This City fell into the hands of the *Venetians* in 1406, and in 1519 they included the Suburbs within the Fortifications, which are now ready to fall. The Streets of this City are lined on both sides with Portico's or Piazza's, which tho' they afford a convenient shelter against the Rains and Sun-beams, they make 'em narrow and dark, and give Opportunity to many Murthers, Robberies and other Insolencies committed by the Scholars, known by the Name of *Qui vali* of *Padua*. *Padua* call'd *The Learned*.

The *Qui vali* of *Padua*. These Scholars have a Custom of going abroad arm'd in the Night-time in whole troops, and lurking between the Pillars of these *Piazza's*, assault such as happen to pass by that way; for whilst one asks the Question *Qui vali?* another immediately cries, *Qui vala?* and so, without giving time to the Passenger to recollect himself, knock him down, and sometimes break an Arm or a Leg.

Some Understanding Persons in these parts are of Opinion that *Padua* was formerly a Sea-port, by reason of its former Grandeur and Riches, and that now they sometimes dig Masts and Anchors out of the Ground; but these may perhaps be the Remnants of Ships left in a Canal leading to that City.

The Tomb of *Antenor*. The *Paduans* boast of *Antenor*, as their first Founder; but not to insist upon the probability of this Assertion, or whether *Padua* be the *Patavium* of *Antenor*, I will only tell you, that their pretended Tomb of *Antenor* is a meer Imposition upon the World; for, about four hundred Years ago, as they were laying the Foundation of an Hospital, they hapned to dig up a Leaden Coffin, near which lay a Sword; the Coffin was without any Inscription, but the Sword had some Verses of *barbarous Latin*, having but very little relation to what was used in *Antenor*'s days: Notwithstanding which, the *Paduans* in general, but especially one *Lupatus*, a man of some Learning, and who was one of their Magistrates, were so much prepossess'd with the conceit of their pretended Founder, that they would needs erect this Monument at the entrance of St. *Lawrence*'s Street, and bestow the Title of *Antenor's Tomb* upon it, with the following Inscription in *Gothick* Characters;

C. *Inclytus Antenor patriæ* ◊ ☐ VOX
nisa quietem
Transtulit huc Exetum Dardani dumque fugas
Expulit Euganeos, Patavinum condidit Urbem
Quem tenet hic humili, marmore casu domus.

Several Criticisms have been made upon this Inscription, but among all the rest no body has been able to find out yet the intention of the C. at the beginning of these Verses. The Tomb of *Lupatus* stands just by that of his dear *Antenor*.

The Church of St. *Anthony* of *Padua*. The Church of St. *Anthony* of *Lisbon*, otherwise call'd St. *Anthony* of *Padua*, is both very large and exceeding magnificent both in carving and painting, and many very sumptuous Tombs; among the last are that of *Alexander Contarini*, the *Venetian* Admiral, and of Count *Horatio Sfeco*, kill'd at the last Siege of *Vienna*.

The Picture *in fresco* in the Chapel of St. *Felix*, done by the famous *Giotto*, is a most admirable piece: But the most considerable piece of all is, the Chapel of S. *Anthony*, which is forty foot long, and twenty five broad; his Body lies entomb'd under the Altar, which is very magnificent and rich; they pretend that his Bones send forth an odoriferous scent, for which reason there is kept a place behind the Altar, which being not well joyn'd, it is no difficult matter to put some Ballam into the opening. The Chapel is cover'd all over with a *basso relievo* work of white Marble, representing the Miracles wrought by this Saint, the Works of *Tullius Lombardus* and *Sansovin*: Before the Altar hang thirty six great Silver Lamps, which burn Night and Day.

The Church of St. *Justina* is both very large and magnificent, tho' not brought yet to its full perfection; the Pavement is compos'd of red, black, and white Marble Squares; and the Roof of the great Church hath seven Domes, which give it both Light and Ornament, and two more on each Arm of the Cross; it contains twenty four fine Marble Altars, all of a different colour, besides the *great Altar*, which is a most magnificent Work; they suffer no Monuments to be erected in this Church. The *Basso relievo* of the Benches of the Choir, representing the Prophecies of the Old Testament concerning Christ, with their Accomplishment in the New, is almost surprizing; it was not finish'd till after twenty two Years. The History of the Martyrdom of St. *Justina* over the *great Altar*, is of the excellent hand of *Paul* of *Verona*. The Monastery is a vast pile of Building, having no less than six Cloysters, and as many Courts and Gardens: I will not trouble you with the Story of the Image of the Virgin, which flew from *Constantinople* when the

the *Turks* became Masters of that City, no more than with an account of the other Saints that are kept in this Church. The great Place* near it was formerly call'd the *Field of Mars*, but has since chang'd its Name into that of *Prato della Valle*, or the *Meadow of the Valley*. The Hall of the Townhouse is a hundred and ten paces long, and forty broad, but dark; it contains many Monuments of illustrious Persons.

* 156 foot long, and 86 broad.

The *Paduans* have had no less Success in finding the Tomb of their Countryman *T. Livius*, than in that of *Antenor*, for in 1413. a Shrine of Lead having been found in the Gardens of St. *Justine*, they did not in the least question but that this Coffin must be that of *Titus Livius*, considering this noted Historian was the *Priest of Concord*, and that this Monastery of the *Benedictines* of St. *Justina* was built upon the Ruins of the ancient *Temple of Concord*. To be short, this pretended Coffin of *Livius* being chang'd for one of Wood, was carried with a great deal of Pomp to the Palace of Justice, where they erected the same Monument that is seen to this day, and afterwards added the following Inscription, which was found in the neighbourhood of the place where the *Temple of Concord* formerly stood:

The discovery of Livius's Tomb.

Vivus Fecit.

V. F.
Titus Livius
Liviæ T. F.
Quartæ L.
Halys
Concordialis
Patavi
Sibi & Suis
Omnibus.

Over this Inscription they have placed a Head of Marble, which passes for that of *Titus Livius*; but tho' both the Head and the Inscription are ancient, yet *Orsato* has in his late Dissertation sufficiently prov'd, that the *Titus Livius* mention'd in this Inscription was no more than a freed Man, of one of the Daughters of *Titus Livius* the Historian.

In the same Hall is another Monument of the Marchioness *d'Obizzi*, who, in my opinion, deserv'd as much, if not more Praise than either *Susanna* or *Lucretia*; for a Gentleman of *Padua* being extreamly in love with this young and beautiful Lady, found means to get into her Bedchamber whilst she was in Bed, in her Husband's absence, and finding all his Rhetorick and Perswasions in vain, and the Lady resolute not to grant his desire, he was so transported with Rage, that he stab'd her. Her Tomb has this Inscription:

A modern Lucretia.

Venerare pudicitiæ simulacrum & victimam, Lucretiam de Dondis ab Horologio Pyrrhæ de Obizzionibus, Orciani Marchionis uxorem. Hæc inter noctis tenebras maritales asserens tedas, furiales recentis Tarquinii faces, casto core extinxit. Sicque Romanam Lucretiam intemeratæ gloria vicit. Tantæ suæ Heroinæ generosis manibus hanc dicavitatem Civitas Patavina decreto; Die 31 Decembr. Ann. 1661.

It is remarkable, that the Gentleman who committed so foul a Fact being put to the Torture, denied the Fact, so that being, after fifteen Years imprisonment, at last discharg'd at the intercession of his Friends, he was soon after shot by the Son of the said Lady, who was no more than five Years old when this barbarous act was committed, and is now in the Emperour's Service.

I can't pass by to tell you, that among all the Antiquaries of those parts, Mr. *Patin*, Professor of Physick, has the most judicious Knowledge in these, as well as most other matters of this nature.

The Amphitheatre of *Padua* exceeded that of *Verona*, but nothing is to be seen of it now but an heap of Ruins.

I must tell you, that going into a Tennis-court here, I found the Walls white, and the Balls black, and the Rackets of the bigness of a large Sieve. I am,

Sir,

Padua, Dec. 19. 1687.

Yours, &c.

LETTER XVI.

SIR,

WE left *Padua* the 20th of *December*, and came to *Venice* the same night in good time: By the way we saw many good Villages and Country houses belonging to *Noble Venetians*.

Coming to *Mestre*, a little City on the shore of the Gulph, five miles from *Venice*, we took a *Gondola*, which carried us in an hour and a half thither.

To give you a true Idea of *Venice*, I must say some- *Venice* the Rich.
thing of the Waters, in the midst whereof it is built. 'Tis certain that the Grounds upon which *Venice* now stands were, thirteen or fourteen hundred Years ago, drown'd by the Sea, till afterwards they were raised out of the Water, and Chanels made betwixt them, for the more convenient approach of Vessels to the City, some of 'em being capable of admitting Ships of the greatest burthen, whereas some can't carry Vessels of above two hundred Tuns. To empty the Mudd out of these Chanels, they have Mills and other Engines, and have turn'd the Mouth of the *Brent* and some other Rivers, to prevent their forcing the Sands into the Lagunes or Chanels, for fear the Earth should gain upon them, who put their greatest Safety and Strength in their Situation: But as they are oblig'd on one side to keep the depth of their Waters, so on the other hand it is not for their interest that these Chanels should be of an equal depth in all places, this being one of their main Securities, which has stood them in good stead at several times, witness the miscarriage of *Pepin*'s Vessels in these Chanels, and of the *Genoese* Fleet about three hundred years ago.

Imagine then a City with thirty or forty tall Steeples to rise from among these Chanels, at a league and a half distance from the Continent, without any other fence than the Waves of the Sea.

Venice is generally describ'd to consist of seventy two Islands, whereas it is altogether built upon Piles in the Water, which washes the Foundation of almost all the Houses four or five foot high; and the *Canals* are of an equal breadth: 'Tis true, that they have some spaces of a reasonable bigness, which seems to intimate, that there was formerly some Land there, but does not evince that there was seventy two Isles. The Streets are very narrow, and were in all likelihood raised with Mudd and Rubbish, and if all the Divisions made by the *Canals* should pass for Isles, there would be near two hundred, instead of seventy two. A description of the Chanels of *Venice*

The compass of *Venice* is generally said to be seven or eight miles; but considering that we row'd the five miles from *Mestre* to *Venice* in an hour and a half, and that in the same space of time we took the whole circumference of *Venice*, with two Rowers, it is reasonable to conclude that its compass can't be above five miles, considering especially that, to avoid the little Lakes, our *Gondola* was forc'd to take a larger compass than the real circuit of the City. Its bigness.

The same Caution is used in reference to the number of its Inhabitants, which some make amount to two or three hundred thousand Souls, others to four hundred thousand: I know not whether the number of its Inhabitants may not have been much greater, whilst this City was in its flourishing state; but if the Word of a Person of Credit, who has liv'd a considerable time here, may be taken, according to his computation, the number of Inhabitants does not at present amount to a hundred and forty Souls, including the Isle of *Giudecca*. What some alledge to prove the Populosity of *Venice*, (*viz.* that it has very few or no Streets of any bigness) is to very little purpose, since the *Canals* take up as much space as would suffice to make very spacious Streets. Number of Inhabitants.

The first place we visited was the Palace of St. *Mark*, the Soul and Glory of *Venice*; the Church of St. *Mark* fronts one end of it, and that of *Geminian* the other; and betwixt both these Churches, the *Procuraties*, or Inns of Court and Offices of Lawyers, built very regularly of fine Marble, border both sides of it with lofty and handsome *Piazza's*. This Place is two hundred and eighty foot long, and a hundred and ten broad. The Palace of St. *Mark*.

As you are going from the Church of St. *Geminian* towards that of St. *Mark*, and instead of entring there, to the right hand you come into another Square two hundred and fifty paces long, and eighty broad, call'd the *Broglio*, the extremity of which reaches to the Sea-side. The *Doge's* Palace takes up one side of it, and the *Procuraties* are continued on the other.

The Tower of S. Mark.

The Tower of St. *Mark* being near the Angle of the Square within, does in ſome meaſure ſpoil the Symmetry of the place; its height is three hundred and ſixty foot, including the Angel that ſerves for a Weathercock; formerly it was finely gilt, and could be diſcern'd thirty leagues at Sea, but the Gold being now worn off, it appears at no great diſtance.

The *Broglio*.

The *Broglio* is the place where the Nobles walk, who ſometimes take to one, ſometimes to the other ſide, according to the conveniency of the Sun or Shade, and no body elſe is admitted to mix with 'em on that ſide they walk, but the other is free for every body; they are ſo nice in this point, that when a young Nobleman is come to an age that qualifies him for the Council, and to take the Robe, four Noblemen of his Friends introduce him the firſt day into the *Broglio*; and if any Nobleman is excluded from the Council, he is alſo not admitted into the *Broglio*.

About the ninth Age the Merchants of *Venice* tranſported the Body of St. *Mark* from *Alexandria* in *Egypt* to *Venice*; and as Chriſt ſaluted this Evangeliſt in Priſon with theſe words, *Peace be unto thee* Mark, *my Evangeliſt*, ſo the Body of this Saint was receiv'd with the ſame words by the Senate of *Venice*, and order'd the ſame to be written in the open Book held by the Lyon of S. *Mark* in the Arms of *Venice*, and the Church of St. *Mark* to be built to his honour; tho' at the ſame time they were ſo careleſs in obſerving his Shrine or Tomb, that now they can't preciſely tell where it is. I will not detain you with the Story of his Apparition, when he ſhew'd his Arm to the *Doge*, and beſtow'd upon him the Golden Ring, which is carried with great ſolemnity in Proceſſion every Year on the 28th of *June*.

The Patriarchal Churches dedicated to St. *Peter* and St. *Mark* is no more than the *Doge's* Chapel, and the *Primicerio* or Dean of the Canons of St. *Mark* wears a Mitre and Rochet, like a Biſhop, and has no dependance on the Patriarch; I ſaw him officiate in great pomp on *Chriſtmas Day*; he muſt always be a Noble *Venetian*, and his annual Revenue may be about a thouſand pounds Sterling.

St. *Mark's* Church.

The Church of St. *Mark* is a ſquare Structure after the *Greek* way, being a Croſs ſhorined, but not very lofty, and ſomewhat dark; its chief Ornaments conſiſt in excellent *Moſaick* Work and Marble; the Roof has ſeveral Domes, among which that in the middle exceeds the reſt: It has a vaſt number of Statues on the outſide, among which the *Adam* and *Eve*, by *Ricedo*, are chiefly remarkable: I don't ſpeak in this place of the four brazen Horſes over the Porch, as being foreign Pieces brought thither by accident. A certain learned Antiquary told me, that theſe Horſes belong'd formerly to the Chariot of the Sun, which was made as a ſingular Ornament to a triumphal Arch erected by the *Roman* Senate to the honour of *Nero*, after his Victory over the *Parthians*; *Conſtantine* the Great carried them from *Rome* to *Conſtantinople*, where they ſtood in the *Hippodrome* till the *Venetians* brought 'em from thence: One may ſtill ſee they were gilt.

Moſaick Work.

But the greateſt Curioſity belonging to the Church of St. *Mark* is, the vaſt quantity of *Moſaick* Work wherewith both the Roof and Pavement is cover'd. To give you ſome Idea of this Work; it deduces its Origin from *Greece*, tho' they tell you that its uſe has been in *Italy* near two thouſand Years; for *Vitruvius* (who liv'd under *Auguſtus*) calls it *Opus ſectile*, *Pavimenta ſectilia*, *Opera Muſiva* and *Muſroa*; by others it is call'd *Opus Varniculatum* or *Teſſalatum*. All Works therefore compos'd of ſmall inlaid Pieces, whether of Stone, Wood, Ivory, or any other matter, let their repreſentations be what they will, come within the compaſs of what is call'd *Moſaick* Work: The moſt curious Works made out of *Florence* Stone come alſo under the denomination of *Moſaick* Work: but inſtead of natural Stones, which would take up too much time to be poliſh'd and prepar'd, they have made uſe here of a certain compoſition of Glaſs and Enamel, melted together in a Crucible, which takes a moſt lively and bright colour, that never fades nor ſtains. Every piece of the *Moſaick* of St. *Mark* is a little Cube; the Field is *Moſaick* finely gilt, and incorporated in the Fire, upon the Superficies of one of the Faces of the Square, all the Figures (with their Draperies and Ornaments) being colour'd according to Nature, by the artificial joyning together of all the pieces of the Work, according to the deſign of the Workman, being ſtraitly united in the compound Matter or Plaiſter prepar'd to receive 'em, which immediately after becomes ſo hard and ſolid, that this Work has laſted near eight hundred and fifty Years without loſing any thing of its beauty.

The Pavement of the Church is not inferiour to the Roof, being compos'd of *Jaſper*, *Porphyry*, ſpotted-green *Marble*, and *Marble* of divers other colours, which make Compartments different from each other. Among all the Relicks, miraculous Images, and other holy Rarities kept here, I will mention only the Rock which *Moſes* ſtruck in the Wilderneſs, in the Chapel of —— at the end of the Font, of a greyiſh Marble; the three holes out of which the Water iſſued are placed triangular-wiſe, about two inches aſunder; but as each of 'em is no bigger than a Gooſe Quill, how theſe could furniſh Water ſufficient in ſo ſmall a time to quench the thirſt of ſix hundred thouſand Men, with their Wives, Children and Cattle, is what I am not able to determine.

In the middle of the Portico of the Church, over againſt the Door, they ſhew a piece of Porphyry enchas'd in the Pavement where Pope *Alexander* III. ſet his Foot on the Neck of the Emperour *Frederick Barbaroſſa*.

The Treaſury of S. Mark.

From the Church of St. *Mark* we were conducted to the Treaſury, of which three Procurators of St. *Mark* are always Guardians, and is never open'd but in the preſence of one of them. In the firſt Apartment they ſhew you ſome Relicks, ſeveral pieces of the true Croſs, the Bones of the Dead, the Hair and Milk of the Virgin. Thence you go into another Room, where the real Treaſure is kept, moſt of which was brought from *Conſtantinople* with the beforemention'd brazen Horſes. The moſt conſiderable Pieces here are, the two Crowns of the Kingdoms of *Cyprus* and *Candia*, abundance of precious Veſſels of Agate, the Root of an Emerald and of Rock-Cryſtal; all theſe, they tell you, belong'd to *Conſtantine's* Cupboard: A Seal eight inches deep, and as many in diameter, made of one ſingle Granate; a *Saphir* weighing ten ounces; twelve Croſſets of Gold, adorn'd with Pearls; as many Head-tires in form of a Crown, worn upon certain Feſtivals by the Maids of Honour to the Empreſs *Helen*; a Cup made out of a ſingle *Turquoiſe*, with *Egyptian* Characters, it is ſeven inches diameter, and three and a half deep; a Picture of St. *Jerome* in curious *Moſaick*; and many other rich things of this nature: But the Duke's Coronet is, in my opinion, the fineſt Piece of all, (which *Camerarius* values at not above two hundred thouſand crowns) the Circle is of Gold, the Bonnet of Crimſon Velvet, enrich'd all over with precious Stones and Pearls of a large ſize: *Charles Paſchal* is of opinion that this Coronet is the *Phrygian* Bonnet or *Trajan* Mitre brought into *Italy* by *Antenor*, the figure whereof is expreſs'd in ſeveral ancient Pieces, as in the Statue of *Ganymede*, which is to be ſeen in the Porch of the Library of S. *Mark*, upon ſome Medals of the God *Lunus*, in ſome others where *Æneas* carries *Anchiſes* upon his Back, and in the Miniatures of the ancient Manuſcript of *Virgil* in the *Vatican*.

The Goſpel of S. Mark.

This Manuſcript puts me in mind of another, *viz.* the ſo much celebrated *Goſpel of St. Mark* kept in this Treaſury, which I had leave, by a ſpecial favour, to conſider all over; its Leafs are of Parchment looſed from each other, very much worn and torn, defaced, and ſo rotted, that wherever you touch it ſomething will ſtick to your Fingers; it is very hard to diſcern any thing diſtinctly of it; it was in *4to*, of the thickneſs of two Fingers, and the remnants of this precious Treaſure are kept ſhut up in a Box, of Vermilion gilt, made in the ſhape of a Book. Here and there you may ſtill diſcern the traces of ſome imperfect Characters upon the moiſt Parchment, but ſo as ſcarce to be diſtinctly ſeen what they were; by a nice inſpection I diſcover'd three or four Letters well form'd, and met with the word KATA diſtinctly written as you ſee it here. The Abbot *Lith*, Library-keeper of St. *Mark*, aſſiſted me in turning over with a great deal of exactneſs all the Leafs, but could diſcover nothing material, except that it had a very broad Margin, and the Lines were placed at a great diſtance from one another, rul'd with two parallel lines, to make the Writing equal and ſtreight. The beforemention'd word KATA, with one Δ and one Σ, which we alſo plainly diſcern'd, prove that it is a Greek Manuſcript; *Alphonſus* ſays 'tis Latin, and *Baronius* confirms it; but that it ſhould be of St. *Mark's* own hand-writing, I can't find ſufficient reaſon to believe, being rather of opinion that (the manner of writing conſider'd) it is the Work of ſome profeſſed Tranſcriber; and as for the reſt, we muſt relie upon Tradition and common Fame, that it is the *Goſpel of St. Mark*; it being ſo much defac'd by the injury of Time, that few Letters can be decipher'd in it, and conſequently it is a difficult task to prove or diſprove whether it real'y be, or not, what they pretend it is.

In the Year 1427. one *Stamati*, a *Candiot* by birth, rob'd this Treaſury, and broke thro' the Wall, but was taken, and every thing recover'd, and he ſentenc'd to be hang'd, which was executed accordingly betwixt the Marble Pillars which ſtand at the entrance of the Palace

over against the *Loggietta*: They say, he beg'd of the Judges, that he might be hang'd in a golden Halter, which was granted.

The Palace of St. *Mark.*

Next adjoyning to the Church of S. *Mark* is the Palace of S. *Mark*, a great mass of Building after the *Gothick* manner, but nevertheless very magnificent: It has been several times defac'd by the Fire, so that the Reparations made at divers times have made it not so uniform as it would have been otherwise. That part which faces the Canal is built of a kind of very hard Stone brought from *Istria*, and excellently well design'd; were all the rest like this, it might pass for an exquisite piece of Architecture.

'Tis in this Palace that the Duke keeps his constant residence; and here it is that the Council of State and the other Assemblies meet. The Apartments are spacious and lofty enough, and well wainscotted, but want Light, in respect to our modern way of Architecture.

The Hall appointed for the meeting of the *Great Council* (where in effect the Soveraignty is lodg'd) is of a large size, and adorn'd with curious Painting; here you see the Pictures of all their Dukes, the History of the taking of *Constantinople* in 1192, but was lost again within sixty Years after; among the rest they shew you the History of Pope *Alexander* and *Frederick Barbarossa*, with the Pope's Foot on the Emperour's Neck, or rather his Shoulder, as 'tis express'd here.

The little Arsenal.

If you remember the Story of the Rebellion of *Bajamonta* against the Senate, in 1210, I must tell you, that this was the occasion of the little Arsenal kept in this Palace, from whence there is a passage to the Hall of the *Great Council* where the Nobility assembles, that in case such another Conjuration should break out whilst they are assembled in Council, they might readily be supplied with Arms from thence for their defence. It was upon the same score that they built the little Judgment-Seat call'd the *Loggietta*, at the foot of St. *Mark*'s Tower, in sight of the Palace and the *Grand Council* Chamber: Here are always some Procurators of St. *Mark* upon the Watch whilst the *Great Council* meet and deliberate of Matters of State.

This Arsenal is provided with a good number of Fusees and Musquets ready charg'd, besides many other Arms. Here they have an Engine which will light five hundred Matches at once: They preserve here also some very curious Arms of an ancient make, and among the rest the Sword of the brave *Scanderbeg*. Here they also shew you the Bust of *Francis Carrara*, the last Lord of *Padua*, who for his Cruelties was strangled, with four of his Children, by the command of the Senate of *Venice* in 1405. I observ'd also a little Trunk with six little Guns, which the said *Carrara* sent for a Present to a Lady, and was so contriv'd by certain Springs, that upon opening of the Trunk the Guns all fir'd at once, and kill'd the Lady. They also shew'd us some little Pocket Cross-bows, and Arrows of Steel of this Tyrant, wherewith he used to kill such as passed by, without knowing from whence they receiv'd their Wounds; and various sorts of Locks and Bolts, wherewith he used to keep up his Strumpets.

Here I also saw the two little Statues of *Adam* and *Eve*, which *Albert Durer* made in Prison with the point of his Pen-knife only, and which purchas'd him his Liberty.

We must not forget the antick Mouths under the inner Portico of this Palace, and in divers places of the Galleries, into the Throat of which any body may cast a Note, to give the best advice or notice of any thing he is able to the Inquisitors, who have the Keys of these Boxes, and sometimes reward those who make what they call *The secret Accusation*, who, to discover themselves, tear a piece of the Billet.

The Library is kept in the *Procuraties* opposite to the Palace, on the other side of the *Broglio*; it is none of the most numerous, rare, and best-condition'd, and has but few Manuscripts, which are for the most part *Greek*; tho' they also shew you another, entitul'd, *De Consideratione Dei*, attributed to St. *Austin*; but to make amends, it has divers excellent Pictures, done by *Titian* and other great Masters, and several exquisite *Greek* Statues, as that of *Ganymede*, a *Venus*, an *Apollo*, and two Gladiators.

It is the Opinion of some, that *Venice* has as many rare Pictures as *Rome*; I will not pretend to determine that matter, but only tell you, that the three most celebrated Pieces we could see, either in the Churches or any other publick place, are, the Wedding of *Canah*, by *Paul Veronese*, in the Refectory of *S. George major*; the Presentation of the Virgin, in the School of Charity; and the S. *Peter* Martyr, in S. *John* and S. *Paul*'s, both by *Titian*.

Venice is the likeliest place in *Europe* for young Painters to improve themselves, for in both the Academies they have the opportunity of viewing naked Persons of both Sexes, in which posture they please.

The Tide.

In answer to your Question concerning the Flux and Reflux, I can only tell you, that the Sea flows six hours, and ebbs as many; it is later every day about three quarters of an hour, as it is generally upon the Coasts you know: The Tide rises at *Venice* generally four foot, or four and a half, sometimes more, sometimes less. The Shore beyond *Venice* is extreamly pleasant, the long and narrow Isles enclosing this City from the North to South, in the form of a Semicircle. The main Sea affords some Shell-fish, and abundance of Oysters, but are neither so savoury nor so wholsome as ours.

The Policy and Liberty of *Venice.*

The *Venetians* boast much of their *Policy* and *Liberty*; for the proof of the first they generally alledge, that they have maintain'd themselves for thirteen hundred Years: This Reason might perhaps stand good, if they could boast to have maintain'd the same Form of Government; whereas it is beyond all contradiction, that the Government of *Venice* has often chang'd its Constitution, since their Dukes were as absolute as *Cæsar* was at *Rome* not long before his death. Another Consideration is, that the Republick of *Venice* being confin'd to such narrow Bounds, in comparison of the more powerful States of *Europe*, and surrounded by Neighbours less potent than it self, it seems not to require such profound Maxims of Policy to maintain it self, by living quietly and peaceably with the rest; and notwithstanding all this, the Senate of *Venice* have, with all their Policy, not been able to prevent the Declensions their State has suffer'd at divers times. As for their Liberty they so much brag of, it amounts chiefly to this; That provided they don't intermeddle with State-affairs, and commit no enormous Crime, that must of necessity, or by its notoriety, fall under the censure of Justice, every body is at liberty to live as he pleases: Hence it is that the *Greeks*, *Armenians* and *Jews* are allow'd the publick exercise of their Religions; and all the other Sects are tolerated, or at least conniv'd at, provided they manage matters with a little discretion: 'Tis true, the worshipping of Images, and Relicks, and such like Superstitions, are as frequent among the common People of *Venice* as in other places; but the better sort set no great value upon 'em. They are now as jealous of the Liberty of the *Venetian* Church as the *French* are of the *Gallican*; and it is for this reason they keep the *Jesuits* so much in awe; they allow none in their Convents but their own Subjects, and will not allow of any Superiour, except a Native of the City. They don't stick to permit these Fathers to wear Masks during the Carnival, to entertain their Concubines, to sing on the Stages, and what else they think fit, provided they keep their Fingers out of the publick affairs.

The *Greeks* at *Venice.*

Concerning the Articles of Faith of the *Greeks* here, I can't but be of opinion, that they differ in many points from the *Greek* Churches of the *Eastern* Countries, tho' they exclaim heavily against the Usurpation of the Church of *Rome*; they declare for Transubstantiation; they make use of common Bread, mingle Water with Wine, and communicate under both kinds. In their Churches they have two Altars, one call'd the *Altar of Preparation*, the other of *Consecration*; the first they make use of to cut the Bread with a Knife slrap'd like the Iron point of a Launce, where also they mix the Water and Wine, and the Priest takes it with a Sponge out of the Vessel in which it was first mix'd, and afterwards squeezes it into the Chalice. They embrace one another before they communicate, and the Communicants receive the Bread steep'd in the Wine, the Priest putting it with a Spoon into their Mouths: Of all this I was an Eye-witness. The Archbishop officiated in a Mitre not unlike an Imperial Crown, and all his Ornaments were exceeding magnificent, and were chang'd several times, according to the different parts of the Service.

Their Ceremonies.

They abound in mysterious Ceremonies; whenever the Bishop blesses the People, he has in his right Hand a three-branch'd Candlestick, with as many lighted Tapers; this, they say, is an Emblem of the Trinity, as the Candlestick with two Branches he holds in his left is of the two Natures of *Jesus Christ*. They divide their Churches into four several parts, the Altars stand at one end, which they call *holy*, none but the Priest who officiates and his Attendants are admitted there; the next part to that is appointed for the other Service; the third is where the Men are separated from the Women by little Balisters; the Women sitting behind Lettices at the other end of the Church, or in the Galleries. They perform their Divine Service in the vulgar Greek, and highly discommend the use of an unknown Language in the Church. They worship standing, bow their Heads, and put their Hands at the same time on their Breasts. Mar-

riage is among them no bar to Priesthood, but if they are single at the time of their being admitted into Orders, they must not marry afterwards; they forbid the fourth Marriage for decency sake, deny *Purgatory*, and yet pray for the Dead. They use Confession, but not after the manner of the *Romanists*: Concerning the Article of the *Proceeding of the Holy Ghost*, they say as little now as they did formerly dispute upon it, looking upon it as a point that has more of nicety than usefulness; they also preserve Relicks, but never worship 'em.

The *Armenians* at *Venice*.

I have, pursuant to your desire, made the best enquiry I was able about the Worship of the *Armenians*, but their Church being repairing at present, I have had no opportunity to see their Religious Worship, nor to learn the truth of it from others, except that a Friend of mine told me, that they were of very different Opinions in respect of several Articles, but that these four or five were most generally receiv'd among 'em, *viz.* they communicate under both kinds, they give the Sacrament even to Infants, believe the Sequestration of the Souls as the *Greeks* do, allow of Divorces, and believe that at the time of the Resurrection there will be no difference of Sexes. I am,

Sir,

Venice, *Jan.* 20. 1688.

Yours, &c.

LETTER XVII.

SIR,

BEfore I leave *Venice*, I must add some few other Observations to what I have said in my former concerning this City.

The Bridge of *Rialto* at *Venice*.

The Bridge of *Rialto* challenges the first place, being built over the middle of the great Canal which divides this City in the figure of an S. The *Venetians* are so much taken with this Bridge, that they often want terms to express its worth as they believe, whereas 'tis certain that it has nothing extraordinary belonging to it, except that 'tis built upon one Arch: As I took particular care to measure it, so I can give you an exact account of it. The compass of the Arch makes a third part of a Circle; the whole extent from one extremity of the Arch to the other, on the level of the Canal, is ninety foot, and its height twenty four. I know some have blam'd the Architecture of this Arch, which according to the strict Rules of Art, might, for its greater strength, be an exact Semicircle; but, in my opinion, this Objection may soon be answer'd, it being reasonable to suppose that the remaining part of the Semicircle is taken up in the Foundation under Water. It is strongly built of great pieces of a kind of white Marble; it has two rows of Shops, which divide it in three Streets, *viz.* one large one in the middle, and two other little ones, between the Rails and the backsides of the Shops. Almost all the other Bridges of *Venice* have but single Arches, and Steps of a white and hard Stone, and most commonly very slippery, which in part has given occasion to the noted Proverb of *Venice*,

Beware of white Stones,
Whores, Priests, and Pantaloons.

All the best Houses of *Venice* stand on both sides of the *Great Canal*, among which are some magnificent Palaces, of *Pisani*, *Morosini*, *Loredano*, *Rosini*, *Vandramino* and *Grimani*, but their chief beauty consists in their Frontispieces, which commonly are of two or three sorts of Architecture, the rest being but very indifferent.

The *Lagunes* do in all probability contribute not a little to the unwholsomness of the Air of *Venice*, tho' the *Venetians* are very unwilling to own it, but their Water is generally bad beyond contradiction; for among a hundred and fifty Springs they have here, there are not above two or three that afford good Water, which is the reason that most private persons of note are forc'd to preserve the Rain-water in Cisterns.

The Wines generally drank here are either fulsome sweet or sowre and eager: Their Bread is also very ill made, for let it be never so fresh, it is as hard as a Bisquet, and must be broken with a Hammer.

The little opportunity a Stranger has of conversing with the *Venetians* in their Houses, makes me give you no account of their manner of House-keeping, but it puts me in mind of what I read the other day in a Preface of *Henry Stephens*, That in his time, a Woman that appear'd bare-neck'd abroad, was look'd upon with a very indifferent Eye in *France*; whereas in *Italy*, and especially in *Venice*, every old Hag did show her wither'd Neck, but at present none but publick Whores shew their Necks bare; nay, the Women of Quality don't even shew their Faces in the Churches, the only places where they appear in publick; and the ordinary Women wear over their Heads a great Scarf, opening only a little about the Eyes.

Their Ladies and Marriages.

Their Females they educate in the Convents, from their tender age till they are married, which is done commonly by their Parents or Kindred, without letting them see their future Husbands; for 'tis to be observ'd, that among Persons of Quality there is no other regard, in reference to this point, but a good Family and Riches, the rest being left to Chance; whence it is that the Men commonly remedy the personal defects of their Wives, by maintaining Concubines: They have here a peculiar way of maintaining certain Women, much used among those of a tender Conscience; 'tis a kind of clandestine Marriage, the Ceremony whereof is not perform'd sometimes many Years after they have cohabited together, and often not till a few Days or Hours before the Death of one of the Parties: But the most general way is, to keep their Mistress at a certain Allowance as long as both Parties agree; and this is so frequently practis'd here, that such as are not able to keep one singly, joyn with two or three more, who enjoy the Woman, without the least Jealousie, each in his turn.

Concubines.

This kind of Libertinism is so generally receiv'd at *Venice*, that the Mothers of young Noblemen are commonly the first who agree with a poor Maidens Father or Mother, for the use of their Sons, at a certain rate, to be paid monthly or yearly, as they can agree best. I have it from credible hands, and *Roman Catholicks*, that the Confessors look upon this as such a trifle, that they will not take the least notice of it in their Confessions.

For Comers and Passengers you have whole Streets fill'd with Ladies, easily distinguish'd from others by their Habits, being dress'd in red and yellow, with naked Breasts, painted Faces, and a Nosegay above their Ears, whereas all the other Ladies appear in black.

The Carnival.

The Carnival begins here the second Holiday in *Christmas*; then it is they begin to wear Masks, and open their *Play-houses* and *Gaming-houses*; the Place of St. *Mark* is fill'd with *Mountebanks*, *Jack-puddings*, *Pedlars*, *Whores*, and such-like sort of Cattle, which flock thither from all parts. In the beginning they do act with some moderation, but the nearer they come towards *Shrove-Tuesday*, the more their madness encreases. The Senate of *Venice* allow these Extravagancies, to divert the People from feeling the heavy burthen of their Government, which, without such-like Amusements, would be insupportable to them: Besides that, the vast number of Strangers which come from all parts to *Venice*, to partake of the Diversions of the *Carnival*, brings a vast Sum of Money to the City; I was credibly inform'd, that during the last *Carnival*, there were no less than seven Soveraign Princes and thirty thousand other Foreigners here.

Their *Opera's*.

To give you (according to your desire) my Opinion of the *Opera's* and *Comedies* of *Venice*, in respect to those of *Paris*, I must be plain with you, That the Ornaments of the first are infinitely inferiour to those of *France*; their Habits are mean, without any Dances, and generally without any Machines or Illuminations, except here and there a few Candles, scarce worth mentioning. I will not venture to contradict the general Opinion of the World concerning the *Italian* Musick; and it must really be confess'd, that they have some excellent Ayres, and most exquisite Voices; but, to tell you my Sentiment of the matter, there is a certain unpleasant Confusion in several Songs of their *Opera's*, and they dwell many times longer in one quavering than in singing four whole lines, and immediately after they run so fast, that you can't tell whether they sing or speak or do both by turns. 'Tis certain that the overstrain'd Shrill is not so pleasing to Foreigners as to the *Italians*. The Consort is much less than at *Paris*, but this may perhaps be esteem'd rather a Perfection than a Fault.

There is another thing I can't pass by without a Remark, I mean the preposterous figure which their Eunuchs make on the Theatre; it is a very odd sight to see one of these mutilated fellows act the part of a Bully with his effeminate Voice; and another to represent a young Lover, with his wither'd wrinkled Face.

The Arsenal of *Venice*.

There are at present no less than seven several *Opera's* at *Venice*, which by Foreigners are frequented chiefly for the

the good Company's sake: They have a Buffoon in every *Opera*, who intermixes his Fooleries, without discretion, with the most serious and tragical part of the Play.

Their Comedies. Their Comedies are fill'd with such ridiculous Buffoonries, that in other parts they would not pass for tolerable Farces, *Harlequin* or some other Buffoon being commonly the head Actor, who is back'd in his Grimaces with the most rank Bawdry that can be invented, to make the Spectators laugh; and for fear they should be disappointed in their aim, they admit whole troops of the *Gondoliers* or Watermen into the Playhouse for nothing, when they are just ready to begin; these are very diligent on this occasion, by bawling and clapping their Hands, to extort as it were a general applause from the Spectators. These Theatres belong to some Noblemen, who make a considerable profit of 'em during the Carnival.

Their Basset-houses. Their Meeting-places where they play at Basset they call *Ridotti*, which are kept open as long as the Theatres; they allow none but Noblemen to cut; you shall see sometimes ten or twelve Rooms on a floor, with Gaming-tables in all of 'em, crowded with Gamesters mask'd, with Courtesans and Ladies of Quality, who under this disguise have the privilege of enjoying all the Diversions of the Carnival, provided they can get a little out of the way of their Spies or jealous Husbands. They have also certain Rooms, where they sell Liquors, Sweetmeats, and suchlike things.

Masquerades Every one thus mask'd, provided he be in good Apparel, has the liberty of talking to the Ladies even of the highest Quality, no body, not even the Husband himself, taking notice at that time what is said to his Wife, because the Mask is sacred, tho' this sometimes gives occasion to an Intrigue, in a place where the scarcity of Opportunity prompts them to do more with the wink of an Eye, than in other Countries with long Courtship.

But the chief place for Masquerading is the Place of St. *Mark*, where you may put your self in what Disguise you please, provided you can maintain the Figure of the Person you assume; for here you see the *Harlequins* jeer one another handsomly, those who personate Doctors to dispute both learnedly and wittily; and so with the rest: But such as have no inclination to venture upon these Engagements, may appear in the Habit of a Nobleman, or some foreign Dress, and so be only Spectators.

All the Masquers must appear without Swords. Here you see, besides *Puppet-players*, *Rope-dancers*, and suchlike, divers *Fortune-tellers*, whose little Stages are fill'd with *Globes*, *Spheres*, and other *Astronomical Instruments*; they make use of a Tube of Tin to speak into the Ears of those who consult 'em; and it is a pleasant sight to see the Priests and Monks more frequently taken up with the Tube than the rest.

I will not pretend to give you an account of their *Bull-baitings*, *Goose-hunting*, *Wrestling* or *Boxing*, *Balls*, *Races* upon the Water, or of their *Feast* on *Shrove-Tuesday*, when they cut off a Bull's Head in the presence of the whole Senate, in memory of a Victory in *Friuli*: but I can't forbear to tell you, that the Carnival is not the only time when *Masks* are in request at *Venice*, there being a Feast of Pleasure where they are not used more or less, as at the Audiences of Ambassadours, on *Ascension-day*, &c. All these days are very profitable to the Watermen, who knowing all the turns and by-ways, keep correspondence with the Waiting-women, and for a good Reward will furnish Ladders of Cords for an Intrigue, one of their main businesses being Pimping, in which Art they are so well vers'd, that they will depositе a sum of Money that their Ware shall prove good.

The Venetian Watermen and Boats. They hire the *Venetian Gondola's* or *Boats* either from place to place, or by the hour, or by the day: You may have one of the best for five or six Shillings a day. These Boats are prettily contriv'd and very light; their length
See Fig. VI. is generally thirty or thirty two foot, and their breadth four or five, in which you may sit with a great deal of convenience, under a Cover like a Couch, with Glasses on both sides; the left is reckon'd the best place, because there you can best see the Boatman, and command him as you please. These Fellows are very dextrous in their business, and will with a surprizing facility manage their Oars standing with their Faces towards the place where they are to go.

All the *Gondola's* or *Boats* must be black, even the little Chamber, which is generally cover'd with black Cloth or Serge, but Foreigners are not so strictly tied to this Rule; the *Gondola's* especially of the Ambassadours are generally exceeding magnificent; they have generally four or five, and make their Entries in 'em.

The Arsenal of Venice. The Arsenal of *Venice* challenges to be rank'd among the first of *Europe*; but as it must be confess'd that it is a place of great consequence, so on the other hand it ought to be consider'd, that it is the only one the *Venetians* have in *Italy*, and that in its enclosure it comprehends all their Ammunition, Stores for their Navy, Casting-houses, Rope-yards, Forges, Lodges for the Galleys and Galeasses, and the *Bucentoro* it self, besides the Docks for refitting their Ships; and notwithstanding all this, you must not believe above half what they tell you upon this Head. I remember that our Guide would fain have persuaded us that it contain'd no less than two thousand five hundred pieces of great Cannon, Arms for a hundred thousand Foot, and compleat Accoutrements for twenty thousand Horse; but these are only words.

Among their Men of War, that call'd *The Redeemer* is the biggest, and, as they told us, carried eighty pieces of Cannon and fourteen Pattareroes, and is now at Sea.

Their Galeasses. Their Galeasses have three rows of Guns in the Prow, but only two in the Poop; their complement of Slaves is ninety two, at six on a Bench: The *Bucentaure* is a
See Fig. VII. large Galeass of State finely carv'd and gilt, in which the Doge and Senate, with many of the Nobles, go out to Sea every Year on *Ascension-day*, to perform the Ceremony of marrying the Sea.

The Noble Venetians. Concerning the Nobility the Noblemen of *Venice* pretend to, which they have push'd to that degree, that they pretend their Nobility to comprehend all other Titles, so as even to compare themselves with Princes of Royal Blood; I must tell you, that it appears to me rather founded upon an Opinion than solid Reason. 'Tis true, that considering the *Noble Venetians*, by right of Inheritance, are Members of the great Council, which gives Life to all the rest, are born with some Character of Soveraignty, but at that rate the Nobility of *Genoa* might challenge the same Prerogative; and after all their boasting, the Commands, great Offices, Wealth and ancient Extraction make new distinctions among them; and they are not so nice, but that they will sell this Title for a certain Sum of Money.

Their Habit. They never appear in publick but in their Robes, which are of black Cloth, and ought to be lined with greyish Cloth in the Winter, and Ermins in the Summer. The Stole is of the same Cloth, as well as the Girdle, which being about four inches broad, is adorn'd with Silver Buckles and Plates. Their Bonnets are no more than a kind of Caps of black Worsted, with a Fringe of the same Stuff, which they commonly bear in their hands, because they are unwilling to incommode their great Perriwigs; however, the Procurators of St. *Mark*, the *Sacri Grandi*, and some others of the great Officers of the State, are distinguish'd by their peculiar Habits; those that have been Ambassadours have the Privilege of wearing a Stole of Cloth of Gold, and Golden Buckles on their Girdles, but they generally content themselves with a little Gold Galloon upon their black Stole.

The *Physicians*, *Advocates*, *Notaries*, and all those they call *Cittadini*, wear the same Habits as the *Nobles*; they challenge the Title of *Excellency*, and the manner of saluting 'em is, to kiss their Sleeve, which about the Elbow is as big as a moderate Sack, which serve sometimes to carry Provisions in from the Market, because they scarce ever appear with any Attendance at their heels. They are never saluted in the Street, except by those who wear the same Robe, being rather fear'd than lov'd by the People, not so much on account of the hardship they suffer from them, as for want of knowing them, the Nobles being not permitted to converse familiarly with any body.

The Nobility of *Venice* does not descend only to the eldest Sons, as in *England*, and they are not permitted to traffick, much less to marry with Foreigners.

The titular Nobility of the Venetian State. Those *Marquesses*, *Counts*, and other titular Nobles belonging to the *Venetian* State, are no Noblemen of *Venice*, but either such as really enjoy'd these Dignities in their respective Countries before they became subject to the *Venetians*, or such as by the *Venetians*, since their Conquests, have been dignified with these Titles to humble the rest, and by a confusion of new Titles abate the Pretensions of the ancient Nobility of those Countries.

There is a third sort of titular Nobility in the *Venetian* State, whose Ancestors, tho' not fully entitled to those Dignities, yet had some Pretensions to them, and upon the change of the Government, laid hold of these Titles by the connivance of the *Venetians*.

The Duke of Venice. Your Information concerning the Duke or Doge of *Venice* is wrong in all its parts; for, I can assure you, he bears only the figure of a Prince, and the shadow of Greatness without any real substance; much in the same manner the Dukes of *Aquitain* and *Normandy* do at the Coronation of a King of *England*: 'Tis true, he has some outward marks of Grandeur annex'd to his lofty Title, but these are bestow'd on him no otherwise than as he is a Re-

Repreſentative of the Republick, as Ambaſſadours are of their Maſters. That this is true beyond all contradiction, pray conſider, that his Councellors have a conſtant watchful Eye over all his Actions, and have an Authority to viſit his Cloſet every hour. It is not in his power to pardon any Criminal; he can't ſo much as paſs over to the Continent without ſpecial permiſſion from the State; and he no ſooner ſets foot aſhore on that ſide, but his Ducal Authority and Dignity ceaſes, and he is conſider'd no more than a bare Nobleman of *Venice*; immediately all his Kindred, that were before in any Offices, are turn'd out, and when he dies, there is no ſuch thing as the leaſt publick Mourning upon that occaſion. He is, beſide this, as much ſubject to the Law as the meaneſt perſon, and the Inquiſition of State ſeems chiefly level'd at his Power, which is ſo ſtreightned, that except two or three inconſiderable Privileges, he poſſeſſes nothing before other Noblemen, which are, that he has a double Voice in the *Grand Council*, and the diſpoſal of divers little Offices belonging to the Palace, and the nomination of the *Primiceria* and Canons of St. *Mark*. The Honours, as I told you before, paid uſually to him being nothing elſe than the marks of the Soveraignty of the Commonwealth in their Repreſentative; 'tis in this ſenſe he bears the Title of Duke and of *His Serenity*, (a Title eſteem'd here beyond that of *Highneſs*) and when he appears abroad upon any ſolemn occaſion, has a Torch carried before him, a folding Chair, (having two Arms and no Back) with its Cuſhion, eight Silver Trumpets, and as many Standards with the Arms of *Venice*, and perhaps ſome Hautboys: Of theſe Standards two are white, two red, two Violet, and two blue, which, they ſay, ſignifie *Peace*, *War*, *Truce* and the *League*: They ſhew'd us that the two red ones were carried firſt, the State being engag'd then in a War againſt the *Turks*, whereas in time of Peace the white ones precede the reſt. He has alſo a kind of Umbrello carried after him.

His limited power.

Upon theſe occaſions the *Doge* is generally accompanied with the *Nuncio* and the Ambaſſadours reſiding at *Venice*, except the Miniſter of *Spain*, who never appears at theſe Solemnities, to avoid diſputing with the *French* Ambaſſadour about Precedence; all theſe Miniſters have their Hats on; the Duke never pulls off his Coronet, except when the Hoſt is elevated, or when he is viſited by a Prince of Royal Extraction, or by a Cardinal, who ſits in the ſame Chair with the Duke, and even on his right hand. After theſe march the chief Senators, before whom is carried the Sword of State, as an evident mark of the Soveraignty of the Council.

'Tis true, upon their Coin the Duke's Name is ſtamp'd, but as on the Reverſe you ſee him on his Knees, at the Feet of the *Primiceria*, who ſits and repreſents St. *Mark*; of him the *Doge* takes the Oath of Fidelity, with the Maſs-book in one hand, and with the other receiving the Standard of *Venice*; ſo it is evident that his Image bears no more marks of Honour here than that of the *Primiceria*.

The Letters of foreign Princes are alſo directed and deliver'd to the *Doge*, but he is ſo far from having any power of opening 'em, that he muſt deliver 'em to the Council: The ſame thing is obſerv'd in reſpect of Ambaſſadours; for after matters have been deliberated and concluded in the Council, the Anſwer is put ſo exactly into the Duke's Mouth, that ſhould he commit the leaſt miſtake, he is corrected upon the ſpot. Thus in all Acts or Declarations of State he is no more than the Herauld, who has the honour of publiſhing what is enacted by the Senate.

See Mr. *Amelot* upon this Head.

I will not pretend to unravel to you the Myſteries of the *Venetian* Commonwealth, the ſame being above my purpoſe, and even out of my knowledge, for want of ſufficient time to be fully inſtructed in ſo many things: I will only add concerning the Patriarch of *Venice*, that after he is elected by the Senate, he receives his Confirmation from the Pope: Tho' his Station is very eminent, yet his Authority is kept within very narrow bounds; for, except two or three Benefices, the People of each Pariſh chuſe their own Curates, and the Clergy (to ſpeak truly) acknowledge no other Superiority but that of the Senate. This Prelate muſt always be choſen out of the Nobility, and his Garment is of a Violet colour; he ſtiles himſelf, N—— *divini miſeratione Venetiarum Patriarcha*, i. e. N—— *by God's mercy Patriarch of* Venice; but not as others do, *Et Sanctæ ſedis Apoſtolicæ gratia, and by the Grace of the holy Apoſtolick See*; the *Venetians* acknowledging no ſuch Superiority. For the reſt, this Election is commonly carried on by Intereſt and Intrigue, as in the chuſing of a Pope, little regard being had to perſonal merit; and 'tis beyond all diſpute, that the Ignorance of the Clergy here is beyond what can well be expreſt or imagin'd; to remedy which, as alſo their licentiouſneſs, and the too free converſation with the Nuns, the Cardinal *Barbarigo*, Biſhop of *Padua*, a wiſe and venerable perſon, has taken a great deal of pains of late years, but to little purpoſe.

The Patriarch of *Venice*.

I muſt not forget to tell you a pleaſant Secret they make uſe of here in behalf of ſome Prieſts that are Muſicians: You are not ignorant that one of the main Qualifications belonging to a Prieſt, is to be a compleat Man; but as the ſweetneſs of the Voice is of great uſe, both in their Opera's and Churches, they have found out this Expedient, that a Prieſt thus fitted for Muſick may exerciſe the Functions of Prieſthood, provided he carry the ſame Implements that before belong'd to his Body in his Pocket.

Father *Mark Aviano*, whom I mention'd in my Letter from *Augsburgh*, is here at preſent, but I could never hear him preach, the crowd of the People being ſuch, that they were forc'd to break a hole thro' the Wall of the Church, to let him go into it from a neighbouring Houſe.

The Cathedral.

If I ſhould enter upon a particular account of the Churches and Cabinets of Curioſities of *Venice*, (among the laſt, the moſt famous are thoſe of *Roſini*, *Juſtiniani*, *Capello*, *Barbaro*, *Grimani*, *Zani*, &c.) I muſt prepare my ſelf for an entire Volume, which being beyond my preſent purpoſe, I conclude, deſiring you will believe that I am,

Sir,

Venice, *Febr.* 14. 1688.

Yours, &c.

LETTER XVIII.

SIR,

THE only thing worth taking notice of betwixt *Padua* and *Rovigo* is the Country, which is plain and fruitful, ſtor'd with Vineyards, Groves, Meadows and well-till'd Grounds, and water'd by many Rivulets. Upon the Road you ſee ſome Houſes of Pleaſure belonging to the *Venetians*, but the Country People about *Rovigo* dwell only in Huts made of Reeds.

Rovigo.

The City of *Rovigo* it ſelf is very poor, and of no great extent, yet is the Reſidence of the Biſhop of *Adria*, that famous City, which imparted its name to the Gulph, being now no more than a half-drown'd Village.

Ferrara.

Ferrara is a large and beautiful City, but poor and ill Peopled: We went on purpoſe to one of the beſt places of the whole City, where four Streets meet, but could not perceive one Perſon in any of them, tho' the Country about it is one of the beſt parts of *Lombardy*, but wants Tillage for want of Inhabitants, this fruitful Country being almoſt deſolate, by the ſeverity of the Papal Government.

Ferrara was united to the Eccleſiaſtical State under the Pontificate of *Clement* VIII. who built a very ſtrong Citadel, which is ſtill in good repair. Of the ancient Univerſity of *Ferrara* remains only a poor College, belonging to the *Jeſuits*. Near the Cathedral ſtand ſome Statues on Horſeback of Braſs; and directly over againſt the Palace of the Nobility is one of Duke *Hercules* II. on Horſeback, on the Pedeſtal of which is an Inſcription granting a Sanctuary to Criminals for twenty paces round it.

Carria.

Cenate.

We alſo ſaw the Ducal Palace, the Houſe of the Marqueſs *de Villa*, and divers Churches and Convents, which have all their own Beauties; and, among the reſt, took notice of the Tomb and Epitaph of *Arioſto*, in the Church of the *Benedictins*.

In the Opera we heard a pretty little Songſtreſs of twelve or thirteen years of age; moſt of the Boxes were fill'd with Jeſuits and Clergymen.

Rimini.

From *Ferrara* to *Ravenna* is fifty miles; all the way we ſaw not one Town or Village worth taking notice of. The firſt days Journey was very paſſable, but afterward the Road becomes very deep, betwixt the Branches of the *Adige* and the *Po*: The ancient Geographers deſcribe its ſituation like that of *Venice*, amongſt the Waters, and it is certain that this was the beſt Harbour the *Romans* were Maſters of in the *Adriatick* Gulph, but ſince that time the *Lagunes* are dried up, and the Sea is at leaſt three miles from it, the City being now ſurrounded with the moſt fruitful Fields of *Italy*: Neither is there the leaſt

Ravenna.

The Harbour.

doubt,

doubt, but that the present *Ravenna* stands in the same place where the ancient *Ravenna* was, there being in the Walls that face the Sea-side many great Iron Rings, by which they used formerly to fasten their Vessels; and the Ruins of the ancient Beacon are to be seen to this day. This City is seated in a flat Country, is not above half as big as *Ferrara*, but meanly built, and as thinly Peopled.

The Mausoleum of Theodoric King of the Ostrogoths.

Without the Walls, near the ancient Harbour, you see the *Mausoleum* erected to the memory of *Theodoric* King of the *Ostrogoths*, by *Amalasintha* his Daughter; 'tis since turn'd into a little Church call'd the *Rotunda*; it is cover'd with one hewn Stone of thirty eight foot diameter and fifteen in thickness, on the top of which stood the Tomb of *Theodoric*, surrounded by the Statues of the twelve Apostles, which were destroy'd during the last Wars of *Lewis* XII, together with the Tomb of *Porphyry*, which since has been fix'd in the Wall of an ancient Palace within the City.

The Cathedral.

The Cathedral is a very ancient Structure, supported by fifty six Pillars of Marble of the *Archipelago*, placed in a double range on each side. The Choir is vaulted with excellent *Mosaick* Work, where they shew you, as a precious Relick, one of the Stones with which St. *Stephen* was stoned. But the great Door of this Church is the most curious thing, worth a Traveller's observation, being made of Planks of Vines, some whereof are twelve foot high, and fourteen or fifteen inches broad; for it is to be observ'd, that in those places hereabouts that were formerly cover'd by the Sea, the Vines grow to a prodigious bigness.

The Church of the Theatins.

In the Church of the *Theatins* they shew a little Window just over the Altar, with the figure of a white Pigeon upon it, placed there, as they tell you, in memory of a Miracle that hapned at the Election of the second Bishop of *Ravenna*, after the death of S. *Apollinarius*, when a Pigeon coming into the Window, perch'd upon him who was to be elected; and the same thing hapned eleven times after successively.

The Churches of S. *Vital*, S. *Apollinarius*, S. *Romualdus*, and S. *Andrew* have many stately pieces of *Marble* and *Porphyry*, brought from *Greece* during the time of the *Exarchy*. The Tomb of *Galla Placidia*, the Daughter of *Theodosius the Great*, is to be seen in the Church of S. *Celsus*, between those of *Valentinian* and *Honorius*.

In the *Grand Place* you see a noble Statue of Brass of Pope *Alexander* VII. And at the other end of the same Square, two Columns, on which formerly stood the ancient Patron and the Arms of *Venice*, whilst *Ravenna* was under their jurisdiction; the like Columns they erect in all Cities belonging to their State; but since, the Pope has put the Statues of S. *Victor* and *Apollinarius* upon the same Columns. Near them, under a Portico, they shew the Gates of Brass, and some other Spoils, those of *Ravenna* took from those of *Pavia*.

We had scarce travel'd a good hour from *Ravenna*, but we enter'd a Forest of Pine-trees, which is four miles long, after which we travel'd within sight of the Sea to the left, and the Marshes to the right.

Cervia.

Having passed the River *Savia* in a Ferryboat, we continued our Journey thro' the little City of *Cervia*, seated among the Bogs; the Inhabitants live upon making of Salt.

Cesenate.

We dined at *Cesenate*, near the Sea-side, and before we had made three miles more, came to the Banks of the famous River *Rubicon*, call'd also the *Piscatello*, and by some the *Frumiscino*; and we were not a little surpriz'd to see our Coach pass it without a Bridge or Ferryboat, tho' *Lucan* in his time gives it the following Character:

Fonte cadit modico, parvisque impellitur undis.

Within an hour after we travel'd close along the Seashore, which was even, sandy and firm, without any Rocks or Shells, till within a mile of *Rimini*, where we were forc'd to travel deeper into the Country, for the conveniency of passing the River *Ariminum*, which washes the Walls of the City of *Rimini*, it is now call'd *Marecchia*.

Rimini.

Rimini is a small and poor City seated in a rich Country. On the Bridge of Marble are two entire Inscriptions, intimating, that *Augustus* and *Tiberius* were the Founders of this City, and that the triumphal Arch was built by the first. Behind the Gardens of the *Capuchins* are to be seen the Ruins of an Amphitheatre, and five hundred paces thence, without the City, a Brick Tower,

The Harbour.

which was the *Pharos* of the ancient Harbour, but is now encompass'd with Gardens, the Sea being retir'd at least half a mile thence.

The Church of S. *Francis* was built out of the Ruins of the Harbour, which was once one of the best in *Italy*.

The Library of the Count *de Gamba Longa* is numerous, but without any rare Books.

In the midst of the Market is a Marble Pedestal with these words upon it, *Caius Cæsar Dict: Rubicone superato civili bell: Commilit: sues hic in foro Ar: allocutus.* In another place you see the brazen Statue of *Paul* V. and near it a curious Marble Fountain.

From *Rimini* we travel'd for fifteen miles along the *Downs* betwixt the Sea and the Fields. As we passed thro' the Village *Catholica*, we found over the Portal of the great Church an Inscription, by which it appear'd that this Village got its Name from certain Orthodox Fathers, who, during the Council of *Rimini* in 359, compos'd for the most part of *Arrians*, used to perform their Religious Service here. Catholica.

About ten or twelve miles thence, towards the *Apennines*, we discover'd the City and little Republick of *Marin*, at the top of a Mountain, on the foot of which are the Limits of its Territories: This small and inconsiderable Commonwealth being below the Envy and Jealousie of its Neighbours, has maintain'd its Liberty for many Ages. The Country betwixt *Catholica* and *Pesaro* is for seven miles together very well inhabited and cultivated. Marin.

The City of *Pesaro* exceeds *Rimini* as well in bigness and the pleasantness of its situation, upon an easie ascent, as in the neatness and goodness of its Buildings. Nothing can be more pleasant to the Eye than the little Hills that surround it, with the agreeable mixture of *Pastures*, *Vineyards* and *Orchards*. Their Olives are very good, but their Figs are esteem'd the best in *Italy*. Meat is so cheap here, that you may buy a pound (which contains eighteen ounces here) for less than an halfpenny; Bread and Wine are cheaper in proportion than Meat, and as both the Sea and Rivers furnish them with plenty of Fish, so this City abounds in all things necessary for Life. Its Fortifications are none of the worst, considering they are after the old fashion. Pesaro.

In the Marketplace is a fine Fountain, and a Statue of Pope *Urban* VIII, under whose Pontificate this City and the Dukedom of *Urbin* were incorporated with the Ecclesiastical State.

From *Pesaro* we continued our Journey along the sandy Shore for seven miles, as far as *Fano*. We saw abundance of Walnuts, Chesnuts, Rushes, and divers other things, forced by the Winds from the neighbouring Rivers to this Shore: One of our Company, among the rest, took up here a certain little Fish, call'd *Cavaletto* by the *Italians*, call'd in *France* by some *Cheval Marin*, or the *Sea-horse*; it is frequently to be met with in the Cabinets, being easily dried and preserv'd; its Head and Neck has some resemblance to those of a Horse. The *Italians* attribute to it a peculiar quality of curing the bite of a mad Dog, if eaten roasted and applied to the affected part, skin'd and beaten with Honey and Vinegar. Fano. A Sea-horse.

Fano it self is a small but neat City, having nothing in it worth taking notice of, except one Triumphal Arch, but the Inscription of it is quite defac'd. It is compos'd of three distinct Gates.

About a mile from *Fano* we travel'd over a wooden Bridge five or six hundred paces long, built over the several Branches of the *Pragio*, which overflow all the circumjacent Country when the Snow begins to melt on the *Apennines*; afterwards coasting along the Sea-side for fifteen miles, we came to *Senegallia*, an old City, enclos'd with a strong Wall and some Bastions, but are not very regular. Senegallia.

Our weariness after a tedious days Journey prov'd the occasion of our good Fortune, without which we had run the same danger that befel several of the Inhabitants, who were the same night present at a Play acted at the Governour's House, but the Arch which supported the Stage, with some of the neareſt Seats, being overladen, gave way, and above thirty persons were kill'd, and many more wounded by this Accident.

From *Senegallia* we kept still all along the Shore, but for seventeen miles met with no Houses, except an old Castle and some Inns, about a hundred paces from the Sea-side. Near a little Village call'd *Turret*, about three miles from *Ancona*, we turn'd into the Land-way, where we arriv'd in good time.

This City is seated upon a double Hillock, at the very point of the Cape, being much larger than any of the four or five last-mention'd Cities, but not much richer, tho' the goodness of its Harbour, and the fertility of the circumjacent Country seems to entitle it to Traffick, of which it had a sufficient share formerly, but is much decay'd of late Years. Ancona.

The Streets of *Ancona* are both narrow and dark, and their Buildings but indifferent, besides that, its situation up and down Hill renders it very inconvenient. The Citadel

Citadel is seated on the first Hill, which commands both the City and Harbour; and on the other, which makes the point of the Cape, stands the Church of S. *Cyriaca*, being a low dark Fabrick, the Front whereof is of Marble, but without any Ornament. Here they boast of the Body of St. *Ursule*, as well as those of *Cologne*, besides many other Saints and Relicks in high veneration among the People. From hence we had a very delightful Prospect of the Sea, City, and Country at one view.

The Triumphal Arch of *Ancona*. At the entrance of the Mole is a magnificent Triumphal Arch of white Marble, erected to the honour of *Trajan*, by the Senate, in acknowledgment of the charge he had been at in repairing this Harbour, as the Inscription, which is not in the least defac'd, tells the Reader.

The *Exchange*. The Exchange where the Merchants meet is built in the nature of a Portico of an indifferent bigness; at the four corners stand as many Statues, representing *Faith*, *Hope*, *Charity* and *Religion*, the last of which is thrown down by an Earthquake.

Odd Dresses. Before I leave *Ancona*, I must tell you something of the oddness of the Dress of the Inhabitants: We saw the chiefest Burghers, on a Holiday, appear in a black Cloak lined with green, with blue or philamot Stockins, Shoes whiten'd with Chalk, and tied with Ribbons of all sorts of colours; their unbutton'd Doublets were embroider'd with divers colours, and the great Sleeves of their Shirts hung down to their Fingers ends. The ordinary sort of Women wear a kind of Coif, with a long Fringe hanging over their Face; the Body of the Gown is generally red or yellow, fastned on four sides with Laces, and trim'd all over with colour'd Galloon; their Wastcoats and Petticoats are both very short and of various colours. The Ladies of Quality imitate in their Dress the *French* Fashion, but after so awkward a manner, that they appear more ridiculous than the others in their Country Dress.

We observ'd another Custom upon this Road, which, they told us, runs from *Ferrara* all over *Italy*; I mean their Paper Windows, which being always torn, prove very inconvenient in the Winter, and afford a very odd Prospect to Foreigners.

To compleat our misery, they would commonly bring a Fricacy of three Eggs, and perhaps as many Pilchards, for a Supper of five or six persons, and at last make us pay as dear as if we'd had extraordinary good Cheer, our Dinner and Supper amounting generally to four shillings a head.

The Tide. The Flux and Reflux of the Sea encreases and decreases according to the distance from the extremity of the Gulph; for at *Venice* the Tide rises about four foot, near *Ravenna* to three, at *Pesara* two, and scarce above one at *Ancona*, till at last it comes to nothing. I am,

Sir,

Ancona, *Febr.* 24. 1688.

Yours, &c.

LETTER XIX.

SIR,

THE Country betwixt *Ancona* and *Loretto* is the best in *Italy*, but the Roads the worst, which oblig'd us to alight several times to ease the Coach. I don't question but you have seen several Accounts of our famous Lady of *Loretto*, but since matters of this nature are variously represented, the curiosity of the thing deserves very well an exact Abridgment of what I was able either to learn or see.

The Holy House of *Loretto*. This House, so much celebrated among the *Roman Catholicks*, is the same (if you will take their Word for it) in which the Virgin was born, where she was betroth'd and married to *Joseph*, where she receiv'd the Salute of the Angel, and where the Son of God was incarnate. This House was from *Nazareth* transported by the Angels into *Dalmatia*, and placed on the Hill of *Tersatto*, 10 *May* 1291, where, after it had continued for three years and seven months, the Angels remov'd it from thence into the middle of a Forest in the Territory of *Recanati*, part of the Marquisate of *Ancona*; but this Wood being famous for many Robberies committed thereabouts, this *holy House* was, after eight months, remov'd a third time from thence to the same Hill on which it now stands; but soon after a Controversie arising betwixt two Brothers, Coheirs of the Ground on which it stood, about the possession of this House, it was in four months after placed by the Angels some paces thence, in the high Road, where it is to be seen to this day.

The Chapel of *Loretto*. To prevent all Inconveniencies that might happen to so sacred a place, they built a most sumptuous Church about it, in the middle of which it stands free from all Injuries; and for its better preservation, they have since erected four Walls, which enclose it on all sides like a Box, without touching the Walls of the *Santa Casa* or *Holy House*; all that Painting, Sculpture, and Architecture were able to perform in the beginning of the last Age, has been bestow'd in this Fabrick, which is built of white Marble of *Carrara*, after the *Corinthian* Order, adorn'd with the most exquisite *Basso relievo*, in which the whole History of the Virgin is represented. Between the double Pillars are two Niches, one above the other; the ten Niches below contain the Statues of the ten Prophets, and those above, the ten Sybils. In the middle of this it is the *Santa Casa* or *Holy House* is enclos'd, which is only a single Chamber forty four palms long within, eighteen broad, and thirteen high, each palm and a half being equivalent to thirteen inches English measure.

To make the Story of the removal of this Hall or Chamber the more probable, they pretend it to be built of some unknown Stones; but, upon the strictest examination I could make, I found the same to be true Brick, of a different bigness and unequal shape, mix'd with some flat and greyish or reddish Stones, which are very common here; the whole is cemented with Lime and Sand, but the pieces are ill joyn'd, as if it had been done in great haste: The Masons Work is almost open to view on the inside, except in some places, where you see certain Fragments of Plaister-work cover'd with Painting, representing the Virgin with the little Jesus between her Arms; this appears plainly in five or six different places. The *holy House* stands from-East to West, a thing not much used in *Italy*; on the East side is a little Chimney, over which, in a Niche, stands the Image of the *Great Lady* of *Loretto*, made (as they say) of Cedar-wood, and by the hands of S. *Luke*, being about four foot high. Her Ornaments are of an inestimable value, and if we may believe those that live thereabouts, she has a great many Robes for change, and seven different mourning Habits for the holy Week: Her triple Crown, which is all over cover'd with precious Stones, was the present of *Lewis* III. King of *France*; they told us, this Distich was engraven upon it:

The Image of our Lady of *Loretto*.

See Fig VIII.

Tu caput ante meum cinxisti virgo Coronæ
Nunc Caput ecce tenet, nostra Corona tuum.

On both sides of the Niche are Cupboards fill'd with ancient Ornaments of this Statue; and in a little Window in the Wall on the South side, they shew you some earthen Dishes which were used in the holy Family; some of these Vessels have since been edg'd with Gold, but that which they shew'd us was a Porringer with a Silver Foot at the bottom, done on purpose to perswade the World that it was made of a strange Earth, whereas it is no more than Potters Ware, the glasing whereof is not so nicely taken off, but that some parts of it remain to be discover'd by a curious Eye. At the West end, just opposite to our Lady, they shew you a Window of about three foot square, thro' which the Angel enter'd: The present Arch of this House being of a modern Fabrick, I ask'd 'em what was become of the old Roof, but they could tell me no true tidings of it. Here are also two remarkable things, which, they say, were transported at the same time with the House, *viz.* the Altar made by the Apostle's own hands, and the Stone on which S. *Peter* celebrated Mass the first time; it is cover'd with Silver, and kept as a precious Relick under the Altar where they usually officiate.

The Floor of the *Santa Casa* is of Squares of red and white Marble; but this is not the old Floor, because that was left, together with the Foundations, at *Nazareth*. This sacred place has three Doors, two of which are at the end facing the East, and give passage to cross from North to South; here the Pilgrims are let in: The other is on the South side, and leads to the Sanctuary, *i. e.* the space betwixt the Altar and the end of our Ladies Chamber.

The rich Ornaments of the holy House. To particularize all the Riches of this place would be an endless piece of Work, the infinite number of precious Stones, wherewith the Mantle of this Image is adorn'd, are alone sufficient to dazzle the sight of the Spectators, besides that all about you see nothing but Lamps,

Lamps, Statues, Buſts, and other Figures of Gold and Silver, not including the twenty eight Candleſticks of Silver and Vermilion, and the twelve of maſſy Gold of twenty ſeven pound weight each. They have a Cuſtom of expoſing the laſt Offering of value for a certain time, before the Eyes of our Lady, in a place made for that purpoſe. That which we ſaw there was an Angel of Gold, with a Heart of the bigneſs of an Egg in his hands, ſet all over with Diamonds of a great value. Our Conductor being an *Engliſh Jeſuite*, he was not forgetful to tell us, that it was a Preſent of the Queen of *England*, and that the ſaid Princeſs had conceiv'd at the ſame minute the ſaid Preſent was offer'd to our Lady, and was then big with Child. He had taken the pains to make a whole Copy of Verſes upon this Subject, by way of Dialogue betwixt our Lady and the Angel, and took a great deal of care to recite them to us more than once with a laudable tone, and would at laſt force a Copy of them upon me.

A Preſent of a Queen of England to our Lady of Loretto.

Round the Walls of the Chapel that encloſes the *Holy Houſe* you ſee a vaſt number of branch'd Candleſticks, to illuminate the whole Fabrick: But the greateſt Curioſity is, the Proceſſions of thoſe Devotees, who crawl round the *Holy Houſe* upon their Knees, ſome five times, others ſeven, and others twelve times, according to the different degrees of their Devotions; ſome of theſe creep along from one ſide whilſt others meet them coming from the other, but all furniſh'd with Beads, and muttering *Pater Noſters*; but as they all covet to come neareſt to the holy place, this ſometimes occaſions no ſmall confuſion, which is the reaſon that this is never done but when there is only a ſlender number of Pilgrims, the chief reſort of whom is at *Eaſter* and the Virgins Nativity, which they celebrate in *September*: I had it from credible hands, that in ſome Years they have had here above two hundred thouſand Pilgrims during theſe two Feaſts.

Proceſſions on their Knees.

The Caravans of Pilgrims.

It is no unpleaſant ſight to obſerve the Caravans of the Pilgrims of both Sexes, who commonly come in Societies: as for inſtance; a certain body of Men joyn at *Bologna*, each of whom has a Frock of courſe Linen, and a Cawl of the ſame, made like a Streiner for *Hippocras*, which covers their Head, leaving only three holes for the Eyes and Mouth. They appear in different colours, each Society chuſing their own, but are all provided with Beads, Girdles, Pilgrims Staves, and the Arms of the Society, which are either painted or wrought on the Back and Breaſt of every Member of the Fraternity. They commonly ride on Aſſes. The Women appear in as rich Apparel as poſſibly they can, and fix to the Bodies of their Gowns a little Pilgrims Staff of the length of a Hand, ſome of which are of Gold and Silver adorn'd with Gems and Pearls, others of Ebony, Ivory, &c. artificially wrought. The Ladies commonly ride in Caleſhes, attended by whole Squadrons of Aſs-troopers.

The Treaſury.

After all the extraordinary things that have been ſaid of the *Holy Houſe*, the Treaſury infinitely ſurpaſſes it in Riches; this is a ſpacious Chamber or Hall, wainſcotted, with ten large Preſſes with folding Doors, the arch'd Roof being a moſt curious ſort of Plaiſter, divided by gilt Compartments, beautified with excellent Pictures. Formerly they were glad to keep abundance of Silver Work here, but the ſame having ſince given place to Gold, is laid up elſewhere in great heaps in private places, and perhaps for private uſes. Theſe Preſſes therefore are now-adays quite fill'd up with nothing but pure Gold, precious Jewels, among which they ſhew a Pearl of an ineſtimable value, ſhap'd after the faſhion of a *Gondola*, or ſuch Veſſels and Ornaments as exceed the value of Gold and Gems.

It would be a piece of Folly to attempt a particular account of what exceeds even Imagination it ſelf; the beſt Idea I am able to give you of this Treaſure is, that you muſt conſider, that all the People, Princes and States who acknowledge the Papal Authority, have for theſe four hundred years laſt paſt, endeavour'd to outvie each other, who ſhould be moſt profuſe in beſtowing the richeſt Preſents that could be had upon this *Holy Houſe*. They have, beſide this, a ſettled Revenue, and vaſt tracts of Land belonging to it; and the Boxes in which they gather the Alms of the Pilgrims furniſh them every Year with more Money to make freſh Purchaſes. To excite the Charity of the Pilgrims, they don't forget to give it out, that the annual Charges of maintaining all that belong to the *Holy Houſe* amounts to no leſs than 38634 Crowns, whereas their ordinary yearly Revenue is no more than 27000 Crowns.

The Arſenal.

From the Treaſury we were conducted to a little Arſenal, which has ſcarce any thing remarkable but ſome Arms taken from the *Turks*, who about fifty years before (under the Reign of *Mahomet* II. and *Palim*) made a deſcent thereabouts, to plunder this ſacred place, but were ſtruck blind by our Lady, as they were endeavouring to break into the Houſe. From the Windows of this Arſenal they ſhew you that part of the Sea over which the Houſe was carried by the Angels; and our Jeſuit made moſt ſolemn Proteſtations, that ever ſince there remains a certain white Tract on the Water, and that he had often obſerv'd it.

I can't paſs by in ſilence, that as we were going Yeſterday towards the *Holy Houſe*, the Rabble flock'd about us, telling us, that we muſt not approach the holy place without confeſſing and communicating, unleſs we would throw our ſelves into manifeſt Danger or ſudden Death.

The Wine-Cellar.

From hence we went to the great Wine-Cellar, ſtor'd with a hundred and fifty Tuns of excellent Wine. And in the Apothecary's Office they ſhew'd us a hundred forty five earthen Veſſels, highly eſteem'd, becauſe they believe 'em to have been painted by *Raphael*. On five of the largeſt are painted S. *Paul* and the four *Evangeliſts*, the reſt being adorn'd with the Hiſtories of ſome Saints, the Metamorphoſes of *Ovid*, &c.

The City of Loretto.

The City of *Loretto* is but ſmall, but well fortified, and has the Title of a Biſhoprick. In the *Great Place* ſtands a moſt noble Fountain of Marble, beautified with divers Braſs Statues, and another erected by the Citizens of *Loretto*, in acknowledgment of certain Privileges granted them by Pope *Sixtus* V.

The Inhabitants get their Livelihood by making and ſelling Medals, Roſaries, ſanctified Beads, Images, *Agnus Dei's*, Meaſures of the height of the Image of our Lady, and ſuchlike Trifles. They ſell here Chaplets, whoſe Beads were as big as Gooſe-Eggs, and are uſed on days of extraordinary Devotion.

The Tradition of the removal of the *Holy Houſe* is ſo ſtedfaſtly maintain'd in this place, that there is ſcarce an Inhabitant ſo mean, but pretends to be deſcended from the Race of thoſe that ſaw the *Holy Houſe* fix'd where now it is, by which means they tranſplant this Tradition from Father to Son *in infinita*. I am,

Sir, &c.

Loretto, Febr. 26. 1688.

Tours, &c.

LETTER XX.

SIR,

Recanati.

TRavelling from hence thro' *Recanati*, a little City ſeated on the top of a Hill three miles from *Loretto*, I look'd into the great Church, where I could ſee nothing worth mentioning but the Tomb of Pope *Gregory* XII, who was depoſed from the Pontificate by the Council of *Piſa*.

Helvia Ricina.

Ten miles further, in a moſt fertile Country on the Bank of the *Potenza*, we paſſed thro' the Ruins of the City formerly known by the name of *Helvia Ricina*, where we ſaw vaſt Fragments of an Amphitheatre, built of Stone and Brick mingled together. We travel'd on this ſide of the River for two miles among the Hills, till we came to *Macerata*, where we lodg'd that night; it being foul weather, we could not ſtir abroad, but were told by the Inhabitants, that it was a pretty large and pleaſant place.

The Country betwixt *Macerata* and *Tolentino* lies all upon a level, and is extreamly fruitful, but very indifferently Peopled. They prop their Vines with Reeds, and plough with Bouffles, theſe Beaſts being ſtronger than Oxen, and eaſier fed.

Tolentino.

Tolentino is ſeated on a riſing ground, being for the reſt a place that has nothing remarkable belonging to it.

Belfort.

The next place we came to was *Belfort*, built all of Stone: A mile beyond it begins the Province of *Umbria*, where we began to enter into the *Apennine*. I remember we fell into the company of a certain Gentleman, who was going from *Macerata* to *Foligno*, who, after ſome Diſcourſe relating to the Lady of *Loretto*, told us, among other things, that they were extreamly pleas'd in *Italy* at the News they had lately receiv'd from *England*, that their King was turn'd Chriſtian. I deſir'd him to explain his meaning, which he did in ſuch terms, that I could not but ſtand amaz'd at his Ignorance, his notions of the *Proteſtants* being near the ſame the *Pagans* entertain'd of the *Primitive Chriſtians*, ſo that with all the Art

I had, I could not perſwade him that we uſed Baptiſm among us: This Simplicity is ſo univerſal in this Country, that they are more ignorant of our Religion than the *Chineſes* themſelves, in which they are encourag'd by their Clergy, who leave no Stone unturn'd to make the *Proteſtants* odious to the People at any rate.

Simplicity of the *Italians* in matters of Religion.

After we had left *Tolentino*, we travel'd for forty miles among the Rocks; the chief Villages we took notice of in our way were, *Valcimara*, *Ponte di Trocca*, *Matic*, *Dignano*, *Colſiorita*, *Caſa nuova*, &c. We left the Mountains near the Village of *Pala*, from whence we diſcover'd the Plain of *Foligno*, which affords the moſt delightful Proſpect from the Hill, being water'd with many Rivulets, well inhabited, and extraordinarily improv'd; ſo that we had no ſooner quitted the Mountains, but we found our ſelves, as it were on a ſudden, in a ſweet and agreeable Climate, where we ſaw the Almond-trees already in Bloſſom, after we had ſcarce recover'd our ſelves from the cold of the froſty Rocks.

Having continued our Journey for four miles in a continual eaſie deſcent, we came into a narrow level way, on one ſide whereof runs a ſmall and clear River, at the end of which lies *Foligno*, in the moſt fertile Country in the World; it has the reputation of a better Traffick than moſt of the other Cities in the Eccleſiaſtical State; their Trade is chiefly in Draperies, Gold and Silver Laces, Silk Stuffs and Spices.

Foligno.

Soon after we came out of *Foligno*, we diſcover'd on the other ſide of the Plain, upon an Eminency, the Town of *Montefalco*, famous for the Interment of St. *Clara*. They ſhew here the three Stones of the bigneſs of ſmall Nuts, ſaid to be found in the Heart of that Saint, upon which the Hiſtory of the Paſſion is engrav'd.

Montefalco.

Near the Village of *Peſignano*, betwixt *Foligno* and *Spoleto*, at the foot of the Hill which encloſes the Plain, a large Spring ariſes thro' four ſeveral Outlets from under the Rocks, which make a ſmall Lake by their conjunction, and thence ſend forth a pleaſant Rivulet, which waters the circumjacent Country.

Not above two hundred paces from the Spring-head you ſee, near the Road, a ſmall Temple of the *Corinthian* Order, call'd S. *Salvatore*, where the Biſhop of *Spoleto* ſays Maſs once a Year. We obſerv'd the three following Inſcriptions on the Front, and on both ſides,

(1) + S. C. S. *Deus Profectarum qui fecit Redemptionem.*

(2) *Deus Angelorum qui fecit Reſurrectionem.*

(3) + S. C. S. *Deus Apoſt.* ——

the reſt being quite defac'd; which together with its manner of building Croſs-wiſe and Eaſtward, as moſt other Churches, and the Croſſes carv'd in divers parts of the Pediments, ſufficiently contradict the Opinion of thoſe who would have this Temple to have been conſecrated to *Clitumnus*, tho' perhaps it may have been erected upon or out of the Ruins of that of *Clitumnus*. It is much more probable what I heard a skilful Antiquary ſay at *Spoleto*, *viz.* That the before-mention'd River is the *Clitumnus* mention'd by the Ancients, and among the reſt, by *Virgil*, in the ſecond of his *Georgicks*.

The Temple and River of *Clitumnus*.

From *Peſignano* to *Spoleto* you travel for ſeven miles in a plain Country, at the foot of the Hills, well ſtor'd with Inhabitants. *Spoleto* is ſeated within the Mountains beyond the before-mention'd Plain, a poor, ill-built, and thinly-peopled City. The Cathedral is celebrated for its height, which however is not extraordinary. The Pavement is inlaid with ſmall pieces of Marble, like S. *Mark*'s Church at *Venice*, and the Pediment of the great Portal is fine *Moſaick* Work on a golden Ground. The Caſtle is ſeated on the higheſt ground, and has nothing to boaſt of but its Situation. About five hundred paces without the City is a Church conſecrated to *Concord*, and ſince call'd the Chapel of the Crucifix.

Spoleto.

Spoleto has alſo ſome Remnants of Antiquity, a Triumphal Arch half ruin'd, and the Fragments of an Amphitheatre with divers looſe Marble Stones, without Inſcriptions, except that the Arch ſtill retains a few Characters. The moſt remarkable thing here is the Aquaduct, which joyns the Mountain of St. *Francis* to that of *Spoleto*: It is a *Gothick* Work, and remains entire and uſeful to this day; its length is three hundred and fifty paces, and its height from the bottom of the Vally two hundred and thirty.

The Aquaduct.

Three miles beyond *Spoleto* we paſs'd the higheſt Mountain hereabouts, call'd *Semma*; and after we had travel'd about five or ſix miles among the barren Rocks, we found the ſucceeding Hills, for four or five miles, cover'd with Lawrels, wild Olive-trees, Tamarinds, Junipers, ever-green Oaks, and divers other ſempervirent Trees and Shrubs.

At our approach to *Terni*, theſe Mountains, which had enclos'd us in a ſtreight paſſage upon the brink of a Torrent which runs at the bottom of the Valley, extended themſelves by degrees to a great Foreſt of Olive-trees laden with Fruit, which they generally let hang till they drop off themſelves: The Olives for pickling are gather'd before they are ripe, and their bitterneſs is remov'd by Art; the ripe ones are as bitter as the green ones, notwithſtanding which they produce the ſweeteſt Liquor that can be imagin'd.

Terni.

From this Wood of Olives we travel'd for a mile in a moſt agreeable Plain, which brought us to *Terni*, ſeated upon the River *Nera*, in a moſt fruitful Country. This City is not ſo large in compaſs as *Spoleto*, but much more populous; they ſell abundance of Oyl: We were told, that during ſix Months of the Year they make here an hundred Charges of Oyl every day, each Charge weighing ſix hundred pounds, and is generally ſold at the rate of twelve Engliſh Crowns. By an Inſcription to be ſeen on the Porch of the Seminary near the Cathedral, it appears, that it may contend for its Antiquity with *Rome* it ſelf; the Inſcription being made for *Tiberius*, is dated thus,

Poſt Interamnam conditam DCCIIII.

Its Antiquity

Terni being anciently call'd *Interamna* and *Interamnium*, from its ſituation *interamnes*, or the two Branches of the River that waters it. On the Bridge is to be ſeen another Inſcription, put there in the time of Pope *Urban* the Eighth, intimating, that this Bridge was built by *Pompey the Great*.

About three miles from *Terni* is the famous Waterfal of Mount *del Marmore*; the way that leads up to it is very rocky, ſo that we were forc'd to alight often from our Horſes. By the way we obſerv'd, on the South ſide of the Mountain, divers Nooks which never felt the rigour of the Winter Seaſon, and among the Buſta's abundance of *Jeſmins*, *Lawrels*, *Myrtles*, *Roſemary* as freſh then (in *February*) as they are with us in *April*.

The great Waterfal.

As we were aſcending the Hill *Papinio*, we obſerv'd in a Valley near the Bank of a River, a tract of Ground planted with at leaſt ſeven hundred Orange-trees, a thing rarely to be ſeen in the open Field, where they have no ſhelter. But to return to our Cataract.

The River *Velerio* has its riſe among the Mountains, twelve or thirteen miles from the place where the Water falls down. At about nine miles from its head Spring it falls into the Lake of *Luco*, whence continuing its Current, with a much larger Stream than before, to a Plain, which in reſpect of the depth below it proves a Mountain, it falls with a great force down from a craggy Rock three hundred paces high, into the Concavity of another Rock underneath it, againſt which the Waters break with ſuch a violent agitation, that it riſes like a cloud of Duſt twice as high as the Fall, and produces a kind of perpetual Rain in all the adjacent parts: The repercuſſion of the Sun-beams in this pulveriz'd Water produces an infinite number of Rainbows, according to the various redounding and ſpurting of this Watery Cloud, the ſight whereof fills the Spectators with amazement; at laſt all theſe Waters gathering into an Abyſs, occaſion'd by the continual falling down of the Waters, from thence break forth with incredible force thro' the Crevices of divers Rocks, and ſo continuing their courſe with a murmuring noiſe a little further, at laſt joyn themſelves with the little River *Nera*, which is much enlarg'd by the acceſſion of theſe Waters.

Narni.

From *Terni* to *Narni* you travel for ſeven miles thro' a plain and fertile Country; it affords an indifferent good Proſpect from the circumjacent Hills on the ſide you come from *Terni*, but deceives you in your expectation after you come into it, being in a manner deſtitute of Inhabitants, with narrow dirty Streets, and ſo uneven, that you can't go five ſteps without aſcending or deſcending; and their Paper Windows make a very beggarly ſhow. I took notice *en paſſant* of two tolerable handſom Fountains of Braſs. The Emperour *Nerva* was a Native of this City.

A little before you enter the City, you ſee the Ruins of a Bridge, ſaid to have been built under the Reign of *Auguſtus*; it is admirable both for its height and ſtructure, becauſe after having joyn'd the Mountain of *Spoleto* to another neighbouring Mount, it ends in the high Road towards *Pemſa*. The vaſt pieces of Marble, which are the Materials of this Bridge, are joyn'd together without any Cement or Iron-work; it hath four or five Arches,

An admirable Bridge.

of

of which only one remains entire; the top of the Mould of the largest being broken: I was credibly inform'd that this Arch is a hundred and seventy foot in extent, which far exceeds the so much celebrated Bridge of *Rialto*.

We had no sooner left *Narni*, but we found our selves again among the Mountains: Thus travelling on for eight miles, we came to the Town of *Otricoli*, near which, at the entrance of a Plain, are to be seen the Ruins of the ancient *Ocriculum*, but could find nothing worth our observation among 'em. *Rimini.*

Not long after we passed the *Tyber* over a Stone Bridge that owes its foundation to *Sixtus* V, and its perfection to *Urban* VIII, as the Inscription tells you.

We came very late to *Citta Castellana*, and departed again early in the morning, this place having nothing that could invite us to stay there. *Citta Castellana.*

Near to *Regnano* we found the old *Via Flaminia*, with its Pavement entire, having not perceiv'd any foosteps of it before since we left *Rimini*, to which place it extended it self.

After we had dined at *Castel Nuova*, an inconsiderable place as well as *Regnano*, we continued our Journey to *Rome*, thro' an infinite number of ancient Ruins, but the Country lay untill'd, and almost destitute of Inhabitants. Having repass'd the *Tyber* by the *Pons Milvius*, (as the ancient Authors call it) since by corruption call'd *Ponte Molle*, we came upon a pav'd way, which brought us betwixt many Gardens and Summer-seats, to the famous City of *Rome*. I am,

Sir,

Rome, *March* 4. 1688. *Yours*, &c.

LETTER XXI.

SIR,

AFter we had rambled two or three days about *Rome*, the good Company invited us to hasten our intended Journey for *Naples*, which is reckon'd eight days Journey from *Rome*. About twelve miles from this City we came to *Marino*, a great Town, now belonging to the Prince *Colonne*, and formerly known by the Name of *Villa Mariana*.

From *Marino* we ascended a rocky Mountain, where we saw nothing but Wood and Bushes: Of the Lake of *Castel Gandolfo*, which we coasted near an hour, we shall have occasion to speak in our return.

About five miles after we had left the Lake, at the descent of the Mountain, we discover'd the Sea, and on our right hand, on a little Hillock, the City call'd *Citta de la Vigna*; being the ancient *Lanuvium*, a Municipal City, which gave Birth to *Antoninus Pius*, but not the *Lavinium* of *Æneas*, according to the common Opinion: *Lavina Sistova* is twelve miles thence, towards *Practica*. *Lanuvium.*

It was late before we reach'd *Velitri*, a little City seated on a Hill, and surrounded by a Wall; it was anciently a considerable place, when it durst cope with *Rome* it self, but now makes a very indifferent figure. The People here are generally of opinion that *Augustus* was a Native of this City, and one of the Servants in the Inn was so curious as to tell us so; but being ask'd who that *Augustus* was, he answer'd, He was the first Christian Emperour; for you must observe, that nothing is more common in *Velitri*, among the *Italians*, than to canonize all illustrious old Men, whether *Christians* or *Pagans*. 'Tis certain that *Augustus* was born at *Rome*, under the Consulate of *Cicero* and *Anthony*, as *Suetonius* positively affirms: 'Tis true, that his Family deduced its Origin from *Velitri*, *Gentem Octavicam Velitris præcipuam olim fuisse multa declarant*. The same Author tells us, that the Chamber in which he was nurs'd, near *Velitri*, was held in the same veneration as they do now-adays the *Holy House* of *Loretto*: *Huc introire*, says he, *nisi necessario & casto, religio est. Temere adeuntibus metus & horror objicitur.* *Velitri.*

In the midst of the Market-place of *Velitri* stands a curious Brasen Statue of Pope *Urban* VIII. sitting, as generally all the Statues of Popes are represented, to denote (as I suppose) their Superiority over other Princes. The Marquess *de Ginetti*'s House is worth viewing, both for its pleasant Situation, and the many Antiquities preserv'd there.

Descending from the Hill of *Velitri*, we took notice of a great many Caves dug on purpose to keep their Wines cool; after which we travel'd for fifteen miles thro' a poor Country, to the foot of the Mountain, on the top whereof stands the little City of *Lormaiera*, built upon the Ruins of the old *Lera*.

About four miles further we saw, on the left hand, about fifty paces from the Highway, certain ancient Ruins, which they told us were the Remains of the place call'd by *St. Paul* the *Three Shops*, but now the *Three Taverns*. On the right hand we discover'd the Cape call'd now-adays *Monte Circello*, suppos'd by some to have been an Island formerly: Here it was that the jealous *Circe* chang'd her Rival *Scylla*, the Mistress of *Glaucus*, into a Sea-Monster, and *Ulysses*'s Companions into Hogs. *Acts* 28.

A little way from the *Three Taverns* you see the City of *Letiæ*, seated on a Mountain; its ancient Fame of the goodness of its Wine is now quite lost, the Mountain producing nothing of that nature at present: 'Tis true, the Woods wherewith these Mountains are almost cover'd, produce abundance of these Trees, call'd *Focus Indica*, some of which grow up to the height of thirty or forty foot, with Trunks as big as a Man; Lawrels and Myrtles you find in great plenty in the Hedges, and abundance of Orange-trees in the open Field. *Letia.* *The Indian Figtree.*

Not far from *Letia*, at the Village of *Casa Nuova*, you may take Boat upon the Lake, which brings you to *Terracina*, but we continued our Journey by Land, and turning to the left, entred into a Valley, which brought us to the Mountain and City of *Piperno*. In our passage thither I observ'd a Church-yard planted with Orange-trees, a thing not usually seen in *Italy*, where all People of fashion have their Chapels or Vault in some Church or Convent, and the poorer sort are buried in some private corner, without the Cities; besides, whenever they have any Church-yards, they plant them with Pines, Yew-trees or Cypresses, but never with Orange-trees.

Piperno is a modern City, built near the place where the ancient *Privernum* stood, the Metropolis of the *Volsci*, and the Residence of their King *Metabus*, Father to the famous *Camilla* *. The Bishoprick of *Piperno* was united with that of *Terracina*, by reason of its Poverty: They keep the Bishop's Chair in the Choir of the Cathedral. In the Church of St. *Benedict* they shew you an Image of our Lady, made by St. *Luke*, which, they say, could not be burnt at the time of the Conflagration of *Piperno*. *Piperno* or *Privernum.* * See *Virgil*, l. 11.

On the Hillock of *Piperno*, call'd *Colle Rosso*, the Lilies and Daffodils grow naturally in great plenty; this Hill also affords a peculiar fine Earth for Potters Ware. From the top of this Hill you may see a little City call'd *Mayerica*, near which is a Lake, the Waters whereof rise considerably two days before Rain.

From *Piperno* we travel'd over sandy Hillocks, cover'd with various sorts of sempervirent Shrubs; we got afterwards into a Wood, where we saw abundance of Cork-trees much resembling an ever-green Oak, and, to speak the truth, I believe it to be a kind of Oak, since it bears Acrons; it has this peculiar quality, that the more you strip it of its Bark, the stronger it grows, and produces immediately a new one.

Soon after we came out of the Wood, we went to see the Abby of *Fossa Nuova*, said to be built upon the Ruins of the *Forum Appii*, about some three hundred paces from the high Road. The Story the Monks told us concerning *Thomas Aquinas* is a very odd one; they tell you, That the said *Thomas Aquinas*, in his way from *Fundi* to the Council of *Lyons*, finding himself very ill, alighted from his Mule, and fastning a Stick in the Ground, ty'd his Mule to it, whilst he laid himself asleep in a corner of the Wood not far from the Church; the Mule getting loose, ran strait to the Church, and setting his Feet in the Choir, sunk in an instant into the Pavement, where he died. They shew you the print of his Feet, over which they have laid an Iron Grate. However, as they search'd after the Master, to chastise him for his Negligence, they met with St. *Thomas*, who was so afflicted at the loss of his Mule, that he died within a few days after in this Convent, where his Body was entomb'd in the Church, and from thence afterwards remov'd to *Fundi*, and from *Fundi* to *Thoulouse*. *Fossa nova.*

About ten miles thence we began to discover certain Remains of the ancient high Road call'd *Via Appia*, made by *Appius Claudius* when he was Censor; you see it come out of a deep Marsh, which is at present unaccessible, whereas formerly it was the direct and common Road from *Capua* to *Rome*, a convincing Instance of the constant vicissitude of all Worldly things. The same thing we observ'd in our way betwixt *Citta Castellana* and *Rome*, of the *Via Flaminia*, of which we saw now and then *The Via Appia.*

considerable Tracts preserv'd entire, as on this side *Regnano*, and towards *Castel Nuovo*, fifteen miles from *Rome*; whereas in other places it amounts up to inaccessible Mountains, and in other places it is swallow'd up in deep Marshes and Valleys, occasion'd questionless by Winds, Rains, great Floods, Earthquakes, and other suchlike Accidents, which produce such stupendious Changes upon the Surface of the Earth.

In my opinion these famous Roads are more surprizing than most other pieces of Antiquity, considering that an infinite number of Passengers, Horses and Chariots should incessantly, for so many Ages, tread on this Pavement, and yet so many considerable Fragments of it remain entire: The Stones which compose this Pavement are not all of the same bigness, (*Procopius* say they were all square, but he is in an Errour) of a grey and reddish colour, not unlike rusty Iron, very hard, and ten or twelve inches thick; generally speaking, those of the largest size are above two foot, and the least not less than one: Notwithstanding the great difference in their shape and figure, they have been joyn'd so nicely, that in those places where the Pavement is quite entire, you can't thrust the point of a Sword betwixt 'em.

Via Consulares These Ways, which they call'd *Viæ Consulares*, had on each side Borders of the same Stone raised about two foot above the rest; I have observ'd 'em very entire in some places; they call'd 'em *Cippo* or *Marginei*, or *Marginationes Viarum*; and 'tis betwixt these Borders the true breadth of these Highways ought to be taken, according to which I found the two Ways, *Via Appia* and *Via Flaminia*, twenty palms broad, with very little difference, which makes fourteen foot less by four inches English measure. In some places you see Ruts made by the Chariot-wheels three or four inches deep, the Tract whereof, from one Pavement to another, is the surest mark of its ancient situation; for the rest, the Pavement is whole and even, without any visible impressions made by the Horseshoes. They told us, that the Foundation of this Pavement was made of another very thick Lay of Stone, fix'd on a Bed of Sand, which keeps it from sinking.

All along the Road to *Terracina* are to be seen the Ruins of many ancient Monuments, erected formerly for Ornament sake.

Terracina (so call'd from its situation upon a Rock of difficult access) or *Terracina* is the *Anxur* of the Ancients, now a poor and ill-peopled place, seated in a desolate Country. A little beyond *Terracina* one may plainly discover divers parts of the Pavement of the *Via Appia* to have been cut thro' the Rock call'd *Pisca Marina*, which being near a hundred twenty six foot high, the ancient Cyphers are mark'd from ten to ten in a capital Roman Character, on the inside of the Rock, which is cut perpendicular, so that the Cypher on the top is CXX. A certain Antiquary of *Rome* told me, that having measur'd these distances, he found them almost all unequal, whence some conjecture, that these marks were only made for the direction of the head Workman, without any further design. Others are of opinion, that the distance of each Cypher marks the division of the Work of every ten Days, and that the inequality did arise from the more or less difficulty the Workmen met with in cutting the Rock. The narrowness of the Rock towards the top, and the greater distance in proportion to it, seem to confirm this Opinion, were it not that according to this Supposition the first Tenth must have been mark'd above, and the Cypher CXX at the bottom, it being very probable that they begun at the top of the Rock.

We continued our Journey over the Hills cover'd with Cork-trees, the Marshes and the Sea on our right, and thus keeping near the old Pavement, we arriv'd at night at *Fondi*. In our way, about three miles beyond *Terracina*, we saw an old Wall which, they told us, was the Boundary betwixt the Ecclesiastical State and the Kingdom of *Naples*.

Fondi. *Fondi* is seated in a flat Country, not far from a Lake bearing the same Name, which extends it self in a large compass among the Marshes, betwixt the Hills and the Sea: The Eels of this Lake are highly celebrated for their bigness. This City was entirely ruin'd in 1534, by *Hariaden Barbarossa* Admiral of the *Turkish* Fleet, the History of which is painted in the Church of the *Annunciata*. *Fondi* is pav'd with the Stones taken from the *Via Appia*, but are not near so exactly joyn'd.

Cicero's Garden. Not far from the Castle they shew you a Garden which (they say) belong'd to *Cicero*. The *Dominicans* preserve with a great deal of Veneration the Chamber and Auditory of *Thomas Aquinas*, as also an old Orange-tree, which he planted; he died in 1273, so that certainly this is the oldest Orange-tree that ever was heard of: I remember they told us strange things of this Tree, and among the rest, that its Leaves were of a quite different shape from those of other Orange-trees; but we could not find the least difference, and were convinc'd by our own Eyes, that the Winter had not spar'd the Oranges of this Tree any more than the rest in other places.

After we had left *Fondi*, we travel'd for ten miles upon the old Pavement to *Mola*, among the Mountains.

Near *Itri*, a small City, seated upon a Rock about six miles from *Fondi*, I took notice of certain large Trees call'd thereabouts *Soucelles*; the Fruit is a Cod of half a foot long, of the thickness of a Bean-cod; they dry 'em, and then they taste like Hony or Manna; their true name is *Carobba*. The Fruit *Carobbe*

About ten a clock in the Morning we came to *Mola*, a little City seated upon the Sea-shore; here are to be seen vast heaps of Marble Stones and other Ruins; *Formiæ*, once a glorious place, built by *Antiphinanes* King of the *Lestrygons*. The Air is infinitely sweet here, and the Hills on the Gulph between *Cajeta* and *Mola* produce most excellent Fruits and Wines, as the Sea affords them vast quantities of Fish. They shew'd us in particular the Ruins of a certain old Palace, which, they tell you, belong'd to *Cicero*, and was for the most part destroy'd by the Sea. The various pieces of *Mosaick*, which are plainly to be distinguish'd yet in divers parts, sufficiently testifie that it was no ordinary Structure; and they assure you with a great deal of confidence hereabouts, that certain Inscriptions have been taken from thence, which made it plainly appear to be *Cicero's*. *Cicero's Palace.*

It blowing then a very brisk gale, we were at a stand whether we should venture over the little Gulph (which is four miles broad) to *Cajeta*, seated on the very point of the Cape, directly opposite to *Mola*, but at last having resolv'd on the passage, we found *Cajeta* of a pretty large extent, strong by Art and Nature, by reason of its difficult access upon the high Rock. The Harbour is also very good. Here is to be seen the Tomb of *Charles* of *Bourbon*, Constable of *France*, who was slain in the sacking of *Rome* by the Imperial Forces: And the ancient *Mausoleum* of *Munatius Plancus*, commonly call'd the Tower of *Orlando*. The Epitaph of the first is as follows; *Cajeta.*

Aucto Imperio, superatæ Italiæ, devicto Gallo, pontifice obsesso, Romæ capto, Bourbonii hoc marmor cineres continet. The Epitaph of Charles of Bourbon.

From hence we were conducted to the cleft Mountain call'd *La Spaccata*, just at the brink of the Sea-shore; it is separated from the top quite to the bottom, where 'tis about four or five foot asunder, but grows broader and broader towards the height: The Concavities on one side, and the Protuberances on the other, directly opposite to one another, seem to be evident marks of its being really divided, which, they say, hapned at the time when our Saviour gave up the Ghost. At one of the insides of this Rock they shew you the print of a Hand, which softned under it on the Challenge of a certain incredulous person; underneath it you see this Distich: The Rock Rupes the Gonrel.

Improba mens verum renuit, quod fama fatetur
Credere; at hoc digitis sexa liquata probant.

This Rock being a famous Pilgrimage, there are small Steps contriv'd, which lead down to a small Chapel dedicated to the holy Trinity. The Curate would have given us some pieces of the Rock he cut off with a Hammer, but finding us not willing to overcharge our selves with such sort of Baggage, he seem'd to be offended at our refusal.

From thence taking our way to the Cathedral, we were shew'd, among other Antiquities, a pretended Pillar of the Temple of *Solomon*; four such-like are to be seen at the high Altar of S. *Mark's* Chapel at *Venice*. Here is also a very ancient Vessel of white Marble, said to have been found at *Mola*, which now serves instead of a Font in the Baptistery; it is a most curious Piece, and most entirely preserv'd: Its shape resembles a Bell about four foot high, supported by four Lyons of the same materials. The *Basso relievo* is esteem'd most rare Workmanship, especially the little *Bacchus* arising out of *Jupiter's* Thigh, put by *Mercury* into the hands of *Ino*: All round it you see *Satyrs* and *Bacchanals*, and among the rest a *Faunus* playing on two Pipes at once, as I have seen the Shepherds do in *Tyrol*; the Workman's Name is engraven on the Vessel, ΣΑΛΠΙΩΝ ΑΘΗΝΑΙΟΣ ΕΠΟΙΗΣΕ.

Not far from the Gardens of the *Franciscans* *Zoccolanti* is a Bush of Thorns which has scarce any Pricks, which, they

they say, has grown thus ever since S. *Francis* rowl'd himself there to extinguish his Lust. Near the place call'd *Della Foglia*, they shew you where he preach'd to the Fishes.

The Statue of Æsculapius.

As you go up by the little Door of the Episcopal Palace, over against the Altar of the *Holy Sacrament*, there is a Marble Statue of about four palms high, representing an old Man setting his Feet upon a little Dog, underneath which is a Death's Head, and a Serpent whose Tail is placed on the Dog, wraps it self about the old Man, and rests on his Head, and has an Eagle on his. This is generally supposed to be the Statue of *Æsculapius*, with his Serpent, the Dog signifying Vigilance requir'd in a Physician, and the Eagle the Empire of God; the Death's Head is an Emblem of Human Nature, subject to that Deity.

After a short stay at *Cajeta* we return'd to *Mola*, and then coasting the Sea upon the *Via Appia* for eight miles, came to the Ruins of the ancient City of *Minturna*, where-

Minturnæ.

abouts *Marius* shelter'd himself after his Army had been defeated by *Sylla*.

We took notice in our passage of the Ruins of an old Amphitheatre, and the Remnants of an Aqueduct which came from the little City of *Tajetto*, two miles further on the left hand. The River *Garigliano* (formerly call'd *Liris*) runs just by *Minturna*; we pass'd it in a Ferry-boat, and quitting the old troublesome and slippery Pavement, travel'd thro' the Meadows to the Village of St. *Agatha*, where we lodg'd that night.

Capua.

The Country betwixt this Village and *Capua* (which is sixteen miles) is very level, and extreamly fruitful near *Capua*. Not far from S. *Agatha* they shew'd us, at some miles distance, the Hills which formerly produc'd the famous *Falernian* Wine.

Capua is seated upon the Bank of the *Volturnus*, the chief River of the Kingdom of *Naples*, tho' but of an indifferent bigness; it has divers Inscriptions and Marble Stones, brought thither from the ancient *Capua*, the Ruins whereof we visited, about two miles from thence, near the Mountains to the Eastward, the Town call'd St. *Marys* being built out of the Ruins of this once so celebrated City; the many little Temples and old Castles, the remnants of two Amphitheatres, one of the Gates, and a great number of broken Pillars and other magnificent Fragments of Architecture, are undeniable Proofs of its former greatness. The Country People brought us variety of Medals to sell, but as they are cunning enough to carry the best to the Antiquaries of the neighbouring Cities, who pay them a good rate for 'em, so they seldom offer any thing but their Refuse to Travellers.

The Campaign betwixt *Capua* and *Naples* (which is sixteen miles, and part of the Province of *Terra di Lauro*) is perhaps the most fruitful Soil in the World, whence it is that they have given it the Name of *Campagna Stellata*, to signifie the benign influence of the Stars upon this Country.

Among other places, we passed thro' *Aversa*, built (as they tell you) out of the Ruins of *Atella* by the *Normans*, after they had driven the *Saracens* and *Greeks* out of *Naples*.

Naples the Grecod.

The City of *Naples* was rebuilt by the *Cumani*, who gave it the Name of Νεάπολις, to distinguish it from the Remnants of the high City, unto which they gave the Name of Παλαιόπολις, for both were before that time called *Parthenope*, from the Mermaid *Parthenope*, who after *Ulysses* and his Companions had escap'd her Snare, threw her self, out of despair, headlong from a Precipice, and was interr'd at *Pelaiopolis*; tho' some others derive its Etymology from *Parthenope* the Daughter of *Eumolus* King of *Thessaly*, who setled a Colony there, and chang'd its ancient Name into that of *Parthenope*. These *Grecian* Names seem sufficiently to evince, that the *Greeks* were the Founders of this City, which is very large and populous, tho' I am not able to give you an exact account of the number of its Inhabitants: Its figure is very irregular, and its circuit, according to the computation of some who have walk'd round the Wall, is about nine miles, not including the Suburbs, which amounting to nine more, make the whole circumference up eighteen: It is pav'd all over with square Stones of the same bigness, the Streets being generally streight and broad, the Houses lofty, flat-roof'd and uniform, in which it exceeds the Buildings of *London*, *Paris*, *Venice*, and even *Rome* it self, all which have very fine Noblemens Seats, but these are mix'd with a great number of ordinary Houses, whereas at *Naples* they are, generally speaking, very handsom Fabricks. To the South it is enclos'd by a little Bay, and to the North by very fertile Hills, which rise by an easie ascent into *Campagna Felice*; to the East lies the Plain which leads to Mount *Vesuvius*, and on the West side the *high Town*, where are the *Chartreux* and the Castle of S. *Ermus*, the Prospect of which Ascent is very charming to behold.

Palaces of Naples.

Besides these private Houses, there are a great many who may be rank'd among the number of the best Palaces; as for instance, those of the Dukes of *Matalone*, *Gravina*, *Airola*, and *de la Tour*; of the Princes of S. *Agatha*, *Montemiler*, *Bisera*, and *Cellamara*; the Palace of the Viceroy stands in a *Great Place*, its Front is very regular, and adorn'd with three Orders of Architecture; its whole length is near four hundred foot, and was built by the famous *Montana*. The three Castles of *Naples*, the Academy call'd *Studii Nuovi*, the School for riding the great Horse, the Convents in general, the Hospitals, the Arsenal, and the Magazines for their Galleys, are all very remarkable Structures. The whole City is adorn'd with

Churches of Naples.

a considerable number of Fountains, among which three are of an incomparable grandeur and beauty: But the Churches here, both for their number and beauty, surpass all the rest; their Frontispieces, Portals, Chapels, Altars and Tombs being the most exquisite Pieces of Architecture that Art ever produc'd; they are fill'd with Pictures, Sculptures, and Gold and Silver Vessels, and their Arches, Wainscots and Walls are cover'd with the most precious Marble curiously laid together, or with Compartiments of *Basso relievo*, or of gilt Joyners work, and beautified with the Works of the greatest Painters. To be short, wherever you turn your Eye, you are dazled with the curious Works of *Jasper*, *Porphyry*, and *Mosaick* of all sorts, and the most exquisite Products of Art. The Church of the *Jesuits* is an excellent Fabrick, embellish'd with magnificent Ornaments from the top to the bottom. The Painting of the Dome is the Work of *Lanfranc*; that of S. *Mary* of the *Annunciata* is not inferiour to it; and the famous Hospital (which has two hundred thousand Ducats annual Revenue) is exceeding rich all over, as are those of S. *Philip of Neri*, S. *Maria le Nuovo*, S. *Severin*, S. *Paul*, S. *Dominick*, the Church and Convent of Mount *Olivet*, the Church of the *Holy Apostles*, S. *John Carbonara*, of the *little Hospital*, and S. *Marys of Health*, not to mention many more, which are all very fair, and have their Vestries and Treasuries stor'd with Riches.

I remember that two *Theatines*, as they were conducting us into their Church of the *Holy Apostles*, made heavy complaint of the Poverty of their Order, (they having no Possessions, and at the same time not being permitted to beg, like the *Mendicants*) but after they had shew'd us the magnificence of their Church, and fourteen large Cupboards in the Vestry fill'd with Gold and Silver Vessels and other precious things, we had sufficient reason to believe, that they had no great occasion to go a begging.

The Convent of the Chartreux.

The spacious Convent of the *Chartreux* of St. *Martin* is every where full of curious and magnificent Pieces; and the Church, tho' none of the largest, yet is a compleat Piece both for the Materials and exquisiteness of the Art. The Monks that were our Conductors assur'd us, that under one Priorate there were bestow'd among them above five hundred thousand Ducats in Silver Plate, Sculptures and Pictures: The Nativity of Christ is a most exquisite Piece, done by *Guido*; the four Pictures of the Last Supper are of the hands of *Espagnolet*, *Anna Caraghe*, *Paul Veronese*, and Cavalier *Massimno*, the last of which has represented Christ standing, giving the Sacrament to his Apostles, who are upon their Knees; besides many other Pieces of high value.

The Pavement of the Cloyster (which is an hundred paces square) is of Marble inlaid in Boughs and such-like Ornaments, the four Galleries being supported by sixty Pillars, each of one entire piece of the best white Marble of *Carrara*. Every Frier has his own Chamber, a Closet and Library, besides a little Garden; and the Prior's Lodgings are fit for the reception of a Prince: Here it is they shew the famous Crucifix of *Michael Angelo*, done, as they say, to the life after a Peasant who was crucified by the said Painter; it is of Wood, and not above half a foot high: It is observable, that the Crucifix holds his Head streight, which looks not very like the posture of an expiring Person on the Cross. They have also a S. *Lawrence*, by *Titian*; and some Designs of *Ruben's* and *Albert Durer*, which are valued at a high rate.

From this Ascent you have the most delightful Prospect that well can be conceiv'd; you have at one view the Sea and many Islands, and among these that of *Capreæ*, the famous *Seraglio* of *Tiberius*, as likewise the whole City of *Naples*, with its three Castles, the Castles of the Egg, the new Castle, and that of S. *Elmo*; the Harbour, Mole and Lantern; and along the Sea-shore, the Creeks and

Inner

Inlets mix'd with the little Capes, as also a great number of Villages built along the Sea-side; towards the Land-side, the Gardens and fertile Hills leading into *Campania Felice* are the most agreeable Objects in the World; and at a greater distance you may behold the horrible Smoke and Shape of the Mount *Vesuvius*.

Chief Relicks at Naples.

To describe all the Relicks, Statues, or miraculous Images, as they stile them here, would be an endless piece, I will only mention a few of 'em: At St. *Lewis* they keep some of the Virgins Milk, which becomes liquid on all our Ladys Festivals; at St. *John Carbonara* the Blood of St. *Januarius* is boil'd up when any one approaches his Shrine, as the Blood of St. *John Baptist* (preserv'd at St. *Maria Donna Romita*) does, whilst they say Mass for his beheading. I pass by the pieces of the true Cross, the Nails, the Branches of the Crown of Thorns, the Images said to be made by St. *Luke*, and suchlike preserv'd Rarities. At St. *Dominick the Greater* they shew the Crucifix that spoke to St. *Thomas Aquinas*; and another in that of the *Benedictins*, which, if you will believe them, spoke much more to Pope *Pius* V. At the Church of St. *Agnello*, in the Chapel of the *Monaci*, they shew you also a speaking Crucifix, with a long Inscription underneath relating to the Story; and another in the same Church, which, they tell you, used to hold long Dialogues with *Fame* the Mother of St. *Agnello*, and with St. *Agnello* himself; this they stile the Image of S. *Mary of Intercession*.

Miraculous Crucifixes.

Among the miraculous Crucifixes here, that of S. *Mary* of the *Carmelites* must not be passed by in silence; for when D. *Pedro d'Arragon* besieg'd *Naples* in 1439, it bow'd its Head at the sight of a Cannon Ball, which only beat off the Crown of the Crucifix.

These Churches contain a vast number of Tombs and Epitaphs: In that of St. *John the Evangelist* are six or seven Epitaphs, made by *Joh. Jovianus Pontanus*, among which one is for his Daughter *Lucia*, another for his Son, and two more for his Wife and himself. At St. *Clara's* you see the Epitaph of King *Robert*, surnam'd the *Good* and the *Wise*. At S. *Domin. Maj.* one for a noble Lord of the Family of *Caraffa*, and another for the Cardinal *d'Ariano* of the same House. In the Vestry of this Church you see many of the Tombs of the *Kings* and *Queens* of *Naples*, among which those of *Isabel* of *Arragon*, Daughter of *Alphonsus* I. and Wife of *John Galeazzo* Duke of *Milan*, and of *Joan* the first Queen of *Jerusalem*, and both the *Sicilys* deserve to be remember'd, the first runs thus:

Noted Tombs and Epitaphs.

Hic Isabella jacet, centum insita sanguine Regum,
Quæ cum Majestas, Itala prisca jacet;
Sol qui lustrabat radiis fulgentibus orbem,
Occidit, inque alio nunc agit orbe dum.
Obiit die 11 Febr. 1524.

The second thus:

Inclyta Parthenopes jacet hic Regina Joanna
Prima, prius felix, mox miseranda nimis.
Quam Carolo genitam, mustavit Carolus alter
Qui morte illa virum, fustulit ante suum.

She was the Daughter of *Charles* of *Sicily*, Duke of *Calabria*, and was strangled by *Charles Durazzo*, whom she had adopted, and who rebelling against her, accused her of having strangled *Andrew* of *Hungary* her first Husband, whose Tomb is to be seen in the Cathedral.

In the same place is also to be seen the Tomb and Epitaph of the famous Marquess of *Pescara*, by *Ariosto*; and in the Church of S. *Mary of Concord*, a long Inscription upon the Tomb of a King of *Fez*, who having embrac'd the *Roman* Faith, and fought under the *Imperial* and *Spanish* Banners, died a hundred Years old in 1641. The Tomb of *Innocent* IV. who died at *Naples* in 1254, is to be seen in the Cathedral, with two long Epitaphs, one whereof is in *Leonine* Verse. In the Church of St. *Agnello* is the following Epitaph for a Bishop who refused the Cardinals Cap;

Sigismundo Papacudæ Franc. F. Tropeiensium Præsul; viro opt. & Jurisconsulto, qui cum in eorum Cardinalium fulsset à Clemente VII. ascitus, maluit in patriâ Episcopus vivere. Vixit ann. 80. M. VI. D. X. obiit 1536.

In the Church of St. *Severin* of the *Benedictins*, in the most beautiful Chapel belonging to the Family of St. *Severin*, are to be seen the Tombs and Inscriptions of three young Lords, Brothers, poyson'd by their Uncle; as also that of their Mother, lamenting the untimely Death of her Sons. Directly opposite to the Church of the *Carmelites* you see a kind of Chapel, erected by order of *Charles* I. King of *Naples*, in the same place where he caused the Head of the unfortunate *Conradin* to be cut off, and at the same time of his Cousin *Frederick* Marquess of *Baden* and Duke of *Austria*, with five or six other Lords, the whole History of which is painted in *Fresco* on the inside of the Walls of the Chapel, in the middle of which stands a Pillar of *Porphyry*, and round about it this Distich:

Astutâ ungue Leo, Pullum rapiens Aquilinus
Hic deplumavit, Acephalumque dedit.

The *Carmelites* shew'd us in their Convent the place where the famous Rebel *Thomas Aniello* (commonly call'd *Massaniello*) was slain, after he had been the Head of the Rebels eighteen days: I have a piece of Money that was coin'd whilst this Rebellion lasted, with this Inscription, *S. P. Q. N.*

As we passed by the Church of St. *Mary Major*, our Conducter told us, there was a brazen Hog to be seen there, made by *Pomponius* Bishop of *Naples*: it seems the place where this Church now stands was haunted by the Devil in the shape of a Hog, which so terrified the Inhabitants, that they left their Houses, till the said Bishop being bid by the Virgin to build a Church for her in the same place, the infernal Hog disappear'd.

I reserve the rest I have to tell you about *Naples* for my next; in the mean while believe that I am,

Sir,

Naples, Mar. 14. 1688.

Yours, &c.

LETTER XXII.

SIR,

Antiquities of Naples.

THE City of *Naples* having been subject to so many Masters and various Desolations, has lost the greatest part of its Antiquities; however, in the Front of S. *Paul major* you still see the Frontispiece of the ancient Temple of *Apollo*, afterwards dedicated to *Castor* and *Pollux*, by one *Tiberius Julius Tarsus*, his Name being to this day distinctly to be seen on one of the Friezes of this Frontispiece:

ΤΙΒΕΡΙΟΣ ΙΟΥΛΙΟΣ ΤΑΡΣΟΣ

The Portico rests upon eight twisted Pillars of the *Corinthian* Order, and the Pediment is adorn'd with *Basso relievo*, representing the Deities. The Columns of the *Restituta* are said to have been taken from the ancient Temple of *Neptune*. Here are also to be seen some Ruins of an Amphitheatre, and an ancient Statue of the *Nile* upon a Crocodile. The House of D. *Dionedes Caraffa* contains many Sculptures and ancient Inscriptions; in the Court you see the Head and all the Crest of a brazen Horse which had no Bridle, which being an Emblem of the Liberty of *Naples* whilst yet a Commonwealth, stood in one of the Great Places, but King *Conrad* having order'd a Bit to be put on this Horse, order'd the following Distich to be set on the Pedestal:

Hactenus effrenis, Domini nunc paret habenis
Rendomas hinc equis, Parthenopensis equum.

On the Hill, where 'tis suppos'd the ancient *Paleopolis* stood, are a great many old Ruins, and divers Collections of Medals, which contribute not a little to the true understanding of the History of *Naples*, are to be found in the Cabinets of the Antiquaries of this City, and especially in that of Mr. *Ricketti*. Of the Catacombs I shall have occasion to speak hereafter.

The Bandits extirpated in Naples.

After Pope *Sixtus* V. had clear'd the Ecclesiastical State of the *Banditti*, they became more numerous in the Kingdom of *Naples*, so that within these few Years Travellers were forc'd to go in Caravans to secure themselves against their Insolencies; but the Honour of freeing this Country from this dangerous Vermin belongs to the Marquess *del Carpio*, late Viceroy of *Naples*, who put a great number of 'em to death; and I remember we saw lately above five hundred of them at work in the Arsenal,

who

who had surrender'd under condition that their Lives should be sav'd and they not made Galley-slaves: But notwithstanding all this, it must be own'd, that the generality of the *Neapolitans* are a very wicked Generation. We were credibly inform'd, that in two Prisons only there were no less than four thousand Malefactors at that time; this has questionless given occasion to the noted Proverb, *That* Naples *is a Paradise inhabited by Devils.*

Certain Defects of Naples.

Besides this, notwithstanding all the outward Grandeur of this City, it has several things which not a little overcloud its Lustre; for Women are as scarce to be seen here as in any part of *Italy*. The Habits and Equipages of Persons of Quality are all black, being not allow'd the wearing of Gold and Silver, and the greatest Lord no more than two Footmen; besides that, most of their Coaches are drawn by Mules; they generally appear in the *Spanish* Dress. The Vigeroy's Court is very quiet and melancholy. Their Trade is also much decay'd, their chiefest Commodities at this time being Soap, Snuff of Tobacco, Stockins, Wastcoats, &c.

The Mount Vesuvius described.

From *Naples* to the top of Mount *Vesuvius* is eight miles, of which I will endeavour to give you a more exact account than in all likelihood you have seen hitherto. The first four miles, as you pass along the Sea-coast, you go thro' many good Villages, and the Grounds are very well cultivated; yet from place to place you see divers great Stones, thrown thither by the Eruptions of that Mountain: The last of these Villages is call'd *Resina*; when turning to the left, we began to ascend, but still on Horseback for two good miles further, among loose Stones and heaps of burnt Earth; the nearer you come to the top, the more you find the Ground crack'd and cover'd with these burnt Stones, and in divers places you see the tracks of the Chanels of Sulphur, which have been forced down from the top towards the bottom. About the middle, the Ascent beginning to grow extream rough, you must alight to pass forward on foot, which is not done without a great deal of difficulty, the Ashes, or rather calcin'd Dust, not allowing any sure footing: but at last, after several small restings, we came up to the ancient Gulph or Hollowness, for of late considerable alterations have hapned in this Mountain. The circumference of this first Gulph has about a mile in diameter, to the best of our guess; the edges being worn into divers rugged Elevations, you may go down into it several ways about a hundred paces below the first Circle of the brim of the Gulph, this being the whole depth of this old Mouth; for it is to be observ'd, that this vast Abyss was by an extraordinary Eruption (not many years ago) almost quite fill'd up with a mixture of Sulphur, Alom, Nitre, Saltpetre and nitrefied Earth, which, after the violence of the Eruption was past, turning into a hard Crust, produc'd a Level in this Gulph not above a hundred paces below its exteriour Brims; but some time after, a furious Eruption having shaken and broken thro' this Crust, tumbled the hardned pieces one upon another, as we see the broken Ice of a Pond congeal'd by a sudden Frost. This unequal Superficies is interspers'd with divers burning Funnels, which emit continual Exhalations, and in some places we could feel the heat thro' our Shoes.

The Hollowness of the Gulph.

You must know then, that in the middle of this Superficies (which is almost of a circular figure) another most violent Eruption has forc'd its passage, and cast up a new Mountain, which is likewise round and about a quarter of a mile high.

A description of the lesser Mountain within the Gulph.

After we had travers'd that rough space of about three hundred paces broad, betwixt the greater and lesser Mountain, we ascended this little Mountain with as much pains as we had done the first, which we found full of smoaking Chinks, and in many places a pure Sulphur mix'd with a kind of *Sal Armoniac* of a Citron colour: In some places we saw a reddish porous substance, like the Dregs or Scum of Iron as it comes from the Smiths Forges.

The hollowness of the lesser Mountain.

The top of this lesser Mountain hath its Gulph as well as the great one, which is about a hundred paces broad, and the Throat and Inlet to this vast subterraneous Abyss, which sends forth a whole flood of Smoak, which fills up the whole Concavity; the Winds forcing it sometimes on one side and sometimes the other, we had an exact view of the height of its Entrance or Brink, which is perpendicular within, except in one place, where it is sloaping enough to descend into it, which we did after our Guide for sixty or eighty paces, when coming to the very brink of this Precipice, we rowl'd down many Stones we broke off near it; we found them sometimes to stop at the first or second falling, and sometimes to make a long continuation of rebounding with a great noise.

We could not perceive any considerable encrease of the Smoak by the tumbling in of these Stones, and if they had been much bigger, would perhaps have produc'd no other effect, there being no great reason to imagine that the Sulphureous Lake is perpendicular under the opening of this Mountain: I know some have had the curiosity to blow up part of these Rocks with Gunpowder, but this seems to me a dangerous piece of curiosity, where 'tis not safe to stay too long, by reason of the sudden Eruptions that happen now and then; witness poor *Pliny*, who was surpriz'd with such a one, tho' at a considerable distance; and the furious Eruptions in 1682 and 1685, and of the last Year, not to mention those mention'd by the ancient Authors.

The little time we had to stay about *Puzzoli* did not permit us to take so particular an account of all the Curiosities there, as we might have done had we been more at leisure; however, I don't question but to relate to you something that is new concerning this Journey.

Pausilippus.

In our way from the Suburbs of *Naples* to *Puzzoli* we saw the Hill known by the Name of *Pausilippus*. To confess the truth, it is a most delicious Hill, of an infinite charming Situation, extreamly well cultivated, full of Summer-Seats, and planted with most excellent Vines. The Ascent to this Hill was not so steep, but that it might have been made easie enough, but, inov'd by an extravagant humour, they resolv'd to pierce the Mountain, and by that means made indeed a shorter way, and of an extraordinary contrivance, but much more troublesome than the Ascent would have been.

The Grott of *Puzzoli*.

This Cave is generally call'd the *Grott of Puzzoli*, being in some places cut thro' the Rock, in others thro' the Sand; its whole length is near a mile, the height betwixt thirty and forty foot, and eighteen in breadth, affording an easie passage for two Coaches: It has no other Light than at the two Extremities, and a little hole in the middle over the Oratory, which is made in the Rock by enlarging that part somewhat beyond the rest. The Dust which is raised by the Passengers is very incommodious, to avoid which you cover your Face with a Handkerchief; and to avoid running against one another, you cry as you pass along, *To the right, or to the left?* This is an ancient Work, *Seneca* in his time complain'd of its Dust and Darkness; it is attributed to one *Cocceius*, who (according to some ancient *Annals*) is said to have imploy'd a hundred thousand Men in it, who finish'd it in fifteen Days; but 'tis not known who this *Cocceius* was, some believe him to be a Prince or Governour of that part of the Country, some only the head Workman.

The Lake of *Agnano*.

A little beyond *Pausilippus* the Lake of *Agnano* is, between two Hills, almost round, and two miles in circumference: The Water is very clear, and without any ill taste, and tho' continually boiling, produceth not the least heat, but great store of Tench and Eels.

The Baths of St. *German*.

Near the Banks of this Lake are the two celebrated Caves known by the Names of the *Baths of St. German* and the *Grotta di Cane*, or *Grott of the Dog*; the Etymology is so fabulous, that I will not pretend to enlarge upon it; thus much is certain, That after you have scarce descended three or four Steps into these *Baths*, you on a sudden feel heat and a sulphureous smell, which puts you immediately into a sweat, and is accounted very salubrious to Gouty persons, and those afflicted with some other Diseases.

The Grott of the Dog.

The *Grott of the Dog* is no more than the beginning of a Cave, at the very foot of a Hill, being no more than nine foot long, four and a half broad, and five high, and not made by Art; the bottom is pure Earth, and the sides have nothing but what is natural: I observ'd some drops falling from above, which, they told us, were produc'd by the condensation of the Exhalations or Vapours raised from below; tho' I am rather of opinion, that it distils from the Mountain, and pierces the top of the Cave, out of the bottom of which arises a subtil penetrating Exhalation, without any visible Smoak, being a sulphureous Steam which stops the Breath in a minute. We saw him who keeps the Key of this Cave, as well as of the beforesaid Baths, make the Experiment with a Dog in the following manner.

The Experiment of the Dog.

He enters as upright as he can to the middle of the Cave, when bowing and kneeling down by degrees, holding his Head as upright as he can, he sits down upon his Heels, so that with his Hands he can hold a Dog by all his four Feet down close to the Ground; the poor Creature is seiz'd in an instant with violent Convulsions, stretches himself without crying, and becomes stiff, when he that holds him throws him out of the Cave, and being put presently into the Lake, which is not above twenty paces distant, he recovers his Breath in a minute, and

and ſwims out of the Water. The ſame Experiment has been made upon Men and divers ſorts of Animals with the ſame effect; the Viceroy D. *Pedro de Toledo* made it with two of his Slaves, who died.

Two foot from the Ground, and even lower, there is nothing to be ſeen of this nature.

The Keeper ſhew'd us another Experiment with two lighted Torches, one of which he put near the Ground, and 'twas extinguiſh'd immediately without the leaſt Smoak; then lighting it by the other, he put that near the Ground as the former, which being likewiſe put out, he rekindled by the other, and ſo by turns.

The like ſulphureous Exhalations are ſaid to be in a Cave at *Zoli* in *Hungary*; and *Pliny* calls this we are ſpeaking of now *Spiraculum Gutet Lunum*. All the circumjacent Country ſeems to be fill'd underneath with Brimſtone, eſpecially about *Monte Sicco* and *Solfatara*, where we ſaw ſubterraneous holes fill'd with Sulphur and Allom, which ſend forth Flames and Smoak with the ſame ſmell and noiſe as we ſee in *Veſuvius*. They prepare abundance of *Roch-Allom* on the *Solfatara*, which is a yellow and white Mountain, dried up and conſum'd by its own Fire; they live in ſmall Hutts, and the Cauldrons boil only by the heat coming out of the Openings.

The Hill of *Solfatara*

The top of this Hill has a kind of oval Baſin about 1250 foot long, and a mile in breadth, the Exhalations of which are often ſmelt at *Naples*, and blacken their Marble and other Ornaments, nay, even corrupt the neighbouring Waters; whence it is that the *Capuchins* of St. *Januarius*, who live near it, have been forc'd to raiſe their Ciſterns from the Ground upon Pillars. Moſt of the Inhabitants in the City, and about it, will poſitively tell you, that theſe ſmoaking holes of *Solfatara* are actually the Chimneys of Hell it ſelf; *Capaccio* himſelf is of the ſame opinion, and aſſures us, that the ſaid *Capuchins* hear often moſt dreadful howlings, and are peſter'd with Hobgoblins.

Puzzoli.

From hence we deſcended towards *Puzzoli*, anciently a famous City, as a vaſt number of ſtately Ruins ſufficiently teſtifie, tho' at preſent it is but an inconſiderable place.

Near to St. *James*'s Church you ſee the Ruins of a magnificent Amphitheatre, the *Arena*'s whereof were an hundred ſeventy two foot long, and eighty eight broad, built of hewn Stone: Here they tell you St. *Januarius*, with ſix other *Chriſtians*, being thrown before the Beaſts, they ador'd inſtead of devouring 'em; but not long after theſe ſeven had their Heads cut off near *Solfatara*, in the ſame place where the Church dedicated to St. *Januarius* now ſtands. On the Altar you ſee theſe words:

Locus de collatione S. Januarii & ſociorum ejus.

Cloſe to the Amphitheatre remain ſtill vaſt Ruins, but buried almoſt under-ground, look'd upon by ſome as the Remainders of a Labyrinth, tho' I am rather inclin'd to believe it to have been a Fiſhpond like the *Piſcina Mirabilis*. The Cathedral is built not only upon the Ruins of the Temple of *Jupiter*, but alſo of part of its Materials. In the Frontiſpiece you ſee theſe words, *Colſurnius Luc. Fil.* which ſhew evidently by whom it was built.

Antiquities of *Puzzoli.*

Betwixt the City and the Amphitheatre are to be ſeen alſo the Ruins of the Temple of *Diana*: In tempeſtuous weather the Sea throws aſhore near the *Dominicans* of *Jeſu Marie*, many new marks of the ancient magnificence of *Puzzoli*, as *Cornelians*, *Agates*, *Jaſpers*, *Amethiſts*, as likewiſe divers other ſorts of Stones, upon which are found engrav'd all ſorts of Figures, as *Cocks*, *Eagles*, *Swans*, *Hares*, *Serpents*, *Greſhoppers*, *Ants*, *Vine-branches*, *Grapes*, *Ears of Corn*, *Heads of Men*, and *Motto's* of Greek and Latin. The Sand of *Puzzoli*, uſed in their Building, is much commended both by *Vitruvius* and *Pliny*; and in effect, if mix'd with a certain ſort of Mortar, becomes as hard as Marble, even in the Sea it ſelf.

As we paſſed along in our Boat to go to the Lake of *Lucrin*, two miles diſtant from *Puzzoli*, we had the opportunity of taking a full view of the famous Arches generally ſuppoſed to be the Remnants of a Bridge built by *Caligula* from *Baja* to *Puzzoli*, whence to this day they

Caligula's Bridge.

are known by the name of *Caligula's Bridge* among the Inhabitants; but if we will attend the words of *Suetonius*, nothing is more evident than that this pretended Bridge of *Caligula* was not of Stones or Brick, but of Boats; theſe are his words, * *Bajarum medium intervallum Puteolanas moles trium millium & ſexcentorum fere paſſuum ponte conjunxit, contractis, undiq; onerariis navibus, & ordine duplici ad anchoras collatis, ſuperjectaque aggere terreno ac directo in Viæ Appiæ formam*, &c. The words *Puteolanas Moles* plainly diſcover what theſe Arches we now ſee were, *viz.* belonging to a Mole that defended the Harbour againſt the Violence of the tempeſtuous Waves: Neither is it a ſufficient Objection to ſay, that we don't build our modern Moles with Arches, ſince things of the ſame nature may be done variouſly at ſo great a diſtance of time; beſides that, ſome will maintain, that a Mole with Arches might be more durable than one without, and be nevertheleſs ſufficient to break the Waves, and to defend the Harbour.

* In Vit. Cal. Sect. 19.

The Lake of *Lucrin*, ſo famous in ancient times, is now no more than a little Pond of about a hundred paces broad, and a quarter of a mile long, being for the moſt part fill'd up with the *New Mountain*; of which more anon. It is now about ſixty or eighty leagues from the Sea, whereas anciently it was joyn'd with it; for if we may credit *Pliny*, they were forc'd to make uſe of many Engines to ſeparate 'em. The Water of this Lake is always ſalt; it was highly celebrated among the Ancients for its Oyſters: *Nuptiæ videbant Oſtreas Lucrinas*, ſaith *Varro*; and *Concha Lucrini delicacior ſtagni*, Martial. I ſuppoſe you are not ignorant of the Story related by *Pliny* and ſeveral other Authors concerning a Dolphin, who being frequently fed with Bread by a Boy that went every day to School from *Baja* to *Puzzoli*, became at laſt ſo familiar with the ſaid Boy, that he uſed to carry him often on his Back over the little Bay; *Appion* tells us, he was an Eye-witneſs of it, beſides many more that flock'd from all parts to *Puzzoli* to ſee it; and *Solin* affirms, that at laſt it was ſo common, that it was ſcarce regarded any more as an extraordinary thing.

Lacus Lucrinus.

Anecdote of a Dolphin.

I remember that in my Travels I ſaw a Sea-Calf, ſo very tame, that it would do as many Tricks as a well-taught Spaniel.

In the Year 1538, in the Night betwixt the 19th and 20th of *September*, the Earth produc'd on a ſudden a certain Mountain never ſeen before, which for that reaſon has ever ſince retain'd the Name of *Monte Nuovo*, or the *New Mountain*. Thoſe who have meaſur'd it make its height perpendicularly four hundred Toiſes, and its circumference three large miles. The Gulph or Opening of fifty paces diameter on the top of this *New Mountain* ſufficiently proves its production to have been cauſed by an Irruption, tho' it never hath ſent forth either Fire or Smoak ſince its firſt Irruption, which was attended with a moſt dreadful Earthquake, that put all the neighbouring Country under a great conſternation, the Sea recoiling, many Churches and Houſes being either burnt or ſwallow'd up, a vaſt number of Men and Beaſts periſhing by this prodigious Birth of the *New Mountain*.

The New Mountain.

Your Mountain of *Markle-Hill*, in the County of *Hereford-ſhire*, was uſher'd into the World after a much eaſier and more pleaſant manner, becauſe it mov'd with an eaſie pace for *three Days* and *Nights*, with *Houſes* and *Trees*, for about four hundred paces.

On the other ſide of the *Lucrin* Lake you ſee another famous Hill call'd *Monte di Chriſto*, the Story whereof runneth thus; A moſt violent Earthquake having made an Opening in this Hill which reach'd from the *Superficies* to the very *Limbus Patrum*, *Jeſus Chriſt* entred thro' this Cavern, where being joyfully receiv'd by the Souls that were deſtin'd to Heavenly Felicity, he led 'em thro' this Paſſage, up to the top of the Mountain, from whence they were lifted up to Heaven.

The Mount of Chriſt.

The Lake of *Averno* is not above a mile from the Lake of *Lucrin*, being much about the ſame bulk as the Lake *Agnano*; it is beyond queſtion, that what *Virgil*, *Lucrece*, *Pliny*, and others ſay of its deadly Vapours, is not ſo at preſent, the Birds now flying over it without the leaſt detriment, which is the reaſon that *Pliny* is reckon'd by ſome modern Authors in a manifeſt Falſhood; but if the matter be truly weigh'd, it will ſufficiently appear that *Pliny* only quotes *Varro* in what he ſays of this Lake, but ſpeaks not as an Eye-witneſs; for, diſcourſing of the *Lakes* which have extraordinary Qualities, he cites *Cliſius* a Greek Hiſtorian, who mentions a Lake in the *Indies* on which nothing ſwims, and afterward alledges the Teſtimony of *Varro* about the *Averno*. Add to this, that *Strabo* attributes the cauſe of this Stench in the *Averno* to the thickneſs and number of the Trees that ſurrounded it on all ſides, which, he ſays, being remov'd by *Auguſtus*, the Air became pure and ſweet: And *Boccace*, who liv'd not above three hundred years ſince, aſſures us, that ſome ſubterraneous Chanel of Sulphur being mix'd with the Waters of the *Averno*, they became ſtinking, and kill'd many of the Fiſh, which he ſaw with his own Eyes: Two manifeſt Inſtances, that this Lake hath been at different times in a very different condition.

The Lake *Averno*.

Virgil derives the word *Avernus* from Ἄορνος, notwithſtanding which this Name ſeemeth to have been the ancient Appellation of ſulphureous *Gulphs* in general, which makes *Lucretius* call theſe kind of Pools *Averna Loca*.

The

The Ruins to be seen to this day about the *Averno* plainly demonstrate, that the adjacent *Hills* were well Peopled after the before-mention'd Trees were cut down. The Antiquaries don't agree, whether the Ruins next to the Lake belong'd to a Temple of *Mercury* or of *Neptune*, but certain it is, it could not be the Temple of *Apollo*.

As we approach'd the *Averno*, I could plainly perceive something of a nauseous Smell, but whether it proceeded from the Lake or not, I will not pretend to determine; for the Lake abounds in Fish, its Waters are fresh and pretty clear, only inclining somewhat to a dark blue; I tasted 'em in divers places, and found 'em to have a little sharp twang of some Mineral.

The Grott of the *Sibyl*. Not far hence is the subterraneous Passage and Cave commonly known by the Name of the *Sibyl's Grott*, the chief Entrance whereof is said to have been near *Cuma*, four miles from *Averno*, but it is all fill'd up on that side. We went into it thro' a narrow Passage, every one with a lighted Torch in his Hand, the Passage being on both sides overgrown with Briars and Thistles. This subterraneous Passage is dug under Hillocks, without any Ornaments, except in that place I am going to describe to you: It is about ten foot broad and twelve high. After you have gone two hundred and fifty paces in a streight line, you meet with a square Grott on the right, and seventy or eighty paces further a little Cell of fifteen foot long, and eight or nine broad. You may perceive by divers Remainders that the Roof was formerly painted and the Walls adorn'd with *Mosaick* Work.

The vulgar Error concerning this Grott. After I had read the learned Treatise of Mr. *Blondel* concerning these pretended *Sibyls* and their *Writings*, I was sufficient Proof against all the vulgar Opinions of this Grott; notwithstanding what divers ancient Authors have told us concerning the *Sibylla Cumæa* and her Den, which by the *Italians* has been applied to this subterraneous Passage, I am not ignorant of the Description of *Virgil*,

Quo lati ducunt aditus centum, ostia centum
Unde ruunt totidem voces ——

but at the same time am convinc'd, that *Virgil* spoke of it only as a Fabulous Tradition; for what else will you say to the *centum aditus* and *centum ostia*, which are not to be found here or any where else? In my opinion this might be such another Passage as the Grott of *Pausilippus*, and the painted Cell appropriated to some Deity. *Strabo* relates, upon the Credit of *Ephorus* an ancient Historian of *Cumæ*, that the *Cimmerians* of *Italy* (to distinguish 'em from those inhabiting near the *Bosphorus*) did inhabit in subterraneous Dens betwixt *Bajæ* and the Lake *Averno*, from whence they sallied out in the night-time, to perpetrate their Murthers. The digging of this Cave seems more properly to belong to them, were it not that the *Mosaick* Work in the Cell hath as little resemblance to their way of living, as to the Habitation of a pretended Mad-woman, such as the *Sibyl* is supposed to have been.

Bajæ. From this Cave we took a turn to *Bajæ*, the most pleasant and magnificent place in the World in ancient times; *Horace*, *Martial*, *Josephus*, *Seneca*, *Albinus* and others have left us such a Character of it, as puts this Assertion beyond all question, were not the Ruins of many *Temples*, *Baths* and *Palaces*, which are to be seen round the Bay, and even in the Sea it self, undeniable Proofs of its former Grandeur. The Bay of *Bajæ* is infinitely pleasant, the Air exceeding sweet, and the adjoyning Hills with their easie Ascents charming beyond what can be express'd or imagin'd; but, alas, that vast number of Summer-seats which adorn'd the neighbourhood of this City, is now nothing but a vast heap of Ruins, and a dismal Solitude.

Agrippina's Tomb. Betwixt *Bajæ* and *Miseno* is the Precinct call'd *Bauli*, where you see the Tomb of *Agrippina*, and near it the Remnants of the Fishpond of *Q. Ort. Hortensius*, Collegue of *Q. Cecil. Metellus*.

Mercato di Sabato. Not far from this are very great Ruins commonly call'd *Mercato di Sabbato*, which some pretend to be the Remainders of a *Circus*. At the very Sea-side are to be seen considerable Ruins of the Country-house of the said *Hortensius*; and near his Fishpond, the Remainders of a Temple said to have been dedicated to *Diana*. Not many years since, a most noble Statue of *Venus*, twice as big as the life, was dug up in this Neighbourhood, holding a Globe in her right hand, and three Oranges in the left: *Capaccio*, who hath given an exact description of it, says, that this Statue was found in the same place where anciently stood the Temple of *Venus Genitrix*. Antiquities of *Baja*.

From *Bajæ* it is not above a good mile to that delightful Plain call'd the *Elysian Fields*, situate betwixt the Sea and that stinking Marsh *Acheron*, call'd by *Virgil*, *Tenebrosa Palus*, now *Lago della Coluccia*. The *Elysian Fields*.

I might farther speak of the Academy of *Cicero*, now turn'd into an Oxen Stall, of the Barhs of *Tritoni*, the Tomb of *Agrippina* Mother of *Nero*, of the *Piscina Mirabilis* or Fishpond of *Agrippa*, and the other Fishpond call'd *Cento Camerelle*, besides a great many other remarkable Remnants of Antiquity, but that I had not sufficient leisure to make so exact an observation of them, as was sufficient to give you a full description of 'em.

From *Bajæ* we took Boat to *Puzzoli* again, and thence went on Horseback to *Naples*. But before we depart, I must say a word or two of the Tomb of *Virgil*.

At the entrance of the Grott of *Pausilippus*, which leads to *Puzzoli*, stands an ancient Monument shap'd like a Pyramid, but above half destroy'd: Some modern Historians assure us, that in their time there were nine small Columns of Marble in the little Chamber of this *Mausoleum*, which supported an Urn of the same substance, with this Distich upon it: *Virgil's* Tomb. See Fig. IX.

Mantua me genuit, Calabri rapuere, tenet nunc
Parthenope; cecini, pascua, rura, Duces.

but now there are neither Columns nor Urn to be seen here. The *Mausoleum* is built of very large square Stone, notwithstanding which it is almost cover'd with Bushes and Shrubs, that have taken root betwixt the Stones; among the rest there grows a Lawrel on the top of it, which, if you will believe the Inhabitants, has been often cropp'd and pluck'd up, but always grows again.

Virgil is look'd upon by many of the Inhabitants of this Country as a great Sorcerer, whence it is that they have attributed to him the making of the Grott of *Pausilippus*, as also of the brazen Horse, the Head whereof, as I told you before, is still preserv'd at D. *Diomedes Caraffa*. Unto this Horse they attributed, for the same reason, a secret Virtue of curing all sorts of Diseases in Horses, and of preserving them from sinister Accidents, and for a considerable time used to bring their Horses from the remotest parts of the Kingdom of *Naples*, to lead 'em in procession round this pretended Horse of *Virgil*; till at last the said Horse was by the order of a certain Archbishop of that Kingdom remov'd from thence, and a great Bell cast of its Body, which remains in the Cathedral to this day.

The House of *Sannazarius*, which stood on the Sea-side, at the foot of the Hill of *Pausilippus*, being destroy'd by the War, a Church was built in the same place, dedicated to the most *holy Birth of the Mother of God*, where his Tomb is now to be seen in one of the Chapels. The Tomb is of white Marble, done by the excellent Hand of St. *Croce*; on it you see the Bust of *Sannazarius* crown'd with Lawrel, and on each side the Statues of *Apollo* and *Minerva*, which they commonly call *David* and *Judith*: I suppose you are not ignorant that *James Sannazarius* chang'd his Name into that of *Actius Sincerus*. I conclude, in hopes that you will believe me to be, The Tomb of *Sannazarius*.

Naples, *Mar.* 17. 1688.

Sir,

Yours, &c.

A NEW VOYAGE TO ITALY,

WITH

A Description of its chief Cities, Churches, Tombs, Libraries, Palaces, Statues and Antiquities.

AS ALSO

Certain Instructions to such as intend to Travel into that Country.

By *MAXIMILIAN MISSON*, Gent.

VOL. II.

LETTER XXIII.

SIR,

YOUR Letter I receiv'd with a great deal of Pleasure, in return whereof I will endeavour to satisfie your Curiosity, in resolving your Questions concerning *Venice*, in the same order you have propos'd 'em; after which I will proceed to give you an account of *Rome*.

1. Whatever your Friend may say on pretence of his being a Citizen of *Venice*, of the number of Inhabitants in that City, which he makes amount to 250000 Souls, I can't allow him a competent Judge; tho' on the other hand I must tell you, that you carry the matter too far, when you declare, that 'tis impossible to know the exact number of Inhabitants of great Cities, Sir *William Petty* having propos'd to us a rational method of making such a Computation, without any remarkable Errour: I ought however not to pass by in silence, that in my Computation I included the Inhabitants of the Isle of *La Giodeca*, but not the Isle of *Murana*.

2. The two Columns of *Granite* in the Place of the *Broglio*, some say, were brought from *Egypt*, others from *Constantinople*, (perhaps they were brought from *Egypt* to *Constantinople*). Upon one of these Columns stands the Arms of *Venice*, *viz.* the *wing'd Lion* of S. *Mark* holding an open Book, with the Inscription of *Pax tibi Marce*. On the other you see the Statue of St. *Theodore*. The like Columns the *Venetians* erect in all the great Cities under their Jurisdiction.

The same *Venetian* did also misinform you about the three great Banners set on Festival Days upon the Brazen Pedestals opposite to St. *Mark*'s Church, *viz.* That they represent the *Venetian* State, and the two Kingdoms of *Cyprus* and *Candia*, the Republick's Arms being to be seen without the least alteration in all the three Banners. Another Vulgar Errour is, That the *Venetian Signiory* has no Coat of Arms, tho' the *Lion* is to be seen in all those places where the Arms of a State are generally to be seen. The Lion of St. *Mark* takes his Origin from the Vision of *Ezekiel*, and not from the imaginary transformation of St. *Mark* into a Lion, to check the incestuous Love of his Sister. Hence it is that the *Venetian* Ambassadour being ask'd what Country it was that produced those *wing'd Lions*, replied, The same that brought forth the double-headed Eagles; alluding at the Arms of the Empire.

3. What I told you concerning the Air of *Venice* must be taken with some grains of allowance, tho' the Air of *Venice* is none of the worst: In the *Lagunes* it is so bad, that the Inhabitants of the lesser Isles commonly leave their Habitations in the hot season.

4. That the Doge of *Venice* continues for Life, whereas the Doge of *Genoa* does only for two Years, is sufficiently known. The Revenues of the Doge of *Venice*, so far as I was able to learn, does amount to about 3000 *l.* Sterling *per annum*; but the Frugality wherewith the *Venetians* manage their Government has taught them not to allow their Spouses any share in those imaginary Honours they pay to their Husbands.

5. Concerning the Libertinism in the Monasteries of *Venice*, as I will not profess my self to be acquainted with it in particular, so I can only tell you, that it is generally acknowledg'd here, that the Nuns are often visited by Persons in Masquerade at the Grates; that they go to *Plays* and other places in Disguise; that they have made Tables on purpose for Entertainments, one half within, and the other half without the Grates; nay, that they are often engag'd in Intrigues; and that the Friers are guilty of such Debaucheries as can scarce be parallel'd or imagin'd.

6. What your Friend has been pleas'd to alledge against the Soveraignty of the *Doges*, is not worth taking notice of, the same being sufficiently known to all that have had any insight into the *Venetian* State.

7. The

The Revenue of Venice.

7. The whole Revenue of this Commonwealth, according to the best computation, amounts yearly to six millions of Crowns, including the sale of Offices and Nobility, Confiscations, &c.

8. They permit some *Jews* to live at *Venice*, who are very rich, especially the *Portuguese*; their Quarter is call'd *Il Ghetto*, or the *Jewry*; their Hats are cover'd with Scarlet, lined and edg'd with black; the poorer sort are contented with wax'd Linen.

The Great Council est ablish'd 1289.

9. The whole number of their Nobility arriv'd to a proper age of sitting in the *Great Council*, amounts to about thirteen hundred; but one half of them being generally abroad in Civil or Military Employments, this Assembly scarce ever exceeds six or seven hundred; yet these seem too many for the management of those matters that come before them, which hath given birth to this Proverb, *Troppo Teste, troppo Feste, troppo Tempeste*; *Too many Heads, too many Festivals, and too many Tempests*: And as the first is meant of the Great Council of *Venice*, so their *Festivals* are so frequent, that they exceed those observ'd in *France* by one third part, and are frequently pester'd with *Storms* in the Summer.

10. The *Golden Book* mention'd contains a Catalogue of all the Noblemen; and as all the Brothers have an equal share in the Nobility, so their Names are registred in this Book as soon as they are born. Upon this occasion I can't forbear to add something in reference of what has been told you against the account I gave you of the haughtiness of the *Venetian* Nobles: There is scarce any body that is acquainted at *Venice* but will easily agree with me, that the *Venetian* Nobles are not only extreamly conceited of their Nobility, but also of very difficult access to Strangers of great Note; tho' the last may be attributed either to a Custom, or rather the Politicks of their Government: And tho' they are not very sparing of Salutations when they are walking at the *Broglio*, yet do they always appear very reserv'd and proud in the company of the Citizens; nay, they give and receive but few Visits among themselves. It must however be confess'd, that in private Conversation, especially if their Interest be concern'd, they will be as obliging as most Men, and will sometimes enter into a familiar acquaintance with Strangers, provided both sides be not of more than ordinary Quality.

The Venetian Nobility.

What I told you concerning the great Sleeves of the Noblemen that they serve instead of a Basket at certain times, was not a bare Jest; for I remember once I saw a good Salad, and at another time an excellent Cods-tail, thus carried out of the Market.

There are, besides this, about two or three hundred *Barnabotes*, so call'd from a cheap place in the City, where they live, (a sort of poor Gentlemen, that serve for a Foil to the richer sort) who both beg about the Streets, and are glad to earn a Penny in carrying home Provisions for other People. In the Summer these Noblemen have their Vests without Furrs, but they turning up on the Edges, remain always furr'd.

11. It was not Negligence that made me give you so imperfect an account of the curious Paintings in *Venice*, but rather the Defect of my Memory, which I will endeavour to supply with some additional Observations.

Formerly there were to be seen in the *Great Council-Chamber* divers rare Pictures done by *Gentile* and *John Bellini*, two Brothers, the best Artists of their Age; but these being lost in a Fire, 1577, and representing the History of the Wars betwixt *Alexander* III. and *Frederick Barbaressa*, they were copied five years after by *Frederick Zucchero*. The Pictures in *Fresco* in St. *Stephen's* Cloyster, done by the excellent Hand of *Pordenonne*, (who both in his Colours and Designs emulated *Titian*) are most excellent Pieces; as are likewise his St. *Sebastian*, St. *Roch*, and St. *John de Rialto*.

The St. *Peter Martyr* of *Titian* would be the finest Picture that is to be seen, had it not lost part of its Lustre, the Beauty and Richness of its Colours, as well as the judicious Disposition of the Lights, together with the Roundness of the Figures, being much defaced.

Rare Pictures of Venice.

Many other rare Pieces of this great Master are to be seen in divers Churches, in the Palace of St. *Mark*, in the Library, Convents and Fraternities. In the Library are some Pieces of *Schiavani*, so excellently well done, that they have been taken for *Titian's*. *Horace Vercelli* came so near to *Schiavoni*, (his Father) that the Picture in the *Great Council-Chamber*, representing the Battel fought betwixt the *Romans* and *Frederick*, made by the Son, is generally ascrib'd to the Father.

The Picture of the Marriage at *Cana*, containing an hundred twenty five Figures, and thirty four foot broad, in the Refectory of the *Benedictins*, in the Isle of S. *George*, is the Masterpiece of *Paul Veronese*, who imitated *Titian* in his beautiful disposition of Figures, judicious choice of Colours, his great Genius, and a most charming Variety. The Feast of *Simon* the Leper, in St. *Sebastian's* Church, is a Piece of the same hand; as also three others in the Arch of St. *Mark's* Library, representing *Geometry*, *Arithmetick* and *Glory* acquir'd by Learning. *Tintoret's* Paradise, in the *Great Council-Chamber*, is a most exquisite Piece; it being the Character of this great Artist, That he joyn'd the most excellent Designs of *Michael Angelo* with the charming Colours of *Titian*; besides that, he had the quickest hand of any Artist. I was shewn a rare Picture of *Tintoret*, which he finish'd whilst *Paul Veronese*, *Salviati*, and *Frederick Zucchero*, his Competitors in the same Work, were imploy'd in finishing the rough Draught. Divers other Pieces of the same Hand are to be seen in the School of St. *Roch*, St. *Maria del Orto*, St. *Mark's* School, and other places. Some of *Bassara's* Pieces are to be seen at St. *Maria Major*; and *Schiavani's* Pictures in the Library are Emblems of Valour, Soveraignty and Sanctity.

12. I told you, if I remember right, that their *Gondola's* or *Boats* have black Covers; I will add, That no body (except the Doge) may be attended by Servants in Liveries; tho' the Ladies of Noblemen, during the first and second Year of their Marriage, are allow'd to give what colours they like best to their *Gondeliers* or Boatmen, and the use of Jewels; but this time being once expir'd, this Courtesie ceases, they being not permitted to appear in Jewels unless on some high Festivals, and during the Carnival; whence it is that the rich Courtesans chuse rather to pay the Fine, than be debarr'd of this Ornament.

The Ladies of Venice.

What I have heard disputed by some, That the *Venetian Ladies* enjoy a greater share of Liberty than those of *England* or *France*, seems to me to be the effect of a fond conceit of Contradiction; for, supposing the *Ladies* of *Venice* have the Liberty in *Carnival* time to go to *Plays*, *Opera's*, *Fairs* or *Gaming-houses* in disguise, what Advantages can they reap from the Diversion of so short a time, especially considering that all this while they are constantly attended by their *Husband's Spies*, who can't but put them in mind of the Slavery they are to undergo for ten or eleven Months in the Year? What comparison is there betwixt this Confinement and the entire Liberty the *English* and *French Ladies* enjoy in their *Walks*, *Visits*, *Meetings* and *Divertisements*, without the least Restraint?

13. However, the young Noblemen are permitted to be as splendid in their *Gold* and *Silver Laces*, *Stuffs*, *Plumes* and *Embroideries* as they think fit: They put on the Gown at fifteen Years of age, tho' they have no Vote in the *Great Council* till they are five and twenty. They have also the liberty of wearing what Habits they like best on the Continent, the Jurisdiction of the Tribunal that regulateth Habits not extending beyond the *Laguna's*.

14. When we were viewing the Treasury, no mention was made by our Guides of St. *Mark's* Thumb, and that he was dismember'd to prevent his being chosen a Priest; but they were not forgetful to tell us the Tradition of the loss of his Ring, and how it was recover'd, the Story whereof runs thus:

An odd Story of St. Mark's Ring.

In the Year 1339. three Men came to a *Gondolier* in very tempestuous weather, and having constrain'd him to carry 'em two miles to the *Lido*, they found there a whole Shipful of Devils, that were busied in raising a Tempest by their Hellish Enchantments; but these three Men had no sooner given them a severe Reprimand, but the Tempest ceased. The first of these three Persons made the Boatman carry him back to the Church of St. *Nicholas*, the second to that of St. *George*, and the third to that of St. *Mark*; but the last, instead of paying the Boatman, gave him a Ring, ordering him to carry it to the Senate, and told him at the same time, that he who went ashore first was St. *Nicholas* himself, the second St. *George*, and that he was St. *Mark*. The Boatman, astonish'd at his words, related the whole matter to all the Senate, who bestow'd a considerable Reward upon him.

15. They suffer *Protestants* to be buried in their Churches; the reason is, because they take no notice of them here as *Protestants*, all such as are neither *Jews*, *Greeks* nor *Armenians* being reputed *Roman Catholicks*.

16. Your Admirer of the Palaces of *Venice* hath mistaken my aim, because I did not deny that there were some stately Palaces there, and made particular mention of divers of 'em; but notwithstanding all this, what I said of the *Italian* Palaces in general, is true beyond contradiction: And because you own that he hath no Skill in Architecture, you will do very well not to relie too

far upon his Judgment in this point, no more than what you have been inform'd concerning the Machines in the *Venetian Operas*, and that *Venice* is for neatneſs to be compar'd to *Holland*.

Paſſage by Water to all the Houſes of *Venice*.

17. I told you, that there is a paſſage by Water to all the Houſes in *Venice*; I am well ſatisfied you did not take this part abſolutely according to the literal ſenſe, becauſe there may be perhaps about five or ſix in a thouſand that can't be approach'd but by Land, and in this I ſpeak the outſide; for what your young Traveller has aſſur'd you, that there was no Canal within five hundred paces of the Houſe where he lodg'd, and that there are twenty ſuch places in the City, is a Contradiction in it ſelf, for at this rate how many ſpaces of a mile in diameter muſt there be in *Venice*? And whether this is poſſible, I leave to your own determination, if you will carefully examine the Platform of this City, which I ſend you, and is founded upon unqueſtionable Evidence.

Of *Rome*.

We will now come to *Rome*, which being ſufficiently deſcrib'd by divers perſons of note, who had all poſſible Opportunities of giving the beſt account in the World of it, I will pretend to no more at this time, than to give you a general Idea of this great and famous City, together with what Obſervations I was able to make upon ſuch matters as were then altogether new, or but little known, and have relation to the anſwering of your Queſtions.

I need not tell you, that before the Reign of *Servius Tullius* it comprehended no more than ſeven Hills, whence it got the Name of *Septizonium* or *Seven Hills*; but being much enlarg'd ſince, contains no leſs than twelve, *viz. Monte Capitolino, Palatino, Aventino, Celio, Eſquilino, Viminale, Quirinale* or *Monte Cavallo, Janiculo, Pincio, Vaticano, Citorio*, and *Giordano*; however, you muſt not imagine 'em to be huge Mountains, but only little Hills, the aſcent whereof is ſcarce diſcernable.

Vopiſcus (who flouriſh'd under *Dioclesian*) would make us believe that the Walls of *Rome*, built by *Aurelian*, were no leſs than fifty miles in compaſs; but there muſt be an enormous Errour in this, ſeeing that the preſent Walls of *Rome* are very near the ſame which *Aurelian* had erected, and yet are not above thirteen miles in circumference, this being the largeſt compaſs *Rome* ever had, tho' its Suburbs perhaps extended far beyond them on all ſides.

But of what is enclos'd within the Walls there is not above one third part inhabited at preſent, the reſt (*viz.* to the South and Eaſt) being nothing but *Gardens* and *Ruins*. Moſt of the Houſes are of Brick, and plaiſter'd over on the outſide; the Roofs are ridg'd, but the Angle on the top is very obtuſe; and ſome are faſhion'd, as we call it in *France*, *à la Manſarde*. Neither the Houſes nor Streets are very beautiful, and the Pavements both narrow and not very neat.

Which way ſoever you approach *Rome*, you may diſcover St. *Peter*'s Cathedral above all the other Spires and the tops of the higheſt Edifices.

See *Loſſi*.

The courſe of the *Tyber* (which makes a little Iſland here) is from North to South: That part on the right ſide (call'd *Traſtavere*) is not above the ſixth part of the other.

The firſt Proſpect of this great City does not ſurprize the Traveller with its Beauties, but the longer he ſtays in it, the more frequent opportunities he will meet with of obſerving ſomething worth his attention, in ruminating upon the remnants of the Spoils of the Univerſe, which made once the *Porphyries, Granites*, and the pureſt *Oriental Marble* to be more common at *Rome* than the *Bricks* or *Stones* out of the neighbouring Quarries; the *Coloſſes, Temples, Palaces, Amphitheatres, Arches, Baths, Cirques, Columns, Fountains, Aqueducts, Obelisks, Mauſoleums*, and other magnificent Structures, being for the moſt part of theſe precious Materials, which, tho' buried now in Ruins, yet retain ſome Remnants of their ancient Splendour.

The Country about *Rome*, for ten or twelve miles, is flat, but uneven, ill Peopled, unhealthy, and barren in many places. As to the number of the Inhabitants, they are generally computed to be two hundred thouſand Souls, but I will not be anſwerable for this Computation, theſe things being founded upon uncertain Conjectures, ſo that even the Paſſages in the ancient *Roman Authors* are very hard to be reconcil'd in this point, ſome telling us three millions a thouſand and thirty ſeven, under the Reign of *Auguſtus*, others of four or five millions, whereas *Suetonius* computes no more than one million and ſix hundred thouſand under *Tiberius*, the immediate Succeſſor of *Auguſtus*; and I remember that *Werner Rolwink*, in his *Faſciculus Temporum*, does not ſtick to make them amount to twenty ſeven millions and eighty thouſand. I ſuppoſe he included all ſuch as had the privilege of *Roman Citizens* in his account.

The Ceremony of endowing 300 Maidens.

Two days after our return from *Naples*, we hapned to ſee the Ceremony of making either Wives or Nuns of three hundred and fifty Maidens, the Fund whereof was raiſed by a Club of ſixty charitable Gentlemen. This Ceremony is perform'd every Year on the Feſtival of the *Annunciation*, when the Pope and the Sacred College meeting at the *Minerva*, the Pope (or in his abſence ſome Cardinal) ſays High Maſs, and all the Girls confeſs, and receive the Sacrament, being cloath'd in white Serge, with Veils over their Heads, having only one opening for their ſight; they enter thus two and two into the Choir, where proſtrating themſelves at the Pope's or Cardinal's Feet who officiates, near whom ſtands an Officer with a Baſin full of little white Bags, each of which contains either a Bill of fifty Crowns, for ſuch Maidens as chuſe Marriage, or a Bill of a hundred Crowns for thoſe that are willing to embrace a Religious Life. Each Maiden having declar'd her Choice, receives her Bag hanging on a little String, with a Kiſs, and ſo goes off to make room for another. Thoſe that have choſen a Religious Life are crown'd with Garlands of Flowers, and have the firſt place aſſign'd them in the Proceſſion. At that time there were no more than thirty two of theſe among the three hundred and fifty.

Having taken a full view of the *Minerva*, (where we ſaw the famous Statue of Chriſt embracing the Croſs, the Work of *Michael Angelo*) we went to the beautiful *Borgheſe* Palace, the Portico of which is ſupported by ninety ſix Antique Pillars of *Egyptian Granite*. In the lower Rooms alone are no leſs than ſeventeen hundred Original Pictures, by the beſt Maſters of *Europe*, among which that of *Venus* blindfolding *Cupid*, done by *Titian*, excels the reſt. The Picture of *Paul* V. (who was of this Family) in moſt exquiſite *Moſaick* Work, is reputed to contain above a million of Pieces, which however I can't find out by my calculation. We alſo ſaw here a Crucifix of the ſame bigneſs with that ſhewn us by the *Carthuſians* at *Naples*, and they aſſur'd us that this is that celebrated Original of *Michael Angelo*.

The Rotunda or Pantheon.

The Name of *Rotunda* was given to the *Pantheon* by the common People, by reaſon of its circular figure. *Boniface* IV. dedicated it to the *Virgin* and all the *Martyrs*, whence he call'd it S. *Maria ad Martyres*: And another Pope would needs comprize all the *Saints* with the *Martyrs*. The origin of its ancient Name is likewiſe ſomewhat doubtful, ſome deriving the Etymology of the *Pantheon* and its Convexity to the reſemblance of the Heavens; others alledging, that it was dedicated to *Jupiter* and *Cybele* the Mother of the Gods, others, to *Jupiter* and *all the Gods*. This laſt Opinion ſeems to be founded upon the many Niches which are ſeen in the inſide, and were (queſtionleſs) full of Idols: But if we may believe *Varro*, who tells us of no leſs than thirty thouſand Gods worſhip'd at *Rome*; and the Philoſopher *Bruxillus*, who in his Speech to the Senate makes 'em amount to no leſs than two hundred and eighty thouſand: There are not near Niches enough to accommodate all theſe Deities.

See *Loſſi*.

The two Lyons under the Portico of the *Pantheon* ſtood formerly on the Front of the Temple of *Iſis*.

This Temple, tho' deſpoil'd of its beſt Ornament, yet is one of the faireſt and moſt entire Pieces of Antiquity in *Italy*. The Columns of the Portico of this Church are all of one piece of *Granite*, of the *Corinthian* Order; they are not equally big, but, according to the moſt exact meaſure I could take, they were fifteen inches in compaſs, ſome few inches leſs or more: That piece of *Granite* in which the opening of the great Gate is cut, is forty foot high, and near twenty broad.

La Guilliniere (who is follow'd by *Meurſius*) would needs perſwade us, that the *Pantheon* of *Athens* ſurpaſſes that of *Rome* in magnificence, having miſtaken the Temple of *Minerva* for the *Pantheon*, into which Errour they have been miſguided by the erroneous account of *Theodoſius Zygomala*, in his Letter to *Martin Cruſius*; or perhaps by the miſtaken Name of *Parthenion*, which *Pauſanias* gives it.

It being not my preſent purpoſe to give you a particular Deſcription of Churches, I will only communicate to you my Obſervations upon 'em.

St. Peter's Church.

That of St. *Peter* has the Reputation of the moſt magnificent and largeſt Church in the Univerſe; he that is willing to give a true Judgment of it, muſt not be ſparing of his pains in viewing it frequently, as well on the top into the very Ball, as the Church under ground. You no ſooner enter this great Structure, but your Eyes are ſurpriz'd with the incomparable proportions of the niceſt pieces of Architecture, and a moſt exact and unparallel'd Order, rather to be admir'd than deſcrib'd: And ſince you are pleas'd to rely upon my Fidelity and Judgment,

I will

I will ſend you the principal Dimenſions of this Structure, as I have taken them with the aſſiſtance of very skilful Perſons, more than once.

Dimenſions of St. *Paul's* Church.

1. The length of the Church, taken on the outſide, including the whole *Portico* and the thickneſs of the Walls, 722 Engl. feet.

2. The length of the Church within, not reckoning either the *Portico* or the thickneſs of the Walls, 594 feet.

3. The length of the Croſs of the Church on the outſide, 490 feet.

4. The length of the ſaid Croſs within, 438 feet.

5. The breadth of the Body of the Church, 86 feet 8 inches.

6. The perpendicular height of the Body of the Church, 144 feet.

7. The bigneſs or outward circumference of the Dome, 620 feet.

8. The diameter of the Dome within, 143 feet.

9. The breadth of the Front of the Church, 400 feet.

10. The compleat height of the Church, from the Floor to the top of the Croſs which is over the Ball, 432 feet.

11. The diameter of the Ball, 8 feet 4 inches.

12. The height of the Statues on the Corniſh of the ſecond Order of the Front, 18 feet.

Michael Angelo and *Bramanti* were the two chief Architects of this truly noble and majeſtical Structure, the firſt under Pope *Paul* III, the ſecond under *Julius* II. The Chair of S. *Peter* is ſupported by the four Doctors of the Church: The Statues of Braſs gilt, and the Tombs of *Urban* VIII, *Paul* III, *Alexander* VII, and the Counteſs *Maud*, are moſt magnificent and curious Pieces of Workmanſhip.

To be ſhort, wherever you turn your Eyes in this Church, you meet with nothing but gilt Work, excellent Pictures, and emboſs'd Work, Statues of Braſs and Marble, and theſe diſpers'd in ſo marvellous an Order, that their multitude does not cauſe the leaſt confuſion. The inſide of the *Cupola* is of *Moſaick* Work, and the Arch of the Nave of a certain fine Clay, with Compartiments of rais'd Work gilt; all the Pilaſters are deſign'd to be overcaſt with the ſame matter, as well as the remaining part of the inſide of the Church. The High Altar ſtands in the midſt of the Croſs, directly under the Dome, the Pavilion being ſupported by four wreath'd Pillars of Braſs, beautified with Foliages and Bees, the Arms of Pope *Urban* VIII. On each of theſe Columns ſtands a Braſs Angel ſeventeen foot high, and on the Corniſh you ſee Children playing and walking up and down: The whole height amounts to ninety feet. Under this Altar is a pair of Stairs leading to the Chapel under ground, where S. *Peter*'s Body is kept, and to ſome other ſacred ſubterraneous places belonging to this Church.

At the Entrance down theſe Stairs I ſaw a certain Bull engraven in Marble, forbidding any Woman to enter there, except on *Whitſun-Munday*, when Men are prohibited to enter there, under pain of being anathematiz'd; the place being very dark, we were told by the Sexton, that that this Prohibition was occaſion'd by an amorous Intrigue. An Indulgence of ſeven Years is granted for every Step of the Stairs leading to S. *Peter*'s Chapel, to all ſuch as deſcend 'em with Devotion.

The double row of Pillars (286 in number) which ſurround the Great Place before the Church, and leads to the ſame by a double Portico on each ſide, is a ſurprizing Piece to behold. The two magnificent Fountains in this place are highly worth a curious Traveller's Obſervation, as well as the Obelisk that ſtands in the middle of one entire piece of *Granite* ſeventy eight foot high, without either the Pedeſtal or Croſs placed on the top of it by *Sixtus* V, when he ſet up his ancient Monument here, which in 1586. weigh'd 956148 pounds without the Baſe. 'Tis a general (but erroneous) Opinion, That the Globe of Braſs which was there formerly contain'd the Aſhes of *Auguſtus*; but *Dominicus Fontana* the famous Architect, upon examination, found it not fit for that uſe, but to be only an Ornament to this Obelisk, which was conſecrated to *Auguſtus* and *Tiberius*; as is apparent from the Inſcription, which remaineth ſtill undefac'd:

Divo Cæſari, divi Julii F. Auguſto
Tiberio Cæſari D. Aug. F. Auguſto ſacrum.

The *Vatican*, ſo call'd from the God *Vaticanus*, who gave his Oracles or Oracles here.

The Palace of the *Vatican* is conveniently ſeated for the Pope near S. *Peter*'s Church, but by its too near neighbourhood takes off abundance of the Luſtre and glorious Proſpect of it, as well as ſome other Edifices near it. This Palace is not one entire regular Structure, but a compoſition of many beautiful Pieces, ſaid to contain 12500 Chambers, Halls and Cloſets, which may in ſome meaſure be diſcover'd in the Model which is ſhew'd of it in Wood.

The *Belvedere* belonging to the *Vatican* has got its name from its delightful Proſpect: We were ſo ſurpriz'd with the moſt excellent Pieces of *Raphael*, *Michael Angelo*, *Julius Romanus*, *Pintoriccio*, *Polidorus*, *John d'Udina*, *Daniel Volterra*, and other great Maſters, found us ſo much Diverſion, that we neglected to take notice of all the other Perfections of this beautiful Edifice.

I have often with a great deal of Delight ſeen and heard the moſt curious Perſons of *Rome* gaze with great amazement upon the Hiſtory of *Attila*, (the Work of the incomparable *Raphael*, who was born 1483, and died when he was thirty ſeven years old) and admire its Beauty and Perfections, nay, even put their Wits upon the rack to find out Expreſſions ſuitable to the ſeveral Excellencies of this marvellous Piece; when after all, ſome nice Judges have, and not without very good reaſon, found fault with the Dreſs *Raphael* has thought fit to repreſent *Leo* I. and two Cardinals in, being after the ſame manner as they are worn by them now-adays; whereas it is evident from the Hiſtory of thoſe times *, that Pope *Conſtantine* and the other Popes (two hundred and fifty years after *Leo* I.) wore plain Cambler Garments. Thus *Titian* hath painted *Roſaries* at the Girdles of the two Diſciples that met Chriſt in his way to *Emaus*; and another noted Painter, named *Roſſo*, has repreſented *Monks* in their Habits as Gueſts at the *Virgins Wedding*. I remember that at *Soeſt*, a Town of *Weſtphalia*, there is a Picture of our Saviour's Laſt Supper painted in a Glaſs Window of a Church, wherein that Painter has put a *Gammon of Bacon* inſtead of the *Paſchal Lamb*. Nay, even *Michael Angelo*, in his moſt celebrated Piece of the Laſt Judgment, has introduc'd many indecent poſtures, Angels without Wings, nay, even the Ferryman *Charon* with his Boat full of Souls.

* See *Platina*.

Miſtakes of ſome great Painters.

In the Hall where the Pope gives Audience to Ambaſſadours, are three large Pictures repreſenting the Hiſtory of the Admiral *Coligni*; the firſt ſhews you the ſaid Admiral as he was carried to his Houſe, after his being wounded by the Ruffian *Mercvel*, (fifty thouſand Crowns were ſet upon his Head) at the bottom whereof you read this Inſcription:

Gaſper Colignius Ammiralius, accepto vulnere domum refertur. Greg. XIII. Pontif. Max. 1572.

The ſecond repreſents him murther'd in his own Houſe, with his Son-in-law *Teligny* and others, with this Motto underneath:

Cædes Coligni & Sociorum ejus.
i. e. *The Slaughter of* Coligni *and his Adherents.*

In the third the News of this Murther is brought to the King, who ſhews a ſatisfaction in his Countenance, with this Inſcription:

Rex Coligni necem probat.
i. e. *The King approves of the ſlaughter of* Coligni.

Beſides theſe Trophies of ſo barbarous an action, the ſaid Pope cauſed Medals to be coin'd with this Inſcription, *Gregorius XIII. Pont. Max. an.* 1. and on the Reverſe an Angel with a Croſs in one Hand, and a Sword (with which he ſeems to thruſt) in the other; with this Inſcription, *Ugonottorum Strages* 1572, i. e. *The ſlaughter of the Hugonotts* 1572. I got one of theſe Medals, tho' they are become very rare of late Years.

Of the Gardens of *Belvedere*, and the Statues there, I will put you in mind only of the unvaluable Marble Statue (of one entire Stone) of *Laocoon*, the Work of *Ageſander*, *Polydorus* and *Athenadorus*, three *Grecian* Sculptors; of the Trunk without Head, Arms or Legs, with the *Sculptors Names* engraven on the Pedeſtal,

ΑΠΟΛΛΟΝΙΟΣ, ΝΗΣΤΟΡΟΣ, ΑΘΗΝΑΙΟΣ
Apollonius, the Son of Neſtor, an Athenian.

The *Vatican* Library owes much of its Encreaſe to the *Heydelburgh* Library and that of the Duke of *Urbin*; the number of Books it contains is ſo variouſly reported, that I thought it beſt to determine nothing upon that Head. The Pictures repreſent for the moſt part the *Sciences*, *Councils*, noted *Libraries*, *Inventors of Letters*, and ſome Pieces relating to the Life of *Sixtus* V. The old MS. of *Virgil* is in Quarto, but of greater breadth than length, in capital letters, without Points or any other diſtinction of Words. The *Gothick Letters*, as well as the *Miniature*, ſhew

The *Vatican* Library.

shew it not to be written in the first Ages of Antiquity, as some would have it.

Among the Manuscripts of the latter Ages, I took notice of some Letters written to and by Cardinals, wherein they give one another no other Title than Mr. *Peter* and Mr. *Julius*. They also shew'd us a Volume in Quarto, of the thickness of a Finger, containing Letters from King *Henry* VIII. to *Anne Bullen*. I also took particular notice of the *German Bible* which you mention'd, and, as they say, translated by *Luther*, and written with his own hand; which might have some probability of truth, were it not that a certain extravagant Prayer, written apparently with the same hand, at the end of it, did destroy it; the words are thus in the Original:

O God, durch deine Gute
Beschere uns Kleider und Hute,
Auch Mäntel und Röcke
Fette Kälber und Böcke,
Oxen, Schafa und Binder,
Viele Weiber, wenig Kinder;
Slechte, Spaise und Trank
Machet eikem das Jahr lang.

i. e. *O God, thro' thy Mercy, grant us Clothes and Hats, Cloaks and Gowns, fat Calves and Goats, Oxen, Sheep and Bulls, many Wives and few Children: Indifferent Meat and Drink makes the Year pass away very slowly.*

The Arsenal. In the Arsenal, they tell you, the Pope maintains constantly Arms for forty thousand Foot and twenty thousand Horse; but I am sure there were not half that number, and those very indifferently kept. I told you that the Pope may with great conveniency descend from the *Vatican* to St. *Peter*'s Church; and on the other side he may with the same ease make a secret retreat from thence into the Castle of St. *Angelo*, thro' a Gallery built by *Alexander* VI. *Urban* VIII. fortified it with four Bastions, unto whom he gave the Names of the four Evangelists. In the Chapel you see a Picture represent Pope *Gregory* I. prostrated at the feet of an Angel that appear'd to him on the top of the *Moles Adriani*, or *Adrian's Mausoleum*, and sheathing his Sword, foretold the Pope the deliverance of the City of *Rome* from a most violent Pestilence; whence this place got the Name of St. *Angelo*.

The Castle of St. *Angelo*. In the little Arsenal belonging to this Castle we saw, besides the Papal Triple Crown, an Armoury full of prohibited Arms, taken for the most part from such unfortunate Persons as were executed upon that account. Among the rest they shew'd us the Pistols of *Ranuccio Farnese*, Son and Heir of *Alexander Farnese* Duke of *Parma* and Governour of the *Netherlands*, who usually carrying Pistols about him, contrary to the express Prohibition of *Sixtus* V, who being a rigorous Person, and of a disposition very forward to maintain his Authority, order'd *Ranuccio* to be seiz'd in one of the Chambers of the Palace, as he was going to desire Audience of His Holiness, and to be carried Prisoner to the Castle of St. *Angelo*.

An odd deliverance of *Ranuccio* Prince of *Parma*. Cardinal *Farnese*, *Ranuccio*'s Uncle, left no Stone unturn'd to procure his liberty, but in vain; for one Evening, about ten a clock, whilst the Cardinal was soliciting his releasement with the Pope, he sent his Orders to the Governour of the Castle of St. *Angelo*, to have the Prince *Ranuccio* beheaded: This done, the Pope not questioning but that his Orders had been executed immediately, and willing to make a shew of obliging the Cardinal, he gave him a new Order about eleven a clock, enjoyning the Governour of the Castle to set *Ranuccio* at liberty. The Cardinal, who knew nothing of the first Order, made all the haste he could thither, but was highly surpriz'd when he found his Nephew preparing himself for present Death in the Arms of a Confessor, the only reason that had delay'd his Execution; but the Cardinal, overjoy'd to have nick'd the time so exactly, and producing his new Order to the Governour, had his Nephew put into his hands, who by his Uncle's procurement took Post immediately, and so escap'd the hands of his Executioners.

During our stay here, there was a certain Prisoner of Note kept in the Castle of St. *Angelo*, nam'd *Borri*, a Gentleman of *Milan*, and a good Physician and Chymist, accused of Heresie in receiving the Errours of the *Collyridians* in the fourth Age, who paid a kind of Adoration to the *Virgin*, nay, some say that he made her a fourth Person in the Godhead: However, he has the liberty of visiting some of his Patients of the best Quality in the City, being suppos'd to be not in his right Wits at certain times.

I am not well able to resolve your Question concerning Dr. *Molinos*, for tho' I have seen those Propositions that are said to be his, yet will I not presume to give my Judgment of 'em, unless I could hear *Molinos* himself; however, as they are publish'd, some of 'em are dangerous, others ambiguous, divers of 'em indifferent, and many very reasonable and orthodox. As to his Person, he has a very bad Character, being reputed a Villain and lewd Fellow, who by his pretended *Insensibility* and *Extasie* has deluded a great number of Nuns, of which they tell you a thousand Stories, which have procur'd him his ignominious Confinement to a Cell for his Life. I have however observ'd, that his most inveterate Enemies have a much better Opinion of his Followers, who have embrac'd that *Quietism* and other Opinions you have heard so often attributed to *Molinos*. I am,

Sir,

Rome, March 30. 1688.

Yours, &c.

LETTER XXIV.

SIR,

SOME Days ago meeting Mr. *M. B.* making his court to the *Heroine* you mention, the Discourse began soon to run upon the various Customs used in *England*, and especially upon the Liberty allow'd to their Women, in opposition to the Confinement of the *Italian* Ladies, in defence whereof it was alledg'd, That this Custom was introduc'd into *Italy* as a necessary Caution, where three parts of the Men living under the constraint of Celibacy, would without this Precaution create most dreadful Disorders; but Answer being made, That St. *Paul*'s Advice might be a much better and more convenient Remedy against this Danger, we chang'd the Discourse: And the Queen understanding that there was a *French* Gentleman in the Company, she ask'd him, what News concerning the late Millions of Dragoons; and having understood his Answer*, *I have*, said she, *heard as much from the mouths of Eye-witnesses, and even the Jesuits themselves, who gave me an account of their barbarous Insolencies. Some German Jesuits told me*, continued she, *that they had seen the Dragoons* Priapos suos immanes in os fœminarum immittentes, ibique urinam fundentes. *I chid them*, added she, *for suffering such Insolencies, but they laugh'd at it.* After these words and some other Stories upon that Subject and the difference betwixt the Court of *Rome* and that of *France* concerning the Immunities, the Queen withdrew.

* See that Princesses Letter to the Chevalier de Terlon, inserted in the Nouvelles de la Rep. de Lettres, May 1686.

This Princess was then about sixty Years of age, of a low Stature, and very fat; her Complexion, Voice and Countenance are masculine, with a great Nose, large and blue Eyes, and yellow Eyebrows; her double Chin is strew'd with some few long Hairs of a Beard, and her under Lip sticks out a little; her Hair is of a light Chesnut colour, of a hand-breadth long, powder'd and curl'd up in Puffs, without any other Head-dress; her Air is very pleasing, and seldom without a Smile: As for her Habit, imagine a Man's *Justaucor* of black Sattin, reaching to the Knees, and button'd quite down; a very short black Petticoat, which plainly discovers a Man's Shoe; a Knot of black Ribbon instead of a Neckcloth, and a Girdle above the *Justaucor*, which supports the Belly.

The Queen had no sooner left us, but we took a view of the Palace *Riari*, her Residence, where we met with many ancient Pieces; the most exquisite of them are, the *Augustus*, of the rarest transparent Oriental Alabaster, but the Head and Feet are of a newer date, and of Brass gilt; sixteen ancient Columns of *Giallo*, with two Pillars of transparent Oriental Alabaster seven foot high; the *Venus*, whose mangled Legs are so admirably supplied by new pieces, that the joyning is not to be perceiv'd; the *Castor* and *Pollux* on each side of their Mother *Leda*, all of one piece of Marble, the Sons are bigger than the Mother; the Altar of *Bacchus*, of beautiful white Marble, is adorn'd with most exquisite Sculptures in *Basso relievo*: Old *Silenus* going home drunk from the Feast of his Foster-child, supported by two Men; the *Bacchantes* appear'd in the posture of Mad-women. In another place we saw a Goat flea'd alive, for cropping the Vines; and a Boar, who is wash'd in order to be sacrific'd.

The Queen of Sweden's Palace.

Among

Among the Pictures, the Piece of *Correggio*, repreſenting the Intrigue of *Jupiter* with *Leda* in the ſhape of a Swan, is exceeding fine; as are the *Virgin*, with the Infant *Jeſus*; the little St. *John*, by *Raphael*; and *Danae*, by *Carachio*, beſides divers other rare Pieces of *Titian*, *Paul Veroneſe*, *Guido*, and other great Maſters.

Medals. It would be much beyond the compaſs of a moderate Treatiſe to enter upon a deſcription of all the rare Medals to be ſeen in this Palace, wherefore I will content my ſelf with mentioning only the beſt: The *Otho*, of Braſs, an *Egyptian* Piece, with *Serapis* on the reverſe of it; the *Pertinax*; a ſmall Latin Medal, on the reverſe whereof you ſee that Emperour offering a Sacrifice; the *Antoninus Pius*, another Latin Medal, having on the reverſe *Victory* and *Plenty* offering him Fruit; another little Medal of the ſame *Antonin*, call'd by Mr. *Bellori*, *l'Anno Nuovo*, or *The New Year*, from the four Letters *A. N. F. F.* which he interprets *Annum Novum*, *Faustum*, *Felicem*; and a Medal of *Nero*, with *Hercules* on the reverſe; the *Cicero*, of Onyx, the Head white on a brown ground, a moſt curious Piece.

The Stone of St. Sabina's Church. But we will paſs from hence to ſome other Curioſities: In St. *Sabina's* Church, on Mount *Aventine*, we ſaw a great Stone, which, they tell you, the *Devil* of *Cullen* hurl'd down from the top of an high arch'd Roof, to knock out St. *Dominick's* Brains, after he had been diſappointed in his deſign of beating down the Chapel of the three Kings.

The Crucifix in St. *Paul's* Church, which ſpoke to St. *Bridget*, was the Work of P. *Cavallini*, it was made in the Year 1360; beſides which, they have ſeveral other talking Images at *Rome*, as, the Crucifix of St. *Mary Tranſpontin's*, which ſpoke ſeveral times to St. *Peter* and St. *Paul*; our Lady of St. *Coſmo* and *Damian*, (formerly the Temple of *Remus* and *Romulus*) which chid St. *Gregory* for paſſing by without ſaluting her; they ſhew you certain Latin Verſes (attributed by ſome to the Abbot *Joachim*, by others to *Beda*) containing the whole Dialogue betwixt the Image and the Saint: Another at St. *Marys the Empreſs*, and one more in St. *Gregory's* on Mount *Celio*, have now and then given ſome Proofs of their not being without the faculty of Speaking, as divers others (if you will believe them) have not been ſparing with their Tears; as at St. *Mary's of Peace*, St. *Mary's* in *Valicella*, and another St. *Mary's* call'd *del Pianto*, and that in the Church of the *Holy Ghoſt*, has ſhed whole Floods of Tears.

Speaking and crying Images at Rome.

The Image of Chriſt at St. *Sylveſter's* in the *Campo Martio*, done by himſelf, as they ſay, and ſent by him to King *Abagarus* (according to *J. Damaſcen*) is the rareſt Picture in *Rome*. *Euſebius* mentions the Letter paſs'd between Chriſt and *Abagarus*, but ſays nothing of the Image.

This City abounds alſo in variety of Relicks; as, the Ark of the Covenant, *Moſes* and *Aaron's* Rods, and the Fountain of Chriſt preſerv'd at St. *John Lateran*; a piece of the ſame Money *Judas* receiv'd, his Lanthorn, (which is alſo ſhewn at S. *Denis* in *France*) and the Croſs of the S. *Good-Thief*, are ſhewn at the Church of the *Holy Croſs* of *Jeruſalem*, with the Tail of *Balaam's* Aſs, and S. *Paul's* Thorn; S. *Roch's* Bowels are kept at S. *Marcell's*. The Beams of the Star that conducted the Wiſe-men have been evaporated of late years, as well as the ſound of the *Jeruſalem* Bells; but *Moſes's* Horns, it ſeems, are ſtill preſerv'd at *Genoa*.

The Relicks of Rome. The Navel of Chriſt is preſerv'd at S. *Maria del Populo*, concerning the Foundation of which they tell you the following Story: In the ſame place ſtood a large Walnut-tree, on the Branches of which uſed to perch a certain troop of Devils, who guarded the Aſhes of *Nero* in an Urn near it; this being very injurious to the Neighbourhood, they prevail'd with Pope *Paſchal* II. to rid them of this Helliſh Company; after ſome time ſpent in Faſting and Prayer, it was reveal'd to him, that he ſhould pull up the Tree by the Root, and build a Church; which being done accordingly, he gave it the Name of S. *Mary of the People*.

In the Church of S. *Giacomo Scoſſa Cavalli* (or S. *James Shake-horſe*) they ſhew the Stone (on the Altar of the Preſentation) on which Chriſt was circumcis'd, with the Impreſſion made by one of his Heels upon the Marble; as alſo another Marble Table on S. *Anne's* Altar, on which *Abraham* intended to ſacrifice his Son: Theſe Relicks, they ſay, were ſent by the Empreſs *Helena*, to be kept in S. *Peter's* Church, but the Waggon was no ſooner come near S. *James's* Church, but the Horſes ſtop'd, ſo that the Drivers not being able to make them go one ſtep further, ſome Myſtery was ſuppos'd to be hidden in this unaccountable Accident; and it being conſider'd at laſt, that S. *Paul* call'd S. *James*, as well as S. *Peter*, the *Pillar of the Church*, they reſolv'd to leave them at S. *James's*, and to preſerve the memory of the Miracle, gave that Saint the Name of *Scoſſa Cavalli* or *Shake-horſe*.

You may eaſily imagin that my Curioſity did lead me to hear ſome of their Preachers, who, generally ſpeaking, expreſs themſelves more in fantaſtical Geſtures, wry Mouths, and odd-compoſed Faces, than in the reality of their Arguments, or a fine diſpoſition of Words, ſerving more for Diverſion than Inſtruction. I muſt further tell you, that each Order has its peculiar way of preaching; the *Jeſuits* declaim very well, without thoſe apiſh geſtures and motions the reſt are guilty of, but their Stile is extravagant enough: The *Capuchins* thunder out nothing but Hell and Deſtruction, and make a hideous noiſe, whence it is that a certain *Italian* Author ſays pleaſantly, That when a *Capuchin* preaches, the Dogs run out of the Church. In ſhort, their Diſcourſe has neither Strength nor Gravity, a confuſed Noiſe and Heat, without either Senſe or Reaſon.

The Roman Catholick Preachers.

I remember I heard once a *Carmelite* preaching before the *Penitent Whores* of the *Holy Croſs*, concerning *Mary Magdalen*, who ſpent at leaſt a quarter of an hour in repreſenting all her Features to the greateſt nicety, not like a Preacher, but like a Painter.

The Queſtion you put to me, Whether there are more Courteſans at *Rome* or *Venice*, I am not well able to anſwer; for tho' I ſee not ſo many here as at *Venice*, I have it from credible perſons, that their number is almoſt infinite. *Sixtus* V. endeavour'd to root out this Evil, but after he had done all he could with Baniſhments and otherwiſe, was forced to recal them again, as *Sixtus* IV. did before, to prevent, as they ſay, greater diſorders.

Upon this occaſion I can't but remember an ancient Picture of a Wedding at the *Aldobrandin* Palace. This is a piece of Frize, brought hither with the ſame part of the Wall on which it is painted, being highly valuable both for its Antiquity and Workmanſhip. I am not to tell you, that the Marriage Ceremonies were very different among the *Romans*, the Bride being ſeated ſometimes upon a Sheeps Fleece, ſometimes on a Figure of the God *Priapus*, ſometimes in another poſture. In this Picture ſhe is ſeated on the Bed-ſide, with her Head hanging down with a pretended coyneſs, whilſt a Matron * ſitting by her puts her in mind, with a ſmiling countenance, of her Duty. The Bridegroom, in an odd Dreſs, with an Ivy Garland on his Head, is ſeated near the Bed, waiting, with an eager impatience expreſt in his looks, for the compliance of his whining Spouſe, whilſt divers Maids are buſie in preparing Baths and ſweet-ſcented Ointments, and a She-Muſician plays upon the Harp, whilſt another ſeems to ſing ſome *Hymenic O Hymenee*, ſome *Epithalamium*, or laſcivious Song, to diſpel the Charms.

* *Pronuba.*

This Picture on the *Frize*, and another on the *Pyramid* of *Ceſtius*, are the only Remnants of the true ancient Painting in *Rome*. This Pyramid is ſquare, ending in a ſharp point; it is of Brick, but covered with white Marble; it was repair'd 1673, and reſtor'd to its former beauty by *Alexander* VII, and as appears by the Inſcription, was erected to the memory of *C. Ceſtius*, one of the ſeven Magiſtrates appointed to take care of Religious Feaſts.

You enter the *Maſoleum* thro' a narrow opening in the middle of the thick Wall, and thence into a vaulted Room nineteen foot long, thirteen broad, and fourteen foot high, plaiſter'd over with a certain white poliſh'd Mortar, on which are ſeen ſeveral Pictures of Women, Veſſels, and other Ornaments.

The old Pictures in the Pyramid of Ceſtius. To enter upon a particular deſcription of ſo difficult a Subject being beyond our ſcope, I will content my ſelf to tell you, that I found the Antiquaries here of different Opinions in reference to theſe Figures, ſome pretending that they repreſent the Preparatives for a Funeral Show, others a Banquet, as a Memorial of the Office of the Deceaſed. One of the Figures holds a Veſſel, in which ſome others pour luſtral Water, and others Wine. Another Figure you ſee with large Pipes, deſign'd, as ſome ſay, for Mirth, and according to ſome, for Mourning, both Parties pretending to back their Opinions by this Diſtich in *Ovid's Faſts*:

Cantabat Fanis, cantabat Tibia Ludis
Cantabat mœſtis, Tibia funeribus.

There is one thing, *viz.* the different colours of the Figures, which ſeem to intimate that theſe Habits were not intended for Funeral Ceremonies; and as, according to the Inſcription of a Pedeſtal dug up near this Pyramid, this *Ceſtius* died in the beginning of *Auguſtus's* Reign, ſo it

it is beyond dispute, that the Women were cloath'd in white at the Funerals in his Reign, the fashion of mourning in black being abolish'd in the beginning of *Cæsar*'s Dictatorship. Perhaps these Pictures were design'd only for an Ornament to the Tomb, without the least respect either to Feasts or Funerals, as the Sepulchre of the *Vibii* has many such Historical Ornaments, the bare product of the Painter's Fancy. The like is to be seen in divers other Tombs, and especially Urns. The greatest Curiosity in these Pictures is their durableness, especially of their Colours, which were only mix'd with Water, and don't even penetrate the Plaister, besides that, Painting in Oyl is an Invention of the latter Ages, by *John de Bruge*, 1450.

The Hill of Potsherds.

This Pyramid is about two hundred paces distant from the Hill called *Doliolo* or *Mon e Testaceo*, i. e. *the Hill of Potsherds*, which some would have derive its Name from the broken pieces thrown there by the Potters, that were obliged to live near the *Tyber*, to prevent its Inundation on that side, by casting together the pieces of the broken *Idols*, *Bathing-tubs*, *Statues*, *Tiles*, and other sorts of earthen *Vessels*, which amounting to a vast quantity in so great a City, produced this Hillock.

But as probable as this Opinion appears at first view, I have, upon strict examination of the matter, observ'd divers things which induce me to believe otherwise; for having seen, at several times and at several places, the People dig Caves under this Hill to keep their Wine in, I could never observe them bring out any Fragments of *Images*, *Tiles*, &c. but only the Remnants of *Urns*; whence I conjecture, that whilst the Custom of burning the Dead continued, a prodigious quantity of earthen *Urns* were made for the common People, and as of necessity many of 'em must be broken, the reverence they had to those *Vessels* that had contain'd the Ashes of the dead Bodies, had induced them to assign a certain place for these Fragments to be laid up in a heap, just as we, out of respect to the Dead, preserve their Bones.

Your Curiosity concerning the famous *Pasquin* and his Antagonist *Marforius* I will satisfie as well as I can: This *Pasquin* was a Taylor, and a jovial smart fellow, at whose House the Newsmongers used to meet; his *Lampoons* were called *Pasquinades*, and these as well as all the other *Libels* of the Town were affixed at a Statue which stood near his Gate: 'Tis a mangled Statue, thought by some to be a *Roman* Soldier; it stands leaning against a House at the corner of a place where several Streets meet. Pope *Alexander* VI. being advised to throw this *Pasquin* into the *Tiber*, he answer'd, *I should be afraid, lest it should be turned into a Frog, and trouble me Day and Night with its croaking.* See Fig. XI.

Marforio is likewise a maim'd Statue, said by some to be made for *Jupiter*, others for the *Rhine*, or for *Nera*, which runs by *Terni*: It stands in one of the Courts of the Capitol; and *Marforius* commonly asks the Questions which are resolved by *Pasquin*.

You will perhaps expect me to tell Wonders of *Tivoli* and *Frescati*, and 'tis not to be denied but that they are *pleasant* or (if you will have it so) *fine places*, but if things are best distinguish'd by way of comparison, (as for instance, betwixt *Frescati* and *Versailles*, or even to some other Seats that are not Royal Seats) I dare boldly affirm, that both *Tivoli* and *Frescati*, and all the other celebrated places about *Rome*, in respect of their *Gardens* and *Water-works*, are only *pretty Toys*.

Frescati the ancient *Tusculum*.

Frescati is a small Town seated on the brow of a Hill, twelve miles from *Rome*; it has several beautiful Country Seats, the three principal ones of which are, *Monte Dragone*, belonging to Prince *Borghese*; *Belvedere*, to the Prince *Pamphilio*; and the *Villa Ludovisia*, to the Dutchess of *Guadagniola*, the Constable *Colonna*'s Sister; all which are in comparison to *Versailles* the same as *Frescati* is to *Rome*.

Monte Dragone.

Monte Dragone is a very large Structure, seated on an Ascent, from which you may see *Rome* and the interjacent Plain; but as the City lies at too great a distance, and the Plain is not embellish'd with that variety of things which render a Landskip agreeable, so the Prospect of *Rome* from St. *Clou* is infinitely more delightful: On the side of *Monte Porzio* there is much more variety in the Prospect, but much more straitned. The Avenues to the House are but indifferent, and very difficult, and the Gardens and Fountains much out of order.

Belvedere.

The situation of *Belvedere* is near the same with *Monte Dragone*; it has a pretty *Cascade* and a *Grotto*, where you see *Apoll* with the *Nine Muses* on *Parnassus*.

The chief Ornament of the *Villa Ludovisia* is the *Cascade*; but the Furniture of all these Houses were but very indifferent.

Tivoli.

Tivoli is such another small Town, about eighteen miles from *Rome*: Here is a Country Seat belonging to the Duke of *Modena*, commonly in the possession of the Cardinals of that Family; it is very spacious, but wants both convenient Apartments and good Furniture; the best thing belonging to it are three Rooms painted in *Fresco* by *Raphael*, and some ancient Statues: The Gardens, tho' but small, yet are adorned with most delightful Terrass Walks and curious Waterworks, far beyond those of *Frescati*, and perhaps all other Works of this nature in *Italy*; but at present, what with the stoppage of the Canals and the defect of the Pipes, every thing is so much out of order in this House, that you see only the remnants of its beauty. *April* 1688

The Palace and Gardens of *Este.*

This sight, as well as of divers other most celebrated Country Seats, put me in mind, after the surprizing things I had heard said concerning the *Italian* Water-works, that if formerly they did surpass those of *France*, the face of affairs is much alter'd now; and allowing even what they say of the Palace *d'Este*, that the Water-works cost no less than three millions, it is nevertheless beyond all dispute, that the Waterworks and other Beauties of *Versailles* exceed abundantly all those that are at *Tivoli*.

The Cascade or Cataract of the River *Teverona* (which produceth white smooth Flints call'd the *Diamonds of Tivoli*) in this small Town is very pleasant to behold, being not very high. Near it you see the Ruins of an ancient Structure, reputed by some to have been the *Sybils House*, by others a Temple of *Hercules*: In the Court stand two ancient Statues of a reddish Granite speckled with black, representing (according to Mr. *Spon*'s Opinion) the Goddess *Isis*, which he supposes to have been brought by *Adrian* out of *Egypt*, to adorn his Country Seat at *Tivoli*.

The Quarries of Rome.

The Hill near this place has many Ages ago, and does now afford most of the Stones used in *Rome*, call'd commonly *Travertin* by corruption, instead of *Tiber Fin*; the Front of St. *Peter*'s Church is built of the same, as well as the *Colliseo*, which is quite cover'd with it: The Stone is very excellent, but yellowish and porous, and not so serviceable as your *Portland* Quarry and those of *Paris* and *Caen*.

Alexander Tassoni, in his *Various Thoughts*, says, That some Workmen having cleft a great piece of one of the Stones of *Tivoli*, found in the middle of it, in an empty space, a *Crabfish* weighing four pounds, which they boil'd and eat. *Alexander ab Alexandro* assures us, that he found a wrought Diamond in the Heart of a great piece of Marble, and at another time a considerable quantity of sweet-scented Oyl in another piece of Marble. *Bapt. Fulgosius* speaks of a Worm found in the middle of a Flint. The before-mention'd *Tassoni* relates, that a Cat suckled a Rat at *Tivoli*.

Lacus Aricinus.

About three miles from *Tivoli* we saw a small Lake call'd *Lago de Bagni*, or *Solfatara*, call'd by the vulgar the *Sixteen Barges*, from the same number of small floating Isles that are upon it: It is no more than a large round Pond, of about two hundred paces diameter, the Water whereof is very transparent, and of a bluish colour; it gives rise to a small Rivulet which, after a small but rapid course, joyns its Waters with the *Anieno*; they say the Waters of the *Anieno* whiten the Teeth. The Lake as well as the Brook emit a very strong sulphureous scent.

The Villa of Cleopatra, Pompeii, and Virgil's Master.

The late Cardinal *d'Este* having in vain attempted to sound the depth of this Lake, tho' divers were prevail'd upon to enter into it, one of whom never return'd, and the other related, that coming at a certain depth, he found the Water so hot, that he was not able to endure it, tho' on the surface it is very cold: The sound made by the treading of the Horses thereabouts, makes it apparent, that there is a hollowness underneath the ground near the banks of this Lake. 'Tis not unlikely that the circumference of this Lake is only the mouth of a much larger Abyss extending a great way under ground on all sides, and that the Diver that was never seen again happened to be carried into the subterraneous Gulph, and could not find out again the entrance of the Lake, for he never appear'd afterwards upon the surface of the Water.

Floating Islands.

Near the Bank of this Lake are seen some Ruins, supposed by some to be the *Baths of Agrippa*: The largest of the floating Islands is of an oval figure, not above fifteen foot long: As the least touch puts 'em in motion, so they are easily carried by the Wind which way soever it blows. Two of our Company got upon the least of these Islands, and push'd it from the Bank only with the points of their Swords.

The

The *Villa Borgheſe* is in my opinion one of the moſt pleaſant and the beſt kept of any about *Rome*; it is all cover'd on one ſide with moſt curious ancient Pillars of *Baſſo relievo*, ſo naturally diſpos'd, as if they had been made for thoſe places where you ſee 'em. All the Apartments are fill'd with rare *Statues* and *Pictures*; among the firſt, the *Gladiator* made by *Agaſias* Son of *Doſithеus* the *Epheſian*, as the Greek Inſcription on the Baſe expreſſes it, a Copy whereof in Braſs ſtands at the end of the Canal in St. *James's* Park in *London*, (ſince remov'd to *Hampton Court*) is an excellent Piece, as well as the *Juno* of Porphyry; *Romulus's* Wolf, of the fineſt *Egyptian* Marble; the Buſts of *Hannibal*, *Seneca*, and *Pertinax*; the *Hermaphrodite*; the old *Silenus* with *Bacchus* in his Arms; the *David* throwing a Stone out of his Sling at *Goliah*, *Æneas* carrying his Father, and the Transfiguration of *Daphne*, three modern Pieces of *Bernin*, yet deſerve to be rank'd among the beſt of the former Ages. Among the *Pictures*, which are numberleſs here, the St. *Anthony* by *Caracchio*, and the *dead Chriſt* by *Raphael*, are prefer'd before all the reſt. In ſhort, the *Villa Borgheſe* is a moſt delicious Seat, and if it wants ſomething of that Royal Magnificence which gives a luſtre to ſome Palaces, its ſweet and natural beauties ſeem to make an ample amends for it: Beſides that, for *Statues* and *Sculptures* the Seat of a *Roman* Gentleman may challenge the precedency before all the other Palaces in the World.

The Villa Borgheſe.

In the Garden the Gardener ſhew'd us a double white *Hyacinth*, the Root of which, he told us, coſt five hundred Crowns the Year before; a thing not much ſurprizing to me, when I had known the fondneſs (to ſpeak no worſe) of ſome People to proceed to that extravagancy in *Flowers*, as to give four or five hundred Piſtoles for a Tulip-plant in *Flanders*.

The *Villa Ludoviſia*, tho' much out of order otherwiſe, yet is remarkable for a vaſt number of Statues, and thoſe for the moſt part very ancient ones: The *Fauſtina* embracing a Gladiator, her Lover; the two Gladiators, one a dying *Mirmillo*, and the other repoſing himſelf after the Engagement. The Statues of *Bacchus*, *Mercury* and *Concord* are all moſt curious Pieces; the choiceſt Pictures and richeſt Furniture are remov'd from hence to other places, the only thing of value remaining there being the Bedſtead, which (they ſay) coſt twenty thouſand Piſtols, but was much out of order then. In the ſame Chamber they ſhew'd us ſome Bones which, they would make us believe, were the Skeleton of a petrified Man, but upon a ſtrict ſearch I found theſe Bones not petrified, but cover'd only with a ſtony Cruſt; not but that I believe Bones to be capable of petrefaction as well as other things, having in my Travels had the opportunity of ſeeing great variety of petrefied *Fruits*, *Flowers*, *Trees*, *Wood*, *Plants*, *Bones*, *Fiſhes*, broad pieces of *Fleſh*, and *Animals* of all ſorts; *Pareus* ſpeaks of a whole Child petrefied in the Mothers Womb; and *Kircher* relates of the Town of *Binedobolo* in *Africk*, that it was petrefied in one Night, with Men, Beaſts, Trees, and every thing that was in it.

Villa Ludoviſia.

Sic Laſſel.

The *Villa Chigi* is famous for its curious little Water-ſpouts, and the Cabinet of Curioſities, in which the *Adrian* of Oriental Jaſper excels the reſt.

The Villa's of Chigi, Pamphili, and Fyni Madame.

The curious Walks of the *Villa Montalto* or *Savelliane*, not inferiour to any of *Rome* for its curious *Statues* and *Pictures*; among the firſt, the *Germanicus*, the *Peſcennius Niger*, the *Scipio*, the Goddeſs *Nænia*, the *Admi*, and the *Gladiator*, are moſt excellent Pieces of Antiquity; and among the *Pictures*, the *dead Chriſt* by *Raphael*, the S. *Francis* by *Caracchio*, the *Virgin* and the *Bacchus* by *Guido*, and the S. *John* by *Pomarancia*. I obſerv'd here an unuſual Figure of *Abraham's* Sacrifice, by *l'Eſpagnolet*, who, inſtead of a Cymetar or ſhort two-handed Sword, as *Abraham* is commonly painted with, has given him a plain ſacrificing Knife to cut his Son's Throat.

The Gardens of the *Villa Pamphili* would for their exactneſs and orderly diſpoſition challenge the preference before many others, were they kept in better repair, the Houſe being adorn'd on the outſide with excellent *Baſſo relievo*, like that of the *Villa Borgheſe*, and is as well furniſh'd within, but that the beſt *Statues* are much diſorder'd by an odd Accident; for the Prince *Pamphilio* being very young, and much bigotted to the *Jeſuits*, theſe holy Fathers, under a pretext of Devotion, prevailed upon him ſo far as to have all his Marble Statues, Men, Women and Children, to be laid over with Plaiſter-work in divers parts of their Bodies, except a little *Bacchus*, who had the good fortune to eſcape their ill-placed Zeal; and a poor *Venus*, the Maſterpiece of *Caracchio*, was forced to ſee her Beauties hid by a ſmutt from Head to Foot. But after ſome time the Prince being got out of the hands of theſe pretended Zealots, he order'd the naſty Clay or Plaiſter to be taken off again, which was done accordingly, but found to his no ſmall regret, that the clumſy-fiſted Plaiſterers had mangled ſeveral parts of the *Statues* to make their Clay ſtick the better.

The *Vigni Madame*, a Country Seat belonging to the Duke of *Parma*, is neither ſpacious nor magnificent, but very regular and pleaſantly ſeated, being the Deſign of *Julius Romanus*: On one ſide it has a moſt delightful proſpect of *Rome*, with many Gardens and adjacent Seats; and on the other, a moſt beautiful Landskip of little well-cultivated Hills: Over againſt it you ſee the *Tiber* flow thro' the pleaſant Meadows and Fields, and at a diſtance the Snowy tops of the *Apennines* riſing up among the Clouds; behind it is a Wood of tall Trees, divided into cool and ſhady Walks; the Gardens riſe by degrees into Terraſs Walks, and are well adorn'd with Statues and Fountains.

Having ſufficiently tir'd your Patience with the Deſcription of *Statues* and *Pictures*, I will ſay nothing of the Houſes of *Medici*, *Matthei*, *Lanti*, *Cæſarini*, *Juſtiniani*, and others. I am,

Sir,

Rome, *April* 11. 1688.

Yours, &c.

LETTER XXV.

SIR,

I Will begin this Letter with anſwering your Queſtions concerning the *Tyber* (formerly call'd *Rumon*, *Teretus* and *Albula* it receives.) As on one hand it owes its chief Reputation to that famous City that was built upon its Banks, ſo on the other hand it has been repreſented by ſome with too much Contempt, its breadth being by a general computation at *Rome* of about three hundred feet, as may be ſeen by the Bridges of St. *Angelo* and of *Sixtus*, the firſt whereof is three hundred and thirty, and the laſt three hundred foot long; beſides that, it has a rapid current, and a conſiderable depth. What ſome Antiquaries would maintain, that it was unlawful to erect Houſes upon the Banks of the *Tyber*, is ſufficiently to be refuted out of *Claudian* and other Authors: *Suetonius* ſays, that *Auguſtus* order'd it to be clean'd, and enlarg'd its Chanel, to render the eaſier paſſage to the Current; whoſe Example has been follow'd by ſeveral other Princes, to prevent its Inundations, (the greateſt happned in *Dec.* 1598, under *Clement* VIII.) but without any remarkable ſucceſs; for the South-East Wind of the *Mediterranean* (here call'd the *Sea Wind*) ſometimes blows with ſuch violence, that it ſtops the Waters of the *Tyber* at its entrance, which if it happens at a time when (either by continual Rains, or the melting of the Snow in the *Apennines*) the torrents of the leſſer Rivers that joyn with the *Tyber* are ſwoln, this concatenation of Accidents produces theſe Inundations, which are look'd upon as the Scourge of *Rome*, as the ſulphureous Eruptions of Mount *Veſuvius* are the Scourge of *Naples*.

The Tyber.

The Cauſe of the Inundations.

The Waters of the *Tyber* appear always muddy and yellowiſh, but if they are ſet by for a night to ſettle, they will become clear and limpid, and are then accounted very good; notwithſtanding which, the *Romans* have been, and ſtill are, at a vaſt charge to convey other Waters to *Rome*, thro' the Mountains, by the means of coſtly Aqueducts. The *Aqua Felice* coſt Pope *Sixtus* V. near four hundred thouſand Crowns to bring them twenty miles to *Rome*; and as the Waters of the Fountain of *Montorio* were carried at a greater diſtance, by Pope *Paul* the Fifth, 1612, ſo 'tis probable they coſt a great deal more.

The Aqueducts of Rome.

On the High Altar of the Church of the *Franciſcans* at *Montorio*, is to be ſeen that moſt excellent Piece of the *Tranſiguration*, which is the laſt Work and Maſterpiece of *Raphael*.

Not far thence ſtands the Chapel, built in the ſame place, as they believe, where S. *Peter* was crucified; for which reaſon they ſhew a deep hole in the Chapel, where the Croſs was fix'd. The Picture of this Crucifixion, with the Head downwards, is to be ſeen at St. *Paul's at the three Fountains*, by the hand of *Guido*; where they alſo ſhew you the Pillar on which, they ſay, S. *Paul* was beheaded. In the Cloyſter of S. *John de Lateran* they ſhew the Column on which S. *Peter's* Cock crew; and another which, they tell you, was cleft aſunder from the

top to the bottom, on the day of Christ's Passion: Here you see also the measure of Christ's height, and the Stone on which *Pilate*'s Soldiers cast Lots for Christ's Garments, it is of Porphyry, four foot long, and three broad; the Dice they pretend to be kept at *Umbratico* in *Calabria*.

I will not trouble you with many other Curiosities pretended to be preserv'd here, but can't forbear to tell you of the Chair I saw there, being a kind of Arm'd Chair of one single piece of Porphyry, about which you desire to be inform'd, that was formerly made use of in the Ceremony instituted to prevent all Doubts concerning the Pope's Chair.

I will not be too curious to enquire into the Reason and End of that Search, but since you have given me sufficient occasion to make the best Reflections I can upon the subject of the *She-Pope*, I must frankly confess, that I have hitherto not met with the least Solidity, either in your Objections, or any made by others, against the truth of this History; tho' I am not ignorant that some *Protestant* as well as *Roman Catholick Doctors* of the last Ages, have rejected the same as a Fable.

For, what reason can be given to rank this among many other extraordinary Events recorded in History, when seventy or eighty Authors, (*Blondel* says seventy one Greek and Latin canoniz'd Writers) all men of Sense, not prompted either by Interest or Honour, have related the same at divers times, nay, when the Interest of Religion and Fear of Punishment might in all likelihood rather have deterr'd them from publishing the same? 'Tis a very slender Objection to alledge the difficulty of the matter, the same not being sufficient to disprove a matter founded upon so unquestionable an Authority, especially if we give some allowance for the diversity of Times, it being certain, that People living then in an Age of Ignorance and Stupidity, they might be sooner impos'd upon than in this crafty Age; besides, that things which seem'd to be involv'd in unsurmountable *Difficulties*, have nevertheless been brought about by Time and Chance; witness *Joan of Arc*, known by the name of the *Maid of Orleans*, born in the Village of *Damremy*, in the Year 1429, who at the age of eighteen or twenty, from a poor *Shepherdess*, became at once a great *General*: Besides, the Difficulties objected by our Adversaries are of such a nature, as cannot render this History fabulous, all the circumstances attending the same being, if not altogether probable, at least within the compass of Possibility.

Arguments to prove the History of the She-Pope a true one.

The Beardless Chin objected to *her Holiness* is of little validity, when we consider that the Papal Chair has at other times been fill'd with Beardless Youths, witness *Benedict* IX. and *John* XII, the first of whom was chose at ten or eleven, and the last at eighteen Years of age. Perhaps this *She-Pope* might be of the number of those *Viragoes* who have not only a masculine Mien and Beard, but also the Courage and other Qualifications of Great Men; And why might not such a one, in disguise, have as fair a pretension to the Papal Chair as a begging Vagabond, such as *Adrian* the Fourth, or a Swineherd, like *Sixtus* the Fifth?

But, say they, how could a Woman hide her great Belly so long, and at last expose her self to the danger of being deliver'd in a solemn Procession? As to the first part of your Objection, What difficulty is there for a Woman that is taken for a Man to hide her great Belly, any more than for a Man that has a swell'd Belly to be imagin'd to be with Child? And as to the pretended Imprudence of our *She-Pope*, it is to be consider'd, that certain things in this World are involv'd in such Difficulties as must be overcome at any rate, maugre all the danger that attends 'em; besides that, it is no hard matter to suppose that she might be deliver'd before her time.

You alledge the different calculations of the time, but the reason is obvious, those who have expung'd the *Popess*'s Name out of the Catalogue of Popes being forc'd to extend the Reigns of the preceding Popes, to fill up the Breach they made themselves.

The next Objections, concerning her Voyage to *Athens* when she was but a young Scholar, is founded upon a frivolous Supposition, which I may soon answer, by telling you, that perhaps she was old enough to be admitted among the Auditors of the *Athenian* Philosophers; besides that, not all the Authors mention her going to *Athens*: And tho' from this various relation of my Authors you may seem to hope for an advantage on your side, I must tell you, that even in *Sacred History* there are not wanting Instances of Variations in the circumstances of this Age, and that these Variations, provided they don't amount to Contradictions, do not in the least weaken, but rather strengthen the credit of such a Relation; for had there been a Combination set on foot on purpose to usher a fabulous Story, as that of Pope *Joan* is pretended to be, they would have certainly agreed in all the circumstances relating to the Story.

The strongest Argument (in your opinion) against us is, the Silence of those Authors who were Contemporaries of Pope *Joan*; but you will find this as weak as the rest, if you consider that *Marianus Scotus*, who died at *Fulda* in *Germany* 1086, *Sigebert* a learned Monk, who died in the beginning of the twelfth Century, and divers others more ancient Authors, did in all probability take it from those Authors that had mention'd the same before them, there being not the least likelihood that they invented it for the reasons before-mention'd: Besides, let me tell you, your Argument is built upon a wrong bottom; for the Editions of *Anastasius* (firnam'd *the Bibliothecary*, who was a *Roman Abbot*, a Person of Learning, and Contemporary of Pope *Joan*) which have escap'd gelding, give a very circumstantial account of the whole matter. But suppose it did not, what wonder is it if *Fear* and *Shame* did impose Silence to the Writers of that Age, when the Invention of Printing was unknown as yet in the World, which could not be kept secret afterwards; as we see that the worst of Princes have been flatter'd during the Age they liv'd in, whom afterwards Posterity, not cow'd by Fear, hath painted in their true colours.

I can't for my life see why the Church of *Rome* should make such a bluster to hide this Disgrace, when *Baronius* bestows the Title of *Monsters* upon several other Popes, and not without reason, considering the Enormities the Popes have been guilty of, of distributing Scepters, and treading crown'd Heads under their Feet, notwithstanding they retain'd the quality of Priests; and what is worse than all the rest, to set a certain rate of Absolution upon the most abominable Crimes that can be committed; witness the Book intituled, *The Rates of the Apostolical Chamber* *, which I bought some days ago. 'Tis true, they have since endeavour'd to suppress the Book, by inserting it in the *Index Expurgatorius* of the *Council of Trent*, but continue nevertheless in selling their Dispensations.

* This Book is sold publickly to this day at *Paris*.

——— Venalia nobis,
Templa, Sacerdotes, Altaria, Sacra, Coronæ
Ignis thura preces, Cœlum est venale Deus.
B. Mant.

I will appeal to all unbyass'd persons, when once Posterity shall read the History of the Persecution of *France*, as represented by *Maimbourg*, *Varillas*, the Bishop of *Meaux*, and others of the same stamp, I say, when they shall read the same in these Authors, whether they would not be apt to imagin that these poor Wretches were used with all imaginable moderation, if it were not manifest by unquestionable Authority, that these unfortunate Creatures suffer'd all the Cruelties that could be invented by their implacable Enemies.

Before I take my leave of Pope *Joan*, I can't forbear mentioning what *Mazeray* says (in the Life of *Charles the bald*) upon this subject, *viz.* That *this Opinion was generally receiv'd as an undoubted Truth for five hundred Years together*. If you are curious to know the reason why the use of this Chair is laid aside now-adays, the following Epigram of *Pannonius* * will satisfie your Curiosity:

* John Bishop of the City of *Five Churches* in *Pannonia* or *Hungary*.

Non poterat quisquam reserantes Æthera Claves
Non explorato, sumere Testiculis
Cur igitur nostro mos hic nunc tempore cessat?
Ante probat quod se, quilibet esse marem.

Pasquin, in his Verses on *Paul* II. and *Innocent* VIII, gives you the same reason;

Pontificis Pauli *Testes ne Roma requiras*
Filia quam genuit, sat docet esse marem.
Octo Nocens *pueros genuit, totidemque puellas*
Hunc merito potuit dicere Romæ patrem.

The Church of St. *John Lateran* is celebrated for its spaciousness, magnificence, and the title she bears of *The Head and Mother of all Churches*, according to the Inscription engraven on the Portico:

Dogmate Papali, datur simul Imperiali
Ut sim cunctarum mater Ecclesiarum.

Sixtus V. built a large Palace near this Church, but was never inhabited. Next adjoyning to this Structure is the *Santa Scala*, from the twenty eight Steps of white Marble, pretended to be the same by which Christ ascended into *Pilate*'s House, where no body is permitted to ascend but kneeling, tho' there are two little Stairs, on each

The *Scala Santa* and *Santa Sanctorum*.

each side one, by which every one is permitted to walk up into the Chapel call'd *Sancta Sanctorum*, or the *Holy of Holies*, except Women, who are forbidden to enter there. It has got its Name from an Image of Christ, which, they say, was made by Angels: I saw it, and can assure you it is very ugly and ill-shapen.

S. Mary maj. From hence we passed by St. *Mary Major*, a vast sumptuous Fabrick. A certain devout *Roman* Lord being warn'd in a Dream to go to Mount *Esquilin*, and there to build a Church to the honour of the *Mother of God*, in the place where he should find Snow; and Pope *Liberius*, having at the same time such another Vision, they walk'd thither the next morning; and notwithstanding it was then in *August*, *Ann.* 355, they found Snow, which they remov'd with their own hands, and laid the Foundation of a Church in that place.

The Chapels of *Sixtus* V. (the Work of *Dominic Fontana*, it cost seven hundred thousand *Roman* Crowns) and of *Paul* V. are very magnificent Structures; in the last of which they shew you the Manger of *Bethlehem*, and the Picture of the Virgin made by St. *Luke*. Near it stands the little Church of S. *Anthony*, where all the Horses of the City receive the Benediction every Year on that Saint's Festival.

Soon after we took a turn to *Castel Gondolfo*, sixteen miles from *Rome*, a Palace belonging to the Pope, but has little remarkable in it. About a mile from this Castle we saw the small Town of *Albano*, where in former Ages stood the famous City of *Alba*, which, they say, extended from the Lake of *Castel Gondolfo* to this Town of *Albano*; but this is called in question by some.

Town.

Its Antiquities. We were shewn at *Albano* the ruins of a *Mausolæum* not unlike an old Tower, call'd commonly the Tomb of *Ascanius*, but with the same uncertainty. There is another very ancient Tomb near *Albano*, suppos'd to be the Sepulchres of the two *Horatii* and the three *Curiatii*, occasion'd questionless by the five Pyramids standing on this Tomb; but *Livy* expresly contradicts this Opinion, *viz.* that their Sepulchres were erected in the same places where each of them expired, *viz.* those of the *Horatii* near *Alba*, and those of the *Curiatii* not far from *Rome*.

The Lake of Castel Gondolfo. They told us, that the Lake of *Castel Gondolfo* was six or seven miles in circumference, enclosed on all sides with rising grounds in the form of an Amphitheatre. In two places the depth of this Lake cannot be sounded, and sometimes the Waters of this Lake swell on a sudden to the very brink of these high Banks, occasion'd questionless by some subterraneous watery Receptacles, which discharge themselves into it

The Lake of Nemi. Near *Genzano*, about half a mile from this Lake, is another little one, call'd by the Moderns the *Lake of Nemi*, but by the Ancients *Speculum Dianæ*, from a Grove and Temple consecrated to that Goddess, which formerly were near the Bank of this Lake.

Between *Albano* and *Castel Gondolfo* are to be seen the ruins of an ancient Amphitheatre; and we were not a little surpriz'd to see several large Trees, that had taken Root without, to have forc'd their passage thro' and cleft asunder the best cemented Stone and Brick. The Country about *Albano* and *Genzano* is very fertile of the best Wines and Fruits, and the Inhabitants do still hold their most ancient custom of cultivating *Leeks* and *Onions*; *Mittis præcipuos nemoralis Aricia porros Marli*.

Before I leave the *Roman* Palaces, I must tell you also something of those within the City, which I will do with all imaginable brevity.

The Palaces of *Justiniani*, *Cesi* and *Farnese*. At the Palace *Justiniani* there is a Catalogue of Antiquities of 1867 Pieces, and of 638 curious Pictures, the most excellent of which are, the *Nero*'s Head, the *Minerva*, *Venus* coming out of a Bath, and the three little *Cupids* sleeping and leaning upon one another. Cardinal *Chigi*'s Palace is scarce inferiour to any in *Rome*, the Gates are overcrusted with an old green Marble: The Statues of the two *Venus*'s, of *Marsias* flea'd, and of the dying Gladiator, are admirable Pieces. The *Farnesian* Palace was begun by *Antonio de S. Gallo*, but brought to perfection by the famous *Michael Angelo*; the Front being broad a hundred and eighty foot, and ninety foot high. The *Gates*, *Corner-pieces*, *Cross-bars of the Windows*, *Cornish*, and in short all the principal *Stones* of this beautiful Structure, were the Spoils taken from the great *Colliseum*, which admirable Monument of Antiquity has furnish'd Materials also not only to the Palace of the *Chancery* and St. *Lawrence*'s Church *, but also to some part of the City Walls. Thus *Innocent* VIII. destroy'd the *Gordian* Arch to build a Church; and *Alexander* VI. that most beautiful Pyramid of *Scipio*, to pave the Streets with the Stones.

* S. Lawrence in Damaso.

The Marble Steps to the Church of *Ara Cœli* belong'd formerly to the Temple of *Romulus*: S. *Blaise*'s Church owes its Ornaments to the Spoils of the Temple of *Neptune*, as S. *Nicholas of the Souls* was built out of the ruins of the *Circus Agonalis*; and had it not been for *Sixtus* V, we might now look in vain for any of the precious Remnants of Antiquity in *Rome*.

The *Hercules and Bull* in the *Farnesian* Palace are celebrated throughout the World; and the Gallery by *Caracche*, the Hall by *Salviati*, and the *Venus* and *Adonis* by *Titian*, are also excellent Pieces.

The Palaces of *Altieri*, *Barberini* and *Colonna*. The Library of the Palace *Altieri* contains a good number of the best Books. The whole Staircase, and especially the Statue of a Captive King at the foot of it, (found five hundred years ago in the Place call'd *Navona*) is very fine. It has very spacious Apartments, well filled with curious Pictures and rich Furniture. I saw here a *Looking-glass* of *Rock Crystal*, ten inches long, and six broad, in a Frame of Gold beset with precious Stones of a considerable value. They also shew'd us a little earthen Dish, carefully kept in a rich Frame, as being suppos'd to be the Work of *Raphael*, and is of the same kind with the Vessels of *Loretto*; but discoursing upon this subject with the noted *Carlo Maratti*, he assur'd me, that *Raphael* never drew a stroke on any of these Dishes, but that by the resemblance of the way of working, some of his Scholars did paint the same, in imitation of his Designs.

The Palace *Barberini*, call'd the *Palestrin*, containing four thousand Chambers, is the largest in *Rome* next to the *Vatican*, and has abundance of Antiquities; the little *Diana*, of Oriental Alabaster, is of great repute; the *Tullia*, Daughter of *Servius Tullius*, and Wife to *Tarquin* the *proud*, is very rare, and said to be the only one of that kind in *Rome*: Here I also saw the God *Osiris* with his Hawk's Head on a Human Body, which was found with the Obelisk of *Minerva*, under the ruins of the Temple of *Isis*; and a Marble Bust of Pope *Urban* VIII. made by a blind Man, and yet the best that is extant of that Pope. The other Palace of *Barberini* towards the four Fountains is fill'd up with *Rarities*, *Antiquities*, and *Curiosities* of all sorts: They told us, that the Library contains four thousand Volumes.

In the Halls of the Palace *Colonna* you see the Pictures of two Popes, *Adrian* I. and *Martin* V, two of the best that ever sate in the Chair, nineteen Cardinals, and fifty four Generals of Armies, all descended from the House of *Colonna*. In this Palace are nine very spacious Apartments, eight thousand Original Pictures, a little Arsenal, Busts, antique *Basso relievo*, Statues, and rich Furniture, in considerable quantities.

As for their way of building in general, I told you before, that they cover their Houses more with ridged than flat Roofs, found out by our famous *Mensard*, and much preferrable before the flat Roofs; and upon this occasion I must entreat you to lay aside that partial Opinion you seem to have conceiv'd of the entire perfection of the *Roman Architecture*, which, as well as in other Countries, varies according to the difference of the Age and peculiar mode of the Country, and is not always suited to the regularity and magnificence of Architecture.

The Obelisks in *Rome*. The *Obelisks* in *Rome* are quadrangular, ending in a sharp point, their Angels respecting the four corners of the World, and denoting the four Elements, as the whole resembled the Rays of the Sun, the chief Divinity ador'd by the *Egyptians* under the name of *Osiris*. The *Hieroglyphic Characters* on these *Obelisks*, suppos'd by some to have been the *Elegies* or *Histories* of great Actions, erected by the *Egyptians* in honour of the Heroes of their Nation, have since been clearly demonstrated to contain the Secrets of their *Divinity*, *Astrology*, *Metaphysicks*, *Magicks* and such other Sciences as were in vogue among the *Egyptians*: All these *Obelisks* (not one of 'em being made at *Rome*) are of *Granite*, a kind of very hard Marble, which, they say, will resist the Fire for a considerable time, and without question induc'd the ancient *Egyptians* to make choice of it for such lasting Monuments.

The *Obelisks* of S. *John Lateran* has stood three thousand Years, and that of S. *Peter* (weighing 956148 pounds) nine hundred Years longer: The first, which is the biggest of the two, is a hundred and eight foot high, without including the Pedestal or the Cross. There are also some *Granites* of *Corsica* in this place, but their Grain is much courser than those of *Egypt*. I am,

Sir,

Rome, *April* 24. 1688.

Yours, &c.

LETTER XXVI.

SIR,

Since you deſir'd me in your laſt to give you my Obſervations upon what Mr. *Chevreau* hath alledg'd, in his Hiſtory of the World, concerning Pope *Joan*, I will write you my Sentiments upon this Head.

The ſaid Author acknowledges, That *a conſiderable number of famous Authors have mention'd that Story, and poſitively aſſerted the truth thereof:* And what reaſon, I pray you, can he alledge why ſo many unbyaſs'd Witneſſes of unqueſtionable credit, who unanimouſly atteſt that matter, ſhould not be credited? He ſays, *The more judicious and cautious part of Mankind, relying on the ſilence of ſeveral other Authors, have examin'd and rejected the ſame.* It is certainly a very weak way of arguing, to ſay that a thing atteſted by the unanimous Voice of ſeventy or eighty Men, all of the *Roman Catholick* Religion, moſt of them Clergymen, and even ſome of them Canoniz'd Saints, all which is confeſs'd by the *Romaniſts*, ſhould be invalidated by the ſilence of ſome other Authors. But, ſays Mr. *Chevreau*, Anaſtaſius *the Bibliothecary makes no mention of the She-Pope* Joan: But this Author, as well as *Onuphrius*, who alledges the ſame Argument, is miſtaken. If you will be pleas'd to conſult Mr. *Lefuevr's Eccleſiaſtical Hiſtory*, and *Colomeſius's Hiſtorical Miſcellanies*, you will hear there of an *Anaſtaſius* in the *French* King's Library, containing a circumſtantial account of this female Pope; beſides two other Copies of the ſame Author * at *Augsburgh*, and another at *Milan*, which give an account of the ſame Pope *Joan*. Theſe before-mention'd Books tell you further, that the *Jeſuits of Mayence* having only ſuffer'd two Copies to be wrought off conformable to the Original, (which they don't deny themſelves to be true) did ſuppreſs what diſpleas'd them in the reſt of the Edition.

* *Salmaſius* ſaw them, not does *Blondel* diſown 'em.

Upon this occaſion I can't but put you in mind truly to weigh the Authority of the Teſtimony of *Anaſtaſius*, (he writ the Lives of the Popes to *Nicholas* I. the Succeſſor of *Benedict* III.) who being a man of ſingular Learning, lived at *Rome*, and was Contemporary with this female Pope.

I can't forbear, in the next place, to give you my Thoughts upon the Reflections made by Mr. *Chevreau* on *Martinus Polonus*, or the *Pole* Archbiſhop of *Coſenza*, and Penitentiary to *Innocent* IV, as likewiſe (according to the Opinion of ſome) to *Nicholas* III, whom he call'd a ſilly Monk; and, I pray, for what reaſon? *Since*, ſays he, *in his Treatiſe of the Wonders of* Rome *he miſtakes the Gate of* Oſtia *or of* S. Paul, *and of* Capenna *and* S. Sebaſtian, *for another which he calls* Collina, *inſtead (as we may probably ſuppoſe) of* Collatina *or* Pinciana, *the* Pantheon *for a Temple of* Cybele, *and the* Amphitheatre *for a Temple of the* Sun, *we may the eaſier forgive his Blunder in Hiſtory when he miſtakes a* Pope *for a* Popeſs.

* *M. Polonus* flouriſh'd in the middle of the 13th Century.

If this Argument holds, *That ſuppoſing* M. Polonus *had miſtaken one Gate for another, therefore he muſt take a* Pope *for a* Popeſs, I might with the ſame reaſon retort it upon *Chevreau* himſelf, that *ſince his Reflections on* M. Polonus *are groundleſs, therefore he miſtakes a* Popeſs *for a* Pope.

That his Reflections are groundleſs, appears, (1.) That Mr. *Chevreau* himſelf knew not that there was ſuch a Gate at *Rome* as the *Collina*, when he ſays that *Polonus took the Gate of* Oſtia *and the Gate* Capena *for another which he call'd* Collina, *inſtead of* Collatina *or* Pinciana; it being certain that *Collina* was the name of a Gate as well as *Collatina*, and had its name *à Colle Quirinali* mention'd by *Ovid:*

Templa frequentari Collinæ proximæ portæ
Nunc decet, ——— Faſt. 4.

being now call'd *Salarco*. (2.) The Gate *Collatina*, ſo call'd from the Town of *Collatium*, is different from the *Pinciana*, as F. *Nardin* hath ſufficiently demonſtrated. (3.) Mr. *Chevreau* has as little reaſon to find fault with *Polonus* for calling the *Pantheon* the Temple of *Cybele*, the ſame being founded upon the Opinion of divers learned Antiquaries, who believe it to have been conſecrated by *Agrippa* to *Jupiter* the *Avenger*, and to *Cybele* the Mother of all the Gods, who was ſometimes worſhip'd under the Names of *Ops*, *Rhea*, *Veſta*, *Berecynthia*, *Dindymena*, ſometimes under the Names of *Tellus*, *Magna Pales*, *Magna Mater*, and frequently ſtiled *Natura rerum parens*. (4.) Mr. *Chevreau* ſpeaks ſo ambiguouſly concerning the *Roman Amphitheatre*, that his meaning is ſcarce to be well underſtood; for ſince there were ſeveral *Amphitheatres*, the ruins of ſome of which are ſtill remaining, I ſuppoſe he means the great *Amphitheatre* call'd *Colliſeum*, built by *Veſpaſian*, and dedicated by *Titus*. (5.) 'Tis certainly too great an abſurdity to believe that *Polonus* could miſtake this *Colliſeum* for the Temple of the Sun; which makes me imagin that ſome of his Expreſſions muſt not be well underſtood, and that inſtead of expreſſing the *Colliſeum* as the Temple of the *Sun*, he might ſpeak of this Temple near the ſaid *Amphitheatre*.

You tell me you have ſeen a Manuſcript of *Polonus*, where this Story is written in the margin by another Hand; And what, I pray, can be inferr'd from thence, except, that the Author having been mutilated by ſome body or other, a more equitable perſon, ſupplied the defect by his own Hand, *Bellarmin* himſelf making not the leaſt ſcruple to confeſs, that *M. Polonus* writ the Hiſtory of the *Popeſs*? For the reſt Mr. *Chevreau* being not a little puzzled to give the World a probable account of the firſt occaſional riſe of this Story, is forc'd to have recourſe to *Onuphrius*, (tho' he conceals his Name) who pretends that Pope *John* was nicknam'd *Joan* from a Favourite Concubine he had of that Name; tho' neither of them can produce any other Authority for this Aſſertion than their own, or make it appear that Pope *John* had ſuch a Concubine: 'Tis true, they cite *Luitprand* in their behalf, but erroneouſly, the Widows Name he ſpeaks of being *Anne*, and not *Joan*. And Mr. *Chevreau*, it ſeems, was ignorant that our Mr. *du Pleſſis Mornay* had already made a diſcovery of this Forgery of *Onuphrius*, and that this Pope *John* fill'd the Chair a hundred years after Pope *Joan*.

What he affirms of the *Chair not being bor'd*, I can contradict as an ocular Witneſs, having ſeen it more than once; and it is bor'd after the manner of Cloſe-ſtools. There are two of 'em, (both of Porphyry) one broken and the other entire, both made after the ſame manner. *Platina* affirms poſitively, after *Chalcondylas* an *Athenian*, who flouriſh'd about the middle of the fifteenth Century, and other approv'd Authors, that the new-elected Pope was placed in the bor'd Chair, and that the youngeſt Deacon us'd to thruſt his Hand thro' the hole, to feel whether he had the true marks of Virility: This was queſtionleſs the primitive uſe of this Chair; and tho' this Cuſtom was laid aſide by degrees, they continued however for ſome time to ſet the Popes on the ſame Chair, to put them in mind, as Mr. *Chevreau* affirms after *Faucher*, that they were ſtill ſubject to the common Infirmities of human Nature.

What Mr. *Chevreau* tells us concerning the Deputies of the Council of *Soiſſons*, ſent to Pope *Leo* IV, who was deceaſed before their arrival, is of little conſequence, ſince he mentions a Council of *Soiſſons* without any peculiar diſtinction, and without the leaſt proof, which ought to have been founded upon Manuſcripts of *uncontroverted Antiquity* and *Credit*, to extricate himſelf and his Adherents out of the Labyrinth in which they have entangled themſelves, by confounding the Succeſſion of the Popes that preceded and follow'd the Popeſs *Joan*; whence it is that whereas *Platina*, *Garenza*, and other unbyaſs'd Hiſtorians, compute twenty four Popes that bore the Name of *John*, (the reſt count but twenty three) and thus introduce an irreparable confuſion in Hiſtory.

But it is time to have done with Mr. *Chevreau*; I will only add, That it ought not to ſeem ſtrange to you that our *Popeſs* is ſometimes call'd *Anglicus*, ſometimes *Moguntinus*; the Author of the *Faſciculus Temporum* (*Werner Rolwinck* a *Weſtphalian*) has unfolded the Riddle in theſe words, *Joannes Anglicus cognomine, ſed natione Moguntinus*. Her Name was *Joan Engliſh*, but was born at *Mayence*. Neither muſt the Variations obſerv'd in Manuſcripts diſturb you, who are not ignorant of a thouſand Inſtances of what Forgeries have been introduc'd by Tranſcribers, no more than the doubtful Expreſſions you meet with in ſome Authors that relate this Hiſtory, it being to be conſider'd, that as the force of Truth did prompt them to ſpeak, ſo Fear on the other hand was a ſufficient Bridle to reſtrain them from ſpeaking too freely of the matter: But as, notwithſtanding all this, ſome Authors have broken thro' all theſe Obſtacles, and given us a poſitive and circumſtantial account of the whole matter, all the *Negative Authorities* in the World cannot be ſufficient to counterbalance the *Credit of ſo many Authentick Witneſſes*, and of a Relation ſo generally and ſolidly atteſted.

To bring up the Rear of your Arguments, you have call'd to your aid ſome of the *Proteſtant Doctors*, who deny the Story of Pope *Joan*, and among the reſt the famous Mr. *David Blondel*, a man of Learning and Wit: But, to deal frankly with you, as the Author's Name is

the

the ſtrongeſt Argument in his Book, ſo it is an unaccountable piece of Prejudice to build blindly upon the Opinion of any man not divinely inſpir'd, let his Name be never ſo great in the World.

For my part, I cannot reconcile his Argument when he confeſſes, that *the Hiſtory of the Female Pope is contain'd in the* Augsburgh *Copies of* Anaſtaſius, but in oppoſition of theſe pretends to cite (and that only in Shreds, without quoting any entire Paſſage) a certain private Copy of *Anaſtaſius*, to be met with (which we muſt take upon his credit) at *Paris*, the certainty whereof he ſeems to queſtion himſelf, when he tells us, that *it has often been miſtaken for* Platina; ſo that in the main this Book may, without much difficulty, be refuted by it ſelf, the reſt being a confus'd Medley of Chronological Cavils, and an heap of needleſs Quotations, ſerving more for Oſtentation, and to confound than demonſtrate the matter he has taken in hand.

To conclude the whole, and to tell you my Thoughts with all imaginable freedom, I have a great deal of reaſon to believe that it was rather Intereſt and Oſtentation than the Love of Truth that engag'd our Author in this Deſign; for I was aſſur'd by a Perſon of Honour living at *Paris*, who knew the Author very well, That he had it from the firſt hand, that he was hir'd to write a Treatiſe againſt the *Hiſtory* of Pope *Joan*. And as my Author is a Perſon of unqueſtionable Reputation, ſo the only thing that can be ſaid upon this Head is, that Mr. *Blondel* is not the firſt man that has been overcome by the force of Gold.

The Greeks and Armenians in Rome.

All what I am able to anſwer to your Queſtions concerning the *Armenians* and *Greeks* is, That as they have each of 'em their peculiar Ceremonies, ſo they officiate according to their own Rites; but before they can ſettle at *Rome*, are oblig'd to acknowledge the Pope's Supremacy. Some Antiquaries ſay, the little *Armenian* Church was formerly one of the Temples of the *Sun* and *Jupiter*.

The Jews at Rome.

Before the Pontificate of *Paul* IV. the *Jews* liv'd pretty eaſie in any part of *Rome*, but this Pope confin'd 'em to a certain corner of the City, whither they were to retire at Sun-ſet, forc'd them to ſell their Poſſeſſions, and allow'd them to deal only in old Clothes, and for diſtinction ſake to wear yellow Hats. *Gregory* XIII. obliged a certain number of them to hear a *Chriſtian* Sermon every *Saturday* in the Afternoon, but I had no opportunity to ſee this Aſſembly. The *Italian Jews*, and eſpecially thoſe of *Rome*, religiouſly obſerve that Cuſtom of marrying before the twentieth Year of age: Their number may at preſent amount, in *Rome*, to about ſix or ſeven thouſand.

The Ceremony of baptizing Infidels.

If any *Jew* or other *Infidel* has a mind to be baptized, the Ceremony thereof is generally put off to *Saturday* in the *Holy Week*, and then perform'd in the Church of S. *John Lateran*, becauſe they believe *Conſtantin the Great* to have been baptiz'd here. We ſaw ſix *Turks* baptiz'd; they wore white Damask Cloaks, and a large Band, with a Silver Croſs hanging at their Necks; the Cardinal that was to officiate, attended by the Canons of the Church, began the Ceremony with bleſſing the Water; then the New Converts being preſented by their reſpective Godfathers, advanced one after another, and having declar'd their willingneſs to receive Baptiſm, they lean'd over the Font, and the Cardinal baptiz'd them by pouring Water upon their Heads with a large Silver Spoon; and having given each his Name, they were, with Wax Tapers in their hands, conducted to the Chapel of the Baptiſtery, to be confirm'd, and from thence went to hear Maſs in the ſame Church.

The Ceremony of waſhing the Feet called Tenfan.

The *Thurſday* before we were preſent at the Ceremony of waſhing the Feet of thirteen Pilgrims in one of the Chapels of the *Vatican*: They appear'd all in white, with a kind of Hood and ſquare Cap, ſeated in a row upon a Bench: After they had pull'd off their Shoes and Stockins, a great Baſin was brought, and Ewers of Vermilion, one for each Pilgrim; then the Cardinal that officiated inſtead of the Pope putting their Feet in the Baſin, waſh'd and rubb'd them with his own hands, and at laſt wip'd and kiſs'd 'em: Soon after, each of them being regaled with two Golden Medals, they went all together to a certain Chamber of the Palace, to partake of a magnificent Entertainment prepar'd for them; they were placed in one row at a Table, the Cardinal dining at the ſame time at another in the ſame Room.

The Pope, [*Innocent* XI.] tho' really old and infirm, yet often makes the want of Health ſerve for a pretext to excuſe his abſence at thoſe numerous Ceremonies uſed at *Rome*.

I had it from very credible perſons, that he did in no wiſe approve of the *French* way of converting People by *Dragooning*, and ſhew'd a great deal of averſion to thoſe who pretended to propoſe certain methods of accommodation to him with the Crown of *France*.

His Retirement is the occaſion he is ſeldom ſeen by Strangers, nay, it is a Rarity to meet any of his Coaches, Footmen, or others belonging to his Retinue. If he happens to ſtir abroad, it is in a large Litter lined with Crimſon Velvet, without and within adorn'd with Gold Galoons and Fringes, the Harneſſes of the Mules being cover'd with the ſame Stuff. He ſits always alone in his Litter, with a little Table before him. All the Popes have the ſame Livery, *viz.* Scarlet, with a double Velvet Galoon of the ſame colour; even the Apartments of the *Vatican* and *Monte Cavallo* are hung with red Damask intermix'd with Edges of Gold Galoons, and adorn'd above with Gold Fringes.

Monte Cavallo.

The Situation of the Gardens of *Monte Cavallo* is very delightful, but their Contrivance is not very regular, nor are they well kept. The two Marble Horſes before this Palace are generally reputed to be made by *Phidias* and *Praxiteles*, whoſe Names are engraven upon them,

Opus Phidiæ, Opus Praxiteles.

Some will have them to be the Statues of *Bucephalus* the Horſe of *Alexander*, which theſe Artiſts made in emulation of one another, but there is a miſtake in this Tradition, conſidering that *Phidias* flouriſh'd a whole Age before *Praxiteles*, and *Alexander* the Great reign'd fifty years after *Praxiteles*.

The Capitol.

The two Marble Horſes in the Court of the Capitol were brought thither from the Theatre of *Pompey*, and the *Equeſtris Statua* of Braſs, placed here by *Paul* III., is ſuppos'd to be the Statue of *Marcus Aurelius*. The Capitol is a modern Structure, built not only upon the Ruins but even upon part of the Foundations of the ancient Fabrick, the old Foundations ſtill appearing.

The Antiquities here being ſo many, that a deſcription of 'em would require an entire Volume, I will only mention ſome of the principal ones: The *She-Wolf* giving ſuck to the two Brothers, on which is to be ſeen the mark of the Thunderbolt mention'd by *Cicero**; four great *Baſſo relievo's*, repreſenting divers paſſages of the Hiſtory of *M. Aurelius*; the *Columna roſtrata* of *Duilius*, the firſt that was honour'd with a Naval Triumph at *Rome*; the Meſſenger pulling out a Thorn in the Senate-houſe; the Buſt of *Cicero* with his Verſes; the four ancient Meaſures, one for Oyl, two for Wine, and the fourth for Grain: the Buſt of *Virgil*; *Nero*'s Nurſe holding him by the Hand; the Goddeſs of *Silence*; the God *Pan*; the three Furies; a Statue of *Ceſar* in Armour; another of *Auguſtus*; thoſe of *Caſtor* and *Pollux*; the Fragments of the *Coloſſus* of *Apollo*, *Domitian*, and *Commodus*; the Lyon devouring a Horſe; and the Trophies of *Trajan*, but believ'd by others to have belong'd to *Marſus*.

* *Orat. contr. Cat.*

The Pictures in *Freſco* in the *Great Hall* are of Cavalier *Joſeph*'s Hand; in my Opinion they repreſent the Battel of the *Romans* with the *Sabines*.

See Laſſ.

I am ſomewhat doubtful what account to give you of the Pillar call'd the *Milliarium*; it is of white Marble eight foot and a half high, with a Cypher [I] mark'd on the top, and on the Chapiter a Braſs Globe of two foot diameter: It is the general Opinion, that this Pillar ſtands in the center of *Rome*, from whence they uſed to compute the diſtances from that City, divided into miles by other Pillars erected on all the great Roads of *Italy*; but there are ſeveral Arguments which contradict this Opinion, for the Column in the *Forum Romanum* was, according to *Suetonius*, *Tacitus*, and other ancient *Roman* Authors, either of *Braſs* or *Braſs gilt*, with the names of the great Roads and diſtances of the chief Cities engraven upon it, like unto which there appears nothing on the *Milliarium* in the Capitol.

The Pillar call'd Milliarium.

If you object, that perhaps the brazen *Milliarium* being loſt, this was ſet up inſtead of it; the Inſcription engraven on one of the Faces of the Pedeſtal will tell you, that it was found near the *Appian* Highway:

Columnam Milliariam primi ab Urbe lapidis in Circo ab Imperatore Veſpaſiano & Nerva reſtitutam de ruinis Suburbanis Viæ Appiæ in Capitolium tranſtulit.

And it ſeems not likely that this Column was from the center of the City tranſpos'd to a mile's diſtance from the Walls; then which way can you give a true explication of theſe Expreſſions, *Primus*, or *ſecundus*, *ab Urbe lapidis*, if

if these Stones or Pillars were not without the City, the words *ab Urbe* shewing plainly that they were not within? And since this *Milliarium* was found in one of the Suburbs near the Highway, I can't but perswade my self that it then stood in its proper place, and that the number of those first Columns was equal to that of the great Roads. Whether we suppose the gilt *Milliarium* to be the only first Pillar, and the second Columns to have been placed at the distance of one mile from it; or that the gilt Column in the center of the City was the head Mark from whence all the distances were computed, and that the next Columns were call'd the first *Milliariums*, and mark'd with an Inscription like that you see in the Capitol; it is evident from either of these Suppositions, that considering the extent of *Rome*, none of these first or second Columns but must be within the City; and that consequently this expression, *Primo ab Urbe lapide*, could not take place, but instead thereof the *primus lapis* must have been *in Urbe*, and not *ab Urbe*.

There is a very ancient Inscription in the Palace call'd *Palestrinum*, which contains the Statues of a College of *Æsculapius* and of *Health*, unto which *Salvia Marcellina* bequeath'd a Temple, a Place or Court, and a Walk, the whole situate on the *Appian Way*, near the Temple of *Mars*, *Intra milliarium primum & secundum ab Urbe euntibus*, i. e. *Between the first and second mile as you come from the City*; which words joyn'd to the Opinion of the best Antiquaries, that there was a Temple of *Mars* without the City, and on the *Via Appia*, are a sufficient inducement to convince me, that the gilt *Milliarium* was erected as a publick Mark to know where all the great Roads begun, and to compute the distance of great Cities; but that all the first Columns were each one mile distant from the Walls of *Rome*. The two following Inscriptions are engraven on the body of the *Milliarium* in the Capitol:

IMP. CÆSAR VESPASIANUS PONTIF. MAXIM. TRIB. POTESTAT. XVII. IMP. XVII. P. P. CENSOR. COS. VII. DESIGN. VIII.

IMP. NERVA CÆSAR AUGUSTUS PONTIFEX MAXIMUS TRIBUNITIA POTESTATE COSMUS III. PATER PATRIÆ REFECIT.

The Church of *Ara Cœli*.

Adjoyning to the right Wing of the Capitol is the Church known by the Name of *Ara Cœli*: They tell you, that *Augustus* having for a considerable time, but in vain, sollicited the Oracle of *Delphos* to know his Successor in the Empire, the Oracle at last declar'd, that his Mouth was stopt by the *Hebrew* Child, who was the Son of God, and True God himself; and that *Augustus* finding this to agree with *Sybillin* Prophecies, order'd an Altar to be built in the Capitol to the honour of the *Hebrew* Child, unto which he gave the Name of *Ara primogeniti Dei*, *The Altar of the First-born of God*. The before-mention'd Church being built in the same place, where *Augustus*'s Altar still remains near the Quire, had thence the Name of *Ara Cœli*.

The Chapel of S. *Pietro in Carcere*.

Near unto this place is a Chapel called S. *Pietro in Carcere*, built in the same place where S. *Peter* and S. *Paul* were kept in Prison after their Condemnation, and according to the Opinion of the best Antiquaries, is the *Tullianum* finish'd by *Servius Tullius* or *Tullius Hostilius*, a Prison for condemned Malefactors only.

Here they shew you a Spring (they tell you that the Water has a Milky taste) which, they say, gushed out of the Rock at the Prayer of St. *Peter*, in order to baptize certain Proselytes; as also an Impression in the Wall, made (as they say) by that *Apostle*'s Face, the Stone yielding as he was thrust with his Head against it by a Soldier.

Among the vast multitude of ancient Ruins behind the Capitol, is the famous *Rupes Tarpeia*, (so call'd from one *Tarpeia* a *Roman* Lady) that once so dreadful Precipice, being now not above twenty foot high; then the Triumphal Arch erected to *Titus* after his Conquest of *Jerusalem*, the *Basso relievo* representing the Candlestick, Table, Trumpets of the Jubilee, and some Vessels taken out of the Temple, were worth a Traveller's Observation. The Arch of *Constantine* is very near entire, except that you see some Statues of them without Heads, supposed to be carried privately by *Lawrence de Medicis* to *Florence*; and as the nicest Judges have observ'd a considerable difference in the beauty of the *Basso relievo*, it is suspected that some of the best Pieces were taken off when it was erected.

Triumphal Arches of *Titus* and *Constantin.*

The Lake of *Curtius* was in the middle of the *Forum Romanum*, but was lost already in *Ovid*'s time;

The Lake of *Curtius*.

Curtius ille Lacus, siccas qui sustinet aras
Nunc solida est tellus: sed fuit ante Lacus.

The vast *Amphitheatre*, call'd *Colliseum* from a Colossus that was near it, is of a circular figure on the outside, tho' the *Arena* is oval; it was capable of containing eighty five thousand Spectators, not including the twenty thousand *Excuncati* who stood in the Passages, and consequently four times as many as the Amphitheatre of *Verona*. The Pillars of the third Order, and the Pilasters of the fourth, had *Corinthian* Chapiters.

Tho' I cannot engage to answer your Questions concerning the Senate of Women instituted by *Heliogabalus*, yet I can thus far satisfie your Curiosity, that the little Edifice at *Monte Cavallo*, by some suppos'd to have been the Temple of the *Sun*, by others the Temple of *Hercules*, is suspected to have been the Meeting-place of that sage Assembly.

The Columns of *Trajan* and *Antonin* are truly magnificent Monuments of Antiquity, adorn'd with most excellent *Basso relievo*, ascending in a spiral line from the Base to the Chapiter, and representing the great actions of those great Princes. *Antonin.*

The first is compos'd of twenty four Stones, each containing eight Steps, erected by the Senate to the honour of *Trajan*, and serv'd afterwards for his *Mausoleum*, his Ashes being placed, in an Urn of Gold, on the very top of it; in lieu of this Urn was afterwards placed the Statue of St. *Peter*, of Brass gilt, by *Sixtus* V. The whole height of the Body of this Column is 128 *Roman*, or 124 *English* feet; and you ascend to the top by 123 Steps.

The second (compos'd of twenty eight Stones) was likewise built by the Senate, to the honour of *Antonin Pius*, with the Statue of that Emperour on the top of it, but has since been forced to make way for S. *Paul*, whose Statue of Brass is now placed there, and gilt like that of S. *Peter* on *Trajan*'s Pillar. The Body of this Column is 160 *Roman*, or 155 *English* feet high; and the Stairs leading to the top consist of 206 Steps. See Eng.

One day, as we were visiting the Caves, known generally by the Name of *Catacombs*, we entred into the *Mausoleum* * of *Cecilia*, the Daughter of *Metellus*, sirnamed *Creticus*, where at the very entrance of it we were shewn a Hole, into which, but a few weeks before, a certain Gentleman (D. *Maiatesta Stanati* of *Cesena*) hapned to tumble deep under ground, unperceiv'd by his Company; his Friends being amaz'd to know what was become of him, after they miss'd him, went in search of him; but whether it was the depth of the Pit, or that he was stunn'd by the Fall, he was not able to cry, or at least not sufficiently to be heard by them, so that they were forc'd to return without him: The poor Gentleman having continued in this deplorable condition for sixty hours, at last found means to open a passage, and so clambering out of the Pit with a great deal of difficulty, got to an adjacent House, where being comforted with some good Brath, he soon after recover'd his strength. * See Addi.

I am apt to believe there is no place in the World that can compare with *Rome* for subterraneous Passages; and tho' the Earth has stopt up the Entrances of some, yet are there still left a prodigious number of those Caves so generally known by the Name of *Catacombs* among the modern Authors, tho' they cannot give sufficient reason for the Etymologies they produce.

The Catacombs of *Rome*.

These Catacombs are not single Vaults, but rather whole subterraneous Cities, with turnings and windings like Streets; as for instance, those of S. *Agnes*, S. *Sebastian*'s, &c. There are some Caverns; as, those of the Gate *Pinciana*, and those near S. *John* and S. *Paul*, which seem never to have been made use of as Burial-places, and are known by the Name of *Grotto's*.

Of *Naples*.

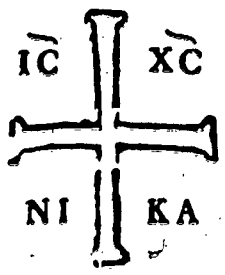
The Catacombs of *Rome* extend under all its Suburbs, but those of *Naples* only under one part of that City; these are dug out from among the Rocks, each Passage being commonly betwixt fifteen and eighteen foot wide, and twelve or fifteen foot high: the hollow Niches in both sides of the Walls are shaped like Chests, of divers sizes, placed in rows above one another without the least order, in which were laid the Bodies without any Coffins, cover'd only with flat Stones like Tiles, cemented with a kind of Mortar or mixture of Chalk and Sand. See Engl.

Tombs in the Catacombs of *Naples*.

Besides these, the Catacombs of *Naples* have divers Tombs of an indifferent bigness, with several Figures of Heads, Half-persons, &c. with the Names of the Persons entomb'd, as *Paulus*, *Nicolaus*, *Proculus*, &c. and sometimes *hic jacet* or *quiescit* underneath it.

On

On one of these Tombs I saw a blue and yellow Cross with the following Characters:



Ἰησοῦς Χριστὸς νικᾷ.

Jesus Christus vincit.

Jesus Christ overcame.

Where it is to be obsery'd that the *Greeks* wrote their Σ almost like our Latin C, during the three first Ages.

Among all the Catacombs of *Rome* those of S. *Sebastian* are the greatest; their height is the same as those of *Naples*, but the passages are not above two foot and a half broad, by reason the Sandy Ground could not be easily underprop'd, which those of *Naples*, hewn out of the Rock, don't stand in need of. We saw one of these Niches open'd, where we found a Skeleton moulder'd away into whitish Ashes, yet could we perceive that the Corps had been laid on its Back.

Opinion of the Romanists concerning Catacombs.

The *Roman Catholicks* have taken a great deal of pains to perswade the World, that *these subterraneous Vaults were dug by the Christians in primitive times, to bury their Dead in, with the exclusion of all Pagans; that they used to perform their Religious Worship in them during the time of the Persecutions; and, that consequently they contain an inexhaustible store of Relicks of the Saints and Martyrs inter'd there.*

The same refuted.

Tho' the proof of this Assertion lies at the Door of the *Romanists*, which hitherto they have scarce attempted, yet will I subjoyn some few Observations which contradict this Opinion. The first thing I have to offer upon this Head is, a Description of *Horace* of the *Puteoli* or *publick Burying-places* of the poorer sort, which is exactly applicable to the Catacombs;

Hinc prius angustis ejecta Cadavera Cellis
Conservum vili portanda locabat in arca
Hoc miseræ plebi, stabat commune sepulchrum.

Sir Thomas Gresham's Roman Hist. in the Chapter of Funeral Ceremonies.

The second Observation are the words *Fata, Diis manibus, Domus æterna*, and such-like, found in the Epitaphs of some Tombs in the Catacombs, which I can't conceive to have been in the least suitable to the Simplicity and Piety of the Inscriptions of the Christian Tombs in primitive times. I remember Mr. *Spon*, that most celebrated Antiquary, is of the same Opinion, in his *Voyage to Greece*, where he looks upon the word *Æthera* and *Superi* as sufficient Proofs to shew, that the Tomb which contain'd them belong'd to a Heathen.

The Glass Vials and little Metallick Vessels frequently found in the Catacombs, seem to be additional marks of *Paganism*; and the *Romanists* pretend those Vessels to have contain'd the Blood of the Martyrs, (this is rather a Conjecture than a Proof) whereas it is certain that the *Roman* Pagans used to put *Lachrymatories* (in which they gather'd the Tears of certain Women hired for that purpose) into their Urns and Tombs.

I remember a certain passage in *Tertullian*'s *Apologetic*, which does not at all agree with the Pretensions of the *Roman* Church; he says, The *Pagans* used to take the dead Bodies of the *Christians* out of their Tombs, and to drag them about the Streets; whence it seems very probable that they would have depriv'd them of their Caves, had they discover'd them: Besides, How can it be conceiv'd that the *Christians* should be able to dig those vast subterraneous Passages without being perceiv'd? and, How could they dispose of the Rubbish? They will tell us perhaps, that they did not do it in secret, and that the Sand of the Catacombs was sold by the poor *Christians*, who for this reason were nicknam'd *Arenarii*, but this is not applicable to the Catacombs of *Naples*; besides that, it does not appear that the poor *Christians* were the only People that imploy'd themselves in the selling of Sand about the City.

The Cyphers of the *Name of Christ*, *Palm-branches*, *Doves of Peace*, *Crosses*, *Crowns* and other Marks of Christianity to be seen upon the Stones of these Sepulchres, are so far from proving that these Burial-places were peculiar to the *Christians*, that they rather appear to be intended as Marks to distinguish them from the *Infidels*.

The same may be said of the *Christian* Epitaphs, the Question being not whether the Bodies of some *Christians* were buried here, (which is beyond all dispute) but whether all others were excluded from being inter'd in the same Vaults, set apart for the dregs of the People.

The Pictures and Altars of different sorts and ages, found in the Catacombs of *Naples* and *Rome*, have been the Products either of the zealous Covetousness of the Popes, who looking upon the Catacombs as a profitable Source of Relicks, have repair'd and made such alterations in them as they found most agreeable to encourage the concourse of the Pilgrims to the Catacombs: *Panciroli* gives us a large account of these Reparations. Most of the Bodies now to be seen in the Catacombs of *Naples* were buried there forty years ago, during the great Plague that raged in that City.

The pretended Temple of *Bacchus*.

About a hundred and sixty paces distant from the Catacombs of S. *Agnes*, stands an ancient *Temple* of a circular figure, reputed by some to have been the *Temple* of *Bacchus*, by reason of the representations of certain Vines on the Roof, and some Vine-branches, Grapes, Vessels, and such-like Instruments on a *Tomb* of *Porphyry* in the same *Temple*; but it being certain that *Bacchus* did not die at *Rome*, its nearness to the Church of S. *Agnes* (built by *Constantine*) seems to be a sufficient proof to believe that it was built by the same Emperour, to serve for a Baptistery to the said Church.

The Church of St. *Agnes*.

The *Tabernacle* of S. *Agnes*'s Church is supported by four Pillars of the best polished Porphyry: the Statue of *Agnes* you see there, is supposed to have been anciently the Statue of some *Pagan Deity*, the Mantle whereof is chiefly remarkable.

As it is beyond the purpose of a moderate *Treatise* to enter upon an exact description of all the Antiquities and other Curiosities I obsery'd in the Cabinets here, so I will content my self with mentioning only the most remarkable ones of those in the Cabinet of Mr. *Bellori*, which for their number exceed all that ever I saw of this kind. His *Fortuna Panthea* of Brass is not above half a foot high, this little Goddess being a composition of all the Characters of Divinity appropriated to other Gods, for she appears with the Beauty of *Venus*, *Juno*'s Crown, *Diana*'s Crescent, the Mitre of *Isis*, the Horn of Plenty of *Ceres*, *Minerva*'s Robe, the Wings of *Fame*, *Cupid*'s Quiver, the Goat-skin of *Bacchus*, the Serpent of *Esculapius*, *Fortune*'s Rudder, and several other Characteristical Marks of Deities; the *Faustina* deified with her Veil strew'd with Stars; the *Magna Mater*, or *Natura rerum parens*, suckling Animals of different kinds at all her Breasts; the Goddess *Fortune* with the Horn of Plenty in one, and the Nail of Necessity in the other hand; the Bust of a young *Roman*, with his Golden Bull hanging at his Neck; the *Cistrum*, or an Instrument used by the *Egyptians* to call the People together to the Sacrifice, and afterwards introduc'd among the *Romans* for the same purpose; it is a most curious piece of Antiquity, resembling a small Racket, the Wood pierc'd with four pieces of Brass like Cords or Rods, which play and make a noise; an ancient brown Earthen Vessel extreamly fine, and of the same sound as the true Porcelane, with Pictures upon it representing the ancient Customs of Bathing; among others you see a Woman holding in one hand a *Strigil* or Instrument for rubbing off Sweat, and in the other a *Guttum* or Vessel with sweet-scented Liquors; not to mention the *Urns*, *Sepulchral Lamps*, *Lachrymatories*, *Pictures*, &c.

Mr. *Bellori*'s Cabinet of Rarities.

Father *Kircher*'s Cabinet was once one of the most celebrated in *Europe*, and notwithstanding its being mangled of late years, retains still a good Collection of Natural Curiosities and Mechanical Engines.

Kircher's Cabinet.

The *Roman College*, or chief House of the *Jesuites* at *Rome*, (where the said Cabinet is to be seen) is perhaps one of the finest Palaces in *Rome*; the Library is numerous, but without any ancient Manuscripts, or other Rarities. In the Great Hall of this Society you see the Picture of the famous Jesuit *Garnet*, who was executed in *England* on account of the Gunpowder Plot, with an Angel on his side shewing him the way to Heaven, open'd to receive him. This Hall is adorn'd with the Pictures of many other Jesuites that suffer'd Martyrdom.

The Roman College.

During the last three days in the *Holy Week*, we saw the Streets of *Rome* crowded with Processions and Penitents with Hoods over their Heads, some clad in white, others in violet colour, blue, yellow, and other colours; some lashing their naked Bodies with Whips of small twisted Cords, which made more noise than they did execution; 'tis sufficiently known that some of 'em are hir'd for this purpose: However the concourse of Pilgrims was not so great this Year as it had been at some other times. I remember I read in an account of *Trinity Hospital*, that in 1600. (being the last Jubilee Year) that House entertain'd or took care to provide for (according to Custom) 440500 Men, and 2500 Women. The

Italian

Italian Pilgrims are entertain'd here three days, but Foreigners four days, and are serv'd at Table by Princes, Princesses, Cardinals, and the Pope himself.

One thing more I must not pass by in silence, *viz.* that we never met the Sacrament in *Rome* or any other Town of *Italy* except at *Venice*, where we saw it twice carried in great state under a magnificent Canopy, attended by a great number of Torches.

I must do this Justice to the *Italians*, that they are not possess'd with the Spirit of Persecution, at least not against Strangers; and I don't remember that in all our Travels thro' *Italy*, not excepting even *Rome* and *Loretto*, we were in the least affronted on the account of worshiping the *Relicks* or *Images*, the worst we ever heard upon that score being stiled now and then *Non sono Christiani, no sound Christians.*

Being oblig'd to leave *Rome*, I will conclude my Letter, assuring you that I am,

Sir,

Rome, *May* 4. 1688.

Yours, &c.

LETTER XXVII.

SIR,

THE Way betwixt *Rome* and *Viterbo* has little remarkable, except some Remnants (towards the Wood of *Boccano*) of the *Via Emilia*, which we found of the same breadth with the other Consular High-roads.

The ancient *Lacus Cyminus* (now Lake *de Vico*) is at the foot of a very high Hill, but of an easie ascent, bearing the same Name with the Lake. It is almost cover'd with Sycamores and Chesnut-trees, and produces vast store of *Primroses*, *Narcissus's*, *Hyacinths*, and many other Flowers.

The City of *Viterbo*. The City of *Viterbo* is built of Stone, and surrounded with a Wall: Besides its Steeples, it has eight or ten square Towers, built by the Inhabitants for retreating places during the incestine Commotions of the *Guelph* and *Gibellin* Factions. The following Inscription on the *Townhouse* gives you an account of the restauration of the ancient *Tuscan* Name *Viterbo*:

Its ancient Inscriptions.

Desiderius ultimus Insubrium Rex Longulam, Vetuloniam *atque* Volturnam *mœnibus cingit & Etruriæ priore nomine inducto* Viterbium *multitudine capitis inducta appellari jubet.* Sal. An. DCC. LXXIII.

Schoder says he saw another ancient Inscription:

M. T. Ciceronem ob egregias ejus virtutes singularesque animi dotes pertotum Orbem nostrum armis virtuteque perdomitum; salvum & incolumem esse jubemus.

In the before-mention'd place is to be seen another ancient Inscription, confirming the Donation made by the Countess *Maud* to the See of *Rome*:

Æternæ memoriæ inclytæ Mathildi, quæ ob præstabile Religionis studium ac pietatem sed: Pontifex suum hoc patrimonium Divi Petri in Thuscia dein nuncupatum elargitus, & in veterem Urbis ejus splendorem intuens Paschalis II. Bledem Pontif. Max. ejus Metropolim, ut ante Viterbium constituit. An. S. 1113.

It would be a fine thing for the *Romanists* if they had so good a Plea for the Donation of *Constantine*; the Latin Version of it is to be seen in *Barth. Picerna* and *Aug. Steuchus*, pretended to be done after the Greek Original in the *Vatican*; it is also inserted in *Gratian's* Decretals, but S. *Antonin* of *Florence* assures us it is not in the old Decretals; and divers noted Authors have refuted this Fable.

This puts me in mind of a witty Repartee of *Hieronymo Donato*, *Venetian* Ambassadour to *Alexander* VI, who being ask'd by the Pope where their Title of Soveraignty to the *Adriatick Gulph* was recorded? replied, That *His Holiness could find their Title written on the back of the Donation of* Constantine.

Notwithstanding the Inscription of *Desiderius* mentions only three Cities united under the Name of *Viterbo*, yet I remember that this City is sometimes stiled *Tetrapolis*, and its Inhabitants *Quaterni Populi*; the Names of the four Cities are express'd in a Distich written on the top of the Stair-case in the Town-house:

Hanc Fanum, Arbanum, Vetuloni, Longula, *quondam Oppida dant urbem: prima Elementa.* F. A. U. L.

Some deduce the Origin of the ancient *Viterbium* from *Isis* and *Osiris*, for which they produce some Greek and Latin Inscriptions, but being inform'd by credible persons that they were suppositious, and suppos'd to have been contriv'd by *John Annius* the *Dominican*, known commonly by the Name of *Annius Viterbiensis* (an Author of no great reputation) I will not insert 'em here.

In one of the Halls of the *Town-house* you see a Picture representing an innumerable swarm of Locusts, which darkned the Sun and cover'd the Earth, devouring every thing they met with upon the Ground about *Viterbo*. This hapned 1526. *Mezeray* relates such another Story, which hapned in *France* 873, and was follow'd by a great Plague; and *Osorius* another Instance of the same nature, which, he says, hapned in *Africk* in the Year of the World 3825.

Montefiascone. We were no sooner come within sight of *Montefiascone*, a little Town seated on a little Hill within eight miles of *Viterbo*, but the Children came out and ask'd us, whether we would not take a view of the *Est, est, est?* The Story, I know, has been mention'd by others, but perhaps not with all its circumstances: A certain Abbot or Bishop travelling from *Germany* to *Italy*, used to send a Servant before, to know in which Inn he could meet with the best Wine, and to mark it with the word *Est* over the Door. Coming to *Montefiascone*, the Servant was so highly pleas'd with the *Muscatello*, that he writ three *Ests* over the Door, which inviting his Master to drink more plentifully than he used to do, he fell sick and died on the spot; his Monument stands in S. *Flavian's* Church, about two hundred paces from the Town; he is represented with a Mitre on his Head, with two Scutcheons (*quarterly in the first a Lyon, in the second two Testes, the Shield not blazon'd*) and as many Drinking-glasses on each side of him; at his Feet you see the following Inscription in *Gothick* Characters, by way of Epitaph, made in all probability by his Servant:

Est, Est, Est, propter nimium Est, John de Fuc: *D. meus mortuus est.*

that is,

Est, Est, Est, for taking too much Est, my Master John de Fuc.* *lost his Life.*

* His Name was *John de Fuc*, the Name of a great Family in *Augsburg*.

All the way betwixt *Montefiascone* and *Bolsena* we pass'd all along near the Banks of the Lake of that name; it is of an oval figure, and forty miles in compass; it contains two Islands, call'd *Martana* and *Passentina*; the first whereof is celebrated for the banishment of *Amalasuntha* the Daughter of *Theoderic* King of the *Goths*, who was afterwards murther'd there by the command of her Cousin *Theodat*, whom she had made her Associate in the Government.

Bolsena. *Bolsena* is a very indifferent Town, formerly an Episcopal See, till it was translated to *Orvieto*. Behind it you see the Ruins of the ancient *Volsinium*, which, as *Pliny* relates, was burnt by Lightning.

Aquapendente. The Country betwixt *Bolsena* and *Aquapendente* is the worst in the whole World; the last of these two is poor and almost desolate, yet has got the Title of an Archbishoprick ever since the destruction of *Castro*. *Centino*, a little Village at the foot of the Hill *Radicofani*, is the utmost Boundary of the Pope's Dominions on that side; the Town and Citadel, built by *Desiderius* the last King of the *Lombards*, bearing the Name of the said Hill upon which they stand, are for half the Year conceal'd in the Clouds. In our way hence towards *Siena*, we saw for eight or ten miles nothing but barren Mountains; but as we came towards S. *Quirico*, the Country began to grow better and better, tho' this lasted not long, for near *Torrinieri* the Land grew worse than before, and continued thus, with some small alteration, till we came *Siena*.

The Town and Citadel of *Radicofani*.

Siena. *Siena*, the third City, and perhaps the most pleasantly situated, upon a little fertile Hill, in all *Tuscany*; its Air is excellent, the Streets, tho' not level, yet very neat, being pav'd with Bricks laid sideways; the Houses are handsomly built, and the Waters very good; besides that, the *Tuscan* Language is spoken here in its utmost purity, without the roughness of the *Florentine* Dialect.

Its Cathedral. The Cathedral of *Siena* is a *Gothick* Structure, but very beautiful, and one of the most perfect among all the great Churches of *Europe*, being cover'd within and without with Marble;

Marble; the Pavement is of black and white Marble put together in the Quire. On the Corridor running round the body of the inside of the Church, are to be seen the Statues of the Popes, and among the rest there is one smooth-chin'd Creature, which, as 'tis said, was placed there in the room of the Popess *Joan*: *Baronius* says, it was taken away and broken to pieces; *Launoy* says it was to be seen in 1634, and *Blondel* acknowledges the same, as also the Statue erected in the place where Pope *Joan* was deliver'd; Father *Maillon* confesses the same Statue, and says, that the Name *Johannes* VIII. *femina Anglica* was added to it. All the Authors that ever I saw, who inveigh against the Story of this female Pope, and mention this Statue, acknowledge that it is still remaining, or at least, that it really subsisted heretofore. This Structure was begun by *Duccio*, and finish'd by *Dominic Beccefumi*. That part next the Quire is beautified with the Pictures of *Abraham*'s Sacrifice, and the passage of the *Israelites* thro' the Red Sea; the arch'd Roof is Azur'd, intermix'd with Stars of Gold.

From the Church you pass into the place where the Library was kept formerly; here we saw those glorious Pieces in *Fresco* representing the Life of *Pius* II, design'd by *Raphael*, but painted by *Peter Perugin* his Master, with *Bernardin* and *Pinturicchio*; most of the Faces represent persons then alive; among others, the Pope's Soul soaring upwards in the shape of a *Paradise* Bird, and the *Hermit* gazing on it, is an exquisite piece.

I will not detain you with the Story of S. *Katherine* of *Siena*, but I can't pass by in silence the old Citadel with fifteen or twenty square Towers; among these the Tower of *Mangiana* is mightily extoll'd for its height, but it is by those who have seen but few others. The Arms of *Siena* are, the famous *She-Wolf* that gave suck to *Romulus* and *Remus*, founded upon a Fable, that *Siena* was built by the Children of *Remus*.

The Arms of Siena.

Travelling betwixt *Siena* and the River *Arno*, we found the Ground grow better and better the nearer we came to the River, especially about *Camiano*, *Granajola*, *Ponte d'Era*, and between *Pontgibon* and *Pisa*. Near *Pontgibon* or *Poggi-bonzi* (famous only for its Tobacco) we met whole troops of young Girls going from House to House singing and wishing every where a merry *May*; their Songs are compos'd of a vast number of pleasant Wishes, every Stanza concluding with *a merry, merry May*.

On several Sandy Hills near *Certaldo* we saw great quantities of divers sorts of Shells, as we had before at *Monte Mario*, a mile from *Rome*, in the *Alps* in *France* and other places; the same have been observ'd by *Olearius*, *Steno*, *Cambden*, *Speed*, and others. I did receive your Observations with a great deal of satisfaction, but, to deal frankly with you, I must tell you, that I differ with you in Opinion; for if these Shells were the Remainders of the Deluge, I see no reason why the same should not rather have been left in the Valleys, and more universally spread upon the Surface of the Earth, whereas now they are only gather'd into heaps in certain places. Nor see I any sufficient cause to have recourse to supposed Inundations, Tempests, and Eruptions; for tho' some such thing might rationally be concluded in reference to certain places subject to Earthquakes, (as for instance, the *New Vesuvius* or *Monte Nuovo*) yet as the same reason does not hold in all other places where these Shells are found, so the Solution of this *Phænomenon* may with much more ease be look'd for in the same property upon the Land which produces these Shells at Sea. You will perhaps tell me, that Shells are inseparable from Fishes, Snails, &c. but you may easily answer your self, if you will but consider, that Shells have been found in the Stomachs, Kidneys, and other parts of Human Bodies. But we will proceed on our Journey.

Shells found on the Hills.

See Mr. Ray's Travels.

Pisa is the second City of *Tuscany*, formerly a considerable Republick, seated in a level Plain on the River *Arno*, dignified with the Title of an Archbishoprick and an University; its Streets are spacious, streight, and well pav'd with broad Stones, and generally well built. The *Arno*, which is navigable here, and twice as broad as the *Tyber* at *Rome*, divides the City into two parts; it is at present very poor and ill-peopled, its desolate condition must be attributed to their Wars with the *Florentines*, who, after the Conquest of this place, founded the Harbour of *Leghorn* upon the Ruin of *Pisa*.

Pisa.

The Cathedral here is very like that of *Siena*, but not quite so large; it is a regular Structure, and overcrusted with curious Marble. The Baptistery is of a circular figure a hundred and eighty foot in circumference, and arch'd, ending into a *Cupola*: By an Inscription on a Pillar of this Baptistery it appears, that the Church was finish'd 1153. Here is an Eccho which magnifies a noise to such a degree, that the sound thereof lasteth as long as the tinkling of a great Bell. Some Travellers make a great account of the Leaning Tower, which some pretend to appear leaning on all sides, by a peculiar Art of the Architect, when in effect its Inclination is only on one side, occasion'd by the sinking of the Foundation: Its whole height is a hundred and eighty eight feet, and is of the figure of an exact Cylinder. I let down a Plummet from the Balcony on the top, on that side where it inclines most, and after several tryals both to the right and left, found that the Lead touch'd fifteen foot distant from the Foundation.

The Cathedral.

The Baptistery.

The leaning Tower has 293 Steps to the top.

The famous Burying-place of *Siena*, call'd *Campo Santo*, (because the Earth was brought from the *Holy Land* 1228) is a kind of Cloyster, a hundred and ninety paces long, and sixty six broad. On a Wall under one of the Portico's I saw an Inscription, being a Decree of the Senate of *Pisa* upon the Death of *Cæsar*, ordering their Subjects to appear in Mourning for a whole Year, and to abstain from all publick Divertisements.

The Camp: Santo.

I will not trouble you with their Physick-garden, as having nothing memorable in it, but must not quite forget the Knights of S. *Stephen*, who have their Residence here: They must be of Noble Blood, and born in Wedlock; they vow Conjugal Chastity, and say a hundred *Pater Nosters* and *Ave Maria's* every day. This Order was founded by the Great Duke *Cosmo* I. 1561, the sixth of *August*, after he had gain'd the Battel of *Marciano*; his Statue stands directly opposite (in the Place) to the Church.

The Order of S. Stephen.

Leghorne is about fourteen miles distant from *Pisa*, the interjacent Country being very level, but woody, fill'd with Oaks, Cork-trees, and wild Myrtles: They tell you that these Woods were formerly all cover'd by the Sea, which reach'd within three miles of *Pisa*, where you see now a large Church at the entrance of these Woods, which, they tell you, was built at the same place where S. *Peter* was shipwreck'd one day when he was abroad fishing. I need not tell you that *Legherne* is a modern City, built on a level Ground, and strengthned with good Fortifications faced with Brick-work; its Streets are large, streight and uniform, the Houses generally of the same height, and painted on the outside.

Leghorne.

In our Journey from *Legherne* to *Lucca*, passing a second time thro' *Pisa*, we saw, three miles on this side of it, the craggy Mount S. *Julian*, the Boundary betwixt *Tuscany* and the Republick of *Lucca*.

Lucca.

This City is most pleasantly seated in a fruitful Plain of fifteen or twenty miles, enclosed by very rich and well-peopled Hills; its Fortifications are regular, and faced with Bricks; we walked round the Ramparts in an hours time: But tho' it is not so big as *Pisa*, it contains many goodly Houses, and is very well peopled. They shewed us the Palace of the Republick, where the *Gonfalonier* or Standard-bearer, with the seven *Anziani* or Counsellors, lodge and eat together.

The State of *Lucca* is a Fief of the Empire; its Government is Aristocratical, manag'd by the Council of two hundred and forty Nobles, divided into two Bodies, who rule alternatively every six months, with the *Gonfalonier* at their head. This chief Magistrate bears some resemblance to the Doges of *Venice* or *Genoa*, but continues no longer than two months in this Dignity, whereby he reaps no other Profit but the maintaining of his Table at the publick charge: His Dress is a Robe of Crimson Velvet, with a Bonnet and Stole, and his Title is *His Excellency*; his Guard consists of sixty *Switzers*, and he may not be chosen to the same Dignity till after six years. Their Arsenal is well stor'd with Arms, and those very well kept.

In the Cathedral we saw the Chapel of the *Volto Santo*. They tell you, that *Nicodemus* having several times attempted in vain to paint the Crucifix, was at last assisted by the Angels, who guided his Pencil to finish it; they are not able to tell you how this Picture came to S. *Fredian's* Church, but are positive that it remov'd from thence to the Cathedral, where it hung in the Air, in the place where we saw it, till they built an Altar under it, on which it rested, and about which they afterwards built a magnificent Chapel. This Crucifix is in such high esteem with them, that they stamp it on their Coin, with the Arms of the Signiory.

The Cathedral.

In S. *Fredian's* Church is a Marble Table seventeen foot long, six and a half broad, and fourteen inches thick, the whole Story whereof is express'd in the following Inscription:

S. Fredian's Church.

O quisquis legis, lapis es, in lapis hic moveas in admirationem & cultum D. Frediani, *qui templo huic construendo, molem hanc in montibus ad quartum lapidem nactus viribus impar, sed spiritu fervens; mirâ facilitate manibus humerisque suis, & Canonicorum in plaustrum binis indomitis vacculis torchendum impositum, sexto salutis seculo, hac in æde statuit sacrum monumentum.*

In the midst of the same Church is to be seen a Tombstone with this Inscription:

Hic jacet Corpus Sancti Riccardi Regis Anglie.
Here lies the Body of St. Richard *King of* England.

Who this Royal Saint was, I am not able to imagine; for *Richard* I. (sirnam'd *Lyonheart*) died in *France*, and was interr'd in the Abby of *Fontevraut*; *Richard* II. was, after his dethroning, stabb'd at *Pomfret*, and buried first in St. *Paul's*, from whence he was carried to *Langley*, and afterwards to *Westminster*; and *Richard* III. being slain in the Battel of *Bosworth* in *Leicestershire*, his Body was interr'd in the City of *Leicester*; and I don't remember ever to have heard any thing of a King *Richard* before the Union of the *Heptarchy*.

In the Church of S. *Austin* you see an Image of *our Lady*, with the little Jesus in her left Arm, concerning which they tell you the following Story: A certain Soldier having lost all his Money at Dice, fell into such a rage, that after having given a great many ill words to the Image of our Lady placed then against the Wall of the Guard-house, he threw a Stone level'd directly at the Head of the little Jesus; but our Lady perceiving the danger, thrust the Child in an instant from her right Arm into the left, where it remains ever since; the insolent Soldier was swallow'd by the Earth, the hole being shewn to this day. About the time of the Reformation divers Noble Families retir'd from *Lucca* to *Geneva*.

Half way betwixt *Lucca* and *Florence* stands *Pistoya*, viz. twenty miles from each; the Country thereabouts is extreamly fertile, and well cultivated, but the City is almost desolate, having lost all the Trade with its Liberty: It is much larger than *Lucca*, its large and regular Streets and beautiful Buildings are sufficient testimonies of its former Grandeur.

The Inhabitants of *Pistoya* have a most profound Veneration for S. *James* and his Relicks; the Altar of his Chapel in the Cathedral is cover'd with Plates of Silver, and adorn'd with very rich Lamps; here I observ'd in a peculiar Prayer directed to him these words, *Tu qui primatum tenes inter Apostolos, imo qui eorum primus*; i. e. *Thou that wert the first, nay, the chief among the Apostles*, &c.

The Guelph and Ghibeline Factions.

There are not a few who pretend to look for the Original of the *Guelph* and *Gibellin* Factions among the *Pistoyans*, where, they say, liv'd two Brothers call'd *Guelph* and *Gibel*, the elder of which sided with Pope *Gregory* IX, whilst the younger embrac'd the Interest of the Emperour *Barbarossa*; but, in my opinion, those hit much nearer the mark who derive the Names of these two famous Factions from the illustrious and potent Families of the *Guelphs* and *Gibellines* (upon the Borders of *Germany* and *Italy*) who were at open Enmity a considerable time with each other, before one declar'd for the Emperour, and the other for the Pope. I am,

Sir,

Florence, *May* 7. 1688.

Yours, &c.

LETTER XXVIII.

SIR,

MY last being written the next day after our arrival at *Florence*, I will in this give you a brief description of this City, and afterwards communicate such Observations as I have had occasion to make during our stay here.

Florence.

Florence, the capital City of *Tuscany*, dignified with the Title of an Archibishoprick, and the ordinary Residence of the Great Dukes, is seated upon the River *Arno*, as it were within the *Arena* of an Amphitheatre, being enclos'd at four or five miles distance (except on the side toward *Pistoya*) with very fruitful Hills, rising by an easie ascent till they unite with the high Mountains: If you take a full view from one of the Towers of *Florence*, of the Villages and Houses of Pleasure in the circumjacent Plain and Hills, it seems to be only one continuation of Suburbs, this Valley being perhaps the best peopled place of that kind in the Universe.

I was credibly inform'd, that the circumference of the Walls of *Florence* is 15240 fathoms, and that the River *Arno*, which runs thro' it, is 500 fathoms broad; so that adding the double breadth of the River to the compass of the Walls, the whole circuit of *Florence* amounts to 16240 fathoms, three of which are equivalent to 5 feet 8 inches *English* measure, according to which computation it amounts to 36675 feet: It is almost of a circular figure. The same person told me, that there are in *Florence* about 8800 Houses, 60000 Souls, 22 Hospitals, 89 Convents, 84 Fraternities, 152 Churches, 18 Halls belonging to Merchants, 72 Courts of Justice, 6 Columns, 2 Pyramids, 4 Bridges, 7 Fountains, 17 Places or Squares, and 160 publick Statues. The Streets are pav'd with broad pieces of a grey Stone call'd *Pietra-forte*, and most of the Houses are built of the same; these are brought from the neighbouring Quarries.

The Great Duke's Palace.

The Great Duke's Palace (call'd *Pitti*) is a most noble Structure, but has this defect, that the Court is not spacious enough in proportion of the Structure, which being 120 foot high to the Cornish of the third Order, can't be seen without trouble in any part of the Court, which is only 160 foot long, and 140 broad.

As we were entring the old Ducal Palace, (the receptacle of all the so much celebrated Curiosities) we took a full view of the four Statues of white Marble on the Bridge of the Trinity, representing the four Seasons of the Year, made by *Michael Angelo*: The chief Curiosities we observ'd here were, the *David*, the Work of *Michael Angelo*; the *Judith*, by *Donatello*; the *Sabin* Women carried off by violence, by *John* of *Bologna*; the *Perseus* of Brass, by *Coligni*; the *Hercules* and *Cacus*, by *Bandinelli*; and the Brass Statue on Horseback of *Cosmo* I. by *John Bologna*; all these are most exquisite Pieces. The three *Basso-relievo's* on the Pedestal of that Statue represent *Cosmo* I. kneeling before the Pope as he was giving him the Title of *Great Duke*; the same Prince entring *Florence* in a triumphant Chariot, and the resignation of the Soveraignty to him by the Senate of *Florence*. The great Gallery of the same Palace is four hundred foot long, where we pass'd betwixt two rows of ancient Statues and Busts. Above them, against the Wall, we saw the Pictures of the ancient Philosophers on one side, and those of great Generals on the other.

Among these Statues, that suppos'd to be *Scipio's*, in a Robe of Brass, excels all the rest, the Characters on the Hem of his Garment are of the old *Hetruscan*; the *Leda* embracing *Jupiter* with a Pleasure mix'd with Shame; the *Bacchus*, with a Copy of the same by *Michael Angelo* not inferiour to the Original; *Julia* the Daughter of *Augustus*, the *Pomona*, the *Venus*, the *Diana*, the *Apollo*, another *Bacchus*, the Peasant striking a Boar, the Busts of all the Emperours to *Galienus*, and especially those of *Adrian*, *Pertinax* and *Severus*, are excellent Pieces.

In the Chambers behind this Gallery we observ'd in the first a great branch'd Candlestick of Amber, a delicious Column of Oriental Alabaster, a Rhinoceros's Horn of an extraordinary bigness, abundance of *Basso-relievo's*, and a great number of ancient Sculptures, Medals, Idols, Sepulchral Lamps, Stones, Minerals, and other natural Curiosities: The second is fill'd with Pictures; the third, call'd the *Mathematical Chamber*, (here used to be kept the Iron Nail, one half of which was pretended to be transmuted into Gold, but is not shewn now, it having been found to be no more than a Sodering) has among other things Globes and Spheres of seven foot diameter: The fourth has likewise nothing but Pictures, which excell those of the second, except the Ornaments of Ivory, Amber, and precious Stones in a peculiar Cabinet, and among the rest a large rough Emerauld rooted in its Rock, and the Platform of *Legborne* on a Table of *Lapis Lazuli*: In the fifth Chamber you see the Pictures of most of the illustrious persons of the present Age; among the Generals are *Cromwell*, *Monk*, and the late Earl of *Ossery*: The sixth contains a hundred and thirty seven Pictures of the most famous Painters, done by themselves: The seventh is filled with Porcelane Vessels, and the five following with all manner of surprizing Curiosities, and great store of Arms of all Countries; the Horse-Tail of twenty foot long, presented to the last Great Duke by the late *Charles* Duke of *Lorrain*, is none of the least among these Rarities;

Rarities; but the most precious things are preserv'd in an Octagonal Apartment call'd the *Tribune*, built by *Buontalenti*, being twenty foot in diameter; the Floor is pav'd with Marble of divers colours, artificially joyn'd like inlaid Work; the Hangings are of Crimson Velvet, the Windows of Crystal, and the inside of the Lanthorn cover'd with Mother of Pearl. You have questionless heard of that most celebrated *Diamond*, which weighs 139 Carats; *Tavernier* says, it is pity that the Water of it is yellowish. Among the other Rarities, the following are the choicest; an antique Head of *Julius Cæsar*, of one entire *Turquoise* of the bigness of an Egg; a Cupboard fill'd with Vessels of Agate, *Lapis Lazuli*, Cornelian, and Rock-Crystal set with Gold and Precious Stones; a large Table and Cabinet of inlaid Work of Oriental Jasper, Calcedony, Rubies, Topazes, and other Precious Stones, excellently well contriv'd; a Collection of the best Medals; a vast number of carv'd and engrav'd Pieces nicely kept; some Masterpieces of the most excellent Painters; six very beautiful *Grecian Statues*; two Wrestlers; the Peasant whetting his Bill, and at the same time listning to the Conspirators, *Catiline*'s Associates; a *Tauro*, a *Cupid* sleeping, a *Venus* six foot high, and another five foot, both of white Marble, the finest piece of Workmanship in the World, the Head turns a little towards her left Shoulder, with her right Hand before her Bosom, yet at some little distance, and covering her privy parts with the other, but without touching it; she stands bowing gently, with her right Knee forward, the better to hide her self. This bashful posture is accompanied with all the marks of Modesty and Chastity in her Face, and with an incomparable Beauty, Sweetness and Youthful Air; her Neck is exceeding beautiful; and, in short, this Masterpiece is the most exquisite imitation of the Perfection of Nature. On the Marble Base are these words, ΚΛΕΟΜΕΝΗΣ ΑΠΟΛΛΟΔΩΡΟΥ ΑΘΗΝΑΙΟΣ ΕΠΟΙΕΣΕΝ. *Made by* Cleomenes, *Son of* Apollodorus *the* Athenian.

From this Palace passing thro' a small Gallery, we came into the ancient Palace of the Republick, where the Great Duke's Wardrobe is kept; and among other things we saw there the rich Coach made for the Solemnity of the Great Duke's Marriage. The great Hall of this Palace is a hundred and seventy two foot long, and seventy four broad.

The Cathedral is a large and stately Building, tho' for the most part of a *Gothick* Architecture, being overcrusted both within and without with the finest polish'd Marble of divers colours: Its whole length is four hundred and ninety feet, and its height, to the top of the Cross on the Globe, three hundred and eighty feet; the worst is, that it has no Frontispiece.

The rarest Statues in this Church are, St. *James*, by *Sansovin*; the *Adam* and *Eve*, by *Bandinello*; the Statue of *God the Father*; the *dead Christ*, and an Angel supporting him, by the same hand, on the high Altar: The *Eve* is somewhat larger than *Adam*. The *Resurrection* painted in the Dome is a most excellent Piece, tho' the Criticks find fault with *Fred. Zuccharo*, who made it, because he has represented the rising Bodies with Clothes on: Besides this, we took notice of a worse Blunder in the same Church, committed by no less famous a Painter than *Paul Uccello*, who has painted a General * on Horseback, and his Horse resting on two Legs on the same side, whilst the other two are in motion.

* *Acciaioli* an Florentine, General of the Pisans.

The pieces of the Rods of *Aaron* and *Moses*, shewn in the Cathedral, are question'd by some, because these Rods are said to be entire at S. *John de Laterans*.

The Steeple of the Cathedral.

The Steeple (near the Church) is a Tower of a hundred and eighty feet high, overcrusted with square pieces of red, black, and white Marble, and beautified with divers excellent Statues: The old Bald Man, by *Donatelli*, is highly esteem'd.

The Baptistery.

The Baptistery is not unlike that of *Pisa*, and cover'd like the Church; some say it was anciently the Temple of *Mars*, and that after its being converted into a Baptistery, it was dedicated to S. *John Baptist*. The *Mosaick* Work on the arch'd Roof is excellent Work, and among the Statues here, the *Magdalen* of Wood, by *Donatelli*, excels all the rest: But the most surprizing Pieces are, the three Gates of Brass, wherein are represented some sacred Histories in *Bassorelievo*. The Back-Gate with this Inscription, *Andreas Ugolini de Pisa me fecit* 1330, is not altogether so beautiful as the other two, which put *Michael Angelo* into such a Rapture, that he said, they deserv'd to be placed at the entrance of Heaven:

The famous Gates.

Dum cernit vivas aurato ex ære nitentes
In templo Michael Angelus, *obstupuit*;
Attonitusque diu, sic clara silentia rupit;
O Divinum Opus! O Janua digna Polo!

The Statue of Justice near the Church of the *Trinity* is supported by a Column of Porphyry said to have stood formerly in the *Pantheon*. In the Court before the middle Gate of the Baptistery, you see two Columns of Porphyry at some distance from one another, and yet chain'd together, which, they say, were brought from *Majorca*, and bestow'd upon the *Florentines* by the *Pisans*, for the assistance they gave them in the conquest of part of that Isle. Near them stands another Column erected in memory of a pretended Miracle wrought by the Body of S. *Zenobius* when it was remov'd from S. *Lawrence* to the Cathedral Church, for his Shrine touching by chance the trunk of a dry Tree that lay upon the ground, it blossom'd immediately, and produc'd Fruit.

S. *Lawrence*'s Church and Chapel.

The Church of S. *Lawrence* is both spacious and rich, and the Chapel, I must confess, when first I saw it, seem'd to be the most exquisite Structure that ever was seen of this kind; it is both very large and magnificent. In the middle of each Face of the Hexagon stands a double Pilaster of Jasper, with a double Chapiter of Brass gilt, the Base being the same. The Emblematical Figures on the Pedestals of these Pilasters are very artificially made of precious Stones: In the six Angles are plac'd as many rich Tombs of Porphyry, Oriental Granite, and some other of the most precious kinds of Marble; on each Tomb lies a great Pillow of Jasper, valued each at forty thousand Crowns, enrich'd with precious Stones, and upon each Pillow stands a Crown exceeding in riches the Pillow it self: The Base supporting the Tombs is overcrusted with Porphyry and Calcedony, on which will be engraven the Epitaphs of the Princes for whom these Tombs are design'd, and their Statues of Brass gilt, twice as big as the life, are to be placed in the Niches of black Marble that are over the Tombs. The inner Roof of the Dome is intended to be cover'd with *Lapis Lazuli* intermix'd with Roses and other carvings gilt; and the rest of the Walls are overcrusted in Compartiments with the finest Agate Granite, Onyx, and suchlike precious Stones, each Pannel being divided into Squares, embellish'd with various sorts of Ornaments of Copper gilt; and the High Altar is likely to surpass all the rest.

The Library of S. *Lawrence* is celebrated for its MSS. as for instance, that of *Virgil* of the age of *Theodosius*, and a very ancient Greek MS. of the Chirurgery of the Ancients, of *Hippocrates*, *Galen*, *Asclepiades*, *Bithynus*, *Apollonius*, *Archigenes*, *Nymphodorus*, *Heliodorus*, *Diocles*, *Rufus*, *Ephesius* and *Apollodorus Cicienſis*, with the manner of curing Dislocations, with Figures painted on Vellum, the only ancient Work of this nature now extant. Mr. *Magliabecchi* the Bibliothecary was very sorry he could not communicate to me S. *Chrysostom*'s Letter to *Cæsarius*, having receiv'd express Orders to the contrary from the Great Duke; but he positively assur'd me, that the passage cited by *Martyr* is contain'd *verbatim* in that Manuscript.

The Library of S. *Lawrence* is 80 fathom long, and 20 broad. A fathom of Florence is a Roman foot, which shorter by 6 inches than the English.

In the Church of the *Holy Cross* we saw the Tomb of *Michael Angelo*, which, in my opinion, bears no proportion to the merit of so famous a person. In this Church is a Chapel belonging to the Family of the *Zanchini*, on the Altar of which is a Picture of Christ delivering the Souls of the Fathers, and among them many female Spirits, the Work of *Angelo Bronzini*: Some are of opinion, that she who is represented for *Eve* is the true resemblance of *Bronzini*'s Mistress, and that the Man in the right corner of this Piece, gazing upon this pretended *Eve*, is the Painter himself; just as *Pinturiccio* painted in the *Vatican* Pope *Alexander* VI. prostrate at the Feet of *Julia Farnese*, under pretext of his adoring the holy Virgin.

The Tomb of Mich. Angelo.

In the *Annunciata* are kept two pieces of the thirty *Judas* receiv'd to betray his Master; and in the Church of the *Carmelites*, the Crucifix that spoke to S. *Andrew d'Ursini*.

Among the several fine Seats belonging to the Great Duke, we had only the opportunity to see *Poggio Imperiale* and *Pratinole*; it must be confess'd they are very delightful places, and have even a sufficient share of Beauty, but since our Gardens and Waterworks are advanc'd to that height in *France*, the only way to maintain the ancient Reputation of the *Italian* Seats, is to pass by in silence their pretended miraculous Works.

The Arsenal and Citadel.

The Arsenal and Citadel of S. *John Baptist* are kept in very good order, but the Forts of *Belvedere* and S. *Miniato* are much out of repair. The Great Duke also maintains divers sorts of wild Creatures, and Nurseries for 'em. In the Hospital *ad Scalas* is the Tomb and Epitaph of a human Monster, with two Heads and four Hands on one Body, nam'd *Peter* and *Paul*; one of these Heads did often weep whilst the other laugh'd, and this slept often whilst the former was awake.

The Mountains near *Florence* produce certain Stones, which being saw'd in the middle and polish'd, represent sometimes Trees of divers sorts, sometimes whole Towns, and the Ruins of old Castles; the first are call'd *Dendrites* by *Kircher*.

To conclude, I must tell you, that tho' *Florence*, for its Situation, and divers other Advantages, may be reckon'd among the finest Cities in the World, yet to those who know the Pleasures of the enjoyment of Society, and especially of the delicious Conversation with the Fair Sex, the insupportable Constraint and unavoidable Ceremonies used at *Florence*, appear an intolerable Burthen, except to those that are inur'd to this kind of Slavery from their Infancy. I am,

Sir,

Florence, *May* 23. 1688.

Yours, &c.

LETTER XXIX.

SIR,

THE Way betwixt *Florence* and *Bologna* being one continued ridge of the *Apennine* Mountains, and consequently not very fit for Calashes, we were forced to hire Horses, all the Litter-men being taken up in carrying Monks (by what accident I know not) over the Mountains. For two days together we passed thro' a barren and mountainous Country, the highest Mountain we met with in our passage was that call'd *Monte Fuoco*; however, the Valleys of *Sarperia* and *Fiorenzola* (which some think to be the *Fidentia* of the Ancients) are not quite so desolate as the rest; the first is famous for Knives and other Cutlers Work made there; it was destroy'd by an Earthquake 1642. We took notice, that near the Village of *Pietra Mala* the Air did sparkle in the Night. At the Village of *Scari Calassino*, betwixt the last-nam'd place and *Loyano*, we saw a Post, the common Boundary of the Pope's and Great Duke's Territories, the Arms of the first being affix'd on one, and the *Florentine* Arms on the other side.

From the top of the last Hills of the *Apennine*, as you approach *Bologna*, and by an easie descent near that City, we had the most glorious Prospect in the World, of the vast and most delightful Plain of *Lombardy*, extending all along the *Po*, from the *Apennines* to the *Alps*.

Bologna, the Seat of an Archbishop, who has the Title of a Prince of the Empire, and the second City in the Ecclesiastical State, is seated at the foot of the *Apennine Hills*, at their opening into the Plain, upon the *Via Emilia*. The fairest prospect of *Bologna* and the circumjacent Country is from the Convent of S. *Michael in Bosco*, where at the same time you may have the pleasure of viewing one of the most magnificent Monasteries in *Italy*, comparable for its beauty to most of the Royal Palaces of *Europe*; and to speak the truth, as *Bologna* is larger and more populous, nay, even richer than *Florence*, so its Convents are generally very spacious and exceeding magnificent. The City is surrounded only with a single Wall without a Citadel; for when they surrendred to Pope *Nicholas*, 1278, it was under these Conditions, That they should not be bridled by a Citadel, their Estates not be liable to any Confiscations, and should be allow'd an Auditor of the *Rota*, and an Ambassadour of their own at *Rome*; which Privileges have not been infringed hitherto.

Bologna, surnamed *the Fat*.

The University acknowledges for its Founder *Theodosius* the younger, 425, but owes its chief Splendour to *Charles the Great*; hence it is that the Motto *Bononia docet* is seen on the Coin of this City, as the word *Libertas* is in their Arms.

The University of *Bologna*.

In one of the Halls of the University College is a Monument, erected to the memory of a certain noted Chirurgeon named *Gabriel Taglicozzo*, who made artificial Noses, Lips, &c. of Flesh.

The Canal, which joyns the *Arno* with the *Po*, is a great conveniency for Traffick to this City, the Inhabitants of which trade in Wax, Hemp, Flax, Hams, Sauciges, Soap, Tobacco and Perfumes, besides that they have near four hundred Silk-mills; formerly they used to sell their little Dogs at a high rate. The Houses of this City are generally of Stone, or Brick plaister'd over; the Streets have Portico's on both sides, like those of *Padua*, but are higher and larger, and are for the most part very streight; the Women are handsom, and not kept under to much restraint as at *Florence*; the better sort are inclin'd to follow the French Mode.

In General *Caprara*'s Palace, one of the best in the whole City, we saw many rich Spoils taken from the *Turks*.

The Publick Palace of this City is appointed for the Lodging of the *Cardinal Legate*, and the *Gonfalonier* and his Councellors. Over the Portal stands a Brass Statue of *Gregory* XIII, and on one side of it that of *Boniface* VIII. with this Inscription,

The publick Palace of *Bologna*.

Bonifacio VIII. P. M. ob eximia erga semerita, S. P. Q. B. Ann. MCCC.

Here you are also shewn the Cabinet of Curiosities of *Ulysses Aldrovandus*, joyn'd with that of the Marquess of *Cesti*, both belonging to the Publick. Among the rest we took notice of the Picture of a certain Woman who (as *Aldrovandus* says by his own knowledge) had a long and thick Beard, like a *Capuchin*. Mr. *Lotier*, a Banker of this City, has also an excellent Collection of Medals, in which are to be seen two *Otho's* in Brass of unquestionable Antiquity *. In a Chamber near it they shew'd us a hundred and eighty seven Volumes in *folio*, all of *Aldrovandus*'s own hand-writing, and about two hundred Bags full of loose Papers; the Margins were pretty large, and the Lines not very close.

* Note, ignorant Fellows, that these are no more *Otho's* than mine.

On the Front of this Palace, betwixt the Statues of the Popes, is a Latin Inscription, intimating, that the Emperour *Charles* V. and Pope *Clement* VIII. meeting at *Bologna* in *Nov.* 1529. restor'd the Peace of *Italy*, and that afterwards the said Emperour was crown'd King of *Lombardy* in the Church of St. *Petronius*; the Emperour had been crown'd before, *Oct.* 22. 1520, at *Aix la Chapelle*.

In another place of this Palace you see the Picture of one named *Ugolino*, on the Wall, hanging by one Foot, with this Superscription, *Ugolino traditore, Sibatuglielo alla Patria*; perhaps this might be Count *Ugolin* of *Pisa*, one of the Heads of the *Guelphs*.

In another place you see an Inscription beginning thus, *Adeste O Sol & Lunæ Testes*, &c. relating to a Miracle wrought by an Image of our Lady, who deliver'd *Bologna* from the Pestilence. That great and stately Fountain which faces this Palace is the Work of the famous *Flemish* Architect and Sculptor *John* of *Bologna*, said by some to have cost seventy thousand Crowns.

In the Church of S. *Petronius* (the biggest of the whole City) is to be seen the so much celebrated *Meridian* Line of *Cassini*, engraven on a Copper Plate of 222 foot long, and fix'd in the Pavement. It begins at the entrance of the great Body on the left hand, and passes between the Pillars, without the least Obstacle, to the end of the little Nave of the Church, the situation of which is almost *East* and *West*. In the arch'd Roof of the last Nave is a Hole, directly over the Noon-point of this Line, thro' which a Ray of the Sun entring, marks the Solstices and Equinoxes upon the Line. The same Operation may, without much difficulty, be perform'd in any other convenient place, the whole Mystery consisting only in measuring the Degrees on the Line, proportionably to the height of the Hole thro' which the Ray enters.

Cassini his Line in the Church of S. *Petronius*.

In the Church of *Corpus Domini* they shew an embalm'd Body of S. *Catherine Vigni*, which has wrought many Miracles: But the Image of *our Lady*, said to be made by S. *Luke*, is in much greater veneration with them; her Residence is at the Mount *la Guardia*, eight miles from the City, (they were then making a cover'd way to that Mountain) from whence they bring her at certain times in Procession into *Bologna* with more than ordinary magnificence, attended by the several Companies of the Artisans, the Fraternities, Convents, Heads of the Parishes, Magistrates, the *Gonfalonier*, and the *Legate* himself: The Image is always carried under a stupendious rich Canopy, the People upon their Knees saluring it as it passes by with the most zealous Ejaculations that can be conceiv'd.

The Image of our Lady.

In the Church of the *Dominicans* you see the most magnificent Chapel and Tomb of S. *Dominic*; the inlaid Work of different colours on the Benches of the Quire, done by *Damian* of *Bergamo* a Monk, are highly esteem'd to this day, tho' it is beyond all dispute, that since the finding out of the Art of imprinting natural Colours on Wood, this kind of Work has been brought to a much greater perfection. In the same Church is to be seen the Tomb of *Hentius* or *Enzelin* King of *Sardinia* and *Corsica*, Natural Son to the Emperour *Frederick* II. The Epitaph gives you an account of his being taken Prisoner by the *Bononians*, who detain'd him twenty two years, nine months, and sixteen days in Captivity, till his Death, which

which happned in *March* 1272. The Tower call'd *Garisenda* is about 130 foot high, and leans like that of *Piſa*; it is a ſquare Tower built of Brick, and its inclination to one ſide proceeds queſtionleſs from the ſame reaſon (*viz.* from the ſinking of the Foundation) as does that of *Piſa*. The bright Stones, known by the name of *Bononian* Stones, are the products of the Hill of *Paderno*, about three miles diſtant from the City.

The heats being almoſt as troubleſome here as in the *Apennines*, the Men uſe Fans as well as the Women, ſome of which are of Paper, and ſold for a Penny a piece. In our Inn they had a way of driving away the Flies by a certain Machine, where they often treat us with *Lake Tortoiſes* of the bigneſs of a good Trencher; their Fleſh is pretty firm, and not ill taſted.

Laſt night leaving *Bologne* about Sun-ſet, we travel'd ten miles to *Samogia*, a ſmall Village about half way betwixt this City and *Modena*. They told us, that from this place to the *Alps* the Country is as level as a Bowling-green, and that the Roads are lined on both ſides either with Cornfields or Vineyards, the Vines whereof are ſupported by Fruit-trees planted Chequer-wiſe, as we have ſeen them already in ſeveral parts of *Lombardy*, and afford a very delightful Proſpect at firſt, but at length grow offenſive to the Eyes of Travellers, for want of that variety which is ſo diverting to the ſight.

The ſame night, as we came near to the ſaid Village, we were ſurpriz'd with the ſight of a prodigious quantity of *ſhining Flies*, call'd *Lucciole*, wherewith the Hedges were cover'd to ſuch a degree, that they ſeem'd to be on fire; they are not unlike the Locuſts in ſhape, but not ſo large; the ſhining part is a certain yellow hairy Doune under the Belly, which being ſtretch'd at every motion of their Wings, ſend forth a bright glance like Fire.

Early this morning we purſued our Journey to *Modena*, where we arriv'd in two hours: In our way we paſſed by the Fort of *Urban* VIII, defended by four Baſtions bearing the Names of S. *Mary*, S. *Peter*, S. *Paul*, and S. *Petronius*; and a little on this ſide of it we croſs'd the River *Panaro*, the Boundary betwixt the *Bolonian* and *Modeneſe* Territories.

Modena. The City of *Modena* it ſelf is ſeated in a fertile Country, but for want of Trade makes but an indifferent appearance; for its Fortifications are much decay'd, the Streets are narrow and dirty, the Portico's on both ſides of them low and ſtreight, and even the Churches contain nothing worth taking notice of; and were it not for its ancient Reputation, and the Reſidence of the Dukes of that Name, it would ſcarce deſerve a place among the Cities of *Italy*. The old Palace is an inconſiderable Edifice, but the new one promiſes much better. I am,

Sir,

Modena, May 28. 1688.

Yours, &c.

LETTER XXX.

SIR,

WE travel'd in Calaſhes in four hours from *Modena* to *Reggio*, a City as void of Curioſities as *Modena*, but is better built, and its Situation very pleaſant. The Inhabitants tell you Wonders of their Churches, but theſe things they muſt tell to thoſe that have not ſeen *Rome* or *Naples*; their chief Pretenſions lie in the Workmanſhip of Bones, whereof they make divers ſorts of Toys not worth the mentioning, and ſold miſerably cheap. *Reggio.*

They told us of certain ancient Inſcriptions found at *Reggio*, in which this City was call'd *Regium Lapidi*, the other *Reggio* in *Calabria ulteriori* being known by the Name of *Regium Julium*, and its Inhabitants *Regienſes*, whereas thoſe of the firſt were call'd *Regini*. They ſtile their Prince Duke of *Reggio* and *Modena*, juſt as in *Scotland* they put the Name of their Country before *England* in the Title of the King.

About eight miles from *Reggio* we paſſed the Bridge over the River *Enſa*, on the other ſide of which begins the Dutchy of *Parma*, being a plain Country, but moſt Paſtures, whereas about *Bologna* and *Modena* the Grounds are generally till'd.

Parma. The City of *Parma* is ſeventeen miles from this Bridge, very pleaſantly ſeated, and ſeen at a conſiderable diſtance, by reaſon of the ſtreightneſs of the Road leading to it, and the height of its Spires. Over the Gate thro' which we entred we ſaw the Arms of Pope *Paul* III, the ſame who beſtow'd the Dukedoms of *Parma* and *Placenza* upon his Natural Son *Lewis*. The River of *Parma* divides it into two parts, but is not navigable; its Fortifications are very good, and the Citadel deſign'd after the Model of that of *Antwerp*.

The Ducal Palace is a very indifferent Building, but the new one is likely to be much larger and handſomer. The Wardrobe is well ſtored, and ſo are the Stables, and the Coaches very rich. The great Theatre is beyond any of that kind I ever ſaw, either at *Paris* or *Venice*; the ſofteſt Whiſper may be heard thro' any part of it, tho' it is of a very large extent; there are no Boxes, but only Benches rais'd one above the other, like in the Amphitheatres. The Floor of this Theatre is alſo very ſpacious, and may be fill'd with Water to the height of three foot, in which they repreſent whole Squadrons of little gilt Boats.

Beſides the Schools of the Univerſity, they have here a College, wherein they receive young Gentlemen of all Nations, but none except ſuch as are capacitated to be admitted Knights of *Malthe*. They eat together tho' they have different Penſions according to the different Sciences they learn; their number at that time amounted to two hundred and thirty.

The Dome of the Cathedral is painted by the hand of *Correggio*, and in the Churches of S. *John* and S. *Anthony* are divers excellent Pieces.

At the Race we ſaw abundance of very good Company taking the *Tour à la mode* in their Coaches; but they obſerve here the ſame Cuſtom that is practis'd upon this account at *Rome*, *viz.* that the Women go never with the Men in the ſame Coach, but always appear in Coaches by themſelves.

In our Journey from hence to *Placenza* we ſaw not any Village or River worth mentioning, except the little diſmantled Town of S. *Domino*, tho' they are thirty five miles diſtant from one another.

The City of *Placenza* is ſeated in a pleaſant Plain about ſix hundred paces from the *Po*; its circumference is larger than that of *Parma*, the Houſes are of Brick neatly built, but very low, and on each ſide of the Houſes foot-ways fenced in with Poſts, like as in *London*, eſpecially in the *Rece-ſtreet*, which is as ſtreight as a Line, of an equal breadth from one end to the other, and three thouſand foot long. The Statues of the famous *Alexander Farneſe*, Governour of the *Netherlands*, and of his Son *Ranuccio* I, adorn the *Great Place*. *Placenza.*

From the top of one of the higheſt Steeples we had a full view of the circumjacent Country, embelliſh'd with the various windings of the *Po*, and could plainly diſcern *Cremona*, tho' at twenty miles diſtance.

The Cathedral has ſome Pictures, done by the hand of *Carache*; and that of S. *Sixtus*, an Image of our Lady, by *Raphael*. To conclude, *Placenza* is ill Peopled, and the Fortifications are but indifferent, tho' much extoll'd by the *Italians*; and their Weights, Meaſures and Coins are different from thoſe of *Parma*.

We coaſted the Banks of the *Po* at ſome diſtance, following the current of the River till we came over againſt *Cremona*, where we paſſed the River in a Ferry-boat, for there are no Bridges on the *Po* below *Turin*.

The City of *Cremona* is ſeated on the *Milaneſe*-ſide of that River; it is very large, but poorer and leſs populous than *Placenza*. The Caſtle, tho' much extoll'd by the romantick *Italians*, is an antick ſhapeleſs heap of Ruins; the Inhabitants of this City boaſt exceedingly of its Antiquity, but produce no proofs for it. This City is forty miles from *Mantua*, and in the way betwixt both you meet with no conſiderable Town except *Buzzolo*, a ſmall City, ſurrounded with ſome inconſiderable Works, which among ſome paſs for Fortifications; however, it bears the Title of a Dukedom, and its Prince is at the ſame time Soveraign of the adjacent Country for four or five miles about it. We paſſed the River *Oglio*, which ariſes with a large and rapid current out of the Lake of *Iſeo*, and falls into the *Po*. *Cremona.* *Buzzolo.*

The moſt Deſcriptions I ever ſaw of *Mantua* have given a very imperfect Deſcription of the true Situation of this City, which is generally repreſented to be ſeated in the midſt of a Lake, but to ſpeak the real truth, this pretended Lake is no more than the Waters of the River *Mincio*, ariſing from the Lake of *Guarda*, which overflowing the flat Country, makes a kind of Marſh fourteen or fifteen times longer than it is broad, in which, but toward one ſide of it, the City of *Mantua* is built on a firm tract of Ground. The Cawſey over which we paſs'd was betwixt two and three hundred paces long, but towards the ſide of *Verona* it is of a larger extent. In ſome *Mantua.*

places

places of these Marshes the Water is always in motion, but as it stagnates in most places, the best of the Inhabitants leave the City during the Summer season.

Mantua has only a Wall for its defence, but the Citadel is very strong: For the rest, it is much about the same bigness as *Cremona*, but much better Peopled; the Streets are broad and streight, but the Houses indifferently built.

The Ducal Palace. The *Italians* will tell you strange things of the magnificence of this Palace, tho' in effect it has neither beauty nor regularity, and the best Idea I can give you of it is, to compare it to *Whitehall*, *viz.* that it is large and commodious, without the other qualifications belonging to a Royal Palace.

We were assur'd that this Palace was most magnificently furnish'd before it was pillag'd by the Imperialists *Anno* 1630. but as you see it now, the Duke's Lodgings want nothing of what is requisite to render 'em both convenient and splendid: The Hall is stor'd with rare and ancient Pictures, and the Cabinet of Curiosities wants not Materials to entertain the industrious Traveller. The Duke of *Mantua* has seven or eight Country Seats, among these we only saw *la Favorita* and *Marmirolo*, the last of which is very pleasantly seated near a delightful Brook and Wood, and well furnished with Pictures and Antiquities, with Gardens, Orange-walks, Bird-houses, and most curious Fountains belonging to it.

In the Church of S. *Anna* they shew the S. *Longin*, with some drops of that miraculous Blood found in this City in the time of *Leo* III. which afterwards gave the occasion (*viz.* 1608.) to the institution of the Order of *Mantua* by *Vincent Gonzaga*, who erected twenty Knights Companions of this Order.

The Knights of Mantua, their Habit was Scarlet, with eight points.

The other remarkable things in *Mantua* are, the Churches of the Jesuits, of S. *Barnaba*, S. *Maurice*, S. *Sebastian*, S. *Ursule*, and S. *Belarie*, the Townhouse, Theatre, Manufactory-halls, the Mill of the twelve Apostles, the Synagogue and Shambles. But before we part with *Mantua*, we must remember the Village of *Andes* near this City, which gave birth to *Virgil*,

Mantua Musarum Domus, atque ad sidera cantu
Excelsa Andino. Sil. Ital. l. 8.

Brescia. Leaving *Mantua*, we travel'd for twenty two miles till we came to the River which is the common Boundary betwixt that Dukedom and the *Venetian State*, and eighteen miles further came and lodg'd the same night at *Brescia*. We were not a little surpriz'd at the sight of the Women in the Streets and Shops, a thing we had not seen since our coming to *Verona*.

Brescia is pretty well peopled, and indifferently large; its Citadel, which is very strong, stands on an adjacent Hill near the foot of the *Alps*; the other Fortifications are of no great moment. The Palace of *Justice* is a noble Structure, of a certain Stone not unlike Marble; on the Pediment of the Front you see these words,

* with a C. *Fidelis Brixia Fidei & Justicia* consecravit.*

The Armourers Shops are directly opposite to this Palace, under a Portico of five hundred paces long, the Fire-arms of *Brescia* being accounted the best in *Italy*; and this City is water'd with many fine Springs and a commodious Rivulet, which have their rise among the *Alps*.

The Cathedral. In the Cathedral they shew you what they call *Constantine's Oriflame*, which they told us was the same blue Cross that appear'd to *Constantine* with this Motto, *In hoc Signo vinces*. But how is it possible that an Apparition in the Air could be preserv'd? And how could it be call'd an *Oriflame*, which signifies a kind of gilt *Standard* or *Banner*? some deriving its Etymology from *flammula* a Banner, and *aurea* golden, because it was affix'd to a gilt Lance; others, from a sort of Gold and Flame-colour'd Stuff; it was adorn'd with green Tassels. I remember *Mezeray* tells us, that the second Race of the *French Kings* used to have S. *Martin's* Cope born before their Armies, but that the *Capets* made use of the Banner of S. *Denys*, call'd *Oriflame*, kept in that Saint's Church. Perhaps this *Oriflame* of *Brescia* is the *Labarum* in which *Constantine*, after his Victory over *Maxentius*, order'd the following Cypher, which consists of the initial Letters of the Name of Christ, to be written, ☧

As we travel'd from *Brescia* to *Bergamo*, we pass'd constantly along the ridge of the *Alps* on our right hand, at the distance of two or three miles.

Palazzuolo. At *Palazzuolo*, a place seated half way betwixt both these Cities, (*viz.* fifteen miles distant from each) we passed the *Oglio* a second time. Coming to *Bergamo*, we found it both a trading and strong Town, its situation being at the foot of the *Alps*. The Fortifications are well faced and kept, and the Citadel, with some Outworks, defend the rising grounds about the City, which has no less than five good Suburbs.

In the Cathedral you see the Tomb of the great *Barth. Coglione*, General of the *Venetian* Forces against the *Milanese*; and in that of the *Austin* Friers, the Tomb of the famous *Ambrose Calepin*, a Native of *Calepio*, a Village not far from *Bergamo*. In the Quire of the Cathedral you see some inlaid Work on the Benches, done after the same manner and by the same hand as that we saw in the Church of the *Dominicans* at *Bologna*.

Bergamo. The *Bergamese* Jargon is very gross, besides which, the Inhabitants have for the most part Scrophulous Tumors on their Throats, which appears very nauseous to Strangers, tho' to them it appears so natural, that they question whether it be a greater Perfection to have or be without these Tumors.

The Grounds about *Bergamo*, and generally all over the *Milanese*, being water'd with many Rivulets arising from the *Alps*, the Country People have from thence deriv'd an infinite number of Chanels, whereby they prevent the inconvenience of Drought, and render their Grounds fertile. The River *Adda* (arising out of the Lake of *Como*) having at that time overflown its Banks, we were oblig'd to quit our Calash at *Canonica*, a Village about twelve miles from *Bergamo*, and to pass the River in a Boat, not without some danger, by reason of the violence of the Current.

Two miles above *Canonica*, on the opposite side of the River, lies *Tezzo*, where we embark'd on the Canal call'd *Navilio della Marresana*, which reaches in a streight line within half a mile of *Milan*, its length being about twenty miles. It is supplied with Water by the *Adda*, which River having in many places very steep Cataracts or Waterfals before it comes into the flat Country, is near *Canonica* twenty five or thirty foot lower than the Canal; which is the reason that so many attempts were made in vain to bring the Waters of the *Adda* to *Milan*, till at last that most celebrated Architect and Engineer *Leonard de Vinci* undertook this Work, and brought it to perfection. Mr. *Felibien* gives this great *Florentine* the following Character; That he was of a very large stature, and of such strength, as to be able to twist the Clapper of a Bell with one hand; he was an excellent Horseman, Dancer, and very dextrous in the management of Arms, and all other Gentleman-like Exercises; he was one of the best Painters of his Age, he and *Michael Angelo* having engag'd *Raphael* to leave his first way of drawing; besides which, he was a skilful Architect, a good Sculptor, and great Engineer; a learned Mathematician, Musician, Anatomist, Philosopher, Poet and Historian; all which joyn'd with his courteous and generous Behaviour, did certainly render him one of the most accomplish'd Persons the World ever saw. He died in the 75th Year of his age, in the Arms of *Francis* I. King of *France*, who giving him a Visit, and our illustrious *Leonard*, endeavouring to shew his acknowledgment by raising his Body in the Bed, the King advanc'd with his Arms to hinder him, and so he expir'd.

The River *Adda*.

The Character of Leonard Vinci.

From this Canal we had a most delightful prospect of the circumjacent Country, border'd in many places with Summer-houses, Gardens and Orchards, like some of the Canals in *Holland*. I am,

Sir,

Milan, June 7. 1688.

Yours, &c.

LETTER XXXI.

SIR,

Milan the Great.

SCarce any City in *Europe* hath been so entirely destroy'd by the two terrible Scourges of Mankind (I mean *War* and *Pestilence*) as *Milan*; notwithstanding which, it may to this day be rank'd among the best and finest Cities in the World: It was quite destroy'd by *Frederic Barbarossa*, 1162. It is almost of a circular figure, about ten miles in compass, and is said to contain no less than thirty thousand Inhabitants. There are but few Instances of such great Cities built in the middle of the Land without the conveniency of either the Sea or a River,

River, the defect of which is supplied by many Springs and Rivulets that water the circumjacent Country, and the Canal deriv'd from the River *Adda* fills the Ditch of the inward Enclosure of the City with running Water. The Fortifications, or outward Enclosure, were made since the destruction of this City by *Barbaroſſa*.

Near the Gate of *Pavia* is to be seen the beginning of a Canal, intended to be made from thence to the City of *Pavia*, by *Galeazzo Viſconti*, the execution whereof was stopt by his death. A certain Latin Author (*Verner Rolwinck*) derives the Etymology of *Mediolanum* à *ſue dumidia lanea*, i. e. from a Sow half cover'd with things found in the same place where this City was fourkled.

The first thing we thought worthy our viewing was, the famous Cabinet of the late Canon *Manfredi Settala*, a man equally learned and skilful, not only in his choice, but also in working many curious things with his own hands. We saw here divers Machines, invented for the discovery of *Perpetual Motion*; Looking-glasses of divers sorts, Dyals, Musical Instruments both ancient and modern, and some of his own inventing; Books, Medals, curious Keys and Locks, Seals, Rings, Pictures, *Indian* Works, Mummies, Arms, strange Habits, Lamps, Urns, Idols, and a great number of all sorts of Antiquities; Fruits, Stones, Minerals, Animals, variety of Shells, Curiosities in Steel, Wood, Amber and Ivory; a piece of Cloth of the Stone of *Amiantus*, Monsters, &c.

But the Dish of yellow Amber, two foot in diameter, is a most exquisite Rarity: There are divers other pieces of rough Amber with *Ants*, *Flies*, *Spiders*, and other *Insects* enclosed in the substance of 'em, a convincing proof, in my opinion, that the Amber is a kind of Gum or Bituminous Matter hardned by the Air, the Sea, or some other cause, so that when (for instance) an Ant happens to light upon a raw and clammy piece of this Bituminous Matter, she is entangled in this unctuous substance, and it growing hard and bigger by degrees, the Insect is enclosed in it. This Opinion is exactly the same *Martial* had of it;

Dum Pinëton ſæa formica vagatur in umbra
Implicuit tenuem ſuccina Gutta feram.
Sic modo quæ fuerat vitæ contempta manenti
Funeribus facta eſt, tunc pretioſa ſuis.

Unicorns Horns. There are three or four pretended *Unicorns Horns* in this Cabinet; for tho' it be beyond all dispute, that they are properly no more than the Teeth of a certain Fish found in the *Northern Seas*, yet here, as well as in the *Venetian* Treasury, and other places where they are preserv'd, they retain still the Opinion, that they grow on the Head of that imaginary four-legg'd terrestrial Creature. There are also some *Fossil Horns* exactly like those that grow on Fishes, tho' of a very different matter. The *Remora*, a Fish about the bigness of a Herring, shewn in the Cabinets, is of the same fabulous kind, I am sure I have seen no less than twelve of 'em in several places, but never two of the same kind.

The Cathedral was begun by the Archbishop Antonio Archinto, first Duke of Milan, in June 1386.

The Cathedral, which stands in the center of the City, is a Structure of a prodigious bulk, tho' (according to my dimension) a sixth part less than S. *Peter's* at *Rome*, but is infinitely beyond it in the curiosity of the Ornaments and Sculptures, wherewith it is cover'd both within and without, there being not the breadth of a hand to be seen in the whole that is unwrought: It is built after the *Gothick* manner, and to form your self a true Idea of this Edifice, you must represent to your self a medley of *Roſes*, *Trees*, *Animals*, *Groteſques*, *Pyramids*, *Niches*, *Statues*, and a thousand other Varieties, affording an agreeable confusion to the Eye: However, there are only some parts of this Church compleatly finish'd, the Canons of the Chapter thinking it their Interest not to proceed with too much vigour in a thing of this nature, which brings vast Sums of Money (by *Donations*, *Legacies*, &c.) into their Coffers, part of which they know how to imploy to other uses: According to an Inscription in golden Letters engraven on a piece of Marble in the same Church, one *John Peter Carcanus*, a Native of *Milan*, left by his Will the Sum of 230000 crowns of Gold, toward the building and adorning the Front of this Church, which nevertheless remains to this day almost naked. There may perhaps also be another reason why the same is not finish'd; for considering that there are two sorts of Architecture in that part of it which is already begun, it seems as if the Undertakers were not a little puzzled how to reconcile the Uniformity of the Architecture to the *Gothick* Structure of the whole body of the Church.

Martin the Fifth's Statue stands in the Quire of this Church, without a Beard, and a very young Face, tho' he was near fifty years old when he was chosen Pope; the Inscription says, it exceeds *Praxiteles*:

—— *Præſtantis Imaginis author,*
De Tradate fuit Jacobinus in arte profundus
Non Praxitele *minor, ſed major, farier auſim.*

Near it is the Statue of *Pius* IV. Behind the Quire are two Marble Tables, containing a Catalogue of all the Relicks preserv'd in this Church, among which is a piece of *Moſes's* Rod, tho' at the same time they pretend to have it entire at S. *John de Lateran's*. Besides this piece, there is another preserv'd at *Florence*, and *Baronius* says another was found at *Sens* 1008. On the great Altar you see the Nail of the Crucifixion, of which 'tis said *Conſtantine* made a Bit for a Bridle; five Lights burn constantly round it day and night.

The Pavement of this Cathedral is more curious, and much more solid than that of S. *Peter's* at *Rome*, the Marble whereof being very thin, is almost worn out. The whole charge of this Pavement (when finish'd) is computed at 66290 crowns, not including the Quire.

We had from the Steeple of this Church a full view of *Milan*, besides divers other Cities in the Plain of *Lombardy*, and the conjunction of the *Alps* and *Apennines* near *Genoua*. The great Bell, nam'd S. *Ambroſe*, has seven foot diameter, and weighs thirty thousand pound. In the great Square before the Church we observ'd generally about thirty Coaches assemble there; but their ordinary *Tour à la mode* is a spacious unpav'd Street (call'd *Strada Marina*) sprinkled every day with Water.

The Ambrosian Library. The *Ambroſian* Library got its Name from being dedicated to S. *Ambroſe*, by *Frederick Borromeo* Archbishop of *Milan*. A certain Author, in his description of this Library printed at *Tortona*, makes the number of its MSS. amount to 12000, and the printed Volumes 72000, but the Library-keeper told us there were not above 40000 in all: Among the first, *Ruffinus's* Version of *Joſephus* challenges the precedency for its antiquity. The great Hall is seventy five foot long and thirty broad; it is kept open two hours in the Forenoon, and as many in the Afternoon *. Among other Rarities, we were shewn a large Volume of Mechanical Draughts, done, as they said, by *Leonard de Vinci's* own hand; the Writing is so bad, that it is not to be read without a Perspective-glass. An Inscription on the Wall near it tells you, that a King of *England* offer'd three thousand Pistoles for it, but mentions not his Name. In the Academy for Painting, adjoyning to this Library, we saw a Picture of *Clement* X. resembling a Print so exactly, that we were all deceiv'd in it.

* See Bescot's Treatise De Orig. & Stat. Bibliothecæ Ambroſianæ.

The Citadel is a regular Hexagon Fortification, well faced, and strengthen'd with a good Ditch and Counterscarps.

The principal Structures, besides the *Churches* and *Convents*, are, the two Palaces of the Governour and Archbishop, the Houses of the Marquess *Homedei*, Count *Barth. Areſe*, and Signior *Martini*.

The Seminary (founded by *Charles Borromeo*) has a double Portico 176 foot 3 inches long, and 16 foot 10 inches broad, extending round the inside of the great square Court; the first Order is *Doric*, the second *Ionic*: Over the high Portal you see the Statue of Piety.

The *Townhouse* and the *Great Hospital*, the great Court of which is 120 paces square, about the inside whereof are two rows or stories of Portico's, supported on each side by forty two Pillars of a certain kind of Marble found in the *Alps*, each Pillar consisting of one single piece of Stone. The body of the Structure is of Brick; the old Hospital is united with it, but the *Lazaret* or Hospital for infected persons lies about three hundred paces without the City; *Bramante* was the Architect. This large Structure is composed of four Galleries joyn'd in a Square, each of which contains ninety two Chambers, about twenty four foot broad, so that the whole length of each Gallery (including the Walls) amounts to eighteen hundred feet. The whole inside is surrounded with a Portico resting upon Marble Pillars, and the Square within is a Meadow, water'd by divers Springs and Brooks, in the middle of which stands an Altar under a Dome, supported by Pillars, by which means the Sick may see Mass said from their Chambers.

The Lazaret.

The Church of S. *Ambroſe* hath divers Statues and Pictures, which were the production of the ignorant Ages: Among the rest, you see here a *Dragon* of Brass, resting upon a Column of Marble; some think it to be the Serpent of *Æſculapius*, others an Emblem of the Serpent in the Desart; nay, the common Opinion is, that this Dragon was cast out of the Fragments of that Serpent;

S. Ambroſe's Church.

2 Kin. 18. 4.

pent; which makes many Pilgrims flock thither to worship it, as *Bossi* and *Charles Torre* assure us by their own experience.

S. *Eustorgia's* Church. In the Church of S. *Eustorgia* they shew still the Tomb that contain'd the Bodies of the three Kings that were afterwards remov'd to *Cologne*; they pretend that it retains to this day a certain Virtue of curing Distempers; for it is to be observ'd, that the *Milanese* are not behindhand with the rest in magnifying their Relicks, of which they have good store, for at S. *Alexander's* there are no less than 144000 Martyrs of the Catacombs of S. *Sebastian*.

The chief Curiosities made in *Milan* are Works of divers sorts in Steel and Rock-Crystal, wherewith they are furnish'd by the neighbouring *Alps*; of the largest pieces they make Looking-glasses, but they are seldom above a foot square. 'Tis to the Curiosity of their Workmanship that some attribute the original of the old Proverb, *viz. He that wishes well to* Italy, *must destroy* Milan; meaning, that thereby it would be dispers'd thro' the whole Country; tho' some explain the same of the fatal Wars that have afflicted *Italy* on the account of this City, it being forty times besieg'd, and two and twenty times taken.

The House of the Marquess of *Simonetta*, two miles without the City, hath an Echo which repeats the last syllable about forty times; we heard it in a cover'd Gallery in one of the wings of the Buildings, where the Echo answering from the other wing, we found the sound to decrease like the reboundings of an Ivory Ball.

In our way from *Milan* to *Pavia* (which is only fifteen miles distant thence) we went to take a view of the famous Convent in the Plain of *Barco*, founded by *John Galeazzo Visconti* first Duke of *Milan*. The Church is of a *Gothic* Architecture, but the Chapels and Altars not inferiour to any in *Italy*; the Cloysters are exceeding handsom, and the Gardens, Parks, Brooks and Avenues exceeding delightful; it contain'd then about fifty eight Friers.

Pavia. The once famous, but now so inconsiderable, City of *Pavia* is so much decay'd from its ancient lustre, that its poor Remnants bear scarce any resemblance to what it was in ancient times, to wit, the Metropolis of a Kingdom, and the Residence of no less than twenty Monarchs, the Castle being now no more than an old heap of Stone, and the Fortifications quite neglected.

The University (founded by *Charlemain*, and re-establish'd by *Charles* IV.) is not much better than the Town; it hath however five Colleges, among which that of *Borromeo* is worth taking notice of, for the beauty of its Structure; the Scholars of every College wear different Gowns.

The Cathedral is a low, dark, and very old Edifice; over against it is an *Equestrian Statua* of Brass, call'd the *Regisol*, which some think to be the Statue of *Antoninus Pius*; *Platina* gives it the same Name, and says, it was brought from *Ravenna* after that City had been sack'd by King *Luitprand*, the same who (as they say) brought S. *Austin's* Body from *Sardinia* to *Pavia*, where it was buried in S. *Pietro's* Church, now in the possession of the *Austin Friers*, tho' it is certain that they can't shew the place where the Body lies, the Marble Tomb in the Chapel on one side of the Church being erected only in honour of that Saint. *Bernard Saccus*, (*l.* 10. *c.* 3.) a Native of *Pavia*, in his History of that City, gives us the following account of the translation of S. *Austin's* Body: *In templo D. Petri à Luitpranda ædificato condituin Augustini corpus fuit; & ne facile reperiri posset, ferunt Luitprandum tribus locis effossis, structis, sepulchris, aliis deinde factis, paucis operi adhibitis, justisse corpus cordi, omnibus sepulchris eadem nocte, occlusis, ut certa corporis sede ignorata, difficilior in avum fieret occasio, ejus perquirendi repetendique. Constructum deinde alio secessu sacellum D. Augustino fuit, juxta Templum D. Petri, in quo sacello Area marmorea & colobra, compacta est, Augustini sepulchrum representans.* The same Author makes the following Observations concerning *Pavia*, That the Grounds thereabouts produce naturally Asparagus twice every Year, which are eaten raw by the Country People; and that the *Po*, which now is five or six miles from that City, reach'd formerly within five hundred paces of it; which explains several passages in the ancient Geographers, who place *Pavia* near that River: *Padus*, adds *Saccus*, *sæpe rotus ab alveo profiliens alium sibi ex templo abeuntem fine fossibus cruit. Si ab Apennino aquarum copia irruat, flectitur in adversum ripam torquet, contra vero si ab Alpium latere aquarum impetus fiat, si ex utraque parte, effervet supermodum.*

St. *Austin's* Tomb.

The River *Tesin.* Coming out of *Pavia*, we pass'd the River *Tesin* (*Ticinum*) over a cover'd Bridge, being the most rapid and largest River of all those that fall into the *Po*. It is subject to great Inundations, which sometimes prove fatal to the low adjacent Fields; they say, that if these Inundations continue for eight days, (which however happens rarely) the coldness of the Waters destroy the Herbs to that degree, that they scarce recover in several years after.

The River *Ticinum* had formerly communicated its Name to the City of *Pavia*, which is built upon its bank; *Saccus* says, in the Year 472. its Name was chang'd in the time of *Odoacer*, who after he had destroy'd it, granted Immunity for five years to the Inhabitants, in order to rebuild the City; whence the City was call'd *Papia quasi piorum patria*, from the Piety of its Citizens, who went to *Ravenna* to implore the King's Pardon, not from their embracing the Christian Religion, which they had done long before. *Mediolanenses*, said one of their Envoys after their return, *nomen invenimus, quod nostræ pietatis officia in patriam restituendam, paucis syllabis posteritati attestabitur, & Ticini nomen aqua restituetur. Papiæ piorum Patria*, &c. I shall add only that *Pavia* is famous for the misfortune of two Kings taken Prisoners there, *viz. Desiderius* by *Charlemain*, and *Francis* I. by *Charles* V. I am,

Sir;

Pavia, June 12. 1688.

Yours, &c.

LETTER XXXII.

SIR,

Vghera. WE dined at *Vghera*, a Town about fifteen miles from *Pavia*, and lodg'd the same night at *Novi*, a City seated at the foot of the *Apennines*, thirty miles from *Genoua*, under whose Jurisdiction it is; the Road betwixt both is very mountainous.

Genoua. The Situation of *Genoua* is at the end of a Gulph partly on the brow of a Hill, which forms a Crescent round the Gulph, and partly on a little Plain betwixt the foot of the Hills and the Sea-shore; the Streets are narrow, and the Houses in the lower part of the City six or seven stories high, but are lower by degrees, as the ascent rises; this affords a pleasant prospect at a distance, but carries along with it divers other Inconveniencies, especially for Coaches, which for that reason are not much in fashion here, the Ladies being generally carried in Litters, and Gentlemen using Calashes they guide themselves: It is strengthned by a double Fortification, reaching on both sides to the Shore, the innermost encloses the body of the City, and the second the rising Grounds about it.

From 10 to 12 l. a month, according to the Government.

When I had taken a view of the City of *Genoua*, I could not but be surpriz'd at what is commonly reported of it, *viz.* that it is built all of Marble, whereas it is beyond all contradiction that (except some Houses in the *Strada Nuova*, that are either adorn'd with, or have whole Fronts of Marble) their ordinary Materials for building are Brick and Stone, or both together, and their Houses are generally plaister'd over on the outside: Notwithstanding this, *Genoua* is not destitute of beautiful Structures, especially in five or six of the best Streets, and in the Suburbs of S. *Pietro d'Arena*; besides that, *Genoua* has this advantage in Building, that Slates and Glass are as plentiful here as they are rare in other parts of *Italy*.

Gardens in the Air. The pretended *Gardens in the Air* in *Genoua*, compar'd by some to the very Gardens of *Semiramis*, owe their original to nothing else but the scarcity of Ground, which obliges the Inhabitants to put their Flowerpots in their Balconies, and sometimes to cover them with Earth.

The French Bombarding of Genoa. The best Edifices of *Genoua* escap'd the fury of the *French* Bombs, which being level'd against the middle part of the City, did most dreadful execution; there being to this day above five hundred ruin'd Houses in that part of the City. In the Church of *our Lady of the Vineyards* they shew'd us a Bomb which did fall there without the least detriment; had not the *French* Bombs thrown down four or five Churches and as many Convents at the same time, they would certainly make the World believe that the Bombs had a certain respect for so sacred a place.

During this Conflagration, the Doge, with thirty persons more, sheltred themselves in the great Hospital call'd the *Albergo*, whither many of the Inhabitants also carried their

their best Effects. To prevent the like for the future, they are at present busied in making a third Mole, which is to stretch further into the Sea than the two former.

In Harbour. The Harbour of *Genoua* is capacious enough and of a good depth, but is expos'd to the *Lubec-ir* or the *African* South-West Wind, the most dangerous that reigns in this part of the *Mediterranean*. This oblig'd them to make another lesser Port within the great one, for the security of their Galleys, which are now reduc'd to the number of six, a small Squadron in comparison of what the *Genoese* Navies were in former times.

Those that intend to have a compleat view of *Genoua*, must view it distinctly from three several places, from the top of the *Phares* or Water-Tower, from the Sea at a miles distance, and from the top of the Hill.

The publick Palace, or *Palazzo Reale*, where the Doge and some of the Senators lodge with their Families, is a very large Structure. In the little Arsenal of this Palace we were shewn a *Rostrum* of an ancient *Roman* Ship, it was of Iron, with a Boar's Head at the end of it; the Inscription tells you, that it was found in the Harbour of *Genoua* as they were cleansing it: Here are also some Curasses, said to have belong'd to certain Ladies of this City that fought against the *Turks*.

A Roman Rostrum.

The Ladies generally dress themselves in Gowns after the *French* mode, but the ordinary sort make use of a kind of little Fardingals. The Noblemen, tho' not oblig'd to any particular Habit, yet wear for the most part black and Cloaks; they assume the titles of *Dukes*, *Marquesses*, *Counts*, &c. which the *Venetian* Nobility does not, but they wear no Swords.

The Doge (who must be fifty years old at least) is stiled *His Serenity*, the Senators *Their Excellencies*, and the Noblemen *Most Illustrious*, a title of no great moment in *Italy*. The Doge is crown'd with a Crown of Gold and a Sceptre in his Hand, by reason of the Kingdom of *Corsica*, under the Jurisdiction of this Republick, but his Power is no less limited than that of the Doge of *Venice*; besides that, at the end of every two years Deputies are always sent to His Serenity, to give him to understand, that his time being expir'd, he must leave the Palace.

The Procession on Corpus Christi Day.

We saw once the whole Senate in their Formalities at the Procession on *Corpus Christi Day*, where the Doge appear'd in a crimson Robe, with a kind of square Bonnet on his Head; before him were carried two Battle-axes and a Sword in the Scabbard, a Senator marching on each side of him in black Gowns, but of the same make as that of the Doge; the Streets were strew'd with green Herbs, and lined on both sides with Tapestry; in the Windows we saw the Ladies dress'd in their best Attire, with Baskets full of Flowers, which they threw among those that follow'd the Procession, according to their several Inclinations, the Gentlemen receiving these favours with low reverences from the hands of the fair ones.

The Church of the *Annunciata*, tho' the fairest in *Genoua*, yet is in beauty and magnificence much inferiour to many we have had occasion to describe before; the most remarkable thing that belongs to it is, that it owns for its Founder a Citizen of *Genoua* of the Family of *Lomellini*.

I will not detain you with the Dialogue betwixt the Crucifix at S. *Jerome's* and S. *Bridget*, no more than with an ample description of the great Dish made of one single Emerauld, in which, they say, Christ eat the *Paschal Lamb*, (*Bede* says it was a Silver Dish) *Du Val* would have this Emerauld Dish to be one of the Presents made by the Queen of *Sheba* to *Solomon*.

At S. *Mary of the Castle* there is another *speaking Crucifix*; for a certain Gentleman, as it seems, having made a Promise of Marriage to his Mistress in a place of the City where a Crucifix stood, which he afterwards refus'd to fulfill, the Lady accus'd him before the Judges, where being upon the point of losing the Cause for want of sufficient Witness, she appeal'd to the said Crucifix; and some persons being sent thither, and the Question propos'd to the Crucifix, it answer'd with a Nod, which made the Judges determine in favour of the injur'd Lady; which is the reason that this Crucifix is particularly reverenc'd by Maids.

The Ashes of S. *John Baptist* are preserv'd in the Cathedral, in a Shrine supported by four beautiful Columns of Porphyry, brought from *Smyrna* 1098. This Saint and the Emperour are the two Protectors of *Genoua*, and the Image of the first is stampt on its Coin, which is the fairest and best in *Italy*.

The two Protection of the Republick.

The *Traffick* of *Genoua* consists chiefly in *Velvets*, *Points*, *Gloves*, dry *Confections*, *Anchovies*, and divers sorts of *Fruits*, but is much decay'd in *Trade*; for tho' some private persons are exceeding rich, yet the generality is poor; the Government monopolizes the Trade of Wine and Corn, so that the *Tavern* and *Innkeepers* must buy their Wines out of the Cellar of the State, and the Bakers fetch their Corn from the publick Granaries. I am,

Genoua, *June* 20. 1688.

Sir,

Yours, &c.

LETTER XXXIII.

SIR,

TAking our way from *Genoua* towards *Casal*, we came back the same way we went as far as *Novi*, where hiring a Coach to *Turin*, we dined the next day at *Alexandria*, a little City, provided with slender Fortifications, notwithstanding which it maintain'd a Siege of six months against *Frederick Barbarossa*, who gave it the Name of *Cæsarea*, which *Alexander* III. chang'd into *Alexandria*. What some affirm, *viz.* that the Emperours used to be crown'd here with a Crown of Straw, is a meer Fable, whence (they say) it got the Name of *Alexandria of Straw*, which indeed it retains to this day, tho' the reason of it is not known. Alexandria.

Casal is a strong City, seated on the right bank of the *Po*; besides the old Castle, it has a new Citadel, fortified with six Royal Bastions, Half-moons before the Curtains, and a large and deep Ditch full of Water, and an Arsenal stor'd with Arms for ten thousand Men: Since the *French* have been in possession of this *Citadel*, they have made considerable alterations in the Fortifications, especially in the Bastions, which being very large, they made a second Rampart and new Bastions within the other: the *Town* remains still in the possession of the Duke of *Mantua*. Casal. Its Citadel.

From *Casal* we pass'd the *Po* a fourth time, the banks of which our Coach follow'd for a considerable time; we pass'd in sight of *Verni*, a small fortified place in that part of *Monferrat* under the Jurisdiction of the Duke of *Savoy*. *Verue* lies on the right side of the *Po*, and is much stronger than the other.

After we had travel'd eight miles from *Casal*, we entred *Piedmont*, the Ground being still level, but not long after found our selves among the Mountains, in a large and flat Valley almost surrounded with the *Alps*: the Grounds in some parts of this Plain are exceeding rich, but in some others very indifferent. In our passage we saw two or three large spots of Ground, where two days before had stood the finest Corn in the World, now laid quite waste by the Hailstones, the very Straw being beaten into the Ground, and the Vines, Walnut and other Trees broken to pieces. It is generally reckon'd but forty five miles from *Casal* to *Turin*, but the *Monferrat* miles, as well as in *Piedmont*, are much longer than those of *Lombardy*.

The City of *Turin* is seated in a Plain upon the River *Doire*, three hundred paces from the *Po*; not only the Town, but also the Avenues leading unto it, are very pleasant; but what most takes with Strangers is, that here they are rejoyc'd with the frank conversation of the Inhabitants, after they have been almost tired out with the sowre and jealous reservedness of the *Italians*, it being certain that, in respect of their manner of living, *Turin* may be compar'd to the most polite City of *France*, which Language is as generally spoken here as the *Italian*, and the People generally follow the same steps in their conversation, and it may be said without the least exaggeration, that the Court of *Savoy* is as sprightly and gay as any in *Europe*. Turin.

The old part of *Turin* is somewhat indifferently built, but to make amends for this, the new part has broad streight Streets, and the Houses are large, high, and pretty uniform. The Street that passes thro' the two Squares and reaches from the Castle to the new Gate, is one of the fairest in *Europe*. The Houses in the new Square are adorn'd with a large Portico, that encloseth it on all sides. Its Buildings.

The Duke's Palace has very good Apartments, tho' it appears in no great lustre on the outside. The Palace of the *Jesuites* and of the Prince of *Carignan* (but lately finish'd) are both magnificent Structures. There is an old and new Palace.

Turin is but of an indifferent bigness, enclos'd with a regular Fortification by the present Duke; but the Citadel

del exceeds the rest both in strength and beauty, but was not quite finish'd. The Walks of Oaks on the Ramparts are very delightful to behold at a distance, and afford an agreeable shade to those that divert themselves here, with the most delicious Prospect towards the Rivers; but the general meeting-place of the Gentry is near *Valentia*, a Country-seat of the Duke upon the Banks of the *Po*, about a mile from *Turin*, besides which the Duke has seven or eight more all well furnish'd.

The Chapel of the holy Handkerchief.

Before we leave *Turin*, we must not forget to say something of the new Chapel dedicated to the *holy Handkerchief*, in the Cathedral; it is, beyond all question, a very glorious piece of Workmanship, but what some have pretended, *viz.* that it excels the Chapel of S. *Lawrence* at *Florence* is so far from being true, that it is not comparable to it; they are indeed both of the same figure, but that of *Turin* is much less, and will be embellish'd only with black Marble. I must upon this occasion put you in mind, that instead of one, there are at least five or six of these pretended *holy Handkerchiefs*, *viz.* two at *Rome*, in S. *Peters* and S. *John de Lateran*; one at *Cadoin* in *Perigert*, one at *Besancon*, one at *Compeigne*, one at *Milan*, and another at *Aix la Chapelle*; they all produce Papal Bulls to maintain their Titles, in which point the Handkerchief of *Cadoin* has the preference, being authoriz'd by no less than fourteen Bulls, whereas that of *Turin* has only four.

Observations concerning *Italy*.

Being now upon the point of taking our leave of *Italy*, I can't let slip this opportunity of giving you some Observations, which I had either neglected or wanted opportunity to insert before: The Duke of *Modena* is tall of stature, and very handsom, resembling the Queen his Sister, but is of a brown Complexion; he discours'd near an hour with me concerning what Observations we had made in our Travels, and especially in *England*. I am sorry I can't give you a satisfactory account of the Academies of Sciences in *Italy*, having not had sufficient time to make so exact an enquiry after 'em as I could have wish'd; but, as I am told by persons of good Understanding and Credit, they are not inconsiderable; however, I can't forbear to give you some of their affected Titles, by which they are distinguish'd from one another, thus: Those of *Genoua* call themselves *drowsie*; those of *Naples*, *borrowing*; those of *Alexandria*, *immovable*; those of *Rome*, *fantastical* or *humorous*; those of *Viterbo*, *obstinate*; those of *Siena*, *fottish*; those of *Perusa*, *mad*; of *Parma*, *nameless*: At *Bologna* they stile themselves *idle*; at *Milan*, *conceal'd*; at *Ancona*, *obscure* or *confin'd*; at *Mantua*, *amorous*; at *Rimini*, *easie* or *pliable*; at *Macerata*, *chain'd*.

It can't be denied but that the *Italians* generally treat Strangers with a great deal of Ceremony and seeming Kindness, but to speak the truth of the matter, it is generally a mixture of Flattery and Design.

The Inns on the Roads give you sufficient Proofs of the Sobriety of the *Italians*, being very indifferently furnish'd with Provisions; they give you indeed divers Courses at Dinner, but such as are seldom pleasing to Forreigners; the first, unto which they give the name of *Antipasto*, is commonly no more than a Plate of Gizerns, Their Diet. ends of Wings and Birds Feet boil'd with Salt and Pepper, and mix'd with Whites of Eggs, which are follow'd by two or three very small Dishes, one after another, of different *Ragou's*. Between *Rome* and *Naples* they entertain you with the Flesh of *Buffaloes* and *Crows*, and you are oftentimes glad to meet with 'em, tho' their Flesh is very ill seented, and so harsh and tough, that without the Beast be well hunted before it is kill'd, the Flesh is not eatable.

Wines.

'Tis true, they don't want variety of Wines in *Italy*, but the best are pretty scarce; the Wine of *Gensana*, *Albane*, and *Cetel Gendolfo* grow about *Rome*; the Greek Wine of *Naples* and the *Lachryma Christi* are very strong; the *Asprino bianco*, and the *Chiarello peccato* are in no great esteem, by reason of their smalness, but pleas'd us best for its agreeable taste; the best Wines of *Florence* and *Montefiascone* have a very fine flavour, and are not strong to any excess, but they have a great quantity of 'em; the *Muscadelle*, dedicated to the Great Duke's own use, grows in a Vineyard by it self, and is never dispers'd thro' the Country, unless it be by way of Present; near *Verona* and *Genoua* are also some passable good Wines. There is a great difference betwixt the Casks made about *Loretto* and those of *Pavia*; the first are short and broad, like a *Dutch* Cheese, but the length of the last exceeds the extent of their diameter seven times.

Leandr. Alberti says, he saw four *Parmesan* Cheeses that weigh'd 300 pounds each.

The Country about *Parma* and *Placentia* abounding in excellent Pastures, they make abundance of Cheese there, Butter being a scarce Commodity in *Italy*, instead of which they use Oyl in their *Ragou's* and *Fricasies*; but notwithstanding they draw the Oyl from their own Olives, it is often not so good as you meet with it in those Countries where these Trees don't grow, it being a general Observation, that the best things, and that will yield the best price, are most transported.

Their Fruits.

We hapned not to be in this Country in the best season for Fruits: Our stay at *Venice* was for three months, in the Winter, where we had very firm and delicious Grapes at *Bologna*; at *Naples* we eat Winter Melons, and at *Genoua* all sorts of small red Fruits, and the largest and best Cherries that ever I saw, the Country about the River of *Genoua* abounding in most excellent Fruits. They have a Proverb of *Genoua*, that *its Hills are without Wood*, *its Men without Faith*, *the Ladies without Shame*, *and the Sea without Fishes*; but of these four the first only holds good, the Sea of *Genoua* affording very good Fishes: Near *Naples* I saw several Fishes taken out of the Sea that I never saw in other places; the Gulph of *Cajeta* affords good store of *Sturgeons*, and the *Tyber* has some of 'em.

Fishes.

In all our Travels thro' *Italy* we never saw either a Hare or Partridge in the Fields, and but very few of 'em in the Inns: It is almost surprizing, that in a Country as *Italy* is, where you see whole Tracts of Lands almost uninhabited, there should be no greater abundance of this sort of Game, especially since it is not quite destitute of these Animals, and that the *Italian* Gentlemen scarce ever reside in the Country, and consequently don't spoil the Game, tho' they are as jealous of their Privileges as other Nations.

As the Nobility of *Italy* don't reside in the Country, (as they do in *England* and *France*) so there are few Seats to be seen there, except in the great Towns or Cities: However, to make amends for the scarcity of Partridges, they are abundantly supplied with Quails every Spring Quails. from the *African* Shore; these poor Creatures come in whole flocks, and so tir'd with their long Voyage, that they settle upon a Ship or any thing they first light on, and are thus caught in heaps without much trouble, but being very lean, they commonly feed them for some time before they eat 'em. It is almost surprizing to conceive how the *Quail*, which hath no very strong Wing, and flies very heavily, should be able to continue so long a flight without resting, which has made some think that they sometimes swim to take breath; but considering that this would so moisten their Wings, that they would not be able to rise again into the Air, this Opinion can't take place here.

In all my Travels I saw no more than one Scorpion in *Italy*, neither are these Animals accounted mischievous here; I could never see any of the hanging Beds I have heard them talk of, to be used by the *Italians* to guard themselves against these Creatures. 'Tis true, that about *Verona* we observ'd many Iron Bedsteads placed at some distance from the Walls, and the Feet of 'em polish'd, to prevent these Insects from breeding in or come near to them. This Creature bruis'd and applied to the wounded part, is an infallible Remedy against its own sting, in lieu whereof they make use of the Oyl and Salt made of the same Animal, which have the same effect: But the stings of the Scorpion are not mortal in *Italy*, nor so frequent as to be much fear'd. Scorpions sting not mortal in *Italy*.

Italy produces two sorts of Animals, two whom they give the Name of *Tarantula*; one is a Species of a *Lizard*, whose sting is mortal, and is most frequent about *Tredi*, *Cajeta* and *Capua*; but the true *Tarantula* (having its Name from *Terentum*, where 'tis most found) is a kind of Spider, living in the Field; they are said to be in great abundance about *Abruzzo*, and in *Calabria*, and in some parts of *Tuscany*. Those that are stung by this Creature make a thousand odd gestures, they weep, dance, vomit, tremble, laugh, turn pale, swoon away, and, if not succour'd in time, die in a few days after: They find some ease by Sweating and other Antidotes, but the most sovereign Remedy is Musick. I had it from a learned and credible person at *Rome*, that he had been twice an Eye-witness of the Distemper and Cure: *Alexander ab Alexandro* says, he was an Eye-witness of the same, and relates divers curious Instances, *Dier. gen.* l. 2. c. 17. I remember that a Gentleman of my particular acquaintance, who was much afflicted with the Gout, always receiv'd ease, and sometimes was wholly freed from his pains, by a loud Musick; for he used to make his Servants beat with all the strength they had upon the Table and Floor of the same Room where he lay, which noise, together with the sound of a Bass-Viol, was his only and absolute Remedy. *Theophrastus* and *Gellius* affirm, that Musick asswages the pain of the Gout. *Albert Crantz* says, that *Henry* IV. King of *Denmark* was by a certain Musician elevated to such a height of Fury, that he kill'd several of his Courtiers.

Tarantula.

High-

Highway-men are no more dangerous nor frequent than the Scorpions, for since the Reign of *Sixtus V.* no *Banditti* have been heard of at *Rome*; and the Marquess *del Carpio* did clear *Naples* of this Vermin.

I made one remarkable Observation, that all the time we staid in *Italy* there was not one person put to death in the places we were in; and there is perhaps no place upon Earth where Executions are less frequent than at *Venice*, for it is but getting under the Patronage of a Nobleman, (which is no hard matter to be obtain'd) and you must commit a very publick and enormous Crime that will cost you your Life.

Fifteen.

At our coming to any Cities, they generally took our Pistols from us, which were redeliver'd at the other Gate at our departure, which however makes the charge at a long Journey's end amount to near as much as a pair of Pistols are worth. The Inhabitants of *Genoa* and *Lucca* are not permitted to wear Swords in their respective Cities, tho' Strangers (at their request) are seldom denied that Privilege: Bagonets are prohibited in all Cities, but upon the Road you carry what Arms you please, not excepting even Fuzees, which are often made use of by Travellers on Horseback.

As the *Italians* are jealous to a degree of madness, so Love and Jealousie are the great occasions of Bloodshed here; 'tis for this reason that the *Italians* have a constant Custom to send their Girls, in their very Infancy, into Nunneries, whence they are not suffer'd to come out till they are married, which is commonly done without seeing their future Spouses, none but the poorer sort keeping their Daughters at home. At *Rome* several Funds are establish'd for the marrying of poor Maids, or the confining of 'em to a Convent. I took notice in the Churches of *Rome*, that during *Lent* the Women were placed under the Pulpit, within a Fence of Rails of six foot high.

Fruits of Italy.

Italy produces divers sorts of Trees and Plants not to be met with either in *England* or *France*, unless it be in the most Southern parts. The Palm-tree is a Rarity in *Italy*, and very seldom bears Fruit there. In the Physick-Garden of *Pisa* we saw a male and female Palm-tree planted together, in pursuance of the ancient Errour, according to which these Trees, unless join'd together, will bear no Fruit; but this is contradicted by Experience, and I my self saw a single Palm-tree full of Dates at the *Villa Mecena* or *Monte Mario*; the largest Palm-tree in *Rome* is in the Cloyster of S. *Peter ad Vincula*.

We saw on *Palm-Sunday* all the Cardinals in the Pope's Chapel, where he who officiated for the Pope presented a Palm-branch to every one of the rest, they were about eight foot long, and the Leaves woven into Knots of divers shapes; one of these was sent to the Pope, and all the other Prelates and Ecclesiasticks then present had also their Branches, which varied in bigness according to the Dignity of those that bore 'em. The Laicks are oblig'd upon this occasion to be contented with Olive-branches.

In peculiar Trees.

Among the Trees that are not common in other Countries, are the great *Maple*, the *Cork-tree*, the *Jujub-tree*, *Carob-tree*, *Olive-tree*, *Myrtle*, *Pomegranate-tree*, the *Ceper-shrub*, *Scarlet-Oak*, the *Cypress*, *Sena*, *Lentisk* or *Mastick-tree*, the great *Indian Fig-tree*, the *Oak* that bears Galls, the *Shrubs* that bears Cotton and Fistick-nuts, and of *Orange* and *Citron-trees* several sorts; of these last those of *Florence* call'd *Cedrats* are the most excellent: The white *Mulberry-trees* grow wild in the Hedges, for the Food of Silkworms, which were first of all brought into *Europe* from *Japan* and *China*.

Those that are curious, and have leisure to look after *Simples*, may find Employment enough in the *Apennines*, betwixt *Loretto* and *Rome*, and in all parts of the *Alps*. Near *Terracina* I gather'd some Sponges, rooted on the hardest Rocks near the Sea-side, the rest lay loose on the Sea-shore.

The Pumice-stone.

These Sponges put me in mind of the *Pumice-stones*, for the search of which I spent a considerable time on the Mount *Vesuvius*, because I understood that they were there in great plenty, but upon a strict enquiry found those porous Stones which are seen upon the Mount *Vesuvius* no *Pumice-stones*, but of another kind, calcin'd and render'd porous by the sulphurous Eruptions of this Mountain.

For the rest; the Mountains of *Italy*, and the *Apennines* in particular, afford great store of Metals, Mineral Waters, Crystal, Alabaster, a kind of Agate, Marble of several sorts, but the Marble of the *Archipelago* is much brighter; the white Marble of *Carrara* is the finest in all *Italy*, abundance of which is transported into other parts.

The long and sharp Winter had so frozen the *Oranges* and *Citrons*, that the Grounds were almost cover'd with them under the Trees, in those places where they grow in greatest plenty.

As the Winters prove sometimes hurtful here, so the Summer season is no less inconvenient, against which they take a great deal of care to preserve themselves, especially at *Rome*; for this purpose Persons of Quality have low Apartments, whither the Sun-beams can't penetrate; they are commonly pav'd with Marble, and furnish'd with Springs and Water-spouts to cool the Rooms upon occasion; beside that, the Doors and Windows are so contriv'd, that thereby a free passage being open'd to the transient Air, they are never without a cool Breeze. To defend themselves against the Gnats, they surround their Beds at a little distance with a Circlet of Gauze or Tiffany, which being fastned close to the Ceiling above, and to the Floor below, prevents these troublesome Animals from coming near 'em.

How they preserve themselves against Heat and Gnats.

They also have a Custom of sleeping after Dinner upon a sort of folding Chairs cover'd with Leather, the Backs rising and falling with a Spring; and the use of *Umbrellos* is very near as common here as they are in the Eastern parts.

During three or four months in the Summer season, the Evening Dew in the *Campagna di Roma* is esteem'd so pestiferous, that Travellers take a great deal of precaution to stay abroad in the Country late, and if they can't reach *Rome* in good time, they remain at eighteen or twenty miles distance from the City. In reference to this I saw the following Inscription on a House in *Rome*, giving certain Advice for the preservation of Health in that City:

Dew about Rome in the Summer.

Evasi infelix residentes pessimus aer,
Romanus; filios non bene gratus habet.
Sospes ut hic vivas, hæc sepsima dat Medicinam
Abstinedir sedus; sic mediusque labor
Pelle somnem & fugias fructus seminaque reliqua
Nec placent gelido, fonte lavare sitem.

I had almost forgot to tell you, that in all *Italy* I saw only the ruins of one Windmill, near *Leghorn*. As Tin is a rare Commodity here, so instead thereof they use Earthen Vessels, which they make themselves, and some of 'em very curiously wrought; however, none resembles *Porcelain* so near as that of *Delft*.

The natural Day of the *Italians*.

The *Italians* don't begin their natural Day at Midnight as we do, but immediately after Sun-set, so that their Clocks strike all the Year round twenty four, from Sun-set to Sun-set again; and according to the length or shortness of the Days, the Hour of Noon varies every day: As for instance; when the Sun sets at four a Clock according to our computation, they count one when we reckon five, and consequently it is Noon the next day at the twentieth hour: Thus when the Sun sets at eight a Clock with us, it is one a Clock with them at nine, and consequently it is their Noon at the fifteenth hour. But in respect of the artificial Day, betwixt Sun-rising and Sun-setting, they use the words *Yesterday* and *To morrow*, as we do.

I will conclude this Account of *Italy* with an Inscription on the Pedestal of the Statue of *Justice* in the *Jesuites* College at *Rome*:

Quæ Dea? Sacra Themis, quæ Patria? Regna Tonantis
Qualis Origo? Enix Sanctus utrique Parens.
Cur Frontem facies aperit formosa severam?
Nescio corrumpi, non amor Blanditias.
Auribus apertis tibi, cur altera & altera clausa est?
Una patet justis, altera surda malis.
Cur gladium tua dextra gerit? cur læva Bilances?
Ponderat hæc causas, percutit illa reos.
Cur sola in cedis? Quia Copia rara bonorum,
Huc referunt paucos, sæcula Fabricios.
Pauperc cur cultu? Semper justissimus esse
Qui cupit, hic magnas, vix cumulabit opes.

I am,

Sir,

Turin, June 29. 1688.

Yours, &c.

LETTER XXXIV.

SIR,

AFter we left *Turin*, we lodg'd the first night at *Veillano*, and the next morning palling near the Gates of the small City of *Susa*, seated among the Mountains, we dined at *Novaleſa*, at the foot of Mount *Cenis*, the highest of all the *Alps*, over which there is a passage, but you must not imagin it to be as high as *Caucasus*, or as peak'd as the *Teneriff*, nor that its passage is over the top, for as you come to the highest part of this passage, you find your self in a Plain, or (if you please) in a Valley, with respect to the lofty Mountains that surround it.

Susa.

Mount Cenis.

The Plain on Mount Cenis.

At *Novaleſa* we took the Mules that carried us over the Mountain; the way is broad enough, without any Precipices, but uneven and stony: On the highest accessible part of it you see the Cross that is the common Boundary betwixt *Piedmont* and *Savoy*, and consequently of *Italy*. In the middle of this Plain is a Lake of a good mile in compass, which, according to common Report, is bottomless; a large Brook, which joyns its Waters with the little *Dore* near *Susa*, has its rise there. The Snow was almost melted on the Hill, tho' not on the highest tops of the Mountain on both sides, the tumbling down of which is the only thing that makes this passage dangerous at certain seasons of the Year. That side of the Hill next *Savoy* being much rougher than the other, we were carried in ordinary Chairs, to which they fastned Arms like the Shafts of a Litter, and thus, each attended by four Men, (who reliev'd one another by turns) we were brought safely and commodiously to the foot of the Hill, where we past'd the little River *Arche* over a wooden Bridge, which brought us to the Village of *Lanebourgh*. *Savoy* being a very mountainous Country, there is little to be said of it.

Chambery.

Chambery is the capital City of that Dutchy, formerly the Residence of the Dukes, and still a Parliamentary Town, tho' it be very small and but indifferently fortified; its situation is at the Conflux of the *Leſſe* and *Orbine*, (both navigable Rivers) at the very foot of the Mountains. If we may credit the Inhabitants, the People are extreamly obliging to Strangers, and the Ladies very handsom.

St. Jean de Maurienne.

St. *Jean de Maurienne* is seated in a very pleasant Valley bearing the same Name; it being an inconsiderable place, we did not think fit to go out of our way to view it, tho' we past within two hundred paces of it: Neither did we make any stay at *Montmelian*, a small City on the right Bank of the River *Iſera*, strengthned by a good Citadel.

Montmelian.

Aix is noted for its Baths. Coming to *Annecy*, we found the whole Country alarm'd at the News of an Irruption of the exil'd *Vaudois* into *Savoy*, by the way of *Lucern*, but this prov'd a false Report.

Aix.

Annecy.

The River *Arve* separates the Territories of *Geneva* from *Savoy*, the wooden Bridge built over this River leads almost to the Gates of the City of *Geneva*. The *Arve* is rather a Brook than a River, falling down from among the Mountains, and carrying some Gold-dust along with it, but with all the care that can possibly be taken, a man can scarce produce so much Gold out of it as will pay the labour even of an ordinary man, which is the reason this Gold is not much look'd after.

Arve.

Geneva.

It being beyond my present purpose to give you an account of the Antiquity, Government, and other matters relating to the History of *Geneva*, I will content my self with giving you a general Idea of that City, according to those Observations I had the opportunity to make during my stay in that City.

The River *Roſne*, just at its coming out of the Lake, makes a little Island: On the right Bank of this River, or rather on the side of its right Chanel, the Grounds are low and level, but on the other side the Ground rises insensibly to a Hillock; it is on this the chief part of the City is built, the rest being seated in the Islands, and on the other side of the *Roſne*, and the whole enclos'd with such Fortifications as may preserve 'em against a sudden Surprize, or perhaps against all the Force of *Savoy*, but not against a more potent Enemy, were it not for their confederacy with the *Swiss Cantons*, and especially with those of *Zurich* and *Bern*, which League was made 1536. They don't want store of good Cannon, and in their Arsenal they shew, among other things, the Ladders the *Savoyards* intended to have made use of in scalading the City, as also the Petard that was to have been applied to burst open the *new Gate*, in the Year 1602. In remembrance of this Deliverance they continue to this day to celebrate an Annual Festival on *Dec.* 22. with Sermons suited to that occasion, and feasting their Friends and Relations, when they never part without singing a certain Song made upon that occasion, and containing most of the remarkable circumstances that attended it.

This small Republick, as well as the Duke of *Savoy* and the *Switzers*, maintains some small Galleys on its Lake; I say its Lake, because the same was given to the City when yet a *Roman* Colony. The Duke of *Savoy* has erected a Fort (call'd *Bellerive*) near the Bank of this Lake, not above a league distant from the City, contrary to the Treaty of *S. Julien*, in which it was stipulated, That the Duke of *Savoy* should neither appear in a body, nor erect any Fortifications, nor maintain any Garison within four leagues of *Geneva*.

The Opinion of many Authors among the Ancients, *viz.* that the *Rhoſne* passes thro' the Lake without mixing its Waters, is absurd, considering the length and crooked figure of the Lake; and I can assure you, that my Eyes have often convinc'd me to the contrary: 'Tis very pure and transparent; it affords divers sorts of Fishes, and among them *Trouts*, some of which weigh fifty pounds each, and some considerably larger: These Fishes are rarely found of that bigness in other places, yet I remember that in one of the Halls of the Arsenal at *Cimachem* I saw the figure of a *Trout* taken in a small Lake of that Country, which weigh'd no less than seventy pounds. They say that the number of Fish is much decreas'd of late years in the Lake of *Geneva*, partly by the ravenousness of the great Pikes, wherewith this Lake abounds, and partly by another sort of Fish call'd *Montcils*, never taken in this Lake till within these six years last past. Their usual way of catching *Trouts* in the Lake of *Geneva* is thus: It is to be observ'd that this Fish keeps a certain time in the Year, when it descends from the Lake to the *Rhoſne*, and at another season returns back to the Lake; the Fishermen knowing exactly the times of their going and coming, fix Piles cross the River where they come out of the Lake, at such a distance that the great Fish can't pass thro' them, unless at certain open places, which are the openings of great Wreels of Wire, where they remain till they are taken out. The Fishermen pay a certain Annual Tribute to the Republick for this Fishery.

The Lake of Geneva.

The Genevoiſe Pound contains eighteen ounces.

How they catch Trouts.

They kill also vast store of Wild-fowl on this Lake in the Winter: It was frozen in the Year 1572. They say its Waves will rage sometimes like those of the main Ocean.

For the rest, the City of *Geneva*, tho' neither very large nor magnificent, yet may justly be call'd a lovely place, having the advantage of pleasant Walks, and of a most engaging Conversation of the better sort of the Inhabitants; and even the common People make, by their Honesty, amends for their Clownishness.

Their Academy is provided with learned Professors, and the Pulpit with able Ministers, but the Government is highly to blame for not allowing them sufficient yearly Salaries, in proportion of the constant Fatigues they undergo in preaching. They have belonging to each Church two Ministers call'd *Semainiers*, these are oblig'd to preach both six or seven times successively from week to week, relieving one another.

The Academy of Geneva.

Tho' the late Persecution of the *Protestants* in *France* has not a little lessen'd the number of Students in Divinity, yet as all Exercises that belong to the accomplishment of young Gentlemen are taught here in perfection, many *Protestant* Gentlemen of *Germany* and other places chuse rather to send their Sons hither upon that account than into *France*. The miserable, exil'd, and half-starv'd *Vaudois* were receiv'd by the Inhabitants with all marks of Compassion, as the *French Refugees* met likewise with a very kind reception there.

'Tis perhaps not unworthy our peculiar observation, that the Arms of *Geneva*, long before the Reformation, had this Motto underneath 'em, *Post tenebras ſpero lucem*, i. e. *I hope for Light after Darkneſs*; which, since the Reformation, they have with some variation turn'd into these words, *Post tenebras lux*, i. e. *Light succeeded Darkneſs*. It must be confess'd, that the City of *Geneva* is the Pattern of Sobriety and Moderation to other Cities; not that they are free here from vicious persons, but Debauchery rides not so triumphant here as in many other places, the Ministers and Consistories, back'd by the Authority of the Magistrates, labouring without intermission to suppress Luxury in Clothes, and all manner of Licentiousness: They used formerly to punish Adultery with Hanging and Drowning, the same being still done in some parts of *Switzerland*.

Their

The Library of Geneva.

Their publick Library contains divers rare Books and Manuscripts; among the last is a very ancient Manuscript Bible of S. *Jerome*'s Translation.

S. Peter's Church.

In S. *Peter*'s Church you see the Tomb of *Henry* II. Duke of *Rohan*, and the Sepulchre of the great d'Aubigne Grandfather to the Marchioness *de Maintenon*; it stands in the Cloyster on one side of the Church. *Calvin*'s Burial-place is in the Church-yard of *Pluinpaem*, without either Tomb or Epitaph. There was formerly an *English* Church in this City, and there is to this day a Church for the *Germans*, and another for the *Italians*, there being many considerable *Italian* Families resident here, as (beside those mention'd in the description of *Lucca*) those call'd *Gallatins*, *Sartori's*, *Puerari*, *Seger*, *Minutoli*, *Stoppa*, *Diodati*, *Offredi*, *Cerdnini*, *Rubieri*, *Franconi*, *Malcontent*, *Burini*, *Bartolone*, *Carmantini*, &c.

Italian Families resident here.

Their Language.

The *Savoyard* is the current Language of *Geneva*, and if we may credit the Treatise call'd *Scaligeriana*, the *Savoyard* Tongue was used in the Council of this City in *Joseph Scaliger*'s time, and that no other Language was to be spoken under a certain Forfeiture, but now-a-days most people of fashion speak also *French*, tho' not in its best Dialect.

Within four small leagues of *Geneva*, betwixt the Fort of *Sluys* and Mount *Credo*, is a *Cataract* or *Water fall*, where the *Rhosne* falls down from an high Precipice among the Rocks, and is as it were swallow'd up for some time; whence it is that such as intend to go by Water from *Geneva* to *Lyons*, are oblig'd to take Water at *Seissel*, below the Cataract and the rising up again of the River. I am,

Sir,

Geneva, July 12. 1688.

Yours, &c.

LETTER XXXV.

SIR,

THE whole passage betwixt *Geneva* and *Lausanne* being one continued, well-peopled and well-till'd Hillock you can't imagine a more pleasant Road in the World than this, which, besides this, coasts for the most part along the Lake, and gives you a delightful prospect of the lofty Piles of fork'd Mountains.

Morges.

Our first Nights Lodging was at *Morges*, a small Town seated upon the bank of the Lake.

Lausanne.

The Situation of *Lausanna* is very rough and uneven, and being an inconsiderable place, we did not stop here, no more than in any other of the little places among the *Swiss*.

The Lake Murat.

Upon the bank of the Lake *Murat* we saw a Chapel quite fill'd with the Bones of eighteen thousand *Burgundians* that were slain near that place, by the united Forces of *Lorrain* and *Switzerland*, as the following Inscription tells you;

D. O. M.

Caroli inclyti & fortissimi Ducis Burgundiæ Exercitus Muratrum obsidens ab Helvetiis cæsus, hoc sui monumentum reliquit 1476.

Bern.

Bern, the capital City of the most potent Canton among the *Swiss*, is of no large extent; its Buildings are generally of square Stone, but more solid than beautiful; its Streets are very clean, being wash'd by a Rivulet that runs thro' the middle of them, and cover'd on each side with Portico's, but they are very narrow. It was built by *Bertold* IV. Duke of *Zeringhen*, 1175, or as some others would have it, 1191; it enter'd into the *Swiss* Confederacy *Mar.* 6. 1352. They say it got its Name from a Bear taken in the place where they laid its Foundations, the word *Bern* signifying as much as *Bear* in the *German* Language, and they bear this Animal in their Coat of Arms; nay, they constantly maintain a certain number of Bears here, as they do Eagles at *Geneva*.

The only things worth our observation here were the Arsenal and the Great Church, the first whereof is well provided and well kept. In one of the Halls they shew'd us the Picture of *William Tell*, that famous Citizen of *Switz*, representing him with his Arrow shooting an Apple from his Child's Head.

I need not put you in mind, that the ill usage of the Governour *Grisler*, joyn'd with some other Grievances, gave occasion to the Revolt of the *Swiss*, and the establishment of their Confederacy, *Anno* 1307, under the Emperour *Albert* I. The following Inscription was lately placed over the Gate of the *Manufactory Hall*:

An Inscription at *Bern* concerning the French Refugees.

Tempore quo crassa Clericorum ignorantia, cum gratia & privilegio Regis in verum Dei cultum furevet; atque DRACONUM *opera nos qui*s Huguenotos *vocant, ferro flamma, & omni genere cruce è regno pelleret, supremus Magistratus eruderibus Cœnobii, olim Prædicatorium hoc ædes exstruxit, ut pietatem simul & a tem Galliæ exulentes hospitalibus tectis excipere at; Fiat Deus* T. O. M. *ut charitatis hoc Opificium juturi eremento patriæ.*

This Inscription being, as I am inform'd, remov'd from thence in *October* 1692, at the request of the *French* Ambassadour, I can't omit to give you the translation of it:

When the blind Ignorance of the Clergy, supported by the King's Favour and Authority, did exert its Rage against the true Worship of God, and by the force of Dragoons, with Fire and Sword and all manner of Torments, drove those call'd Huguenots *out of the Kingdom, this House was erected by the supream Magistrates, upon the Ruins of the old Monestery belonging formerly to the Predicant Friers, that Piety and Industry, banish'd at once out of* France, *might meet there with an hospitable entertainment: May it please the most Great and Good God, that this Charitable Act may tend to the advantage of our Native Country.*

In the Church of the *Dominicans* they preserve still some Monuments of that noted piece of Roguery transacted by certain *Jacobin Friers*, the Story whereof runs thus: A Dispute being arisen betwixt the *Jacobins* and *Cordeliers*, concerning the Conception of the *holy Virgin*, whom the last exempted from Original Sin, which being oppos'd by the *Jacobins*, four of them (at the request of some of their Fraternity) undertook to prove their Assertion by a Miracle; to make good this, they resolv'd to raise a counterfeit Apparition, and thereby to impose upon the simplicity of a certain Novice nam'd *John Jetzer*, and accordingly so contriv'd the matter, that the Virgin appearing to him in the night-time, declar'd to him, that she was conceiv'd in Sin; which succeeded so well for some time, that the People hearing of this Apparition, flock'd to this Novice-like Saint, to learn from his mouth the Opinion of the Virgin her self concerning her Immaculate Conception, which now began to be publickly discredited; but the Monks at last pushing the matter too far, *Jetzer* began to discover the Cheat, where of the Monks dreading the discovery, they endeavour'd by their Entreaties to engage him not to discover the matter; but unwilling to rely too long upon his good nature, they attempted to poyson him, which he having notice of, made his escape out of the Convent, and declar'd the whole matter to the Magistrates, who having obtain'd from the Pope certain Commissioners (*viz.* two Bishops and the Provincial of the *Jacobins*) to examin the matter, the four Friers, who upon this account were engag'd in divers other enormous Crimes, were condemn'd, and having confess'd the whole matter, were deliver'd up to the Secular Power, degraded and burnt, 1509. The Novice, after having suffer'd the Rack, was acquitted.

The Cheat of some *Jacobin* Friers.

Solothurn enjoys a very delightful Situation in a fruitful Valley, upon the River *Aar*, the same that passes by *Bern*. It is very proud of its Antiquity, which some would deduce as far as from *Ninus*, in which respect it stiles it self the Sister of *Treves*. Its Name is written differently in Latin by the modern Authors, but in the *Itinerary* of *Antonin* it is call'd *Solothurum*, from a Tower, as some would have it, that was built here to the honour of the Sun. It is defended by a very regular Fortification, faced with a kind of white Marble: As the *French* Ambassadour has his constant Residence here, so the common People are of opinion, that it was his Master that furnish'd the Money for this chargeable Work.

Solothurn, the People of this place were so superstitious, that they had the Image of Christ on the Cross in the Habit of a *Swiss*.

The City of *Basil* is defended only by a single Wall, strengthned with some Towers, tho' it may boast it self to be the largest, handsom'st and richest of all the Cities of *Switzerland*; its University is also much celebrated in these parts. The *Rhine*, which begins to be pretty broad and rapid hereabouts, runs thro' the middle of it, dividing it into two parts, which are rejoyn'd by a very handsom Bridge of Stone; however, that part which lies on the *German* side is not so considerable as the other, which

Basil was united with the *Swiss* 1522.

which is seated upon an Ascent. The Bishop of *Basil* resides at *Porcktren*, as the Bishop of *Geneva* does at *Annecy*, neither of 'em having any Jurisdiction in either of these Cities.

Basil hath several good Libraries, among the MSS. of which is a very rare *Virgil*, and an *Alcoran* written on *China* Paper; with some Cabinets of Curiosities. In that of Mr. *Sebastian Fesh* are many curious Pictures, and divers rare Medals, not to be seen any where else. In the Cabinets of *Erasmus* and *Amerbach* (belonging to the University) are no less than twenty Original Pieces of *Holben*; for that representing the dead Christ has been offer'd a thousand Ducats. Besides these, it has four *Series's* of excellent Medals, *Greek*, *Consulary*, and *Gold* and *Brass Imperials*; but the golden Medal of *Faustina*, *Trajan's* Spouse, is the most esteem'd: The following Epigram is under *Erasmus's* Picture;

Ingens, ingentem quem personat Orbis Erasmum
Hic tibi dimidium picta tabella refert
At cur non totum? Mirari desine Lector,
Integra non totum, Terra nec ipsa capit.

But among the Rarities of this City, the Magistrates with their long Beards and antick Dress, appear none of the least to Strangers.

Those who are admirers of Painting must not neglect to take a view of the rare Pictures in the Townhouse, and especially the *Dance of Death*, done by the famous *Holben*; it is to be seen in a publick place on the Wall of the *French* Church, representing a long train of persons of all sorts, holding one another by the hand, Death it self leading the Dance. *Holben* was a Native of *Basil*, and having learnt his Art without any Instructor, he had a peculiar turn in all his Pieces; he was call'd to *England* by King *Henry* VIII.

'Tis a general Custom in the Cities and Towns of *Switzerland* to present Strangers that pass that way with Wine, especially if they are of any Quality: Those who bring it have but one Speech, which they address to all indifferently, with some variation of the Titles, which they have enough to do to place sometimes where they ought to be: Their Courtesie must be return'd with a Present of Money.

Hunningen. From *Basil* you pass by an easie descent along the left Bank of the River to *Hunningen*: The Cavalier which you see so well furnish'd with Cannon above the rest, upon the Bastion looking towards *Basil*, is an evident Proof that this City is within their reach. As to the Fortifications of *Hunningen*, I will only tell you, that the *French* have spar'd no cost to bring it to an entire perfection; the Waters of the *Rhine* fill the Ditches, and there lies a small Isle directly over against it, which is joyn'd to both sides by two Bridges built over both the arms of the River; these Bridges are well fortified both in the Isle and on the *German* side.

Fribourg in Brisgaw. From *Hunningen* we travel'd to *Fribourgh*, four leagues from the *Rhine*, seated in a Plain at the foot of the Hills; it is of a considerable extent, notwithstanding which its Fortifications are very good and regular: It was taken by the *French* 1677, who have made it almost inaccessible by securing the adjacent Hills with Forts and Trenches. They make several pretty Toys here of a sort of Agate found in the Neighbourhood.

Brisac. *Brisac* is about four hours journey from *Fribourgh*; it is seated on a Hillock, fix'd as it seems on purpose, in a Country as smooth and level as Ice; on one end of this Hill stands the Town, on the other the Citadel, both extraordinary well fortified on the foot of the Hill; the Stone Bridge over the *Rhine* is also excellently well fortified on the *French* side.

Schlestadt, once an Imperial City. *Schlestadt* is a City of the lower *Alsace*, seated about three leagues from the *Rhine*, and four from *Brisac*; it is exceeding strong, both by its Fortifications and its Situation in a flat Country, without the least Eminency to annoy the Town.

Strasburgh. The City of *Strasburgh*, since it fell into the hands of the *French*, 30 *Sept.* 1682, is such a Prodigy of Fortifications, that I durst not venture upon a description of 'em, not questioning but that the Platform I have sent will give you a much better Idea of the whole than I could pretend to with all the Art I have. Before that time it was an Imperial City, and follow'd *Luther's* Doctrin.

Its Steeple. Its famous Steeple of the Cathedral is the highest in *Europe*, being 574 foot high; it was finish'd 1449. The Church is at present in the possession of the *Romanists*, where the Bishop said Mass and harangued the King a few days after the surrender of that City *. I can speak it upon my own knowledge, that the Clock of *Strasburgh* far exceeds that of S. *John* at *Lyons*, both in the variety and curiosity of its Motions, I having had the opportunity to take a full view of both 'em; this is the reason they say at *Strasburgh*, that the Clock at *Lyons* is the best in *France*, but that theirs is not to be match'd in the World. There is a very exact printed Description, with a very good Draught of it.

* See D. *Burnet's* Travels.

The River Ill. The little River *Ill*, after it has run thro' the City, divides it self into several Branches; the *Rhine* is not above a mile distant from it to the right hand. Its Arsenal, so much celebrated in former times, is now almost disfurnish'd by their new Masters the *French*. The Women here do still retain an odd, antick, and fantastical Dress.

Before I conclude I must tell you, that all the other Towns and Villages in the Country of *Alsace* were either entirely ruin'd, or at least half burnt, by the *French*, whilst the chief Seat of the War was near the *Upper Rhine*. I am,

Sir,

Strasburgh, Jul. 22. 1688.

Yours, &c.

LETTER XXXVI.

SIR,

BEing oblig'd, for pressing reasons, to make what haste we could to *Brussels*, we embark'd upon the *Rhine*, tho' we had before travel'd that way, from *Mayence* to *Cologne*.

Fort Louis. In our way from *Strasburgh* we took a view of *Fort Louis*, another *French* Fort, seated betwixt *Strasburgh* and the little City of *Germersheim*; its Fortifications are not inferiour to the other *French* Fortresses upon the *Rhine*, which making an Island here, the same is defended with a Fort of four regular Bastions, and the two Bridges on each side are cover'd by certain Redoubts rais'd on the banks of the two arms of the River. Night overtaking us sooner than we expected, we were oblig'd to go ashore and take up with a little Straw in a Barn for our Nights Lodging, in a miserable Village, where, besides the want of Victuals, we were very sufficiently pester'd with the Gnats.

Philipsburgh. The next place we thought worth our view was *Philipsburgh*, seated in the middle of a Marsh about a small Cannon-shot from the *Rhine*, on the *German* side; before it was fortified by *Christopher Sutteren* Elector of *Treves*, it was no more than a poor Village, call'd *Udenheym*: It is a very regular *Hexagon*, cover'd with Half-moons before each Courtain, and of difficult access, by reason of the Marshes that surround it, without the least Eminencies; it was taken from the *French* by the *Imperialists* 1676, who relying upon the Truce, had at that time but a slender Garison in it, but since retaken by the *French*. It lies under the Jurisdiction of the Bishoprick of *Spires*.

The Imperial Chamber at Spires. *Spires* is a free Imperial City, tho' of no large extent, and no Trade, the only thing that makes it considerable for the present being the Imperial Chamber, which was fix'd here by *Charles* V. This is the chief Court of Judicature of the Empire, from whence there lies no Appeal, except in some few Cases. The chief Judge, who must always be a *Roman Catholick*, represents the Emperour's Person, and has for that reason always the *Imperial Scepter* laid before him when he appears in the Court: Besides him, there are two Presidents, one a *Protestant* and the other a *Catholick*, and fifteen Assessors, seven of which are *Protestants*, and the rest of the *Roman* Religion. The other Great Tribunal of *Germany* is stiled the *Council of the Court*, because it is kept either at *Vienna* or wherever the Imperial Court resides; it is not in all its degrees equal to the *Imperial Chamber* of *Spires*, tho' Cases of the same nature are adjudg'd here, there being no removal of Suits from one of these Courts to the other, except that in some peculiar Cases a reverse of the Judgment may be obtain'd before the Emperour himself.

This Court is compos'd of Judges of both Religions.

I will now directly pass from *Spires* to *Cologne*, having nothing to add to the account I have given you before of those places that lie betwixt 'em.

Juliers. From *Cologne* we travel'd towards *Juliers*, the capital City of the Dutchy of that name; it seem'd to be indifferently well fortified: The *Protestants* are allow'd the free exercise of their Religion here.

From

From hence we travel'd for four or five hours thro' a very pleaſant Country, to *Aix la Chapelle*; it was formerly a very pleaſant City, but has loſt not a little of its ancient luſtre, notwithſtanding which it is ſtill a large and handſom City, enjoying the Freedom of its own Government, except that the Dukes of *Juliers* (in whoſe Territories it lies) have the nomination of one Burgher-maſter.

Aix la Chapelle, an Imperial City.

Attila quite deſtroy'd this City, but was after four Years rebuilt by *Charles the Great*, who beſides beſtow'd upon it many Privileges, conſtituted it the Metropolis of *Gaul beyond the Alps*, and kept his conſtant Reſidence here; his Tomb is ſhewn to this day. The ſame Emperour laid the Foundation of the great Church, whence this City got the Name of *Aix la Chapelle*, it being before call'd *Aquiſgrannum*, from a certain *Roman* nam'd *Granus*, a Kinſman of *Nero*, who laid the firſt Foundations of this City, and built a Caſtle here, whence one of the old Towers adjoyning to the Eaſt ſide of the Town-houſe, retains to this day the Name of *Granus* or *Granius*. The Succeſſors of *Charles the Great*, for the ſpace of five hundred years, were moſt of 'em deſirous to be crown'd here, and purſuant to the *Golden Bull* made in *Charles* IV's time, the Emperours were to receive their firſt Crown here; but that Cuſtom is laid aſide ſince, of which they have only the ſhade left now, the Emperour always declaring, in what place ſoever he is crown'd, that the ſame ſhall not be interpreted as a prejudice to the Privileges of this City. The Emperour is always a Canon of *Aix*, and in that quality takes an Oath at the time of his Coronation.

See Bruyn's and Tav's Travels.

Maeſtricht is a pretty large City, well built, and ſtrongly fortified; the Gariſon conſiſted at that time of no leſs than ten thouſand Men, all well-diſciplin'd Troops, the then Prince of *Orange* (late King of *England*) was taking a review of 'em whilſt we were there: The Suburbs on the right bank of the *Maeſe* is call'd *Wyck*. It is call'd in Latin *Trajectum ad Moſam*, or *Trajectum ſuperius*, as *Utrecht* was call'd *Trajectum ad Rhenum*, or *Trajectum inferius* or *ulterius*.

Maeſtricht.

We left *Maeſtricht* about three of the Clock in the Afternoon, and coming the ſame Evening to *Liege*, we found the City ſo crowded with People, by reaſon of the Ceremony of the Election of a new Biſhop, that we were forc'd to take up with very indifferent Lodgings. The City of *Liege* is of a great extent, pretty populous, and has ſome goodly Structures, among which the Cathedral and Epiſcopal Palace challenge the precedency. The Chapter of *Liege* was in former Ages in ſo high a repute, that, according to their Annals, there were preſent at the Coronation of *Lotharius* II. perform'd in this place 1131, by Pope *Innocent* II.) no leſs than nine Kings Sons, fourteen Sons of Dukes, all Soveraign Princes, twenty nine Counts of the Sacred Empire, and eight Barons; but now any Licentiate or Doctor of the Univerſity of *Louvain* is qualified for the Election of a Canon of *Liege*. The *Maeſe* divides the whole City into two parts, the chiefeſt whereof is ſeated on the left ſide, joyn'd to the other by a handſom Stone Bridge, the Arches of which afford a free paſſage to large Barks, that import and export all ſorts of Commodities. The adjacent Coal-mines have drawn thither a great many Armourers, and Vineyards on the circumjacent Hills afford 'em a ſort of tolerable Wine, but 'tis not ſtrong; theſe Hills produce alſo good ſtore of fine black Marble.

Liege.

From *Liege* we paſſed in ſight of *Tongres* and *Sainteron*, and took up our Quarters that night at *Tilmont*, or *Tirlemont*; we dined the next day at *Louvain*, and arriv'd the ſame night at *Bruſſels*.

Louvain is a ſpacious and pleaſant City, the ſecond of the Province of *Brabant*; it has divers goodly Churches, beſides the Townhouſe, the Phyſick-College, and ſome other Structures; but the Univerſity founded by *John* IV. Duke of *Brabant* 1425, is the chief thing that makes this place remarkable, having no leſs than forty five endow'd Colleges, with Divinity, Law and Phyſick-Schools.

Louvain.

See Mr. Ray's Travels.

Mr. *Gutſchoven* ſhew'd us certain embalm'd Bodies, diſſected after different methods, the Veins, Arteries, and even the leaſt Fibres, being fill'd with a certain red matter, which makes every part of 'em appear very diſtinctly, not unlike red Coral.

I muſt not forget to tell you, that we ſaw here a Sea-Calf, ſhewn by ſome *Dutch* Seamen, who had taken it near the Coaſt of *Greenland*, and had made it ſo tame, that it would play very near a thouſand tricks; it was about the bigneſs of a young Lamb, of an Olive colour, with ſoft and ſmooth Hair; the Head was thick and ſhort, with two long Hairs like a Cat; its fore-feet had Claws, which were joyn'd together like thoſe of Geeſe, and it draws the hindermoſt feet after it: They nouriſh it with Milk. I am,

A Sea-Calf

Sir,

Bruſſels, Aug. 12. 1688.

Yours, &c.

LETTER XXXVII.

SIR,

Bruſſels.

Bruſſels, the capital City of *Brabant*, and the ordinary Reſidence of the *Spaniſh* Governours of the *Netherlands*, is a large populous City, of an oval figure, ſeated partly in a Plain, and partly on the brow of a little Hill, the lower part of the Town being water'd by ſeveral Canals fill'd by the little River *Senne*, and communicating with the *Scheld*; they are able to bear Barks of a good burthen: It has ſome ſlight Fortifications on one ſide.

The Air of *Bruſſels* is excellently good, the Streets are pretty broad and well pav'd, the Houſes both large and commodious, and the circumjacent Country very delightful; moſt of the publick Places are beautified with Fountains; the Inhabitants are obliging and free, and by ſome accounted too eaſie; the Governour's Palace is neither regular nor magnificent, the chief thing belonging to it being its admirable Proſpect into the Park.

As you come from the Palace to the Park, you ſee a great Gun near the little Garden, the whole Story whereof is contain'd in an Inſcription engraven on a piece of Marble underneath the Cannon, containing in ſubſtance, that one of the Enemies Ships being blown up, that Cannon, with a young Girl, were carried thro' the Air into the Palace, and that *Iſabella Clara Eugenia*, the then Governeſs of the *Netherlands*, order'd this Cannon to be preſerv'd, and the Maid to be educated.

From the Flower-garden you aſcend into the Park, well planted with Oaks, Beech and Walnut-trees, and ſtor'd with ſeveral ſorts of Deer. The Alleys here are very delightful, and the Ramparts are likewiſe planted with a double row of Trees. Beyond the Park you ſee the Houſe of Pleaſure built by *Charles* V. and in it his Cradle; here he ſtaid for five or ſix months after his reſignation to his Son *Philip*. Not far from it is the Gallery furniſh'd with Arms and Inſtruments for Tournaments, beſides Suits of Armour of ſeveral Emperours, Princes, and great Generals. Here they alſo ſhew'd us three famous Horſes, whoſe Skins were ſtuff'd and joyn'd together ſo artificially, that they reſembled the Originals: The firſt, they tell you, belong'd to K. *Philip* II. and coſt twelve thouſand crowns; the ſecond bore on his Back the Infanta *Iſabella*, when the made her ſolemn Entry into *Bruſſels*; and the third was preſerv'd for having ſav'd the Life of Archduke *Albert* at the Siege of *Oſtend*; his Name was *Nobie*, and being a Horſe of Merit, it had a long Epitaph in Latin annex'd to it.

Bruſſels Park.

They have a peculiar Cuſtom here of harneſſing three or four Maſtiffs at one another's ſide, and make 'em draw Coaches or other Carriages at pleaſure. I was credibly inform'd, that upon a Wager two of theſe Dogs drew five Men in a Coach from one end of *Bruſſels* to the other.

Coaches drawn by Dogs.

The Filth of the City is carefully gather'd and ſold at a good rate; for as the *Flemmings* and *Hollanders* are ſtrange lovers of Flowers, they uſe this Dung in particular (after it is duly fermented) for the making up of theſe Flower-beds.

It muſt be confeſs'd, that for good Company, few Cities in *Europe* can compare with *Bruſſels*; abundance of People of Quality either live in, or reſort to this City, who are of no difficult acceſs, eſpecially to Strangers.

The *French* Tongue is much in vogue here: Every Night, both Winter and Summer, they take the *Tour à la mode* in the lower Town, where the Men never go in the ſame Coaches with the Women, as it is practis'd at *Rome*, but for a far different reaſon; for, whereas in *Italy* it is done to avoid the Converſation of both Sexes, they ſeparate here out of a pure piece of Gallantry; for the Men always keeping one Circle, and the Women another, they meet continually, and thus have the opportunity of talking to, or ogling, one another at pleaſure; the worſt is, that their continual Salutations as often as they meet is no ſmall interruption to this general Society.

There

There is another pleasant Custom observ'd among the Citizens of *Brussels*, on the 19th of *January*, when the Women undress their Husbands and carry 'em to Bed, the Husbands being oblig'd to treat their Friends the next day: For the original of this Custom they give you two reasons; the first is, That the City being once reduc'd to such extremity as to be forc'd to surrender to the Enemy, under condition only, that the Women should have liberty to carry along with 'em their Children and all they could bear upon their Shoulders, according to which they took their Husbands instead of their Ornaments. Others alledge, that a good number of the Citizens of *Brussels* following S. *Lewis* in his first *Croisade*, they had the good fortune to escape for the most part that general Rout, and afterwards coming home in a body, their Wives, rejoycing at the return of their Husbands, met and caught them in their Arms, and so carried them home.

The principal Churches of *Brussels* are, those of S. *Gudula* and the *Jesuites*; these have this in particular, that they use great Bells like the Parish-Churches, at which the other Monks are not a little jealous.

The Chapel of the Holy Sacrament of Miracles

In the Church of S. *Gudula* the Chapel of the *Holy Sacrament of Miracles* is much taken notice of; here are preserv'd certain Hosts in a golden Shrine, which being before consecrated by a Priest, were bought by some *Jews*, who stabbing the same with a Knife, a great deal of Blood issued out thence: The *Jews* were burnt on the highest Tower of the City Walks. The whole Story is painted on the Wall near the Quire. The *Capuchins* Church is perhaps the finest belonging to this Order.

In the *Jesuites* Library they shew, among other Curiosities, the Chair cover'd with gilt Leather, in which *Charles* V. resign'd the Crown to his Son: The Chapel belonging to the *Tassin*, in the Church of *des Sablons*, is also worth a Traveller's Observation.

I had it from credible persons, that of 35000 Acres which the Province of *Brabant* contains, 29000 belong to the Ecclesiasticks. Some few *Protestants* live at *Brussels*, but dare scarce own themselves such, tho' the Inquisition was never introduc'd in the *Netherlands*.

Lace and Tapestry are the chief Manufacturies of this City, whereof I would give you a more ample account, especially of its Academy, Theatre, the publick Place, the Townhouse, with its Pictures and curious Tower, the Duke of *Bournevill*'s Gardens, Count *Egmont*'s Hall, and other Curiosities, were it not that the want of Time did force me to conclude my Letter. I am,

Sir,

Brussels, Sept. 23. 1688.

Yours, &c.

LETTER XXXVIII.

SIR,

FRom *Brussels* we embark'd on the Canal, and in five hours came to the Village call'd *Little Villebroeck*, where taking Boat upon the *Ruppel*, we came with a fair Wind and Tide in two hours to *Antwerp*. At our departure thence we hir'd a Coach, which carried us over *Mechelen* to the little City of *Vilvorden*, from whence we went by Boat to *Brussels* again, being only two leagues distant.

Mechelen.

Mechelen is generally celebrated for its neatness, tho' in outward appearance it can challenge no preference in that point before other places: It is advantageously seated upon the River *Dyle*, which furnishing its Canals with sufficient Water, they thereby have a communication with most of the neighbouring Cities. Their chief Trade consists in Bone Lace made here. Nothing more common than for the Women of the Lordship of *Mechelen* to be brought to Bed in the Province of *Brabant*, that their Children may enjoy the benefit of the singular Privileges belonging to the Natives of that Country, which being so much talk'd of in these parts, I thought it not amiss to give you a short Abstract of them.

Privileges of the Province of *Brabant*.

I. *The Duke* (now the King of *Spain*) *shall have no liberty to call together any Assembly of the Prelates or inferiour Clergy, without the Knowledge, Consent, and Approbation of the other two Estates, viz. the Nobility and Commonalty.*

II. *The Duke shall not prosecute any Inhabitants of this Country, but by the usual way of Justice, whereby the accus'd Person may either plead his own Cause in publick, or by his Advocate.*

III. *The Duke shall have no Power to impose or levy Taxes on his Subjects, without the Consent of the States of the Province.*

IV. *No Dignities or Offices of Honour shall be bestow'd upon Foreigners, unless some inconsiderable Employments.*

V. *Whenever the Duke calls an Assembly of the States General, those of* Brabant *shall not be oblig'd to go out of their own Province, or to give their Consent to any thing, except in the same.*

VI. *If the said Duke, either by force, fraud, or any other way, should contravene or violate any of these before-mention'd Privileges, the People of* Brabant *(after a legal and dutiful Protestation) shall be absolv'd from their Oath of Allegiance, and are at liberty to dispose of themselves as they find it most convenient.*

Besides this, the Province of *Brabant* and Lordship of *Mechelen*, by a peculiar ancient Custom, receive no particular Governour. The Great Council instituted by *Charles* Duke of *Burgundy* 1473, and who us'd always to follow the Court, was settled at *Mechelen*, 1503. These Judges determine all the Causes depending betwixt the Knights of the *Golden Fleece* without Appeal.

Antwerp.

The City of *Antwerp*, so famous in the last Age, is seated in a smooth and level tract of Ground, upon the right Bank of the *Scheld*, in form of a Semicircle, the diameter whereof extends along the River side, and as I am credibly inform'd, is 3635 Geometrical paces in compass: Its Streets are generally large, streight, and well pav'd, but the Houses built after a way peculiar to it self, half of Brick, half of Wood, with a kind of Battlements on the tops of 'em, and very high Roofs; all which, tho' it appears somewhat antick, makes nevertheless in the main a handsom show.

The Fortifications are not so much celebrated for their strength as beauty, the Ramparts being almost every where adorn'd with double rows of Trees, which afford a most delightful and shady Walk in the Summer. The Citadel however is strong and regular, but somewhat neglected: Formerly the Statue of the famous Duke of *Alva* in Brass stood in the middle of the Place of Arms of the Citadel, in compleat Armour, but without a Head-piece, extending his right Arm towards the City, and his Hand open; he was trampling under his Feet a Monster with two Heads and six Arms, with two Dishes hanging in its Ears, and a Satchel about its Neck, out of which came forth two Serpents; in the six Hands it held a Torch, a Leaf of Paper, a Purse, a torn Cloak, a Club, and an Ax; and at the Feet of the Monster lay a Visor. On the Front of the Pedestal, that faced the City, were these following Letters;

The Duke of *Alva*'s Statue in the Citadel of *Antwerp*.

F. A. A. T. A. D. P. S. H. R. A. B. P. & E. S. R. P. R. P. P. I. C. P. P. F. R. O. M. F. P.

signifying,

Ferdinando Alvarez à Toledo Albæ Duci Phil. II. Hisp. Regis apud Belgas Præfecto, quod extincta seditione Rebellibus pulsis, Religione procurata, Justitiæ culta Provincias pacem firmaverit: Regis optimi Ministro Fidelissimo positum.

Over against *Antwerp*, and two leagues both above and below it, the *Scheld* is very broad and deep, which contributed not a little to the flourishing condition of this City in former times, when it had the reputation of the richest and most-frequented Port in *Europe*. I remember that I read in the Annals of this City, that its Trade in 1550 amounted to one hundred and thirty three millions of Gold, without reckoning the Bank. The same Records mention a certain Merchant nam'd *John Doens*, who having lent a million of Gold to *Charles* V. afterwards invited the Emperour to Dinner, where, after a Royal Entertainment, he threw the Emperour's Bond into the Fire, which was of Cinamon; but of late Years the face of Affairs is much alter'd, for now the Port of *Antwerp* is without Ships, the Exchange without Merchants, tho' for the rest the City it has not quite lost its ancient Beauty, and there are still many rich Families left.

A Story of a rich and pernicious Merchant.

Lubeck and *Antwerp* were in those days the two chief Cities of the *Hanseatick* Towns; they had a fair and spacious Building, call'd the *Easterlings House*, in the last of these Cities, which is in being still.

The

The *Bourse* or *Exchange* of *Antwerp*

The *Bourse* or *Exchange* of *Antwerp* is ninety foot long, and seventy broad, including the breadth of the Portico's which surround it on all sides; it was first built *An.* 1531, and has got the Name of *Bourse* from a House that stood in the same place, which had a Scutcheon with three Purses upon it, whence, they say, the publick place where Merchants meet have since retain'd the Name of *Bourse*. The Townhouse of *Antwerp* is a noble Structure.

Its Churches.

At the first time of my coming to *Antwerp* I was not a little surpriz'd at the magnificence of its Churches, especially of that belonging to the *Jesuites*, where you see nothing but curious Marble and excellent Pictures, till I saw a hundred Churches in *Italy* that infinitely surpass'd them: However, tho' the *Italians* have their Domes and Towers separate from the Bodies of their Churches, they can't boast of such Pyramids as the Steeple of the Cathedral of *Antwerp*, which has thirty three Bells, and is four hundred and twenty foot high, approaching pretty near to that of *Stramburgh*, but more finely wrought.

About thirty paces from this Church you see a Well, the Iron Branches of which, whereon the Pulley hangs, are adorn'd with Foliage-work wrought by a famous Smith nam'd *Quintin Metlys*, who becoming enamour'd of a Painter's Daughter, would have made her his Wife; but the Painter absolutely refusing to marry his Daughter to a Blacksmith, (tho' otherwise a man of a good Fortune) the Smith laid aside his Hammer, and taking up the Pencil, became one of the best Masters of *Antwerp*, and had his beloved Damosel, as a Reward of his Industry. He died *Ann.* 1529, and over his Tomb, at the foot of the Cathedral, near the great Portal, you see the following Verse engraven in *Roman* Letters;

Connubialis Amor de Mulebre fecit Apellem.

There is also a great part of *Plantin*'s Printing-house remaining to this day.

How the Brewhouses are supplied with Water.

The Water of the *Scheld* near *Antwerp* is brackish; and as the Fountains of the City could not supply the Brewhouses with sufficient Water, they were forc'd to bring another supply of Fresh-water by a Canal, which emptying it self into a great Cistern, it is from thence rais'd by certain Engines into a Basin, and so convey'd by forty Pipes to as many Brewhouses, every one of which knows how to open the Cock of his Pipe at certain hours.

Ghent.

Ghent is a large, pleasant, and neat City, enjoying the benefit of an excellent Air and convenient Situation; it was *Jan.* 1678. taken by the *French* in six days. The neighbourhood of the *Scheld* and the *Lys* are of no small advantage to this City: Upon the Bridge which is built over the latter stands two Brass Statues, representing a Man ready to cut off the Head of another. The same Figure you see painted in the Townhouse, with this Inscription underneath;

Ac Gandt le en Fendt trape Son Pere se tatte de tue, mais se heppe rempe si grace de Dieu 1371.

which *Walloon*, or ancient *Gaul* Inscription, implies as much as, *A Gand l'Enfant trappe Son Pere dessus la teste, mais son épée rompt, par la grace de Dieu*; the Story of which Adventure they relate thus, *A Father and Son being both condemn'd to Death, a Pardon was afterwards offer'd to either of them that would be the other's Executioner.* After a long Contest, the Father prevail'd upon the Son to save his own Life by taking away his, which the Son at last being forc'd to consent to, he was just ready to give the fatal blow, when the Blade either broke in the Air or flew out of the Handle; which being interpreted as a most singular piece of Providence, they were both pardon'd.

The Prince's Court.

The ancient Structure known by the Name of *The Prince's Court* was formerly the Palace of the Counts of *Flanders*. Here they shew'd us the Chamber where *Charles* the Fifth was born, which was so little that it could scarce hold a Bed; notwithstanding which, the ancient Inscription to be seen here proves, beyond contradiction, that this was certainly the place where that great Prince first saw Light.

The Cathedral.

The Cathedral is a vast Pile of Building, dedicated to *St. Bevon*; here I read a very short (but expressive) Epitaph, on a certain Prelate, *viz.*

Ecclesia Antistitem amisit, Respublica Virum.

Bruges, formerly a Hans Town.

Leaving *Ghent*, we passed along the Canal to *Bruges*, a very large and handsom City; for tho' it comprehends not so large a compass as *Ghent*, yet is it much more populous, and its Houses more uniform; Ships of five hundred Tuns may come up to the City by the Canal, but *Holland* has drawn the Trade from thence, as well as from *Antwerp*.

The Townhouse, the Waterhouse, Episcopal Palace, Cathedral, the great Market-place, the Colleges of the four Nations of *Flanders*, the *Jesuites* Church, and the magnificent Tombs in the Collegiate Church of *our Lady*, are all very fine, and worth a Traveller's Observation. On one side of the Quire in the Cathedral they shew you the place where *Charles the Good*, Count of *Flanders*, was assassinated.

The Order of the Golden Fleece.

The Order of the *Golden Fleece* was instituted at *Bruges*. It acknowledges for its Founder *Philip the Good*, Duke of *Burgundy*, in the Year 1430. There are various Opinions concerning the occasion of the institution of that Order, but the most probable is, that the great encrease of this Prince's Revenue by the importation of the *English* Wool, was a sufficient inducement to him to erect this Order.

I remember I saw at *Brussels*, in the Townhouse, a very ancient piece of Tapestry, adorn'd with S. *Andrew*'s Cross, (the Arms of *Burgundy*) and the representation of the Story of *Gideon*'s Fleece, and *Olivier de la Marche* (who had considerable Employments under *Philip the Good*) relates, that at a great Feast, known by the name of *The Feast of Vows*, made by *Philip the Good* at *Lisle*, *February* the 17th, 1453. there was, among other things, represented the History of *Jason*'s Conquest of the Fleece.

Ostend.

At *Bruges* embarking again on the Canal, we came in three hours to *Ostend*, a little City and well fortified; but the Sluice which furnishes the Canal with Water from the Sea, is the most remarkable Curiosity belonging to this place. I need not put you in mind of the so famous Siege of this place, which being then but meanly fortified, yet sustain'd a most furious Siege of three Years, (it was begun by Archduke *Albert*, *Jun.* 5. 1601, and taken by *Ambrose Spinola*, *Sept.* 22. 1604.) during which they receiv'd 300000 Cannon-shot, had 71624 Men slain on their side, and kill'd of the Enemy 72900, and after all obtain'd of their Adversaries an honourable Capitulation.

Leaving the Canal that is betwixt *Ostend* and *Newport*, we took Coach thither, of which City I have nothing else to say, but that it put an end to our Travels on this side of the *British* Sea, which had in all respects been happy enough, and free from any sinister Accident; but notwithstanding all this satisfaction, we found it the greatest pleasure to come home. I am,

Sir,

Newport, *Oct.* 3. 1688.

Yours, &c.

Instructions to a Traveller.

AS *Travelling* seems to be a mixture of *Pleasure*, *Profit*, and *Pain*, so these Observations were intended to improve the two first, and lessen the last, in reference especially to those Countries thro' which we pass'd.

In *Holland* the Rates of Passages, either by Boats or Coaches, being fix'd, you meet with no great difficulty upon that account; but if you have more than one *Portmanteau* with you, you must either agree beforehand, or afterwards pay what they please.

Whilst you are in *Holland* you ought to make a small excursion into *North Holland*, the same being worth a Traveller's sight.

In our Journey from *Holland* into *Germany* we hired a Coach at *Utrecht*, to *Arnheim*, for 12 Livres 16 Sous, and there another to *Wesel* for 9 Livres; from thence we pass'd to *Cologne*, and so further to *Mayence* by Water, the Land-carriage being excessive dear. From *Mayence* to *Frankfort* is an easie days Passage upon the *Main* by Boat, at a set price.

By reason of the different sorts of Money in *Germany*, Travellers ought to provide themselves beforehand with Gold Ducats, Silver Rixdollars and Pistoles (the *Spanish* of full weight are the best for *Italy*) Letters of Commendation to private Persons living in those parts where they are to stay for some time, as also Pasports from those places from whence they came, are necessary Precautions; the first introduce you into the knowledge of the place, and may do a singular kindness in case of any Accident, the second does not only frequently save a great deal of trouble, but also procures a respect to the Traveller: And as for Bills of Exchange, they are so necessary, that the loss that attends them is much more supportable than the hazard of carrying much Money about one.

From *Frankfort* to *Heidelburgh* we travel'd in a Coach with six Horses, which we hired at the rate of three crowns a day.

From *Heidelburgh* to *Nurenburgh* we travel'd in six days, and paid thirty crowns for the Coach, and twenty more for another from *Nurenburgh* to *Augsburgh*, from whence there are set Stages going to *Venice*; but we having a mind to see *Munich* and some other places, we went on Horseback at the rate of twenty Ducats a head (all our Charges bore) over *Munich*, *Inspruck*, *Bolsena*, *Trent*, *Verona*, *Vincenza* and *Padua*, but were inform'd afterwards that we paid too dear by a fifth part.

'Tis to be observ'd, that Travellers are rarely stopt on the account of Customs either in *Holland* or *Germany*, and rarely at *Venice*, but in some other parts of *Italy* they are troublesom enough, but a few *Julio's* (*i. e.* Six-pence a piece) makes the Customhouse Officer very pliable. The Winters are generally pretty sharp in *Italy*.

From *Venice* we hired a Boat to *Padua* for twenty four Livres; in the common Boats a man may go at the rate of two Livres a head. At *Padua* we hired a Coach for fourteen Pistoles to carry us to *Loretto*. In many parts of *Italy* you have the conveniency of Stage-Horses, or of Calashes, or perhaps of both, which have this convenience, that you may stop where and as long as you please, because you change your Horse or Calash at every Stage: I prefer the Calashes in most places before Horses, for they carry two Persons, afford you a shade in the Summer, and keep you pretty warm in the Winter; besides that, you may have your Portmantles ty'd behind, tho' they weigh two hundred weight.

At *Loretto* we hired three Calashes with two Horses (there being eight of us) for two and twenty *Italian* Pistoles, to carry us to *Rome*, where we took a House ready furnish'd at 6 *l.* Sterl. *per* month, and 14 Pistoles a month for a handsom Coach and two good Horses, it being then near *Easter*, at another time you might have one for 10 or 12.

If you intend to take an exact view of *Rome*, you must address your self immediately to a skilful Antiquary, who will shew you many Rarities and curious things not to be met with in Books.

A Traveller ought to be well provided with Measures of divers sorts, Geographical Maps, a Watch, Perspective-Glass, a Mariner's Compass and Quadrant. I had always with me a piece of Packthread, well twin'd and wax'd, of fifty fathom long, divided into feet by Knots, by the means of which I could measure the height of Towers, bigness of Pillars, &c.

The Journey from *Rome* to *Naples* is commonly perform'd either with Horses or Calashes, or perhaps with both, for the better easing themselves by change. In your Journey thither you are very seldom troubled with any Customhouse Officers, but in your return they will be plaguing you the first half-days Journey, imagining that you have a cargo of Silk-Stockins with you, one of the best Manufactures of *Naples*, but are not near so good as the *English*.

We agreed at *Rome* for Calashes, and to have our charges bore from *Rome* to *Florence*, for eleven days, at the rate of six *Italian* Pistoles a head, *viz.* six days to *Leghorne*, two and a half from thence to *Florence*, the remainder being spent in our way at *Viterbo*, *Siena*, *Pisa*, *Lucca*, *Pistoya*, &c. *Florence* is famous for all manner of Perfumes.

From *Florence* to *Bologna* you travel either on Horseback (22 Livres for each Horse) or in Litters, the Road being too rough for Calashes. In *Lombardy* we travel'd always in Calashes, which are chang'd at every Stage. The Mountains betwixt *Novi* and *Genoua* are not passable but on Horseback; the Rates differ according to the Seasons.

In our return from *Genoua* we hired a Coach with four Horses at *Novi*, to carry us to *Turin*, from whence we travel'd on Horseback over *Geneva* to *Basil*, and from thence, by the way of *Hunningben*, *Friburgh*, *Brisac* and *Schledstadt*, to *Strasburgh*: The best way for a Traveller is, to agree with the Guides to have his Charges bore along the Road.

From *Strasburgh* we went to *Cologne* by the *Rhine*, there took Coach to *Brussels*, and from thence to *Ghent*, and so further by the Canal to *Bruges* and *Ostend*.

For the rest: It is not very convenient to travel in great companies, especially in *Italy*, where the Country Inns are but indifferently provided with Beds and Provisions, as well as in many parts of *Germany*.

A Traveller ought never to travel without an Iron Engine to fasten the Doors of his Lodgings, which are often without Locks or Bolts, and it is a true Proverb, that *Opportunity makes Thieves*.

For the rest: It ought to be his chief aim to keep the best Company he can, to enquire after Persons famous for their Skill in Arts and Sciences, and to converse with them, these being likely to prove the most useful to him in his Travels, which being at all times attended with many Difficulties and Accidents, this Reflection ought to be a sufficient inducement to the prudent Traveller to embrace all Opportunities that may in all likelihood recompense his Charges and Trouble.

Topographical Descriptions.

WITH

Historico-Political and Medico-Physical

OBSERVATIONS,

Made in Two several

Voyages thro' most parts of *Europe*.

By *JOHN NORTHLEIGH*, LL. M. D. *Lond.* 1702.

CHAP. I.

A Description of the United Provinces.

The *Briel*.

THE *Briel*, being the place from whence the Pacquet-boats take their usual passage to and from *Harwich*, may be rank'd among the Towns of a middle size of *Holland*, and is the chief City in the Country of *Van Voorn*, (the rest being inconsiderable places) so call'd from its situation before the other parts of the Province of *Holland* which lie N. N. E. of it. The Town of *Gemliet*, which some place in this part of the Country, lies in the Isle of *Putt*, separated from this by an Arm of the Sea.

At the *Briel* you observe the same neatness as in all the other Cities of *Holland*, and is strengthned with a Moat, and secur'd by Drawbridges, like most other Towns in this Province; the Wall is partly of Earth, partly of Stone, with a Breastwork of Turf, but none of the most regular; their Cannon were then dismounted, and their Garison very weak. By the help of a Canal, Ships can load and unload in the very City. They have one large and three lesser Churches, one whereof is call'd the *English Church*; their Houses are generally uniform, built of Brick, with sharp Roofs and pointed Fronts, but not so high as in some other places; their chief Street is streight, and near a thousand paces long; their Town-house is but small, the figure of the City almost triangular, and its situation very pleasant: Their Government is administred by a Scout, or Sheriff or Bailiff, the *Eschevins*, or a Court of Aldermen, and a *Raedt* or Common Council. What renders this Town the greatest Fame amongst the Cities of *Holland*, is, that the Count *de la Mar*, Lord of *Lume*, seiz'd upon this place with his Refugees or *Gueuses*, 1 *Apr.* 1572. and by his brave example drew the other Towns of the *Netherlands* into a general Revolt. This place was put into the hands of Queen *Elizabeth*, as one of the *Cautionary Towns*, an evident sign (considering its advantagious situation) that the *Dutch* were either forc'd or willing to trust to the Generosity of that Great Princess. Its situation is in a flat and fertile Ground, which produces in great plenty a certain Plant call'd *Hellem* by the Inhabitants, and *Genes* or *Genet* by the *French*, being our *Spanish Broom*: The Roots of this Plant being long and thick, they us'd formerly to fence the outsides of their Dikes with it in *Holland* and *Zealand*, which (by the description,) I suppose to be the *Spartum Maritimum* or *Quartum Clusii*, a sort of our *English Matweed*, which I observ'd on this Island, and on the sandy Shore near *Scheveling*, of a much larger growth than in *England*; the *Germans* call it *Halm*, whence the *Hollanders*,

See Guicciardine.

in their Dialect, have got the word *Hallem*, being thick at the Roots, and consequently proper for such a use; tho' now-a-days they fortifie their Water-fences with more Art and Security: I have also seen it on the Southern Coasts of *Italy*, and on those of *Denmark*, and we have some of it about *Sandwich* and the Isle of *Thanet*, but not so large as the *Dutch*.

The River.

The River hereabouts is call'd the *Maese*, tho' it may properly be consider'd as the common discharge of the *Rhine*, the *Wahl*, the *Yeuse* and *Mercie*.

Maesland Sluys.

On the opposite side of this River, almost directly over against the *Briel*, lies the Town of *Maesland Sluys*; the River being here near half a league over, we view'd it only at a distance: The Inhabitants maintain themselves chiefly with Fishing; they have of late years built themselves a fair new Church.

Vlaerdingen.

Higher up the River, to your left, lies a small (but ancient) Town, conveniently seated near the *Maese*, call'd *Vlaerdingen*, but of little Trade, which is quite remov'd thence to *Rotterdam*.

Schiedam.

About two miles higher lies the small Town of *Schiedam*, so call'd from its River the *Schie*; it aboundeth in Fishermen and such as make Cords, Nets, and such-like Work.

Delfshaven.

About two miles above this place you see the Town of *Delfshaven*, *i. e.* the *Harbour* of *Delft*, from the passage that goes up from hence to *Delft*. Here is a goodly Structure erected for the use of the *East-India Company*: This place is conveniently seated for a strong Fortification, and sends abundance of Busses to catch Herrings.

Rotterdam.

Two miles beyond this lies the famous City of *Rotterdam*, the second trading City of the *United Provinces*, seated upon the Banks of the River *Maese*, a place of vast Traffick: I was told, that in the Year 1671. after a great Frost, the *English*, *Scots*, and *Irish* set out at once three hundred Sail from this place, nothing being more common among the *English* Merchants, than to send great quantities of Merchandizes by the Inland great Passage-boats to *Amsterdam*, and from thence again to *Rotterdam*, because they often can make sooner returns from this last place to the *Thames* than they can get out of the *Texel*. It hath got its Name from the River *Rotte*, which runs into it on the North-West side, and the word *Dam*, signifying in *Dutch* a Fence against the Water. Its Figure is oval, or rather triangular, the Buildings lofty, but something irregular, the Fronts leaning forwards, for which reason they are fastned backwards with Iron-work.

Their Chanels which run thro' the Streets are so broad and deep that they admit Ships of great burthen into any part of the City; these are joyn'd by Draw-bridges, which appear not so beautiful as the Stone-bridges of *Amsterdam*. Their Great Church is that of *S. Laurence*, the Tower whereof was, not many years ago, set streight and upright again by a good Architect: In this Church you see the Tombs of *Cornelius de Wit* and *Egbert Bartholomew de Cortenaer*, two of their Admirals, the first slain in an Engagement against the *Swedes*, and the last in another Sea-fight; they are both very magnificent, and erected at the charge of the Publick. The noble Organ in this Church is compos'd of two or three thousand Pipes.

Th Tombs of Cornelius de Wit and Cortenaer.

The fairest Structure here (at least on the outside) is what they call the *Stadt-huys*, or the House for Consultation about publick affairs; it is a spacious square Pile of Building, the Front whereof is beautified with Free-stone and curious Fretwork. Their Exchange, Admiralty-house, the *East-India* and Town Houses, are also goodly Structures. In their Hospital they maintain five or six hundred Children.

Rotterdam is also celebrated for the Birth of the Great *Desiderius Erasmus*, whose Statue of Brass in a Gown and Cap, stands in the *Great Place*, with several Latin Inscriptions on the sides of the Pedestal. On the outside of the Walls this City appears rather pleasant than strong, by reason of the most delightful Walks that surround it on all sides.

Erasmus's Statue.

The Government of Amsterdam.

The Government is administer'd here by a President, four Burghermasters, and twenty four Senators or Aldermen, call'd the *Roosship*; the latter have the governing Power not for Life, but only for two or three Years, and if any one dies, the rest chuse another in his stead; for it is manifest, that in most part of *Holland* the Government is rather *Aristocratical* than *Democratical*, whatever some may pretend to the contrary. As their Excellency consists in foreign Traffick, so Manufactury is not much regarded here: This City had originally no right of sending Deputies to the State, till by the encrease of its power it was added with some others, to the rest. Liberty of Conscience is as free here as at *Amsterdam*; the *English* and *Scots* have two considerable Churches. I saw here also a *Quakers* Meeting, where I heard a certain noted *English Quaker* * preach an ingenious *English* Sermon to a *Dutch* Congregation, an Interpreter, who stood at his side, explaining with a great deal of dexterity what he said Paragraph by Paragraph. During the general Distraction in *Holland*, in 1672, this City was one of the first that declar'd in favour of the House of *Orange*, and for the revocation of the perpetual Edict.

* Mr. Pen I.

In the West end of the City, among their Ordnance, I observ'd an old Anchor, kept there as a great piece of Antiquity, which some had the Folly to give the Name of the *Anchor of Noah's Ark*; but upon enquiry I understood the same to have been dug up very deep out of the Ruins of the City, which seems to evince that a great part of the City lay formerly under Water. But the most curious Piece of Art I observ'd here was, the neat Work of Mr. *Van Dulet*, done only on plain Paper, in which he had cut the finest Piles of noble Structures, Fretwork, *bass* and *high Relievo*, Foreshwork, Ships and Landskips, as lively as if they had been done by the Hand of the most skilful Painter.

Mr. Van Dulet's curious Paper-works.

As for the Air of *Rotterdam*, I can't commend it as very wholsom; for, besides the situation of the place among the Fenns, which render it much subject to Fogs, the Canals of the City having not a current swift enough to purge 'em from the Filth the Water brings along with it, the heat of the Summer-season elevates certain Exhalations here, which much affect our Nostrils.

Dort.

From hence we sail'd in a Yacht to *Dort*, seated just where the *Meuse* and the *Waal* divide into two branches, and embrace a tract of Ground call'd the *Isle of Ysselmond*. Their Churches, Streets and Houses much resemble those of *Rotterdam*, but is not so large, and its Figure almost circular. In one of the upper Rooms of the *Gunners Doel* you see still the Benches where the famous Synod sate in 1611, which has given occasion to so many Divisions in this Country, betwixt the *Arminians* and *Anti-Arminians*, *Remonstrants* and *Anti-Remonstrants*, *Predestinarians* and *Latitudinarians*, &c. who all with the same Zeal pretend to the true explanation of the Articles establish'd by this Synod.

The Staple of Rhenish Wine.

Hereabouts hapned, in 1421, that prodigious Inundation in which seventy Villages were drown'd, but since regain'd: It was always the Staple for the *Rhenish Wine* and other Commodities that come down the Rivers above it, and pay a certain Duty here; but since the *Hamburghers* have left it, the Wine Trade is not so great as before.

Their Magistrates have some peculiar Privileges, and they have an old Mint with this Inscription;

This is the Imperial Mint, and the Land's of Holland.

Debtors have a Refuge here against their Creditors. This City was originally one of the six that had a Voice in the management of the State, and was very zealous for the House of *Orange* in 1672.

From *Rotterdam* you go in two hours to *Delft*; by the way we saw some neat Country Seats and Gardens on the bank of the River *Schied*, which runs to *Delft*, with the Town of *Overschied*, which has taken its Name from it. The Passage-boats that carry you from hence, and from one place to another, call'd *Trekschuyts*, being in shape not unlike our *London* Barges, but not so fine, and are drawn by Horses; they go off at certain times, at the warning of a Bell. Their Places of Execution are generally near some Canal, as we put ours near the High-way; their Felons hang here till they drop down, as we do ours hung in Chains.

Delft is a round, compact, and well-built City; the Townhouse is a goodly Structure, facing the new Church, betwixt which is a spacious Place; within it you see a noble Seat of Judicature, and six goodly Apartments for the use of the Officers of the Government. The new Church has a curious and lofty Steeple, the Tower of Brick, and the Spire of Stone; in this Church is the Monument of Prince *William* of *Nassau*, who was barbarously murther'd by one *Balthasar Gerard*; on his Marble Tomb is a handsom and long Inscription; at the head of his Effigies, as it lies along in Marble, standeth the Prince's Statue in Brass, and Fame sounding him in his Armour with this Motto, *Te vindicetur Libertas*; with another Emblem of his going on steady in a Storm, with this Inscription, *Deum Tranquillum in undis*. At his Feet lies a Dog, which, they say, really liv'd and died with him. The whole is adorn'd with as good Brass Statues and as excellent Marble as any I ever met with in *Italy*. This Monument contains the Bodies of four Princes and three Princesses, *viz.* *William* of *Nassau* and his Spouse, his Son and his Princess, Prince *Maurice*, Prince *Frederick* and his Daughter.

The old Church is much inferiour to the new one in its Fabrick, yet contains the Ashes of two renown'd Heroes, *viz.* of the Great *Van Tromp*, whose Tomb has likewise a large and elegant Inscription; and of *Van Heem*, who was likewise slain in a Sea-engagement, and lies interr'd here under a fair Marble Tomb: Here also lies the Body of the Lady of Sir *Charles Morgan*. The circumference of this City is about two miles, being fortified with a Wall and Ditch, but after the antique fashion. The chief Magazine and Armoury of the State is at *Delft*; here are two great Pieces of Ordnance, each weighing eight thousand pounds, made at *Lubeck* 1669. This City was always one of the six that had a Voice in the State, and now has the third in the States of *Holland*, and contains one of the Chambers belonging to the *East-India* Company: It is chiefly famous for its excellent Earthen Ware made here in imitation of Porcelane. This City also gave Birth to that pernicious Heretick *David George*, who set up for our Saviour; he quitted *Delft* in 1544, and went to *Basil*, where he died. Formerly a certain Apothecary nam'd *Vander Mere* had a curious Collection of Rarities here, but is since dispers'd among his Heirs, and neglected. They have also a Theatre for Anatomy, with some Natural Rarities and Lectures, but the Vicinity of the University of *Leyden* makes them not to be much taken notice of.

From *Delft* we went to the *Hague*, a place chiefly famous for the Court of the Princes, the Assembly of the States, and the great Consflux of Strangers; the Princes Court is neither capacious without nor within, but the Town it self round and compact, neatly built, and the old Church is a very noble Structure, adorn'd within with the Escutcheons of the Knights of the *Golden Fleece*, hung up here, without doubt, whilst they were yet under the *Spanish* Government: In this Church is to be seen the old Inscription, in Capitals, mention'd by *Henegius*, viz

E. Douse Jeni F. Hic Cubat Qui vixit, Ann. XXV. *Mensis* XI. *Dies* IV.

We heard a Sermon preach'd here by one of their Divines, who was dress'd in a loose Coat without a Girdle; they are cover'd during the Sermon. Their Town house can't compare either with that of *Delft* or *Rotterdam*. At the end of the Town towards *Scheveling* is the *Tapethuys* (as they call it) or Magazine, a goodly Edifice, and hard by it, nearer to the Town, the *Old Princess*

Princesses Palace, a handsom Fabrick of Free-stone, with the Treasury and some other fair Buildings.

The Tomb of Opdam in the New Church.

Their *New Church* is a plain (but modern) Structure, with a *Cupola*; the chief Ornament of it is the Tomb of the great *Opdam*; his Effigies is to be seen in a standing posture on a most noble Base, *Fame* crowning him with Lawrels, the whole cover'd with a *Cupola* of Marble resting on four Pillars of the *Corinthian* Order, finely vein'd with red and white; at the Pedestal of each you see a Statue of Marble representing *Fortitude*, *Vigilance*, *Prudence* and *Fidelity*; above, in the Front, is a long Inscription, and on the Sides two or three others, describing his great Actions, and how he had set fire to his own Ship in his last Sea-engagement against the *English*.

The Walks, which are even in the middle of this *Town*, as they make it extreamly pleasant within, so the Woods about it, especially that call'd the *Bosch*, render it infinitely delightful without. I remember that *Tacitus* mentions certain Groves hereabouts, in the chiefest of which *Claudius Civilis* assembled the People, and made an eloquent Harangue to them; *Guicciardine* has also taken notice of some ancient *Sculptures* and other matters hereabouts relating to the Emperors *Adrian*, *Antonin*, *S. Septimi Severus*, and some other *Roman* Heroes.

This *Town*, as considerable as it is, never had a Voice among the six in the Senate, nor among the twelve that have been added since, tho' *Purmerent* and *Scheidam*, two inconsiderable poor places, are of that number, the true reason whereof I am not able to give you, unless it be that the *Hague* was always consider'd as a Village; but if it be, it is the fairest and largest in the World: Whilst they were under the *Spanish* Jurisdiction, their Kings kept here their Chamber of Accounts, the Treasury, and a fair Library.

In the adjacent Wood I found the *Unifolium*, and on the Sea-shore near *Scheveling* (a poor Fisher-Town a mile from the *Hague*) the *Sparton Maritimum*, the *Kali Spinosum* J. B. and the *Tragus Matthioli*.

The most considerable places about the *Hague* are, *Honslaerdike*, a Country Palace belonging to the Prince of *Orange*, having got its Name from the Plain in which it is seated, where it was built by the late Prince of *Orange*, a mile from *Gravesend* or the Sea it self. It is very handsomly built, and adorn'd with fine Gardens, beautiful Fountains and Statues, and among these some antique ones, as the *Roman* Gladiator, *Sampson* tearing the Lyon, and several others: This House is superiour to many noted Palaces of *Italy*; from the backside there is a delicious prospect thro' a pleasant Grove and divers regular Plantations of Greens, which make up a Square of about half a mile from each Angle to the Center, the utmost rows of Trees being set in lines like a Landskip; beyond this is the place where they keep the Exotic Birds, and another for strange Beasts, the most remarkable are, the *Indian* Stork, the *Surinam* Hens, differing from other *Indian* Hens; the *Cassowary* and *Ostriches*; the *Cassowary* is the *Emeau* of *Aldrovandus*, and the *Ornithologia*, being of the *Ostrich* kind, but not so tall, and is rather woolly than feather'd; Dr. *Harvey* says it eats and digests Coals, and *Aldrovandus* allows it no Tongue, but *Jacob Bontius*, in his description of it, does not mention either of these: Among the two-legg'd Beasts we saw the *Plandbuck*, the *Indian Cows*, no bigger than our *Welsh* Heifers, having upon their Shoulders, where the *Vertebræ* of the Neck joyn with the Spine, Bunches like Camels; some *Indian* Deer, the Antelope and Roebucks, more frequent in *Germany*.

The lower Rooms of this Palace have no peculiar Ornaments, except that they are neatly pav'd with Marble after the *Dutch* fashion, but above-stairs the Rooms are stately, and the two Galleries very curious, and adorn'd with excellent Pieces of Painting; the Picture of King *Charles* I. is of the hand of *Van Dyke*, as is the *Medusa* and several other Pieces; the *Venus* is of *Rubens*, the Flower-work by one *Latine*, and the Figures by *Duval*. The Princesses Closet was most curiously wainscotted with most exquisite Japan-work.

The Palace at Rejwick.

Nearer to the *Hague* is another Palace belonging to the Princes of *Orange*, call'd *Rejwick*; it has many good Pieces of Painting, by the best Masters; the Marble Staircase is also exceeding fine, as well as the Marble Floor; its Front is of Free-stone, very noble and lofty, and the Terras very fine; it was then unfurnish'd; the late Treaty of Peace concluded at this Palace will render its Name famous for ever.

The House in the Bosch.

There is another House belonging to the Princes of *Orange*, call'd *The House in the Bosch*, i. e. *the House in the Wood*, from its situation in the Wood near the *Hague*; it has one noble Room with a Cupola on the top, enough to make (as indeed it does) the whole House; the Paintings in it are most excellently done, by great Masters, especially the Triumph of Prince *William* of *Nassau*; and another Piece representing Captivity, with the different passions of submitting Patience and insulting Pride excellently well express'd, besides divers other good Pieces done by one *Tulp*. Over the Chimney-piece you see this Inscription in golden Capitals:

Fr. Hen. Nassovius
Nass. Delph. W. Camer. Febr.
CIↃ IↃ XXXIV.

This Palace seems by its situation contriv'd for the sweetest and most solitary retirement this Country can afford.

Among other things we also took a view of the Village of *Lansdun*, six miles from the *Hague*, famous for the pretended Delivery of a certain Countess of *Hornsburgh* of three hundred sixty five Children at a birth, a Story that may well be look'd upon as a Relick of the Popish Legend; notwithstanding which they have taken peculiar care to transmit it to Posterity by certain Latin Inscriptions on a Table or Plate fix'd to the side of the Wall; but 'tis to be observ'd that this is a new Inscription, put up some hundred Years after the Fact, it being evident from *Guicciardine* that it was not there about a hundred Years ago, because the Epitaph recited by him is quite another and much shorter. The two Brass Basins in which they say these Children were baptiz'd, are not unlike our Milk-pans, with this Dutch Inscription:

In dese twey Bekens, sin alle dese Kin'ren gedoopt,
i. e. *In these two Basins were all the Children baptiz'd*.

On the opposite side is to be seen a short Inscription to memory of Mr. *Richard Hardihg*, an *English*man, who being Privy Purse to King *Charles* the Second in his Exile, is interr'd here.

From the *Hague* we went to the most celebrated University of *Leyden*; this City for bigness challenges the next place to *Amsterdam*, but the Academy falls short of ours of *Oxford* and *Cambridge*, and even of some others I have seen abroad.

By the way we pass'd by the ancient Town of *Woerden*, which some say was an old *Roman* Castle, or of *Rhinsod* King of the *Frisons*, which they pretend to prove from some ancient Monuments and Inscriptions found among the Ruins made by the *Danes* and *Normans*.

The Academy.

Their Academy is their Schools for publick Lectures, (they having no Colleges) being a Fabrick of Brick only two Stories high, and two Rooms on a Floor, the two lowermost for Divinity and Physick, and the two uppermost for Law and Philosophy; in the Garrets the *Officinæ*, and on the top a kind of Tower or Lanthorn for Mathematical Instruments and Astronomical Observations.

Adjacent to it is their Physick-garden, containing an Acre of Ground well stor'd with Plants, and carefully preserv'd by the Industry of Dr. *Herman*, a curious Botanist and Professor of Physick, and who has the keeping of a large and good Collection of Natural Rarities, for which I will referr my self to the Catalogues printed by him; the most remarkable and exotick things I saw there were, The Cabinet of Curiosities.

the *Anser Magellanicus Clusii*, so call'd from those Streights, *Penguinus dictus Clusii*, i. e. the *Indian* Goose call'd the *Penguin*. Mr. *Ray*, in *Willoughb. Ornithol.* *lib.* 3. *p.* 322. says, it walks upright, with Wings hanging down on both sides: A Bird of *Brasil*, the Head arm'd with a sort of Horns, according to *Margravius*; the Horns given powder'd in Wine are an excellent Remedy against Poyson; *Piso* affirms it by his own experience, *Siliqui arboris Indicæ Malebaricæ: Faseoli Pisanelli Cerbonensibus similes, dictæ*. Hort. Mal. *Tom.* 1. *p.* 77. The Authors of the *Hort. Malabarici* call it *Arborem admirandam*; the Cod was three foot long; the Cortex is used to consolidate Fractures, the Roots in Decoctions against the Dropsy and Distempers of the Head, and the bruis'd Leaves for Ulcers *: The *Orb-fish* with Prickles, call'd the *Guara* by *Piso*, the Gall whereof taken even in the least quantity, causes most dreadful Symptoms, as the Swimming of the Head, trembling of the Limbs, loss of Speech, cold Sweats, till a general Lipothegm puts an end to the Patient's life, notwithstanding all which it is in *Brasil* serv'd up for a Dainty, after the Cooks have carefully clean'd it from the *Felliculæ fellis*, which contains the poysonous matter, against which they have also a certain Antidote, *viz.* the Powder of a certain little Crab of a various colour, (of which I believe I have one) call'd by the *Brasilians Aratu*, which soon expels the Poyson. The Intestines of this Fish lie round in circles, like those of terrestrial Animals,

* *Vid.* Description of the Isle of Ceylon.

which

which is not usual in the Aquatick Creatures; a true *Seamorse's* Head, and the Skin of a wild Horse from *Brasile*; *Concha Maxima Imbricata Indica*; the Head of an Hart with huge monstrous Horns; the *Manucodiata* or Paradise Bird, a thing not so remarkable for its rarity as for the discovery of the vulgar Error of their having no Feet, and the absurd consequences thereof, as their living upon the Celestial Dew, their hovering in the Air, the Cavity in the Male's Back to lodge their Eggs, many of that kind coming to us as fairly footed as other Birds, and provided with Claws, which shews them to be Birds of Prey.

Vulgar Error concerning the Bird of Paradise.

The Fruit of the *Indian Ananas*, the *Rana Pinea* or *Pine-thistle*, brought from thence sometimes preserv'd, is of a delicious taste, being as big as a Melon; from the top sprouts forth the coniferous Bud or Bunch by which they propagate; I have some of the Leaves by me, which resemble those of the *Aloes Aquatica* or *Militaris Aizoides*, generally call'd the *Water Warrior*, but something shorter: This Fruit *Piso* and some other Physicians recommend as very cordial and stomachick, and excellent good in Distempers of the Stone and Gravel. I took notice of another exotick Plant, *viz.* a large arundinous Trunk of the great *Indian* Figtree, call'd *Jamacaru* by *Piso*, hollow'd like a Cane, the *Tamandu* of *Piso*, call'd *Ant-eater* by the *Dutch*, (or the *Ant-Bear*) because he feeds upon those little Creatures, and is taken by the *Indians* with a Hook hid in an heap of Ants, and tied to a Tree; it is a large Beast: The true Rattle-snake; the *Boiciningia Piseon*, who fay s the Rattle in the Tail is augmented by one Joint every Year, and a Snake often has one of two fingers long, which emitted into the *Anus* of any Creature, kills sooner than any other Infection; the Cure is perform'd by the application of its Head bruis'd, or the *Juncus, Scirpe dictus*: The *Hippopotamus*, but whether a true one or not, I will not determine, Authors varying so much in the description of this Creature, that I question whether there is any determin'd Species of it in Nature: The *Lacertus Indicus Squamosus*, a Creature more remarkable for its oddness than scarcity, for it lives underground like a Mole, and its Head is sharper, but the formations and junctures of its Scales are most surprising. *Bontius* and *Clusius* have given a very exact account of it. We also saw here the true Talipot-leaf of the *Palma Nucifera*, which serves the *Indian* for an Umbrello; and one of those Nests, made by a Bird like a Swallow out of the froth of the Water, or the scum of some Semen of a certain Fish found on the Coast of *Cormandel* and *Malabar*, fastned to the Rocks; *Bontius* says the Inhabitants eat it for a Dainty, like as we do Mushrooms, Caviar, &c. They also shew here a large Cabinet of all sorts of Animals, very well preserv'd in a Balsamick Liquor, as they call it, being only a Spirit of Wine mix'd with some qualifying Emollients or Gums, to prevent the Spirit of Wine from preying too much upon the Bodies they intend to preserve; among those few I took notice of were a *Lizard*, the *Legana* of *Bontius*, some of which (he tells us) are five foot long: there are also some Water-Lizards, differing not much in shape from the *Alligators* and *Crocodiles*; this was serrated all along the Vertebra of the Back, with a ugly squamous Skin, just as *Bontius* describes it, *Hist. Nat. Lyce.* 4. They preserve here another kind of *Lizard* wing'd like a Bat, the only kind of Dragons that ever has been seen; what the Scripture mentions of them seeming altogether congruous to this Creature, which commonly dwells in desolate places and solitary Caves, and can't fly at any distance; the Naturalists call it *Draco volans* and *Serpens alatus*. Besides these, they have a good Collection of *Vipers* and *Serpents* of the *Indies*, and especially of the Isle of *Ceylon*. The true *Indian* Locust, the *Acrimat.* of *Piso*; if it wounds a Man, it produces an immediate trembling all over the Body, which is cur'd by Palm-Oyl and the application of a certain Herb. I saw here the largest *Scorpion* that ever I met with, as big as one of our largest River *Crabs*: *Bontius* indeed mentions one he saw in the *Indies* of a quarter of a yard, but neither *Spain* nor *Italy* produces any that come near that for bigness.

The Rattle Snake.

After the publick Schools and the Physick-garden, the *Anatomical Theatre* challenges the first place, being much superiour to that of *Padua* and our *Chirurgeons-Hall*, and well furnish'd with Natural and Anatomical Curiosities, of which they have a printed Catalogue; those I took notice of were, two testaceous Shells, weighing about three hundred pounds each; the Skeleton of the Female *Ai*, a slow Beast, which, as *Piso* tells us, can scarce go in fifteen days so far as you can fling a Stone; the Skeleton of a Sea-Hare, which resembling somewhat our Land-Hares, (according to the Draughts they shew of them) with vast variety of all other sorts of Skeletons, the most entire and curious I ever saw. Here they also shew you the Effigies of a Peasant, who had a Knife cut out of his Stomach, and liv'd ten Years after, if any one will believe it; as likewise an odd-shap'd large Stone taken out of the Kidney of a young Maiden, a Present of *Heurnius*; as also a Liver containing such another Stone. I remember Dr. *P.* an ancient and noted Physician at the *Bath*, told me of a certain Body, which being open'd upon suspicion that the Kidneys were affected, upon strict examination one putting his Finger into the neck of the Ureter, or some of the *Caniculi* or *Tubuli* extended, took out a perfect petrified testaceous Shell, which (as far as I could guess by his description) was not unlike the *Turbines* or *Trochea* mention'd by Naturalists. See *Aldrovand. L. C. 25.*

The Anatomical Theatre

We saw here also the Head of the *Indian* Hog call'd the *Barbirousa*; an *Egyptian* Urn, with an Abortion preserv'd in it; as also a *Roman* Urn, with some Idols and Pieces of Antiquity; the Canon *Egyptiacus Ligneus*, the manner of embalming their Mummies; and certain Images taken out of their Sepulchres, which they used to bury with Persons of Quality, to preserve 'em from violence: Thus *Suetonius* tells us of *Nero*, that he used to worship a little Image of a Maiden, to *protect him against Conspiracies*. I pass by in silence a vast number of *Veins, Arteries* and other *Vessels* of the Body curiously preserv'd.

Quasi Romanum opus esset.

The *Apothecaries* and *Chirurgeons* (of the last of which there is above a hundred here) have each their particular Hall, and just without the Walls is their Pesthouse, or the Hospital used in the time of Plague; the Walk which leads to it is the best kept of any that ever I saw, and the Trees very tall; the Hospital is well built, and endow'd with a considerable Revenue, which is laid up every Year against a time of Plague, which is not near so frequent here now as in former times.

In their Childrens Hospital, call'd the *Weeshuys*, they maintain handsomly above nine hundred Children. We were credibly inform'd that it is a Custom here, establish'd by a Compact betwixt the several Towns of this Province, that if any of these Children, with permission from the respective Governours of the Hospitals, go to any of these Cities, they may demand to be entertain'd in the Hospital of that place to which they go; not unlike the Priests in Popish Countries, travelling by command of their Superiours.

Leyden was so famous formerly, that *Cornelius Aurelius* call'd it *Leyda* in the plural, as the *Athenians* did their University *Athenæ*; but *Ptolemy* calls it *Lugdunum*, the same Name it now bears; *Pliny* mentions it as an ancient Town; it was also call'd *Legia*, from the *Roman* Prætor, who having his residence in this Town, used to quarter his Legions hereabouts. It is water'd by many Canals, *Guicciardin* accounts no less than a hundred forty five, which number is considerably augmented since; besides that, it is wash'd by several branches of the *Rhine*. It is indifferently fortified with Walls and Ramparts.

The City of Leyden.

The Church of St. *Peter* is the oldest, and now the best in the whole City; its high Steeple was much celebrated among the Seamen, unto whom it serv'd for a Land-mark, but fell down in 1522. Here you see the Tombs of many persons eminent for their Learning, as of Dr. *John Heurnius*, *Gerardus Bontius*, *Thomas Erpenius*, *Rembertus Dodonæus*, &c. In St. *Maries* you see the Tomb of *Jo. Justus Scaliger*, the Son of the famous *Julius*; he could have no other Inscription upon his Tomb but the following:

Famous Men of Leyden.

Josephus Justus Scaliger. Hic expecto Resurrectionem.

Here liv'd *Carolus Clusius* the great Herbalist, the most celebrated *Justus Lipsius*, and the famous *John* of *Leyden* King of *Munster*; they shew you the Shopboard on which he used to work before he was intoxicated with the royal Title.

The place unto which they have given the Name of *Burgh* is a Mount of Earth cast up; some make *Hengist* the *Saxon* the Founder of it in 450, after his conquest of *Britain*, but others say it belong'd to the Burgraves of the Family of *Wassenaer*.

The *Townhouse* is a goodly Structure, adorn'd with divers excellent Pieces of Painting, by their celebrated *Lucas van Leyden*; they tell you, that the Emperour *Rudolph* offer'd as many *Hungarian* Ducats for one of these Pieces representing the Day of Judgment, as would cover it. It is one of the six Towns that anciently had a Voice in the Senate of the Province.

The chief Canals of this City are so curiously planted on both sides with tall Trees, that it appears to a Traveller like a pleasant Wood in a large City, or rather a City built in a Wood. The Prince's House stands in one

Privileges of the University.

Hartem.

The great Church.

The Church-Musick.

of

of their chief Streets call'd the *Rapenburgh*. Their Acts of Charity and Alms-house are very remarkable here; they have a certain College who take care of Orphans, and such Children whose Parents intend to remarry; their Government is administred by a *Vroetschap* or Council of forty four, out of which four Burghermasters are chosen every year; the plurality of Voices prevails in publick Affairs: The administration of Justice is committed to seven Eschevins and the grand Bayliff; their Subhastations both for Real and Personal Estates are without the least probability of Fraud.

The Government of Leyden.

Their Hall for the Woollen Manufactury is beyond our *Blackwel-hall*; and the Library contains a good number of Manuscripts, especially in the Oriental Tongues, bestow'd upon it by *Justus Scaliger*, some of them being those of *Bonaventure*, and what *Goltzius* brought from the *Levant*; *William* Prince of *Orange* gave the first beginning to it, by bestowing upon it the *Opus Complutense* and other Books of note. The Sick in the University Hospital are visited by the Students of Physick, who are to determine what Remedies they think most proper to be applied, which being approv'd by the Professor, he writes the Recipe, and the Students transcribe it; the dead Bodies of these Patients being all liable to be dissected, they never want wherewith to exercise their Industry in Anatomy.

Library.

The Students here wear Swords instead of Gowns, none but Professors being seen in Scholastick Habits, and that but rarely neither. He that intends to enter the List of the Students need only go to the *Rector Magnificus*, who enters them into the University Book for five Shillings, or half a Crown, and so by means of a certain Ticket they are entitled to a certain quantity of Wine and Beer, without paying Excise.

Scholars.

Their Degrees are not regulated here either by Time or Merit; if the Commencer can make a *Thesis* and pay his Fee, he may be admitted, a Professor bring his President, and any of the Scholars his Opponents. The Degrees of *Doctor* and *Master of Arts* are the only ones among them, that of *Batchelour* being not known here; the *Graduates* give publick Treats, and publish their *Theses* in print.

Degrees.

The Professors of the several Faculties print every year their *Series Lectionum*, containing the Times when, and the Subjects upon which they are to read in publick; some of them have two hundred, others three hundred pounds *per annum*.

Professors.

There are always three *Curatores* or chief Surveyors of the University, who take care of the publick Stock, Buildings, Privileges, and other matters relating to the University; for if a matriculated Student (as they term 'em) happen to become liable to a Criminal Action, the chief Officer of Justice can't apprehend him without the Consent of the *Rector Magnificus*; and if the Party be allow'd to be seiz'd, he is not committed to the common Goal, but to a Room of the Townhouse. In Civil Causes the *Rector* and his Assessors endeavour to accommodate matters between the Parties, which if it cannot be effected, they appeal to the Senate of the University.

Privileges of the University.

Tho' Duelling is strictly forbid here every year, at the time of the election of a new *Rector*, yet considering the various mixture of so many Nations that frequent here, it is almost impossible to be avoided. Their private Lectures are generally kept every three months, for which each Scholar pays forty or fifty Gilders, tho' they seldom are superour to the Lectures of our private Tutors; they commonly dictate in Latin, sometimes no less obscure than the sense it self.

The Renown of this University, and its difference from ours, has made me insist longer upon this Subject than I would have done upon any other account; we will now hasten to *Harlem*, where we arriv'd in one of the Passage-boats by the *Nieuwe Vaart* or *New Canal*.

This City is handsomly seated and built upon the little River *Spaar*, running thro that and the Country, from the *Y* to the *Harlem-meer*: the great Church is a spacious and lofty Fabrick, and has no less than three or four Organs, there being scarce any Church of note in this Country but what has one Organ; and as the *Lutherans* (the first Protestants) have scarce any publick Church without Vocal and Instrumental Musick, they seem to be a Reproach to our Dissenters, who exclaim with so much vehemency against these Church-Bagpipes, as they stile 'em. In the Walls of this Church they shew several Cannon Balls, which, the Inhabitants say, were left there ever since the Siege of this place by the *Spaniards*. In the Quire of this Church remains still the Stalls of several Princes and other Persons of great Quality, most of 'em of the Order of the *Golden Fleece*, their Arms are painted on the Backs. In this Church (formerly dedicated to S. *Bavo*, and one of the best in *Holland*) are still preserv'd two antique Monuments, viz. the Model of the Ships which were sent by those of *Harlem*, under the Reign of the Emperour *Frederick Barbarossa*, to *Palestina* (now *Damiata*) on the Borders of *Egypt*, and deliver'd one of their Counts of *Holland* (a Prisoner there) by cutting the Chain that guarded the passage into the Harbour, with the Keels of their Ships edg'd with Iron; and the two little Bells of *Corinthian* Brass brought from thence, which hang still in the Tower of this Church, and chime about nine every night. The young Men of this *Town* do in memory of this extraordinary Action, celebrate every Year the First Day of *January*, when they carry little Boats fashion'd like the Ship in the Church in triumph: they boast, that *Frederick Barbarossa*, in consideration of the signal Services done by those of *Harlem* in the *Holy War*, added the Sword to the Arms of this City, as the Patriarch of *Jerusalem* bestow'd the Cross upon it: this Church hath also divers remarkable Tombs, and many pretty Inscriptions.

Harlem. The great Church. The Church-Musick.

The next thing *Harlem* glories in is, the Invention of the Art of Printing by one *Laurence Coster*, an Inhabitant of *Harlem*, who, as *Guicciardin* says, walking one day in one of the Groves, of which they have several about this place, he cut some Letters on the Barks he had piel'd from the Trees, and stamping them inverted on a piece of Paper, found them to come right, then rubbing them over with Ink, it produc'd something like a Letter, tho' somewhat blotted; however, being encourag'd by this rough Draught, he cut more regular Letters on more proper materials, which being dipt into a more glutinous Ink, by repeated improvements he brought it at last to perfection. They tell you, that one of his Servants rob'd him of all his Instruments, and went with 'em to *Mayence*, whence it is that this City disputes this Invention with those of *Harlem*. His Picture, with the Letter A in his Hand, is to be seen in the Princes Garden. In the Houses belonging to them are divers good Pieces of Painting, among which that done by *Cornelius van Harlem*, a Citizen of this place, is highly esteem'd. They shew you here a Piece of *Coster's* first printing, the impression only on one side, as they used to print their first Originals. The *Traffick* of this City consists at present chiefly in Linen, (which they bleech better here than in any other place) as also in *Taffaties*, *Damasks*, *Velvets*, and other Silks.

Printing invented

From *Harlem* to *Amsteldam* is three hours or *Dutch* leagues, the Metropolis of the *United Provinces*. Half way betwixt these two places we took notice of the Palace of the *Dyckgraves*, as they call 'em, whose business 'tis to take care of the Sea Dykes, and meet in this House, where every one has his own Apartment, and resides during the time of their Consultations. Just by we observ'd a small Barrier against the Sea, compos'd of Piles joyn'd with long Ledges of Wood, to break the violence of the Waves of the Sea, and keep 'em from breaking into the Canal; this slender Bank being the Barrier betwixt the Sea call'd *Het Y* and the *Harlemmer-meer*, in 1672 a strong North-West Wind bore the Waters of the *Y* with such violence upon this Bank, that at last they bore it down, and laid all the Land (which lies all upon a level) betwixt *Harlem* and *Amsteldam* under Water.

Amsteldam. The Haarlem-meer.

Amsteldam hath got its Name from the River *Amstel* that runs thro' it and about it by the help of Sluces; its figure is semicircular, making an Umbo to the side of the *Y*, and towards the Land-side it is fortified with good Bastions, but its chiefest Strength consists in the Waters they can bring about it in case of necessity, which stood them in good stead when the *French* were come so near them, as to be Masters of *Naerden*. Their Streets are narrow, as well as the Fronts of their Houses; however, the *Heeren Graef* or *Lords Canal* is a noble and spacious Street, with fine Buildings on both sides; some have computed the number of Houses of this City to 54000, its length 2500 paces, and its breadth 2000.

The Stadthouse.

Their *Stadt* or *Townhouse* is a magnificent Structure, built upon wooden Piles like Masts of Ships, forced down with Rams, as thick as they can stand together, in the same manner as almost all the other Houses are in this City; this *Townhouse* is said to be supported by fourteen thousand large wooden Poles, and to have cost above one hundred thousand pounds, there being a vast quantity of Ironwork in this Foundation to cramp the Piles together; the Superstructure is said to have cost twice as much: It is a large square Fabrick of Free-stone, with *Corinthian* Pillars of the same, with Statues and History in *Relievo*, of a great height and most magnificent form, but the Portico is somewhat dull, and not suitable, even in respect of

of its bigneſs, to ſuch a noble and lofty Pile of Building.

The Noble Hall. The Great Hall is a noble Room indeed, adorn'd on all ſides with the fineſt Marble Pillars of the *Corinthian* Order; the Paintings on the Roof were not quite finiſh'd then, but the Floor of Marble is the moſt ſurprizing of all, for the Stones, without the addition of any other Lines but what is made by the joyning of 'em, repreſent both the celeſtial and terreſtrial Globes; which put me in mind of the famous Line of *Caſſini* at *Bologna*. In one of the upper Rooms we ſaw the Counſellors pleading their Cauſes before the Burghermaſters, (the Judges in Civil Cauſes) and they told us, that a Counſel's Fee was no more than three *Dutch* Shillings, which amounts to ſomething above eighteen Pence *Engliſh*. Criminal matters are determin'd by the Scout in the Orial below.

The New Church. The next Structure both in note and ſituation is the *New Kirk* or *New Church*; the Carvings on the Pulpit and the Canopy coſt 1000*l.* Sterling. The Sculpture on the back-ſide, repreſenting the Reſurrection, is an admirable piece of Workmanſhip; the Organ is alſo very remarkable, it counterfeits a *Chorus* of fifty two whole Stops, beſide the half ones, and the Screen is of maſſy Braſs.

The Tomb of *de Ruyter*. Here you ſee the moſt magnificent Tomb of the brave Admiral *de Ruyter*, his Effigies lying at large, adorn'd with all ſorts of Trophies, in Marble, Sculpture and *Relievo*, with large Inſcriptions. In one of the Iſles of this Church is another ſumptuous Monument, ſet up to the memory of *John van Galen*, another of their Admirals, with a very fine Inſcription.

The Old Church. The *Old Church* has ſcarce any thing remarkable but its Steeple and ſome Monuments of Perſons of Note, *viz.* thoſe of *Heemskerck* and *Hulſe*, Admirals; of *Iſaac Swerius* and another Hero, Vice-Admirals.

Their Admiralty-houſe is a goodly Pile of Building, with Magazines well ſtor'd, ſeated on the Sea-ſide.

Their Hoſpitals and Houſes of Correction. Their Hoſpitals, and other Houſes dedicated for the maintenance of the Poor, are more like Palaces than Hoſpitals. It is beyond all diſpute, that in no place in the World *Idleneſs* is leſs encourag'd, or *Poverty* better provided for; they have a peculiar Houſe for the confinement of Beggars, Vagrants, and other idle Fellows; in the *Raſphouſe* they keep *Petty Larciners*, and other ſuch-like Tranſgreſſors, as Women that counterfeit great Bellies, and Men that forge Paſſes or other Writings; here they raſp Braſilewood, Logwood, and ſuch-like; if Blows will not make them work, they are forced to it by being put into Water to their very Chins, ſo that they muſt be forced either to pump without intermiſſion, or drown. In the *Spinhouſe* they keep lewd Women, Drunkards, diſobedient Children, &c.

Their great Charity. Their Proviſions for the Poor are as much to be admir'd as their Care to keep People from being ſo; nay, *Amſteldam* ſeems to be one continued Alms-houſe, there being ſcarce a Window where you don't ſee a Box with a *Remember the Poor*; and there is no Bargain made, but ſomething is reſerv'd for the Poor, which is collected every Quarter by ſome of the Pariſh Officers; beſides which, the ſaid Officers do every firſt *Wedneſday* in the Month take their rounds, and collect the Charity of the Inhabitants at their Doors, and the Officers of the Hoſpitals do the ſame conſtantly twice a Week; nay, there is ſcarce any thing ſo inconſiderable or vile, but what pays a certain Tax to the Poor, *Mountebanks*, *Ropedancers*, *Bartholomew-boothis* pay the third Penny, and the Stage-players of *Amſteldam* eighty thouſand Gilders *per annum*; hence 'tis that they ſay, they provide for above 20000 Poor yearly in this City, ſome of their Hoſpitals containing 500, others 1000, and ſome 1500 perſons.

As their Exchange exceeds that of *Rotterdam*, ſo it is inferiour to that of *London*, tho' built ſomething like it, with Pillars and Piazza's; it is 200 foot long, and 130 broad.

The *Jews*. The *Jews* of *Amſteldam* live together in a peculiar Quarter, reſembling almoſt a little City; they have two Synagogues, one not inferiour to ſome of the beſt Churches in *London*, built all of Free-ſtone; and the other, tho' not near ſo ſumptuous, yet exceeds all they have at *Rome* or *Venice*; beſides which, they have their Schools, in which they educate their Youth in their own Religion and Tongue; and as their number is computed to amount to twenty thouſand, and many of them exceeding rich, having a vaſt ſhare in the *Eaſt-India* Company, ſo they ſeem to have greater Privileges than any other Chriſtians that are not of the Eſtabliſh'd Church. I went once into their Synagogue, where I ſaw about two thouſand Men and Boys with white Silk Hoods over their Shoulders, to hear two others (who had but little reſemblance to Prieſts) explain the Laws at the lower end of the Church; at every period they repeated their great *Alla* or *Allalujah*, but the reſt were not very attentive, but laughing and talking together.

Anabaptiſts mutiny at *Amſteldam*. In 1525 this City had almoſt fallen a Sacrifice to the *Anabaptiſts*, who had form'd a Conſpiracy to make themſelves Maſters of it, as they did at *Munſter* in *Germany*; this Deſign being agreed to be put in execution at the ſound of a certain Bell, ſix hundred of 'em were got into a body in the Market-place, before the Magiſtrates had any intelligence of it, they had already cut to pieces the Guards, and their number encreaſing every minute, made the beſt of their way toward the Gates; but ſome of the boldeſt among the Citizens having cut the Bell-rope and barricado'd the Streets thereabouts, they were prevented from being joyn'd by their Accomplices; the Night coming on, gave time to the Magiſtrates to conſult what was beſt to be done to quench the Fire of this Rebellion, which was happily effected the next Morning, the Conſpirators being all either diſpers'd or deſtroy'd.

Since their freeing themſelves from the *Spaniards*, and the eſtabliſhment of *Liberty of Conſcience*, this City has ſo encreas'd in Trade and the number of its Inhabitants, that it has been no leſs than four or five times enlarg'd, *viz.* in 1585, 1614, 1662, 1675. Every Spring, about the Month of *April*, they ſend a vaſt Fleet to the *Baltick*, beſide what goes to other parts of *Europe*.

Their *Eaſt-India* Company. But their *Eaſt-India* Company ſurpaſſes all the other Eaſt-trading Societies in the World for Traffick, Power, and Riches, and the number of Ships, they having oft waged War with great ſucceſs with ſome of the moſt potent Princes in the *Indies*, unto whom they are become formidable upon that ſcore; ſome ſay they conſtantly maintain thirty thouſand Men, and two hundred capital Ships; thus much is certain, that they have not only quite diſpoſſeſs'd the *Indians* in many places, but alſo the *Spaniards*, *Portugueſe* and *French*, nay, I may add alſo the *Engliſh*, and by this means monopolize a great part of the *Eaſt-India* Trade in *Europe*; and, to their great credit be it ſpoken, have been no leſs careful in introducing and propagating the *Chriſtian Faith* among the *Barbarians*, by ſending thither and maintaining a ſufficient number of Miniſters and Schoolmaſters, as alſo by tranſlating Bibles, Prayers, and other uſeful Books, into the *Indian* Tongues, much beyond what the *Roman Catholicks*, and even the *Jeſuits Miſſionaries* themſelves, can boaſt to have perform'd in thoſe parts.

The extent of their Dominions. From their Dominions you may make a computation of their Strength: They have a Fort on the *Cape of Good Hope*, for the conveniency of taking in freſh Water and Proviſions, by ſuch of their Ships as paſs and repaſs to and from the *Eaſt-Indies*: In the Iſle of *Java* they have a conſiderable City call'd *Batavia*, regularly fortified; in *Bantam* they have great Poſſeſſions, as well as in the *Moluccа* Iſlands and thoſe of *Banda*; they drive a vaſt trade in *China* and *Japan*; how they made themſelves Maſters of the Trade of *Amboyna*, our *Engliſh* were long ago made ſenſible to their coſt; in *Perſia* their Colonies are ſo numerous, that they are even formidable to that great Monarch; the Coaſts of *Malabar* and *Cormandel* is a continuation of their Settlements and Colonies, and they have conſiderable Plantations in the Countries of the *Mogul*, and in *Golconda*; and *Ceylon* may properly be call'd their own, ſince they have poſſeſs'd themſelves of *Columba*, and confin'd the Emperour of that Iſland to the inland Mountains.

The ſeveral Chambers of this Company. They have divers Aſſemblies or Meeting-places in ſeveral Cities, call'd by them *Chambers*, as at *Delft*, *Rotterdam*, *Middleburgh*, &c. but their *Great Chamber* is at *Amſteldam*, where they have built two Palaces for that purpoſe, fit for the reception of a Prince: By vertue of their Charter they have an abſolute juriſdiction in Criminal Affairs in the *Indies*, and Interlopers are puniſh'd with Death even in *Holland*. To be ſhort, this Company is in ſome meaſure the Baſis of their Government.

The paſſage of the *Pampus*. Notwithſtanding all theſe Advantages, *Amſteldam* labours under one great Inconveniency, *viz.* the paſſage of the *Pampus* into the *Y*, and from that into the *Zuyder* Sea, being ſomewhat too low, and conſequently not paſſable for great Ships, which was the reaſon they had formerly ſcarce any Men of War of above ſixty Guns; but having experienc'd the diſadvantage they lay under in this reſpect to their coſt, in ſeveral Engagements with the *Engliſh*, they built twenty more of eighty Guns a-piece and upwards, and the ſame *de Witt* was the firſt that ſhew'd 'em the method of bringing them over the *Pampus*.

The Government. The Government of *Amſteldam* is manag'd by a Council of thirty ſix Perſons, who enjoy this Dignity for Life, and upon the Death of one of their Members, chuſe another

ther in his ſtead; as likewiſe the four Regent Burgher-maſters: They have nine Eſchevins, who are the Judges in criminal matters, their Scout being like our Sheriff, who apprehends the Malefactors, and ſees Sentence executed: their Penſioner is like our City Recorder.

Their heavy Taxes. Their Taxes are innumerable, and ſo heavy that they would prove inſupportable to any but the *Dutch*, who looking upon their Country as their common Father, unto whom they are beholden for every thing, they think nothing too much for him, and willingly pay Exciſe out of what they eat and drink, to let him have his ſhare: What Taxes they pay for their Houſes and Lands, tho' they are exceſſive in themſelves, yet the Security they enjoy in their Titles by their publick Regiſters makes an ample amends for them. The Bank. What is paid to the Bank of *Amſteldam*, (the beſt in the World) as it is chiefly done by thoſe who have the moſt benefit by it, may rather be call'd an Inſurance than a Tax, if a Fund ſecur'd only by Credit may deſerve that Name.

Their *Lemm*, or general Pawn-Office. Their publick Pawn-Office or *Lombard* is alſo no ſmall Conveniency to this great City, which prevents Extorſions and Theſts; and as all the forfeited Goods are ſold here by open ſale, the Owner may buy his Goods again. Voluntary Bankrupts are puniſh'd pecuniarly, corporally, and ſometimes capitally; and if they are prov'd perjur'd in giving an account of their Eſtates, they die by the Law. Frauds are alſo puniſh'd with Death; and an Intention of Murther is look'd upon almoſt as criminal as the Fact. On the other hand, Creditors are oblig'd to maintain their Debtors in Priſon.

Their Muſick houſes. What is moſt blamable in the Government of this City is, the publick Licenſe they give to *Muſick-houſes*, where Women and Men enter, in the face of the World, to make their Bargains for Lewdneſs and Debauchery, in which point they exceed all whatever I ſaw of this kind in all my Travels, not excepting even *Rome* it ſelf.

Schola Illuſtris They have no Univerſity here, but ſomething reſembling an Academy, which they call their *Schola Illuſtris*, where, in the Summer-time, ſix Profeſſors keep their publick Lectures in their reſpective Faculties. They have alſo a ſmall *Anatomical Theatre*.

The Air of *Amſteldam* is not very wholeſom; formerly they us'd to be often afflicted with the Plague, but not of late, ſince that in 1663, the reaſon whereof is attributed to the extraordinary neatneſs of the Inhabitants, and the laying aſide the uſe of Wells, inſtead of which they gather and preſerve the Rain-water with a great deal of care.

The Phyſick-garden. Near the *Jews Quarter* they have of late Years cultivated a pretty little Phyſick-garden, the Supervifor of which (a curious Herbaliſt) beſtow'd upon me ſeveral Exemplars of collected Plants brought from the *Cape of Good Hope* and the Iſle of *Ceylon*, *viz.* the *Arbor Cotonea* or *Cotton-tree*, which bore a tuft of Cotton there; *Goſſypium ſive Xylon*, *Chabrei Gerardi*, the *Melo Cardnus Echinatus*.

Famous Men of *Amſteldam* They have in *Amſteldam* ſeveral Cabiners of Curioſities, gather'd by Men of Learning and Induſtry, this place being famous for divers Men of extraordinary Ingenuity, witneſs their *Janſon* and *Sandius*, two Divines; and *Spigelius* and *Horſtius* for Phyſick. During the general Calamity in *Holland* in 1672, when the *Amſteldammers* were reduc'd to the greateſt Nonplus that ever could happen to ſo potent a State in ſo ſhort a time, by the Arms of *France*, that appear'd within ſight of their Walls, there were not wanting among 'em ſuch as did ſhew themſelves both *true Patriots* and *bold Spirits*; Mr. *Valkanier* their *Burghermaſter* was the firſt, who in an eloquent Harangue exhorted them to venture all, rather than ſubmit to the *French* Yoke, who being bravely ſeconded by the Penſioner *Hop*, Mr. *Haſſelaer*, and divers other brave Citizens, it was reſolv'd to cut their Dams and lay all the circumjacent Country under Water; which being done accordingly, they preſerv'd their Liberties by this bold Reſolution, and afterwards joyn'd with the other Cities in annulling the Perpetual Edict, and reſtoring the then Prince of *Orange* to the Stadtholdership.

Naerden, *Weſep* and *Muyden*. At *Amſteldam* we took a Coach-Waggon (ſuch as they commonly uſe in *Holland*) for *Naerden*: In our way we paſs'd thro' *Weſep* and *Muyden*, two ſmall (but ſtrong) Towns, ſeated upon the River *Vecht*; it was near this laſt that the *French* made a halt with their Army after the taking of *Naerden*, which was then but ſlenderly fortified, and defended only by one Troop of Horſe and a few Companies of Foot but being regain'd in the ſame Year, at their Prince's perſwaſion was ſtrengthen'd with regular Fortifications of Earth and Brick-work. The Sea, which betwixt this place and *Muyden* is with a North-Weſt Wind forc'd ſtrongly upon the Dams, is kept out with prodigious chargable Works of *Piles*, *Planks*, and other *Timber-works*: It being then a time of Peace, there were no more than two Companies to guard it, and all the Guns diſmounted, which by ſome was attributed to the Jealouſie of the *Amſteldammers*. It is the capital City of the Country of *Goyland*.

Hereabouts I ſaw whole Fields with the true ſort of *Fagotriticum* or *Buckwheat*, the *Dutch* call it *Bockweyt*; I obſerv'd the ſame in *Eſſex*, in our way to *Holland*, where the Country People call it *Brank*; it is the *Fagopyron*, *Dodon. Eryſimum*, *Theoph.* C. B. the *Hollanders* make Bread of it, but the *Engliſh* feed their Horſes with it. The Country betwixt *Naerden* and *Utrecht* being high and ſandy, the Air is ſomewhat more wholſom and agreeable than in the watery parts of *Holland*.

Utrecht. *Utrecht* is an ancient City ſeated in a very good Country, anciently call'd *Urbs Antonina*, from a *Roman* Senator of that Name, who fled thither under the Reign of *Nero*, tho' others pretend to derive its Name from *Mark Anthony*; it got the Name of *Utrecht* by a certain King of *France*, who took it: Its ſituation is upon a Branch of the *Rhine*, where the Bed of the ancient *Rhine* lay, which is now drown'd in the *Leck*, and a new Canal cut out for new Waters, the *Vecht* croſſing it alſo: Its figure is almoſt circular, but not near ſo large as *Leyden*; it has an old Caſtle, built by the Emperour *Charles* V.

The great Church and Steeple. Their *Great Church* has a very old (but noble) Steeple, built after the ſame manner as that of *Delft*, and is four hundred and ſixty ſteps high: The Church has been alſo a goodly and lofty old Structure, but was for the moſt part beaten down ſome years ago by a Storm. In this Church, near the Quire, is the Tomb of *William Joſeph* Baron of *Gaunt*, who, as appears by the Inſcription, commanded in that famous Expedition when the *Dutch* came up our River *Thames* as far as *Chatham*; his Effigies is ſeen lying at length upon certain Trophies, his Atchievements being ſet forth in *Relievo* on the Baſe. Near this you ſee another Tomb of one of their Biſhops of an ancient Family, nam'd *George d'Egmont*. The Tomb of Van Gaune.

In their Church of St. *Mary*, commonly call'd the *Engliſh Church*, they have a Story by Tradition of a Pillar founded upon a Bull's Hide; it is to be ſeen in the Nave of the Church: And the half-defac'd Inſcriptions (made by an old Biſhop of theirs nam'd *Baldwin*) on the two Pillars that ſupport the Dome tells you, that the Emperour *Henry* IV. having ſack'd the City of *Milan*, and burnt the Church of St. *Maries* there, afterwards lamented his Raſhneſs, and vow'd to erect ſuch another Church to the honour of the Virgin in any other place; which *Conrade*, the then Biſhop of *Utrecht* (who attended him in that Expedition) improving to the advantage of his See, engag'd him to have the ſaid Church built at *Utrecht*: But whilſt they were imploy'd in the erecting of this Structure, the Workmen found a certain place ſo muddy as not to be able to bear one of the Pillars that was to ſupport the Church, till an ignorant Fellow call'd *Fuſo* offer'd to make a firm Foundation, but asking an extravagant rate for his Art, the Biſhop prevail'd upon his Son to pump the Secret out of his Father, which being done, the Pillar was fix'd upon Ox-hides: The old *Fuſo* ſeeing his Secret diſclos'd, and himſelf diſappointed in the hopes of his Reward, was ſo incens'd thereat, that he ſtabb'd the Biſhop. On the Pillar which they would make you believe was erected upon Bulls-hides, you ſee theſe odd Characters, intimating perhaps the date of the Year:

M * ① I *

Underneath them you ſee the Figure of a Bull in *Relievo*, with this Diſtich:

Accipe poſteritas, quod per tua ſecula nulla
Taurina Cutibus fundo ſolidata Columna eſt.

But conſidering that it was *Frederick Barbaroſſa*, who reign'd a hundred years after *Henry* IV. that ſack'd *Milan*, and was commanded by the Pope to build this Church, this Story muſt be rank'd among the fabulous Popiſh Legends.

The Library. This Church has a little Library belonging to it, containing ſome old Books and Manuſcripts, and among the reſt a Bible of the old Tranſlation, in ſix Volumes, finely writ; beſides, ſome Pagan Idols, an Elephant's Tooth with exotick Characters and Figures upon it, &c.

The Univerſity. The Univerſity of *Utrecht* was founded in 1636, being model'd much after the ſame way as that of *Leyden*: Their Schools for publick Lectures are but indifferent, being only three in number, one for Divinity, another for Philoſophy, and the third for Law and Phyſick:

Every fourteenth Year they have what they call a *Jubilee*, when they celebrate their ſolemn Commencements, but don't come near to thoſe of our Univerſities either in Exerciſes or Splendour.

On one of the corners of the Ramparts they have a little Phyſick-garden, which contains nothing but a few Herbs commonly uſed by the Apothecaries. About their old Walls (which have very pleaſant Walks) I found in great plenty the *Cymbalaria Italica*, a Plant much diſputed about among the Herbaliſts what *Species* to refer it to, but all agree, that its Leafs reſemble neareſt the *Hedera terreſtris* or *Ground-Ivy*; and *Matthiol* obſerves, that in *Fluor. alb. mulierum* it is uſed with Oyl and Vinegar, like other Sallads. It grows alſo frequently about *Padua*, where the Apothecaries uſe it in the compoſition of their *Unguent. Populeum*, inſtead of the *Cotyledon verum* or *Umbilicus veneris*; in *Engliſh* it is call'd the *Italian Baſtard Navelwort*. In the Ditch that ſurround the Walls we obſerv'd abundance of the *Militaris Aizoides*, the *Aloe aquat. paluſtr.* C. B. L. B. our *Water Warriour*, which grows in abundance about *Cambridge* and in the Iſle of *Ely*. In the Fields near *Utrecht* we ſaw the *Baccharis* like the *Monſpelienſium*, being a kind of *Coniza* or *Fleabane*.

Their Walks round the Town are very pleaſant, eſpecially that which is ſomething like our Mall in S. *James's* Park, but neither ſo large nor pleaſant. The Air is very healthy here, there being an eaſie deſcent from the high ground of this place to the Sea-ſide, which is plainly to be perceiv'd from the Tower of the great Church. For the reſt, *Utrecht* is neither ſo large nor ſo uniformly built as ſome of the Cities of *Holland*; and tho' it has ſome Canals, yet are they neither ſo large nor ſo numerous as in the Seacoaſt Towns.

Their Civil Government

Their Civil Government is manag'd by two Scouts and four Burghermaſters, of whom two are choſen every Year. For the reſt, its ſituation is more fitted for Pleaſure than Strength, and it has a great number of delightful Villages about it, which eſcap'd the fury of the *French* Soldiers in the late Wars, by their early Compoſition. Before the Reformation this City was overſtor'd with *Abbies* and *Convents*, and Pope *Adrian* IV. was a Native of this place, whoſe Epitaph ſpeaks his Humility and Modeſty:

Hadrianus ſextus hic ſitus eſt, qui nihil ſibi infelicius, in vitâ duxit quam quod Imperaret.

The Union of Utrecht.

It was an ancient Epiſcopal See, but what has rais'd its Renown of late is, the famous *Union of Utrecht*, which laid the Foundation to the moſt potent Commonwealth of the *United Provinces*, after the Pacification of *Ghent* was found too weak to ſupport its intended Deſign, the *Catholicks*, tho' joyn'd with the *Proteſtants* in point of Intereſt in reſpect of their Liberty, being found unwilling to lend them an helping hand in the eſtabliſhment of their Religion, which made the Prince of *Orange* convene thoſe of *Guelderland*, *Holland* and *Zealand* at *Utrecht*, where they entred into this Union.

Vianen.

From *Utrecht* we continued our Journey to *Vianen*, a wall'd (but not fortified) Town, upon that Branch of the *Rhine* which from thence forward is call'd the *Leck*, which we paſs'd in a Ferry-boat at the *Leck-ferry*; it is a privileg'd place, belonging to the Lord of *Brederode*, of the ſame Family that headed the *Geuſes* at *Bruſſels*, when they preſented their Petition againſt the Inquiſition in 1566. The Town has nothing remarkable, except a handſom Country Seat which belong'd to the Count of *Dowey*, then at the Court of *Berlin*, his Uncle being lately ſlain at the Siege of *Buda*, who left an Eſtate of ten thouſand pounds *per annum* to him. It has very handſom woody Walks all about it, and the Garden, which is a quarter of a mile from it, has tolerable good Water-works, and the fineſt Walks of male Fir-trees that ever I ſaw. In a Summer-houſe belonging to this Seat were divers peculiar Aſſemblies kept, on account of the before-mention'd *Union of Utrecht*.

In our way we paſſed thro' *Leckerfield*, *Lexmont*, and *Meerkiſh*, ſmall Villages; the Fields thereabouts were full of Hemp, which grows very rank and high here: In the Ditches fill'd with freſh Water we obſerv'd great plenty of *Aloe*, or *Aizoides Militaris*. This way brought us to *Gorcum* and *Workum*, both ſeated upon the River *Wahl*, almoſt oppoſite to one another.

Gorcum.

Gorcum is of no great circumference, but well fortified to the Land-ſide, and ſufficiently defended on the other ſide by the Waters of the *Wahl* and *Maeſe*, which are twice as broad here as the *Thames* by *London-bridge*. Its ſituation is juſt on the point of the *Bommel-Iſle*, made by the Branches of the *Wahl* and the *Maeſe*; the River *Linge* runs alſo thro' the Town. The Country about it is call'd *Arkel*, being the Title of an ancient Lordſhip. It has a lofty handſom Steeple, and is not above five miles from *Dort*. Near it is the Caſtle of *Leveſtein*, where *Hugo Grotius* and ſome other noted *Remonſtrants* and *Arminians* were detain'd Priſoners.

Worcum.

On the oppoſite Bank of the ſame River, is *Worcum*, noted chiefly for its ſtrength; it belong'd formerly to the Family of the Counts of *Horn*, one of which was executed at *Bruſſels* with the Count of *Egmont*.

Henſden and Bommel.

As we were travelling from hence to the *Boſch*, we left *Heuſden* (a ſtrong place) to our right, and to the left the Town of *Bommel*, a place famous for its artificial and natural ſtrength, being ſeated upon an Iſle, and the ſame which *Cæſar*, in his deſcription of the *Maeſe*, call'd the *Inſula Batavorum*.

Hertogen-boſch. Boiſle-duc. Boſch.

From hence travelling for ſome time thro' very marſhy grounds, we came to the *Boſch* or *Hertogen-boſch*, or *Boiſle-duc*, (as the *French* call it) *i. e.* the *Duke's Wood*, from a Foreſt that was formerly hereabouts, belonging to the Dukes of *Brabant*; this Town is of very difficult acceſs, being ſeated on the River *Dieſe*, in the middle of a Lake, there being no other Avenues leading to the Town but Cawſeys made for that purpoſe of half a mile in length, the City it ſelf being ſeated on a riſing ground, defended by a ſtrong Wall and deep Trench; beſides that, the Avenues are commanded by ſeveral Forts, and the Citadel commands one ſide of the Town, and the Country towards *Bommel*; it had then a Gariſon of four Regiments, and a good Magazine.

The Houſes here have but a ſlender aſpect, in reference to what you ſee in *Holland*, being for the moſt part of Wood, and cover'd with Planks; however, their Market-place is ſpacious, and the Townhouſe a goodly Structure, built in imitation of that of *Amſteldam*.

Their chief Church, dedicated to S. *John*, is a good old Fabrick, provided with an excellent Organ, and adorn'd with as fine a Skreen as ever I ſaw out of *Italy*, and the Figures and Ornaments of the Skreen, as well as of the Altar, remain undefac'd, tho' in a *Proteſtant* place.

In the Quire you ſee painted the Arms of ſome of the Knights of the Golden Fleece, with a ſhort hiſtorical account of the inſtitution of that Order in *French*, by *Philip* (ſirnam'd *the Good*) Duke of *Burgundy*, *Lorrain* and *Brabant*, in 1429, in the City of *Brabant*.

This Town is properly ſeated in the Province of *Brabant*, and had formerly a Biſhop, Suffragan to him of *Mechlen* or *Maliues*, and has ſtill many Villages under its juriſdiction; the Air is not extraordinary good here, by reaſon of its ſituation in the midſt of the Marſhes. They ſhew here a certain Cabinet of Curioſities, where, among other Rarities, we ſaw a preternatural Object of a Woman of *Purmeren* (in *Holland*) with a ſort of Excreſcence on her Forehead of half an ell long, reſembling a Horn; a large *Xiphias*, as the *Greeks* call it, the *Gladius* of the *Latins*, or the *Sword-fiſh*, a Fiſh very common in *Italy*, where they plant certain Fellows on the Cliffs near the Sea-ſide, to give notice to the Fiſhermen whereabouts they eſpy the Fiſh, who ſtrike him with a Harpoon, and ſo give him Line enough till he is quite ſpent; in *Meſſina* they eſteem him a great Dainty. One of the largeſt *Stellæ Marinæ* or *Sea-Stars* that ever I met with; abundance of Ivory-work curiouſly done, beſides ſome Skeletons, &c.

The Sword-fiſh, how taken.

From hence to *Breda* is eight long leagues; in our way, about half a mile from the *Boſch*, we paſſed by two Forts, that command the Avenues on that ſide where the Moraſs is moſt acceſſible, and afterwards travelling thro' ſandy Plains and Heaths, we took notice of the *Salix Argentea* and *Erica vulg. & Corii folio*, *i. e.* the Silver ſhrub-by Willow, the thin leaf'd Heath, and the creeping *Dutch* Heath; we alſo ſaw the Herb call'd by ſome *Herba Turca*, the rough Head of it, more commonly known by the name of *Herniaria*, or the *hoary Rupture-wort*. We paſs'd by the way thro' a Wood of four miles long, as regularly planted as the Trees of the moſt artificial Walks.

Breda.

Breda was about three hundred years ago annex'd to the Family of *Naſſau* by Marriage; it is an ancient Barony, having about ſeventeen Villages under its juriſdiction. The City is ſeated on the River *Had* and *Merk*, being ſomewhat leſs than *Hertogen-boſch*, but much better built, and more regularly fortified after the modern way, and they were then ſtrengthning it by ſome additional Works. The Family of *Naſſau* have a handſom Palace here, with a delicious Garden, between the body of the Town and the Works; and Prince *Henry* of *Naſſau* built another in the Citadel in form of a Caſtle, after the antique way; it has a noble Portico and handſom Gallery, and the Box-work in the Garden is extraordinary curious. The Great Church, with its Tower, are old, but goodly Structures. In a ſide-Iſle of this Quire is the

Tomb

Tomb of the just-now-mention'd Prince *Henry* I. of *Nassau*, whose Effigies, with that of his Princess, you see at length on a Marble Base, with a Marble Canopy over them, supported by four Statues representing as many ancient Heroes kneeling, at the four Angles, with these Inscriptions at two of the corners:

C. Julius Cæsar / *virtute bellica* / *Imperavi Fortitudo.*

Mattillius Regulus / *Infractus* / *Servavi Magnanimitas.*

Divers other Inscriptions relating to the several Revolutions of this Town are to be seen in this Church, and among the rest two relating to the taking of it by *Spinola*, 1624, and its being retaken by *Frederick Henry* Prince of *Orange*, in 1637. Some say, that the final conclusion of the Union of *Utrecht* was made here; certain it is, that in 1660 a Treaty was manag'd here for the restauration of King *Charles* II.

The most eminent Men of this place were *Kecelius*, *Buscmius*, *Gerard de Breda*, &c.

Maestricht. The next place we came to (under the jurisdiction of the *United Provinces*) was *Maestricht*, seated upon the River *Maese*, an ancient Town, mention'd by *Cornelius Tacitus*, and an old Bishop's See, which was from thence translated to *Liege*. The Country about it is plain and fertile, especially towards *Tongeren*.

On the other side of the River is a small Town call'd the *Wiick*, joyn'd to the other by a fair Bridge, and enclos'd in the same Fortifications. Their Houses are of late built of Brick, by order of State; their Market-place is spacious, and the Townhouse a modern Structure after the model of that of *Amsteldam*, but not near so large; it has a fine *Orial* and *Cupola*. The *Jesuits* Church here is not so magnificent as these Fathers have in most other places, where they have better opportunity to enrich themselves: There are also divers Convents here, belonging to other Orders; the *Calvinists* have two Churches, the *Lutherans* one, and the *French* one.

In Government. The greatest part of the Inhabitants are *Roman Catholicks*, but the Government is equally divided betwixt them and the *Protestants*, with such an entire Union, that there is no State-administration manag'd here, but a *Protestant* and *Romanist* are joyn'd in Commission.

Strength. This place being one of the chief Frontier Towns of *Holland*, is of great strength; the Walls are reputed to be about two miles and a half in compass, they are old, and not extraordinary regular, but very broad, thick, and strongly made, strengthned and cover'd with abundance of Half-moons and other Works, especially to the North-West, where the *French* made their main attack in 1675, which is since cover'd with divers new Outworks; it has a Hill on the South side, where the *French* then planted two Batteries, notwithstanding which they look upon this side as the strongest part of the Town, by reason of the vicinity of the little River *Jecker*, by stopping of which they can overflow all the Ground betwixt the Walls and the Hill. The Governour of it then was Prince *Waldeck*, and the Garison consisted of ten Regiments of Foot, and two of Horse. It belong'd formerly to the Bishoprick of *Liege*, till one of their Bishops sold it to *Charles* V; the *Hollanders* took it from the *Spaniards* in 1633, and the *French* from them in 1675, but were forc'd to restore it to them in 1678, by vertue of the Treaty of *Nimeguen*.

Petersburgh. At no great distance from *Maestricht*, on the side of a Hill call'd *Petersburgh*, we entred the famous Quarry, having on the top of the Hill a small Convent of the *Brothers Minims*, near which we came out again. They told us here, that this subterraneous passage was of such an extent, that two of their Fraternity venturing in without Lights and a good Guide, were never heard of again. This is a Freestone Quarry, hewn out for many years successively in such a manner, that Columns of Stone being left in a regular order, it resembles a subterraneous Palace or Vault made on purpose; our Guide inform'd us, that its whole length was nine *English* miles, and that from the place we went in, to that we came out again, it was about one *Dutch* or three *English* miles, but it did not seem so much to us. In one of these Alleys which made these numberless square Columns, I observ'd a very good *An inverted Spring.* Eccho, and in another part a Spring of Water which, instead of rising from below, drop'd down into a Basin from the Rock above twenty five fathom thick; the Water had a very disagreeable Nitro-sulphureous taste: The Vault, with its Columns, is generally twenty foot high, and more in some places, and its extent encreases every day, by reason of the great conveniency they have of rowling down such Stones as are hewn out, from the Hill to the River-side on which it lies.

After we had made a little excursive journey into *Flanders*, (of which in the next Chapter) we went from *Bruges* by the *Nieuwe Vaert* or *New Canal* towards *Sluys*. In our *Sluys.* way thither we pass'd thro' a little Town call'd *Damm*, and near to the Fort of S. *Donaw*, both belonging to the *Spaniards*, being a little, square and regular Fort, where Passengers are to pay about half a Stiver: About three hours after we came to *Sluys*, a Port-town surrounded by the Sea, its Harbour being capable of five hundred Ships of great burthen; it has on the North-west side an old Castle, and a pleasant Grove: This place is memorable for two Sieges, which cost abundance of Men; the first by the Duke of *Parma*, in 1587, and afterwards (*viz.* in 1604.) when it was retaken from the *Spaniards* by Prince *Maurice* of *Nassau*.

From hence we cross'd the Water in a Boat to *Cattsand*, *Cattsand.* an Isle which has got its Name from its *Sandy Ground*; it had formerly some Towns and Forts, and was the place where both the before-mention'd Generals had their head Quarters; it has now not so much as one Village, and only some small remnants of a *Dutch* Fort, demolish'd some years before. This Isle, as inconsiderable as it now appears, was once the Seat of the late learned *George Cassander*, celebrated for his Writings against the *Anabaptists*. We observ'd here some Sea-plants in great plenty; as, the *Halimus, sive Portulaca marina* C. B. *Marina fruticosa Halimus*; *Clusii* J. B. the Sea-Purslain, which the *Dutch* pickle as we do our Samphire; *Kaligeniculatum majus* C. B. *Salicornia* J. B. *Ger.* Park. *Saltwort* or *Glasswort*; *Kali spinosum* C. B. *Tragus Matthiol.* Park. Ger. *Tragus spinosus* J. B. Prickly *Glasswort*; *Kali minus* Ger. *Soluta minus arborescens vermiculatum* J. B. *Glasswort*; the *Papaver Corniculatum flore luteo* J. B. Park. yellow-horn'd *Poppy*; the *Halimus secundum Clusii* Ger. *Sallow-thorn*, or Sea *Buck-thorn*; *Eringium marinum Matth. Dod.* the *Sea-Holly* or *Eringo*.

From hence we pass'd in two hours cross the Water to *Flushing*, *Flushing.* a City of great Traffick, and an excellent Sea-Port, seated in the Isle of *Walcheren*, being almost surrounded by the Sea, and their Canals fit for the reception of Ships of vast burthen. The Houses are generally well built here, and the Townhouse is a goodly Structure. In their great Council-chamber you see the Portraicture of all the Princes of the House of *Nassau*. It is a place of great strength, and considerable for its situation, which made *Charles* V. leave this Lesson to his Son *Philip*, That by securing this place he might secure *Flanders*; and it was questionless for this reason that the Duke of *Alva* would have secur'd it to his Master's Interest, by ordering a strong Citadel to be built there, but the Inhabitants hang'd his Engineer, and so put an end to his Project, and were the first (after the Lord of *Lume* had seiz'd the *Briel*) that revolted in *Holland*; the Dukes of *Alva* and *Parma* both attempted it, but without success. This was one of the Cautionary Towns put into the hands of *Elizabeth* Queen of *England*, and Sir *Philip Sidney* was made Governour of it. And notwithstanding they were involv'd in so heavy a War, they erected a new Church for the *English*, a new Townhouse, and a Palace for the Prince.

From *Flushing* we travel'd in an hour to *Middelburgh*, *Middelburgh.* seated in the middle of the same Island, (whence it got its Name) of which it is the capital City. Their Market-place is very handsom and large, and the Townhouse a very old goodly Structure, having formerly been an Abbey, call'd *Nostredame*. They constantly maintain here, at the entrance into their Townhouse, three Eagles, as the living Emblems of the Arms of the Empire, (one of them being kept for a supply) in consideration of certain Privileges granted them by the Emperour.

Their New Church is a goodly Fabrick, their Houses are generally handsom, the Streets broad, and the Town very populous and full of Trade, being the Metropolis of the whole Province of *Zealand*, where the States of the Province meet, in the Prince's Palace. Here is also the Mint of the Province; and Ships of a great burthen may come up to it, by the way of an artificial Canal brought thither from the Sea.

We went up to the Tower of the Townhouse, from whence we had a full prospect of the whole Island, of the Town of *Ter-Vere*, seated on the North Shore of the *Ter-Vere.* Isle, from whence our ancient and noble Family of the *Veres* are said to derive their Name; as also of *Armuyden*, *Armuyden.* a small Town, and the places thereabouts where they make their Salt; and lastly, of the Fort of *Rammekens*, *Rammekens* which, with the Towns of *Flushing* and the *Briel*, was *Fort.* surrender'd as Cautionary to our Q. *Elizabeth*.

To say something in general of the Government, Manners and Customs of the *Dutch*, it is to be observ'd, that it was heretofore much more Democratical than it is

at present; the first Mould of this now so potent Republick was made at *Dort*, in 1572, after the seizing the *Briel* and the revolt of the *Flushingers*, where the Prince of *Orange* being declar'd their *Generalissimo*, their Union of *Utrecht* did not ensue till seven Years after, *viz.* in 1579.

Their Government. The Nobility as well as the Citizens send their Deputies to the General-Assembly of the Provincial States; these being their Representatives, the last of them were chosen by the Freemen, as our Parliament is now, but the *Dutch* Mob being found too turbulent, and consequently dangerous in such great meetings, the choice of these Deputies was committed to the chief Council of each City or Town which they were to represent. The Magistracy of the several Cities is compos'd for the most part of a certain number of *Burghermisters*, (like our Mayors) of *Eschevins*, as they call 'em, being Judges; and their *Scouts* are like our *Sheriffs*, as the *Pensioners* are the same with our *Recorders*. Each of these Towns or Cities hath its peculiar Jurisdiction, without any dependance or interferance on or with the Province in which they are seated; which tho' alledg'd by some as a mark of an independant Soveraignty, is no more than what all the Cities in *England* enjoy, no Sheriff of a County having any Authority to seize a Criminal in our Cities, all Seizures, Trials and Executions being perform'd by their own Officers, with this difference only, that whereas in our *English* Cities the Process runs in the King's Name, those of the *United Provinces* perform the same in the Stile and by vertue of their own Authority.

Their Ecclesiastical Jurisdiction. As to their Ecclesiastical Constitution, it is certain that they have a *National* or *Establish'd Church*; for tho' this point was left undetermin'd in the Union of *Utrecht*, it was afterwards (*viz.* in 1583) positively declar'd, that *Calvin*'s Form of Church-Government (which they gave the name of *Evangelical*) should be establish'd throughout the seven *United Provinces*, yet so that other Opinions should be tolerated.

In 1608 some Distractions had like to have happned, on account of some Disputes betwixt *Gomar* and *Arminius* and their Adherents, but the Synod of *Dort*, or rather the Prudence of the States, put an early stop to these Divisions.

Their Church Ministers are maintain'd by publick Salaries, without any Church-Lands, Tythes, or any other Contributions, which, together with the strict Rules impos'd upon them by the Civil Magistrates, makes them in some measure subservient to the State as well as the Church.

The People. As for the generality of the People, an unavoidable Necessity, as well as their natural Inclination, seems to engage them to Industry and Ingenuity; for they work hard and spend little, Herrings, Butter, Cheese, and Herbs being the ordinary Fare of the vulgar sort, whose surly temper makes the Character of Rusticity to have been impos'd upon the whole Nation. The Gentry themselves are very parsimonious in their Housekeeping, and not near so lavish in Clothes as most other Nations; they send their Children to *Leyden* or *Utrecht* for their better Education.

The generality of the *Dutch* are publick-spirited, whence it is that they seldom repine at Taxes, tho' never so heavy, and nothing is more severely punish'd here than Riots committed upon that occasion. Some attribute a sort of Dulness to the *Dutch*; however, it must be confess'd that the better sort among 'em have a sufficient share of Wisdom, to manage publick affairs to the utmost advantage; witness the Industry they shew in fortifying their Towns, Their Genius. strengthning their Dikes, managing their publick Stocks and Banks, but above all, their Maritime Affairs, unto which as they seem born by their very situation, so they have improv'd it to such a degree, that they have thereby drawn a great part of the Treasure of the World into their own Country, and besides this, never want Seamen and Understanding Persons to manage their Admiralties; Their Courts of Admiralty. there are certain Councils compos'd of such as are deputed from the chief trading places, which sit in certain Cities appointed for that purpose; these manage the Fund for their Fleets, try all Civil and Criminal Actions that relate to the Sea, and chuse all the Captains and other Sea-Officers, in which they have a peculiar regard to the vogue of the common Seamen, who upon that score have very seldom occasion to complain either of bad Diet or want of Wages. In all these Maritime Councils the Admiral or Vice-Admiral is President, whenever he happens to be present in any of the places where they keep their Sessions.

Add to this the Ingenuity the Common People shew, not only in improving their Lands, but also in the neatness of their Houses, Streets, Canals, Boats, &c. without which it would be impossible to keep the Air sweet in the Summer-time.

Tho' they are very apt to impose upon others, yet are they generally punctual in their Contracts; so that the only way to avoid being over-reach'd in *Holland* is, to make a Bargain with them beforehand.

The Women bear almost an equal share in the Drudgery of their Husbands, and in the Cities the Women often manage the Cash and part of the Trade, whence it is that there is much more equality observ'd here in their Families than in *England*, and other places, where the Husband is the head of the Family.

Their Meat is generally much better than their Cookery: With Corn and Materials for their Navies they are supplied from the Northern parts. Their Funerals are very grave, and not expensive. Prisons they have none, to speak properly, being only places of confinement, where the Debtors must be maintain'd at the charge of the Creditors that put 'em in. Their Language is a kind of a Dialect of the old *Teutonick*, model'd into many Monosyllables, and pronounc'd with a more tart and voluble-fineness.

It is however observable, that their former Frugality does not continue in the same degree, witness their stately Buildings in the new Streets of *Amsteldam*, their changableness in their Habits and Diet after the *French* mode; and the Folly of Gaming has also got no small footing among them. Their Cleanliness is very often incommodious, and they make but little account of the Sabbath-day.

Both Men and Women are generally bulky, and accounted more sturdy than truly couragious, tho' their *de Ruyters*, *Ghents*, *Opdams* and *Tromps* seem by their brave Exploits to contradict this Assertion; and the States always take care to reward good Services both while the Persons live, and raise them Trophies after their Death, which excites a most commendable emulation of doing well in those that serve them. Their Encouragement to Virtue.

It is very surprizing to see so many publick lewd Houses in a Country where they profess a more nice Sanctity than in some other places, where the same would be look'd upon as abominable: Young Women here justifie the liberty they take, whilst unmarried, with a common saying, that *their Bodies are their own, but afterwards their Husband's, and consequently not at their own disposal.*

Most of their ancient Nobility is rooted out by their Civil Wars and other Revolutions; a few are left, such as the *Brederodes*, the *Egmonts*, and the *Wassenaers*; the first have their Residence still at *Vianen*, near *Utrecht*; and the *Opdams* now bear the Title of *Wassenaers*; the Counts of *Egmont* are properly to be placed in the *Spanish Netherlands*. Some of these pretend to deduce their Pedigree from the ancient Counts of *Holland*.

To conclude; Notwithstanding the *Dutch* are charg'd with so much Dulness, it is evident, that both in their Revolt from *Spain*, and since they have disengag'd themselves from the Obedience to that Crown and the Confederacy of the *French*, they have by their Politicks sufficiently contradicted that Opinion; and as the Basis of their politick Maxims seems to be founded upon the *enriching of their Subjects at home, and strengthning themselves by good Alliances abroad*, they give Liberty of Conscience to all, and treat their Subjects with impartial Justice, prefer Peace before War, Merchants before Gentlemen, and Soldiers before Lawyers. In case of War, they sue for the Alliance of *England* and the House of *Austria*, keep the balance betwixt the two *Northern* Crowns, and love to be upon good terms with the Princes of the Empire, especially with the Elector of *Brandenburgh*, whose Assistance they may perhaps stand in need of at one time or other.

CHAP.

CHAP. II.

A Deſcription of the Spaniſh Netherlands.

Antwerp. THE firſt place we came to in the *Spaniſh* Territories was, the once ſo famous City of *Antwerp*. In our way from *Breda* we paſs'd thro' *Cage*, a neat Village, with a handſom Country Church, and ſo by the way of *Rysberg* and *Sundere* (inconſiderable places) over a long Heath to this City, where we found the *Roman* Religion appear in its higheſt ſplendour, it happning to be the firſt *Sunday* after the Feaſt of the *Aſſumption*, when in honour of the Virgin *Mary* the ſeveral Companies of this City go in ſolemn Proceſſion, with their Banners diſplay'd, carrying the Virgin, with ſome other Saints richly attir'd, thro' the Streets, follow'd by the ſeveral Orders of their Religious Perſons deeply border'd with the beſt Lace of their Country; it appear'd to us in all reſpects like one of our *Lord Mayors Shows* in *London*.

Antwerp is pleaſantly ſeated, in a fertile Country, upon the River *Scheld*, and near the *Schyne*, which joyns with the former below the Town. It is fortified with Walls well faced with Free-ſtone, of a great height, and ſo broad that Walks of great Trees are planted upon them, ſurrounded by a broad and deep Moat. The Citadel is a Pentagon, erected by the Duke of *Alva* upon a riſing ground, to command the City. It lies very convenient for Trade, Ships being able to come from the main Sea with one Tide up to it; and tho' the River near the City is not ſo broad as the *Thames* about *London*, yet it encreaſes much below, but as the *Fluſhingers* lye ſo conveniently for ſpoiling their Trade, they have now been careleſs in improving the ſame, to the ruin of this City.

In Fortifications.

In Extent and Buildings. Its compaſs is much the ſame as that of *London* within the Walls; their Houſes are handſomly built, eſpecially in the great Market-place (call'd the *Meer*) in the middle of the Town, and the other adjacent Streets. On the Head of the *Meer* is to be ſeen a moſt noble Crucifix of Braſs, of betwixt thirty ſix and forty foot high, erected in 1635, with this Inſcription:

Chriſto Crucifixo Sacrum.

The Church of S. Mary. Their Great and New Church is dedicated to *Our Lady*, a noble Fabrick both within and without; the Steeple is ſomewhat lower than ours of *Salisbury*, but moſt excellently wrought in Stone. About the Church you ſee many Altars and little Chapels beautified with exquiſite Workmanſhip of Marble. The Skreen, which is on the ſide of the Church, exceeds that of *Hertogen-boſch*: The Paintings of the Altars are moſt of the hand of the excellent *Paul Reuben*, who inhabited here; the Aſcenſion of the Virgin on the high Altar; the taking down of Chriſt from the Croſs in the croſs Iſle, and the Hiſtory of the Salutation and Circumciſion painted on the Valves of the Doors that lock up the former, all done by the ſame Maſter, are all highly eſteem'd, as well as another of his in the *Cupola*. The Portico of this Church, with its Marble Statues, is not inferiour to any in *Rome*. By the Symmetry of the Building of this Church it is eaſie to perceive, that ſuch another Steeple was deſign'd to have been erected, but perhaps the Church of the other made 'em lay aſide that deſign. We went up to this Steeple by 620 Steps, and then wanted 30 foot to the top, which, they told us, was cover'd with Copper Pans, to alarm the Country upon the approach of an Enemy, by ſetting fire to Pitch and other combuſtible matter, as we us'd to do with our Beacons. From it you have a moſt delicious proſpect of all the circumjacent Country, and the Sea; *Guicciardin* makes its height 420 foot of *Antwerp* meaſure?

This Church has a Dean and twenty four Canons, and a particular Order call'd *The Confraternity of the Circumciſion*, becauſe they pretend to preſerve here the true foreſkin of our Saviour, ſent them by *Godfrey* Duke of *Bouillon* King of *Jeruſalem*; and every Year on *Trinity-Sunday* they go in publick Proceſſion, which they call the *Feaſt of the Preſence*. They have ſeveral other Confraternities, as that of the *Holy Croſs*, that of the *Virgin*, of the *Sacrament*, of S. *Anthony*, of S. *Roch*, beſides ſome other *by-Confraternities*, ſuch as dedicate themſelves to *Arms*, *Rhetorick*, and other Sciences, who all have their peculiar Chapels in this Church, where they perform their Devotions on certain Feſtivals. In this Church King *Philip* held the firſt Chapter of the Order of the *Golden Fleece*, in 1556.

The Jeſuites Church. The ſo much celebrated *Jeſuites Church* is a moſt noble Structure, the Model of the inſide being not unlike that of our S. *Clements* in *London*, but ſomething longer, and not quite ſo broad: The Pillars that ſupport the Galleries, as well as the upper row that ſuſtain the Roof, are of the pureſt Marble, and the Walls and Roofs are wainſcotted, with Panels of the beſt Paintings of *Reuben* and other great Maſters. The Great Altar is very lofty and noble, of the moſt beautiful Marble that can be found, in which you ſee the Aſcenſion of the Virgin, by *Reuben*, and God the Father reaching down a Crown of Gold on her Head, with this Inſcription, *Veni, Coronaberis*. The Front is ſuitable to the reſt, reſembling ſomewhat that of our Theatre of *Oxford*, but twice as high, and beautified with moſt exquiſite Statues in the Niches.

These Fathers lead here a lazy idle life; they have a very good Library, and another private Chapel for the uſe of the Fathers belonging to the College, call'd *The Society Chapel*, where you ſee their Saints drawn in fine Paintings by the beſt Maſters, with their Names in capital Letters, with this Inſcription, *Sanctus Colitur XIII. Febr.* and ſo for the reſt, to put you in mind of their reſpective Feſtivals; which ſeems to contradict what they would generally make the World believe, *viz.* that they pay no adoration to the Saints or their Images. It is far otherwiſe in the *Lutheran* Churches, in which tho' you frequently meet with exalted Crucifixes, various Images, and many Pieces of Paintings, ſo much reſembling thoſe of the *Romaniſts*, that I have ſeen them by miſtake pay their Devotions there, as they would have done in their own, yet is all Veneration ſtrictly forbidden among them, they being preſerv'd only as the remembrances of our Saviour and the Devotion of his Saints, as we uſe our Prints and Pictures in the Bibles and Common-prayer Books.

Images in the Lutheran Church.

S. James's Church. Next to theſe, the Church of S. *James* challenges the firſt place; the High Altar is of the fineſt poliſh'd Marble, ſupported by two beautiful wreath'd Pillars of the *Corinthian* Order. Behind lies interr'd the famous *Paul Reuben*, the Painter of his Age and Country, (who alſo painted our Banqueting-houſe at *Whitehall*) in a by-Chapel of his own founding, the Altar-piece being a curious Painting of his own. A great number of Canons belong to this Church.

The Church of the Predicant Friers. The Church of the City, and beautified with many excellent pieces of Painting by the beſt Maſters. There is a ſeparate Sect of *Carmelites* here, who have a Cloyſter at one end of the City, but the College of the *Carmelites* lies near the *Meer*, or great Market-place; it has a very large Church and Quire, and a moſt curious Chapel in it, which contains the Heart of its Founder. Here you ſee the Eſpouſals of *Joſeph* and *Mary*, an excellent Piece, by the hand of *Paul Reuben*.

The Abbey of S. Michael. The Abbey of S. *Michael*, belonging to the Order of the *Premonſtrants*, is vaſtly rich, and has a noble Church; in it you ſee the Tomb of one of the Family of the *Stuarts*, and the Statues of the twelve Apoſtles round the Nave of the Wall. On the Altar is a fine Piece of *Reuben*, repreſenting the Sages adoring Chriſt. The Abbot's Apartments are very noble, and they have here fifty Veſtiments all white. The Founder both of this Church and Order was *Norbert* a Prelate, Son to Count *Herebert*, Palatine in *Picardy*, and in the Dioceſs *de Laon*, in a place known anciently by the name of *Premonſtre*, in 1124; his Life is written in Latin Verſe about the Cloyſter of this Abbey.

Plantin's Printing-houſe. The noted Printinghouſe of *Plantin* is a kind of little ſquare College, fitted for the lodging of divers Officers and Workmen; they are almoſt wholly imploy'd in Divinity-works.

Their Townhouſe is a handſom old piece of Architecture, and the *Eaſterlings* Houſe is a good Fabrick, ninety ſeven foot long, and ſixty five broad; the Exchange of *London* is ſaid to have been built after the Model of that of *Antwerp*, but the Copy much ſurpaſſes the Original. A certain Gentleman nam'd *Luerse* (who had been formerly Bedchamberman to K. *Charles* I, and ſpoke very good

good *English*) oblig'd us with the sight of an excellent Collection of Pictures by the best hands, *viz.* of *Reuben*, *Van Dyke*, *Lilly*; that of the Archduke *Leopold* on Horseback, by *Van Dyke*, is a most exquisite Piece; and the *Madona* of *Andrea Carta* is highly valued, besides divers others done by *Titian*, *Raphael* and *Palma*; they were all in his own possession.

Antwerp was formerly one of the Cities of the first rank for Trade in *Europe*, tho' now-adays there is but a slender Assembly upon their once so celebrated Exchange: It was also an Imperial City, and is still the capital City of the Marquisate of the same name; the Princes of the House of *Nassau* had formerly the Title of *Burghgraves* of this place, which has produc'd divers great Men, celebrated for Learning as well as Painting and other Arts, *viz.* the famous Geographer *Abraham Ortelius*, *Scotus*, *Gruterus*, &c. the most celebrated Painters, *John de Fuick*, *Reuben*, *Goltius*, *Heemskirk*.

Mechelen. From hence we travel'd thro' a very fine Country in five hours to *Mechelen*, a Town chiefly noted for the Lace they make, tho' they are imploy'd likewise in divers other Manufacturies of Linen, Leather, casting of Bells, great Guns, &c. It is seated on a rising ground, of a larger extent than *Hertogen-bosch*, but not near so strong, being no Frontier Town.

The Great Church. Their *Great Church*, dedicated to St. *Rumbald* is an ancient Fabrick, in which you see the Statues of the Apostles placed round the Walls. This St. *Rumbald*, they tell you, was stoned to death, like St. *Stephen*. In the Church is an Inscription in *French*, the Date being worn out, intimating, that *there lay the Body of* Margaret Stuart, *Daughter of* Her. *of her Royal Highness Madam the Dutchess of* Orleans, *Issue of* George Stuart *her Father, of the illustrious House of* Stuart *and* Lenox, *Earls of* Boverby *in* Scotland; *and of Dame* Mary de Baqueville *her Mother, of the Family of* Baqueville *in* Normandy, *who died*, &c. The situation of this City is in the very center of *Brabant*, at an equal distance from *Louvain*, *Brussels* and *Antwerp*, upon the River *Dele* or *Demer*, which runs thro' it, and the Tide comes somewhat above it: It is a Lordship, making (with its Appendences) one of the seventeen Provinces, whence it is that it had a Great Council and Parliament instituted in 1463, by *Charles* Duke of *Burgundy*; the Council consisted of thirty seven Persons, he himself President; when it was annex'd to *Spain* by Marriage in 1503, the numbers were alter'd, but the Parliament in substance settled and retain'd to this day: It is a Bishops See, founded in 1559, by *Paul* IV, and made Primate of all *Flanders*; the Cardinal *Granvel* was their first Archbishop. We observ'd on the Road near it growing the *Bellis Cerulea*, *blue Daisie*, the *Tanacetum* or *Tansy*, and the *Argentina* or *Silver-weed*.

The Convent of Alexis. Not far from *Mechelen*, near the Road leading to *Antwerp*, formerly stood a large Monastery encompass'd with a strong Wall, call'd the Convent of *Alexis*, containing betwixt five and six hundred religious persons, under the Government of four Presidents; they had liberty to go out and in when they pleas'd, and to marry, after they had renounc'd their retirement; but this Convent was laid desolate in the Civil Wars.

Vilvorden. Going from *Mechelen* to *Brussels* we pass'd thro' *Vilvorden*, an ancient Town, situate upon the little River *Senne*, from whence a handsom Canal is carried to *Brussels*; it was formerly very well fortified, but Time and the *French* have batter'd down its Walls, tho' the Castle (where formerly were kept the Records of the Dukes of *Brabant*) remains pretty entire. In this place it was that Mr. *Will. Tindal* our Countryman, that early Translator of the New Testament, suffer'd Imprisonment and Martyrdom against all the Laws of Nations, he being then a Subject to another Prince.

Brussels. A league further lies *Brussels*, an old Town, surrounded with Stone Turrets and a Moat; they walk on their Walls as at *Antwerp*: It is seated upon the River *Senne*, and has always been the Residence of the *Spanish* Governour of these Provinces; it exceeds *Bristol* in bigness, and is built upon a rise and a descent; their Houses resemble more our *English* than the *Dutch*, being cover'd for the most part with Slate and Tiles; the Townhouse is an old but noble Fabrick, not much inferiour (in proportion to its bigness) to that of *Amsteldam*, and the Front exceeds it much.

Its publick Buildings.

The Jesuites College. The Jesuites College here is exceeding noble, and by its Front, Church and Tower seems to have been the Model to that of *Antwerp*, being much older, and not so august. Their private Chapel is neatly wainscotted, and they have a delightful Garden; their Library is kept in a long Room, the Intercloses betwixt the Windows being adorn'd with the Pictures of the eminent Writers of their Society; and on the Wall at the entrance you see some *Roman* Antiquities, with ancient Inscriptions in Stone, brought thither from *Italy*. They have their several Schools, of Grammar, Rhetorick and Philosophy. We observ'd at that time in all their Churches a certain Inscription in *Dutch*, *French* and *Spanish*, written on Tables, *viz. Pray for the prosperity of the Christian Arms before Buda*; and soon after we were rejoyc'd with the News of the good success of that Siege.

The Governour's House and Park. The Governour's Palace, an old Fabrick, stands in the Park; it has another additional one near it, call'd the *Emperour's Palace*, perhaps from *Charles* V, who built it; it has a curious Grotesque and Waterworks, tho' within it is a very ordinary Building; they shew'd us a piece of Painting here done by thirty six hands. About the middle of the Park you see, in a little Grott, a Marble Statue of *Magdalen*, extended upon the ground, with Water dropping over her Face, a curious Piece by one *Canaw*, who was afterwards burnt at *Brussels* for committing Sodomy behind the high Altar.

In their Great Church (an old *Gothick* Fabrick) are the Tombs of two Dukes of *Brabant*, and on one side of the Isles of the Quire you see an old written account on a Table of two or three *Jews*, who having hir'd some Persons to convey the sacred Host to them, prick'd it with their Knives, and the Blood presently follow'd; a thing absurd enough, notwithstanding which they keep an annual Procession in memory of this pretended Miracle, in which they pretend to shew the same Host still bleeding. This Church was anciently dedicated to S. *Michael* the Patron of the Town, but one S. *Gudule*, a Daughter of one of their Counts, having enrich'd it with good Revenues, they since consecrated it to her memory.

In S. *Mary's* Church lie interr'd the Bodies of *Ernest* Archduke of *Austria* Son to the Emperour *Maximilian* II, and of *Ernest* Count of *Isenburgh*; their Histories you have in their Inscriptions.

Palaces of Brussels. *Brussels* has divers goodly Palaces, as that of *Egmont*, (who was beheaded here by the Duke of *Alva*, with Count *Horn*) and that belonging to the Family of *Orange*; that of *Bourneville*, a handsom Structure, then inhabited by the Countess of *Soissons*, banish'd *France* for poysoning; those of Prince *Vaudemont* and of the Prince *de la Tour* are also noble Fabricks. The *Fabri*, *Remander*, the two *Martini's*, Civilians, and the celebrated *Vesalius*, were Natives of this City.

The Garden of Arscot. Within five hours hence is the Country Seat of the Duke of *Arscot*; the Castle is both old and little, but the Garden and Park not inferiour to any that may be seen out of *Italy* and *Versailles*, excellently well planted with delightful Groves and shady Walks of Firr, and a handsom Mall at the lower end; however, the Duke not residing here then, it was much out of order: The Town near which it is seated is call'd *Enghien*, one of the first Baronies of the Province of *Hainault*, and formerly gave a Title to some of the House of *Bourbon*, but now lies almost desolate, being demolish'd by the *French* in the last Wars. This place was formerly noted for excellent Tapestry-work, but now they make some Lace.

English.

Hall. In our return to *Brussels* we pass'd thro' *Hall*, a small, mean, and inconsiderable Town, seated upon the same River *Senne*, on the Confines of *Brebant* and *Hainault*; it is noted only for its Church, dedicated to the Virgin *Mary*, whose Image being reputed to work prodigious Miracles, the Inhabitants of those parts flock hither on Pilgrimages, as the *Italians* do to *Loretto*; they have lately publish'd a whole Book of her pretended Miracles, said to be a *Translation* of *Lipsius*, and many of them are represented in Pictures round the Church; among the rest, we observ'd her painted standing on a Ladder and taking down a Thief alive, that had hung there a considerable time before, as they told us. In this Church lie also interr'd the Bowels of *Philip*, firnam'd *the Hardy*, Duke of *Burgundy*, who united the *Netherlands* with that House; it was miserably ruin'd by the *French* in the late Wars.

Louvain. From *Brussels* we travel'd for four hours thro' an excellent Country, but a very bad Road, to *Louvain*, a City seated in a kind of a Valley on the River *Dye*, and wall'd with double Works and Ditches: The generality of the Houses belonging to private Persons are but mean, tho' some of their Colleges are handsom enough, yet much inferiour to those of either of our Universities, with which they otherwise agree most of all the other foreign Academies in their Foundations and Government; they have a Rector, who is like our Vice-Chancellour, and is chosen every six months. The whole number of their Colleges and Schools amounts to forty three; a particular account of the Foundation of them was printed in the Year 1654; we were told, that at that time there were no less than sixteen hundred Students here; the chief Col-

Its Universities.

lege

Colleges. lege is call'd *Magnum ſive Majus Theologicum*, to diſtinguiſh it from that call'd *Minus*, dedicated to the ſame Profeſſion; the great one has no leſs than a hundred and twenty *Burſi* (as they call 'em) or Students that are maintain'd out of its Revenues; they have four *Scholæ minores*, as they ſtile 'em, more eminent than the reſt, known by the Names of *Porcus*, *Falco*, the *Caſtrum*, and the *Lilium*, theſe Emblems being to be ſeen over their Gates; one of theſe, they told us, contain'd ſix hundred Scholars, two hundred whereof were maintain'd at the charge of the Colleges, but they are for the moſt part Boys, nothing but Grammar, Rhetorick and Poeſie being taught here. Several of their Colleges are in their Buildings equal to ſome of ours, and the Students here wear no Swords, but certain Gowns, eſpecially thoſe of Divinity, who never appear without 'em. They have two Lectures in Philoſophy, the *Primarius* and *Secundarius*, each reads two hours, one in the Forenoon, the other in the Afternoon: Abſent Scholars pay a Fine of a Penny, and other Treſpaſſes are aſſeſs'd proportionably: They take an Oath before they are admitted Members of the Univerſity. As for their Degrees, they are obtain'd without much difficulty; they commence Batchelors of Divinity after two years ſtanding, but don't admit them to proceed Doctors till they are come to a good age: They have a *medium* betwixt a Batchelor and Doctor call'd a *Licentiate*, whoſe Title is *Peritiſſimus* in Phyſick, *Eximius* in Divinity, and *Conſulteiſſimus* in Law: They ſolemnize their Graduations with feaſting, preſenting of Gloves, beating of Drums, and ringing of Bells. The *Caſtrum* will make a fine Square when the fourth part, which was then imperfect, comes to be finiſh'd: The *New College* had then but two ſides, but they were then buſie in making it a handſom Quadrangle. The publick Schools, which were but mean formerly, have of late been new built, ſo that now they exceed thoſe of *Cambridge* as much as they are inferiour to thoſe of *Oxford*. Some will have this City to have no leſs circumference than *Ghent*; certain it is, that it has very large and empty ſpaces of Ground, ſcarce the fourth part being taken up with Buildings.

Their Degrees.

Their Churches. The Jeſuites Church here is a loftier Structure than that of *Antwerp*, but not ſo ſumptuous; the Church of S. *Quintin* is a goodly Fabrick of ancient Architecture; but the Great Church dedicated to S. *Peter* is but an ordinary Building: The *Townhouſe* is a noble Fabrick, built after that of *Bruſſels*, but not ſo large; the Carving and other Ornaments are extraordinary. Some would deduce the Origin of this City from *Cæſar*'s time. I obſerv'd hereabouts abundance of *Alſine rectæ Triphyllæ* C.B. *Park. fol. Hed. Rutæ modo diviſ. Lobel.* the *baſtard Chickweed*, the *Euphraſia vulg. & officinarum* C.B. common *Eyebright*, and the *Adriantium Aureum*, or *Gold-locks*.

About a league from *Lovain* are to be ſeen the Ruins of an old Seat belonging to the Duke of *Arſcot*, there being ſcarce any thing left beſides the Front. Near it ſtands a little Church belonging to the *Celeſtine* Friers, in the Quire whereof, in the ſide-Iſles, are ſeveral Tombs of the Dukes of that Houſe; moſt of the Inſcriptions are in *French*, except that upon one of their Dukes that died laſt, which is in *Latin*, on a white Marble; they were formerly Dukes of *Arenberg*, before that of *Arſcot* deſcended to 'em by Marriage.

The Tombs of the Family of *Arſcot*.

Town. The next Town we came to in *Brabant* is *Tienen*, about three leagues from *Lovain*, a ſmall inſignificant place, being demoliſh'd by the *French*; it is ſeated upon the River *Geet*.

Soutelay. Two hours more brought us to *Soutelay*, a wretched place, yet ſurrounded with ſome Works and a Ditch, and govern'd by a Mayor and a Governour, who commands the Garriſon; the Soldiers were ſo wretchedly kept, that they begg'd upon the Guard. Their Church belongs to a Convent of *Auſtin Friers*.

S. Truyen. An hours travel thence lies S. *Truyen*, another ſmall Town, demoliſh'd not long before by the *French*; it is renown'd in ancient Hiſtory, *Cæſar* makes mention of it, *l. 5. de Bell. Gall.* the Country hereabouts being known then under the Name of that of the *Centrones*. This, as well as the Town of *Tongeren*, belongs to the Chapter of *Liege*, and the Abbot of the Abbey of S. *Truyen* ſhares in the Government of the Town with the Biſhop of *Liege*. In all theſe Countries you ſee frequently near the Roads Croſſes and Crucifixes, with little Chapels, ſome cut out in hollow Trees; and I obſerv'd a certain Plant growing wild, which we cultivate in our Gardens, *viz.* the *Malum Spinoſum Chabræ*; *Stramonium*, Ger. *Prickly* or *Thorn-Apple*.

Tongren. About three or four hours thence lies the ancient Town of *Tongeren*, on the *Jaker*, which (ſome ſay) was built eleven hundred years before the Birth of our Saviour; the Ruins of the old Caſtle, and the old Wall on the Biſhop *Maternus*'s Chapel, are generally believ'd to have been before our Saviour's Nativity: I obſerv'd in the Moulding the Images of *Sol*, *Venus* and *Jupiter*. Their *Jeſuites Church* being demoliſh'd by the *French*, they were then erecting a new one, but not agreeable to the Grandeur of that Society. Their old Church is a *Gothick* (but very handſom) Fabrick; it has twenty two Canons and a Dean, and had formerly a Biſhop too, but the See was tranſlated to *Maeſtricht*, and from thence to *Liege*.

Antiquities. If it be true, that *Attila* the *Hun* deſtroy'd a hundred Churches here, it muſt have been much bigger than the Ruins, which are yet to be ſeen without the Walls, do appear; here are ſtill to be diſcover'd ſome remnants of a Temple and Statue of *Hercules*, and of a pav'd Cawſey, carried from thence in a ſtreight line for eighty leagues, as far as *Paris*, ſuppos'd to have been ſome *Roman* Work. It is beyond all queſtion that ſome of *Cæſar*'s Legions quarter'd hereabouts, and ſome of them were cut to pieces by the *Tungri*.

About half a mile from the Town we took notice of a Mineral Water of a chalybeat taſte, which ting'd the Stones and Earth with an Iron Ruſt; ſome would have this Spring be the ſame deſcrib'd by *Pliny*, *Nat. Hiſt. l.* 3. *c.* 2. but however moſt Antiquaries gather from this Deſcription, that he meant another near *Tungris* in *Gaul*, which are the preſent noted *Spaws*, about eight leagues from hence. I found wild hereabouts a Plant, which is not found ſpontaneouſly growing in *England*, *viz. Doronicum majus officinarum, maximum Chabræi*, the great *Wolfſtane*.

'Tis certain that this City had a conſiderable Territory belonging to it in the time of the *Romans*, as appears from *Cæſar*, *Strabo*, *Tacitus*, *Jul. Capitolinus*, &c. in all probability the Towns of *Tongerloo*, *Tongerhein*, and *Tongris* (now in different Principalities) did formerly belong to its Juriſdiction.

From hence we went to *Maeſtricht*, deſcrib'd in the preceding Chapter, and from thence to *Liege*, by the *Teck-ſchuyt*, up the River *Meuſe*, againſt a ſwift current: A ridge of Hills runs from *Maeſtricht* along the right hand as far as *Liege*, and tho' a ſtony Soil, yet is planted with Vineyards and Orchards: On the left hand, the firſt place you come to is *Novegne*, a little Town belonging to the *Spaniards*, in the County of *Limburgh*; it is ſeated on the Water-ſide, and defended by a Redoubt facing the River.

Novegne.

Beyond *Novegne*, half-way betwixt *Maeſtricht* and *Liege*, lies *Weſet*, a wretched place: The next we came to was the Caſtle of *Argenteau*, ſeated on a high Hill, and much celebrated in ancient times, but now almoſt ruin'd. On the right hand we paſs'd by *Herſtad*, and in ſight of the Convent of the *Minims Brethers*, very rich and conſiderable in its Revenues.

Weſet. Argenteau.

Liege. Soon after we came to *Liege*, ſeated upon the *Meuſe*, all-along the Banks of which is a Key a quarter of a mile in length, for the conveniency of landing their Goods, reaching to their new Bridge, ſupported only by ſix Arches, every one of which is twice as broad in compaſs as ours belonging to *London-bridge*, and not much leſs than the ſo much celebrated Arch of *Rialto* at *Venice*; it riſes high in the middle, and is broad enough for five or ſix Waggons to go a-breaſt; it is provided with ſome Cannon.

Its Bridge.

The form of the City is triangular, one whereof runs over againſt the Hill towards the Citadel: Its ſituation is much like that of our Town of *Dartmouth*, but it is of a much larger compaſs. The Citadel was built 1650, by the Archbiſhop of *Cologne*, and was three years before our arrival demoliſh'd by the *French*, and then rebuilding in the form of a Pentagon with five Baſtions, after the modern way: the aſcents to it are ſo ſteep, that Carts and other Carriages can't go up without a great deal of difficulty. Their Houſes, tho' generally of Wood, are well built, but their Streets dirty and irregular. Proviſions, tho' heavily tax'd, are very cheap here; and they have the beſt Mutton in the World, fed in the Foreſt of *Arden* near it, a Wood fam'd in *Cæſar*'s time.

Citadel.

The Seminary of the *Engliſh Jeſuites* (founded by a certain Duke of *Bavaria*) is ſeated on the aſcent of a Hill, having a pleaſant Garden belonging to it; here you ſee great variety of Dyalling, of the invention of the famous Mathematician *Linus*; among theſe, that in the middle of the Garden is the moſt curious, by its ſeveral ways of ſhewing the Hours, *viz.*

The Engliſh Seminary.

1. A Wine Glaſs, in the middle of which a perpendicular Gnomon directs you to the Figures on the outſide.

Curious Dyall.

2. A Glaſs reflecting like a Looking-glaſs, in which if you center your Eye, you ſee a little Star, caus'd by the penetration of the Sunbeams, that ſets the time of the day.

3. A

3. A round Glass full of Wire and small Brass Bars that surround it, from which to the Point of Time the Sunbeams are reflected in a Punctum, as from a Burning-glass, so that by counting the number of these little Bars, from the first to the Punctum, where the heat centers, a blind Man, by the sensibility of his Fingers, may find the Hour of the Day.

4. Reflections on a Globe of Constellations for a Night-Dyal.

5. By the elevation of the Pole-Star, and the light of the Sun trajected.

6. By the receding of the Gnomon till it casts no shadow, the Reverse of the ordinary Dyals.

Their Chapel is small, and the College none of the largest, containing about eighty in number. They receiv'd us very kindly, and gave us an Entertainment of Musick.

St. James's Convent. The Convent of S. *James* is a noble Structure; it has two beautiful Monuments, one of their Founder, and the other of one of their Abbots; they are both curiously wrought in *Relievo*, as is the Passion of our Saviour in the Skreen.

Their Relicks. They shew you abundance of Relicks here, as a Tooth of our Saviour, several pieces of the true Cross, some of *Mary Magdalen*'s Hair, a Shift of one of the Innocents murther'd by *Herod*'s command, some Bones and part of the Skulls of all the Apostles, besides a vast number of Relicks of Martyrs; among these last they shew'd us an *Antipendium*, made out of the embroider'd Cloak (as they pretend) belonging to our King *Charles* I, and the same he wore upon the Scaffold when he suffer'd: We were not a little surpriz'd at the sight thereof, especially since they positively assur'd us it was so, tho' they could not tell how it came to their hands; I am apt to believe, if the thing be real, they must have it from his Consort, afterwards the Queen-mother.

Their Structures. This City has two or three handsom Squares, with divers goodly Houses. The Episcopal Palace is a noble Fabrick, with divers Courts, one whereof is more spacious than our Exchange, with Piazza's. Their Great Church is but an ordinary Building; to their Cathedral (dedicated to S. *Lambert*) belong sixty Canons, all nobly descended, who chuse the Bishop of *Liege*: Besides these, The Chapter (call'd for distinction sake *Nobiles* or *Majores*) they have twelve *Canonici Mediocres*, and as many *Minores*. The Cardinal *de la Marche*, Brother to the famous Earl of the same Name, was Bishop of this See; his Effigies of Brass is to be seen in the Church kneeling, with this Inscription, and Death put before his Face by his own order;

Erardus à Marchâ mortem habens præ oculis, vivus, posuit.

In the Convent of the *Williamites*, situate at one end of the Town, you see the Tomb of our Countryman Sir *John Mandeville*, who ended his long Travels and Life in this place; they preserve in the Vestry (as Relicks) his Spurs, Bridle and Saddle, and two large Knives, said to have been presented him by the *Grand Signior*; his Effigies is cut in Stone, representing an arm'd Man with a fork'd Beard, his Hand elevated in a begging posture, with this Libel, in old *French* and a most barbarous Character, out of his Mouth:

Sir J. Mandeville's Tomb.

Vol Ki passeis sor mi
Pour l'Amour Deix preiez por mi.

i. e. *All you that pass o'er me,*
For the love of God pray for me.

His Latin Inscription in Capitals runs thus:

Hic jacet vir Nobilis Dominus JOHANNES *de Mandeville, al' dictus ad barbam miles, Dominus de Candia, natus de Anglia Medicinæ Professor, Devotissimus Orator, & Bonorum largissimus Pauperibus Erogator, Qui toto quasi orbe lustrato Lecdiis Dieb' vitæ suæ Clausit Extremam* ANNO DOMINI MCCCLXXI. *mensis Novembris Die* XVII.

This Knight writ an account of his own Travels, yet extant, under the Reign of our King *Edward* III, and was consequently a Contemporary with *Chaucer* and Sir *John Hawkwood*, another Countryman of ours, who render'd himself so famous in *Italy*.

The *Meuse* dividing it self here into several Branches, is a considerable advantage to this City, which (they say) has no less than a hundred Parish-Churches. Certain it is that its Bishop is a Member of the Empire, and that *Cæsar*, in his *Commentaries*, call'd the Inhabitants of this Country *Eburones*.

They have here a *Convention* of the *States* (somewhat like our Parliament) compos'd of the Nobility, Clergy, and Commons; no new Law can be made or any Taxes impos'd without their consent.

The Country has Mines of Iron and Coal. *Baldwin* a famous Civilian, and *Limbourgh* a noted Physician, were both Natives of this City. The Inhabitants make use of a certain Herb for Sallad which we account a Weed, viz. the *Eruca Sylvestris* or *Wild Rocket*; they chiefly speak *French*, and for their Fewel use generally what they call *Hotshots*, being a mixture of Coals and Clay made up into round Balls and dried in the Sun, which allays the heat of the Coal, and keeps it from wasting too much. The Women here undergo as much Drudgery as the Men, in carrying Baskets with Coals and other burthens of great weight, &c.

From hence we made an excursive Journey thro' the Province of *Luxemburgh*, and some of the *German* Territories on the *Moselle* and the *Rhine*, (of the last of which we shall have occasion to speak in the description of that Country) and so back thro' the Dutchy of *Limburgh* to *Liege* again.

What we observ'd in the places belonging to the *Spanish Netherlands* were these: First, on our left hand, the Town and Castle of *Franchimont*, a very ancient place, built upon the top of a Hill; it belongs to the Bishoprick of *Liege*, from whence it is about four of their miles distant, near the little River *Theu*: The Castle owns the before-mention'd Cardinal *de la Marche* for its Founder. These Hills afford store of wild *Juniper*, with the *Vaccinia Nigra* and *Rubra*. Franchimont.

Between *Liege* and the next place, we went to see the so much celebrated *Spaw*, where we found the purling Brooks rising from among the Rocks, and running along the Valleys; the Village which bears the Name of *Spaw*, and has imparted it to the Waters, being seated in a woody pleasant bottom. The Spaw Waters.

There is one Spring of these Waters in the Town, and two or three more in the Wood about a mile off; that in the middle of the great Street of this place they call the *Powhunt*, has a vitriolate taste, and if you put in it any thing that is austere, as *Galls*, *Oak-leaves*, *Balaustium*, &c. it turns black, which I experimented several times: those in the Woods are of a more piquant taste, and of quicker operation than our *Chalybeat Waters*: According to Mr. *Boyle*'s Experiments, they weigh two grains in three ounces more than *Tunbridge*, and four grains more than some of the *Islington* Waters, yet both less than the common Water by several grains; but a considerable allowance in that respect must be given for their evaporation in the bringing hither from those parts: they seem'd to me clearer on the place than our *Chalybeats*; and it is worth the observation of a curious person, that tho' by the exactest Scrutiny of Glasses no *visible difference* has been found hitherto betwixt the contexture of the minute parts of Common Water and any Mineral one; yet by Chymical Precipitations and ordinary Solutions, and sometimes by subsiding, considerable separations of a different Substance are made without much difficulty. I further observ'd, that a much greater Coldness is plainly perceivable in these Waters, than what is found in those commonly mix'd with the *Rhenish-Wine* in these parts to cool it, and which generally passes under the Name of *Spaw-water*, and makes a strong ebullition with the Wine, for this is brought from different and far distant places call'd *Dienstein* and *Coblentz*, upon the *Rhine* and *Moselle*; the true *Spaw-water* produces no such ebullition, tho' mix'd never so much with Sugar, and is always bottled up in the place in little Wicker Flasks, but the other in Stone Pottles. See Mr. Ray's and Dr. Brown's Travels.

Near the great Well in the Town is another lesser arch'd one, the Water whereof seems to exceed the other in strength; and it is worth observation, that there are several Springs both in the Town and in the Wood, at a small distance from the *Chalybeat Waters*, which nevertheless don't in the least participate of their taste or vertue; the Well call'd *Sauvenier*, a mile from this Village, does not taste so strong of the Vitriol as that in it. The two Springs in the Wood are call'd *Geronster* and *Tonolet*.

The Woods hereabouts afford store of Plants, the most rare I could take notice of were, the *Polygonatum minus*, a lesser sort of *Solomon's Seal*, and another with narrower Leaves, suppos'd to be the *Angustifol. ramosum Chabræi* much rather than the former; the *Cynus major*, by others the *Major Hortensis*, the *Great Blewbottle*, which we and the *Germans* cultivate in Gardens; the *Asclepias Vincetoxicum Dodonæi*, by what I could guess, the Flowers of both kinds being gone; *Fiore albo & nigro*, the *black and white Swallow-wort*. Divers rare Plants.

From

From hence we continued our Journey toward *Luxemburgh*, a ſtony and mountainous Country, and full of Woods, which perhaps are the remnants of the ancient Forreſt of *Arden*; for tho' the modern Forreſt of *Arden* is contain'd to that Track that lies about *Bovillon*, *Meſſiers* and *Fumay*, it is not unlikely that thoſe *Sylvæ Arduennæ* mention'd by *Cæſar* were of a much larger extent, and were perhaps cut down in part by his Legions and other Armies ſince that time, to ſerve them both with Fewel and Timber.

The Forreſt of Arden.

Stable.

In our paſſage leaving *Stable*, an inconſiderable Town, on our left hand, we paſs'd by a ſmall Convent ſeated on the top of the Hill call'd *Fraſcoun*, the Valley beyond it being water'd by a pleaſant Rivulet purling among the fertile Meadows.

Fraſcoun.

Alſemont.

A little way beyond it, we came to *Alſemont*, a little Town upon the River *Alſ*, in the middle whereof, in a ſtrong current, we took notice of a hollow Trunk of a Tree ſtamm'd down into the bottom of the Water, and looking into it attentively, I found the ſides of this wooden Well cover'd with a ruſty ferruginous ſubſtance, as is generally obſerv'd in all Vitriolate and Chalybeate Springs, and its taſte near the ſame with the *Spaw-waters*, except that it was not quite ſo ſtrong: I made the beſt enquiry I could of the neighbouring Country-people, who told me, that they call'd this Spring the *Little Spaw*, which by this wooden Trunk they had ſo ſeparated from the River-water, that it no way participated either of its taſte or quality. I obſerv'd however, that the Water of ſome of their Gutters and Spouts had ſomething of an aſtringency in it.

A Chalybeate Spring in the middle of a River.

Salmeville.

From hence we travel'd on to *Salmeville*, an inconſiderable Town, ſeated upon the *Alſ*, about five hours from the *Spaw*; and thence thro' a rocky Valley up to an Hill, on which ſtands an old Caſtle call'd *Salm Caſtle*, which gives title to the Count *de Salm*, and was formerly a place of ſtrength.

Soon after we croſs'd the *Sour*, paſſing thro' the Villages of *Gevi* and *Boilegne*, and by a Country Seat of the Sieur *Brandenburgh*, and in ſight of the ſmall Town of *Dickirk*, ſeated on the left of the *Salm*. We travel'd along the Banks of the River *Alſeth* for three or four miles in a very pleaſant Road. We paſs'd afterwards thro' *Altabrugge*, a wretched place, and by a little Caſtle, or rather Country Seat, call'd *Beriale*; and in three hours more came to *Mets*, a ſmall and inconſiderable place, three hours on this ſide of *Luxemburgh*, ſeated betwixt the *Alſeth* and the *Erk*. As about *Liege* and *Maeſtricht* they uſe a ſort of Language call'd *Walon*, being a mixture of *Low Dutch* and *French* in a *Flemiſh* Accent, ſo in the Province of *Luxemburgh* I obſerv'd ſuch another medley of *High Dutch* and *French* pronounc'd in the *French* Accent.

Mets.

The Walloon Language.

From hence we paſs'd thro' a Valley of about ten or twelve *Engliſh* miles, to *Luxemburgh*, over a pav'd Cauſey made by the *French*, from whence by a gentle aſcent we came up to the Rock on which this impregnable Fortification is erected.

Luxemburgh.

Luxemburgh, the Metropolis of the Province of the ſame name, is ſeated near the River *Alſeth* that runs under it, upon a Precipice of Rocks, which alſo ſurround it, Nature having made a Vale betwixt the Rocks on which it is ſeated and thoſe that front it, to render it almoſt impregnable without Art. By which however it has been ſo improv'd ſince, that what with the Works already made, and thoſe deſign'd to be made, it will queſtionleſs be the ſtrongeſt place in *Europe*; tho', after all, it has ſome adjacent Rocks from whence it may be bombarded, and made an heap of Stones and Aſhes. On the Weſt ſide of it lies a Promontory of the oppoſite Hill jetting out, which by a Bridge is joyn'd to the Town-Gate.

In Strength.

The *Jeſuites* have a handſom Church here, but miſerably batter'd by the *French* Bombs, which that King order'd to be repair'd at his own coſt: The *Franciſcans* Church being at the ſame time laid level with the ground, was not rebuilt then, tho' they had taken care of their own Lodgings.

In the little Chapel belonging to the great Church of the *Franciſcans* (likewiſe laid in ruins) they had a Vault, in which were entomb'd ſeveral Perſons of Note, among the reſt *John* of *Luxemburgh* King of *Bohemia*, Sonne to the Emperour *Henry* VII, and the famous Count *Mansfelt*, whoſe Effigies, with thoſe of two of his Wives in Braſs, are to be ſeen on his Tomb, with a Latin Inſcription in Capitals. This *Erneſtus* Count of *Mansfelt* was the ſame who render'd his Name ſo famous in the Civil Wars of the *Netherlands*, and afterwards Governour thereof, whoſe Son ſignaliz'd himſelf as much on the *Proteſtants* ſide as the Father had done at the head of the *Roman Catholick* Party.

Count Mansfelt's Tomb.

On that part where the Hill is neareſt to the Town, the King of *France* was then erecting divers additional Works, and Halfmoons, Redoubts, and other advanc'd Works were making on the Rocks that ſurround it, to cover thoſe within.

The additional Works by the French

For the reſt, the Town is neither large nor well built, except ſome Edifices built by the *French* King's order, for the conveniency of the Officers of the Gariſon. We found here one Dr. *Daffe*, an *Iriſh* Phyſician belonging to the Gariſon, who ſpoke *Engliſh* very well, and gave us a ſuccinct account of many things, being a perſon of good Underſtanding. The *French* at firſt left the Government in the ſame ſtation as they found it, when they had a Burghermaſter that had the chief management of publick affairs; but ſoon after they introduc'd a new Model, aboliſh'd the Power of this ſupream Magiſtrate, and made the Citizens to be contented with ſeven Common-councilmen and three *Schepen*. They were then imploy'd in making a High-road thro' the Valley, to keep Travellers into *Lorrain* and *Germany* from being oblig'd to paſs thro' the Town, a work of vaſt expence and labour.

In our paſſage from thence we obſerv'd on the Eaſt ſide ſome Ruins of ſtately Fabricks belonging formerly to the Counts of *Mansfelt*, demoliſh'd in the laſt Siege: At our parting, an old *Franciſcan* Frier, with whom we had ſome Diſputes about Religion, gave us this Farewell;

O vos Angli,
Quam Eſſetis Angeli,
Si non Hæretici!

From hence we went forward to *Gravemakeren*, a ſmall old wall'd Town, ſeated upon the Frontiers of this Province, about four leagues from *Luxemburgh*, but now demoliſh'd by the *French*: The *Moſelle*, upon which they lie, affords 'em good conveniency for the venting their Wines. The Country betwixt this and *Luxemburgh* is very hilly and woody, but near to this River the Vineyards lay upon a level with its Banks.

Gravemakeren.

Somewhat lower lies the Village call'd *Waſſerbillech*, where the River *Sour* diſembogues out of the Arch of a Bridge into the *Moſelle*, with ſuch violence, that the Current is viſibly repell'd by the oppoſite Shore.

Waſſerbillech.

From this place we paſs'd down the *Moſelle*, but the Countries hereabouts belonging either to *Lorrain*, the Archbiſhops of *Treves* and *Cologne*, or the Dukedom of *Juliers*, we reſerve the account thereof to the deſcription of *Germany*.

From *Aix la Chapelle* in *Juliers* we return'd to *Limburgh*, one of the ſeventeen Provinces. Croſſing the two Rivers of *Geul* and *Gueule*, we travel'd in ſight of *Dalem*, a ſmall (but fortified) place; and paſſing from thence thro' *Weſet*, a little Town on the banks of the *Moſelle*, (which we ferry'd over here) we return'd to *Liege*: Here we took the conveniency of one of their Drawboats for *Huy*, up the *Meuſe*, all the way under Precipices of Slate and Marble Rocks. Their Vineyards on the right hand, facing the South, produce a tolerable good Wine.

A mile above *Liege* we paſs'd in ſight of a Convent of the *Benedictins*, pleaſantly ſituated, and of *Sleyn*, a ſmall (but delightful) Village; and higher up, of the Caſtle of *Duſelmond*, ſeated on a high Rock; the little Village of *Tillo*, and another Caſtle built on a mountainous Precipice call'd *Choquiers*, belonging to the Baron of *Benbon*; it being obſervable, that moſt of the ancient Seats of the Nobility of this Country, which us'd to be frequently involv'd in Wars, are thus built on inacceſſible places, and ſtrengthned with Fortifications; and it is more than probable that the ſame Cuſtom obtain'd in *England*, before that general demoliſhing of Caſtles under the Reign of K. *Stephen*.

We obſerv'd hereabouts the method they uſe in making their Allom and Salpetre. On the top of theſe Rocky Hills they dig up a certain Earth, which being diluted with Water and percolated, they convey the Water thus impregnated with the Nitrous Salt, by the help of long Pipes, from the tops of the Rocks to the bottom, into boiling Ciſterns, where they boil it into Salt, and carry it by the River which way they pleaſe. I took particular notice, that the top of the Earth that lay round the Pits, which had been diluted by the Waters, appear'd of a reddiſh colour, like the *Caput Mortuum* or Remnants after the diſtillation of the *Spirit of Vitriol*, whereas the common Earth of the Hill was a black Soil; which made me imagin, that the mixture of ſome other Ingredients had imparted that colour to it, which they could not deny, but would not tell us what it was.

Allom and Nitre Works.

Higher up the River we paſs'd in ſight of the Caſtle belonging to the Baron of *Harmal*, a handſom Building,

and above that, of *Flowm Abbey*, compos'd of twelve regular Canons, built likewise of Brick, of that colour, which is of a much deeper red than ours.

Huy. *Huy* owes its Name to the River *Hoiaul*, which here joyns its Waters with the *Meuse*; it is but a little (but very ancient) Town, seated on both sides of the last of these two Rivers, being joyn'd by a Bridge, which together with the Castle was demolish'd by the *French*, but the first was then repairing. Their Great Church, dedicated to the Virgin *Mary*, is an ancient *Gothic* Structure. In the Convent of the *Capuchins* they have a Cistern of betwixt three and four yards diameter, hewn out of one piece of rough Marble, of which there is abundance hereabouts, but of a greyish colour, and some Iron Mines. They boast their Castle to have been built by the Emperour *Antonin*, which they pretend to maintain by a certain old Inscription, *Antoninus piissimus Imperator.*

Beyond *Huy* commences another ridge of Rocks all along the River as far as *Namur*, among which that call'd *Sampson's* Rock is the most remarkable: Hereabouts the *Meuse* dividing it self into divers Branches, makes several Islands.

In our way we pass'd in sight of the small Villages of *Este*, *Amder Abbey*, *Soissons*, *Marsledam*, and thence to *Namur*, seated upon the *Sambre*, at its conflux with the *Meuse*; it divides the Castle from the Town. At the mouth of the River here they shew you a little Isle, which was made (as they tell you) by the Stones and Earth carried thither by a great Flood of the *Sambre* in 1571, the time of which Flood, and the height to which the Waters arose, is to be seen in Inscriptions on their Walls. It is extraordinary well fortified to the Water-side, and was then well garison'd, tho' very ill paid: They bring hither continually vast quantities of Iron from the Mines in the Forest of *Arden*, where they are easily furnish'd with Wood to work 'em.

Namur.

Its Churches. They have about nine or ten handsom Churches; that of S. *John* was lately repair'd, and beautified with several fine Marble Altars; but their *Jesuites Church* exceeds even that of *Antwerp*, not only for the beauty of the Marble, but also for the excellency of the Workmanship and bulk of the Structure; the wreath'd Columns of red Marble of the *Dorick* Order, curiously vein'd, and near a yard and a half in diameter, with their beautiful Bases and Cornishes, are most excellent Pieces: They have some Copies of *van Dyke's* and *Reuben's*, done by very good hands, and an Original of the latter, representing our Saviour's Resurrection and Triumph over the Grave, over the high Altar. The outside of this noble Fabrick is 140 foot long, 120 high, and 100 broad.

Its Castle. The Castle, divided from the Town by the *Sambre*, is seated on the point of a steep Hill almost inaccessible, except from the River-side; the *Meuse* washes it on one side, as the *Sambre* does on the other; the Garison consisted at that time of four thousand Men. On the very top of it they have a deep Well, and two very good Springs, for a constant supply of fresh Water.

About an hours walk from the Town, upon the Bank of the River, the then Governour of the place, the Duke of *Barbacon*, had a little Country-house and Garden; three parts of the way you pass thro' pleasant verdant Meadows under the Precipice of high Rocks, where is an Eccho repeating whole Songs and Sentences with a plainness more than can be express'd or imagin'd.

The City of *Namur* is of a circular figure, about the bigness of *Exeter*; the Houses are but indifferently built, except in two or three of their Squares; the Country abounds in Marble and Iron, and it is an Episcopal See: Some of the Family of the *Courtney's* were formerly Counts and Marquesses of *Namur*.

Passing from hence towards *Charleroy*, we found the Country very pleasant and fertile, and the Air very agreeable. The Abbey of *Floresse*, with its fine Church, lies on the other side of the *Sambre* near *Namur*; and an hour from *Charleroy* is the Village of *Fosselines*, near which is the Seat of the Baron of *Bucquoy*, upon the River *Sambre*; it is a Structure of Brick, with Turrets, and enclos'd with a Moat, as most of the Castles hereabouts are, that are not built upon Rocks: The Gardens were but indifferently kept, yet I saw here an high and large Walk of *Charons* (as the *French* call it) much beyond those of *Enghien*; they are made with the young Plants of the *Carpinus* or *Betulus* planted in rows; the *Hornbeam-tree*, which growing high and thick, is very fit for a Quick-Hedge.

Fosselines.

Charleroy. An hour more brought us thro' a fertile and plain Country to *Charleroy*, rather a Garison or Citadel than a Town, having nothing in it but Barracks, and some Lodgings for the conveniency of the Soldiery. Its situation is on the descent of a Hill, and is fortified with a treble Wall, but dry Ditches, and the whole Fortification consists of six royal Bastions, as many Ravelins, and divers Outworks, all very regular, after the modern way. The *Basse Ville* or *lower Town* is divided from the other by the *Sambre*. It was lately but a poor Village, but being fortified by the *Spaniards*, was taken from them by the *French* in 1667, when its Fortifications were not finish'd, who were oblig'd to surrender again to the *Spaniards*, by vertue of the Treaty of *Nimmeghen*.

From hence we pass'd by a fair Village on our left hand call'd *Marchienpont*, upon the *Sambre*, and about three hours from *Mons*. In our way we saw a very pleasant Castle in a Wood, belonging formerly to the Marquess of *Grana*, Governour of the *Spanish Netherlands*.

Mons. *Mons*, or *Bergen* in *Hainault*, (to distinguish it from others of the same name) is seated on a rising ground in a level Country, which on one side is fenny, and may easily be laid under Water, on the other are two Hills within the reach of Cannon; on the East side it has a rising ground that cannot be set under Water, which is fortified by three or four Redoubts seated in the middle of large Trenches, which are not easily to be fill'd with Faggots, being two Pikes length deep, and defend all that part they can't lay under Water. For the rest, the *Its Strength.* Wall of the Town is very old and ordinary, the defect whereof is supplied partly by the Water, and partly by the many Outworks, which, as far as I could see from their stately Tower, are compos'd of twenty four Bastions, besides Redoubts. The Houses are generally handsomly built, and their Streets are very spacious; the Episcopal Palace is a goodly Fabrick, and their Piazza is a handsom spacious place; their noble Tower, a fine piece of Architecture, just faces the Townhouse, built on what they call the *Old Castle-hill*, an Eminency to be seen at five or six leagues distance, and which perhaps gave it the Name of *Mons*.

In the *Jesuites* Church (which is an ordinary Structure) you see a fine Marble Tomb, erected to *Francis van der Bark* late Bishop of *Cambray*: But their Canonesses Church *The Canonesses Church.* exceeds all the rest in this Town; to this Church belong no more than ten Canonesses, who have each a Revenue of two or three hundred pounds *per annum*, and their Abbess about three times as much; they are clad in decent Habits, with white Veils, and sing their Services as the Canons Regulars do in other Churches; they must be all of noble extraction, and are at liberty to resign their retir'd Life, and to embrace Matrimony; they enjoy also a sufficient share of Liberty whilst they lead this kind of religious Life, for after they have perform'd the usual Services, they change their Habits at pleasure, and after Dinner go abroad at pleasure: Some of this kind are also in use among the *Lutherans*, but have no such ample Revenues.

The little River *Trulla* that falls into the *Hayne* runs thro' part of this City, which formerly us'd to be noted for its Manufactury of Serges and other Woollen Stuffs; it is the Metropolis of the Province of *Hainault*, which is about twenty *Dutch* leagues in length, and about six in breadth, water'd by two Rivers, the *Scheld* and *Sambre*, well stor'd with Woods and Pasiures, and excellent arable Land.

In our passage from *Mons* to *Brussels* we observ'd many fair Villa's, and among the rest that of Seignieur *Brain le Comte*; and more towards the right, betwixt *Mont* and *Gemblours*, *Seneff*, famous for the Battel fought hereabouts betwixt the Prince of *Orange* and the Prince of *Conde*, both challenging the Victory. Betwixt *Mons* and *Valenciennes* we observ'd the Ruins of the Villages of *Cesson*, *Bossu*, *Tuling*, *Kyoring*, and several others.

In our first Tour from *Mons* to *Brussels*, in our way thro' *Ghent*, we passed thro' *Asch*, a wretched Village, tho' within three hours of *Brussels*: A little beyond it we travel'd in sight of *Affligbem Abbey*, a goodly Structure, *Affligbem Abbey.* with very fair Towers; they say they keep here a good Library, with some Manuscripts, but we had not time to view 'em.

Pursuing our Journey to *Alost*, two leagues thence and *Alost.* five from *Brussels*, we found it a pretty small Town, seated upon the *Dender*, which joyns its Current with the *Scheld* at *Dendermond*; its Jurisdiction extends to the very Walls of *Ghent*, comprehending a good number of small Villages; the Streets are very regular and neat: One of their Churches is very large and fair, and in one of their Altar-pieces you see an excellent Piece of *Paul Reuben's*, representing their Patron S. *Roche* with a *Madona* over it, which is always cover'd, and only shewn to Strangers.

About five leagues from *Alost* lies the large and re- *Ghent.* nowned City of *Ghent*, a place of vast extent, but better fill'd with Walks and Gardens than Inhabitants; it has a

Wall

Wall and Ditch, but avail them little, by reason of their vast circumference; the Castle encloses part of the Town.

In Churches. Among their Churches, that formerly dedicated to S. *John* (but since by *Charles* V. to S. *Bavo*) challenges the preference, the Abbot having a considerable tract of Ground, with many Villages, under his Jurisdiction, with some marks of Soveraignty: In this Church *Charles* V. was baptiz'd; several of their Bishops lie entomb'd here, and K. *Philip*, the Son of *Charles* V. celebrated in this Church the Order of the *Golden Fleece*, the second time that this Solemnity was ever perform'd at *Ghent*. In the Lower Church they shew'd us a Tomb of one entire Touchstone belonging to a certain Lady of Quality, we try'd it both with Gold and Silver, and found it as good as ever we saw of that kind. The Count *de Faing* has a very fine Chapel and Monument of Marble near the Quire of this Church. The next in rank is that of S. *Michael*, where they carefully preserve an excellent Piece of *van Dyke's*; after this comes the Church dedicated to S. *Peter* and S. *Paul*, belonging to a Convent of the *Franciscans* or the *Carmelites*, where they were then celebrating the *Exequiæ* for all the Christian Souls that lost their Lives in the Siege of *Buda*, with *Scandards*, *Armours*, *Banners*, and all sorts of Musick.

We took notice also of the *Dome-Tower* call'd *Belfort*, which formerly contain'd the largest Bell that ever was made, the Inhabitants had given it the Name of *Roland*, but being since cast again, is only of a moderate size.

The *Jesuites* College has nothing extraordinary. Over against the *Fridays-market*, as they call it, you see a great Cannon mounted upon a kind of wooden Scaffold, the diameter in the bore of which is a full yard, beyond the bulk of any Mortarpiece that ever was seen yet. In the great Marketplace stands the Effigies of the Emperour *Charles* V, and the Chamber in which he was born is a little round Chamber, no bigger than a Porter's Lodge, in what they call the *Prince's Hoff* or Palace: Over the Chimney you see his Nativity moulded in *Gypswork* and *Relievo*, with this Chronological Inscription underneath it:

MatthIas LVCe eXIgVo CVbILI natVs CaroLVs qVIntVs.

On the Bridge call'd *Dogebrack* stand two Statues in Brass representing a Son beheading his Father, of which they tell you a long old Story.

The Church belonging to the *Predicant Friers* is handsomly painted, and the Townhouse is a Fabrick of fine old Stone-work in Sculpture, adorn'd with Pilasters after the modern way. It is an Episcopal See: Its situation is very convenient, betwixt the *Scheld*, the *Lis*, and the *Lieve*, with fine spacious Houses, of which there are computed about 40000 great and small, its whole circumference being about ten *English* miles.

Their Government is manag'd by *Burghermasters* and *Schepens*, like most Cities of *Holland*; they were always accounted warlike, and had always a share in the several Revolutions that happen'd from time to time in these Countries. The *French* took it in six days, in 1673, but did restore it to *Spain* by the Treaty of *Nimmeghen*.

On the North-west side of *Ghent* you come back in a large *Treck-schuite* (bigger than those of *Holland*) upon what they call the *Nieuwe Vaert*, i. e. the *New Canal*, for *Bruges*, which lies seven hours thence; this is a very fine, convenient and spacious Canal, supplied with Water as occasion requires, by many Sluices erected at the side of the Banks, from the River *Lieve*, of which it is an artificial Branch.

Bruges is a pretty place, pleasantly situated, and partaking much of the neatness of the *Holland* Cities; it is almost of a circular figure, the Houses generally handsom and lofty, and the Streets spacious and clean, with several Canals in them, brought thither from the River *Rhey*, and leading to the *New Canal* of *Ghent*, to the *Sluice Canal*, and to *Ostend*; they told us that Ships of five hundred Tuns would ride in an artificial Cut that goes up to the City; we saw some of two hundred Tuns upon the Stocks. Upon one of these Canals stand their publick Warehouse, where the Boats bring the Goods to the very Door to be wound up, it having heretofore been a place of vast Trade, before the *Dutch* got their Traffick from 'em; tho' some say, that the first decay of their Trade was occasion'd by the rigour of the Magistrates, which made most of their best Weavers transport themselves into *England*.

The *Englishmen* are generally complimented here in the House where K. *Charles* II. resided during his Exile; and several Houses have been erected with the Money given by the Royal Family, for the Citizens to exercise themselves in with Bows and Guns: the Rooms are adorn'd with Pictures, and other Monuments, to the memory of the three Brothers.

The Churches of S. *Saviour* and S. *Donatus* are handsom Structures; in the Cathedral lies entomb'd the famous *Ludovicus Vives*. Our Ladies Church has a Tower leaning on one side by the neglect of the Builder, who threw himself down from it, and is interr'd just under it. Their *Jesuites* Church is as plain as that of *Namur*, and after the same Model: Here they shew you the exact Plan of our Saviour's Sepulchre, in a solid Fabrick built after the Model brought by a certain Lord (who lies interr'd here with his Lady) nam'd *Courhuys*, from *Jerusalem*, whither he undertook a Journey twice for that purpose. In our Ladies Church you see a noble Tomb of *Charles* Duke of *Burgundy* and his Dutchess, who had all the *Netherlands* under his Jurisdiction, (as appears by the Inscription) the last of these Dukes, whose Territories devolv'd by his death to the House of *Austria*; he was slain in the Battel of *Nancy*, and his Body translated thence by *Charles* V. his Grandson, and the Monument erected by *Philip* II.

Their Churches.

Our Saviours Sepulchre.

The Tomb of Charles Duke of Burgundy.

Bruges is suppos'd to have got its Name from the great number of Bridges that cross their Canals; it is an Episcopal See; its Fortifications are only of Earth-work; the Marketplace is handsom and large, and the Town and Clock-house handsom Fabricks: Here are two *English* Nunneries.

On the North-east side of *Bruges* is the Canal to *Sluys*, (of which before) which brought us in 4 hours to S. *Donat's* Fort, a little, regular, square Fortification, surrounded with a Ditch that rises and falls with the Tide.

S. Donat's Fort.

About half way betwixt *Bruges* and *Ostend*, both going and coming, we view'd the little Town of *Damm*, so call'd from the Dikes that lie round about it; 'tis strong and well garison'd, and serves as a frontier Town to *Bruges*: Some are of opinion that formerly the Sea wash'd its Walls, tho' now there are several Villages betwixt it and the Sea.

Damm.

From *Bruges* we went down the *New Great Canal*, (drawing fourteen foot Water) to *Ostend*, a small Town, but regularly built, not unlike *Leghorn* on the Coast of *Tuscany*; the Houses are low, and the Streets broad, and so order'd that at each end of the Street you can see quite thro' the Town. It is guarded by some Redoubts on the Sea-side, and towards *Bruges* with good Bulwarks and a Ditch; besides that, they can put all the Country round about it under Water. Their Harbour is none of the best, being often choak'd up with Mud, yet some Ships come thither for the sake of the *Bruges* Trade. It has undergone divers memorable Revolutions, and is chiefly remarkable for the three years Siege carried on by the Duke of *Alva*, when it was valiantly defended by our Countryman Sir *Francis Vere*, and at last deliver'd up to the Marquess *de Spinola*, the *Spanish* General, upon honourable terms. In my walks about it I took notice of the following Plants; the *Valerian. Marin. S. Aquat. Palust.* the *Alga Platuceros porcsa*, *Muscus marinus pennatus*, *Absinth. Marin. Abrotanum*, *Marin. Filicula & Cochlear. Marin. Fucus tenuifol. Musc. capillaceus*, some *Corallines*, the *Sea-holly* and *Eryngus Jacobæa Marin.* and the *Fucus Marinus*, *Sea-thongs*.

Ostend.

Not far from *Ostend* lies a little Town call'd *Westend*, and on the left hand, towards *Newport*, another not much better, call'd *Steegorge*. In the Marshes betwixt *Ostend* and *Newport* I found abundance of the *Rhamnus Clusii*, *Salicis fol. fructu flavescente* C. B.

Off of *Newport*, toward the Sea-side, you see a little Fort, defended only by an old Wall and a slender Ditch, with some indifferent Bulwarks, its chief strength consisting in its situation, because by the help of their Sluices they can set the whole Country about it under water. From hence the *Flanders* Packet-boat usually goes off for *England*. The *French* Territories extend almost within a Stone's throw of the Walls. The Harbour is both small and unfit for Ships of any bulk, and the Inhabitants very wretched, having no other livelihood than Fishing. It was formerly call'd *Sandhofft*, i. e. a *Sand-hill*, but since *Newport*, from the *new Town* built here. It is famous for the Victory obtain'd near this place by Prince *Maurice* over the *Spaniards*.

Newport.

From the Walls of *Newport* you may discover *Vuern*, a Town something bigger than *Newport*, and an hour and a half thence, in the possession of the *French*, who have demolish'd its Fortifications; it has still a handsom Townhouse and large Marketplace.

Vuern.

From *Newport* we embark'd on the Canal of *Ypres*, in one of their large *Treck-schuites*, and about half-way came to *Dixmude*, a ruin'd place belonging to the *Spaniards*, having only some remnants of an irregular Fortification;

Dixmude.

The House where King Charles II. resided in his Exile.

the Grounds hereabouts abound in Pasturage, and would make the Farmers as rich as their Soils, if the neighbourhood of the *French* did not keep them in constant fear, who just beyond it are possess'd of the Fort *Knock* and two or three other Redoubts, which give them a sure Inlet into this part of the Country at pleasure.

Ypres. Passing a deep Sluice and a high Fall, we came to *Ypres*, an ancient City, surrounded only with an old Wall, but by the *French* (who had then been in possession of it about three years) strengthned with new and regular Outworks. The circumjacent Country being low, can be laid under water.

In their Church dedicated to S. *Martin* are several Monuments of their Bishops to be seen, and among the rest that of *Antoninus Himininus*, the Founder of the *Himinian* College at *Douay*, as you see by the Inscription. Their Townhouse is a stately Structure, with a spacious Front: The *Jesuites* Church has nothing remarkable, except the Altar-piece, an Original Painting of *Cyrus Terrus*, a celebrated Artist, representing our Saviour's Resurrection. I observ'd in their College Cloyster the Prints and Effigies of all the Jesuites martyr'd (as they stile it) in *England*. The Marketplace is large, and the Houses well built, tho' for the most part of Wood, and the great Church is a lofty and goodly Fabrick.

This City got its Name from the River *Ypre* that runs thro' it, and was noted formerly for its Manufactury of Serges and other woollen Stuffs; they have still a good Clothiers-Hall. The *French* took it in 1678.

Rousselaer. In my second passage this way I took notice, betwixt *Bruges* and *Lisle*, of the Town of *Rousselaer*, a little open place belonging to the *French*, three or four leagues from *Bruges*; it formerly bore the Title of a Lordship, the Barons being High Chamberlains to the Dukes of *Brabant*; it is now govern'd by a *Burghermaster* and six *Schepen*.

Menin. Three leagues from hence is *Menin*, whither we travel'd thro' a miserable way, the Roads being all plank'd across with the trunks of Trees, as they make their Bridges over the Marshes in *Hungary*; it is in it self a poor wretched place, considerable only for its Fortifications, which are not inferiour to any the *French* have in the *Netherlands*, it being the Bulwark of *Lisle*, and not inferiour in strength to *Lisle* it self: They were then finishing a great Work on that side, and had demolish'd a good Church for that purpose. This Fort was surrounded with treble Bastions, and as many Ramparts, but the Ditch was dry on one side, tho' well water'd on the other towards *Lisle*; its situation is upon the River *Lys*.

Courtryck. In my last Journey to *Lisle* I took a Tour to *Courtryck*, a City once well fortified, but since demolish'd by the *French*, being for the rest a well-built Town: The great Church is a goodly old Fabrick after the *Gothick* manner, beautified with some good Pieces of Painting; their *King's Church* is also a handsom Pile, besides which they have a Convent of a certain Order of Women call'd *beguines*, endow'd with good Revenues: It is seated upon the River *Lys*, and deduces its Origin from the times of *Julius Cæsar*, the Inhabitants being willing to be reckon'd among his *Centrons* and *Nervians*. The *French* took it in 1667, and remain ever since Masters of it.

Aldersberg. Betwixt *Courtryck* and *Ghent* you come to a small place call'd *Aldersberg*, i. e. *the Old Mount*, being reckon'd the most ancient Town in *Flanders*. By the way we saw several Acres of Ground cover'd with Wood as regularly planted as our Orchards. About three miles on this side *Ghent*, towards *Courtryck*, there stands a new fair Chapel, near the High-road, occasion'd by the stealing of some of the Church-plate of *Ghent*, with the consecrated Host in the Silver Pix, and thrown in a Ditch here by the Felons as they were pursued.

A Cawsey of 20 English miles. Between *Ypres* and *Lisle* (call'd *Ryssel* by the *Flemmings*) is a Cawsey for near twenty *English* miles, reaching quite to *Lisle*, the work of the *French*, who have carried it all along thro' the marshy grounds, without which there would be no passage this way. About half-way is a small Town call'd *Wakerton* or *Walseren*, once a Lordship with several Villages under its jurisdiction, and famous for its Manufactury of Cloth: Here resides still an Abbot with about ten *Austin* Friers; they had just then wainscoted their Quire with good Oak, and adorn'd the Stalls with curious Carving, but their Church was ordinary.

Lisle. *Lisle* (call'd *Insula* in Latin) or *l'Isle*, from its situation perhaps in the midst of the Marshes, is the only place that may be said to have been a Gainer by its being conquer'd by the *French*; for, not to mention the strong Castle and the Fort, with the adjoyning Citadel, flank'd with five great royal Bastions (the Ditches being fill'd by the River *Dele*) cover'd by several Halfmoons, it is considerably encreas'd since the Conquest both in its Buildings and Trade, the People here looking with a different face to what they do even in the center of *France*. They have here a very good Arsenal, the Marketplace is spacious, the Townhouse a little (but handsom) Fabrick, with a goodly Church near it; their old Buildings are all of Wood, but the new ones, of which they have several entire Streets, of Brick and Freestone; their chief Trade consists in Linen Manufactury, the Country round about producing a vast quantity of Flax. Its situation is upon the River *Dele*, which joyns its Waters with those of the *Lys* or *Ley*; it is the Metropolis of what was anciently known by the Name of *Flandria Gallica*, and had formerly a Jurisdiction of great extent, the Chamber of Accounts of *Flanders* being kept here, establish'd by *Philip the Hardy*.

Their most considerable Church is that of St. *Peter*, founded by *Badouin* the famous Count of *Flanders*, who was born here. Here formerly was to be seen the Ruins of an ancient Castle call'd *le Bucq*, (but since quite lost) belonging to the Lords Wardens or Rangers of the Forests of the Kings of *France*, whence they had the name of *Foresters*, but were afterwards made hereditary Counts of *Flanders*.

Tournay. From hence we pass'd thro' a fruitful Country to *Tournay*, a City not near so large nor so well built as *Lisle*, however it has a double Wall with a dry Ditch about it. The Church of our Lady is a goodly Structure, and the Quire is adorn'd with excellent Marble-work; they boast much of their Antiquity, the best mark whereof is one of their ancient Structures much resembling a Piece of the old *Roman* Architecture.

This City is seated upon the River *Scheld*, which runs thro' it; it has no less than seventeen Parish-Churches, and the Cathedral is a noble Pile, adorn'd with five Towers placed like a *Burgundian* Cross; the Castle is ancient and strong, but rendred much stronger by the *French* of late; formerly it was noted for *Woollen Manufactury*, but now they are contented with a little dealing in Linen. The *English* made themselves Masters of it under King *Henry* VIII, but it was re-deliver'd to the *French* by the Intrigues of Cardinal *Wolsey*; the King of *France* took it in the Year 1667, who retains it to this day, and has taken care to fortifie it *à la moderne*, with regular Bulwarks and Bastions. I could not sufficiently admire the curiosity of the Underminings of the Citadel, the Works or Vaults under-ground (setting aside the depth and darkness) being so well contriv'd, that they might rather pass for Terras-walks than Mines; the greatest Curiosity is, that in the very center of the Citadel you see a Well the surface of whose Water is from the mouth about fifty foot deep, and just above the brink of the Water are certain Balconies, that conduct you to these several subterraneous places.

The Mine-works of the Citadel.

In our way from *Tournay* towards *Valenciennes*, we had a view of the two celebrated Abbeys of S. *Amand* and *de Vicoigne*. The first of these two is a stately Structure, both within and without, as lofty as our *Westminster*, with a double row of Galleries or Corridors about it; both sides are excellently well wrought in Stone-work and Mouldings; it is seated upon the River *Scarpe*, which not far from thence joyns its Current with the *Scheld*; the Abbot has both a temporal and spiritual Jurisdiction over the Dependencies belonging to the Abbey, which appears like a little Village. The *French* are now Masters of it. In the publick Records it is always stiled *Abbatia S. Amandi Elnocensis*, from the Saint that resided at this place call'd *Elno* by the old Latin Authors. It is seated in a most fertile Country, about four leagues from *Tournay*, a little above half-way from thence to *Valenciennes*; and the Foundation (made by *Dagobert* V. King of *France*) is for thirty Canonists and twenty Jesuites. The most delightful Forest, near it, call'd *The Forest of S. Amand*, was by the *French* King's Orders quite cut down in the Year 1676.

S. Amand.

The Abbey de Vicoigne. The Abbey *de Vicoigne* lies within a league of *Valenciennes*; this Structure is not so large nor so stately on the outside as the former, but exceeds it within both in Riches and curious Workmanship, all the sides of the Nave of the Church being cover'd with most exquisite *Relievo*, representing the History of the Passion of our Saviour; the Quire and Altar are very magnificent and noble, being adorn'd with two or three Pieces of Painting; the Nativity and Passion of our Saviour, with the Ascension of the Virgin, are excellent Pieces of *Paul Reuben*. They have also a good Library. *Sanguin* a Hermit was its Founder, who instituted twenty white Friers-hoe, that wear white Hats and white Serge Vestments.

Valenciennes. *Valenciennes* is a City seated on the ascent of an Hill, in an oblong form, representing it self on the North-west

side

side, towards *Tournay* Cawsey, like the South-west Prospect of *Oxford*, with divers *Towers* and *Turrets*. This Road or Cawsey begins at *Ypres*, and from thence by *Lisle* and *Tournay* reaches to *Valenciennes*, a tract of fifty miles, the work of the present *French* King, not inferiour to some of the *Roman* Roads, except that the Pavements are scarce so durable. The Town has a double Wall and Ditch, but dry; the *Scheld* passes thro the middle of it. The Buildings are for the most part of Wood; the Marketplace is spacious, and the Townhouse a large, oblong and ancient Structure; the Citadel is built upon a Hill at a little distance from the City, it was then not quite finish'd, but is not likely to come near either of those of *Tournay* or *Lisle*.

Their Great Church, dedicated to our Lady, is an ancient goodly Structure; that of S. *John* is a modern Fabrick; on S. *Peter's* they have a good Mathematical Dyal: Here are three Convents of *Mendicant* Friers; those of S. *Francis* have in their Chapel very noble Tombs of the Counts of *Hainault*, that were Lords of *Valenciennes*; the *Jacobins* have in theirs a noble Tomb belonging to *John* Nephew of the famous *Badouin*, Count of *Flanders*, and Emperour of *Constantinople*, who built a Palace here, the ordinary Residence of the ancient Counts of *Hainault*. Their *Clothworkers-Hall* shews them to have formerly had a good *Woollen Manufactury* here, and once it was the Staple for *French* Wines, but now they are forc'd to be contented with a reasonable share of Silks and Linen Trade. It had anciently a Jurisdiction of a great extent, the Towns of *Bouchin*, *Conde* and *Quesnay*, with a hundred Villages, being then its Dependencies: It was taken by the *French* in 1667, who have since fortified it with strong Works. The Emperour *Henry* VIII. was born here, and the Princess *Mary*, Daughter of *Charles* the last Duke of *Burgundy*. *Froissart* the Historian, and *Molinetus* the Poet, were both Natives of *Valenciennes*.

Hapre. From *Valenciennes* towards *Cambray* you travel thro' a fertile Plain; we stay'd a little in a Village call'd *Hapre*, where is a handsom Priory, and the Church divided into two parts, one for the Service of the Secular Parish Priest, the other for the seven Monks belonging to the Convent. It is seated upon the River *Sell*, as they call it, being a Branch of the *Scheld*. As you come near to *Cambray*, you pass over divers Bridges laid over Cataracts or deep Chanels of Sand which have no Water, except after the falling of great Rains, when they swell on a sudden like great Rivers; such Rain-Rivers are frequently met with in *Italy*.

Cambray. *Cambray* stands in a level ground, having a strong Citadel on the left as we enter'd; it is not so large as *Valenciennes*, but well fortified; the great Marketplace and Townhouse are both very large and noble; the Great Church of our Lady is a handsom Structure without, and beautified within with many Statues and Tombs of Saints, among which those of S. *Sebastian* and S. *Michael* are the chiefest, being of curious Marble. The Chapter consists of forty eight Canons and ninety five other Ecclesiasticks. Among the Statues is that of the Count of *Speigelberg*, slain at the Battel of S. *Quintin*, by our *English*, in Queen *Mary's* Reign. The Quire and the Nave of the Church are separated by Rails of massy Brass well wrought. Here they preserve a Clock which, upon striking, represents the whole History of the Passion of our Saviour, and is highly admir'd upon that account, tho' it has nothing extraordinary in it.

I remember that in my Travels in this Country I once met with a *Frenchman*, who by fifteen years Labour had produc'd an artificial Head, which by the motion of certain Wirework, Springs and Wheels, would utter whole Dialogues distinctly with an human Voice, nay, even laugh, and express some other Affections, without any delusion; it was at last stoln from him.

Cambray is seated upon the *Scheld*, that runs thro' it; it is an ancient Archbishoprick, and has several Suffragans; in 1677 the *French* took both the Town and Citadel, the latter of which is a good Fortification of five large Bastions, strengthned with Halfmoons and other Outworks, the Ditches being cut out of a Rock, and by its situation upon a rising ground commands the Town, which on the side of *Peronne* is defended by good Works, on the East side by the Castle, and to the West by the Water, which by drowning the Country renders it inaccessible thereabouts. It is noted for making of the finest Linen.

In Citadel.

But, before we enter *France*, we must give you a short description of some few other Towns of the *Spanish Netherlands* we visited in our return; first, the little Town of *Hesdin*, in the Province of *Artois*, upon the Borders of *Picardy*. It is but small, but fortified with a double Wall and Ditch, besides which they can put the Country under water: The *French* took it in 1639, and it was granted them in 1659 by the *Pyrenean Treaty*. From hence to S. *Omer* you travel for ten leagues thro' a fruitful and pleasant Country.

Hesdin.

S. *Omer* is seated on the River *Aa* and a great Morass; being besides this defended by a Citadel and several Bastions, Halfmoons and good Ditches; some Antiquaries are of opinion that the Sea came up to it in former Ages, and that it was the *Portus Iccius* of *Cæsar*. Near it is a little Lake, which, they tell you, contains floating Islands.

S. Omer.

It has divers good Churches, as that of S. *Bertin*, a very regular and handsom Fabrick, endow'd with good Revenues, belonging to the *Benedictins*; this Church has two noble Pillars of Marble twenty foot high, which support the Organ-loft. The *English* have a Seminary of *Jesuites* here, and the *Walcons* of the same Order another, both large and conveniently seated. It was taken by the Duke of *Orleans*, the *French* King's Brother, in 1677, and surrender'd to that Crown by vertue of the Treaty of *Nimmeghen* in 1678. The Air of this place is none of the most wholesom, by reason of the adjacent Morasses.

Its Churches and Convents.

From S. *Omer* we pass'd on a fair Canal in seven hours to *Winoxberghen*, a neat Town, seated upon the River *Colm*: By the way we took notice of another *Jesuites* College call'd *Warten*, belonging also to the *English*, seated on the top of a Hill near the Canal; their institution is for the education of *Novitiates*. The Town it self has four or five good Churches, and a handsom Piazza or Marketplace; the best Woollen Cloths and Stuffs of all *Flanders* were formerly made here, and it has still some dealing in them. It was taken by the *French* in 1658, and confirm'd to them by the *Pyrenean* Treaty.

Winoxberghen

From hence we were convey'd by another Canal in one of their *Treck-schuyts* to *Dunkirk*. About half-way betwixt these two places are two Royal Forts, the first call'd *Le Fort de France*, the second *Fort Louis*, erected to cover the Country betwixt *Winoxberghen* and *Dunkirk*, being an extent only of a league and a half.

Dunkirk is seated at the head of the before-mention'd Canal, and fortified to the Land-side with double Walls and Works, and Bastions of a great height, and towards the Sea-side with treble Works; it is of the bigness of *Oxford*, with large Streets and handsom Houses; its situation is on the North side of the Canal, environ'd by the Sea in form of a Halfmoon, the Breach of which us'd to fill the Works with Sand, but this is resisted now by a long Bank of Timberwork, Faggots and Fascines, that run for half a mile into the Sea, defended at the extremity by two small Forts that command the entrance into the Harbour. Tho' the whole Town be an entire and perfect Fortification, yet have they for its greater security erected a strong Citadel.

Dunkirk.

The Church is a plain old Structure, having nothing extraordinary but a good Piece of Painting of the Day of Judgment. After it was taken by the Marshal *de Turenne*, with the assistance of the *English*, it was deliver'd up to them by Contract, together with the Fort *Mardyke*, in 1662, but in 1666. sold to the *French* for the Sum of Six millions.

From *Dunkirk* we travel'd along the sandy Sea-coast towards *Graveling*, and in our way pass'd by the before-mention'd Fort of *Mardyke*, formerly a strong place, and valiantly assaulted and taken by our *English*, but now quite demolish'd, there scarce appearing any foot-steps of its Ruins.

Graveling is seated upon the River *Aa*, which a little below it exonerates it self into the Sea; this place, together with *Dunkirk* and *Ostend*, were the three Cautionary Towns offer'd to our Queen *Elizabeth*, in lieu of which she accepted afterwards *Brill*, *Flushing*, and the Fort of *Rammekins*. It is but a small Town, but its Fortifications of a considerable compass, consisting of six good Bastions, defended with Ravelins and other Outworks; besides that, by its low situation in a watery Plain it is of very difficult access, for we pass'd at least five or six Drawbridges before we entred the body of the Town, it having divers other Forts to hinder the approach of an Enemy; just without the Town the Fort *Philip* defends the Harbour, and at a further distance are the Forts of *Oye* and *l'Ecluse*. Near this place the *Spaniards* obtain'd a signal Victory over the *French* in 1558, who in an hundred years after, *viz.* in 1658, with the assistance of the *English*, took both this place and *Dunkirk*, and was confirm'd to them by the *Pyrenean Treaty*.

Graveling.

The *Spanish Netherlands* lie for the most part more remoter from the Sea than the *United Provinces*, but have nevertheless a fertile and pleasant Soil: They have got their

The Country.

their Name from their being now under the Jurisdiction of *Spain*; for tho' in their late Civil Wars even seven of the ten remaining were engag'd in the common Revolt, yet after the Union of *Utrecht* they return'd to their former Allegiance.

Its Government. This Country is for the most part govern'd by a *Grandee* of *Spain*, with the Title of the *Governour of the Spanish Netherlands*, who resides always at *Brussels*, and like a hungry Leach, sucking the Blood of the People, return loaden with the Spoils of their Subjects into *Spain*.

Their Cities retain still their former model of Government, which is administred for the most part by *Burghermasters* and *Schepens*, as in the Cities of *Holland*, but in garison'd Towns the Governour has the chief command. The City and Bishoprick of *Liege* has no dependency either on the *Spaniards* or *French* in the *Netherlands*, being a Principality of the Empire, and their Appeals in Temporals lie to the Chamber of *Spires*.

The People. The Inhabitants of these Provinces are more polite than the Natives of *Holland*, perhaps from their constant conversation with the *French*, whose Language is almost universal here, tho' mix'd with some *Flemmish*, which produces the *Waloon* Dialect. They neither live so parsimoniously, nor work so hard as the *Hollanders*; their former flourishing Trade is destroy'd by the Severity of the Government and the Encroachments of the *Dutch*, Linen being now their best Commodity, having a most convenient Soil for the growth of Flax and whitening of Linen. They retain here the *Roman Catholick* Religion, which being the same profess'd in *Spain*, makes them the better dispense with their Government. The Inhabitants were a warlike People in the time of the *Romans*, and made great opposition to *Cæsar*; their Nobility may boast now-adays more of their ancient Families than Riches. The Rivers *Meuse*, *Moselle*, *Sambre*, *Rhine* and *Scheld* water these Provinces, tho' at the same time it is evident that in the *Roman* under *Belgia* was comprehended (besides the before-mention'd Provinces) the Electorates of *Treves*, *Mayence* and *Cologne*, the Dukedoms of *Normandy* and *Campaign*, the Bishopricks of *Reims*, *Laon* and *Beavois*, and the City of *Aix la Chapelle*.

The greatest part of the *Spanish Netherlands* lying much more remote from the Sea-side than the *United Provinces*, enjoy a much better Air, and the Country abounds in Corn, a thing much wanted in *Holland*. They have no Mines, except some Iron, Allum and Salt-petre about *Liege*.

The eldest Son here challenges the Name of both his Parents, and has some precedency before the younger Children, but not the sole Inheritance, as our elder Brothers in *England*.

CHAP. III.

A Description of France.

THE first place we came to in *France*, properly so call'd, (without its Conquests) was *Peronne*, formerly a Frontier Town towards *Cambray*, and well fortified after the old way, being the first on that side in *Picardy*: Here the Custom-house Officers search'd us as strictly as if we had first set foot into the *French Territories*, tho' we came out of the *French Conquests*, and had paid Duties there before to the same King.

Peronne. It is seated upon a Level on the River *Somme*, not unlike our *Salisbury*, but in bigness approaching next to *Exeter*, in that part of *Picardy* call'd the *Vermandois* or *Sans-terre*; the first being the situation of the ancient *Veromandue*; S. *Quintins*, which is not far off, being suppos'd to have been the *Augusta Veromanduorum* of *Cæsar*.

Roy. From *Peronne* passing thro' the little Village of *Marsilpe*, we came to *Roy*, formerly a Town of note, (as its Ruins sufficiently testifie) seated on the River *Moreul* in the *Sans-terre*; then taking our way thro' the Village of *Gouncy*, sirnam'd *Sur le Arondeberg*, in the Isle of *France*, we came to *Pont*, sirnam'd S. *Maixence*, upon the River *Oyse*, having an old strong Wall, and a good Bridge that brings you to it cross the River.

Pont.

Senlis. From hence travelling three leagues further, we came to *Senlis*, a Bishop's See, Suffragan to that of *Reims*; some would have it the *Augustomagus* of *Ptolomy*. The Great Church dedicated to the Holy Virgin is suppos'd to have been built by the *English*.

Louvre. The next Town betwixt this and *Paris* is the *Louvre*, seated in the Dukedom of *Valois*, once the Family of the present King, before it was swallow'd up in the House of *Bourbon*. *Picardy* has generally a pleasant and fertile Soil.

Paris. Thence we came to *Paris*, the Metropolis of *France*, which some have compar'd with *London* for its Extent, Buildings, and number of Inhabitants.

Its extent. As for its Circumference, the same is easily discover'd from off the Towers of their *Nostre Dame* or *Our Lady's* Church, to be much less than ours, tho' it lies in a more circular figure.

Buildings. The Houses, it must be confess'd, look very handsom on the outside, being built with a fair white Free-stone, (found thereabouts) with handsom Sash-windows.

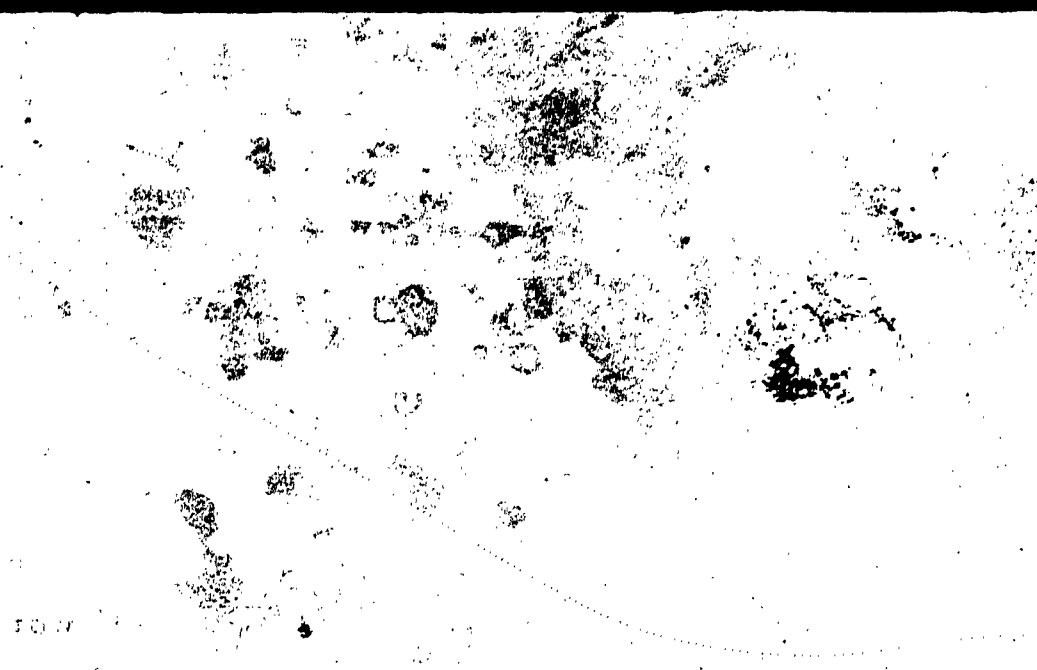
Inhabitants. The number of its Inhabitants is, in my Opinion, best guess'd at, without any further scrutiny, by the People you meet with in the Streets, especially on the *Pont neuf*, the greatest Passage in *Paris*, and that a very short one, notwithstanding which you shall very rarely see near so many People there as you meet continually walking all-along from *Tower-hill* to *Westminster-Abbey*: Add to this, that their by-Streets and Alleys are not near so throng'd with People as ours are in *London*; and if Trade is the main thing that renders Cities populous, (as we see in those of *Holland*) it is evident that our Metropolis challenges the preference upon that account. What some would alledge in reference to the number of Coaches in *Paris* is of no great consequence, tho' I am apt to believe we may carry it even upon that account.

Situation. This so much celebrated City is seated in a most delightful Plain; their Houses are generally six or seven stories high: By common computation *Paris* has betwixt thirty and forty thousand Houses, and about seven hundred thousand Souls.

Streets. The Streets are much handsomer and less dirty than they were formerly, (which gave it the Name of *Lutetia*) and their Squares are exceeding noble; they are enlightned in the night-time by Lanthorns hung on Lines. The whole bulk of this spacious City is divided into three parts; the first is call'd *la Ville*, containing the four Suburbs of S. *Antoin*, *Du Temple*, S. *Martin* and S. *Denis*, being encompass'd with the *Sein* on one side, and Walls on the other; the second is call'd *la Cite*, seated betwixt the first and the third, upon what is properly call'd the *Isle*, surrounded by the branches of the before-mention'd River, and joyn'd to the rest by Bridges, being the most ancient part of the Town; the third part is call'd the *University*, seated on a rising ground, containing the Colleges erected for the promoting of Learning, and the *Fauxbourgs* or Suburbs of S. *Germain*, S. *Michael*, S. *Jaquet*, S. *Marcell*, and S. *Victoire*. Its several Quarters.

The Suburb of S. *Germain* has the best Palaces and Colleges. For the rest; In all the three Quarters are reckon'd 40 Parish-Churches, 42 Abbeys and Convents, 40 Nunneries, 24 Hospitals, 48 Colleges, besides 17 Chapels, so that Charity and Religion seems to take up a considerable part of this great City. The *Sein* passes thro' the middle of it, and the Water is very sweet and fresh here, but has no Tide, like our *Thames* about *London*. So much of it in general; we will now proceed to give you the particulars.

The Louvre. The *Louvre*, were it finish'd according to the first design, would questionless exceed all Structures in the World, whereas now only two sides are compleated, *viz.* that towards the *Sein* and *Thuilerys*, the Hotels of *Crequi*, *Longueville* and *Montausier* being since built within the compass of this Structure, which for this and some other reasons (amongst which the siding of this City with the League in this King's minority is none of the least) is suppos'd will never be finish'd, it being certain that the third part of the Charges imploy'd in building of *Versailles* would have made this as compleat and magnificent a Structure as ever the World beheld: Some say *Philip* the *August* was the first Founder of it, above five hundred years



A New Chart of the CHANNEL Between ENGLAND and FRA

Shewing the Sands and Depth of water wit
of the Tydes, and Setting of the Current, as the
ved in the Year 1701. by Capt EDM: HA
MAJ,TIES Command.

Sold by Iex: Seller and Cha: Price at the Herm

Note The Variation was Observed in all parts of the Channell to be about seven Degrees and half, from the North, Westerly or two thirds of a point, in the Year 1701. and so much must be allowed in all Courses on this Chart.

ADVERTISMENT

In this **Channell Draught**, *the smaller figures are the Depth in fathoms. The Litterall or Roman figures shew the hour of* **Highwater**, *or rather the end of the stream that setts to the Eastwards on the day of the* **New & Full Moon**. *Add therefore the time of the Moons Southing or Northing to ye Number found near the place where your Shipp is, and the Summe shall show you how long the Tyde will run to the Eastwards, but if it be more then 12 Subtract 12 therefrom.*
The Direction of the Darts shew upon what point of the Compaß the strength of the Tyde Setts.

In
With Pol
years

years ago, but the Fabrick, as it now stands, oweth its Rise to *Francis* I. The Hall call'd *le Salle de Cent Swiss*, formerly the Hall of Audience for Ambassadours, was by *Mary de Medicis* turn'd into a Playhouse: On the Porches you see several Inscriptions, sufficiently demonstrating that the *French* were always apt at flattering their Monarchs, tho' they then did not come up to that height as they have been since, in bestowing the Epithet of *Vero Immortali* and other such-like blasphemous expressions upon them. Upon this occasion I can't forbear to insert three Distichs made by the *French* Poets, exceeding for their loftiness the Structure it self:

Rex, Regnum, atq; Domus, tria sunt Miracula Mundi!
Rex animo, Regnum viribus, arce Domus.

Non orbis gentem, non urbem gens habet ullam,
Urbsve Domum, Dominum nec Domus ulla parem.

Louvre Domus, Dominus Ludovicus, Regia Rege
Digna suo, Cœlo est hæc minor, ille Deo.

All the Antiquities and *Roman* Statues, with a most curious Cabinet of Paintings formerly preserv'd here, are transported to *Versailles*; there are however some Pieces left of *le Brun*'s, and that celebrated Piece of *Paul Veronese*'s Wedding of *Cana*, presented to the King by the Senate of *Venice*; for the *Servi*, in whose Church it stood on the Altar, having sold the same to the *French* King, the Senate hearing of it, to check these mercenary Monks, presented it to the King.

The Academy for the *French* Tongue.

Their Academy for the cultivating and improving the *French* Tongue, instituted by the present King's Father, consisting of forty or fifty of the most ingenious Persons of the City, is kept here ever since. Many of the chief Artists belonging to the King have their Apartments in this Palace; their chief Painter then was Monsr. *le Brun*, since dead; their head Graver was *Girardon*; and for Sculptures, Medals and Coin, Monsr. *Roty*, whose two Brothers have the honour to serve in the same Imployment to the Kings of *England* and *Spain*. And not far from these they shew you another spacious place call'd the *Garde meuble*, stor'd with all sorts of Paintings, Tapestries and curious Cabinets.

The Thuillery.

The *Thuillery* is also a part of the *Louvre*, where it faces the fine Garden of the *Thuilleries*; it was formerly furnish'd with abundance of the best Painting, and other Movables of the best Workmanship, which have been carried to *Versailles*: That part which fronts the Garden is a long beautiful piece of a Fabrick begun by *Henry* IV, and compleated by *Lewis* XIV. The Theatre in it is exceeding noble, and the Garden is before it not inferiour to any in *Europe*, not excepting even *Versailles*, the Walks and Plantations whereof are indeed more costly, but not more delightful and regular. At the lower end of it stands a noble Statue of *Verity* carried off in the Arms of *Time*, with this Inscription;

The Gardens.

Opus Petri à Frankevilla Comeracensis, Ann. 1609.

There are divers excellent Pieces extant of this great Master.

The Royal Palace, call'd *Palais Royale*, does also belong to the King, being the ordinary Residence of the Duke of *Orleans*, the King's only Brother, when in Town; it is compos'd of two fair Courts, with a delicious Garden behind it; Cardinal *Richlieu* was the Founder of it, who also built here a Theatre on purpose for Tragedies, of which he was a great admirer; but since *Moliere* had liberty to act his Comedies there, and after his death the Opera's were acted in the same Theatre.

The Place Royal.

The *Place-Royal* is a vast Square, open towards the Street of S. *Honore*, intended chiefly for the King's Statue, which is to be put in the middle, for which reason they have demolish'd the *Hotel de Vendosme*, and ruin'd the Convent of the *Capuchins*.

The Academies for Painting and Architecture.

Near this is another Structure call'd *le Palais Brion*, design'd for a Library, but since turn'd into two Academies, *viz.* for Architecture and Painting; the first erected by Monsr. *Colbert*; *Mansard*, *Perault*, *Blondel* and *Felibien* were Members of it; they meet two or three times a week to consult about the most curious Models in Architecture that can be contriv'd. That of the Painters acknowledges Monsr. *Noyers*, Secretary of State, for its Founder, but Monsr. *Colbert* for its Restorer; of this M. *le Brun* their great Painter was President. They keep here good store of Original Paintings of some of the best Masters, Statues, Busts of ancient *Roman* Sculpture to design by; besides which, they hire every day some clean-limb'd Man or Woman, who expose themselves naked to their view.

The King's Cabinet.

The House known by the Name of the *Cabinet du Roy* contain'd formerly great store of curious Pictures, Medals, Agates, and such-like Rarities, as also the *Anticalia* found in *Childeric* the First's Tomb at *Tournay*, with his Library, and a considerable Collection of Manuscripts, among which was St. *Cyprian*'s Work, brought thither from St. *Lawrence*'s Library at *Florence*, but these are for the most part now at *Versailles*.

The Academy of Sciences.

The Academy of Sciences was likewise founded by Monsr. *Colbert*; they are imploy'd in promoting Mathematicks, Physick, and Natural Philosophy, like our *Royal Society*, which exceeds theirs both in number of its Members and advancement of Learning.

They have many Noblemens Houses of note, call'd by them *Hotels*; that of the great Monsr. *Colbert*, now in the possession of the Marquess of *Seignelay*, is a very noble Fabrick, and his Library is most exquisite, both for its number of good Books and curious Manuscripts; they shew you a Manuscript Bible as old as the Reign of *Charles le Chauve*; the famous Historian Monsr. *de Thou* has also left the Publick an excellent Library. Most of their Noblemens Palaces of note are furnish'd with very good Collections of Original Pictures by the most excellent hands, which they have purchas'd for a great part from the covetous *Italians*; among these the *Palais Mazarin*, and the Hotel *de Seguier*, deserve to be particularly remember'd; the first is noble without, and curiously furnish'd within with Statues and Paintings both ancient and modern, of the hands of *Grimaldi* and *Romanelli*, two noted *Italian* Painters, sent for hither upon that account; the King has taken the best of 'em, yet there are many Cabinets, Tapestries, and other rich Vessels of Stone and Silver, left. The second was also excellently well furnish'd with all sorts of Curiosities, and particularly with precious *China*-works of all sorts, but since sold or distributed.

The Palais Mazarin.

The Hotel de Seguier.

The *Recolets* have a very good Library, and some excellent Paintings: Hard by is the Hospital of St. *Lewis*, founded for those that are infected with the Plague, by K. *Henry* IV, but at present is made use of for the Sick of the *Hotel de Dieu*.

The Grand Prior's Palace.

In the Street of S. *Avoye* is an old large Palace belonging to the *Grand Prior* of *France*, but formerly appertaining to the *Knights Templers*; it has a considerable Revenue annex'd to it. In the Street of S. *Lewis* is a noble Fountain, adorn'd with *Tritons* and such-like other Ornaments.

The Townhouse.

Their *Maison de Ville* or *Townhouse* stands in the Place call'd the *Greve*, built by K. *Francis* I. Neither the place nor Structure are answerable to the greatness of such a City as *Paris*; however, there is a noble way leading to it, enlarg'd in 1675, with Cawsey-banks on both sides.

The Place Royal, and Statue of Lewis XIII.

The *Place Royal* is a magnificent Square, near as spacious as our *Great Lincolns-Inn-Field*, enclos'd with *Piazza-Walks*, and the Platform with Iron Rails; the Statue of K. *Lewis* XIII, set up by Cardinal *Richlieu*, stands in the middle of it, with divers Inscriptions on it in *French* and *Latin*; the Horse is said to be the Work of *Volterre* a famous *Italian*, who made it for K. *Henry* II. The said Cardinal's House stands in the same place, having among other Curiosities an excellent Collection of Paintings.

The Bastile.

The *Bastile* is a place not unlike our *Tower*, surrounded with a plain Wall and eight antique Turrets, and serves for the same use, *viz.* for a Magazine and a Prison for Prisoners of Quality.

The Arsenal.

There is another very good Arsenal not far from this, a spacious Pile of Building, three great Courts and a Garden; the Portal is supported by Cannons instead of Pillars, with this Inscription in Capitals:

Ætna hæc Henrico Vulcania tela ministrat,
Tela Gigantæos debellatura furores.

Here many Workmen are imploy'd by the King, to cast Statues and other Works of Metal.

The Abbey of S. Victoire.

The Abbey of St. *Victoire*, in the possession of the *Canons Regular* of S. *Austin*, is one of the most ancient Foundations in *Paris*; it has a good Library, and some Manuscripts, and Students are permitted to make use of them three times every week. The noted Mr. *Santevil* belong'd both to this House and Order.

The Physick-Garden.

The *Jardin Royal* or *Physick-Garden* (of which Mr. *du Verney*, an excellent Anatomist, was Surveyor) is maintain'd at the King's charge, and Botanick Lectures are kept there during the best season for Plants; it is something longer, but not broader, than that of *Oxford*. There also belongs to it a very good Anatomy-School, stor'd with

with Skeletons of Animals, and among the rest with one of a very large Elephant. In the King's Laboratory every body is admitted to see the Operations, and the Medicines whole here are bestow'd upon the Poor.

Near it is the *Hospital General*, as they call it, a vast Pile of Buildings, finish'd in 1657, by Cardinal *Mazarin*, and containing near six thousand poor People, who are imploy'd here in divers sorts of Work, and when sick, well look'd after.

Hotel Dieu. Another of their Hospitals is that call'd *Hotel Dieu*, a very large Building, but neither handsom nor extraordinary convenient, being sometimes overcrowded with Sick, and too closely built up round about it. As it is the chief Hospital in *Paris* for the Sick, the Nuns of S. *Austin* are oblig'd to tend and look after them, which they do with so much tenderness sometimes, that they don't care much to return to the Nunnery; for, not long before, a certain *Irishman* being recover'd by the care of his pretty Nurse, made shift to carry her away without being ever heard of since: The danger and trouble that must needs be the attendants of this Imployment, making the same very meritorious among the *Romanists*, the Ladies of the first Quality sometimes imploy themselves in these acts of Piety; and it was in this place that (not long before) the Dutchess of *Nemours*, Mother to the Dutchess of *Orleans*, got the Small-pox, and her Death into the bargain.

Hospital of Charity. Not far thence is the Hospital *de la Charité*, where the Friers of S. *John* perform the same Office as the Nuns do in the former: Each Room has three rows of Beds.

There is another Hospital in *Paris* they stile *The Incurable*, because only such as are past Cure are admitted into it.

The Royal Hospital of the Invalides. But what exceeds all the rest is, the *Hotel Royal des Invalides*, or the *Royal Hospital* for maim'd Soldiers, or those render'd unserviceable by age, founded upon the same Design as our *Chelsea-Hospital*, built at the present King's charge, from 1670 to 1678. The whole Structure is compos'd of five Quadrangles, one large one in the middle, flank'd with two other square ones on each side, with Piazza's and Corridors or Galleries round them all; the whole Fabrick being of a hewn Stone, makes a very noble appearance. The Kitchin is very large and handsom, and in their Refectories (where the Soldiers eat) you see most of the Sieges undertaken in the late Wars by the *French*, painted on the Walls. The Apothecary's Shop belonging to this place is the best contriv'd and as well furnish'd as any I ever met with in all my Travels. The Soldiers are attended here by the Sisters of S. *Lazarus*. Considering the freedom allow'd to Strangers, to be present at their Operations perform'd in all their Hospitals, the advantage of their Chymical Lectures, Physick-Garden, and frequent practise in Anatomy, *Paris* seems the most accomplish'd School for young Physicians, to be prefer'd in this respect to *Leyden*, *Padua*, *Montpellier*, *Cambridge*, and *Oxford* it self.

The Gobelins. The House known by the Name of the *Gobelins*, in the Suburbs of S. *Marcell*, was formerly famous for the making and dying of the best Scarlet Cloths, but now divers sorts of the best Workmen are imploy'd here at the King's cost and profit, in making the finest Tapestry, Plate, Mosaic, Iron, Copper and Brass-Works, Statuary, Sculpture, Embroideries, &c. These Suburbs have a Church dedicated to S. *Marcell*, where you see the Tomb of the noted *Peter Lombard*.

The University. The University of *Paris*, which makes up one third part of the whole, is worth the Curiosity of a Traveller; they make it as ancient as *Charles the Great*, and say it was encompass'd with a Wall; hence it is that they celebrate a certain Day to his memory, when all the Heads of the University meet at the College of *Navarre*. Formerly the University of *Paris* had more Colleges and Students, the number of the first (where publick Exercises are perform'd) is at present reduc'd to eight or nine, among which the *Sorbonne*, the College *du Plessis*, that of *Navarre* and *de Harcourt* are the chiefest: They had also formerly the Privilege of being exempted both from the Civil and Criminal Jurisdiction of *Paris*, but that is little regarded now.

The chief things profess'd here are Divinity, Physick, Law, and Arts, or Philosophy; for each of these they chuse, four times a Year, a *Rector* or *Professor*: The *Sorbonne* and the College of *Navarre* are the most considerable for Divinity. The Schools for the Civil Law are in the *Rue de Beauvais*, lately new model'd by the King's Orders. The Physicians have a fair Anatomical Theatre in the *Rue de Boucherie*; and their College call'd *de quatre Nations*, (i. e. of four Nations) *viz.* those of *France*, *Picardy*, *Normandy* and *Germany*, is dedicated to their Faculty of Arts.

The Sorbonne. The *Sorbonne* has got its Name from *Robert de Sorbonne* its Founder, formerly a plain and ordinary Fabrick, but now turn'd into a magnificent Structure, chiefly by the care of Cardinal *Richlieu*; it has always been famous for its learned Professors, ever since its first Foundation, which was under the Reign of S. *Lewis*, as the Inscription on a Brass Plate in the Church testifies;

Ludovicus Rex Francorum, sub quo fundata fuit Domus Sorbonæ circa Ann. Domini MCCLII.

The Professors and Students are lodg'd in the Apartments about the great Quadrangle.

The Library. The Library is kept in a handsom and lofty Room, much encreas'd by the liberality of the said Cardinal, especially with some Manuscripts, distinguish'd with his Arms upon 'em. Among other curious Pieces, they shew you two large Volumes of *Livy*, an old Translation in antiquated *French*, written in the Reign of *Charles* V, embellish'd with Paintings in Miniature on Vellum, which Art has been lost about two hundred Years since. They have good store of Divinity Works, and all Translations of the Bible. The Picture of the Cardinal their Benefactor hangs at one end of the Room, at length, in his Habit; and at the other, his Bustum in Brass, done by the excellent hand of *Varini*. The Fathers and School-Divines are regularly plac'd one after another, with their respective *Annotators* in the rows underneath.

Their Degrees. After they have frequented the publick Lectures for three Years, they are qualified for the Degree of Batchelors, who wear Lambskins and Tippets like our Batchelors of Arts at *Oxford*; after two Years more, they may be promoted to the Degree of Licentiates, who generally are the Opponents to such as take the Degree of Doctors. I was present at some of their publick Exercises and Disputations, which were manag'd with a great deal of decency and order. The Subjects on which most generally they exercise themselves are, the Sacrament, the Transubstantiation, Trinity and Incarnation, which in the *Roman* Church being look'd upon as the sole Object of Faith, even in contradiction to Sense and Reason, I could not but admire to hear the Opponents urge oftentimes such things as are accounted and declar'd heretical among 'em.

The College of Navarre. The College of *Navarre*, the next in rank, acknowledges King *Philip the Fair* and his Queen for its Founders, as the Inscription under their Statues testifies. Formerly none but Noblemens Children were admitted here, but now all sorts, without distinction. They have four Professors in Divinity, and the Archbishop of *Paris* is President of it. In 1684 the Magistrates of *Paris* founded an annual Panegyrick for this present King, on S. *Lewis*'s Day.

The College Harcourt. The College *de Harcourt* is a large Structure, near the *Sorbonne*, where continual Exercises are held for inferiour Forms of Students in Logick and Philosophy; they print their Theses, and dispute categorically, without confining themselves strictly to Syllogistical Rules.

The College du Plessis. The College *du Plessis* was restor'd by Cardinal *Richlieu*, being as it were the Nursery of the *Sorbonne*, who always put a Governour of their own College over it. The Faculty of Arts for the four Nations is a different Foundation from the College of the *quatre Nations*, these Artists having peculiar Houses allotted 'em, and chuse each every Year a President of their own Nation.

The College of the four Nations. The College of the *quatre Nations* acknowledges the Cardinal *Mazarin* for its Founder; the Portal hath this Inscription:

Jul. MaZarin: S. R. E. Card.
Basilicam & Gymnas.
F. C. A. MDC. LXI.

It has a double Court, and a good Library of the Cardinal's own Collection, which is open to every body at certain hours in the day. The number intended by the said Cardinal's Will were sixty, *viz.* fifteen from about *Pignerol* and the adjacent parts of *Italy*, fifteen for the *Alsatian* Youth of *Germany*, twenty for those of the *New Conquests* in the *Netherlands*, and ten for *Roussillon* and *Catalonia*; but neither the *Structure* nor *Institution* is compleated yet. As the *Doctors* of the *Sorbonne* are Governours of this College, so their Books in the Library treat of the Canon and Civil Law, mix'd with abundance of School-Divinity-men.

College Royal. The *College Royal*, founded by *Francis* I. for Law, Physick, Mathematicks, and the Oriental Languages, was carried on further by K. *Henry* IV. *Mary de Medicis*, and *Lewis* XIII, tho' not brought to perfection; the *Professors* receive

receive their Salaries from the King, without any dependance on the University. It is seated near S. *James's Street* and the College of *Cambray*.

The *English* Nunnery and Convent.

The *English Roman-Catholicks* have a good Nunnery and Convent of the *Benedictins* in *Paris*, foundded in 1657. In the Nunnery many young Ladies of Popish Parentage are educated.

The Cathedral.

Among their Churches, the Cathedral call'd *Nostre Dame* challenges the first rank, an antique *Gothick* Structure, compleated at several times, more strong than noble, a very ancient Bishoprick, founded (as they say) by S. *Dennis* not long after the Apostles time, but made an Archbishoprick not till 1622, by Pope *Urban* VIII. In the Quire you see divers good Pieces of Painting and rich Tapestry, and abundance of Gold and Silver Plate for their Altars: It has about fifty Canons belonging to it, among which was once the famous Historian *Paulus Emilius Veronensis*, whose Tomb is to be seen in one of the little Chapels.

The *Jesuites* College.

The next is the *Jesuits* Church; on the Front of their College you see these words in Capitals, *Collegium Ludovici Magni*. This Society was first introduc'd into *Paris* by *du Prat*, who presided at the Council of *Trent* for *France*, and afterwards prov'd a great Benefactor to them, as well as that famous and unfortunate Minister of State Monsr. *Fouquet*. The Library, which was his Gift, is a very good one, both for number of Books and Manuscripts, among which are many *Protestant* and *Socinian* Authors.

Another.

These Fathers have another College in the Street of S. *Anthony*, the Church whereof is a magnificent modern Structure, carried on in part by Cardinal *Richlieu*, under the Reign of K. *Lewis* XIII, whose Heart is entomb'd here, as well as that of *Henry de Bourbon* Prince of *Conde*.

A third.

They have lately built another in the Suburbs of S. *Germain*, call'd the *Novitiates*, the Church whereof is but small, but the Architecture most excellent; it was built at the charge of Monsr. *Noyes* Secretary of State.

The Church of S. Genevieve.

The Church of S. *Genevieve*, with its Regular Canons, is said to have been founded by King *Clovis*, who has an old Tomb here, which has been embellish'd of late years, for they have put on his Head a Crown with a *Flower de Luce*, whereas these Arms were not till long after us'd by the Crown of *France*; just as in some other Popish Countries I have observ'd our Saviour painted with Beads and a Rosary in his hands. They have put a modern Inscription upon the old King's Tomb.

The Tomb of Des Cartes.

But the chief Ornament of this Church is the Tomb of that great *French* Philosopher *Des Cartes*; it has two Inscriptions, one in *French* Verse, the other in *Latin*, as follows;

RENATUS DES CARTES.

Vir supra Titulos omnium retrò Philosophorum
Nobilis genere, Armoricus gente, Turonicus Origine
In Gallia, Flexiæ studuit,
In Pannonia, miles meruit,
In Batavia Philosophus delituit,
In Suecia vocatus occubuit:
Tanti Viri Pretiosas Reliquias
Galliarum Percelebris tunc Legatus
Petrus Chanut
Christinæ Sapientissimæ Reginæ, Sapientum Amatrici,
Invidere non potuit, nec vindicare Patriæ,
Sed quibus licuit cumulatus honoribus
Peregrinæ terræ mandavit invitus
Anno Domini 1650. *mense* Feb. 10. *ætatis* 54.
Tandem post septem & decem Annos
In gratiam Christianissimi Regis
Ludovici Decimi-Quarti
Virorum Insignium Cultoris, & Remuneratoris;
Procurante Petro Dalibert,
Sepulchri pio & amico violatore
Patriæ Redditæ sunt,
Et in isto urbis & Artium culmine positæ.
Ut qui vivus apud Exteros otium & famam quæsierat,
Mortuus apud suos cum laude quiesceret.
Suis & exteris in Exemplum & documentum futurus.
I NUNC VIATOR.
Et divinitatis immortalitatisque Animæ
Maximum & clarum assertorem
Aut jam Crede felicem, aut precibus Redde.

The Apothecary's Shop belonging to the Convent, and the Library, are neatly dispers'd, where they have divers ancient Busts, Coins, Medals, and other Antiquities: Father *Molinet* has a curious Collection of Rarities of his own; and the famous Architect Father *Creil* was a Member of this Convent.

In the Monastery of the *Jacobins* is to be seen the Monument of *Humbertus*, the last Prince of *Dauphine*, who having no Issue, sold this Principality to *Phil. de Valois*, and embracing a Monastical Life at *Lyons*, became first to be Prior of this Convent, and afterwards Patriarch of *Alexandria*, as the Inscription tells you.

The *Jacobins* Convent.

The Church of the *Carmelites* is for its Antiquity not inferiour to any in *Paris*, being suppos'd to have been founded by S. *Dennis*; it now contains the Heart of the Great *Turenne*, and has divers excellent modern Paintings and other Ornaments within. That call'd *Val de Grace* is both a modern Institution and Structure, after the *Italian*, founded by Queen *Ann* of *Austria*, upon the miraculous Birth (as they stile it) of this present King, after she had been married 22 Years: Her Heart, as also that of our *Henrietta Maria* Dutchess of *Orleans*, lies entomb'd here. The *Altar* and *Cupola* are exceeding fine, and upon the *Portal* you see these words,

The Church of the *Carmelites* and *Val de Grace*

Jesu nascenti Virginiq; Matri.

All the Nuns are of noble extraction, and chuse a Lady Abbess every three years: Madam *Le Valleiere*, once the King's Mistress, retreated to this Nunnery, to do Pennance for her past Miscarriages.

In the ancient Abbey of S. *Germain* are the Tombs of many of their ancient Kings, who us'd to be buried here, before the time of the Inroads made by the *Northern* Nations, as of late they do at St. *Dennis*. That of *Chilperic* has only these few words, in a very old Character, on a plain Stone,

The Abbey of S. *Germain*.

Rex Chilpericus hoc tegitur Lapide.

But that this was but part of his Tomb, is evident from the Inscription on a broken Tombstone dug up since in another place;

Hic jacet Chilpericus Francorum Rex.
Ego Chilpericus Francorum Rex precor ut inde in Æternum non auferentur ossa mea.

Queen *Fredigonde*, who died in 601, is also entomb'd here; and *Clotharius*, and the second Son to *Chilperic*, of the same Name with his Father, with their Wives. Among the modern Monuments here, are chiefly remarkable that of the Duke of *Vernoüil*, Prince of *Bourbon*, Natural Son of King *Henry* IV, who was Bishop and Abbot of S. *Germain*, but afterwards relinquishing the Monastical state, married the Dutchess of *Sully*. Here is also inter'd the young Duke of *Bourbon*, Son of the present K. of *France*, and *Casimir* K. of *Poland*, who after having resign'd his Crown, died Abbot of this place; their Epitaphs and Inscriptions are too long to be inserted. Here are buried also some of the Family of the *Douglas*'s of *Scotland*. They have a very good Library here, formerly accounted one of the best in *Paris*, and which still has the reputation of excelling all the rest in Manuscripts, except the King's. They pretend to have the *Psalter* of St. *Germain*, which he generally us'd at Divine Service, and a Missal of nine hundred years old, written with a Style on little Tables of Cedar. They shew you a great Volume brought by a *French* Ambassadour from *Constantinople*, with attestation of most of the Bishops of the *Greek* Church, concerning their Belief of Transubstantiation, which they produce as an undeniable Proof against the Opinion of the *Protestants*; tho' to speak the truth, it is very probable that these good Fathers might do much out of complaisance both to the King and the Ambassadour, nothing being more observable among the *Greeks* than to accommodate themselves, both in Discipline and Doctrine, to those among whom they live; as is particularly remarkable at *Rome* and *Venice*.

The Fathers of this Abbey formerly publish'd a very good Edition of S. *Austin*'s Works, from the best Manuscripts in *Europe*; and Father *Dacherry*, of this House, has put out divers Volumes of his *Specilegium*, containing many Curiosities and Antiquities taken out of their Manuscripts. They tell you, that the Church being built in the same place where stood anciently the Temple of *Isis*, a Statue of which Goddess remains on part of the Walls, a simple old Woman was seen to worship it for a Saint, which the Fathers having got notice of, they broke it to pieces.

Another of their publick Structures is what they call *le Palais*, because in old times it was the Residence of their Kings, but by King *Philip the Fair* appropriated for the Assembly of their Parliament. The Hall in which anciently their Kings us'd to perform their greatest Solemnities is very spacious, and arch'd, with the several

Le Palais

Courts of Justice in particular Chambers about it; the ancient Chamber of Private Audience is now the Room where the Remainders of their ancient Parliaments assemble when the King has any thing of moment to propose to them; it opens always on St. *Martin*'s Day, when the Members attend in the Great Hall in their Scarlet Robes. Here is also kept the Court of Aids, which has a separate Jurisdiction from the Parliament; their *Court of Chancery* and the *Chamber of Accounts* are the same as our *Exchequer Court*; they plead by way of Bill and Answer, Plaintiff and Defendant, but in a more summary way than in our *Court of Chancery*, but much like our Civil *Courts of Judicature*; tho' at the same time there are not wanting Instances, that their Suits have been protracted for a great many Years. Here all the *Patents* of the Peers are regist'red, as well as their *Charters* and other *Records*.

The Chapel of St. *Lewis*. In the Chapel of S. *Lewis*, belonging to the Lawyers, they shew you abundance of Relicks, which they vouch for authentick; as, the Sponge dipt in Vinegar and Gall, the Head of the Spear wherewith they pierc'd our Saviour's Side, and the purple Robe entire, tho' at *Rome* they shew with the same assurance a piece of it. Near this Palace is the Place call'd *la Place Dauphin*, of a triangular form, built immediately after the Birth of *Lewis* the Thirteenth, which gave it the Name *Dauphin*.

The Palace of *Luxemburgh*. The *Palais de Luxemburgh* or *Palais d'Orleans*, built by *Mary de Medicis*, is one of the most regular and magnificent Structures in *Paris*; Madamoiselle *d'Orleans* has her Lodgings on one side, and the Dutchess of *Guise* on the other, in whose is that famous Gallery of Paintings of *Mary de Medicis*, representing her whole Life, from her Nativity to the end of her Government, the Work of the excellent *Paul Reuben*, who, they say, bestow'd two whole years upon it; her meeting with *Henry* IV, just before Marriage, he all in Armour, and she dress'd with all imaginable advantage, and the most beautiful and amorous Looks in the World, is a most exquisite Piece: The same Dutchess has most of her other Apartments curiously furnish'd with the choicest *Italian* Pictures, among these the wandring *David*, by the hand of *Guido Reni*, is most excellent. The Gardens are suitable to the magnificence of the Palace, and open for publick Walks.

The Observatory. Their *Observatory*, built by the present King for Astronomical Observations, is a vaulted Fabrick, without either Wood or Iron-work, three stories high; besides which, you descend by two hundred Steps into a Cave with little Alleys, from whence there is a Prospect thro' the very top of the House to the Sky, in order to observe the motions of the Stars by Day; but this Contrivance don't answer expectation, no Stars being to be seen there, but only the Light, which they impute to the not passing of any Stars thro' the *Zenith* of *Paris*; but it is something strange that this Defect should not have been foreseen by their Artists; tho' otherwise the Building is better contriv'd than ours at *Greenwich*.

Near it is the *Tour de Charpente* or the *Timber-Tower*, all of *Carpenters-work*, for the fixing of their Tubes and Telescopes; Mons. *Cassini* is the chief *Supervisor* of all this business, the same who was *Professor* of *Bologna*, and made that famous *Meridian Line* in one of the Churches of that City; he has a very good Salary allow'd him by the King.

The Royal Bridge. Among the Bridges of *Paris* there are only three worth taking notice of; the first is, the *Pont-Royal*, or *Royal Bridge*, a strong plain piece of Stone-work, but lately built cross the *Seine* to the *Thuilleries*; in 1685. a Silk Bag of Medals was lodg'd in some of the Masonry of it, to perpetuate the memory of their so much celebrated *Lewis le Grand*; it was included in a Cedar Box, with a blue Sattin, and the Arms of *France* upon it: One of these Medals was very large, of Copper gilt, besides twelve others of Gold and Silver; one among 'em had for its Motto *Germania servata*; another this, *Justis Quiescere*; another, *Rheno Batavisq; una superatis*; and on another is represented *Jupiter*, with this Motto, *Vibrata in superbos Fulmina*, and underneath, *Genua emendata*.

The Bridge of our Lady. The second is the *Pont Nostredame*, charg'd with Houses something like our *London-bridge*, but not near so big.

The New Bridge. The next to this is the *Pont Neuf* or *New Bridge*, a curious Fabrick, (tho' not near so large as that of *London*) first begun by K. *Henry* III, but finish'd by his Successor *Henry* IV, whose Statue on Horseback stands upon it much beyond the natural bulk; it is a most excellent piece of Workmanship of *John* of *Boulogn*, an *Italian* Artist, but descended from *French* Parentage; it has several Inscriptions about it, relating to some memorable actions, and the Battels of *Ivry* and *Arque* are represented in *basso relievo* upon the Pedestal, on each Angle of which lie four Slaves of massy Brass.

The Place of St. *Victory*. That noble Monument erected in the Place of St. *Victory*, to the memory of their present King, by the Care (if not at the Cost) of the Marquess *de la Feuillade*, is certainly the most excellent piece of Statuary that can be beheld either in *Italy* or any where else, and the *French* boast, that it exceeds all that ever were made of this kind, not excepting even those erected to the *Greek* and *Roman Emperours*. The King's Statue is of massy Brass, thirteen foot high, in his Robes, with a *Victory* standing behind him of the same bulk and metal, crowning him, pois'd with his Foot on a Globe; under his Feet is a three-headed *Cerberus*, to denote the triple Alliance over which he triumph'd, at the foot whereof you see these words, *Viro Immortali*, the last of which they explain of the *Immortality of his Fame*. The whole Mould was cast all at once, and weighs above thirty thousand pound. The Pedestal is twenty two foot high, which with that part of the massy Mould the Statue stands on being three foot, and the Statue it self thirteen, makes this superb piece about thirty eight or near forty foot high. Upon the Pedestal rest four Slaves of Brass, much beyond the natural largeness, with *basso relievo's* of his Battels and Conquests. It stands in a very spacious place, and to render it the more uniform, they demolish'd many Houses, and the Duke pull'd down part of his Palace. The Statue it self is enclos'd by stately Iron Grates that environ a Floor of Marble; and a Centinel is always placed near it. The grand Inscription upon it runs thus:

Ludovico Magno
Patri Exercituum
& Ductori
semper felici,
Domitis hostibus, protectis sociis,
Adjectis Imperio fortissimis populis,
Extructis ad Tutelam Finium firmissimis Arcibus.
Oceano & Mediterraneo inter se junctis, praedari variis toto mari Piratis: Emendatis Legibus. Delctâ Calviniana impietate;
Compulsis ad Reverentiam Nominis
Gentibus remotissimis, cunctisq; summâ providentiâ, & virtute domi forisq; compositis.
Franciscus Vicecomes d'Aubusson, Dux de la Fueillade ex Franciæ Paribus, & Tribunis Equitum unus in Allobrogibus Prorex & prætorianorum peditum Præfectus.
Ad memoriam posteritatis sempiternam.
P. D. C.

Besides this, there are several Verses, some for the Statue, some relating to the Historical part represented in the *Basso relievo's*; as for instance, that relating to the Statue,

Tali de ære ferens, orbi & sibi, jura modumq;
Dat Ludovix, famamq; affectat vincere factis.

There are divers others upon his passage of the *Rhine*, the Peace of *Nimeghen*, the *Dutch* and the *Germans*, but that on the *Genouese* for haughtiness exceeds all the rest:

Vane Ligur, frustraq; animis elate superbis;
Justiciam monitus disce, & non temnere Divos.

The Triumphal Arch. The *Triumphal Arch* was, at the time of my being there, not brought quite to perfection, but if you will believe the *French*, it is to exceed all of that nature in *Europe*, whether ancient or modern: 'Tis true, the Design promises the thing very noble; the Models consist of two Faces of an extraordinary height, with three Portals, after the manner both of the ancient and modern *Romans*; the Orders of the Columns are finely design'd, and the Captives and Trophies most exquisitely done, by the famous *Perault*, who translated *Vetruvius*. The King's Statue on Horseback is design'd to be placed on this Arch.

Their other Gates of the Town (as many *Triumphals* Gates. *Arches*) are all proud pieces of Architecture; that of St. *Dennis* (which leads to the Place of the same name) is above seventy foot high, and as many over, adorn'd with Columns, *Basso relievo's*, and Trophies, with some Inscriptions relating to the passing of the *French* over the *Rhine*, and their taking of *Maestricht*.

St. *Martin*. The Gate of St. *Martin* is fifty foot high, and as many wide, having on each side an Inscription relating to this King's Actions.

St. *Anthony*. The third Gate is that of St. *Anthony*, erected in King *Henry* the Second's time, but new embellish'd by the

the City, with some Inscriptions likewise relating to the present King.

The *French* boast, that *Cæsar* makes mention of this City, and that he laid Siege to it, being then enclos'd betwixt the two branches of the *Seine*, the same part now call'd the *Isle*. Some of their Historians add, that *Cæsar*, after the Conquest of *Gaul*, had his head Quarters here, and built several Castles on the *Seine*. They all agree in that point, that the Name of *Lutetia* was given them by the *Romans*, from its situation in a moist dirty Soil, betwixt the two branches of the River; the modern Name of *Parisii* being deduc'd from *Paris*, one of the Kings of the *Gauls*.

Paris is much more gay and splendid in outward appearance than wealthy within, nothing being more frequent than to meet with Beggars that appear in habit like Gentlemen. It has few or no Pumps, most of their Waters being preserv'd in Cisterns. I took particular notice here of two Medals that went about at that time, made in revenge to Pope *Innocent* XI; one represented our Sir *Edmundsbury Godfrey* strangling, with this Motto, *Jussu Pontificis*; the other had his Holiness's Head or Bust on one side, and an Altar, Pix and Chalice turn'd topsy-turvy on the other, with this Inscription, *Pontificis quis credat opus*: Another I met with at the same time no less odd than the two former, having the King's Bust on one side, and a broken Column on the Reverse, on the upper part whereof hung a Scroll of Parchment with these words written upon it, *Edictum Nanceii reversum*.

Divers odd Medals.

Mezeray says, that *Paris* was first pav'd and wall'd under the Reign of K. *Philip* II, firnam'd *the August*; and near it the *French King* has many Palaces, where he resides at pleasure: That call'd *Fountainbleau*, seated in the Isle of *France* among Woods, is an irregular Structure, but its convenient situation for Hunting makes the Court retire thither in the Summer-time. Its Fountains and Canals are very good, and it has one noble spacious Hall, the rest of the Apartments being neither large nor magnificent enough for a Royal Palace, tho' some very good Paintings are to be seen in them; in the Queens Gallery the Conquests of *Henry* IV. are excellently well done in *Fresco*; and in the Gallery *de Cerfs* underneath this, you see all the Royal Palaces of *France*, with their circumjacent Landskips, curiously painted; not to mention the Paintings in the King and Queens Cabinets. The Chapel Royal is also a very good Fabrick, and well adorn'd.

Fountainbleau

In their Playhouse is to be seen a curious Marble Chimney-piece, representing the Battel of *Ivry* fought by King *Henry* IV. The Gardens are beautified also with Statues; and formerly a good Library belong'd to it, since remov'd to *Paris*. The most noted Apartment in this Palace is what they call the *Salle de Conseil*, famous for the Conference occasion'd by Monsr. *du Plessis*'s Book against the Mass, in which the celebrated Monsr. *Perron* (afterwards Cardinal) pretending to shew at least five hundred false Quotations, a Conference was appointed to be held in this Room on *May* 14. 1600, in the presence of K. *Henry* IV, the President *de Thou*, and the famous *Isaac Casaubon*; the first for the *Romanists*, and the last for the *Protestants*: The first day was spent in examining only nine, and each Party challenging the Victory, the Conferences were discontinued; *Du Plessis* afterwards publishing a Treatise upon these Debates, the same was answer'd by *Perron*.

The Palace of S. *Germain*, seated on a rising ground near the River *Seine*, about four or five hours from *Paris*, and one from *Versailles*, is built in the nature of a Castle, surrounded with a dry Ditch; a noble Stone Gallery runs round the middle of the whole Structure, which is of an oval figure: The Covering of this Pile is of flat Free-stone, each Stone being three foot long, and two broad, and three inches thick: On one side of the Garden is a most delicious Terras-walk, with the River running under it, 3350 paces long; and on the other side it is flank'd by a most delightful Wood.

The Palace of S. Germain

I found hereabouts the wild *Genista Hispanica*, or *Spartum Hisp. Clus. Chab.* the *Spanish Broom*, and the *Onobrychis Spicata, Vulgaris parvi, Cocks-head*, commonly call'd by us *Sainfoin*, brought from *France* first, where it grows wild. In the Garden I observ'd, among other curious Plants, the *Agrifol. odoratum*, a smooth Holly with sweet-scented Flowers.

The *Chateau Neuf* was built by *Henry* IV, upon the brow of the Hill near the other, its Gardens descending by degrees down to the River; here are to be seen the noble Ruins of *Grotto's, Cascades*, and *Water-works*.

Chateau Neuf.

About an hour from hence is *Marli*, a most delightful Summer-seat, built by the present King (rather gay than magnificent) at the head of a Canal, with divers Houses along the side of the Water for the *Courtiers*; they were then busie in cutting a way to it thro' an adjacent Wood. Near this Palace, on the *Seine*, is that so much celebrated *Water-work* of *Marli*, by which the Current of the River is, by the help of an Engine-mill built upon it, forced over two or three vast Hills, by Iron Pipes of half a foot diameter, joynted into one another, and several laid by the side of one another, every stroke of the Mill throwing a vast quantity of Water into the Basins on the Hill, which from these Basins is convey'd by such another Mill higher, over all the Eminencies, when gathering into a small Lake, the same by Aquaducts furnishes with sufficient Water both *Marli* and *Versailles*.

Marli.

Versailles, the most beautiful Palace in *Europe*, is seated in a forc'd dirty ground; that side which faces the Stables is not suitable in magnificence to the rest, as that which fronts the Garden surpasses all what can be imagin'd sumptuous and excellent; its Roof glittering with Gold, affords a glorious Prospect at a distance; and the Garden, for *Statues, Canals, Groves, Grotto's, Fountains, Waterworks*, or what else may be thought delightful, far surpasses any thing to be seen of this kind in *Italy*; and its Riches and Beauty within are altogether answerable to its outside. The Royal Cabinet for Medals, Coins, Painting, and suchlike Curiosities, has the choice of all what *Italy* could afford. The King's Lodgings are enrich'd with Utensils of massy Plate, even to the Bedsteds, Balusters and Rails: The Gallery towards the side of the Garden is the noblest that ever I beheld in my life, for its most delicious Prospect, Statues and Looking-glasses plac'd between the Panels. The modern Paintings in this Palace are for the most part of *Mignard, Poussin* and *le Brun*, among which the Battels of *Alexander* are highly esteem'd. At one end of the Garden is the place where they breed all the foreign Beasts and Birds the *East* and *West-Indies* afford: And what they call the *Trianon* is a cool retreating place for the King after his Walks, suitable in all respects to the rest.

Versailles

About two leagues thence Monsr. *Louvois*, the late chief Minister, had erected a noble Palace with vast cost, the Ground rising into a pleasant *Terras*, with fine Gardens behind it.

Near *Paris* there is another of the King's Houses, call'd *Madrid*, both unfurnish'd and unfinish'd; they tell you that it was built by K. *Francis* I, who having promis'd to pay his Ransom at *Madrid*, gave it this Name, and carrying the whole Sum thither, paid the *Spaniards* with this Equivocation instead of Money.

Madrid.

Hard by it (*viz.* at *Ruel*, a little Town) stands a pretty little Palace built by Cardinal *Richlieu*; it is neither stately nor magnificent, but has very neat Gardens and curious Waterworks.

Ruel.

About two leagues from *Paris*, on the ascent of the Hill of S. *Cloud*, is another of the King's Houses, where the Duke of *Orleans* sometimes resides for his Diversion; the Gardens are very pleasant, the Galleries very beautiful, and some of the Paintings very good: It was here that King *Henry* the Third was stabb'd, by one *Clement* a Monk.

S. Cloud.

In our Tour to *Roan, Diep*, and the Sea-coast, we pass'd thro' S. *Dennis*, about a league from *Paris*, famous for the Sepulchres of the *French* Royal Race, and the Abbey built by King *Dagobert*, formerly call'd *Catulliacum*, but since dedicated to S. *Dennis* the *Areopagite*, whose Body (they say) lies interr'd here; tho' the Monks of the Convent of S. *Emeran*, near *Ratisbon* in *Germany*, dispute that point with 'em, and positively affirm, that they have the whole Body, and those of S. *Dennis* only a Finger. They boast here of the Sepulchres of divers other Saints, as of their King S. *Lewis*, S. *Hilary* Bishop of *Poictiers*, S. *Hypolito* one of the sanctified Martyrs of the *Thebæan* Legion, and one of the Innocents murther'd by *Herod*'s command. The most remarkable among the Tombs of the Royal Family are those of *Francis* I. and *Lewis* XI. Here you see also the Tomb of the Great Marshal *de Turenne*, placed by the King's order (but at the charge of his Nephew) in a Marble Chapel built for that purpose; he lies at full length, surrounded with Laurels and Trophies in *Relievo*, with a *Roman* Eagle at his Feet retreating as it were backwards, with display'd Wings, at the sight of his formidable Enemy: For tho' this *Abbey* is chiefly dedicated for the Sepulchres of the Royal Family, yet by the King's Favour, such of his Subjects as have signaliz'd themselves in his Service are also sometimes interr'd here. There is a Cross of massy Gold on the Altar seven foot high, set with Diamonds and the best Pearls, and a Table of Gold, the Altar it self being also plated over with Silver.

S. Denys.

Pontoise. From hence we pass'd on to S. *Pontoise*, an inconsiderable place, seated upon the River *Oyse*, which arising in *Picardy*, runs a little below it into the *Sein*. The Country of *Normandy* betwixt this place and *Roan* is a Plain champaign and extreamly fertile, especially in Apples, of which they make Syder.

Roan. *Roan* is the Metropolis of *Normandy*, and one of the Cities of the second rank in *France*; its situation is upon the banks of the River *Sein*, at the foot of a Hill, and to the opposite bank you pass by a handsom Bridge of Boats two hundred and seventy paces long, which being pav'd, rises and falls with the Tide; below it you see the Pillars of an ancient Stone Bridge, beaten down some years ago by the violence of the Current; something lower Ships of al out two hundred Tun can ride with safety: Near the River-side stands a very ancient Castle with Turrets, now the Residence of the Governour. Two other Rivers (*viz.* the *Robbée* and *Reinelle*) run also thro' this City, which has two Churches remarkable before the rest; the Cathedral, dedicated to our Lady, exceeds in handsomness and regularity that of *Paris*; here you see the Tomb of *John* Duke of *Bedford*, Regent of *France* in K. *Henry* the Fourth's time, but the Monument is not answerable to the Grandeur of so high a Person. The Church of S. *Tein* is also a lofty Structure, but chiefly famous for its great Bell.

The Streets of *Roan* are narrow, and their Houses for the most part of Wood and Plaister-work; here it was the *Virgin* burnt the Dame of *Orleans*; this place was the *Rotomagus* of the *Romans*, and the Residence of the Dukes of *Normandy*; it is at present a Bishop's See, and was lately a place of very good Traffick.

Diep. From hence we travel'd thro' a very good Country and bad Road to *Diep*, a pretty little Seaport Town, the Streets whereof are more spacious and regular than those of *Roan*; they are very ingenious here at working in Ivory. The little Harbour lies betwixt two Cliffs, and the River *Arque* runs into it: Anciently it was known by the Names of *Falia bona* and *Deppa*, and then strongly fortified; it has still a good Castle and Wall.

From *Diep* we continued our Journey thro' a little place call'd *Eu*, seated upon the River *Bresse*, which being the common Boundary on that side betwixt *Normandy* and *Picardy*, exonerates it self into the Sea about a league below it.

Near the River's mouth we saw on the Cliffs another small Town call'd *Criel-port*, and so passing thro' *Franche-*

Abbeville. *ville*, came safely to *Abbeville*, a poor old Town, meanly built and extremly dirty, in that part of *Picardy* they call *Ponthieu*. They are noted here for making Guns and Pistols, but they are rather fine than serviceable. It is seated upon the River *Somme*, which falls into the Sea near S. *Valery*, from whence Barks can come up to this City. Before the *French* had made themselves Masters of the Province of *Artois* this was a frontier Town of a considerable strength, and unaccessible in some parts, being almost surrounded by the Fenns. It is also a Bishop's See.

Calais. From hence we travel'd by the way of *Hesdin* (described before in the *Spanish Netherlands*) to *Calais*, from whence we could discover the chalky Cliffs of *Dover*; it is of no great compass, but regularly fortified, and strengthned with a good Citadel; the Townhouse is but small, but the Markerplace spacious: Some Antiquaries would have it be the same mention'd by *Cæsar* in his *Commentaries*, under the Name of *Portus Iccius*, which others explain of *Boulogn*, others of *Dewy*. The loss of it by the *English* is alledg'd the chief cause of our Queen *Mary's* Death.

Charenton. As you travel from *Paris* in a kind of *Dutch Treck-schuyt* along the River *Sein*, you pass by *Charenton*, a curious little place, seated on the Banks of the *Marn* and *Sein*, and once famous for the Privileges the *Protestants* enjoy'd there. Above it is a neat House belonging to the *Madamoiselle*.

Corbeil. The next place is *Corbeil*, of no great consequence, the *Castrum Corbolium* of the *Latins*, call'd by *Cæsar Fisedum* or *Metrosedum* on the *Sein*, where its Waters are mix'd with those of the *Juin* or the *Estampes*.

Higher up, on the River, you see another little place, about four or five leagues from *Corbeil*, call'd *Melun*, (the *Melodunum* of the ancient *Romans*) which gives Title to the Viscounts of a very ancient Family. Here the River *Sein* dividing into two Branches, makes a little Island, which you pass by two good Bridges. The Barge which carries you from *Fountainbleau* down the River to *Paris* being drawn by three or four Horses, runs inten or twelve hours sixteen of their leagues, or about forty eight *English* miles. In the Woods thereabouts I took notice of the *Milyssophillum*, *Orobanche*, *Rapum Genistæ*, Ger. Park. *Cariophillum olens* C. B. our *Broom-rape*, *Polygonatum*, *Lentifol. vulg.* C. B. the *Solomon's Seal*, besides all sorts of Spurges of the *Essula* and *Tythimalus* kind.

The next place we came to from *Fountainbleau* was *Nemours*, having nothing remarkable except that it gave *Nemours.* Title to the ancient Dukes of that Name. Near it is the Abbey of *Surcesson*, of the Order of St. *Bernard*. Here we observ'd the Women of the Town (even such as were in very good habit) to come to the Inns to collect Alms from Travellers for the Poor.

From hence we travel'd on to *Montargis*, an old wall'd *Montargis.* Town, but of no great note, except that being part of the *Demesnes* belonging to the Crown, it gives Title to the King's Brother, who is Duke of *Orleans* and *Montargis*; it has however a very ancient Church, with curious Pillars, and an antique Castle built in the midst of Ruins: The present King's only Brother has laid the Foundation of a Church here, but it remains unfinish'd, there being nothing compleated but a small Portico, in which, on a black Tablet of Marble, is a *French* Inscription with golden Letters, intimating, that he laid the first Stone of this Church in 1677, in memory of his Victories obtain'd in the Battels of *Montcassel*, S. *Omer* and *Buchar*.

From *Montargis* we continued our Journey to *Briare*, *Briare.* whither Cardinal *Richlieu* caus'd a Canal to be brought from *Blesueau*, a tract of twenty miles, and thereby made a Communication betwixt the *Loing* (which falls into the *Sein*) and the River *Loir*, so that by the help of *The Loir.* Sluices Boats can pass thro' all three; the Banks of the *Loir* lying all along on the Flats, as you see near the Seashore, make it a very pleasant River. Near it we found the *Cariophillus marinus*, Ger. Hob. *Juncus* C. B. or the *Sea-Gilliflower*, which is rarely found in Inland Countries, but commonly in Salt Marshes near the Sea-side.

From hence we pass'd thro' *Cosne*, a little place noted *Cosne.* for the making of Knives, and some Mills for polishing Iron and Steel, and so in sight of *le Charité*, an inconsiderable place, to *Nevers*, seated near the conflux of the *Loir* *Nevers.* and the *Nibarre*, the capital of the Territory of *Nivernois*, tho' notwithstanding which the Houses are but meanly built, representing more of Antiquity than Beauty: It is a Bishop's See, Suffragan to that of *Sens*, and gives Title to the Counts of *Nevers*, (now in the Family of the Cardinal *Mazarin*) *Cæsar* mentions it under the Name of *Nivernum* or *Noviodunum*.

The next place we came to was *Moulins*, near which *Moulins.* are the so much celebrated Waters of *Bourbon*, even in the time of the *Romans*; they are of the nature of our *Baths* *The Waters of Bourbon.* and those of *Aix la Chapelle*, compos'd of a bituminous substance mix'd with an Alcalisate Salt, which being mix'd with an Acid, causes a fermentation, and produces the same effect on Syrup of Violets as the Salt of Tartar, turning it green. Of late they have been much used inwardly against the *Gout* and other Nervous Distempers.

The before-mention'd Town of *Moulins* is of no great extent, tho' once the Residence of the Family of *Bourbon*, who built a handsom Castle here; the Inhabitants are reputed excellent Workmen in Steel and Iron, Knives and Scissars, &c.

Among their Churches and Convents (of which they have several) those of the *Carthusians* and of the *Visitation* are most remarkable, the last containing the Monument of the great Duke of *Montmorency*, who was sacrific'd to *The Tomb of the Duke of Montmorency* the greatness of the Cardinal *Richlieu*. The whole Chapel consists only of a small Cupola to cover him, his Canopy and Armour is supported by Angels, with his own Effigies and that of his disconsolate Lady lying by him, in an elevated Tomb, with the Statues of *Pallas*, *Hercules*, *Charity* and *Religion*, all of the choicest Marble, much beyond their natural Grandeur, with this Inscription to his memory:

Henrico II. Montmorenciaci Ducum ultimo optimo & maximo, Franciæ Pari, Thalassiarcho, Polemarco, Terrori hostium, Amori suorum.

Maria felix Ursina, ex Romana Stirpe Conjux unice, cui ex immensis viri Divitiis, una amor viventis & defuncti Cineres, fœlicissimo post exactos Conjugii Annos XVIII. *Marito incomparabili, de quo dolere nihil unquam poterat, nisi mortem bene merenti pessit. Ann. Sal.* MIOLII. *Sui luctus* XX.

It is remarkable, that they were forc'd to behead him in the Townhouse, for fear of the Populace, whose Darling he was; his Dutchess was so highly afflicted at his death, that she forsook the World and retir'd into this Monastery, where she ended her days in Tears for the loss of a Husband

Husband she lov'd more than her own Life: I was credibly inform'd by a person who was well acquainted in that Family, that her fondness to the Duke was such, that she would not stick to assist him in his private Amours to gratifie his Desires.

S. Sophorin and Bregile.

We had hitherto travel'd for the most part thro' fertile Plains, but coming near to S. *Sophorin* and *Bresle*, two small places, we pass'd thro' Mountains cover'd with Pines and Firrs, which afforded great variety of Plants; those I took notice of *en passant* were, the *Polygala Lutea*, call'd by *Chabr. Polygala vulg. maj. fol. angustissimus*, a kind of *Milkwort*; the *Myrsophillum* or *wild Baum*; the *Bellis Cærulea Monspel.* tho' growing also in other parts of *France*; *blue Daisies*: In the Woods we observ'd the several Species of *Orchis*, *Spurges* of all kinds, but especially the *Tithymalus Cuprissicus*.

Lyons.

From *Bresle* we soon came to *Lyons*, the largest City of *France* next to *Paris*, seated at the Confluence of the *Soan* and the *Rhosne*; the last runs here with a swift current, and over the first they keep a Chain of Boats link'd together, to prevent Barks from passing by without paying Custom. Its situation was anciently, as well as now, at the conflux of these two Rivers, as appears from a passage in *Seneca*; and that its Name was *Lugdunum* among the *Romans*, is evident from the following Inscription found at *Gayeta* in *Italy*:

L. Minutius 2 L. Fil. L. N. L. Pro N. Plancus
Cos. Cens. Imper. iter. VII. Vir Epulon:
Triumph. ex Rhetis eidem Saturni fec. de manubiis agros divisit in Italia *Beneveriti, in* Gallia *colonias deduxit.* LUGDUNUM *&* *Rauracum.*

Part of the City is built on the Hills of *Tornir* and St. *Sebastian*, the rest along the banks of the Rivers; the Marketplace is handsom, and the Townhouse (lately built) a fine Structure. In the *Carmelites* Church is an Altar of *Agate* and *Lapis Lazuli*; the *Capuchins* have all the pretended Miracles of their Saint painted on the Walls of the Cloyster, among which you see one where he pays his Apothecary with Prayers instead of Money.

The Cathedral.

The Church of S. *John* or S. *Francis* is their Cathedral, compos'd of Gentlemen of the best Families, and formerly boasted of having had several Kings and Princes of their Chapter; they compute, that in the 13th Century they had, at one time, one Son of an Emperour, nine Sons of Kings, fourteen Dukes Sons, thirty of Counts, and twenty of Barons; there belong no less than three Churches to this Chapter, *viz.* that of S. *John* before-mention'd, of S. *Stephen*, and of the *Holy Cross*; in the first is to be seen the Clock so much celebrated for the variety of its Motions and Mechanism. The *Huguenots*, during the Civil Wars, knock'd down many of the Heads of the Saints that were placed to adorn the Front of this Church. Their *Theatres* and *Opera's* are not inferiour here to those of *Paris*; and the *Jesuites* College upon the *Rhosne* is the finest Structure in the whole City, being a regular Quadrangle curiously painted in *Fresco*, which is somewhat defaced on the East side, where the West Winds from the Mountains beat upon it: I found them to perform their publick Exercises much after the same manner as they do at *Paris*. Their Chapel has a fine Altar-piece of *Lapis Lazuli*, and an excellent Piece of Painting by *Blanchard*; who died while we were there.

The Jesuits College.

The Apartment for their Library is spacious and handsom, but the Books not extraordinary, and at that time were all disorder'd, by reason of a late Fire that broke out in the College; they have however some Manuscripts of the Bible, but not very old; and *Pliny's Natural History* and *Decades* finely printed on Vellum about two hundred years ago, all the capital Letters in Miniature, gilt and embellish'd like as we see the old Mass-books: The most valuable Piece of the whole Library is a Manuscript of the same Author's *Natural History*, four or five hundred years old; many obsolete words, such as *illod*, *jocondissimo*, &c. demonstrate it to be a Piece of a considerable antiquity.

The Abbey of Daisne.

The Abbey of *Daisne*, just without the Town, is an ancient piece of Architecture, with very good *Mosaick* Work, the Picture of God the Father (excellently done) being almost defac'd by age. This Abbey is the same place where *Caligula* had erected his *Athenæum* for the improvement of the *Greek* and *Latin* Tongues, (mention'd by *Suetonius*) Rewards and Punishments being propos'd to such as did either well or ill; to this *Juvenal* alludes,

Palleat ut nudis pressit qui calcibus anguem,
Aut Lugdunensem Rhetor dicturus ad aram.

Here they shew you the so much celebrated Buckler of *Scipio*, which upon due enquiry is so far from being his Buckler, that it is rather a Basin or Dish well gilt and emboss'd; for, according to the ancient form of Armoury, it is too unwieldy, and its concavity within more adapted to the bending of the Arm and covering the Body. Add to this, that all Bucklers, both ancient and modern, have their Ornaments of painting or gilding on the outside, and not within the Concavity; and I remember that talking with Monsr. *Patin*, a great Antiquary of *Padua*, upon this Subject, he was of the same opinion: It being crack'd, it was cramp'd on the Back with small Iron Bars.

The pretended Buckler of Scipio.

They have here a more authentick Piece of Antiquity, I mean the Speech of *Claudius*, who was born here; it is to be seen in the Front-walk of the Townhouse, and the word *illod* for *illud*, and the old *Roman* Punctation betwixt every word, sufficiently shews its antiquity. They have also some Obelisks, but not so ancient as those at *Rome*; that near the *Jacobins* Church is inscrib'd ☽ W ☽. τῷ θεῷ παντοπείαν παρακλητὸ ἱερὸν.

Their St. *Peter's* Nunnery is a fine Foundation, and the Parochial Church of S. *Nizier*, adorn'd with divers fine Pieces of Painting by *le Brun*.

The Prison of the City is built upon a Rock, unto which they have cut out a way with vast charge and difficulty, but 'tis probable that this was rather done to make a way into the Town by the Water-side, it extending perhaps before out into the River, which now runs just by the Street that lies under the Rock. Monsr. *Servie* hath a pretty Cabinet of Curiosities here. This place being seated on the Confines of *Italy*, was one of the best Magazines of the *Romans* in *Gaul*; some of the greatest Men of *Rome* have honour'd it either by their Birth or Abode, besides the Emperour *Claudius*, *Germanicus*, *Geta*, *Caracalla*; and here are still to be seen some Remnants of the *Roman* Antiquities, of their Baths, Aquaducts, and part of an Amphitheatre: At present the King's Treasury for that part of *France* is kept here, and another call'd the *Court of Commerce*.

Two General Councils have been held at *Lyons*, in 1245, under *Innocent* IV, and in 1274, by *Gregory* XI; besides which, they had several Synods here long before, as that assembled by St. *Irenæus* in 197, and another in the time of St. *Cyprian*, under *Faustinus* Bishop of *Lyons*; it was upon this occasion St. *Cyprian* writ that Letter to the Pope, which begins thus, *Faustinus Collega noster Lugduni consistens*, &c. In my walks about the *Carmelites* Church-walls I observ'd the *Fumaria major scandens*, the *large Fumitory*; the *Muscatellina fol. fumariæ bulb. fa.* J. B. or the *Radix cava minor*, Ger. the *Muskwood Crowfoot*; *Bellis major*, the *Enneaphyllon* of *Pliny*, or the *great bastard Hellebore*; the *Hypericum vulg.* C. B. St. *John's Wort*: about the City grows also the *Anchusa Lutea*, a kind of *bastard Gromel* with a yellow Flower. I was not a little surpriz'd to see so fruitful a Soil as all the Country betwixt *Lyons* and *Savoy* (call'd *Dauphiny*) almost destitute of Inhabitants, tho' well enough cultivated in many places, but upon enquiry found that this part of the Country being allotted for Winter-quarters to the *French* Horse, the Peasants used to come thither only in the Spring, to sow the Seed, and in the Summer to reap the product thereof, and so retire into other parts.

This fertile Tract of *Dauphiny* brought us to the utmost Borders of *France* on that side, *viz.* *Pontcheauvesin*, an obscure place seated upon an inconsiderable River call'd *Gyer*, which however is the common Boundary here betwixt *France* and *Savoy*. The chiefest Plants of note I observ'd in *Dauphiny* were, the *Valeriana rubr. anguisol.* C. B. the narrow-leaf'd red *Valerian*; the *Radix Rodia* or *Rosewurt*, in great plenty; *Linaria fol. Bellidis* J. B. a kind of *Toad-flax* with a Daisy Flower; *Imperatoria vulg.* or the common *Masterwort*; *Parietaria cerulea quædam*, a sort of blue *Pellitory*; the *Cotaneme fol. Cyani Dalech. fl. Coronop.* J. B. which *Chabræus* would have the *Sisamoides minus Matth.*, a certain Grass with the Leaves of the *Blue-bottles* and Flowers of the *Buckshorn Plantain*.

The Government of France.

Tho' the *French* live under the most Despotical Government in *Europe*, yet are they so fond of it, that they laugh at other Governments which don't come up to that absolute Power, of which they frame themselves such pleasant Imaginations, that in the midst of their Slavery they find out an *Oligarchy* in their Council of State, an *Aristocracy* in their Parliaments, and a *Democracy* in their City Governments, administred by Provosts, Mayors and Merchants, and thereby would introduce into the World the most perfect mixture of a Commonwealth; when, to speak truly, all these different Qualifications make up

but

but one entire Chain of Slavery. They boast of the Policy of *France* as loudly as of their Conquests; and it must be confess'd, that in their Military Affairs they follow in many things the Footsteps of the ancient *Romans*, but want their Honesty and true Generosity.

The People. The Body of the People is compos'd of the Nobility, Husbandmen, Artificers and Traders; the Peasants, being condemn'd to perpetual Drudgery, furnish the Field with Labourers and Soldiers, for when they are suck'd to the very Marrow by the Gentry and Tax-gatherers, they must either chuse to starve at home, or seek for a Livelihood (such a one as it is) in the King's Armies. Artificers and Traders are much encourag'd in *France*, being the Court-Sponges, from whence they squeeze out what Juice they have gather'd before by one means or other: The King commonly picks out the most ingenious among them for his own service, and the rest are imploy'd in converting the Products of *France* into Manufacturies exported into foreign parts.

The Religion and Clergy. The Clergy of *France* has of late been look'd upon with somewhat of a jealous eye by the Laity, both by reason of the encrease of their number, and several Ecclesiastical Usurpations; these Encroachments of the Clergy at home, and the pretended Power from the Popes abroad, has made them revive our Lord *Digby*'s distinction betwixt the Church of *Rome* and the Court of *Rome*, and not to be so fond of the *Jure divino* Doctrin of the Priesthood, but that the Privileges of the *Gallican* Church, and the *Regale*, have been made to give Laws to both; witness the Synod and the Decrees made there in 1682, against Pope *Innocent* XI; the Profession of the *Protestant* Religion being resolv'd on to be rooted out, some were for attempting it by mild ways, which were follow'd at first, but soon chang'd for Fire and Sword, as the most effectual means, either to make 'em fly the Kingdom, or to comply with the King's express Commands. This is differently taken among the *French*, according as they are more or less devoted to that Unchristian Doctrin of the Extirpation of Heresie.

CHAP. IV.

A Description of the Dukedom of Savoy, *and Principality of* Piedmont.

WE were no sooner pass'd the Bridge of *Pontbeauvoisin*, but we were sensible of the difference of the Country; for whereas we had left behind us the fertile Plains of *Dauphiny*, the other side of the Banks of the same River represented to our view the frightful *Alps*, the Precipices whereof would have been more dreadful to us, had not the many Vineyards we found on the first Ascent taken off a great part of the Horrour we had conceiv'd at the first sight of 'em.

The *Alps*. As you ascend the first Rocks, you see and hear the Cataracts of the River *Guyre* among the Precipices, over which you ride by a way cut out and supported by Art: Along this terrible Road I found among the wild Hedges the *Oxyacantha*, the *Privet*, *Ligustrum & Vaccinia nigra*. From this narrow passage you proceed further into the *Alps*, where the Duke of *Savoy* has made a Road thro' the middle of the Rock, near which is erected a Stone with this Latin Inscription:

Carolus Emanuel II.

Subaudiæ Dux. Pedem. Princeps. Cypri Rex. Publicâ fœlicitate partâ, singulorum commodis attentus, breviorem securioremq; viam Regiam, à naturâ occlusam, Romanis intentatam, cæteris desperatam, dejectis scopulorum Repagulis, æquatâ montium iniquitate, quæ Cervicibus imminebant, præcipitia pedibus substernens, æterni populorum Commercii patefecit. Ann. Dom. 1670.

About half-way betwixt this noted Passage and *Chambery* you see a delightful Fall of Water from one of the highest Rocks, which being continued afterwards by three or four more gradual Falls joyning into a Current, and from a vast height spreading it self among the craggy Precipices, produces here a natural, but more pleasant Cascade than all the Art and Expences of *Versailles* are able to afford.

Pic. sent Cascade.

Chambery. From hence we proceeded to *Chambery* thro' a sort of a Valley, (in respect of the other Mountains) a Town not so considerable now as it was in former Ages, when it could boast to be the Residence of the Dukes of *Savoy*, but now has nothing to shew but old Houses and Walls, and a ruin'd Ditch about 'em; it is the *Camariacum* of the *Latins*, and still the capital of the Dutchy of *Savoy*, where their Parliament is conven'd, and the Chamber of Accounts kept: Its situation is on the little River *Orban*, in a sort of a Valley surrounded with Mountains; the Churches and Convents, the Townhouse, Marketplace, and a great number of Fountains, make some tolerable Show. Here we first observ'd what we afterwards found common over all *Italy*, the Houses built so as to jet out into the Streets, and supported by Pillars, which form a sort of Alley or Cloyster, under which you may pass secure from Rain and the heat of the Sun. The Mall without the Town is not unhandsom.

Another such a Plain brought us to *Montmelian*, a place of great strength both by Nature and Art, in *Savoy*, seated on a high Rock at such a convenient distance from the adjacent Mountains, that tho' they overlook it, they don't command it; the River *Hero* runs by the Town that bears the same Name with the Castle, with an impetuous Current, and joyning with the *Arche*, another rapid River made by the melted Snow, falls into the *Rhosne* at *Arbigny*, a little place above *Montmelian*, as the *Isere* does at *Grenoble*, the accession of these rapid Rivers being the true occasion of the impetuous course of that River. This Fortress is the Key of the Mountains on this side, as *Susa* is on the other; but notwithstanding its strength, it was taken by the *French* in 1691. *Montmelian.*

The Country hereabouts being all mountainous, hath a very indifferent prospect, except some few Valleys, which seem to promise something of fertility; and the People looking as meagre and dejected as the Soil was barren, they seem'd to be made for one another, and adapted to that Slavery they are forced to suffer from their Prince, who has model'd his Government after that of *France*.

We had scarce pass'd the River *Isere* at *Montmelian*, but we came into a Valley much more pleasant than any we had yet met with in *Savoy*, and continuing our way towards *Argentier*, we met the roaring River *Arche*, which at that time (it being Midsummer) was so swell'd by the melted Snow from the Mountains, that we were forced to leave the ordinary Road near the Water-side, and instead thereof, climb up a dreadful Precipice call'd by them Mount *Grety* or *Grezy*, as high if not higher than the noted Mount *Cenis* it self. On the middle Region of this Mountain you see a few small Farm-houses, there being thereabouts some cultivated Ground, which you can perceive below, but when you come to it, you find another Mountain rising upon the former like *Pelion* upon *Ossa*: The Froth and Sediments which are by the impetuosity of the River *Arche* forc'd down from the Mountains, makes its Waters appear in the Valley as black as Pitch, almost like the Washes of Dyehouses. The Rive Arche. Mount Grey.

We kept however along the Current of this River for some time thro' *Argentier*, *Esperies*, and *la Chambrey*, inconsiderable places; and we no sooner left the last, but we were forc'd (as we told you before) to climb up the Mount *Grety*, by reason of the Inundation of the River *Arche*, the descent whereof brought us to S. *John Maurienne*, once the chief City of the *Medulli*, and an Archbishop's See, which gave the Title of Earls of *Moriene* to the Dukes of *Savoy*. Argentier. Esperies. La Chambre. S. John Maurienne.

From hence we went on to St. *Michael*, a low watery place: On the top of the Mountain I observ'd as well as I could the *Mentha Cattaria montana*, *Valeriana Alpin. Lacifol. Valerian. Alpina Angustifol.* the *Caryophill. Alpin. minimus*; the small *Mountain Pink* of the *Alps*; afterwards I found it in great plenty on another Hill.

St. Mi-

St. *Michael*

St. *Michael* was formerly a Convent, but now only a Village, near the banks of the River *Arche*, which they pass over hereabouts by Bridges of Timber made of the Trunks of young Firr and Pines, laid athwart, which being round and ill joyn'd, tremble under your Feet as you pass 'em.

St. *Andre*.

The next place we came to was St. *Andre*, an inconsiderable Town seated among the Mountains; just over against it is such another Cascade or high Waterfall, but not altogether so diverting as that near *Chambery*. The Current of this River, render'd impetuous by the various Waterfalls, is almost like the Torrents of our Mill-tails, but more foul, swift and furious. I took notice hereabouts of the *Absinth. Latifol. Ponticum* or *Rom.* and the *Absinth. tenuifol. minus*, which some would have to be the *Absinth. Commune minus* of *Gesner* and *Gerard*. Above St. *Andre* the River *Arche* is, at a place call'd *Termignon*, augmented by a certain Chanel of Water coming from another part of the Mountains, which brought us to *Lasiebourgh* or *Lanscbourgh*, a place that has nothing remarkable, except its situation at the foot of the noted Mount *Cenis*: Here crossing the River *Arche*, we took our leave of it, which rises about two leagues above this place with a pure but small source, and hereabouts affords as well-tasted *Trouts* as our best Rivers.

Lasiebourgh.

The Mount *Cenis*.

We were now come to the passage of Mount *Cenis*, (the *Cinisium* of the Ancients) which we perform'd by the help of Mules we were furnish'd with at *Lasiebourgh*. This Mount exceeds in height those of S. *Goddard* and *Sampion*, by which you enter *Italy* from the side of *Switzerland*: Mount *Cenis* being in some places cover'd with Pine and Fir-trees from the top to the bottom, ascending regularly one above another with the gradual rising of the Mountain, affords the most natural Grove that can either be devis'd by Art or expres'd by the Pencil. About *May* these Mountains open their vast Storehouses of Snow, which melting by degrees till *October*, (when they begin to harden again) make the Rivers swell hereabouts in the heat of the Summer, when the Sources of most other Rivers are very near exhausted.

The Passage of Mount *Cenis*, notwithstanding its height, is not very unpleasant; the Precipices being not so perpendicular as the rest, gave our Eyes liberty to look about with less trouble, and the slowness of our Cattle (which made me walk on foot) allow'd me sufficient opportunity to expatiate a little way out of the Road, and to take notice of a great many Plants, but having lost the said Collection at Sea, I can only give such as I accidentally remembred and since set down, *viz.*

Plants on it.

the *Caryoph. Alpin. minor* in prodigious quantities; the *Geranan. Columbinum*, and what is more remarkable, the *Geran. Argent. Alpinum*; the Cranes-bill; the *Hyacinth. Caruleus Ger.* or *Racemosus carul. minor*, C. B. *Funcifol.* toward the bottom out of flower; *Calceolus Mariæ, ad Ger. Elleborine major.* Park. *Jcell. flor. rotund.* C. B. About the bottom, *Helleborine flor. alb.* C. B. or *Damasonium Alpinum* J. B. the little, wild, white *Hellebore*; *Iris fl. albo*; the great white-flower'd *Iris*, or *Flower de Luce* wild; the *Herba Paralysis* or *Paralytica Alpina*, out of flower; the *Caryophillat. Montan.* or *Caryophillat. Alpin. Lutea*; *Casp.* B. *yellow Mountain*; *Avens, flos Caryophill. Alpinus pumilio dictus*; the little Dwarf-mountain Pink, or rather a *Lychnis* agreeing with the description of *Ger.* who from its *Calix* calls it of the *Lychnis* kind; *Sedum Alpinum, Exigui fol.* C. B. *Sedum Alpin. minim. flor. carneo, Schol. Botan. Helleborus niger*, Lob; *verus* Park. Ger. *fl. Albo & Atro rubente*; the *black Hellebore*, *Gentian. maj. fl. lut.* &c.

I took this opportunity to make a strict examination of the Snow as it lay incrustrated in hard Cakes on the very top of the Mountains; some of these are such as have lain there for several years, the Sunbeams not being able quite to dissolve 'em, by reason of their vast thickness.

In the midst of the top of Mount *Cenis*, near the Road, (which is flank'd by other higher Rocks) you see a pretty large Lake, gather'd questionless by the melted Snows, as the coldness of the Water seems to testifie; in the midst of it the Duke has a very handsom House, and another just by the Road, one for Devotion (of which the Priests take care) and the other for his Diversion, which lies almost in ruins by neglect. Here it is you take Chairs to descend the Mountain, being only wooden Chairs carried by two Poles; with this carriage you are convey'd down the rocky Precipices, which are however not so dangerous or dreadful as some have represented them; for tho' your Horses are led about a further way, you may descend for the most part without much difficulty on foot, which I chose rather to do than be jolted in these uneasie Chairs.

A Lake on Mount *Cenis*.

Its Hospital.

Here is also a little Hospital for such as fall sick by the way, and a small Chapel to bury such as perish in the Snow, from thence call'd the *Transis*. The Plain on the top of this Mountain (which is about four miles long) has also an Inn for the accommodating Passengers, suitable to the circumstances of the place: The ascent is likewise four miles, but the descent no more than two.

Novalese has not any thing remarkable, except its being the utmost Frontier of *Savoy* near the River *Semæ*, which joyns its Waters with the *Doria* at *Susa*; where begins *Novalese.*

The Principality of Piedmont,

Having got its Name from its Situation at the foot of the Mount *Cenis*, the highest of all the *Alps*.

Susa, the first Town on this side of the Mountains, is seated at the Confluence of the two little Rivers *Semar* and *Doria*, which however often swell considerably by the Waterfalls from the Mountains, tho' they run not with so impetuous a Current as the River *Arche*: It was the *Segasium* or *Segovium* of the Ancients, where *Coctius* King of the *Allobroges* was interr'd, one of the seven Marquisses created by the Emperour *Otho*. It is a strong place, tho' its Fortifications were somewhat neglected at that time, notwithstanding which it is reckon'd (and not without reason) the Gate into *Italy* from *France*, which is the reason that the *French* held it a long time, and always will look upon it with a wishful eye. The Town it self, as I told you, was not well kept at that time, its chiefest strength consisting in its Castle, seated upon an adjacent Rock, which commands both the Avenues of the Town and the famous Pass of *Susa*, so remarkable in our time by the *French* breaking thro' no less than twelve several Barriers made by the Duke of *Savoy* to defend that passage into *Piedmont*. *Susa.*

The Plains of *Turin.*

Immediately after our coming out of *Susa*, we perceiv'd the Hill to open by degrees, which brought us into the most fertile and pleasant Plain of *Turin*; for passing by S. *Ambrosio* and *Rivoli*, one of the Duke's Country-houses seated in an excellent Air, we kept along the Banks of the River *Doria* till we came to Mount St. *Michael*, the utmost Branch of the *Alps* on that side, on the top whereof stands a Convent, but being a very solitary place, it remains uninhabited. From hence you have a most delightful prospect of the Plain that brings you to *Turin*.

The flying Glow-worm.

Hereabouts I first took notice of the flying *Glow-worm*, which is to be seen glittering in the dusky Evenings in great swarms, with large streams of light, which appear very surprizing to a Traveller that is ignorant of the true cause of it: These Insects are frequently to be met with in *Jamaica* and other places of the *West-Indies*, being only small Flies cover'd with scaley Wings and Backs, of the Beetle or *Scarabæus* kind; the colour of their Body is brown, but the extremity as well of the Tail as Head white or yellowish, in which is contain'd the *Noctiluca*. Upon this rugged Mountain we met the Train and Baggage of the Marquess of *Lavardin*, late *French* Ambassadour to Pope *Innocent* XI, who after he had in vain contested for the *Franchises* and *Regalia*, was now forced to return home, to give his Master an account of the resolute Temper of the Father of *Christendom* toward his *Most Christian* Son. What we took peculiar notice of (and which made no small noise upon the Road) was, that the Marquesses Coach-horses Tails had been cut by the way, which by some was interpreted as done by the *Italians*, in derision of his ill success at the Court of *Rome*.

Turin.

We were no sooner come into an Inn at *Turin*, but a certain *Franciscan* Frier of *Chambery* pull'd out of his Wallet two or three Satyrs upon the holy Father, which he seem'd mightily delighted with, and had brought them as far as from *Lyons*, tho' they were much more satyrical than witty, especially one call'd *The Pater Noster of the holy Father*.

The City of *Turin* (the *Taurinum* or *Augusta Taurinorum* of the *Romans*) was, according to some, built before our Saviour's Nativity: Its Walls are somewhat ancient, but the Citadel lately built is a regular Fortification of five Bastions, near the River *Po*. It is populous, but not very large; the old Houses are but indifferently built, but the new Street, and the Square in the midst of it, very handsom and uniform. Upon the Cathedral of St. *John* they were then erecting a fine Cupola, where they keep the Sheet in which (they say) our Saviour was wrapt up after his Crucifixion, and in which he was buried.

The Duke's Palace.

The Duke's Palace is not very spacious nor magnificent, but conveniently built, the new Street leading to it, and the Apartments are adorn'd with fine Tapestrys and Paintings by the best Masters, especially those in the Gal-

lery,

lery, as *Michael Angelo*, *Raphael*, *Paul Veroneſe*, *Baſſan*, and the Original of *Titian's* Laſt Supper; thoſe in the Bedchamber are of the hand of *Albani*. The Statue of *Amideus* on Horſeback, near the Staircaſe, is an excellent Piece; as likewiſe the Stairs, the Library, and ſome other Works. In his preſent Royal Highneſs's minority the *French* were Maſters of the Citadel of this City, by his conſent, but would not redeliver it till they had an Equivalent (*viz.* the City of *Pignerol*) put into their hands.

The Palace call'd *Valentin.*

From the Town down to the Banks of the *Po* a Walk of Elms of a mile in length brings you to the Dutcheſs Dowagers Palace call'd *Valentin*, finely furniſh'd with Paintings and Hangings, repreſenting all ſorts of Flowers, Birds, Fiſhes, and four-legg'd Beaſts that can be nam'd. The *Venery* is one of the Duke's Hunting-houſes. At one end of the Town are ſtill to be ſeen the Ruins of an old Caſtle of Brick, which they tell you was built before our Saviour's time. It is an Archbiſhop's See, and they have a ſmall Univerſity here, noted for one thing in particular, that the learned *Eraſmus* took his Degrees of Divinity here. They have alſo ſome Manuſcripts in the Duke's Library, and boaſt that the Art of Printing was brought hither into *Italy*; which, conſidering its ſituation, may not be altogether improbable.

From *Turin* we travel'd thro' a low and level Country full of little Rivers, and conſequently ſubject to Inundations, to *Chivazzo*, (an inconſiderable place) leaving the *Po* on the right, and croſſing the Rivers *Cerouda*, *Stura*, *Baltia*, &c. by the way, near the Road-ſide, I took notice of the *Hypericum* and *Aſcyron* J. B. *Anagallis flor. rubro, purpureo, Phœnicio*, J. B. *Alcea frutex ſive fruticoſa*; *Trif. fragiferum*, or *fragiferum Friſicum* C. B. the *Strawberry Trefoil*; the *Stramonium peregrinum fl. albo*; the *Thorn-Apple* with white Flowers. At the paſſage of a little River call'd *Donbo* I found the *Centaurium minimum lut.* perhaps the *Paluſtre luteum*; as alſo the *Minus vulgare fl. purpureo & albo*, the *yellow*, *white* and *purple Century*; and on the oppoſite bank the *Lychnis Coronaria fl. albo & rubro*, *white* and *red Campions*.

Vercelli.

Moſt of the Rivers we croſs'd, as the *Doria*, *Cerouda*, *Choria*, *Baltia*, *Servo*, *Orco* and *Seſia*, exonerate themſelves into the *Po*: Upon the two laſt is ſeated *Vercelli*, a place of note, and the chief Frontier Town of *Piedmont* on the *Milaneſe* ſide, in a delightful Plain, having formerly belong'd to that Dukedom, till it was beſtow'd upon *Amedeus* III. Duke of *Savoy*, in Dowry with *Blanch* the Daughter of *Philip* Duke of *Milan*. The Fortifications conſiſt of five regular Baſtions, with treble Ramparts and Ditches. Hereabouts it was the *Lybici*, *Salaſſi*, and *Taurini* inhabited in the time of the *Romans*, when *Vercelli* (belonging to the *Latins*) was in a flouriſhing condition, but now is not very populous, becauſe the Taxes in *Piedmont* are even heavier than in the *Spaniſh* Dominions in *Italy*.

The Cathedral is a very ancient *Gothick* Fabrick, and you ſee ſome of theſe Characters on a certain Tomb in that Church: They have alſo a Monumental Piece of Panegyrick, erected in memory of an Indulgence granted them by Pope *Gregory* XIII, with a very good Piece of *Freſco-work* in it, beſides ſome other Antiquities. A Council was held here in 1050, by Pope *Leo* IX, who ſummon'd hither *Berangerius* an Archdeacon of *Angers*, for denying the Body of our Saviour to be tranſubſtantiated into the Elements, but he did not think fit to appear.

About *Turin* and *Vercelli* I took notice of theſe Plants wild, *Doronicum vulgare* J. B. or *Majus Officinarum*, Ger. the common *Leopards-Bane*, the *Hepaticam Trifol.* Lobel. cultivated in our Gardens by the name of *Noble Liverwort*, or *Hepatica*; the *Hyacinthus Botryodes* or *Grape Hyacinth*, growing likewiſe in our Gardens.

I thought fit to treat of theſe Dukedoms ſeparately from *Italy*, as belonging more properly to the *Alps*, *Savoy* lying in the mountainous part, and *Piedmont* being the Plain at the foot of them.

The Inhabitants.

The Inhabitants were in the time of the *Romans* known by the Name of the *Allobroges*, the moſt powerful among them; and as the roughneſs of the Country they inhabit makes them robuſt, they have maintain'd themſelves againſt their more potent Neighbours, tho' perhaps this ought to be aſcrib'd to the advantage of their Situation rather than their Valour; for, conſidering that they inhabit for the moſt part in the Valleys, into which the melted Snow carries along with it the ſcowrings of the Mountains, theſe occaſion in the Bottoms (tho' the Air be never ſo fine on the Hills) foggy Vapours, which ſtagnating betwixt the Hills for want of due ventilation, render the Air thick and unwholſom, and their Bodies ſluggiſh.

The Duke ſtiles himſelf (beſides the Title of *Savoy*) King of *Cyprus* and Prince of *Piedmont*, as alſo *Vicario Generale del Imperio in Italia*, a Title that only declares his ſubjection to the Empire. This Duke's Father, *Emanuel* the Second, at the interceſſion of the Cantons of *Zurich* and *Bern*, declar'd himſelf very favourable to the *Proteſtants* inhabiting theſe Valleys in about thirteen or fourteen Villages, to the number of fifteen thouſand Souls, who had maintain'd their Religion in the midſt of the *Roman Catholicks* for above twelve hundred Years.

The Vaudois.

As *Piedmont* is a plentiful Country, ſo Proviſions are generally very cheap here: The Duke's Revenue is by ſome computed at a Million of Gold, by others of Silver, and that he is able (without dreining his Gariſons) to bring into the Field thirty thouſand Foot and five thouſand Horſe.

The preſent Duke (notwithſtanding his arbitrary ſway) is highly belov'd by his Subjects; and it muſt be confeſs'd that he is a comely and active Prince, tho' it were to be wiſh'd that in ſome of his late Actions he had ſhewn more Generoſity and Sincerity than he has, in reſpect to the Confederacy and the before-mention'd *Vaudois*, who ſignaliz'd themſelves ſo well in his Service.

LETTERS

OF

The Lady's —— Travels

INTO

SPAIN:

GIVING

An Account of the Devotions, Nunneries, Humour, Customs, Laws, Militia, Trade, Dyet, and Recreation of the *Spaniards*; being the truest and best Remarks extant of that Court and Country.

WITH

An Additional LETTER concerning the State of *Spain* in the Year 1700.

LETTER I.

Bayonne. IN my last I gave you account of what hapned of moment in our Journey to *Bayonne*, the last Town of *France* on the *Spanish* Frontiers, upon the Rivers *Dadour* and *Nivelle*: It is defended by two strong Castles, and has many pleasant Walks about it, being a place of considerable Traffick. Whilst I staid for the Litters that were to be sent from St. *Sebastian*, several of the Ladies of the Town came to visit me, who were of a very dark Complexion, but with sparkling Eyes, and a certain Vivacity of Wit: I was surpriz'd to see them bring along with 'em small sucking Pigs with Collars of Ribbons of divers colours about their Necks, which they diverted themselves with instead of our Lap-dogs.

Their manner of dancing. They having an inclination to dance, some Pipes and Tabors were sent for; and it was no unpleasant sight to see every one of the Gentlemen who attended the Ladies take one of them, and so with their Hands joyn'd dance around together: Afterwards long Canes being brought in, each Gentleman took hold of his Lady's Handkerchief, and thus they made so many Turns, Frisks, and Capers, (throwing at the same time the Canes into the Air, and catching 'em again) that I was not a little surpriz'd at their activity. Monsr. *de S. Pe*, the King's Lieutenant, invited me to a Dinner in the Castle facing the River, where I was very handsomly entertain'd, in the company of several Ladies, invited on purpose to bear me company, who were very handsom.

Civilities. At my return to my Lodgings I was not a little surpriz'd, to find the Ladies had sent me several Baskets of dried Sweetmeats, tied up in very fine Pieces of Linen, the finest Linen in the World being made in this Country; and I observ'd in our passage thro' the Villages near *Bourdeaux*, the Peasants, who else live most wretchedly, to have as fine Napkins as Persons of the best Quality at *Paris*. I return'd their Civilities with some Trifles, as Fans and Ribbons, of the last of which they are extreamly fond, and wear 'em on their Heads and Ears; in lieu of which they presented me again with Gloves and Thred-Stockings curiously knit: They would also regale me with a Consort of Musick in one of the adjacent Chapels, but tho' their Voices were good, they wanted both Air and Skill.

The Litters being come, I prepar'd for my departure: Each of these Litters has a Master, who looks as big as a Lord, mounted on a Mule, with a Servant upon another, in order to relieve those that carry the Litter at certain times, which makes Travelling very chargable here.

Having not without a great deal of difficulty got clear of the Custombouse Officers, we set out on our Journey, but were pursued by the Town-Musick, consisting of Drums, Trumpets, Pipes, &c. quite out of S. *Anthony*'s Gate, which made such a confused noise, that I was glad to buy 'em off with a piece of Money from pursuing me any further.

We had no sooner left *Bayonne*, but we travel'd over a barren Heath, having nothing but Chesnut-trees, but afterwards passed along the sandy Sea-shore, which brought us to St. *John de Luz*, the largest Burrough in *France*, and in that respect, as well as of the goodness of its Buildings, may compare with many of its Cities: Its situation is both pleasant and commodious, betwixt two Mountains, at the entrance of the River *Nivelle*, and Ships of a great burthen may come up to the very Key. We were well and cheap entertain'd here, especially with Wild-fowl, but their Beds were very bad. In the Market-

St. *John de Luz.*

place ſtands a fine Church of a modern faſhion, and the wooden Bridge which carries you croſs the *Nivelle* is of a great length. The Cuſtomhouſe Officers made us pay for every thing, not excepting our Wearing Apparel.

I took alſo a view of the ſtrong Caſtle of *Arion*, and a little further paſs'd by *Orognes*, where they begin to ſpeak the *Biſcayan* Jargon, being neither *Spaniſh* nor *French*. The badneſs of the way and weather oblig'd us to ſtay all night near the Banks of the River *Bidaſſoa*, the common Boundary betwixt *France* and *Spain*; its Stream is but ſmall, except when it overflows its Banks by the melted Snows, and we did not paſs it without difficulty. All this way from *Bayonne* they have a kind of light Carriage drawn by Oxen, with two Iron Wheels, which make a great noiſe at a diſtance. It being a Moonlight Night, they ſhew'd me the Iſle where the Marriage of our King was concluded upon with the *Infanta* of *Spain*. I paſs'd afterwards in ſight of the Fort of *Fontarabia*, ſeated at the mouth of this little River, belonging to the King of *Spain*, tho' the *French* as well as the *Spaniards* take Toll here, the firſt from thoſe that go into *Spain*, as the others do from thoſe that are bound for *France*.

The River *Bidaſſoa*.

Fontarabia

The Country call'd *Biſcay* is very mountainous, but abounds in good Iron Mines; the Inhabitants are very nimble and active, and their Jargon is a poor ſort of Speech, ſo that one word ſignifies ſeveral things.

Biſcay.

Coming on the other ſide of the River, my Banker, unto whom I had Letters of Credit, met me there, from S. *Sebaſtian's*, with two of his Relations, dreſs'd after a very odd faſhion, half *French* and half *Spaniſh*, and their Compliments were as inſipid as their Clothes.

We continued our Journey thro' the little Burrough of *Tran*, about an *Engliſh* mile from the River, and as much further came to *Iran*, the firſt Town of *Spain* on that ſide; it was extreamly ill built, the Streets very uneven, and we were forc'd to go into our Inn thro' the Stable, where were alſo the Stairs that brought us up into our Bedchamber: They had ſet up above forty Candles, upon little pieces of Wood, but no bigger than Packthreds, and in the middle a Pan of Coals of the Bark of Olive-trees, to qualifie the ſcent of the Candles. Our Supper was ſo high ſeaſon'd with Garlick, Saffron, and Spice, that I was forc'd to have recourſe to my Cook for a little *Regou*.

Tran.

Intending the next day to go no further than S. *Sebaſtien*, I dined before we ſet out, when one of my Women bringing my Watch to wind up, (which coſt me fifty *Louis d'Ors*) the Banker look'd ſo earneſtly upon it, that I could not but give it into his hands, in order to ſatisfie his Curioſity; which I had no ſooner done, but the old Spark made me a deep Reverence, with a thouſand Thanks for ſo conſiderable a Preſent, which he ſaid he would keep as long as he liv'd, and ſo put it into his Pocket: My Servants were ſurpriz'd, and I my ſelf out of countenance, not knowing what to do, but conſidering that I ſhould have occaſion for him hereafter, I thought it beſt to let him keep it: Upon enquiry, all the ſatisfaction I had was, that it is the Cuſtom in *Spain*, that when you deliver any thing into one's Hand, he may kiſs your Hand and keep it if he likes it.

Not long after we had left the Town, we entred the *Pyrenean* Mountains, the Precipices of which ſtruck us both with horrour and amazement: After we had paſs'd over ſeveral of 'em, *Don Antonio* (ſo was the Banker's Name) deſir'd me to change my Litter for a Boat, (being the more convenient paſſage) which I did accordingly, and in little Boats adorn'd with gilt Streamers and manag'd by Girls, two for the Oars, and one for the Steerage, were carried down to the very mouth of the River *Andaye*, where we ſaw three fine large Galeons riding at Anchor.

Female Rowers.

Theſe young Wenches live in ſmall Hutts along the Water-ſide, under the tuition of ſome old Maidens of their own Gang, (whom they much reſpect) they are generally of a brown Complexion, well ſhap'd, with white Teeth and black Hair, ty'd up on the Back with Ribbons in Knots; they cover their Heads and Breaſts with a kind of Veil of Muſlin flower'd with Gold and Silk; in their Ears they have Pendants of Gold and Pearl, and Bracelets of Coral; their Habit was chiefly a kind of cloſe-bodied Coat with very ſtrait Sleeves, which together with their gay Air and Countenance, was very natural and becoming. They told us, that they are a kind of a little Commonwealth among themſelves, whither they are ſent away very young by their Parents from the adjacent Countries, and that they ſuffer no Men, nor Women that ever have known Men, among 'em; but if they have a mind to marry, they go to *Fonterachia*, and after they have choſen a Husband, relinquiſh this Society. A ſcurvy buſineſs had like to have hapned betwixt my Cook and one of theſe female Rowers, who being a rough Fellow, would have turn'd up her Veil, in recompence for which ſhe broke his Head with the Oar, but the matter was compos'd by the interceſſion of *Don Antonio* our Banker and a little Money.

Here the Ways began to be ſo rough, the Paths ſo narrow, and the Precipices ſo dreadful, that I was not a little afraid of my Mules; when paſſing over a large ſandy Plain, we came to the Convent of S. *Francis*, near the River *Andaye*, which we paſs'd over a long wooden Bridge, and tho' very near S. *Sebaſtian*, we could not ſee it, by reaſon of a ſandy Mount that lay betwixt us and the Town, which is ſeated at the foot of a Mountain that on one ſide ſerves it for a Rampart againſt the Sea, where the Veſſels ſhelter themſelves cloſe to the foot of the Mount againſt the Tempeſts, which are frequent and violent here: The paſſage into the Haven is deep, enclos'd betwixt two Moles, no larger than affords a convenient paſſage for one Veſſel at a time: The Caſtle that defends the entrance is a ſquare Tower, well provided with Cannon, ſeated upon an Eminency, as are alſo the Walls and Baſtions of the Town facing the Sea-ſide.

The Pyrenean Hills.

S. *Sebaſtian*.

This Town is ſituate in the Province of *Guipuſcoa*; the Streets are long and broad, pav'd with a large white Stone, the Houſes tolerably good, and their Churches handſom enough, their Altars of Wood, hung with little Pictures from top to bottom. This Country abounds in Mines of the fineſt and beſt Iron and Steel in the World, and this, together with their Wool-trade, (which is brought hither for Tranſportation out of *Caſtile*) makes it a place of conſiderable Traffick, *Bilboa* and S. *Sebaſtian* being the two chiefeſt Ports the King of *Spain* is Maſter of on the Ocean; this is queſtionleſs the reaſon why every thing is ſo exceſſive dear here, tho' they have plenty of Fiſh and Fruit.

As I lay in the beſt Inn of the Town, it was not long before a certain Perſon of Quality nam'd D. *Ferdinand de Toledo*, a Nephew to the Duke of *Alva*, happening to paſs that way in his Journey from *Flanders* to *Madrid*, gave me a Viſit, and offer'd to encreaſe my Train, which I gladly accepted, conſidering that his Quality would ſtand us in good ſtead upon the Road; ſo, notwithſtanding the Entreaties of ſeveral Ladies of Quality, who would have ſtaid me ſome time longer, we ſet out the next day after, having ſufficiently provided our ſelves with Gammons of Bacon and dry'd Tongues, to ſerve us in our Journey in ſuch places (of which there are many) where we were not likely to meet with any freſh Proviſions.

Before I conclude I muſt tell you, that this Town has a peculiar Privilege belonging to it, *viz.* that when their Deputies are admitted into the King's preſence, he is to ſpeak to them bareheaded. I am

S. Sebaſtian, Feb. 20.
1679.

Yours, &c.

LETTER II.

LEaving S. *Sebaſtian*, a rough way brought us to a terrible ſteep Mountain call'd *Sierra de S. Adrian*, on the top whereof you ſee a whole Wood of tall Pine-trees, and in the middle a Rock higher than all the reſt, which ſeparates *Biſcay* from *Old Caſtile*, from whence you ſee nothing on all ſides but Deſarts water'd with pure Cryſtalline Rivulets. This Rock being placed in the middle of the top of the Mountain, a Stone Vault has been cut thro' it of about fifty paces long, where you ſee no Day-light except what comes in at both ends, which are ſhut up with Doors. In this Vault is an Inn in the Summer-time, and a little Chapel call'd S. *Adrian's*.

Sierra de S. Adrian.

After we had paſs'd this Vault, we ſtill aſcended to the higheſt top of the Mountain, which is reckon'd the higheſt among all the *Pyrenean* Hills, and all overcover'd with Aſh-trees, from whence you have a proſpect wounded only by the want of each of your Eyeſight, which, together with the agreeable ſhade and divers Cryſtalline Brooks, make it the fineſt place of Solitude that can be conceiv'd.

We began to deſcend afterwards, where we met ſometimes with little barren Plains intermix'd with Rocks, and with the River *Utrola*, which dividing it ſelf into divers Branches, fall with a great force and pleaſing noiſe in among the Rocks. We ſaw here and there a few Shepherds Hutts; and the Snow being deeper at this time than

than it had been in forty years before, twenty Men were always imploy'd in making way for our Company, and that without any considerable charge, the Inhabitants hereabouts being oblig'd to be the Traveller's Guides and Guardians, without any other Reward than what their Liberality is pleas'd to bestow upon 'em; and our Retinue was so numerous, that we resembled almost one of the Eastern Caravans; for besides my Train and that of Don *Ferdinand de Toledo*, three Knights more (*viz.* two of *Andalusia*, and one of *Catalonia*) travel'd along with us. We took up our Lodgings that night at *Golarate*, a small Burrough near Mount S. *Adrian*, seated in the little Province of *Alava*.

The Road betwixt this place and *Victoria* began to be better and better, as well as the Country, which yields great store of Corn and Grapes, and is full of small Villages. Don *Ferdinand de Toledo* having told me a thousand Stories about a certain Castle call'd *Quebara* we were to pass by, which they tell you is haunted by Spirits, we struck off a little to the left, to the Burrough of the same name: Our Innkeeper having the Keys to it, at last gave us entrance, tho' not without many fearful Protestations and Forewarnings of the Danger we were likely to undergo: We found it a very handsom Fabrick, tho' it was unfurnish'd, there being nothing left but some old Tapestry Hangings in a great Hall, in which were represented the Amours of Don *Pedro*, sirnam'd *the Cruel*, and Donna *Maria de Padilla*: We had the curiosity to go up into the Tower, on the top whereof was a Dungeon, which they said was the ordinary place of residence of the Spirit, who would perhaps not be seen at that time in so great a company.

The haunted Castle of Quebara.

From hence pursuing our Journey, we pass'd thro' a delightful Plain towards *Victoria*, the Capital of the fore-mention'd Province of *Alava*, surrounded only with two Walls, one old and the other new: In the Marketplace we saw about two hundred young Lads divided in four Companies, marching with Drums and Trumpets several times round, after which they fell to pelting one another with Snowballs, with so much eagerness, that they seem'd to be engag'd in a mortal Quarrel.

Victoria.

After I had taken a little rest, I was invited to a Play. The Theatre was rais'd upon old Barrels, cover'd with some very bad Boards; instead of Candles, they had set open the Windows to let in the light; they were to represent the Story of S. *Anthony*, who when he said his *Confiteor* (which he did several times) the Spectators fell down upon their Knees and knock'd themselves against their Breasts, as if they had been going to beat the Breath out of their Bodies. I observ'd, among the rest, that the Devil was only distinguish'd from the rest by a pair of flame-colour'd Stockins, and a pair of Horns on his Head. This, as well as all their other Comedies, consisted only of three Acts, and betwixt each of these Acts they represent a Farce, in which he call'd *El Gracioso*, or the *Buffoon*, acts the chief Part: These Interludes are intermix'd with Dances to the Harps or Goitars, which are generally Sarabrands, the Dancer performing them with Castanets and a little Hat on his Head: They have some peculiar motions, especially of their Hands, which they do with no ill grace.

A Spanish Play.

I will defer speaking of their Habits till I come to *Madrid*; yet I can't forbear telling you, that all the Ladies I saw here had bedaub'd their Faces with red Paint from the Eyes to the very Chin and Ears.

The Piazza or Marketplace of *Victoria* has a very noble Fountain in the middle, and round about it you see a Townhouse, the Prison, two Convents, and several handsom private Houses. They have a new and an old Town, but most People live in the first: Their Merchants are very rich here, their Traffick being chiefly in Iron, which they send to S. *Sebastian*, *Bilboa*, *Granada*, *Estremadura*, *Gallicia*, and other places. Their chiefest Streets are planted with Trees, and water'd with a Current. It lies seven leagues distant from Mount S. *Adrian*. I am

Victoria, Feb. 24. 1673. Yours, &c.

LETTER III.

FROM *Victoria* we travel'd to *Miranda*, where we lay that night, the Country being extreamly pleasant as far as *Aviguy*, but afterwards, near the banks of the River *Trola*, are much more troublesom; the natural Cascades, or Falls of the Water, occasion'd by the Rocks in this River, afford an agreeable diversion both to the Eyes and Ears.

We continued still to ascend the *Pyreneas*, (a very dangerous passage) where we saw near *Gargason* the Ruins of another haunted Castle, of which the *Alcade* or Mayor of the Burrough told us a long Tale, of a King's Daughter who died here for Love. Here we pass'd the River *Trola* over a handsom Stone Bridge, and not long after over another, and so came to *Miranda d'Ebro*, a little Town upon the River *Ebro*, (one of the best in *Spain*) with a pretty strong Castle seated on the top of a Mountain, with several old Towers. It has a spacious Marketplace, and a handsom Fountain in the middle of it. From the Rock on which the Castle stands flows a Rivulet with so strong a Current that it turns several Mills.

Miranda d'Ebro.

It being not very late when we came to our Inn, Don *Ferdinando* and the two *Andalusian* Knights went to play at *Ombre*, which they did without speaking one word, let the Cards run for or against 'em: In the mean while Don *Fred. de Cardenne*, the *Catalonian* Knight, entertain'd me with the rehearsal of certain Curiosities relating to his Country; he told me of a Salt Mountain there as transparent as Crystal, of a green, violet, and many other colours, which loseth its tincture as soon as it is wet; and what is more surprizing, that upon it there grows tall Pine-trees and excellent Vines: He told me likewise of two Fountains there, the Water of one being as red as Claret, and the other near *Blut*, the Water of which is of the same colour as others, but tinges every thing you put into it with a Gold colour; besides divers other things relating to that Country: But what pleas'd me most was the Character he gave of the *Spaniards*; he said, They have a certain Greatness of Soul and Constancy, a natural Seriousness and piercing Wit, and a set Behaviour, full of Affectation, and so highly valuing their own Merit, that in this respect they will scarce do Justice to that of others; they are brave on the defensive part, but do not care to engage easily into Danger; their Revenge and the means they use to attain it is unaccountable, and contrary to all Maxims either of Honour or Christianity; nay, they proceed so far, as not only to assassinate those who have affronted them, but also such as have been offended by them, for fear the same should otherwise be executed upon themselves: They alledge, That it is foolish, after your Enemy has taken the first Advantage, you should not secure the second; and, that to fight him upon the square, is not punishing him so much as your self, since you share half the danger with him. As to their Persons, added he, they are not very bulky, commonly lean, with good Faces, sparkling Eyes, well-set Teeth, and a dark Complexion; they are fond of a slow Walk, large Legs, a small Foot, and Shoes without Heels; their Hair being strait cut, they part it on both sides, and put it behind their Ears, with a broad Hat, black Habit, Taffaty or black Tabby Sleeves, a very long Sword, very strait Breeches, hanging Sleeves, and a Ponyard, and a black Frize Coat over all this.

The Character of a Spaniard.

It being late, by this time we went to Bed, and intending to lie the next night at *Birbiesca*, we set out early in the morning, and following the Banks of the River (to avoid the Mountains) we cross'd that of *Oron*, a considerable River, which joyns its Current with that of the *Ebro*, we ascended afterwards on a very narrow way to *Pancorvo*, the Castle of which stands on an Eminency hard by; thence we travel'd thro' a great Plain (a Rarity in this Country) enclos'd with a Chain of Mountains call'd *Ocea*, and after having cross'd another little River, we came to *Birbiesca*, a Burrough having nothing remarkable in it, except a good College and some Gardens, near the Water-side.

Birbiesca.

It being pretty late, I was willing enough to go to Bed, which before I do, I will give you an account of the condition of our Inn, which may serve as a Pattern for all the rest, they being the same all over *Spain*.

When you come into an Inn, either half roasted by the Heat, or almost frozen by the Cold and Snows, (for here commonly one of these Extreams reigns) you seldom meet with any Fire, and much seldomer with any Pot upon it; your first entrance is thro' the Stable, full of Mules and Mule-drivers, who live, eat and drink, nay, sleep with their Cattle, the Saddles serving at night for Pillows, and in the day instead of Tables. From hence you are conducted by a very stout Staircase, or rather a Ladder, to your Chamber, without any Hangings, except that the Walls are adorn'd with a vast number of little scurvy Pictures of their Saints, the Beds without Curtains, and the Sheets no larger than our Napkins; and of these you find not above four or five in a whole Town.

A description of the Spanish Inns.

Town. The worſt is, that they have but one Cup in a Houſe, which ſerves the Muleteers as well as other Paſſengers, and if they have taken hold of it firſt, you muſt make ſhift with an Earthen Pitcher, or what elſe you can get. When the Fire is made in the Kitchen, you can't come near it for Smoak; beſides that, the Fire-place is in the middle of the Room, (the Smoak going out on the top thro' the Cieling) with a dozen Men, Women and Children, as black as Chimney-ſweepers, ſtinking like Hogs, and clad like Beggars.

Inſtead of roaſting their Meat as we do, they lay it upon Tiles before the Fire, and ſo turn it till it be done enough; if it be too large, they faſten it with a String, and ſo turn it with their Hands till it be as black as a Chimney-ſtock.

The Miſtreſs of the Inn does not forget to bid you welcome, with her Gown tuck'd up, and her dangling Sleeves, bringing her Children to you bareheaded, (tho' never ſo cold) whoſe Eyes, Cheeks and Hands ſhe rubs with your Clothes, as if they were Relicks. The next thing is, to know whether you will eat any thing; if you will, you muſt (tho' it be midnight) ſend to the Butcher, Baker, Tavern, &c. for what you will have with ready-money, the Innkeepers being not allow'd to furniſh Travellers with any thing but Lodging: But the worſt is, that very often you meet with nothing that is eatable in a very conſiderable place, and if you do, they ſpoil it miſerably in dreſſing; for tho' their Mutton be very good, the frying it with Oyl does not reliſh with Strangers. They have plenty of very large Partridges, but they are lean and dry; and to make 'em the worſe, they roaſt 'em to a Coal: Their Pigeons are excellent, and ſome of the *Spaniſh* Country Towns afford very good Fiſh, eſpecially thoſe call'd *Baſſugoſſes*, a Fiſh in taſte like our *Trouts*, of which they make Pies, which would not be amiſs, were they not ſo overſeaſon'd with Garlick, Saffron and Pepper: Their Bread is white and ſweet as Sugar, but not well wrought, and worſe bak'd, which makes it very offenſive to the Stomach; it is flat, like a Cake, of about the thickneſs of a Finger. To make amends for all the reſt, their Wine and Fruits are very good, ſo that you may hope for a good Deſert after a bad Meal: Their Grapes are large, and of a luſcious taſte, and their Lettice the beſt in the World.

As Travellers in *Spain* carry much of their Proviſions along with 'em, ſo they ſeldom or never dine in an Inn, inſtead of which they repoſe themſelves a little near a River, or where-ever the Muledrivers bate their Mules, whom they feed with Barley, or Oats mix'd with chop'd Straw, but not with Hay. A Woman is not allow'd to ſtay (without very good reaſon) above two days in an Inn on the Road. And thus much for their *Inns*.

After Supper the Gentlemen went to Cards, but Don *Ferdinand de Toledo* having no inclination to play at that time, diverted me by the Fire-ſide with ſeveral Diſcourſes relating to *Old Caſtile*, his native Country, and would fain have perſwaded me to go ſomewhat out of my way, to take a view of *Valladolid*; he told me wonders of the Portal and emboſs'd Works of the *Dominicans* Church there, founded by the Dukes of *Lerma*, and of the Tomb of a certain *Caſtilian* Knight in the Quire of the Church of the Religious of S. *Clara*, which ſends forth Groans as often as any of the ſame Family are near their Deaths. Finding me a little doubtful in the matter, he told me if I queſtion'd the truth of it, I ſhould certainly be taken for an Heretick; and, to convince me, gave me an Inſtance of a certain Bell of fifty foot in circumference, in a certain Town call'd *Villilla*, which ſometimes ſounds it ſelf, without any help, beginning firſt to toll, and afterwards to ring out, and that generally as a forerunner to ſome remarkable Accident. Finding by my Countenance that I was not ſufficiently convinc'd of the truth of theſe things, he call'd to Don *Eſtevo de Carvagal*, one of the two Gentlemen of *Andaluſia*, to back his Story by another of the ſame nature well known to 'em both, and this was of a Bell in a certain Convent of *Conduc*, which (they aſſur'd me) never fails to ring not long before one of the Religieuſes dies.

A miraculous Bell.

I ſeeming to be better convinc'd than before, he turn'd his Diſcourſe upon other matters, as, the *Salt-Mines* near the Village of *Mengraville*, into which you deſcend by above two hundred Steps, the whole Roof of this ſubterraneous Cavern being ſupported by a Pillar of Salt as bright as Cryſtal, and of a ſurprizing bigneſs and colour. He added, that near this place, *viz.* in the Town of *Soria*, there was a great Bridge without a River, which by an Earthquake had been forced out of its Chanel.

The Aquaduct of *Segovia*.

But what was moſt taking with me was, the deſcription he gave me of the Aquaduct of *Segovia*, conſiſting of two hundred Arches of a great height, all of Free-ſtone, joyn'd without any Mortar or other Cement; the whole Aquaduct is five leagues long, and in ſome places the Arches are erected upon one another.

He told me another thing worth obſervation, concerning the Town of *Medina del Campo*, which, he ſaid, enjoy'd this Privilege, that the King of *Spain* can't appoint their Officers, nor the Pope confert Benefices upon Eccleſiaſticks, without their approbation and conſent.

We are juſt now come to *Burgos*, what is worth mentioning here you ſhall know by my next. I am

Burgos, Feb. 27. 1673.

Yours, &c.

LETTER IV.

Burgos.

I Was ſcarce arriv'd at *Burgos* but I was ſenſible that it was colder here than in any of the places thro' which we had paſs'd hitherto. Its ſituation is juſt upon the deſcent of the Mountains, reaching down the Plain to the very River-ſide, which waſhes its Walls: The Streets are tolerably handſom and ſtreight, and the Caſtle on the top of the Mountain is ſtrong, tho' not very large: Something lower ſtands the Triumphal Arch of *Fernando Gonſales*, much admir'd by ſome. It being the firſt Town conquer'd from the *Moors*, it holds the firſt place in the two States of the two *Caſtiles*, tho' this alſo is challeng'd by thoſe of *Toledo*: It is the capital City of *Old Caſtile*, where their Kings us'd formerly to reſide; its Buildings are very lofty, and *Vecaſco's* Palace is ſtately; the largeſt Streets, and other open places, are adorn'd with Fountains and Statues, ſome whereof are not deſpicable.

The Cathedral.

But what they chiefly boaſt of is their Cathedral, a Maſterpiece of *Gothick* Architecture, and of ſuch an extent, that they ſay Maſs in five ſeveral places at a time, without the leaſt diſturbance to one another. Three Stone Bridges lead you to the Suburbs of *Bega*, and the Gate of S. *Maria* is very lofty, with the Statue of our Lady upon it: In this Suburb are moſt of their Convents and their Hoſpitals; in that founded by *Philip* II. Pilgrims that are going to S. *James* are entertain'd for a whole Day; and the Abbey of *Mille Flores*, a noble Structure, is not far from it. This Suburb has alſo very pleaſant Gardens, water'd with Fountains and Springs from the River; and the adjacent Park, enclos'd with a Wall, affords very delightful Walks.

The Auſtins Convent.

The noted Crucifix in the Convent of the *Auſtin Friers* is placed in a Chapel large enough, but ſo dark, that without the help of Lamps it could ſcarce be ſeen; of theſe there are always kept burning above an hundred, ſome of Gold, others of Silver, and thoſe of ſo large a ſize, that they cover all the Vault of the Chapel; beſides, there ſtand upon the Ground on both ſides of the Altar ſixty Silver Candleſticks of the bigneſs of the talleſt Man, and of ſuch a weight that a Man can't lift one of 'em; thoſe upon the Altar are of maſſy Gold, and betwixt 'em you ſee two Croſſes of the ſame Metal, enrich'd with precious Stones and Pearls, as alſo Crowns adorn'd with Diamonds of a great luſtre hanging over the Altar: The Chapel it ſelf is hung all round with Tapeſtry wrought with Gold; beſides which, there are vaſt rich things kept in the Treaſury.

The Crucifix.

The holy Crucifix it ſelf is of a natural bigneſs, and ſtands upon the Altar, cover'd with three ſeveral Curtains embroider'd with Pearls and Precious Stones; 'tis ſeldom ſhewn, except to Perſons of Quality, and that not without a great deal of Ceremony, for no ſooner are the Curtains opening, but at the tinkling of ſeveral Bells every one preſently falls on his Knees: This Crucifix is exquiſitely made of carv'd Work, and the Carnation exceeding natural; from the Breaſts down to the Feet it is cover'd with a very fine piece of Cloth laid into plaits; they are of opinion that *Nicodemus* made it, but the *Monks* ſay it did fall from Heaven, tho' they can't tell how nor when; they tell you alſo, that it ſweats every *Friday*. One of the Knights Servants entring this Chapel booted, the Friers were ſo enrag'd thereat that they confin'd him, in hopes of extorting ſome Money from him, but he made ſhift to get out of their clutches, by ſhewing them a fair pair of Heels.

The Piazza.

Tho' this City is not very great, yet is the Piazza or chief Marketplace very ſpacious and noble, and the Pillars which ſupport the Buildings very ſtately: Here they keep their *Bull-feaſts*, a thing much delighted in among the

the *Spaniards* in general. The Great Bridge is also a good Fabrick, broad and long, leading to a Meadow, the Bank whereof is planted with delightful shady Trees, that make a pleasant Walk. It was formerly a place of much better Trade than it is now; the best *Castilian* is here spoken, and the Inhabitants are counted the best Soldiers in the whole Kingdom.

While the rest of our Company were playing at Cards after Supper, Don *Sancho Sanmiento*, one of our three Knights, took this opportunity of giving me an account of the Cruelties exercis'd by the Marquess *de los Navas*, the *Spanish* Viceroy of *Sicily*, after their Rebellion, which were such as are scarce to be parallel'd in History. Being tir'd with a rehearsal of those things so disagreeable to my Inclinations, (of which for the most part he had been an Eye-witness) he turn'd his Discourse upon *Gallicia*, which he confess'd was a poor and mean Country; but finding him willing to give us some better, of the
St. James de Compostella. City of *S. James de Compostella*, I was well enough pleas'd with his Intentions: This City, said he, is the Capital of *Gallicia*, not inferiour to any of *Spain*, either in Extent or Riches; the Yearly Revenue of the Archbishop amounts to seventeen thousand Crowns, and that of the Chapter to no less: Its situation is in a most delightful Plain, surrounded with Hills of an indifferent height, which keep out the venomous blasts that arise sometimes among the higher Mountains: Its Palaces and Churches are exceeding fine, the University none of the worst, and the publick Places noble; their Hospital deserves to be rank'd among the best in *Europe*, the Fabrick consisting of two very large Courts, with Fountains in the midst of them.

Several of the Knights of St. *James* reside here, and this Saint being the Patron of the City, his Body is kept
The Tomb of St. James. here in a most stately and magnificent Tomb: They pretend they hear in this Monument sometimes the clattering of Arms, which always portends something very ill to *Spain*. This Saint is represented on the Altar in carv'd Work, which the Pilgrims kiss three times, and as often put their Hats on his Head; some more zealous than the rest go up to the top of the Church, which is cover'd with broad flat Stones, on which stands an Iron Cross, whereon the Pilgrims fasten some Rags or other pieces of the Clothes they wear at their being there; then they pass under the Cross, thro' so strait a passage, that such as are somewhat corpulent are in danger of squeezing their Guts out; there are Instances that some have travel'd three or four hundred leagues to crawl thus upon their Bellies.

The French Chapel. Here is a *French* Chapel very neatly kept, tho' that under-ground surpasses the other for stately Tombs and ancient Epitaphs. The Archiepiscopal Pile is an ancient but noble Structure.

Our next Discourse running upon Military Affairs, the same Gentleman would needs give me an account of their *Militia*.

The Militia. These, said he, are oblig'd to appear in Arms every Year in the Month of *October*, no body being excepted from this Duty that is above the age of fifteen; and this is observ'd with so much rigour, that in case a Father should conceal his Son, he would be condemn'd to perpetual Imprisonment, of which there have been some Instances, tho' but few, the Peasants being so well pleas'd to see themselves in Arms, and to be call'd *Cavaliers* and *Nobles Soldados del Reg*, *Cavaliers* and the *Kings Soldiers*, that they would not miss this opportunity of shewing themselves for a good deal, tho' perhaps in a whole Regiment you shall scarce meet with one that hath more Shirts than Backs, and the Stuff which scarce covers their nakedness as coarse as if it were made of Packthread, without Stockings, and the Shoes of Wood; a Dunghil-Cock's Feather in their Caps is their best Ornament, the Sword being for the most part without a Scabbard, and fastned about the middle with a piece of Packthread; the rest of the Arms are suitable to these: Thus equip'd
Tuy their general Rendezvous. they march on to *Tuy*, one of their three general Rendezvouses (the other two being *Cindud Rodrigo* and *Badajor*) upon the Frontiers of *Portugal*, opposite to *Valentia*, a strong and well-fortified Town belonging to that Kingdom; and indeed *Tuy* is none of the least considerable among the *Spaniards*, being seated on a rising Ground near the River *Minhio*, and well provided with Works and Ammunition: Here it is that they perform their Exercises, and give Proofs of their Valour, a slender Recompense to the Country for the want of so many young Men, who in the mean time neglect cultivating the Ground, which makes it look about *Compostella* almost like a Wilderness. But near the Sea-side, the Country being much better Peopled, Provisions are in proportion to be had in much greater plenty, such as Oranges, Limons, Pomegranates, and other sorts of Fruits, most excellent Fish, and especially most delicious *Pilchards*.

He told me another thing for a real Truth, which was more surprizing than all the rest, and that was, a Fountain at the source of the River *Lours*, on the very top of the Mountain of *Cerbres*, which tho' at twenty leagues distance from the Sea, has its flux and reflux like the Sea; and it has been observ'd, that during the greatest Heat it casts the most Water, which sometimes is as cold as Ice, and at other times boiling hot.

When I was going to Bed, I was not a little surpriz'd *Tricks of the Innkeepers.* to see my self conducted into a long Gallery, with Beds from one end to the other, like our Hospitals; I told them I wanted only four for my self and my Women, but being answer'd, that this was the best and only place left in the House, I was forc'd to be contented. I was scarce got into the Bed, but hearing somebody knock fiercely at the Door, my Woman open'd it, and to her great amazement saw the Master and Mistress of the House appear, with about a dozen of ragged or rather half-naked Creatures at their heels, who entring the Room without any further Ceremony, the Mistress of the House told me, that she had brought in some honest Travellers to lie in the empty Beds; I ask'd her whether she were out of her Wits; she replied, I might well think her so, if she should let the Beds stand empty, unless I paid for 'em all. It is scarce to be imagin'd in what a rage this rudeness put me, but considering that the safest means were the best, I agreed with her to allow her twenty pence for every Bed; and so this beggarly Crew withdrew. Upon enquiry I found the next day that these had been only her Neighbours, invited in on purpose to extort from me four Pistoles; and taking a view of these Beds I paid for at so dear a rate, I found most of 'em to be Sacks fill'd only with Straw; but being told that it was a Stratagem frequently practis'd by the Innkeepers in *Spain*, I laugh'd at the Frolick, tho' to my cost.

The Weather being very bad all that night, we did not set out till late from *Burgos*, and we had not travel'd far before we wish'd our selves there again, the Roads being so cover'd with Snow that we could not see a Tract, especially on the adjacent high Mountain, where one of our Muletiers fell from a Precipice and broke his Head, and disjoynted his Arm, so that we had enough to do to hale him up again.

Night beginning to come upon us, we were glad to take up our Quarters in a little Village call'd *Madrigalesca*, consisting of not above a dozen Houses, and the best of them (where we lodg'd) not above half cover'd, notwithstanding which, we were scarce got well in when an ancient Gentleman came to entreat me, in the behalf of a Lady, to let her have some small share in this House, as being the only one fit for Entertainment in the whole Village; understanding that she was the Widow of the Marquess *de los Rios*, (a Person of good Quality in *Andalusia*) I willingly accepted of her good Company.

Her Dress, when I saw her come out of the Litter, *How Widows mourn.* appear'd to me most singular; her Gown and Petticoat was only of black Serge, over which she wore a kind of Linen Surplice reaching down below her Knees, with the long and strait Sleeves quite over her Hands; the Surplice was fastned to the Gown, without any Plaits behind; on her Head she wore a Muslin Veil, which cover'd all her Head, Face, Neck, and part of her Body; she wore besides this a large black Taffety Mantle coming down to her very Heels, and a huge broad-brim'd Hat, tied under her Chin with a Silk Ribbon: This Dress they never leave off, unless they marry again, the *Spanish* Ladies lying under an Obligation, by the Custom of their Country, to bewail with a great deal of Ceremony the death of an Husband whom commonly they have but little reason to love.

I was credibly inform'd, that these Widows pass the first Year of their Mourning altogether in a Chamber hung with black, (without seeing so much as the glimmering of Day-light) and that sitting cross-leg'd on an *Indian* Quilt; after this they change it for another Room hung with grey, but are not permitted to have any Pictures, Looking-glasses, Cabinets, fine Tables, Plate, or any such like Ornaments, nor to wear Diamonds, Pearls, or any Colours.

She told me, she was going to see a near Relation, a Religieuse, at *Luschuelges de Burgos*, a noted Nunnery, *A famous Spanish Abbey.* wherein are near a hundred and fifty Nuns, most of 'em the Daughters of Persons of Quality; and, that the Jurisdiction of the Abbess extended over fourteen large Towns, fifty places of less note, and seventeen Convents;

and

and has the diſpoſal of twelve Commanderies, and of ſeveral other Benefices. She told me, that ſhe was going to paſs ſome time in this Monaſtery, and finding me ſomewhat ſurpriz'd thereat, ſhe aſſur'd me, that for a conſiderable time ſhe had ſeen fewer People at her own Houſe than ſhe ſhould there, where ſhe ſaid the Nuns had a ſufficient ſhare of liberty. She added, that there were certain Canoneſſes at *Madrid*, ſtiled the *Ladies of S. James*, and their Inſtitution is like to the Knights of the ſame Order, for (like them) they bear a Sword made in form of a Croſs, embroider'd with crimſon Silk; theſe they have on their Scapularies and Cloaks, which are white: Their Houſe is a fine Fabrick, with noble Apartments, as richly furniſh'd as if they liv'd in the World; and they have each a conſiderable Allowance, and three or four Women to wait on 'em; however, they never ſtir out, and tho' every body is admitted to viſit 'em, yet they are never to be ſeen (not even by the neareſt Relations) but thro' a Grate, which would perhaps ſeem a Hardſhip in any other Country but *Spain*, where Women are us'd to a perpetual Confinement.

The Ladies of S James.

Then our Diſcourſe running upon ſome Court-News, and at laſt upon the particular Privileges belonging to theſe of *Arragon*, I deſir'd her to give me the beſt account of them ſhe could, which Deſire ſhe readily complied with.

Privileges of Arragon.

The *Arragonians*, ſaid ſhe, being the firſt who ſhook off the *Mooriſh* Yoke, and there being none alive of the Race of the ancient *Gothick* Kings, they put the Crown upon the Head of a certain Lord of the Country nam'd *Garci Ximenes*, and being then a People free and unconfin'd to any Laws but what they thought fit to impoſe themſelves, it was agreed, that he and his Succeſſors ſhould rule them under theſe Reſtrictions: As ſoon as any of their Kings ſhould infringe any of their Laws, he ſhould by ſo doing forfeit all his Right and Title to the Crown, and the Subjects be at full liberty to elect another, tho' even a *Pagan*; and to render this the more effectual, a certain Magiſtrate was conſtituted under the Name of *Juſticia*, whoſe chief care was to be, to keep a watchful eye over the King's Actions and his Judges; and to protect and maintain his Authority it was eſtabliſh'd, that this Magiſtrate ſhould not be call'd to account for what he tranſacted in his Office, but by the General Aſſembly of the States, call'd by them *Los Cootes*.

It was further enacted, That if the King did prove grievous to any one of the Subjects, the Great Men of the Kingdom might aſſemble themſelves, and ſeize upon his Revenues, till Juſtice were done the oppreſs'd Party.

The Juſticia.

To make their new King *Ximenes* ſenſible at the firſt entrance upon his Government what Authority they had annex'd to the Office of this Magiſtrate, they order'd a Throne to be erected, and the King to kneel down before him bareheaded, to receive from him the Oath of adhering inviolably to theſe Conditions, which done, they proclaim'd him their Soveraign in the following words:

We, who are as good Men as your ſelf, conſtitute you our King and Governour, under Condition you maintain us in our Rights and Properties, otherwiſe we diſown you.

This Cuſtom continued till Don *Pedro* came to the Crown, who not reliſhing this Cuſtom, obtain'd (by his Authority and Entreaties, and the promiſing other Privileges) the aboliſhment of it from the States; the Parchment on which the Act was written being deliver'd to him, he drew his Dagger, and piercing his Hand with it, told them, That *a Law which entitled Subjects to a Liberty of diſpoſing of their Soveraigns, ſhould be effaced with the Soveraign's Blood.* His Statue ſtands to this day in the great Audience-Hall of *Saragoſſa*, with a Dagger in one Hand and a Parchment in the other.

Tho' their late Kings have not been ſo religious in obſerving their ancient Privileges, yet however the uſe of the *Juſticia* is not quite aboliſh'd, there being a Law ſtill in ure, known by the name of the *Law of Manifeſtation*, by vertue whereof a Subject who finds himſelf aggriev'd by a Judge, may (after having depoſited five hundred Crowns) appeal to the *Juſticia*, who is, after a moſt exact Inquiſition, to puniſh the Judge, if he is found guilty of having given a wrong Sentence: And in caſe the *Juſticia* fails in redreſſing the Grievance of the oppreſs'd Party, he may have recourſe to the General Aſſembly of the States of the Kingdom, who chuſe certain Perſons of their own Body to decide the matter in queſtion.

It is very obſervable, that they commonly pitch upon the moſt ignorant perſons to judge the Men of the Gown, alledging, that *Juſtice ought to be ſo plain, as to be underſtood by every body, even of the meaneſt Capacity.* But what is more ſingular, is, that tho' (in caſe of wrong Judgment given) they puniſh the perſon that has committed the Crime, yet does the Decree or Judgment remain in its full force, and muſt be put in execution accordingly; ſo that the aggriev'd Party has no other Redreſs for his Loſs (perhaps of a vaſt Eſtate) than his five hundred Crowns back again, and five hundred more out of the condemn'd Judge's Eſtate, all the reſt being forfeited to the King: But if the Plaintiff fails in making out his Charge againſt the Judge, he forfeits his five hundred Crowns to him.

The Country of Arragon.

She further added, Tho' the Country of *Arragon* was celebrated for Great Men, who ſignaliz'd themſelves beyond the reſt of the King's Subjects, nevertheleſs their Country was generally barren, unleſs in ſome few Valleys water'd by the Chanels brought thither from the River *Ebro*, the reſt being nothing but Sand and Stones.

Saragoſſa.

Her Character however of *Saragoſſa*, their capital City, was extraordinary, *viz.* that the *Holy Street* (where they run their Courſes) was vaſtly broad and long, beautified with many ſtately Palaces on both ſides. She told me, that the Vault of S. *Francis*'s Church was a miraculous Piece of Architecture, not ſupported by any Pillars, tho' of an extraordinary largeneſs: The greateſt Defect, it ſeems, of this City is, that it has neither Fountains nor Walls, and the River *Ebro* is not navigable even for Boats, by reaſon of the many dangerous Rocks that obſtruct its paſſage. The Annual Revenue of the Archbiſhop, ſhe told me, was ſixty thouſand Crowns; but the Viceroy of *Arragon* a bare Title, without any ſettled Income, whence it is that none but the richeſt Lords can aſpire to this Dignity. The Court of Inquiſition have a noble Palace here, and proceed with great rigour, the People being naturally fierce and ſtubborn.

A Tragical Story of a Robber.

But notwithſtanding all the rigour of the Government, there are a conſtant Gang of Robbers here, as well as in moſt other parts of *Spain*, call'd by them *Bandoleros*, who murther all they meet with, and much addict themſelves to ſtealing of young Children or Women of Quality, upon whom they ſet an extraordinary Ranſom, and if the Women prove handſom, ſometimes keep them for their own uſe, and make them lead a moſt direful Life in ſubterraneous places, or among the Mountains, and carrying them ſometimes from place to place on Horſe-back: I was credibly inform'd, that one of the Ring-leaders of a Troop of theſe Thieves being mortally wounded, ſome Soldiers that were ſent after him in the Mountains finding his Miſtreſs (who was a near Kinſwoman to the Marqueſs *de Camerata*, a Grandee of *Spain*) willing to take this Opportunity to deliver her ſelf from this doleful Life by flight, he catch'd hold of her Hair, and thruſt a *Dagger* into her Heart: Being found near her dead Body (almoſt expiring) ſoon after, by the ſame Soldiers that had wounded him, he declar'd, That tho' he was even dying, he could not ſuffer any body elſe to be poſſeſs'd of what he had lov'd ſo dearly in his life-time.

It ſnowing ſo hard all night that no Path was to be ſeen, we were forc'd to tarry three whole days in this little place, when the Weather beginning to mend, I took my leave of the Marchioneſs, and travel'd towards *Lerma*, whither we got not without a great deal of difficulty, being forc'd to traverſe the high Mountains call'd *Sierra de Cogolos* by the *Spaniards*. The Town is but ſmall, but the Caſtle conſiderable, which we intending to ſee to morrow, you will have an account of it in my next. I reſt

Lerma, Mar. 8. 1679.

Yours, &c.

A Re-

A Relation of
A Voyage to SPAIN,
In several LETTERS.

PART II.

LETTER V.

THE Castle of *Lerma* is by most of the *Spaniards* plac'd next to the *Escurial*, and to confess the truth, it is a noble Fabrick, which acknowledges the Cardinal *de Lerma*, King *Philip* the Third's Favourite, for its Founder: It is seated on the ascent of a Hill, and you go to it by a spacious Court environ'd with Piazza's and Galleries. The Structure it self consists of four vast Piles joyn'd together in one Quadrangle, having Porches on the inside near as high as the Edifice it self, which hinders the Prospect from the Rooms on that side; and consequently all the Windows are on the outside of the Apartments, which are very spacious, and most curiously gilt, and notwithstanding there is a great number of 'em, are adorn'd with rich Furniture.

The adjacent Park extends into the Plain, and is water'd with a River besides divers Brooks, and being well planted with Trees all-along the banks of the said River: These Walks of tall Trees, I say, together with a little Wood at a small distance, makes this questionless a very delightful place in the Summer-time.

The Keeper of the Castle ask'd me, whether I had a mind to see the adjoyning Convent; I told him, Yes; so we were conducted thro' a Gallery, at one end whereof was a Grate which reaches from the top to the bottom: The Abbess, having got private notice of our coming, receiv'd us here with several of the Religieuses about her, who were very handsom and young, but notwithstanding this, witty, and discours'd very well. Whilst we were entertaining one another, a young Wench did whisper the Lady Abbess in the Ear, who soon after told me, that a certain Lady of the chiefest Quality, the Daughter of Don *Mandrica de Laro* Count *de Valino*, and Widow of Don *Francisco Fernandez de Castro* Count *de Lemos*, being lately retir'd into their Convent, was always very desirous to entertain any *French* Ladies that pass'd that way; I replying, That I should be proud of the Honour of seeing her, she appear'd soon after in a Dress us'd by the *Spaniards* these hundred years, with a kind of Pattins, or rather Stilts, which made her seem exceeding tall, and oblig'd her to lean on two Daughters of the Marquess *del Carpio*, one of which was of a fair Complexion, (a Rarity in this Country) and the other had Hair as black as Jett, but both very handsom, tho' they were somewhat too lean, but this is look'd upon as no disadvantage in *Spain*, where Skin and Bones satisfies them instead of Flesh. For the rest; this Lady wore a kind of black Satin Bodice embroider'd with Gold, and button'd with Rubies of a great value, the Bodice reaching from her Neck down like a Wastcoat, with strait Sleeves, which had large Wings about the Shoulders, and other Hanging-sleeves fastned to the bottom of the Gown with Roses of Diamonds. Her Fardingal was so large, that she could not sit, except upon the Ground: She had about her Neck a Ruff, and divers rows of large Pearls and Diamonds. Her Hair, which was quite grey, (she being seventy five years of age) was cover'd with a kind of a Veil of black Lace; she look'd still very handsom, without the least wrinkle, and her red and white Paint did not ill become her.

A Tragical Story of a Robber.

She telling me, among other things, That she attending the *Infanta* when she espous'd *Lewis* XIII, she had the opportunity of seeing and knowing the most famous Queen *Christian* of *Sweden*, I was extreamly desirous to hear some particulars concerning this great Queen, which were not yet come to the knowledge of the World: She told me, that Don *Antonio Pimentel* being sent to *Stockholm* by the King of *Spain*, in the quality of Ambassadour, to penetrate into the Inclinations of this Queen in reference to the House of *Austria*, he soon got such an Ascendant of her Heart, that he not only succeeded very well in his Intentions, but also (by the Queens peculiar Orders) accompanied her into *Flanders*. She added, That tho' the said Queen in outward appearance laid down the Scepter (of which she was the lawful Heiress), without any seeming reluctancy, and rather harangued the States upon this occasion, as done out of a pure motive of Generosity, to bestow the same upon the Prince *Palatine*, it was very well known by some, that she made not this Surrender without a signal Grief to one she hated in the bottom, as having by his Interest with the States procur'd a Declaration, whereby he was propos'd to be her Husband, which being a subjection not to be brook'd by such a Spirit as hers, he retir'd from Court, but did not neglect, by his Creatures, to set out the Queens Defects in the worst colours he could: It was at that time (she seeing her self freed from her mortal Enemy) that, instead of applying her self more seriously than ever to the publick Affairs, she had recourse to Books, Love-Plays, Balls, and other publick Diversions, which together with the enriching of Strangers at the expence of her own Subjects, the *Swedes* began not only to murmur, but even to exclaim aloud against these Mismanagements, which put her upon that Resolution, to take Vengeance of her self rather than her Enemies, and to abandon the Kingdom to her Cousin.

Memoirs of Q. *Christian* of *Sweden*.

Her resignation of the Crown.

If her Conduct, in parting at so easie a rate with a Crown, was blam'd by the generality of the World, her Proceedings afterwards were no less liable to censure; for she left *Sweden* in a Dress very unbecoming her Sex, with a sort of *Justaucorps*, a very short Petticoat, Boots, a Cravat, a Hat with Feathers, and a Perriwig ty'd behind in a knot, (a thing not usual in those days) and she would be attended only by Men, it being her common Saying, *That she liked Men, not as Men, but because they were not Women*; tho', to speak the truth, she was guilty of some Weaknesses even below the very meanest of Women.

Her Conduct.

There needed no other Interest (said she) than that of Don *Pimentel* to introduce me to kiss Her Majesty's Hand, (tho' at the same time she had sent word to all the Ladies, that she would excuse 'em for their Visits) she receiv'd me very favourably, and, to speak truth, her Discourse was full of Wit, and a more than ordinary vivacity of Spirit, but she would often break out into Oaths, and many of her Words and Actions had nothing of that *decorum* in 'em that ought to be observ'd by People of Quality.

She and the Prince of *Conde* being both equally desirous to see each other, but differing about some Ceremonials, the Prince took the opportunity one day, when there was a great crowd of Courtiers in her Apartment to slip in *incognito* among 'em, but whether she had any notice of it, or had seen his Picture, certain it is that she knew him, and would have paid him such Civilities as were due to his Person and Merit, but the Prince retiring, she follow'd to conduct him, which made him stop, and so telling Her Majesty *Either all or nothing*, he retreated. However, soon after they had another Interview in the Mall of the Park of *Bruxells*, where they treated each other with a great deal of Civility, but much Reservedness.

Her Interview with the Prince of *Conde*.

Our Discourse turning afterwards upon the Castle of *Lerma*, whose Founder was the Cardinal of that name, the noted Favourite of K. *Philip* III, she gave me an account of the true occasion of his Death, which, for the oddness of it, and the relation it has to the Custom of the

Court

The occasion of the Death of *Philip* III.

Court of *Spain*, I can't forbear to relate: The King, it seems, being very busie one day (when it was very cold) in writing and dispatching Letters in his Closet, they had placed near him so strong a Charcoal Fire as put him into a sweat, but what with the easiness of his Temper and eagerness of dispatching his Matters, he made no Complaint; but the Marquess *de Pobar* observing the King's uneasiness, spoke to the Duke *d'Alva*, Gentleman of his Chamber, to have the Fire remov'd; but his Answer was, That it belong'd not to him to do it, but to the Duke of *Duesda*: The Marquess *de Pobar* being sensible how much the King suffer'd by the excess of heat, and yet not daring to venture to take it away, sent immediately word of it to the Duke of *Duesda*, who being by ill fortune gone a little way out of Town, to view a House of his that was building there, word was brought of it to the Marquess *de Pobar* accordingly, who again propos'd to the Duke *d'Alva* the removing of the Fire, but he persisted in his resolution of not invading another man's Province, but chose rather to send immediately into the Country to the Duke of *Duesda*, who indeed came away immediately, but before he arriv'd in the Palace the King was so far spent that they were forc'd to carry him to Bed, where he fell ill the same night of a violent Fever and Erysipelas, which Inflammation degenerating into the Purples, put an end to his days.

As the old Countess was a Lady of good Understanding, so she entertain'd me with several other Relations, as of the Count *de Villa Medina*, who was shot in his Coach by K. *Philip* the Second's order, he having conceiv'd a Jealousie against him of his being in love with the Queen, unto which his appearing at the *Carowsel* of *Madrid* in a Suit all cover'd with a sort of Money call'd *Realles*, with this Motto, *Mis amores son Realles*, gave the first occasion, by the word *Realles*, which signifies as much as *Royal*.

K. *Philip* IV. bastinado'd by the D. of *Alburquerque*

The other Story of K. *Philip* the Fourth's being in love with the Dutchess of *Alburquerque* was much more pleasant, especially that part of it where the King putting the Duke in his place to play at Cards for him, went in the mean while in disguise to visit the Dutchess, which the Duke mistrusting, found means to leave the Game, and returning home, found the King in the Court-yard, where he soundly bastinado'd him, pretending he came to rob him.

Tho' the weather was extreamly bad, we set forward, notwithstanding we could scarce see ten foot about us, and the Wind was so high that it blew off several pieces of the Rocks, one of which had like to have kill'd one of our Company; but the worst of all was, that after we had travel'd, according to our computation, about eight leagues, we found our selves at night just at the Gates of *Lerma*, having travel'd up and down round the Town all that day: Our Hostess was much better pleas'd at the sight of us than we, and as an addition to my sorrow told me, that I could not have the same Chamber, a Lady of Quality nam'd Donna *Eleanor* of *Toledo* being come into it just before our return. She being a near Kinswoman of Don *Fernand de Toledo*, he complimented her by his Gentleman, and afterwards conducted me into her Chamber; and Don *Fernand* having told her who I was, and whom I was going to see at *Madrid*, she told me, that she knew the Person very well, and that not long before the King had made her *Titularia* and Marchioness of *Castile*: As I had but little knowledge of the nature of these Titles, so I took this opportunity to desire her to oblige me with an account of this, as well as the Title of *Grandee*.

The Titles of *Spain*.

In the time of the first Kings (said she) of *Austria* and *Gallicia* they were elected by the *Prelates* and those call'd *Ricos-homes*, the Titles of *Dukes*, *Marquesses*, and *Counts*, which now distinguish the Nobility from the Gentry, being unknown in those days in *Spain*; these *Ricos-homes* were questionless the same with the modern *Grandees* of *Spain*, for they stood cover'd before the King, made up part of the States, and had their *active* and *passive* Voice: The *Titulado's* seem to come pretty near the *Ricos-homes*, but that their Privileges are not so large, and most of these Honours they possess having since been bestow'd on the *Grandees* of *Spain*. These *Titulado's* are allow'd a Canopy of State in their Apartments, in *Madrid* a Coach with four Horses, with long Traces of Silk that fasten the foremost to the hindermost; at the Bull-feasts they have Balconies allotted 'em, where their Wives (at the King's or Town's charge that makes the Feast) are presented with Sweetmeats, Gloves, Ribbons, Fans, Silk Stockings, &c. and when the King creates a *Titulado* Marquess of *Castile*, *Arragon* or *Granada*, he has his Seat among the States of the Kingdom.

The *Titulado's*.

The *Grandees* are of three different ranks in *Spain*, distinguish'd by the manner in which the King speaks to them in creating them; those whom he orders only to be cover'd, without saying any thing else, are only for Life, the Dignity not descending to their Families: The second, upon whom the King bestows this Dignity with a certain Title of *Duke* or *Marquess*, and tells him, *Duke* or *Marquess of* such a place, *cover your self for you and for yours*, transfer the same to their eldest Son, and for want of Sons, to their Daughter or Heir, the Grandeur being annex'd to the Estate: The last never cover themselves till after they have spoken to the King, and to these he says, *They are Grandees for Life, or in their Race.* Some others there are, whom the King makes to be cover'd before they speak to him, by saying only *Cubridos*, and they speak and hear the King speak always cover'd; others are uncover'd till they have spoke to him and he has answer'd them, and the last only cover themselves when they are withdrawn pretty near the Wall or Door; but in publick Offices, and at Chapel, they are all cover'd indifferently, and sit down before him; and if he writes to them, he gives them the Title of *Excellency*. The Queen receives their Wives standing, and they have Cushions laid to sit upon.

The *Grandees* are of three ranks.

Having a long Days-journey before us, we set out early in the morning towards *Aranda de Duero*; the morning was misty and the day rainy, and for our comfort we were no sooner arriv'd at the Inn, but the Host told us, that there was no Bread to be had; asking the reason, we were told, that the *Alcaid Major* (who is both Governour and Judge) of the Town had order'd all the Bread and Meal to be laid up in a House, in order to make an equal distribution of it, in proportion to the number of Families, because the River *Duero* (which surrounds the Town) as well as the *Leon*, *Sucgra*, *Burgos*, *Tormes* and *Salamanca*, (which fall into the former) being all frozen, the Mills could not grind, so that this Precaution was taken to prevent a Famine: However, upon sending a Servant to the *Alcaid*, we had as much Bread given us as we wanted, and something to spare for our Host, who wanted it much.

The *Alcaid's* Son, who was a true *Guap* or *Spark*, would needs give me a Visit; his Hair was parted on the Crown of his Head, ty'd behind with a blue Ribbon of four inches broad, hanging down two full yards long; his Breeches were of black Velvet, button'd close with five or six Buttons down each Knee; his Vest reach'd scarce to his Pockets, and his Doublet was scallop'd, with Hanging-sleeves of four Fingers breadth of white Sattin embroider'd; his Cloak was of black Bays, wrapt (as all the Gallants do in *Spain*) about his Arm, with a light Buckler in his Hand, having a Steel Point in the middle; his Sword was near the length of a moderate Half-pike, and the Guard so large, that the Iron thereof would have furnish'd materials for a Back and Breast-plate; the Scabbards of these Swords have a Spring, which opens them on the side with the least touch, no Man, except a Gyant, being able to draw them otherwise, by reason of their excessive length; his Poignard was fastned to his Belt on his Back, and his Collar was so strait, that it was impossible for him to move his Head; he wore something about his Neck, which I can call neither Ruff, Band nor Cravat; and his Hat was of a very large size, the Hat-band being bigger than those we wear in our Mourning; his Shoes were of Glove-leather, slash'd all over, (tho' the Weather was very cold) without Heels, and so well clos'd as if they had been pasted to his Feet. This modern Piece of Antiquity, all perfum'd as he was, entred the Room in an antick posture, making his Reverence after the *Spanish* mode, his Legs cross one another, and stopping low, as Women do at their first Salutes: He was very brisk, and did not neglect to let us know, that he never miss'd venturing his Person at the famous Bull-feasts. The best was, his Visit was but short, and he no sooner withdrew but to Bed we went.

The Habit of a Spanish Gallant.

We were scarce well asleep e're the ringing of Bells, a confus'd Noise, and most terrible Outcry, disturb'd our Repose; before we could know the true reason, we saw Don *Fernand* and Don *Frederick de Cordonna* bursting open our Chamber-door, and taking me out of the Bed, (with only my Gown wrapt about me) carried me and my Daughter to the top of the House: So soon as I was able to ask what was the matter, I was told, that a sudden Thaw in the Mountains had so swell'd the Torrents about the Town, that it was laid quite under Water, which immediately after came into the Chamber from whence they had brought me so lately: The Shrieks and Cries of those that were in danger of being swallow'd up by the Torrents kept us in continual fear all that night, but the approach-

A sudden Inundation.

approaching day afforded us some comfort, for the *Alcaid* and Inhabitants had been so careful in turning off the Waters, that the Town was soon free from the danger. I rest

Aranda de Duero,
Mar. 9. *Yours, &c.*

LETTER VI.

THE Thaw made the Air somewhat warmer, but the Roads scarce passable; and we did not without great difficulty pass the Mountain *Sarnozierra*, that parts the *Old* and *New Castile*; they call this Pass the *Puerto*, *i. e.* a *Port*, a Name they give not only to Sea-ports, but also to the Passage from one Kingdom into the other.

Puerto, gnid.

Coming to *Buitrago*, we were almost as wet as the day before by the Inundation at *Aranda*; for their Litter being not well clos'd at the bottom, the Mules, as they pass thro' the Water, throw it up with their Feet into the Litter.

Buitrago.

We went to see the famous Castle here, which is not altogether so spacious as that of *Lerma*, but no less handsom, and pleasantly seated; besides that, the Aparuments are both more uniform and more richly furnish'd. Both these Castles belong to Don *Rodrigo de Silva de Mendosa*, Duke *de Pastrana* and *del Infantada*, who deduces his Origin from *Ruy Gomes de Silva*, and was created Duke of *Pastrana* and *Eboly* by K. *Philip* II. His Wife was the Princess of *Eboly*, with whom that King was so passionately in love; she is represented here in a Picture at full length, sitting under a Tent fastned to the Boughs of some Trees, cover'd only with a fine Linen Cloth, which lets one part of her Body be seen; she seems as if she were rising, and if the Picture has not flatter'd her, she was certainly one of the most charming Women in the World; her Eyes are so sprightly, that they appear as alive; her Neck, Arms, Feet and Legs are naked, with her Hair spreading over her Breasts, surrounded with little *Cupids*, who seem to outstrive one another to attend her, one holding her Looking-glass, another her Slippers, and others strewing her with Flowers, whilst some at a greater distance are imploy'd in sharpning their Arrows, filling their Quivers, and managing their Bows; there is a Fawn painted looking on her thro' Boughs, whom she shews to one of the *Cupids* that is leaning at her Knees, with a smile.

In Castle.

A beautiful Picture.

I scarce could satistie my Eyes with so curious and beautiful a Piece, and should have regretted to part with it, had they not shewn her me again in an adjacent Gallery, where she was represented in a very large Piece attending Queen *Elizabeth*, Daughter to King *Henry* II. of *France*, married by King *Philip* II. of *Spain*, instead of giving her to Don *Carlos*, his Son, to whom she was promis'd before: She appear'd making her Entry on Horseback, with such lustre as something obscurated that of the Princess *Eboly*; her Gown was of blue Sattin, and the rest of her Habit the same I describ'd to you when I spoke of the Countess of *Lemos*. The King was represented standing in a kind of a Gallery to see her pass by, clad all in black, with the Collar of the Golden Fleece, his Hair red mix'd with grey, his Countenance pale and old, and his Visage long and wrinkled. Don *Carlos* rid by her side dress'd in white embroider'd with Precious Stones, in a Doublet, and his Hat button'd up on one side and cover'd with white Feathers: He appear'd very fine and handsom, with light yellowish Hair and blue Eyes, which he cast with so moving an Air towards the Queen, that one might easily discover the Secrets of his Heart.

Another curious Piece.

In the same Gallery I see another Piece, *viz.* the said Don *Carlos* dying; he was painted in an Elbow-Chair, leaning on one of his Arms on the Table, with a Pen in his other Hand, as if he were going to write; near him stood a Vessel fill'd with a black Liquor, design'd doubtless for the Poyson: On the other end of the Picture you see the Bath preparing for him where his Veins are to be open'd. The whole is so naturally done, that this Piece is look'd upon as inestimable.

sudden ndation.

We found afterwards, in a Chamber, the Furniture that once belong'd to the Archduchess *Margaret* of *Austria*, Governess of the *Netherlands*, and among the rest a Bed neatly wrought with Flowers, Woods, Animals, and Feathers of divers colours, the Hangings of the Room the same, pretended to have been done by the said Archduchesses own hands.

At Night, whilst the rest of the Company were diverting themselves with playing at Cards, Don *Estevo de Carqaval*, one of the before-mention'd Knights, entertain'd me very pleasantly upon divers Subjects, and our Discourse, among other matters, falling upon the Subject of Commanderies, I desir'd him to give me some account of the Orders of S. *James*, *Calatrava*, and *Alcantara*: He told me, that they are at least five hundred years old; that the Order of *Calatrava* is stiled the *Gallant*, because generally young Cavaliers are receiv'd into it; that of St. *James* is sirnam'd the *Rich* from its vast Revenues; and that of *Alcantara* the *Noble*, because such as are to be receiv'd Knights of that Order must prove themselves nobly descended from four Races, whereas the others require no more than two.

The Order of Knighthood in Spain.

For some time after their first institution, the Knights of these three Military Orders were oblig'd to a *Vow of Chastity* and to fight against the *Moors*, and when at home, liv'd in Community together; but in process of time, when the Great Men of the Kingdom began to be admitted among 'em, they by degrees got liberty to marry, provided they could obtain a Dispensation from the Pope. The chief thing to qualifie one for these Orders is, to have the King's Letters to prove one's Nobility, and that you are descended from a Family that has not intermarried with *Jews* or *Moors*.

By vertue of a Patent granted by Pope *Innocent* VIII, in 1489, to King *Ferdinand* and his Successors the King (under the Title of *Perpetual Administrator*) disposes of all the vacant Places, and the three Great Masterships bring him in an Annual Revenue of 4000 Crowns: When he holds a Chapter as Great Master of any of these Orders, the Knights sit down and are cover'd in his presence. Don *Estevo* assur'd me, that the Order of *Calatrava* had thirty four Commanderies and eight Priories, valued at 120000 Ducats *per annum*; that of *Alcantara* thirty three Commanderships, four *Alcaids*, and as many Priories, yielding about 80000 Ducats yearly; and, that the eighty seven Commanderies belonging to that of St. *James* amounted to the yearly value of 272000 Ducats. In relation to the Order of the *Golden Fleece* he added, That being an Order whose lustre consisted chiefly in Honour, without any Revenues, the same was not much regarded or sought for by private persons.

Revenues.

Concerning the Institution of the *Golden Fleece* they have this Tradition in *Spain*; That a certain Peasant, at the time when *Spain* groan'd under the *Moorish* Yoke, praying very devoutly to God to deliver his Nation from the Oppression of these *Barbarians*, an Angel came from Heaven, and giving him a *Fleece of Gold*, arm'd him by this Token to gather some Troops to fight against the *Infidels*; and the Success proving answerable to it, *Philip the Good*, Duke of *Burgundy*, instituted this Order of the *Golden Fleece* in honour of God, of the *Virgin*, and S. *Andrew*, in 1429, on the Day of his Marriage with *Isabella Infanta* of *Portugal*.

The Order of the Golden Fleece.

While we were thus busied in talking, seeing a Coach with a good Equipage stop not far off, we found upon enquiry that the Archbishop of *Burgos* was arriv'd. As he was a very obliging person, so he no sooner understood that a *French* Lady lodg'd hard by, but he came to pay me a Visit; he was a very civil graceful person, and in his Carriage adher'd strictly to the Gravity becoming his Character and the *Spanish* Nation. He wore over his Clothes (they being of purple Velvet) a long Cassock with Sleeves ruffled up to his very Ears, and a pair of large Spectacles on his Nose. After the first Compliments, having told us the Expectation the Court was in of seeing an happy issue of the Negotiation of the Marquess *de los Balbacos*, concerning a Marriage between their King and *Mademoiselle*, he began to turn the Discourse upon the Greatness of the King of *Spain*, the vast extent of his Territories, and above all the rest, concerning the vast number of Dignities and Offices in his disposal, to gratifie his Subjects. I being very desirous to hear the Particulars of these things, he soon granted my Request, by pulling out an Abstract of them, and delivering it to me.

The Archbishop of Burgos.

Viceroyalties.

Great Offices in the K. of Spain's disposal.

Naples, *Sicily*, *Arragon*, *Valentia*, *Navarre*, *Sardinia*, *Catalonia*, and *Peru* in *Spain*.

Governments.

Of *Flanders*, *Milan*, *Gallicia*, *Biscay*, the Isles of *Majorca* and *Minorca*; in the *West-Indies*, of *Madera*, *Cape Verd*, *Mina*, S. *Thomas*, *Angola*, *Brasil*, and the *Algerves*; in *Africk*, of *Ceuta* and *Maragan*; in the *East-Indies*, the *Philipin Isles*.

Archbishopricks and Bishopricks.

The Archbishop of *Toledo* is Primate of *Spain*, Great Chancellor of *Castile*, and chief Councellor of State; his Revenue amounts yearly to 350000 Crowns, and that of his Clergy to 400000. However, the Primacy of all *Spain* is disputed with him by the Archbishop of *Braga* in *Portugal*, (who being also a Temporal Lord of that City, wears a Sword on his side) for during the Invasion of the *Moors*, the Primacy belong'd first to the Archbishop of *Seville*, but upon their further penetrating into the Country, was translated thence to *Toledo*, and for the same reason afterwards to *Braga*; but after the *Spaniards* had regain'd *Toledo*, the Archbishop challeng'd his Primacy, which was oppos'd and protested against by the Archbishop of *Braga*.

The Archbishoprick of *Seville* is valued at 350000 Ducats *per annum*, and the Chapter at 100000. The Cathedral of *Seville* is one of the finest Structures that can be seen; it has a Tower of Brick near two hundred foot in compass, and a hundred foot high, upon which is built another, so ingeniously contriv'd within, that you may go up to the top of it on Horseback; it is most curiously gilt and painted on the outside.

The Archbishoprick of S. *James de Compostella* has an Annual Revenue of 60000 Ducats, and its Chapter 100000; that of *Granada* 40000 Ducats; that of *Burgos* the same; that of *Saragossa* 50000; that of *Avila* 20000; that of *Valencia* 40000.

As to the Bishopricks, that of *Astorga* amounts to an Annual Revenue of 12000 Ducats; that of *Quenca* above 50000. of *Cordua* 40000, of *Siguenza* as much, of *Segovia* 25000, of *Calabria* and *Salamanca* 20000 each, of *Placentia* 50000, of *Palancia* 25000, of *Jaya* 30000, of *Malaga* 40000, of *Osma* 22000, of *Zamora* 20000, of *Coria* the same, of *Ciudad Rodrigo* 10000, of the *Canary Isles* 12000, of *Lugo* 8000, of *Mordenedo* 10000, of *Oviedo* 20000, of *Leon* 22000, of *Pampelune* 28000, of *Calez* 12000, of *Orensa* 10000, of *Ongueta* the same, of *Almeria* 5000, of *Guadix* 90000, of *Tuy* 4000, of *Badajos* 18000, of *Valladolid* 15000, of *Huesca* 12000, of *Tarazona* 14000, of *Balbastro* 7000, of *Albervain* 6000, of *Tervel* 12000, of *Jaca* 6000.

The Cathedral of *Cerdua*, added the Archbishop, is a most noble Structure, built by *Abderhaman* King over all the *Moors* in *Spain*, in 787, to serve for a Mosch, but turn'd into a Church by the *Christians*, after the Conquest of that City from the *Moors* in 1236: It has no less than twenty four Gates, emboss'd with Steel-work; the Fabrick is well proportion'd, being fifty foot wide and six hundred long, and supported by eight hundred and fifty Pillars, the greatest part of Jasper, the rest of black Marble, each one foot and a half in diameter; and the Roof is most curiously painted.

The Cathedral of *Cerdua*.

After what I have told you (continued he) concerning this Cathedral, you will scarce imagine that the Cathedral of *Leon* exceeds this by far, whence is arisen this common Saying in *Spain*, That *the Church of* S. Leon *is the finest in* Spain, *that of* Toledo *the richest, that of* Seville *the largest, and that of* Salamanca *the strongest*.

The Cathedral of *Malaga* is likewise a very beautiful Church; they say, that the Desk in the Quire has cost no less than 105000 Crowns; the rest is magnificent in proportion to this.

In *Catalonia* are the Archbishopricks of *Tarragona* and *Barcelona*, and the Bishopricks of *Lerida*, *Urgel*, *Gironne*, *Vique*, *Salsona*, *Tortosa*, and *Elm*.

In *Italy*, the Archbishopricks of *Briades*, *Lanciano*, *Matera*, *Otrante*, *Rocli*, *Salermo*, *Trani*, *Taranta*; and the Bishopricks of *Ariano*, *Acerra*, *Aquila Cestan*, and *Castelamare*.

In the Kingdom of *Naples*, the Archbishop of that City, the Bishopricks of *Gaeta*, *Galilopoli*, *Gniovenazzo*, *Mosule*, *Monopoli*, *Puzzuole*, *Potenza*, *Trivento*, *Tarpeia*, and *Digento*.

In *Sicily*, the Archbishopricks of *Palermo* and *Monteral*, the Bishopricks of *Girgento*, *Mazara*, *Messina*, *Pati*, *Cefalo*, *Catania*, *Zarayeta*, *Malta*.

In *Milan*, the Archbishop of that City, and the Bishoprick of *Vigevano*.

In *Majorca*, the Bishop of that Name.

In *Sardinia*, the Archbishopricks of *Cagliari*, *Oristan*, *Sacer*; the Bishopricks of *Alguerales*, *Roza*, and *Amprurias*.

In *Africk*, the Bishopricks of *Tangier* and *Ceuta*.

In the *East-Indies*, the Archbishoprick of *Goa*; the Bishopricks of *Madera*, *Angola*, the *Terecta Isles*, *Cape Verd*, S. *Thomas*, *Cochin*, *Malara*, *Maliopanu*, *Macao*, &c.

From all these Archbishopricks and Bishopricks (some of which have been of late years subalienated from *Spain* but those only a few) they pay nothing to the Pope, neither while the Bishop lives nor when the See is vacant.

In the *Indies*.

In *New Spain* and its Isles, and in *Peru*, the Archbishopricks and Bishopricks are, the Archbishoprick of the City of *Los Reges*, the capital City of *Peru*, and has a yearly Revenue of 30000 Crowns; the Bishoprick of *Arequipa* 16000, that of *Truxillo* 14000, that of S. *Francisco de Quito* 18000, of *Correo* 24000, S. *John de Victory* 8000, *Panama* 6000, *Chili* 5000, of our Lady of *Chili* 40000.

The Archbishopricks of *Bogota* in the Kingdom of *Granada* 14000, of *Popoya* 5000, *Carthagena* 6000, S. *Maria* 18000.

The Archbishoprick of *la Plata* 60000; the Archdeacon 5000; the Master of the Children of the Quire; the Chaunter and Treasurer, 4000 each; six Canons, 3000 each; six other Dignities valued at 1800 Crowns each: Its Suffragans are, the Bishopricks of *Paz*, *Treuman*, *Santa Cruz*, *de la Sierre*, *Paraquay*, *de Buenos Agres*, *del Rio de la Plata*.

The Archbishoprick of St. *James*, in the Province of *Tutuman*, is valued at 600 Crowns; the Bishopricks of S. *Lawrence de la Barranca* 12000, of *Baraguay* 16000, of *la Santa Trinita* 15000.

The Archbishop of *Monico* has 20000 Reals *per annum*; the Bishop of *los Angelos* 50000 Reals; the Bishopricks of *Valladolid*, in the Province of *Mechoacan*, 14000 Crowns, of *Antequera* 7000, of *Guadalaxara* in *New Gallicia* 7000, *Durango* 4000, *Merida* 8000, *Gantiago* the same, *Santiago Leon* 3000, and *Chiopa* 5000.

The Archbishopricks of S. *Domingo* of the *Spanish* Isles 13000 Crowns *per annum*; of S. *John de Porto Rico* 50000 Reals, of the Isles of *Cuba* 8000, of S. *Anne de Coro* as much, of *Camayagua* 3000.

The Archbishoprick of *Manila*, Capital of the *Philipin Isles*, 3000 Crowns, and the Chapter as much, paid 'em by the King: Its three Suffragans are, the Bishop of the Isle of *Cebu*, of *Luzon*, and of *Comerika*.

The Archbishop of *Burgos* being ready to withdraw into his own Room, he begg'd of me to accept of an *Olio* for my Supper, which I readily accepted, considering I was in a place where it was not likely I should meet with better Fare: When it was brought in we were not a little surpriz'd to find it fastned with a Lock, (a thing usual in *Spain*) but the worst was, that the Cook being out of humour, would not give the Key, pretending he had lost it; the Archbishop chid him severely, but the fellow was so impudent as to tell him, *He would not be reprimanded, for* (says he) *I am of the Race of the old Christians, who are as noble, if not more noble than the King*; and persisted so far in his Obstinacy as not to deliver the Key, so that he kept the *Olio* for himself. I am

Superstition concerning Evil Eyes.

The Insolence of a Spanish Servant.

Buitrago, March 13. 1679. *Yours*, &c.

LETTER VII.

THE Weather proving warmer every day, (notwithstanding the Season) was an infallible sign of our approach to *Madrid*; but what seem'd almost astonishing to me, was, that the nearer we came to the capital City of so potent a Kingdom, where so great a Monarch keeps his constant Residence, the worse Inns we met with on the Road; for whereas in our Country we met near the capital Cities with fine Seats, Walks, Gardens, &c. you scarce have sight of a Tree here of three foot high, and meet with nothing but sad Objects of Poverty. I can assure you, that the Chamber from whence I write this Letter (tho' not above ten leagues from *Madrid*) stands even with the Stable, having no other Light than what is furnish'd by a little Lamp fill'd with stinking Oyl, Candles being things scarce known among them.

The Inns near *Madrid* bad.

I took particular notice, that notwithstanding this general Indigency, the *Spaniards* abate nothing of their natural haughtiness; and it could not but be almost surprizing to me, to see even the Peasants, tho' without either Shoes or Stockings, come into my Room with a grave pace, and to be as inquisitive after Foreigners and Politicks, and to reason up what they heard, as if they had been old Courtiers, a sign that they naturally have a very quick Apprehension and good Understanding.

A Lady of Quality's Nature.

As they are much addicted to Novelties, so even the Townsmens Wives would come to give me a visit; among the

the rest, one came with a very lean Child in her Arms, having above a hundred little Hands (like those of our joynted Babies) hanging about the Neck and round the Body; I asking her the reason of it, she told me, they were good against *Evil Eyes*; I thought she had meant Sore Eyes, but she soon explain'd her self, telling me, that there were certain persons among the *Spaniards* who carried so lively a kind of Poyson in their Eyes, that with looking stedfastly upon any thing, but especially upon Children, they would make it dwindle away to nothing; she added, she had known a Man, who had such an *Evil Eye*, that he was forc'd to wear a Patch upon it, for fear of doing mischief with that Eye, whereas the other had not the least Symptoms of *Malignity*: She added, that when he was in a merry humour among his Friends in the Country, he would single out a certain Fowl, and pulling off the Patch from his Eye, fix it upon it till it turn'd round several times and dropt down dead upon the spot: She told us, that her Child was reduc'd to this miserable condition by such an Eye, and that it was the Custom, when they suspected any person upon that account, to present one of these Hands, or one's own shut, and to say, *Take this Hand*, unto which the suspected person is to answer, *Dios le bendiura*, *God bless you*, which if he refuses to do, he is liable to be question'd by the Inquisition, or you may lawfully beat him till he says the words.

Superstition concerning Evil Eyes.

In the Wife. Indies.

Tho' I did not altogether rely upon the Relation of this Woman, yet I had the curiosity to ask her, whether there were any signs in these *mischievous Eyes*, to distinguish 'em from others; she answer'd, that their Eyes were commonly more fiery, and appear'd more spirituous than those of other People.

She told me several Instances how divers People, on account of being suspected and accus'd of suchlike Enchantments, had been severely handled by the *Inquisition*; and going on upon the rigorous Proceedings of that Court, she related to me a thing done by two *Jews*, the like is scarce to be paralleld among *Christians*: One *Ishmael* a *Jew* being put into a Dungeon by the *Inquisitors*, with his Father, who was a *Rabbin*, the Son made shift to get thro' a hole up to the top of the Tower, and by the help of Ropes got down, not without manifest danger, both he and his Father being condemn'd to be executed in a few days; he no sooner set Foot on the Ground, but recollecting with himself that he had abandon'd his Father, he climb'd up with much more danger than he came down, and descending into the Dungeon, made him escape first, and so got away after him.

Filial Pity of a Son to his Father.

Being now ready to go to *Madrid*, I intend to send my next Letter from thence. I am

S. Augustin, Mar. 25.

Yours, &c.

LETTER VIII.

MY Kinswoman was to meet me at *Alcovendus*, six leagues from *Madrid*, but finding her not there at our arrival, one of the Knights of our Company invited us to a Country-house of one Don *Augustin Pacheco*, his Friend, who had married lately a young beautiful Lady. We were receiv'd there with all manner of Civility; but as the *Spaniards* don't rise till late, I was introduc'd into the Lady's Bedchamber, where I was receiv'd with the same frankness and respect as if we had been known to each other several Years; for it must be own'd of the *Spanish* Persons of Quality, that tho' they will not be forgetful in challenging what is due to themselves, they are as ready to pay all manner of respect, even to the greatest nicety, to others. Her Head was bare, without any Cornet or other sort of Coif, the Hair parted in the middle of the Forehead, ty'd behind with a Ribbon; her Shift was very fine and very wide, almost like a Surplice, the Sleeves large in proportion, button'd at the Wrists with Diamond Buttons, the Neck and Wristbands were flower'd with Silk, and her Ruffles were of white Taffety pink'd instead of Lace; several small Pillows well trim'd with Ribbons and broad Lace lay upon the Bed; the Bedstead was of Brass gilt, and the Head adorn'd with four rows of Balusters of the same Metal.

A Lady of Quality's Attire.

When she was ready to put on her Shoes and Stockings, she order'd the Door to be bolted; I enquir'd the reason, she answer'd, That knowing there were some *Spanish* Gentlemen in the House, she would not for her life let them see her Feet; which could not but make me smile, tho' I must confess they were both very small and handsom.

The first thing she did after rising, was, to have recourse to the *red Pot*, out of which she laid it on very thick with a Pencil, not only on her Cheeks, Chin, under the Nose, above the Eyebrows and edges of the Ears, but also on the inside of her Hands, her Fingers and Shoulders; and this, she said, she practis'd constantly every night and morning, going to and rising out of Bed: She added, That it being so general a Custom in *Spain*, every body was oblig'd to follow it, without which their Complexion would appear sickly in comparison of the rest. At the same time one of her Women perfum'd her with the Smoak of very sweet-scented Pastrils, whilst another took Orange-flower-water in her Mouth, and besprinkled her with it thro' her Teeth, fancying this makes the Water scent the sweeter; tho', for my part, I can't see what pleasure there can be in having an old Hag with rotten Teeth spurt Water into ones Face.

How the *Spanish* Ladies paint.

This Lady being born at *Madrid*, but educated for the most part in *Portugal*, could not sufficiently praise the Advantages of that Kingdom: She told me, That the River *Tagus*, upon which *Lisbon* is seated on an easie Ascent, is capable of receiving the largest Ships; that the Ruins of the old Walls built by the *Moors* are yet standing, and that the Fortress upon the Hill commands the City.

Lisbon.

She told me Miracles of the *Royal Palace* of *Alcantara*, (a Village about an *English* mile from *Lisbon*) of its delightful Situation, Grotto's and Cataracts, and that the Country round about it is the most delightful in the World, by reason of the vast quantities of Limon and Orange-trees that grow thereabouts, and the many bright and sparkling Brooks that water the Grounds among these sweet-scented Woods. There is one thing I took particular notice of, *viz.* that whenever the King of *Portugal* intends to go abroad, Notice is given of it by the sound of Trumpet early the same morning, in those places thro' which His Majesty is to pass, which gives opportunity to the poorer sort, who have no admittance into the Palace, to offer their Petitions.

The Royal Palace of *Alcantara.*

Don *Augustin*, being a Person of a very pleasant humour, coming into the Chamber, told us, He would lay a Wager his Spouse had hit upon *Portugal*, this being always her Field of Actions: She replied, That he need not find fault upon that account, since he was as unwilling to leave *Mexico* (where he had liv'd a considerable time) when he was once settled in that Theme; of which he promis'd to give me an account hereafter.

He took me by the Hand and led me into a Hall pav'd with white Marble, cover'd on the sides with Pictures instead of Tapestries, where we found a Cloth laid upon a Table for the Men, and another for the Ladies upon a Carpet on the Floor. I being not us'd to this Custom, I must confess my Legs aked ready to break my Heart, which being obsery'd by Don *Fernand de Toledo*, they told me, I should absolutely dine with them at their Table; I told them, I was not unwilling to comply, provided the Lady of the House would do the same, which she durst not attempt till her Husband was pleas'd to dispense with the usual Ceremony (for Women to dine with the Men) upon my account: What made me smile was, that this Lady (as she told us) having never sate upon a Chair before, thought her self not half so much at her ease as she was before upon the Carpet. We dined very merrily, and after a most obliging Conversation, took our leave of our generous Benefactor and his Spouse.

How the *Spanish* Ladies sit at Table.

We had scarce travel'd an hour from the House when we espy'd at a little distance two Coaches, drawn by six Mules a-piece, which went on a greater pace than the best Horses commonly do; their manner of harnessing took up a great length; one had six indifferent large Glasses, and was made after the same fashion as ours are, except that it was very low above, and on the inside had a wooden Cornish gilt, big enough for a handsom Room. The Coach being gilt on the outside, we soon perceiv'd it belong'd to some Foreigner; but what surpriz'd me most was, to see the Coachman ride upon one of the fore Mules, tho' at the same time there was a handsom Coach-box: Don *Frederick de Cardonna* told me, that this Custom had been introduc'd ever since the Duke of *Olivarez* was betray'd by his Coachman, who had overheard him speaking something of great moment as he was sitting in the Coach-box. Their Traces are generally Silk, and sometimes Hempen Cords, of such a length, that there is at least three Ells distance from one Mule to another. In *Madrid* they use but four Mules, notwithstanding which the Coachman rides upon the foremost.

A *Spanish* Coach drawn by Mules.

Why the Coachman sits not in the Coachbox.

I found my Relation in the first of these Coaches, with three *Spanish* Ladies, the second being fill'd with the Gentlemen and Pages, which was made after a quite different fashion, with Boots like our antiquated Coaches; it had Glasses about twice the bigness of a Hand at the end of the Coach, the top of it was lin'd with Paragon, the Curtains were large and long, drawing round, and fastned with Buttons and Loops, like some Stage-Coaches. I was extreamly pleas'd to see my Relation dress'd half after the *French* and half after the *Spanish* Fashion, and much more at my hearing her speak a kind of mixture of *Italian*, *French*, *Spanish* and *English*: We embrac'd one another very tenderly, and I must confess that I found some of the Ladies very pretty and witty.

In our way to *Madrid* we pass'd over a sandy Plain of four leagues in length, but so full of holes that we fell in sometimes very deep, and consequently could advance but slowly; this lasted till we came to the Village of *Mardes*, within half a league of *Madrid*, the Country all about appearing very barren, so that you scarce get sight of a Tree in half an hour.

Madrid. The City of *Madrid* is seated in the center of *New Castile*, and it is above an Age since the Kings of *Spain* have made it their ordinary Residence, by reason of the *Its Founder.* excellency of the Air and Water: The *Spaniards* deduce the foundation of this City from a certain Prince nam'd *Ogno Bianor*, Son of *Tiberino* King of the *Latines*; they further tell you, that *Madrid* lies in the very heart of *Europe*, because the Village of *Pinto*, about three leagues thence, is call'd in Latin *Punctum*, which, if you will believe them, implies as much as that it is the center of *Europe*. At our first approach to it I took notice, that it had neither Walls nor Ditch, and tho' it has something like Gates, they are all broken, and fastned only by a Latch; neither has it any thing else that resembleth a Castle or a defensible place, its chiefest strength seeming to consist in the Mountains that surround it, which in some places have so narrow a passage, that two Men may defend 'em against a good body.

Its Streets and Houses. The Streets are indeed long, streight, and of a good breadth, but so ill pav'd that in some places the Horses fall into holes up to the Belly, and the Water comes into the Boots of the Coaches. There are few or no Houses here with great Gates, and those that have are without Court-yards; for the rest, they are spacious, handsom, and conveniently built, tho' only of Earth and Brick: It is remarkable, that the first Story of any new-built House belongs to the King, so that the Owners being oblig'd to purchase it, this produces a considerable Revenue: Few Houses here have less than ten or twelve Rooms on a floor, and some twenty and more; they divide 'em into Summer and Winter Apartments, and sometimes reserve particular Rooms for the Spring and Autumn.

Their Families and Domesticks. Families of Persons of Quality are generally so numerous, that they are forc'd to hire some neighbouring Houses to lodge 'em in; for this there are two reasons, first, because the Allowance of Servants is very slender, an ordinary Servant being allow'd but two *Reals*, or Sixpence, a day, both for Food and Wages, (tho' Strangers generally pay double that rate) and a Gentleman belonging to a Person of Quality in *Spain* has not above fifteen Crowns a month, out of which he must appear in Velvet in the Winter and Silks in the Summer; to make it hold out, they live upon Pease, Onions, and such-like ordinary Food, which makes 'em as greedy as Dogs if a good piece of Meat comes in their way, so that they will snatch the Victuals out of the Dishes as they are carrying it to the Table, unless special care be taken to prevent them.

It was upon this account that I advis'd my Kinswoman to get such a Silver Stewpan (fastned with a Padlock) as the Archbishop of *Burgos* had, which she did accordingly, so that the Cook can look into it thro' some small holes, but Servants can have nothing of it but the smell, whereas before we commonly had our Soup brought in without Meat.

Their greedy and covetous Temper. It is observable, that the so much celebrated Temperance of the *Spaniards* is owing chiefly to their covetous Temper, but when they eat at the cost of other People, they are as ravenous as Hounds; I can protest to you, that I have seen Persons of the first rank eat at our Table with so much greediness, as if they had not seen any Victuals in several days before; neither were they insensible of it themselves, for they would tell us, that *They lik'd the dressing of our Meat so well, that they could scarce satisfie themselves.*

At every corner of a Street you meet with Cooks Shops, but you must not imagin 'em like those in *London* or *Paris*; their chief Kitchin-Utensils consist in a Kettle set on a Trever, and their Meats in Beans, Garlick, Onions, Leeks, Pease, and such-like, and perhaps a little Broth, in which they steep their Bread, and with this both the Gentlemen and Waitingwomen live very merrily, for they go thither as well as other People, no Victuals being dress'd at home but what is just sufficient for the Master, Mistress and Children.

It must be own'd, that they are really temperate in Wine, the Men as well as the Women; the last never touch any, and the first in so small a quantity, that they scarce exceed a quarter of a Pint in a whole day. The worst Affront you can put upon a *Spaniard* is, to call him a *Drunkard*.

Thus much for the first reason; the second is, That it is a constant Custom among Persons of Quality in *Spain* for the Son to keep all the Father's Servants after his death, and the Daughter or Daughter-in-Law to do the same in respect of the Women-servants, which holds to the fourth Generation: These being lodg'd in adjacent Houses, come every foot, rather to show themselves than to do any Service.

I remember, the first time I came to pay a Visit to the Dutchess of *Ossuna*, (a Lady of high Quality) I was surpriz'd to see several Rooms till'd with Women and Chamber-maids, and could not forbear asking her how many she had; she answer'd, Only three hundred now, but lately she had five hundred. The King's Houshold is numerous in proportion to his Greatness, and I was credibly inform'd, that at *Madrid* only he pays Allowances or Pensions to above ten thousand Persons every day: The Provisions of the King's House are brought in and distributed every day, in proportion to the different Qualities of the Persons; they give 'em tame and wild Fowl, Fish, Chocolate, Fruit, Ice, Charcoal, Wax-candles, Oyl, Bread, and all other Necessaries for Life. Ambassadors, and some *Grandees* of *Spain*, pay no Excise for what Provisions they use, which saves a great deal of expence, considering the Impositions upon those things are very heavy.

'Tis only to Ambassadors and Foreigners that Footmen and Pages are allow'd at their pleasure, for notwithstanding the *Spaniards* keep such numerous Families, they must not take abroad above three persons to attend 'em, and one of these is a Groom, who wears no Sword as the Footmen do, but is only to take care that the Horses don't entangle their Legs in the long Traces; these are generally old fellows, nothing being more common than to see Footmen here to be fifty years of age and upward, *Their Footmen.* but never under thirty; they are generally very clownish and surly look'd, with their Hair cut close to the top of their Heads, there being left only one lock, which is seldom comb'd, and consequently very greasie: They wear long Swords, with Shoulder-belts and Cloaks; their Livery is generally blue or green, the Cloaks sometimes lined with Velvet cut in flowers; the Sleeves are either of Velvet, Sattin or Damask; and notwithstanding all this charge, these Liveries make but a very indifferent show, and the Looks of the Fellows a much worse, for they have upon their Coats or Vests neither Buttons, Loops, Laces, or any other sort of Trimmings, and they wear Bands without Collars, which affords a very awkward sight. The Gentlemen and Pages always follow in another Coach, they are dress'd in black Clothes in all seasons, *viz.* Velvet in the Winter, with Cloth Cloaks (which trail upon the Ground when they are in Mourning.) The Pages wear no Swords, but only Poignards; in Summer their Habit is of black Damask or Taffety, and the Cloaks of a light-black Stuff.

None but Persons of the greatest Quality, and such as *Their Equipage.* have Titles of Nobility, (call'd *Titulado's*) are allow'd four Mules to their Coaches (with long Traces) in *Madrid*; those that transgress are fin'd and abus'd besides in the Streets; for in *Spain* 'tis not Riches only, but Quality, that entitles a Man to many things. The King's Coaches only are drawn by six Mules, being distinguisht chiefly from others by their Coverings of Oyl-cloth both round about and on the top; for the rest, the Carv'd-work is extreamly course, and they have falling Boots, like our old-fashion'd Coaches; we were told, that the King of *Spain* retain'd this old Custom in memory of *Charles* V, who us'd such Coaches, tho' they have otherwise as fine Coaches as any are to be seen in *France*, *Italy* or other parts, but these are seldom us'd; and in this point the *Grandees* follow exactly the King's footsteps, for tho' they have very fine Coaches, these don't appear abroad above four or five times a Year: Their Houses being without Court-yards, this is the reason they have certain large Yards made on purpose, where Coaches are set up in several Partitions, sometimes two hundred in one Yard. Some of the great Lords begin of late years to use Horses instead of Mules, which looks very handsom, their Horses

Why they use Mules instead of Horses at *Madrid*.

ses being very beautiful Creatures; but, to speak the truth, 'tis a thousand pities that such fine Beasts should be put to the drawing of their Coaches, which almost resemble a little House, and their Streets being so full of holes and ill pav'd, their Feet are spoil'd in a little time; in short, they are very handsom and dear, but scarce big enough for any Coach, but I have seen 'em draw a Calash with extraordinary grace, for what with their nimbleness and the fine carriage of their Heads, they appear like Staggs.

Spanish Horses.

As soon as you are got out of the Town, you are at liberty to put six Horses to your Coach. Their Harnesses are very curious, and they trim their Manes (which hang almost down to the ground) with Ribbons of all sorts of colours, or with Puffs of a Silver Gauze, which makes a glorious show.

Some days ago my Kinswoman and I walking without S. *Bernardine*'s Gate, (a place much frequented in the Winter) we saw Don *Antonio de Toledo*, Son to the Duke of *Alva*, passing very near us in his Coach drawn by six fine *Isabella*-colour'd Horses curiously harnes'd, which made me speak in commendation of them as he pass'd by us; according to the *Spanish* Custom, he told me, they were absolutely at my service; and he prov'd as good as his Word, for at night he sent a Gentleman of his to tell me that the Horses were put into my Stable; we could not forbear laughing, but my Kinswoman told the Gentleman, that I being lately come to *Madrid*, was unacquainted with their Customs, and did not understand that one must not praise any thing that belong'd to so generous a person as his Master, desiring him to take 'em back again, which he refusing to do, we were forc'd to send 'em to his House by our own Servants, but he return'd them immediately, and so we spent several hours in sending backwards and forwards, till by a Letter we were oblig'd to give him our Reasons why we could not accept of so considerable a Present.

A piece of *Spanish* Gallantry.

I am inform'd, that after the King has once made use of a Horse, no body is to ride on him afterwards: As an Instance, they told me a Story of K. *Philip* IV. and the Duke of *Medina de los Torres*, who having bought a most beautiful Horse for 25000 Crowns, would have presented it to the King, who refus'd to accept of it, giving for a reason, That as he should seldom ride it, and no body would make use of it after him, it was pity so fine a Creature should remain useless.

Nothing is more common here than for Persons of good fashion to put their younger Daughters to Ladies of Quality; these Ladies take also great delight in keeping Dwarfs of both Sexes, who are generally very ugly, especially the Females, their Hands being commonly bigger than their Bodies without, their Hair hanging loose about their Ears, and sometimes down to the Ground; they are always richly clad, and as they are often their Mistresses Confidents, so they live very well.

Their Dwarfs.

At a certain hour all the Women of the Family attend the Lady of the House in the Chapel, where they do scarce any thing else but repeat their *Rosary* aloud, Prayer-books being things hardly known among them. The Count *de Charney*, a *Frenchman*, General of the *Spanish* Horse, told me, that one day reading his Prayers out of a Book at Mass, a *Spanish* Woman snatch'd it out of his Hand, and throwing it to the Ground, said, *Make use of your Beads*; these they are so well acquainted with, that every Woman wears 'em at her Girdle, hanging down to the Ground; these they use in the Streets, at Cards, whilst talking, making Love, backbiting, &c.

The *Spanish* Womens Habit.

'Tis not many years ago that the Women of *Spain* wore Fardingals, of so excessive a bigness that they could scarce enter a Door without some trouble, but they are seldom us'd now, except in the presence of the King and Queen; their general Dress now is a lesser Fardingal, made of thick Copper Wire almost round about the Waste, the uppermost has many Ribbons, wherewith they fasten another round of the same shape and make, which is wider, and thus they have five or six more one under another down to the Ground, to bear up their Garments: It is almost impossible to conceive how such little lean Creatures as the *Spanish* Women are should be able to carry such a burthen without a great deal of trouble. Their upper Garment is of a course black Taffety, or of a grey Stuff made of Goats-hair, with a Fardle coming down to the Knees round the upper Garments, which are so long before and on the sides, that they draw upon the Ground,

Their Feet.

which is done chiefly to cover their Feet, things they most affect to hide; and I have heard it said by credible persons, that after a *Spanish* Lady has granted the last Favour to her Lover, she will shew him her Feet, as a Pledge of her Passion to him: It must be confess'd they are exceeding fine and small; their Shoes are generally of black *Spanish* Leather, cut upon colour'd Taffety as strait as a Glove, without Heels, so that they rather slide than walk along, and that very nimbly.

Under this plain Under-garment they have a dozen others (don't think I romance, for in Summer they have seven or eight of Velvet and thick Sattin) of rich Stuffs trimm'd with Gold and Silver Laces or Galoons to the Girdle; under all the rest they have a white Garment, (call'd *Sebengala*) either of fine Bone-lace or Muslin flower'd with Gold, of about four ells wide; some of these cost five or six hundred Crowns. In their Houses they wear neither Fardingals nor Pattins, the last being a kind of Sandal of Silk or Velvet fastned to Plates of Gold, which raise them half a foot from the Ground, and make 'em walk awkwardly. They use not much Whalebone in their Stays, which are very high before, but behind scarce reach up to the middle of the Back, which (considering their leanness and swarthiness) affords but an indifferent sight to Strangers, tho' they would not be fat for any thing in the World. As their Shoulders are naked, so they participate of the red Paint as well as the Cheeks; they have a very good white Paint, but few of 'em have the nice way of using it; however, some of 'em have naturally a good Complexion, and generally their Features are very exact. Want of Breasts is so far from being a Defect among the *Spanish* Women, that they study all possible means to prevent their growth, by binding pieces of Lead upon 'em, as close as we swaddle a Child, which is the reason that [illegible] the least appearance of 'em, except the [illegible] between, caus'd by their excessive leanness.

Their Hands are no less beautiful than their Feet, [illegible], white, and exactly shap'd, and their Sleeves, fastned at the bottom of their Wrists, make 'em appear the less; these Sleeves are commonly Silk of several colours, like those of the *Egyptians*, with broad lac'd Ruffles. People of Quality wear very fine Linen, but the rest little, and often none; for as it is very scarce and dear, so the *Spaniards* will rather go without any than wear it course, or have but one Shirt, which they wash often, and for want of that, frequently dress themselves without any at all: But the best of Linen is very ill wash'd here, for they beat it upon rough Stones, which makes it full of holes, but seldom white.

But to return to the Womens Dress: About their Necks they wear Bone-lace, embroider'd over with red or green Silk, or Gold and Silver. Instead of Girdles, they have a row of Medals and Relicks, and perhaps a Cord of some Order, as of S. *Francis*, the *Carmelites*, &c. this small Cord is commonly of black, white or brown Wool, hanging round the outside of their Stays down before to the very bottom of the Petticoat, having many Knots, and upon each Knot is fastned a Diamond or some other Precious Stone.

Rich Jewels of the *Spanish* Ladies.

Of Jewels the *Spanish* Ladies have greater store, and much richer, than those of *France*, or any other Country that I know of; for they are so far from being contented with one good sett, that they seldom are without eight or ten, some of *Diamonds*, *Rubies*, *Emeraulds*, *Pearl*, *Turkey Stones*, &c. however, these are generally ill set for want of good Lapidaries.

On the top of their Stays the Ladies of *Spain* constantly wear a Breastplate of Diamonds, from whence hangs a Chain of Pearl, or ten or twelve little Knots of Diamonds, fastned at the other end to their sides. Necklaces are not in use among 'em, but Bracelets, Rings and Pendants in abundance; unto the last they hang sometimes other Ornaments, which, together with the weight of the Pendants, draws their Ears to a considerable length, for some are so extravagant as not only to hang on them whole Locks of Diamonds, but also good large Watches, nay, sometimes curious wrought *English* Keys and Bells. Their whole Bodies are cover'd with little Images and *Agnus Dei's*, and their Heads with small Bodkins in the shape of Flies or Butterflies, in their natural colours, distinguish'd by variety of Precious Stones. They wear not any sort of Coif, either night or day, but for the rest dress their Heads after different ways, some with curious Feathers of divers sorts of colours, which is not at all unbecoming.

For an instance of the manner of Conversation of the Ladies of Quality in *Spain*, their rich Furniture and Apparel, I will give you a brief account of the Reception I had at the House of the Princess of *Monteleon*, then lately married to Don *Nicholas Pignatelli*, tho' she was scarce thirteen years of age: You must know, that this young Princess, the Dutchesses of *Terra Nova*, *d'Hijar* and *Monteleon*, live all together in one Palace, which is so splendidly furnish'd, that I never saw any thing beyond it in all my life; we were introduc'd into the upper

The Palace of *Monteleon*.

Apart-

Apartments, hung with Tapestry done with rais'd-work as of Gold: There is one spacious Apartment (something longer than broad) where you see divers Glass Doors, which bring you into lesser Rooms; the first was that where the Dutchess of *Terra Nova* (of about sixty years of age) had her Lodgings, which was but plainly furnish'd, hung with grey, with a Bed of the same; next to her was the Apartment of her Daughter the Dutchess of *Monteleon*, who being a Widow, her Furniture was the same; the next brought you into the Lodgings of the Princess of *Monteleon*, the Bed being of Damask flower'd with Gold, and lin'd with a Silver Brocade trimm'd with Point *d'Espagne*, and the Sheets lac'd with *English* Bone-lace of half an ell deep: Opposite to this were the Lodgings of the Children of the Dutchesses of *Monteleon* and *d'Hijar*, hung all with white Damask; and next to theirs the Apartment of the Dutchess *d'Higar*, hung with crimson flower'd Velvet upon a Gold ground. All these Rooms were separated only by a Wainscot of a certain well-scented Wood; and I was told, that no less than six of their Women lay every night in each of their Chambers, upon Beds brought thither at night.

The Formality of visiting among the *Spanish* Ladies.

The Ladies receiv'd us in a spacious Gallery, the Floor whereof was cover'd with a rich Carpet, and all about the Room were set crimson Cushions of Velvet, much longer than broad; the rest of the Furniture consisted in rich inlaid Cabinets adorn'd with Precious Stones, (not made in *Spain*) between which were Tables of Silver and exceeding large and fine Looking-glasses with Silver and other rich Frames.

At one end of this Gallery was a Cabinet fill'd with divers sorts of Curiosities of *Ambergrise*, *Porcellane*, *Crystal*, *Bezoar-stone*, *Mother of Pearl*, *Coral*, *Filligrain-work* of Gold, and such-like things of great value: Among other Rarities they shew'd me a Fish with a little Tree upon its Skull, which was neither Wood nor Moss.

I was not a little surpriz'd to see above sixty Ladies sitting cross-legg'd on the Floor, (a Custom deriv'd from the *Moors*) and not so much as one Man in the whole Company: There was indeed one great Elbow-Chair of *Spanish* Leather, stitch'd with Silk after a very antique fashion, which (they told me) was for the Prince of *Monteleon*, who comes sometimes after the Ladies are retir'd. I took five or six Cushions and seated my self upon 'em instead of a Chair, knowing my self not able to sit long in their posture.

Their Visits are attended with divers odd Ceremonies, for when you come into the House a she-Dwarf runs up stairs immediately, to give notice of it to the Lady upon one Knee, whereupon the whole Company rising, follow her to the Door, where she receives the Visitors; they don't kiss at meeting, but shake hands with their Gloves off: In Discourse they never make use of any Titles, as *Your Highness* or *Excellency*, nay, not so much as *Madam*, but only *Thou* and *Thee*, adding their Christian Names, as Donna *Maria*, Donna *Theresa*, which (they told me) was done to avoid all occasion of Offence in a Country where they are so overnice in the least Punctilio's: 'Tis upon this score that you never see Ladies of Quality mix'd with those of an inferiour rank, nay, not even with those of the Long Robe. I found one thing very tiresom in these numerous Visits, that is, that as often as a new Visitor comes, every one there present is oblig'd to follow the Lady of the House into the Antichamber, to receive the last comer.

They were all richly dress'd, both in Clothes and Jewels.

Gaming and Cards.

There were two Tables for the Game of *Ombre*; as they play'd very high, so you did not hear 'em say one word relating to the Cards, which were painted after a quite different manner from ours, and so thin, that a cunning Gamester might easily discover the whole Game on the back-sides.

Conversation.

Their Discourse ran most upon News, with a great deal of friendship and kindness, and you would commonly hear them speak rather in praise than discommendation of other Persons, and that very ingeniously, and with a singular vivacity of Spirit and sound Judgment, which makes 'em, tho' they read but little, yet improve the same to the utmost advantage.

Features.

Their Features are for the most part as delicate and nice as their Wit, but their Leanness is not agreeable to such as are not well us'd to it: Their Complexion is generally brown, but smooth, and you seldom see any of 'em mark'd with the Small-pox. Their Hair is black and shining like Jett, and their Eyes very sparkling, which is a great addition to the Symetry of their Faces. I remember I saw, at a certain Lady of Quality's, a little Cup fill'd with the White of an Egg beat up with Sugar-candy; I ask'd one of her Women what they did with it, who answer'd, That her Lady us'd it both to clean her Face and make it shine. As most of 'em have only a little Thread of Hair above the Eyes, so those whose Fancy reaches above common rank are oblig'd to make themselves false Eyebrows: And tho' their Teeth are very even, yet what with the constant use of Sweetmeats, and the neglect of having 'em cleans'd by a skilful Artificer, (no such thing being known in *Spain*) they are generally very black. They have one odd Custom, both for Men and Women, to pick their Teeth without any respect to the Company, this being look'd upon here as a kind of Pastime to be allow'd of where-ever you are.

Their Spectacles.

At my first visit of the Princess of *Monteleon*, I could scarce forbear laughing, to see so many young Ladies with very large Spectacles on their Noses: The Marchioness *de la Rosa*, a *Neapolitan* by birth, (one of my intimate Acquaintance) being there at the same time, I ask'd her the reason of it; she told me, That this Custom so generally receiv'd among those of both Sexes in *Spain*, was introduc'd to make 'em look grave and careful: She also shew'd me a Lady sitting not far off, who (she said) had never left off her Spectacles for these many years, except when she went to Bed. As she is a person of Wit, so she told me a diverting Story of a certain young *Jacobite Frier*, who having by the interest of his Friends procur'd a favourable Sentence to those of his Convent in a Cause of great moment, the *Prior* desir'd him to ask what Favour he pleas'd that was in his power to give; whereat the young Frier being greatly rejoyc'd, requested that he might wear Spectacles, which was granted him to his singular satisfaction. They are so nice in this point, added she, that they have certain differences in Spectacles, in proportion to their Qualities, both Men and Women; those us'd by the *Grandees* of *Spain*, call'd *Ocales*, are as broad as a Man's Hand, which they are forc'd to fasten behind their Ears: She assur'd me, that she had seen a Statue of the Marquess of *Astorges*, Viceroy of *Naples*, with such a pair of Spectacles upon his Nose.

A Collation.

Some small time after, a Collation was brought in by eighteen of the Lady's Women, in great Silver Baskets fill'd with Sweetmeats wrapt up in gilt Paper, as *Cherries*, *Apricocks*, &c. and that in such plenty, that you might not only eat, but also carry away what you pleas'd; I saw three or four old Ladies fill their Handkerchiefs with them, and fasten 'em to their Fardingals, without any body's taking the least notice of it. The next Course was *Chocolate*, presented to every one in a *China* Cup placed on a little Dish of Agate set in Gold, and some Sugar in another Vessel of the same: There were divers sorts of *Chocolate*, some with Ice, some hot, and some with Milk and Eggs; they take it with Biskets, or some thin Bread made on purpose as hard as if it were toasted: Some of the Women took four or five Dishes, and I was told they would do so three or four times a day.

They are also much addicted to the eating of the *Medicinal Portuguese Earth*, (of which they have also some small Vessels, cover'd with Filugrain-work) tho' it generally causes Obstructions, and makes their Bellies swell as hard as Stones; it tasted to me like a piece of Stone. You can give them no better Entertainment, than to treat 'em with what they call *Barros*, accounted a soveraign Remedy against Poyson and some other Distempers; they are so fond of this, that their Confessors enjoyn it as a singular Pennance not to eat of it in 24 hours. I have a Cup of it, which holds about a Pint; no Wine will keep in it, but 'tis excellent for Water, which seems to ferment in it, and if it stands a little while, the porosity of the Earth of which the Cup is made drinks it all up; its scent is very strong. They commonly take *Water* before *Chocolate*, which is very pleasant and cool, tho' they make use only of *Snow*, which they think cools much better than Ice.

The Collation being over, in came the Governour of the Pages, a little, old, grey-hair'd Fellow, with a great Gold Chain and a Medal about his Neck, and kneeling down upon one Knee in the middle of the Room, said aloud, *Let the most holy Sacrament be prais'd*, unto which the whole Company answer'd, *For ever*; this being a Custom they constantly observe when Light is brought in. He was follow'd by 24 Pages, two by two, who having likewise kneel'd with one Knee upon the ground, placed each a Branch upon the Tables, and so departed with the same Ceremony, and then the Ladies made a low bow to one another. These Branches are full of Lamps fastned to a Silver Pillar, with a broad Foot; each Lamp has generally eight or twelve Pipes in which the Wick burns, which afford a glorious Light, to encrease which there is a Silver Plate fastned to it, which reflects the Light. The Oyl they burn being not inferiour in any respect to the best Sallad-Oyl, is not in the

Their Lights or Lamps.

the leaſt offenſive, either by its Smoak or its Scent.

The richneſs of the *Spaniſh* Ladies Apparel.

Before I took my leave, the young Princeſs of *Monteleon* would needs have me ſee her Wedding Clothes; I ſtood amaz'd when I ſaw thirty Silver Baskets fill'd with 'em brought in, in ſhape not unlike our Table Baskets, and of ſuch a weight and bigneſs, that no leſs than four Women were able to carry one of 'em. To enter upon the particulars of what I ſaw, would be an endleſs piece of buſineſs, I will only tell you, that whatever can be conceiv'd to be fine and rich, according to the *Spaniſh* Faſhion, was to be ſeen there; and among other things, no leſs than ſix cloſe Coats of Gold and Silver Brocade, made like Veſts, for an Undreſs in the Houſe, with Buttons of Diamonds, Emeraulds, and ſuch-like, ſix dozen in each Veſt. The Linen, Lace, and Jewels were proportionable to the reſt, but the laſt were very ill ſet. I am

Madrid, Mar. 29.
1679.

Yours, &c.

LETTER IX.

HAving in my preceding Letter given an account of their Houſes, we will now come to their Churches, which are exceeding rich and beautiful: They are but rarely frequented by Ladies of Quality, (who have their own Chapels at home) except on certain Days, as thoſe in the *Paſſion Week*, &c. when they receive their Indulgences, and go to Confeſſion.

Their Churches.

Our *Lady's Church* of *Atocha* (*i. e.* of the *Buſh*) is built within a ſpacious Convent of Religious Women ty'd to very auſtere Rules of Life: Here 'tis the *Spaniards* ſing their *Te Deum* after a Victory obtain'd over their Enemies; and 'tis this Church that is much celebrated by reaſon of the *Virgin* with a young *Jeſus*, unto whom they attribute ſingular Miracles. The *Virgin* her ſelf is of a black complexion, generally dreſs'd in a Widows Habit, but upon great Feſtivals richly adorn'd with Jewels and fine Clothes, with a large pair of Beads either in her Hand or hung at her Girdle. The Chapel in which this Image ſtands, being very dark, is enlightned by above a hundred Lamps of Gold and Silver, and in it the King has his Gallery, the forepart whereof is made up with a Lattice Window.

Our Lady of Atocha.

They uſe Haſſocks to kneel upon in their Churches; when a Perſon of Quality comes in, the Sexton ſpreads a Carpet before them, or elſe conducts them to a handſom Cloſet with Windows round about it. The Great Altar is every *Sunday* illuminated with a hundred Wax-Candles, and adorn'd with great ſtore of Church-plate, as are generally the Churches of *Madrid*. They contrive alſo abundance of Walks made of green Turfs ſet with Flowers, and adorn'd with Fountains, from whence the Water ſprings into Baſins of Marble, Porphyry or Silver; theſe are ſurrounded with a great number of Orange-trees as high as a Man, planted in Boxes, among which they turn looſe many Birds, which make a curious harmony. Their Churches are never without Orange or Jeſſamine-trees all the Year round.

The Chapel of our Lord of *Almunada*.

In the Chapel call'd *Our Lord of Almunada* is an Image of the Virgin, brought (if you will believe them) by S. *James* from *Jeruſalem*, and hid in a Tower in the middle of *Madrid*: They tell you, that the City being beſieg'd by the *Moors*, was reduc'd to the laſt extremity for want of Proviſions, till by chance they found this Tower full of Corn, which encourag'd 'em to ſo vigorous a defence, that the *Moors* were at laſt forc'd to quit the Siege. The Image of the Virgin being found in the ſame place afterwards, they erected this Chapel to her memory, and on the Walls thereof painted the whole Hiſtory in *Freſco*. The Lamps, the Altar, and the Rails about it, are of ſolid Silver.

The Church of the *Minim* Brothers.

The *Brothers Minims* have a Church not far thence, in which is the Chapel of our *Lord* of *Soledad*, a place of great reſort for Devotees, or at leaſt of ſuch as pretend to be ſo.

Their Lights or Lamps.

The Church of St. *Iſidore* (the Patron of *Madrid*, tho' but a poor Labourer) exceeds all the reſt in magnificence, the Walls being all cruſted with Marble of various colours, with Pillars and divers Statues of the ſame. The Saint's Tomb in the middle of the Chapel has over it a Crown of Marble embelliſh'd with Flowers in their natural colours, ſupported by four Porphyry Pillars; round the outſide of the *Cupola* ſtand the Images of the twelve Apoſtles.

S. *Iſidore's* Chapel.

S. *Sebaſtian's* Church.

In the Church of St. *Sebaſtian* they ſhew you a Canopy preſented by the Queen Mother, for carrying the holy Sacrament to the Sick; it is of Chagrin, nail'd with Gold Nails, and lin'd with crimſon Velvet, with ſeveral Glaſſes about it. In the middle of the Roof is a kind of little Steeple, with little Golden Bells, and is always carried by four Prieſts, accompanied by a great number of Flambeaux of white Wax, and divers Muſical Inſtruments. When they are to celebrate a Feſtival in ſome Church, a long Pole is ſet up the Evening before, with a kind of a deep Chaffingdiſh, which they fill with wooden Chips, Brimſtone and Oyl, which burning all night long, make a delightful ſhew at a diſtance.

When you ſee the Women at Maſs, you may eaſily obſerve a diſtraction in their Thoughts, which are commonly taken up with ſomething they like better.

Their Muffs are near an Ell long, and being generally of the fineſt Martins and Sables, coſt ſometimes four or five hundred Crowns. You never ſee 'em without a Fan, fanning themſelves both Winter and Summer whilſt they are at Maſs. When the Elevation is made, all then preſent give themſelves ſuch blows upon their Breaſts, that the noiſe thereof almoſt frightens a Stranger.

The *Cavaliers* or Gallants (diſtinguiſh'd from the reſt by a Crape Hatband) range themſelves as ſoon as Maſs is ended round the place where the Holy Water is kept, of which they preſent ſome to the Ladies as they go out, and at the ſame time ſay ſomething very obliging to 'em, which they know how to return by a genteel Reply in a few words. This Cuſtom has of late been aboliſh'd by the Pope's Nuncio, under pain of Excommunication.

Big bellied Women very troubleſom in *Spain*.

The *Spaniſh* Women, tho' of never ſo great Quality, uſe neither Cuſhions, nor have their Train born up, at Church. As big-bellied Women are mightily fondled in *Spain*, ſo they are very troubleſom, eſpecially in the Churches; for they will take the liberty, under pretence of longing, to pull off your Gloves, and examin every thing about you, even to your Pockets: I was told, that a certain young Gentleman, who was highly in love with a certain married Lady perſonating a big-bellied Woman, eaſily obtain'd from her Husband permiſſion to viſit his Wife in private, which you may be ſure was longer than they are uſual otherwiſe in *Spain*. Such is the Prerogative the big-bellied Women challenge in *Spain*, that whenever they give the King notice that they long to ſee him, he will come out into a Balcony which looks into the Palace of the Court, and ſtay there till they are ſatisfied. I was told a pleaſant Story contriv'd by ſome Courtiers, to intimate to the King the Magnificence of the Viceroys of *Naples*; they ſet on a big-bellied Woman, lately come from *Naples*, to deſire to ſee the King, which being eaſily granted, after ſhe had look'd for ſome time ſtedfaſt upon him, ſhe with her Hands lifted up, ſaid, *Pray God you may be one day made Viceroy of* Naples.

Their *Lents*.

I hope you will believe me when I tell you that I am glad *Lent* is over, for tho' I kept only the *Paſſion Week*, it was more tedious to me than if I had kept two *Lents* in another place; for, you muſt know, Butter is a ſcarce Commodity at *Madrid*, being brought thither above thirty leagues off, made up in Hogs Bladders; you may gueſs at the goodneſs of it: Their Oyl indeed amends for this Defect, to ſuch as like it; but the worſt is, they have very few River-Fiſh, and thoſe caught in the Sea, which being brought eighty leagues to *Madrid*, are ſeldom ſweet, and very dear into the bargain: To remedy this, their Shambles are open as well in *Lent* as at other times, and the Pope's Nuncio gives a Licenſe, for a Shilling, to eat Butter and Cheeſe all *Lent*, and the Heads, Feet, and Inwards of Fowl, &c. every *Saturday* throughout the whole Year.

Their Meat.

They have an odd way of buying and ſelling Meat, for the Butcher's Shop being never open, you tell the Maſter thro' a little Window what you would have, and pay the Money beforehand; this done, perhaps he brings you quite another Joynt than what you ask for, if you like it not, he takes it in again and gives you another, if that does not pleaſe you, he returns your Money, and tells you he will give you no other. Their Fleſh is generally lean, dry and black, but nevertheleſs very nouriſhing, which muſt be attributed to the goodneſs of the Climate, for an Egg is counted as nouriſhing here as a Pigeon in moſt other places.

Their Wines.

Their Wine is alſo none of the beſt in *Madrid*, coming not near that excellent taſte thoſe brought from the *Canaries* and *Andaluſia* have in foreign parts, after they are improv'd by their tranſportation beyond the Seas. They

are

are indeed here strong enough, but of a fulsom sweet taste, and always smell and taste of Pitch; so that it seems, in some measure, that Necessity rather than Inclination makes the *Spaniards* so famous for Temperance. The Poor are worse serv'd in this respect, for what is sold in small quantities is kept in an open Basin, and consequently soon turns flat and sowre.

The Passion Week.

No body, of what Rank and Degree soever, fails of going to receive Indulgences in *Passion Week*, especially from *Wednesday* to *Friday*; during these three days you see various things perform'd by *Penitents*, *Hypocrites*, and *Lovers*. It is well known here that many Women go to certain Churches at that time, where, a Year before, they have appointed their Lovers, and (notwithstanding the watchful Eyes of their female Guardians call'd *Duennas*), get thro' the Crowd into an adjacent House hir'd for that purpose, where they pass their time more pleasantly than at their Devotions, and afterwards returning into the Church, chide their *Duennas* for having neglected them at that rate.

Disciplinarians.

Their *Disciplinarians* afford but an unpleasant sight to such as are not used to it: As they are ty'd to certain Rules in this Discipline, so they have Masters on purpose to instruct 'em in every thing belonging to it, as we have our Dancing and Fencing-masters; they have a kind of Robe made of very fine Cloth, reaching down to their Feet, full of small Pleats, which takes up a prodigious quantity of Cloth; upon their Heads they wear a Cap not unlike a Sugarloaf, but three times higher, cover'd with Holland, from whence falls down a piece of Cloth which covers all the Face and fore-part of the Body, with two holes in it to see thro'; on the Back of their Wastcoats, just about the Shoulders, are two large holes, and the Sleeves of the Wastcoat, which hang down, are adorn'd with Ribbons of divers colours; their Gloves and Shoes are white, and to their Whip they tie a Ribbon of the same colour that is worn by their Mistress; to whip themselves with a graceful ayr, they must move only the Wrist and Hand, and give the blows leisurely, that the Blood may not spoil their Clothes; They must walk as if they counted every step, and when they come under their Mistresses Windows, they give themselves most terrible lashes, so that the Lady has the satisfaction of seeing the Blood gush from her Gallant's Back, unto which she encourages him by some obliging Expressions: If they meet a handsom Woman, they whip themselves till the Blood sparkles about her Clothes, which being counted a peculiar piece of Gallantry, the Lady acknowledges as a great Favour. Instead of Whips, they sometimes make use of Sponges stuck with Needles, wherewith they prick their Hides and Shoulders till the Blood follows.

You will perhaps be surpriz'd if I should tell you, that the young Courtiers of the best rank perform this kind of Pageantry in whole troops, and that well arm'd in the night-time: We saw the Marquess *de Villa Hermosa* and the Duke *de Vejar* perform this kind of Hypocritical Devotion; the Duke went from his House about nine of the clock at night, with a hundred Flamboys before him, accompanied by a hundred and sixty Gentlemen, every one with his Page; the Ladies appear'd in their best Apparel in their Balconies cover'd with rich Carpets, and illuminated by a good number of Flamboys; and so the *Knight of Discipline* with his Company walketh thro' the chief Streets in great state, where these Ladies are plain'd. But the best Sport was when we saw the Marquess *de Villa la Hermosa* meet the Duke in the same Street and both striving for the upper hand; 'twas no small pleasure, to see the Footmen lay one another about the Ears with the Flamboys, and the two Devotee Heroes to sing'e one each other to exercise their Whips: When the Whips, Flamboys and Disciplines began to fail, they fell to boxing like Carmen and Porters, till having bang'd one another very handsomly, the Duke *de Vejar* yielded to the Marquess *de Villa Hermosa*, and so the Quarrel ended, and every one walk'd on his way as gravely as if nothing had hapned, tho' several were carried off dostly wounded.

Spanish Disciplinc.

The Duke would have demanded Satisfaction for the Affront, but the King order'd both of 'em not to stir out of their Houses till the Quarrel was compos'd by the King's Authority.

After these flogging Knights are return'd home, they are well wash'd with Sponges dipt in Vinegar and Salt, to wash off the coagulated Blood, and the Night is spent in feasting, where their Friends are sure to magnifie their Bravery and Constancy, and above all, the Happiness of the Lady for whose sake he endur'd all this.

True Penitents.

Besides these, there are also to be seen some true *Penitents*, who are dress'd after the same manner as the *Disciplinarians*, except that they are naked from the Shoulders down to the Waste, swaddled with a kind of narrow Mat, to that degree, that the Flesh appears quite black and blue; they have sometimes six or se. en Swords sticking in their Backs and Arms, which hurt them grievously as they walk along, especially if they happen to stumble, which happens frequently, by reason of the sharpness and unevenness of the Pavement, over which they march barefooted. Some, instead of Swords, carry heavy Crosses, by which they are born down to such a degree, that their Servants (in disguise) are forc'd to refresh them frequently with Wine, Vinegar and other Restoratives, they being often Persons of Quality. These *Penances* us'd to be enjoyn'd for the most part by the Confessors, but the Pope's Nuncio told me, that he had forbid it for the future, so that those we saw did, in all probability, perform 'em meerly out of a Devotion they had impos'd upon themselves.

A Procession on Good Friday.

All the *Passion Week* you see abundance of all sorts of *Penitents*, who all meet in one general Procession on *Good Friday*, compos'd of all the Parishes and Convents. On this day the Ladies appear in their Balconies adorn'd with sumptuous Carpets and Cushions, richly apparel'd; the Procession begins at four a clock in the Afternoon, and lasts till eight, in the presence of an infinite number of Spectators, from the King, great Courtiers, the *Cardinals*, *Ambassadours*, the *Grandees*, to the meanest sort of both Court and City, every one with a Wax Candle in his hand and a numerous train of Servants with Torches and Flamboys: In this Procession they carry Banners and Crosses cover'd with Crape, as are also the Drums, which beat a melancholy Tune like at the Funeral of some great Military Officer; even the four Companies of the King's Guards of *Burgundians*, *Spaniards*, *Germans* and *Archilians* trayl their Arms, cover'd with Mourning, upon the Ground; at the same time certain Machines are represented upon Stages, relating to the Life and Death of our Saviour; I took particular notice of one representing the flight of our Lady into *Egypt*, the Furniture wherewith the Ass was cover'd was all over embroider'd with fine Pearls.

Their Funerals.

The *Spaniards* are not very expensive in their Funerals; during my stay at *Madrid* I saw scarce any one that was magnificent, except that of the Daughter of the Duke of *Medina Celi*; the Coffin was made of a most excellent *Indian* Wood, put into a blue Velvet Bag with Silver Strings, by which the Bag is fastned at both ends of the Coffin, like a Cloak-bag; the Hearse was cover'd with white Velvet, set round with Garlands and Coronets curiously wrought of Flowers: She was carried to *Medina Celi*. Commonly they dress the dead Carcass in the Habit of some Religious Order, and thus they carry 'em barefac'd to their place of burial. The Women are generally buried in the Dress of the *Carmelites*, an Order in great veneration in *Spain*, among which the Princesses of the Blood seek for their Retirement, and the Queens, after they are become Widows, are oblig'd to spend the remainder of their days there, unless the King, before his death, is pleas'd to dispense with this Custom, as King *Philip* IV. did; the same obtains in case of a Divorce.

The Royal Barefoot Carmelites.

The King of *Spain* presuming so much upon his own greatness, that no body after his decease ought to enjoy a Person that has once been his Wife. The King's Mistresses, if once dismiss'd, are oblig'd to submit to the same Fate, from whence they have the Title of *Descalcas Reales*, i. e. the *Royal Barefoot*.

I (was shewn a certain Collection of Letters of S. *Theresa*, by Donna *Beatrix Carillo* her Niece, Decess, written with her own Hand in a large legible Character, wherein appear'd a certain vivacity and sweetness of Thought.

You see very frequently, but especially in *Lent* time, Preachers at the corners of the Streets, who rather sing than preach certain good Morals to the vulgar sort of People, putting them in mind of the great Actions of their Ancestors; they frequently sing to a little Drum or Flute a certain Song made on King *Francis* I. in very bad old *French*, beginning,

When the King left France, to his sorrow,
He left it &c.

The Prison of K. Francis I.

The Palace in which this King was kept a Prisoner is for its Structure and Neatness not inferiour to most of the best Buildings in *Madrid*; the Iron Bars on the Windows being like big gilt. On the Roof of the Chamber where the King lodg'd, you see to this day an *Esmerald*, in memory of the Glory the *Spanish* Nation obtain'd by the Imprisonment of that great Prince in their capital City.

I sold

Their Furniture.

I told you before that their *Tapestry*, *Cabinets*, *Paintings*, *Looking-glasses* and *Plate* are exceeding rich, the reason is obvious, for the Viceroys of *Naples* and the Governours of the *Spanish Netherlands* having sufficient opportunity to provide themselves with the most excellent Tapestry, as the Viceroys of *Sicily* and *Sardinia* have with the best Embroideries and Statues, and those of the *Indies* with Precious Stones and Gold, 'tis no wonder if you see their Palaces furnish'd with the best Spoils both of the *East* and *West*. They change both their Furniture and Apartments according to the Season of the Year; in the Winter their Beds are generally of Velvet, trimm'd with rich Gold Galoons; the worst is, that they are so low, and the Valens so deep, that they touch the very Counterpans: In Summer they make use of no Curtains, or if they do, they are only of colour'd Gauze, to keep off the Gnatts. In Winter they use the Apartments of the upper part of the House, even to the fourth Story: They have many Rooms on a Floor, often twelve or fifteen, but generally six or seven; they are longer than they are broad, and neither the Floors nor Cielings are ever painted or gilt, being made of a plain (but very white) Plaisterwork, which being well scraped and polish'd every Year, looks almost like Marble. The Floor of their Summer Apartments are made of a certain matter, upon which tho' they throw ten or twelve Pails of Water in a morning, it is dry in half an hour after, and leaves a pleasant coolness behind it; they spread Matts made of fine Ruthes over it, and with the same cover the Walls to the height of an Ell; above these are hung Pictures and Looking-glasses; the Cushions of Silver and Gold Brocado's are set upon the Matts, with curious Tables and Cabinets betwixt 'em, and at certain distances Silver Cases or Boxes fill'd with Orange and Jessamin-trees.

Summer and Winter Apartments.

They keep out the Sun by certain Frames made of Straw, which they set in the Windows, and in the Evening take the cool Air in their Gardens, which are for the most part well adorn'd with Grotto's and Fountains, their Water being exceeding good.

Among the fine Palaces of *Madrid*, those of the Duke *d'Ossuna*, of the *Almirant* of *Castile*'s Lady, of the Countess *d'Ognale*, and of the *Constable* of *Castile*, excel the rest.

Few Tradesmen in Madrid.

Madrid has but few Inhabitants of the vulgar sort, in proportion of its bigness, there being not above seven or eight Streets fill'd with Tradesmen, the rest are inhabited by People of Quality: They have also but few Shops, except those where they sell Sweetmeats, Liquors, Ice, and Pastry.

Canopies are much in request here, for as not only the *Dukes* and *Princes* have the privilege of using them in their Houses, but also the *Titulado's*, (who are very numerous in *Spain*) and that there are often thirty Chambers on a Floor, each whereof has a Canopy, what wonder if their number is almost infinite?

My Kinswoman being created by the King Marchioness of *Castile*, I am also serv'd under a Canopy, by Pages upon one Knee; I had much ado at first to accustom my self to this kind of odd Ceremony, but was soon satisfied when they told me, that a Cobler would turn away his Apprentice if he should neglect to give him an old Shoe without bending one Knee.

Their Riches in Plate.

What I told you before concerning the preference they have, in respect of the richness of their Furniture, to other Nations, is in a more transcendent degree appliable to their Plate, of which they have such vast store, as is scarce to be imagin'd, much less express'd; besides that, a Plate weighs near as much here as a moderate Dish in *France*: Tin and Pewter are Metals never to be seen here in People of Quality's Houses, but only Earthen and Silver Vessels; I was credibly inform'd, that they spent two hours a day for six weeks together in weighing the Duke of *Albuquerque*'s Plate, who is lately dead; he had fourteen hundred dozen of Plates, five hundred large Dishes, and several hundred lesser ones, and every thing else proportionable, not to mention forty Silver Ladders for the Cupboard, to which you ascended by little Steps, like as to an Altar.

I should have look'd upon this account as romantick, had not Don *Antonio de Toledo* assur'd me that it was very likely to be true, and that the Duke of *Alva*, his Father, (who was not reputed very rich in Plate) had no less than three hundred dozen of Silver Plates, and eight hundred Dishes: Considering their penurious way of eating, one would wonder what use they have for so many Dishes, except at their Marriage Feasts, which are very magnificent.

Most of these Vessels are brought ready made from the *West-Indies*, and pay no Custom, but are generally very ill shap'd.

Their ill management in private Affairs.

It is almost past belief, how careless Persons of Quality are (in this Country) in the management of their Estates, most of 'em passing their whole Life at *Madrid* without so much as ever looking upon them, but leaving the whole to the Fidelity of a Steward, who is sworn to take care of his own Interest, especially with such as the *Spanish Grandees* are, who think it below themselves to inspect and enquire after their Accounts, whether they be true or not.

This Neglect is accompanied by another no less pernicious Errour, *viz.* that whatever is wanted in the House is brought in every day by the Bakers, Butchers, Pastry-Cooks, and other Trades, who as they give Credit for what they furnish, so they set down what they please, being sure that their Bills will never be strictly examin'd. What is left the Servants carry away every Night to their Lodgings.

This unseasonable Pride highly enriches the Tradesmen, for a Man or Woman of Quality would think it much below their Dignity to haggle for the Price of a piece of Silk, Stuff, or any thing else they buy of a Shopkeeper, or to take Change out of a piece of Gold. This, together with the Credit they are to give, (sometimes for ten Years) makes 'em sell that for ten Pistoles which otherwise might conveniently be bought for five, tho' they seldom lose at the long run, the *Spaniards* most commonly assigning them part of their Land for a certain time, till the Debt be paid.

Their Law-Suits.

In their Law-Suits they use stampt Paper, and they have certain Terms for the distribution of these Suits, which are given at *Madrid*, tho' most of 'em are try'd in other places; for this purpose they put the Deeds and other Papers relating to the Plaintiff in one Bag, and those belonging to the Defendant in another, and the Instructions in a third, and thus they are sent to some distant Parliament, who, after Judgment given, send it back to *Madrid*, where 'tis communicated to the Parties concern'd.

They are so little acquainted with improving their Estates, whether Real or Personal, that whatever ready-money is left by a Father or Mother, after their decease, to Minors; the same is not put out to Use, but kept in a Chest. Thus, in my time, the Duke of *Feas* left six hundred thousand Crowns in ready-money to three Daughters, (the eldest of which was not quite seven years of age) which was lock'd up in three Chests, with the Name of each of the Daughters upon it, and was not touch'd till they came to age.

Their several Councils.

They have divers Councils for the dispatch of publick and other weighty Affairs, as, the *Council of State*, the *Supream Council of War*, the *Royal Council* of *Castile*, the *Alcaids of Court*, the *Council of the holy Inquisition*, the *Council of Orders*, the *Sacred, Supream and Royal Council of Arragon*, the *Royal Council of the Indies*, the *Council of the Chamber of Castile*, the *Council of Italy*, the *Council of the Finances*, the *Council of the Croisado*, the *Council of Flanders*, the *Court* for the *Duty of Horses*, the *Court* for the *Royal Woods*, and the *Court* of the *Millions*. I am

Madrid, *Apr.* 27.
1679.

Yours, &c.

A Relation of
A Voyage to SPAIN,
In ſeveral LETTERS.

PART III.

LETTER X.

The Royal Palace.

THE Palace Royal ſtands on an eaſie aſcent of a Hill, extending even to the Banks of the River *Manzanarez*, having a moſt delicious proſpect into the Country; the Street which leads to it is call'd *Callemayor*, both long and broad, and adorn'd with ſeveral fine Houſes. Juſt before the Entrance of the Palace is an open Place, and no Coaches are allow'd to enter the Court, but muſt ſtop under the great Arch of the Porch, except when Bonfires are made here, or Maſquerades. The Gate is guarded only by a few Halberdeers; it ſtands at the South end of the City; the Front is compos'd of two Pavilions, the reſt being very irregular: Behind it are two large ſquare Courts, the firſt of which has two ſpacious Terras Walks, rais'd upon high Arches, and adorn'd with Baluſters and Statues; I obſerv'd the Womens Statues to have red Paint both on their Cheeks and Shoulders.

You paſs thro' ſeveral Porches to a fine and large Staircaſe, which leads to the Apartments, richly furniſh'd with curious Pictures, excellent Tapeſtry, exquiſite Statues, and other rich Furniture, ſuitable in all reſpects to the Grandeur of ſo potent a Monarch: The worſt is, that ſome Rooms are ſo dark, that no light is to be ſeen in 'em but what comes in at the Doors; and thoſe that have Windows are even but dark at the beſt, by reaſon of their ſmallneſs, which (they ſay) are thus contriv'd to keep out the heat of the Sun, tho' the exceſſive price of Glaſs may alſo be an additional occaſion of this Contrivance, whence 'tis that many good Houſes are ſeen here without any Glaſs Windows, tho' the ſame is not perceiv'd on the outſide by reaſon of the Lattices; and when a *Spaniard* gives you a deſcription of a compleat Houſe, he certainly tells you *it is glaz'd*.

This Palace is adorn'd with many Balconies finely gilt; all the Councils have their meetings here, and when the King has a mind to be preſent, there are divers ſmall Galleries and Entries thro' which he may go to 'em unperceiv'd by any but his Attendance.

I have heard it ſaid in *France*, that the Palace call'd *Madrid*, built by K. *Francis* I. near the Wood of *Bologn*, was built after the Model of this Palace, but I found not the leaſt reſemblance betwixt 'em.

The Gardens are not ſuitable to the Grandeur of a Royal Palace, being neither large nor extraordinary well look'd after; they reach down to the River, are enclos'd with Walls, and owe their chief Beauty to their pleaſant Situation.

The *Buen Retiro*.

The *Royal Houſe* call'd *Buen Retiro* is built alſo on the deſcent of a little Hill near one of the Gates of *Madrid*; it conſiſts of four great Apartments and four large Pavilions, which make a perfect Square, in the middle whereof is a Flowerpot well ſtor'd with Flowers, and a Fountain, whoſe Statue ſprinkles the Flowers and Croſs-walks leading to the Apartments, which are ſtately, adorn'd with excellent Paintings, and the Cielings and Floors beautified with Gold and other lively colours; the worſt is, they are ſomewhat low.

In the great Gallery is repreſented the publick Entry of Queen *Elizabeth* (Mother to the late Queen) on Horſeback, with a Ruff and Fardingal, her Hat trimm'd with Jewels and Feathers; ſhe looks plump, fair and pleaſing, her Eyes appear exceeding fine, and her Looks ſweet and quick.

The Theatre here for Comedies is well contriv'd, very ſpacious, and adorn'd with much carving and gilding: The Boxes (which hold about fifteen perſons a-piece) have all Lattice Windows, and the Cieling is richly gilt; however, they have neither Galleries nor Amphitheatre, every body ſitting upon Benches on the Floor.

Near the Terras-walk ſtands the Statue of K. *Philip* II. on Horſeback, of Braſs, a Piece highly eſteem'd by the Curious. The adjoyning Park is about a league in compaſs, having in divers parts private and handſom Lodges; the Canal is ſupplied with Water from Springs at a conſiderable diſtance, not without great charge; beſides which there is another large Pond ſurrounded with Fountains and Trees, where the King diverts himſelf in the hot Seaſon in little Boats finely painted and gilt. This Park has variety of Grotto's, Cataracts, Ponds, and ſhady Walks, which render it extreamly delightful.

The *Caſa del Campo* is a Royal Country-ſeat, noted more for its delightful ſituation upon the Bank of the before-mention'd River *Manzanarez* than its largeneſs, with pleaſant Groves about it, which afford an agreeable ſhade, by reaſon of the tallneſs and thickneſs of the Trees, a Rarity in this Country: It hath ſeveral curious Springs and Ponds, one of which is ſurrounded with large Oaks. In the Garden ſtands the Statue of K. *Philip* IV, but very ill kept; here they keep *Lyons*, *Bears*, *Tygers*, and other ſuchlike wild Beaſts, which are obſerv'd to live very long in *Spain*, by reaſon of the congruity of their Climate with thoſe from whence theſe Beaſts are brought. The *Caſa del Campo*.

The River *Manzanarez* ſcarce deſerves the Name of a Brook at certain times of the Year, for in the Summer you ſhall ſee the People walk thro' it without almoſt wetting their Feet; whereas in the Winter, after the melting of the Snows on the Hills, it runs with a moſt rapid Current, and overflows the adjacent Country. The Bridge which K. *Philip* II. order'd to be built over it (call'd the *Segovia Bridge*) is very ſtately, and not inferiour to the *Pont Neuf* or *New Bridge* at *Paris*. A certain Stranger ſeeing ſo lofty a Bridge, and no Water under it, told ſome of his Friends, *That they had better ſell the Bridge and buy ſome Water*. The River *Manzanarez*.

The *Florid* is another of the King's Houſes, with very pleaſant Gardens, adorn'd with a good number of *Italian* Statues by the beſt Maſters, and ſtor'd with all ſorts of ſweet-ſcented Flowers, water'd by divers murmuring Brooks. The Walk call'd *Prado Nuovo* is planted with Trees of an extraordinary height, intermix'd with moſt delightful ſpouting Fountains; it does not lie upon a level, but the aſcent is ſo eaſie, that 'tis ſcarce perceivable: Here the Men generally walk on foot at night, and if they ſee any Coaches with Women paſs by, they lean upon the Boots, and throw perhaps Flowers or ſpout Water upon 'em. The *Florid*. The *Prado Nuovo*.

The *Corzuela* is a Country-houſe which hath nothing to brag of but ſome cool Rooms, a moſt delightful Proſpect and curious Situation, where the King frequently refreſhes himſelf after hunting. The *Corzuela*.

But leaving the *Royal Palaces*, we muſt proceed to other matters: On the firſt day of *May* there is a vaſt reſort of People without the Gate of *Toledo*, at a place call'd *El Sotillo*, tho' by a general Cuſtom all Ladies of Quality are not permitted to go abroad or to appear in publick Places or Walks after the firſt Year of their Marriage, and during that time not without their Husbands, who ſit at the upper and the Ladies at the lower end of the Coach, with open Curtains, the Ladies appearing then in their moſt magnificent Apparel; and 'tis pleaſant enough to ſee two perſons ſit looking at each other, like Statues, without ſpeaking one word. However, there are certain Days appointed by Cuſtom at *Madrid*, when every body (except

(except the King and a few Courtiers) walk to take the Air; many Ladies that are not of the first rank come thither with their Curtains drawn, but at night even those of the highest Quality will make hard shift to participate of these Diversions *incognito*.

Their Diversion on *May-day*.

For, this purpose they disguise themselves in white Mantles not unlike the *English* Ridinghoods, (worn otherwise by none but the ordinary sort, or such as are engag'd in an Intrigue) of some Woollen Stuff, embroider'd with Silk, which covers 'em all over down to the Heels, where they divert themselves with talking to the *Cavaliers* or *Gallants*. The Count *de Berka*, the Imperial Envoy at *Madrid*, told me, that one Evening as he was at Supper, three Women in such white Mantles knock'd at the Lattice of his Hall, desiring the Windows might be open'd, that they might see the Envoy; but being by his order conducted into the Hall, they placed themselves in one corner, and said many witty things to him and the Company; they refus'd to sit down or to accept of any of the Sweetmeats offer'd them, and after an hours stay went their way: They were discover'd to be the Dutchesses of *Medina Cœli*, *d'Ossuna*, and *Ducada*, because the Ambassador partly knew 'em, having seen 'em at their own Houses, (a thing permitted to foreign Ambassadors) and having caus'd 'em to be follow'd at a distance by one of his Servants, who saw 'em go into one of their Houses by a private Door.

But, to return to the merry *May-day*, it is no small pleasure to see the People diverting themselves, with their Wives, Children, Friends or Mistrisses, in the Fields near the Banks of the River *Manzanares*, some eating, some drinking, some playing upon Musical Instruments: At that time the King hapned to come there, with Don *John*, the Duke of *Medina Cœli*, the Constable of *Castile*, and the Duke *de Pastrana*, in a Coach drawn by six of the finest py'd Horses in the World, with his Curtains close drawn, so that you could perceive nothing, except thro' the little Glasses on the sides of the Coach.

The *Spaniards* always stop their Coaches and draw their Curtains, but we, according to the *French* mode, left 'em open, and made a low Reverence: The King observing a handsom Spaniel Bitch in my Arm, he sent the Count *de los Arcos*, Captain of the *Spanish* Guards, to ask me for it; I gave it him, and I saw the King play with it, being mightily pleas'd with the little Bells about the Neck, and the Buckles upon the Ears; he had at the same time a Bitch with him call'd *Durana*, and he sent to ask me whether I would exchange mine for her, but finding me not very willing, he sent back my Spaniel, but without her Collar or Buckles, and order'd the Count *de los Arcos* to present me, in his name, with a golden Box full of Pastrils, which he had about him.

I was oblig'd for this Honour to Don *John*, who often us'd to visit my Kinswoman, tho' he had never seen me as yet.

Don John's Visit incognito.

Two days after, being all alone in my Apartment, I saw a Man enter, who by his Face and Air seem'd to promise something above the common rank; he told me, That understanding my Kinswoman was not at home, he was willing to stay for her return. After some indifferent Discourse, he began to talk of Don *John*, adding, That he suppos'd I was often visited by him; I told him, That he paid frequent Visits to my Kinswoman, but, as far as I understood, he never ask'd for me; This was perhaps, replied he smiling, because you were ill; I have not been sick, return'd I, and I should have been glad to embrace the opportunity of seeing a Person whom I have heard so much of, both Good and Evil, and I have told my Kinswoman as much, who excus'd the matter, alledging, that he was so devout as not to care to be disturb'd by the company of Women: I am apt to believe, answer'd he, that his Devotion has not so much got the ascendant over his mind; I dare assure you he ask'd for you, but was told you were ill of a *Fever*: Of a *Fever*, cry'd I, that is strange, who could tell you so?

Now my Kinswoman entring the Room, was not a little surpriz'd to find me with Don *John*, and so was I when I heard his Name, little thinking that it was he to whom I had spoken with so much freedom: He chid her for imposing upon him in such a manner, and my Kinswoman, tho' she clear'd her self well enough, yet could not forgive my having denied to have been ill of a *Fever*. It must be own'd that this Prince is extraordinary handsom, of a noble Air, very well bred, and has a great share of Wit, and a more than ordinary vivacity of Mind.

The King refuses to see the Queen-Mother.

Among other Court-News he told us, That the *Queen-Mother* having lately sent a Letter to the *King* her Son, to see him, he had refus'd her, and for that reason had stopt his Journey to *Aranjuez*, for fear she should come thither from *Toledo* contrary to his Orders. As we knew the *Queen-Mother* to have been banish'd by his Interest, so we would needs give him to understand our Surprize at such a Denial, unto which he replied, That *Soveraigns must square their Inclinations to the Publick Good*, adding, that the *Spaniards* at Court had one general Maxim in all affairs of moment, which was, to consult the Spirit of *Charles* V, and to regulate themselves according to what they might reasonably conclude that great Prince would have done in the same Case that was laid before them.

The first time I had a full sight of the *King* was at *Buen Retiro*, at the acting of an *Opera*, where he had the curiosity to open the Lattice of his Box to look at us, being dress'd in the *French* Mode; he was pleas'd to say that we were very handsom, but that it was pity we were not dress'd after the *Spanish* Fashion.

The King of *Spain*'s Portraicture.

His Complexion was very fair, his Forehead broad, with bright and sweet Eyes, but his Face is long and narrow, with thick *Austrian* Lips, a hook'd Nose, and a sharp and turning-up Chin; he has a very thick Head of Hair, very fair, lank, and put behind his Ears; he is streight, slender, and tall of stature, with small Legs all over of a thickness; his Inclinations are good and mild, sober, liberal and pious, of an equal Temper and no difficult access; he can't boast of that degree of Education as is requisite to form the Mind, yet is he not quite destitute of either. I will hint to you some of his merry Humors, which may give you a more compleat Idea of his Mind.

His merry Humors.

The Lady *Connestable de Colenna* having made so many escapes out of the Monastery at S. *Domingo*, that the Abbess was resolv'd not to admit her any more, she obtain'd (by the Intercession of her Friends) a Mandate from the *King* to receive her once more, but the Nuns persisting in their Refusal, under pretence that they would go in a body and justifie their Conduct to the *King*, he burst out a laughing, saying, *Won't it be pretty sport to see the Nuns in Procession singing* Libera nos Domine de la Connestabile?

Another time, it being a terrible tempestuous Day with Thunder and Rain, the *King* order'd the Marquess of *Astorga* to stay for him upon the Terras Walk; the Marquess replied, That *if His Majesty did not think fit to come in a little time, he would do well to send him a Coffin: Go*, said the King, *I will quickly be with you*. The Marquess did go out, but instead of going to the Terras-walk, went directly home in his Coach. About two hours after the King said to those that were near him, *Prey call in the Old Gentleman, for I shall be mightily pleas'd to see him wet to the Skin*; but being told that he went directly home in his Coach, the King said, *He is both old and cunning*.

Some days ago a handsom Miss being taken near the *Royal Palace* disguis'd in Mans Clothes, where she had set upon her Gallant, whom she believ'd unfaithful; he knowing her by her Voice, would not defend himself, but opening his Bosom, offer'd his Body to her, which she pierc'd thro' with her Weapon; no sooner had she committed the Fact, but she threw her self upon him, tore her Hair and Skin, and made most lamentable Outcries. She was seiz'd by the Officers of Justice just as some Persons of Quality came by, who having related the matter to the King, he would needs see her; being brought before him, he ask'd what could induce her to commit so barbarous a Fact; she replied, *Ah Sir! to be revenge'd of an ungrateful Villain. But*, said the King, *why were you so much afflicted at it? Oh Sir!* answer'd she, *in seeking Revenge I have punish'd my self, and desire Your Majesty to put an end to my Life*. The King turning to those that were near him, said, *I don't believe there is any thing so miserable in the World, as to love, and not be belov'd*: And so discharg'd her, telling her, that she had more Love than Reason, and that she should learn to be wise for the future.

An Opera.

But to return to our *Opera*; That which was acted they call'd *Alcinous*, the Machines were very miserable ones, the Gods coming down on Horseback upon a Beam as long as the whole Theatre; the Sun was represented to shine by the means of a dozen oyl'd Paper Lanthorns with Lamps; the *Daemons*, call'd out of Hell by *Alcinous*, came up by Ladders; *Jack Pudding* intermix'd a thousand Impertinencies; the Singers, 'tis true, had good Voices, but sung too much in the Throat: The Great Room, in which the Boxes are, is very spacious and finely gilt; the Boxes have Lattices reaching from top to bottom; that side where the King has his exceeds the rest in magnificence. Formerly all sorts of People were permitted to come into this place, but of late none but the *Grandees*, *Titulado's*, and *Knights of the Military Orders*, have access here; upon this account it is, I must tell you, that the

Plays which are commonly acted in the City receive their Fate from the fantaſtical Humour of ſome ignorant Fellow or other; there is now a certain Shoemaker in *Madrid*, whoſe Opinion in this reſpect has got ſuch an aſcendant over the People, eſpecially of the younger ſort, that on his Approbation or Diſapprobation depends the good or bad ſucceſs of the Play, which obliges the poor Poets to have recourſe to him, as their Dictator, before the Play is acted, and to ſtrike out or inſert what his Judgment ſhall think fit; for, if he happens to diſlike the Play at the firſt time of its acting, he falls a whiſtling upon a little Whiſtle, which being the Signal for a hundred more to do the ſame, the Play is damn'd for ever.

There is a kind of Amphitheatre in this Playhouſe call'd *la Cazuela*, where all the Women that are not of the beſt Reputation ſit; you ſhall hear Perſons of Quality talk to them, and they to make very pleaſant Repartees, being acquainted with all that paſſes in the Town, and the *Spaniards* are ſo fond of a good Jeſt, that they will even not ſpare Their Majeſties rather than loſe it.

The Women Players are highly careſs'd, and for the moſt part kept by Perſons of the beſt Quality, being extravagantly expenſive: Their Perſons are generally very ugly, but perhaps their Diſcourſe makes amends for it.

It being now the Seaſon wherein the Mules are put to Graſs, every body walks on foot, Perſons of the greateſt Quality ſcarce affording themſelves two Mules at this time to draw 'em.

Their Bull-feaſt.

The King commanding a *Bull-baiting* (or *Bull-feaſt* as they call it) to be on the 22d of this Month, I was very glad to have the opportunity of ſeeing what I had ſo much heard of before, eſpecially when I underſtood that the young Count *Conningſmark*, a *German* under the *Swediſh* Juriſdiction, would *tauriſe*, as they ſtile it, for a Lady of my acquaintance: The firſt thing I did was, to take a view of the *Placa major*, where 'tis perform'd, and where my Kinſwoman (being a *Titulada* of *Caſtile*) had her Balcony, with a Canopy, Carpet, and Cuſhion of State.

How they catch the Bulls.

To give you as compleat an Account of the matter as I can, you muſt know, that after the *King* has fix'd a Day for the Feaſt, certain *Cows* (call'd by them *Mandarines*) are led into the Foreſts and Mountains of *Andaluſia*, where the moſt furious *Bulls* are in vaſt numbers; the *Bulls* no ſooner ſpy the *Cows* but they purſue 'em with a great deal of eagerneſs, and the *Cows* flying, decoy 'em into certain Palliſado'd Rails made on purpoſe along the way, ſometimes for thirty or forty leagues, being follow'd by a good number of Men arm'd with Half-pikes, and mounted on good Herſes, to hinder their return, which is not done ſometimes without Bloodſhed. Certain Meſſengers being appointed to bring timely notice when theſe *Bulls* approach *Madrid*, the Streets thro' which they are to paſs are lin'd alſo with ſtrong Rails, to prevent their doing of miſchief; the *Mandarines* going before, and the *Bulls* following 'em, are thus convey'd to the very baiting-place, where are certain Stables built for this uſe, with Shutters to keep 'em in; ſometimes they bring in thus thirty, forty, or fifty at a time: The Stable hath two Doors, one thro' which the *Mandarines* go in, and another thro' which they eſcape, the *Bulls* being prevented from following 'em by a Trap-door.

The Placa Mayor.

After ſome hours reſt given them, they are one after another let out into the *Placa Mejor* or *Great Place*, where a great many young luſty Peaſants appointed for that purpoſe are, ſome whereof take the *Bull* by the Horns, others by the Tail, and ſo mark him with a hot Iron on the Buttock, and ſlit his Ears, whence they call 'em *Heradores*, which is alſo ſeldom done without ſome ſiniſter Accident or other. Theſe *Bulls* are well fed for a certain time, and the fierceſt of 'em pick'd out for the baiting; for as thoſe *Bulls* that behave themſelves well upon this occaſion are mark'd by a Ribbon tied to his Horns, ſo they diſtinguiſh them again by the difference of the Colours.

The Day for the Feaſt being come, the *Placa Major* is cover'd with Sand, ſurrounded with Bars of ſix foot high, on which are painted the *King's Arms*. This Place, which is longer than 'tis broad, ſeems to me more ſpacious than the *Place Royal* at *Paris*, being enclos'd on all ſides with fair Houſes built upon Pillars and Arches like Towers, five ſtories high, with a row of Balconies to each, into which you enter by Glaſs Doors. The *King's* ſtanderh in the middle of one of the ſides, being remarkable before the reſt by its largeneſs and rich gilding, with a ſtately Canopy over it. Directly oppoſite to his are the Balconies of ſuch of the Ambaſſadors as have their places in the *King's Chapels*, as the *Nuncio*, the *Imperial Ambaſſador*, thoſe of *France*, *Poland*, *Venice*, *Savoy*, &c. the *Proteſtant* Miniſters having no Privilege allow'd 'em upon this account. On the right hand are the Balconies for the ſeveral Councils of *Caſtile*, *Arragon*, the *Inquiſition*, *Italy*, &c. known by their reſpective Arms embroider'd in Gold upon crimſon Velvet: Then come the City Companies, *Judges*, *Grandees* and *Titulado's*, according to their reſpective Degrees, at the *King's* charge, or elſe of the City's that gives the *Bull-feaſt*, who hire theſe Balconies from the People that dwell in theſe Houſes.

The moſt conſiderable part of the Bull feaſt.

All the Company there, of both Sexes, is entertain'd with a Collation of dry'd Sweetmeats, Fruits, Water cool'd with Snow or Ice, Gloves, Ribbons, Fans, Paſtrils, Silk-Stockings, Garters, &c. put up in curious Baskets, inſomuch that ſuch a Feaſt coſts commonly above a hundred thouſand Crowns, the Expence being defray'd out of the Fines and Forfeitures belonging to the *King* or the *City*, which are laid aſide as a Fund to be imploy'd to no other uſe than this, tho' in the greateſt Emergency, for fear of a Commotion of the People, who are ſo bewitch'd to this Sport, that commonly from fifteen to twenty Piſtoles is given for each Balcony, which are all cover'd with Carpets and Canopies

How the Spectators are placed

From the level of the Pavement to the firſt row of Balconies, Scaffolds are made for ſuch of the People as have no Privilege to be admitted into the Balconies, but no Benches are erected under the *King's* Balcony, that place being reſerv'd for his Guards. There are three Gates only leading into this Place, thro' which Perſons of Quality, but eſpecially foreign Miniſters, paſs in their rich Coaches and Equipages, and taking ſeveral turns round it before the King comes, they ſalute the Ladies in their Balconies, who upon this occaſion appear without their Veils, cover'd all over with Jewels, and in their fineſt Apparel, which, together with the Tapeſtry Carpets and Cuſhions embroider'd with rais'd-work of Gold, affords one of the moſt glorious Sights I ever beheld in my life: The King's Balcony had green and Gold Curtains, which he draws when he has no mind to be ſeen.

The King's Appearance and Train.

About four of the Clock the King came, with five or ſix Coaches before him fill'd with his Officers, Gent'emen and Pages of his Chamber; at his arrival all the Coaches withdrew out of the Place: The Coach of Honour, which is always empty, goes immediately before His Majeſty's own, whoſe Coachman and Poſtilion appear bareheaded, a Footman carrying their Hats; the Coach is attended by a Guard on foot: The *Lifeguard* are arm'd with Partiſans, and march at a little diſtance from the Coach, next to the Boots of which walk the King's Pages clad in black, without Swords, which diſtinguiſhes them from other Pages.

The Ladies deſign'd for the Attendance of the future Queen being already nam'd, they appear'd (under the Conduct of the Dutcheſs of *Terra Nova*) in the King's Coaches; near their Boots you might ſee divers Men of Quality, ſome on foot, others mounted on moſt ſtately Horſes: This piece of Gallantry muſt not be attempted without particular Leave from their Miſtreſſes, without which it would be look'd upon as a Preſumption, and a blemiſh to the Reputation of the Lady's Kindred, but when Leave obtain'd, they are permitted to make uſe of all the pleaſant Humors allow'd of upon occaſion of ſo great a Solemnity; tho' at the ſame time the *Ducgno's* or Women of Honour, of which there are always ſeveral in every Coach, and the *Guarda Dama's* that are on Horſeback, are but troubleſom Companions; the firſt will draw the Curtains whenever the Fancy takes 'em, and the laſt will tell the *Cavaliers*, That *the moſt reſpectful Love is always beſt*; ſo that often they are forc'd to make uſe of their Eyes inſtead of their Tongues.

His Guard.

The King being ſeated in his Balcony, the Captain of the Guards with the reſt of the Officers, mounted on fine Horſes cover'd with Knots of Ribbons of divers colours, and embroider'd Houſings, enter the Place at the head of the *Spaniſh*, *German* and *Burgundian* Guards; they are cloath'd in yellow Velvet or Sattin (the King's Livery) trimm'd with tufted crimſon Galoon mix'd with Gold and Silver. The Yeomen of the Guard, or his *Lifeguard*, have ſhort Cloaks of the ſame Livery, but only black Clothes.

The *Spaniards* wear their Breeches tuck'd up after the old way: The *Germans*, call'd by them *Tudeſques*, wear theirs like the *Switzers*: They are placed in ranks near the King's Balcony, whilſt the two Captains and the two Lieutenants march in a rank, each with a Staff of Command in his Hand, and attended by a great many Liveries, round the Place for ſeveral times, giving the neceſſary Orders, and ſaluting the Ladies. Upon this ſolemn occaſion every one affects to wear the Cobar that is moſt eſteem'd by his Miſtreſs.

Every one being ſeated, the Place is water'd with forty or fifty Tuns of Water, brought thither in little Carts, and the Captains and Lieutenants returning to their Poſts

under

under the King's Balcony, make a Fence of their Bodies and Halberts, by keeping close together, which they present to the Bull when he approaches 'em, being oblig'd not to move a foot from their station be the danger never so great; this done, six *Alguazils* or City Doorkeepers enter the Place mounted on excellent Horses harness'd after the *Morisco* fashion, and adorn'd with many little Bells, their business being to fetch the *Knights* that are to combat the Bulls; they have each a white Rod, and their Habit is white also, with Plumes of Feathers on their Heads.

Laws of the Bullfighting.

You must observe that there are certain receiv'd Laws for this *Bullfighting*, which they call *Duelo*, i. e. *a Duel*, because the *Knight* engages the Bull in a single Combat. No body must fight the Bull except a Gentleman born, and known to be such, that he may fight on Horseback: The *Knight* must not draw his Sword (which is short, and three fingers broad) till the Bull has insulted over him; they call it *insulting* when he has broken or forced the Launce out of his Hand, tumbled off his Hat or Cloak, or wounded the Horse or any of the Company, for this being an *Empenno*, as they stile it, or an Affront, that the *Knight* must either revenge or die in the attempt, he is oblig'd to push his Horse directly upon him, and to give him a back stroke upon his Head or Neck: If the Horse is daunted at the Bull, the *Cavalier* must alight and engage him on foot, when the other *Knights* are oblig'd also to alight from their Horses and to follow him, not with an intention to assist him, but only to try whether they can frighten this fierce Animal, by marching up directly against him; and if he, instead of encountring them, retreats to one end of the Place, they have satisfied the Laws of Duelling.

Horses Incens'd for their Combats.

They have an odd way of providing themselves with Horses for these Combats; if any Horse be known in Town to have been us'd at the *Bull-feast*, or to be well train'd up for that Exercise, any one of the *Knights* that are to fight, tho' an absolute Stranger to the Owner, will borrow it; and be sure not to be refus'd; nay, if the Horse happen to be kill'd in the Combat, the Owner will refuse the Money offer'd for the payment of the Horse, the *Spaniards* looking upon it as unbecoming their Generosity to take Money upon such an account, tho' the Horse cost 'em a great deal of Trouble and Money training up for this purpose.

The Knights Combatants Equipages.

The first day I was there I saw the *Alguazils* march to the Gate which is at one end of the List, to introduce the six *Cavaliers* that had engag'd to combat the Bulls; their Horses were exceeding handsom, and most magnificently harness'd; they had, beside those they rid on, each a dozen led Horses, with as many Mules laden with *Garrahons* or *Launces* made of Firr, about five foot long, painted and gilt, and the Iron very bright; the Mules were cover'd with Velvet Cloth, of the same colour as the Combatants, with their Arms upon 'em embroider'd with Gold. I was told that the same magnificence is not observ'd at all the *Bull-feasts*, (especially when given only by the City) but this being appointed in honour of the *King's Marriage*, the *Knights* did strive to outvie each other in their splendid Equipages.

Dress.

They themselves were dress'd in black, embroider'd either with Gold or Silver, or Silk and Bugles; their Plumes of Feathers were white intermix'd with other colours, and a Diamond *Hatband* and *Knot* of the same adorn'd the Hat; their Scarfs were of different colours, which some wore about the Waste, some over the Shoulders like Sword-belts, others about their Arms; these last were very small, being the Present of the Lady for whose sake they expose themselves to this danger. Their black Cloaks were wrapt about 'em, with the ends turn'd behind, so as not to hinder the full use of their Arms: They wore little white *Bukini*, and long gilt Spurs with one sharp point only, after the fashion of the *Moors*, whom they also imitate in riding with their Knees bent, which they call *Cavalgar à la Gineta*.

Attendance.

They were attended each by forty Footmen, some clad in Gold Mohair trimm'd with Galoon or Lace, others in Carnation-colour'd Brocado's striped with Gold or Silver; but all in the Habit of Foreigners, some like *Turks*, others like *Hungarians*, *Moors*, *Indians*, *Savages*, some of these carried abundance of Launces.

Thus, conducted by the six *Alguazils* under the sound of Trumpets, they pass'd over the *Placa Major*, and approaching the King's Balcony, with a profound reverence ask'd Leave of him to engage the Bulls, which being granted with a Wish of *Good Success*, all the Trumpets began to sound, in defiance of the Bulls, under the Acclamations and Shouts of the People and the repeated Huzza's, *Viva vivo los bravos Cavalleros*; this done, they separate, and saluting the Ladies of their acquaintance, send away all their Footmen out of the List, except two for each Knight, who carry the Launces, and always keep close to their Masters. At the same time many young Men (not nobly born) came from far distant places to fight the Bulls on foot.

The Rage and Fury of the Bull.

As soon as one *Cavallero* engages the Bull the rest withdraw at some little distance, for they must not assault the same Bull unless in their own defence, and the first the Bull runs at is to combat him: If the *Cavalier* happen to be wounded, they cry out, *Filemo or Empenno*, i. e. he must revenge the Affront receiv'd from the Bull, and then he attacks the Bull closely, on Horseback or a foot, and gives him a cut with his Sword on the Head, Neck or Throat, and not in any other part, but after the first stroke he may fight and strike him as he will or best can; and when the first blow is given, the rest of the Knights, if on foot, are at liberty to remount their Horses.

After the *King* had given the Signal for the beginning of the *Bull-fighting*, two of the *Alguazils* came under his Balcony, when he deliver'd the Keys of the Stables where the *Bulls* are kept (which are in his own custody) to Don *John*; then the *Trumpets* sounded, and the *Timbrels*, *Drums*, *Fifes*, *Hautboys*, *Flutes* and *Bagpipes* play'd in their several turns, whilst the *Alguazils* went trembling to the Stables, to open the Doors for the *Bulls* to come out. There stood a Man behind the Door with a Ladder, who, as soon as the Bull was come out, shut it, and so immediately sav'd himself by climbing up to the top of the Stable, these Creatures being so cunning as to look immediately behind the Door: As the *Alguazils* are naturally Cowards, and besides this are not allow'd to engage the Bull, they immediately seek their safety in their own Horse's Heels.

No sooner is the Bull come into the *Placa Major* but the young Men on foot throw their Arrows and Darts trimm'd with cut Paper at him, which sticking in his Skin, makes him stir about on all sides, and at the same time forceth the points deeper into his Flesh, the rattling of the Paper also contributing not a little to his rage, he strikes Terror into the Beholders, his Eyes and Nostrils breathing nothing but Fire and Flame, with as swift a motion as the nimblest Horse. The *Cavalier* approaches him with his Launce, which he holds like a Dagger; when the Bull makes up at him he declines his Fury, and at the same time thrusts one of the Launces at him, which the Bull breaks, but his Footman supplies him with another, which he also thrusts into the Flesh of the furious Beast, who turns, leaps, bellows, and overthrows every thing he meets in his way: If he runs at a Man unarm'd, they throw a Hat or Cloak at him, which stops him; sometimes they fall upon the Ground, and so the Bull runs over 'em; they have also a way of deceiving him by Figures made of Pastboards, which gives them leisure to escape. 'Tis further observable, that the Bull never fails to shut his Eyes at that very instant when he is ready to push, which being exactly taken notice of, they may avoid the blow, but sometimes their Skill fails 'em, and so pay dearly for it.

The fierceness of the Bulls.

Boldness of a Black.

I saw a *Black* perform one of the boldest and most dextrous acts of this kind that ever was seen; he advanc'd with only his Dagger to the Beast, whilst in his full rage, and thrust it so furiously into his Scull betwixt the Horns, that he fell dead upon the ground in an instant.

No sooner is a Bull kill'd, but four *Alguazils* fetch in four Mules cover'd with Feathers and little Bells, these they tye with Traces of Silk to the Bull, and so draw him out of the Rails, under the sound of Trumpets and Shouts of the People. There were no less than twenty baited the first day; among these one more furious than any of the rest ran with such fury upon Count *Comingsmark*, (one of the Combatants there) that he not only wounded him in his Leg, but also burst his Horse's Belly; he got off of him immediately, and tho' he had lost a good quantity of Blood, and was forc'd to be supported by one of his Footmen, he made up with an undaunted Courage towards the Bull with his Sword only, wherewith he gave a terrible wound to the Bull on his Head; then turning himself to that side where stood a young Lady for whose sake he had fought, he kiss'd his Sword, and so was carried off almost half dead, being accompanied to the Bars by the other Knights, who immediately after return'd to their stations.

The Bravery of Count Comingsmark.

There was a *Biscayer* who from his Horse leap'd upon the Bull's Back, where he staid for above a quarter of an hour, and let not go his hold till he had broke one of his Horns.

If a Bull defends himself so long till the King is tir'd of him, he calls for a fresh one, (who affords better sport) and the former is baited with a kind of *English* Bull-dogs, being not very big, but low, yet so fierce that they never let

let go their hold, tho' you cut them to pieces: If the Bull proves too hard for the Dogs, and they would be rid of him, they hamſtring him with certain Irons put croſs-wiſe to a long Pole; this they call *Facetar el Toro*.

Bloody Combats. We ſaw another *Cavalier*, after his Hat was faln off, ruſh with his Horſe upon the Bull, whom he gave a wound with his Sword in the Neck, but it being only a ſlight one, the enraged Beaſt roar'd and tore as if he would have trampled all under foot; a young *Toledian* was toſſed by the Bull up into the Air, and cruſh'd ſo miſerably with his Horns, that he died upon the ſpot. There were two other Perſons mortally wounded, and four Horſes kill'd or ſpoil'd, yet, according to the Sentiments of the *Spaniards*, this was not a fine *Bullfighting*, becauſe there was no more Blood ſhed, for they never eſteem it as ſuch unleſs ten Men at leaſt loſe their Lives in the Fray.

'Tis almoſt incredible with what dexterity theſe Combatants manage their Horſes and Arms, and how they ſometimes keep for an hour together not above a foot diſtant from the Beaſt, without being touch'd by him. I ſaw a *Caſtilian* jump as nimbly upon one of theſe Bulls as if he had been an Horſe.

The King gave a Preſent of fifteen Piſtoles to the *Black* we ſpoke of before, and as much to another, who likewiſe had kill'd a Bull.

To conclude, theſe Feaſts are very noble, magnificent, and coſtly, and muſt be confeſs'd to have ſomething in 'em ſo extraordinary as muſt be ſeen to form a true Idea of the whole: On the other hand it can't be denied that they ſavour ſomething of the Barbarity of the *Moors*, from whence they have deriv'd this Cuſtom; and it is doubtleſs upon this ſcore that divers Popes have been inclin'd to aboliſh this dangerous Cuſtom, but that the *Spaniards* made uſe of all their Intereſt in the Court of *Rome*, not to be bereav'd of their darling Sport.

Don *Ferdinand* perceiving me ſeveral times change colour and turn pale, at the ſight of ſome of the *Cavaliers* that were either wounded or ſlain, told me ſmiling, What would you have done if you had been preſent at a

A ſad Accident at a *Bull feaſt*. certain *Bull-feaſt* ſome Years ago? A certain Gentleman of Honour being deſperately in love with a beautiful young Lady, would needs give her ſome Proofs of his Love and Courage at one of theſe *Bull-feaſts*; ſhe diſſwaded him as much as poſſibly ſhe could, but finding him perſiſt in his Reſolution, ſhe diſguiſed her ſelf in the Habit of a Country Youth, and thus going to the *Placa Mejor*, found her Lover engag'd with a furious Bull; ſhe threw a Dart at the Beaſt, which piercing deep into his fleſh, ſo enrag'd him, that leaving the *Cavalier*, he ran directly roaring after the Youth, who being frightned, loſt his Cap in the retreat, and was ſoon diſcover'd to be a Woman, whilſt the Bull with one deſperate puſh threw her upon the ground: The Lover ſeeing his beloved Miſtreſs in this condition, threw himſelf like one enrag'd upon the Bull, and perform'd Wonders; but being more mindful of his Revenge than his Perſon, he receiv'd ſeveral mortal Wounds, which put a period to his Life ſoon after: The two unfortunate Lovers deſir'd to be laid both in one Chamber, and to be married, which being done accordingly, they died not long after, and were both buried together in one Grave.

I have hitherto ſaid nothing of the *Spaniſh* Language, which I am now ſtudying as much as I can, becauſe it appears to me grave, noble, and expreſſive; tho' the Courtiers, I muſt own, (who affect conciſeneſs) ſometimes thruſt in ſuch abſtracted Metaphors and Compariſons as make them hard to be underſtood, except by thoſe who are acquainted with their way of ſpeaking; yet, in the whole, I think *French* is the only Language that may challenge the precedency before the *Spaniſh*.

Land Galleys. You will perhaps be ſurpriz'd when I tell you that I ſaw at *Madrid* (which is eighty leagues from the Sea) ten Galleys lately arriv'd from *Gallicia* and *Mancc*; theſe are certain Chariots four or five times as long as the ordinary ones, with ſix Wheels, three on a ſide, the upper part cover'd with a Canvas, and round like a Galley; each of theſe holds about forty Perſons, drawn by eighteen or twenty Horſes; they eat and drink, ſleep and dreſs Victuals in 'em, and commonly travel ten or twelve in company, for fear of overturning, it requiring no leſs than the aſſiſtance of a hundred perſons to ſet one of 'em upright again: They carry all their Proviſions along with 'em, the barren Mountains (eighty leagues over) affording nothing but a little wild Thyme.

On *Trinity Sunday* I ſaw the Pope's Nuncio Monſ. *Molini* conſecrate the Patriarch of the *Indies*; he wore a black Suit, with a gold-colour'd Silk Belt, ſet in Flowers with little Pearls, with his broad Hat flapping over his Shoulders, an odd ſort of a figure for any Stranger to behold. I am

Madrid, *May* 29.
1679.

Yours, &c.

LETTER XI.

I Now begin to be ſenſible that what I heard before concerning the exceſſive Heat here, falls far ſhort of what I find it, being ready to be ſmother'd with it, till the *Weſtern* Briezes refreſh one a little about midnight. Whilſt you take the Air and keep the Glaſſes open you are choak'd with Duſt, if you ſhut 'em you are ſtifled with Heat, and the Duſt will notwithſtanding this penetrate into the Houſes and Coaches, and ſpoil your Clothes and Furniture.

The Proceſſion on *Corpus Chriſti Day*. I was preſent at the Ceremony on *Corpus Chriſti Day*; this Proceſſion is attended by all the Pariſhes and Monaſteries, thro' the chief Streets hung all with the fineſt Tapeſtry in the World, both of the King's and moſt Perſons of Quality; the Balconies upon this occaſion are without Lattices, adorn'd with Carpets, Cuſhions and Canopies, fill'd with Ladies, who appear upon this day the firſt time in their Summer Apparel, and throw Flowers and ſweet Waters upon thoſe that paſs by in Proceſſion, unto which no Women are admitted: They ſtretch Ticking croſs the Streets, to keep off the heat of the Sun, and wet it often with Water, to make the Air cooler; the Ground is cover'd with Sand and Flowers well water'd to lay the Duſt: The King appear'd there in perſon, preceded by his three Companies of Guards, new cloath'd in a black Luſtring Suit, with a Shoulder-belt of blue Silk edg'd with white, his Sleeves of white Taffety embroider'd with Silk and Bugles, they were long and open before, and his little Hanging-ſleeves did reach to his Waſte, with his Cloak wrapt about his Arm, and his golden Collar of the *Fleece*, ſet with Diamonds, about his Neck; the Buckles of his Shoes and Garters and Hatband were likewiſe of Diamonds, as well as the Knot at the buttoning of his Hat, on which hung a Pearl call'd by them *the Peregrine*, pretended to be the fineſt in *Europe* for its ſhape, largeneſs and colour. The whole Court and the Councils, without any order or precedency, follow'd the King and the Tabernacle (under which was the *Holy Sacrament*) each with a white Wax-candle in his Hand: The Gentlemen of the King's Bedchamber had at their Side a golden Key as large as one of our Cellar Keys; and I obſerv'd the Knights of *Malcha* with their Croſſes of *Holland* embroider'd on their Sleeves.

The Return or holy Tragedies. No ſooner is the *Holy Sacrament* carried back to the Church, but every one goes to Dinner, that they may be ready to go to what they call the *Auto's*, being certain poor Tragedies acted upon *Religious Subjects*, in the Court or Street of each Preſident of a Council. The King and moſt People of Quality commonly appear there, and my Kinſwoman and I among the reſt: It was an odd ſight to ſee a prodigious number of *Flamboys* lighted, whilſt the Sunbeams were ready to ſcorch you to death, and melted the very Wax of which they were made; it was the moſt impertinent piece I ever ſaw of this kind in all my life: They repreſented an Aſſembly of the Knights of the Order of S. *James*, and our Saviour coming in to petition them to be admitted into their Order, which ſome of the Knights are very willing to conſent to; but ſome of the *Seniors* alledging, that our Saviour being born of ignoble Parents, could not be a Member of their Order without infringing the Fundamental Rules of their Inſtitution, it was at laſt carried in the negative, but in lieu thereof pitch'd upon this Expedient, to inſtitute the Order of *Chriſto*, now us'd in *Portugal*.

Theſe *Auto's* continue for a whole month, but thoſe that frequent 'em muſt like 'em better than I do; the only ſatisfaction I had was, that I hapned to meet with Don *Auguſtin Pecchco* and his Lady, (of whom before) at the Preſident *de Hazienda's* Houſe.

We went, after the *Auto's* was over, to take the Air in the *Prado*, and ſtaying ſomewhat later than moſt of the Company, the *Nuncio* and the *Venetian* Ambaſſador order'd their Coaches to come up cloſe to ours: Whilſt we were talking with them, we were ſurpriz'd on a ſudden by a certain kind of Proceſſion and Illumination; there appear'd ſixty Cardinals in their proper Habits and

Caps,

Caps, mounted on Mules, follow'd by the Pope carried upon a Scaffold, cover'd with a Carpet, in a Chair of State under a Canopy, with S. *Peter*'s Keys laid at his Feet upon a Cushion, and a Vessel full of holy Water of Orange-flowers, wherewith he sprinkled all that pass'd by. They march'd on very orderly till they came to the end of the *Prado*, where the Cardinals began to play a thousand odd tricks, some throwing their Caps upon the Trees and catching 'em again upon their Heads, others standing upright upon their Mules Backs and making 'em run full speed, to divert *His Holiness*: They were follow'd by a vast number of People.

The Pope's *Nuncio* assur'd us he did neither know what it meant, nor approve of such an odd sort of Pageantry, and would have sent his Attendants to disperse 'em, but finding upon enquiry that it was the *Bakers Holiday*, or an Anniversary Feast celebrated in honour of their Saint, they pass'd on undisturb'd.

My Kinswoman being sensible how generously I had been entertain'd at Don *Augustin Paccheo*'s House, invited him to Supper, when I took the opportunity to challenge his Promise of giving me an account of the *Spanish West-Indies*, where he had liv'd a considerable time.

That part of *America* which now is under the jurisdiction of *Spain*, being first discover'd by the *Spaniards* in 1492, under the Conduct of *Christopher Columbus* a *Genoese*, in the Reign of *Ferdinand* King of *Castile* and *Arragon*, the said King and his Successors obtain'd a Grant from Pope *Alexander* VI, by which they were establish'd *Perpetual Vicars* of the *Holy See*, so that the Kings of *Spain* have a much larger extent of Power in *America* than in *Europe*, as being both *Temporal* and *Spiritual Lords* of that vast Tract of Ground, where they nominate Bishops, receive Tenths, and exercise all other Ecclesiastical Jurisdictions.

The Council of the *Indies* is one of the most considerable of all the Kingdom, besides which there are two Chambers of the *Indies*, one at *Madrid*, compos'd of the eldest Members of the Council of the *Indies*, whose business 'tis to take cognizance of all matters relating to the Revenues, and send Dispatches by their Secretaries; the other at *Seville* is stiled the *House of Contraction*, compos'd of Councellors both of the Robe and Sword: These last manage matters relating to the Fleet and Galeons, the others take cognizance of every thing relating thereunto, in a judicial way; tho' an Appeal lies from hence to the Council of the *Indies*.

The Chambers of *Madrid* and *Seville*.

In the *House of Contraction* are kept the Registers of all Goods imported or exported to the *Indies*, that the King may not be defrauded in his Customs, which are a Fifth part; but as the Clerks are generally Sharers with the Merchants, so they agree well enough in this point.

'Tis the Council of the *Indies* that recommend to the *King* such persons as they judge qualified for the *Viceroyalties* of *New Spain* and *Peru*, which are never granted for above five Years, as are all the other places of note in the *West-Indies*; as, those of the Governour, Captain General, and President of the Chancery of S. *Domingo* in the *Spanish* Islands; the Government of S. *Christophers* in the *Havanna*, of St. *James*, of *Cuba*, of the City of St. *John*, of *Puerto Rico*, of St. *Austin* in the Province of *Florida*, of the City of *Ascension* in the Isle of S. *Margaret*, of *Cumana* the capital City of the Province of *New Andalusia*; the Viceroyalty of *New Spain*; the President of the *Royal Audience* residing at *Mexico*; the Governour and Captain General of *Merida* the Metropolis of the Province of *Yucatan*; the President and Governour of the *Royal Audience* residing at *Gaudalakara* the Capital of *Galicia*; the Governour and Captain General of *Guadiana* the Capital of *New Biscay*; the Governour, Captain General, and President of the Chancery residing at S. *Jago*, in the Province of *Guatemela*; the Governour of the Province of *Lamusco* in the Streight of *Guatemela*; the Governour and Captain General of the City of *Cornigua*, of the Province of *Honduras*, of the City of S. *James*, of *Lyon* the Capital of the Province of *Nicaragua*, of *Carthagena* the Metropolis of *Costa Riga*; the Governour, Captain General, and President of the Chancery residing at *Marvilla* in the *Philippin Islands*; the Governour and Lieutenants of the Fortresses of *Ternate*; the Governour and Captain General of the Militia of the same Province; the Viceroy, Governour, Captain General, and President of the *Audit* of the City of *Lima*, eight Councellors, four Alcaids, two Accusators, the Protector of the *Indies*, four Reporters; the Governours of *Chucuito*, of *Ica*, of *Xica*, of *Delos Collegos*, of *Guamanga*, of *Santigo de Misastaves de Zara*, of S. *Marco*, of *Arequipo*, of *Truxillo*; the Viceroys of *Castra*, and of *Michael de Puerto de Blata*; the Master of the Camp of the Streight of *Puerto del Callao*; the President of *la Plata*, with his Councellors, Reporters, &c. the Governours of the Provinces of *Tucumanan*, *S. Croix*, *de la Plata*, and *Paraguay*, of the Citadel of *de la Plata de Potosy*, of *Philip* of *Austrich*, and the Gold Mines, of the City of *Paix*, and of the Mines of *Potosy*; the Governour, Captain General, and President of the City of S. *Foy*; the Governour and Captain General of the Province of *Casienaya*, with his Lieutenant and *Mareschal de Camp*; the Governour and Captain General of the Province of S. *Martha*; the Governour of the Citadel of S. *Martha*; the Governours of the Provinces of *Entoia*, *Popayan*, and *Merida*, of *de los Mosos y Colinos*, of the Cities of *Tunja*, *Tena*, *Emalhague*, *Quinos Zamoco*, *Ecanele*, *Jane*, *Santigo de Quingaquil*, *Luja Zamora*, and of the Mines of *Cernura*; the Governour, Captain General, and President of the City of *Panama*; the Governour, Captain General, Lieutenant General, and Captains of *Veragoa*; the Governours of the Castle of S. *Philip* and *Puerto Velo*; the chief Governour of *Puerto Velo*, and the Governour and Captain General of the Province of S. *Martha*, of the River *Hacha*; and the Governour of the great *Caka Marca*; not to mention the many places of the Courts of Judicature, and Benefices, which are very considerable.

Chief Governments of the *Spanish West-Indies*.

In those places where there is no Governour, the President supplies that Place; and when a Viceroy dies, the President of that Viceroyalty has the supream administration of the Government till a new Viceroy is sent by the King of *Spain*, who has the disposal of those great Posts and the most considerable Governments, the rest being the Gift of the Viceroys; these gather commonly in five Years time a Treasure of two millions of Crowns, and the Governours of the most considerable places about five or six hundred thousand Crowns each, and nothing is more common than a Missionary to bring home thirty or forty thousand Crowns for his share.

Riches of the Governours of the *West-Indies*.

The *Spaniards* were not in the wrong when they would not permit any sort of Manufacturies to be made in the *West-Indies*, by which means the Inhabitants must have a constant dependance on 'em, in respect of this as well as several other Commodities, especially Wine and Oyl, the planting of *Vines* and *Olive-trees* being likewise forbidden in their *American* Plantations.

It is upon this score the *Spaniards* send their *Flota* or Merchant-ships laden with all sorts of *European* Commodities to the *West-Indies*, their *Galeons* being properly Men of War, intended for Convoys, tho' they are often (contrary to the *King*'s Prohibition) laden so heavy with Merchandise, that they are not able to defend themselves in case of an attack: The Merchants pay for the dispatch of each of these Vessels three, four, or six thousand Crowns, to the Council of the *Indies*, according to the bigness of the Vessel.

The Flota and Galeons.

The *Galeons* stop at *Puerto Velo*, whence the *Flota* continues their Voyage to *New Spain*. The *Galeons* sail from S. *Lucar* to *Carthagena* in six weeks or two months, and after they have tarried there a little while, come back to *Puerto Velo*, a Seaport Town of *America*, seated in a very unwholsom Air.

Puerto Velo.

About ten leagues distant thence, on the opposite side of the *Isthmus*, lies the City of *Panama*, whither they bring prodigious quantities of Silver Wedges from *Peru*, besides other *Indian* Commodities, which are thence sent by Land to *Puerto Velo*, where is kept the greatest Fair in the World, nothing being more frequent than to hear that in forty or fifty days time there has been sold, of *European* Commodities, to the value of twenty millions of Crowns ready-money.

Panama.

After this Fair, the *Galeons* return to *Carthagena*, where they buy up abundance of *Indian* Commodities, and thence to the *Havanna*, to provide themselves with Necessaries for their Voyage back to *Cadiz*, which is generally perform'd in two months. The *Flota* stops at *Porto Rico* to refresh, and sail in five weeks to *Vera Crux*, there they unlade their Merchandize, which are thence carried by Land eighty leagues to *Mexico*; the *Flota* goes afterwards to the *Havanna*, which must be only in *April* or *September*, by reason of the North Winds. The *Galeons* spend generally nine months in their Voyage to *Peru*, and the *Flota* thirteen or fourteen.

All the Money brought from the *Indies* upon the *King*'s account is transported on board one particular *Galeon*, and deliver'd to one of the Masters of the Mint, who has One *per Cent.* Allowance for the whole, in consideration of which he pays six thousand pounds for every Voyage.

The Merchants pay a certain Duty for all the Silver and Goods register'd and brought from the *Indies*, call'd *Avarié*, towards the fitting out of the *Galeons* and *Flota* for the next Year; besides which, the *General* of the *Galeons* advances the *King* a hundred thousand Crowns, and every Captain of a *Galeon* a certain Sum, in proportion to the bigness of his Vessel, which is repaid them with

very

Duties paid to the King, out of the Mines and their Products

very good Interest in the *Indies*. There goes a *Tetacha* with the *Galeons*, which, after they are come to the Latitude of the Gulph *de las Tegua*, goes to the Isles of *S. Margaret* to fish for Pearl, and afterward meets them again at *Cartagena*: A fifth part of all the Pearl taken belongs to the King; the same Duty is paid for all the Silver, Gold and Emerauld Mines in the *West-Indies*.

Potosi has the best Mines of Silver, which is thence brought to *Porto d'Ariga*, one of the Ports of *Lima*. The Kingdom of *Peru* produces every Year in Gold and Silver about eleven millions of Crowns, and *New Spain* five more, besides Merchandize, such as *Cochenele*, *Tobacco*, *Wool of Vigogne*, *Campeachy-wood* and *Hides*.

The King of *Spain* disposes, in the *Indies* as well as in his own Dominions, of the Bull of the *Crusade*, which is a License to eat Flesh on *Saturdays*, and to have the benefit of *Indulgences*. The Inquisition in the *Indies* does not extend to the idolatrous Natives or Pagans, but only to the *Hereticks* and *Jews*. No Strangers are allow'd to go to the *Spanish West-Indies* without special License, which is seldom granted.

It is impossible for me, added Don *Ferdinand*, to represent to you the beautifulness of the Churches, Palaces,

The City of *Mexico*.

and publick Places of the City of *Mexico*, as also its Riches, Magnificence, and happy Situation, which is such, that they are never sensible of the excessive heat in the Summer, nor of the extremity of cold in the Winter. The circumjacent Country produces two Crops every Year, and Flowers and Fruits in vast plenty, and is very well stock'd with Cattel; their Lakes and Ponds afford vast plenty of Fish, and Forests excellent wild Fowl and Beasts; besides that, the Earth opens in this Country her most interiour Bowels, to furnish them with Gold and Precious Stones.

But to return to our Supper: Don *Augustin*'s Lady was so well pleas'd with some of our *Ragou's* done after the *French* way, that she would needs engage me to give her a Receipt of 'em; and Don *Augustin* himself begg'd to have some of my Larding-pins, which are a great Rarity in *Spain*. As 'twas in the hot season, when the Nights are much preferrable before the Days, we did not part till five in the Morning.

Their taking the Air in the Night-time.

I told you before, that there are certain Days when every body takes the Air upon the Bridges of the River *Menzanares*; I have seen them make a stand in certain places, and to tarry till two or three of the clock in the Morning, and that sometimes to the number of a thousand Coaches; some divert themselves with Musical Instruments, others eat and drink, and others bathe themselves, which is done after a very ugly manner, for they dig a hole in the Gravel, which presently filling it self with Water, they thrust themselves into it. We saw the *Danish* Ambassadour's Lady wash her self thus in this River.

The *Spanish* Nobility.

To prove your self of a noble Extraction in *Spain*, you must shew your Descent to be, both by Father and Mother, from *Viejos Christianos*, as they stile 'em, *i. e.* from *Ancient Christians*, without any mixture of *Jewish* or *Moorish Families*. Nothing's more common in *Spain* than for Children to take upon 'em their Mothers Name, if she be of the better Family, and there are now very few Families of note in *Spain*, whose Name and Nobility has not by a Daughter been transfer'd into another.

As *Biscay* and *Navarre* were secur'd against the Attempts of the *Moors* by the unaccessibleness of their Mountains, so there is scarce a *Waterbearer* there but what boasts himself a Gentleman

There is one thing very particular in *Spain*, *viz.* that all such as can prove themselves *Foundlings*, and to have been bred as such in the Hospital, are noble, bear the Title of *Hidalgoes*, and enjoy all the Privileges belonging to the Nobility. There are certain illustrious Families in *Spain* which hold their Estates by the Title of *Mejorazgo*; if all of the Name are dead, the next Male, tho' a Bastard, inherits the Estate, and for want of such, the eldest Domestick succeeds both in Honour and Estate.

An Instance of *Spanish* Jealousie.

I can't forbear to give you an account of a Misfortune that lately befel a certain Lady of Quality of our acquaintance in *Madrid*, call'd *Donna Clara*: This Lady having a strong Inclination to the Count *de Castrillo*, a Person both witty and handsom, found means to let the same be known to him by a Letter; the Count, ambitious of his Conquest, gave the Lady a suitable Return, and used frequently to see her, in spight of her Brother *Henriques*, (who watch'd her narrowly) in expectation of the return of her Father, to whom they did not question this Match would not be unacceptable: However, matters being not carried on so secretly, but that *Henriques* got some scent of it, he (without the least shew of Indignation) entred her Chamber in the night-time, and strangled her in her sleep, and fearing that *Castrillo* would take a severe Vengeance for the Death of his beloved Mistress, he appear'd no more in publick, under pretence of dedicating his time to his private Devotions. The Count *de Castrillo* having for some time left nothing unattempted to revenge his Quarrel, at last pitch'd upon a way which answer'd his Intention; he took the Disguise of an *Aguador* or *Waterbearer*, (who carry Water on Asses in Pitchers about the City) and leaning upon a Well just against the House where Don *Henriques* dwelt, and where he had committed that barbarous Fact, he discover'd thro' one of the Casements, which was half open, his Enemy looking in a Looking-glass; this cunning *Waterbearer* threw abundance of Cherry-stones into the Room, as it were to mock him, some of which hitting Don *Henriques*'s Face, he was so enrag'd thereat, that he ran out into the Street to chastise the Insolence of this rude Fellow, but was highly surpriz'd when he saw him advance with his naked Sword (which he had hid for that purpose) and discovering himself, saying, *Traytor, defend thy self: Henriques* begg'd Quarter, but in vain, for *Castrillo* kill'd him upon the spot, and so made his escape.

The Revenge of the *Spaniards*.

The frequent Assassinations in this Country on account of some Affront or other, seems almost to authorize these barbarous Facts: If a Man receives a box on the Ear, or a stroke in the Face with a Hat, nay, with a Handkerchief or Glove; if he be call'd a *Dunkard*, or a reflecting word happens to pass upon his Wife's Virtue, these must be wip'd off with no less than the Blood of the Aggressors, and that by Assassination; *For*, say they, *'tis not just that, after a signal Affront receiv'd, the Offended Party should put his Life in an equal balance with the Offender*. They are so tenacious of Revenge, that they will not lay aside an Injury for twenty years after: if they happen to die before they can accomplish it, they will recommend the same upon their Deathbeds, to be executed by their Children. I had it from credible hands, that a certain Person of note dreading the Revenge of his Enemy, went to the *West-Indies*, where he staid twenty years, till hearing that both he and his Son were dead, he return'd into *Spain*, yet not without changing his Name for his greater security, but in vain. for, notwithstanding all his Precaution, the Grandson of his Enemy, tho' not above twelve years of age, found means to hire a Ruffian, who assassinated him soon after his return.

Most of these Assassines are Natives of the City of *Valentia*, a wicked Generation, who will venture at any thing for Money, and are always provided with Fire-Arms that will discharge without noise, and *Stilettoes*; some of these are about the length of our common Dag-gers, but no thicker than a good Needle, of the best Steel, and sharp-edg'd; it wounds mortally, the Wound being never to be dress'd, by reason of its depth and small Orifice: They have another sort somewhat longer, and of the thickness of a little Finger; I have seen some of these struck at one blow thro' a thick wooden Table: I was told, that a certain *Spaniard* of note having agreed with one of these *Bandoleros* (as they call 'em) of *Valentia*, for a certain Sum of Money to dispatch his Enemy, but a Reconciliation being made soon after betwixt 'em, he acquainted the *Bandelero* with it, desiring him not to put his Design in execution, tho' at the same time he allow'd him the Money as a voluntary Gift; but the Assassine replied, That *he scorn'd to have any of his Money without deserving it, to do which he must either kill him or his Enemy*. The Gentleman being willing to preserve his own Life, was forc'd to let him put in execution what he had design'd against the other, unless he would have resolv'd to seize him, a thing of dangerous consequence in *Spain*, where these Ruffians are so numerous and so closely united, that they are sure to revenge the Quarrel of any of their Companions, which makes *Spain* the most doleful Theatre of Tragical Scenes in the Universe.

Their Stilettoes or Daggers.

What is more surprizing than all the rest is, that as well those who leave no Stone unturn'd to put their Revenge in practise, as those who put 'em in execution, should engage themselves in certain Devotions for the success of their Enterprizes, at the very time they are going to give the mortal Wound to an innocent person of their own Religion and Country: I will not apply this indifferently to the whole Nation, there being questionless among 'em some who are endow'd with a more than ordinary greatness of Mind, of which I will give you some undeniable Instances, tho' even those may perhaps be interpreted by many as Follies, rather than true Generosity.

Instances of the *Spanish* Generosity.

The *Constable de Castile*, one of the chiefest Lords of *Spain*, has (as most of the Nobility of *Spain*) by ill Husbandry been reduc'd to a considerable want of Money, he

he being Preſident of the Council of State, Conſtable of *Caſtile*, and Grand *Falconer*, theſe Places would ſufficiently repair that Want, but that his Haughtineſs will not permit him to receive the Money due to him upon that account, alledging, *That a Man of his Quality ought to eſteem himſelf happy in ſerving his Prince, without being hir'd to it by Money, which belong'd to mercenary and ſlaviſh Souls.* The Duke *d'Arcos*, or *d'Aveiro*, pretends a Title to the Crown of *Portugal*, which is the reaſon he never ſtiles that King otherwiſe in his Diſcourſe than Duke of *Braganza*, and loſes a yearly Revenue of 10000 *l.* in *Portugal*, becauſe he will not kiſs that King's Hand; nay, tho' the King of *Portugal* has ſent to him more than once, to ſend only one of his Sons, (which he pleas'd) to whom he would pay not only the Annual Revenue, but alſo all the Arrears (amounting to a vaſt Sum) due ever ſince the Seizure, he never could be prevail'd upon to comply with his Requeſt; his reaſon is, That an Annual Revenue of 10000 *l.* bears not the leaſt compariſon with the acknowledging an Uſurper. Thus the Prince *d'Eſtillano* hath as many Places in his diſpoſal, belonging to the *Houſe of Contraction* at *Seville*, as amount to 80000 Livres *per annum*; but ſuch is his Haughtineſs, that when his Secretary offers to him the ſigning theſe Commiſſions, he will ſeldom do it, telling him, That *they are Trifles not worth his taking notice of*; tho' at the ſame time the King does not think it below his Dignity to diſpoſe of theſe Places and take the Money too.

Few Strangers at Madrid.

Madrid hath fewer Strangers than any other City in the World; the reaſon is manifeſt, for the Jealouſie of the *Spaniards* makes 'em rarely admit any body to lodge in private Houſes, and they have no more than two Inns. Add to this, that the ſcarcity of Hackney Coaches, and the want of Converſation with the Fair Sex, makes this place very diſagreable to Foreigners; tho' the young *Spaniards* begin already, at the age of twelve or thirteen, to maintain their Concubines, (call'd by them *Amancebade*) who, beſide the vaſt charge, commonly give them a Tincture of the *French* Diſeaſe.

The French Diſeaſe very frequent.

This Diſtemper is ſo current here, that very few Perſons of either Sex, (nay, even thoſe of the beſt Quality) are free from it, for the Children bring it along with 'em into the World, or elſe ſuck it in with their Nurſes Milk: One thing is obſervable, that this Diſeaſe is not attended with ſuch dangerous Symptoms in *Spain* as in moſt other places, becauſe their Hair and Teeth are very good; the Women of Quality at Court talk of it with as little concern as they do of a *Fever* or any other common Diſtemper, and ſeldom will be cur'd of it, becauſe they are in continual danger of falling into it again by their Husbands, who (tho' married) ſeldom quit their Concubines.

The Spaniſh Lords ill Husbandry.

Perſons of Quality who return loaden with Riches from the *Weſt-Indies* and other Governments, never lay out their Money in Purchaſes, but live upon it as long as it laſts, profuſely enough; when the Stock is exhauſted, they ſeek to repair their Fortune by a new Poſt or Government, whither they go poor enough, but return rich.

It muſt be confeſs'd, that there are divers illuſtrious Families in *Spain*, deſcended from the Race of the Kings of *Caſtile*, *Navarre*, *Arragon*, and *Portugal*; but 'tis certain on the other hand, that their Education (except ſome few) is not in the leaſt ſuitable to their Grandeur: The Study of *Latin* and *Hiſtory* is ſo foreign to them, that it is a rarity to find an able Perſon here to teach 'em; and even thoſe that take to the *Sword* ſeldom are inſtructed in the *Mathematicks*, *Fencing*, *Riding the Great Horſe*, and ſuchlike Exerciſes.

Their Education.

Add to this, that they are ſo fond of *Madrid*, that (looking upon it as the only Center of Happineſs, or a Terreſtrial Paradiſe) a Father rarely ſends his Son abroad to improve himſelf in foreign Countries, but commonly keeps him at home to paſs his time in Idleneſs, and without ſeeing any thing but their own domeſtick Cuſtoms, which makes them the greateſt admirers of their own Perſon in the World. At the age of ſixteen or ſeventeen the young Lord marries a Wife more a Child than himſelf, ſo that being his own Maſter before he knows the leaſt thing belonging to the Affairs of the World, he follows the general footſteps of confounding his Wife and debauching himſelf.

After all, to give the *Spaniards* their due, ſuch of them as have had the good fortune of a liberal Education, and improving themſelves by Travelling abroad, muſt be own'd to be Perſons of a ſolid Underſtanding and uncommon Vivacity; they both ſpeak and write conciſely, very apt for Politicks, and upon occaſion very temperate, conſtant, and laborious: Beſides that, they are naturally inclin'd to Generoſity, Secreſie, true Friendſhip and Bravery: All which taken together, makes their Manners not ſo odious to me as they appear to ſome People, who have perhaps given them a worſe Character than they deſerve, for want of examining the matter. I reſt

Madrid, June 27.
1679.

Yours, &c.

LETTER XII.

THE News brought by the Marqueſs *de los Balbaces*, That the *French* King had conſented to the Match betwixt *Madamoiſelle* and the King of *Spain*, was receiv'd with extraordinary demonſtrations of Joy at *Madrid*; the King went in Perſon to hear *Te Deum* at the Church of our Lady *d'Atocha*; the Ladies appear'd at the ſame time in the Windows and Balconies, and the Tables were ſpread in every Houſe in the City, tho' moſt of 'em had no other Entertainment than Garlick, Leeks and Onions, and drank Their Majeſties Healths in Water; for, as I told you, they are ſo averſe to Intemperance, eſpecially in ſtrong Liquors, that by the Law a man who has been prov'd but once notoriouſly drunk, is not admitted as a good Witneſs in any Court of Juſtice. The ſame night the Houſes were illuminated with Flamboys of white Wax, much longer and much dearer than thoſe we uſe at *Paris*; ſome Houſes have in the Windows, from top to bottom, and in the Balconies, no leſs than five hundred.

A Maſquerade.

In the Palace was a *Maſquerade*, compos'd of a hundred and fifty Perſons of Quality mounted upon very fine Horſes, cover'd with Silver Gawze and rich embroider'd Houſings; they were clad in black, with colour'd Sleeves, and Plumes in their Hats, which were turn'd up with Diamond Buttons, with rich Scarfs and Jewels, but their black Cloaks and Collars appear'd not very agreeable to the reſt; they rid with ſhort Stirrops, like the *Moors* and *Turks*. They generally meet upon ſuch occaſions at one of the Gates of the City, from whence they march four a-breaſt with a grave pace, and attended by a vaſt number of Footmen richly cloath'd in Gold and Silver, with Flamboys in their Hands, thro' the Streets, that were ſtrew'd with Sand and illuminated with large Chaffing-diſhes ſet upon Poles, by a great number of Flamboys and Lanthorns; thus they proceeded under the ſound of *Trumpets*, *Timbrels*, *Bagpipes* and *Flutes*, to the Court cover'd with Sand, where they took ſeveral Turns, endeavouring to thruſt one another out of the Saddle; Prince *Alexander* of *Parma*, a very bulky perſon, had the miſhap to be lifted thus out of the Saddle, his Fall causing a general ſhout, and he was ſo bruis'd, that they were forc'd to carry him off immediately.

A Spaniſh Lord creates Grandees.

Now we are upon the point of *Grandees* of *Spain*, I remember Don *Ferdinand de Toledo* told me the other day a pleaſant Story of his Father-in-law the Marqueſs *de Palacios*; Being a great Gallant at Court, where there was a publick Feaſt appointed by the King, and the Marqueſs wanting Money to appear there with his uſual Splendour, he went poſt into the Country, to ſeveral Towns of which he was the Lord, and there had it publiſh'd, *That all ſuch as had a mind to be Grandees ſhould come to him at a certain time*; the Citizens, being ambitious of ſuch an Honour, crowded to him, and he agreed with each of 'em in private for a certain Sum; which done, they appear'd all together, when he bid 'em to be cover'd before him, and gave 'em certain Letters to create 'em *Grandees*, by which means he got a conſiderable Sum of Money. The thing was at firſt ill repreſented to the King, and not well reliſh'd, but upon his Excuſes and asking of Pardon, it paſs'd for a Jeſt.

Great Officers in the K. of Spain's Family.

There are three *Great Officers* (as they ſtile 'em) belonging to the King's Family, the *Major Domo Mayor*, who commands in chief in the Palace; the *Surceiller of the Body*, who manages every thing in the King's Chamber; and the *Maſter of the Horſe*, who commands every thing belonging to the Family without the Palace. The next in rank are the *Gentlemen of the King's Bedchamber*, who wear a golden Key at their Girdles; there are three ſorts of theſe Keys, the firſt belongs to the Employment, the ſecond gives both Entrance and the Employment, and the third only Entrance into the Antichamber. There are no leſs than forty Gentlemen of the Bedchamber, who wait in their turns every day, and are generally *Grandees*; there are alſo eight *Mayors Dome*, or *Stewards in Ordinary*, who wait every week in their turns, and in the

the abſence of the Lord High Steward officiate in his place, introduce foreign Miniſters to the King's Audience, and have the ſame freedom of acceſs to the King as the Gentlemen of the Bedchamber.

The King's Guards.

The King has three Companies of Guards, conſiſting each of a hundred Halberdiers, *viz.* the *Flemiſh* or *Burgundian*, the *German*, and *Spaniſh*; not to mention the Guard call'd the *Lancers*, compos'd likewiſe of a hundred *Walloons*, which never attend abroad but upon great Ceremonies.

The chief Miniſter of State is call'd *Privado*, who has under him a Secretary of State, ſtil'd *The Secretary of the Univerſal Diſpatches*, becauſe all matters brought before the King and the chief Miniſter paſs thro' his hands, for the Council of State and the other Councils, after having examin'd and debated matters relating to their reſpective Provinces, ſend 'em to the King and his chief Miniſter, to be determin'd as they ſhall think fit.

The Councellors of the ſeveral Councils of the *Indies*, of the *Inquiſition of Whr*, of *Arragon*, of *Italy*, &c. have conſiderable Salaries and Profits annex'd to 'em, which amount from ſixteen to twenty thouſand Crowns a Year. And tho' Places are not ſold in *Spain*, yet Preſents are not refus'd.

The Cargo of the *Galeons* and *Flota*.

It is known that about thirty five millions of Crowns are brought every year from the *Weſt-Indies*, but of this there does not a fourth part belong to the King or Kingdom, the reſt belonging to the *French*, *Engliſh*, *Dutch* and *Genoeſes*, who in lieu thereof ſupply the *Spaniards* with the Manufacturies and other Neceſſaries of *Europe*, of which they would ſtand but in little need, were it not for their lazineſs. All this Treaſure Foreigners are oblig'd to venture under the Names of the *Spaniſh* Merchants, who are ſo exact and faithful upon this account, that they would rather loſe their Lives than diſcover the Combination: And there are certain Fellows at *Cadiz*, call'd *Metadors*, whoſe whole Employment is to cheat the King, and to convey the Silver and other precious Merchandize to places of ſecurity, which they do with ſo much fidelity and exactneſs, that it was ſcarce ever heard they fail'd in either; tho' without doubt this could not be ſo eaſily put into practiſe without the connivance of the Magiſtrates and Officers, who, to ſpeak the truth, are the greateſt Cheats in nature in *Spain*, and will ſcarce ſtick at any thing for Money; hence 'tis that they let Thieves, Murtherers, and other Criminals eſcape the hands of Juſtice if they have nothing to give, but if they have, they muſt allow them a ſhare, and ſo will remain undiſturb'd.

Criminal matters are judg'd only twice or thrice in a Year, and 'tis a rarity to ſee even ſome of the worſt of them die, the *Spaniards* being ſo tender to each other in this reſpect, that they rather condemn 'em to the Mines or Gallies. If an unfortunate Wretch is to be hang'd,

How they execute Criminals.

they tie him upon an Aſs with his Face to the Tail, and thus carry him to a Scaffold erected for his execution, where, after a long Speech made to the People, he is turn'd off.

Notwithſtanding the haughty Temper of the *Spaniſh* Lords, they are very ſubmiſſive to the *King*'s Pleaſure, and reſpect his Orders with ſuch exactneſs, that they will go to Priſon, or into Baniſhment, without murmuring: This is chiefly to be underſtood of thoſe of the two *Caſtiles*, where the People upon that ſcore are groſſly burthen'd with Taxes, the other *Kingdoms* and *Provinces* challenging a much greater ſhare of Liberty, eſpecially in reference to Taxes.

At the arrival of the *Flota* from the *Indies* there is an univerſal Joy all over *Spain*, eſpecially at *Madrid*; and as the *Spaniſh* Lords are not for amaſſing Treaſures, ſo they ſend for their Creditors, and pay them with ſo much profuſeneſs as if Money came to 'em by chance, tho' perhaps they ſoon after find the want of it, and would much more, were it not that the Tradeſmen are willing enough to give freſh Credit to ſuch generous Debtors: And to ſpeak the truth, the *Spaniards* are much better in Adverſity than Proſperity, unto which their natural Temperance ſeems to contribute a great ſhare, and the Cuſtom they have of eating and drinking ſeparately from their Wives and Children; by which means, as they loſe great part of that Freedom and Union which produces that deſirable frankneſs betwixt Friends, ſo this creates in 'em a ſort of melancholy illuſive Philoſophy, and this a certain Indolency, miſcall'd by them a *Greatneſs of Mind*, which renders them neglectful, or at leaſt indifferent, to provide for future Contingencies.

Their Love-Paſſion.

Their only Paſſion ſeems to be *Jealouſie*, which they encourage to ſuch a degree, that the leaſt ſuſpicion produces fatal effects among 'em: A certain Lady of Quality, not long ſince, having found her Gallant unfaithful, ſhe invited him to a Houſe where every thing was at her devotion; after having reproach'd him at pleaſure with his Infidelity, ſhe offer'd him a Dagger and a Diſh of poyſon'd Chocolate, willing him to chuſe which he lik'd beſt, to put an end to his Life; the Gentleman, knowing it was in vain to reſiſt, without delay drank off the Chocolate, which done, he only told her, That ſhe would have done very well to put a little more Sugar in it, becauſe the Poyſon had made it very bitter; and being ſoon after ſeiz'd with Convulſions, he died in an hours time, the Lady not ſtirring out of the Room till ſhe ſaw him expire.

A Trick of a Spaniſh Jilt.

Not long ſince, a Lady in diſguiſe, with two Gentlemen-Ushers and a good Attendance, came to the *Venetian* Ambaſſadour's Houſe, deſiring to ſpeak to himſelf in private, which being eaſily granted, ſhe told him, That *her Name was Donna* Blanca de Guſman; *that, notwithſtanding her Quality, ſhe had ſet aſide all the Laws of Decency to declare her Paſſion for him, and that ſhe muſt ſtay with him all night.* The Ambaſſadour not queſtioning but that ſhe was a Jilt that intended to cozen him under a borrow'd Name, yet with a great deal of Courteſie told her, That *he was vex'd that his Station would not permit him to entertain a Perſon of her Quality, without running the hazard of great Troubles.* Whereupon ſhe broke out into bitter Reproaches, and would have ſtabb'd him with a *Stiletto* ſhe had carried along with her for that purpoſe, but being prevented, the Ambaſſadour order'd one of his Gentlemen to give her a Preſent of five or ſix Piſtoles, which ſo allay'd her fury, that ſhe diſcover'd the whole matter, adding, That *ſhe was drove to this Deſperation for want of being able to pay her Gentlemen-Ushers and other Attendants ſhe had hir'd to carry on this Ente p iſe, who without it would have brok' her Bones.* The Ambaſſadour being taken with her Ingenuity, order'd her ten Piſtoles more, ſaying, *That at that rate her Share would not anſwer the Pains ſhe had taken*; and ſo diſmiſs'd her. She went from thence directly to the *French* Ambaſſadour's, where ſhe would have acted the ſame part, but being diſcover'd, had enough to do to eſcape without a *Baſtinado*.

The Pride and Vanity of a Spaniard.

This morning, as we ſtopt in the *Placa Major*, we heard a Fiſhwoman bauling out her *Salmon*, a *Signior Capaten* or Shoemaker, as ſhe ſtiled him, came to ask her for a pound; the Woman wondring he ſhould not ask the price, ſhe told him, that *it was no leſs than a Crown a pound*, (for every thing, even Wood and Charcoal, is ſold by the pound here): The Shoemaker, vex'd to the heart that ſhe ſhould queſtion his ability in our hearing, told her in anger, that *if it had been cheaper he would have bought but one pound, but now would have three*; and ſo paid her three Crowns immediately, tho' it was very likely 'twas all he had, and more than he could get in a week, eſpecially conſidering that they never work but when Neceſſity obliges 'em; notwithſtanding which, there is ſcarce a Handicraftſman but will appear in his Velvet and Sattin Clothes, like the beſt Gentleman. If a Shoemaker has two Apprentices, he carries them both along with him when he is to try a pair of Shoes, which he will ſcarce do himſelf, unleſs upon an extraordinary occaſion: When he has receiv'd the Money he ſets himſelf a ſunning, and with ſuch company as himſelf determines State-affairs with more gravity and authority than an old Preſident of a Privy-Council; the beſt ſport is, that when they can't agree in their Opinions, they often fall together by the Ears, and beat one another very handſomly. Nay, even the Beggars in *Spain* will not ask an Alms, unleſs it be in an imperious tone, and you muſt not refuſe them without a Complement, that *you have no Money*, and then they go away from you contentedly.

Their general way of living.

Academies.

There is a ſort of Academies in *Madrid*, where they meet, ſome for Gaming, ſome for Converſation; the firſt is perform'd with a great deal of *Decorum*, and much more *Honeſty*; for tho' they loſe ſometimes great Sums, they ſurely pay it the next day without the leaſt exception. The Winners give what they call *Barato*, (a Cuſtom alſo uſed in *Italy*) *i. e.* a ſmall Preſent of Money to the Standers-by, which they muſt not refuſe, tho' they are of a better Fortune and Quality than the Gameſters; and they have the liberty of demanding it of thoſe that win, who never refuſe it. They are ſo nice in theſe Gaming-houſes, that in caſe any one ſhould be found out in cheating, he muſt never appear in company again, and will be glad to come off without ſome Cuts in his Face, as a mark of his Diſhoneſty.

Night Rambles.

Unto thoſe Houſes reſort alſo moſt of the Wits and other ingenious perſons about the Town, who improve one another by their Diſcourſes, and communicate what they intend to write before it goes to the Preſs: They

are

are excellent at writing of Novels, wherein their Genius, for the conciseness and equality of the Style, seems to surpass all others: They are very cautious in not advancing any thing beyond probability, except sometimes in their Elogies: For the rest, their Books are not well printed, their Paper not very white, and ill bound, either in Parchment or Sheepskin.

There are no good Painters at *Madrid*, and those that pretend to drawing are either *Italians*, *French*, or *Flemmings*.

A Trick of a Spanish Jilt.

They have a great number of Slaves, for the most part *Moors* or *Turks*, who are sold for four and five hundred Crowns a-piece: Formerly they had the freedom of killing a Slave at pleasure, but that being forbidden since, they don't fail to cripple 'em sometimes, without being accountable for it.

Their Slaves.

If they marry two Slaves together, their Children are Slaves to the same Master, but the Issue of these Children are free. If a Woman-Slave marry a Freeman, the Children follow the Condition of the Father: These poor Wretches make good and industrious Servants, and seldom change their Religion.

A mistaken Saint.

A few days since arriv'd at *Madrid*, from *Galicia*, a reputed Saint, sent for by the Marchioness *de los Velez*, to cure her of a dangerous Distemper, but being somewhat long in his Journey, the Lady was recover'd before his arrival; however, the whole Family knowing the Day when he was to come to their House, attended in full expectation of him: It hapned that Don *Ferdinand de Toledo* (who was her Nephew, and had not seen her since his return out of *Flanders*) gave her a Visit about the same time, whereupon the Domesticks, full of expectation of their Saint, and not knowing Don *Ferdinand*, (by reason of his long absence) threw open the great Gate to welcome him, but not contented thus, the whole Family met him as it were in Procession, with Wax-candles in their Hands, asking his Blessing upon their Knees; he thought them either mad or himself in a Dream, and would have talk'd to 'em, but in vain, for instead of hearing him, they began to crowd so close upon him that he could neither stir nor move, and in a few moments he saw his Clothes torn in small pieces from his Back, to be kept as Relicks; seeing most of his Clothes gone, he thought himself in no small danger of losing his Limbs upon the same score, when he was seasonably reliev'd by the Marchioness *de los Velez*, who having understood the arrival of the *Holy Man*, was carried by four Servants in an Elbow Chair to meet him, but seeing her Nephew mistaken for a Saint, she could not forbear laughing, and so heartily, that they were all overjoy'd to see her have still left so much Strength after a lingring Distemper. Don *Ferdinand* came to our House in the same Remnants of his Clothes that were left him by the Zealots.

The Pride and Vanity of a Spaniard.

Their general way of living.

The general way of particular Persons in their Houses is, to drink as soon as they are out of Bed some Water cool'd with Ice or Snow, and immediately after some Chocolate; at Dinner the Master sits down at Table, the Wife and Children eating upon the Floor near him, because the Women can't sit upon Chairs. Their Meals are very light and sparing; perhaps a great Lord shall have a Pheasant, a pair of Pigeons, and an *Olio*, (which are very good) and perhaps a *Ragou* overseason'd with Pepper and Garlick for his Dinner, and a Desert of a little Fruit and some Fennel. After Dinner every one takes his repose upon the Beds, which are cover'd with *Spanish* Leather for coolness sake, so that till two a clock in the Afternoon in the Winter, and four in the Summer, you shall find the Shops shut, and scarce any body appearing in the Streets; then they dress themselves, and after they have taken some Sweetmeats, or Chocolate, or Water cool'd with Ice, they go abroad, and seldom come home till eleven or twelve a clock at night. The Supper is not costlier than the Dinner, a *Ragou* of a Pheasant, or some small Pastry business well season'd, being the chief, and often the only Dish. The Lady drinks nothing but Water, and the Gentleman a little Wine, and so to Bed they go.

Academies.

Those that are unmarried, or don't live so regularly, after they have taken the Air in the *Prado*, go abroad in the Night with a light Supper in their Belly, on Horseback, with one Footman behind 'em, who is to hold the Horse upon occasion, and to serve at the same time as a Guard, tho' they generally leave their Masters in the lurch. These Night-rambles are generally on account of some Lady or other, and I have been told, that notwithstanding the continual Hazards they run in suchlike Enterprizes, they will continue their Commerce for many years, and that with admirable nicety, fidelity, and secrecy. These Nocturnal Lovers often meet with Mischances of a less dangerous consequence, but which nevertheless is very troublesom, by the throwing out what is not fit to be nam'd, for want of Necessary-houses, which sends the Gallant home sometimes with a very ill scent: This makes the Streets look very nasty in a Morning, but the heat of the Sun consumes or dries it up by Noon.

Night Rambles.

Besides these Night-visits thro' the Lattices, they have another, of meeting with their Mistresses when they pay a Visit to Ladies of their Acquaintance or Relations; 'tis no hard matter for an intriguing Lady to slip out at a Back-door in her Veil into a Chair, and to be carried to the place of appointment, and afterwards return to the same place as if nothing had been done; and this is easie to be done, for that there are few Women who have not a Brother or Sister, Uncle or Aunt, that will serve for a Pretence, and should the matter be guess'd at, the Women are so faithful to each other in this regard, that tho' they were at mortal enmity, they would not discover a thing of this nature, being sensible it must be attended by most fatal consequences; and as the Men rarely come in the Assemblies of the Women, they are secure as to them upon that score.

Dy intrigues

I remember, that talking the other day with the Marchioness *d'Alcannizes*, one of the greatest and most virtuous Ladies of the Court, she frankly told us, that if a Gentleman should be alone with her for half an hour, in a convenient place, and not ask her the last Favour, she should think he despis'd her, tho' she should at the same time not grant his Request.

It often happens that a Lady of Quality, disguis'd in a plain large Mantle or Veil, walks on foot thro' the Streets to pursue an amorous Intrigue, and as her manner of walking soon distinguishes her from the vulgar sort, so perhaps a Gentleman pursues her, contrary to her present Intentions; all that she has to do in this case is, to speak to the first *Cavalier* she meets with, and without discovering her self, to tell him, That *the Curiosity of the Gentleman that follows her will disappoint her Assignation*; she need say no more, the *Cavalier* is oblig'd upon Honour to ask the Gentleman that follows her, why he will press upon the Lady against her Inclinations, and if the other proves resolute, the Sword must decide the matter, the Lady taking this opportunity to pursue her Intrigue. The best Jest is, that sometimes the Husband is the person that thus delivers her, and consequently hastens her expedition to the Embraces of her amorous Gallant.

Kindness of the *Spaniards* in Love Intrigues.

The *Spaniards* are so kind-hearted to one another in Love Affairs, that if a Man meets his Mistress in a place where he has no opportunity of conversing with her in private, he need only go into the next House, and to request the Master (whether he knows him or not) to give him the opportunity of talking with a Lady of his acquaintance in private in his House, and he is sure 'twill scarce ever be refus'd.

Happening the other day to be stopt in the Street by the throng of Coaches, I saw at least fifty Chairs, and as many Coaches, going to the Dutchess *d'Uzeda*; asking the reason of such numerous Visits, I was told, That the Duke her Husband was under Confinement, on occasion of a Quarrel betwixt him and the Prince of *Stillano*, and as the Women are oblig'd not to stir abroad so long as their Husbands are under the least Confinement, so she sent every day for a great many Ladies of her acquaintance, the better to divert her self at home; for, you must know, that the *Spanish* Ladies are not at liberty to visit one another when they please, but only when they are desir'd to come, which is done by a Letter in the Morning, and in the Afternoon they go in a Chair, attended by a Coach, in which are the Gentlemen and Pages, who are sent back as soon as they come there, and so appointed to come thither again at certain hours. I rest

Madrid, July 25. 1679.

Yours, &c.

LETTER XIII.

BEing desirous to see the Entrance of the Marquess *de Villars*, the *French* Ambassadour, we delay'd our Journey to *Toledo* for a few days; it was made on Horseback, as the Custom is here. I wonder'd to see so many

Ladies appear in their best Apparel in the Balconies, to see a Sight which is not uncommon in *Madrid*, but soon recollected my self, that the little share of Liberty they have makes 'em court all opportunities to see and be seen; and you may believe their Gallants are sure to take this opportunity to come as near to the Balconies of their Beloveds as possibly they can, to supply the want of Conversation by their Eyes, and a sort of silent Language they have by the assistance of their Fingers, by which they can communicate their Thoughts to each other at a considerable distance.

This Solemnity being over, we set forward, in company of the Marchioness of *Palacio* and her Daughter Donna *Margareta*, as also the Marchioness *de la Rosa*, in two Coaches, the 6th of *August*; Don *Ferdinand de Toledo*, with divers other Gentlemen, went on Horseback. It was ten of the clock at Night before we came out of the Gates, to avoid the Heats of the Day, which were very excessive, but the Night being cool, and the Coaches open on both sides when the Curtains are drawn aside, we travel'd pleasantly enough, it being the fairest weather in the World.

Arranjuez. About five of the clock in the Morning we came within sight of *Arranjeuz*, seated in an Island made by the Rivers *Tagus* and *Xarama*, which supply it with Water, and are a great addition to its natural beauty.

Half a league on this side the *Tagus* we pass'd over a wooden Bridge into Walks of Elms and Lime-trees very The Walks. tall, green, and shady, a great Rarity in so barren a Country, but this Defect is supplied here by certain Pits and Trenches made along the Walks near the Trees, into which the Waters of the *Tagus* being convey'd, moistens the Roots of the Trees. These Walks are of such a length, that from the middle you can't see either to one end or the other, and several Alleys running into them, make the perfect figure of a Star: I never met with a more delightful place in all my Travels, tho' indeed the Gardens are somewhat too close, and the Alleys not spacious enough, yet in the main 'tis a most delicious place, the Trees and Hedges being loaden with Fruits, as the Terrasses were cover'd with all sorts of Flowers. There Divers Foun- are a vast number of Fountains, with Statues of Brass, tains. and Marble Basins, which being fed by the Waters of the *Tagus*, spout them forth to a great height. The Fountain of *Diana* excells the rest; 'tis placed on a delightful Ascent, the Goddess in the midst among Bucks, Does and Dogs, all spouting out Water; it is surrounded with a kind of Hedge of Myrrh cut in several shapes, with little *Cupids* peeping out and casting Water upon those Creatures round the Goddess. In the midst of a great Pond you see the Mount *Parnassus* rising aloft, with *Apollo*, the *Muses*, the Horse *Pegasus*, and a Cataract representing the River *Helicon*: Out of the Rock issue forth a thousand little Springs, which launch out in divers shapes, and disperse like Flowers in the Air. The Fountain of *Ganymedes* is also a very beautiful Piece; here the Child sits upon the Eagle plac'd on a Column with his Wings spread, from whence he throws out Water, as well as by his Beak and Talons. Near this is the Fountain of *Mars*, a noble Statue: That of the *Harpies* has these Creatures plac'd upon noble and lofty Pillars of Marble, and they cast the Water at a certain Youth represented in the middle of the Fountain picking a Thorn out of his Foot. Out of the Fountain of *Love* you see the little God arise all pierc'd with Darts, out of every one of which comes a Spout of Water; the three *Graces* sit at his Feet, and divers Spouts of Water come out of four high Trees like Fountains.

It would be an endless piece of work to give you a particular description of all the Cataracts, Fountains, and Springs, as also of the other Curiosities belonging to this delightful Garden; I must only tell you, that both the House and the Place wherein it stands are not suitable to the rest, tho' there are some excellent Pictures in the King's Apartments.

The place or Town has no more than two bad Inns, and a few private Houses, ill enough provided with every thing.

Having spent the Day in refreshing our selves with sleeping, and eating the best we could get, we went after Supper to the *Grand Canal*, where we diverted our selves on board a small Boat built in the shape of a *Galeon*, richly gilt, till two of the clock in the Morning, when we thought fit to continue our Journey to *Toledo*.

After we had left *Arranjeux*, I found the Plains cover'd with *Wild* and *Mother-Thyme*; they assur'd us that there was good store of Rabbets, Staggs, Does, and Fallow-Deer hereabouts. After we had pass'd almost two leagues in silence, I desir'd Don *Ferdinand de Toledo* (who was come into our Coach) to give me some account of the so much talk'd of *Inquisition*: This was (said he) a thing The Inquisi- *unknown* till the *Thirteenth Century*, before that time Here- tion. ticks lying under the Censure of the Bishops and Civil Magistrates; it was in the Year 1251. that Pope *Innocent* IV. gave Authority to the *Dominican* Friers to take cognizance of these matters, in conjunction with the Bishops; the same was confirm'd by *Clement* IV. in 1265. Several suchlike Courts were afterwards establish'd both in *Italy* and the Provinces depending on the Crown of *Arragon*, till at last the Court of *Inquisition* was introduc'd in *Castile* by *Ferdinand* and *Isabel*, and in *Portugal* by K. *John* III, in 1557; for till that time this Jurisdiction being contested by the Bishops, the *Inquisitors* had only a limited Power; but before *Isabel* of *Castile* came to the Crown, her Confessor *John de Torquemeda*, a *Dominican*, and afterwards Cardinal, had engag'd her in a Promise to root out all Hereticks and Infidels, whenever it should be in her power; in pursuance of which she prevail'd upon *Ferdinand* her Husband to obtain a Bull in 1483, from Pope *Sixtus* V, to constitute an Inquisitor-General over *Arragon* and *Valentia*, and the Pope extending afterwards his Jurisdiction over all the Dominions of the *Catholick* King *Ferdinand* and *Isabel*, constituted a Supream Council of the *Inquisition*, of which having made *Torquemada* President, it's said that in his time he try'd no less than a hundred thousand Persons, and that above six thousand were condemn'd to the Stake in less than fourteen years time.

This Court has power to proceed against all Hereticks, but especially *Judaizing Christians* and secret *Mahometans*. It is compos'd of the Inquisitor-General, (nominated by the King, but confirm'd by the Pope) five Councellors, one of which must be a *Dominican*, a Procurator, two Secretaries of the King's Chamber, two Secretaries of the Council, an *Alguazil Major*, a Receiver, two Reporters, two Qualificators and Consultors. The number of the inferiour Officers belonging to this Court is almost infinite, for as they are exempted from the ordinary Jurisdictions, so as many as possibly can are apt to shelter themselves under this Pretext.

This Supream Court of Inquisition has a full Authority over all the particular Inquisitions under the *Spanish* Jurisdiction, each of which consists of three Inquisitors, as many Secretaries, one *Alguazil Major*, three Receivers, Qualificators, and Consulters. All Persons admitted into any of these Employments must prove themselves firm unstained *Catholicks*.

Their Procedure is very odd, for a Man is committed to Prison without knowing his Crime or the Witnesses that depose against him; and as there is no delivery from thence, but by the confession of the Crime you are accus'd of, so many, to obtain their Liberty, own what they never were guilty of, the first Crime of this nature being not capital, tho' it makes him incapable of any Employment; and besides, there lies no Appeal from this Court.

Whilst I was listening with great attention to Don *Ferdinand*'s Discourse, the Marchioness *de Palacio* told us, that we were not far from *Toledo*, and that the Ruins we saw on the left hand belong'd to an enchanted Palace. Don *Ferdinand* perceiving me smile, told me, that tho' I was one of the Unbelievers, yet he would not conceal what Tradition had transmitted to them upon that account: They say, there was a Cave closely shut up, An enchan- with a threatning Prophecy foretelling the Destruction ted Cave. of *Spain* if ever it was open'd; this made this Cave to remain unattempted for several Ages, till Don *Rodrigo* the King ventur'd to have it open'd, and notwithstanding the most dreadful Noises and Hurricanes which terrified all that were present, the King would enter in Person, by the light of several Flamboys, where he saw the Figures of several Men with very antique Arms and Clothes, one of which had a Copper Blade in his Hand, and upon it writ in *Arabick*, That the time of the Desolation of *Spain* was at hand, and that by those whose Statues he saw there.

By this time 'twas light enough to observe the Charms *Toledo.* of the delightful Country, and we had no sooner pass'd a large stately Bridge over the *Tagus*, but we saw *Toledo*, surrounded on all sides with Hills and Rocks, which command it: You may discover among these Hills many very neat and pleasant Country-houses; that of the Archbishop is a handsom Building. As the City is built upon a Rock, so the Streets are uneven, narrow, ill pav'd, and troublesom, which makes People make use of Litters here instead of Coaches. We took up our Lodgings in the *Plaça Major*, (the only place of note whither Coaches can go) but we stopt first at the Hospital of *Foira* in the Suburbs,

Suburbs, the Building of which is compos'd of three sides, within which is a large square Court, the Church making up the fourth: This was the Foundation of an Archbishop of *Toledo*, whose Tomb and Statue stands in the middle of the Body of the Church. The Walls of the City are built after the *Mooriſh* fashion, with a great many small Towers, and what with this and the deep Ditches fill'd with the Waters of the *Tagus*, it would be a strong place, were it not for the adjacent Hills that command it.

The Church. The Church is reckon'd the fineſt in *Europe*, and is call'd the *Holy* by the *Spaniards*; were its length and height answerable to its breadth, it would be much more uniform: It has many Chapels not inferiour to some Churches, all cover'd with Gold and Paintings: There is a Niche in the Quire, whence (they tell you) issued out a plentiful Spring of Water, that reliev'd the Inhabitants when they were beſieg'd by the *Moors*, there being not so much as one Spring in the whole City, which is furnish'd with Water from the *Tagus*.

The Treasury is exceeding rich; the Tabernacle used upon *Corpus Chriſti Day* is so heavy, by reason of the Gold and Precious Stones, Angels and Cherubims that belong to it, that it must be carried by thirty Men, and is counted ineſtimable; the Chalices and Pixes, the Sun, (where the Holy Sacrament is kept) the Crowns and Robes of the Virgin, are cover'd with Diamonds and Oriental Pearls, and the most splendid and magnificent that can well be seen.

You will not wonder at all this when I tell you, that the Annual Revenue of the Archbishoprick is 350000 Crowns, that of the Church 100000 more, forty Canons have each a yearly Allowance of 1000 Crowns, the grand Archdeacon 40000; three Archdeacons, the first whereof has 15000, the second 12000, and the third 10000 Crowns; the Dean has also 20000 Crowns a year; the Chaplain *major* of the Chapel *de los Rios* enjoys an Allowance of 13000 Crowns *per annum*, and six more 1000 Crowns a year.

We were no sooner come to our Inn but an Almoner and a Gentleman belonging to the Cardinal *Porto Carrero* came to invite us to the Palace, whither we were forc'd to go, not without much reluctancy, and we were entertain'd with great splendour and civility.

Having a great inclination to kiss the Queen-Mothers Hand, we were order'd to attend her at eight of the clock in the Evening, and accordingly, being all attir'd in our

The Alcazar *Spaniſh* Apparel, we were carried in Chairs to the *Alcazar* or Palace where she resides, seated upon a very high Rock; you pass thro' a spacious Place into the Court, of 160 foot long and 130 broad, adorn'd with two rows of Piazza's, ten rows of the Pillars, which make up the length, being all of one entire Stone, and the breadth had eight rows of Pillars. The Staircase, which begins at the bottom of the Court, is as broad as the Court it self; it brought us into a Gallery, from whence we were conducted thro' many spacious Apartments (but with very few People in 'em) to a great Hall with all the Windows open, the Hangings, Cushions, Carpets and Canopy of which were all of grey Cloth; here we found the Queen-Mother leaning upon a Balconey, with a great pair of Beads in her Hand; she turn'd towards us with a cheerful Countenance, and we had the honour to kiss her Hand, which was very small and white, but lean; for the rest, her Complexion was pale, but clear, her Face little, long and somewhat flat, her Stature neither tall nor short, she appear'd in the Dress of a Nun, as Widows of Quality usually do in *Spain*. After some Discourse about the intended Marriage of the King her Son with *Madamoiſelle*, she shew'd me her Picture done in Water-colours, asking whether 'twas like her; when I told her 'twas not, and that she was much handsomer, she said, That her Son would be agreeably cheated, being already so well pleas'd with the Picture. Supper being ready, she desir'd us to follow her into a Parlour all cover'd with Marble, where she sate down alone, we standing near her; she had among other Dishes some Melons cool'd with Ice, and some Sallads, and Milk, of which she eat heartily, having a good Stomach; she did not touch the Flesh, which indeed look'd very indifferently; she drank some Wine, which was presented her by the Lady *Camerera* upon her Knees, another Lady presenting a Napkin upon her Knee also, to wipe her Mouth: She gave some Sweetmeats to my Daughter, and ask'd after the Queen of *France*. After Supper we took our leaves of her.

The next day we took a view of the *Placa Major*, which is round, and enclos'd with Brick Houses regularly built. We heard Mass in the Church *de los Rios*, a fair and spacious Structure, adorn'd within with whole Alleys of Orange, Pomegranate, and Jessamin trees, reaching up to the high Altar, shining with Silver, Gold, and rich Embroidery; besides which, there were a great number of painted Cages with *Nightingales*, *Canary-birds*, and others, which made a pleasant harmony.

Toledo has two high, long, and broad Bridges cross the River, and if the *Spaniards* were not so lazy, they might without much trouble make the *Tagus* navigable quite up to the City. The *Hospital* of the *Foundlings* and the *Town-house* are also handsom Fabricks.

The next day being again spent in feasting at the Archbishop's, we set forward towards the Castle of *Ignarica*, belonging to the Marquess *de Palacios*: We were most obligingly receiv'd there, and splendidly entertain'd for six days, part of which we spent in Fishing in the River *Xarama*, and so return'd well satisfied to *Madrid*. I am

Madrid, *Aug.* 30.
1679.

Yours, &c

LETTER XIV.

I Had a great inclination to see the late Treaty of *Nimeguen* ratified by the King; the Constable of *Castile* did us the favour to conduct us into a private Apartment from whence we could see the whole Ceremony, which began as soon as the Marquess *de Villars* came into the great gilt Hall, where the King was placed on a Throne embroider'd with Precious Stones and Pearls, on the right hand whereof, below the Alcove, sate the Cardinal *Porto Carrero* in an Elbow Chair, and the Constable of *Castile* upon a Stool, the *Grandees* being placed near the Cardinal; the Ambassadour was seated on the left hand of the Throne, upon a Bench cover'd with Velvet. The full Power of the most *Christian King* being read by a Secretary, a little Table was set before the King with a Crucifix and a Book of the *Evangelists*, and whilst he laid his Hand upon it the Cardinal read the Oath to keep the Peace inviolably. It was very hot at that time, as it is generally here in *June*, *July*, and *August*, for the rest the Seasons are much more pleasant in *Spain* than in *France*, *Holland*, *England*, or *Germany*, from *September* till *June*, and 'tis scarce ever so cold here but that you may be without Fire, which is the reason they make use here of Chasingdishes instead of Chimneys.

The First of this Month Don *John d'Austria* was reduc'd to such an extremity that his Life was despair'd of, which News he receiv'd with an entire resignation: The King was scarce ever out of his Chamber, he receiv'd the *Viaticum*, made his Will, and writ a Letter to a certain Lady, whose Name I could not learn, sending her at the same time a Box with Writings and Jewels. The King having at the same time receiv'd the News of the Queens approach, he imparted the same to Don *John*, bursting out into Tears, and telling him, that his desperate condition was the only allay of his Happiness, and would have put a stop to all the publick Rejoycings in the Palace, had not Don *John* beg'd him not to do it: He died *Sept.* 17. highly regretted by some, and as little lamented by others; he was of a middle Stature, well shap'd, with regular Features, black and sprightly Eyes, and black long Hair; his Judgment was beyond the common rank, he was generous, brave and liberal, vers'd in most Arts and Sciences, a good Historian, Mathematician and Musician, and skill'd in no less than five Languages. The Queen came to *Madrid* immediately after his death; he was buried in the little Vault near the *Pantheon* or Royal Sepulchre, in which none are buried but the Kings and such of the Queens as have had Children.

Don *John's* Death. His Character

As we had not the same fondness for *Madrid* as the *Spaniards* generally have, so we were willing to embrace the opportunity that was offer'd of seeing the *Escurial*.

In our way we saw the *Prado*, one of the Royal Houses of *Spain*, a square handsom Structure, supported by Pillars, adorn'd with several good Pictures, and among the rest the Kings of *Spain* in a very odd Dress; the Gardens and Park are very pleasant, and tolerably well kept. Near it, on the top of a Hill, is a Convent of the *Capuchins*, where they preserve a Crucifix made of the Wood of the true Cross, which (they say) works Miracles. The *Prado* and *Carcuela*.

From hence we walk'd to *Carcuela*, another of the King's Houses, which has nothing remarkable but its curious Fountains and delicious Water; and so we went forward to *Monarco*, where the Woods begin, not far thence coming

The Convent of the *Escurial*.

coming to the Park belonging to the Convent of the *Escurial*, built there by K. *Philip* II. among the Mountains; we were conducted to it thro' a long and spacious Walk of Elm-trees, planted in four rows, leading to the great Gate, which is adorn'd with divers noble Marble Pillars, above one another, with the Statue of S. *Lawrence* on the top; the King's Arms are cut in a certain Stone brought from *Arabic*, call'd the *Thunder-stone*, the cutting cost 60000 Crowns. The Building it self is a large square Pile, beyond which jetts out at length a row of Buildings contriv'd to represent the shape of the *Gridiron* on which S. *Lawrence* (the Patron of this Convent) was broil'd; it is very plain, and of the *Dorick* Order: The Square is divided in the middle, and one of those Divisions opens it self both ways into four lesser Squares or Cloysters built likewise after the *Dorick* Order: The whole Structure has nothing in it but its bulk, being 380 paces in the Square. The other Division is subdivided into two other Squares or Piles of Buildings, one of which is the King's Lodgings the other for the Pensioners, maintain'd here at the King's charge, besides which there are no less than three hundred Friers belonging to this Convent, who live after the same manner as the *Carthusians*; they are of the Order of the *Hieronymites*. The Stone wherewith this Structure was built being all taken out of the neighbouring Quarries, has this peculiar quality, that the sharpest Air and severest Weather makes not the least alteration in it, but it continues its natural grey colour, without growing in the least dirty.

The Pantheon or Royal Sepulchre.

This Structure is said to have cost six millions of Gold. It was *Philip* IV. who added the *Pantheon* or Royal Sepulchre to it, after that of *Rome*; it is under the great Altar of the Church, all of Marble, Jasper and Porphyry, into which you descend by Steps of Jasper; twenty six magnificent Tombs are to be seen enchas'd in the Walls. The Tabernacle, the Altar, with the Steps belonging to it, the Pix made of one single Agate Stone, and the Riches in Gold and Precious Stones belonging to it, are a matter of surprize, but not to be describ'd. There is one Cupboard with Relicks (and they have three more) is prefer'd much before the Treasure of S. *Mark* at *Venice*.

The Church.

The Church-Ornaments, Chalices and other Vessels, are cover'd with the best Pearls and Precious Stones, and all the Candlesticks and Lamps are of pure Gold. Forty Chapels, and as many Altars, have every day forty several Cloths and Attires. The fore-part of the high Altar has four ranks of Jasper Pillars, and the seventeen Steps by which you ascend to it are of Porphyry; the Pillars of the Tabernacle are of Agate, and the Figures of Metal and Crystal: You see nothing about it but Gold, Azure stone and some other Stones, so transparent that the Sacrament (kept in a Vessel of Agate) may be seen thro' them. The Tabernacle is valued at a million of Crowns. The Church has no less than eight pair of Organs. The Seats in the Quire are of an *Indian* Wood, curiously inlaid, like those of S. *Dominick* at *Bologna* in *Italy*.

The Chapel in the Convent.

The Cloysters of the Convent are also very magnificent, in the middle of 'em is a delicious Flower-garden, and a Chapel with four openings, the Roof being supported by Porphyry Pillars; in the Niches betwixt 'em you see the Statues of the four *Evangelists*, with an Angel and several Creatures of white Marble, bigger than natural ones, throwing Water into Marble Basins. The Arch of the Chapel is curioully wrought, and the Floor pav'd with black and white Marble; besides which, it has divers Pictures of inestimable value, as hath also the Chapter-Room, and two *Bosso relievo's* of Agate two foot and a half high, which are reckon'd beyond all value. The Church it self has nothing extraordinary, it is of the *Dorick* Order, design'd by the famous *Italian* Architect *Bramante*: Neither are the King's and Queen's Lodgings magnificent: But the Library is worth a curious *Traveller*'s Observation; for, besides a considerable number of Original Manuscripts of the Fathers and Doctors of the Church, finely bound and gilt, it contains above 100000 Volumes; and the famous *Titian*, with several other great Masters, have employ'd all their Skill in painting the Galleries belonging to it, to the utmost perfection.

The Library.

To give you the best Idea I can of the vastness of this Structure of the *Escurial*, I will only tell you, that it contains 17 Covsters, 22 Courts, 11000 Windows, 800 Pillars, and an infinite number of Halls, Parlours, and other Apartments: It is built on the descent of certain Rocks, in a barren and desart place surrounded with Hills, which makes it generally cool there. The Village below consists only of a few Houses: The Gardens and Park comprehend a large tract of Land, wherein are Woods, Hills, Plains, and Valleys, abounding with all sorts of Deer and Fowl; there is a large House in the middle of it, where the Keepers lodge.

We return'd by the way of the Mountains, a shorter but more troublesom Road, just when the new Queen's Houshold were setting out from *Madrid* to meet her upon the Frontiers: It was an odd sight to see the old Ladies mounted on Mules shod with Silver, and accoutred with rich Housings, but in such odd Dresses and morose Countenances, as we could easily guess would not be very acceptable to so young and well-temper'd a Lady as the Queen. I rest

Madrid, Sept 30. 1679. *Yours*, &c.

LETTER XV.

THE Court is return'd, the King and Queen were both in one Coach with the Curtains open, she was dress'd after the *Spanish* Fashion, and he in the *Spanish* Country-Dress, coming something near the *French* Mode: I was credibly inform'd that the Queen could scarce recover her self from the Surprize the first sight of the King had occasion'd in her, being dress'd in a close-bodied grey *Parragon* Coat, but both very short and wide Velvet Breeches, and very thin Stockings of *Pelo* or raw Silk; the Cravat he wore was exceeding fine, being sent him by the Queen, but hanging very loose, and his Hair turn'd behind his Ears, with a grey Hat, made a very odd figure. The *Queen* eats after the *French* fashion, as the *King* does after the *Spanish* way, dress'd by a Woman Cook: At Dinner there is no other Attendance than a few Ladies of the Court, and many male and female Dwarfs.

The Queen's Entry.

The Queen's Entry was exceeding magnificent, many Triumphal Arches were erected to honour her reception, the Magistrates of *Madrid*, mounted on very fine Horses, went to offer the City Keys to Her Majesty, who rid upon an excellent Horse of *Andalusia*.

The Kings and Queens of *Spain* sleep in different Apartments, but this King never lies from her, tho' else the *Spanish* Monarchs are oblig'd to as severe Rules in relation to Ceremonials and old Customs as the meanest of their Subjects, nay, even far beyond 'em; hence it is that the appointed time for the King's going to and returning from his Houses of Pleasure, being known at Court, the same is never transgres's'd, let the occasion be never so urgent; nay, even his Confessor never fails to present himself in due time to put him in mind of his Devotions.

Ceremonies at Court.

The Queens of *Spain* are attended by none but *Widows* and *Maids*; if any of these are let Blood, the Chyrurgeon knows how to be well paid for his labour, by preserving the Ligature, Fillet, or any other Cloth or Handkerchief which has but the least drop of the fair Lady's Blood upon it, for he is sure to have a good Reward of the *Cavaliers*, who make it their chief Ambition to stop at nothing for their Mistresses sakes.

When the Queen goes a hunting (which was never allow'd to any Queen of *Spain* except this last) and comes to the place where she is to mount on Horseback, she must set her Feet upon the Coach-boots, and so throw her self upon the Horse; if the King is present he assists her, if not, no body else dares pretend to it, tho' she should be in danger of being hurt without it. The Queen uses no Featherbeds, but in lieu of 'em thirteen or fourteen Quilts made of the best *Spanish* Wool, which being not above two or three inches thick each, the Bed is no higher than our Featherbeds are in *France*.

They have another peculiar Custom, *viz.* to see such as come to visit 'em out of the House, because (they say) 'tis the greatest piece of Civility one can shew to his Friend, to leave him in possession of every thing in his House.

I must mention such another before I conclude, *viz.* That if a young Woman pitches upon a Person for her Husband, and doubts of her Parents Consent, she need only apply her self to the Curate of the Parish, and let him know how the matter lies; if he approves of the Proposition, the thing is done in the main, for he has no more to do than to put her into a Convent for some time, or to some Lady of good Repute: If she persists in her Resolution, her Parents are oblig'd to allow her a Portion according to their Quality, tho' against their Will. I rest

Madrid, Sept. 28. 1681. *Yours*, &c.

Several

Several Years

TRAVELS

THROUGH

Portugal, Spain, Italy, Germany, Prussia, Sweden, Denmark, and *United Provinces.*

By an ENGLISH Gentleman.

1693. IN the Year 1693, I embark'd on board a Merchant-ship for *Portugal*, where we arriv'd safely, without any memorable Accident but such as are ordinarily at Sea, in the River of *Lisbon*, in which City staying several months, I will give you the best account I am able of what I observ'd during my stay there.

Lisbon in Portugal. It is seated on divers Hills, which makes the Streets very uneasie and unpleasant; besides that, the Dirt and noisom Smells arising from the Filth that runs from their Kitchins (which are all above-stairs) into them, and by reason of their narrowness can't be dried up by the Sun, makes them so offensive, that no body (unless upon urgent occasions) cares much to pass thro' the City.

Their monstrous Processions. Arriving there in *Lent*, I was entertain'd with the sight of their monstrous Processions, wherein I observ'd some of the true Penitents lash themselves with that severity that they frequently die of it, for which reason it is that the Priests are oblig'd (to moderate their blind Zeal) to declare to them, That *such as procure their Death by this excess of Folly are the occasion of their own Damnation.* But among these true Devotees are to be seen many others hir'd on purpose by the Religious Societies, to encrease the number of the Penitents; a thing so scandalous, that even the foreign *Catholicks* residing here blush at it, there being scarce any but the most profligate and debauch'd Wretches that will expose themselves to such dangerous Mortifications for lucre sake: Among the rest, they had at that time employ'd a certain lewd fellow, who us'd to serve as a Porter to the *English* residing there.

They have a vast number of Churches and Convents, but few that are magnificent, the *Domo* or Cathedral it self being neither large nor handsomly built: Their chief Publick Structures are, the Royal Palace, seated upon the River *Tagus*, the Model whereof was design'd much larger than it now is; it has a Cloyster behind adjoyning to it. The Palace of the Archbishop of *Lisbon* is a spacious Structure, with some good Statues upon the Stairs, the only kind of Furniture the *Portugueses* delight in, there being even in the King's Apartments nothing to be seen but white Walls. Their Houses are generally very high, and pretty cool, but the Streets so narrow, that instead of Coaches they are forc'd to make use of Litters carried by Mules, which are very strong and large in this Country.

Manners and Customs. 'Tis an odd sight to see the *Portugueses*, both young and old, appear with large Spectacles fastned to their Ears in the Streets. Their Diet is generally very moderate, and they seldom or never commit any Debaucheries in Wine; their predominant Vice is, the Conversation of lewd Women, unto which the heat of the Climate seems to incline 'em more than Extravagance. The Women paint here very young, and are consequently oblig'd to follow it as they grow more in years. The Men are exceeding jealous, and a suspicion of Incontinency in a Woman puts her in danger of her Life; hence 'tis that they are seldom allow'd to stir abroad, except when they go to Church on *Sundays*, *Holidays* or their *Eves*.

1693. The Women of Quality wear their Fardingals here larger than those of *Italy* or *Spain*; they wear Veils to cover their Faces; they look upon it as the greatest piece of Immodesty to shew their Feet, for which reason they wear very long Petticoats, and their Pages or Footmen hold a piece of Cloth either before or behind 'em as they get in or out of their Coaches or Litters, tho' at the same time they go both with their Bosom and Shoulders bare. *Their Habit.*

The Mens Habit is a black Coat and a Band, of our *Colchester* Bays, which they turn the wrong side outward in Mourning; this is the general Wear, without any distinction of Persons or Quality, unto which they are all subject without any difference, Silver and Gold Laces being expresly forbid among 'em. The *Inquisition* makes them all appear good *Christians*, tho' 'tis generally believ'd there are many conceal'd *Jews* among 'em, as their swarthy Complexion and fiery revengeful Temper are the remnants of their *Moorish* Ancestors.

Convenient Situation of Lisbon. For the rest, the Situation of *Lisbon* upon the River *Tagus* makes it a place of considerable Traffick; for, not to mention their Commerce in the *East-Indies* and *Brasile*, they trade with most Nations of *Europe*, but especially with the *English*, who take in Salt there for *Newfoundland*, and bring back to them dried *Codfish*; besides that, they exchange many of their Woollen Manufactures for the Wine and Fruits of *Portugal*.

The extent of the *Tagus* into a great part of the Country, affords them likewise a most commodious carriage of their Wines, Oyls, Fruits, and other Products of the Country: Their Salt, especially that of *S. Ubes*, is transported into most parts of *Europe*, and us'd in vast quantity in *Sweden*.

They abound in Fish at *Lisbon*, but have some scarcity of Flesh, especially of Beef and Mutton, the adjacent rocky Mountains affording Food only for Goats; however, their tame Fowl, when well fatted, are very good, and their Pigeons both very large and well tasted.

About *Lisbon* are many Summer-houses, and Gardens well planted with Orange-trees, the agreeable scent whereof perfumes the Air at a considerable distance: A Friend of mine had one of these Summer-seats at *Luz*, about four miles from *Lisbon*, with a well planted, pleasant, wall'd Garden of three Acres of Land belonging to it, which, among other advantages, had this Conveniency belonging to it, that we could go thither in a Coach, a Rarity among these craggy Mountains. I spent a great part of the Summer there.

During my stay here I took particular notice, that even in the hottest season we were constantly towards Evening refresh'd with a cool Sea-brieze, a thing I afterwards observ'd in most places about *Lisbon*.

From this Country-seat I us'd frequently to take a walk to the once so much celebrated Nunnery of *Odevellas*, but much restrain'd of late years both in its Revenues and the free Conversation allow'd to that Order in some of their Convents.

Leaving

1694. Leaving *Lisbon*, *May* 6. 1694. I travel'd towards *Porto*, to take a view of the Country on that side; I pass'd the first day thro' a Rocky Country to *Sacca Veina*, and thence two leagues further to *Alucrea*, and in the Afternoon thro' *Alinaca*, *Villa Franca*, *Povos*, and *Castinera*, where I lodg'd that night, but badly enough; the next morning early I pursued my Journey thro' the Villages of *Villa Nova de Reina*, *Ambesia*, and *Cassesia*; after Dinner I travel'd on near *Serra Terena*, thro' a plain and most delightful Country, abounding in Wine, Oyl and Corn, and so came to *Parsinia*, where I took up my Lodging for that night; the next day I continued my Journey in a no less pleasant and delightful Country, over *Campo de Gallicia*, (a delicious Plain, abounding in Corn and Olive-trees) thro' *Allamorsa*, *Pindva*, and *Jandemosans*, to *Coimbria*, where I lay that night, and the next morning over *Anjon*, *Pulgo*, *Rolosal*, &c. getting to *Coimbria* that night, after four days Journey in a Horse-litter, being none of the quickest in these Countries.

Coimbria. Before I entred the Gates of *Coimbria*, I cross'd the River over a Bridge very remarkable for its length, as having no less than twenty nine Arches, and its being built upon another Bridge, which is swallow'd up in the Sand; the River being so shallow now that 'tis fear'd it will in time be quite choak'd up. On this side of the Bridge stands a Convent and a Nunnery, both belonging to the *Franciscan* Order, the first dedicated to S. *Bartholomew*, the other to S. *Clara*.

The City it self is computed to contain about 30000 Souls, and its Situation is like most of the great Towns of this Country, upon Hills; it has sixteen Colleges and Convents.

The University The *University* has but two Colleges, *viz.* those call'd S. *Peter's* and S. *Paul's*, adjoyning to each other like one Building. Their Schools make no great show, tho' they keep publick Lectures in 'em in all Sciences; and I was told they had a good *Library*. I saw a *Fidalgo* (or Gentleman's Son) perform his Exercise for his Degree of *Doctor in Law* in the Hall, which is a handsom large Room, common to both the Colleges, hung about the Walls with the Pictures of the Kings of *Portugal*. As the number of Students here is computed at no less than five thousand, (because they are admitted as soon as they can well read, and are distributed accordingly in different Classes) so none but the Children of Persons of the best Rank can have their Chambers in the Colleges, the rest being dispos'd in the Town as they best can.

The Convent and Church of St. Cruz. The chiefest of their Convents is that of S. *Cruz*, being all Noblemen, and of the Order of S. *Austin*. The Church belonging to this Convent is a large Structure, with Altars richly gilt, and adorn'd with Silver Candlesticks of great value: They preserve here many Relicks, but as they are very shy of shewing 'em to Strangers, I obtain'd this Favour by the assistance of an *Irish* Father; they *Relicks.* shew'd me the Sword of King *Alphonso*, wherewith he kill'd five *Moorish* Kings; they tell you that K. *Sebastian*, when he was just upon going to the Wars in *Barbary*, borrow'd this Sword of the Convent, and that the Sword being lost there, together with the King, they instituted publick Supplications for the recovery of this Sword, which was one day found by a Frier upon the High Altar, as he was going to officiate there. But the chief Repository of their Relicks is in a Chapel at the end of the *Dormitory*; here they shew'd a Golden Cross set with Precious Stones, which (they say) contains a piece of the true Cross, and us'd always to be fix'd on the Royal Standard in their Wars against the *Moors*; half of one of the Thorns wherewith our Saviour's Head was crown'd; a Bone of S. *Stephen*, another of S. *Austin*, a Finger of one of the Innocents slain by *Herod*, S. *Peter's* Chains with large thick Iron Links, a Bone of S. *Paul*, a Leg-Bone of one of the eleven thousand Virgins sent out of *England* to the *Indies*, to marry and encrease the *Christians* there; an Arm-Bone of S. *Blazius*, a Bone of S. *Sebastien*, the Bones of *Theotonius* in a Silver Chest, the Bones of five Martyrs put to death by the *Moors* in *Barbary*, whither they were sent to convert 'em to the *Christian Faith*, likewise in a Silver Chest; a Bone of S. *Lawrence*: Most of these, besides many others, were brought out of *England* immediately after the dissolution of the Monasteries by K. *Henry* VIII. They were so cautious in shewing them, and that at such a distance, that I could scarce distinguish what they were, which made me never enquire any further about any such things as *Relicks* in this Country.

After a stay of three days I left *Coimbra*, taking my way towards *Aveyro* thro' a pleasant Country, tho' somewhat mountainous and rocky: I found my travelling upon a Mule as tedious as in a Litter, for you go no faster than your Guide, who is on foot.

Aveyro is a very handsom Town, with clean and pleasant Streets, govern'd by a Justice, as are most Country Towns here; it has three Convents, of *Dominicans*, *Carmelites*, and the Order of S. *Anthony*; and four Nunneries, of S. *Anthony*, *Franciscans*, *Dominicans*, and *Carmelites*; and four Parish-Churches: Each of the Nunneries contains above a hundred Persons, including Servants; and the whole City about fifteen or sixteen thousand Souls. The Duke of *Aveyro* lives in *Spain*, under pretence that the Family of *Braganze* has usurp'd the Crown of *Portugal*, so that his Estate being seiz'd upon for the King's use, his Palace is bestow'd upon the *Carmelite* Nuns. 1694. *Aveyro.*

The Town is fenc'd about with a Wall after the *Moorish* fashion, and has great plenty of good Fish and Fowl: The River is of such a depth that Vessels of seventy or eighty Tun may ride safe at Anchor under the Town, to which belong above four thousand Boats, employ'd for the most part in carrying Dung from thence into the Country, where the Ground is barren, and wants much more manuring than the Soil about *Lisbon*. Much Salt is also made hereabouts, which is carried into the Country, and into *Gallicia*.

From *Aveyro* to *Porto* is ten leagues; the first five I went by Water, for taking Boat at twelve at night, I came the next morning to a little Village call'd *Varr*, whence I travel'd the other five on Horse, thro' a barren Country, to *Porto*, the River of which affords a safe Harbour, being so environ'd with Hills, as to protect Ships against the violence of any Winds; the Ships may ride under the very Walls of it, which are very high, but at that time without a Garison.

The City of *Porto* it self is very handsomly built, and the Streets neatly pav'd, tho' seated upon Hills. On the other side of the River call'd the *Serra* stands a Convent of *Austin Friers*, a spacious Structure, containing about forty five Brothers, who call'd themselves *Dons*: Their *Dormitory* I found to be two hundred and fifteen paces long, and five broad. Near it is a Nunnery of S. *Dominick*. *The City of Porto.*

Somewhat lower, on this side of the River, at a place call'd *Gaia*, (famous in ancient times for the *Palace* of the *Moorish* Kings) is another Convent of twenty eight Friers, of the Order of S. *Antonio*. In the Convent of the *Serra* they shew'd me a pair of Crutches of a lame Child, which was cur'd by a certain little Image of our Lady in *Basso relievo* in the same Church: The like you see in several other Churches, as also wooden Legs and Arms, nay, sometimes the Pictures of the Persons pretended to be cur'd, near the Saint's Image that is said to have wrought it.

For the rest; This City has four Parish-Churches, the Cathedral, which is but small in comparison of others of that rank, the Church of S. *Nicholas*, of S. *Victoria*, and S. *Peter*; they appear'd to me richer and better gilt than those of *Lisbon*: Seven Convents of Friers, *viz.* the *Franciscans*, S. *John Novo*, S. *Elio*, (dress'd in Purple) the *Dominicans*, *Carmelites*, *Benedictins*, and the *Tanagrapes*, an Order following the Discipline of the *Jesuites*, and upon that score in much repute here. They have also a College of *Jesuites* and four Nunneries, *viz.* of S. *Monicha*, S. *Bento*, S. *Clara*, and the *Recollettes*, an Order peculiar to this Country, and seldom to be met with but in Sea-port Towns, being intended for Seamen to bestow their Wives in till their return; Orphans are likewise educated here till they come to years of maturity to chuse either Marriage or a Religious Life; Widows are also permitted to enter into this Order after the decease of their Husbands, provided they vow Chastity for the future. *Convents and Nunneries.*

The whole City is reckon'd to contain fifty thousand Souls, including the Suburbs, in one of which is another Parish-Church dedicated to S. *Alphonso*. It is a place of vast Trade, the River (which supplies them with great quantities of Provisions, Wines, Oyl, Corn, Fruits, &c. out of the Country, for transportation) having from its conveniency got the Name of *The Golden River*. The Bar thro' which the Ships come in is a very narrow passage, with Rocks on both sides. Over against it, near the Village of S. *John*, is a Fort kept by a small Garison. *The Harbour.*

The Episcopal Palace near the Cathedral seem'd to be a goodly Building, but was not inhabited then, because the Bishop being at variance with the Clergy of his Diocess, was at *Lisbon*.

From *Porto* I travel'd to *Gamarains*, over steep and rough Hills; it is a pretty neat Town, well built upon a Level, of a considerable compass; it has five Convents of Friers, *viz.* the *Dominicans*, *Carmelites*, *Capuchins*, *Franciscans*, and *Austin Friers*; and three Nunneries, *Franciscans*, *Carmelites*, and *Dominicans*, but no more than two Parish-Churches: The whole place is enclos'd by a strong and high Wall, and there are to be seen here the Ruins of

1694. of a Caſtle, ſaid to be built for one of the Kings of *Portugal*'s Brothers.

From hence I continued my Journey the next day to *Braga*, the moſt ancient Archbiſhoprick of *Portugal*, and which to this day diſputes the Precedency to the Archbiſhop of *Toledo* in *Spain*.

Braga. *Braga* is a ſpacious City, well wall'd according to the faſhion of this Country. The Cathedral is ſomething bigger here than in moſt other places in *Portugal*, and ſtrong'ly built, as are moſt of their Structures, for they have hereabouts a kind of very durable ſort of Marble, and their Loam very white and fine, and conſequently exceeding binding, as may be ſeen by their old Buildings. In this Church is a Monument of the Duke of *Barcelos*, (a thing the *Portugueſes* don't much regard) who being met upon the Road to this City by a great number of People to honour his Entry, and dying there ſoon after, order'd by his Will a certain yearly Revenue to be employ'd for diſtributing a certain Allowance to the *Poor* every morning in the Cloyſters of the Church, adding, That *ſince he was not able to feaſt 'em, he would take care they ſhould not go without a Breakfaſt.* The Tomb, which is about a yard and a half high, ſtands in the Iſle of the Church, being all of Braſs, with his Effigies at full length, which appear'd to have been gilt formerly; the Grates about it hindred my reading the Inſcription. Not far from the Dome ſtands the Archiepiſcopal Palace, an old Pile of Building, which made but an indifferent ſhew in the outſide, being not inhabited then, by reaſon of the death of the Archbiſhop.

Viana. The next place I came to in this Journey was *Viana*, one of the pleaſanteſt Towns in *Portugal*, ſeated along the Sea-ſide, ſo that from the Key you may ſee any Ships along the Coaſt: It is well pav'd, the Streets upon a level, with very good Buildings. Its Strength conſiſts only in a ſmall Caſtle on the Sea-ſide, which commands the Harbour, but they had at that time a Gariſon of a thouſand Foot and two Troops of Horſe, and the Caſtle about thirty ſeven great Guns mounted; there was then lately built a Magazine for the King, containing Arms for about twenty thouſand Men, and ſome Accoutrements for Horſe. They ſhew'd us a ſmall low Building within the Precinct of the Caſtle, ſaid to be built for the impriſonment of King *Alphonſo*. For the reſt, this is a place of pretty good Trade, tho' the River is not far navigable by reaſon of the Sands which choak up the Chanel.

From this place I travel'd for three leagues very pleaſantly along the Sea-ſide to *Camena*, ſeated in a Plain, and tho' the Frontier Town on the Borders of *Gallicia*, it is of no great ſtrength, but commonly provided with a good Gariſon: There ſtands however upon a Rock near the entrance of the River a little Fort, commanding the paſſage toward the Harbour, but it was guarded only by ſix or eight Country Fellows at that time, and had not above three or four Guns mounted; within it is the Convent of S. *Anthony*.

Camena.

This place has ſome little Trade, two Pariſh-Churches, two Convents of *Dominicans* and *Franciſcans*, and one Nunnery of *Dominicans*.

If you intend to go from hence into *Gallicia*, you muſt croſs the River, which is the common Boundary betwixt *Spain* and *Portugal* on this ſide.

Villa Nova de Silvero. I went from *Camena* to *Villa Nova de Silvero*, an ancient Town in the Road betwixt *Camena* and *Valentia*; as 'tis a Frontier Town, ſo it hath a Wall after the manner of this Country, with a Gariſon.

Valentia. *Valentia*, likewiſe a Frontier Town, upon the Borders of *Gallicia*, advantageouſly ſituated for being made a ſtrong place, but almoſt without Defence then, tho' ſo near to *Spain*; 'tis true, ſome Works it had, but without either Men or Arms to defend them, all the Defence they have being the Fort *Lovelio*, about a mile from the City, in oppoſition to which the *Spaniards* have one or two on their ſide of the River. At this place the King's Officers make ſtrict ſearch, whether you carry more Money with you than is allow'd; the ſame is done on the Borders of *Gallicia*, by the *Spaniards*, in your return hither, which they do with Severity enough, unleſs you make 'em civil by a piece of Money. Here you muſt alſo give Security for the return of your Mule.

Tine. The firſt *Spaniſh* Town you come to after you have croſs'd the River is *Tine*, an Epiſcopal Seat, but meanly built, which made me without any ſtay continue my Journey to *Vigo*, a Seaport Town in *Gallicia*, ſeated upon a River, and accounted one of the beſt Harbours of *Spain*, formerly the Rendezvous of the *Spaniſh Armada* or *Fleet*, when they made a much better figure at Sea than they do now: Here their *Galeons*, and the *French* Squadron commanded by Monſ. *Chateaurenaud*, were deſtroy'd by the

Vigo.

Engliſh and *Dutch*, in the Year 1702. For the reſt, the Town is of no conſiderable Traffick, few inhabiting here but Fiſhermen, which makes their Houſes appear very mean: 'Tis reckon'd among the Gariſon'd Towns of *Spain*, but the ſame conſiſts only of ſixty Country Fellows, who are ſummon'd out of the circumjacent Country, for the defence of ſome ſlight Works provided with a few Guns, and are chang'd every day. It has one large Pariſh-Church, but meanly built, and two Convents, one of Friers, the other of Nuns, both *Franciſcans*. About three leagues down the River you ſee the Iſles of *Bayonne*. 1694.

From hence I paſs'd for three leagues down a noble ſpacious River towards *Ponte Vedre*, lin'd on both ſides with Hills and pleaſant Valleys, and ſome little Redoubts oppoſite to one another, for the defence of the River. As you paſs along this River you ſee *Redundella*, a goodly Town, built upon the Bank of the River, in the middle of which is an Iſland, with a Convent of *Franciſcans* upon it, the Gardens of which being well planted with Fruit-trees, made a pretty ſhow at a diſtance. At the end of this River you muſt travel a league and half by Land before you come to *Ponte Vedra*, thro' very rough and uneven ways. *Redundella.*

Ponte Vedra is a large but meanly-built Town, tho' the River (which exonerates it ſelf into the Sea) affords 'em ſome Conveniency for Traffick. The chief thing worth taking notice of here is the Church of our Lady, a large Fabrick, and adorn'd on the inſide with ſome curious wrought Work on the Cieling, and the Pillars, which are Marble, a thing ſeldom obſerv'd in the Churches of *Gallicia*. The Front of this Church hath alſo ſome very fine *Relievo-work*; among the reſt you ſee here our Bleſſed Lady on her Deathbed, with the Apoſtles and ſome of the Ancient Fathers about her. *Ponte Vedra.*

The Archbiſhop of *Diego*'s Palace here is a large Structure, but appear'd much decay'd: It has two Pariſh-Churches and three Convents, two of *Franciſcan*, and the third of *Dominican Friers*, one of *Nuns*, and a *Jeſuits* College. The Magazine here had alſo ſome good Braſs Guns, and ſome ſmall Arms.

Gallicia appear'd to me the ſame as *Portugal*, as well in reſpect of the Soil as of the Manners and Cuſtoms of its Inhabitants, who alſo differ but very little from the *Portugueſes*, even in their Habit and Language; and as there is ſcarce any footſteps of Induſtry or Husbandry among 'em, ſo you ſee nothing but Poverty wherſoever you turn your ſelf. *Gallicia.*

The indifferent uſage I met with in all thoſe places thro' which I paſs'd, made me ſoon alter my Reſolution of going further that way, ſo I return'd to *Porto* the ſame Road I came, but took another way from *Porto* to *Aveyro*; for, after having paſs'd *Aveyro*, inſtead of going to *Coimbria*, I took the Road of *Figera*, a ſmall Maritime Town, yet not without ſome Trade in Salt and Oyl, Ships of about a hundred Tuns being able to come up the River hither: They have a Caſtle with ſome Guns for their defence. The Salt is made near this River, and the circumjacent Country affords abundance of Olives. *Figera.*

Betwixt *Aveyro* and *Figera* is the Town of *Mira*, much celebrated for the vaſt ſtore of wild Ducks thereabouts, which they take in a peculiar manner without either Nets or Guns, but by throwing Sticks at 'em as they riſe and take Wing, which they do with ſuch dexterity, that they knock down ſeveral at a time. *Mira.*

I paſs'd the River near *Figera* the 25th of *July*, which being on a *Sunday*, and S. *James*'s Day, I had ſcarce travel'd two miles to *Lavos*, where meeting with an *Iriſh* Prieſt, he would fain have engag'd me to go about four leagues with him, to a Chapel dedicated to St. *James*, where (he told me) was a Famil which had this peculiar to it ſelf, that on this Day, when the People of the adjacent Country came to pay their Devotions to the ſaid Saint, and are regaled with a large hot Cake by the Town, any of them can go to the Oven, tho' never ſo hot, and turn the Cake without the leaſt danger to themſelves; but I thank'd him for his care, and told him, That having no great Faith in ſuchlike matters, he muſt excuſe me if I did not go ſo far out of my way.

I came the ſame day to *Lazia*, the Seat of a Biſhop, whoſe Palace is a goodly Structure: For the reſt, the Town is but indifferently built; it hath three Pariſh-Churches, the Cathedral, S. *Diego*, and S. *Peter*'s; the firſt appear'd to be a large handſom Fabrick, but I did not view the inſide of it: They have four Convents of *Auſtin Friers*, *Dominicans*, *Franciſcans*, and *Capuchins*, and a Nunnery of *Dominicans*. Near it, upon a very high Hill, you ſee a Caſtle belonging to the King, which at a diſtance appear'd to be a noble Building. *Lazia.*

1694. In my way from *Luzia* to *Terena* I pass'd by *Batalia*, where is said to be the best built Church in all *Spain*, perfected by some *English* Workmen; it contains the Sepulchres and Tombs of the *Portuguese* Kings. The steepness of the Rocks over which I was forc'd to pass together with the length of the way, made this the worst days Journey I ever had, which made me not get to *Terena* till late at night; and having fourteen leagues to *Lisbon*, I set out early in the morning again, and after I had rode two leagues, embark'd on the River, (sending my Mule by Land) which brought me the same day to *Lisbon*.

I observ'd a great deal of Poverty in the Country thro' which I pass'd, the poorer sort living for the most part upon *Brow* and Water: This *Brow* is a kind of course yellowish Bread, made of a certain *Indian* Corn call'd *Milio*; certain 'tis that many a hundred Families live upon this, without ever tasting Meat in all their lifetime.

The Country thro' which I pass'd affords scarce any Wood for Timber, the Oaks, which are but few, appearing no bigger than Shrubs here; Olive and Cork-trees they have in abundance, and I saw some pretty large Groves of Pines.

The Author's Journey from Lisbon *to* Madrid.

I Set out *Sept.* 1. 1694. from *Lisbon*, for *Madrid*; I went three leagues by Water on the other side of the River to *Allegaiego*, whence continuing my Journey the next day, I travel'd for eight leagues thro' a barren Country to *Vento Novo*, and the next day by the way of *Monte Major* (a goodly Village) to *Ryolio*, a small ruin'd Town with an old *Moorish* Castle, which affords a fine Prospect into the adjacent Country. The next day I travel'd on to *Estremeze*, a place noted for Earthen Ware, then garison'd with eight Companies of Foot, and three Troops of Horse. *Estremoz.*

Thence I went to *Elvas*, the last Frontier Town of the *Portugueses* bordering upon *Spain* on that side, a place of good strength, and famous for the six months Siege it so bravely sustain'd against the *Spaniards*, in their last Wars. Near it is a most noble Aquaduct three leagues and a half in length, and of a vast height in some places where the Ground is low, where for a considerable way together there were no less than four Arches built upon one another with vast expence. *Elvas.* A noble Aquaduct.

Not above two *English* miles beyond *Elvas* you come to a small River, which being the common Boundary betwixt *Spain* and *Portugal* on that side, you are no sooner past it but you come to the *Campo* or *Plain* where was fought that memorable Battel betwixt the *Spaniards* and *Portugueses*, in their last War, with the loss of seven thousand *Spaniards*, in which Action the *English* had a considerable share on the *Portuguese* side.

The first Town belonging to the *Spaniards* on this side is *Badajos*, a strong place, into which you enter over a Bridge of twenty six Arches. *Badajos.*

The next day I travel'd on to *Merida*, into which you must pass over a Bridge of above sixty Arches; this place affords some Entertainment for curious Travellers, as the ruins of some ancient *Roman* Buildings, a spacious Castle, now turn'd into a Prison, a noble Arch of vast Stones joyn'd without Mortar, the work of *Julius Cæsar*, a curious Pyramid by *Augustus Cæsar*, the remnants of some ancient *Roman Aquaducts*, and another modern one, by which the Water is conveyed into the Town a great way. *Merida.*

From hence I travel'd to *Trukille*, thro' a woody and mountainous Country; the Town it self is very well built with several goodly Structures belonging to Persons of Quality; it has five Parish-Churches, as many Convents of Friers, and four Nunneries: The Villages upon the Road were most of 'em very large, but the Dwellings only of Mudd; however, I took notice by the way of one spacious and noble Palace belonging to the *Conde de Lopeso*; I lodg'd at *Telaveyra de Reyne*, a goodly Country Town, having eight or nine Parish-Churches, thirteen Convents of Monks, and five Nunneries. *Trukille.*

From hence I travel'd five good leagues out of my way to take a view of the City of *Toledo*, a magnificent place, nobly built, and adorn'd with stately Churches, very rich in Plate and Jewels. The Image of our Lady in the Cathedral has a Garment cover'd all over with Pearl and Precious Stones of an inestimable value: The Paintings are answerable to the rest. It is the Metropolis of all *Spain*, and the Archbishoprick is counted the most considerable for its Revenues in *Christendom*, tho' that of *Braga* disputes the Priority with it. The *Castilian* Language is spoken here in its purity, and several great Councils have been held here. The present Archbishop is a Cardinal. The King's Palace or *Castle* is a spacious Pile of Building, and the Stables belonging to it are capable of containing at least five hundred Horse. *Toledo.* 1694.

Madrid is only a Village, but may deservedly be call'd the largest of that kind in *Europe*; the Soil round about it is not so mountainous as in *Portugal*, but very fruitful, which agrees best with the slothful Temper of the *Spaniards*. This place, tho' the ordinary Residence of the Kings of *Spain*, is not seated in a very wholsom Air, occasion'd questionless by the adjacent River, which is often dry; this River is a Branch of the *Tagus*, arising near *Toledo*, whence it continues its course as far as S. *Terence*, fourteen leagues beyond *Lisbon* in *Portugal*. The Buildings here are generally very good, of Brick, and some of the Streets regular, spacious, and noble, but very dirty, nauseous, and full of Filth. Their Churches are for the most part very fine. *Madrid.* Its River.

The Palace of the *Almirant* of *Castile* is highly remarkable for its excellent Pictures, in the collection whereof the *Spanish* Lords spare no cost; among the rest I took notice of one done by *Titian* representing *Ixion* embracing the Clouds; it was pawn'd to this Lord for five hundred Dubloons, much less than 'twas worth.

In the King's Summer-house a little way out of the Town, call'd *Buen Retiro*, I took notice of many curious Pieces of Painting by *Titian*, *Raphael Urbin*, *Bodona Annibal*, and *Vandike*, but has nothing else remarkable either within or without, being built only of Brick, except that in the Garden you see the Statue of King *Philip* IV. on Horseback, finely done in Brass, plac'd on a Marble Pedestal. On the Canals are divers Pleasure-boats, and some Summer-houses for the Musicians to divert the King whilst he takes his pleasure in these Boats upon the Canals. At the entrance of the outer Court are the King's Stables, that for the Saddle-horses had at that time about sixty, chosen out of all Nations; in those for the Coach-horses were three setts of black ones, as many of light grey, all of *Flanders* breed, one of dark grey, and two setts of very fine duns, besides six setts of Mules. *Buen Retiro.*

Adjoyning to these is the Armoury, a spacious handsom Room, fill'd with many curious Suits of Armour belonging formerly to their Kings; here they shew you divers Suits once us'd by the great *Charles* V, with a Sword presented him by the Pope; his Armour is eatily distinguish'd from others by our Lady's Image he always wore engraven on his Breastpiece; a large polish'd Steel plate the said Emperour us'd instead of a Looking-glass when he put on his Armour, and an easie Chair he slept, eat, drank, and dispatch'd business in when in the Camp; several other Suits of *Philip* II, *Philip* III, *Philip* IV, and among the rest one for the late K. *Charles* II, tho' it is certain he never wore any, 'tis double gilt, and set with Precious Stones: Here you see also the Armour of that warlike Cardinal *Ildefonso*, and several Trophies and Colours taken from the *Turks*. The Armoury.

The outward Court of the Palace is a large Square, with Cloysters on both sides, the Stables and Armoury fronting the Palace it self; it consists of two Quadrangles, with Cloysters both above and below; one of these Quadrangles is allotted for the King, the other for the Queens Lodgings, but are not to be seen unless when the Court is not there.

I pass'd thro' three or four indifferent Rooms (as far as they would let me go) to see the King at Dinner; the Dining-room was large, but indifferently furnish'd, the Room before it was less, but crusted over on the Walls with fine Jasper and Marble. The King has always twelve Dishes at Dinner, and eight at Supper, serv'd up in as many Silver Plates, and attended by as many Halberdiers, who make every one uncover as the Meat passes by. There is a glorious appearance at Court every day, as well of Coaches as a great number of People, the reason is, because all the chief Courts of Justice belonging to the several Provinces under the *Spanish* Dominions are kept in the Palace.

Many of the Streets of *Madrid* have Fountains, but such as have nothing extraordinary in 'em. The *Plaça Major*, where they keep their *Bull-feasts*, is a noble handsom Square. The *Prado* of S. *Hieronymo* is sprinkled every Evening with Water out of the many Fountains plac'd there for the conveniency of the Coaches that take the *Tour à la mode* there.

Gross the Water the King has another House, call'd *Casa del Campo*, where he refreshes himself sometimes in the heat of the Summer, under the cool shady Walks, the chief Allurement of this Seat.

From

1694. From *Madrid* I took a turn to *Alcola de Henares* or *Compostell*, in Latin *Complutum*, the greatest Univerſity (next to *Salamanca*) in *Spain*, founded by Cardinal *Ximenes*. The Buildings of the City it ſelf are none of the beſt: The *Univerſity-College*, where all publick Exerciſes are kept, acknowledges the great Cardinal *Ildefonſo* for its Founder; the other Colleges are, that of *Madre de Dios*, of *Malca*, the *Trilingue*, the King's College, that of *Mena*, of *Manrique*, of S. *Clement*, of *Lugo*, that of *Arregon*, of *Verdes*, of S. *Ambroſe*, of S. *Catherine*, of S. *Denis*, that of the *Ruffians*, and S. *George*'s College, built and well endow'd by a *Portugueſe* Count, for the uſe of thirty *Iriſh* Students, but the Count dying before it was quite brought to perfection, the King ſeiz'd on the greateſt part of the Revenues, leaving only a ſlender Allowance for the maintenance of eight Students, who are oblig'd by Oath, after ſeven years ſtay in the College, to preach the Goſpel in ſome of the Northern parts. There are beſides theſe the Colleges of S. *Peter* and S. *Paul*, and that of the Grammarians.

Complutum or Compoſtell.

Its Colleges.

Madrid.

Its Rivers.

Their Convents of Monks are, that of the Order of S. *Auſtin*, of S. *Thomas*, S. *Baſil*, S. *Bernard*, and that for the *Complutenſes*, the *Carmelites*, the *Oratory*, the *Jeſuites*, two of the *Trinitarians*, the *Diſcalceats*, two of the *Mercenaries*, the *Minims*, the *Agoniſants*, the *Auſtin Friers Diſcalceats*; the Convent of the Angels of S. *Diago*, S. *John de Dios*, and that of *Leon*, beſides ten Nunneries.

Convents.

Bucs Retiro.

I heard one of their Diſputations, and it ſeem'd very odd to me, that the Reſpondent, after having repeated the Opponent's Syllogiſm, did not anſwer in Latin, but in his native Tongue.

Juſt before the high Altar in the Chapel of the *Univerſity College* ſtands a white Marble Tomb, containing the Body of the before-mention'd Cardinal *Ildefonſo*, his Effigies in a cumbent poſture, all excellently done, and encompaſs'd with Braſs Grates; *Mahomet*'s Lamp, and ſome *Turkiſh* Colours taken by him from the *Turks*, are hung up in the ſame Chapel.

The Cathedral here is a ſpacious and noble Fabrick, in which (among others) I took notice of a white Marble Tomb with a Latin Inſcription, erected to the memory of Dr. *J. Gonzales*.

This City ſtood formerly on the other Bank of the River, at the foot of an high Hill, but being laid deſolate by the *Moors*, it was afterwards rebuilt in the place where it now ſtands.

Over the Water, on an high Hill, in a little Chapel, they preſerve a red Croſs, which (they ſay) was ſent down from Heaven and put into the hand of one of their Kings, as he lay encamp'd againſt the *Moors*, who were entirely routed. In the Cathedral they ſhew you a miraculous Stone, which formerly afforded ſuch abundance of Oyl, that they ſupplied all the Lamps of the Church with it, but thoſe who look'd after it making a Gain of it, by ſelling it for other uſes, the Miracle ceaſed.

During my ſtay at *Madrid*, I made another excurſive Journey to take a view of the *Eſcurial*, that Wonder of the World, built by K. *Philip* II, purſuant to a Vow he made before the Battel at S. *Quintin* againſt the *French*, and having obtain'd the Victory, he dedicated the *Convent* adjoyning to the Palace to S. *Lawrence*, (being his Day when the Battel was fought) and placed in it two hundred Friers of the Order of S. *Jerome*, under a Prior nominated by the King, and a College or Nurſery for young Students. It is ſeated about ſeven leagues from *Madrid*, among the Mountains in the Kingdom of *Toledo*, having to the Eaſt and Weſt very delightful Plains water'd with many Rivulets and Springs. Its form is a large Square, each ſide whereof is 263 foot long, with a fine Tower on each corner; the Materials are a ſort of very hard Stone, ſpotted with grey; the greateſt part of the Architecture is of the *Dorick* Order, with ſome of the *Ionick*, *Corinthian*, *Compoſite* and *Tuſcan*: The whole Fabrick is ſubdivided into four leſſer Squares, which have ſixteen Gates; the chief Entrance is on the Weſt ſide, thro' three Gates, over which ſtand the Statues of S. *Lawrence*, the Patron of this Fabrick, and in the middle the Arms of *Spain*.

The Eſcurial.

The firſt Quadrangle is two hundred and thirty foot long, and a hundred and twenty ſix broad: The Front of this inner Court is adorn'd with ſix Pillars of the *Dorick* Order ſixty eight foot high, upon which are placed ſix Pedeſtals, and upon them as many Statues of the Kings of the Old Teſtament, *viz. David*, *Solomon*, *Joſias*, *Ezechias*, *Jehoſhaphat* and *Manaſſes*, with Crowns of Braſs on their Heads weighing a hundred pound each, and the Scepters (of the ſame Metal) fifty pound each; *David*'s Harp, likewiſe of Braſs, weighs no leſs than three hundred ſeventy five pounds. Under each of theſe Kings are the following Inſcriptions:

1694.

David	Solomon	Ezechias
Opera	*Templum*	*Mandata*
Exemplar	*Domino*	*Domini*
A Domino	*Ædificatum*	*Phaſe.*
Recepit.	*Dedicavit.*	*Celebravit.*
Joſias	Jehoſaphat	Manaſſes
Volumen	*Lucis*	*Contra*
Legis	*Ablatis*	*Aras*
Domini	*Legem*	*Altaria*
Invenit.	*Propagavit.*	*Deſtruxit.*

Into the *Church* you enter by five Arches twenty eight foot high and fourteen broad; the length of the *Church* is three hundred ſixty four foot, and its breadth two hundred and thirty; its whole height, from the Floor to the Croſs on the top of the *Cupola*, is three hundred and thirty foot; the Architecture is of the *Dorick* Order; it has ſix Iſles, two of which make a Croſs, the other four meeting into a Square; it has beſides this twenty four noble Arches, fifty large Windows, and thirty nine Galleries with Silk Curtains: There are here alſo no leſs than twelve noble Croſſes of Jaſper-ſtone, ſet over ſo many Chapels, and forty Altars, in their peculiar Chapels, beautified with excellent Pictures of the Saints.

The Church.

The Floor of the Church is pav'd with grey and black Marble, and the Iſles are illuminated with a vaſt number of large Silver Lamps; the middle Iſle alone has fourteen Balconies of two yards three quarters in length. The Grand Chapel is magnificent beyond what can be imagin'd, its length is twenty foot, the breadth fifty, and the height an hundred; you aſcend into it by the middle Iſle, by twelve Steps of the fineſt Jaſper of fifty three foot long; the Chapel is parted from the body of the Church by curiouſly wrought Rails of Braſs gilt; the Paintings are very excellent here, ſuitable to the reſt: It contains four ſorts of Architecture, which are ninety three foot high, and forty nine broad, the firſt of the *Dorick* Order with ſix Pillars, the ſecond of the *Ionick* with as many, the third is *Corinthian*, and the fourth the *Compoſite*, with two Pillars ſuſtaining the Roof and Arches; they are all of the beſt Jaſper, curiouſly poliſh'd, the *Baſes* and *Capitols* of Braſs gilt: In one of the Pillars of the *Dorick* Order is the *Cuſtodia* or place where the Sacrament is kept; on each ſide is an Original of *Perig ino* an *Italian*, one repreſenting our Saviour's Birth, the other the Adoration of the three *Eaſtern* Kings; the four *Evangeliſts*, in Braſs gilt, ſtand on the ſides of the Pillars: In the *Ionick* Order is painted S. *Lawrence*'s Martyrdom, by the ſame *Perugino*: On the ſides are two Originals, one of Chriſt ty'd to a Pillar to be ſcourg'd, the other repreſenting Chriſt bearing the Croſs, by *Frederico Zuccharo*, and four Statues of Braſs of as many ancient Fathers of the Church: In the *Corinthian* Order you ſee the Aſſumption of our Lady, and on the ſides the Reſurrection, and the Deſcent of the Holy Ghoſt, all Originals painted by the ſame hand: Between two Pyramids are two brazen Statues of S. *Andrew*, and S. *James* the Patron of *Spain*; the *Compoſite* Order has but two Pillars, and in the middle of them our Saviour on the Croſs, S. *Peter* and S. *Paul* on the ſides, and the Virgin *Mary* and S. *John* on the out-ſides; they are all four of Braſs gilt, and thirteen foot high each.

The great Chapel in the Church.

The *Cuſtodia*, or Box wherein the Sacrament is kept, is of a round figure, made of various Stones; its height is ſixteen foot, and its diameter ſeven and a half, ſupported by eight Columns of *Diaſpare*, imitating the Rainbow in their various colours; they ſay, that this Stone is not to be wrought but by Diamonds, and that the Workmanſhip of this coſt eighty thouſand Ducats.

The Cuſtodia.

Over the *Cuſtodia* you ſee the Statues of the twelve Apoſtles, and at the top the Reſurrection of our Saviour. You enter into this Chapel (call'd the *Segrario*) by two Doors of Jaſper, one on each ſide, and aſcend to the Altar by ten Steps of the ſame Stone, which alſo furniſhes the Materials for the Floor; it has its Light thro' a curious Cryſtal Window on the Eaſt ſide, with Iron Bars gilt; it is beautified with Pictures repreſenting the Myſtery of the Euchariſt, with a Rainbow and many Angels over it. On the right ſide of the Altar you ſee five Statues in Braſs upon their Knees, of the Emperour *Charles* V, his Daughter, and two of his Siſters; on the other ſide are placed the Arms of *Spain*, with five Statues underneath reſponding to the others, *viz.* one of K. *Philip* II, of his Queen *Anne*, of two of his former Wives, and of his Son *Charles*. Under this Altar is the *Pantheon* or Burial-place of

1694. of the Kings of *Spain* of the *Austrian* Family, of which more anon. This Church hath receiv'd much additional Beauty by the excellent Paintings of the Sacred History by the rare hand of *Luquesto* an *Italian*.

Relicks. Among their Relicks (of which, they say, they have something of every Saint) they shew some of the Hair of our Saviour and the Blessed Virgin, as also some of their wearing Apparel, some Thorns of his Crown, and one of the Nails wherewith he was nail'd to the Cross, some remnants of his purple Habit, divers Relicks of S. *John* the *Baptist*, of the Apostles Martyrs, and the entire Body of S. *Lawrence*, the Head of S. *Jerome*, and the Heads of several other Saints.

Riches and Ornaments. They tell you, that they have no less than five hundred and fifty *Pixes* and *Chalices* of Gold, Silver and Crystal, among which they shew one said to have been offer'd to our Saviour by one of the three Eastern Kings.

The Choir. In the middle of the Isle is the *Choir*, fronting the Chapel, its length is ninety six feet, its breadth fifty six, its height forty eight, the Floor cover'd with the same Marble as the Church, and the Walls painted with the Martyrdom of S. *Lawrence* and S. *Jerome*, the first by *Romulo*, the last by the just now mention'd *Luqueste*, who has also painted the Glories of Heaven on the top: It is illuminated by a Crystal Branch of twenty eight Lights, the Present of the late King *Charles* II, and has two Orders of Seats curiously wrought with precious Wood: On each side is an Organ, with cross Galleries gilt, and in the Church are six more, one of Silver, the Gift of *Charles* the Fifth.

Sacristy. The Sacristy is a hundred and eight foot long, and thirty broad, the Pavement of Marble of divers colours, and the Cieling and Walls painted with the best Originals (thirty four in number) of Sacred History, the Gift of *Philip* IV, by the greatest Masters in that Art, *viz.* *Titian*, *Raphael Urbin*, *Paulo Veronese*, *Tintoret*, *Andrea del Sarte*, *de Bordenon*, *Guido Bolgnese*, *Annibal*, *Caracche*, *Van Dike*, and others.

The Pantheon or Sepulchres of the Kings of *Spain*. Near the Sacristy you descend by Steps of the best Marble into the *Pantheon*, containing the Sepulchres of the Kings of *Spain* of the *Austrian* Family, being esteem'd the finest Piece of this kind in *Europe*: Over one of the Gates, (which are of Brass gilt) underneath the Arms of *Spain*, you see upon a black Marble this Inscription in golden Letters:

D. O. M.
Locus Sacer mortalitatem exuviis
Catholicorum Regum
A Restauratore Vitæ, cujus Aræ Max.
Austriaca adhuc pietate subjacent.
Optatam Diem expectantium.
Quam post suam sedem sibi & suis
Carolus Cæsarum Max. in votis habuit,
Philippus IIdus Regum Prudentissimus elegit,
Philippus IIItius verè pius inchoavit,
Philippus IVtus
Clementia, Constantia, Religione Magn. Auxit,
ornavit, absolvit; M. D. C. LIV.

The Arms of *Spain*, cut in precious Stone and richly gilt, are placed here betwixt two Statues of Brass gilt, one representing the Fall of Man, the other the Hope of a Resurrection. This Door brings you by the before-mention'd Steps of the finest Jasper and Marble into the *Pantheon*, which is overcrusted with the same, and most artificially polish'd; its form is round without, and an octagonal within, in each of the Squares being reposited the Urns for the Royal Bodies, four in each Square, there were then in all twenty six of these Urns, of grey Marble, supported by four Lyons Paws of Brass gilt; of the same Metal there is an oval Figure in the middle of each of these Urns, containing the Names of such Royal Persons as are interr'd there, in black Letters. In the Square fronting the Door stands the Altar, and upon it a large Cross of Brass gilt, fix'd within another of black Marble, of which also the whole Altar is compos'd, except that it has some curious Ornaments of the choicest *Porphyry*: On each side of the said Cross stands a Pillar of green *Genoua* Marble, with brass Bases and Capitols gilt. On the Gospel side of the Altar lie interr'd the Bodies of *Charles* V, *Philip* II, *Philip* III, and *Philip* IV, and on the other side such of their Queens as brought them forth Issue, such as die without being not admitted to be buried here, but in another Sepulchre allotted for the Branches of the Royal Family.

The *Pantheon* is enlightned by a curious Branch of Brass gilt, with twenty four Lights; the Floor is cover'd with the same Stone as the Walls, and wrought into the figure of Stars.

The Convent has no less than five Cloysters, the biggest being no less than eight hundred foot square, painted all about with the Life, Death, Resurrection and Ascension of our Saviour. 1694.

The old Chapel. The old Chapel affords three excellent Pieces, that of S. *Lawrence* on the Gridiron in the middle, and on both sides the Offering of the three Eastern Kings and Christ's Sepulchre, both by *Titian*, besides divers other Originals of Sacred History of the best Masters: They boast here of one of the Innocents Bodies entire, of one of the Waterpots in which Christ turn'd Water into Wine at the Wedding of *Canaan*, and of one of the Bars of the Gridiron on which S. *Lawrence* was broil'd, but these are not to be seen by Hereticks. In the Refectory you see a celebrated Piece, by *Titian*, of the Lord's Supper, brought hither from *England* during the Exile of K. *Charles* II, and pawn'd for 15000 *l.* Sterling.

The Royal Palace and Library. I had no opportunity of seeing the Royal Palace, which is not very large, and was told it contain'd little of moment except the Paintings; but the Library must be own'd a noble lofty Structure, two hundred foot long and thirty six high, the Stalls of the Books (which are all letter'd on the Back) being of Cedar and other precious foreign Wood; it has seven Pillars of the *Dorick* Order, the Floor is cover'd with white and grey Marble, and the Cieling with curious Paintings representing the Arts and Sciences, and the most celebrated Authors, by *Perugrina*; but those Histories of Arts and Sciences you see under the Cornishes are of the excellent hand of *Bartholomew Carducho*. In the middle of the same Room stand seven Tables of Jasper and Marble, and two of *Porphyry*, with Globes and Spheres plac'd upon them. They preserve also some ancient Medals and Writings on the Bark of Trees; their most valuable Manuscripts are, Manuscripts. *De Baptismo Puerorum* of S. *Austin*'s own writing, a Piece of S. *Chrysostom*, *Apocalypsis de Sancto Amadeo*, four Books writ by S. *Theresa*, a Letter of S. *Vincent*, the Original of S. *Lewis Beltram* of the Conception of the Virgin *Mary*, with divers other Pieces of St. *Gregory*, S. *Anastase*, and S. *Chrysostom*.

The most excellent Paintings on the Cieling of the Church, and over the great Stairs, by that great modern Artist *Luca Giordano* a *Neapolitan*, and but lately finish'd at the late King's expence, are no small addition to the beauty and glory of this stipendious Fabrick, which I was told contain'd, with every thing belonging to it, above thirty six leagues in circuit; certain 'tis that there belong to this Structure 15 *Cloysters*, 11 *Courts*, 25 *Fountains*, 13 *Statues of Stone*, and 38 of *Brass* gilt; the number of original and other choice *Pictures* is computed at 1602, besides 540 more on the Walls; the Copies of *Landskips*, *Fruits*, &c. are not to be number'd: It has besides this 9 *Refectories*, 5 *Infirmaries*, 2 fine *Apartments* for the reception of Strangers, and 9 *Kitchins*; it was 24 years before 'twas finish'd, and cost K. *Philip* II. six millions wanting only two thousand Ducats, unto which adding the charge of the *Pantheon* and other additional Buildings, and the Reparations made after the Fire hapned, in 1671, the whole charge has been computed at no less than eight millions of Ducats. The vastness of this Structure.

I have nothing to add to the description of this wonderful Piece, except the curious Walk of double rows of Elm-trees, leading from the little Town below to this Royal Foundation.

I left *Madrid* Dec. 3. 1694, and lodg'd the first night at *Valdemore*, whence I turn'd somewhat out of the Road the next day to go to *Aranjeux*, mov'd with a curiosity to view the King's Palace there, the situation of which among Woodlands (a Rarity scarce ever to be met with in this Country) put me in mind of my native Country *England*.

Aranjeux. For the rest, the House is but ordinary for a Royal Palace, the Gardens and Walks not very large, yet better contriv'd than any I ever saw either in *Spain* or *Portugal*; here are many excellent *Statues* and *Fountains*, brought hither from all parts by the Emperour *Charles* V. and those that are more modern are very good ones; the great number of these *Statues*, of Brass and Marble, together with the pleasant *Fountains* all along the shady Walks and Arbours of large Elms, and some Oak and Ash, (great Rarities here as well as in *Portugal*) render this place very delightful, its situation being between two Hills, upon the very Banks of the River *Tagus*, from whence some Walks run up the Hills for a league together, yet is the Air counted not extraordinary healthful. Here the King keeps his best Male Asses for breeding.

I lodg'd the next night at *Ocanno*, a place noted for the best *Castile-Soap*, and the following night at *Cerral de Almogner*. As the Road betwixt *Madrid* and *Alicant* is passable

1694. bly good for a Coach, for the Country is generally fertile in Corn, Oyl and Wines, and the rocky parts produce abundance of Rosemary, Thyme, and suchlike Sweet-herbs, wherewith they feed their Sheep and Goats.

Poor and bad travelling in Spain.

The next place I came to was *Alvarazete*, noted for good Knives, Daggers, and Scissars; notwithstanding this the extream Poverty of the Country-people, and consequently the ill Accommodation one meets with upon the Road, (where you are oftentimes destitute of Provender for your Horses, a Bed, nay, Bread and Wine) renders travelling very difficult and tedious in *Spain*; however, I got at last safe to *Alicant* the 13th of *December*, after a journey of ten days in a Calash.

Alicant.

The Town of *Alicant* is pleasantly seated betwixt Hills along the Sea side, where there is a continual passage of Ships bound to or from the *Mediterranean*; it suffer'd much in the late War with the *French*, who with three Bomb-Vessels threw in about 4700 Bombs, and destroy'd six hundred Houses; they told it as a great Miracle, that above three hundred of the *French* Bombs fell upon the Cathedral dedicated to S. *Nicholas*, of which one only pierced thro' the Roof, whereas the whole Miracle was only to be attributed to the strong *Cupola's* and *Arches* which cover it. The *French* bombarded the Town with incredible dexterity, throwing their Bombs even over the Castle, that stands a good way above the Town, upon so high an Hill, that I had enough to do to get up to it, tho' when I came there I found nothing worth the trouble I had taken except a fine Prospect, the whole *Spanish* Garison consisting of only five or six Guards, and perhaps as many Guns.

Bombs shot by the *French.*

Alicant is of no strength, and the People so unfit to defend it, that at the time of the *French* Bombardment they all retir'd into the Mountains, not excepting the Officers themselves, and had certainly deserted the place, had not one Mr. *Newland*, an *English* Merchant, ply'd the *French* with two Guns from the Mole, and by his example encourag'd some of them not to leave the place to the *French*.

The Manners of those of *Valentia.*

The Gentlemen here of *Valentia*, both in their Dress and Actions, much more imitate the *French* than the *Castilians*; they are of a hasty, vain and base Temper, and so bigotted to their foolish Niceties, or *Spanish Punctilio's*, that upon a very slender occasion they will either murther one another themselves or hire others to do it, there being many of that sort of Mercenaries in this Country, who will sacrifice any man for a few *Pieces of eight*, which they commonly perform by shooting and waylaying: These Murthers produce sometimes no small Disorders, the Friends of the murther'd Party thinking themselves oblig'd to revenge his Death, go in strong Parties, some a hundred in a body, arm'd each with five Guns, (one Fusee, and four lesser ones in the Girdle) and so going into the Field, surprize one another wherever they can, it being their Principle not to attack their Enemy but upon a manifest advantage; I was told there were at that time two such Parties in the Mountains of forty on a side each, and I was credibly inform'd, that not long ago two such-like fellows were executed at *Valentia*, who confess'd that one of 'em had murther'd thirty three persons, and the other no less than seventy seven.

Government.

The Government of the Kingdom of *Valentia* is administred by a *Viceroy*, but the Town of *Alicant* has its peculiar *Governour*, who commands also the Garison when they have any, all their standing Forces thereabouts consisting in a few Troops of Horse and some Foot of the Militia, for the defence of the Coast.

The City contains betwixt thirty and forty thousand Communicants; their Civil Administration is by a Justice, like our Mayors, and some Aldermen; it has six Convents of Religious Men, *viz.* the *Jesuites*, *Dominicans*, *Austin Friers*, *Carmelites*, *Franciscans*, and *Capuchins*; two Nunneries, the *Monges de la Sangue* and *Capuchins*; and as many Parish-Churches, S. *Nicholas* and S. *Mary's*.

The present Condition of *Spain.*

For the rest, *Spain* is at present in a very low condition, thro' the weak Administration of the Queen-Mother, the King's want of Education, and the Feuds among the *Grandees*, which has depriv'd 'em of all their former strength both by Sea and Land, for want of Money, Provisions, and all other things requisite for the maintenance of a Fleet and Army, and, what is worse, without any future prospect of having these things redress'd. Tis true, the King's Revenues are very great, but being anticipated, little of 'em comes into the King's Coffers; for the *Spanish Indies* are computed to amount to ten millions a year in their Revenues to the Crown, and their Sea-port Towns must needs bring inconsiderable Customs, were it not that the Officers are both remiss and corrupted in their Places.

About half a league from *Alicant* is the famous Convent of Nuns, whither there is a great resort of Pilgrims, to pay their Devotions to the *Santta Faz* or *Holy Face* kept in this Nunnery; among these are especially many Seamen, who when they leave *Alicant* frequently make a Vow of performing their Devotions here after their safe return, which they perform bare-foot after a prosperous Voyage. The Story of this *Holy Face* runs thus: 1694.

The Story of the *Holy Face.*

Our Saviour going to his Crucifixion, a certain Woman call'd *Veronica*, who was just then moulding Dough, and had a Napkin girt about her, coming out of her House at the noise of the People, and seeing our Saviour's Face all dropping with Blood and Sweat, took the folded Napkin and so wiped his Face, the impression whereof remain'd upon the three folds; these the *Church* has preserv'd as holy Relicks, one whereof (they say) is at S. *Peter's* at *Rome*, the other in a Convent near *Malaga*, and the third here, which (they say) came hither over Sea, and landing in *Valentia*, upon the Confines of two Parishes, a great Contest arose which of them it belong'd to; to decide this Difference 'twas agreed to blind a certain Person, who should walk for some time with the *Santta Faz* thereabouts, and that those should be Masters of it in whose Precinct he hapned to drop it; which was done accordingly, and it hapning to fall in this place, a *Convent* and *Church* was founded for its preservation.

Its Vertue was the first time experienc'd in a great Drought, when being carried in Procession, it rain'd immediately, and that in great abundance. By permission of one of the Fathers I had liberty given me to look upon it a second time, as near as the Glass in which 'tis enclos'd would allow of, and found it rather to resemble the Face of a Child than a Man of that age as our Blessed Saviour at the time of his suffering, which made me look upon the whole as fabulous; and I remember, a certain *Italian* Painter seeing it, did not stick to say, *It was the worst daubing he ever saw.*

Once a Year, *viz.* the 17th of *March*, there is a great Feast celebrated at *Alicant* in memory of this *Holy Face*, when 'tis brought into the City, upon which occasion great Rejoycings are to be seen every where, and the Night generally concludes with Bonfires and a fine Fire-work.

The Procession on *Corpus Christi Day.*

During my stay at *Alicant*, I had the opportunity of seeing divers of their Processions, and among the rest that on *Corpus Christi Day*, one of the most celebrated in those parts: The first Pageant represented the History of *Adam* and *Eve*, how the Serpent entic'd her, how they eat the forbidden Fruit, and were threatned by the Angel with a naked Sword: The next, *Abraham's* Sacrifice of his Son *Isaac*, acted by living persons, who (as we were told) were Fishermens Children, and had their Lessons taught by the Priests, and their Pay from the Town for their acting.

These Pageants are made upon Waggons, with Boards laid upon 'em, both the Stages and Actors being thus drawn by Men along the Streets; these were follow'd by certain Gyants, to personate the *Gentiles*, after whom came a Serpent representing Temptation, and after this a Dragon with his Mouth wide open, to represent Hunger: Next to these came the several Companies of Tradesmen with their Banners; then the *Capuchins*, *Carmelites*, *Austin Friers*, and *Franciscans*, each carrying the Image of the Founder of their Order, and that of the Virgin *Mary*, splendidly attir'd; then follow'd some Morris-dancers, and after them some Churchmen of note and a few little Children dress'd up like Angels, strewing Flowers before the Bishop, who walk'd under a Canopy, carrying the Host.

The Temper of the *Spaniards.*

And thus I take my leave of *Spain*, in hopes of meeting with better Accommodation in *Italy*, it being certain that the general Poverty and villanous Inclinations of the People here will make one thank God to have pass'd their Country with safety; and as I am taking my Farewel of 'em, I must declare it as an undoubted Truth, that all the time I staid in *Spain* I neither saw nor heard of any honourable or generous Action done by a *Spaniard*, but frequently of the direful Effects of their vain Pride, Poverty, Thefts, Murthers and Deceits, which are too often committed here.

The Author's Voyage to Genoua.

THE 20th of *July*, N. S. 1695, I embark'd at *Alicant* on board a *Genouese* Vessel call'd S. *Francisco Xaverio*, Capt. *Carcanio* Commander; we set sail the next day, but 1695.

1695. but were forc'd back in three days by contrary Winds: *July* 31. the Wind turning fair, we set sail again, but were no sooner got to Sea when we met with three *Turkish* Rovers off *Cape Antonio*, but finding us prepar'd to receive 'em, steer'd off. Soon after we were again surpriz'd with harder contrary Winds, off the Gulph of *Valentia*, which cast us upon the Coast of *Barbary*, but the Wind veering about, we made again to the *Spanish* Coast, and passing in sight of the Islands of *Yuica*, *Majorca*, *Minorca*, and *Sardinia*, we stood close in for the Isle of *Corsica*, (belonging to the *Genouese*) within Gunshot of the Town of *Lagiasi*, a pretty little Seaport Town, the Harbour of which was enclos'd on each side with Mountains. I did not go ashore in our Boat, which was sent to get Intelligence of the *English* Fleet, but our Mariners told me, that the Inhabitants of these Mountains were generally *Banditti*, who never stir abroad unarm'd, to be always ready for Prey, or to defend themselves against the *Moors*, who often land in these parts.

Lagiasi in Corsica.

Coasting along this Island, we pass'd in sight of another little Town call'd *Carvi*. The Island all along the Shore is encompass'd with Mountains, of such a height that they are never free from Snow, but the inland parts are very fertile in all sorts of Provisions; it is of a large circumference.

The Harbour of Genoua. We were fifteen days at Sea before we arriv'd at *Genoua*, which was not till the 14th of *August*, when we cast Anchor in the Harbour, now defended by two Moles, for before the building of the last, (with incredible charge) which runs a vast way into the Sea, there was no safe riding at Anchor here, but now the stoutest Ships may lie close to the Mole: At the upper end of it stands the Lanthorn upon a little Rock, which serves for a sure Guide to Ships at a great distance.

Their Feast. My arrival happening a few days before the Feast of S. *Bernard*, I saw the Ceremony of their Doge's giving a Portion to twelve Nuns of the *Order* of S. *Jerome*, which is done every year in the following manner: Twelve Nuns of this Convent, who are inclin'd to marry, are brought from thence in Litters to S. *Bernard*'s Church, where after Mass being said in the presence of the Doge and Senate, the Doge bestows upon each of 'em a Note of two hundred Livres as their Portion; this done, they are carried back to the Convent, and being at full liberty to marry, any one may make suit to them thro' the Grates; if they agree the matter, 'tis well; but if not, and they die unmarried there, the Convent inherits the Portion.

They have another Feast on S. *Bartholomew*'s Day, celebrated in a Convent dedicated to this *Saint*, in honour of the *Volto Santto* or *Holy Face*, pretended to be kept there; tho' if it be true, that there are but three of these Faces, (as their own Tradition says) the *Catholick Fathers* must agree among themselves which are the true ones, since *Alicant*, *Malaga*, and S. *Peter*'s at *Rome* challenge three of 'em.

Their Churches. The Churches of *Genoua* are generally extreamly rich and magnificent, but the Cathedral dedicated to S. *Lawrence*, the *Annunciata* of the *Franciscans*, that of S. *Ambrose* of the *Jesuits*, and that of S. *Cyro* belonging to the *Theatins*, excell the rest in Marble and Painting.

Armoury. The *Armoury* is said to contain small Arms for forty or fifty thousand Men; they shew you also some Leather Cannon lin'd thro' with Brass, some murthering Arms, and the Royal Standard taken from the Duke of *Savoy*.

In the *Strada Nova* and *Strada Balbi* are many fair Palaces, and the *Suburbs* of S. *Pietro in Arena* are worth seeing upon the same account; the chiefest are, the Imperial Palace, and that of the Duke *d'Oria*; the long Iron Cage for Birds in the Garden of the last is broken down of late, because the Waves of the Sea us'd in the Winter-time to beat over the Walls.

Their Work-house. Their *Albergo* or Workhouse, a Square of above two hundred paces on each side, built a little way without the City, on one side of a Marble Rock, will be a stately Structure when brought to perfection; the *Statues* of the *Founders* are to be seen here in Marble, and the Foundation will imploy above two thousand poor People in constant Work and Pay.

Government. The *Streets* of *Genoua* are narrow, but cleanly kept: Their Government is Aristocratical, compos'd of a biennial *Doge* and eight *Senators*, who constantly dwell with him in the same Palace, from whence the *Doge* is not to stir but at certain times. As they may be easily bombarded at Sea, so they are careful not to disoblige those Powers that are Masters of a good Naval strength. Their *Doge* is crown'd with a Royal Crown, and is stiled Prince of *Savona*, Doge of *Genoua*, and King of *Corsica*. What Guards or Forces they keep on foot are *Germans*, *Swiss*, *Dutch* and *Corsicans*, not judging it for their Interest to exercise their own Countrymen in the Feats of Arms.

1695. After fourteen days stay at *Genoua* I set out for *Milan*; the first night I lay at *Campo Morone*, the next at *Voltaggio*, and the next following at *Grevi*; the fourth day I din'd at *Novi*, the last frontier Town towards the *Milanese*, but of slender defence; the same night I took up my Quarters at *Tortona*, the first frontier Town belonging to *Milan*, and came the next day to *Pavia*, the second City in the *Milanese*, tho' not very considerable at present.

Pavia. It is seated upon the River *Ticinum*; the Cathedral is an ordinary Structure, and the Launce shew'd here of *Orlando Furioso* seems a fabulous Story: The *Statue Equestrian* in the Piazza before the Cathedral is said to be made for *Constantine* the Great, but by others for *Antoninus Pius*. The *Augustin* Church is a handsom Fabrick, containing the Body of S. *Austin*, and that of *Severinus Boetius*. Here are also inter'd two *Englishmen* of Quality, *viz.* a Duke of *Suffolk* and one Bishop *Parker*, of the House of *Morley*, as the Inscription tells you. The *Francisean* Church is noted for the Tomb of the famous Civilian *Baldus*.

Milan. The next morning I continued my Journey to *Milan*, where I did not arrive till after four days and a half: The first thing I took a view of was the Cathedral, one of the most beautiful and largest Structures I ever saw, and when finish'd will perhaps be inferiour to none of that kind. The Statue of S. *Bartholomew*, by the hand of *Cilio*, and the Picture of our Lady, are accounted inestimable. The chief Architect of this Church was *Giovanni Antonio Honedeo*. The great Hospital is for its largeness and Revenues beyond what can be met with in any other place. The Convent of S. *Ambrose*, belonging to the *Benedictine Friers*, is spacious enough for two or three hundred of that Society, whereas there are never more than thirty or forty admitted at a time, who live in such plenty that most of 'em keep their Coaches; and they have several stately *Apartments*, three *Refectories*, one for Winter, another under-ground for the Summer-season, and another very large one above this.

The Library of S. Ambrose. The *Library* of S. *Ambrose*, founded by Cardinal *Borromeo*, is a stately Fabrick, containing (if I may credit this *Librarian-keeper*) 50500 Books: In another Room are kept no less than 14000 Manuscripts, and these all very choice ones.

From hence you go into the *Statuary*, where you see some Originals, and the best Copies of all the rarest Statues in *Rome*. Out of this you are conducted into another Room fill'd with Pictures of a great value, and some Medals and other Antiquities

In the Room where the Manuscripts are kept you see also the Pictures of some learned Ladies, as of *Cornelia Episcopeia*, *Isabella de Rosales*, &c.

I took afterwards a view of the Castle, which with all its Outworks comprehends a large tract of Ground, tho' at that time the Garison consisted only of three hundred Men; they told me it had two hundred and fifty Brass Guns mounted.

In the Cloyster of the *Jesuites* College I took notice of the Pictures of seven *Englishmen* reputed Martyrs among them, *viz.* *Alexander Briant*, executed in *England*, *Dec.* 1. 1581; *Edmund Campion*, who suffer'd at the same time; *John Cornely*, *Jul.* 6. 1594; *Roger Filcock*, *Feb.* 27. 1601; *Edward Oldcorn*, who was executed *April* 7. 1606; *Henry Garnet*, *May* 3. in the same Year; and *Francis Page*, *Apr.* 30. 1607.

The Shops in *Milan* where the Marble Statues are wrought, as also those for Crystal, and where they work in all sorts of curious Steel-works, and for Embroideries, are worth the Visits of curious Travellers, which you are permitted to do whether you buy or not. Among the Statues those in the *Capuzin*, where the Overseers of the Cathedral meet, are most excellent, representing *Adam* and *Eve*, by the hand of *Annibal Fontano*; that of *Adam* has the reputation of an admirable Piece.

I also took a view of the *Chamber of Rarities* collected by the noted Canon *Serati*, consisting in all sorts of Burning-glasses, Mathematical Inventions, Medals, Musical Instruments, and other natural and artificial Curiosities; but the present Possessor seems not to preserve them with the same Care and Ingenuity as they were collected by that great *Virtuoso*.

The Palaces here are scarce worth mentioning, the *Governour*'s being only a large *Gothick Structure*, and very old; that of the Grand *Dada* (Brother to the Pope's Nuncio in *England* under the Reign of King *James* II.) I found to be well furnish'd with some very good Pictures, and being told it was one of the best of *Milan*, I look'd no further. The *Civilians* have a noble College at *Milan*, many of the best Families applying themselves to that Study.

1695. Study. At the entrance into the Church of S. *Nazarius*, in the Niches of the Wall, you see eight Tombs of the *Trivultii*.

The Academy of Wits of *Milan* (mention'd by Mr. *Lassels*) known by the Name of *Nascosti* or *Obscure*, have made their Title good by this time, being so much hidden that the Antiquary who conducted me was surpriz'd to hear me enquire after 'em, the very memory of 'em being now lost.

The *Lazaretto* without the City is also a stately Building, and consequently worth the sight of a curious Traveller.

After six days stay at *Milan*, I set out thence for *Parma*, and taking my way over *Marignano*, (famous only for the Battel fought there by *Francis* I.) I lay that night at *Lodi*. *Lodi*, seated upon the River *Adda*, which affords 'em a communication with *Venice*, *Leghorn*, and some other places of *Italy*.

Piacenza. Next morning I continued my Journey to *Piacenza*, all this way thro' a plain and fruitful Country intermix'd with Rivulets, Trees and Meadows: About six miles on this side *Piacenza* you enter the Duke of *Parma*'s Territories, (after you have a little before pass'd the River *Po*) not distinguish'd by any mark.

The Cathedral of *Pincenza* is an old Structure, the Portico of which is supported by Pillars resting upon Lyons, but notwithstanding this it makes a glorious show within: S. *Antonin*'s Church is noted for the Tombs of S. *Victor*, S. *Fiavioli*, and other Saints. The Convent of the *Austin Friers* is very large and rich; but the Carving in the Sacristy, representing the Birth, Death, and Resurrection of our Saviour, is highly admir'd. In the Marketplace stand the Statues on Horseback of the two famous Dukes of *Parma*, *Alexander* III. and his Son *Ranutio*, the first a great Warriour, and the other as great a Politician and good Prince. The City had then a Garison of six Companies of Militia; they did not search our Baggage at the Gates, but took our Names, which are sent to the other Gate where one is to go out at, and there you are examin'd again. The Prince's Palace makes so indifferent a show, that there are many others in the City far exceeding it.

I went from hence to *Fientogela*, where I slept the same night, and met with nothing observable but a Woman, who by her grey Hair and wrinkled Countenance appear'd to be above sixty years of age, that was suckling a Child.

Parma. I continued my Journey hence to *Parma*, the ordinary Residence of the Duke of that name, tho' inferiour in bigness to *Piacenza*. The Prince's Palace is a large but confused Building and scarce half finish'd; adjoyning to it are the Coach-houses and Stables, and in a great Room over them the rich Harnesses for Coach-horses, and magnificent Trappings for Saddle-horses. I saw the so much celebrated Coaches, eight of which were very large and heavy, but not near so stately as some Travellers make 'em. I had no opportunity of seeing the inside of the Palace. The Duke's Garden (or rather *Orchard*) is rather pleasant than magnificent; at the upper end it has a very delightful Summer-house, and the Fountains and Waterworks are none of the worst, were they kept in good order. The Cathedral here is remarkable for the excellent Painting of the famous *Correggio*.

Reggio. From *Parma* I travel'd on by the way of *Reggio*, a handsom City, and an Episcopal See in the Duke of *Parma*'s Dominions, to *Modena*, where I arriv'd the same night. *Modena.* The first thing I did the next morning was, to view the Palace, where being admitted into all the Rooms, I found in 'em most excellent Paintings of *Correggio*, *Parmigiano*, *Bordonon*, *Titian*, and *Raphael Urbin*. Thence I went into the Stables, where I saw the greatest number of the finest Horses that ever I met with in one place in all my Travels. The present Duke employs daily a considerable number of Workmen on his Palace, which, when finish'd, will be a noble Building: All the Country from *Milan* (thro' *Lombardy*) to this place being a flat, plain and rich soil, is exceeding pleasant in the Summer, but must of necessity be almost impassable in the Winter.

After having bestow'd a little time in viewing what was worth observation here, I took Calash again, and soon left this Duke's Territories, and after having pass'd *Fort Urban.* a small River, entred the Pope's Dominions, and came to Fort *Urban*, a regular Citadel built by Pope *Urban* VIII. The *Armory* contain'd Arms for about four thousand, but the Garison exceeded not four hundred Men.

Bologna. From hence I went on directly to *Bologna*, the second City of the Ecclesiastical State, being both handsom and large, with noble Buildings, especially their Convents and Palaces; among the Convents, that of the *Dominicans* challenges the preference, being the biggest belonging to this Order I saw any where: They have also a neat Library, and a vast spacious Cellar fill'd with prodigious stores of the best Wines. The Convents of the *Franciscans*, *Austin Friers*, and *Carmelites* are also magnificent Buildings, and several of their Churches worth the seeing of a Traveller. The Cathedral has nothing to recommend it but its bulk. The curious Fountain of Marble, with Brass Statues, in the *Grand Piazza* over against the Legate's Palace, is a noble thing; and in the said Palace is the Cabinet of Curiosities of *Aldrovendin*. The University and publick Schools are goodly Structures, and most of the other Houses are well built, with Arches on both sides of the Streets, either to keep you from Rain or the scorching heat of the Sunbeams; 'tis much inhabited by Gentlemen, who are extreamly courteous in their Behaviour.

1695.

I continued my Journey from hence in a Calash that was just then returning to *Florence*; I lodg'd the first night *Florence.* at *Lojano*, and dined the next day at *Pietra Mala*, the first place under the *Great Duke*'s Jurisdiction; thence passing over the rugged *Apennines*, I came to *Fiorenzuola*, a little old Town, and lodg'd the same night at *Scarperia*, and so the next day to *Florence*, seated at the foot of the *Apennine* Hills upon the River *Arne*.

I visited the *Great Duke*'s Palace; the first Room below is curiously painted in *Fresco*, by *Giovanni de S. Giovanni* and *C. Bravo*; the other Apartments had curious Pieces of *Colonna*. Above Stairs I was shewn the excellent Paintings of *Pietro di Cortona*, and *Ciro Ferri*; and the Chambers of the Prince's Lodgings were adorn'd with the Pictures of the best Masters, *viz.* four Battels of *Bourguignone*, some others by *Salvator Rosa*, *Livius*, *Mense*, *Veronese*, *Peter* and *Paul Reuben*, *Andrea del Sarto*, *Dominichino Suternam*, *Fra. Bartholomeo Andrea*, *Mantegna*, *Rosse*, *Correggio*, &c. In the Cardinal's Lodgings I met with a great number of curious Paintings, and divers noble Cabinets.

The *Grand Duke*, *Princes* and *Cardinal* happening to be all out of Town then, I had the opportunity, in the company of a Lady of Quality, to see the *Mezzanini*, which are private Apartments in the uppermost Lodgings for the *Grand Duke* and *Princes* in the Winter season, never to be seen when the Court is there, but now shewn us by a Marquess, who was like our Lord Chamberlain, to the *Great Duke*.

From hence I went to the so much celebrated Gallery in the old Palace, to view the Rarities and Curiosities laid up there, which as they are very numerous, and described by many Authors before, so I will referr my self for a Catalogue thereof to them, as also for the most remarkable Statues there, the chiefest whereof stand in the Duke's Palace, tho' the *Equestrin Statua* of *Ferdinand* I. in Brass, in the Piazza of the *Annunciate*, made by *Giovanni di Bologna*, that of *Hercules* of the same Metal, and the *Centaur* in Stone, by the same Master, in the *Giardino di Cernassecca*, and the Statue of *Ajax* of *Grecian* Marble at the foot of the *old Bridge*, together with the Statues of the four Seasons of the Year on the Bridge of the *Holy Trinity*, are also very excellent Pieces. *See Misson and Brown's Travels.*

The chief Churches of *Florence* are, the Cathedral, *Churches of Florence.* whose *Cupola* was the first of that kind in *Europe*, the Work of *Brunelleschi*, the Painting by *Vasari* and *Zuccharo*: The Church of *S. Zenobio* is famous for its high and curious Steeple, built by *Scoto*, apart from the Church; the bald Man, by *Donatello*, is an excellent Piece, belonging to it. The *Cupola* of the *Annunciata* is painted by *Volterrane*. In the Church of S. *Maria Novella* belonging to the Convent of *Dominican Friers* the Council of *Florence* was held. The Altar in the S. *Spirito*, a Convent of *Austin* Monks, cost 100000 Crowns. The *Cupola* in the *Carmelites* Church is excellently well painted by *Giordano*. In S. *Mark*'s Church is the Tomb of St. *Anthony*, by *Giovanni di Bologna*. That of St. *Croce* has many fine Altars, and excellent Pictures over them; you see a most admirable Piece of the *Resurrection* over an Altar immediately on the left hand as you come into the Church by the great Doors, but by reason of some Nudities represented in that Picture, no Mass is said there.

After a view of the Churches, I took a walk to the *Poggi Imperiale*, so call'd from the present Great Duke's Grandmother, who was Sister to the Emperour; it has vast store of fine Pictures of the best Masters, as *Carracci*, *Perugino*, *Titian*, *Paul Veronese*, &c. The Offering of the three Eastern Kings, by *Ghirlandajo*, is esteem'd an admirable Piece; the four Pieces of our *Saviour's Sufferings* are done by the hand of old *Ligozzi*, and several curious Landskips by *Pandolpho* a *Polander*; but the Statue of *Adonis*, by the excellent hand of *Michael Angelo*, surpasses the rest. The Crystal-work in the Cardinal's Lodgings, made after the way of Filugrine, is also exceeding fine.

The

1695. The Great Duke's Stables are well stor'd with fine Horses, and near them is the place where is kept *Lyons*, *Leopards*, *Tygers*, wild *Boars*, *Bears*, *Wolves*, and other such like wild Beasts.

The Chapel of S. *Lawrence*, design'd for the Sepulchres of the Great Dukes, will be (when finish'd) the Masterpiece of the World. For the rest, the Streets of *Florence* are neatly pav'd with broad Stones.

Pistoia. After a stay of four or five days, I set out from *Florence* towards *Legorne*, taking my way over *Pistoia*, an old place of no consideration, and lodg'd that night at *Lucca*, a small Republick in the midst of the Great Duke's Territories; the City is well fortified, and their Magazine contains Arms for four or five thousand Men; their *Gonfalonier* or supream Magistrate (who is chang'd every two months) has his Swiss Guards and Attendance like a Prince. They allow no Stranger to wear a Sword without License, which is only for eight days at a time. They have their own Archbishop, who was a Cardinal at that time. The Cathedral is an ordinary Building: In their Church of St. *Frediano* lies interr'd an *English* King, S. *Richard*, who dying in his Pilgrimage to *Rome*, was canoniz'd.

Pisa. From *Lucca* I continued my Journey to *Pisa*, once a Commonwealth and its own Mistress, now under the subjection of the *Florentines*, whose Policy is to keep it low, which makes it appear in a desolate condition: The fine Cathedral, with the curious Brass Doors, the bending Tower, and the *Campo Santo*, are still remnants of its former greatness. The Knightly Order of S. *Stephen* is instituted to fight against the *Turks*.

Legorne. From hence I travel'd to *Legborne*, one of the neatest Seaport Towns that can well be seen: The Mole, which extends a great way into the Sea, renders the Haven very safe, and Ships may ride without danger close to the Wall; the Lanthorn serves for a Guide to such Ships as are to make the Harbour.

The Statue of *Alexander* the first Great Duke is highly esteem'd, and the *Bagnio* or place where the Slaves are kept at night and sent out to work by day, is very useful and convenient for that purpose; the *Turkish* Slaves have some Privileges allow'd 'em beyond the rest. The Cathedral is both low and meanly built, and so are almost all the rest of the Churches here, but the Streets are well pav'd with broad Stones, and neatly kept; the place is strongly fortified, and defended by a good Garison: As there is a great Trade here, so many Foreigners inhabit this Seaport, and among the rest the *Jews*, who are allow'd a good Synagogue.

From *Legborne* I return'd to *Florence* by post in one day, and set out the next day towards *Rome* in a Calash, which carried me thither in five days and a half, the weather being very bad. I lay the first night at *Poggi-bonzi*, a *Poggi-bonzi.* place noted for sweet-scented Snuff, and dined the next at *Siena*, a large handsom City, once a Commonwealth, *Siena.* but now under the Great Duke's subjection. The Cathedral here is a most beautiful Structure, especially the Pavement, compos'd of Marble of different colours, and so curiously contriv'd, that the various colours express the Lights, Shadows and Figures to the life.

This City has a very delightful Situation, its Buildings are very good, and the Streets pav'd with Bricks set edgeways, as in *Holland*; the wholsomness of the Air and the University invites many Foreigners to reside here for some time, especially the *Germans*, who challenge peculiar Privileges.

I went on from *Siena* to *Ponte Centino*, where I lay that night, and the next day passing by *Torricini*, *Radicofani* and *Aquapendente*, (once a Bishops See) I lodg'd that *Bolsena.* night at *Bolsena*, famous for the double Miracle wrought here for the confirmation of the Real Presence of Christ's Body and Blood in the Sacrament, on account of which that celebrated Feast of *Corpus Christi* was instituted by Pope *Urban* IV. They tell you, that a Priest officiating, and doubting the verity of the Article of the *Real Presence*, the Host he held in his hand dropp'd two or three drops of Blood upon the Stone he stood upon, which is shewn to this day, as is likewise another Stone, upon which (they say) the same Miracle hapned to confirm a doubting *Frenchman*.

Montefiascone. From thence we pass'd on to *Montefiascone*, a place sufficiently noted for excellent *Muscatello* Wine; it is a Bishop's Seat.

Viterbo. We lodg'd that night at *Viterbo*, a large City, and not unhandsom; the Cathedral contains the Tombs of four Popes: The next day I came by the way of *Monteroſi* to *Baccano*, where I staid that night, and the next day got in good time to *Rome*, by the *Via Flaminia*, thro' the *Porta del Popolo*.

It being now pretty late in the Year, I staid but four days at *Rome*, and so set out for *Naples* with the ordinary 1695. *Vetturino*, who oblig'd himself for seventeen *Roman Crowns* to carry me thither in five days, to stay for me at *Naples* till I could see it, and to bring me back in five days again, providing me with Lodgings and Entertainment upon the Road.

The first Town I came to after I had left *Rome* was *Marino*, about eleven miles thence; the next place we came to was the City of *Velletri*, a large Town, where we *Velletri.* lodg'd the first night. Betwixt *Rome* and *Marino* you see some Bowers and other antick Ruins of old stately Buildings, the Remnants of the ancient *Rome*.

From *Velletri* I pass'd forward by the way of *Peperno* to *Terracina*, an old Town seated near the Sea-side, and an *Terracina.* Episcopal Seat; so we travel'd on to *Fundi*, an inconsiderable little City, four miles beyond which you enter the Dominions of the Kingdom of *Naples*; near it you come upon the *Via Appia*, which reaches from *Rome* to the Ferry of *Carigliano*.

I was no sooner come to *Mola* (the ancient *Formiæ*) but *Mola or Formia.* my *Vetturino* or Carrier provided me a Boat to cr ss over (while Dinner was getting ready) to *Gaieta*, a small Isle *Gaieta.* in the possession of the *Spaniards*; I had much ado to get up to the Castle, which, after all, affords nothing remarkable but a fine prospect, and the Head and Bones of the once famous *Charles* of *Bourbon* Constable of *France*.

From hence I went to view the Rock that was split at the time of the suffering of our Saviour, into which you are led by a pair of Stairs into a little Chapel built between the two Rocks; it is built upon a vast Stone, which (they say) was miraculously cast cross the split Rock, and serves it for a Foundation; so I return'd to my Dinner at *Mola*, where to this day are to be seen some of the Foundations of the House of *M. T. Cicero*, as likewise his Tomb.

We came afterwards to the Ferry of *Carigliano*, near which you see the remnants of an Amphitheatre belonging formerly to the ancient and famous City of *Minturnæ*, *Minturna.* with a noble Aquaduct, but nothing is to be seen of it now.

Crossing the River in a Ferryboat, we travel'd on to *Capua*, an Archiepiscopal Seat, where I took particular *Capua.* notice of the Church of the *Annunciata*, a large and goodly Structure: From thence we went on to *Aversa*, once noted for a considerable City, but of moment now; and thence to *Naples*, the capital City of a great Kingdom.

As, according to agreement, I had but five days to stay, so I went the next day to Mount *Vesuvius*, about seven miles from *Naples*, and having satisfied my Curiosity, I return'd to *Naples*, and thence went the next day to *Pozzuolo*. I came first to the *Grotta di Pausilippo* (on the top of which, on the right hand, is *Virgil*'s Tomb) cut thro' a Rock, as 'tis said by *Cocceius Nerva*; its length is a measur'd mile, its height forty foot, and the breadth sufficient for two Waggons to meet with ease. Thence *See D. Brun and Misson's Travels.* I went forwards to the *Grotta del Cane*, where I saw the Experiments made upon a Dog and a lighted Torch, sufficiently describ'd by other Authors. Not far from this Lake are the sulphureous Sweating-baths of S. *Germane*, *The Stoves of S. Germane.* reputed an excellent Remedy against the *French* or *Neapolitan* Disease.

Going forward, I pass'd the Plains of *Solfaterra*, about *The Plain of Solfaterra.* a mile from *Pozzuole*, being computed 1242 foot long, and 1000 broad, environ'd with smoaking Hills on all sides; tho' you are sensible of a more than ordinary heat, yet holding a piece of Paper to the mouth of the Vault, I found the Paper damp with the Exhalations, without any sign of burning. The Smoaks are generally attended with roaring Winds, issuing from those subterranous Caverns. They refine hereabouts great quantities of Brimstone. The black Pool of boiling Water mention'd by Mr. *Lassels* is lost now, it being since cover'd with Earth.

From hence walking towards *Pozzuole*, I took notice by the way of the Ruins of an Amphitheatre, *Cicero*'s Academy, and his House. At *Pozzuole* I took Boat for *Baiæ*, observing by the way the stupendious Remnants of *Caligula*'s Bridge, which reach'd over the Sea from *Pozzuole* to *Baiæ*; landing here, I view'd the *Lacus Avernus*, *Baiæ.* on one side whereof you see the Remnants of *Apollo*'s Temple. Thence I came to the *Grott* of the *Sybilla Cumea*, with her Baths and Apartments; afterwards I visited *Cicero*'s Baths, the Baths of *Tritoli*, and S. *George*'s Bath. Rowing in my Boat to the other side of the Bay, I was shewn the *Mercato del Sabbato*, once a noted Street, where *Saturdays* Market was kept, but now a plough'd Field; as also the *Elisian Fields*, so highly celebrated by the ancient Poets: The *Piscina Mirabile* deservedly may be call'd

call'd wonderful. I obſerv'd alſo the ſituation of the Promontory of *Miſena*, the *Mare Mortuum* and the *Cento Camere*, two ſubterraneous Vaults made for the keeping of Slaves. I could ſcarce take a full view of *Agrippina*'s Tomb, being almoſt cover'd with Earth.

1695. Getting again into the Boat, they ſhew'd me the Ruins of *Nero*'s Palace, and the private Stairs contriv'd for the free acceſs of his Concubines, as alſo the places where formerly ſtood the Temple of *Diana* and *Lucullus*'s Palace. A great part of the ancient Town of *Baiæ* being ſwallow'd up by the Sea, I was told, that in a ſtill and clear day you may ſee divers Arches and the Pavement of ſeveral Streets under water, but it being ſomewhat tempeſtuous, I could diſtinguiſh nothing. In our return to *Pozzuolo* they ſhew'd me the *New Mountain*, which was caſt up in one night.

Naples. My time being but ſhort, I return'd immediately from *Pozzuolo* to *Naples*, where the firſt thing that did light in my way was the *Carthuſian* Monaſtery of S. *Martini*, ſeated upon a very high Hill, whence you have the faireſt proſpect in the World of *Naples*, the Sea, the Harbour, the Mole, the Arſenal, the adjacent Country, of Mount *Veſuvius*, the Cape of *Miſeno*, and the Iſle of *Capreæ*. The Chapel of this Convent is exceeding rich and neat, as is indeed the whole Fabrick; from whence I aſcended higher to the Caſtle of S. *Elmo*, built by *Charles* V. to bridle *Naples*.

The Cathedral of *Naples* is an ancient Structure, but has excellent Paintings, thoſe on the *Cupola* being by the hand of *Dominichino*. The *Jeſuits* Church is reckon'd the fineſt they are Maſters of; the excellent Paintings on the *Cupola* are done by Cavalier *Lanfrank*, now fallen down by an Earthquake, as are the noble, large, and ancient Pillars that ſtood at the entrance of the Apoſtles Church, the Paintings on the Roof of which are of the ſame hand, and thoſe on the *Cupola* by Cavalier *Benaſchi*. Here, they ſay, the Heads of the Images of *Caſtor* and *Pollux* were thrown down while S. *Paul* preach'd. In the great Church of the *Dominicans* is preſerv'd the Croſs which (they ſay) ſpoke to *Thomas Aquinas*. The *Annunciata*, S. *Maria Nova*, and that of the *Olivetan* Fathers, are all noble Structures.

The *Strada* or Street of *Toledo* at *Naples* is certainly the fineſt Street that can be ſeen, lined on both ſides with noble Palaces, and pav'd with fine broad Stones. The Palace of the Viceroy is a ſumptuous and magnificent Structure. The Mole runs a great way into the Sea, having a Lanthorn at the end, and well provided with great Guns ſince the laſt Wars.

Rome. My time being expir'd, I was forc'd to leave *Naples*, and return'd the ſame way to *Rome*, thro' the Gate of S. *John Lateran*, where I will begin to take a view of this famous City; but as divers Authors of unqueſtionable Credit and Ingenuity have given us very compleat deſcriptions of all the remarkable things there, ſo I will content my ſelf with mentioning them only in this place in the ſame order I took 'em.

See Lassels and Misson's Voyages into Italy.

The firſt Church I viſited was that of St. *John de Lateran*, the Mother-Church of *Rome*, which acknowledges no other Biſhop but *Rome*; the Tabernacle, in which are kept the Heads of S. *Peter* and S. *Paul*, ſtands in the middle of the Church, which is the fineſt next to S. *Peter*'s in *Rome*: in the Cloyſter of this Church are many remarkable Relicks, and among the reſt the bor'd Chair in which His Holineſs ſits when he firſt takes poſſeſſion of this Church.

The Baptiſtery of Conſtantine the great. From hence I went to the Baptiſtery of *Conſtantine* the Great, on the Walls whereof are very curious Paintings in *freſco*, by *Giacinto Ginignani*.

Paſſing along from hence I took notice of the Statue of *Henry* IV. of *France* in Braſs; the lofty *Guglia*, with *Egyptian* Hieroglyphicks; the noble Palace of *Sixtus* V, ſince beſtow'd upon the Poor; and the *Scala Santa*, with the Chapel call'd *Sanctum Sanctorum* on the top of theſe Stairs. The Church *Santa Croce*, ſo call'd from a piece of the true Croſs on which our Saviour ſuffer'd, preſerv'd here, was built by *Conſtantine* the Great, highly eſteem'd for many precious Relicks.

In my return thence towards S. *Maria Maggiore*, I took by the way a view of the *Columne* or Pillar in the little Church of S. *Praſſedo*, to which our Saviour was ty'd to be ſcourg'd, being brought to *Rome* by the Cardinal *Giov. Colonna*, whence the Family of the *Conneſtabile di Colonna* has got its Name. They ſay, that under this Church are buried the Bodies of 3000 Martyrs.

The Church of S. Maria Maggiore. Near it is the Church of S. *Maria Maggiore*, ſituate on the Mount *Eſquilino*; in the Piazza is a noble Column, upon which is fix'd a Statue of Braſs of the Bleſſed Virgin, with her Son in her Arms; the Model was the work of *Gulielmo Francaſe*, but the Caſting by *Dominico Herreri* a *Roman*: in the Church is a moſt excellent Picture of the Reſurrection of *Lazarus*, done by *Girolamo Muſiano*. The Chapel of *Sixtus* V. is a beautiful Piece, done by Cavalier *Dominico Fontana* a Native of *Milan*, in 1668. On the ſides ſtand two Marble Statues of *Sixtus* V. and *Pius* V. the firſt done by *Volaterra* or *Lombardo*, with moſt curious *Baſſo relievo*, the other by *Leonardo de Sarzana*. The Chapel of *Pius* V. on the other ſide of the Church is of the ſame Architecture as that of *Sixtus* V. viz. of the *Corinthian* Order, and of the ſame hand, but exceeds the other in Paintings, which are ſo numerous in both, that 'tis impoſſible they ſhould be remembered. As you come out of this Church toward the City, you ſee an ancient *Guglia* with *Egyptian* Hieroglyphicks. *The Chapel of Sixtus and Pius.*

Next I came to the Church of S. *Pudentiana*, built in the place where S. *Peter* liv'd at his firſt coming to *Rome*, and where he converted S. *Pudentiana* to the Chriſtian Religion: The Offering of the three *Eaſtern Kings*, by the excellent hand of *Pietro Paolo Oliveri*, in *baſſo relievo*, is an excellent Piece. The Church of S. *Maria della Vittoria* was the work of *Carlo Maderno*.

From hence I went by the way of the *Quatre Fontane* to the Garden of *Montalto*, eſteem'd one of the beſt in *Rome*, and thence to the Church and Convent of the *Capuchins* call'd S. *Maria de gl'Angeli*, built upon the Ruins of *Diocleſian*'s Baths, by that great Artiſt *Michael Angelo Buonarota*.

Next I view'd the Pope's Granaries, which are two ſtories high, and of a large circumference; and afterwards the Hill call'd *Monte Cavallo*, from the two *Coloſſian* Statues repreſenting Horſes of Stone, with a Groom to hold 'em. On the top of this Hill is the Palace *Mazarini*, famous for an excellent collection of Pictures; the *Aurora* in the Garden is of the excellent hand of *Guido Reni*. The *Chiſa Nova* or New Church is a beautiful piece of Architecture, the chief Architect of which was the famous *Martin Lunge*, but *Fauſto Rabeli* finiſh'd it; it has very curious original Pictures; the Roof is painted by *Pietro de Cortona*.

The Church of S. *Andrea della Valle* is both very large and beautiful within; the precious Chapel of S. *Ginetti* was the work of *Carlo Fontani*; the Church of S. *Nicholo di Tolentino* is one of the neateſt and fineſt Churches in *Rome* for its bigneſs; the fineſt of its Chapels is that of Monſ. *Gavott*, the work of *Pietro di Cortona*; the *Cupola* is painted by *Ciro Ferri*, and the moſt exquiſite *Baſſo relievo* over the Altar by *Coſimo Fancelo* a *Roman*. The Church of S. *Carlo Catinari* belonging to the Order of S. *Barnabo*, and that of S. *Pantele* near it, are both little handſom Churches.

The Church of S. *Ignatius*, or the *Roman* College, owns *Bartolomeo Ammanneto* a *Florentine* for its Architect; it is a large Structure, and they were then erecting a ſumptuous Altar for S. *Ignatius*, the Deſigners of which were Father *Graſſi* a Jeſuite, and the famous *Domenichino* and *Algardi*; ſome of the Paintings about the ſeveral Altars are done by *Pietro Sorri* a Jeſuite: The falſe *Cupola* is a curious contrivance, for tho' flat, the Perſpective is ſo nicely made, that it deceives the Eyes of the Beholders, the work of *Andrea Pozzia*, a Jeſuite: The four Statues on the Goſpel-ſide of the High Altar, repreſenting Faith, Hope, Charity and Religion, were done by *Simon Giorgino*, *Jacomo Antonio Savaggi*, *Franceſco Nivolone*, and *Franceſco Reinaldi*, all great Artiſts; as the four Cardinal Virtues in the Niches on the Epiſtle-ſide were by *Camillo Ruſcone*, a Native of *Milan*. The Painting over the Porch is of the hand of the incomparable and ingenious *Mutiano*. *S. Ignatius's Church.*

Near this Church is that of the *Maria Sopra Minerva*, belonging to the *Dominicans*; that extraordinary Piece in *baſſo relievo* repreſenting our *Saviour*, in white Marble, is the work of the greateſt Maſter in the World *Michael Angelo Buonarota*. Near it is the *Chiſa*, the Model of which Church was deſign'd by *Giacomo Barozzi*; the figure of our Saviour taken from the Croſs, in his Mothers Arms, is an admirable Piece of *Scipio Gaetano*.

Churches in the Corſo. In the Street call'd the *Corſo* I took notice of theſe following Churches, S. *Mark*'s, within the *Venetian* Ambaſſadour's Palace; that of S. *Carlo in Corſo*; the *Gieſu Maria*, one of the neateſt in *Rome*, the Walls are overcruſted with various Stones of value, and the Sculptures, Pictures and Gilding as curious as the Ingenuity of the Cavalier *Reinaldi* could contrive 'em. Somewhat lower is the Hoſpital and Church of S. *Giacomo de gl'Incurabili*; the Front was the Deſign of *Franceſco Volterra*.

As you go on to the *Porta del Populo* you paſs by two little Churches, S. *Maria de Monte Santo*, and S. *Maria de Miracoli*, anſwering one another at the Extremities of three Streets from the *Piazza del Popolo*, and built in the ſame form by that great Architect Cavalier *Reinaldi*;

1695. they are both very neat, tho' the first has the preference before the other, especially by reason of the excellent Paintings done by *Carlo Maratti*; the Tombs of Cardinal *Guesnai* and his Brother are the Works of Cavalier *Lucenti*.

In the middle of the *Piazza* stands a high *Egyptian* Pyramid, adorn'd with Hieroglyphicks, placed here by *Domitian Cæsar*. The S. *Maria del Popolo* is just within the Gate, where formerly *Nero*'s Sepulchre was; the *Cupola* was painted by Cavalier *Lanfranc*.

On this side appears the most noble entrance in the whole World into the City, affording a Prospect along the *Corso* as far as S. *Marco*, at least a mile in length, besides which you may see near as far into two others on each side of the Churches, as here [illegible] these both, one leading to the Bridge of S. *Angelo*, the other thro' the *Piazza del Popolo*.

Rome by Mr. Perrault. Pompous.

The Piazza *Navona* is an oblong Square, adorn'd with the best Fountains in *Rome*, divers stately Palaces, and the neat Church of S. *Agnes*, built by that great Architect *Borromini*, tho' the *Cupola* and *Cupola* were the work of Cavalier *Bernini*. The Pictures of the four Angels in the *Cupola*, by *Giovanni Battista Venetian*, and the other Paintings of the said *Cupola* by *Ciro Ferri*. In the same Piazza is the *Spanish* Church call'd S. *Girolamo*, and the College of Lectures for the Civil Law, call'd *Sapienza*.

From hence I went on thro' the Piazza *Medina* to S. *Lewis*, a large and handsom Church and Hospital belonging to the *French* Nation; the chief Architect of both was *Giacomo della Porta*.

Hence I pass'd on to the *Rotunda*, or the *Pantheon*, one of the most ancient Temples of *Rome*, of a circular form. Here are interr'd a great number of *Virtuosi*, and among the rest a famous Civilian named Dr. *Giles*, an *Englishman*, with his Effigies upon his Tomb in Marble, by *Michael Angelo*. The magnificence of the Portico and Pillars, together with other Excellencies belonging to this Structure, soon discover it to be one of the best Pieces of Architecture.

See Fer. Voy. Rome.

Taking one day a walk without the Gates, I took a view of the Church of the three *Fountains*, where they shew the Pillar S. *Paul* was beheaded upon: The Picture here of the Crucifixion of S. *Peter* is of the hand of *Guido Reni*. The Church of S. *Maria di Scala Cœli* was so call'd, because S. *Bernard* saw here a Ladder with Angels ascending and descending. The Church of St. *Paul*, formerly the Temple of *Mars*, was dedicated to S. *Paul* by *Constantine* the Great.

Betwixt this Church and the City Gates is a little Chapel built in memory of St. *Peter* and *Paul*, on the places where they took their last farewel of one another in order to suffer Martyrdom. The Tomb of *Caius Cestius*, built in form of a Pyramid, of white Marble, within the City Wall, half on one and half on the other side of it, near S. *Paul*'s Gate, is perhaps the most entire Monument of Antiquity in *Rome*, and is likely to last many Ages longer.

Not far thence is the *Monte Testaceo*, whence I went on to *Constantine*'s Arch, adorned by the Spoils taken from *Trajan*'s Arch. The Amphitheatre for *Coliseo* was the work of *Titus Vespasian*, whose Ruins sufficiently testifie its magnificence; they tell you here for certain, that a great Arch of this Structure tumbled down that very moment Pope *Innocent* XI. died. Near to it are the Baths of *Titus*, and not far thence the Temples of the *Sun* and *Moon*. Next to this comes the Triumphal Arch of *Titus Vespasian*, erected after his Conquest over the City of *Jerusalem*; among other carv'd Trophies, you may distinguish the golden Candlesticks he brought from *Jerusalem*, and on the top *Jupiter* under the shape of an Eagle, with *Titus* on his Back, and he flying up towards Heaven.

Vespasian's Amphitheatre.

Not far thence stand the Temple of Peace built by *Vespasian*, and that of *Venus* by *Julius Cæsar*. The ancient Temples of *Castor* and *Pollux* are now converted into one Church, dedicated to S. *Cosmo* and S. *Damian*. In the *Campo Vaccino* you see three remaining Pillars of the Temple of *Jupiter Stator*, and in the same place the Church of S. *Maria Liberatrice*, near which was the ancient *Lacus Curtius*.

Betwixt the Mount *Palatine* and *Aventine* was formerly the famous *Circus Maximus*, adorn'd in those times with the same two stately Obelisks, one whereof is now placed before the Church of S. *John de Lateran*, the other near the *Porta del Popolo*. Near unto the Triumphal Arch of *Septimius Severus* and his Son *Caracalla* stood anciently the Temple of Concord, and the remnants of the Dungeon where S. *Paul* was kept under-ground, but they are scarce to be discover'd now. Upon Mount *Celio* is a Church and Convent call'd St. *John* and St. *Paul*, in the possession of some *English* Father of the Order of the *Dominicans*.

1695.

From hence I walk'd up to the Capitol, where the first thing I met with was the Brass Statue on Horseback of *M. Aurelius*, esteem'd the finest in the World. Coming into the Hall, I there took notice of the excellent Pictures done by Cavalier *Giuseppe Arpino*, as a Proof of the Statues and Pictures of the best Masters in the other Chambers of this Palace, sufficiently describ'd by other Travellers. Adjoyning to the Capitol is the noble Church of S. *Maria in Aracœli*, from whence I went to that of S. *Maria in Cosmedin*, a very ancient Church, as also to S. *Tomaso degl' Inglesi*, formerly call'd *della Sanctissima Trinita*, given to the *English* by *Gregory* XIII, who now call it S. *Thomas à Becket*; the Society consists of *Jesuits*, their Church is small; Cardinal *Howard* made a considerable addition to this Convent, for he having built a Palace upon their Ground, afterwards left it them for a College, but it was not fill'd in my time.

Mus. Mag. Rom. Very fine.

The Library.

Not far thence, on the Mount *Pincio*, stands a Palace belonging to the Great Duke of *Florence*, which for its admirable Prospect and pleasant Gardens is highly valu'd at *Rome*. Underneath this Hill stands the Fountain call'd the *Barcaglio* or *Little Boat*, in the Piazza of *Spain*, and near it the College *de propaganda Fide*, where Students of all Nations may be instructed in the *Roman* Faith *gratis*. The Church of S. *Antonio de Portugesi* is small, but well stor'd with curious Pictures.

The Palaces at Rome.

One day I went to see the Churches of S. *Sebastian* and S. *Lawrence*, about a mile without the Gates; the first is built upon the *Via Appia* over the Catacombs: The Chapel where this Saint's Body is interr'd is very glorious, done by *Ciro Ferri*.

Returning from S. *Sebastian*, I view'd *en passant* the Cape *di Bove*, said to have been the Monument of the Wife of the Consul *Marcellus*; and near it the Ruins of *Caracalla*, the Ruins of the Walls whereof are undeniable instances both of its ancient grandeur and circumference! Here stood in ancient times the *Gingle*, remov'd thence to the Piazza *Navona*. Near this *Circus* you see also some remnants of the Wall where the *Prætorian* Bands had their Quarters. I took also a view of the little Chapel call'd *Domine quo vadis?* The Church of St. *Lawrence* stands near the Road of *Tivoli*; the most remarkable things here are two *Gothick* Tombs with excellent *vasso relievo* upon them.

The Manufactures and Columns of Rome.

But, before I take my leave of the Churches of *Rome*, I must not quite pass by in silence that magnificent Structure, I mean the Church of St. *Peter*'s: The four rows of Pillars supporting the grand Portico round the Piazza before the Church make the most glorious shew in the World; the Designers of this Piazza were the Cavaliers *Bernini* and *Reinaldi*. In the middle of this Piazza stands that most noble *Gugnal*, rais'd on a magnificent Pedestal, contriv'd by *Fontana*; *Constantine* the Great was the first Founder of this Church, *Julius* II. enlarg'd it, and *Paul* III. brought it into the form of a Cross by the Skill of *Michael Angelo Buonarota*; the following Popes carried on this great Work, and *Pius* IV. erected the Front, the Design of *Giacomo Barozzi*; the Cupola was added by *Sixtus* V. by the direction of Cavalier *Fontane*; the high Altar under this Cupola was design'd by *Bernini*; and at the feet of the Pilasters which support the Cupola are four Statues twenty two palms high each, representing *Veronica*, S. *Helena*, S. *Andrew* the Apostle, and S. *Longinus*, done by *Francesco Mochi*, *Andrea Bolgi*, *Francesco Quesnay* a *Fleming*, and by *Bernini*. The Tomb of *Alexander* VII, with his Statue in a kneeling posture, with the four Cardinal Virtues about it in Marble, is done by the same hand; but the peculiar Beauties of this Church being so nicely describ'd by others, I will not enter upon any further particulars, which, if describ'd to the utmost advantage, would require an entire Treatise.

Tivoli.

Fuligni.

From the top of this Church, where I was viewing the Cupola, I was shown the Mount where *Charles* Duke of *Bourbon* was slain by a Cannon Ball, as he was levelling his great Guns against the Castle of S. *Angelo*.

In my return from this Church I took notice by the way of the Workhouses, where a great number of People were employ'd in hewing and polishing of Marble and other Stones, as also in beating Marble to dust in Mortars; this Drudgery being inflicted by way of Pennance upon poor Bigots, they undergo this Toil with a great deal of Patience and Industry, and so the Church is serv'd better *gratis* than others for their Money.

Mascrata.

Loreto.

Adjoyning to this Church is the *Vatican* Palace; the Hall, into which you enter by easie Steps, is curiously painted by *Paul Brill* a *Fleming*, as the little adjacent Chapel was by *Romanelli*; and one of the largest Dining-rooms by *Andrea Secchi*, where is also a curious Piece

The Vatican

of

1695. of *Pietro de Cortona*; there are two other Rooms painted in *fresco* by *Julio Romano*, and three others by *Raphael Urbin*, (reckon'd the best in the World) and another little Chapel by *Zucchero*, and the Roof of another by *Guido Reni*; the Maps and Towns in the long Gallery by *Paul Brill*, and the great Hall by *Vasari*; the Paintings in the great Chapel are of the excellent hand of *Michael Angelo Buonarota*, but the darkness of the Room is no small diminution to their lustre.

The Gardens are exceeding curious in Waterworks and most exquisite Statues, describ'd by other Authors.

I also saw the Armoury, in which (they told me) were Arms for 62000 Men. But as we leave the *Vatican* we must not forget its Library.

The Library. In the Antichamber for transcribing and copying Manuscripts are divers good Pictures of *Paul Bril*; thence you enter the Library it self, where the Manuscripts are kept in Boxes round the large Pillars that support the Fabrick, and the Books on the sides of the Walls, likewise in Boxes, lock'd up. Among the Manuscripts I took notice of the ancient Septuagint, from whence the Bible has been publish'd; a very ancient *Terence*, with the Habits of the Actors; an old *Virgil*, &c. On the right hand of the upper end of the same Room, as you are going into the Gallery (likewise fill'd with Presses of Books) is an additional Building made for the reception of the Library of Queen *Christiana* of *Sweden*.

The Palaces at Rome. The Palaces belonging to private persons I visited were that of Prince *Justiniani*, the Palace *Farnese*, lately inhabited by the said Queen of *Sweden*, the little *Farnese* in *Lungara*, those of *Barberini* and *Borghese*, besides the Villa's of *Ludovisio* and *Borghese*; the vast variety of rich Furnitures, exquisite Pictures, and most excellent Statues, with their noble Gardens and almost inimitable Waterworks, and other Curiosities, having been describ'd long before by divers Travellers, who were Eyewitnesses of their Grandeur and other Perfections, I willingly supersede to enter upon the particular description of 'em at this time.

The Mausoleums and Columns of Rome. Not far from the Palace *Borghese* is the *Mausoleum Augusti*, or Sepulchre of *Augustus*, the remnants of which are undeniable proofs of its ancient greatness: The same may be said of the *Moles Adriani*, or the Sepulchre of *Adrianus Cæsar*, now converted into the Castle of S. *Angelo*, the only place in *Rome*, where the Pope keeps a constant Guard, being his State-Prison.

There are also some noble ancient Columns in *Rome*, as that erected to the honour of *Trajan*, of white Marble, by that great Architect *Apollodore*; and the Column erected in honour of the Emperour *Antonine*, likewise of white Marble, and curiously wrought in *basso relievo*.

Having satisfied our Curiosity in viewing *Rome*, I left that famous City *Nov.* 24. 1695, in order to pursue my intended Journey for *Venice* by the way of *Loretto*: I pass'd over the *Ponte Molle*, a mile distant from *Rome*, famous for the Battle fought here betwixt *Constantine* the Great and the Tyrant *Maxentius*. The next night I lodg'd at *Castel Nuovo*, and the next following at *Otricoli*, the Road being very bad, which grew worse the next days Journey, over Mountains and Rocks; I dined at *Narni*, and came in good time to *Terni*, an ancient Episcopal Seat, but inconsiderable now; the Cathedral had nothing remarkable except the Tomb of S. *Anastasius* Bishop of this place. The next morning setting out early, I came in good time to *Spoleto*, another Bishop's Seat, but soon after continued my Journey to *Foligni*; they tell you strange things of this City, that it was built by the *Longobards* or *Lombards*, and of such strength and consideration, that their Kings resided here for some time: Certain 'tis, that its situation is very pleasant, in a fruitful Country, and that the noble broad way near the City seems to be a remnant of its former grandeur.

Having fifteen miles to travel before Dinner to *Saravalla*, I travel'd with as much expedition as the foul weather and mountainous Country would permit. After a slender Entertainment in this poor Village, I travel'd on to another more wretched than the former, call'd *Ponte della Trave*, seated among prodigious high Mountains, yet this place had a *Franciscan* Convent erected there in honour of the Well where, they say, St. *Francis* turn'd Water into Wine.

I dined the next day at *Tolentino*, an old City, and lodg'd at night at *Maccrato*, a large City, containing five Parish-Churches, eight Convents, and eleven Nunneries. The next morning I soon came to *Loretto*, a place sufficiently noted for the vast concourse of Pilgrims that resort thither from all parts, to pay their Devotions and Offerings to the Holy House, as they call it, said to be the same where the Blessed Virgin was saluted by the Angel, and translated to this place *Dec.* 10. 1294, under the Pontificate of Pope *Boniface* VIII, for the further description of which, with its Treasury, and all other Curiosities belonging to it, I will referr my self to those Authors who have publish'd their Travels into those parts. 1695. See *Brown's*, *Ray's*, *Lassels's* and *Misson's* Voyages.

Going pretty late from *Loretto*, I travel'd no further that night than *Ulne*, which has but one Inn, but perhaps the best I ever met with in this Country. Not above an *Italian* mile thence, upon the *Adriatick* Gulph, lies *Ancona*, a large City and a very ancient Harbour, fortified first by *Trajan*, which have been since augmented by several Popes; the next day I dined at *Senegallia*, a Bishop's Seat and a Garison Town, not far from the Sea-shore; here I refresh'd my self with very good Oysters: I travel'd the greatest part of the Afternoon very pleasantly along the Sea-side, and by the way of *Fano* (another City) came by night to *Pesaro*, where I took up my Lodgings.

Pesaro. This is a considerable City, govern'd always by a Cardinal with the Title of *Legato a Latere*, who is attended by his *Swiss* Guards. The Piazza has, besides the Governour's Palace, divers stately Structures; in the middle of it you see a Marble Statue upon a Pedestal representing Pope *Urban* VIII, sitting in a Chair in his Pontifical Habit; the Fountain is also a good piece of Workmanship.

Rimini. We travel'd but slowly the next day, by the way of *Cattolica* (a pitiful Village) to *Rimini*, where I lay all night, and feasted my self once more with good Oysters. Near the East Gate I took notice of a Marble Triumphal Arch erected to *Augustus Cæsar*, and further in the Town of a Statue of Brass of Pope *Julius* II sitting in a Chair. The next day I dined at *Cesene*, an ancient Episcopal See, and by a pleasant Road pass'd *Savignano*, or little *Rome*, surrounded with a very ancient Wall, and so continuing to go on in the same delightful Road, came that night to great *Furli*, five miles distant from the former: Early in the morning I travel'd on to *Faenza*, a goodly City and Bishop's Seat, and dined at *Imola*, another Episcopal City, and taking my way thro' *Castello Pietro*, (another City) I reach'd S. *Nicolo* by night; from this place to *Bologna* is no more than ten miles, where having rested my self for one day, I hir'd a Calash to carry me in two days and a half to *Padua*. Little and great *Furli*.

I lodg'd the first night at S. *Pietro* in *Casal*, a place of little note, the next morning I took my way thro' *Ferrara*, a very ancient place, owing its origin to the *Goths*, seated upon the *Po*, and beautified with many stately Palaces; it being a frontier place on the Borders of the *Venetian* State, the Pope maintains a good Garison here: The Cathedral is large, but an old Building. *Ferrara*.

Not long after I pass'd the *Po*, the common Boundary on that side betwixt the Ecclesiastical State and the *Venetian* Territories; I dined that day at an *Hosteria* or Inn by the way, and lodg'd at *Rovigo*, the ancient *Adria*, govern'd by a *Venetian Podesta*; in my way hither I cross'd another River call'd the *Canale Bianco*. *Rovigo*.

The next day's Journey brought me to *Padua*, now the largest City belonging to the *Venetians* next to *Venice* it self; it is encompass'd with a strong new Wall. The Church where S. *Anthony*'s Body is kept is a very ancient Pile of Building, but his Chapel on the left side of the Church is a curious piece of Workmanship of white Marble: In the Church-yard you see the Statue on Horseback of the famous *Venetian* General *Gattamelata*. The Convent of St. *Justina*, with its Church, is one of the largest, stateliest, and best endow'd in *Italy*. Before the Church is the *Campo* where is kept a monthly Fair for Cattle, and is us'd instead of a *Corso*. At one end of S. *Lawrence*'s Church they have erected on the outside a Marble Tomb in memory of *Antenor* their first Founder, the Inscription in *Gothick* Characters, justly transcrib'd, contain these following Verses, the interpretation of which has puzzled several learned Criticks: *Padua*.

C. *Inclytus Antenor patriam vox nisa quietem*
Transtulit huc Exetum Dardani namque fugæ;
Expulet Euganeos, Patavinum condidit Urbem
Quem tenet hic humili, marmore casa, domus.

The Cathedral of *Padua* is but an indifferent Structure, but its Endowments make an ample amends for this defect; the then Bishop was a Cardinal, a very good liver, and who would willingly have introduc'd a better Discipline among his Clergy; his Palace adjoyning to the Church has nothing extraordinary in it, but the Palace of the *Podesta* presents it self very handsomly without, and the great Hall is worth the sight of any curious Traveller.

1695. As the Gentry or Nobility belonging to this place are descended of the most ancient Families of *Italy*, tho' now reduc'd to a low ebb of Fortune by the severity of the *Venetian* Government, so 'tis the interest of the *Venetians* to keep 'em so, for fear they should one time or other be in a condition to recover their ancient Liberty.

Besides many learned Men, *Titian* the great Painter was a Native of *Padua*. Their University was formerly as famous as the City, and to this day a considerable number of Students from all parts of *Italy*, and some *Germans* and *Poles*, frequent it.

From hence I set out for *Venice* in a Boat drawn by Horses, as far as *Lizza Fetika*, and from thence in a *Gondola* to *Venice*. *Venice*. I was not so much surpriz'd at the beauty of this City as at its stupendious situation, having scarce any other Foundation than wooden Piles, and Water instead of Walls for its defence. The famous Bridge of *Rialto* is built over the great Canal, which on both sides is lined with stately Palaces, where in the Summer Evenings Persons of Quality keep the *Corso* in their Gondola's, as in other places they do in their Coaches.

In the *Piazza* of S. *Mark* is the Doge's Palace, with the *little Arsenal*, and opposite to it the Library of S. *Mark*, as a little above the Palace stands S. *Mark*'s Church, adjoyning to which is the Treasury of S. *Mark*. In the same Piazza, as you come from the Sea, stand the two celebrated Pillars of *Porphyr*, with S. *Mark*'s Lyon upon one, and S. *Theodore* upon the other. The Churches of S. *John* and S. *Paul*, S. *Chrysostom* and *Salvatore*, as also that dedicated to the Apostles, have excellent Paintings; and that call'd the *Madona di Salute* is a very beautiful Structure.

I us'd sometimes to take a walk in the Garden of S. *George*'s Convent (the only place for a walk) belonging to the *Benedictines*. In their Chapel they pretend to shew you in a Marble Pillar a natural Crucifix, but if you get upon the Altar to view it nicely near hand, you may discover it to be artificial. In their Refectory is an excellent piece of Painting of the Lord's Supper, done by *Guido Reni*.

The great Arsenal, which is surrounded with a Wall of about three miles in compass, is well stor'd with all sorts of Arms and Instruments both for Sea and Land, and employ'd a great number of People.

Venice is famous for the finest large Looking-glasses (made in the Isle of *Murano*) and the best Treacle, because the adjacent Hills afford great store of Vipers, one of the main Ingredients in this Composition. I hapned to be there in the Carnival-time, which is spent in Opera's, Masquerades, and Balls, when intriguing is so much in fashion at *Venice*, that there is scarce an Inhabitant there but what will afford a Chamber to a couple of Masks; at the same time every body is allow'd to play at the *Redoubt*, (a place like our Groom-porter) where no body else is admitted but what is a *Noble Venetian* at another time.

After three months stay at *Venice* I return'd to *Padua*, and thence set forward by the way of *Vincenza* and *Verona*, towards *Vienna*.

Vincenza. *Vincenza* is a well-built City, with very rich Inhabitants, belonging to the *Venetians*, as does also *Verona*, seated upon the River *Adige*; here is to be seen an Amphitheatre one of the most entire *Roman* Antiquities of all *Italy*, they were then bestowing a considerable Sum of Money to repair it.

We had scarce left *Verona* but we began to ascend the Hills; the first night we lay at *Scravalle* upon the *Adige*, and the next morning pass'd the *Chiusa*, a Pass between the *Venetian* Territories and *Tyrol*, having the *Adige* on one side, and on the other inaccessible Rocks, adjoyning to which are a few Cottages, the Habitations of those that guard this narrow passage; the Rocks on that side which leads from the *Venetian* Territories are excessive steep, we were forc'd to take our Horses out of the Calash, and to have it drawn down by Men.

I lodg'd the same night at *Alla*, and taking my way *Alla*. the next day over *Roveredo*, came the same night to *Trent*, a place famous for the last Council held there, under the Pontificate of *Paul* III. and *Pius* IV, where were present 7 Cardinals, 2 Legates, 3 Patriarchs, 37 Archbishops, 230 Bishops, 71 Abbots, 7 Generals of Religious Orders, 146 noted Divines, and the Ambassadours of all the *Roman Catholick* Princes and States. In the Chapel of the Church of S. *Maria Maggiore*, where the Council sate, you see a Picture representing the true order of their Session.

Bolza n. The next day I travel'd on thro' *Salom* to *Bolzano*, a place famous for its Fair, especially of Silks, once a Year; it was just kept at that time. We had scarce left *Bolzano* but we also quitted the River *Adige*, and soon after came to *Wasock*, another River, not so large as the former, but no less rapid, being supplied with large Brooks from the neighbouring Hills, which are intercepted in their passage by divers Cataracts or Waterfalls. I lodg'd the same night at *Celman*, and having dined the next day at *Brixen*, lay at *Sterzingen*, and so came the following day to *Inspruck*, a City seated among the Mountains, cover'd with Snow all the Year round. 1695.

Inspruck. It is neither very large nor very healthful, the Hill which hangs over it, and is most commonly cover'd with Clouds, making it then (tho' in *July*) so dark and cold, that we could very well have endur'd a Fire. For the rest, the *Tyrol* Hills are full of Trees, most of 'em Firrs, which harbour abundance of wild Beasts, as Foxes, Wolfs, Bears, and wild Boars.

I visited the Palace, (then the Residence of the Queen Dowager of *Poland*, the Emperour's Sister) which has nothing extraordinary belonging to it, except that in the Gardens are some good Brass Statues, among which that of the Emperour *Ferdinand* on Horseback excels the rest. Near unto the old Palace you see another House built of Wood, for the security of Her Majesty and the Princes her Sons in time of Earthquakes, which happen frequently here.

Not far thence is the Riding-house, a handsom and well-contriv'd Building, well provided with good store of fine Horses.

The *Franciscan* Church contains about twenty eight Statues of Brass of Men and Women, and some Emperours. The Balcony of the Town-hall is cover'd with massy Gold, said to be done by one of their Princes nam'd *Frederick*, who keeping a very mean Court, was in derision call'd *Frederick with his Leather Satchel*; to contradict which, he put himself upon this vain proof of his Riches, and at the same time order'd his Statue to be made of Brass, with a poor man's Bag at his side, which is to be seen to this day among the Statues of their other Princes in the Church.

I took particular notice, in my passage over the *Tyrol* Hills, that the Inhabitants were tall and strong-bodied, what little Ground they had was very well cultivated, and scarce any poor People were seen among 'em.

I left *Inspruck* in the Evening, and came to *Hall*, where I embark'd upon the River *Ihn* for *Vienna*; in my passage *Schwatz*. I saw *Schwatz*, where they work the Silver Ore that is brought thither from the Mines out of the Mountains: We met abundance of large Boats laden with Corn from the Country of *Bavaria*, which going against the Stream, had sometimes twenty six Horses to tow 'em along.

Rotenburgh. The next place we pass'd by was *Rotenburgh*, in the Castle of which Count *Serini* a *Hungarian* was confin'd Prisoner for life. *Kuffstein*. The next place to this was *Kuffstein*, upon the Borders of *Bavaria*, and soon after found the Country more plain and open, and the Soil exceeding fertile, not full of Firr-trees, like the Mountains.

Rosenheim. Afterwards I pass'd by *Rosenheim*, a handsom large Town, and going along with a swift current, row'd that day eighty *Italian* miles to the City of *Vassenburgh*, where *Vassenburg*. I lay all night, and the next day passing by *Kramburgh*, *Mildford* and *Oeling*, (a place famous for the miraculous Image of our Lady) came to *Brunaw*, a considerable City, and of some strength, in the Country of *Bavaria*, from *Brunaw*. whence we row'd on to *Schardingen*, another pleasant and *Schardingen*. well-seated City, the last on that side belonging to the Elector of *Bavaria*. The *Dome* or Cathedral was very large, and a goodly Building, but my stay being short, I had not the opportunity of taking a full view of it, being extreamly pleas'd with this place, where, as well as all over the Country of *Bavaria*, we met with good Victuals, stout Beer, and convenient Lodgings.

The next morning passing by *Newburgh*, we soon after quitted the *Bavarian* Territories, and came into the Bishoprick and Principality of *Passau*. *Passau*. Its capital City being of the same Name, is most deliciously seated upon the *Danube*. The great Church here is esteem'd the finest of *Germany*, and I must confess, that of all that ever I saw in my Travels, but few exceeded it. Next to it is the Episcopal Palace, and near that the Jesuites College, a stately Structure. The *Capuchins* on the other side of the *Danube* boast of a miraculous Image of our Blessed Lady.

From *Passau* we pass'd forward by *Linz*, a City of *Linz*. *Austria*, famous for excellent Gunbarrels made here, and lodg'd that night at *Matthausen*: The next day we row'd by that noted Whirlpool call'd the *Wirble*, which at low water is very dangerous, but it being then an high water and day-light, we pass'd it without danger, by the help of six Oars. We took up our Quarters that night at *Crembs*, and the next day came to *Vienna*.

This

1695. This City, the ordinary Reſidence of the *German* Emperour, is not of a very large compaſs, but exceeding populous; its ſituation is low, and the Fortifications very ſtrong; the Streets are very regular and handſom, and the Churches ſtately and large, eſpecially the Cathedral and S. *Stephen's*. The Obſequies for the Imperial Family are always perform'd in the Church belonging to the Convent of the *Auſtin Friers*. The beſt Palaces now to be ſeen in *Vienna* are thoſe that have been built ſince the laſt Siege of this City by the *Turks*, who laid the greateſt part of it in Aſhes. One of the chiefeſt things worth a Traveller's obſervation in *Vienna* is, the S. *Trinita*, a curious Church, and the firſt of its kind in the World, built by the preſent Emperour, to fulfill a Vow he had made during a Peſtilential Diſtemper that had rag'd at *Vienna*, viz. *That he would erect a noble Structure in honour of the Holy Trinity.*

Vienna.

There is a moſt delightful place juſt without the Walls of *Vienna*, where the Gentlemen and Ladies take the *Tour à la mode* in their Coaches in the Summer Evenings; it is a Park well ſtor'd with Deer, Staggs, wild Boars, &c. formerly belonging to one of the Emperour's Palaces laid in Aſhes by the *Turks*.

About a good hours riding from *Vienna* is *Eberſdorf*, one of his Imperial Majeſty's Country Seats; in my way thither I took a view of *New Gebaw*, once a glorious place, as the Walls and ſome Ruins ſufficiently teſtifie, but now reſerv'd only for the keeping of the Emperour's wild Beaſts, as Lyons, Tygers, Bears, and a Panther; among other exotick Creatures, I ſaw here a kind of an *Indian* Bird not unlike an *Oſtrich*, except that the Hair or Feathers were black, and had on the Head a certain high riſing of Horn, joyning to the Beak, not unlike a Crown; they told us, that it was an amphibious Creature, and would devour a prodigious quantity of Meat. Here it was the *Turks* kept their chief Magazine at the laſt Siege of *Vienna*.

New Gebaw.

Eberſdorf.

The Imperial Palace of *Eberſdorf* is a pretty, compact, new Structure, infinitely well ſeated for Hunting, which is the reaſon the Rooms are generally rather pleaſant and convenient than large and ſtately; here 'tis the Emperour and Empreſs (who are both excellent at Shooting) divert themſelves for four or five weeks in *October* and *November* with hunting the wild Boars and Staggs. The firſt Room I came into was the Guardchamber, handſomly (but low) built, and adorn'd with very good Pictures of Horſes, wild Boars, Staggs, &c. the next, being a Withdrawing-room, was beautified with the ſame ſort of Pictures, among which was an odd kind of a Stagg kill'd near *Paſſau*, whoſe Head and Horns were quite different from the reſt of the Creatures of this kind; the Apartment beyond this was furniſh'd with the Pictures of the preſent Emperour, the *Infanta* of *Spain* his firſt Spouſe, as alſo thoſe of his Father, Mother and Brother, and a Landskip repreſenting the Emperour fowling upon the Water: In another Room I ſaw the Picture of the Elector of *Bavaria* and his firſt Spouſe the Emperour's Daughter, the preſent King of the *Romans* in his Royal Robes, the ſame he wore when crown'd King of *Hungary*, and the Empreſs; here was alſo an old Man's Head, of the hand of *Nicholas Fabrique* a Native of *Namur*, and a *Mary Magdalen*, two excellent Pieces: Another Apartment contain'd the Pictures of many of the Family of *Auſtria*; as did alſo the Empreſſes Dreſſing-room, where I ſaw the preſent Archduke's Picture excellently well done: The Audience-room is alſo adorn'd with a good number of exquiſite Paintings; and in the Apartment where the Emperour and Empreſs ſupp'd, hung two vaſt branch'd Candleſticks of Silver, with many Lights. The Apartments of the King of the *Romans* were alſo full of Pictures, eſpecially Landskips.

I told you before, that the excellency of this Houſe does not conſiſt ſo much in its magnificence as in its delightful ſituation, having on one ſide a moſt agreeable Proſpect over a vaſt tract of the richeſt Corn-ground that can be ſeen, and on the other excellent Paſtures, intermingled with little Woods and ſpacious Ponds; the Palace is ſurrounded by a Ditch.

Paſſau.

The Imperial Palace call'd the *Favourite* is a Summer-houſe, where the Emperour diverts himſelf in his Gardens, which are however not very noble, but exceeding pleaſant, by reaſon of the great variety of Springs and Fountains.

The Shoene Brunnen.

Hence I went to the *Shoene Brunnen*, i. e. *the Fair Fountain*, where they were then building a ſtately Palace for the King of the *Romans*, in lieu of an old one that was burnt by the *Turks*. The Ground is exceeding well fitted, both by Art and Situation, for a moſt noble Garden. I did not ſee the ſo much talk'd of Chambers of Rarities at *Vienna*.

After a ſtay of three weeks here, I ſet out towards *Dreſden*; and paſſing thro' *Newhouſe* and *Tabor* without the leaſt ſtay, I ſoon after left *Auſtria* and enter'd *Bohemia*, where travelling thro' the moſt fruitful champion Country of Corn that ever I beheld in my life, I came to *Prague*, the Metropolis of that Kingdom ſeated upon the River *Maldaw*, which runs thro' the middle of it, and divides the *Old Prague* from the *New Prague*, as they call it. Theſe two are rejoyn'd by a ſtately Stone Bridge, with three Statues of Braſs upon it, one whereof repreſents our Saviour on the Croſs. In *New Prague* about ſixty *Iriſh Franciſcans* have a ſtately Convent. The Royal Palace or Caſtle is ſeated upon a high Hill, within which ſtands the Cathedral, an old mean Structure, having nothing remarkable but the Tombs of many of the *Bohemian* Kings. I took alſo a view of Count *Stavenburg's* Houſe croſs the River, accounted the beſt in thoſe parts; it muſt be confeſs'd it is a neat Fabrick, but is neither large nor has any thing extraordinary in or about it.

1695.

Prague.

After a ſtay of two days at *Prague*, I continued my Journey to *Dreſden*: As ſoon as you leave *Bohemia*, you enter the Territories of the Elector of *Saxony*, which extends not many leagues: On this ſide of *Dreſden* at the ſame time you leave behind you the *Roman-Catholick* Religion, and now come among the *Lutherans*, the moſt general and eſtabliſh'd Religion in thoſe parts.

Dreſden.

Approaching *Dreſden*, the Metropolis of the Country of *Miſnia*, and the ordinary Reſidence of the Electors of *Saxony*, I found it one of the ſtrongeſt and moſt regular Fortifications I had ſeen any where before or ſince. Having the curioſity to ſee the ſo much talk'd of Stables and Chambers of Rarities, (call'd by them *Kuriſt Kammers*) two or three Gentlemen and I joyn'd Purſes for that purpoſe.

The Stables and Chambers of Rarities.

In the Apartments belonging to the Stables we were ſhewn vaſt variety of curious Sledges us'd in the Winter-time upon the Snow and Ice, with their magnificent Trappings for the Horſes that draw 'em, as alſo very rich Saddles, noble Accoutrements, and many curious and fine Suits of Armour. From thence being led into a Gallery cover'd on all ſides with Pictures, we ſpent all the morning in viewing of them, and after Dinner return'd to take a view of the Chambers of Rarities; the firſt contain'd chiefly all ſorts of Chyrurgical Inſtruments, and Pictures; the ſecond great variety of fine Glaſſes, Cups, and Platters of Silver richly gilt, and inlaid with Pearl; another had many fine and rich Cabinets, ſome Paper-Organs; another moſt exquiſite Braſs Cuts, Glaſſes and Pictures or Draughts; the next Apartment had a prodigious variety of precious Stones; and the laſt, great ſtore of all ſorts of Clockwork, and many curious Pieces wrought in Ivory.

Over theſe Chambers you ſee a vaſt Collection of Skeletons of all ſorts, both Men and Beaſts. In the adjacent Court is the Riding-place for the managing of the Elector's Horſes, of which he has a great number, and that of the beſt kind, in his Stables.

Another time we took an opportunity to ſee the *Arſenal* or Magazine of Arms, which we found well ſtor'd with all ſorts of Arms and Warlike Inſtruments, in a very exact order; I never ſaw ſo many Braſs Guns, and ſo well kept, in any one place before, the preſent Elector being of a martial diſpoſition; which makes his Subjects (who are naturally inclin'd to War) apply themſelves with unſpeakable reſolution to Warlike Exploits; and I was told, that in the Winter there is a vaſt concourſe of Officers and other Strangers of note at this Court, but it being then Summer, and the Elector (ſince King of *Poland*) in the Field againſt the *Turks*, the Town was pretty empty. I muſt confeſs I never ſaw ſtronger and better look'd Souldiers in my life, than theſe that kept the Gariſon here at that time.

Having ſpent five or ſix days in viewing what was the moſt remarkable at *Dreſden*, I ſet out on my Journey for *Hamburgh*: The firſt place of note I came to was *Meiſſen*, once the Capital of the Marquiſate of *Miſnia*, to which it has given its Name, but now an inconſiderable place; thence I continued my Journey to *Leipzick*, a place of good Trade, and one of the beſt Univerſities in *Germany*, but has no Colleges, like ours; what their Students may be I am not able to tell you, becauſe I ſtaid but one night, by reaſon of the intolerable impoſition they put here upon Strangers in the Inns; however, they have certain Fairs here, when there is a great concourſe of Strangers; their Library is alſo worth ſeeing.

Meiſſen.

Leipzick.

From *Leipzick* I went the next day to *Hall*, the firſt City of note on that ſide, under the *Elector of Brandenburgh's* Juriſdiction, and made an Univerſity about two years before by the preſent *Elector*, (ſince King of *Pruſſia*) who aſſign'd a College in the great Piazza to the Students; tho'

Hall.

1695. tho' (to speak the truth) the continual burning of Coal for making of Salt renders the Air very thick, and none of the most wholesom. I had the curiosity to take an exact view of the Salt-pans here, which bring a considerable profit to the *Elector*: The Pans wherein they boil the Liquor taken out of the Brine-pit, which is very deep and brackish, are not very large, and the whole business requires no more Art nor Care than to take out the Salt after the Liquor has boil'd for four hours, and to replenish them again.

Salt-pans.

S. *Mary's* Church stands not far from these Pans, it is a goodly Fabrick; and from thence you go into the great Piazza, where you see a strong Tower that overlooks the Town, and where is a constant Watch kept all night long. The Cathedral is also a handsom Fabrick; over against the Pulpit is the *Elector's* Seat, and in a Gallery on the other side a Picture of a Gentleman, his Wife and Children, buried here, making in all thirty two, *viz.* sixteen Sons and fourteen Daughters. Near this Church you see the Ruins of an old Castle, ruin'd in the long *German* Wars by the *Swedes*.

Magdeburgh. From hence I pursued my Journey to *Magdeburgh*, by the way of *Loswick*, *Kockten*, and *Salz*. This City has given its Name to the whole Dutchy; it is but of a moderate bigness, but the Cathedral (formerly belonging to the *Franciscans*) is both large and stately, and retains still many remnants of the *Romanists*; it had formerly 32 noble Altars, upon the high Altar is still a Table of *Jasper Stone* nine ells long, four broad, and three foot thick: They shew us here several Relicks, which if true ones, are not inferior to any of that kind I ever met with, tho' the People that shew 'em to Strangers are so far from having the least reverence for 'em that they speak of 'em with contempt and derision. They shew a large piece of Stone, part of one of the Waterpots wherein our Saviour turn'd Water into Wine at the Wedding of *Cana* in *Galilee*; an old Wooden Slipper belonging to the Virgin *Mary*, that she wore when she travel'd cross the Mountains to *Nazareth* big with our Saviour; a great piece of Wood, part of that on which the Cock sate that crow'd at S. *Peter's* denying our Saviour; a large Basin, in which our Saviour us'd to wash; a piece of the Lanthorn made use of by the *Jews* while they went in search of our Saviour; a piece of Stone Vessel in which the Virgin *Mary* us'd to wash her self; besides divers very fine ancient Statues, and a most noble Tomb of Brass in a little Chapel, of *Ernestus* once Archbishop of this Church and Prince of *Saxony*; several other ancient Monuments are to be seen in the Cloyster of this Church, and among the rest the Picture of a Woman that had been twice buried.

The Cathedral and Relicks there.

From hence I continued my Journey for *Hamburgh*, and travelling thro' the Marquisate of *Brandenburgh*, I took the Road to *Gardleben*, *Salzwedel*, &c. and in my passage met with large Woods of Oak, and some Firr-trees.

Lunenburgh. From the *Brandenburgh* Territories I enter'd the Country of *Lunenburgh*, and soon came to the chief City, of the same Name, which having nothing remarkable in it, (except a Table of Gold in one of the Churches) I staid no longer than I could change my Waggon, and so travel'd on for *Hamburgh*, two *German* leagues on this side of which City I ferry'd over the *Elbe*, where the *Lunenburghers* have a small Redoubt on one, and the *Hamburghers* on the other side of the River.

Hamburgh. *Hamburgh* or *Hambrough* may deservedly be call'd the Key of the Northern part of *Germany*, and the chiefest City for Traffick, being seated conveniently upon the River *Elbe*, which being navigable quite above the City, occasions a considerable Traffick with *England*, *France*, *Spain*, *Holland*, and other parts; besides that they have a considerable Fishing-trade for Whales in *Greenland*, which makes this City noted for rich and able Merchants. There is an *English* Company of Merchant-Adventurers here, who upon their first establishment had extraordinary Privileges here granted 'em, but of late years the Citizens have retrench'd some of their Privileges, and 'tis to be fear'd that (unless due care be taken) they will by degrees make further encroachments upon 'em. This City is pretty regular, and strongly fortify'd, tho' their chief strength consists in its situation betwixt the Territories of divers potent neighbouring Princes, who envying each other the accession of so much Strength and Riches, are always ready to assist the *Hamburghers* when attack'd, especially against the *Danes*, who always did, and still do lay claim to it.

Their four chief Gates are, the *Altena* Gate, the *Dam* Gate, the *Stone* Gate, and the *Dike* or *Ellern* Gate. Their chief Churches (besides divers Chapels of ease) are, the *Cathedral*, St. *Peter's*, St. *Catherine's*, St. *Nicholas's*, and S. *James's* Church; and in the *New Town* are two, the *Old* and *New Church*, both dedicated to S. *Michael*. 1695.

The Cathedral.

In the Cathedral they shew you an ancient Tomb of Pope *Benedict* V. one of the Ant popes, it stands in the middle of the Choir, with this Inscription round it:

Benedictus Quintus Papa qui de sede Apostolicâ per violentiam amotus, & post, cum revocaretur, Obiit Hamburgi, Anno Domini D. C. C. C. *quadragesimo primo Quinto Nonas Julii & sepultus est hic.*

Platina says he died at *Habsburgh*, and mentions nothing of his being recall'd.

Within the Wall on one side of the Isles of this Church is to be seen an old Inscription on a Tombstone, with the figure of an Ass playing upon Bagpipes cut upon it, and several other Inscriptions in the old *Low Saxon* Tongue, which are for the most part explain'd by *Lambecius*, in his *Orig. Hamburg.* and of no great consequence; that relating to the Emblem of the Ass with the Bagpipes, representing the perverted Genius of the World, runs thus;

De Weltheft Zickum gekeheet, darem so hebbeick armen Isel-piepen gelehrt.

i. e. *The World is turn'd topsy-turvy; this has taught the poor Ass to play upon the Bagpipes.*

On the right hand, as you ascend up to the Choir, stands upon a Pillar the Statue of S. *Ascharius*, first Archbishop of this Cathedral; and in the body of the Church the Sepulchral Monument of the Counts of *Holstein*, *Wagern*, and *Stormar*, &c. In the Church of S. *Nicholas* is a Stone fix'd in the Wall on the East side, in memory of Count *Adolph* III. who, tir'd with the burthen of the Government, turn'd a *Franciscan* Frier; he is represented in his Military Habit standing, and in his Religious Order in a cumbent posture, tho' he was not buried here but at *Keil*. S. *Catherine's* Church has a curious Marble Pulpit, and a most excellent Organ; Mr. *Adams* the Organist told me it had six thousand and odd hundred Notes upon it.

Their House of Correction, Spinhouse, and Arsenal are also worth a curious Traveller's sight.

I set out from *Hamburgh*, *Apr.* 14. 1696, for *Lubeck*, where I arriv'd after a difficult day's Journey, the Roads being exceeding bad. 1696.

Lubeck. *Lubeck* is like *Hamburgh*, one of the *Hans Towns*; the King of *England* most generally maintains a Resident in these parts, sent to *Lubeck*, *Bremen*, and *Hamburgh*, who for the most part resides in the last of these three Cities: *Lubeck* is tolerably well fortified, yet not sufficient to defend it self against a vigorous attack; its chief Security is the mutual Jealousie of its Neighbours: it has five Parish Churches and three Chapels of ease; I us'd frequently to visit S. *Mary's* Church, a stately Structure, containing several remarkable things both ancient and modern; among the last is the High Altar, compos'd of black and white Marble, the Pillars of divers other colours, all brought from *Italy* at the charge of one Mr. *Fredenburgen* a rich *Spanish* Merchant, yet living; it will be a most beautiful piece when brought to perfection. Under the Altar is a beautiful Vault for the said Merchant's Family: The Pulpit is likewise of black and white Marble; and it has two very good Organs.

The Cathedral is low built, but very long; the High Altar lately set up at the charge of Mr. *Westenberg* is so exactly painted, that at a distance one can't distinguish it from true Marble: Just before this Altar lies interr'd the Body of *Henry Bockholt*, once Bishop of *Stralsund*; over the Vault you see his Statue in Brass, with an Inscription upon it, of which I could understand nothing else but that he was buried here in 1322. Over one of the Altars is a Picture excellently well done by *Mark Hobby* a Frier, in 1591, representing the Passion, Death and Burial of *Christ*.

The rest of the Parish-Churches are those of S. *Helen's*, S. *Peter's* and S. *James's*, all goodly Buildings, as are the greatest part of the private Houses, after the manner of the Northern Countries; the Streets are spacious and well pav'd, and the City has a considerable Trade into *France*, *Spain*, *Portugal*, *Sweden* and *Denmark*, by means of the River *Trave*, which near the Town has nine fathom Water at low Tide.

Their Government is somewhat like that of *Hamburgh*, but much more quiet; and the Country round about extreamly well stor'd with Wood both for building of Ships and Fuel.

After

1695. *Travemunde.* After a stay of eight days I was perswaded to go and stay for a fair Wind at *Travemunde*, a poor Fishing-place seated near the entrance of the River *Trave*, about two *German* leagues from *Lubeck*; here the *Lubeckers* have a small Fort, the Garison whereof is chang'd but once a year.

After five days stay we imbark'd on *Monday Apr.* 26. and the next morning pass'd betwixt the Isles of *Moen* and *Lanteritze*, the first belonging to the *Dane*, the other to the *Swedes*. *Bornholm.* In the Evening we sail'd in sight of *Bornholm*, one of the most considerable Isles belonging to the King of *Denmark*.

On *Tuesday* we pass'd in sight of the Coast of *Pomerania*, under the Jurisdiction of the *Swedes*) and on *Friday* in the Evening discover'd the Watch-tower of *Hela*, belonging to *Dantzick*, and no more than four leagues thence; towards the maintaining of this Light-house each Ship is oblig'd to pay a certain Duty.

May 3. leaving our Ship in the Road, I went with the Master of the Ship towards the City; after we had been clear'd at the *Munde* by the Custom-house Officer, we cross'd the Water, to be examin'd at the Fort or Castle, which done, we came by means of a *Treckschuyt*, or Boat drawn by Horses, (set up a few years before) to *Dantzick*. This Boat goes every hour in the day by a certain artificial Chanel, the passage for the Ships being on the other side of the Island, where is that noted River the *Weichsel*, which comes from *Cracow* to *Dantzick*, and near it exonerates it self into the *Baltick Sea*.

The Castle of Munde. The Castle of the *Munde* commands the Road of *Dantzick*, being always provided with a good Garison under its peculiar Governour; having a License from one of the *Burgomasters* to see its Fortifications, I found them very strong, and they were then adding some new Works, by reason of some late Threats from *France*.

Dantzick. The City of *Dantzick* it self is a stately City, the Metropolis of all *Prussia*, and the chief trading Town in the *East Sea*; their staple Commodity is Corn, brought thither down the River twice a year out of *Poland*, in such prodigious quantity, that *Dantzick* may justly challenge the Title of the chief Granary of *Europe*, from whence *Its Traffick.* *Holland* is almost wholly supplied with this Commodity. *Sweden* carries off yearly a great deal, and some other places in proportion, in lieu whereof they are supplied with *Wines* from *France*, with *Woollen Manufactury*, *Lead*, *Tobacco*, and *Coals* from *England*, *Salt* and *Herrings* from *Scotland*, with *Salt*, *Wine* and *Fruits* from *Spain* and *Portugal*, tho' *Holland* furnishes them chiefly with these Commodities, which are afterwards transported thence into the neighbouring Countries, as *Poland*, *Prussia*, *Cassubia*, &c. *Sweden* sends them abundance of Iron.

Harbour. The greatest defect belonging to the Harbour of *Dantzick* is, that at the entrance of the fresh Water, call'd the *Barr*, there is seldom above nine foot Water, so that they are forc'd to unlade their Ships here, and carry their Commodities in Lighters (which hold a hundred Tuns at a time) to the City:

Warehouses. Their Warehouses are very large, strong, and lofty Buildings; the Cellars and Warehouses below are kept for other Merchandize, but the Stories above for Corn only: They are all built together on the same side of the Water. No Ships in the River *Motlaw*, that parts the Town from these Warehouses, are allow'd any Fire on board, for fear of mischief; all night there is a Watch kept thereabouts, and great Dogs are let loose, to prevent the approach of Thieves. The Boats that come out of *Poland* lie sometimes so close in this River, that you may cross the River over them, like a Bridge of Boats.

Buildings. Most of the Houses of *Dantzick* are well built, of Brick or Stone, tho' they have more of outward shew than inward conveniency, a long Entry, a spacious Hall, and a large Parlour, with a Stove backwards, taking up so much room, that the rest of the Apartments are pinch'd for them. For the rest, they can't boast of any Palaces or stately publick Edifices, and their Streets are very narrow, by reason of their way of building a pair of Stairs to every House on the outside into the Streets, which takes up a great deal of room, and gather a great deal of filth under them just before their Doors.

Their Arsenal is worth the sight of a curious Traveller, but you must have a *Burgomaster's* License before you can be admitted.

Religion and Churches. The *Lutheran* is the Establish'd Religion here, yet the *Romanists*, *Calvinists* and *Anabaptists* are also tolerated here. The Cathedral is a spacious Fabrick; over one of the side-Altars is an excellent piece of Painting: There is an ancient piece of Clockwork here, which for the variety of its motions must have been an admirable piece, especially in these days; they tell you, that the Artist who made it being condemn'd (an unheard-of piece of Barbarity among Christians) to lose his Eyes, because no other should be made like it by him, he desir'd to mend something in it, which being granted, instead of adding the Spring he pretended, he so disorder'd the Work that it could never be made to go since. 1696.

Government. Their Government is Democratical; they live under the protection of the Republick of *Poland*, swear Fealty and pay Homage to that King. It would be a strong place, were it not for some adjacent Hills that overlook it.

The Convent of Oliva. Four *English* miles from *Dantzick* is the famous and stately Convent of *Oliva*, with its beautiful Church: it has a considerable Revenue, and the Abbot is stiled *His Grace*.

Newstadt. I went also to *Newstadt*, which by some is thought to be done after the model of the true *Jerusalem*, as it now is; here you see many little Chapels, in which are represented the Cross, Pallion, Death and Burial of our Blessed Saviour.

Elbing. A good days Journey from *Dantzick* lies *Elbing*, another City under the protection of *Poland*, stronger both by Art and its Situation than *Dantzick*; it was formerly a place of Trade whilst the *English* were setled there, but these leaving it in disgust, Trade left the Town at the same time.

Konigsberg. From hence I continued my Journey to *Konigsberg*, where I arriv'd not long before the famous *Muscovite* Embassy (in which the Czar was *incognito*) made their solemn Entry, which was exceeding magnificent.

This is the capital City of the Ducal *Prussia*, under the Jurisdiction of the Elector of *Brandenburgh*, who has since been exalted to the Title of King of *Prussia*. It is a place of some Trade, because Ships can come up to it, but has nothing extraordinary belonging to it. The Palace is a very indifferent Structure: In the Library they shew'd me a Knife which (they say) one *Andrew Grunheid* was kill'd, and after it had been in his Body five weeks and six days, was, by the application of a Loadstone to his side, drawn that way near to the skin, and afterward taken out by Incision, after which he liv'd nine years: To the Knife is fastned a Plate with this Inscription,

Andreas Grunheid Natus Anno 1613. [illegible] Anno 1635. 29 Maii; Idem exsiit [illegible] die 9 Julii.

Regiomonti Prussorum.

I had the opportunity of seeing the artificial Fireworks made by Count *Sternfeld*, Lieutenant-Colonel of the Artillery, for the diversion of the Czar and Embassy, which was exceeding fine, and curiously contriv'd, and succeeded to the general satisfaction of all, without the least miscarriage.

Elector. The *Elector* would also entertain the *Czar* with the fighting of wild Beasts; among these was an *Ore-Ox*, a *Fighting of wild Beasts.* Beast (as they say) not to be met with any where but in a certain Wood about ten *German* leagues from *Konigsberg*; 'tis the strongest and fiercest Creature that ever I beheld in my life, and of such courage, that he will engage and worst a Lyon; he seem'd by his shape and nature to resemble a wild Bull, with a short and thick Head and Neck, and on his Forehead he had long Hairs, which when first pull'd out by the roots, have a smell like Musk; the Horns are short and black, bending so as to make a guard to his Head; his Eyes were both quick and fierce, and he had but little Hair all along the Back; his Colour is almost of a Chesnut brown: If you see him from behind you may perceive him to be somewhat unweildy, but this Defect he recommences by the agility of his fore-parts, wherewith he will assault any Creature with incredible activity. *An Ore-Ox.*

The first Experiment they made with him was, to turn him out to a Bull and Cow; he did run at them at the first sight with great fury, but coming up with them, made a sudden stop and smelt upon them; he was so far from offering any violence to them, that when soon after a Bear was turn'd out upon the Bull and the Cow, he would not let the Bear so much as come near them.

I saw afterwards this furious Creature engag'd with three wild Bears at once; they made all together at him with incredible fury, but he met them with an angry countenance, and toss'd the Bears about to that degree, that but one of the three could take hold of him; this Bear had fix'd his Paws and Teeth in the Ox's Shoulder, which rather heightning than diminishing his Courage, he stamp'd and turn'd about most furiously till he got one of his Horns under the Bear's Belly, and thus threw

1696. threw him at once over his Back with such violence, that the Bear being sorely bruis'd by his weight and fall, was glad to crawl away.

After I had spent eight days in *Koningsberg*, I return'd to *Dantzick* by the way of the *Pillaw*, an inconsiderable Fishing-place, but useful for its Harbour, where Ships of the greatest burthen can unload, for which reason there is a goodly Fort erected here, defended by a good Garison. *The Pillaw.*

After you have cross'd the Water, you travel all the way to *Dantzick* thro' sandy Woods, and along the *Strand* where the *Amber* is gather'd, which producing a considerable Revenue to the *Elector*, a certain number of Horsemen patrole constantly thereabouts, to prevent any other persons but what are appointed for that purpose from gathering this Resinous substance, which is thrown upon the shore by the Sea with the Weeds.

From *Dantzick* I took a *Tour* to *Marienburgh*, an old City under the Jurisdiction of *Poland*, very mean and poor, without any thing remarkable in it, except an old ruinous Castle, the ordinary Residence of the Weywode of *Marienburgh*; the Country round about it is flat and very fertile, and affords a large Prospect. *Marienburgh.*

1697. After having spent a considerable time in *Prussia*, I embark'd at *Dantzick*, *June* 3. 1697, for *Stockholm*, in which Voyage we spent twelve days, by reason of contrary Winds.

The only places I could take notice of in this Voyage were, the Islands of *Gothland* and *Oeland*, both belonging to *Sweden*; the first is pretty large, and produces some Tarr, the other furnishes them with a kind of very good Stone for Building. *Gothland and Oeland.*

When you come near *Landsorth* or the *Lands-end*, the entrance towards *Stockholm* is very dangerous, by reason of the vast number of Rocks, some whereof lie just under, others even with the surface of the Water. So soon as they 'spy a Ship from the shore, a Pilot comes to conduct you as far as the place they call the *Dahlers*, where you are met by another, who conducts you to *Stockholm*, which is near sixty miles, and very tedious and troublesom to pass, because you can't come up with the same Wind, without which Inconveniency *Stockholm* would be one of the best Harbours in the World, because Ships of the greatest burthen can come up and ride safely in any weather just by the Bridge.

As these Pilots are absolutely necessary for the safe and secure conducting of the Ships, so it is not left to the Master's choice whether they will have 'em or no, a certain number of 'em being sworn, who in their turn go on board without being demanded, and take a set Duty, the greatest part whereof belongs to the King, the rest the Pilot has for his pains.

Stockholm, the Metropolis of the most potent Northern Kingdom of *Sweden*, is built for the most part upon Hills, their Houses are generally of Brick, and tolerably good. The *Royal Palace* or Castle being consum'd by Fire some years before, they were then laying the Foundation for a new one, which by the Model will be a stately Structure; as are likewise the House where the Estates meet, the Armoury, the publick Bank, and divers of the Great Mens Palaces. *Stockholm*

The Armoury, a noble Building, formerly belonging to Count *Magnus*, Uncle to the late King by Marriage, has many spacious Rooms; the first is fill'd with Pikes, Swords and Musquets, neatly kept; in several others about it you see the Colours and other Trophies taken in several Battels from the *Danes*, *Lunenburghers*, *Brandenburghers*, and other *German* Princes, especially in the Wars of *Gustavus Adolphus*: They tell you here a Story of a certain young *German* Count, who would not part with his Colours whilst living, and so wrapping himself in his life, was kill'd by the Enemy; the print of his bloody Face remains in the white Colours to this day: In divers other Rooms are to be seen many more Standards and Colours taken from the *Poles* and *Tartars*, and some in the *Spanish Netherlands* and *Ireland*. *The Armoury.*

They shew'd among other things a Trunk fill'd with combustible matter, to be fir'd by a Gun-lock, and so contriv'd by Springs to be wound up, that it might be discharg'd at what hour you pleas'd, the contrivance of a certain *German* who serv'd the *Danes* when they were engag'd in a War with *Carolus Gustavus*, and having lifted himself a Seaman on board the *Swedish* Fleet, then at Anchor in the Road of *Wisme*, intended to have blown up part of the said Fleet; but the matter being timely discover'd by the noise of the Springs, he was punish'd according to his desserts.

You are also shewn here several Suits of Armour belonging to their Warlike Kings and Generals, and among the rest you see the *Buff-coat* worn by *Gustavus Adolphus* that day he was kill'd, shot thro', with his bloody Shirt; the Skin of his Horse which he charg'd upon when he receiv'd his fatal Wound, is put upon a Horse of Wood. Among the old Armour in another Room stands a large Crucifix, found among the Ruins of the old Castle after the Fire in a Vault, with a *Gigantick* wooden Statue in Armour near the Crucifix, with these words written in old Characters, 1697.

This is the true Son of God.

They also shew'd me the King's Stables, and rich Harnesses, his precious Coronation Robes, some Pictures of the Royal Family, and among other Curiosities a most excellent Picture, an Original of *Peter Oloffson*, one of the Representatives of the Boors in the Assembly of the Estates, and a person noted for his Judgment much beyond his Birth and Condition: This *Oloffson* stood Godfather (as is usual) to a young Prince that was born during the said Assembly of the Estates. Here you see also a *Laplander*'s Sledge, such as they use in the Winter for travelling, and one of their Magick Drums, since forbidden on pain of Death.

Stockholm has seven Churches, that of S. *Nicholas*; the *German* Church, dedicated to *S. Gertrude*; the Church where are the Sepulchres of their Kings, formerly belonging to the *Grey Friers*; S. *Marys*, where the *English* have their Burying-place; S. *Catherine's*, S. *James's* and S. *Clara's*, besides two or three wooden Chapels, one of which belongs to the *Finlanders*. *Their Churches.*

The *Lutheran* is the Establish'd Religion in *Sweden*, introduc'd first in 1528, under the Reign of K. *Gustave* I. by some *German Soldiers* and *Swedish Students*, who had heard *Luther* at *Wittenburgh*. *Religion.*

The Government of the City is lodg'd in a *Stadtholder* and four *Burghermasters*: The City maintains a Guard of its own of three hundred Men, and the King's two Companies of *Guards du Corps* consist of two thousand four hundred Men; these are the ordinary Garison of the place, which else is of no great strength. *Government.*

Stockholm is a place of considerable Trade; the Commodities exported from thence of the Product of the Country are, *Corn*, *Pitch*, *Tarr*, *Deals*, *Masts*, *Copper-plates*, and *Wire*; the Commodities imported are for the most part *Salt* from S. *Ubes* and *French* Wines. *Trade.*

The King lives in another House (not intended for a Royal Palace) while the old one is rebuilding, which has nothing remarkable in it besides that the Rooms were all hung in Mourning, for the Death of the late King.

I took a view of *Jacob's Dahl*, one of the King's Country Seats, then fitted up for the reception of the Duke and Dutchess of *Holstein*. The Chapel belonging to it is little, but exceeding neat, and the Picture of our *Saviour* bound (over the Altar) is an excellent Piece. The Queen-Mother's Apartments, on the same Floor, were also not spacious, but very neat, the Hangings and Chairs of her Chamber being of green Velvet. Above these were three or four small Apartments belonging to the King; his Bedchamber had Hangings of Cloth of Gold, and the Bed and Chairs were of red Velvet; the Dining-room was hung with gilt Leather; under the Canopy sate *Charles* II. late King of *Sweden*, *Gustave Adolph* on the right hand, and *Charles Gustave* on the left; the Cieling was adorn'd with very good Painting in *fresco*. In one of the Withdrawing-rooms were the Pictures of the *Mecklenburgh* Family, and in the next Lodging-room the Pictures of all the late King's Children. The Anti-chamber to the late Queens Closet had divers exquisite pieces of Clockwork, and her Closet many fine Stones, and a long Unicorn's Horn. *Jacob's Dahl.*

The King has another Country Seat not far from the City, call'd *Carlberg* or *Ulrich's Dahl*; it being then in Mourning. I saw nothing remarkable there, except the Pictures of the *Saxon* and *Danish* Families in the Gallery, and in the Audience-room some curious Heads of the Family of Count *Magnus*, to whom this Palace formerly belong'd. *Carlberg or Ulrich's Dahl.*

The Queen-Mother has a Palace call'd *Drotningholm*, about five or six miles below *Stockholm*, fronting the Water-side, with very good Gardens behind it, which were enlarging then; here are very fine *Waterworks*, and a good number of excellent Statues both of Stone and Brass, (part of the Spoils of *Germany*) with divers delightful long Walks. The Housekeeper being out of the way, I could see only two or three Rooms, wherein the Painters were busie in making Draughts of Landskips *Drotningholm.*

where

where several Battels were fought betwixt the *Swedes* and *Danes* in the late War: The Entrance and Staircase is look'd upon by some as exceeding curious; 'tis certain that it is the most magnificent Palace of *Sweden*, being built at the charge of the Queen, Mother to the late King.

Upsal. From *Stockholm* I took a Tour to *Upsal*, an Archbishop's Seat, who is always Vicechancellor of this Univertity: As they have no Colleges here, so the Students are not distinguish'd by their Habits, but bestow themselves in the Town as they best can; their chief time of study is in Winter, in the Summer they go to their Friends in the Country, or such as have none go a begging, to get wherewithal to subsist at the Universtity in Winter.

They shew you in the Cathedral S. *Eric*'s Bones, preserv'd in a Silver Chest, as also the Garments of the Nobility put to death by King *Eric* XIV; the Whetstone sent by King *Albert* to Queen *Margaret* of *Denmark*, to whet her Needles upon, who afterwards taking the said *Albert* Prisoner, set up the said Whetstone in the Church of *Roschild* in *Denmark*, whence it was remov'd by King *Charles Gustave* (after the taking of that place) and sent to *Upsal*.

Their Lakes. *Sweden* abounds in Lakes, the chiefest of which are the *Wetter*, the *Venner*, and the *Macler*, which, besides the great conveniency of travelling in the Winter with their Carriages, afford 'em vast plenty of Fish, the chief Food of the poor Country People, who dry 'em in the Sun, *Country people.* especially a certain Fish call'd *Stroomling*, not unlike our *Pilchards*, whence comes the *Low-Saxon* Proverb,

Were dee Stroomeling nicht geboren
So weren de Sweden *gantz wer lohren.*

i. e. *Without the Stroomelings the* Swedes *must be lost.*

For 'tis to be observ'd that the poor wretches in the Country live in the utmost misery, many of 'em in time of scarcity dying for want of Bread, in lieu of which they are forc'd to feed upon chopt Straw and the Bark of Trees, which they make up into a kind of Paste.

This Country abounding in Beach, Fuel is exceeding cheap here. They have one Silver and one Copper Mine, but many Iron Mines; the Forges are easily supplied with Charcoal, which the vast quantity of Wood furnishes them withal.

Having hitherto given you my Observations concerning *Sweden*, I will now proceed to the account of my Journey, and what I met with worth taking notice of in the places I went thro' towards *Denmark*.

It must be acknowledg'd that 'tis exceeding cheap travelling in *Sweden*, for by the King's Orders, you find Post-horses ready at every Stage, which are oblig'd to carry you a *Swedish* mile (six of our *English*) for Six-pence, except in a great City, where you pay double the price; and that no Deceit may be put upon Strangers, the distances of each Stage, and the price, is affix'd to certain Posts at the end of every Stage.

It being then in *January*, I took the advantage of the Sledges as far as within a league of *Helsingburgh*; I took *Norkioping and Nykoeping.* my way over *Nykoeping* and *Norkioping*, the chief place for Copper-plates and Wire in *Sweden*, by means of an infinite number of Wheels, turn'd by the Water that runs from the Lake *Wetter*. This Town has also some Trade and Shipping.

The next place of note I came to was *Linkioping*, and eleven or twelve *Swedish* leagues further *Jenkioping*, both Corporation Towns, of no great consequence: Thence I continued my Journey over *Jongley Markerve* to *Hepstingburgh*, sixty three *Swedish* leagues from *Stockholm*, or about three hundred and seventy *English* miles: The last *Helsingburgh.* Town on that side under the *Swedish* Jurisdiction is *Helsingburgh*; seated near the Sea-side, at the narrowest part of the *Sound*, directly over against the *Danish* Fortress of *Cronenburgh*, which makes it always provided with a Garrison of two or three hundred Men, tho' the place is without any Defence, except what the old Castle can afford 'em, which they boast was built a considerable time before our Saviour's Birth.

The Sound. The Passage of the *Sound* is very narrow here, tho' I remember that Monsr. *Terlon*, the *French* Ambassadour in *Sweden* at the time of the Siege of *Copenhagen*, is of opinion that no Cannon-shot can do any execution here half way, to back which he alledges the Passage of the *Dutch* Fleet thro' the *Sound*, when coming to the relief of *Copenhagen*, notwithstanding they were by the King of *Sweden*'s order ply'd both from *Helsingburgh* and *Cornenburgh* with great Cannon; of which, he says, he was an Eye-witness: But those who have seen the *Sound* in this place will easily agree with me, that he was mistaken in his computation, and that this passage of the *Dutch* must be ascrib'd to their Bravery at Sea, which they did not accompliish without great loss.

Cronenburgh. In this Castle of *Cronenburgh*, being remarkable both for its strength and admirable situation, the King of *Denmark* spends sometimes a Month or two in the Year: Thence you go to *Helsingore*, a Town of no consideration except that all Ships but the *Swedes* pay here the usual Customs of the *Sound*. Not far thence is the Isle of *Ween*, where that famous Astronomer *Tycho Brahe* liv'd, about 1575, (as is to be seen upon his Seat in the Church) and made his Observations from a Tower or Observatory to be seen there.

Helsingore. About five *Danish* leagues and a half from *Helsingore*, as you travel along the *Strand*, (the Sea to the left) lies *Copenhagen*, the Capital of *Denmark*, and the ordinary Residence of their Kings. As you approach the Town *Copenhagen.* you see the King's Ships lie close together, with their Masts appearing like a little Wood. The Buildings here are generally good, the Streets broad and handsom, and the Inhabitants very courteous to Strangers.

The Harbour is one of the best in *Europe*, notwithstanding which this City has no considerable Traffick, the Country not affording much for exportation, and the Air is none of the wholsomest here.

Churches. St. *Mary's* is the largest and handsom-st Church in *Copenhagen*, and adorn'd with several Tombs of the *Guldenlieu's*, Admiral *Adlet's*, and Mr. *Harbec's*. In that of St. *Nicholas* is a stately Tomb, erected to the memory of Count *Ros. Crantz*, one of the *Danish* Generals kill'd in *Schonen*, in their last War with the *Swedes*. That of the *Trinity*, adjoyning to the College, and belonging to the Universtity, contains the Tombs of General *Shack* (who so bravely defended *Copenhagen*) and Mr. *Van Stocken*.

University. Both their Schools and the Library have nothing remarkable in 'em, except some Mathematical Instruments of *Tycho Brahe*, and a certain Desk, so contriv'd, that turn it over as fast as you will, none of the Books will be remov'd out of their places.

The Royal Palace is a very indifferent Structure, surrounded with a dirty Ditch; tho' there are several other handsom Palaces in the City, as those of the two *Guldenlieu's* in the great Square, where stands a curious Brass Statue of the late King on Horseback.

Arsenal. The Arsenal (after leave obtain'd from the Admiral) is worth seeing: Here the Equipments for each Ship are laid up in so good an order, that the whole Fleet can be fitted out in a little time; besides that, a certain number of Seamen are kept in constant Pay, (under some small Allowance) who live with their Families together at that end of the Town, and must be ready upon all occasions.

Religion. The *Lutheran* is the Establish'd Religion in *Denmark*, tho' at the intercession of the Queen-Mother the *Calvinists* got leave to build a Church in 1689, at *Copenhagen*.

As the late King was a great Sportsman, and had the Islands which afford the best Hawks under his Jurisdiction, so he left a very fine Falconry behind him, which is near *Copenhagen*. His present Majesty also takes great delight in Hunting, and has his several Summer-seats for that purpose; at *Fredericksburgh*, a pleasant place seated among the Woods, the Court spends generally two or three months in the Summer.

I embark'd (*June* 20. 1699.) again for *Hamburgh*, and we set sail the next morning, but soon having a contrary Wind, we advanc'd but little that day; the following night the Wind continued at W. N. W. and on *Thursday* we got clear of the *Ancuit*, where the Rocks prove often fatal to Ships; the Wind veer'd about in the Evening to South-east, and held with a gentle gale till Morning, when it shifted and turn'd calm; on *Saturday* being afflicted with a contrary South-west Wind and a boistrous Sea, we put the next Morning into *Oester Isen*, a safe *Oester Isen in Norway.* Harbour of *Norway*, which we discover'd by the rocky Mountain, part of which is whiten'd over for a Land-mark to Mariners, which being done at the expence of the Lord of this poor Fishermens Village, every Ship coming in here by stress of weather pays him a *Rixdollar*, whereas such as load or unload here pay but half a *Dollar*; for some Ships come hither yearly from *England* and *Holland* to fetch Wood, who pay a certain Anchorage-money to the King, in proportion to their burthen. The adjacent Rocks afford vast store of Wood, besides which they have scarce any thing but Fish, except some Corn, brought thither from *Jutland*. They know not what a Flesh-market is, if they eat any, 'tis when two or three Families joyn together and divide a Sheep or Calf betwixt 'em.

The Wind turning fair after two days, we made out to Sea again, but, to our singular grief, instead of a North-east Wind (as it was in Harbour) met with a contrary West-north-west Wind, yet we struggled as well as we could along the Coast all the night following; the next morning a Pilot coming on board us about three leagues from the *Norway* Shore, conducted us to a little Creek call'd *Riperwich*, consisting only of four or five Fishermens Hutts. The Wind continued all that day and the day following at South-west and West-south-west, with Rains and Storms; on *Friday* morning the Wind shifted round the Compass, and at noon settled in the South-west.

Riperwich.

On *Saturday* the Wind holding contrary, and we being in want of Beer and Bread, the Master and I went early in the morning to *Christians-sand* to buy some Provisions, about two *German* leagues from the place where our Ship lay; this is a Corporation Town, and reckon'd the second place in *Norway*, tho' a poor and mean place; it is defended by three small Forts and a Garrison of two Companies of Soldiers. This Town lying upon a River which empties it self near it into the Sea, is seldom mention'd in Sea Maps; it has some few Ships belonging to it, and the *English*, *Dutch* and *Danes* drive some little Trade here.

Near the Sea lies a small Town call'd *Ulekery*, defended likewise by three Forts and a small Garrison.

Ulekery.

On *Sunday* morning we put to Sea again, the Wind at North-east, but were becalm'd at night. *Monday* about noon the Wind turn'd to the West, with foggy unpleasant weather; about six at night it chang'd to the North-west but the Fogs continued; *Tuesday* morning early it began to clear up, and a handsom gale from the North-west carried us over the *Rief* or *Jutland*; *Wednesday* morning the Wind turning to the North, we pass'd on with a fresh gale, which encreasing at night, made the Sea very rough; *Thursday*, by five of the clock in the morning, we found our selves under *Heglige-land*, i. e. the *Holy-land*, a little high Island, inhabited by Fishermen.

The Holy Land.

Thence we entred the River *Elbe*, having the Territories of *Lunenburgh* and *Sweden* on our right, and *Holstein* on the left side. All Ships must strike to the Castle of *Gluckstade*, belonging to the King of *Denmark*, and at *Stade* (on the *Swedish* side) they pay some small acknowledgment.

From hence I went post to *Hamburgh*, whence (after some days stay) I set forward again for *Bremen*, in my way for *Holland*.

Crossing the *Elbe*, I came to *Harburgh*, a Town with a Castle belonging to the Duke of *Zell*; I continued my Journey thence to *Bremen*, a free Imperial City, which by the assistance of its Neighbours has hitherto maintain'd its Liberty against the *Swedes*, who look upon it with a longing Eye, their Territories extending within a *English* mile of the Walls of the City.

Bremen was a place of greater Trade formerly than now, since *Hamburgh* has drawn great part of it away, because Ships of burthen are forc'd to unlade a great way from *Bremen*, and send their Commodities in Lighters to the City. It is generally well enough built, but their Townhouse and Armoury mean Buildings.

Bremen.

They have five Parish-Churches; the Cathedral belonging to the *Swedes* is for the use of the *Lutherans*, the rest are *Calvinists*, the most establish'd Religion here: There is a Vault in the Cathedral, the Air whereof is accounted so subtil and dry, that Bodies have been found there uncorrupted sixty or seventy years after they were buried; I my self was shewn the Corps of a Girl that died thirty years ago of the *Small-pox*, which, notwithstanding the nature of this Distemper, appear'd hard, uncorrupted and dry, like the rest.

In the Market-place stands a huge *Colossean* Statue of Stone, placed there in memory of one *Rowland*, a great Defender of the Privileges of several Cities. They have no less than seven Gates in *Bremen*.

From hence I travel'd by the way of *Oldenburgh* to *Norden* in *East Friesland*, and thence to *Embden*, and so over *Winshoochen* to *Groeningen*, a large City, which imparts its Name to a whole Province.

Groeningen.

Lewarden.

I continued my Journey to *Lewarden*, the Residence of the Prince of *Nassau*, Hereditary Stadtholder of *Friesland*. I made no stay in these places, so that I can only tell you that they were generally well built, the Streets neatly pav'd, and some of 'em very considerable for their strength.

I took afterwards the ordinary Passage-boat over the *Swyder-sea* to *Amsteldam*, but soon after the Wind turning against us, we made shift to come near *Enchuysen*, where putting out a pair of Breeches (the usual Signal) at the end of a Pole, a Boat came aboard us, which carried me and another Gentleman ashore at *Enchuysen*, a Town very considerable for its situation, the Water coming into the Town, notwithstanding which their chief Trade is now only in Herrings, and the place but indifferently Peopled, tho' for the rest the Town is large, and the Streets neatly pav'd with *Dutch* Bricks set edgewise, as is all the way betwixt this and *Horn*, whither we got early the same day; it is a very neat Town. And setting out thence with the first Treckschuyt the next morning for *Amsteldam*, we arriv'd there safely before Exchange time.

Enchuysen.

Horn.

Amsteldam being our near Neighbour, and so frequently visited by the *English*, I will not pretend to give you a description of it, which would be the work of an entire Volume; I will only say, that for Strength, Trade, Riches, and the commodiousness of its Harbour, it may stand in competition with any place in *Europe* except *London*, the number of their Ships sent to *Spain*, the *Straits*, *France*, *England*, and the *Baltick*, (besides what goes to the *East* and *West-Indies*) being almost incredible. The vast number of their Canals and Drawbridges, for the convenience of delivering their Merchandizes into and from their Warehouses without any considerable trouble, is a thing scarce to be met with, or at least in very few places of *Europe*; this makes their Merchants live in Palaces rather than Houses, curiously fitted up both within and without.

Amsteldam.

Among their publick Structures their Townhouse challenges the first place, not only here, but among all others of that kind in the World. The three Statues of Brass, representing *Justice*, *Fortitude* and *Plenty*, placed at its entrance, and the Woman of Marble in *relievo* supporting the City Arms, are most exquisite Pieces; the Tower above, with the Clock and its admirable Chimes; the *Atlas* with the Globe on his Shoulders, on the West side; the Treasury of the Bank of *Amsteldam*, kept in Vaults under this Structure; as also all the other Beauties and Ornaments of Sculptures and Paintings, are scarce to be match'd in *Europe*; all which being circumstantially describ'd in a Book in *folio* call'd *A Description of* Amsteldam, I will content my self with mentioning them only upon this occasion, as well as the rest of their magnificent publick Structures, as their several Houses of Correction, Hospitals, and the *East-India* House, with its vast Stores and Treasures. I must only add, that the Exchange of *Amsteldam*, tho' not so beautiful as ours of *London*, yet seems to exceed it in the number of People of all Nations, who resort thither as to a general Rendezvous. But with all these Advantages, this proud City enjoys not the benefit of a wholsom Air, by reason of its situation in so marshy a Country.

The next considerable place for Trade in *Holland* is *Rotterdam*, which for the commodiousness of its Harbour and the depth of its Canals excels even *Amsteldam* it self. Not far from their Exchange, in a spacious place near the great Bridge, you see a Statue of Brass erected to the memory of the great *Erasmus* their Countryman. In the great Church are divers noble Tombs of their Admirals, slain in the service of their Country.

Rotterdam.

In my way from *Rotterdam* to *Utrecht* I stopt at *Genda*, to see the famous Paintings on the Glass Windows of St. *John*'s Church, whereof a little entire Treatise has been publish'd in *Low Dutch*.

Genda.

Utrecht, one of the *Dutch* Universities, being seated in a much higher Country than the Towns in *Holland*, enjoys a much better Air, and consequently is much frequented by the Gentry, which together with the Students makes it a very populous place; the worst is, that the Government of the University is not so regulated as to keep this young Crew under a more strict Discipline, who frequently, in and after their Debaucheries, commit great Insolencies in the Streets, which upon that score are oftentimes scarce passable in the night-time.

Utrecht.

Without the Walls of the Town are very delightful Walks, planted with Trees; the Mall is very large, beautiful, and so pleasantly contriv'd and shaded with tall Elms on both sides, that the King of *France*, when his Armies committed all the inhuman Barbarities that can be conceiv'd in that Country, forbid under pain of Death not in the least to deface or injure these Walks.

Leyden is another University of the Province of *Holland*, exceeding *Utrecht* both in the number of Students and neatness of its Buildings; but the Canals in the Streets are in the Summer very often offensive to the Nostrils. As this University is well provided with excellent Masters in all Arts and Sciences requir'd for the cultivating both of the Mind and Body, so to give all imaginable Encouragement to the Students, they have divers Privileges before the Burghers. Their Anatomy-Hall, with its Rarities, being exactly describ'd both in *English* and

Leyden.

and *Low Dutch*, I refer the Reader wholly to that Treatise.

St. *Peter's* Church is a lofty noble Structure; the *French* Church has nothing to boast of but the Tomb of the Great *Scaliger*.

About three hours travelling in the *Treckschuyt* from *Leyden* is the *Hague*, the ordinary Residence of the Princes of *Orange* and all foreign Ministers sent to the States-General, who also hold their Assembly here. The Buildings are generally very good, and some of 'em most stately; the Streets are very pleasant, and many of 'em planted with Trees; in the Walks near the Court the Gentry make their *Tour à la mode* in their Coaches in the Evening.

In my way to the *Briel* I pass'd thro' *Delft*, where, in the great Church, I took notice of that noble Monument erected at the charge of the States, to the memory of *William* I. Prince of *Orange*, who was murther'd in this Town in his own Palace, by a *Burgundian* Ruffian, in 1584. This Church contains also the Tombs of Prince *Maurice* and *Frederick Henry*, as also of the famous Admiral *van Tromp*, slain in an Engagement with the *English*.

After a stay of four or five weeks in these Provinces, I came to the *Briel*, where I embark'd on board the Packet-boat, which brought me safely to my Native Country *England*.

AN ABSTRACT Of a Description of the HOLY-LAND.

By Mr. SANDYS.

THE *Holy-Land* is bounded on the North with the Mountains of *Libanus*, and part of *Phœnicia*, on the East with *Cœlo-Syria* and *Arabia-Petræa*, on the South with the same *Arabia* and *Idumea*, on the West with a part of *Phœnicia*, and the *Mediterranean* Sea. It extends from 31 to 33 deg. North Lat. So that in length, from *Dan* to *Bersheba*, it contains no more than 140 Miles, and where broadest not 50. It was divided into 3 Regions, *Judæa*, which lies to the South, *Samaria* in the midst, and *Galilee*, which extends unto *Libanus*; and is water'd by many Springs; but the principal River is *Jordan*, which runs from North to South, and makes two Lakes in its passage, the one in Upper *Galilee*, now called *Howle*, the other in the Lower, call'd the Sea of *Galilee*, or the Lake of *Tiberias*, in length 100 Furlongs, and 40 in breadth; but as it passes through the Plains of *Jericho*, it is at last swallowed up by the Lake *Asphaltides*, whose Waters are so heavy and so salt, that divers Men being cast into it, floated on the top: which sends forth such bituminous vapours, that Birds flying over are said to fall in. It is 70 Miles in length, and 10 over, and furnishes the whole Country with Salt. It was once a fruitful Valley, and call'd *Pentapolis*, from her 5 Cities, which were destroy'd with Fire from Heaven, and converted into this filthy Lake. Beyond *Jordan* are the warm Baths of *Callirhoe*, which discharge themselves into this Lake, and are good for divers diseases.

After many Revolutions, *Julius Cesar*, Lieutenant to *Adrian*, raz'd 50 strong Holds, 985 Towns, and carried the *Jews* Captive into *Spain*; from whence they were banish'd by *Ferdinand* in 1500. And now their Country having chang'd several Masters, is govern'd by Sanziacks under the Bassa of *Damasco*. It is for the most part inhabited by *Moors*, who live in the Valleys, and *Arabians* in the Mountains. There are in it few *Turks*, but many *Greeks*, and other *Christians*, of all Sects and Nations. Here live also some *Jews*, who are a People scatter'd over all the World, hated and despis'd every where, among whom there are three Sects, one that allows only the Books of *Moses*, call'd *Samaritan Jews*, who are said to worship a Calf; a second, which allows all the Books of the Old Testament; and a third, which mingles the same with the Traditions and Fables of the Rabbins inserted in the Talmud. They are commonly allow'd Synagogues in *Turkey* and *Christendom*, in the middle of which is a Scaffold, on which he stands that reads the Law in Savage tones, and sings their Liturgy in harsh tunes, with many ridiculous gestures. They stick up the Law in the Jambs of their Doors, and cover it with glass, written by their Cacams, *i. e.* Doctors of the Law, and sign'd with the Name of God, which they kiss when they go out and return. They write it on Parchment prepar'd on purpose, with a peculiar sort of Ink, not with a Quill but a Cane. Their familiar Speech is *Spanish*; their only Studies are Divinity and Physick, their Occupations Brokage and Usury, yet they take no Interest of one another, nor lend but upon Pawns, which being forfeited cannot be redeem'd. They bury the Dead in the Fields by themselves, setting a stone upright on their Graves, which once a Year they frequent, burning Incense, tearing their Garments, and fasting and mourning certain days, even for such as have been executed for Crimes. If a *Jew* deserves to die by the *Turkish* Law, they will either privately make him away, or accuse him of a Crime that deserves the like punishment. Their Women are generally fat and rank smell'd, and for the most part goggle-ey'd, but they are industrious, and will do any thing for profit, that can be done by the Art of a Woman. They are so well skill'd in Lamentations, that the *Greeks* hire them to cry at their Funerals.

Gaza is the principal of the 5 Cities that belong'd to the *Philistines*, at first famous for the Acts of *Sampson*, who liv'd about the time of the *Trojan* Wars, and is thought to have given occasion to the Fictions of *Hercules*. It stands upon a Hill encompass'd with Valleys, planted with all sorts of delicate Fruits, but the Buildings are mean both for Form and Matter. And indeed, they live in so much subjection to the *Turks*, that they dare not keep handsom Houses, or employ their Grounds to the best advantage, lest they should be counted wealthy; when we lodg'd in the City, there came a Captain, with

200 Spahi's, to raise 30000 Dollars of the few Inhabitants of that poor City. The *Grecians* here are forc'd to press out their Wine secretly, and to bury their Corn under ground, keeping that which is for present Use in long Vessels of Clay, lest it should be eaten with Worms.

Being thrust out of our Lodging by the Spahi's we return'd to our Caravan, and the next day we set forward, and pass'd through the most pleasant Valley that ever eye beheld: having on the Right hand a ridge of high Mountains whereon stands *Hebron*, and on the Left the *Mediterranean* Sea, border'd with a ridge of Mountains, between which lies a Champagne about 20 Miles over, full of flowry Hills, with Groves of Olives and other Fruits: And yet this rich bottom is only inhabited by some barbarous *Moors*, who Till no more than will feed them, because the place is often infested by Armies, before they go into the Field, who plunder the Towns and Passengers.

Ten Miles from *Gaza*, near to the Sea, stands *Ascalon*, formerly famous for the Temple of *Dagon*, and the Birth of *Semiramis*, begotten of the Goddess *Decreta*; and 10 Miles to the North of *Ascalon* is *Azotus*, and 10 Miles beyond that is *Acharon*, now places of no note.

After this, having pass'd through a large Valley, and a spacious Field of Olives, we pitch'd on a little Hill within a Furlong of *Rama*, where is a Monastery built by *Philip the Good*, in that place where the House of *Nicodemus* stood, built for the Relief of Pilgrims in their passage to *Jerusalem*, and serves to that purpose, being call'd *Sion-House*, because it belongs to the Monastery of *Mount Sion*.

A little out of our Road stands *Joppa*, having a bad Haven, which is expos'd to the fury of the North-wind, that drives the Ships against the ragged Rocks, tho' formerly it was call'd the Port of *Jewry*. The Merchandize here embark'd for *Christendom*, is only Cottons gather'd by certain *Frenchmen*, who reside at *Rama* in the House of *Sion*. The Western Pilgrims do for the most part come hither, and from hence are conducted to *Jerusalem* by a *Greek* of *Rama*, paying 7 Sultanies a-piece for his Mules, his labour, and discharge of *Cafar*, and by his means they pass securely, he being in Fee with the *Arabians* that possess the Mountains.

At length, from *Gaza* we came to *Jerusalem*, and we only were not suffer'd to enter in by the North-gate call'd formerly the Gate of *Ephraim*, now of *Damascus*; but having gone about the Wall to the West-gate, call'd the Gate of *Joppa*, we were met by two *Franciscan* Friars, who saluted us, and convey'd us to their Convent, which stands on the Left hand upon a part of *Mount Gihon*, where we were civilly entertain'd, and paid for 8 days Diet about 100 Dollars. And this is one part of their Income, That all Christian Pilgrims must resort to their Convent, and reward them for their Entertainment, which the Papists do out of Devotion, and the rest out of Civility. But to quicken our Charity, they told us of the great Extortions of the *Turks*, how that a little before our coming, a *Turk* being deny'd some trifle by a Friar, gave himself such a blow upon the Nose that the blood gushed out, and having complain'd to the Sanziack that he was beaten by the Friar, they were forc'd to pay 800 Dollars for this Sham-affront.

Another part of their Income is by the Knights of the Sepulchre, who pay 30 Sultanies a-piece to the Father-guardian that gives them their Dignity, which is now given to any one that has Money to purchase it. They take the Sacrament at their admission to hear Mass every day, if they can conveniently; to serve in the Wars against the Infidels, to promote other good Designs, and abstain from many Vices. And after this Oath, the Father-guardian lays his Hand upon his Head, as he kneels before the entrance into the Sepulchre, and bids him be a Loyal Soldier of Christ and the Sepulchre. And then he gives him the Spurs, which he puts on his Heels, and the Sword of *Godfrey* of *Bulloign*, wherewith he girts himself; who then arising, and kneeling with his Head inclining over the Sepulchre, is created by receiving three strokes on his shoulder, and saying thrice, *I Ordain thee a Knight of the Holy Sepulchre of our Lord Jesus Christ, in the Name of the Father, the Son, and the Holy Ghost.* From the top of this Monastery you may survey the most part of the City, which is inhabited by Christians out of Devotion, and by *Turks* for the benefit they receive from Christians.

The same day we went into the Temple of the Sepulchre through a long descent, and then ascended to *Mount Calvary*, a rocky Hill, which formerly stood without the City, and was the place of Publick Execution, but now stands in the heart of the City. Here *Helena* built this magnificent Temple, which not only possesses the Mount, but the Garden below, together with a part of the Valley of *Carcases*, that lay between the Mount and the Wall of the old City. At Festival-times the *Turks* sit here to gather Money of those that enter, the profits arising being farm'd at the Yearly Rent of 8000 Sultanies; for each *Frank* pays 14, (except he be of a Religious Order, and then he's excus'd but the Christians subject to the *Turk* pay but a trifle. At other times the Door is seal'd with the Seal of the Sanziack, and not open'd without his direction, whereat their hang 7 Cords, which by the Bells that they ring, give notice to the 7 several Sects of Christians (who live within the Temple continually) of such as would speak with them, which they do through a Wicket, whereat they receive the Provision that is brought them.

The Roof of the Temple is of a high pitch, curiously arch'd, and supported with great Pillars of Marble, the Out-Isle gallery'd above, and the whole Fabrick stately and sumptuous. After we had dispos'd of our Luggage, the Confessor show'd us the holy and remarkable places of the Temple: And first, right against the Door, there lies a white Marble in the form of a Grave-stone, compass'd about with a Rail of Brass, which they say is the place where *Joseph* of *Arimathea* and *Nicodemus* anointed the Body of our Saviour with sweet Ointments. This they kiss and kneel to, rubbing upon it their Crucifixes, Beads and Handkerchiefs, nay, whole Webs of Linen, which they carry into far Countries to serve for Winding-Sheets; over this hang 7 Lamps continually burning. Against the East-end of this Stone is the Chappel of St. *John*, in which on the Right-hand is the Sepulchre of *Godfrey* of *Bulloign*, and on the Left his Brother *Baldwin*'s. Over this are the Chappels of *Mount Calvary*, to which we ascend on the North-side by 20 Steps. The Floor of the first Chappel is checker'd with divers colour'd Marbles, not to be trod upon by any feet that are shod. At the East-end, under a large arched concave of the Wall, is the place whereon our Saviour suffer'd, reputed the most holy in the World. In the middle is the place where the Cross did stand, lin'd with Silver gilt and emboss'd. On either side there standeth a Cross, that on the Right-side in the place where the good Thief was crucified, and that on the Left where the bad, divided from it by the rent of the Rock which clove asunder in the hour of his Passion. This place belongs to the *Georgians*, who are poor and take Alms, and no other Nation says Mass at that Altar; over which hang 46 Lamps continually burning. On the same Floor is that other Chappel belonging to the *Latines*, divided only by a Curtain, into which we enter through the former; and in the midst of the Pavement is a Square, enchas'd with stones of different colours, where Christ, they say, was nail'd upon the Cross. This place is too Holy to be trod upon, but is worn with the Peoples knees, and heated with their fervent kisses. These are the only 2 Chappels which stand on the top of the Rock, except that of the Immolation of *Isaac*, where they keep the Altar of *Melchisedeck*. About 20 paces Westward is the place where the B. Virgin stood, and the Disciple whom Jesus lov'd, when from the Cross he commended each to other. A little on the Right-hand of this you pass between certain Pillars, into that part of the Church which is call'd *the Temple of the Resurrection*, and of the *Holy Sepulchre*; a stately Round, cloister'd below and above, and much of the lower Cloyster is divided into sundry Chappels, belonging to several Nations and Sects, where they Exercise the Rites of their several Religions. This Round is cover'd with a Cupolo, sustain'd with Rafters of Cedar, being open in the middle like the *Pantheon* at *Rome*, whereat it receives the light. And just in the midst, and in the view of Heaven, stands the glorified Sepulchre, 108 foot distant from *Mount Calvary*, being a Natural Rock hewn in the form of a Chappel. The stone which the Angel roll'd from the mouth of the Sepulchre, is said to be remov'd by *Helena* to the Church of *St. Saviour*, standing where the Palace of *Caiaphas* was. On the North-side there is a Tomb of Marble, which takes up one half of the room, made in the form of an Altar, and will not hold above three at one time. 'Tis said, that long after our Saviour's Resurrection, this Tomb remain'd in the same form as when our Saviour lay there, but because the Pilgrims were continually carrying away little pieces of it, it was first enclos'd within an Iron-grate, and afterwards by *Helena* within this Marble Altar, which now belongeth to the *Latines*, whereon they only say Mass, tho' 'tis free for other Christians to Exercise their private Devotions at it: And there thousands of Christians perform their Vows, and offer their tears Yearly, with all the expressions of Sorrow and Affection. On the North-side, without the Limits of the Temple, is the Chappel of the Apparition, so call'd, because Christ there

there shew'd himself to his sorrowful Mother and comforted her. This serves the *Latines* for a Vestry, from whence they begin their solemn Procession. On the East-side of it there are 3 Altars, that in the middle is dedicated to God and our Lady, that on the Right-hand is call'd the Altar of the *Holy Cross*, where a great part of it was kept until the *Armenians* carried it away to *Sebastia*. That on the Left-hand is call'd the Altar of *Scourging*, behind which there is a piece of that Pillar, as they say, whereunto our Saviour was bound when they scourg'd him; it is 3 foot high, of a black vein'd Marble, spotted with red, which they affirm to be the marks of his Blood. 'Tis so encompass'd with a grate of Iron, that it cannot be touch'd but with a Stick, that is cover'd at the end with leather like a Foil, by which they convey their Kisses, and bless their Lips with the touch of that which has touched the Relique. Through the aforesaid Vestry, a passage leads to certain Rooms heretofore a part of the College of the *Knight-Templars*, where divers of their Statues are to be seen, and the posture us'd in their Burials, after the same manner as in the *Temple-Church* at *London*. We saw also the Chappel of the Angels, the Grot hewn out of a Rock, where they say the *Jews* imprison'd our Saviour, while they prepar'd things necessary for his Crucifixion; the place where the Title was preserv'd which hung over our Saviour's Head, and is now shown at *Rome* in the Church of the *Holy Cross* of *Jerusalem*; and the place where they say the Soldiers cast Lots for his Garments. 'Tis commonly reported, that the *Jews* threw our Saviour's Cross into the Valley of *Carcases*, and cover'd it with the filth of the City; but after 300 Years, the Empress *Helena* coming to visit those places which Christ had sanctified with his Corporal presence, threaten'd torture and death to the principal *Jews*, if they would not discover where their Ancestors had hid it; whereupon, an old *Jew* called *Judas*, show'd them the place, where they found 3 Crosses, and hard by the Superscription. And 'tis said, the Earth trembled, and breath'd from her crannies aromatick Odours. But when they were not able to distinguish the Cross of Christ from the other two, they say that *Macarius*, then Bishop of *Jerusalem*, going with the Empress to a Noble-woman sick of an incurable disease, by healing her with the touch of the Cross discover'd that it was Christ's. Whereupon the *Jew* became a Christian, was made Bishop of *Jerusalem*, and suffer'd Martyrdom in the Reign of *Julian*; and the 3d of *May* is still celebrated in Memory of the Invention. We saw also the Chappel of *Derision*, where under the Altar they say is a part of that Pillar to which Christ was bound, when *Pilate's* Servants cloath'd him in a purple Robe, crown'd him with Thorns, and put a Reed in his Hand instead of a Scepter, crying, *Hail, King of the Jews*. The Quire, which is like that in our Cathedral Churches, and is call'd the *Temple of Golgotha*, hath a little Pit in the Pavement, which they say is the Navel of the World, applying to that purpose the words of Scripture, *God wrought his Salvation in the midst of the Earth*; and this they fill with Holy Water.

On *Good-Friday* they carried the Image of Christ on a Sheet, supported by the 4 corners, in Procession, with Banners of the Passion: First, To the place where he was imprison'd, then in Order to the other; and laying it where they say he was fix'd on the Cross, the Friar-preacher made over it a short and passionate Oration, which drew tears from himself and the Hearers. At length they brought it to the place where they say it was Embalm'd, where the Father-guardian anointed the Image with sweet Oils, and strew'd it with aromatick Powders, and from thence convey'd it to the Sepulchre. At Night the Lights being put out, and the Company remov'd, they whipt themselves in their Chappel of *Mount Calvary*. On *Sunday* they carried the Cross in Procession to the said Chappel, creeping to it, kissing and lying groveling over it. On *Easter-day* they said solemn Service before the Door of the Sepulchre, and concluded with a triumphant Procession, bearing about the Banners of the Resurrection. The other Christians (except such as inhabit within, of each sort a few) enter'd not until *Good-Friday*, being *Grecians*, *Armenians*, *Coptites*, *Abyssins*, *Jacobites*, *Georgians*, *Maronites* and *Nestorians*. And on *Easter-day*, about One a Clock in the Morning, all these Nations and Sects, with joyful Clamours, according to their several Customs, encompass'd the Church, and visited the Holy places in a solemn Procession.

Upon *Easter-Monday* we hir'd certain Asses to ride to *Emaus*, and about Midway we saw a Monastery built by *Helena*, where they say Christ appear'd to the 2 Disciples. *Emaus* stands 7 miles Westward from *Jerusalem*, and there Christ was known by the breaking of Bread in the House of *Cleophas*, in which place a Temple was built by *Paula* a *Roman* Lady, whose Ruins are yet extant. This City was burnt in the *Jewish* Wars, but upon the destruction of *Jerusalem* rebuilt by the *Romans*, who call'd it *Nicopolis*. In our return we saw a Valley, which they say was the Field of that Battel, when the Sun and Moon stood still at the command of *Joshua*, and the place where the Prophet *Samuel* is said to be buried. On the North-west side of the City, we saw sundry places of Burial hewn out of the main Rock, and among the rest one call'd the *Sepulchre of the Prophets*, and another which is said to be the Monument of certain Kings of *Judah*; and hence we return'd to the Convent.

The next day we rid towards *Bethlehem*, which stands about 6 Miles South from *Jerusalem*; and going out by the Gate of *Joppa*, turning on the Left-hand by the foot of *Mount Sion*, we saw on the top of it the Tower of *David*, which had been a place of great strength and beauty; and on the Right-hand we saw the Fountain wherein they say *Bathsheba* bath'd her self. About two Miles from the City there grows a Turpentine-tree, which is generally believ'd to have given shelter to the Virgin *Mary*, and is a place of great Devotion; and a Mile beyond that a Cistern, call'd the *Cistern of the Star*, because there the Star appear'd again which led the Wise Men to the place of our Saviour's Birth; and near to that, we saw the place where they say the Angel took up *Habakkuk* by the hair of the Head, and convey'd him to *Babylon*; and half a Mile further, a Religious House dedicated to *Elias*, hard by the Rock on which they say he us'd to sleep. A little beyond are the Ruins of a Church, built they say where *Jacob* dwelt, and the Sepulchre of *Rachel*, which is kept entire, being encompass'd with a Wall. Below it, on the side of a Mountain, we saw the Ruins of that *Rama*, of which the Prophet says, *A voice was heard in Rama*, &c. Within half a Mile of *Bethlehem* are the Cisterns of *David*, whereof he desir'd so much to drink, and when the Water was brought to him he refus'd it.

At last we came to *Bethlehem*, first call'd *Ephrat*, a City of *David*, long possess'd by his Ancestors, seated on a Hill in a happy Soil, and having a pleasant prospect. And here we saw the Grot at the East-side of the City, which was employ'd for a Stable, where the Virgin *Mary* fell in travel, and brought forth the Saviour of the World: In which Cave *Helena* erected a goodly Temple, and call'd it *St. Maries* of *Bethlehem*, which is built in the form of a Cross; but now it is left for the most part desolate, the Altar naked, and no Service is said in it except at extraordinary times, being inhabited only by a few poor *Greeks* and *Armenians*. Adjoyning to this Church there is a Monastery of the *Franciscans*, and a Chappel dedicated to St. *Katherine*; from which we descended with Lights in our Hands into a little square Cave, where we saw the Vault in which the Infants slain by the Edict of *Herod* are said to be buried; and in another Grot the Monument of *Paula*, who built hard by this Church four Monasteries, and an Hospital for Pilgrims, and the Tomb of St. *Jerom*, who liv'd in her Time; and in another Grot his Cell, wherein he lay 50 Years, and there twice translated the Bible. After this, we return'd into the Chappel of *Innocents*, and by another Entry pass'd into a Vault, where we found an Altar garnish'd with a Table of the Nativity, a Manger hewn out in a Concave, wherein they say our Saviour was laid by the Virgin; and a Bench in a Rock like an Altar, wherein they say the Eastern *Magi* dispos'd of their Presents. All which places are in the possession of the *Franciscans*, and no less reverenc'd than *Calvary* or the Sepulchre. In the place where this City stood, there are now but a few poor Cottages standing, and the few Inhabitants being *Greeks* and *Armenians*, get a beggarly Living by selling unto Strangers the Models of the Sepulchre, and of the Grot of the Nativity, cut in Wood, or cast in Stone.

After Dinner we descended into the Valley which lieth East of the City, where *Jacob* fed his Flock, and is call'd his Field; but more famous for the Apparition of Angels, who there brought to the Shepherds the glad tydings of the Birth of a Saviour: upon which account, *Helena* built a Church in the midst of it, which she dedicated to the Angels, but is now ruin'd. Near to this is the Village where the Shepherds dwelt, where is the Well that the Virgin *Mary* desir'd to drink of, which being refus'd by the Villagers, they say the Well overflow'd to satisfy her desire. Nearer to *Bethlehem* are the Ruins of a Chappel, where *Joseph* had his Dwelling when the Angel commanded him to fly into *Egypt*, and the Cave wherein he hid our Saviour and his Mother, whilst he prepar'd things necessary for the Journey. The

The next day we directed our Course to the Mountains of *Judæa*, and having pass'd by a Village call'd *Bezec*, about two Miles further, we came to *Bethsur*, where we saw the Ruins of a great Church, and below that a Fountain, where they say *Philip* baptiz'd the Eunuch, which is therefore call'd the *Æthiopian* Fountain. About a Mile and a half further, we came to the Cave where *John the Baptist* is said to have liv'd from 7 Years of Age until he went into the Wilderness by *Jordan*. After this we turn'd towards *Jerusalem*, leaving the way of *Bethlehem* on the Right-hand, and that of *Emaus* on the Left; and the first place of note we met with, was that where once stood the Dwelling of *Zachary*, seated on the side of a fruitful Hill, well-stor'd with Olives and Vineyards. Hither came the Blessed Virgin to visit her Cousin *Elizabeth*, who died here, and was buried in a Grot, over which a good Church and Monastery were erected, which are now ruin'd. Near this stands a Temple built by *Helena*, and dedicated to *John the Baptist*, in the place where *Zachary* had another House, and the Prophet was born to him, which is a place of great Devotion.

The day following we went to review the remarkable places about the City, and there we were shew'd a small Chappel, having the Door and Windows ramm'd up, because, as they say, the *Mahumetans* became mortally sick who by chance came into it, standing where stood the Temple of St. *Thomas*. From hence we came to the Palace of *Annas*, destroy'd at the time of the Siege, where now standeth a Church dedicated to the blessed Angels; and hard by there is an old Olive-tree, encompass'd with a Wall, unto which 'tis said they bound our Saviour. After this we went out of the Port of *Sion*, and not far from thence, in the midst of the Mount, is the place, as they say, where Christ did eat his last Supper; where also, after his Resurrection, the Doors being shut, he appear'd to his Apostles, where they received the Holy Ghost, where *Peter* converted 3000, and where they also held the first Council. Here *Helena* built a most sumptuous Temple, including therein the *Cœnaculum*, where that Marble Pillar was preserv'd that stood before in the Palace of *Pilate*, to which they tied our Saviour when they whipp'd him. This Church was destroy'd by the *Saracens*, and now the *Turks* have a Mosque here, upon the account of a Tradition that this was the place of *David*'s Sepulchre. Between this and the Walls of the City, the *Franks* have their Burial-place, and hard by is the place where stood the proud Palace of *Caiaphas*, in which our Saviour was buffetted, spit upon, and spightfully revil'd; where *Helena* built a fair Church to St. *Peter*, but that being destroy'd, there is now a little one in the room of it, dedicated to *St. Saviour*. Not far from hence, they shew'd us the place where the Fire was made by which St. *Peter* stood when he denied his Master, and the Chapiter of the Pillar, whereon the Cock crowing, did move him to Contrition. At the upper-end of the Church, upon a large Altar, lieth the Stone which, as they say, was roll'd against the mouth of the Sepulchre. From hence we descended into the Valley of *Gehinnom*, which divideth *Mount Sion* from the *Mount of Offence*, where *Solomon*, by the perswasion of his Wives, sacrific'd to *Moloch*, which is now call'd by Christians the *Mountain of ill Counsel*, where, they say, the *Pharisees* took Counsel against Jesus. On the South-side of this Valley, near where it meeteth the Valley of *Jehosaphat*, on the side of the Mountain is *Aceldama*, or the *Field of Blood*, purchas'd, with the reward of Treason, to be a Burial-place for strangers, which is now the Sepulchre of the *Armenians*. A greedy Grave, for they say the Earth thereof, within the space of 48 hours, will consume the flesh laid in it, which is probable enough from the small compass of ground, and the great multitudes that are buried in it. Beyond this, on the point of the Hill, is a Cave hewn out of the Rock, consisting of several Rooms, where 6 of the Apostles are said to have hid themselves at the time of Christ's Passion. The Valley of *Jehosaphat* is about two Miles long, water'd by the torrent *Cedron*, which loseth its streams in the Lake *Alphaltis*: And here the *Jews*, *Latines* and *Mahometans*, do all agree that the General Judgment shall be kept. On that side of the Valley which is next the City, is the place where the Prophet *Esay* was sawn asunder and buried; and close below this stood the *Oak Rogel*, where now a white Mulberry grows. North of this, in a gut of a Hill, above which stood the Tower, was the Fish-pool of *Siloe*, now dry in the bottom. On the other side is the Sepulchre of *Zachary*, who was slain between the Temple and the Altar, all of the natural Rock, 18 foot high, 4 square, and beautified with dorick Columns of the same Stone. Near to this is another Rock, within which is a Grot, whither *James* retir'd, they say, after the Passion of our Saviour, having resolv'd never to eat until he saw him, who there appear'd to him after his Resurrection. A little farther, there is a Stone-Bridge over the torrent *Cedron*, and at the East-end of it stands the Pillar of *Absalom*, against which there lies a great heap of Stones, which encreases daily, for both *Jews* and *Mahometans* throw stones against it, still cursing *Absalom* for his Rebellion against *David*. A little more North once stood the Village *Gethsemane*, a place now fruitful in Olives, and hard by is the pleasant Garden wherein our Saviour was betray'd. They point at the place where he left his two Disciples; and a little higher the third, when he went to pray, and also the place where he was taken. In this Garden is the stone, whereon they say our Lady sat and beheld the Martyrdom of St. *Stephen*, who suffer'd on the side of the opposite Hill.

To come at the Sepulchre of the Blessed Virgin we must descend 50 steps, and passing by about the middle, the Sepulchres of *Joacim* and *Anna* on the one side, and of *Joseph* on the other, we enter into a spacious Church, in the midst whereof is a little square Chappel hewn out of the Rock, and at the far side of it stands her Tomb, now in the form of an Altar, under which they say she was decently buried by the Apostles. In this Chappel 18 Lamps burn continually, which are maintain'd partly by *Christians*, partly by *Mahumetans*; and against the North-end of the Sepulchre there is a Clift in the Rock, where the *Turks* say the Virgin did hide her self when she was persecuted by the *Jews*, into which I have seen their Women creep, and give the cold Rock warm kisses. Having remounted the same Stairs, not far from the Garden of *Gethsemane*, we descended into a vast round Cave, all of the natural Rock, the place they say where Christ did pray, when in his bloody Agony he was comforted by the Angels. From hence we went into the City, at the Gate of St. *Stephen*, by which the Cattle came in that were to be sacrific'd; and on the Left-hand there is a Stone-Bridge, which goes into the Court of *Solomon*'s Temple, and is the Head to the Pool *Bethesda*, where the Sacrifices us'd to be wash'd, which had 5 Ports in which diseased Persons lay, for he that went in next after the Angel had troubled the Water was cur'd.

The Temple of *Solomon* being finally destroy'd by *Titus*, the Court of it is still to be seen, and in the East Wall of it stands the golden Gate through which our Saviour pass'd in Triumph; and in the midst of this Court there is another, in which stands a Mosque finely adorned: and in the South-east corner there is a handsome Temple, call'd by the Christians the Church of the *Purification of the Virgin*, which is now also a Mosque.

Having repass'd the foresaid Bridge, on the North-side of the Street, we saw the Remains of a goodly Church and Monastery built to the Honour of St. *Anne*, and going onward we found the Palace of *Pilate*, which doubtless had been the Castle of *Antonia*, and is now the Residence of the Sanziack; and at the far end of the Street, we saw the Ruins of the stately Mansion of *Herod*. At the West corner of *Pilate*'s Palace, there are a pair of high Stairs, which lead to the place of Justice, and the Throne of the *Roman* President, where the Saviour of the World was condemn'd by the World. These Stairs are call'd *Scala Santta*, which I have seen at *Rome* in the *Lateran*, being translated thither by *Constantine*. Three pair there are in one front, divided by Walls, whereof the middlemost are of white Marble, 18 in number, worn by the knees of those who ascend them, and descend by the other. At the top there is a little Chappel call'd *Sanctum Sanctorum*, in which Mass is never said, because they say a Father saw in it a Procession of Angels, some Singing, and others bearing Torches. The way between the place of these Stairs and Mount *Calvary* is call'd the *dolorous Way*, through which our Saviour was led to his Passion; and in it they shew three places in which our Saviour fell under his Cross. A little beyond there is an arched Window, where *Pilate* presented Christ to the People. A hundred paces further there are the Relicks of a Church, where they say the Blessed Virgin stood when her Son pass'd by, and fell into a trance at the doleful sight. Sixty paces further they say they met with *Simon* of *Cyrene*, and compell'd him to bear our Saviour's Cross. Then on the Left-hand they shew'd us where the Women wept, and Christ reply'd, *Weep not for me ye Daughters of* Jerusalem, *&c.* But turning to the Right-hand, they shew'd us the place where *Veronica* dwelt, who gave our Saviour, as they say, a Napkin as he pass'd by the Door, to wipe off the Blood that had trickled from his Brows pierc'd with Thorns, and the Spittle wherewith they insulted and defil'd him, who return'd it enrich'd with his lively Picture,

Picture, which is now to be seen at *Rome* in St. *Peter's* Church. Fronting the end of this Street is the old Gate, where the Elders sate in Judgment, through which the Condemn'd were led to Execution in *Mount Calvary*, which was then 220 paces without, but is now in the heart of the City. Turning to the South, we were shew'd where once stood the Dwelling of *Zebedeus*, in which *James* and *John* were born; and a little higher the Iron-gate, which gave way to St. *Peter* when he was conducted by the Angel. From thence we went to the House of St. *Mark*, and the Church of St. *James*, standing where he was beheaded; and then we return'd to the Convent.

The next day we went out again at the Gate of *Sion*, and turning on the Left-hand, we were shew'd the place where *Peter* wept when he had deny'd our Saviour. Not far beyond we cross'd the Valley of *Jehosaphat*, and ascended the South-end of *Mount Olivet*, by the way of *Bethany*, to a good height; and on the Right-hand they shew'd us where *Judas* hang'd himself on a Sycamore-Tree, being buried in a Grot adjoyning; and nearer the top, where Christ curs'd the Fig-Tree, there being now many growing in the place. Descending the East-side of the Mount, on the Left-hand we saw the House of *Simon* the Leper, and then the Ruins of the Castle of *Lazarus*, Brother to *Mary* and *Martha*, under which lies *Bethany*, now a small Village inhabited by the *Arabians*. In it is the Vault where Christ rais'd *Lazarus* from the Dead; and above it are two little Chappels, where stood a stately Church built by *Helena*. North of *Bethany*, we saw the Ruins of a Monastery, in the place whither the Penitent *Mary* retir'd from the Vanities of the World. Southward stood the House of *Martha*, and in the Mid-way between there is a Stone, whereon they say Christ sate when the two Sisters entreated him to raise their Brother from the Dead. A little above there is a Fountain of excellent Water in a Rock, call'd the *Fountain of the Apostles*. Now we ascended *Mount Olivet* towards the North; and upon the Right-hand, not far from the top, stood *Bethphage*, from whence Christ went unto *Jerusalem* in Triumph upon an Asses Colt, which is Superstitiously imitated every *Palm-Sunday* by the Father-guardian.

Here I look back and survey the high Mountain *Quarantania*, and the low Plains of *Jericho*, *Jordan*, and the *Dead Sea*, of which I have spoken already, and shall now only add, that *Jordan* runs almost 30 Miles from *Jerusalem*, and in it the Pilgrims wash themselves, and carry away of its Water, which they say is a sovereign Remedy against many diseases. A great way on this side the River is a crooked Channel, where they say Christ was baptiz'd by *John*. On the Right-hand stood *Jericho*, formerly an Episcopal See, beautiful in her Palms, and proud of her *Balsamum*, from which that precious Gum is distill'd, which is now brought from *India*; but now there are only a few poor Cottages standing, and there grows nothing in the Valley, which is about 10 Miles over, but spiny Grass. It is bounded with high Mountains, among which *Quarantania* is the most eminent, being in that Wilderness where Christ for 40 days was tempted of the Devil, and from whence the Tempter shewed him all the Kingdoms of the Earth; and it is crown'd now with a Chappel.

After this we return'd to the top of *Mount Olivet*, higher than all the neighbouring Mountains, whose West-side gives a full view of the City, a place famous in Sacred History, as being often bless'd with the Presence of Christ, and Apparition of Angels. It extends from North to South, and has three Heads: On that in the middle there stands a little Chappel, all of white Marble, pav'd within with the natural Rock, which bears the impression of our Saviour's foot-step, the last that he set on Earth, when from thence he ascended into Heaven; a place highly honour'd by Christians, but possess'd by *Mahumetans*, yet free to both their Devotions. It was built by the Mother of *Constantine*, cover'd with a sumptuous Temple and a Monastery; and on the South-side they shew'd us the Cell of *Pelagia*, a rich Courtezan, who being converted, liv'd long here as a Hermit, and was never discover'd to be a Woman till she was dead. As we descended, we were shew'd by the way where our Saviour taught the *Pater-Noster*, foretold the Destruction of *Jerusalem*, and wept over the City. After this crossing the Valley, we return'd to the City and the Monastery.

The next day we set forth for *Tripoly*, and near the City on the Right-hand we saw *Shilo*, the Station for the Ark of the Covenant, which is the highest Mountain of *Jewry*, and has on the top some fragments of a City. After 4 Miles riding we descended into the Valley of *Teberinth*, famous for the slaughter of *Goliah*. About 4 Miles further they shew'd us *Modin*, the ancient Seat of the *Maccabees*, seated on a Hill where are the Ruins of a City, and some Miles further a ruinous place call'd the *House of the Good Thief*; from whence we came to *Rama* that Night, and lodg'd in *Sion-House*, on the ground.

The next day we departed from *Rama*, and travelling through a fruitful Valley, the first place we past by was *Lydda*, call'd afterward *Diospolis*, where yet stands a Christian Temple, built, as they say, by a King of *England*, to the Honour of St. *George*, who, after he became a Soldier of Christ, suffer'd Martyrdom; and here the *Greeks* show what they call his Skull. The next place we came to is the Castle of *Augia*, built like a Cane, and kept by a small Garrison, being about 8 Miles from *Rama*; and hence we travell'd with much hardship to *Mount Carmeli*, famous for the Habitation of *Elias*, whose House was after his Death converted into a Synagogue, where Oracles, 'tis said, were given by God. Of whom *Suetonius* says, That *Vespasian consulting of the God* Carmelius, *was assur'd by him that he should be successful in all his Undertakings*. From hence proceeded the Order of the *Carmelites*, as Successors to the Sons of the Prophets left there by *Elias*; and there is yet to be seen the Remains of a Monastery, with a Temple, dedicated to the Blessed Virgin, under which is a little Chappel or Cave, the ancient Dwelling of *Elias*. This is inherited by *Achmet*, an *Emer* of the *Arabians*, within whose Precinct stands the Castle of the *Peregrines*, upon a Cape almost encompass'd with the Sea, now call'd *Tortora*, built by *Raymond*, and after fortified by the Templars. Ten Miles South of this stood that famous *Cæsarea*, which was magnificently adorn'd by *Herod*, but is now quite ruin'd and abandon'd. We cross'd the Torrent *Hison*, which floweth from the Mountains of *Tabor* and *Hermon*, and gliding along the Skirts of *Carmel*, dischargeth it self into the Sea. *Carmel* is the South-bound to the large Valley of *Acre*, which on the North is bounded by *Sharon*, on the West by the Sea, and on the East with the Mountains of *Galilee*. When we enter'd the Town, which is mid-way between *Tripoly* and *Jerusalem*, we stay'd there with some *Englishmen* that were come from *London*.

This City was first call'd *Ace*, and then *Ptolemais* and *Acon*, and now *Acre*; it had many strong Castles, which are ruin'd, and has now a Haven for Ships on the South-side. After it was taken by *Saladine*, it was deliver'd by our *Richard* the First, who appears by the Ruins to be the Founder of some places there. About 100 Years after, it belong'd to the Knights Hospitallers of St. *John's*, and was call'd *St. John de Acre*, but is now under the Sanziack of *Saphet*, and has not above 2 or 300 Inhabitants. The *Franks* for the most part bring hither Ready Monies, and chiefly *Dutch* Dollars, which are here in *Jewry* equivalent to Rials of Eight, (tho' elsewhere less by 10 Aspers) and they fraught their Ships with Cottons, that grow abundantly in the Country adjoyning. The *English* are much respected by the principal *Moors*, as being the greatest Traders here. The Inhabitants do every night House their Goats and Sheep for fear of the Jaccals, which lurk in the Vault and Reedy Marshes, adjoyning to a Brook that abounds with Tortoises.

We waited 4 days at *Acre*, hoping, but in vain, to have gone with the Merchants to *Nazareth*, distant from hence about 15 Miles, now a small Village of *Galilee*, seated in a Vale between two Hills, where are the Remains of a goodly Temple erected over the House of the Blessed Virgin, whereof there is yet one Room to be seen, partly hewn out of the living Rock, which is much honoured by Christians; tho' the Papists relate, that the Room wherein she was born was carried by the Angels into *Italy*, and after several removes, at last settled at *Loretto*. No Christian is suffer'd to dwell at *Nazareth* by the *Moors* who inhabit it; most of the old City seems to have stood on the adjoyning Hill, which has the Ruins of divers Churches.

On the 8th of *April* we hois'd Sails for *Sidon*, and met with a mighty Storm, wherein the spouts of Water were seen to fall against the Promontory of *Carmel*, but came to *Sidon* about 4 a Clock, and could not reach the Harbour of the Rock, the safe place for Ships of burthen.

Phœnicia is a Province of *Syria*, between the Sea and *Galilee*, stretching North and South from the River *Valanus* to the Castle of the *Peregrines*, which is on the far side of Mount *Carmel*, so call'd from *Phœnix* Brother to *Cadmus*, and the 5th from *Jupiter*. It has on the Sea-coast these Cities, *Tripoly*, *Biblis*, *Berytus*, *Sidon*, *Tyrus* and *Acre*; whereof the most ancient is *Sidon*, of a pleasant and healthful situation, on the one side wall'd with the Sea,

Sea, on the other side with the fruitful Mountains that lie before *Libanus*, from which fall many Springs that overflow their Orchards, abounding with excellent Fruits. It was formerly an Episcopal See, but is now contracted into narrow Bounds, and has nothing of Antiquity but the suppos'd Sepulchre of *Zebulon*. The Inhabitants are of several Nations and Religions, govern'd by Princes, whom they call'd *Emers*, descended, they say, from the *Druses*, being the remainder of the *French* brought hither by *Godfrey* of *Bulloign*, who being driven to the Mountains, could never be utterly destroy'd by the *Saracens*, and now are neither wholly Christians nor *Mahumetans*. This *Emer* coins new *Dutch* Dollars, has the 5th part of the encrease of all things, and has Head-money for *Christians*, *Jews*, and all Cattel in his Dominions. He treats *English* Merchants civilly, and they may travel without danger, paying 3 in the 100 for Custom: But if a Factor happens to die, he seizes on the Goods belonging to his Principals, and seems to do them a favour in admitting of a Redemption under value. The Merchandize of this place are Cottons, Silks, which are made in the Mulberry-Groves: Other Commodities, which are many, they fetch from *Damascus*, 2 days Journey from hence, over the tops of Mountains exceeding cold, the heat being then very great in the Valleys. Our Ship returning to *Alexandria*, we return'd to *Acre* by Land, and after 5 Miles riding, we met with a small Mosque, built, they say, over the Widows House that entertain'd *Elias*; close by it are the Foundations of *Sarepta*, and over against it is a new Town call'd *Sarapanta*; beyond which are many Caves cut out of a Rock, call'd, in the Book of *Joshua*, *Meara*, *i.e.* the Caves of the *Sidonians*.

Tyre was the Metropolis of *Phœnicia*, famous for Merchandize, and could boast of her Purple, which is a Shell-fish, that in the midst of his Jaws has a vein, that contains that precious Liquor. The *Boat* is a gaping Oyster, kept for that purpose long out of Water, into which the Purple puts his Tongue, and so by the sudden closing of the Oyster, is retain'd and drawn out. But now the *Purple* is no more to be had, either because that kind of Fish is extinct, or because the places they frequented, are now possess'd by the barbarous *Mahumetans*. When the Christian Religion grew powerful in these Parts, *Tyre* was the Seat of an Archbishop, having 14 Bishopricks under her Primacy; but now it is no more than a heap of Ruins, which may instruct the Beholder in its former Grandeur. The next Morning we ascended the high and wooddy Mountains of *Sharon*, which extend unto the Sea of *Galilee*, which are frequented only with Leopards, Bears, and such like Savage Inhabitants, and ere night we re-entred *Acre*.

An Abstract of the Reverend Mr. Maundrel's *Journey from* Aleppo *to* Jerusalem, *being a Supplement to Mr.* Sandys.

ON *February* 26. 1696. I set out with 14 *English* Gentlemen from *Aleppo*, designing to visit the *Holy-Land* at the next *Easter*, and the first night we took up our Quarters at the *Honey-Kane*, about an hour and a half West of *Aleppo*.

And here 'tis to be noted, that in travelling this Country, a Man does not meet every night with Inns as in *England*, but you must either lodge under your own Tent, or else in Publick-Houses, founded for the use of Travellers, call'd by the Turks *Kanes*, to which all Comers are welcome, paying a small Fee to the *Kane*-Keeper, if they be able. And here you must expect nothing generally but bare Walls, but all other Necessaries must be furnish'd by every one that travels.

On *February* 27. we parted from the *Honey-Kane*, and passing by *Oorem* and *Keffre*, we enter'd into the Plains of *Kefteen* of a vast compass, and in most places very fruitful. At our first descent into them at *Essoyn*, we counted 24 Villages; and *Kefteen* it self is a large Village on the West-side of the Plain, encompass'd with so many Fields of Corn, that the Inhabitants breed very many Pigeons. At this place we saw over the Door of a Bagnio a Marble-stone carv'd with the Sign of the Cross, and the *Gloria Patri*, &c. which was probably the Portal of some Church formerly.

Feb. 28. we left *Kefteen*, and continuing in the same Plain, abounding with Corn, Olives and Vines, we came to *Harbonose*, and from thence to a very rich Valley call'd *Rooge*, which is wall'd on both sides with high Mountains; and having travell'd in this Valley four hours, we pass'd through the Skirt of *Rooge*, and from thence we came to *Te-me-ree*, where we paid our first Caphar.

These Caphars are certain Duties paid by Travellers, to Officers that attend in their Stations to receive them. They were at first levy'd by Christians for repairing the Ways, and scouring them from Robbers; but under that pretence, the *Turks* now exact unreasonable Sums, tho' themselves are often the greatest Robbers.

After this Caphar, we cross'd over the Mountains on the West-side of the Valley of *Rooge*, and descending into a Valley we past *Bell-maer*, and came to *Shoggle*, which is a large but filthy Town, situate on the River *Orontes*, over which you pass to it by a Bridge of 13 small Arches. The River hereabouts is pretty deep, and yet so rapid, that it turns great Wheels, made for lifting up the Water, by its natural swiftness, without any force added to it, meerly by confining its stream. We lodg'd here in a large and handsome *Kane*, founded by the second *Caperli*, and so well endow'd, that it supplies every Traveller with a competent portion of Bread, Broth and Flesh. It was crouded with Turkish *Hadgees* or Pilgrims, bound for *Mecca*, but we found a peaceable reception among them.

March 1. we parted from *Shoggle*, and cross'd a Mountain on the West-side of the Valley, from which we descended into a third Valley like the two former; and having pass'd the Village *Bedame*, we entred into a wooddy Country, where our Road was very rocky and uneven, but yet pleasant, because it treated us with the prospect of Plants and Flowers of divers kinds, as Myrtles, Oleanders, Tulips, and other aromatick Herbs. After this we descended into a low Valley, at the bottom of which there is a Fissure, so narrow, that you cannot discern it till you come upon it, tho' you may hear the noise of the stream running into it at a great distance. They call it the *Sheeks Wife*, from a Woman of that quality that fell into it. From hence we came in one hour to a place call'd the *Sultan's Stone*, where we pitch'd our Tents and lodg'd for that night.

March 2. we left our Campagnia Lodging very early, the Weather being yet moist and cold, and came in an hour to the Caphar of *Crusia*, and from thence in another to the foot of a Mountain, call'd *Occaby*, which we ascended with great difficulty, and then we found a fine Country planted with Silk-Gardens, through which we came to *Belulca*, and there repair'd to a place which is both the *Kane* of the Village, and the *Aga*'s House, but tho' we gave him a small Present, we could hardly obtain a dry part of the House to lodge in. In the mean time, being inform'd that there were several Christians Inhabitants in this place, we went to visit their Church, which was only a Room about 4 or 5 Yards square, wall'd with Dirt, and cover'd with Bushes, in which was an Altar of the same materials with the Walls, pav'd at top with Potsherds and Slates; and in the middle of the Altar stood a Cross made of two Laths nail'd together, on each side of which there are 2 or 3 old Pictures of our Blessed Lord and the Virgin, &c. a very mean Habitation for the God of Heaven, but yet held in great esteem by the poor People, who come hither with great Devotion, and hang the Room with Bags of Silk-worms Eggs, that by the Holiness of the place they may bring a Blessing upon them, and encrease their Virtue.

March 3. we left *Belulca* and arriv'd at *Sholfatia*, a poor Village, situate upon a small River, now swoln so high with the late Rains that it was not Fordable; which put us to a Nonplus, not knowing what to do till the Rain abated, and then we pitch'd in the open Field,

Field, tho' thorowly soak'd with wet: But after the Rain had ceas'd a little while, it began to pour down afresh with Lightning and Thunder, and then we sent a *Turk* to a *Sheck*'s House hard by, to try if by any means we cou'd get admittance there; and at last, with good words, having declar'd that we had no intention to defile their Faith, we were permitted to secure our Baggage in the House, whilst we shelter'd our selves among the Tombs from the Rain, which pour'd down all night.

A *Sheck*'s House is a Stone Fabrick, of 6 or 8 Yards square, roof'd with a Cupola, erected over the Grave of some eminent *Sheck*, *i. e.* one who by his long Beard and Prayers, and *Pharasaical* Pride, (the great Vertues of the *Mahometan* Religion) have purchas'd the Reputation of a Saint; of which sort there are many in this Country, to which the People repair with their Vows and Prayers, which they offer in these Shrines, not to the Saints, as the Papists do, but to God only, whom alone they adore.

March 4. This Morning we found the River fordable, and got to the other side of it with our Baggage, from whence ascending a very steep Hill, at the top of it we were presented with the first prospect of the Ocean; and to the Westward, we had a view of the City *Laticheа*, built by *Seleucus Nicanor*, and by him call'd *Laodicea*, which Name it still retains with a little corruption. After it was reduc'd to a low condition, it now begins to flourish again, being put in a way of Trade by *Coplan* Aga, a Man of great Wealth and Authority in these Parts. From the Hill last mention'd, we descended into a spacious Plain, having the Sea on the Right-hand, and Mountains on the Left. In which Plain we discern'd 2 ancient Tombs, which were Chests of stone, 2 Yards and a half long each, cover'd over with large Tables of stone, carv'd on the outside with Ox-heads, and Wreaths hanging between them, after the manner of adorning Heathen Altars. Above an hour from these Tombs we were stopt by another stream, but here we found a safe passage to the other side, and then we were forc'd by the Rain to make the best of our way to *Jebilee*. After this manner our Bode continu'd for several days, between the Sea on the Right, and the Mountains on the Left-hand; but the Mountains go under different Names, and are inhabited by several rude People. In that part of them above *Jebilee*, there dwell a People call'd by the Turks *Neceres*, of a very singular Character, for 'tis their Principle to adhere to no certain Religion, but to put on the colour of that Religion which is profess'd by those with whom they converse: And so with *Christians* they profess themselves *Christians*, with *Mahometans* they are good *Mussulmans*, and with *Jews* they pass for *Jews*. All that is certain concerning them is, that they make very much and good Wine, and are great Drinkers, but in Religion they are very *Proteus*'s.

March 5. This whole day we spent in *Jebilee*, having a convenient new Kane to lodge in, built by *Ostan* the present Bashaw of *Tripoly*. *Jebilee* is seated close by the Sea, having a vast and fruitful Plain on the other sides of it; its ancient Name was *Gabala*, and so 'tis call'd by *Strabo*. In the time of the *Greek* Emperors it was a Bishop's See, and is still accounted a City, tho' it makes a very mean figure at present. The most remarkable things in it are a Mosque and an Alms-house, built by Sultan *Ibrahim*; in the former is his Tomb, which we found to be a great woodden Chest erected over his Grave, and cover'd with a Carpet of painted Callico, trick'd up with a great many Ropes of woodden Beads, which is the *Turks* usual way of adorning the Tombs of their holy Men. In this Mosque we saw several Incense-Pots, Candlesticks, and other Furniture, being the Spoils of Christian Churches. The *Turks* reported that he divested himself of his Royalty, and liv'd 20 Years in a Grotto by the Sea-side; and to confirm the truth of their Relation, they show the Cell where he abode, and another Grot twice as large, which had three Niches or Praying-places hewn in its South-side, as they always are, for that way the *Mussulmen* are oblig'd to set their faces, in reverence to the Tomb of their Prophet. From this Mosque our Guide carried us to a Christian Church, which we found to be nothing but a small Grotto in a Rock open towards the Sea, having a rude Pile of Stones for an Altar, which poor Chappel is the only place, as the Curate told us, allow'd to the *Greek* Christians for Divine Service. But the most considerable Antiquity in *Jebilee*, is the Remains of a noble Theatre, of which the Semi-circle is all that's now standing, being 100 Yards in compass, having in it 17 Windows, between which are large massy Pillars standing against the Wall, that is 3 Yards 3 Quarters thick of firm Stone, by which means it has been preserv'd thus long from the Jaws of Time, and the Ruin which the *Turks* bring upon most places.

March 6. Having done with *Jebilee*, our Road continu'd by the Sea-side, and banish'd us in two hours to a fair deep River, call'd the *King*'s *River*; on both sides of which we saw the footsteps of some considerable Buildings. About half an hour further we pass'd the River *Jobar*, and on the other side stood a great square Tower, and round about it there was the Rubbish of a great many other Buildings. And all along this days Journey we obsery'd the Ruins of Castles and Houses, which testify that this has been formerly a place of great strength and beauty. *Strabo* calls that whole Region, from *Jebilee* as far as *Aradus*, the Country of the *Aradii*, and gives the Names of several places situate along the Coast, which cannot be now distinctly known. Only the *Balanea* of *Strabo* seems to be that place which the *Turks* now call *Baneas*, which stands about a Furlong from the Sea, and has such a pleasant Situation, such Ruins, and such a Bay, as shews it to have been a commodious Habitation. Leaving *Baneas*, we went by the Sea-side, and in one quarter of an hour we pass'd by an old Castle, on the top of a high Mountain, built in the Figure of an equilateral Triangle, which the *Turks* call *Merchab*, which probably is the same Castle mention'd by *Adrichomius* under the Name of *Margath*, to which the Bishops of *Balanea* were forc'd to translate the See, by reason of the Insults of the *Saracens*. About an hour and half from *Baneas*, we met with a small clear stream, which induc'd us to take up our Lodgings near it, about 2 or 3 Furlongs from the Sea, having in sight on the Mountains above us a Village call'd *Sephia*, inhabited only by *Maronites*, and a little further *Resek*, possess'd by the *Turks*; and a little further *Merakiah*, possess'd by *Christians* and *Turks* together.

March 7. Next Morning we came in three hours to a deep River call'd *Nahor Hussine*, having one Arch large and well wrought; and in an hour and half more we reach'd *Tortosa*, anciently call'd *Orthosia*, being a Bishop's See in the Province of *Tyre*, frequently mention'd by the Writers of the Holy Wars as a strong place, as it appears to have been. What remains of it is the Castle, wash'd on one side by the Sea, on the others fortified by a double Wall, between which there is one Dith, and another compassing the outermost Wall. You enter this Fort over an old Draw-bridge which lands you in a spacious Room, which on one side resembles a Church, having at this day several holy Emblems, as that of a Dove descending, and that of the holy Lamb; but on the other side it has the face of a Castle, being built with Port-holes instead of Windows. On the South and East-side of it stood anciently the City, encompass'd with a good Wall and a Ditch, of which there are some Remains; but of other Buildings there is nothing left, except a Church which is 130 Foot long, 93 broad, and 61 high, so entire, that it might easily be repair'd, but it is now made a Stall for Cattel, in which we waded up to the knees in Dirt when we went to see it. From *Tortosa* we sent our Baggage before towards *Tripoly*, which we follow'd not long after, and within one quarter of an hour we came to a large Channel of a River, now almost dry; and in half an hour more we came to a small Island about a League from the shore, call'd by the Turks *Ruad*, which is suppos'd to be the ancient *Arphad*, or *Arpad*, (mention'd 2 *Kings* 19. 13. *Gen.* 10. 18. *Ezek.* 27. 11.) and the *Aradus* of the *Greeks* and *Romans*, which seem'd to be fill'd with Buildings like Castles, and to have been anciently famous for Navigation. About a quarter of an hour further we came up with our *Muleteers*, who had pitch'd our Tents at a place where we found several notable Antiquities, having in it a Fountain call'd the *Serpent Fountain*. The first Antiquity that we obsery'd was a large Dike 30 Yards over at top, cut into the firm Rock, whose sides went sloping down with Stairs form'd out of the Rock; and this was on the North-side of the Fountain, but on the other side we found a Court of 55 Yards square, cut in the natural Rock, and compass'd about with Walls of the same Rock on three sides, but to the North it lay open. In the Center of this *Area* was a square part of the Rock left standing, being 3 Yards high, and 5 Yards and half square, which serv'd for a Pedestal to a Throne made of 4 large stones, two at the sides, one at the back, and another hanging over the top like a Canopy, which was 5 Yards and three quarters square, carv'd round with a handsome Cornish. The Court we imagin'd to be an Idol-Temple, and the Pile in the middle to be the Throne of the Idol, which seem'd the more probable, because *Hercules*, i. e. *the Sun*, the great abomination of the *Phenicians*, was wont to be ador'd in an open Temple.

March 8. We got up early to take a nearer view of the two Towers we saw the night before, whereof one was 33 Foot high, on a Pedestal 10 Foot high and 15 square, the other was 30 Foot high, on a Pedestal 6 Foot high, and 16 Foot 6 Inches square, supported by 4 Lions, the upper-part rear'd upon the Pedestal being all one single stone. Under these Monuments were several Sepulchres, to which we descended by steps, having several Cells for Corps hewn out of the Rock, some of which we found to be 8 Foot and half long. But the particular description of these, and some other Sepulchral Monuments, together with the Cuts of them, the Reader may see in Mr. *Maundrel*, p. 21, 22. Having parted from these Antiquities, we entred into a spacious Plain between the Sea and the Mountains, reaching almost as far as *Tripoly*, which the Natives call *Junia*. We were 7 hours in passing it, and found it all along very fruitful by reason of the many Rivers that are in it; of which the first being about 6 hours from *Tripoly*, has a Stone-Bridge of 3 Arches, and is call'd the great River. About half an hour further we came to another call'd the *Leper*'s River: In three quarters of an hour more we came to a third call'd *Nahor Accharo*; and two hours more brings you to a fourth, call'd the *Cold Waters*. Which Rivers I do particularly mention, because 'tis probable, according to the description of the Ancients, that one of them is the River *Eleutherus*, tho' the Moderns do all agree, that 'tis the same with a River between *Tyre* and *Sidon*, call'd by the Turks *Casimeer*, contrary to the account of *Strabo* and *Pliny*, who place it near *Orthosia*, or between that and *Tripoly*; and of *Ptolomy*, who places it yet more Northerly between *Orthosia* and *Balanca*.

March 9. our *Muliteers* were afraid lest their Beasts should be press'd for Publick Service, as indeed they were in spight of all their caution; and so we left them in the Plain of *Junia*, and arriv'd at *Tripoly* about Sun-set. It is seated about half an hour from the Sea, and the major part of the City lies between two Hills, one on the East, on which stands a Castle that commands the place, and the other on the West, between the City and the Sea, which is said to be first rais'd, and still encreas'd by Sand blown to it from the shore; whence arises a Prophecy, that the whole City shall in time be buried with this sandy Hill.

March 10. we were treated by Mr. *Fisher* in a narrow pleasant Valley by a Rivers-side, about a Mile from the City: A-cross the Valley there runs from Hill to Hill a lofty Aquæduct, carrying upon it so great a Body of Water as suffices the whole City. It was call'd the *Princes Bridge*, and is suppos'd to be built by *Godfrey* of *Bulloign*.

March 11. we all din'd at Consul *Hasting*'s House, and after Dinner we went to wait upon *Ostan* the Bassa of *Tripoly*, having first sent our Present after the manner of the *Turks*, to procure us a favourable reception; for 'tis counted uncivil in this Country to visit without an Offering in hand, which all great Men expect as a Tribute due to their Character. And even the inferiour People seldom visit without bringing a Flower or an Orange, or some such token of Respect, according to the ancient Oriental Custom, limited in 1 *Sam.* 9. 7. *If we go, says Saul, what shall we bring the Man of God? there is not a Present*, &c.

March 12. We went to visit *Bell-mount*, a Convent of *Greeks*, about two hours to the South of *Tripoly*, and we came there just as they were going to Evening Service. The Church is large but obscure, and the Altar is enclos'd within *Cancels*, which none but the Priest must approach, after the manner of the *Greek* Churches. They call the Congregation together by bearing a Tune with two Mallets on a long piece of Plank, hanging at the Church-door, Bells being an abomination to the *Turks*. Their Service consisted in a hasty chattering of certain Prayers and Hymns to our Blessed Saviour and the Virgin, and in some dark Ceremonies, for the Priest that officiated spent at least a third part of his time in compassing the Altar, and perfuming it with a Pot of Incense, and then going round the Congregation, tendring its smoke with three vibrations to every one present. Towards the end of the Service there was brought into the Body of the Church a small Table, cover'd with a Linen-cloth, on which were plac'd five small Cakes of Bread cross-wise; and in a hole made in each Cake, was fix'd a small lighted Wax-taper. And then the Priest read the Gospel concerning our Lord's feeding the Multitude with five Loaves; after which, the Bread was carried within the *Cancelli*, and being there broke to bits, was again brought out in a Basket, and presented to every one in the Assembly, that he might take a little. After this Collation, the Priest pronounc'd the Blessing, and so the Service ended. On both sides of the Church there were Seats for the Monks, being about 40 in all, and in each Seat there were Crutches, (as there are in most Churches of this Country) which are us'd by the Priest to ease him, by leaning on them, in case the Service be long, because by the Rubrick he is forbidden to sit down. We found the Monks good-natur'd, but very ignorant, for the chief of them told the Consul, that he was as glad to see him, as if he had beheld the Messiah in Person come to visit him. Nor is this Ignorance much to be wondred at, since they are forc'd to spend all the time, between their hours of Devotion, in managing their Flocks, cultivating the Land, and pruning their Vineyards, which they do with their own hands; and this they are oblig'd to do, not only for their own Sustenance, but to satisfy the unreasonable Exactions of the *Turks*. And to shew what kind of Men they are, I took particular notice, that the same Person whom we saw officiating at the Altar, in his embroider'd Priestly Robe, brought us the next day, on his own back, a Kid and a Goats-skin of Wine as a Present from the Convent.

March 13. This Morning we went again to wait upon *Ostan* Bassa, by his own appointment, and were receiv'd with great Civility after their manner, which is as follows: When you would make a Visit to a Person of Quality, you must send a Present by a Servant, who is to learn what time may be most seasonable to wait upon him: When you come to the House, some Servants receive you at the outermost Gate, and conduct you towards their Master's Apartment, and others in their several Stations meet you as you draw nearer to him. Coming into the Room, you find him prepar'd to receive you, either standing at the edge of the *Duan*, or lying down at one corner of it, as he thinks proper. These *Duans* are low Stages rais'd about 16 or 18 inches above the Floor, spread with Carpets, and furnish'd with Bolsters to lean upon; on which the *Turks* eat, sleep, smoke, say their Prayers, receive Visits, &c. Their whole Delight is in lolling on them, and their Luxury in furnishing them richly. Being come to the side of the *Duan*, you slip off your Shoes, and take your place first at some distance, and upon your knees, laying your hands formally before you; and there you must remain till the Man of Quality invites you to draw nearer, and to lean upon a Bolster. When you are thus fix'd, he discourses with you as occasion offers, the Servants standing round with profound Respect and Silence. When you have talk'd over your Business or Complements, he makes a sign to have the Entertainment brought in, which is generally a little sweet Meat, a Dish of Shirbet, and another of Coffee, which is presently brought in by the Servants, and tender'd to all the Guests in order with great care, for if any of them should make the least slip in giving or receiving his Dish, it might cost him 100 drubs on his bare feet to attone for his crime. At last comes the finishing part of the Entertainment, which is perfuming the Beards of the company; and for this purpose, they have a small silver Chasing-dish, with a lid full of holes, fix'd on a Plate, in which they put some fresh Coals, and upon them a piece of *Lignum-Aloes*, and then the smoke ascends with a grateful odour through the holes of the Cover. This smoke is held under every ones Chin, and offer'd as a Sacrifice to his Beard, which greedily drinks in the gummy steam, and retains the savour of it a good while after. This Ceremony is intended to give a civil dismission to the Visitants, intimating that they may go away as soon as they please, and the sooner after this the better.

Having ended our Visit to *Ostan* Bassa, we rid out after Dinner to view the Marine, which is about half an hour distant from the City. The Port is an open Sea, rather than an enclos'd Harbour, but is partly defended by two small Isles, about two Leagues out from the shore, one of which is call'd the *Bird*, and the other the *Coney-Island*, from the Creatures they severally produce. And for its security from Pirates, it has 6 several Castles on the shore at convenient distances. In the Fields, near the shore, there are many heaps of Ruins and Pillars of Granite, which are Indications of some great Buildings this way; which agrees with what *Causabon* says upon *Strabo*, that *Tripoly* was anciently a cluster of three Cities, of which the first was the Seat of the *Aradii*, the second of the *Sidonians*, and the third of the *Tyrians*, which may more probably be the occasion of the Name, than the Joynt-interest of three Cities in building it, as is commonly said.

March 14. we rested at *Tripoly*, and on the 15th our *Muliteers* having run away for fear of the Bassa of *Sidon*'s Servants, who press'd Mules every-where for their Master's Servants, we put our selves in a new posture of travelling.

travelling. We parted from *Tripoly*, and going close by the Sea-side, we came in an hour and half to *Callemone*, a Village just under *Bell-mount*, and from hence putting forward, we met with a high Promontory that lay in our way, and forc'd us to turn off to the Left-hand into a narrow Valley, where we took up our Quarters under some Olive-trees; which Promontory seems to be that which is call'd by *Strabo* the *Face of God*, and which he assigns for the end of Mount *Libanus*.

March 16. This Morning we cross'd over the fore-mention'd Cape, which we did in an hour, tho' it was very steep and rugged, and we came into a narrow Valley, which laid the Sea open again; and near the entrance is a small Fort that commands it, call'd *Temseida*. And in half an hour we came up with *Patrone*, which is thought to be *Botrus*, situate close by the Sea, in which we found some Remains of a Church and Monastery. In three hours more we came to *Gibyle*, call'd by the *Greeks Byblis*, a place once famous for the Birth and Temple of *Adonis*. It is compass'd with a dry Ditch and a Wall, with square Towers at 40 Yards distance, and on its South-side it has an old Castle. There is nothing else remarkable in it but many heaps of Ruins, and the fine Pillars in the Gardens near the Town. It is probably the Country of the *Giblites*, mention'd *Josh.* 13. 5. whom King *Hiram* made use of in preparing Materials for *Solomon's* Temple, as may be collected from 1 *King.* 5. 18. where the word rendred *Stone-squarers* in the *Hebrew* is *Giblim*, and in the Version of the 70 *Byblii*; *i.e.* the Men of *Byblus*, the former using the *Hebrew*, the latter the *Greek* Name of the place; which difference may be observ'd likewise in *Ezek.* 27. 4. where our Translation has the *Ancients of Gebel*, and the 70 the *Elders of Byblus*. Leaving *Gibyle*, we came to a River call'd by the *Turks Ibrahim Bassa*, which is doubtless that ancient River so famous for the Idolatrous Rites perform'd here in lamentation of *Adonis*, and we lodg'd on the Banks of it that night.

March 17. having had a very tempestuous night of Wind and Rain, we had an opportunity of discovering the occasion of that Opinion which *Lucian* relates, that this River at certain Seasons of the Year, especially about the Feasts of *Adonis*, is of a bloody colour, as he says, from a sympathy for the death of *Adonis*, who was kill'd by a wild Boar in the Mountains out of which this stream rises; for we found the water of a very red colour, which doubtless was occasion'd by a sort of *Minium*, or red Earth, wash'd into the River by the violence of the Rain. In an hour and a quarter we pass'd over the foot of Mount *Climar*, and enter'd into a large Bay call'd *Innia*, where we found an old Stone-Bridge, and at the bottom the high Mountains of *Castravan*, chiefly inhabited by *Maronites*, and famous for an excellent Wine. The *Maronite* Bishop of *Aleppo* dwells here in a Convent, and there are many other small Convents on the top of these Mountains. Towards the further side of the Bay we came to a square Tower or Castle, at which we paid a fourth Caphar, which is receiv'd by the *Maronites*, who are more exacting Rogues than the *Turks* themselves. In an hour more we came to the River *Lycus*, call'd also sometimes *Canis*, whose Name is deriv'd from an Idol in the form of a Dog or Wolf, which was worshipp'd and gave Oracles. The Body of it is shown to strangers lying in the Sea, but the Head they say is to be seen at *Venice*. This River, which is certainly different from *Adonis*, (tho' some Moderns confound them) issues into the Sea from between two Mountains very high and rocky, where we found a good Bridge of four Arches, and near the foot of it a piece of white Marble inlaid in the side of a Rock, with an *Arab* Inscription, that the Emir *Faccardine* was the Founder of it. Having pass'd the River, we presently ascend the Rock hanging over it on that side, where we met with a path above two Yards broad, cut along its side at a great height above the water, being the Work of the Emperor *Antoninus*, as appears by an Inscription engraven on a Table, plain'd in the side of the natural Rock. In passing this way we saw strange antick Figures of Men carv'd in the Rock, in *Mezzo relievo*, and in bigness equal to the Life; and close by each Figure there was a Table plain'd in the side of the Rock, on which something had been inscrib'd, tho' the Characters are generally now defac'd, which may deserve the further scrutiny of some Traveller. The Antonine way extends about a quarter of an hours travel, after which you come upon a smooth sandy shore, which brings you in an hour and half to the River *Beroot*, which has over it a Stone-Bridge of 6 Arches; and on the other side is a Plain near the Sea, which is said to be the Stage on which St. *George* duell'd and kill'd the Dragon. In memory of which, there is a small Chappel built upon the place, dedicated at first to that Christian Hero, but now perverted to a Mosque. From hence in an hour we arriv'd at *Beroot*, and quarter'd at a good Kane by the Sea-side.

March 18. This day we spent at *Beroot*, anciently called *Berytus*, (from which the Idol *Baal-Berith* is suppos'd to have had its Name) which was honour'd with many Privileges, and the new Name of *Julia Felix* by *Augustus*. Its greatest happiness at present consists in its situation, being seated by the Sea-side in a fertile Soil, which abounds with fresh Springs flowing down from the Hills. The Emir *Faccardine* had his chief Residence here, in the Reign of Sultan *Murat*, the 4th Emir or Prince of the *Druses*; who not content to be penn'd up in the Mountains, enlarg'd his Dominion into the Plain, all along the Sea-coast, as far as from this place to *Acra*, but was driven back again to the Mountains by the Grand Seignior. We went to his Palace, and found at the entrance a Marble Fountain of greater beauty than is usually seen in *Turky*. The best sight that the Palace affords (which is now much ruin'd) is the Orange-Garden, which contains a large quadrangular Plat of ground, divided into 16 lesser squares, 4 in a row, with Walks between them, which are shaded with Orange-trees of a fine growth, on which the Fruit hang'd thicker than ever I saw Apples in *England*. Every one of these 16 squares was border'd with Stone, and in the Stone-work were Troughs artificially contriv'd for conveying the Water all over the Garden, there being little outlets cut at every Tree for the stream, as it pass'd by, to flow out and water it. But the *Turks* have so little sense of such refin'd delights, that they use it now as a Fold for Sheep and Goats. In another Garden, we saw several Pedestals for Statues, and at one corner of it a Tower about sixty foot high, whose Wall's were 12 foot thick; from whence we had a view of the whole City, and saw a large Christian Church, which was said to have been consecrated to St. *John* the Evangelist, but is now the chief Mosque of the *Turks*. There is another Church, which being a very mean Fabrick, remains in the hands of the *Greeks*, which is adorn'd with many old Pictures. And among the rest, I saw one with this Inscription in Greek, *Cyaartus the first Archbishop of Berytus*, and just by it the figure of *Nestorius*, who commonly makes one in the *Greek* Church of his Sect, tho' they do not now profess, nor I believe know his Heresy. But there was one very odd figure of a Saint at full length, with a large Beard reaching down to his feet. And the Curate told us, that this was St. *Nicephorus*, who wanting the Ornament of a Beard to set off his other endowments, fell into a deep Melancholy; whereupon the Devil tempted him to comply with his suggestions, by promising to give him a Beard, but this beardless Saint rejected the temptation, and at the same time taking the downy tuft upon his Chin in his hand, he found the hair immediately stretch with the pluck he gave it, and he never left pulling his Beard till he had drawn it down to his feet. At the East-end of *Beroot* are to be seen seven or eight Pillars of Granite, and several pieces of Marble, having Greek and Latin Inscriptions, fragments of Statues, and other poor Relicks of its ancient Grandeur. On the Sea side is an old Castle, and some Remains of a Mole.

March 19. Leaving *Beroot* we came into a large Plain, and at the entrance of it there is a Grove of Pine-trees of *Faccardine's* Plantation, and at a distance we saw a small Village call'd *Suckfoar*, which belongs to the *Druses*, who possess at this day a long tract of Mountains as far as from *Castravan* to *Carmel*. Their present Prince is *Achmet* Grandson to *Faccardine*, an Old Man, and one who keeps up the Custom of his Ancestors of turning day into night, from a traditional Perswasion among them, that Princes can never sleep securely but by day, when Men's actions and designs are best observ'd by their Guards, and, if need be, most easily prevented; but in the night it concerns them to be always vigilant, lest the darkness should give Traytors an opportunity to assault them with Dagger or Pistol. Two hours from *Faccardine's* Grove brought us to the 5th Caphar, and another hour to the River *Damer*, anciently call'd *Tamyras*. Here were Country-fellows who had stript themselves naked to assist us in passing over; and to make their help more necessary, they brought us to a place where the water was deepest, which Cheat we saw them impose upon other Travellers, but we found a place of the stream which was broader and shallower, where we pass'd without their assistance; and just by we saw the Ruins of a Stone-Bridge, which might have been still entire, had not these Villains broke it down to make their advantage of Passengers, either in conducting them over

for good pay, or else if they have opportunity, drowning them for their Spoils. On the other side of the River the Mountains came closer to the Sea, leaving only a narrow rocky way between. From *Damer*, in 2 hours time, we came to another considerable River, not mention'd by any Geographer; but the *Maronite* Patriarch at *Canobine* told me it was call'd *Awle*, and had its Fountain near *Barook*, in Mount *Libanus*. At this River we were met by several *French* Merchants from *Sidon*, who have there the most considerable Factory they have in the *Levant*; and being arriv'd at *Sidon*, they conducted us to a large Kane close by the Sea, where the Consul and all the Nation are Quarter'd together. Before this Kane is an old Mole running into the Sea, which was fill'd up with rubbish by *Faccardine*, to prevent the *Turkish* Gallies from coming hither; so that all Ships that take in their burden here, are forc'd to ride at Anchor under a small ridge of Rocks about a Mile from the shore. *Sidon* is stock'd well enough with Inhabitants, but is very much shrunk from its ancient Extent, and more from its Splendor, as appears from many beautiful Pillars that lie in the Gardens without the Walls. On the South side stands an old Castle, said to be built by St. *Lewis* the Ninth of *France*; and not far from the Castle is an old Palace of *Faccardine*'s, which serves the Bassa for his Seraglio. Near to *Sidon* begin the Precincts of the *Holy-Land*, particularly of that part which was allotted to *Asher*, the borders of which Tribe extended from *Carmel* as far as great *Zidon*, as appears from *Josh.* 19. 26, 28. But the People on the Sea-coasts were never actually master'd by the *Israelites*, being left to be thorns in their sides for a reason given, *Jud.* 2. 1, 2, 3, *&c.* He who is the *French* Consul at *Sidon*, has also the Title of Consul of *Jerusalem*, and is oblig'd to visit the holy City every *Easter*; with whom we desir'd to joyn in this Year's Pilgrimage, but he set out from *Sidon* the day before our arrival there.

March 20. We set out early next Morning from *Sidon*, hoping to overtake the Consul, and travelling in a fruitful Plain, in half an hour we met with a large Pillar of Granite, lying cross the High-way, on which was a fragment of an Inscription; and some *English* Gentlemen, in 1699, found another Pillar with the like Inscription, about midway between *Jerusalem* and *Sidon*, by which we may observe the exactness of the *Romans* in measuring out their Roads, and marking down on every Pillar the number of Miles, as 1, 2, 3, *&c.*

A little beyond this Pillar we pass'd in sight of *Korie*, a large Village on the side of the Mountains, and in 12 hours and half more came to *Sarphan*, suppos'd to be the ancient *Sarephath*, or *Sarepta*, so famous for the Residence and Miracles of *Elijah*. From hence, in 7 hours, we arriv'd at *Casimeer*, a large River running down to the Sea, which had once a good Stone-bridge, of which there remains nothing now but the Supporters, between which are laid Beams and Boards to supply the room of Arches. This River, by Modern Geographers, is falsly thought to be the Old *Eleutherus*, as has been shown before; but it seems to be that River mention'd by *Strabo*, *p.* 521. falling into the Sea near *Tyre*, for within a Bow-shot of this River *Casimeer* is a Kane of the same Name, from which keeping near the Sea-side, you arrive in an hour at *Tyre*.

This City standing in the Sea upon a Peninsula, promises something magnificent at a distance, but when you come to it, you find nothing like the glory for which of Old it was so renown'd, as it is describ'd *Ezek. c.* 26, 27, 28. On the North side it has an old *Turkish* Castle, besides which there is nothing here but a meer *Babel* of broken Walls, Pillars, Vaults, *&c.* there being not so much as one entire House left. Its present Inhabitants are only a few poor Wretches, that harbour in Vaults, and subsist upon Fishing, whereby God seems to have fulfill'd his Word concerning *Tyre*, viz. *That it should be as the top of a Rock, a place for Fishers to dry their Nets on*, Ezek. 26. 14. In the midst of the Ruins there stands up one pile higher than the rest, which is the East-end of a great Church, probably of the Cathedral of *Tyre*, and may very well be the same that was erected by its Bishop *Paulinus*, and honour'd with that famous Consecration Sermon of *Eusebius*, recorded by himself in *Eccl. Hist. l.* 10. *c.* 4. And 'tis very observable, that in all the ruin'd Churches which we saw, being perhaps no fewer than 100, tho' their other parts were totally demolish'd, yet the East-end we always found standing, and tolerably entire. How this came to pass I cannot determine, but certainly a thing so universally observ'd by us in our Journey, could not proceed from blind Chance.

But to return; There being an old Stair-case in the Ruin above-mention'd, I got to the top of it; from whence I had a prospect of the Island-part of *Tyre*, the Isthmus, and the adjacent shore; and from that height I could discern the Isthmus to be a Soil of a different nature from the other, it lying lower than either, and being cover'd all over with Sand, which the Sea casts upon it. The Island of *Tyre*, in its natural state, seems to have been of a circular figure, about 40 Acres in compass, and the Foundations of the Wall that encompass'd it are still to be seen. It makes with the Isthmus two large Bays, one on its North-side, and the other on its South, which are in part defended from the Ocean by a long ridge, either of Walls or Rocks, resembling a Mole, stretching out directly on both sides from the head of the Island. Coming out of these Ruins, we saw the Foundation of a very strong Wall, running cross the neck of Land which served as a Barrier to secure the City on this side. And hence we past the sandy Isthmus, and came to the place we thought the natural shore, where we met with a fertile Plain, which extends to a vast compass before *Tyre*, whence we arrived in three quarters of an hour at *Roselayn*.

March 21. *Roselayn* is the place where are the Cisterns call'd *Solomon*'s, which according to the common Tradition are said to have been made by that King, as part of his Recompence to King *Hiram*, for the Materials he sent toward building the Temple: But tho' they are very ancient, yet they are of a later date than this Tradition makes them, because the Aquæduct which conveys the Water, is carried over that neck of Land by which *Alexander* joyn'd the City to the Continent at his Siege of this place; and so cannot be older than his time. Of these Cisterns there are three entire at this day, one about a Furlong and half distant from the Sea, the other two, a little further up. The former is of an Octogonal figure, being 22 Yards in diameter, and contains a vast Body of excellent water, which is so well supplied from its Fountain, that tho' there issues from it a stream like a Brook, driving four Mills between this place and the Sea, yet it is always brimful. On the East-side was the ancient Outlet of Water by an Aquæduct, having a Channel one Yard wide, which is now stopt up by the *Turks*, who have broke an Outlet on the other side, which makes a stream for grinding Corn.

The Aquæduct, now dry, is carried Eastward 120 paces, and then approaches the two other Cisterns, of which one is 12, the other 20 Yards square, and they had each a Channel, by which they rendred their Waters into the Aquæduct, and so the united streams of all the three Cisterns were carried together to *Tyre*. There still remain some fragments of the Aquæduct, and in its sides, and under its arches, we observ'd some heaps of Matter, produc'd by the leakage of the Water which petrified as it distill'd from above, and by continual accession of new Matter were grown to a great bulk. They were compos'd of innumerable Tubes of Stone of different sizes, cleaving to one another like Isicles, each tube having a cavity in its Centre, from which its parts were projected in the form of Rays to the Circumference, like the Stones call'd Thunder-stones. The Fountain of these Waters is as unknown as the Contriver of them, tho' 'tis certain, from their rising so high, they come from some part of the Mountains which are about a League distant.

From this pleasant place we came in an hour and half to the white Promontory, over which you pass by a Way about two Yards broad cut along its side, from which the prospect is dreadful, by reason of the steepness of the Mountains, and the raging of the Sea at bottom. This Way, and the Castle *Scandalium*, which is not far off, are said to be built by *Alexander*; from whence we come first to *Nachera*, and then to the Plain of *Acre*, over a deep Mountain, suppos'd to be part of Mount *Saron*. This Plain extends from Mount *Saron* as far as *Carmel*, and is 6 hours long, and 2 hours broad, between the Sea and the Mountains, and was a delicious Plain, but is now, for want of Culture, over-run with rank Weeds, which were, when we pass'd it, as high as our Horses backs.

Having travell'd about an hour in the Plain of *Acre*, we pass'd by an old Town call'd *Zib*, which probably is the Old *Achzib*, mention'd *Jos.* 19. 29. & *Jud.* 1. 31. and seems to be one of the places out of which the *Asherites* could not expel the *Canaanites*. Two hours further we came to the Fountain of the Blessed Virgin, as it is call'd by the *French* Merchants at *Acre*, at which place we arriv'd in an hour more.

Acre, anciently call'd *Accho*, is another of the places from which the *Israelites* could not drive the Natives; but being in after-times enlarg'd by *Ptolemy* the First, it was by him call'd *Ptolemais*. And once it was possess'd

by

by the *Turks*, like other Cities, having loſt its *Greek* Name, 'tis call'd by them *Acca*, or *Acra*. This City has often chang'd Maſters, and at laſt, by a long Siege, was taken and ruin'd by the *Turks*, in ſuch a manner as if they had taken revenge upon it for the Blood it coſt them. On the North and Eaſt 'tis compaſs'd with a ſpacious and fertile Plain, on the Weſt 'tis waſh'd by the *Mediterranean* Sea, and on the South by a large Bay, extending from the City as far as Mount *Carmel*. But notwithſtanding theſe advantages, beſides a large Kane in which are the *French* Factors, a Moſque, and a few poor Cottages, there is nothing now to be ſeen but vaſt Ruins, which ſhow its former ſtrength, for it appears to have been compaſs'd about with a double Wall defended with Towers, and without the Walls are Ditches, Ramparts, and a kind of Baſtions. In the Fields we find ſeveral large Balls of Stone, 13 or 14 inches in diameter, which were part of the Ammunition us'd in battering the City, Guns being then unknown. Within the Walls are the Ruins of the Cathedral dedicated to St. *Andrew*, of the Church of St. *John*, the Titular Saint of this City, and of the Convent of the Knights-Hoſpitallers, and near to it the Palace of the Grand Maſter of that Order; and laſtly, ſome Remains of a large Church, formerly belonging to a Nunnery, of which they tell this Story. The *Turks* having preſs'd this City with a long Siege, at laſt entred it by Storm, *May* 19. 1291. In which extremity, the Abbeſs fearing leſt ſhe and her Nuns ſhould be ſubjected to ſuch Beſtialities as is uſual in ſuch caſes, exhorted them all to cut and mangle their faces, as the only way to preſerve their Virgin purity; and to encourage them, ſhe made her ſelf the firſt example of her own Counſel, which the Nuns inſtantly follow'd, cutting off their Noſes, and diſfiguring their Faces with ſuch terrible gaſhes, as might excite horror rather than luſtful deſires. The conſequence of which was, that the Soldiers breaking into the Nunnery, and ſeeing inſtead of beautiful Ladies ſuch ſad Spectacles, put them all to the Sword in revenge for diſappointing their Luſts. There are many other Ruins here of Churches, Palaces, Monaſteries, Forts, &c. for more than half a Mile in length. But that which pleas'd us moſt was, to find the *French* Conſul *l'Empereur* here, who having ſtaid for us two days, reſolv'd to ſet forward next morning. But we were doubtful which way to take, becauſe of the Factions of the *Arabs*, which are kept up by the *Turks*, to prevent their uniting under one Prince, whereby they might be ſtrong enough to ſhake off the *Turkiſh* Yoke; for in theſe Diſcords ſtrangers are ſure to ſuffer, being a prey to each Party.

March 22. We ſet out early from *Acra*, having ſome *Turkiſh* Soldiers for our Convoy: And firſt we paſs'd by a ſmall River, which we took to be *Belus*, famous for its Sand, of which Glaſs is made. Here we declin'd from the Sea-coaſt to the Eaſt, and croſſing over the Plain, we arriv'd at its further ſide, where it is bounded by Mount *Carmel*; and here we found a narrow Valley, which led us out of the Plain of *Acra* into that of *Eſdraelon*. About this place is the end of the Tribe of *Aſher*, and the beginning of that of *Zabulon*, as their borders are deſcrib'd, *Joſh.* 19. 26.

Paſſing through the ſaid narrow Valley, we arriv'd in two hours at the River *Kiſhon*, which cuts his way down the middle of the Plain of *Eſdraelon*, and then continuing his Courſe by the ſide of Mount *Carmel*, falls into the Sea at a place call'd *Caypha*. We ſaw it when it was low, but we diſcern'd many torrents falling into it from the Mountains, which muſt make it ſwell, as it did at the deſtruction of *Siſera*'s Hoſt, *Jud.* 5. 21. In three hours and half from *Kiſhon*, we came to an old Village, and a good Kane call'd *Legune*, near to which we lodg'd this Night. From this place we view'd the Plain of *Eſdraelon*, which is very large and fertile, and about ſix hours diſtance ſtood within view *Nazareth*, and the two Mounts *Tabor* and *Hermon*; and here we felt the dew of *Hermon*, as the *Pſalmiſt* calls it, our Tents being as wet with it as if it had rain'd all night. About a miles diſtance from us was encamp'd *Chibly*, Emir of the *Arabs*, with his People and Cattle; and below upon the Brook *Kiſhon*, lay another Clan of the *Arabs*, being the adverſe Party to *Chibly*; and it was little to our ſatisfaction, that we were ſeated in the midſt between two ſuch bad Neighbours.

March 23. Leaving this Lodging, we went to the Emir's Tents, to whom we paid two Caphars, one of *Legune*, and the other of *Jeneen*, and whatever elſe he was pleas'd to demand. He very civilly eas'd us of ſome of our Coats, which begun now by reaſon of the heat to be troubleſome. Getting quit of *Chibly*, we return'd out of the Plain of *Eſdraelon*, and entred into the Precincts of the half Tribe of *Manaſſes*. From hence our Road lay, for 4 hours, through narrow Valleys, pleaſantly wooded on both ſides; and we lodg'd at *Caphar Arab*.

March 24. Having paid our Caphar, we ſet out very early the next Morning, and leaving firſt *Arab*, and then *Rama*, on their Right-hand, we came to *Selee* and *Sebaſta*, where we leave the borders of the half Tribe of *Manaſſes*, and enter into thoſe of the Tribe of *Ephraim*.

Sebaſta is the ancient *Samaria*, the Imperial City of the 10 Tribes after their Revolt from the Houſe of *David*, and being rais'd by *Herod the Great* to a magnificent ſtate, was by him, in honour of *Auguſtus*, call'd *Sebaſta*. It is ſituate on a long Mount of an oval figure, and is now wholly converted into Gardens, having no other Remains of ſuch a place, but on the North-ſide a large ſquare Piazza, encompaſs'd with Pillars, and on the Eaſt ſome Ruins of a great Church, ſaid to be built by *Helena*, over the place where *John the Baptiſt* was impriſon'd and beheaded. In the Body of the Church you go down a Stair-caſe into the Dungeon where that blood was ſhed. The *Turks* hold that Priſon in great Veneration, and over it have erected a ſmall Moſque, but for a little piece of Money they ſuffer any one to go into it.

Leaving *Sebaſta* we paſt by *Sherack* and *Barſoba*, and then entring into a Valley, we arriv'd in an hour at *Naploſa*, which is the ancient *Sychem* or *Sychar*, as it is call'd in the New Teſtament. It ſtands in a narrow Valley between Mount *Gerizim* on the South, and *Ebal* on the North. From Mount *Gerizim* God commanded the Bleſſings to be pronounc'd upon the Children of *Iſrael*, and from Mount *Ebal* the Curſes, *Deut.* 11. 29. Upon the former the *Samaritans*, whoſe chief Reſidence is at *Sychem*, have a ſmall Temple, to which they are ſtill wont to repair for Religious Worſhip: But that their Religion conſiſts in worſhipping a Calf, as the *Jews* ſay, ſeems to have more of ſpight than truth in it. Upon one of theſe Mountains alſo it was, that God commanded the Children of *Iſrael* to ſet up great Stones, plaiſter'd over and inſcrib'd with the Body of the Law, and to erect an Altar, and offer Sacrifices, Feaſting and Rejoycing, before the Lord, *Deut.* 27. 4. But whether *Gerizim*, or *Ebal*, was the place appointed for this Solemnity, there is ſome cauſe to doubt; for the Hebrew *Pentateuch* and ours, from it aſſigns Mount *Ebal* for this uſe, but the *Samaritan* aſſerts it to *Gerizim*. Our Company haſting a little at *Naploſa*, I had an opportunity to viſit the chief Prieſt of the *Samaritans*, and to diſcourſe with him about this and other difficulties.

And firſt, as to the difference between the *Hebrew* and *Samaritan* Copy, *Deut.* 27. 4. the Prieſt pretended that the *Jews* had maliciouſly alter'd their Text out of odium to the *Samaritans*, putting for *Gerizim Ebal*, becauſe the *Samaritans* worſhipp'd in the former, which for that reaſon they would not have to be the true place appointed by God for his Worſhip. To confirm this, he alledg'd that *Ebal* was the Mountain of Curſing, *Deut.* 11. 29. and an unpleaſant place, whereas *Gerizim* was fertile and pleaſant, and the Mountain of Bleſſing; and therefore it was more probable, that this was the Mountain appointed for Religious Worſhip, and not *Ebal*. But he could not ſay that any of thoſe great ſtones, which God directed *Joſhua* to ſet up, were now to be ſeen in *Gerizim*, which would have determin'd the Queſtion clearly on this ſide.

I enquir'd alſo, what thoſe *Selavæ* were wherewith the Children of *Iſrael* were ſo long fed in the Wilderneſs, *Numb.* 11. he anſwer'd, They were a ſort of Fowls, which by his deſcription appear'd to be Quails. Then I ask'd him, what ſort of Plant or Fruit the *Dudaim* or Mandrakes were, which *Leah* gave to *Rachel* for the purchaſe of her Husband's embraces? He anſwer'd, They were Plants of a large leaf, bearing a Fruit like an Apple, ripe in Harveſt, but of an ill ſavour and unwholſome, and that the vertue of them was to help Conception, being laid under the genial Bed; to which purpoſe they are often made uſe of by Women at this day. Of theſe Plants, I ſaw ſeveral in the way to *Jeruſalem*, and if they were ſo common in *Meſopotamia* as here, we muſt conclude that either theſe were not the true Mandrakes, or elſe 'tis hard to give a reaſon why *Rachel* ſhould purchaſe ſuch common things at ſo beloved a price. *Naploſa* is at preſent in a very mean condition to what it has been anciently; it conſiſts of two Streets lying parallel under Mount *Gerizim*, but is full of People. Having paid our Caphar here, we proceeded in the ſame narrow Valley between *Gerizim* and *Ebal*, and juſt without the City we ſaw a ſmall Moſque, ſaid to be built over the Sepulchre purchas'd by *Jacob* of *Emmor* Father of *Sychem*, *Gen.* 33. 19. It goes by the Name of *Joſeph*'s Sepulchre.

pulchre, his Bones being interr'd here, *Josh.* 24. 32. About a quarter of an hour from *Naplosa* we came to *Jacob*'s Well, famous not only for its Author, but for the Conference it had there with the Womam of *Samaria*, *Joh.* 4. Over the Well there stood formerly a large Church erected by *Helena*, of which remains nothing now but some foundations. The Well is cover'd at present with a Stone Vault, into which you are let down through a very straight hole, and then removing a broad stone, you discover the mouth of the Well. It is dug in a firm Rock, and is about three Yards in diameter, and 35 deep, five of which we found full of water. At this Well the narrow Valley of *Sychem* ends, opening into a wide Field, very pleasant and fruitful, which is probably part of that parcel of ground given by *Jacob* to his Son *Joseph*, *Joh.* 4. 5.

From *Jacob*'s Well we went through a large Valley, and having pass'd by two Villages on the Right-hand call'd *Howar* and *Sawee*, we came in four hours to *Kane Lebun*, near a Village of the same Name, one of which is suppos'd to have been the *Lebonah*, mention'd *Jud.* 21. 19. and here we lodg'd this night.

March 25. From *Kane Lebun* our Road lay through a rocky Country; but having past by *Singa*, we enter'd into a narrow Valley between two rocky Hills, at the further end of which we found the Ruins of a Village and Monastery. In this place *Jacob*'s *Bethel* is suppos'd to have been, where he had his strong Couch made easie by the Vision of God, and of the Angels ascending and descending on a Ladder between Earth and Heaven, *Gen.* 28. near which place are the limits that part between *Ephraim* and *Benjamin*, *Josh.* 18. 13.

From hence we pass'd through large Olive-Yards, and having left *Geeb* and *Selwid* on the Right-hand we arriv'd at *Beer*; which is the place to which *Jotham* fled from the revenge of *Abimelech*, *Jud.* 9. 21. and is suppos'd to be the same with *Michmas*, 1 *Sam.* 14.

Beer is seated on the side of a Hill, which at the bottom has a Fountain of the same Name, and at its upper side are the Remains of an old Church built by *Helena*, in memory of the Blessed Virgin, who being in quest of the Child, *Luke* 2. 24. is said to have sate down here weary and pensive, because she cou'd not find him; but after her return to *Jerusalem*, she found him sitting in the Temple with the Doctors, both hearing them, and asking them questions. All along this days Journey we had nothing in view in most places but Rocks, Mountains and Precipices, which astonishes Pilgrims, as being contrary to those high Idea's they had form'd of the pleasantness and plenty of this Country, and almost startles their Faith, as thinking it hardly possible for a Land like this to feed so prodigious a number as are said to have been poll'd at one time, being no less than 1300000 fighting Men, besides Women and Children. But to remove these scruples, any one may observe that these Rocks and Hills must have been anciently cover'd with Earth and cultivated, and so they afforded a larger trace of ground than if the Country were level, which they husbanded by gathering up the stones, and placing them along the sides of the Hill in form of a Wall, which kept in the Mould, and form'd many Beds of excellent Soil, from the bottom to the top of the Mountains; of which form of Culture, we see plain footsteps in all the Mountains of *Palestine*. And there is nothing upon Earth more fruitful than the plain Country and Valleys, either for the production of Corn or Cattel. The Hills, tho' improper for any Cattel but Goats, yet being dispos'd into the Beds aforesaid, serv'd very well to bear Corn, Melons, Goards, Cucumbers, and such like Garden-stuff, which are the chief Food of these Countries for several Months of the Year. The most rocky parts might serve for Vines and Olive-trees, which delight in such dry and flinty places; and the great Plain joyning to the dead Sea, which by reason of its saltness could not serve for Corn, Vines or Olives, was yet very useful for the nourishment of Bees, and making of Honey, as *Josephus* testifies, *Bell. Jud. l.* 5. *c.* 4. and I found by experience, when I was there, finding in many places a strong smell of Honey and Wax. Thus the Country might very well maintain the vast numbers of its Inhabitants, being every where productive of Milk, Corn, Wine, Oil or Honey, which are the principal Food of these Eastern Nations.

Leaving *Beer* in two hours and a quarter, we came to the top of a Hill, from whence we had the first prospect of *Jerusalem*; *Rama*, anciently call'd *Gibeah* of *Saul*, being within view on the Right-hand, and the Plain of *Jericho*, and the Mountains of *Gilead*, on the Left. In an hour more we came to the Walls of *Jerusalem*, but durst not enter without leave of the Governour; which being obtain'd, we entred at the *Bethlehem-Gate*, mounted and arm'd, because we were in company with the *French* Consul, for otherwise all *Franks* that come not in with some publick Minister, are to dismount at the Gate, deliver their Arms, and enter on foot. We took our Lodging at the *French* Consul's, and our Board at the Latin-Convent, while we stay'd at *Jerusalem*.

March 26. being *Good-Friday* in the Latin Style, we were oblig'd to go with the Consul into the Church of the Sepulchre to keep the Feast with him, tho' 'twas a Week before our own *Easter*. We found the Church-doors guarded by *Janisaries*, who suffer none to go in until they have paid their Caphar, which for *Franks* is commonly 14 Dollars *per* Head, unless they be Ecclesiasticks, and then it is but half so much. This being once paid, you may go in and out *gratis* as oft as you please during the whole Feast, at the ordinary times when the door is open. All the Pilgrims being admitted, the Church-doors were lock'd, and open'd no more till *Easter-day*; and being confin'd for 3 days, we visited all the Holy places at so much leisure, that we might give a large description of them, but that Mr. *Sandys* has given us one already, so perfect that little can be added to it, and so exact that nothing in it can be corrected, and therefore I shall only relate what pass'd during the Festival, and say no more of the Church than is necessary to make my account intelligible.

The Church of the Holy Sepulchre is founded on *Mount Calvary*, a small Hill upon the greater Mount of *Moriah*; it was anciently appropriated to the Execution of Malefactors, and therefore shut out of the City as a polluted place, but since it was made the Altar on which the precious Sacrifice for the Sins of the World was offered, it stands in the midst of *Jerusalem*, a great part of the Hill of *Sion* being shut out of the Walls to make room for it.

Tho' a great part of this Hill was cut away to make it a fit Foundation for a Church, yet care was taken that none of those parts concern'd in our Lord's Passion should be alter'd or diminish'd; and so that very part of *Calvary* where Christ was fasten'd to the Cross remains entire, being about 10 or 12 Yards square, and standing so high above the floor of the Church, that you have 21 Steps to go up to its top; and the Holy Sepulchre, which at first was hewn into a Rock under-ground, is now a Grotto above ground, the Rock being cut away from it all round. The Church is less than 100 paces long, and not more than 60 wide, and yet it contains 12 or 13 Sanctuaries, consecrated by some particular actions relating to the Death or Resurrection of Christ: As, 1. The place where he was derided by the Soldiers. 2. Where the Soldiers divided his Garments. 3. Where he was shut up, while all was made ready for his Crucifixion. 4. Where he was nail'd to the Cross. 5. Where the Cross was erected. 6. Where the Soldiers stood that pierced his side. 7. Where his Body was anointed in order to his Burial. 8. Where his Body was laid in the Sepulchre. 9. Where the Angels appear'd to the Women after his Resurrection. 10. Where Christ himself appear'd to *Mary Magdalen*, *&c.* All which places, and many others of the same nature, are contain'd within this Church, and adorn'd with so many several Altars.

In Galleries about the Church, and little Buildings annex'd to it, every Christian Nation had anciently proper Quarters for a Society of Monks, but now, all except four, have forsaken these Quarters, because of the severe Rents impos'd upon them by their *Turkish* Landlords; and of these four, the *Cophtites* have only one to represent their Nation, and the *Armenians* are so much in Debt, that they are likely to desert the place quickly, and then the *Greeks* and *Latins* will only remain.

Besides their several Apartments, each Fraternity have their peculiar Altars and Sanctuary for their own use. But the great prize now disputed between the *Greeks* and *Latins* is the command of the Holy Sepulchre, in which Contention they have proceeded to blows and wounds, even at the door of the Sepulchre: and as an evidence of this fury, the Father-guardian show'd me a great Scar in his Arm, being the mark of a wound given by a *Greek* Priest; but at the request of the *French* King, this Holy Sepulchre was appropriated to the *Latins* in 1690, they alone having the Privilege to say Mass in it, tho' all other Christians may go into it for private Devotions. The *Latins*, of whom there are always 10 or 12 at Church, with a President over them, makes every day a solemn Procession, with Tapers and Crucifixes, to the several Sanctuaries, and sing at every one a Hymn relating to the Subject of the place. Their Ceremony begins on *Good-Friday* night, which is call'd by them the *nox tenebrosa*; and as soon as it grew dusk, all the Friars and Pilgrims

Pilgrims met in the Chappel of the Apparition, (which is on the North-side of the Holy Grave) to go in Procession round the Church. After a Sermon, at which all the Candles were put out to make a lively Image of the dark night, every one had a lighted Taper put into his hand; and amongst the other Crucifixes, there was one very large, which bore an Image of our Lord, as big as the Life, fastned to it with great Nails, crown'd with Thorns, besmear'd with Blood, and lively represented our Lord's Body as it hung upon the Cross. This Figure was carried in the head of the Procession, after which all the company follow'd to all the several Sanctuaries of the Church, singing at every one a Hymn.

The first place was that of the Pillar of Flagellation, kept in a little Cell just by the Chappel of Apparition; there they sung their Hymn, and a Friar preach'd in *Spanish* about the scourging of our Lord. From hence they proceeded to the Prison of Christ, where they had also a Hymn and a Sermon. From the Prison they went to the Altar of the division of Christ's Garments, where they only sung a Hymn; and from thence to the Chappel of Derision, where they had a Hymn and a fourth Sermon. From this place they went up to *Calvary*, leaving their Shoes at the foot of the Stairs. Here are two Altars, one where he was nail'd to the Cross, at which they laid down the great Crucifix, and acted the nailing of Christ to the Cross. The other where his Cross was erected, bearing the Image of our Lord's Body. At this Altar there is a hole in the natural Rock, in which the foot of our Lord's Cross stood; and here they set up their Cross, with the bloody crucified Image upon it, and then sung a Hymn, and preach'd a Passion-Sermon. About a Yard and half from the hole where the foot of the Cross was fix'd, is seen that cleft in the Rock which was made by the Earthquake at Christ's Death, when *the Rocks were rent*, *Matt.* 27. 51. It appears to be a natural breach, for the sides of it do answer each other like two Tallies, and it runs in such intricate windings as could not be counterfeited by Art. After the Ceremony of the Passion is over, two Friars personating *Joseph* of *Arimathea* and *Nicodemus*, come with a grave and solemn air, and take down the feigned Body from the Cross. The Limbs of the Image were soft and flexible, and it was surprizing to see the two Mourners bend down the Arms which were before extended, and lay them upon the Trunk, as is usually done in Corpses. The Body being taken down was receiv'd in a large Winding-sheet, and carried from *Mount Calvary* to the Stone of Unction, *i. e.* the place where our Lord's Body was anointed, *Joh.* 19. 39. And here while they cast over it sweet Powders and Spices, they sung a proper Hymn, and a Friar preach'd a Funeral Sermon in *Arabick*. After this they carried the feigned Corps and laid it in the Sepulchre, shutting up the door till *Easter* Morning.

March 27. This Morning the Pilgrims had leisure to make their Arms with the usual Ensigns of *Jerusalem*; and in the Afternoon, the Congregation was assembled in the *Area* before the Holy Grave, where the Friars sung over the Lamentation of *Jeremy*, which with the usual Procession to the holy Places was all the business of this day.

March 28. On *Easter* Morning the Sepulchre was again set open very early, and Mass was celebrated just before it, being the highest place in this Church, where the Father-Guardian in his Robes gave the Host to all that were dispos'd to receive it, not refusing Children of 7 or 8 Years old: Which Office being ended, we went out of the Sepulchre, return'd to the Convent, and din'd with the Friars. After Dinner we went to visit some of the remarkable places without the Walls; we began with those on the North-side. And first, we were conducted to a large Grot, a little without *Damascus*-gate, which is said to have been the Residence of *Jeremiah*: And here they shew'd us the Prophet's Bed, being a shelve on the Rock about 8 foot from the ground, and near it is the place where they say he wrote his Lamentations. This place is now a College of *Dervises*, much honour'd by *Turks* and *Jews*.

The next place we came to, was those famous Grots call'd the Sepulchres of Kings, for what reason I know not, unless they were the Sepulchres of the Sons of *David*, mention'd *Chron.* 32. 33. but it appears by the Labour and Expence to have been the work of Kings. At the East-end you enter through a Rock into an open Court about 40 paces square, cut down into the Rock. On the South-side is a Portico 9 paces long, and 4 broad, cut out of the natural Rock, and at the end of it you descend into the Sepulchres, within which is a fair Room about 7 of 8 Yards square, cut out of the natural Rock so exactly square, that nothing could be built more regular, and so firm, that it may be call'd a Chamber hewn out of one piece of Marble. From this Room you pass into 6 more one within another, all of the same Fabrick with the first. In every one of these Rooms, besides the first, were Coffins of Stone plac'd in niches on the sides of the Chamber, and in each Room there was a small Channel cut in the Floor, to drain the drops that constantly fall into it. But the most surprizing thing that belongs to these Rooms was their doors, of which there is only one remains hanging to puzzle the Beholders. It consisted of a Plank of Stone about 6 inches thick, of the size of an ordinary door. It was carv'd so as to resemble a piece of Wainscot, but the Stone was visibly of the same kind with the whole Rock, and turn'd upon two hinges like Axels, which were of the same Stone with the door, and contain'd in two holes of the Rock, one at the top, the other at the bottom. It seem'd to be a Riddle to Pilgrims, whether these doors were here cut out of the Rock, or brought hither; for resolving of which, I observ'd that the door left hanging did not touch its Lintel by at least two inches, and so might easily be lifted up and unhing'd, which intimates how this Work was done.

From these Sepulchres we return'd towards the City, and just by *Herod's* Gate were shown a Grotto full of Mire, which passes for *Jeremiah's* Dungeon, out of which he was dismiss'd by *Ebed Melech*, Jer. 38.

March 29. This day being *Easter-Monday*, the Mosolem, or Governour of the City, set out with some Bands of Soldiers to convey the Pilgrims to *Jordan*, and secure them from the Insolence of the *Arabs* in those Parts. The Fee to the Mosolem, upon this Occasion, is 12 Dollars for each *Frank* Pilgrim, and 6 for Ecclesiasticks, which every one must pay, whether they go the Journey or stay in the City. We went out at St. *Stephen's* Gate, being in all, of every Nation and Sex, about 2000 Pilgrims; and having cross'd the Valley of *Jehosaphat*, and part of Mount *Olivet*, we came in half an hour to *Bethany*. At the entrance into it there is an old Ruin call'd *Lazarus's* Castle, suppos'd to be his Mansion-House, and not far from it is the Sepulchre out of which he was rais'd by Christ, which is held in great veneration by the *Turks*, who use it for an Oratory, and demand of all Christians a Caphar for their admission into it.

A little further you pass by what they call *Mary Magdalen's* Habitation, and then descending a Hill you come to the Fountain of the Apostles, where they were wont to refresh themselves in their travels between *Jerusalem* and *Jericho*. After some hours travel in a barren Country, you come to the mountainous Desart into which our Saviour was led by the Spirit, to be tempted of the Devil; and from the top of these Hills we had a prospect of the Mountains of *Arabia*, the dead Sea, and the Plain of *Jericho*, into which we descended, and turning up on the Left-hand, we came to the foot of the *Quarantania*, which they say is the Mountain into which the Devil took our Saviour when he tempted him with that Visionary Scene of all the Kingdoms in the World, and the Glories of them. Turning down hence into the Plain, we came to the Fountain of *Elisha*, so call'd, because by him it was miraculously purg'd of its brackishness, at the request of the Men of *Jericho*, 2 *Kings* 2. 19. Its Waters now being receiv'd in a Basin, divide themselves into several small streams, which refresh the whole Field that lies between this and *Jericho*. A little from hence is *Jericho*, at present only a poor nasty Village of the *Arabs*; and here we saw the place where *Zaccheus's* House is said to have stood, which is an old square Stone-building on the South-side of *Jericho*.

March 30. we set out early for *Jordan*, and arriv'd there in two hours. We found the Plain very barren, producing nothing but Marine Plants; and in many places of the Road, where puddles of Water had stood, we observ'd a whiteness on the surface of the ground, which we found to be a Crust of Salt rais'd by the Water out of the Earth. About a Furlong from the River *Jordan*, was an old Church and Convent dedicated to St. *John*, in memory of his baptizing our Saviour; we were there in *March*, but could discern no sign of its overflowing, tho' it was the proper time for these Inundations. One Bank of the River is so beset with Bushes and Trees, that several sorts of wild Beasts are said to harbour in them; whose being wash'd out of their covert by the overflowings of the River, gave occasion to that allusion, *Jer.* 49. 19. *He shall come up like a Lion from the swelling of* Jordan. When we came to the River, some stript and bath'd themselves in it, others cut down boughs from the Trees, and every one was some way employ'd to take a Memorial of this famous stream.

Its

Its breadth was about 20 Yards over, and in depth it far exceeded my height. By the Mosolem's Leave we went towards the Dead Sea with a Guard to attend us. The Dead Sea is enclos'd on the East and West with very high Mountains; on the North it is bounded with the Plain of *Jericho*, on which side also it receives the Waters of *Jordan*. On the South it is open, and extends beyond the reach of the Eye. It is said to be 24 Leagues long, and 6 or 7 broad. On the shore of the Lake we found a black sort of Pebbles, which being held in the flame of a Candle soon burns, and yields a smoke of an intolerable stench; but by burning it loses only of its weight, and not of its bulk. It is a common Tradition, that Birds attempting to fly over this Sea, drop down dead into it; and that no Fish, nor other sort of Animal, can live in these Waters. The former Report I saw actually confuted, by several Birds flying over this Sea without any visible harm. The latter I have some reason to suspect as false, having observ'd on the shore two or three shells of Fish like Oyster-shells. As for the Bitumen, for which the Sea is famous, there was none at the place where we were, but it is gather'd near the Mountains on both sides in great plenty. It is so like Pitch, that it cannot be easily distinguish'd from it but by its Sulphureous smell and taste. The Water of the Lake was clear, and not only salt to the highest degree, but extreme bitter. To try its strength I went into it, and found it bore up my Body in swimming with an uncommon force. Tho' I diligently search'd, I could not find any Remains of those Cities here situated, which were made so dreadful an example of Divine Vengeance, neither could I discern any Smoke ascending above the Water, nor any Ruins. But the Father-guardian, and Procurator of *Jerusalem*, both assur'd me, that they had seen one of these Ruins, and the Water being very shallow they went to it, and found there several Pillars, and other Fragments of Buildings. On the West-side of this Sea is a small Promontory, near which, as our Guides told us, is the Monument of *Lot*'s Wife metamorphos'd. As to the Apples of *Sodom*, I neither saw nor heard of any such hereabouts, nor is there any Tree near the Lake from which one might expect such Fruit. In our return, about an hours distance from the Sea, we saw a ruin'd *Greek* Convent, and found a good part of the Church remaining, with the Figures of several Saints, and a *Greek* Inscription over the Altar. Hereabouts, and in many other places of the Plain, I perceiv'd a strong scent of Honey and Wax, the Sun being hot, and the Bees very industrious about the blossoms of that salt Weed the Plain produces. Amongst the Products of this place, I saw a notable Fruit call'd by the *Arabs Zacchone*; It grows on a thorny Bush with small leaves, and both in shape and colour resembles an unripe Wall-nut. The kernels of this Fruit the *Arabs* bray in a Mortar, and then putting the pulp into scalding Water, they skim off an Oil which rises to the top; which Oil they use inwardly for Bruises, and outwardly for green Wounds, and I have found it upon some trials a very healing Medicine.

March 31. This Morning we went in 6 hours near the Walls of *Jerusalem*, and thence to *Bethlehem* in 2 hours, through the Valley of *Bephaim*, famous for being the Theatre of *David*'s Victories, 2 *Sam.* 5. 23. In this Road we met, 1. With the House of *Simeon*, who having our Saviour in his arms sung his *Nunc dimittis*. 2. The Turpentine-tree under which the Virgin is said to have rested, when she carried Christ in her arms to present him to the Lord at *Jerusalem*. 3. A Convent dedicated to *Elias*, where the *Greek* Monks pretend to shew the impression of his Body in a stone that serv'd for his Bed; near to which is the Well of the Star that appear'd to the Wise Men, which there re-appear'd to them. 4. *Rachel*'s Tomb, mention'd *Gen.* 35. 19. which is a Modern Structure, but probably the true place of her Interment.

Being arriv'd at *Bethlehem*, we went to all the Holy places belonging to it, *viz.* the place where our Lord is said to be born, the Manger wherein he is said to be laid, the Chappel of *Joseph* his supposed Father, that of the Innocents, those of St. *Jerom*, of St. *Paula* and *Eustechium*, and of *Eusebius* of *Cremona*, and the School of St. *Jerom*; all which places I only name, being afore describ'd by Mr. *Sandys*.

From the top of the Church we had a view of *Tekoah*, about 9 Miles distant Southward, of *Engedi* about three Miles Eastward, and of a high Hill call'd the *Franks* Hill, being defended by the *Crusaders* 40 Years after the loss of *Jerusalem*.

April 1. We went to see the remarkable places near *Bethlehem*, and first to the famous Fountains, Pools and Gardens, which are said to be King *Solomon*'s, to which he seems to allude, *Eccl.* 2. 5, 6. The Pools are three in number, so dispos'd, that the Waters of the uppermost descend into the 2d, and the 2d into the 3d. The breadth in all is the same, being about 90 paces, but the length is different, that of the 1st being about 160 paces, that of the 2d 200, and the 3d 220. About 140 paces from them, is the Fountain from which they chiefly derive their Waters, which the Friars will have to be that seal'd Fountain to which the Spouse is compar'd, *Cant.* 4. 12. Here you find 4 places where the Water rises, from which it is convey'd into a Basin, and from thence is carried by a Subterraneous passage into the Pools; and by the way there is an Aquæduct of brick Pipes, which receives part of the stream, and carries it by many turnings about the Mountains to *Jerusalem*. These Pools may probably be the same with *Solomon*'s, because there is not the like store of good Spring-water to be met with any where else in *Palestine*. From these Memorials of *Solomon* we return'd to visit some places nearer *Bethlehem*, where we saw the Field in which they say the Shepherds were watching their Flocks, when they receiv'd the glad tydings of Christ's birth; and hard by the Village where they dwelt, and an old Nunnery built by St. *Paula*, in which she died; all which places lie Eastward about half a Mile from the Convent. But to the Westward we saw *David*'s Well, which he so much thirsted after. 2 *Sam.* 23. 15. and a little beyond it some Remains of an old Aquæduct, which convey'd the Waters from *Solomon*'s Pools to *Jerusalem*; which is said to have been the genuine Work of *Solomon*, but is now destroy'd by the *Turks*. Returning from this place, we went to see the *Greek* and *Armenian* Convents, contiguous to that of the *Latines*, each of which has a several door opening into the Chappel of the Holy Manger; and then we went to the Grot of the Blessed Virgin, within 40 Yards of the Convent, where she is said to have hid her self, and her Divine Babe, from the fury of *Herod*, some time before their departure into *Egypt*. This Grot is hollow'd into a chalky Rock, whose whiteness they say proceeds from some drops of the Virgin's Milk, that fell from her Breast while she was sucking the holy Infant; upon which account, they believe that this Chalk has a miraculous vertue of encreasing Womens Milk, and for that end 'tis often taken by Women *Turks*, *Arabs* and *Christians*, and they say with very good effect.

April 2. Having presented the Guardian with two *Chequeens* for his Civilities to us, we went from *Bethlehem* to go visit the Wilderness, and Convent of St. *John Baptist*, and in this Stage we first cross'd that famous Valley in which the Angel is said in one Night to have destroy'd many thousands in the Army of *Sennacherib*; and then we came to *Boatshellah*, in which they say no *Turk* can live above two Years, by which Report the *Christians* have it to themselves. A little further we came to a Fountain, where they told us, but falsly, that *Philip* baptiz'd the *Ethiopian* Eunuch; and then to the Village of St. *Philip*, at which ascending a steep Hill, we came to the Wilderness of St *John*, which is very rocky, but is well cultivated, and produces great plenty of Corn, Vines and Olive-trees. And here we saw the Cave and Fountain where the *Baptist* is said to have led an austere Life, *Mat.* 3. 4. Near this Cell are some Locust-trees, which the Friars say yielded him Sustenance, tho' they appear to be planted much later than his time. After this, as we went to the Convent of St. *John*, we pass'd along one side of the Valley of *Elah*, where *David* slew the Giant, 1 *Sam.* 17. and had a view of *Modin*, on the top of a Hill, the Burying-place of the *Maccabees*.

When we came near the Convent, we visited a place which they call the House of *Elizabeth* Mother of the *Baptist*; and in the Ruins of the Convent that was formerly here, is a Grotto in which they say the B. Virgin saluted *Elizabeth*, and pronounc'd her divine Magnificat, *Luke* 1. 46. The Convent of St. *John* has been rebuilt from the ground within these 4 Years, and is now a large square Building, and near all over; and has in it a very beautiful Church, at the North-end of which you go down 7 Marble-steps to a stately Altar, erected over the place where they say the *Baptist* was born. As we return'd from St. *John*'s to *Jerusalem*, we saw a Convent of the *Greeks*, taking its Name from the Holy Cross, because they say here is the Earth that nourish'd the Root that bore the Tree that yielded the Timber that made the Cross; and under the high Altar you are shown the hole in the ground where the stump of the Tree stood. After this we return'd to *Jerusalem*, and had our feet wash'd by the Guardian, and kiss'd by every Friar, who did all sing Latin Hymns at the time.

April 3. We went to see the Office of the Holy Fire.

a

a Ceremony kept up by the *Greeks* and *Armenians*, who believe that every *Easter-Eve* a miraculous flame descends from Heaven into the Holy Sepulchre, and kindles all the Lamps and Candles there. When we came to the Church of the Holy Sepulchre, we found it crouded with a numerous Mob, who began their disorders by running round the Holy Sepulchre with all their might, crying out *Huia*, *i.e. This is he*, or *this is it*; by which they express the truth of the Christian Religion. After this they began to act many antick tricks, like Mad-men; sometimes they dragg'd one another round the Sepulchre, sometimes they set one Man upon anothers shoulders, and so march'd round; and sometimes they tumbled round the Sepulchre like Tumblers on a Stage, and acted the rudest things on this Occasion. This frantick humour continued from 12 to 4; and then the *Greeks* first set out in a Procession round the Sepulchre, who were immediately follow'd by the *Armenians*, in which Order they thrice compass'd the Sepulchre, producing their Standards, Crucifixes, and embroider'd Habits, upon this Occasion. Towards the end of this Procession, a Pigeon came fluttering into the Cupolo over the Sepulchre, at which there was a great shout; and the *Latines* told us, this was let fly by the *Greeks*, to deceive the People into an Opinion that it was a visible descent of the H. Ghost. The Procession being over, the Suffragan of the *Greek* Patriarch, and the principal *Armenian* Bishop, approach'd the door of the Sepulchre, and cutting the string with which it was fasten'd and seal'd entred in, shutting the door after him, all the Candles and Lamps within having been before extinguish'd in the presence of the *Turks*. And then the Exclamations were double as the Miracle drew nearer, and the People press'd with such vehemence to the door, that the *Turks* could not keep them off with the severest drubs, which they did out of a great desire to light their Candles at the holy Flame, as soon as it is brought out of the Sepulchre, for that is counted most sacred and pure, as coming immediately from Heaven. The two Miracle-mongers had not been above a minute in the Sepulchre, when the glimmering of the holy Fire was seen through some chinks of the door, which made the Mob as mad as any in *Bedlam*. Then presently came out the two Priests with blazing Torches in their hands, which they held up at the door of the Sepulchre, while the People throng'd with mighty Zeal to obtain a part of the first and purest flame, and could not be kept off by the hard blows of the *Turks* Clubs, who laid on without mercy. Those that got the Fire apply'd it to their Beards and Faces, pretending it would not burn like an Earthly flame, but I saw none that endur'd the trial long enough to make good the pretension. However, so many Tapers were presently lighted, that the whole Church seem'd to be in a flame; and with this Illumination the Ceremony ended. Those within the Church acted their part with great quickness and dexterity, but the behaviour of the Rabble without, which would better become a Bacchanale than a Christian Festival, very much discredited the Miracle. The *Latins* take a great deal of pains to expose this Ceremony as a shameful Imposture, and a Scandal to the Christian Religion, but the *Greeks* and *Armenians* pin their Faith upon it, and make their Pilgrimages chiefly upon this motive; and 'tis the unhappiness of their Priests, that having acted the cheat so long, they are forc'd now to stand to it for fear of endangering the Apostacy of their People. After the Rout was over, when we went out of Church we saw several People about the Stone of Unction, who having store of Candles lighted with the holy Fire, were daubing pieces of Linen with the wicks of them and the melting Wax, which were design'd for Winding-sheets; for they believe, that if they are buried in a Shroud smutted with this Fire, it will secure them from Hell-fire.

April 4. being our *Easter*, we did not go abroad, the time requiring employment of another nature.

April 5. we went to see some new Curiosities; and first we came to that which is call'd St. *Peter's* Prison, from which he was deliver'd by an Angel, *Acts* 12. next we came to an old Church in the place where the House of *Zebedee* stood; then to the place where stood the Iron-gate, which open'd to St. *Peter* of its own accord; and a little further is a small Church built over the House of St. *Mark*, whither *Peter* went after his miraculous Goal-delivery. The *Syrians* who keep it, pretend to show you the Window at which *Rhoda* look'd out when *Peter* knock'd at the door. In the Church they shew a *Syriac* MS. of the New-Testament, pretended to be 852 Years old, and a little Stone-Font us'd by the Apostles in baptizing. Beyond this, in the same Street, is that which is call'd the House of St. *Thomas*, formerly a Church, now a Mosque. A little further, in another Street, is the place where they say our Lord appear'd after his Resurrection to the *Maries*, *Matt.* 28. 9. And here the *Armenians* have their Convent and Gardens, which take up all that part of Mount *Sion* that is within the Walls of the City. Their Church is built over the place where they say St. *James*, the Brother of *John*, was beheaded, *Acts* 12. 2. and on the North-side of it is shown the place of his Decollation. In this Church are two Altars set out with extraordinary splendor, deck'd with rich Mitres, Copes, Crosses of silver and gold, &c. and in the middle a Pulpit made of Tortoise-shell, and Mother of Pearl, curiously mingled and inlaid in one another. In the Anti-chappel are three large rough stones esteem'd very precious, one of them being the Stone upon which *Moses* cast the two Tables when he broke them, the other two being brought, one from the place of our Lord's Baptism, and the other from that of his Transfiguration. After this we went to another Chappel of the *Armenians*, which is said to be founded in the place where *Annas*'s House stood; and in it is shown a hole, denoting the place where one of the Officers of the High-Priest smote our Saviour, *John* 18. 22. whom the Friars will have to be the same *Malchus* whose Ear our Lord heal'd. In the Court before this Chappel is an Olive-tree, to which they say Christ was chain'd for some time by Order of *Annas* to secure him from escaping.

From the House of *Annas* we went out of *Sion-gate*, which is near to that they call the House of *Caiaphas*, where is another small Chappel of the *Armenians*. Here under the Altar, they say is the Stone which was laid to the door of our Saviour's Sepulchre, *Matt.* 27. 60. which the *Armenians* stole from the Church of the Sepulchre and brought hither; it is two Yards and half long, one Yard high, and as much broad. Here is likewise shown a Cell, said to have been our Lord's Prison till the Morning, when he was carried hence before *Pilate*; and also the place where *Peter* was frighted into a denial of his Master. A little further without the Gate, was the Church of the *Cœnaculum*, where they say Christ instituted his last Supper, which is now a Mosque. Near this is a Well, which is said to be the place where the Apostles divided to go every one to his several Charge; and close by it is the Ruin of a House, in which the Virgin is said to have breathed her last. And a little lower is the Grot in which St. *Peter* wept so bitterly for denying his Master. After this we return'd to the Convent, and by the way had a view of the beautiful Gate of the Temple.

April 6. we took another progress about the City, and going out at *Bethlehem-Gate*, and turning on the Left-hand, we came to *Bathsheba*'s Pool, where she is said to be washing her self when *David* spied her from his Palace. A little below this Pool begins the Valley of *Hinnom*, on the West-side of which is the place call'd the *Field of Blood*, now call'd *Campo Santo*, which is about 30 Yards long, and half as broad. The Corpses are let down into it through 5 holes left open for that purpose, through which we could see the Bodies under several degrees of decay. A little below the *Campo Santo* is an intricate Cave, in which the Apostles are said to have hid themselves when they forsook their Master and fled. The Valley of *Jehoshaphat* crosses the end of that of *Hinnom*, in which is the Brook *Cedron*, which is always dry except in the Winter. In this Valley of *Jehoshaphat* we first went to the Well of *Nehemiah*, so call'd because it is reputed the place where he recover'd the Fire of the Altar after the *Babylonish* Captivity, 2 *Mac.* 1. 19. A little higher is the place where *Isaiah* is said to be sawn asunder; and above that is the Pool of *Siloam*. A little further is the Fountain of the B. Virgin, and over-against it the Village call'd *Siloe*, in which *Solomon* is said to have kept his strange Wives; and above it is a Hill call'd the *Mountain of Offence*, where *Solomon* built the high places, 1 *Kings* 11. 7. Not far from it they show another Field of Blood, where *Judas* met with his compounded death, *Matt.* 27. 5. Here also they show'd us two noble Antiquities, the Sepulchre of *Zachary*, and the Pillar of *Absalom*; and close by is the Sepulchre of *Jehoshaphat*. From hence keeping in the Valley, we saw the Sepulchres of the B. Virgin, St. *Anna* and *Joseph*. After this, going up the Hill, we saw a broad Stone on which they say St. *Stephen* was martyr'd, and not far from it a Grot into which the *Jews* cast his Body; from whence we went to St. *Stephen*'s Gate of the City.

April 7. we set out again to see the Holy places upon Mount *Olivet*, and as we ascended the Mount we saw certain Grotto's, call'd the Sepulchres of the Prophets. A little higher you come to the place where they say Christ utter'd his Prophecy concerning the destruction

of *Jerusalem*, *Matt.* 24. and on the Right-hand is the place where they say he dictated a second time the *Pater-Noster* to his Disciples, *Luke* 11. 1, 2. At the top of the Hill you come to the place of our Lord's Ascension. Here was anciently a large Church built in honour of that triumph, in which they shew the print of our Saviour's foot, but it is now us'd for a Mosque, as many other holy places about *Jerusalem* are, whether out of devotion or lucre I do not determine. Two furlongs Northward is the highest place of Mount *Olivet*, on which stood a high Tower call'd *Viri Galilæi*, in memory of the Apparition of the two Angels to the Apostles after Christ's ascension, which about two Years since was demolish'd by a *Turk*, who bought the Field in which it stood. From this place we descended the Mount by another way, and about midway they shew the place where Christ beheld the City and wept over it, *Luke* 19. 41. A little lower they shew *Gethsemane*, about 57 Yards square, lying between the foot of Mount *Olivet* and the Brook *Cedron*. It is well planted with Olive-trees, which are believ'd to be the same that stood here in our Saviour's time; which Opinion made the Olives and Oil an excellent Commodity in *Spain*. At the upper-part of the Garden is a flat ledge of Rocks, which is said to be the place on which *Peter*, *James* and *John*, fell asleep during our Saviour's agony; and just by is a Grotto, which is said to be the place in which our Saviour underwent that bitter part of his Passion. Not far off is a small shred of ground 12 Yards long and one broad, which is said to be the path on which *Judas* walk'd up to Christ, and said, *Hail, Master*, and kiss'd him; which narrow path is separated by a Wall out of the midst of the Garden, as a *terra damnata*; which is the more remarkable because it is done by the *Turks*, who, as well as *Christians*, detest the ground on which that infamous treachery was acted.

April 8. we went to see the Palace of *Pilate*, which is not far from St. *Stephen*'s Gate, from whence we had a prospect of the place where the Temple stood, which is all that is allow'd us, for we cannot go within the borders of it without forfeiting Life or Religion. It lies upon the top of Mount *Moriah*, over against Mount *Olivet*, the Valley of *Jehoshaphat* lying between. It was about 590 of my paces long, and 370 broad; in the middle of the Area stand now a Mosque, which is said to be built on the ground where formerly stood the *Sanctum Sanctorum*.

In this pretended House of *Pilate* is shown the Room where Christ was mock'd with the Ensigns of Royalty, and buffeted by the Soldiers. As you come out is a descent, where was formerly the *Scala Sancta*. On the other side of the Street is the Room where they say our Saviour was scourged, which is now a Weaver's Shop. Returning from *Pilate*'s Palace, we past along the dolorous Way, in which we saw, 1. The place where *Pilate* brought our Lord forth to the People, and said, *Behold the Man*. 2. Where Christ fainted thrice under the weight of the Cross. 3. Where the Blessed Virgin swoon'd at so tragical a spectacle. 4. Where *Veronica* presented him the Handerchief to wipe his bleeding brows. And, 5. Where the Soldiers compell'd *Simon* to bear his Cross. All which places I need only to name, being describ'd by Mr. *Sandys*.

April 9. we saw the Pool of *Bethesda*, which is 120 paces long, 40 broad, and 8 deep, but no water in it; and there we saw some Arches, which are said to be the Porches in which the Lame, Halt and Blind sate, *John* 5.

From hence we went to the Convent of St. *Anne*, where there is a large Church, and under it a Grotto, where they say the Blessed Virgin was born. Near this Church they shew the *Pharisees* House, where *Mary Magdalen* wash'd Christ's feet with her tears, and wip'd them with her hair, *Luke* 7. 38. In the Afternoon we saw the stately Pool of Mount *Gihon*, which is 106 paces long, and 67 broad, lin'd with a Wall, and well stor'd with water.

April 10. we went to take our leave of the Holy Sepulchre, which being the last time, the *Turks* allow free admittance to all People without any Fee, not only to the poor, but to the lewd, who prophan'd it as much as when the Heathen celebrated here their *Aphrodisia*.

April 11. Now began the *Turks* Byram, and we kept at home to avoid the affronts usual at such Festivals.

April 12 & 13. we prepar'd for our departure, and how to avoid the *Arabs*, by going along with the Mosolem.

April 14. we went with a small Present to wait on the Mosolem, who set out the next Morning, and before our departure I took the Measure of the City, going out at *Bethlehem-Gate*, and walking round about to the same Gate again, and found it in circumference to be 4630 paces, and 10 of my paces amounting to 9 Yards; this number makes 4167 Yards, which is just two Miles and a half.

April 15. This Morning having receiv'd our *Diplomata*, to certify that we had visited the Holy places, and presented the Convent with 50 Dollars a Man for their trouble, we set out with the Mosolem, and lodg'd at *Kane-Leban*. The Country People being at Plough, in order to sow Cotton, us'd Goads of an extraordinary size, being 8 foot long, having at one end a sharp prickle to drive the Oxen, and at the other a Paddle to cleanse the Plough, which is held by the same Person that drives; and such a Goad it seems to be that *Shamgar* made the great Slaughter with, *Jud.* 3. 31.

April 16. leaving *Kane-Leban*, we past by *Napulosa* and *Samaria*, and came to the Fountain *Selee*, where we lodg'd.

April 17. we travell'd in the same Road we came to *Caphar-Arab*, and then we left that Road, resolving to cross the Plain of *Esdraelon* and visit *Nazareth*, which we did, after paying our Caphars to Emir *Chibly*.

April 18. *Nazareth* is now a small Village, on a high Hill, where we were treated at a Convent of some Latin Fathers, who live in perpetual fear of the *Arabs*. The Church of *Nazareth* stands in a Cave, said to be the place where the Blessed Virgin received the Message from the Angel, *Hail thou that art highly favour'd*, &c. *Luke* 1. 28. It resembles the figure of a Cross, whereof the Tree is 14 paces long and 6 over, and the Traverse is 9 paces long and 4 broad; just at the Section are two Granite Pillars, whereof one stands at the place where the Angel, the other where the Blessed Virgin stood at at the time of the Annunciation.

After this we went to see the House of *Joseph*, where they say the Son of God liv'd for near 30 Years in subjection to Man, *Luke* 2. 51. and near this they shew the Synagogue, where our Lord preach'd that Sermon which so much exasperated his Country-men, *Luke* 4. Here are the Ruins of two Churches built by *Helena*.

April 19. About two hours distance from *Nazareth* Eastward is Mount *Tabor*, a high Mount round and beautiful, standing in the Plain of *Esdraelon* about 3 furlongs within the Plain. This is thought to be the Mountain on which our Lord was transfigur'd, *Matt.* 17. which has a plain Area at top very fertile, on which in several places are Cisterns of good water, and three Grotto's representing three Tabernacles, which St. *Peter* propos'd to erect, when he said, *Let us make three Tabernacles*, &c. And here I cannot but observe, that almost all Passages and Histories of the Gospel, are said by them who shew the places, to have been done in Grotto's. Thus the places of the Blessed Virgin's Birth, of the Annunciation, of the Virgins Salutation of *Elizabeth*, of the *Baptist*'s and *Christ*'s Nativity, of St. *Peter*'s Repentance, and the Transfiguration; all these places are said to be Grotto's, tho' 'tis no ways probable that so many various actions, with such circumstances as seem sometimes to require places of another nature, should be done in Grotto's.

From the top of *Tabor* you have a most delightful prospect: On the North-west you discern the *Mediterranean*, and all round you have the beautiful Plains of *Esdraelon* and *Galilee*, where you have a view of many places memorable for the Resort and Miracles of Christ; at the bottom stands *Daberah*, which is said to take its Name from *Deborah*, and near it is the Fountain of *Kishon*. Eastward you see Mount *Hermon*, and at the foot of it *Nani*, famous for our Lord's raising the Widow's Son there, *Luke* 7. 14. and *Endor*, where *Saul* consulted the Witch. Southward you see the Mountains of *Gilboa*, fatal to *Saul* and his Sons. Due East you discover the Sea of *Tiberias*, and close by it a steep Hill, down which the Herd of Swine ran and perish'd in the waters, *Matt.* 8. 32. Towards the North appears that which they call the Mountain of Beatitudes, where our Saviour deliver'd his Sermon, *Matt.* 5. 6, 7. And not far from this little Hill is the City *Saphet*, that stands upon a high Mountain, to which being then in view, our Saviour may be suppos'd to allude, when he says, *Matt.* 5. 14. *A City set on a Hill cannot be hid.* From Mount *Tabor*, we had also a sight of the place call'd *Dothami*, where they say *Joseph* was sold by his Brethren, and of the Field where our Saviour fed the Multitude with a few Loaves, and a fewer Fishes. After dinner we went to see the Mountain of the *Precipitation*, *i. e.* the brow of the Hill where they say the *Nazarites* would have thrown down our Saviour, *Luke* 4. had he not made a miraculous escape: And here the Friars shew some holes, which they call the prints of Christ's fingers, made in the hard stone, when he resisted the violence offer'd him.

April 20. we directed our Course to *Acra*, pass'd in view

view of *Cana* of *Galilee*, and came to *Sepharia*, the reputed Habitation of *Joachim* and *Anna*, Parents of the Blessed Virgin; over which stands a good part of a large Church. Here begins the Plain of *Zabulon*, from whence we came to *Acra*.

April 21. At *Acra* we were treated by the *French* Consul, and came the first night to our old Lodging at *Solomon*'s Cisterns.

April 22. About three hours from *Sidon*, we were carried to see a place we had not observ'd before, which was a high rocky Mountain; on the side of which were hewn a multitude of Grots, to the number of 200, as they were counted, which have an Entrance two foot square, and a Room within for the most part 4 yards square, which seem'd to be design'd for the use of the Living, and not of the Dead, because some of the Cells are no more than one yard square, and in the Rock are Cisterns for storing up water.

April 23. we continued at *Sidon*, being generously treated by the *French*.

April 24. having gone through the Olive-Yards of *Sidon*, we ascended *Libanus*, till we came to a Fountain call'd *Ambus-lee*.

April 25. This day we arriv'd at the highest ridge of the Mountain, where the Snow lay close by the Road; and then we begun to descend on the other side, and came to a Village call'd *Meshgarah*, where a Caphar was demanded by the *Druses*, who possess these Mountains. From hence, in one hour, we entred into a Valley call'd *Bocat*: This seems to be the same with *Bicath-Aven*, mention'd *Amos* 1. 5. together with *Eden* and *Damascus*, for there is very near it a place call'd *Eden* to this day; in this Valley there runs a large River call'd *Setane*, which falls at last into the River *Casimir*, sally call'd *Elentherus*. We cross'd a Bridge, and pitch'd our Tents on its Bank.

April 26. We pass'd through the Valley *Bocat*, and came to the foot of *Antilibanus*; and having pass'd by several Villages, we went through a narrow Clift between two rocky Mountains to *Demus*, a small Caphar.

April 27. This Morning we came to the River *Barrady*, which supplies all the Gardens and the City of *Damascus* with water; we cross'd over it at a Bridge, and our Road ascending brought us to the brink of a high precipice, from whence the *Turks* say their Prophet took a view of the City *Damascus*, which he found so pleasant and beautiful that he would enter into it, because he said there is but one Paradise design'd for Man, and he would not take his in this World. It is as near as I could guess about two Miles long, but compass'd with Gardens, extending to 30 Miles round; in which are Fruit-trees of all kinds, and many Turrets, Steeples and Summer-houses, peeping out from green boughs.

The River *Barrady*, near its Spring-head, is divided into three streams, whereof the middle most runs directly to *Damascus*, and is distributed in the City; the other two are drawn round to the borders of the Gardens, so that there is not a Garden but has a fine quick stream, which serves not only for watering the place, but for Fountains and other Water-works. This River was call'd by the *Greeks* and *Romans Chrysorrhoas*; but as for *Arbana* and *Pharpar*, Rivers of *Damascus*, mention'd 2 *Kings* 5. 12. I could find no memorial of them, but doubtless they were branches of the River *Barrady*. We continu'd a good while upon the Precipice, as being loth to leave such a charming prospect, tho' it allur'd us down to the City. Coming down the Hill into the Plains, we were conducted by a *Janisary* into the City, where we observ'd the Garden-walls to be made of great pieces of Earth, fashion'd like Bricks, and hardned in the Sun, being two yards long and one broad, and half of one thick. We also observ'd their method of scowring the Channels: They put a great bough of a Tree in the water, and fasten it to a Yoke of Oxen, upon the bough there sits a good heavy fellow to press it down and drive the Oxen; and thus the bough is dragg'd all along the Channel, and serves at once both to cleanse the bottom, and also to fatten the water; for the greater benefit of the Gardens.

April 28. We walk'd out to take a view of the City: And here we found all the Houses on the out-side built either with Sun-burnt Brick or *Flemish* Wall, very coarsely daub'd over; and so by the washing of the Houses upon a violent Rain, the whole City becomes as it were a Quagmire. But the Gates in these Mud-walls are adorn'd with Marble Portals, carv'd and inlaid with great beauty; and on the inside you find generally a large square Court, beautified with variety of fragrant Trees and Marble Fountains, and Duans floor'd with Marble, richly gilded, and furnish'd with Carpets and Cushions. In the next place we went to see the Church of St. *John Baptist*, now converted into a Mosque, which no Christian may enter into. Its Gates are vastly large, cover'd with Brass, stampt over with *Arab* Characters; and within it is spacious and lofty, built with three Isles, between which are rows of polish'd Marble of great beauty. In this Church is kept the Head of St. *John*, with other Relicks so holy, that 'tis death for a *Turk* to go into the Room where they are. From the Church we went to the Castle, and being admitted within the Gate we saw store of ancient Arms and Armour, and among the rest a *Roman* Balista, and a Chain cut in stone.

April 29. we went to see the Cavalcade of the *Hadgees* setting out for *Mecca*, which has been describ'd before. After this we went to see the Ager *Damascenus*, a beautiful Meadow just without the City, divided in the middle by a branch of the River *Barrady*; and 'tis a current Tradition here, that *Adam* was made of the Earth of this Field. Adjoyning to this is a large Hospital, enclos'd on the South-side by a stately Mosque, and on the other sides with Cloysters and Lodgings. Returning hence homeward we saw a beautiful Bagnio, and not far from it a Coffee-house capable of entertaining 4 or 500 People. It had two Quarters for Guests, one for Summer, and the other for Winter. That for Summer was a small Island, wash'd round with a large swift stream, shaded over head with Trees, and with Mats when the boughs fail. And here we found a multitude of *Turks* in the Duans, regaling themselves with Greens and Water, which two, with a beautiful face, according to their Proverb, are a perfect Antidote against Melancholy. In the Afternoon we went to visit what they call the House of *Ananias*, who restor'd sight to St. *Paul*, *Acts* 9. 17. And the place shown for it is a small Grotto, containing a *Christian* Altar and a *Turkish* Praying-place, seated too near one another. Our next Walk was out of the East-gate, to see the place of St. *Paul*'s Vision, which is about half a Mile from the City, close by the Way-side. A little nearer the City is a small Timber-structure with an Alter in it, where you are told St. *Paul* rested some time in his Way to the City after the Vision, *Acts* 9. 8. Being return'd to the City, we were shown the Gate at which St. *Paul* was let down in a Basket, *Acts* 9. 25. This Gate is at present wall'd up, by reason of its vicinity to the East-gate, which renders it of little use. In the City we saw the Patriarch of it, who told me there were more than 1200 of the *Greek* Communion in that City.

April 30. we went to visit the Gardens, and spent a day in one of them, where we found a pleasant Summer-house, with a plentiful stream of water running through it, and the Garden thick set with Fruit-trees. In visiting these Gardens, the *Franks* are oblig'd either to walk on foot, or ride on Asses, (which stand there ready to be hir'd) for the *Turks* will not allow them to ride a Horse.

May 1. we spent in another Garden, whose Summer-house was more splendid, and had greater variety of Fountains.

May 2. some of us went to *Sidonaia*, a *Greek* Convent, about 4 hours from *Damascus* to the Northward, and by the way we saw on the Right-hand a very high Hill, reputed the same on which *Cain* and *Abel* offer'd Sacrifices, and where the latter was slain by the former. *Sidonaiia* is situated at the further side of a large Vale, on the top of a Rock, which would be inaccessible but for the steps that are cut in it all the way up. It is fenc'd at top with a Wall which encloses the Convent, which was at first founded by *Justinian*, and is at present possess'd by 20 *Greek* Monks, and 40 Nuns, who live promiscuously together. Upon this Rock, and in a little compass round about it, are no less than 16 Churches or Oratories, dedicated to several Names, 1. To St. *John*. 2. To St. *Paul*. 3. To St. *Thomas*. 4. To St. *Babylas*. 5. To St. *Barbara*. 6. To St. *Christopher*. 7. To St. *Joseph*. 8. To St. *Lazarus*. 9. To the Blessed Virgin. 10. To St. *Demetrius*. 11. To St. *Saba*. 12. To St. *Peter*. 13. To St. *George*. 14. To *All-Saints*. 15. To the *Ascension*. 16. To the Transfiguration of our Lord; from all which we may conclude, that this place was highly esteem'd for Holiness. In the Chappel here made use of by the Convent for their daily Service, they pretend to a great Miracle, of which they give this account. In this Church they had once a little Picture of the Blessed Virgin, very famous for the many Cures and Blessings granted to Supplicants. This Picture was stole away by a sacrilegious Rogue, who had not kept it long but it turn'd into a Body of Flesh; which wonderful event struck him with such remorse, that he carried back the Prize, and begg'd pardon for his Crime. The

Monks

Monks having recover'd so great a Jewel, to secure it for the future, laid it in a Chest of Stone, and placing it in a little cavity behind the high Altar, fix'd an Iron-grate before it. Upon the Grates hang abundance of Toys, being the Offerings of many Voraries for the success of their Prayers made at this Shrine. Under the same Chest, in which the Incarnate picture was deposited, they always place a small silver Basin, to receive the holy Oil, which they pretend distils from the enclosed Image, and does wonderful Cures in many distempers, especially those affecting the eyes. On the East-side of the Rock is an ancient Sepulchre hollow'd in the firm stone, which is about 8 yards square, and contains 12 Chests for Corpses. At the entrance are 6 Statues in 3 Niches, 2 in each; at the Pedestals are some *Greek* words very dark.

May 3. we went to see the Street call'd *Straight*, *Acts* 9. 11. in which is shown the House of *Judas*, with whom St. *Paul* lodg'd; and in the same House is an old Tomb said to be *Ananias*'s, much reverenc'd by the *Turks*, who keep a Lamp always burning over it.

May 4. In an hour and half we came to a small Village call'd *Sinir*, just by which, on the top of a Hill, is an old Structure, suppos'd to be the Tomb of *Abel*, which is 30 yards long, and thought to be but just proportion'd to his stature; from whence the adjacent Country, in old times, was call'd *Abylene*.

May 5. we pass'd by the Fountain of *Barrady*, and came to a Village call'd *Surgawch*, from whence we arriv'd a second time in the Valley of *Bocat*, and hence going Northerly, we came in three hours to *Balbeck*, which is suppos'd to be the ancient *Heliopolis*, or City of the Sun, and so the word imports; for *Baal*, tho' it imports all Idols of whatever Sex, is very often appropriated to the Sun, which is the Sovereign Idol of this Country. The City has a pleasant situation on the East-side of the Valley of *Bocats*, of a square figure, compass'd with a good Wall, tho' its Houses are mean, as they are usually in *Turkish* Villages. There is in it a noble Ruin which was anciently a Heathen Temple, in which we observ'd, 1st, a round Pile of Building all of Marble, encircled with Columns of the *Corinthian* Order very beautiful, which support a Cornish that runs all round the Structure, of no ordinary state and beauty; and what remains of it at present is in a very tottering condition, but yet the *Greeks* use it for a Church, which should excite them to a little more fervour in their Prayers than they generally use, for they are seemingly the most indevout at their Divine Service of any People in the Christian World. But the further description of this Temple, together with a Cut of it, the Reader may see in the Reverend Mr. *Maundrel*, p. 133, 134, 135.

But besides this Temple, here is another Curiosity, which is so strange, that a Man may be thought to strain the Privilege of Travellers in relating it, and that is a large piece of the old Wall, which encompass'd all the Structures in the City; a Wall made of such prodigious great stones, that the Natives here ascribe the building of it to the Devil. Three of the stones we measur'd, and found them to extend to 61 yards in length, whereof one was 21, and the other two 20 yards long; these three stones lay in one row end to end. Here was also a single Column of the *Tuscan* Order about 14 yards high, and one yard and half diameter, having a Channel cut from the bottom to the top.

May 6. we left *Balbeck*, and went a-cross the Valley; and as we pass'd by the Walls of the City, we saw many stones inscrib'd with *Roman* Letters, which show that the Walls are made of the Ruins of the old City.

In two hours we saw near the Road an old Pillar, 19 yards high, and 5 foot in diameter. In an hour more we came to the other side of the Valley at the foot of *Anti-libanus*; and ascending the Mountain, we saw an old Lake call'd *Limone*, and thence in an hour more we arriv'd at the Snow. Here we lodg'd all night on the top of *Libanus*, which is free from Rocks, but very barren, and cover'd with a sort of white Slates. It is so high, that it proves a Conservatory of abundance of Snow, which thawing in the Summer, supplies with water the Rivers and Fountains in the Valleys below; and in the Snow we saw the print of the feet of wild Beasts, the sole Proprietors of these upper parts of the Mountain.

May 7. we went almost four hours upon Snow, which being frozen bore us and our Horses, and then descending about an hour, we came to a Fountain and a milder Region. From hence we design'd for *Canobine*, but our Guide being at a loss we steer'd to *Tripoly*, where we were nobly treated.

May 8. Mr. Consul *Hastings* carried us to see the Castle of *Tripoly*, which is situate on a Hill that commands the City; but being now unprovided with Arms, it serves rather for a Prison than a Garrison. There was in it a poor Christian call'd *Sheck Eunice*, a *Maronite*, one that had formerly renounc'd his Faith and turn'd *Mahometan*, but in his declining age retracted his Apostacy, and died to attone it; for he was Impal'd by Order of the Bassa two days after we had left *Tripoly*, which kind of punishment is certainly one of the greatest barbarities that can be offer'd to Humane Nature. The Execution is done after this manner: They take a Post about the bigness of a Man's leg, 8 or 9 foot long, which they make sharp at one end, and force the Criminal to carry to the place of Execution; and there they thrust in the Stake at his Fundament, and then taking him by the legs, draw on his body upon it till the point of the Stake appears at his shoulders, and then they erect the Stake, and fasten it in a hole dug in the ground. The Criminal sitting in this posture, does sometimes drink, smoke, and talk, for 24 hours; but generally, after he has remain'd an hour in this posture, one of the By-standers is permitted to give him a gracious stab to the heart, which puts an end to his unexpressible misery.

May 9. having cross'd the Plain of *Tripoly*, we came to the foot of *Libanus*; and thence ascending, in 4 hours we pass'd by a Village call'd *Eden*, and in two hours and half more we came to the Cedars which grow amongst the Snow, near the highest part of *Lebanon*, where we found some very old and of a prodigious bulk, of which sort I counted 16, and others younger, of a smaller size. I measur'd one of the largest, and found it 12 yards 6 inches in girt, and 37 yards in the spread of its boughs. It was still found, and about five yards from the ground was divided into five limbs, and each of which was equal to a great Tree. After we had staid about half an hour in this place, the Clouds began to thicken and fly upon the ground, which so obscur'd the Road, that with much ado we found the Way that goes down to *Canobine*; which is a Convent of the *Maronites*, and the Seat of a Patriarch, and is pleasantly situated near a Rupture in *Libanus*, cloath'd with Greens, and refresh'd with Fountains. It is seated on the North-side of this Chasm, about the midway in the Mountain, and was founded by *Theodosius the Great* at the mouth of a great Cave, having a few Rooms fronting outward that have the light of the Sun, the rest being all underground. The Valley of *Canobine* was anciently much resorted to for Religious retirement, as appears from the many Hermitages, Cells and Monasteries, here to be seen.

May 10. I took my Leave of the Patriarch and return'd to *Tripoly*, through a path cut in the side of the aforesaid Rupture.

May 11. we took our Leaves of our worthy Friends at *Tripoly*, and travelling the same way we came, we arriv'd in 8 days at the *Hony-Kane*, and found many of our *Aleppine* Friends there. All that occurr'd to us new in these days travel, was a particular way us'd by the Country-people in gathering Corn, which they pluck up by handfuls from the roots that they may lose none of their Straw, which is generally very short, and necessary for the sustenance of their Cattel, no Hay being made here. This is their practice in all places of the East I have seen, and seems to give light to that expression of the Psalmist, *Psal.* 129. 6. *which withereth afore it be plucked up*; and tho' there is mention in the next Verse of a Mower, yet being such as fills not his hand, this rather confirms the former sense.

FINIS.

Navigantium atque Itinerantium Bibliotheca.

VOL. II. LIB. 4.

VOYAGES
TO THE
South Sea, several Parts of *America*, &c.

CHAP. I.

Sir John Narborough's *Voyage to the Streights of* Magellan, &c.

1669. May 15. 1669. HAVING received a Commission to command his Majesty's Ship the *Sweepstakes*, then at *Depford* in the River of *Thames*, set out at his Majesty's proper Charge, burthen 300 Tuns, with 36 Cannon and proportionable Ammunition, mann'd with 80 Men, and provided with 14 Months Provisions at full Allowance; instead of Beer we had 4 half Tuns of Brandy, and Stores of all sorts for 12 Months; as likewise Craft for Fishing and Fowling, as Hooks, Lines, Nets, 12 Fowling Pieces, Lead to make Shot, &c.

Sunday. Septem. 26. 1669. We began our Voyage in Company of the *Batchellor* Pink, burthen 70 Tuns, carrying 4 Pieces of Ordnance, with Ammunition in proportion; mann'd with Nineteen Men and One Boy, victualled for Twelve Months at full Allowance, Fishing and Fowling Craft; besides of the following Goods to the value of 300 Pounds, which were to be exchanged with the Natives at his Majesty's Cost, *viz. Knives, Scissars, Glasses, Beads, Hatchets, Bills, Hoes, Nails, Needles, Pins, Pipes, Bells, Boxes, Daffels Linnen, Cloth, Osenbrigs, Tobacco, Pipes*, &c.

Wednesd. Septem. 29. Hazy weather, the Wind North West by West with a fresh gale: About 12 a Clock at Noon I stood to the South Westward as near as I could; the *Lizard* bore N. of me a little to the East, about 12 Leagues distance, at 98 *d.* 35 *m.* Latitude: *Lizard* in *England* lies at 50 *d.* 10 *m.* Latitude, and in Longitude East from the Meridian of the West part of St. *Michael*, one of the *Azore's* Islands, 18 *d.* 30 *m.* Taking my departure from the *Lizard*, I intend to keep my daily Account of the difference of my Longitude from that Meridian.

Octob. 17. I made the Isle of *Madera*, having a high Land and irregular Hills, cover'd with Wood on the top and down the sides; as also Vines; planted by the *Portugueses*, who also make Sugar here. The chief City call'd *Fonchiale*, is seated at 32 *d.* 10 *m.* of North Latitude, and in Longitude West from the *Lizard* of *England*, 10 *d.* 1 *m.* and Meridian distance 143 Leagues, on a Bay at the South side of the Isle, just upon the Seashore, and is well wall'd, and provided with a good Artillery. Its length is about an *English* Mile, and its breadth 3 quarters of a Mile. A fair Rivulet carries a fresh Water Stream into the Sea, in the middle of the Bay, from under a spacious Arch in the Wall of the Town; near which Ships may ride within the reach of a good Cannon. Near the Shore in the Bay you see abundance of Peeble-Stones, and Rocks in other places; to the East side it has deep Ground. The *Desarts* are certain high, barren and rocky Isles, at the S. E. point of *Madera*, about a Miles distance from the Shore. They treat to the S. E. The Channel betwixt those Isles and the *Mederas* is so deep as to be passable without any danger, with very little Wind at N. W. and fair Weather, Course South West. 1669.

Madera. *Fonchiale.* *The Desarts.*

I make my Course from *Fonchiale* Bay till to Day at Noon S. South West, distance sailed 34 Miles 6 tenths, departure West 13 Miles, difference Latitude 00 *d.* 32 *m.* Latitude by Account 31 *d.* 38 *m.* Meridian distance from the *Lizard* West 147 Leagues 1 Mile. Longitude from the *Lizard* West 10 *d.* 17 *m.* Difference of Longitude from *Fonchiale* West 00 *d.* 16 *m.* About Noon I saw the Isle of *Madera*, bearing North by East, at about 11 Leagues distance; it makes in a bluff Body at the West, and treats to the East. The Course in the Afternoon South West, little Wind at Night; I order'd my Master to Steer his best and nearest Course with all the Sail he could make to the Isle of St. *Jago*, yet so as not to leave the Company of the *Batchelor* Pink. Sunday 17.

Saturday *October* 23. This day in the forenoon I cross'd the *Tropic* of *Cancer*, with a Gale from the North by East; all my Men in good Health, many of them having been with me in the *Indies* before, were let Blood, a thing I had in my former Voyages to St. *Helena*, and the Coast of *Guinea*, found by Experience to be a great Preservation against the Calentures, and other Distempers of those hot Climates; and in all those Voyages, nor in two years in the Mediterranean Sea, nor at the *Canaries*, I ever felt one day's Distemper, which I attributed to my breathing always a Vein as often I approach'd to the *Equinoctial*.

Thursday *October* 28. In the Morning with a stiff Gale from E. N. E. I got sight of the Isle of *Mayo*, bearing S. by W. about 8 Leagues distance: It appears high and craggy to the East part, but to the North West part are low Lands near the Shoar; It is 18 Leagues distant to South by West from *Bonaviste*.

The Island of *Mayo*. About Eleven in the forenoon I came to an Anchor in the Road, about a Mile from the Shore in 7 fathom Water, sandy Ground; the North point of the Road bearing North North West, half a point to the West, and the South point of the Road South East from me about a Mile and half distance. To the South of the Road are craggy Rocks near the Shore, but to the North it is low and sandy. The Road lies on the North West by West part of the Isle in a sandy Bay, a Bows shot from the Sea side: In the flat Grounds is a salt Pond, whereabouts I got ashore, and found a heap of Salt of 20 Tuns, of which I carried off about 2 Tuns and a half: This being my main intention of touching at this Isle, which I knew would stand us in great stead to preserve our Provisions. We caught here abundance of *Mullets*, some *Cavalle* and *Silver-Fish* with our Seyne Net. I continued here all Night with fair Weather, and an East Wind near a dry Shore without any Wood. The Wind continued fair from the North East.

1669.

Friday *October* 29. I sent this Morning my Boat a shore, who bought of the Inhabitants several Goats at half a piece of Eight *per* Head, and 8 Cows, very good Meat, at six pieces of Eight a Cow, but return'd the Hides: We caught also vast store of Fish, which we split and and laid in Pickle 4 Hours, afterwards they are dry'd, and afford very good Food at Sea, because they will keep in any Climate. In the forenoon I discovered a a Sail to the West, passing on the South side of the Isle, and in the afternoon several others coming from the North, which proving the *Portuguese* Fleet bound for *Brazil*, were steering their Course to *Port Praya* in the Isle of St. *Jago*; I weighed at 12 a Clock this Night, and stood away South West for *Port Praya*, with the Pink in Company.

Saturday *October* 30. This Morning I steer'd South West with a full Gale from North East by East, for the South side of St. *Jago*, where I arriv'd in *Port Praya* Road at 12 a Clock, lying South West from the Road of the Isle of *Mayo*, about 9 Leagues distant. I cast my best Bower-Anchor in 10 fathom rough Ground, the East Point bearing East of me, and the West Point West-south-west, at half a Miles distance. The *Portuguese* Admiral of a Fleet of 36 Sail, was a very large well built Ship, call'd the *Padre Eternel*; burthen 1700 Tuns, with Ports for Three Tiers of Guns flush, but carry'd only Eighty, and was poorly mann'd, and so were all the rest; 6 moderate Frigots might have master'd the whole Fleet. The Admiral saluted me with 7 Guns, which I return'd with as many; Captain *Francis Wilkshier* in the *Jerusalem* fired 5, I answered him with 3, and so did the Rear-Admiral, whom I return'd the same number, several of the Fleet fired 3, whom I answer'd with 3 for all. I saluted the Fort with 5 Guns, which return'd 3.

Sunday *October* 31. This Morning the Wind at North East, with fair Weather, *Don Carolus* and I, (after leave obtain'd from the Governour) went a shore to *Pryan*; with much ado, I got off one Boats load of Water, neither durst I return to send my Men a shore again for more, because some of the *Portuguese* Soldiers, that were watering there at the same time, had snatch'd away their Hats.

Port Praya in St. Jago's Isle. The Bay call'd *Port Praya* is no Port, but only a round Bay, with steep Cliffs on the East side, and in the bottom a Hill whereon stands the Castle, of a slender Force, and provided only with 4 pieces of Cannon; on the East side is another on the top of a Hill, which has no more than 3. The North West side of the Bay has a gravelly and sandy Shore, and a pleasant Grove of *Coco-Nut Trees*. A Brook of fresh Water carries its Stream through the Valley, and thence through the Sands soaks into the Sea. The Water is excellent good, and keeps very well at Sea. Near the West part of this Bay lies a small Isle, close to the shore, which affording very good Grass for Cattle, I cut some of it: These Forts are not the least safeguard for Ships riding here, for a Man of War may venture in without fearing the least dammage from them; and a whole Fleet may be destroy'd by Fire-Ships; for every Day blows a fresh Gale, and there is but two Points of Land, by which a Man may fetch into any part of the Bay; which lies open to the Sea from the East, and Southerly to West-south-west. It was here I declar'd to my Lieutenants and Master, that according to my Orders, I was from thence to steer my Course towards *America*, to the South of the River of *Plate*, and thence through the *Streights* of *Magellan* into the *South Seas*; I put them in mind to be careful to keep Easterly enough, to weather the shoals of *Brazil*, call'd the *Abrohollis*, at about 18 *d.* of South Latitude: For the Wind blows for the most part thereabouts between the Latitude of 10 South, and the Latitude of 20 South, at East by South, and East-south-east, fresh Gales. The Master telling me soon after that all things were stow'd, and the Wind a fresh Gale at E. by N. we agreed to steer our Course at present South and by East, so that as we got Southerly, and the Wind encreased, we might change our Course; so I order'd my Master to steer South by East by the Compass, and my Lieutenant to read Service to the Ship's Crew, to beg a prosperous Success of our Undertaking from God Almighty.

1669.

Instructions for Mr. Humphrey Fleming, *Commander of his Majesty's hired Pink the* Batchelour; *By Virtue of an Order from his Royal Highness, dated* 29 August, 1669. *to me directed.*

YOU are hereby required to sail with his Majesty's hired Pink the *Batchelour*, (under your Command) and to keep Company with the *Sweepstakes* (another of his Majesty's Ships) to the Coast of *America*, to the South of *Rio de la Plata*, and all along to the South of the Coast of *America*, till you come to the Streights of *Mallegan*, at 53 *d.* South Latitude; through these you are to pass into the *South Sea*, and sail along the *American* Coast to the North, as far as *Baldavia*, at about 40 *d.* South Latitude, where you shall receive farther Orders, either from me, or in my absence from the Commander in Chief aboard his Majesty's Ship the *Sweepstakes*, in case you keep Company with her, which you are to do, and not leave her upon any occasion whatsoever, unless you have Orders for so doing from the Commander of the *Sweepstakes* then aboard her; by whose Orders you shall also be employed in the discovery of Lands, Bays, Ports, Rivers Streights, *&c.*

The Design of this our Voyage being to make a Discovery both of the Seas and Coasts of that part of the World, and if possible to settle a Trade or Commerce there. You are not to touch, or send ashore on the Coast of *America*, without an extraordinary necessity, till you come to the S. of the *Rio de la Plata*; much less shall you meddle with, or do the least Injury to the *Spanish* Subjects inhabiting there: You shall with all possible accuracy take Observations, and cause your Master and Company to do the same, of all Headlands, Isles, Bays, Harbours, Roads, Mouths of Rivers, Rocks, Shoals, Soundings, Courses of Tides, flowings and settings of Currents, both in the *North* and *South Seas*, &c. and have Draughts made of them; as also take notice of all Trade-Wines you meet with, and of the Weather, but especially be exact in observing the Harbours of the *Streights* of *Magellan*, as also of the nature of the Soil of all places where you come, what Fruits, Woods, Grain, Fowls and Beasts each of them produces; what Stones and Minerals the Hills, and what Fish the Rivers and adjacent Seas do afford. As many sorts of Minerals as you are able to procure, you are to send to his Royal Highness's Secretary. The better to gain a Correspondence with the *Indians*, you shall dive into their Temper and Inclinations, and represent to them the Power and Wealth of the King and *English* Nation; and that you are sent to enter into a Friendly Commerce with them; to obtain which, you ought to be careful your Men don't by any mis-behaviour of theirs, create an Aversion in them to us, but rather to endeavour to gain their good Will, by civil Usage; such as act contrary to this, shall be Chastiz'd, wherewith you may acquaint your Men, that they may not plead Ignorance. You are also to Husband all sorts of Provisions to the utmost advantage, as well as your Ships Trimming, Sails, Cables, Anchors, *&c.* and not to neglect any opportunity of getting Provisions, Wood, and fresh Water, for the Preservation of your Men; whom you shall not expose to any Hazards, without an absolute necessity, many having been cut off in such Voyages for want of due care, and a sufficient guard. You shall keep a good Command over your Ships Crew, and, if any mutinous Practices should arise, impart the same immediately to me. You shall also keep your Ship sweet and clean, for the better preservation of your Men's Healths. God Prosper us.

Given on board his Maiesty's Ship the *Sweepstakes*, riding in *Port Praya* Road at the Isle of St. *Jago*, November 5, 1669.

John Narborough.

To

1666.

To Captain Humphrey Fleming, *Commander of the* Batchelour *Pink, Theſe.*

Inſtructions for the better finding each other in caſe of Separation by chance, Tempeſts, or otherwiſe.

YOu are by Theſe required to ſail with his Majeſty's hired Ship the *Batchelour*, (under your Command) and to keep Company with his Majeſty's Ship the *Sweepſtakes*, along the *American* Coaſt to the South of *Rio de la Plata*, as far as St. *Julian* on that Coaſt, at 49 *d.* 20 *m.* South Latitude. In caſe of Separation from each other, you ſhall endeavour to meet again, by looking abroad well at Sea and the next Poſt of Rendevouz; being as aforeſaid at Port St. *Julian*, you are to make all poſſible haſte thither; and if you reach that Place before the *Sweepſtakes*, to ſtay two whole Months for her, and ſhe ſhall do the ſame for you: In your Paſſage thither, after you are come to the South of *Rio de la Plata*, you may keep along the Coaſt of *America*, and to make Cape *Blanco* at 17 *d.* 20 *m.* South Latitude, and ſo to *Port Julian*; you may alſo enquire for me at *Port Deſier* at 48 *d.* South Latitude. If I ſhould be come to, and gone again from any place, before your coming thither, I will leave behind me a piece of Board nail'd to a long Pole or Tree, engraven, mentioning the Ships Name, the Day of my Departure, and the Port I intend to make next: Pray do you the ſame. I will do ſo likewiſe at Port St. *Julian*, and leave an Order directed to you, put up in a Glaſs-Bottle, and faſten'd to a Pole, which you ſhall find plac'd on the Iſle which lies at the Weſt end of the Harbour; where I will erect alſo my Tent, which I would have you look carefully after, as I will do for you. 'Tis poſſible I may touch on the Coaſts as I paſs along, to try whether I can eſtabliſh a Commerce with the Natives, but where-ever I come, you may be ſure I will leave the before-mention'd Memorials of my being there before you. God proſper our Intentions.

Given at *Port Praya*, read aboard the *Sweepſtakes* in the Iſle of St. *Jago*, *November* 8. 1669.

John Narborough.

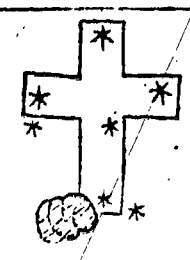
Decemb. 4. We ſaw many Fiſh, as flying Fiſh, *Bonettis*, *Sharks*, and *Albycores*, a Fiſh not unlike a Mackrel, but larger than the *Bonettis*, which are their Food, they are Feavoriſh; ſome we caught with Hooks, and one Shark, which our Men eat, and lik'd very well.

Decemb. 7. Two Butts of our Beer being leak'd out, we all drank Water that Day, every one always faring alike, from the Officer to the Cabin-Boy, in their Proviſions, to avoid all manner of Conteſt; I us'd to order one of the Ship's Crew blinded, to ſerve every Man his ſhare.

Saturday Decem. 18. I found all my Men in good Health, without any Calentures, moſt of them having been let Blood ſince our paſſing the *Tropic* of *Cancer*; I alſo uſed to allow in this hot Climate a quart of Vinegar to 6 Men *per* Week, to eat with their freſh Fiſh, which was always divided equally among the whole Ship's Company, whether we caught much or little.

Friday Decem. 24. I obſerv'd a conſiderable difference within the 48 hours, betwixt my *Dead Account*, as we call it, which is kept by the Log, and the Obſervations I made theſe two Days, when the Sun was on the Meridian; for I find my ſelf more South by 12 Miles, than the Log allows; I can't perceive any variation, and the Log is well kept, and the half Minute Glaſs good; I am of opinion, that the Current ſets to the South, now the Winds are at the Eaſt, and the Moon very near the full.

Decem. 30. This afternoon I took an *Azimuth*, and find 6 *d.* 10 *m.* variation Eaſterly, my Obſervation being of a good one; The Weather fair at 9 a Clock at Night, *Nebeles Major* appear'd very clear, and ſeems to be a piece of the *Milky way* broke from it; The South Conſtellations near the *Antarctick* Pole, the *Camelion Bird of Paradiſe*, the Tail of the *leſſer Hydra*, and the *Water-Snake*, all Stars of the 5th and 6th Magnitude, were viſible; but no *Pole-ſtar*, or any other fit for Obſervation within 15 *d.* of the Pole. The *Groſer Stars* of the firſt and ſecond Magnitude are good for Obſervation, and when on the Meridian above the Pole, appear thus:



1666.

We ſaw ſome Sea-gulls, Gannets, a black Sea-Fowl of the bigneſs of a Pigeon, and ſome larger, and three Tropick Birds of a grey Colour, with a long ſpired Tail, as big as Pigeons. We alſo took ſome *Bonetto's*, and a large broad flat Fiſh follow'd the Ship, not unlike a *Scate*; the Seamen call it a *String-Ray*, having a long Tail, with a ſharp bow at the end of it; ſome call them *Cloke-fiſhes*, the ſmall ones are good Food. Diverſorts of Sea-Fowls and Fiſh.

Variation of the Compaſs, by an Amplitude in the Morning 6 *d.* 46 *m.* Eaſt. This afternoon perceiving the Sea to look whiter than ordinary, whereby I judged my ſelf thwart of the Shoals of *Brazil*, I ſounded and found 184 fathom right down, without any Ground; Variation at Sun-ſet, 6 *d.* 46 *m.* Eaſt, the Wind Eaſt by North. I made all the Sail I could; ſome Fowls flying over the Ship, call'd *Men of War*; they feed on *Flying Fiſh*; we ſaw a few *Bonetto's*, and with certain ſmall Sea Fowls, call'd *Black Nodies*, two *Curlieus* flying to the Eaſt. January 5. Jan. 14.

Finding my ſelf 9 Miles farther to the South than I expected, I attribute the ſame to the Current that ſets out from *Rio de la Plata*; I have been very careful of my Courſe and Variation, which is but 18 *d.* 20 *m.* Eaſt, by an Amplitude taken to Night. Being open of the Mouth of *Rio de la Plata*, I ſounded at Night, but found no Ground at 140 fathom; The Wind at North by Eaſt; cloſe weather at Night: I ſteered South-weſt and by South. Jan. 24.

A calm Morning, at 8 a Clock the Wind turn'd to the North Weſt, with a fine Gale, at Eleven the Wind went round the Compaſs, and ſetled in the North, with Thunder and Lightning; we ſaw divers ſorts of Sea-Weeds driving on the ſurface of the Sea, with many Sea-Fowls of a browniſh colour ſwimming in it; Courſe ſteered is South-weſt by my Compaſs; Variation of Sun-riſing by an Amplitude 19 *d.* 43 *m.* All my Men very healthy. All the beforemention'd Fiſh have now quite left our Ship; we ſee no Fiſh but Whales. Monday Jan. 31.

A foggy Morning, with little Wind at South Eaſt. I ſtood to the South Weſt, and ſaw abundance of Sea-Fowls among the Sea-Weeds, driving near our Ship, ſtriking for ſmall Fiſh. In the afternoon calm, many ſmall Shrimps about the Ship, and 8 young Seal-Fiſhes, of the bigneſs of a moderate Spaniel-Dog, and a black colour, they ſwam to the Weſt. In the afternoon a freſh Gale at South-ſouth-eaſt. I ſteer'd to the South-by-Weſt by my Compaſs; and found the Air on a ſudden as cold here as in *England* in *September*: The Seas hereabouts are much expoſed to ſudden Guſts and variable Winds; The Wind has for theſe three Days run twice or thrice a day round the Compaſs: The Sea-Water being whiter than ordinary, I ſuppoſed I muſt be in Soundings, alſo by my account of Longitude, kept from the *Lizard*, I am not 1 *d.* 28 *m.* from Land, according to the *Mercator's* Draught. I ſounded towards Evening, and found 130 fathom without Ground, Wind at South. I ſteer'd Weſt-ſouth-weſt, and at 10 a Clock obſerv'd the Water to riple, as it does upon Shoals; I ſounded and found Ground at 70 fathom; fine red Sand, inclining to grey. Tueſday Feb. 1.

Meridian diſtance from the *Lizard* Weſt, 839 Leagues 2 Miles, eight tenths Longitude. At noon from the *Lizard* Weſt, 49 *d.* 43 *m.* Wind at South Weſt by South, with a ſmall Gale. I ſounded, but found no Ground at 140 fathom. I try'd the Current with my Boat, but could obſerve little or none; The Sea ripled in divers places; I ſounded, but found no Ground at 108 fathom. Several beds of Sea-Weeds of about 5 or 6 fathoms long drove to and fro; the Leaves are broad and browniſh, and on the Roots hangs a clod of Rock of two or three pound weight. Our Men kill'd ſome Sea-Fowl with their Birding-pieces, not unlike *Sea-Gulls*, and good Food; we ſaw ſome *Seals* and *Whales*. Feb. 2.

More beds of Rock-weeds and Sea-fowls, like Gannets, ſome black, others white, grey and pied; ſome ſmall Seals, with Heads like Dogs, which they will hold above Water a long time, and then dive under Water again very nimbly. This afternoon at 7 a Clock I was at 41 *d.* South Latitude, and of Longitude Weſt from the *Lizard* 52 *d.* 5 *m.* and in Meridian diſtance from the *Lizard* 895 Leagues; Meridian diſtance from *Port Praya* 616 Leagues, Longitude from *Port Praya* Feb. 5.

1666. West, 36 *d.* 34 *m.* I adviſed at Night with *Don Carolus*, (who had told us that he had been this way in a Galley, and knew all the Coaſts from the River of *Plata* to the *Streights*, and through them all along the *Weſt Coaſt*, to *Baldavia* and *Lima*) in what Latitude, or at what Cape or Harbour we had beſt hale in with the Land, being now to the South of *Rio de Plata* in *America*, and conſequently according to my Inſtructions, near the Coaſt to be diſcover'd; but I could get no other anſwer, than that I might do what I thought beſt, for he was not acquainted with the Coaſt, ſo that I ſuppoſe, he may have liv'd with a Governour in *America*, where he heard them talk of theſe Parts.

Feb. 8. At 7 a Clock in the afternoon I ſtood to the South, the Wind Weſt-ſouth-weſt; we ſaw much Rock-weed, and divers Sea-fowls, the ſeaſon very cold, being Summer; I ſhew'd *Don Carolus* how far we were to go through the *Streights* along the Weſt Coaſt; he anſwer'd me, He did not think we ſhould have come ſo far South; and that the *Spaniards* went to *Chili* a ſhorter way: I told him, They went into the River of *Plata*, and ſo by Land. My Men are generally healthy, except ſome few, unto whom I give Vinegar once a Week, to prevent the *Scurvy* in their Mouths; every Man is order'd to waſh his Mouth, Hands and Face every Morning, under forfeiture of that days Allowance, and to keep himſelf free from Lice, under the ſame Forfeiture; becauſe the foggy weather is a great Enemy to the keeping of every thing clean in the Ship.

Feb. 19. I ſounded often, and had 50 and 53 fathom; dark black Sand, with ſome bright Sand in it. Beds of Rock-weeds, *Seals* and *Porpiſes* ſeen; 3 *Whales*, many *Fowls*, and ſome *Penguins* ſwimming near the Ship. At 2 Clock in the afternoon, a brisk Gale at Eaſt by South; I ſtood to the South, cloſe haled under my Courſes; the Pink, half a Mile to Windward of me under hers, ſhe out ſails us; now it blows hard.

Monday *Feb.* 21. Paſt 8 in the Morning I ſaw the Land, bearing Weſt of me, diſtant 4 Leagues: I ſounded, and had 21 fathom, ſmall Stones and Sand; I ſtood Weſt by my Compaſs. The Land appear'd not very high near the Sea-ſide, but farther up, with round high Hills, of a reddiſh colour: The Nothermoſt Land I could ſee, (being *Cape Blanco*) bore 2 Leagues North-north-weſt of me; and the Southermoſt Land at the face of the Cape. The Land trented away to the South and South-weſt of me, of an indifferent height near the ſhore, but in the Land, like Hills flat on the top, with Hills and Valleys intermix'd like Downs of an ordinary height. At 9 a Clock in the Morning, I laid to half an Hour, till it clear'd up, that I might make the Land the better, being within 5 Miles of the ſhore, which made a kind of a Bay; I found at 17 fathom rough Ground, with ſmall Stones, drawn up in the Tallow of the Lead; the Fogs being clear'd betwixt 9 and 10 a Clock, I ſaw the Land appear plainly reddiſh like ſeared Graſs, without any Woods either on the Hills or Valleys, but like the Graſs Downs in *England*. I durſt not ſend my Boat aſhore by reaſon of the Fog, and the high Sea; a freſh Gale blowing along the ſhore, the Wind at North by Eaſt. The Land along the Sea-ſide lies South-ſouth-weſt, and North-north-eaſt, as far as I could ſee to the South, but could not diſcover either Fire or Smoak. Courſe made true after ſeveral Courſes from yeſterday 12 a Clock, till 9 this Morning, when I was 3 Leagues off of the Land; True Courſes Weſt. 6 *d.* 50 *m.* Southerly diſtance, ſailed 50 Miles, ſeven tenths departure Weſt 50 Miles; difference of Longitude Weſt, 1 *d.* 15 *m.* difference of Latitude, North 0 *d.* 6 *m.* Latitude by account is 47 *d.* 14 *m.* South; no Obſervations this 3 Days, being foggy Weather. Meridian diſtance from the *Lizard* Weſt 1041 Leagues, 1 Mile ſeven tenths Longitude, at 9 a Clock from the *Lizard*, Weſt 16 *d.* 56 *m.* and ſix tenths Longitude from *Port Praya*, Weſt 44 *d.* 38 *m.* and half Meridian diſtance from *Port Praya*, Weſt 735 Leagues, 1 Mile and half Variation of the Compaſs, Eaſterly, 18 *d.* I ſuppoſe we had paſs'd by *Port Deſier* in the Fog, becauſe the Iſles and Rocks we ſaw, were *Pengwin*, and ſome other Iſlands lying about it to the South of that Harbour; we ſaw *Seals*, *Penguins*, py'd *Porpiſes*, and Sea-fowl in abundance.

Thurſday *Feb.* 24. Hazy weather, Wind at Weſt-north-weſt. No ſight of the Pink, I ſuppoſe her to be got into *Port Deſier*; I weigh'd at 8 in the Morning, and ſtood to the North and whilſt the Ship ſails in the Offing, 2 Leagues from the ſhore, I went in my Pinnace along the ſhore to the North, which I ſaw, full of Beaches and ſcattered Wens; in ſome places the Tide of Flood was with us. At the North end of *Seals Bay* you ſee a little rocky Iſle, reſembling a Hay-cock, and cover'd over with grey colour'd Fowls Dung; Betwixt the Iſle and the Main the Tide runs very ſtrong, being not above a Cables length from the Point of the Main; about it are many broken Rocks, the main Land near the Sea-ſide low and ſandy, but deeper in the Country, large Downs and Hills, without Wood or freſh Water; we gave this Iſle the name of *Tomahawke*, which is all a craggy Rock, ſomething bigger than *Seals* Iſle, from whence it is 8 Leagues diſtant to the North-north-eaſt: It has abundance of *Seals* and *Sea-Fowls*. To the North Weſt of this Iſle is a deep rounding Bay, call'd in the Hydographigal Maps *Springs Bay*, wherein are three ſmall but pretty high Iſlands: The Land in the Country beyond the Bay being Hilly, and Rocky to the North part of the Bay. I croſs'd it in my Pinance, being 7 Miles broad and near 3 Leagues deep, I found in the midway 21 fathom; it rounds with a turning up to the North-north-weſt, behind a Point farther then I ſaw; upon which rounding Point are black Wens, reſembling an old Building with Towers. At my coming in, I ſail'd cloſe under the ſhore with my Boat, which I found ſteep, with Black Rocks, Low Bays, Peeble-Stones, and Sandy Beaches, green Graſs on the Hills, but without either Wood or freſh Water. At the North Eaſt Point of this *Spiring's Bay*, the Land jets out like a foreland in large plain Hills, with ſandy ſmall Bays; at the face of this foreland lie ſix rocky Iſles, one only a Muſquet-ſhot from the Main, the reſt farther off; the outwardmoſt being the biggeſt, and a Mile from the Main, and is call'd *Penguin-Iſland*, of an indifferent height at the ends, but low in the middle, which is Gravelly, and produces ſome Graſs, whereas the ends are craggy Rocks; its length is near three quarters of a Mile North-north-eaſt, and South-ſouth-weſt; its breadth a Mile Eaſt and Weſt. Here the great black *Gannets* and the *Penguins* lay their Eggs upon and under the Rocks in Holes; the *Seals* lie on the tops and on all ſides of them; theſe as alſo Sea-Fowls are to be found here in incredible numbers; but the *Penguins* frequent the biggeſt Iſland moſt. I took at one time in half an Hours time above 300 of them, and could have taken 3000 if my Boat would have carried them; for you may drive them in Flocks to the Boat, where the Men knock them on the Head with Truncheons. In the mean while the Ship was ſtanding to the North; about 2 Leagues thence many broken Rocks, and foul Ground lie betwixt theſe Iſlands, and without the Point of the outwardmoſt it makes a great ripling, occaſioned by the force of the Tide ſtruck back from the Iſlands againſt the other Tide. To the North of theſe Iſles is a Bay 4 Leagues long, and 1 and half deep; in the North Weſt whereof lies the Harbour call'd *Port Deſier*, which we could ſee from *Pengwin*-Iſlands, bearing North-north-weſt from them, at 3 Leagues diſtance: About the middle of this Bay is a ridge of white Cliffs 2 Miles long; the uppermoſt of which has black ſtreaks down to a fourth part, occaſioned by the draining of the Water; theſe Cliffs are plain on the top, but deeper into the Country high rounding Hills and Downs, deſcending lower and lower towards the Water-ſide; the South part of the Bay has craggy Rocks on the Main, like high Walls: Near the Sea is a ſandy Cave, juſt under the Rocks, where you may hale a Boat up in foul Weather.

1666.

Tomahawke Iſle.

Spring's Bay.

Penguin Iſle.

Penguins in prodigious Numbers.

Port Deſier.

Fair Weather, with a brisk Weſt Wind; I kept out Light all Night, for a ſignal to the Pink, and a Fire was made aſhore for the ſame purpoſe; the Weather cold: At 7 a Clock in the Morning I went aſhore with both my Boats, leaving the Ship within the Muſcle-bank at 6 fathom low Water; I ordered my Men to make a Fire upon the Hills on the North ſhore, as a ſignal to our Pink; I ſounded the Harbour at low Water, which I found very good, and fit for great Ships to ride in, provided they have good Cables and Anchors: On the ſhore I ſaw no Wood, little freſh Water, and on the Hilly large Downs a few Buſhes, and long dry Graſs growing in Knots and Tufts; the Soil gravelly and dry, mix'd with ſome black Mould in the Valleys: I ſaw neither People, Fire, nor Smoak, but the foot-ſteps where ſome had lain upon the Graſs behind the Buſhes, where they had made ſmall Fires: I ſaw alſo ſome Wool, Feathers, Bones of Beaſts, and ſhivers of Flints; but no Beaſts, except two Hares; I had left a Flag with Beads on it yeſterday on a Hill hard by, but could not perceive any body to have been near it; I let it ſtand where it was: We did not at this time advance above a Mile from the Sea-ſhore, yet found in the Valleys betwixt the Rocks great ſtore of *wild Peaſe*, with green Leaves and blewiſh Bloſſom, growing entangled together like Vines, and taſting like green Peaſe leaves in *England*; alſo ſome ſweet Herbs like Tares, very green, with

Saturday *Feb.* 26.

Wild Peaſe.

1666. with white and yellow Flowers, and another green Herb like *Sage*, but growing in Knots like our *Lettice*; theſe Herbs afforded a good Sallad to our People againſt the *Scurvy*; on the Rocks are abundance of Muſcles and Limpets, and in an Iſland hard by many Seals and Water-Fowls; the River has pied Divers as big as Ducks, ſome of a grey colour, and black Shags, Ducks, and other Sea-Fowl you alſo meet with among the Rocks and Buſhes; I caught in one of theſe little Iſlands, as many young *black Shags* in their Neſts as loaded my Pinnace; and ſo aboard I went with them and ſome Herbs, which were equally divided among the Men. It being a black cloudy Night, I kept out a Light in the Poop for the Pink; and the next day the Ship's Company feaſted upon the young *Seals* and *Penguins*, which they found very good Food. As our Ship wanted a little refitting, I judged this a fit Harbour for that purpoſe, eſpecially ſince from the tops of the Hills we might ſee our Pink a great way at Sea if ſhe ſhould approach that Coaſt.

Tomahawke Iſle.

Spring's Bay.

Two freſh Water Springs.

Our People diſcovered two Springs of freſh Water, one in a Valley, cloſe by the Water-ſide, half a Mile up the River; the other in a Valley between the Rocks, juſt over againſt where the Ship rid, about half a Mile from the Rivers ſide, right from *Cooper's-Bay* in the ſame Valley; they were both but ſmall and a little brackiſh, the Earth being naturally ſaltiſh; for both the Ground and Rocks have a white Rhime of Salt-petre hanging on them. I went 2 Miles North Weſt into the Country, which I found hilly, and dry, without Wood or Water, and ſome craggy Rocks, and low Valleys of a Salt-petre nature. Here and there are prickly Buſhes, with leaves like our *Engliſh White-Thorn Buſhes*; ſome leſſer Buſhes bearing dry Gauls, with a ſmall Seed, as hot in the Mouth as Pepper; I did not ſee one Tree; the Soil generally gravelly and ſandy, bearing tufts of dry Graſs. I digged in ſome places, but inſtead of Metals or Minerals, found nothing but Rocks and Sands; nor could I ſee the leaſt ſign of any Metals among the Rocks; I diſcovered the Land all round about from the Hills, to be all Hills and Downs like *Cornwall*; I ſaw the ſame day 9 Beaſts not unlike Deer, but longer, with larger Necks, though without Horns; when we came within a Furlong of them, they fell a neighing like Horſes, and ſo run away.

Penguin Iſle.

Some Plants.

Penguins in prodigious Numbers.

Tueſday March 1. A fair cold Morning, the Wind at North, I fill'd one of our Casks out of the Spring, which I cauſed to be dug deeper; I alſo erected a long Pole on a Hill, with a white Cloth faſtned to it, and ſome Beads, a Looking-glaſs, a Knife, a Hook, and an Hatchet, to intice the Inhabitants to come to us, but could ſee neither People, nor Fire, nor Smoak. I ſaw 3 Oſtriches, but they were too far to make a ſhot at them, and too nimble for my Greyhound; they were grey, and larger than an *Engliſh* Turkey-Cock; they never fly, but truſt to their long Legs. I ſaw in the Graſs two handfuls of red *Spaniſh* Wool, which they bring out of *India*. At 7 a Clock I return'd aboard; the Wind North, with hazy Weather; no ſight of the Pink; at 10 the Wind came to the South East.

Oſtriches.

Friday March 4. A fair Morning, the Wind at East; we fill'd more freſh Water; at 12 a Clock I went with both the Boats and 40 Men to *Seal-Iſland* into the Harbour, every Man with his Club; we drove them up together, and in half an Hours time kill'd 400 young and old; ſo ſoon as they were knock'd down, we cut their Throats, and ſo loading our Boats, carried them to the Bay, where the Tent was, and laid them upon the Rocks; whence they were fetch'd all at Night. The large *Male-Seals* are of the likeneſs of a good Calf, with ſhaggy Necks, Heads and Faces, like Lyons; the Females are alſo like Lioneſſes before, except that they are hairy and ſmooth all over like Horſes, whereas the Male is ſmooth only on his hind-parts, which is very deformed in both, for it tapers till it comes to a point, where grow two Fins like Feet, and two more out of the Breaſt, by means of which they can climb up high Rocks and Hills, though they delight chiefly to lie aſleep near the ſhore; ſome are 18 Foot long, thicker than a But in the Bilge, and very fat; many are 14 Foot long, and generally no leſs than 8 Foot, and all very fat.

Seal-Iſle.

The Seal-Iſle.

Saturday March 5. A fair Morning, Wind at South Weſt; we went aſhore to ſlay ſome *Seals*, we cut them in good pieces and ſalted them; the Meat looks as white as Lamb, but eats beſt a little ſalted; I mean the young ones, who ſuck their Dams; theſe as ſoon as they come aſhore bleat, when the young ones come to ſuck her; one old one ſuckles 4 or 5, and will not admit of other young ones that come near her; which ſeems to intimate that they have 4 or 5 young ones at a time; the young ones we dreſs'd were of the bigneſs of a middle-ſiz'd Dog; with their fat we fried our Proviſions, which our Men thought as good as Oil of Olives: The Fat of the old ones affords Oil for Lamps. 1666.

Blowing weather, Wind at Weſt: After Prayers I went aſhore on the South ſide of the River, with 12 Men well arm'd, and travelled 8 Miles into the Country, South Weſt by Weſt; my Lieutenant went in one of the Boats 9 or 10 Miles up the River, and my other Lieutenant went to the North ſide with 10 arm'd Men; I ſaw in my Travels one of theſe before-mentioned Beaſts like Deer, dead and whole, his back had pretty long Wooll of the colour of dry'd Roſe-leaves, and down the ſides; the belly white Wooll; he was of the bigneſs of a ſmall Colt, with a long neck, head like a Sheep, and ſo were the mouth and ears; his legs very long, with a cloven foot like a Deer, and a ſhort buſhy tail of a reddiſh Colour. As I took theſe Beaſts to be no other than *Peruvian* Sheep, *(Guianacoes)* and that I had heard ſome *Weſt-Indian Spaniards* affirm, that they have found the *Bezoar-Stone* in the *Guianacoes*. I had this opened, but found none, neither in his Stomach, or otherwiſe, tho' I turn'd all inſide outward: I ſaw afterwards ſometimes 30 or 40 in Herds together; I ſaw alſo 9 *Oſtriches*, but could not come within reach of my Gun to them, and they out-ran my Greyhound upon the Hills; we ſaw alſo a Fox, a wild Dog, and 5 or 6 Hares; of the laſt my Greyhound kill'd one, which was like an *Engliſh* Hare, but much larger, with a ſtub of an inch long, inſtead of a Tail, without Hair; they live under Ground like our Rabbets. We ſaw no Wood except a few Buſhes like *White-Thorns*. The Land is dry, the Soil ſandy and gravelly, riſing in moderate large rounding Hills, which produce nothing but Graſs in the Valleys, you ſee now and then ſome gullies of freſh Water, produced by the melted Snow. I ſaw no Fruits nor Herbs, nor any foot-ſteps of People, no Birds like thoſe of *Europe*, but Kites, and ſome ſmall ones like Sparrows and Linnets, ſome Flies and Humble-Bees: We alſo ſaw a fore-footed Animal, like what we call in *England* an Eft, Newt or Lizard; no Adder, or any other venomous Creature: Here would be good food for Horſes, Cows, Sheep and Goats. Returning aboard about 10 a Clock at Night, I found the Lieutenant (who had been up the River) return'd; he ſaw 3 Iſles, which had Sea-fowls and ſome Buſhes for fewel; the River grows broader upwards, and has ſeveral Rocks in it; upon the Banks they ſaw *Guianacoes*, *Oſtriches* and *Hares*, but no People nor Fire, or Smoke, tho' they diſcover'd the foot-ſteps of the Natives, where they had made Fire before; they met with no freſh Water nor Wood, nor any Metal or Mineral; the Country hilly, with Graſs on it. At 12 a Clock at Night thoſe ſent to the North ſide alſo return'd aboard, having been 8 Miles into the Land North Weſt, where they ſaw likewiſe no People, but ſome places where the Natives had made a Fire in the Graſs, and laid Graſs to fire the Buſhes; as alſo where they had plac'd Buſhes in Half-moons, to ſhelter themſelves as they lay upon the Graſs; they made a Fire on the top of a Hill, but no Body came near them. The Country they found full of rounding Hills, moderately like the Downs on the *Yorkſhire* Coaſt about *Burlington*, without freſh Water, Woods or Trees, except a Soil gravelly and ſandy, with ſome ridges of Rocks; they ſaw *Guianacoes*, *Oſtriches*, *Hares*, *Kites*, and ſome of the before-mentioned Creatures like *Efts*; but neither Fruit nor Berry, no Mineral nor Metal; for I had charged them to look for grains of Gold, or other Metal, in the Gullies, where the Water uſed to run; it being certain that Gold is found on the other ſide of this Country, within 200 Leagues hence. They ſaw much Salt-petre hang on the Earth where Water had been, and the very plaſhes of Water were as Salt as Brine: I ſaw Smelts 18 inches long lying dead on the Sea-ſide, but hitherto no Oyſters, or any other ſhell-Fiſh, as Craw-fiſh, Lobſter, Crabs, *&c.* As I was ſtanding near the Sea-ſide a *Seal-fiſh* chaſed aſhore a Fiſh of the bigneſs of a *Mackrel*, but not unlike a Mullet; it was dreſs'd and prov'd very good Meat. There muſt needs be a prodigious quantity of Fiſhes in theſe Seas, conſidering the vaſt number of *Seals*, *Penguins*, and other Fowls that live upon them, and are generally very fat.

1666.

Sunday March 6.

A certain four-legg'd Beaſt.

And ſome other Creatures.

A cold indifferent Morning, Wind at Weſt; I went up the River in my Boat, with 14 Men well arm'd; and paſſing the little Iſle where the bruſhy Buſhes are, and where we took the young *Shags*, I found the River there to grow broader a Mile from the North to the South ſhore, and continues thus for 4 Miles; when turning to the South-weſt, it becomes much narrower; at the Point of this turning is an Iſle, rocky but not high,

Sunday March 13.

1666. high, affording ſome Graſs, and a few ſmall Buſhes; I no ſooner came up to it, but found a Poſt ſet up of 5 foot long, (which had been the Timber of a Ship) with a piece of Board of a foot ſquare nail'd to it; at the foot of it we found a piece of Sheet-Lead, with this Inſcription engraven on it,

M D C X V.
EEN SCHIP ENDE EEN IACHT GENAEMT EENDRACHT EN HOORN GEARRIVEERT DEN VIII DECEMBER, VERTROKEN MET EEN SCHIP D'EENDRACHT DENX: IANVARY: MDCXVI.

C: IACQVES LE MAIRE
S. WILLEM CORNELIUS LE HOVTS
ARES CLASSEN
IAN CORNELIUS SCHOTS
CLAES IANSSEN BAN.

In a hole of the Poſt, ſtopt with a Plug, was a written Sheet of Paper encloſed in a Tin Box, but ſo conſumed with Ruſt, as not to be legible; I cut upon a Board with my Knife the Ship's Name, and the date of the Year and Month, which I nail'd upon the ſame Poſt, and carried away the Lead, giving the name of *Le Maire*'s Iſle to the place; we found here alſo ſeveral pieces of Boards of the Wreck of a Ship that had been burnt: From hence I went to the North-ſide of the River, 2 Miles into the Country, ſaw no Trees, but many *Oſtriches* and *Guianacoes*; the Soil marly and good, with moderate Hills like large plain Downs, with Graſs all over them. In 2 or 3 places where I dug, I found dry Ground a foot deep, then Marle; I believe it would make good Corn-ground, being not unlike our Ground on *New-Market* Heath. In the Gullies and broken Rocks I ſearch'd for Grains of Gold, or other Metals, but ſaw nothing like it: In my return rowing farther under the ſhore, I landed and mounted a ſteep rocky Hill, having ſome ſmall Buſhes; hence I could ſee the courſe of the River a great way, the Ground on both ſides covered with Graſs, but no Boats nor People; from hence ſeveral Creeks run a Mile or 2 into the Land; then croſſing the River to the South-eaſt ſhore, and having faſtned our Boat in a Creek near a Valley, we went 3 Miles up into the Country, where we ſaw *Oſtriches* and *Guianacoes*, but all without our reach; here I diſcovered the foot-ſteeps of 5 Men, I meaſured my foot with them, which was larger and longer by half an inch than any of them, but ſaw no People; we pluckt up ſome Graſs, which we laid upon all Night, keeping Watch two by two; a cold night, the Wind Weſt.

Le Maire's Iſle.

Monday *March* 14. It proved fair but cold, this Morning we went farther into the Land 4 Miles South-weſt by South, but met with no freſh Water, neither any People, tho' we made Fires on the Graſs, on purpoſe to draw them towards us; we met with *Guianacoes*, *Hares*, *Foxes*, *Wild Dogs*, (pretty large ones) and a *Grey Cat*, not unlike ours; we alſo catch'd an *Armadillo*, a Creature as big as a *Hedge-Hog*, and not unlike it, living in Holes like Coneys; we dug her out, and found the body covered with a Shell, jointed under one another like ſhells of Armour, no Dogs could hunt her. Rats we ſaw in abundance, and a kind of black *Pole-Cat*, with only two white ſtreaks on the Back; our Dogs kill'd 2 of them, they had a nauſeous ſcent. We ſaw alſo ſome *Partridges* and many *Kites*. The Land conſiſted of Hills, the Soil ſandy and gravelly, covered with Graſs, without freſh Water, Wood, Metal or Mineral. In our return in the afternoon, we paſs'd with our Boat thro' a Creek two Miles long, (dry at low Water) and only thirty Foot broad; it makes a pretty Iſland, of no great height, plain on the top, and covered with Graſs, a ſandy and marly Ground, without Wood or Water; its length is two Miles, its breadth half a Mile; we ſaw here above 20 Hares in a moment, of whom our Greyhound kill'd two; I call'd it the *Hare-Iſland*, being at a ſmall diſtance from the ſhore, eight miles up the River from the narrow, I went down the River, and came aboard; a cold Evening, Wind at Weſt, which turn'd to the North in the Morning; I could not find that theſe *Indians* have any ſort of Boats.

An *Armadillo*, or kind of *Hedge-Hog*.

The *Hare-Iſle*.

March 24. A hard Wind at Weſt, we began to get every thing ready to ſail again; I went aſhore that day to the peaked Rock on the South-ſide, which I found a natural Rock ſtanding upon a ſmall Hill, as if it had been placed there on purpoſe; it has a Cleft on the top, of the circumference of a good Butt; its height above the Hill is 40 foot, being ſurrounded with little Rocks; the biggeſt ſtick of Wood I ſaw in all the Country I went through, (which was above 20 miles) was not big enough to make the Helve of a Hatchet, but there are Buſhes fit for Fuel at Sea: Freſh Water is a ſcarce Commodity in *Port Deſier*, in the Summer; out of the before-mention'd two ſmall Springs, I made ſhift to fill 40 Tuns; the firſt Spring is on the North-ſide as you enter the Harbour, half a mile up a Valley in a Gully of Rocks; it bears North-north-weſt from the lower Rock; the other we call'd *Peckell's-Well*, is a mile up the River, likewiſe in a Gully, within a Bow-ſhot of the ſalt Water: The Valleys afford green and ſweet Graſs, and great ſtore of wild Peaſe; ſome ſmall Nutgals grow on few Buſhes, Salt might be made here near the Sea-ſide. 1666.

Gentlemen, I deſire you to take notice, that this Day I take poſſeſſion of this Harbour and River of *Port Deſier*, and of the Country on both ſhores, for the uſe of his Majeſty King *Charles* the Second, of *Great Britain*, and his Heirs; God ſave our King, and ſo we fired three Pieces of Ordnance, *March* 25.

Saturday *March* 26. I ſtood to the North Wind at Weſt. This Morning at ſix a Clock when the Sun appear'd above the Eaſt Horizon, the Moon ſet in the Weſt Horizon, being eclipſed at *London*, at Eleven a Clock, ten minutes in the forenoon, but here at ſix a Clock thirty minutes paſt, which gives four hours forty minutes difference of time, between the Meridian of *London* and the Meridian of *Cape Blanco*, which Cape lies in 47 *d.* 20 *m.* South Latitude, on the South-eaſt Coaſt of *America*, where I ſaw this Eclipſe 70 *d.* in Longitude to the Weſt of the Meridian of *London* by this Obſervation. It being cloudy I could not ſee the whole Eclipſe; I find *Cape Blanco* by my account of ſailing in the Longitude of 69 *d.* 16 *m.* to the Weſt of the Meridian of *London*: If it had not been cloudy I might have been exact in the Longitude, but believe my account is not much out.

Cape Blanco lies in the Latitude of 47 *d.* 20 *m.* South; and in Longitude from the *Lizard*, Weſt, 61 *d.* 56 *m.* and in Meridian diſtance from the *Lizard*, Weſt, 1014 Leagues 1 Mile and ſix tenths.

Penguin Iſland 47 *d.* 55 *m.* South Latitude, in Longitude from the *Lizard*, Weſt 61 *d.* 57 *m.* Meridian diſtance from the *Lizard*, Weſt 1014 Leagues 2 Miles.

Port Deſier in *America* in the South Latitude of 47 *d.* 48 *m.* In Longitude from the *Lizard*, Weſt, 61 *d.* 57 *m.* Meridian diſtance from the *Lizard*, Weſt, 1015 Leagues, 2 Miles and ſix tenths.

Variation of the Compaſs Eaſterly 17 *d.* 30 *m.*

April 1. The *Sweepſtakes* off of *Seals Bay* in the South Latitude of 48 *d.* 10 *m.* on the Coaſt of *Patagonia*.

Saturday *April* 2. A fair Morning, the Wind North-north-weſt, I ſteered away South-ſouth-weſt, and South by Weſt by my Compaſs, as the Coaſt lies; in 20 fathom Water, black Sand, 3 Leagues from the ſhore. At 9 a Clock in the forenoon I ſaw to the Weſt of me a little flat Iſle, a League from the ſhore, in the South Latitude of 48 *d.* 40 *m.* The Land, over againſt it high large Hills, ſome with round tops; 2 Leagues farther to the South, the Land is low, and a large Plain, and a Beach by the Sea-ſide; but the ſhore directly oppoſite to the Iſle is Rocky. I found 23 fathom black Sand, at 2 Leagues Eaſt from the flat Iſland; I haled cloſe in towards the ſhore, and ſailed within 5 miles of it. From this Iſle all along to *Port St. Julian*, I found 18 or 20 fathom black Sand; the Land low, the Sea-ſhore is a Beach, here and there a Rock; being in a Beach for 4 Leagues after you are to the South, a League off the Flat-Iſle; the ſhore lies South-ſouth-weſt, and north-north-eaſt: At the South end of this Beach in a Land are high round Hills, but juſt by the Sea-ſide a ſteep white Cliff, not very high, with a black ſtreak in it; beyond the Cliff the Hills round up to the top, having ſome few ſmall black Buſhes on the ſide, but no other Wood or Tree.

Port St. Julian. In this Bay is *Port St. Julian*, the mouth of the Harbour in the middle of the Bay, which you can't ſee without, one Point ſhutting in the other, unleſs you ſend in your Boat to view the Harbour at low Water, and the Bar without, for it is a barr'd Harbour: The Land in the Country near *Port St. Julian*, appears to the Weſt, in high round copling Hills, like blunt Sugar-loaves, being the higheſt Land and Hills on all that Coaſt; to the South the Land is level, without any Hills in eye-ſight; I anchored in the Bay before St. *Julian*, in 12 fathom Water black oaſie Sand, the Harbour's mouth being Weſt-ſouth-weſt of me, 2 Leagues diſtant: I ſent in a Boat to view the Harbour, and ſee whether the Pink was there; after its return, the Lieutenant told me that there was a ſafe Harbour, and Water enough for a much larger Ship, but not the leaſt ſight of the Pinks having been there; ſo I diſpaired of

ever

1670. ever seeing her again; the consideration of which put the Ship's Company somewhat out of Humour, considering they must be past all relief if in a stormy Season and unknown Coasts they should happen to run aground any where; but the hopes of the vast Riches I propos'd to them, and the instance of Captain *Drake*, who sail'd in one Ship round the World, when Navigation was not brought to the same perfection, put these suspicions at last out of their Heads. It was a calm Night, and a small Tide running where I rode; the Water ebbing near 3 fathom perpendicular; from the *Elu-Isle* to *St. Julian* is 9 Leagues South-south-west, and North-north-east as the shore lies.

The mouth of *Port St. Julian* in 49 *d.* 10 *m.* South Latitude, in Longitude from the *Lizard* 63 *d.* 10 *m.* and in Meridian distance from the *Lizard*, West 1030 Leagues; by an Amplitude here, the Compass has varied *West.* 10 *m.* East.

Wednesday *April* 31. Fair Weather, Wind at West, but cold, no sign of the Pink: I went ashore, and on the East side caught with our seyne Net (at the first Flood) in 4 Hours time 500 Fishes as big as *Mullets*, and not unlike them, grey, and full of Scales, some as big as a Man's Leg; they were all divided among the Company, who eat them with a great deal of satisfaction; on the Rocks we saw many good Muscles and Oyster-shells on the Sea side, but without any Meat in them: Wind at West to Night.

Monday *April* 18. A cold snowy Morning, Wind at South-west; the Winter advances with Storms that we shall not be able to hold the Coast in the Streights, because the Winds that blow altogether from the West and South-west in Gusts, will force the Ship off the Coast. I commanded the Purser to allow the Ship's Company a Quart *per* Week a Man of Brandy, and got a Boat's load of Fuel aboard: It blew hard at Night at South-west; the Ships Company had salted *Seal* and *Penguins* for their Allowance, which is very good, and keeps well a long time.

Friday *April* 22. A cold Air, Wind at South-west: I went ashore with 20 Men, to the North-west side to the salt Pond, which I found crusted over like a Pavement with white good Salt, 2 inches thick, 2 miles in length: In *February* you may have Salt enough here to fill 1000 Ships; we laid up two Tuns out of the Water, because there was some Water over the Salt; it was whiter than *French* Salt, and of an agreeable smell; I saw also some *Guianacoes* and *Ostriches*; the Hills and Valleys dry Earth, with some Grass on them; the high Hills had some Snow; we saw no People but the marks of Fire, and where they had lain under Bushes in several places; no Mineral nor Metal, Fruit or Tree; it freezes so hard that the Ice bears a Man.

Wednesday *April* 27. Cold frosty Weather, the Wind West by South; the Ice not permitting us to pass the *Streights*, we intend to Winter here; we have stormy Winds most out of the West, with long cold Nights.

Thursday *April* 28. The Port is safe, and affords some refreshments of Ducks, Peekes, Divers, *&c.* when the Sun comes in the *Southern Signs*, we shall have shorter Nights and more temperate Weather; in the Evening it rain'd, and blew so hard from the North-north-east, that the Boat sunk at the Ships Stern; late it turn'd to the W. and grew better.

Friday *May* 6. A pretty good day, Wind at West-north-west; I went ashore with 30 Men on the North-west side, and went up the Hills 7 or 8 miles in the Country, without seeing any People: The Country is Grass Downs in most places, and on the tops and sides of the Hills, both in the Veins of the Earth, and in the firm Rocks lie abundance of Oyster-shells of 6 and 7 inches broad, whereas there is not one Oyster to be found in the Harbour; we saw not the least sign of Minerals, nor Woods, nor Trees: Up among the Hills we met with a fresh-water Spring, which afterwards mixes with the salt-water Swashes: Six miles from the shore were several *Salt-Petre* Ponds; we saw *Ostriches*, *Guianacoes*, and a *Fox*, on the top of one of the highest Hills I made a Fire, but no answer was seen; we return'd at Night, which proved fair.

Large Oyster-Shells among the Hills.

Port St. Julian.

Friday *May* 13. The Weather indifferent, Wind at West-south-west; we fetch'd Salt this Day, and one Mr. *Wood*, a Gentleman belonging to the Ship, walking on the Isle of *Justice*, found there three small pieces of Gold Wire of the thickness of a large Pin, well hammered, in two *Muscle-shells*; which Shells were fastned together by a green Gut string: The Gold might be worth about two Shilling sterling.

Monday *June* 6. Cloudy cold Weather, Wind at South-west; I went ashore with 16 Men, and travell'd 10 miles to the West into the Land; we found the Hills covered with Snow, we could not go farther; on the Hill I was on, we saw nothing but Hills without Woods, Trees or Bushes, but all Grass-Downs, the tops of the Hills being flat, whence fresh Water runs into the Valleys, which being nothing but melted Snow, ceases as soon as the Snow is melted. We saw *Guianacoes* and *Ostriches* in abundance, but no People; though nearer the Sea side we discover'd in divers places where they had lain in the Snow on the Hills, and where they had kill'd and eat *Guianacoes* and *Ostriches*; which they seem not to roast, for we observ'd some raw Flesh hanging on the Bones still, which they had gnawed with their Teeth; so that their Fires being made only with a few small sticks, are only to warm their Children: I gathered also some *Guianacoes* Wool they had left there: These People must needs live worse than Beasts, the Country affording neither Fruit, Root, nor Herb; the Soil is dry, gravelly and sandy, a Marle in some places two foot below the Surface, the Grass grows in knots, thick but not long: In the Valleys the Ground participates much of *Salt-Petre*, we look'd in all places for Minerals but found none, and return'd at Night. 1670.

Tuesday *June* 7. A close dark Day, the Wind North-east by East: A new Moon to day, with fair but cold Weather at Night; the Stars near the *Antartick Pole* are very visible; some of the small Stars in the Constellation of the little *Hydra* are near the *Pole*; there are divers Stars near the *Pole* fit for observation, of the first and second Magnitude: the *Star* at the South end of *Ariadne*, the *Star* at *Hydra's Head*; the *Star* in the *Peacock's Eye*; the *Stars* in *Tucan's Bill*, and the *Stars* in *Tucan's Thigh* and *Back*; the *Stars* in *Grus's Head*, and *Wing*, and *Body*; but the brightest of all are the *Stars* in the fore foot of *Centaurus* and the *Crosiers*; the other *Stars* are of the third, fourth and fifth Magnitude: The two Clouds are seen plainly; and a small black Cloud, which the foot of the *Cross* is in, is always to be seen when the *Crosiers* are above the Horizon, as they always are here in these Latitudes. The Heavens in the South Hemisphere are the same as in the North Hemisphere, but no *Stars* for Observation within 18 *d.* of the *Pole*; no *Pole-Star*, as the *Star* in the Tail of the little *Bear* is in the North. The Air is cold but healthy here; every one has an excellent stomach; Foxes and Kites, whatever else we kill, nothing comes amiss, no Body complains of Cold in his Head or Coughs. The *Ostriches* here are not so big as those on the Coast of *Barbary*, nor of the same Colour and Feathers; for these are grey with shaggy Feathers of no use, white on their Bellies; with long Legs and small Wings, a long Neck, small Head, and beaked like a Goose; their meat is lean and dry, but sweet: To Night the Wind at West.

Stars visible near the *Antartick Pole*.

Ostriches.

Wednesday *June* 22. This day Wind at West-north-west; I went ashore on the East side, without seeing any Body; Mr. *Wood* went about the same time to the West side with three arm'd Men, they travell'd for four mile into the Land to the West by North, and on a Hill saw seven of the Natives, wafting them to the Ship, with a certain confused noise; three of the *Indians* advanced towards Mr. *Wood*, with their Bows and Arrows in hand, a loose skin about their Bodies, some Furs about their Heads, and pieces of skins tyed to their Feet; the rest of their Bodies naked; and their Faces painted red and white; they were very shy, and would not be touch'd by our Men (having perhaps heard of the Cruelties of the *Spaniards*;) they continued wafting with their Hands and repeated often *Oaſe*, *Oaſe*; they spoke harsh, and in the Throat; and would take any thing that Mr. *Wood* cast to them upon the ground, as a Knife, a Shash, Neck-cloath, and a bottle of Brandy, but they would not drink; Mr. *Wood* saw no Bracelets, or any other Ornaments they had about them: They were of a middle stature, not so tall as Mr. *Wood*, but well limb'd, of an Olive Colour, with black Hair, not very long; they appeared very barbarous in their behaviour, and took their own time to march away, without shewing any signs of thanks for what they had received; their Dogs, which were but small, following at their Heels: Mr. *Wood* return'd aboard the same Night.

The *Natives* near *Port St. Julian*.

Saturday *July* 2. The Wind at West: I went ashore to the East side, where I kill'd a *Guianaco* with my Greyhound. We look'd for the Bezoar-stone in his Paunch; but found none, and no People in all our way, but found a place where they had Glased earthen Vessels, because there lay some of their stuff run together. I return'd aboard at Night.

Sunday *July* 3. The Wind at South, close Weather. We found the *Guianaco* to weigh 250 pounds neat. It served the whole Ship Company for one day, and proved very good Meat.

Tuesday *July* 12. Little Wind at North by West. I found in the Fuller's-Earth Cliffs at the head of the Harbour, a Vein like

1670. like rotten Ising-glass, but is good for nothing. In two places I saw also pieces of rotten Floor-Timber of a Ship, and some of the biggest Bushes, cut down by Christians; which together with some wooden Plates, a piece of Cork, and an old Oar, shew'd some Christian Ship had been here formerly. I stay'd ashore all Night.

Sunday *July* 31. A fair day, Wind South-west, but as cold and rather sharper than in the middle of Winter in *England*. The Thighs and Legs of twelve of my Men (who were lazy, and cared not much for stirring) are turn'd as black as a Coal, with the Blood chill'd by the Cold; but those that use exercise are very well.

Tuesday *August* 2. A cold still day, Wind at South-west: We see hundreds of *Guianacoes* near the Water side, but my Greyhound being lame, we cannot catch any of them; we

Indian Swans. see also many *Ostriches*, green *Plovers*, and some *Swans*, not quite so large as ours; they are white, but the Head and half the Neck is black, and so are their Feet: Here are also white *Geese*, like those of *Europe*; their *Brant-Geese* are sometimes white, sometimes black and grey; their *Mallards*, *Ducks* and *Teals* are grey.

Tuesday *August* 16. A brisk gale at West-north-west. Some of my Men going to the East side for Water, saw two of the Natives behind a Bush, they went towards them, and made signs to stay for their coming, but they made the best of their way thence, leaving a bundle and two mungrel Dogs coupled together behind them, which my Men brought to me; I found in it several bags of Skins, with red and white Earth, wherewith they paint themselves; some Flint-stones, and Arrow heads, Bracelets of Shells, bits of Sticks, braided Thongs, Arrows, Muscle-shells, Armadillo-shells, and a small point of a Nail in a stick for a Bodkin: The Skins were pieces of *Seal* and *Guianacoes* Skins, sew'd together with small Guts, full of holes and very greasy; there were also pieces of Flints made fast with a green Gut in the split of a Stick, wherewith they knock their Arrow heads into shape, and some pieces of Sticks to get Fire with. The Bundle was ty'd together with Leathern thongs, braided round like Whip cord,

Their Dogs. and the Dogs (a kind of large Mungrel Curs, of the *Spanish* Race) were coupled with the same; they were grey, and painted with red spots, very lean, and so tame that any Body might handle them. Near the Bundle were found two Staves of tough Cane in short joints, of about four foot long.

Tuesday *August* 30. A still foggy Morning, the Wind North. We travell'd betwixt ten and twenty Miles farther into the Land; to the West we found dry Ground, with some Grass and thorny Bushes; the Hills high, covered with Snow on the tops, without Wood or Tree; the Water coming from the Hills, gathers into a fresh-water Rivulet, with good green Grass, some sedgy Bushes, and a certain Herb of a strong hot taste, growing on the brink; we see here some Teal and other Water-fowl. The Country has divers Salt-water Ponds; in the Valleps we saw Fowls like Herons, but red all over, a great many *Guianacoes* and twenty *Ostriches*, some

And other Creatures. *Hares* and *Partridges*, greyer and bigger than ours; as also some *Snipes* and small Birds, *Penne-wrens*, *Kites*, small *Hawks* and *Owls*, two *Foxes*, a *wild Dog*, and many *brant-Geese*: we caught two *Armadillos*. The Country is Hills and Valleys, the Soil gravel and sand, of a Salt-petre nature; the Grass sometimes short, sometimes long, but dry; we saw the Footsteps of People, where there had been Fire made, and some *Guianacoes* kill'd; the Bones and Ostrich Feathers lying scatter'd about; we found also the Skulls of three People very clean pick'd without Flesh, of the same bigness as those of the *Europeans*, with smooth, even and close set Teeth; one of these Skulls was broken; perhaps they are Man-eaters: As there is many Plains and Meadows here, so it would make a good Pasturage for Cattel, and as good for a Plantation as any in *America*, were it not for want of Wood to build with: It being a foggy afternoon we could not travel any farther, though we had our Compass along with us, without which there is no travelling in these large Plains and Downs.

Tuesday *September* 1. Hazy Weather, the Wind at North. The Water very cold; the farthest part of this Country I was in, was 25 Mile North-north-west from the mouth of the Harbour: What Creatures I saw I mentioned before; no manner of Snake or venomous Creature, nor Beasts of Prey, except Earth-worms, Caterpillers and Bugs, and these but seldom; for the rest the Country would produce *European* Grain, and breed good Cattel.

September 16. Some of my Men being very weak, I thought it best to sail to *Port Desier*, to refresh them with *Penguins* and *Seals*, and to salt up a good quantity of them, to lengthen out my Provisions. I set Sail this forenoon from *St. Julian*, steering North-north-east with a small Gale, which veering in the Night to the West-south-west, I made easie Sail, for fear of coming among the Eady Stone Rocks before Day-light. 1670.

Wednesday *September* 21. A fair Day; the Wind veering round the Compass, we loaded both our Boats with *Penguins* and *Penguin's* Eggs; these last are very good Nourishment.

Thursday *September* 22. A fair Day, the Wind at West. The Eggs were divided among the Seamen; the *Seal* and *Penguins* salted: Fair Weather at Night.

Friday *September* 23. Wind North in the Morning, turns to the South before Noon, with Storm and Rain: This day I and *Don Carolus* went ten Mile up the River with ten arm'd Men, and lay all Night on the South side, but saw no People; though the same Night the Natives came to our little fresh Water Well in the Valley, and stole thence an Iron Pot, three suits of Cloaths, with some Linen, that were laid a drying there, but did not touch the Beads that were fastned to a Pole on an adjacent Hill: In a Valley hard by, they had made the form of a Ship in Earth and Bushes, with Sticks instead of Masts, which Model I suppose, is to record our Ship: We left it untouch'd, only hung a string or two of Beads on it.

Tuesday *October* 11. A cold Snowy day, Wind at West-south-west. My Men are all in good Health now, being cured of the *Scurvy*, by the refreshments of fresh Meat, Herbs and wild green Pease Leaves they met with here; for we have plenty of Provisions; and I may confidently affirm it, that the *Island of Penguins* only affords more *Penguins* and *Seals* at present than three hundred Tuns of Cask can hold, when dress'd and salted; so that if you have Salt, you may provide your self with what quantity you please, and it will keep four Months at least very sweet, if care be taken in bleeding, dressing and salting, as I told you before; you may have Salt enough at *St. Julian's* Salt Pond in Summer, and I believe Salt may be made in the same Season at *Port Desier*, there being dry'd Salt in the holes of the Rocks; and here are several Flats, where you may make Pits and let in the Salt-water, for the making of Salt. The

The *Penguin*. *Penguin* is a Fowl living upon Fish, of the bigness of a *brant-Goose*, weighing commonly about eight pounds; instead of Wings, they have flat stumps like Fins; their Feather is a kind of Down, of a blackish colour, but grey on the Back and Head, and white about the Neck and down the Belly; their Legs are short like those of a Goose, they are full necked, with Heads and Backs like a Crow, except that the point of their Bill turns down a little. The bite severely, but are so tame, that you may drive them in Herds to the Boat side like Sheep, and there knock them in the head at leisure: Here are also great numbers of *Sea-Pies*, *Ducks*, *Ox-birds*, *Sea-Mews*, *Gulls*, white *Sea-Pigeons*, white breasted *Divers*, and *Dobchicks*.

October 13. I set Sail again from *Port-Desier*, standing to the South. I was at 49 *d.* 8 *m.* South Latitude, and the

October 16. 19th past'd by the Cape, called *Beachy-head*, and the Hill of St. *Ives* at 50 *d.* 10 *m.* Latitude. The variation of the Compass 16 *d.* 37 *m.* to the East. The Land here makes a Bay, where the River of St. *Cruce* goes in.

October 21. We pass'd by Cape *Fair-weather* at 50 *d.* 30 *m.* South Latitude. Here goes on the River of *Gallegoes*: We

October 22. came to *Cape Virgin-Mary*, at the very entrance of the Streights of *Magellan*. It lies at the North entrance at 52 *d.* 26 *m.* Latitude. In Longitude from the *Lizard* in *England*, W. 65 *d.* 42 *m.* Meridian distance from the *Lizard* in Leagues, West 1092 Leagues. Variation of the Compass to the East 17 *d.*

The entrance of the *Streights* of *Magellan*. All about this part of the Streight from *Cape Virgin-Mary*, till you come to the *Narrow*, is very good Anchorage and not much Tide, but in the *Narrow* the Tide runs much stronger than in the *Hope*; the Flood setts into the *Streights*, and the Ebb out, and keeps its Course as on other Coasts six hours Flood and two hours Ebb; it rises and falls near four fathoms perpendicular; it is an high Water here at the change day of the Moon at eleven a Clock. You see here many beds of Rock-weed driving. At two a Clock I was over against Point *Possession*; we steered two Leagues thence West-north-west, and then West and West-south-west, and South-west by South round the North shore. I found 22, 18, 16, 12, and 9 fathoms, sandy and sometimes gravelly Ground and Peeble-stones: Being not certain where the *Narrow* lay, I failed rounding the shore; for being shut in one Land with the other, I could not see the opening, yet enter'd it at five a Clock with a Gale at North-north-east, I steered into the

1670. the Chops of it South-west by South, but the Tide being so strong I could not get past a League into it, for fear of running the Ship upon the steep Rocks that lie on the Northside. These Rocks have abundance of Rock-weed, over them I found five foot Water, and on the side of them went to the Channel 14 fathom. They come trenting from the Point of the *Narrow* of the N. side, a Mile off. At six a Clock the Wind turn'd to the N. and at eight to the N. W. with dark rainy Weather, so that not being able to see the shore, I was forced to get back out of the *Narrow* as fast and as well as I could, and anchored at 25 Fathom Oazy Ground, and Peeble stones, a little Wind at S. W.

The Narrows of the Streights.

From the first *Narrow* to the second is above eight Leagues: The Reach from the first *Narrow* to the second is seven Leagues broad from the North to the South shore, and shews like an inland Sea, for we did not get sight of the second *Narrow*, till we had sail'd three Leagues within the first. At the Point of the second *Narrow* on the North shore, a mile or two to the North-east, is a Bay on the North shore, and a white Cliff of an indifferent height, call'd *Cape St. Gregory*; in the Bay you may ride in 8 Fathom clear sandy Ground, half a Mile from the shore; if the Wind be between the North-east and the South-west to the W. for here the Winds are most given to blow on the Western quarter. I found the Channel in the second *Narrow* to have 38 Fathom, small Stones: The North shore on this *Narrow* makes in a Bay at the East Point, with white Cliffs all the way through; this *Narrow* lies throughout West-south-west, and East-north-east; and at the West end of the *Narrow* the Land makes up into steep white Cliffs, as the South part rounds away South-east from this Foreland, and then it trents away to the South in Lowland. The North shore of this *Narrow* rounds up to the North in white Cliffs, and falls into Shores; there goes in a Harbour, having four Fathom in the Channel at high Water: The Harbour is flat and round, oazy Ground; I call'd it *Oaz-Harbour*: Coming to the West part of this *Narrow*, you will see three Islands, shewing like steep Cliffs, situate in a Triangle one of another, and four Leagues distant from the *Narrow*, West-south-west. The smallest and eastermost is call'd the Isle of St. *Bartholomews*, the biggest and westermost, *Elizabeth*: and the middle and southermost, St. *George's* or *Penguins* Isle, from the vast multitude of *Penguins* there. I anchored this Evening in eight fathoms black Sand, two mile off the Isle of *Elizabeth*: The East Point bearing South by East of me; fair Weather, the Wind South by West.

Three Isles, Elizabeth, St. Bartholomew, and St. George.

Elizabeth Isle.

I went ashore the next Morning on *Elizabeth-Isle*, nineteen of the Natives came down a Hill to me, with whom I exchanged Knives and Beads for their Bows, Arrows, and Skin Coats, made of young *Guianacoe's* Skins; I gave them a Hatchet, Knives, Beads, and such like Toys, wherewith they seem'd well pleased. I shew'd them Gold, they would also have taken it; I made them to understand by signs, that if they had any I would give them some of our Toys for it; I laid Gold and bright Copper upon the Ground, and looking about me, seim'd as if I found it, at which they look'd at and spoke one to another, but I did not understand their meaning; they were for laying hands on every thing they saw, after a very brutish way; and tried to break the Boats Iron-grapenel with Stones; I let them alone, bid them sit down, and put strings of Beads about their Neck, but the more I gave, the more they seem'd to crave. Mr. *Peckett* my Lieutenant danc'd with them hand in hand, and so did some of our Men; the Lieutenant having a red Coat on, a Colour they much covet, he chang'd it for one of theirs: After two hours Conference, I made signs we would go to fetch more things, and come again; they shew'd us a Cliff, under which they would have us land when we return'd, which I suppose was done with an intention to sink our Boat with Stones thrown down from the Cliff. They set themselves down on the Grass near the shore, unto which they set Fire soon after; I cannot guess where they could get Fire so suddenly. I found the Channel betwixt *Elizabeth* and St. *Bartholomew's* Isle very fair, a Mile over at the narrowest, thirty eight Fathom in the middle, and nine and ten near the shore side, gravelly Sand.

The Natives there.

Their Stature, Cloathing, &c.

These People were of a middle stature, well-limb'd, with round Faces, low Foreheads, little Noses, and small black Eyes and Ears; their Teeth are smooth, even and white, their Hair flaggy and very black, of an indifferent length; Men and Women alike; they are all full breasted, of an Olive Colour, and painted all over their Bodies with red Earth and Grease; their Faces daub'd in spots with white Clay, and black streaks made with Smut; their Arms and Feet the like; their Heads are generally small, their Fingers short, and their Bodies very active; their Cloathing is of the Skins of *Seals*, *Guianacoes* and *Otters*, sewed together; their Garments are in form of a Carpet five Foot square, which they wrap about them, as the *Scotch* Man does his Pladding: On their Heads they wear Caps of the Skins of Fowls with the Feathers, and on their Feet pieces of Skins to keep them from the Ground; they are very hardy, for tho' it was very Cold then, they don't wear these Skins when they go about any business that requires stirring: They have no Hair on any part of their Bodies or Faces, nor any thing to cover their Privitys, except that the Women have a piece of Skin hanging before it; the Men and Women are cloathed alike, except that the Women go without Caps, and wear Bracelets of Shells about their Necks, which the Men have not: The Men are something taller than the Women, and fuller fac'd; the Men have a harsher Voice, and rattle in the Throat, the Women somewhat shriller; they often repeat the word *Ursah*, and if they did not like any thing, would cry *Ur*, *Ur*; they feed both upon Fish and Flesh, live under no manner of Government, or worship any thing. At our Landing they came to us with a great noise, every one his Bow ready, and two Arrows in his Hand: Their Bows are about an Ell long, and every Arrow eighteen Inches, neatly made of Wood, headed with Flint stones, curiously wrought broad Arrow fashion, and well fastned to the Arrow; the other end being feathered with two Feathers, and ty'd on with the Gut of some Beast, whilst yet green and moist; the Bow-string is of twisted Guts. They have large Mungrel Dogs of several Colours, not unlike *Spanish* Dogs: I saw no other domestick Creatures, nor their Boats which then lay on the other side of the Island, towards the Main, where they waited for fair Weather to catch *Penguins*, of which there is a vast quantity on the Southermost of these three Isles, as also of white-breasted *Divers*.

1670. Weapons.

This Night I anchored in a small Bay, eleven Fathom Water, gravelly Ground half a Mile from the shore; no Tide runs here, the Water rises and falls perpendicularly ten Feet. This Bay had two fresh Water Brooks, and Timber Trees of eighteen Inches diameter, and forty Foot high; the Wood like Beech; and some wild Currants, and other Bushes. I call'd it *Fresh-water Bay*, lying nine Leagues South of the *Sweepstakes-Bay*; *Sand-point* is a low Point jetting out beyond the other Points into the Sea; few Trees grow on it.

October 30.

Fresh-water Bay.

From *Fresh-water Bay* to *Port Famen*, is 6 Leagues South, and North from one Point to the other, that which is nearest to *Port Famen* cannot be seen as you come Northward, but you come to bring the Point of St. *Anne* upon the North-west of you, for the Bay lies upon a little hook North-west, and the Sand on the West side of the Bay is low in a Point, and sandy, and some Grass grows on it: A little way within Land are brave green Woods, and in the Valleys large Timber Trees of two foot diameter, and some above forty foot long, not unlike our Beech Timber in *England*; and their Leaves are like green Birch tree Leaves, very sweet; the Woods shew at a distance like regular Plantations, having several clear places where Grass grows; on *Point St. Anne*, as you come Northward, you see large Bushes and tall Trees that grow on the very Point of it, which is rocky on the Sea side, but not dangerous, for you may be bold on it to get into *Port Famen* Bay.

Port-Famen Bay.

Here is both good Wooding and Watering, and we catch'd with our Net above 500 large Fish, like a *Mullet*, with *Seals*, and some *Smelts* twenty inches long, also vast store of *Anchovies* and small *Scates*; we fed wholly upon them, and filled up the rest: Here also grow great store of Trees of good Timber, forty inches diameter; the Leaves are green, not unlike those of the Bay-tree in *England*; the rind is thick, and grey on the outsides, and as hot as Pepper in the Mouth, and more quick, and when dry'd, smells like Spices; we used to season our Meat with it and steep it in our Water, it gave it a pretty flavor, and was very wholesome: These Trees grow in the Woods, in many places in the *Streights* on both shores, and on the Coasts on both sides of *Patagonia*, before you enter them. Perhaps this is the Winter-bark of the Shops.

A Spicy Bark.

Port Famen lies at 53 *d.* 35 *m.* South Latitude, Longitude West, from the *Lizard* 68 *d.* 9 *m.* Meridian distance 1092 Leagues West, according to my Account in Sailing. This Voyage I give no Credit to the plain

Port Famen.

1670. Sailing; therefore this Meridian distance signifies very little as to Navigation. I took a view of many places on the shore, but could see no Fruit-trees, or Oak, Ash, or Hazel, or any Timber like ours in *England*: These Woods affording only two sorts, *viz.* the *Pepper-rind* Tree, and another like *Beech*; hereabouts are the biggest Trees in all the *Streights*, some having two foot and half Diameter, and betwixt thirty and forty foot high: I search'd all the Gullies for grains of Gold, but could find none, or any other Mineral or Metal; some Herbs we met with, which we boil'd, and were relishing enough. The Soil in the Woods is gravelly and sandy, mixed with good brown Earth in some places: The Woods are for the most part on the sides of the Hills; for the Land on the North-west and West of *Port Famen* runs up to very high Hills, and the inland part is the same; the tops are so ragged and barren, being scarce ever free from Snow: The Land on the South shore is very high and peaked. We saw many Ducks and Brant-Geese near the shore, and in the fresh Waters, and some Whales in the main Channel.

I am of opinion that these Mountains contain either some Gold or Copper; for upon shewing my Ring to one of the *Natives* that came aboard us, he pointed to the Mountains, and said something I did not understand: They eat all that was set before them, and greased their Coats with the Oil; I made signs to them to bring me some Gold, some went away, the rest talk'd to one another sitting on the Grass, and pointing to the Ship. Their Language is much in the Throat, but slow. I obsery'd no superiority among them, except that the younger paid some sort of Obedience to the elder, and the Women to the Men; for when I would have laid one of the Men's Garments upon a Woman, he did take it again; I pretended to exchange one of our Lads with one of theirs, but the *Indian* refus'd, so I dismiss'd the Men with some Knives and Fishhooks, and the Women with some Looking-glasses and Beads, to gain their Affection; they refus'd to take any of the Brandy.

The Natives there.

Cape Froward. *Cape Froward* is the southermost Land of the vast Continent of *America*; the Land behind is very high, the Face steep Cliffs of Rocks, black grey, with deep Water near it; I found forty fathom close to it; in the Channel there is no Ground at two hundred fathom, and very little Tide; nor any ripling, but a fair Channel of three Leagues broad from the North to the South shore; but it is best to keep near the North shore, the Winds coming most generally from the West Quarter.

Cape Froward in the *Streights* of *Magellan*, lies at 53 *d.* 52 *m.* South Latitude. In Longitude West, from the *Lizard* 68 *d.* 40 *m.* West. Meridian distance 1099 Leagues, 2 Miles West. The Compass 16 *d.* Variation East at *Cape Froward*. As to the Firling Points I can't say any thing; I wanted a Needle.

Novemb. 4. I came in *Wood's Bay*, so call'd after my Mate. The fifth I was over against *Cape Holland*, near which lies *Cape Coventry* and *Andrews Bay*, also *Cordes* and *Fostenes Bay*, *Cape* and *Port Gallant*: But for a more exact situation of the Promontories, Bays, Harbours, Rivulets, Soundings, *&c.* I refer my Reader to the draught of the *Sreights* of *Magellan*, made by me on the place.

Over against the Bay, two Leagues off is the Isle call'd by me *Charles Island*, and *Monmouth Isle*; more to the West is *Fames Isle*, and *Ruperts Isle*, and the Lord *Arlingtons Isle*, and the Earl of *Sandwich's Isle*, and Secretary *Wrens Isle*: This Reach I call'd *English Reach*; a League more to the West of *Fostenes Bay* is *Cape Gallant*.

The Streight appears now as if there were no farther passage to the West; the South Land rounding up so much to the North-west, as to close the passage against the North Land, to a Man's sight. I saw two large openings into the South Land, one opposite to *Charles Isle*, the other more to the West, up of the round South Kite: Here I obsery'd many *Whales*, so call'd it *Whale-Bay*; as also *Brant-Geese* and *Ducks*: I discover'd a Fire made by the Natives in the Grass on the South side; and left some Beads and Knives in their Huts, to purchase their good Will.

The situation of the Streights. From the pitch of *Cape Froward* to the pitch of *Cape Holland*, the Streight lies in the Channel W. by N. nearest, and is distant full 5 Leagues: From the pitch of *Cape Holland* to the pitch of *Cape Gallant*, the Streight lies in the Channel W. by N. a little N. and is distant 8 Leag. From the pitch of *Cape Gallant* to a low Point 3 Leagues to the W. the Streight lies in the Channel N. W. by W. a little N. This Reach is 2 Miles broad from the North shore to the Islands which I call'd the *Royal Isles*: Just opposite to the Westermost Island, which I call'd *Rupert's Isle*, being in the middle of the Channel with the Ship, I shot off one of my Sakers with a shot, and the shot lodg'd close to the Islands side. This low Point on the North shore, over against *Rupert's Isle*, I call'd *Passage-Point-Passage*. This Evening at 6 a Clock I was past *Point-Passage*, half a Mile to the W. of it, with a fine gale from the East. 1670. *Passage-Point.*

A foggy Day, Wind at W. and sometimes at N. W. I rode close to the shore: In the Afternoon I went in my Boat to the South side, opposite to *Elizabeth's-Bay*, at the Point call'd *Whale-Point*, from the many *Whales* thereabouts. I mounted the Hills 2 Miles, saw no Metal, but irregular Rocks, and a mossy kind of Grass, the Ground boggy and rotten; I thrust a Pike of 16 foot long easily into it: I saw many *Juniper-Trees*, of a foot Diameter, the Wood not very sweet; and Brant-Geese, and Ducks, and much Snow on the the Mountains. In the Grass you might discern the footsteps of the Natives, but could get no sight of any; so I return'd to my Boat. On the Rocks are store of good Muscles 5 inches long, with good Fish, and many seed Pearls in them; and among the Rocks large Limpets and Sea-eggs. *Monday Novemb.* 7. *Whales Point.*

It is but an Hours time on both Tides Ebb and Floud, when the Tide runs strong, and the Tides are rather advantageous than prejudicial to the Navigation of the Streight, to help from Road to Road either way.

The Streight in the Reach betwixt *Elizabeth's Bay* and and *St. Jerom's* River is about 2 Leagues broad, with high Land on the S. side, which hath several brave Coves on it, like the Wet Dock at *Deptford*, where Ships may lie safe from Wind and Sea. I call'd this Bay *Muscles-Bay*, from the vast quantity of Muscles found here. The Sea side is rocky, and generally steep; no Ground in the main Channel at 100 fathom; it is also deep Water in the Bays on the S. side, and in these Bays, and close along the S. shore lie many small Islands. We saw here great numbers of *Whales* and *Pengnins*, and some *Seals*; the shores are woody on both sides, and boggy Ground, but the tops of the Rocks bare: Divers streams of Snow-water run down in the Cliffs of the Hills, 2 Leagues to the W. of *Elizabeth's Bay*. On the N. shore 'tis low and woody; in a Valley runs a fresh Water River, into which I went with my Boat, it is very shallow at low Water, but very convenient for Sloops and small Vessels; the Tide rises 8 or 9 foot at high Water: I gave it the name of *Batchelor's River*. I saw some of the *Indians* Arbors or Huts, but no People in them. At the entrance of this River in the Streights, is good anchoring at 9, 10 or 12 fathom sandy Ground; a fair birth off the shore: The Tide runs but ordinary, and the Floud-tide comes from the W. and the Tide that comes out of St. *Jerom's* Channel makes a ripling with the Tide, that comes along the Streight. I call'd the Road before *Batchelors River*, *York Road*; here is safe riding with W. Winds, and here can't go any great Sea; if a Cable give way, he may have the Streight open to carry it away; for the W. Winds that blow here are the greatest, witness the Trees, which stoop to these Winds, and lean to the E. and the W. side of all the Trees, that stand open are made flat with the Winds; the Trees of the Mountains look to the E. and the E Winds seldom blow strong here, as far as I observed: The Sea side that lies open to the E. has abundance of Grass down to the Water side; and the Trees on the E. side of the Hills are strait and tall, but on the W. shore the Grass and Trees are much weather-beaten, worn away and cripled, and the Shore sides much tewed with the surge of the Waters. *Muscles-Bay.* *Batchelors River.* *York-Road.*

At *Cape Quad*, the Lands shut one with the other, as if they had stopt up the passage, till coming nearer you discover the openings; more and more, as the Streight rounds more to the N. against *Cape Quad* is a steep, rocky, grey Cape on the N. shore, of a considerable height, appearing at the distance like an old Castle: It jets out in a Point so far from the other Mountains into the Channel of the Streight, that shutting in against the S. Land, it maketh an Elbow in the Streight, which here from shore to shore is not past 4 Mile broad: The Lands steep, rocky, craggy, and barren on both sides, having only a few Trees and Bushes, but much Snow on the Mountains. On the S. side opposite to *Cape Quad* is a spacious Bay call'd *Riders Bay*: I did not go into it, but if there be anchoring, it is a good Road for any Ships: In the Channel is no Ground at 100 fathom. This part of the Streights from *Point-Passage* to *Cape Quad*, being the most crooked part of all the Streights, I call'd it *Crooked-Reach*. On the North shore to the E. of *Cape Quad* are two small Isles. *Cape Quad.* *Riders-Bay.*

This

1670. This Morning I was abreſt of *Cape Munday* (as I call'd it) on the S. ſide, 13 Leagues diſtant from *Cape Quad*. The Streight here is 4 Miles broad, and the N. ſhore makes into the Land with great Sounds and broken Iſlands; the Land on both ſides, high, rocky, barren Hills, with little Wood or Graſs. At *Cape Munday* the Streight grows broader and broader to the W. but keeps the ſame Courſe N. W. by W. to *Cape Upright*, a ſteep upright Cliff on the S. ſide, 4 Leagues diſtant from *Cape Munday*. Near the Streight inclines to the W. half a Point; the Streight lies from *Cape Munday* W. N. W. half a Point N. right out into the S. Sea. I find little Tide here, either in the Channel or near the Shore; no Ground at 220 fathom, a Musket ſhot off the ſhore on either ſide. Here run into the South ſhore many Sounds and Coves; I ſail cloſe to the S. ſhore all this day, becauſe the N. ſhore makes in broken Iſles and Sounds. The S. ſhore has all along ſome ſmall Iſlands, but being ſteep, there is no danger near them. To day at Noon I was oppoſite to an Iſle on the N. ſhore of the Streight, which being high and rocky, I call'd it *Weſtminſter-Hall*; the Streight is 5 Leagues broad betwixt this and the S. ſhore, but between it and the N. ſhore lie many rocky Iſlands and broken Ground; as alſo to the E. and W. Theſe I call'd the *Lawyers*.

Novem. 14 *Cape Munday.*

The Iſle of *Weſtminſter Hall.*

The Situation of the Streight from *Cape Munday* to *Cape Deſſeada* is W. N. W. and E. S. E. half a Point N. and half a Point S. neareſt; their diſtance 15 Leagues. From *Cape Quad* to *Cape Deſſeada* is 28 Leagues, and the Streight lies N. W. by W. from *Cape Quad* into the S. Sea; and near in one Reach, which I call'd *Long Reach*, and our Seamen *Long Lane*. This part may moſt properly be call'd the Streights, having high Land and barren Rocks on both ſides, with Snow on them; whence I gave that Tract from *Cape Quad* into the S. Sea, the name of *The Land of Deſolation*.

Cape Deſſeada lies at 53 *d.* 10 *m.* S. Lat. In Longit. W. from the *Lizard* 72 *d.* 56 *m.* Meridian diſtance 1149. Variation of the Compaſs E. 14 *d.* 10 *m.* *Cape Pillar* lies at 53 *d.* 5. *m.* Lat. In Longit. W. from the *Lizard* 72 *d.* 49 *m.* Meridian diſtance 1143 Leagues Weſt.

Length of the *Streights of Magellan.*

I compute the whole length of the Streights of *Magellan* from *Cape Virgin Mary* to *Cape Deſſeada* with every Reach and Turning to be 116 Leagues. The beſt Landfall is to make the face of *Cape Deſſeada*, to come out of the S. Sea into the Streights of *Magellan*, they lie E. and W. at firſt till you come oppoſite to *Cape Pillar*, then the Courſe is S. E. by E. neareſt. Be careful to keep in ſight of the S. ſhore, for the N. ſhore being broken Iſlands and Sounds, you may eaſily miſtake the right Channel as you come from the S. Sea, if you loſe ſight of the S. ſhore.

At the N. part of the Streights Mouth in the S. Sea, lie 4 little Iſlands pretty near together: The Eaſtermoſt lies by it ſelf, a round copling Iſland like a Hay-Cock, or Sugar-Loaf, of an indifferent height; the other 3 flattiſh: They lie N. N. W. from *Cape Pillar*, 6 Leagues off by the true Compaſs; and from *Cape Victory* 4 Leagues S. W. I call'd them the Iſles of *Direction*.

The *Iſles of Direction.*

Novem. 26.

Many Iſlands near the main Land, large and high Hills In-land, with Snow on the top of them, ſtretching N. and S. At 8 a Clock I made the Iſland of *our Lady of Sucore*, as the *Spaniards* call it; I ſteer'd with it N. E. by E. it made a rounding up at the E. end, and lower in the middle than at either end: It has a ridge running from one end to the other, with Trees on it: The ſhore ſide is rocky on the S. ſide, with ſome broken Rocks near the ſhore. On the S. E. end ſtand 2 peaked copling Rocks cloſe to the ſhore, white on the top with Fowl dung. This Iſle is pretty high, woody on the N. ſide, the Trees growing down to the Water ſide, with many Spicy Trees, and freſh Water running down in 5 or 6 Gullies.

The Iſle of our Lady of *Sucore.*

Meridian diſtance at Noon from *Cape Pillar* E. 20 *d.* 0 *m.* four tenths Longit. at Noon from *Cape Pillar*, E. 1 *d.* 19 *m.* Longitude at Noon from the *Lizard*, W. 71 *d.* 42 *m.* Meridian diſtance at Noon from the *Lizard*, W. 1128 Leagues 2 Miles nine tenths. The *Iſle of our Lady of Sucore* lies at 45 *d.* S. Lat. In Long. E. from *Cape Pillar*, 1 *d.* 19 *m.* Meridian diſtance from *Cape Pillar*, E. 20 Leagues 0 Miles 4 tenths. Meridian diſtance from the *Lizard*, W. 1128 *d.* 2 *m.* nine tenths; Longit. from the Meridian of the *Lizard*, W. 71 *d.* 42 *m.* The Compaſs 11 *deg.* Variation East.

We provided our ſelves ſufficiently with freſh Water here; I ſaw on the ſhore an old Hut or Arbour of the Natives, but no ſign of any People on the Iſland; now I ſuppoſe they come hither at certain ſeaſons to get young Fowls; for I could ſee nothing elſe here, no Metals nor Minerals: The Soil is a ſandy and black Earth, grown all over with unpaſſable Woods, like Beech and Birch; 'tis white but fit only for fuel: No Fruit or Herbs; little Graſs, ſedgy and long; no wild Beaſts; ſome ſmall Birds like Sparrows, Fowls like Kites, black and white brant Geeſe, pied Shags, Pinks and Sea-mews. I made a Fire on the ſhore, but had no anſwer, ſo return'd aboard again.

1670.

Novem. 30.

Being on the main ſide this forenoon, I went aſhore in an Iſland adjacent to the Main: Betwixt that and the Main the Channel is ſo rocky and foul that I durſt not venture my Ship in it. The Iſle is 4 Leagues long from the N. to the S. point, in ſome places, in others 2 Leagues broad, covered with thick Woods; the Timber like as in the Iſle of *Socora*. The ſhore in ſome places ſandy, and rocky in others; the Earth of a ſandy black Soil, but wet with the continual Rains. Not finding the name of this Iſle in my Draughts, I took poſſeſſion of it in his Majeſty's name, and call'd it *Narborough's Iſland*.

Narboroughs Iſland.

South-eaſt from this Iſle on the Main about 3 Leagues diſtant runs into the Land a River or Sound, with ſome broken Ground before it: The ſhore is rocky, and the in-land Hills very high on both ſides of it; the opening lies E. and W. which I take to be the ſame call'd in the Draughts *St. Domingo*. It lies at 44 *d.* 50 *m.* S. Latitude. More to the S. lie many round copling Iſles, covered with Woods all along the Coaſts, not far from the Main of a great height.

St. Domingo.

All our Bread being now ſpent, all the Ship's Company and I my ſelf eat Peaſe inſtead of Bread; however all my Men, 72 in number, are indifferently in health: We could take no Fiſh; ſaw ſome Whales and Porpiſes, and ſome Sea-fowl: The Wind ſtrong at N. W.

No-Man's Iſland lies at 43 *d.* 47 *m.* S. Lat. In Longit. W. from the *Lizard* 71 *d.* 32 *m.* Meridian diſtance from the *Lizard* 1126 Leagues 1 Mile. Meridian diſtance from *Cape Pillar* E. 22 Leagues 2 Miles 2 tenths. In Longit. E. from *Cape Pillar* 1 *d.* 29 *m.* 1tenth. The Variation of the Compaſs 10 *d.* E.

No-Man's Iſle.

This Iſland is the ſame put in the Draughts at the S. end of the Iſle of *Caſtro* at the entrance of that Channel, which is betwixt *Caſtro* and the Main: The Draughts are not exact in deſcribing this Coaſt, which they make ſtreight without mentioning the ſeveral Iſlands that lie on it, no more than thoſe lying to the S. at the Latitude of 45 and half *deg.* For the reſt I found the Lat. of moſt places near the ſame as mentioned in the Draughts.

At 7 a Clock *Don Carolus* was ſet aſhore, on the S. ſide of the Harbour of *Baldavia* in a ſandy Creek, without the mouth of it a Mile, and two Mile within *Point-Gallery*, between the Point and the Mouth of the Harbour. He carried along with him a Sword, one Caſe of Piſtols, a Bag with Beads and Knives, Sciſſars, Looking-glaſſes, Combs, Rings, Pipes, Bells, Tobacco, to beſtow'd upon the Natives. Having deſired the Lieutenant (who ſet him aſhore) to look out for his Fire in the Night: He took the path near the Sea ſide, leading to the mouth of the Harbour; after a quarter of a Miles walk he turn'd out of ſight behind a Rock. The Sea ſhore is low and ſandy, with ſome ſcattered Rocks, the inland riſing up into large Hills, very woody; with thick tender Wood: My Lieutenant went to the edge of the Woods, where he gathered green Apples, which grow on Trees near the Water ſide, not unlike our *European* Winter Fruits, of the bigneſs of a good Walnut with its ſhell on: I did not obſerve any Current or Tide that could be prejudicial to Navigation, nor any Trade Winds: They are veerable, and blow hard on the Weſtern Quarter, with much Rain.

Decem. 15.

Apples.

The Mouth of the Harbour of *Baldavia* on the Coaſts of *Chili* in the S. Sea, lies at 39 *d.* 56 *m.* S. Lat. In Longit. W. from the *Lizard* 70 *d.* 19 *m.* In Longit. E. from *Cape Pillar* 2 *d.* 41 *m.* In Meridian diſtance from *Cape Pillar* E. 41 Leagues 2 Miles 1 tenth.

The Harbour of *Baldavia.*

According to the Account made by my ſailing from the Meridian of the *Lizard*, according to my daily computation of my Ships way; for I don't look upon the Account of plain Sailing fit for Obſervations at Sea, but the beſt is by *Mercator*, ſailing according to the Circle of the Globe, which I ever made uſe of, and keep my account of *Eaſting* and *Weſting* by *Longitude*, the beſt and trueſt Sailing, to give an exact Deſcription of the Globe: I have ſet down the daily Meridian diſtance, whereby ſuch Navigators as know better, may have that to give them the knowledge of the

1670. distance of places, according to their Understanding. Most of our modern Seamen sail, and keep their account of the Ships way by the plain Chart, though they sail near the Poles; a great Error! for they can't tell how to find their way home again, for want of understanding the true difference of the Meridians, according to their Miles of Longitude in the several Latitudes. I wish all Navigators would sail by *Mercator*'s Chart.

At 8 a Clock in the forenoon my Boat row'd ashore within *Point Gallery*, to the place where *Don Carolus* was landed, and so along the shore into the Harbour; on the S. side of which stands a small Fort of 7 Guns, call'd St. *Jago*'s Fort, which our Boat not perceiving till they were within reach of their Guns, the *Spaniards* wafted them with a white Flag; my Lieutenant row'd to them and ask'd them what Country-men they were? They answer'd, of *Spain*; and demanded our People who they were? They told them *English* Men; whereupon the *Spaniards* ask'd them to come ashore, which they did, in hopes of meeting with *Don Carolus* there, whom they had seen going along the Path leading directly to this Fort, betwixt the Woods and the Sea side.

St. *Jago*'s Fort. The Fort stands on a Wood side, on an ascent from the Sea, with a Breast-work of Earth cast up before the Ordnance, with some slight Pallisado works 4 Yards distant from the Guns to the S. The *Spanish* Garrison had Match-lock Musquetoons, but very indifferent ones, and very indifferently us'd.

My Lieutenant was receiv'd ashore by about 20 *Spaniards* and *Indians*, who conducted him to the Governour and two other *Spanish* Gentlemen seated under a great Tree; they bid him welcome ashore with a good Silver Bowl of Wine, asked his Company, whence they came, and which way into those Seas, who their Captain was, and such like questions? My Lieutenant having answer'd him: He ask'd whether they were at Wars with the *Indians*? He answer'd yes, wafting his Hand all about the Harbour, adding, that they were a barbarous and valiant People, and good Horsemen; and that they had lately kill'd one of their Captains near a Wood, which he shew'd them; for they have no ground belonging to the Fort, nor dare walk at a Musket-shots distance from the Pallisadoes, without being well arm'd. The *Spaniards* say the *Indians* abound so much in Gold, that the Breastplates of their Armour are of beaten Gold.

How our People were entertain'd there.

In the afternoon our People were entertain'd in a Tent out of the Fort with Oleos, Pullets and Fish, dress'd with hot Sawces and Sweetmeats, served in Silver Dishes, Plates and Pots, as were all the other Utensils, Stewing Pans, Basons, *&c.* The Hilts of the common Soldiers Swords were of Silver, and those of the Officers of Gold; nay, even the Plate at the But-end of the Stock of their Musquetoons was of the same Metal.

Four *Spanish* Gentlemen came aboard us with my Lieutenant, who offered to conduct her into the Harbour, but being well acquainted with the Treachery of the *Spaniards* in those parts, (an instance of which I remember'd in Captain *Hawkins* at St. *Juan de Ulloa*) I civilly refus'd it.

The condition of that Country. We had much discourse concerning *Baldavia*, and the Country of *Chili*; they told us, that there is much Gold about *Baldavia*, but that the Natives will not let them come at it, being a barbarous valiant People, of an almost Gigantick stature, and bring sometimes 8 or 10000 Horse in the Field. Their Weapons are long Lances, Bows, Arrows and Swords, and some Muskets taken from the *Spaniards*: That these *Indians* are very numerous about *Baldavia*, at *Orsono* on the Isle of *Castro*, and at *Chili*, and have much Gold at *Orsono* and *Chilue*, which they truck with the *Spaniards*.

They added, that every Year 6 Ships went from *Lima* to the Port of *Mannelos* in the *Philippine* Isles, in the Month of *January*, and perform their Voyage in two Months, within the Tropicks, with much E. Wind; and return'd back by the N. to gain the W. Wind, which carries them to *California*, and to the Port of *Aquapulco*, on the W. Coast of *New Spain*, from whence they come over *Panama* to *Lima* again. Their Cargo is rich Silks, Spices and Callicoes. For those of the *Mannelos* have a great Trade with *Japan* and *China*.

The Captain ask'd me whither I was bound? I answered, for *China*, and that I only had touch'd at the *Spanish* Settlement, to refresh my Men, and get some Provisions and fresh Water: He reply'd, I should have what the Country afforded; he shew'd me at the same time a Rivulet falling from the Hills, the Sand whereof contains Gold, which they wash, or separate from it in a Bowl.

A Gold Rivulet.

1670. The *Spaniards* buy much Gold from the Natives, which they gather in the Gullies of the Hills or barren Rocks, 30 Leagues from the Sea side: Betwixt which and these Hills the Country is plain and fruitful, stor'd with Horses, Cows, Goats and Sheep taken by the *Indians* from the *Spaniards*. These rocky Hills the *Spaniards* call *Andes*, and tell you that they run in one continued ridge from the *Streights of Magellan* to Saint *Martha*, which is on *Terra firma* near *Carthagena*.

The most Gold in all *America* is in *Chili*, as far as is known as yet; but I observ'd the *Spaniards* had but little Knowledge of the Country to the S. from *Baldavia* to the *Streights Mouth*; except in the Isle of *Castro*, and at *Orsono* on the Main, over against *Castro*, in both which places they have Settlements, and deal with the *Indians* for Gold. *Castro* lies at the Lat. of 43 *d.* 30 *m.* meaning its S. Point; but the N. End at 41 *d.* 40. *m.* Lat. It is a fine Isle, near the Main, fertile in Wheat: The *Spaniards* are but few, but the *Indians* numerous, a valiant large siz'd People, who keep the *Spaniards* from searching after their Wealth in the Country.

The Isle *Castro*.

A Ship laden with Provisions, Cloaths, Ammunition, Wines, Tobacco and Sugar, came from *Lima* to *Baldavia*; and in her return took in Gold, Bezoar-Stone, red Woolls and *Indian* Slaves: These last they carry to the Gold Mines in *Peru*, and in lieu of these bring back some of the *Peruvian Indians*, to serve for Soldiers here against the *Indians* of *Chili*; and to serve them as Interpreters to Trade with the Natives here; who, tho' at continual Wars with the *Spaniards*, yet will exchange their Gold for Knives, Scissars, Combs, *&c.* and sometimes for Arms, which are brought them by stealth. There were then 30 *Indians* and *Mustice* Soldiers in the Fort, commanded by 16 white Men.

They told us that the City of *Baldavia* was seated in a Plain 3 Leagues up the River, upon the very bank of it; containing about 1000 Souls, and defended by a Fort of 5 pieces of Cannon. They told me, there was a passage by Land from *Baldavia* to the other parts of *Chili*, but that they never us'd it, except when provided with a good Guard, for fear of the Natives: That they built no Ships at *Baldavia*, but at *Velperrazco*, that the Island of *Mocha* is inhabited by *Indians*, who, tho' no great Friends of the *Spaniards*, yet will exchange their Sheep, Goats, Hogs and Hens with them for Hatchets, Knives and Beads; but will not part with their Gold.

Baldavia.

The *Spaniards* have a Fort with 5 Guns on the Isle of St. *Mary*, and are Masters of it, tho' but few of them inhabit there. It abounds in Hogs, Sheep, Corn and Potatoes. I laid the Draught of all that Coast before them; asking them who liv'd at such a Port, and who liv'd at such a one? but they either could or would not answer me to any purpose, but were for waving the Discourse. They told me that some Ships went from *Lima* to the Isle of *Castro*.

The Isle of St. *Mary*.

There is anchorage on the N. E. part of the Isle of *Mocha* at 8 fathom near the shore, in a sandy Bay. The N. E. Wind is the worst for that Road. On the S. side of the Isle lies a ridge of Rocks, and some scattered Rocks not far from the shore: On the N. side of the Isle of St. *Mary* is the best anchorage in a sandy Bay at 8 or 9 fathom, at some distance from the shore; N. N. W. Wind is the worst for that Road. If we may credit the *Spaniards*, both these Isles afford Wood and fresh Water: The Tides are but little on that Coast; the Flood which comes from the S. not rising above 8 or 9 foot.

The Isle of *Mocha* lies at 38 *d.* 30 *m.* S. Lat. The Isle of St. *Mary* at 37 *d.* 14 *m.* S. Lat. They produce store of Apples, Plums, Pears, Olives, Apricocks, Peaches, Quinces, Oranges, Lemmons, Musk Melons, Water Melons, *&c.* These *Spaniards* described this Country to us like an earthly Paradise, where the People live in the greatest delight and plenty in the World; and to speak the Truth, these four *Spaniards* aboard us, as well as those we saw ashore, were very well complexion'd and corpulent.

Decem. 1. I sent ashore 18 of my best Men, to inspect the Harbour and Fortifications of the *Spaniards*, and to endeavour to settle a Commerce with the Natives; it being certain, that this Country is lost for want of true Knowledge of it. The *Spaniards* bought several things of them, for good pieces of Eight, but would not part with their Gold, or any Bread: As for instance, two Fowling-pieces worth 20 Shillings in *England*, for 16 pieces of Eight a piece; Cases of Knives worth 3 Shillings in *England*, for 5 pieces of Eight a piece; Leather Gloves of 10 pence a pair for a piece of Eight. They were

1670. were very eager to buy Cloaks and Bays Cloath, tho' their under Garments were very rich of Plush, Silk and Silver Brocadoes; with fine Linen, and good *Flanders* Lace, made for the most part after the *Spanish* fashion. Four of the *Spaniard*'s Wives would needs go into the Boat: They were white, born in *Peru* of *Spanish* Parents, and well apparelled after the *Spanish* fashion, with a large golden Chain about their Necks, and Pendants of *Saphir* in their Ears.

The Governour of Fort St. *Jago* presented my Lieutenant with a Silver Tobacco Box, a Silver-headed Cane, and a Plume of Ostrich Feathers, red, white and blew, dy'd in the Country; it was but small, and not so good as those of *Barbary*: Mr. *Wood* had another given him by a *Spanish* Gentleman, it was black and large, of the Ostriches Feathers of the Country, of which they have vast numbers, as well as of Guianacoes, the Beasts that bear the red Wool, whereof Hats are made in *England*.

Our People could not find the least opportunity of entring into a Conference with the Natives; for, tho' they made a Fire near the Wood side, and fastned a white Flag to a long Pole; the *Spaniards* would not permit our Boat's Crew to come near them. At their return they brought word that the Governour of Fort St. *Jago* had not orders for our fetching of Water, but with'd them to go to St. *Peter*'s Fort: Accordingly they went with a Fryar, two *Spaniards* and a Trumpeter; they were very civilly conducted to, and kindly received by the Governour, unto whom they delivered the Cheese, Butter, Spices, Glasses and Tobacco Pipes, I sent him; and desired him to let us fetch fresh water there: He drank to my Lieutenant and Mr. *Fortescue* in a Silver Bowl full of *Chili* Wine, and in the mean while sent some to seize on the Boat; the Lieutenant asking for what reason? He reply'd, he had orders from *Don Pedro de Montaies* Captain General of *Chili*, to detain them till the Ship came under the command of the Fort; and he was sorry he had no more of them in his possession.

Lieutenant Armiger's Letter to Capt. Narborough.

Sir,

Myself and Mr. Fortescue *are kept Prisoners here, for what reason I know not: They still pretend much Friendship, and say, if you will bring the Ship into the Harbour you shall have all the Accommodation that may be. Sir, I need not advise you farther.*

I am,
Thomas Armiger.
John Fortescue.

Decemb. 18.
1670.

After the return of the Seamen with the Boat, I found upon examination, that the *Spaniards* intended to get the Ship into their Power. Two *Indians* who spoke *Spanish* indifferently well, came aboard us, ask'd my Country, and when I was to come again? I told them my Country was not far off on the other side of the Sea, and that I would soon return with great store of Knives, Hatchets, Beads and Glasses, *&c.* I exalted the Power and Riches of our King and Nation; and that I was impowered to let them know we were sent on purpose to enter into a Commerce with them; desiring them to impart the same to the Inlanders. These poor Wretches being sensible of our kindness, seem'd to be unwilling to return ashore; telling us that the *Spaniards* are Devils, which I believe to be true enough, by reason of their insulting Temper. These *Indians* told us that both the *Indians* and *Spaniards* had much Ore or Gold: I gave to each of them a Knife, a Looking-glass, and some small Beads, wherewith they seem'd infinitely pleased, and promised to impart my Message to the inland Inhabitants.

The Natives near *Baldavia*.

These *Indians* were of a middle size, strong limb'd and fleshy, tawny colour'd, with long black shaggy Hair; of tolerable features, but a melancholly Countenance, active of Body and hardy in their Diet; on their Heads they wear small Caps like Mounteers, and on their Bodies a square piece of Woollen stuff, of their own weaving of the Wool of the *Guianacoes*: This has a hole in the middle, through which they put their Heads, and let it hang down over their Shoulders and whole Body, (being button'd before) like a Mantle, which reaches to the Knees, and sometimes to the middle Leg: Some also wear half Stockins, but neither Shoes nor Shirts; some have Breeches after the *Spanish* fashion, close to their Thighs and Knees.

Capt. Narborough's Note enclosed in his Letter to Lieutenant Armiger.

Lieutenant,

Take what notice you can of the Fortifications of the Fort, and what Forces they have in it, whether they are able to withstand a Ship, and what quantity of Provisions, and whether Don Carolus *be there; send me an account by* John Wilkins: *I will use all endeavours to bring you off when I know the strength of the place.* 1670.

I remain your loving Friend;
John Narborough.

Burn all the Letters you receive from me, and in case of Examination——

I found the Variation of the Compass 8 *d.* 10 *m.* E. *Decem.* 18. I am much at a stand about the reason of the difference of the Variation in the same Latitude between the E. and W. side of the Land of *America*; for on the E. side at the Latitude of 40 *d.* I found the Compass to have 20 *d.* Variation E. and here I find but 8 *d.* 10 *m.* and is but 8 *d.* of Longitude more W. in the same Parallels, differing betwixt these Observations and the difference of Variation. I found the Land but 125 Leagues broad from the E. to the W. side in the Latitude of 40 *d.* The attractive quality of the Magnet must be more powerful in the E. part of the Land, than in the W. part, which produces this difference; yet I admire how, being on both sides of the Land, the Compass should always have the same Variation E. for I was of opinion, the Variation would have been W. on the W. side, it being E. on the E. side; but finding the contrary by experience, I believe the attractive quality is not much in this part of *America*, but in some other more Easterly part; which I submit to better Judgment.

The Harbour of *Baldavia*.

Three handsome fresh water Rivers discharge themselves with a brisk Current into the Harbour of *Baldavia*, which makes the Water fresh just within the Harbour's mouth One of these Rivers comes from the S. E. the other from the E. and exonerates it self behind St. *Peter*'s Port: The third at the N. Point of the Harbours mouth between the Point and the North End of St. *Peter*'s Isle, coming from the N. E. It has about 9 or 10 Mills. From what I understand by the *Spaniards* (who never fail to exalt their own) *Baldavia* is no large place, being rather a Garrison maintain'd for the convenience of Commerce with the *Indians*, for Gold, Bezoar stones, Guianacoe Wooll, *&c.* I believe these Rivers come a great way out of the Country, though the *Spaniards* have but little knowledge of the inland parts; but they are scarce navigable, because they carry all their Goods in small flat-bottom'd Barges, of 10 or 12 Tuns, to the City of *Baldavia*: They steer with a Rudder, and have one Mast and Sail, like ours; the Sails of Callicoe, the Ropes of the rind of *Mangrove* Trees, wooden Crabclaws or Kellocks instead of Anchors, their Masts of white Cedar, which are heavy and break short; hence it is that Iron Anchors and Grapnels, Ropes and Cables of Hemp, and good Fir Masts are precious Commodities here: Their Canoes or smaller Boats are cut out of the Trunk of a Tree, shaped at the end like a Sloop; some are 30 foot long, and will carry 20 Men, being raised on the sides with a Board; those without a Board have a great Beam lashed fast on each side, to keep them from oversetting: They are rowed with Oars, the lesser sort with Paddles by *Indian* Slaves. The Land about *Baldavia* is low near the shore, but rises up into large Hills in the Country; some Bays are sandy, with broken Rocks glittering like Gold, shattered along the shore. The whole Country (as far as I saw) is covered with Woods, which are almost unpassable, by reason of the thick Under-wood.

Their Barges.

Canoes.

The Harbour being a mile and half broad, the Guns can't reach from one side to the other: St. *Peter*'s Fort is near 2 Miles from the Harbours Mouth; any Ship may beat the *Spaniards* from their Guns in St. *Jago*'s Fort, and St. *Andrew*'s Redoubt at the S. W. side of the Harbour; and after you are once in, St. *Peter*'s Fort can do but little harm. The *Spaniards* have no Plantation on the S. W. side: After you are within the Mouth of the Harbour, it is like a Sound to the S.

Near the Sea side grow many good *Bamboe* Canes among the Trees of the Woods, winding about them like Vines; some are 20 foot long, and taper from the root to the top, like an Angling-Rod. As they have no other *European* Commodities here, but what are brought from *Panama*, and by the River of *Plata*, so they are very scarce and dear here; as Linnen Cloaths, Silks, *Flanders* Lace, Silk stockings, Ribbons, Looking-glasses, and all sorts of *European* Workmanship; Gunpowder for Fowling is worth a piece of Eight *per* pound, and Bird-shot from one and half to 2 Ryals a pound. As the Country is better inhabited on the Coast of *Chili* to the N. near *Vale Perazo*, *Coquimo* and *Areca*, and that they are nearer the Mines of *Potosea* (the Silver whereof comes

1670. comes to *Areca*, and is thence transported to *Lima* by Sea) so no doubt all those Commodities bare a higher price; so that the most advantageous Trade in the World might be established in those parts, if the *English* had the freedom of these Ports; or else the same might be carried on by force in spite of all their Forts by 4 or 5 Ships, with 20 or 30 pieces of Ordnance a piece; and I don't question but that the Natives of the S. parts of *Chili*, about *Castro*, *Orsono* and *Baldavia*, when civilly treated, would be willing enough to exchange their Gold for Knives, Scissars, Glasses, Beads, Combs, Hatchets and such like Commodities.

I intend, if the Weather proves right, to sail from *Baldavia* to the S. to the Streights Mouth all along the Coast, as far as *Cape Desiade*, as also to view the Island of *Castro* and *Orsono*, to try whether it be true what the *Spaniards* told me of those parts.

The Names of the four Persons detain'd at *Fort St. Peters*.

Thomas Armiger Lieutenant, aged 40 Years, born in *Norfolk*.

John Forteseue Gent. aged 27 Years, a *Kentish* Man.

Hue Coe Trumpeter, aged 28 Years, born in *Wapping*.

Thomas Highway Interpreter, aged 33 Years, born of *Moorish* Parents in *Barbary*: He is a Tawny-Moor, has embraced Christianity, and lived formerly with an *English* Merchant at *Cadiz* in *Spain*.

As they were very healthy and well quallified Persons, so I hope they will live to give an exact Account of that Country.

Cape Gallery. *Cape Gallery*, the utmost Point on the S. side of the Harbour of *Baldavia*, lies at 39 *deg.* 57 *m.* S. Lat. In Longit. to the W. of the Meridian of the *Lizard* 70 *deg.* 20 *m.* according to my Account. In Meridian distance 1108 Leagues W. And in Longit. E. from the W. Mouth of the *Magellan* Streights, and *Cape Pillar* 2 *deg.* 40 *m.* In Meridian distance nearest 42 Leagues.

Thursday *Decem.* 22. A fair Morning; Wind at S. W. I plied to the windward along the Coasts 3 Leagues off the shore, to the S. of *Cape Gallery*, out of sight of the People of *Baldavia*, the Cape being shut in by the Land to the N. of the Harbour. At 12 a Clock I found my self at 40 *deg.* 3 *m.* S. Lat. 3 Leagues from the shore, no Ground at 80 fathom, S. of *Baldavia* Harbour.

Decem. 31. It blew and rain'd hard from the N. W. I steered S. W. by W. this Afternoon and Night, some white, pied, black and grey Porcupises, different from those in *Europe*.

Sunday *January* 1. Cold and cloudy Weather; the Wind N. W. with a high Sea, I steered S. S. W. After several Courses made from *Saturday* Noon till to day Noon, I made the true Course to be S. 39 *deg.* 0 *m.* W. and distance sailed 125 Miles, and departure W. 66 Miles. Difference of Longit. 101 *deg.* 37 *m.* 4 tenths, difference of Lat. 1 *deg.* 22 *m.* 3 tenths, Latitude by account 47 *deg.* 47 *m* S. W.

Wednesda. *Jan.* 4. Wind N. W. and sometimes W. N. W. my Course S. Some Porpises, Whales and Sea-fowl seen. I found the Compass to have 10 *deg.* 28 *m.* Variation. My Course made true from *Tuesday* Noon till to day Noon, is S. distance sailed 84. The difference of Lat. is 1 *deg.* 24 *m.* 8 tenths. Latitude by good observation 51 *deg.* 31 *m.* S. Meridian distance from *Point Gallery* W. 70 Leagues 1 Mile 5 tenths. Longit. from *Point Gallery* W. 4 *deg.* 48 *m.* 4 tenths. Longit. from the *Lizard* W. 75 *deg.* 8 *m.* 4 tenths. Meridian distance from the *Lizard* W. 1175 Leagues 1 Mile 5 tenths.

Friday *Jan.* 6. A foggy Morning, Wind S. W. I steer'd in to make the 4 Isles, whom I call'd the *Isles of Direction*, or to make *Cape Desiade*, my Course E. N. E. At 4 in the Morning I found no Ground at 80 fathom; I reckoned my self 10 Leagues from *Cape Desiade* at 52 *deg.* 53 *m.* S. Lat. Soon after it clearing up, we discovered the *Isles of Direction* lying at the Streights Mouth N. N. W. from *Cape Desiade*, about 8 Leagues distance; they were then 4 Leagues distant to the N. E. of me at 52 *deg.* 42 *m.* Lat. At 5 a Clock they bore 3 Leagues N. of me. I found no Ground at 70 Fathoms; I saw *Cape Desiade* 8 Leagues E. S. E. of me; it being then foggy on the top of the Hills, whereas in clear Weather *Cape Pillar* and *Cape Desiade* may be seen 15 or 16 Leagues at Sea; they are so high and ragged.

I steer'd by *Cape Pillar* E. by S. Wind at W. S. W. with a high Sea coming from the S. W. I saw the Waves break violently against some Rocks under and above the Water about 4 Leagues, and 2 Leagues West of the Point of *Cape Desiade*, some reaching within a League, nay within half a Mile of the Cape.

As I advanced to the Streights Mouth, I raised the Land on the N. side by *Cape Victory*, and the broken Islands within the Streights, call'd by me *Westminster Isle* and the *Lawyers*. At 9 a Clock *Cape Pillar* bore a Mile and a half of me. No Tide or Current either in or out the Streights to prejudice Navigation. 1670.

The difference of Longit. E. is 1 *deg.* 39 *m.* 4 tenths. The Lat. 52 *deg.* 52 *m.* S. but according to my former Account 52 *deg.* 58 *m.* Meridian distance at 9 a Clock from *Point Gallery* W. 35 Leagues 00 Miles 2 tenths. Longit. at 9 a Clock from *Point Gallery* W. 2 *deg.* 43 *m.* 1 tenth. Longit. at 9 a Clock from the *Lizard* W. 73 *deg.* 3 *m.* 1 tenth. Meridian distance at 9 a Clock from the *Lizard* W. 1153 Leagues 00 Miles 2 tenths.

I perceive but little Tide or Current in the Sea call'd *Mare del Zur*; for I am but 3 Minutes of Longit. out of my Account, in sailing between *Cape Gallery* and *Cape Pillar*, forwards and backwards.

If you are to enter the West mouth of the *Magellan* Streights, you had best bear in for the Land at 52 *deg.* 50 *m.* S. Lat. where you will discover the 4 *Isles of Direction*, somewhat to the N. before the Mouth of the Streights, 8 Leagues distant N. N. W. from *Cape Pillar*: The Sea breaks much on these Isles with W. Wind. *Cape Pillar* is a steep Point of Rocks on the W. side of the Streights Mouth, as *Cape Desiade* is the W. Point; for it falls off from *Cape Pillar* near S. W. and they are distant 2 Leagues from one another, which is the face of the Lands betwixt these two Capes: For at the Point of *Cape Desiade* the Land on the S. side of the Cape trents off to S. S. E. all ragged Mountains as far as I could see. At the pitch of *Cape Desiade*, lie many shatter'd Rocks, appearing like the Ruins of Houses above Water; others under Water about 4 Leagues off of the Cape, W. at 53 *deg.* 10 *m.* S. Lat. I call'd them the *Judges*, being near 10 Leagues S. by W. from the *Isles of Direction*, so broad is the first opening of the Streights; when you can once see the Land to make it, you are safe enough; without which it is difficult enough to pass it from the W. to E. there being at its first entrance from the S. Sea many Openings and Sounds on the N. side, which seem fairer for a passage than the Streight it self; therefore it is safest to keep the S. side: For from *Cape Pillar*, which is the Point at the Entrance, the Course will be E. by S. for 1 or 2 Miles, and then E. & E. and S. E. by E. so the Channel lieth to *Cape Quad*. *Cape Pillar.* Caution for entring the Streights from the West.

The N. side of the Streights from *Cape Victory* all along E. to *Cape Froward* for 15 Leagues is all a raggy, rocky mountainous Country, and abundance of small Islands scatterred along the shore; so that it is not safe for a Ship to keep the N. shore, for the thick and foggy W. Winds which blow most part of the Winter there, will make them mistake the right Channel. For want of a Sloop or some other small Vessel, I could not discover the many Sounds and Coves on the N. side betwixt *Cape Victory* and *Cape Quad*; and divers other places in the Streights I would willingly have seen.

In *Tuesday-bay* and *Island-bay* grow thick shrubby Bushes on the low Lands, with Berries like Hurts; they will serve for Fuel, and grow in a mossy Earth, lying 4 or 5 foot thick on the Rocks; here is also some thick sedgy Grass: We saw great store of Geese, Ducks, white and pied brant-Geese, grey Gulls, Sea Mews, Divers, and Penguins, and Muscles, and Limpets, and some Seals on the Rocks. I return'd aboard in a rainy Night, Wind at W. S. W. A great deal of fresh water comes running down the sides of the bare Rocks into the salt Water; some Whales spouting here. The Country is desolate.

At 8 a Clock in the Evening I anchored before *Batchelor's River* at 9 Fathom sandy Ground, 2 Cables length from the shore. Here is good riding with W. and N. Winds, the S. Wind blows directly into the Reach; but the Sea is never high here; the Streight in this Reach being but 2 Leagues over. The River is 5 Leagues E. of *Cape Quad*, and 2 to the E. of St. *Jerom's* Channel: on the N. side of it the Tide both Ebbs and flows, but with an indifferent strength: At St. *Jerom's* Channel it rises and falls perpendicular 8 or 9 foot: At the Entrance of *Batchelors River* is only 10 foot Water at High-water; but there is good fresh Water and Wooding thereabouts. The many Arbours (the *Indians* Houses) shew'd this place to be much frequented by the Natives.

A fine calm Sun-shining day, I rowed in my Boat with 20 Men 4 Mile up *Batchelor's River*, to a Lake of fresh Water in a Creek in a Valley, where the River has its source: Thence we marched 5 or 6 Mile into the Land, till we were stop'd by the Mountains and unpassable Woods: We made a Fire, but had no answer, nor saw we any Beast or living Creature, or Metal or Mineral: Abundance of fresh Water falling Sunday *January* 8.

in

1671. in ſtreams from the ſteep Rocks; ſome Buſhes with red Berries like Hurts; Trees like thoſe at *Port Famen*, and ſome ſmall Pepper-Trees: The Graſs-Land was very looſe and boggy, and the Rocks a kind of white Marble.

Here ends Sir *John Narborough*'s Manuſcript Journal, which we ſhall continue to *England* from the MS. Diary of Mr. *Nathaniel Pecket* his Lieutenant.

Wedneſda. *Jan.* 11. The Continuation of the Journal. Fair Weather, variable Wind from S. E. to S. W. We got into *Port Famen*, and anchored at 12 a Clock at 9 Fathom: Abundance of freſh Water and Wood, (whereof we took in good ſtore) of good wild Fowl, and Fiſhes like Mullets and Smelts.

Jan. 16. Wind W. The Lieutenant went 9 Mile up *Segar's River*, but could go no farther; ſaw nothing worth obſervation.

Jan. 29. Little Wind at S. W. The Captain went to the S. ſhore to ſee whether there were any part ſhort of *Port Famen*, there came an *Indian* to the Point of that Harbour, without Bow or Arrows; we invited him aboard, but he would not; he was a Slave and run away.

Tueſday *Jan.* 31. The Captain return'd aboard from the S. ſhore, but could find no Harbour nor *Indians*.

Saturday *Feb.* 4. Fair Weather, Wind W. by N. At 4 a Clock in the Morning we ſet Sail from *Port Famen*, at Eleven we were ſhort of *Freſh Water Bay*, and at ſix anchored in 12 Fathom water in a ſandy Bay, 4 Leagues N. of *Freſh Water Bay*.

Feb. 5. High Wind at S. W. and W. S. W.

Feb. 7. Fair weather, Wind N. The Captain ſent me in the Pinnace along the N. ſhore, between *Elizabeth*'s Iſle and the ſhore, to ſee for *Indians*, but it blowing hard I put back into a ſandy Bay, where I put aſhore and ſtay'd all Night: Here we got Smelts of 20 inches long and 8 inches about.

Wedneſda. *Feb.* 8. Wind W. S. W. This Morning I run down the Streights with the Pinnace, keeping the N. ſhore aboard, betwixt it and *Elizabeth*'s *Iſle*: I ſaw no *Indians*, but ſeveral places where they had lately been building their Canoes. From *Cape Deſiade* to *Elizabeth*'s *Iſland*, is plenty of Water and Wood, but from thence to *Cape Virgin Mary* both are very ſcarce. At 3 a Clock in the afternoon I return'd aboard, and at 4 we came to an Anchor at 8 Fathom black Sand, within a Mile of the ſhore: St. *George* and St. *Bartholomew*'s Iſland were both ſhut in one, bearing E. S. E. of me, and *Elizabeth*'s Iſle S. by E. Here we rid all Night.

Feb. 9. Fair weather, Wind W. The Captain ſent me to ſee for ſome *Indians*, but could ſee none; yet I fell in with a good Harbour for ſmall Veſſels at the N. ſhore, at the S. end of a great deep large Bay thwart of *Elizabeth*'s *Iſle*: The Entrance of the Harbour being but a Bow-ſhot from ſide to ſide; tho' from the Entrance to the upper end it is 7 Mile: There was 12 foot Water at low water, but within 3 fathom at low water I ſaw many Geeſe and Ducks; and aſhore great ſtore of Heath-berries and Black-berries, but no *Indians*. The Captain went into another Harbour one Mile to the S. of the ſecond Narrow on the N. ſhore; it had 4 fathom Water, and broad within; he ſaw many Sea-Crabs.

Saturday *Feb.* 11. Variable Wind; the Captain ordered me to diſcover the N. ſhore in the Pinnace, and if I could diſcover ſome part of the S. ſhore; as far as the firſt Narrow, and there to ſtay for the Ship: So I paſs'd the ſecond Narrow, and landed on the S. ſide in a ſandy Bay or Cove; I went 5 or 6 Miles into the Country, ſaw ſeveral Trees, but no *Indians*. At Night I return'd to the Boat, near which we pitch'd our Tent, where we catch'd 700 good and large Fiſhes like Mullets: The Land is barren. 1671.

Feb. 12. Fair weather, N. Wind: I went into a fine ſandy Bay, on the N. ſhore at 7, 8, 9 and 10 fathom Water, a Mile and a half from the ſhore: This Bay is betwixt the ſecond Narrow and *Cape Gregory*, cloſe under the Cape, which is 5 or 6 Mile E. of the ſecond Narrow. I went into the Country to look for *Indians*, but ſaw none; we lay all Night in our Tent near the Boat.

Feb. 13. A brisk gale at W. I run along the ſhore from *Cape Gregory* to the firſt Narrow, where I ſaw 3 Anchors in a ſmall ſandy Cove, above High water Mark: We landed, and one of our Men found an Iron Commander for ſome Ship's Poop: One of the Anchors was 12 foot long in the ſhank, the other two 11 apiece; they were *Spaniſh* Anchors. The Land here was dry and barren, without either Wood or freſh Water: For the ſpace of 5 or 6 Miles compaſs were vaſt numbers of Rats living under Ground like Coneys. All the way betwixt the firſt and ſecond Narrow are good ſandy Bays on the N. ſide, with 10 and 12 fathom of Water, a good Birth off.

Tueſday *Feb.* 14. Rainy and Windy weather at W. After the Ship was got through the *Narrow*, I came aboard her; we made all the Sail we could, and by Night ſhe got clear of the Streights into the N. Sea; and at 3 a Clock *Cape Virgin Mary* bore N. W. a Point N. diſtant 4 Leagues.

Thurſday *Feb.* 23. The Wind variable from N. N. W. to W. N. W. At 9 a Clock in the Evening we anchored at 22 fathom ſandy Ground on the S. part of *America*, at 47 *deg.* 16 *m.* S. Latitude: *Cape Blanco* bearing N. N. W. of us, diſtance 6 Leagues.

Feb. 24. A little Wind N. At 6 a Clock in the Evening we anchored in *Port Deſier* Bay, in 14 fathom Water.

Feb. 25. A brisk E. Wind: The Long Boat went into the Port to fetch ſome freſh water, but brought but little, and that brackiſh.

Sunday *Feb.* 26. A brisk gale at S. S. W. We ſet ſail for *England* at 47 *d. deg.* 10 *m.* S. Latitude; *Cape Blanco* to the N. but not by the Compaſs, for here is a Point and a half Variation E. At 4 a Clock *Cape Blanco* bore N. N. W. of us by the Compaſs, diſtance 9 Mile at 20 fathom Water; but when it bears N. N. W. from you, you are 8 Mile off, and will have but 10 fathom Water. Along this Coaſt from *Cape Virgin Mary*, which lies at 52 *deg.* 15 *m.* S. Lat. is good Sounding. For 5 Leagues from the Main there is 25 and 30 fathom Water; and 16 Leagues off, 50 and 55 fathom black Sand.

Wedneſda: *May* 17. 1671. This Evening we ſaw the Iſle of St. *Mary*, one of the *Azores*; it bore S. E. of us, diſtance 16 Leagues, Wind at South East.

May 19. Fair weather, Wind E. This Morning at 7 a Clock the Town of *Puncelegada* on the Iſle of St. *Michael*, one of the *Azores* bore N. of me, diſtance 2 Miles.

Tueſday *May* 23. Much Wind at N. E. We wanting Proviſions and freſh Water, we ſteer'd towards *Angria* at the *Terceras*.

May 24. We anchored this forenoon in *Angria* Road, at 16 fathom, Wind at N. E. by N.

Friday *May* 26. Little Wind at N. E. We ſet ſail thence for *England*.

June 10. Hazy weather, Wind at S. W. This Morning at 7 a Clock we ſaw *Scilly*, bearing N. E. by N. of us, diſtance 5 Leagues; and at 6 a Clock in the afternoon the *Lizard* N. of us about 3 Leagues: I make my diſference of Longitude from *Cape Blanco* to the *Lizard* in *England*, to be 60 *deg.* 45 *m.* 5 tenths; and the Meridian diſtance is 840 Leagues; I am ſo far to the Eaſt of the Cape.

CHAP.

CHAP. II.

The History of the Bucaneers *of* America; *from their first Origine down to this Time.*

1666.

§ 1. The Author embarks for the *West Indies.*

WE set sail from *Havre de Grace* (in *France*) *May* 2. 1666. in a Vessel call'd the St. *John*, belonging to the *French West India* Company, equipt with 28 great Guns, 20 Seamen, and 220 Passengers in all. Coming to the Cape of *Barfleur*, we staid there for 7 more Ships that came from *Diep*, (belonging also to the said Company) under Convoy of a Frigot of 37 Guns and 250 Men: Five of these were bound for the *Caribe Islands*, two for *Senegal*, as ours was for *Tortuga*; by the occasion of some other *French* Ships bound for *Newfoundland*, and some *Dutch* bound for *Nants*, *Rochel*, &c. Our whole Fleet was encreased to the number of 30 Sail, under the *Chevalier de Sourdis* Commodore. We set sail thence with a favourable Gale, and by the favour of some Mists pass'd undiscovered by 4 *English Frigots* of about 60 Guns each, who waited for our coming near *Aldernay*.

They escape the *English.*

As this made us keep as near the Coast of *France* as we could, so it caused no small fear among the Inhabitants, who took us for Enemies, tho' we did all we could to undeceive them, by putting out *French* Colours. We anchored in the Bay of *Conquet* in *Britany*, not far from *Ushant*; where having provided our selves with some fresh Water and Provisions, we pass'd by the *Ras* of *Fontenean*, being afraid to come near the *Sorlingues*, because the *English* were cruising thereabouts. The River *Ras* rowling here with a rapid current over the Rocks into the Sea, at 48 *deg.* 10 *m.* Latitude, makes this passage very dangerous; whence it is that the Mariners in this as well as some other peculiar passages perform a kind of Ceremony they call the Sea *Baptism*.

Sea Baptism used by the *French.*

The Master's Mate being dress'd up after an Antick ridiculous way, with a wooden Sword in his right, and a pot of Ink in his left Hand, causes all such aboard the Ship as never pass'd that way before to kneel down before him; and after having mark'd them with the sign of the Cross on their Foreheads with Ink, he gives them a stroke with his wooden naked Sword on the Shoulders, whilst the Standers by cast a Bucket of Water upon every one of them: Each Person thus Baptiz'd is oblig'd to give for a fee a bottle of Brandy (to be placed near the main Mast without speaking one word) for the use of the old Seamen: If the Ship never pass'd there before, the Coast is oblig'd to give them some entertainment of Wine, *&c.*

Sea Baptism by the *Dutch.*

The *Dutch* observe the same custom in this and several other Passages, but especially of the Rocks call'd the *Berlingues*, on the coast of *Portugal*, at 39 *deg.* 43 *m.* but in a different manner; for they hoist them up 3 or 4 times to the main Yards end, and thus dip them as often in the Sea; such as are unwilling to be dipt must ransom themselves with 12 Pence apiece, and Officers double or triple, according to their station: Passengers must agree with them as well as they can. They say this custom was introduced by the Emperor *Charles* V.

From *Ras* to Cape *Finis Terræ* we had very good weather; but then being overtaken by a Tempest, which lasted 8 Days, we lost the Company of all the other Ships. After this the weather and wind prov'd favourable till we came to the *Tropick of Cancer*, an imaginary Circle limiting the approach of the Sea towards the North Pole, at 23 *deg.* 30 *m.* Latitude. Here the beforementioned Sea-Baptism was perform'd a second time; as the same is likewise practised by the *French* under the Tropick of *Capricorn*. To our great joy we met with favourable weather under the Tropick, being then reduced already to a daily allowance of half a pint of fresh water a Man. At the Latitude of *Barbados* we were chased by an *English* Privateer, who finding us too strong, he steer'd away, and we after him, but he escap'd. Soon after we pass in sight of *Martinico*, but being overtaken by a Storm, we could not reach it, no more than the Isles of *Peter* and *Guadalupe*; so directing our Course towards *Tortuga*, we pass'd along the Coast of *Punta Rica*, (affording an agreeable prospect, by reason of the beautiful Woods there) we discovered *Hispaniola*, and coasted about till we came to an Anchor at the Isle of *Tortuga*.

Scarcity of fresh Water.

1666. *July* 7.

§. 2. A Description of *Tortuga.*

This Island which is 60 Leagues in Circuit, lies on the N. side of *Hispaniola* at 23 *deg.* 30 *m.* Latitude: Having got its name from its shape, which is like a *Sea Tortoise*, call'd *Tortuga de mar* by the *Spaniards*. The Country is all rocky, but notwithstanding this, full of tall Trees; the roots whereof appear bare upon the surface of them. The North part of the Isle is destitute of Inhabitants, by reason of its unwholesome Air, and ruggedness of the Coast; but the South part is pretty well Peopled: Here is only one Harbour capable of containing Ships of 70 Guns; you enter into it by two Channels. This Harbour is in that part of the inhabited Country they call the *Low Lands*. The Town is call'd *Cayona*, where the chief Planters have their Residence. The second is call'd the *Middle Plantation*, fit only for Tobacco. The third to the West part of the Isle is call'd *Ringot*; and the fourth *The Mountain*, where the first Plantations were erected.

Its Harbour.

Plantations.

Trees.

This Isle abounds in very tall Trees, fit for Timber, as also in the *yellow Saunder* the *Lignum Sanctum* or *Guajacum*, and the Trees that produce the *Gummi Elemi*. They have also store of *China* root, but none of the best; it is white and soft, and the wild Boars often feed upon it: They also don't want Aloes and divers other medicinal Drugs. Among the Fruits this Island affords, are the *Magniot*, *Potato's*, *Abajou* Apples, *Yannas*, *Bacoues*, *Poques*, *Caroseles*, *Mamayns*, *Annanes*, and in short many other sorts not inferiour to any, which other Islands produce in these parts. Here also grow vast number of very tall *Palm Trees*, which furnishes a juice to make Lime of, and the Leaves serve instead of Tiles, to cover their Houses.

Fruits.

They abound in wild Boars, the hunting of which is prohibited, in order to preserve them, in case of an Invasion, when the Inhabitants are oblig'd to retire to the Mountains and Woods.

Greatnumbers of wild Pigeons.

At a certain season of the Year the Inhabitants of this Isle feed upon nothing but *wild Pigeons*, which then are excellently good; but the same being past, they become lean and bitter in taste, the reason whereof is attributed to a certain bitter Seed these Birds eat at that time. The Sea shore affords vast quantity of Sea and Land Crabs, both are very large, but not wholesome; for eaten often they occasion Giddiness in the Head, and Dimness of Sight.

Land and Sea Crabs.

Hispaniola and *Tortuga* discovered by the *French.*

After the *French* were setled in the Isle of St. *Christopher*, they planted many Trees, which afterwards furnished them with Timber for the building of small Vessels; some whereof they sent West for the discovery of new Islands: These landed at *Hispaniola*, where they met with vast numbers of *Cows*, *Bulls*, *Horses*, and *wild Boars*; but knowing the Island to be pretty well stock'd with *Spaniards*, they seiz'd upon the Isle of *Tortuga*, without any opposition, where being no more than 10 or 12 *Spaniards* to guard it, as they pass'd and repass'd frequently in their Canoes to *Hispaniola*, they drew so many People thence to increase their Settlement at *Tortuga*, that the *Spaniards* became jealous of their strength, and with the assistance of some of their Neighbours, surpriz'd the *French* Colony at *Tortuga*, forcing them to retire with all they had to the Woods: But having found means to waft over in their Boats to the shore of *Hispaniola*, they there intrench'd themselves so well in the Forrests, that the *Spaniards* durst not attempt to drive them from thence. But at last being resolv'd to draw this Thorn out of their sides, they joyn'd all their Forces to dislodge them: The *French* having receiv'd intelligence that most of the arm'd *Spaniards* of *Tortuga* had joyn'd the rest in *Hispaniola*, laid hold of this opportunity, and before they could be attack'd by the Enemy, pass'd over to *Tortuga*; where meeting with no opposition, they intrench'd themselves, and sent to the *French* Governour of St. *Christophers* for aid, which he willingly granted; and at the same time sent them a Governour of their own, one Monsieur *Le Passeur*, (pursuant to their request) who ordered a Fort to be built upon the top of a high Rock, commanding the Etrance of the Harbour. This Fort having no other access than a narrow passage, he caused the same

They People it.

Are dispossess'd by the *Spaniards.*

Return thither.

Erect a Fort under their Governour.

1665. to be broken, leaving no other ascent than by a Ladder. The Rock had a large Cavity, which served for a Storehouse; and a spring of fresh Water sufficient for 1600 Men. Having thus secur'd themselves, they began to follow their usual Employment of planting Tobacco, hunting and pyrating upon the *Spaniards*, who exasperated thereat, and fearing lest they should give them at last a visit upon *Hispaniola*, took the opportunity, when most of them were abroad, either in hunting or at Sea, and landed 800 well arm'd Men. But as they were not likely to continue there long unless they could master the Fort, they pitch'd upon an adjacent Mountain, to raise a Battery. The worst was that the said Mountain being inaccessible, they were forced to employ a great number of *Indians* and Slaves, who with their incredible pains hew'd a way through the circumjacent Rocks, through which, by the help of Pullies and Ropes they brought two great pieces of Cannon. The Hunters and Pyrates in the mean while, having understood what pass'd near the Fort, made shift to join in the night time; and being acquainted with these Rocks, surpriz'd the *Spaniards* by a back way, forc'd the greatest part to throw themselves down the Rocks, and cut the rest to pieces.

The second attempt of the Spaniards.

Cut a way thro' the Rocks.

Are routed.

The first *French* Planters kept in possession of the Isle of *Tortuga*, as Proprietors of the same, under their own Governours till 1664. when the *French West India* Company imposed upon them Monsieur *Ogeron* for their Governour, and sent their Factors thither to manage a Traffick as well with the Planters, Hunters, and Pyrates there, as with the neighbouring Isles; obliging the *French* Inhabitants to buy their Necessaries from them; but not being able to get sufficient payment of them to quit their Charges, they recall'd their Factors with their Effects, and sold their Slaves as well as they could, at the rate of 20 or 30 pieces of Eight *per* Head.

The French West India Company seize, and again leave Tortuga.

I being then in the service of the said Company, I had the misfortune to be sold to the chief Head of the *Island*, who being a barbarous Wretch, treated me so cruelly, as threw me into a dangerous Sickness; which however proved my happiness; for my Master fearing he should lose me, sold me to a Chyrurgeon for 70 pieces of Eight; who not only treated me very civilly, but also after one Years service, gave me my liberty, under condition only, that I should pay him a 100 pieces of Eight as soon as I could.

The Author sold twice.

Being now free, but naked, I resolved to enter my self into the List of the Pirates, which I did accordingly, and assisted in all their Exploits (of which more anon) till 1672. when I return'd to my native Country: But before I begin my Relation, I will give the Reader the best account I am able of the Isle of *Hispaniola*, seated towards the W. of *America*.

§. III. *A Description of Hispaniola, discovered by Columbus.*

The rich Isle of *Hispaniola* is situate from 17 to 19 *deg.* Latit. Its whole circumference 300 Leagues: Its length from E. to W. 126. and its breadth 50 Leagues. *Christopher Columbus* was the first Discoverer of it in 1492. ever since which time it has remained in the possession of the *Spaniards*, who have many good Cities, Towns, Villages and Plantations there.

The Metropolis of the whole Isle is the City of St. *Domingo*, seated on the S. side, and well stor'd with rich Merchants and Shopkeepers, as being the Residence of the Governour, and the Storehouse of the whole Isle, whence the other Cities are supply'd with all manner of Conveniencies: Its Inhabitants being oblig'd not to Traffick with any but the *Spaniards*. The Country round about affords a most delicious Prospect, by reason of the rich Plantations, verdant Meadows and fruitful Gardens.

St. Jago.

St. *Jago* is another City, but without Walls or Castle, seated at 19 *deg.* Latitude, inhabited by Hunters and Planters, the adjoining Soil being fit for both; and they trade much in Skins and Hides.

Nuestra Senora de alta Gracia.

In the S. part is another City call'd *Nuestra Senora de Alta Gracia*; the Territory whereof producing vast store of *Cocoes*, the Inhabitants trade much in Chocolate, as also Tobacco, Tallow and Ginger.

Isle of Savona.

The Isle of *Savona* being not far distant from *Hispaniola*, the Inhabitants resort thither for Fishing, especially for Tortoises, which bury their Eggs there in vast numbers in the Sand, and are hatch'd by the heat of the Sun. For the rest it is a barren Isle, and produces nothing but some *Lignum Guaiacum*.

Aso. St. John of Goave.

To the S. of St. *Domingo* is a place call'd *the Town of Aso (El Pueblo de aso)* who drive a great Trade with those of St. *Juan de Goave*, another Town in the middle of the Isle inhabited chiefly by Hunters and Butchers, who deal in nothing but Tallow and Hides. Their Territories for 20 Leagues round, feeding a prodigious number of wild Bulls and Cows. The Inhabitants are a mungrel sort of People, born either from *Europeans* and *Negroes* call'd *Mulatos*, or from *Indians* and *Europeans* call'd *Mesticos*, or from *Indians* and *Negroes* call'd *Alcatraces*. For it is the general opinion that the *Spaniards* love the *Negro* or Tawny Women better than the *Europeans*. These are the places of note under the *Spanish* jurisdiction, in this Isle, from the *Cape of Lobos* towards St. *John de Goave*, unto the *Cape of Samana* on the N. side, and from the E. part to the Sea call'd *Punta de Espada*, the rest being possess'd by the *French*; for tho' the *Spaniards* had also many good Towns and Villages on the N. side; these were quite left desolate by the *Spaniards*, since they were ruin'd by the *Dutch*. 1666.

Ports of Hispaniola.

On the W. side from *Cape of Lobos* to *Cape Tiburon*, are no less than four Ports, exceeding in goodness and largeness the best in *England*. From *Cape Tiburon* to the *Cape of Donna Maria* are two more excellent Harbours; and from this Cape to that of St. *Nicholas* twelve more. Each of these Ports lies near the confluence of two or three Rivers, which afford vast quantities of well tasted Fish, as the Sea shores do abound in *Tortoises*.

§. IV. *Fruits, Trees, and Animals of Hispaniola.*

In this Isle you see an infinite number of spacious Fields of 5 or 6 Leagues long, covered with divers sorts of fruit Trees, such as *Orange*, *Lemon*, *Citron*, *Toronjas* and *Limas* Trees; some of these are sweet, others sower, (call'd Crab-Lemons) and some of a pleasant tartish taste; but none of the Lemons are bigger than a good Hens Egg. Sometimes you meet with whole Plains full of *Date-Trees* of 150 or 200 foot high, but without Branches to the very top; within this grows a certain white Substance like a Cabbage, (whence the Leaves and Branches sprout) in which the Dates are contain'd, which ripens but once a Year; but one of the Branches falls every Month, and another sprouts forth instead of it. The Leaves are 7 or 8 foot long, and 3 or 4 broad, used for Tiles. These Cabbages (so we will call them) are greenish on the outside, but white within, which is used by the *Spaniards* as we do our Cabbages, boil'd with Meats. The Dates are much coveted by the Hedge-Hogs. From this white part is separated a Rind, which is as strong, and may be used as Parchment. The Trunks of these Trees are beyond the grasp of two Men, though they are not woody above 3 or 4 inches deep, the Marrow within being like Cheese. They make an incision 3 or 4 foot above the Root, whence distils a Liquor, which after fermentation becomes as strong as Wine. The *French* call them *Frank Palms*, and they grow only here, and in other saltish Grounds.

The Date or Palm-Tree.

Palm Wine.

Hispaniola has besides these, four other sorts of Palm-Trees, call'd the *Latanier*, the *Prickle Palm*, the *Wine Palm*, and *Rosary Palm*.

Latanier Palm.

The *Latanier Palm* is somewhat lower than the *Wine Palm*, but of the same shape, except that the Leaves resemble Women's Fans: It grows in sandy and gravelly Grounds, is 6 or 7 foot in circumference, has very sharp Prickles a foot and half long, and produces its Seed as that beforementioned.

Prickle Palm.

The *Prickle Palm* has got its name from the infinite number of thorny prickles which cover it, from the Root to the very Leaves; and therefore used by the *Indians* to torment their Captive Enemies. This *Palm-tree* differs from the *Latanier* in its Leaves, which are like those of the *Frank Palm*; and its Seed is something bigger and rounder than that of the rest, and full of little Kernels, as sweet as our Walnuts. It grows in marsh Grounds near the Sea side.

Wine Palm.

The *Wine Palm* owes its name to the great quantity of Liquor it affords; it grows on rocky Mountains, but seldom exceeds the height of 40 or 50 foot: About two thirds upwards from the Root the stem is not above 3 or 4 inches thick, but afterwards becomes as big as a good Milk-pail. Its Marrow is like a tender white Cabbage-stalk; which, by incision, furnishes them with the Liquor they by fermentation turn into *Palm-Wine*. The Fruit like that of other Palms, but smaller, not unlike a Cherry, and of a good taste, but causes Inflammations in the Throat.

The Rosary Palm.

The *Rosary Palm* has got its name from its Seed, which being hard and small is very fit for *Rosaries* or *Beads*. It grows on the tops of high Mountains, very strait and tall, with few Leaves. This Isle produces also vast quantities of a certain sort of *Apricot-trees*, whose Fruits are as big as our common Melons, with Stones as big as a Hens Egg: Their taste is the same with ours, but are of an Ash colour. They have another Tree call'd *Caramite*, like our Pear-tree; the Fruit whereof resembles our Damascene Plums, of a very delicious

Apricots.

Caramite-trees.

666. taste, but black on the inside, with three, four or five Kernels, as a big as *Lupine*. They are not so frequent as the *Apricots*, but both afford food for the Wild Boars.

Genipa-trees. The *Genipa-trees* are also found in great plenty, being not unlike our *Cherry-trees*: Their Fruit is as big as two Fists, and of an ash colour, enclosed in a skin, which if eaten causes Griping in the Guts. The juice of it before it ripens is as black as Ink, and is fit for writing, but quite disappears in nine Days. The Wood is very solid, and fit for Ships, being not apt to putrify in the Water.

There are many other excellent Fruits in this Isle, being described already by others, but I must not pass by *Cedars.* in silence the Cedars, which grow in all this part of the World in prodigious quantities. They use them *Canoes* how made. for building their Ships and Canoes, which are a kind of Wherry-boats, made of the Trunk of a Tree hollowed without any iron Instruments, by burning the Tree near the Root, and so governing the Fire afterwards according to their invention; thus they give them their shape, and go 60 or 80 Leagues with them.

Among the Medicinal Trees, that which produces the *Gummi Elemi*, the *Lignum Sanctum*, the *Aloe-wood*, *Cassia Lignea*, *China-roots*, and divers others, deserve a *Mapon.* place. The Tree *Mapon*, besides its Medicinal Vertues, is used for making Canoes, though its Wood is somewhat spungy. But the Wood of the Tree, call'd *Acoma* being very hard, is much used to make Oars for Sugar-mills.

Brazil-wood. This Isle abounds also in Brazil-wood, and that which the *Spaniards* call *Mancanilla*: The first serves chiefly for dying, and grows plentifully along the Coasts, especially near *Jucmel* and *Jaquina*, two convenient Bays fit for the reception of large Ships.

Mancanilla. The *Mancanilla*, or *Dwarf-apple-tree*, grows also near the Sea shore, being so low that the Branches always touch the Water. The Fruit is like our sweet Apples, Its venomous quality. but of a venomous quality; those that eat them, being seized immediately with a violent Thirst, and dying soon after: They even kill the Fish, if they happen to eat of this Fruit. The Tree affords a thick white Liquor, like the Fig-tree, which raises deep Blisters: I happened once to make use of one of the Branches of this Tree to drive away the Gnats, but found my Face swell'd and blister'd all over the next Day.

Yuca. The *Yuca* is a low Tree, growing in sandy Grounds near the River side, bearing a Fruit like our Damascene-plums, which fattens the wild Boars, as our *Abelcose.* Acrons do the Hogs. The Tree call'd *Abelcose* bears a Fruit of the same colour with the *Yucoes*, but of the bigness of a Melon, with a Kernel as big as a Hens Egg, that is yellow and of a pleasant taste: The Trees grow as tall, and near the same shape as our Pear-trees.

Three sorts of *Flies.* Among the Insects of this *Island*, I will only mention three sorts of Flies, which sorely afflict Strangers. The first sort are of the bigness of the common *European* Horse-flies, which stick to and suck the Blood of humane Bodies till they are quite fill'd. The *Spaniards* *Musquitos.* call them *Musquitos*; and the *French Marangnines.* The second The second are no bigger than a grain of Sand, and kind. make not the least noise; they penetrate unperceived the finest Linen Cloth. The Hunters, when going abroad, defend themselves against them by greasing their Faces; and in their Huts by burning Tobacco-leaves. The best is, that being so little, the least Wind disperses them; they are but seldom troublesome in the The third sort. Day time. The third are a kind of *Gnats*, of a red colour, but no bigger than a Mustard-seed; they don't sting but bite, and produce little Ulcers, but never after Sun-set. The *Spaniards* call them *Rajados*; and the *French Calarodes.*

Glow-worms. Here are also a kind of *Glow-worms*, call'd *Cochinillas* and *Moscas de fuego*, or *Fire-flies* by the *Spaniards*; they are somewhat bigger than those of *Europe*, with two little specks on their heads, which give a light like Fire by Night: I observed once three of them in my Hut at midnight, which shined so bright, that by the light they gave I could read a Book. I endeavoured to bring some of them into *Europe*, but with the change of the Climate they lost first their light, and afterwards their lives.

Crickets. *Hispaniola* has also an excessive number of Crickets, much bigger than ours, which make a hideous noise: As also many Serpents, and other Reptiles, but are *Serpents.* neither poisonous nor mischievous, except that now and then they will devour some Fowl, as Pigeons and Pullets. They also catch Rats and Mice, and after they have suck'd their Blood, throw away the Entrails, and swallow the rest entire, which they digest into soft Excrements. Another sort of *Reptiles* they have, 1666. call'd *Fly-catchers*, because they live upon nothing but Flies. *Fly-catchers.*

Of *Land-Tortoises* they have vast numbers; they breed in mead and marshy Grounds, and are accounted good Food by the Inhabitants. They have likewise a kind of a very large *Spider* that breeds in the roofs of Houses: They are of the bigness of a good Hen-Egg, with feet as long as a Sea-crab, very hairy, with four black Teeth, like a Rabbets both for bigness and shape; they bite very fierce, but are not venemous. This Island produces also *Millepedes* (or *Thousand-feet*) and *Scorpions*, but though the Wounds they give often are attended with Inflammations, yet the same disappear again without the application of any Remedy, so that no venemous Creature is found in *Hispaniola*.

However they are terribly pestred with the Beast call'd *Cayman*, a kind of *Crocodiles*, sometimes seventy foot long, and twelve in circumference. These place *Crocodiles.* themselves near the Fords of Rivers or Ponds, where Cattel usually drink, and floating upon the Water like a piece of Timber, with great agillity snatch at the first Man or Beast that comes: What is more surprising is, that they swallow two hundred weight of Stones, to render themselves more heavy, the better to stifle the prey after they have plunged it under Water; which done, they keep it four or 5 days, because they can't eat it unless it be half putrify'd. Thus they will drag Hides that are drying in the Field, into the Water, and keep them after the same manner. I had it from a creditable Person, that being one day busy in washing his Tent in the River, one of these *Crocodiles* took hold Their Cunning. of his Tent, which he being willing to save, pull'd it back with all his strength; at which the *Crocodile* snatched him under Water, and with his weight endeavoured to stifle him, but he having by good chance a very sharp Knife in his mouth (wherewith he had scrap'd the Tent) gave the *Cayman* so many Wounds with it in his Belly, that he expired upon his Body. He had the curiosity to open him, and found in his Stomach a hundred weight of Stones, of the bigness of a Fist.

The *Caymans* have little Scales, which having an aro- They catch matick Scent, the Flies settle and sting underneath *Flies.* them, which makes the *Cayman* devour them as fast as he can catch them. These *Caymans* lay their Eggs on How the some sandy Banks of a River exposed to the Sun, *Caymans* which they cover with their feet, and so leave them to are pro- be hatcht by the heat of the Sun-beams. As these *created.* Eggs are sometimes destroy'd by the Birds, so the female *Cayman* if she fears any of these flocks, swallows these Eggs by Night, and keeps them till the danger is over. As soon as they are hatcht they run to the Water and play with the Dam like Whelps. I have often disturb'd their play with throwing Stones at them to the opposite bank of a River, and us'd to see them run into their Dam's Throats, and come out again as Rabbets do in their holes. They are hatcht all in one season, for they never copulate but in *May*.

Hispaniola has also vast stores of all sorts of four-leg'd §. V. Beasts, as *Horses*, *Bulls*, *Cows*, *wild Boars*, and other Of the useful Animals: But besides it is mightily infested with Country, *wild Dogs*, who appear 50 or 60 together in the Fields, Beasts and and devour the *Colts* and *Calves*; nay, they will some- Birds of times assault entire herds of *wild Boars*, and worry this Isle. them till they have kill'd two or three of them. Of this I saw once a notable instance: Being in the Field with a *Bucanier*, we saw a *wild Boar* standing alone against a Tree, and defending it self couragiously a- A remarka- gainst a great number of *wild Dogs*: After having kill'd ble Story of and wounded several of them with his Tusks; he at- the *wild* tempted to fly, when one of the Dogs leaping on his *Dogs.* back fastned on his Testicles, and quite tore them out; at which the rest being encouraged, did fall unanimously upon the Boar, and soon kill'd him. This done, they all lay down quietly upon the Ground near the prey, till the first Dog, who had seiz'd the Boar had eat as much as he would, then all fell to, and eat till nothing was left.

Monsieur *Ogeron* the *French* Governour of *Tortuga* en- Endea- deavoured to extirpate these *wild Dogs* in 1668. by vours to causing poisoned Carrion to be laid in those places extirpate where they usually resorted; but though a vast num- these *Dogs.* ber of them were kill'd by this means, yet they multiply'd so fast, that this diminution was scarce perceivable. These *wild Dogs* are easily tam'd: The Hunters take the Puppies from the Bitches, and after they are bread up at home, they hunt better than other Dogs.

It is worth our inquiry how these Dogs came into How these this Island. After the Conquest of these Prats by the *Dogs* came *Spaniards*, their Inhabitants having conceived a general- hither.

aversion

1560. aversion against them, fled into the Woods, from whence they did considerable mischief to their new Masters. These for want of other remedies, sent for a great number of Dogs to search the Woods, whence they chased their Enemies, and kill'd vast numbers of them; which nevertheless was so far from reducing the rest, that they rather chose to dye in subterraneous Caverns, than submit to their merciless Conquerours. Hence it is that you see frequently large Caves full of human Bones in those parts. The *Spaniards* having no farther occasion for these Dogs, turn'd them out of their Houses, and these betook to the Woods for food, and grew wild in process of time.

Wild Horses. The whole Isle abounds in *wild Horses*; they are low and short, great heads, long necks, and thick legs; and appear always in Troops of two or three hundred, one always going before the rest. They will stand still till you come within reach of them, but then start and fly away on a sudden. They take them for their Skin's sake; sometimes they smoak their Flesh for the Sea.

Wild Bulls and Cows. Of *wild Bulls* and *Cows* they have also vast store, tho' many of them have been destroy'd by the Hunters. The *Bulls* are of a large size, but harmless. The Hides are from eleven to thirteen foot long.

Birds. Among the various sorts of Birds, I will content my self to mention only a few. They have certain *wood Pullets* (call'd *Pintadas* by the *Spaniards*) as good as our tame ones, and *Parrots* in vast numbers; these build in the holes of the *Palmito trees*, not of their own making, (for their Bills are too crooked) but excavated by a certain small Bird, no bigger than a *Sparrow*, call'd the *Carpinter*, which has a very sharp Bill. *Pigeons* in vast plenty, which are something fatter and bigger than those of *Tortuga*, and eatable at the same season. They have another sort of small Birds, call'd *Cabreros* or *Goat-keepers*, which are very like those call'd *Heronsetas*, and chiefly feed upon *Sea Crabs*. These Birds have seven distinct bladders of Gall, and their Flesh is as bitter as Aloes. *Crows* and *Ravens* are numberless here, being the same as in *Europe*, feeding upon dead Carcasses.

Wild Pullets. Parrots. Carpinters. Pigeons. Cabreros. Crows.

Settlement of the French in those parts. How the *French* came into these parts, we have mentioned before; we will add something concerning their manner of Living and Employments. These are of three sorts; Hunting, Planting, or Pirating at Sea. Whatever Employment they take to, they always join with a Partner (upon certain Articles) in a common Stock, whom if they dye without Wife or Children, they generally constitute their Heir.

The Hunters and Bucaniers. The Hunters are of two sorts: For those that Hunt the wild Bulls and Cows are call'd *Bucaniers*, but such as hunt the wild Boars properly *Hunters*. The first were formerly six hundred strong, but by the decrease of the Cattel are now reduced to three hundred. They commonly remain for two Years in the Woods, and after their return divide the Spoil, when they go to *Tortuga* to buy Guns, Powder and Shot for the next Expedition, and spend all the rest in Brandy, Wine, and lewd Women, being a very debauch'd Generation, and very cruel to their Servants: Neither are the Hunters of the wild Boars of a better stamp; they join five or six in Company, and go a hunting three or four Months together; the Flesh they salt, and sell to, or rather exchange with the Planters at a certain rate for Tobacco.

The Planters. The Planters began to cultivate first the Isle of *Tortuga* in 1598. The first Plantation was of Tobacco, which succeeded to admiration, but there being but little Ground fit for that purpose, they attempted to make Sugar, but that not answering the charge, the greatest part apply'd themselves to hunting and piracy.

But the Hunters being also too numerous, they were forced to endeavour to render some more Grounds fit for culture; so that now their number is encreased to two thousand, who have their Plantations in the following Quarters; *the great Anse, Nep, Rochelois, the little Grave, the great Grave*, and the *Angame*: Most of which they rendred fit for cultivation with incredible Pains, being forced to make their way through thick Woods, the Shrubs and little Trees whereof they set on fire, as well as the great ones, and then dug up the Roots as well as they could.

Beans, Potatoes. The first Seed they sow'd was Beans, which here ripen and dry in six Weeks. The second they attempted was *Potatos*, which come to perfection in four Months. These they boil in fair Water, and after they have covered them for half an hour with a Cloth, they become as soft as Chesnuts. Of these *Potatos* they make a Liquor call'd *Maiz*. They cut them into small slices, and cover them with hot Water, which being well imbibed they press it through a course Cloth: The Liquor being put in Vessels to settle, ferments in three Days, and having thrown off its Lees is kept for use, being of a pleasant sowrish taste, and not unwholesome. This invention is owing to the *Indians*. 1666.

Mandioca or Cazave Root. The third Fruit is the *Mandioca* Root, which does not come to perfection till after eight or nine Months, and when ripe may be left eleven or twelve Months in the Ground without corruption, but after that putrifies. Of this Root they make a kind of white Flower or Meal (for want of Wheat) thus: They grate them upon certain graters, made of Copper or Tin (such as they use in *Holland* to grate Horse-radishes with) and put the Ratlings into coarse linen Bags, and squeeze out the moisture. Then they sieve the gratings, and dry them upon hot iron Plates, whence they afterwards remove them to the tops of their Houses to be thoroughly dry'd in the Sun. What does not pass the Sieve is roll'd up in pieces of five or six inches thick, which being laid together till they begin to corrupt, produces a liquor call'd *Veycou*, not inferiour to *English* Beer.

Bananas. Of the *Bananas* they also prepare a liquor as strong and pleasant as the best *Spanish* Wine, but is apt to inflame the Throat. Of the *Guineas agudos* they make also a certain drink, but not so strong as the former: Both may be drank mixt with Water. *Guineas agudos.*

Tobacco. The manner of planting *Tobacco* is perform'd thus: They sow the *Tobacco* upon beds of twelve foot square, covered with Palmite Leaves, to keep off the Sun, and water them when it does not rain, till the *Tobacco* be grown to the bigness of our young *Lettuce*; then they plant them in the Fields in streight lines, each Plant three foot distant from one another. This must be done from *January* till the end of *March*, when the most rains fall. Then they weed it carefully, and when grown to the height of a foot and half, they cut off the tops; and as soon as it is come to perfection, lay it upon Poles or Rafters, (in certain Sheds made for that purpose) to dry; when it is thoroughly dry'd they strip the leaves from the stalks, which are made up into rolls. The *Tobacco* has this property, that if, whilst upon the ground, the leaves be pull'd off from the stalk, it will sprout forth again four times a year.

How planted. *And dry'd.*

It was not without great reluctancy the *French* Planters of *Hispaniola* submitted to the Governours of *Tortuga*: When in 1664 the *French West India* Company seized upon that Isle, the Planters of *Hispaniola* were so refractory to their Governour in the Isle of *Tortuga*, as proved one of the chiefest occasion of the Company's quitting that Colony. Afterwards the Governour of *Tortuga* endeavoured to reduce them, by intercepting their Commerce with *France*; but being supply'd with Necessaries by the *Dutch*, they bid defiance to the said Governour; and even proceeded so far as to enter into a Design to kill him, to possess themselves of the Isle of *Tortuga*, and erect a Commonwealth independent of the Crown of *France*: But the War breaking out not long after betwixt the *French* and *Dutch*, the Governour obtain'd two Frigots from the King with arm'd Men, who reduced the *French* Planters in *Hispaniola* to Obedience, under condition that they should be at liberty to trade with what Nation they thought fit.

Spaniards came subject to France.

Kidnapers. These Planters have but few Slaves, and these are such as for the most part are kidnapt in divers *European* Countries. They are oblig'd to serve only three Years, but during that undergo such intolerable Slavery and Drudgery as is not to be express'd; being much worse us'd than the Negro Slaves, who are their perpetual Slaves, whereas these being only bound for a short time, they care not whether they live or dye. This produces in many (of a weak and tender Constitution and Education) a Disease call'd *Crona*, which in a manner deprives them of their Senses: Besides that oftentimes they beat them to that degree that they expire under their hands. Of this I have been a Witness more than once: I remember that such a Servant being retaken by his cruel Patron (after having quitted his service) he ty'd him to a Tree, and there gave him so many lashes till his Body was quite covered with Blood; afterwards he caused Crab Lemon Juice, Salt and Pepper to be rubb'd into his Wounds; and having left him in this condition 24 Hours, lash'd him again the next Day, till he expired, wishing his Patron as many Torments before he dyed, as he had made him to feel; which was fulfill'd soon after: For in three or four Days after he run mad, howl'd like a Dog, and tore his own flesh from his bones till he dy'd.

Cruelty of the Planters.

How the English use their Slaves. Those of the *Cariby* Isles are rather accounted worse: In the Isle of St. *Christopher's* lives one *Betteſa*, who thus has kill'd above a hundred Slaves. The *English* are no better, nothing being more common among them than

1665. to use their Slaves with such rigour the last Year (they being bound for seven) as to force them to intreat their Masters to sell them to others for seven Years longer, and frequently for three or four: I have known some serve thus fifteen or twenty Years. They have also a Law in their Plantations, that in case a Man owes but 25 Shillings *English*, he is liable to be sold for six or 8 Months. But not to insist farther upon these matters, I will now proceed to give the Reader an impartial Account of the famous Exploits of the greatest Pirates, of which I my self have been an Eye-witness.

§. VI. Origine of these Pirates.

The first Pirate known upon *Tortuga* was *Peter the Great*, born at *Diep* in *Normandy*. The *Spaniards* having till this time scarcely sail'd through the Channel of *Bahama*, the said *Pierre le Grand* undertook the boldest attempt that ever was heard of before or since: For being at Sea with a Boat mann'd only with 28 Men, without meeting with any Prizes, and all their Provisions spent, the espy'd a stout Ship (being the Vice Admiral of the *Spanish Flota*) near the Cape of *Tiburon* on the West side of *Hispaniola*, which they resolv'd to attack in the dusk of the Evening. Having for this purpose order'd the Chirurgeon to bore a hole in the sides of the Boat (to take away all hopes of an escape) they climb'd up the sides of the Ship with no other Arms than each a Pistol in one and a Sword in the other hand; and whilst some seized the Captain in the great Cabin with other Officers, the rest made themselves masters of the Gun-room, killing all that made the least opposition; and at last forcing the rest to surrender the Ship, which *Pierre* carried to *France*, and never return'd to *America*.

Bold Attempt of *Pierre le Grand*.

Those of *Tortuga* turn'd Pirates.

However this rich Prize was a sufficient encouragement to many Hunters and Planters of *Tortuga* to follow his footsteps; but being unprovided with good Ships, they made use at first of Canoes only, wherewith they cruised upon the Cape of *Alvarez*; and having taken many of the *Spanish* Coasters trading with Tobacco and Hides to the *Havana*, they carry'd them to *Tortuga*, where being sold at a good rate, they met with sufficient opportunity to provide themselves with all Necessaries for a greater Expedition. Accordingly they sail'd, some to *Campeche*, others to *New Spain*, whereabouts they took within a Month four large Vessels, two whereof being bound with Plate from *Campeche* to *Caracas*, they stock'd the whole Isle of *Tortuga* with Riches. And as this success was a sufficient encouragement to the rest, so in this small Isle there were no less than twenty of these Ships equipt in a little time, which oblig'd the *Spaniards* to set out twelve Men of War for the defence of these Coasts.

§. VII. How they arm their Vessels and regulate their Voyages.

A certain number of Pirates being agreed to go to Sea, they meet at a certain day to appoint the time of their Embarkment, and settle the allotment of Provisions every Man is to bring, which is generally Flesh, and especially Pork, and next to that Tortoises. Their Pork they commonly steal out of the *Hog-yards* of the *Spaniards*, who have often 1000 heads of Swine together. Being all come aboard the Ship, they allow every Man whatever he can eat, without any distinction from the meanest Sailor to the Captain.

Articles of agreement among them.

Before their departure they enter into certain Articles, to regulate what summ of Money each particular Person is to have (besides his share in the Booty:) As first how much for the Captain for his Ship; next the Ship-wright, which is commonly 100 or 150 pieces of Eight. Then the Chirurgeon and his Chest 200 or 250 pieces of Eight. Next the Mariners and Wounded come into consideration; as for the loss of the right Arm 600 pieces of Eight, or 6 Slaves; for the left 500 or 5 Slaves; For a right Leg, 500 or 5 Slaves; for the left 400 or 4 Saves: for an Eye 100 or 1 Slave: for a Finger the same. All which is to be taken out of the common Stock of what they take, and an exact dividend to be made of the remainder, according to their respective Stations. Of this the Captain has five or six shares to what a common Seaman has: The Master's Mate two, and so in proportion; of the which they draw equal shares, and Boys half a share. 'Tis for this reason they are oblig'd to declare by a solemn Oath, that they have conceal'd nothing: For the rest, they are very charitable to one another, assisting one another upon all occasions. What Prisoners they take they commonly set ashore, except such as they stand in need of, who are also released in two or three Years.

Their Charity to one another.

At the Isle of *Cuba* they commonly careen their Vessels, and provide themselves with Tortoises, which they take from the Fishermen: Of these *America* produces four different sorts. The first have Scales so soft that they may be cut with a Knife; and weigh often 2000 or 3000 pounds, but are not fit for food. The second are greenish, indifferently big, and of a good taste, with a hard shell. The third is almost the same with the former, except that the head is something bigger, and affords no good food: The *French* call them *Cavana*. The fourth sort is like those of *Europe*, call'd *Caret* by the Inhabitants. These are generally seen among the Rocks, where they feed upon Sea Apples; as the others do upon Grass growing on the sandy Banks. Their Eggs are not unlike those of the *Crocodiles*, but without a shell, covered only with a thin film. If vast numbers of these Eggs were not destroy'd by the Birds, the Sea would be covered with *Tortoises*. They lay their Eggs at certain places every Year; the chief are the three Isles call'd *Caymanes*, at 20 *deg.* 15 *min.* Latitude, 45 Leagues N. of *Cuba*: While they are at these Isles they eat little or nothing, but the season of hatching being past, they retire to *Cuba*, where in a Months time they grow fat, and are taken in prodigious quantities, only by means of a sharp Nail fix'd at the end of a long Pole, which they strike into the *Tortoises* whenever they appear above Water. 1665. Four Different sorts of *Tortises*. Their *Eggs*. How taken.

The Inhabitants of *New Spain* and *Campeche* commonly transport their Commodities in Ships of great bulk. They sail from *Campeche* in the Winter to *Caracas*, the *Trinity Isles*, and that of St. *Margaret*, and return in the Summer. It is on these Coasts the Pirates us'd to keep their Stations in the proper seasons, but if they happen'd to miss their aim, they then used to undertake some more hazardous Enterprizes; of which I will give some Instances. Stations of the Pirates.

A certain Pirate named *Peter Francis*, having for a considerable time waited in vain for the return of the Ships from *Maracaibo* to *Campeche*, steer'd his Course to *Rancherias* near the *Plata* River at 12 *deg.* 30 *min.* N. Latit. where is a rich Pearl Fishery, managed every year by twelve Vessels sent thither from *Cartagena*, under Convoy of a Man of War. He found the said Pearl Fleet riding at anchor at the entrance of the River *de la Hacha*, in calm weather; the Convoy about half a League distant from the rest. With this intention he row'd along the Coast, as if he had been a *Spanish* Vessel, but being come up unawares with the Vice Commodore, carrying eight Guns and sixty Men, he boarded her, and forced the Crew to surrender; having compell'd them to assist him in his farther design, he sunk the Boat, and putting up *Spanish* Colours, set sail in hopes to surprize (by this Stratagem) the Commodore, and consequently the whole Fleet: But the Commodore fearing a Mutiny among the Mariners, and that they intended to go off with the Riches on board her; he set sail also, which made the Pirate change his resolutions, and to make the best of his way into the main Sea. Accordingly they laid on all the Sail they could, which prov'd their Ruin: For a sudden gust of Wind having brought the Main-Mast by the board, they were overtaken by the Man of War; with whom they engag'd couragiously for some time; but being no more than 22 sound Men, were oblig'd at last to surrender, on condition that they should not be made Slaves, but be set ashore on free Land. *Peter Francis*. He goes in quest of the Pearl Fleet. Takes the Vice Commodore. Loses his Main-mast. Is taken.

As bold an Attempt as this was made by another head of the Pirates, call'd *Bartholomew the Portuguese*, (he being a Native of *Portugal*) who setting sail from *Jamaica* in a Boat of 4 Guns and 30 Men, attacked upon the Cape of *Corriente* in *Cuba* a *Spanish* Ship bound from *Maracaibo* and *Cartagena* to the *Havana*, provided with 20 Guns and 70 Men; and after a dubious Fight made himself Master of her; but the Wind being contrary for *Jamaica*, they were forc'd to steer for Cape St. *Anthony* (to the West of *Cuba*) to get fresh Water; there being met by three stout *Spanish* Ships from *New Spain*, bound to the *Havana*, by whom they were retaken, with the whole Cargo, consisting in 120000 weight of *Cocao Nuts*, and 70000 pieces of Eight. These Vessels being afterwards separated by Storm, that which carried the Pirates got safe to *Campeche*, where the Magistrates condemn'd *Bartholomew* to be hang'd. Having soon got notice of their design, he prepar'd, for his escape, two earthen Jars well stopp'd, to help him in swimming (being not vers'd in that art) and to escape the vigilancy of his Centry, stab'd him with a Knife, and then throwing himself with the Jars into the Sea, he got ashore and retired into the Woods; thence making the best of his way to the *Golfo triste* (40 Leagues from *Campeche*) he after a most painful Journey of fourteen Days, safely arrived there; being forc'd to cross several Rivers upon old Boards fastned together with Osiers and twigs of Trees; the N°. 1. *Bartholomew the Portuguese*. Takes a great Ship. Is taken himself. Is brought to *Campeche*, and condemn'd to be hanged. Kills his Centry and swims ashore. Comes to *Cape Triste*.

1666. the old Nails whetted against a Stone serving instead of a Knife.

Here meeting with a Vessel of Pirates lately come from *Jamaica*, unto whom having related his whole Adventure, he desired only a Boat and 20 Men of them, promising he would return to *Campeche*, and assault the same Ships that had taken him before. His Comrades having granted his request, he retir'd in 8 Days to the River of *Campeche*, and with an undaunted Courage assaulted and took the beforementioned Ship, who taking him for a Boat that carried Contraband Goods aboard, were in no posture to resist him. *Bartholomew* seeing himself thus Master of the same Ship in which he had been so lately detain'd in order to be hang'd, was not a little rejoyc'd at this change of fortune, and made the best of his way out of the Port towards *Jamaica*; but near the Isle of *Pines* to the South of *Cuba*, was overtaken by a violent Tempest, which split his rich Prize against the *Jardines* rocks. However he and his Crew had the good fortune to escape in a Canoe to *Jamaica*, where soon after he went on new Adventures, but without success.

Returns with a Boat to Campeche.

Retakes the Ship by which he was taken, and loses her by Storm.

Returns to Jamaica.

N°. 2. *Roche Brasiliano.*

The Exploits of *Roche Brasiliano* are no less famous than those of the former. He being a Native of *Groningen* (in *Friesland*) and his name unknown, got the Sirname of *Brasiliano*, where he had liv'd a great while; and after the recovery of *Brasil* by the *Portugueze* from the *Dutch*, was fled to *Jamaica*. Here he entred into the Society of the Pirates, among whom he serv'd as a common Sailor for some time, and behaved himself so well, that upon a difference of a great part of the Ship's Crew with their Captain, those that left the Ship, made him Chief of a Vessel they were fitting out for the same purpose.

Is made Captain.

He had not been long at Sea before he took a rich *Spanish* Ship coming from *New Spain*, with a vast quantity of Plate aboard, which made his name celebrated at *Jamaica*; though otherwise he was a brutish Fellow, and very cruel in his Inclinations, especially against the *Spaniards*, whom he would sometimes order to be roasted alive.

Takes a rich Ship.

Is Shipwreck'd. Escapes in a Canoe.

After some time cruising betwixt *Campeche* and *Golfo triste*, he lost his Ship by Storm, but he and the Mariners got ashore in a Canoe, only with their Arms, Muskets, and Ammunition. Being on their Journey along the Coast to *Golfo triste* (the Rendezvouz of these Pirates) almost spent with hunger and thirst, they were stopt by 100 *Spaniards* well arm'd, whom they defeated after an obstinate Fight, though they were no more than thirty in number. As they were continuing their march along the Sea shore, they espy'd a small Man of War, a Convoy to some Canoes that were loading Wood there; *Basiliano* sent six of his Men in the Night to observe their motions, who having possess'd themselves of the Canoes by Stratagem, gave the signal to the rest, who coming timely to their assistance, they boarded and took the little Convoy. Thus being again Masters of a Ship, they wanted only Provisions; the defect whereof they supply'd by killing the Horses they had taken in their Journey; and so to Sea they went again, and soon after took a rich Ship going from *New Spain* to *Maracaibo*, with abundance of pieces of Eight, and other valuable Commodities; all which they carried to *Jamaica*, and according to their custom spent it all in Taverns and Stews: Nothing being more common among these Pirates than to spend 3000 pieces of Eight in a Night, without leaving themselves a Penny, or a Shirt the next Morning.

Takes a small Convoy.

As also a rich Ship from *New Spain*.

Returns to *Jamaica*.

Brasiliano and his Crew having spent all they got before, were forced to have recourse to their old Trade. Coming on the Coast of *Campeche*, he with most of his Men went in a Canoe to view the Port, but by misfortune was taken with all his Men, and committed to a Dungeon, in order to be hang'd; which they had infallibly been, had it not been for a Stratagem of *Brasiliano's*, who counterfeiting a Letter, writ in the name of the whole Society of the Pirates, found means to have it convey'd to the Governour. This Letter containing in substance, *That if he did any harm to those in his Custody, they would give no quarter to any* Spaniard *that should fall into their hands.* This had such an influence upon the Governour, (who knew the Coast of *Campeche* always to be infested with them) that he releas'd them, exacting only an Oath from them, that they would desist from Piracy for the future; and so sent them in the quality of common Seamen, in the Galleoons to *Spain*. But having got 800 pieces of Eight together in this Voyage, they made shift by the help thereof to return to *Jamaica*, from whence they set out to Sea again, and committed greater Robberies and Cruelties upon the *Spaniards* than before.

1666.

He goes to Sea again.

Is taken, and in danger of being hang'd, but escapes by a Stratagem.

Is sent to *Spain*, and returns to *Jamaica*.

This obliged the *Spaniards* to have recourse to other remedies, which they thought to have found in the diminishing the number of their Ships; which the Pirates soon perceiving, they gathered into Companies, and landed in their Dominions, spoiling and pillaging their Cities, Towns and Villages.

The Pirates begin to land in the *Spanish* Dominions.

The first Pirate who attempted to land in the *Spanish* Dominions was *Lewis Scot*, who sackt and put to an excessive ransom the City of *Campeche*. After him one *Mansvelt* invaded *Granada*, and penetrated to the South Sea; and being forced thence for want of Provisions, took the Isle of St. *Catherine*. But the great Actions of *John Davis* (a Native of *Jamaica*) in the Kingdom of *Granada Nueva* ought not to be pass'd by in silence. This Pirate having in vain cruised in the *Gulf* of *Pocatauro*, in an expectation of some Ships from *Cartagena*, bound to *Nicaragua*, at last resolved to pillage the last of these two places: He put 80 Men out of 90 into three Canoes, and entring the River in the dark of the Night, lurk'd by day near the Banks under the Trees, which grow thick along the River sides. The third Night approaching, the City and the Country taking them for Fisherboats, they set ashore an *Indian* who was run away from his Master; this Fellow having murthered the Centinel, they all entred the City; and being conducted to the wealthiest Houses and Churches, took all they thought worth carrying, without much Tumult for some time; till at last the whole City being put into an Alarm, the Pirates march'd off in good order with their Booty, and some Prisoners of note, and got safely aboard their Ship, though the City was 40 Leagues from the Sea.

Lewis Scot and *Mansvelt*.

John Davis.

They kill the Centry, and rob the City.

They brought above 50000 pieces of Eight in Money and Jewels to *Jamaica*; which being soon spent, they chose the said *John Davis* Commodore of 7 or 8 Vessels, wherewith he steer'd his Course to the North of *Cuba*, to wait for the Fleet from *New Spain*; but missing his aim there, directed his Course for *Florida*, where he landed his Men, and pillaged the City of St. *Austin* of *Florida* without the loss of one Man, tho' the Castle had a Garrison of 200 Men.

He goes to Sea again.

Sacks St. *Austin*.

Thus much of *Hispaniola* and *Tortuga*: We will now proceed to give you an account of the actions of two famous Pirates, who committed incredible Barbarities upon the *Spaniards*.

CHAP. III.

The second Part of the Bucaniers *of* America.

§. I. *Francis Lolonois* and his Robberies.

FRancis *Lolonois* was born in *France*, in that District known by the name of the *Sands of Olone*. He serv'd in his Youth as a Slave in the *Carriby* Islands, and afterwards coming to *Hispaniola*, lived among the Hunters, before he join'd with the Pirates.

N°. 3. Turns Pirate, and gets a Ship.

In his first two Voyages he serv'd as a common Sailor; in which station he behaved himself so well, that Monsieur *de la Place*, Governour of *Tortuga*, bestow'd a Ship upon him, wherewith he got great Riches. But being sometime after Shipwreck'd on the Coast of *Campeche*, and forced to save himself and his Men ashore, they were for the most part kill'd by the *Spaniards*, and he himself wounded, which sav'd his Life; for mingling Sand with the Blood of his Wounds, he so defaced all his Body, that lying among the Dead, he was taken for such by the *Spaniards*, who had no sooner quitted the Field, but he made shift to get into the Woods: Hence taking his way to *Campeche*, he went disguised in a *Spanish* habit through the City

Is Shipwreck'd, but escapes with Life.

Appears in disguise at *Campeche*.

1666. City, whilst the Citizens were making Bonfires for his Death; and having enticed some Slaves to follow his Fortune, they stole a Canoe, and came safe to *Tortuga*. Here he made a shift to get another Ship mann'd with 21 Sailors; with these he sail'd to *Cuba*, on the South whereof lies the Village *de los Cayos*, the Inhabitants whereof being very rich in Tobacco, Sugar and Hides, he hop'd to ease them of their Treasure, by sacking the Place. But these being forewarn'd by some Fishermen, obtain'd a stout Ship from the Governour of the *Havana*. The Pirates had no sooner notice of the arrival of this Ship, which carried 10 Guns and 90 Men, then at anchor in the River *Estera*, but they forced some Fishermen to conduct them into the Port; and coming up by 2 in the Morning with the Ship, (who took them for Fishermen) they assaulted the Vessel on both sides with their two Canoes, and drove the Crew with Sword in hand under the Hatches. The Governour of the *Havana* having expresly order'd the Captain not to give Quarter to any of the Pirates, ordered the *Spaniards* to be brought up one by one; and so had their Heads struck off, reserving only one alive, who he dispatch'd to the Governour, to let him know, that for the future he would serve all the *Spaniards* that fell into his hands in the same manner, and that he hop'd to execute the same upon his own Person. The Governour was so exasperated thereat, that he swore he would hang all the Pirates he took; but was oblig'd to recal his Oath, at the intercession of the Inhabitants, who living for a great part upon Fishing, were likely to have the worst of it.

Goes to Sea again.

Takes a great Ship.

Lolonois having now got a good Ship, but with few Men and little Provisions, he thought it his best way to return to *Tortuga*, to fit himself with both for a greater Enterprize; which he did accordingly, having the good fortune to take in his way thither another rich Prize, laden with Plate and other rich Commodities.

§. II. *Lolonois gets together a fleet.*

The good success of *Lolonois*, and the fame of his future designs soon got him together a body of 400 Pirates; which being join'd by another famous Pirate nam'd *Michael de Basso*, (an Inhabitant of *Tortuga*) they made in all 660 fighting Men, embark'd in eight Vessels, the biggest whereof carried ten Guns.

The first steer'd their Course for *Hispaniola*, where being join'd by a good number of *French* Hunters, and provided with several Necessaries, they sail'd for the East Cape of the Isle call'd *Punta de Espada*, whereabouts espying a Ship bound to *New Spain*, *Lolonois* alone went in quest of her, ordering the Rendevouz of the Fleet to be at *Savona*, to the East of Cape *Punta de Espada*. The *Spaniards* having 16 Guns and 50 sound Men aboard, receiv'd the Pirate couragiously, but after three Hours fight were forced to yield the Ship, in which they found 120000 weight of Cocoa Nuts, 40000 pieces of Eight, and 10000 more in Jewels. This Price he sent immediately to *Tortuga*, to be disposed of there, and to return with Provisions and Ammunition to *Savona*; where *Lolonois* was no sooner arriv'd, but he found that his Comrades had not been idle, having taken a *Spanish* Vessel of eight Guns, bound for *Hispaniola*, with 7000 weight of Powder, a great number of Muskuets, and 1200 pieces of Eight, which was a seasonable Booty for them at this juncture.

Takes a rich Ship.

The Pirates take another.

The Ship lately sent to *Tortuga* by *Lolonois*, was no sooner return'd with the desired Provisions, but he chose her for his own, giving that which he commanded hitherto to *Antony du Puis*; and thus equipt, they set sail for *Maracaibo* in *Nueva Venezuela*, at 12 *deg.* 10 *min.* N. Latitude. This Isle is 20 Leagues long and 12 broad, and to this Port belong the Isles of *Onega* and *Monges*. The West side is call'd *Cape of Caquibacoa*, and the East side *Cape St. Roman*, and the Gulf the *Gulf of Venezuela*, but the Pirates commonly call it the *Bay of Maracaibo*.

At the entrance of the Gulf are two Isles, extending from East to West. That to the East is call'd *Isla de las Vigilias*, having a Watch house on a high Hill. The other *Isla de la Palomos*: Between these two Isles is a fresh Water Lake 60 Leagues long and 30 broad; which disembogueing into the Ocean, dilates it self near these two Islands: Betwixt which is the Channel or passage for Ships, of the breadth of a Cannon shot of an eight Pounder. The *Isle of Pigeons* has a Fort commanding the Passage, by reason of the Sand banks on the opposite shore, with only 14 foot Water: There are many other Shelves 40 Leagues within the Lake, scarce 10 foot deep, and some not above 6 or 7.

The *Watch Isle*.

The *Pigeon Isle*.

The Lake of *Maracaibo*.

Sand Banks.

To the West hereof is seated the City of *Maracaibo*, pleasantly built all along the shore: It contains about 3000 or 4000 Souls, Slaves included, among whom 800 are capable of bearing Arms. It has one very handsome Parish Church, four Monasteries and one Hospital: It is under the Government of a Deputy of the Governour of *Caracas*. Their Trade consists in Hides and Tobacco; the Country for 30 Leagues round containing a vast number of Cattel, and good Plantations. Hence it is that those of *Gibraltar* are furnish'd hence with Flesh, in lieu whereof they send to *Maracaibo* Oranges, Lemons, Cocaos, and other sort of Fruits.

The City of *Maracaibo*.

1666.

Maracaibo has a secure and spacious Port, fit for the building of Ships, by reason of the cheapness of Timber near it. Near the City lies the small Isle of *Borrica*, which feeds great number of Goats, and some Sheep, but of a small size. In some Islands of this Lake, and in other places on the West side inhabit still certain Savage *Indians*, call *Bravos*, i. e. *Wild* by the *Spaniards*, which could never be reduced or civiliz'd by them. They dwell in small Huts, built upon Trees near the Water side, as do also many Fishermen on the East side of the Lake, for fear of Inundations which are frequently here, by reason of the conflux of no less than 25 Rivers into this Lake; an inconveniency the Town of *Gibraltar* is also often subject to.

Its Port.

The Isle *Borrica*.

Wild *Indians*.

Gibraltar is seated 40 Leagues within the Lake, containing about 1500 Inhabitants, 400 whereof are capable of bearing Arms. Their adjacent Fields afford good store of Sugar, Cocoas, Timber wood and Cedars, seven or 8 foot in circumference; being well furnished with Brooks and Channels for the conveniency of their Plantations, which produce abundance of that sort of Tobacco stiled for its excellency *Tobacco de Sacerdotes*. Their Territories are 20 Leagues in compass; and being surrounded with high Mountains, they are forced to carry all their Merchandizes upon Mules to *Merida*, a City on the other side of the Mountains, unto which *Gibraltar* owes its subjection.

Gibraltar.

Priests Tobacco.

Merida.

Lolonois coming to the Gulph of *Venezuela*, cast an anchor out of sight of the Watch Isle with his Fleet, and the next day entring the Lake of *Maracaibo*, landed his Men a League from a Fort, which commands the Bar, and therefore call'd the *Barra*, consisting only of some Baskets of Earth placed on a rising Ground, with 16 Guns planted behind, and a little Breast-work to cover the Gunners. The Governour having got notice of their landing, had laid an Ambuscade to cut them off in the Rear, whilst he attacked them in Front; but the Pirates having got intelligence of it, first routed those laid in Ambuscade, and having cut off their Retreat to the Fort, attacked the same with Sword and Pistol in hand so furiously, that after an obstinate Fight of three Hours, they at last became Masters of it. Whilst they were engaged near the Fort, those that been routed in the Ambuscade, retreated to *Maracaibo* 6 Leagues thence, and put the City into such a consternation, that the Inhabitants fled with all their best Moveables, some to the Woods, the rest to *Gibraltar*.

Lolonois comes into the Gulph.

Takes a Fort near *Maracaibo*.

The Castle was no sooner taken, but the Pirates ordered their Ships to advance; and having spent the remainder of the Day in demolishing the Fortifications, steer'd the next Day for *Maracaibo*, where they arriv'd the following Morning, and landed their Men, under the favour of the great Guns, for fear of Ambushes, though there was no Body to oppose them. Thus they entred the City without opposition, destitute of Inhabitants, but met with good store of Bread, Flower, Pork, Brandy, Wine and Poultry. After having placed convenient Guards, they sent out divers Parties, who brought back some Prisoners and 20000 pieces of Eight. They put the Prisoners to most violent Torments, to learn from them where their Inhabitants had buried their Riches, and *Lolonois* cut one of the *Spaniards* to pieces in sight of the rest, but whether it were that they were resolved not to own any thing, or that their fellow Citizens had removed their Effects to other places, they could find out nothing of moment.

Demolish it.

Land and plunder *Maracaibo*.

Lolonois cuts a *Spaniard* to pieces.

Thus after fifteen Days stay at *Maracaibo* they resolved to go to *Gibraltar*, not knowing that the Governour of *Merida* was come to their relief with 400 Men, and as he was a good Soldier, had raised two Batteries, one of twenty, the other of eight Guns, near the Sea shore, and barricado'd up the narrow passage by Land, through which they must advance towards the City, resolving to dispute it to the utmost with 800 chosen Men.

Gibraltar fortify'd by the Governour of *Merida*.

The

1666. The Pirates, I say, being ignorant of these preparations, steer'd towards *Gibraltar*, where finding the Royal Standard display'd in defiance of them, *Lolonois* call'd a Council of War, wherein, after many Debates, it was notwithstanding all the difficulties resolved to attempt the place, as not questioning but that all the Riches of *Maracaibo* were laid up at *Gibraltar*.

The Pirates land near *Gibraltar*.

Accordingly having cast an Anchor a quarter of a League from the Town, they landed 350 Men next Morning by break of Day, arm'd only with Cutlasses and Pistols, and Powder for 30 Charge each. After they had all shook Hands, *Lolonois* cry'd, *Brothers, follow me*; and so on they march'd, following their Guide, who brought them to the narrow barricado'd passage: But finding this place too hot for them, they turn'd off on one side into the Woods, but by reason of the boggy Ground, stuck in the Mire; the *Spaniards* playing upon them all this while with their Cannon: However they cut down the Branches of Trees, by the help whereof they got through the Wood: Here they were saluted by a Battery of six Guns, loaden with small Bullets and pieces of Iron, which together with a vigorous Sally made by the Enemy put them into confusion, and obliged them to look for some other passage; but finding all the Roads intercepted by Trees laid a cross, they were forced to have recourse to an old Stratagem; *Lolonois* ordered his Men to make a shew of flying, thereby to draw the *Spaniards* into the Field: This succeeded according to expectation; for these seeing them run away, sally'd out in great disorder, and pursuing the Pirates at a good distance from their Batteries, these rallied, and with incredible Bravery, fought their way through them to the Batteries; who seeing their Forces routed, and flying to the Woods, surrender'd at discretion, leaving the Town to the mercy of the Enemy. These set up their own Colours, carried all the Prisoners to the great Church, and there raised a Battery for their better defence, in case the *Spaniards* should rally their broken Forces. Above 500 *Spaniards* were slain upon this occasion, besides a great number wounded, and 150 taken Prisoners, without reckoning 500 Slaves. The Pirates had 40 kill'd, and 80 wounded, most whereof died by reason of the bad air. Here they spent near a Month in searching for what Riches they could meet with, not only in the Town, but also in the circumjacent Country; most of the wretched Prisoners dying in the mean while for hunger, except some few Women, who for hunger submitting to their brutish Lust, had better cheer allow'd them.

Are reduced to great straits.

Take *Gibraltar* by a Stratagem.

Prisoners die for hunger.

Receive 10000 pieces of Eight ransom for the Town.

Being ready to depart, they summon'd the *Spaniards* in the Woods to pay 10000 pieces of Eight, as a ransom for the Town in two Days; which being not paid at the appointed time, they fired it in several places, and burnt the Church belonging to the Convent. At last the said summ being paid, they embark'd all their Riches, and with such of the Prisoners as had not paid their ransom, return'd to *Maracaibo*, where they also demanded 30000 pieces of Eight, to save the City from burning. Whilst the Inhabitants were deliberating upon the matter, some of the Pirates got ashore, and carried away the Images and Bells of the great Church. This hastned their resolutions, for they offer'd 20000 pieces of Eight, and 500 Cows; which being deliver'd accordingly, they set sail for *Hispaniola* after they had exercited their Cruelties for two Months in those two places. Here they anchored in a Port call'd *Isla de la Vacca*, i. e. *Cow Isle*; which being inhabited by *French Bucaniers*, they unloaded their Treasure, which upon computation amounted to 260000 pieces of Eight, besides a 100000 more in Linen, Silks, other Commodities, and a vast sum of Money in Plate and Jewels: All which was divided according to agreement.

20000 more for *Maracaibo*.

Divide the Prey.

Then they set sail for *Tortuga*, where the Governour bought a whole Cargo of a Ship loaden with *Cocoa Nuts* for the 20th part of the value; there being just before arriv'd two Ships from *France*, with Brandy, Wines, and such like Commodities, the Owners made a good market of it, selling a Gallon of Brandy for 20*s.* sterling, which before they would gladly have sold for half the Money. Thus these Pirates having squandred away most of their Substance in three Weeks time, either at play, or in Taverns and Stews, they were soon forced to have recourse to the same methods of getting more.

§. III. *Lolonois* prepares to attack St. *James de Leon*.

The repute *Lolonois* had got in this last Expedition, soon got him together 700 Men; which being embark'd in six Vessels, they sail'd to *Baycha* in *Hispaniola* to take in Provisions, and thence steer'd their Course to the Port of *Matanzana* near the South side of *Cuba*; they took as many of the Fishermen's Canoes there as they had occasion for; and thus provided, sail'd towards the Cape of *Gracias a Dios*, on the Continent at 15 *deg.* N. Latitude, 100 Leagues from the Isles *de los Pinos*. But being becalm'd at Sea, they were forced to enter the *Gulph of Honduras*, and from thence in their Canoes into the River *Xagua*, inhabited by *Indians*, to seek for Provisions, of which they stood in great need: Here meeting with a good quantity of Millet, Hogs and Pullets, they pillaged and destroy'd all the Towns and Villages along the Gulph, as far as *Puerto Cavallo*, where the *Spaniards* had two Storehouses, wherein they lay up their Merchandizes, which are brought thither from the inland Country: These they burnt with all the other Houses of the place, and seized upon a *Spanish* Ship of 24 Guns and 16 Patareros, committing unheard of Cruelties upon the poor Wretches that fell into their Hands; so that all of them dy'd under the several Tortures inflicted upon them, except two that were preserv'd to shew them the way to St. *Pedro* 10 or 12 Leagues from *Puerto Cavallo*, whither *Lolonois* march'd at the Head of 300 Men, leaving the rest behind under the Command of *Moses Van Vin* his Lieutenant: But they had scarce advanced three Leagues, when they fell into an Ambuscade of *Spaniards*, out of which they disentangled themselves by their Bravery; the same they did with two more, killing most of the *Spaniards* that attacked them: But the worst of all was, that as they approached the Town, they found the Road (the only that did lead to it) barricado'd up, and the circumjacent Fields covered with a sort of thorny Shrub call'd *Requelites*. The *Spaniards* fired briskly upon the Pirates with their great Guns, which they avoided by falling upon their knees, and afterwards attacked them with Sword in Hand and Fire-balls, with so much vigour, that they forced them to capitulate under Conditions, that the Inhabitants should have liberty to dispose of themselves at pleasure for two Hours. This being granted, they carried away all their best moveables into the Woods, but *Lolonois* found means to be even with them; for the time being elapsed, he followed them, and seized their Goods, and made the Men Prisoners.

1666. Comes to the Gulph of *Honduras*.

Plunders the *Indians* and *Puerto Cavallo*.

Takes a great Ship there.

Marches to St. *Peter*.

Take it upon conditions.

After a stay of a few Days, (during which they committed all manner of Barbarities) they burnt the Town, and resolved to go to the other side of the Gulph to careen their Vessels, and provide themselves with Tortoises, having two Canoes with Men before the mouth of the River of *Guatemala*, on that Coast, to lay wait for a Vessel expected there from *Spain*.

They knitted Nets with the rinds of certain Trees call'd *Macoa*, whereof they made also Cables. This place affords also a kind of Pitch, like *Bitumen*, which being melted by the Sun beams near the Sea Coast, congeals in the Water in vast pieces like small Islands: I take these to be pieces of Wax mixed with Sand, carried from the Rivers into the Sea, the Country abounding much in Honey. After they had careen'd their Vessels, they kept cruising on the Coast of *Yucatan*, inhabited by *Indians*, who being reduced under the yoak of the *Spaniards*, were initiated by them in the Christian Religion; but being highly provoked by the Barbarities of their Conquerors, they return to their Idolatrous Rites, every one having his peculiar Idol unto whom he pays his Devotion: They observe an odd custom with their new born Babes; these they leave alone in the Temple naked in a hole fill'd with Ashes, the Temple being open on all sides; next Day the Parents come to see whether they can perceive the footsteps of any wild Beasts in the Ashes left near the hole, which if they find not, they leave the Child till they find the track of some Animal or other near it, unto which they afterwards Consecrate the Child, as to its Patron, unto whom the Child, (when grown up) makes his Offerings, which is a certain Gum of a pleasant smell, call'd *Copal*, which they burn as an Incense upon an Altar.

A sort of Bitumen or Wax.

The *Indians* on the Coast of *Yucatan*.

Their *Religion* and *Ceremonies*.

In this manner live these *Indian* Pagans, or Demi-Christians, in the Islands of the Gulph of *Honduras*, and on the Continent of *Yucatan*; where are divers excellent Ports, near which they inhabit.

The Pirates having staid three Months in that Gulph, and advice being brought that the so long expected Ship was unloading in a Port not far distant, they made all the Sail they could towards them, but the *Spanish* Vessel carrying 42 Guns and 120 Men, behaved her self so well, that the Pirates who had but 22 Guns, were forc'd to retire, and must quite have left her, had they not found means, under favour of the smoak, to board her, and forced the *Spaniards* to submit. But as the

The Pirates take a great Ship with little Booty.

1666. the Ship was above half unloaden, so the Booty did not answer their expectation.

This proved the occasion of no small contests among the Ship's Crew, some that were Novices in this Trade, and who at their setting out from *Tortuga* had imagin'd nothing but Riches to be met with at the first Encounter, being resolv'd to quit the Fleet, whilst others were not for returning home, without a considerable Booty. However the greatest part separated from the rest, choosing *Moses Van Vin* and one *Pierre le Picard* for their Leaders.

Lolonois is left by many of his Company.

They go to *Costa Rica*.

These coasted along the Continent to *Costa Rica*, where they landed near the River of *Veragnas*, and pillaged the Town of the same name, (after a brave resistance) but met with no great Booty, the whole not amounting to above 7 or 8 pound weight of Gold; which they wash out of the Sands of the neighbouring Rivers. They form'd afterwards a design against *Nata*, a rich Town seated on the Coast of the S. Sea; but understanding the *Spaniards* were upon their guard, they chang'd their resolution.

Lolonois stays behind.

Lolonois thus deserted, remain'd in the Gulph of *Honduras*, his Ship being too large to get out, where he was reduced to that extremity, that his People were forced to feed upon Monkeys. At last coming to the Isles call'd *Las Pertas* in the altitude of the Cape of *Gracias à Dios*, his Ship stuck upon the Sands, so that not being able to get her off, they were forced to break her to pieces, and build a Boat with part of her Planks and Nails.

Isles *De las Pertas*.

The Inhabitants.

The Inhabitants of these Isles are a barbarous unciviliz'd sort of People, very tall and as nimble as a Horse, and very dextrous at diving. They have no other Arms but Lances, of a fathom and a half long, and those without Iron, some having having points of Crocodiles Teeth. Their Plantations consisting of Potatoes, Bananas, Ananas, &c. are enclosed with Woods, and they are accounted Men-eaters; for a *Spaniard* of *Lolonois*'s Crew being missing, he sent some others to look for him, who found the *Indians* round a Fire, with some Men's Bones well roasted near them, and one Hand with two Fingers only remaining.

Men-Eaters.

Marching forward they seized upon five *Indian* Men and four Women, whom they brought aboard the Ship; and finding them very fearful, they endeavour'd to gain their Affections by some trifling presents of Knives, Beads, &c. which they seem'd to be pleased with, making signs that they would come again, tho' they never did, nor could they get sight of any *Indians* in this Island afterwards. But as the building of their Boat went on but slowly, they planted some *French* Beans, which came to maturity in six Weeks; and with these, together with some *Spanish* Wheat, Bananas, and some other Fruit, they sustain'd themselves for six Months.

The Pirates stay here six Months.

By this time the Long-boat being finish'd, they agreed to go to the River *Nicaragua*, in hopes to take some Canoes, in order to fetch off the rest of their Companions, who (by reason the Boat could hold but one half) were forced to stay behind in the Island.

Accordingly after having cast Lots, one half embark'd with *Lolonois*, and in a few Days arriv'd at the River *Nicaragua*, where they were scarce landed, but a strong body of *Indians* and *Spaniards* join'd together fell upon them so furiously, that they put them to the rout, killing most of the Pirates upon the spot, so that *Lolonois* not without great difficulty escap'd with the remainders of his broken Forces into his Boat. But persisting in his resolution not to return to the Isle of *Pertas* without taking some Canoes, he took his course to the Coast of *Carthagena*; where within few Days after his arrival, he was slain with most of his Companions; by the *Indians* of *Darien*.

Lolonois slain by the *Indians* of *Darien*.

His Companions join with a *Jamaica* Pirate.

Those that were left in the Isle of *Pertas* having for some time (but in vain) waited for the return of their Captain with his followers, at last embark'd aboard a *Jamaica* Pirate, bound for *Gracias a Dios*, who came that way. These two Crews being now join'd, and come to *Gracias a Dios* enter'd the River of *Carthagena*, 500 in number in Canoes, with an intent to take that City: As they did not question to meet with sufficient Provisions in the *Indian* Plantations near the River side, so they took nothing along with them. But the *Indians* having got some scent of their coming, left not the least thing fit for subsistance in their Settlement. This reduced them to such extremity, that they look'd for green Herbs and Roots in the adjacent Woods; and these proving insufficient for the subsistance of so great a body of Men, they were reduced to that distress as to feed upon their Shoe-leather, the sheaths of their Swords, Knives, and such like things; in hopes of meeting with some place or other where to satisfie their hunger, and afterwards to comfort themselves for these hardships by plunder of so rich a City. But at last finding themselves quite frustrated in their hopes, they return'd to the Sea side, where they had left their Ships, but so faint and weak, that the greatest part of them dy'd soon after, and the rest dispersed.

They make a vain attempt.

1666.

They disperse.

§. IV.

Capt. *Morgan*'s Descent and memorable Actions.

Henry Morgan was the Son of a good substantial Yeoman in *Wales*, but not liking his Father's Employment, he entred himself aboard a Vessel bound for *Barbados*; where he was no sooner arriv'd, but according to their custom he was sold, and served his Time in that Isle. After having obtain'd his liberty, he went to *Jamaica*, and engaged himself with some Pirates there, with such good success, that in three or four Voyages he got a pretty good stock of ready Money. This he join'd with some others of his Acquaintance, and bought a Vessel, whereof they having made him Commander, he sail'd from *Jamaica* to the Coast of *Campeche*, where he took several good Prizes.

Turns Pirate.

About that time there was an old Pirat at *Jamaica* call'd *Mansvelt*, who being then equipping a Fleet to pillage on the Continent, and hearing of the good success of *Morgan*, pitch'd upon him for his Vice Admiral in his intended Expedition. They sail'd from *Jamaica* with 15 Ships (great and small) mann'd with 500 Men, most *Walloons* and *French*; and not long after arriv'd at the Isle of St. *Catherine*, near the Continent of *Costa Rica*, and 33 Leagues from the River *Chagre*, at 12 *deg.* 30 *min.* Latit. They soon made themselves Masters of the Forts here, which being all demolish'd but one, they laid a Bridge over the Channel to an adjacent Isle, and without much difficulty also took possession of the same. This done, having left 100 Men behind at St. *Catherine*'s Isle, for its defence, they reimbark'd the rest, and sail'd to the Coast of *Rica*, and thence to the River *Costa*, with an intention to pillage the Sea Coast as far as *Nata*: But understanding that the Country had taken the Alarm, and that the Governour of *Panama* was ready to give them a hot reception, they thought it their safest way to return to St. *Catherines* Isle.

Is made their Vice Admiral under *Mansvelt*.

The Isle of St. *Catherine*.

Taken by the Pirates.

The *Sieur Simon*, a *French* Man by Birth, who had been left Governour of it, had been very industrious in putting the said Isle (during the absence of *Mansvelt*) in a good posture of defence; and to cultivate the lesser Island with fertile Plantations, which induced *Mansvelt* to take a resolution to keep these two Isles in his possession, by reason of their convenient situation near the *Spanish* Dominions.

With this intention he sail'd for *Jamaica*, where he proposed the same to the Governour; but being rejected by him, and *Mansvelt* knowing himself not in a condition to keep them without his assistance, he went to *Tortuga*, where he dy'd suddenly.

Mansvelt dy'd at *Tortuga*.

The *Sieur Simon* hearing no farther News from *Mansvelt*, was soon after attacked by the *Spaniards*: He defended his Ports for some time, but having no hopes of relief, surrender'd them upon certain Conditions. A few Days after the surrender, an *English* Ship sent thither with supplys from *Jamaica*, arriving in that Port, and not knowing what had happen'd, was seiz'd by the *Spaniards*, with the Men and Women aboard them.

The *Spaniards* regain the Isle of St. *Catherine*.

§. V.

The Isle of *Cuba*, he arrives at, and takes the Town of *El Puerto del Principe*.

Capt. *Morgan* equips a Fleet.

A description of the Isle of *Cuba*.

Capt. *Morgan* after the Death of his Predecessor, entertain'd the same thoughts concerning the keeping of the Isle of St. *Catherines*, but finding himself disappointed in his design, by the taking of that place by the *Spaniards*; he bent all his thoughts upon the equipping of a good Fleet, which he having encompass'd by degrees, he appointed their general Rendezvouz at a certain Port of *Cuba*, in order to concert measures there, against which place they should bend their Force.

The Isle of *Cuba* stretches in length from 20 to 23 *deg.* N. Latitude, about 150 *German* Leagues, and 40 in breadth. It is in fertility not inferiour to *Hispaniola*, and affords many things fit for Exportation, especially the Hides of divers Beasts, noted by the name of *Hides of Havana*. It has many Isles on all sides, call'd the *Cayes*, which serve for places of refuge to Privateers. *Cuba* is watered with divers good Rivers, and has spacious and secure Harbours, which bring thither a considerable Traffick. The chief Ports are St. *Tiago*, *Bayame*, St. *Maria*, *Espiritu Santo*, *Trinidad*, *Xagoa*, *Cabo de Corrientes* on the S. side of the Isle. Those on the N. side are *La Havana*, *Puerto Mariano*, *Santa Cruz*, *Mata Ricos*, and *Barracoa*.

The Isles of *Cayes*.

Its Rivers and Ports.

The Isle of *Cuba* has two chief Cities, *viz.* St. *Tiago* and the *Havanna*: The first lies on the S. side, and has under

Its Cities. St. *Tiago*.

1669. under its jurisdiction one half of the Isle: From hence they transport much Tobacco, Sugar and Hides to the *Canaries*. It is defended by a strong Fort, notwithstanding which it was pillaged by the Pirates of *Jamaica* and *Tortuga*.

The *Havana*. The City and Harbour of *Havana*, (one of the strongest places in the *West Indies*) is seated betwixt the N. and W. side of this Isle; its jurisdiction extends over the other half of the Isle; it is defended by three large and strong Forts, two whereof command the Port, the third the Town, being built on a Hill. It is said to contain 10000 Families. The Inhabitants transport thence Its Strength. Commerce. vast quantity of Tobacco to *New Spain*, *Costa Rica*, and over to the *South Sea*, besides what is sent to *Europe*. All the Ships that come from *New Spain*, *Campeche*, *Honduras*, *Florida*, from *Caracas*, *Carthagena* and *Costa Rica*, must take in their Provisions here for their Voyage to *Spain*. The *Spanish Flota* also touches here in her return home.

In two Months time Captain *Morgan* had got together twelve Vessels mann'd with 700 Men, in the Ports of *Cuba*. It was proposed by some to go and plunder the *Havana*; but that proposition being rejected as not practicable, the Town of *el Puerto de el Principe* was pitch'd upon as most proper for their purpose, being reputed a rich place. Accordingly they set sail towards the Coast neareſt to *el Puerto de el Principe*, and cast an Anchor at the Bay call'd *Puerto de Santa Maria*. They were no sooner arriv'd there, but a *Spanish* Prisoner swam ashore in the Night, and gave notice to those of *Puerto del Principe* of the design of the Pirates: Hereupon the Inhabitants removed all their best Effects and Riches, and the Governour arm'd 800 Men, most of whom he placed in Ambush, in order to fall upon the Pirates, whilst they were advanced to a certain Post, which he had barricado'd with Trees cut cross the way. Captain *Morgan* finding the avenues to the Town (which lies at a pretty good distance from the Sea) unpassable, he made his way through the Wood; and thus having escap'd their Ambuscades, enter'd the plain call'd *La Savana*, where they found the Governour at the head of a good body of Horse, who charg'd them very briskly in Front: But the Pirates being drawn up in form of a half Moon, gave them such a hot reception, that the Governour with most of his Men were slain upon the spot, without any considerable loss on their side. Then they march'd into the Town, where they met with more resistance than they expected they should have done, the *Spaniards* there defending the Entrance thereof as long as possibly they could; and afterwards retiring into the Houses, from whence they fired briskly upon the Pirates, till these threatning to destroy them all with Fire, they were forced to submit: Then they shut up all the *Spaniards* as well as Slaves in the Churches, where a great many of them (whilst the Pirates were making good chear) perished for want of Food; and some of them were tortured to Death with the most exquisite Torments that could be invented, to make them confess where they had hid their Goods.

They sail towards *Puerto de S. Maria*.

Their design betray'd.

Puerto del Principe taken by the Pirates.

Having got what plunder they could, they told the Prisoners, *That unless they did pay them a considerable Ransom, they should all be carried as Slaves to* Jamaica, *and the Town laid in Ashes*. Hereupon four of them were sent to look after the demanded Contribution; but being return'd, brought word, *That they were not able to find out any of their own Party, but that they would endeavour to raise the Money in fifteen Days*; which was granted.

But soon after some of the Pirates, as they were searching the Woods for Goods, seized a *Negro*, with Letters from the Governour of St. *Tiago*, to some of the Prisoners, intimating, *That they should endeavour to delay the payment of the Contribution, and that he would not fail to come shortly to their assistance*. After this intelligence Captain *Morgan* had all the Booty they had got brought aboard, and ordered the *Spaniards* to pay their Ransom the next day, without giving them the reason for it; but these alledging the impossibility of raising such a sum in so little time, he demanded of them 500 Oxen or Cows, with Salt sufficient to powder them, to be carried aboard his Ships: Which being perform'd accordingly with all possible haste, he set all the remaining Prisoners at liberty.

Letters intercepted from St. *Tiago*.

They leave *Puerto Principe*. This done, they set sail to a certain Isle, to make a dividend of their Booty, which amounting not to above fifty thousand pieces of Eight in Goods and Money; they resolved to undertake another Enterprize before their return to *Jamaica*. However the *French* not agreeing very well with the *English*, thought fit to leave Captain *Morgan*, though he did all he could to dissuade them from it, and promised to give them all imaginable satisfaction, in respect of a Murther committed upon one of their Countrymen by an *Englishman*; which he did punctually perform after his return to *Jamaica*, where he caused the Criminal to be hang'd.

1669. The *French* separate from the *English*.

§. VI.

He gets together another Fleet.

Captain *Morgan* not in the least discouraged at his being left by the *French*, knew so well how to animate his Men, that they all unanimously resolved to follow his Orders; and being soon after join'd by another Pirate of *Campeche*, they gathered a Fleet of nine Sail, great and small, mann'd with 460 Men, fit to bear Arms.

They set sail to *Puerto Velo*.

Soon after they set Sail, steering their Course toward *Costa Rica* on the Continent; and so soon as they discovered the Land, Captain *Morgan* declar'd his intentions, of attacking and plundering the City of *Puerto Velo*, to the rest of the Officers. These alledged that they had not a sufficient number of Men to take so large and strong a City; but he representing to them, that the Booty would be the greater: The hopes of getting vast Riches infallibly engag'd them to approve his resolution, in hopes they might find the *Spaniards* unprovided for a vigorous Defence.

A Description of that City.

The City of *Puerto Velo* is seated in the Province of *Costa Rica*, at 17 *deg.* N. Latitude 14 Leagues from the Gulph of *Darien*, and 8 Leagues W. from the Port of *Nombre de Dios*; being next to the *Havana* and *Carthagena*, accounted the strongest place under the *Spanish* jurisdiction in the *West Indies*, and defended by two strong Castles at the Entrance of the Harbour. The Garrison consists commonly of 300 Soldiers, and the Inhabitants are computed to be about 400 Families; because few of the Merchants dwell here, but only come hither for a while, and keep their Ware-houses here. This place being reputed very unhealthy.

They come to *Puerto Naos* and *Puerto Pontin*.

Captain *Morgan* who was well acquainted on this Coast, arrived with his Fleet in the Evening at *Puerto de Naos*, 10 Leagues W. of *Puerto Velo*: Here they enter'd the River, and came to an Anchor at another Harbour, call'd *Puerto Pontin*. From hence they went higher up the River in *Canoes* till midnight, when they landed at a place call'd *Estera longa Lemos*, and thence march'd by Land to the first advanced guard of the City: Here they seized the Centinel without any noise, and having ask'd him what questions they thought fit, and threatned him with immediate Death if they found him in a falshood, forced him to conduct them to the next Castle, about a Mile thence, which they surrounded immediately; and having posted themselves under the Walls, summon'd the Garrison to surrender; but being answer'd with Fire, they assaulted it with Sword in Hand so furiously, that the Garrison after a brave defence, were forced to surrender at discretion, but were all put to the Sword by the Pirates, except some of the Officers, whom they put into one Room, and afterwards blew them up into the air, together with the whole Castle, thereby to strike a Terrour into the Inhabitants of the City. These were put into such a consternation at the approach of the Pirates, that the Governour finding it impossible to make them face the Enemy, retir'd to one of the Castles, from whence he fired most furiously upon the Pirates; and these being resolved to conquer, or fall in the Attempt, left nothing undone that might facilitate the taking of it. The assault lasted from break of Day till Noon, when the Pirates endeavouring to try their utmost effort, threw in abundance of Hand-Granadoes; but being repaid in the same Coin by the *Spaniards* with Fire-pots and great Stones, Captain *Morgan* was quite at a stand what to do: Whilst he was pondering upon the matter, he saw a Troop of his Crew advancing towards him, proclaiming by their Shouts the Conquest they had made over another Castle. Being incouraged by this success, he resolved to continue the Assault, cost it what it would: Accordingly he ordered twelve Ladders to be made with all speed, of such a breadth that three or four Men might mount them abreast; which being done accordingly, he commanded all the Religious Men and Women (they had taken out of the Cloysters) to fix them against the Walls, in hopes thereby to induce the Governour to a surrender. It was a miserable spectacle to see these poor Wretches cry out and implore the Governour to spare their Lives, who was so far from hearkening to their Prayers, that he fired most furiously upon them; but could not prevent their fixing of the Ladders. This was no sooner done, but the Pirates scaled the Castle

The first Castle taken and blown up.

The great Castle assaulted.

A lesser Castle taken.

Religious People forced to fix the Ladders.

1669.

with undaunted Bravery; and being got to the top of the Walls threw their hand-Granadoes and Fire-pots so thick among the *Spaniards*, that they soon forced them to lay down their Arms, and to cry for Quarter, except the Governour, who in spite of all the entreaties of his Wife and Children, would not surrender, but fought till he was kill'd upon the spot, after having given signal proofs of his Bravery.

The great Castle taken.

The Governour kill'd.

After the taking of the Castle, the Pirates fell to Plundering and Debauchery, committing all manner of Insolencies, Rapes and other Violences; several of their Inhabitants being tortured to Death, to discover their Riches.

People tortured to Death.

The President of *Panama* being advertised of what had happen'd at *Puerto Velo*, gathered immediately what Forces he could to drive out the Pirates, who were now preparing to return aboard (after a stay of 15 Days) and therefore demanded a ransom of 100000 pieces of Eight. In the mean while the Governour of *Panama* was marching to *Puerto Velo* to cut off their retreat; but they being inform'd of his march, posted a hundred chosen Men on a pass, who charged the fore Troops of *Panama* so briskly, that the President thought it his safest way to retreat in time, leaving the Citizens to agree for their Contributions as well as they could, which they did accordingly, and soon after paid the demanded ransom of 100000 pieces of Eight. The Governour of *Panama* being surprized at the success of the Pirates, who had with 400 Men, made themselves Masters of so many strong Castles without any pieces of Ordnance, sent a Messenger to Captain *Morgan* to desire a pattern of these Arms, wherewith he had perform'd such stupendious Exploits. He was obligingly receiv'd by Captain *Morgan*, who gave him a Pistol and a few small Bullets, desiring him to tell his Master, *That these were the Arms wherewith he had taken the City; and that if he would keep them a twelve month he would come himself and fetch them thence.* But the Governour soon sent back the Pistol with this answer, *That he stood not in need of such Weapons, and that he had best save himself the trouble of coming to* Panama, *because he was not likely to succeed so well there as at* Puerto Velo.

The Governour of *Panama* beaten.

The City pays the ransom.

A Messenger sent to Capt. *Morgan*.

Captain *Morgan* having provided his Ships with all manner of Necessaries, and taken aboard the best Guns, set sail from *Puerto Velo* for *Cuba*, where having divided the Booty consisting of 250000 pieces of Eight, besides Linen, Silks, Cloth, &c. they return'd to their old Rendezvouz, I mean *Jamaica*; where they soon spent, in all manner of Debaucherys what they had purchased with so much hazard and labour.

§. VII.

The City of *Maracaibo* taken by Capt. *Morgan*: His Piracies in those Seas; they destroy three *Spanish* Men of War.

The repute of Captain *Morgan*, drew soon after to his aid many of the Pirates in those parts; he appointed their Rendezvouz at the Isle of *de la Vaca*, or *Cow Isle*, South of *Hispaniola*: There being at that time a stout *English* Vessel at *Jamaica*, mounted with 36 Guns, the same was order'd to join Captain *Morgan*, wherewith, and the other assistance he expected, he thought himself sufficiently provided for some Enterprize of note: However there happen'd to be at the same time another Ship of force of 24 iron and 12 brass Guns, in the same Port: but this being mann'd with *French*, would not join with the *English*.

The *French* Captain having not long ago met an *English* Vessel at Sea, had forced from her some Provisions, without paying ready Money for it; Captain *Morgan* who was very desirous to strengthen his Fleet by this Ship, laid hold of this opportunity, and inviting the *French* Captain and his chief Officers aboard the before-mention'd great Ship; he made them all Prisoners, under pretence of making reparation for the damnage and affront sustain'd by the *English* Vessel at Sea. This was no sooner done, but a Council being held on board the Vessel, and resolved to sail for the Isle of *Savona*, to wait for the *Flota* then expected from *Spain*, they fell a drinking of Healths, as is usual among Seamen; then on a sundden (by what accident is unknown) the Ship was blown up, and all the Men, *viz.* 350 *English* Men, besides the *French* Prisoners, only 30 escap'd, who were in the great Cabin.

Capt. *Morgan*'s Treachery.

Punish'd by the blowing up of 320 Men.

To remedy this disaster, as well as the circumstances of the matter would allow of, it was given out by Capt. *Morgan* and his Friends, that the *French* Prisoners had set Fire to the Ship, and out of revenge, and that the rest intended to commit Piracy upon the *English*.

Capt. *Morgan* sails for *Savona*.

Eight Days after the blowing up of the Ship Capt. *Morgan* set sail for *Savona*, the place appointed for their Rendezvouz, where were to meet no less than 15 Vessels, to be mann'd with 960 Men. The first place they came to, was *Cabo de Lobos*, South of *Hispaniola*, betwixt Cape *Tiburon* and Cape *Punta de Espada*: Here they were detain'd three Weeks by contrary Winds, and then continued their Voyage to the Port of *Ocoa*. Here they sent some Men ashore to fetch some Water, and to hunt for Beasts: The *Spaniards* dissatisfied to see their Beasts slaughter'd before their Faces, sent for 400 Men from St. *Domingo*, to lay in Ambush for the Pirates: These seeing a great herd of Cows guarded only by two or three Men, kill'd as many of them as they thought convenient, and were going to carry them aboard their Ships; but being unexpectedly surpriz'd by a good Body of Troops, they were forced to quit their Prey, and to retreat, which they did in very good order, firing continually upon the Enemy, who finding themselves sorely gall'd retreated to the Woods, but were for the most part kill'd in the pursuit. Next Day Captain *Morgan* went in Person with 200 Men into the Woods, but finding no *Spaniards* there, exercised his Cruelty upon the poor Peasant's Cottages.

1669.

An Ambush laid by the *Spaniards*.

Are defeated.

In the mean while Captain *Morgan* having waited for some time in vain, for the coming of some of his Ships, he steer'd for *Savona* in hopes to meet them there: But after a stay of some Days, hearing not the least news of their coming, he set sail with what Ships he had with him, being eight in number, mann'd with 500 Men, for the Isle of *Ruba*, with an intention to attack *Maracaibo*, being encouraged thereunto by a *French* Man, who had formerly serv'd *Lolonois* in the same Enterprize. The first place they got sight of was the Isle of *Curassao*, but landed at another 12 Leagues thence to the West, call'd *Ruba*, an Isle inhabited by *Roman Catholick Indians*, and defended by a slender *Spanish* Garrison. The Isle is barren and dry, producing only sustenance for some Sheep, Lambs and Kids, which they exchange with the Pirates for Linen, Thread, &c. It has abundance of venomous Creatures, and among the rest Spiders, by which if a Man is bitten, he dyes Mad, unless you tye immediately both his Hands and Feet, and so leave him 24 Hours, without the least Nourishment.

Capt. *Morgan* sails to *Savona*.

The Isle of *Ruba*.

After two Days stay, they set sail again in the Night, that they might not be discovered by the Inhabitants what course they steer'd, and arriv'd the next Day at the Lake of *Maracaibo*, where they anchored the next Day over against the Bar of the said Lake. Since the attempt of *Lolonois* the *Spaniards* had built another Fort here, from whence they fired briskly upon the Pirates, whilst they were busy in putting their Men into the Canoes, in order to land them. In the Night Captain *Morgan* approaching the Fort, to take a full view of it, perceived that they had deserted it; and entring the same found a Match lighted near a train of Powder, which he snatch'd up immediately, and thereby preserv'd himself and his Companions from being blown up: This done he demolish'd the Walls, and having divided the Arms and Ammunition he found there among his Ships, he order'd them to sail the next Day into the Lake for *Maracaibo*; but meeting with a Bank not passable for Ships, when the Waters are low, they were forced to make use of their Boats and Canoes, in which they embark'd some of their smallest pieces of Cannon, and their Men, and so row'd up towards the City. Their first landing was near the Fort *de la Barra*; which being found deserted as well as the former, they advanced to the Town without the least opposition: They were not a little surprized when they found the City as empty as the Forts, which obliged them to send several small Parties into the Woods, to look for the Inhabitants and their Goods, and they seldom return'd without success: The miserable Wretches thus taken, were put to the Rack to confess where the Inhabitants had shelter'd themselves with their Goods: Some had their Limbs stretch'd with Cords, and afterwards were beaten with Sticks; others had burning Matches put betwixt their Fingers, and others had small Cords twisted about their Heads till their Eyes burst out: At last Captain *Morgan* having gotten 100 of the best Families into his Hands, he resolved to go for *Gibraltar*: In order to this he sent some Prisoners thither to exhort them to surrender, and immediately after set sail with his whole Fleet, but was receiv'd at his arrival there with nothing but Cannon and Ball; however they made shift to land their Men, and by the help of the beforementioned *French* Guide left the open road; but instead thereof passing through the Woods, so surpriz'd the *Spaniards*, that without more ado they fled with all their best Moveables to the Woods, leaving no body behind them but one poor Wretch who was born a Fool; but this could not save him from the Rack; for having told the Pirates, that he was the

Brother

1669. Brother of the Governour of *Maracaibo*, they lifted him up with Cords, tying weights to his Feet, and putting burning Palm-trees to his Face, till he expired under their Hands. Not long after they hang'd also a poor Peasant taken in the Woods, because he had given them (as they supposed) wrong intelligence concerning the Inhabitants and their Goods.

Their Cruelties.

Among the rest, they had taken a Negro Slave, who, inticed by the promise of his liberty, led them into the Woods, where about 250 of the Citizens lay conceal'd, all these they made Prisoners, took many Mules loaden with Riches, and caused the Negro to kill several of them before their Faces, thereby to engage him for ever to their Interest. Among these there was an ancient *Portugheze*, who either not able or unwilling to discover what he had, they ty'd him with small Cords by his two Thumbs, and great Toes to four Stakes fixt in the Ground, so that the weight of his whole Body hung on the Cords; but not contented thus, they thrash'd upon the Cords with great Sticks, and laid 200 weight upon his Belly, appling at the same time burning Palm-leaves to his Beard, Hair and Face. Thus they kept him for several Days, till they made him promise them 1000 pieces of Eight for his ransom.

They torture many Prisoners to Death.

They exercised divers sorts of Torments upon other Prisoners; some they hung up by their Testicles till they were torn from their Bodies, and afterwards Murthered. Others had lighted Matches put betwixt their Fingers and Toes, and others their Feet put to the flames till they were half roasted, or expired in the midst of these Torments.

Discovery by a *Negro*.

Among the Slaves they had taken, there was a certain Negro who offered to discover a Ship with 4 Boats richly loaden, in one of the Rivers of the Lake of *Maracaibo*, as likewise where the Governour of *Gibraltar* kept himself concealed with most of the Women and their Treasures. Hereupon Captain *Morgan* sent two large Boats well mann'd to look after the Ship; but he himself at the head of 250 of his best Men advanc'd to a small Isle in the River, where the Governour had made a small Fort for his defence: But upon the approach of Captain *Morgan* retired to an adjacent Mountain, which being inaccessible except by one narrow path, he resolv'd to defend himself there to the last extremity. In the mean while Captain *Morgan* and his Men were extreamly harrass'd in their march, being often forced to wade up to their wastes in Water; besides that the continual Rains had spoil'd their Baggage and Ammunition, so that when they came to the Mountain, they durst not so much as attempt the assaulting of it, but were glad to return to *Gibraltar*, after having spent 12 Days in this fruitless Expedition, not without the loss of several of their Companions drowned, and most of the Women and Children they had taken by the way.

Capt. *Morgan* endeavours to take the Governour.

Miscarrys in his design.

However, within two Days after they were comforted by the return of their two great Boats, which had been much more successful in their Enterprize; for they had taken four Boats and some Prisoners, with a considerable Booty, though the *Spaniards* having got notice of their approach, had unloaded part of their loading beforehand.

They take four Boats with Goods.

After they had thus spent five Weeks, they began to think of their returning to *Maracaibo*, and at the same time demanded a ransom from the Town; but some of the Prisoners being sent into Woods, to endeavour to raise the same among their fellow Citizens, return'd with this answer, That not being able to find any of them, they were not in a condition to pay more than 5000 pieces of Eight for the present, but that if he would keep four of them as Hostages, they would endeavour to raise the remaining part whilst they staid at *Maracaibo*; Captain *Morgan* being not insensible of the danger his long absence from *Maracaibo* might produce, thought fit accept their offer, and set sail for *Maracaibo*, where he arrived in 4 Days time.

Return to *Maracaibo*.

They had not been long here, when they receiv'd intelligence by a poor old Man, that three *Spanish* Men of War were come to an anchor at the entrance of the Lake of *Maracaibo*, had rebuilt the Fort, and provided it with Guns and Ammunition, to dispute their passage out of the Lake. Captain *Morgan* being not a little surpriz'd at so unexpected a piece of News, sent out a Boat immediately to discover the truth of the matter; she return'd the next Day, and confirm'd what had been related, adding, that the biggest Ship carried 40 Guns, the second 30, and the third 24 Guns. These Ships being much beyond their strength, (because their biggest Ship carried not above 14 Guns) they were put to the greatest nonplus that could be, as seeing no way left to escape, either by Sea or Land: However, to put the best countenance upon the matter, Captain *Morgan* sent a *Spanish* Messenger to *Don Alonso del Campo y Espinosa* Commodore of that Squadron, to demand a ransom for the City of *Maracaibo*. The Messenger return'd in two Days with a Letter from the said Commodore to Captain *Morgan*, dated the 24th *April* 1669. aboard the *Magdalen*, wherein he offered *To let him, and his Ships pass without molestation, provided they would quit* Maracaibo, *and surrender every thing they had taken in this Expedition, as well Prisoners as Goods.*

They receive bad News.

1669. Boldness of Capt. *Morgan*.

Captain *Morgan* having read this Letter in publick, and asked their advice, they declar'd unanimously, That they would rather perish than part with their Booty; and one above all the rest offered to destroy the biggest of the *Spanish* Ships, by the help of a Fire-ship he intended to fit for that purpose; which, tho' it was approv'd of, yet it was thought expedient to endeavour an Accommodation upon the following Terms: *That they would quit the City of* Maracaibo *without a ransom, set all the Prisoners at liberty, as also one half of the Slaves, and send back the four Hostages from* Gibraltar. But these Propositions being rejected by the *Spanish* Commodore, the Pirates prepar'd for fighting. The first thing they did was to put the Prisoners under a strict Guard; then they prepar'd their Fire-work of Pitch, Tar and Brimstone done up in Palm Leaves: These they put in the Fire Ship, fitted with Port holes and false Guns, with Poles above Deck dress'd with Hats and Montera's, and arm'd with Swords and Muskets like Men, the better to deceive the Enemy.

Propositions for an Accommodation.

Are rejected.

A Stratagem used by the Pirates.

Thus fitted, they made the Fireship lead the Van; and having put the Prisoners and all the Booty in two or three Boats, they set sail, and follow'd the Fireship at some distance, and in the Evening, *April* 30. cast anchor in sight of the Enemy. Next Morning with break of Day they weigh'd anchor, and steer'd towards the *Spaniards*, who doing the same, the Fireship fell upon the *Spanish* Commodore's Ship, and grappled her. The *Spaniards* then beginning to perceive their Error, did all they could to get clear of her, but the Fire having already seized her Tackling, soon after consum'd the Stern, and made the Vessel sink to the bottom of the Sea. The second Ship seeing this Disaster, run ashore under the Fort, and was burnt by her own Men, and the third was taken by the Pirates, who could have saved some of the Men of the great Ship that were swimming towards the shore, but they refused to take Quarter, except a few, whom they took into their Boats: Among these was a Pilot, a Stranger, who being brought before Captain *Morgan*, and examin'd by him, told him that six Ships were sent by special Orders from *Spain* to Cruize upon the Pirates, under the Command of *Don Augustine de Bustos*: But being arriv'd at *Carthagena*, two of the biggest Ships were ordered to return to *Spain*, and *Don Alonso del Campo y Espinosa* was sent with the four remaining Vessels to the Bay of *Campeche*; where having lost one of their Vessels in a Storm, they sail'd for *Hispaniola*, and thence to St. *Domingo*. Here the *Spaniards* being inform'd that the Pirates had form'd a design against the City of *Caracas*, *Don Alonso* steer'd immediately for that place, but found none of the Pirates there: However they met a Boat, by which being certify'd that they were sail'd to the Lake of *Maracaibo*, the *Spaniards* also steer'd the course to the Entrance of the Lake, and having landed some of their Men, repossess'd themselves of the Fort, and provided it with great Guns, and a Garrison of 100 Men, the better to intercept their passage out of the Lake. He added that two Days before we came out to engage them, a *Negro* came aboard the *Spanish* Commodore, to forewarn him of our coming, and that we had prepar'd a Fireship to burn their Fleet: But the Commodore reply'd, *That he had neither Ingenuity, nor Instruments, nor Materials for a Fireship:* And thus despising the *Negro*'s Council, was catch'd in the Snare.

Two *Spanish* Ships burnt, and a third taken.

The Depositions of a Prisoner.

The Pilot was entertain'd in our Service, and Captain *Morgan* sent a Messenger to the *Spanish* Commodore, who was got into the Fort, to demand 30000 pieces of Eight and 500 Bullocks, as a ransom for the Town of *Maracaibo* and the Prisoners: They agreed for 20000 pieces of Eight, which were paid accordingly, and the Cattle deliver'd; but Captain *Morgan* refused to deliver up the Prisoners till he was got out of the reach of the Fort, in hopes by this means to facilitate his passage out of the Lake: For the same end he sent some of the Prisoners to the Fort, to let them know that unless they would let him and his Fleet pass unmolested,

Ransom for the Town and Prisoners.

Prisoners sent to request a free passage.

1670. molested, he would hang all the Prisoners in his Ships. These poor Wretches did all they could to move the Governour of the Fort to compassion, but were told, That had they not by their Cowardice opened the way to the Pirates into the Lake and their City, they needed not have given themselves the trouble of asking what could by no means be granted. The disconsolate *Spaniards* being return'd with this answer, Captain *Morgan* told them, That he would find a way to do it without the Governour's leave; and immediately order'd a dividend to be made of all the Booty, Slaves and Merchandizes; which was done accordingly, and distributed into the several Ships; the Money and Jewels only amounting to 250000 pieces of Eight.

They divide the Spoil.

A Stratagem to amuse the *Spaniards*.

This done, they contrived the following Stratagem to amuse the *Spaniards* in the Fort; the Day preceding the Night when they had resolved to get into the Lake, they embark'd a good number of their Men in Canoes, and going to the shore, as if they intended to land them, hid themselves for some time under the Branches of the Trees that hung over almost into the Water; then having caused the Men to lay flat down in the bottom of the Canoes, they return'd to the Ships empty in all appearance, no body being to be seen except those employ'd at the Oars. This pretended landing they reiterated several times, so that the *Spaniards* not questioning but to be attacked the next Night from the Land side, placed all their great Guns, and most of their Men on that side: Night being come, the Pirates weigh'd anchor, and the Moon shining bright, mounted themselves to the ebbing Tides without Sails; which having brought them directly opposite to the Fort, they hoisted their Sails, which the *Spaniards* perceiving, they brought their Guns as fast they could to the Sea side; but the Pirates having a fair Wind, soon came beyond their reach, without any considerable dammage: Then Captain *Morgan* sent back the Prisoners taken at *Maracaibo*, but kept the Hostages from *Gibraltar*. 1670.

They get safe out of the Lake.

The next Day they were surprized by a most violent Tempest, which oblig'd them to stand out at Sea, for fear of being cast ashore, where they could expect but very ill entertainment, both from the *Spaniards* and *Indians*; but the Wind ceasing soon after, they arriv'd safely at *Jamaica*. Here they met with some of the Men that had promised to meet them at their Rendezvouz at *Savona*, but coming too late, they chose one Captain *Hansel* their Commander in chief; being then 400 Men divided in four Ships and a Boat, it was resolved to attack the Town of *Commana*, on the Continent of *Caracas*, 60 Leagues to the West of the Isle *de la Trinadad*. They landed without much opposition, but near the Town were encounter'd by a good body of *Indians* and *Spaniards*, who gave them them so vigorous a reception, that they were glad to retire to their Ships.

Their Companions attack *Commana*.

CHAP. IV.

The Third Part of the History of the Bucaniers *of* America.

§. I. Capt. *Morgan* gathers a new fleet in *Hispaniola*, to infest the Coast of the *West Indies*.

CAptain *Morgan* flush'd with these several Expeditions, began now to meditate nothing less than the taking of *Panama*; and to gather a sufficient strength for so great an Enterprize, he stopt the Mouths of the Inhabitants, who were Creditors to the Privateers, and had encourag'd them in their Debaucheries, with the hopes of more profitable Attempts, by which means he got together a considerable number of these lewd Wretches, unto whom he appointed the Port on the South side of *Tortuga* for their Rendezvouz. He at the same time sent his Letters to the Hunters and Pirates of *Hispaniola*, to invite them to assist in this Expedition, which had so good an effect, that they were all present at the appointed place (*October* 24. 1670) *viz.* at the Port *Conillon*, over against the Isle *de la Vaca*. Here it was consider'd how to get Provisions sufficient for so great a number of People; and it being resolv'd to take all the *Maiz* and other Provisions they could get on the Continent, 400 Men were sent to the River *de la Hacha*, in order to assault the Village of *Rancheria*, that place and the Country thereabouts being very well stor'd with Corn. At the same time Captain *Morgan* sent another Party to hunt after Beasts, who kill'd a great number of them, whilst the rest were employ'd in equipping and fitting the Ships for their departure.

Capt. *Morgan* gathers a Fleet to burn *Panama*.

§. II. Their Exploits in the River *de la Hacha*.

The beforementioned 400 Men set sail from *Hispaniola* in four Ships, for the River *de la Hacha*, where being becalm'd within sight of Land, the Inhabitants had sufficient time to prepare for their reception. However, as soon as the Wind began to prove more favourable, they had the good fortune to seize upon a Ship from *Carthagena*, loaden with *Maiz*, and the next Morning landed their Men, though not without a brave resistance on the *Spaniards* side, who much annoy'd them from a Battery they had raised near the place, where they must land; which done, they pursu'd them to the Village, where a fierce Engagement ensued, which lasted till night, when the *Spaniards* were forced to retire to the Woods, leaving the Town a prey to the Pirates; however they took many Prisoners, from whom they extorted by Torments a free confession of their Riches, which they seized, and afterwards forced them to pay 4000 Buthels of *Maiz* for their ransom. Thus having obtain'd their end, they return'd after five Weeks absence to *Hispaniola*, to the great satisfaction of Captain *Morgan*, who had almost given them over for lost.

Take a Ship with Corn, and Land their Men.

They take the Town.

And return with a great Booty.

Soon after their return, they set sail hence for Cape *Tiburon*, where being join'd by some other Ships lately come from *Jamaica*, they made up a Fleet of 37 Ships, and 2000 fighting Men, besides Mariners, the Admiral being mounted with 28 Cannon, the rest with 20, 16, 18, and the smallest at least with 4, with Ammunition and Provisions proportionable to their number. The whole Fleet being divided into two Squadrons, and an agreement made what share every Officer and Seaman in his respective Station should have of the Booty; it was consulted, which of the three places they should attack, *viz. Carthagena*, *Panama*, or *Vera Cruz*; but *Panama* being pitch'd upon, it was thought convenient first of all to go to the Isle of St. *Catherine*, in order to get some of the *Banditti* there, to serve them as Guides to that City.

Panama pitch'd upon to be burnt.

§. III. They go from *Hispaniola* to the Isle of St. *Catherine*, which they take.

They set sail from the Cape of *Tiburon December* 16. and in four Days after came in sight of the Isle of St. *Catherine*, and the next Day anchored near the Island, in the Bay call'd *Aguada grande*, where the *Spaniards* had erected a Battery of four pieces of Cannon: Notwithstanding this Captain *Morgan* landed 1000 Men in divers places, and marching through a Wood, advanced to a place where the Enemy had erected a Platform; but upon the approach of the Pirates, abandon'd it, and fled to the little Island join'd to the great one by a short Bridge: Here they had fortify'd themselves with Forts and Batteries; and firing furiously upon the Pirates, forced them to intrench themselves in the Field, where, what with the vehement Rains, and want of Cloths and Provisions, they were put into such a distressed condition, that they were almost reduced beyond all hopes of succeeding in their Enterprize: However, to put the best face upon the matter, Captain *Morgan* sent a Messenger to the Governour, to let him know, *That in case he did not surrender himself and his Company within a few Hours, they must expect no Quarter.* The Messenger return'd soon after with this answer, That the Governour desired two Hours time to consult with his Officers: The time being expired, he sent two Persons accordingly, who told Captain *Morgan* that the Governour not being provided with a sufficient Force to defend the Isle against them, was willing to surrender it into his Hands: but that for the saving of their Reputation, he desired to have the same performed under the Covert of the following Stratagem, *viz.* That Capt. *Morgan* with his Land Forces should make a false attack upon the Bridge that joins the two Isles, and the Fort of St. *Jerom* adjoining to it; whilst his Fleet should advance towards the Fort of St. *Teresa* to attack it by Sea: That at the same time a certain Troop should land near the Battery of St. *Matthew*, and intercept the Governour, as he was going thence to the Fort of St. *Jerom*,

They come to and land in St. *Catherine's* Isle.

They attack the Castle, but are repulsed.

The surrender of that Isle upon Conditions.

1670. *Jerome*, who thereupon should be (seemingly) forced to deliver up the Fort, that in these attacks they should fire on both sides with Bullets. These propositions being accepted, and put in execution according to mutual agreement, this Mock-Engagement begun, wherein they forced the *Spaniards* from the two chief Forts, the rest soon submitted at discretion. For that of St. *Jerome* next the Bridge had no less than eight great Guns mounted; and that of St. *Teresa* twenty, being defended by a thick Stone Wall, and surrounded with a dry but deep Ditch of twenty foot deep; within the Wall was an inaccessible Mountain, defended by four pieces of Cannon; on the Sea side there was no coming at it by reason of the Rocks; and on the Land side it was accessible only by a path of three or four foot broad, leading up to the Mountain. There were besides these seven Forts and Batteries more, all well provided with Cannon, an hundred and ninety Soldiers, forty Inhabitants, thirty four Slaves, and thirty nine Negroes.

The Fort of St. *Teresa.*

The Pirates being extreamly glad to have purchased so many considerable Posts, and with them both the Isles, at so cheap a rate, disarm'd all the *Spaniards*, and demolish'd the Forts except that of St. *Jerome*, adjoining to the Bridge.

The next thing they did, was to get some Guides to conduct them to *Panama*; and having found three *Banditti's* who offered their Service upon promise of great Rewards, it was immediately resolv'd to send four hundred Men, embark'd in four Vessels and a Boat, to take the Castle of *Chagre* upon the River of the same name; which was put in execution accordingly, whilst Captain *Morgan* with the whole Fleet (to hide his design upon *Panama*) remain'd at the Isle of St. *Catherines*.

Four hundred Men sent to take the Castle of *Chagre.*

§. IV.

The Castle of *Chagre* taken by 400 Men, sent from the Isle of St. *Catherines.*

Capt. *Brodely* made Commodore.

The Castle of *Chagre.*

The small Squadron detach'd for the Expedition against the Castle of *Chagre*, being commanded by Captain *Brodely*, who had formerly signaliz'd himself on that Coast under *Mansvelt*, arrived in three Days after their departure in sight of the Castle of *Chagre*, call'd by the *Spaniards* St. *Lawrence*. This Castle is seated on a high Mountain, and defended by a Fortification of Wood, or Pallisado's fill'd with Earth: The top of the Mountain is divided in two parts by a broad Ditch of thirty foot deep, over which is laid a Draw Bridge leading into the body of the Castle. To the Land side it has four Bastions, and two to the Sea. On the South side it is unaccessible, being surrounded with craggy Rocks; and the North side is encompass'd by the River, which is very broad here. At the foot of the Mountain is a strong Fort, mounted with eight Guns, commanding the Entrance of the Rivers mouth, and somewhat lower are two other Batteries of 6 pieces of Cannon each, planted there for the same purpose: You ascend to the top of the Castle by steps hew'd out of the Rock, near the two great Store-houses of Ammunition and Merchandizes, brought thither out of the inland Countries. It has a small Port to the West about seven or eight Fathom deep, and before it at the Mouth of the River is a great Rock, which appears only at low Water.

They Land.

The Pirates anchored a League from the Castle, and marching through the Woods, till two a Clock in the Afternoon, as they were advancing through the Plain, were so warmly saluted by the *Spaniards* shot, that they were in doubt whether they should desist from, or go on in this Enterprize, which considering the situation of the Castle, appear'd very dangerous to them. However being resolv'd either to conquer or fall in the attempt, they made the assault with Sword in Hand, and Granadoes; but not being able to climb the Walls, were forced to retreat for that time, yet not without an intention to renew the assault at Night. Then they endeavoured to fire the wooden Pallisadoes, by means of some Fire-works, in which whilst they were employ'd, there happen'd an unexpected accident, which prov'd the occasion of their Conquest. One of the Pirats being wounded with an Arrow in his Back, pull'd it out near the Breast, and winding a little Cotton about it, put it into his Musquet, and shot it into the Castle: The Cotton being set on Fire by the Powder, set two or three Thatcht Houses on Fire, unperceiv'd by the *Spaniards*, till the Flame having communicated it self to a place where a considerable quantity of Gunpowder was laid up, the same was blown into the air to the great consternation of the *Spaniards*.

They attack the Castle, but are repulsed.

A remarkable accident.

They burn the Pallisado works.

The Pirats improving this opportunity of setting fire to the Pallisado Works in several places, whilst the *Spaniards* were employ'd in quenching the fire within. This continued all Night; in the Morning finding that the Earth betwixt the Pallisado's was fallen into the Ditch, and thereby had open'd them a Breach, they renewed the assault about Noon with the utmost vigour, and maugre all the resistance of the *Spanirds*, headed by the Governour in Person, entred the Breach, and immediately after made themselves Masters of the whole Castle; most of the *Spaniards* yet alive, chose rather to throw themselves into the Sea, than to ask for Quarter. The Governour himself, with some few, retreated to the Main *Crops du Guard*, and planted two pieces of Cannon before it, ready to sell his Life at the dearest rate he could, without asking Quarter; till at last being kill'd by a Musquet ball, the rest about 30 in number surrender'd, being all sorely wounded except ten, being all that were left of 314. of which the Garrison consisted, when the Pirats attacked it. It was very observable that not one Officer was found alive.

1670. Enter the Breach and take the Castle.

Only 30 left alive of 314.

By the Prisoners they were inform'd that the Governour of *Panama* had 3 Weeks ago receiv'd intelligence of their design upon that City, and therefore had sent 164 Men to reinforce the Garrison of this Castle, which before was not above 150 Men strong; they added, that he had laid divers Ambuthes along the River *Chagre*, and intended to encounter them in the open Field with a body of 3600 chosen Men.

However the Conquest of this Castle cost the Pirats very dear, for they had 100 Men kill'd and 70 wounded: But Captain *Morgan* had no sooner receiv'd intelligence of the taking of the Castle of *Chagre*, but he imbark'd all the Provisions and Corn, as also the Prisoners taken at St. *Catherine's* Isle, he set sail thence for the River of *Chagre*, where he arrived in 8 Days, but lost four of his Ships in the entrance of it; but the Men and Goods were all saved.

Capt. *Morgan* comes to the River of *Chagre.*

Loses four Ships.

He was no sooner received (with all marks of Joy) in the Castle, but he ordered the Pallisado works to be repaired; and having seized several *Spanish* Transport Ships in the River, he left a Garrison of 500 Men in the Castle, 150 more for a Guard of his Ships, and with the rest, being 1200 of the best Men, he embark'd in Canoes and Boats towards *Panama*, without carrying along with them any considerable quantity of Provisions, as not questioning but that they should be sufficiently provided among the *Spaniards* that lay in ambush for them in several places near the River.

Leaves a good Garrison at the Castle of *Chagre.*

§. V.

His Voyage to *Panama*, and taking the City.

It was *August* the 18*th* when Captain *Morgan* at the head of 1200 Men set forth from the Castle of *Chagre*, towards *Panama*, in 32 Canoes, with 5 Boats of Artillery: The first Day they made 6 Leagues to a place call'd *de los Bracos*, where his Men got ashore and sought for Victuals among the Plantations, but found none, the *Spaniards* being fled, and having left nothing behind them. The second Day in the Evening they came to *Cruz de Juan Gallego*, where they found the River very shallow, and therefore went ashore the third Day in the Morning, in order to march forward by Land, but the ways proving excessive bad, they were forced to reimbark, and row forward (not without great difficulty) to a place call'd *Cedro bueno*, but did not meet with either *Indians* or *Spaniards*, and consequently with no Provisions, of which they stood in great need, being almost spent with Hunger.

The fourth Day some of the Pirats continued their march by Land, the rest follow'd by Water; having their peculiar Guides and Spys, to discover the Ambushcado's on both sides of the River. About Noon they came to a place call'd *Torna Cavallos*, where they found a few Leathern Bags all empty, which were as welcome to them, as if they had met with the best Dainties in the World, for they feasted upon them with incredible eagerness, and were ready to quarrel who should have the best share.

They feast upon Leathern Bags.

Thence they went forwards to *Torna Munni*, where they arrived at Night, but found no Provisions. The fifth Day about Noon, they came to a place call'd *Barbacoa*; they search'd several Plantations thereabouts, but could meet with nothing that could relieve their Hunger, till at last they discovered a Grot, lately made, where they found two Sacks of Meal and Wheat, two Jars of Wine, and certain Fruits call'd *Platanos*, which was distributed among them.

The sixth Day they went on part by Land, part by Water, being obliged to pass through many rugged ways, and having nothing to subsist upon but Leaves of Trees, Grass and some green Herbs, till to their singular joy, they came about Noon to a Plantation, where meeting with a Barn full of *Maiz*, they soon beat down the Doors, and distributed the Corn among themselves. At the same time they saw 100 *Indians* on the other side of the River; some of the Pirats endeavoured to cross

1670.

croſs it, in order to take ſome of them, but they were too nimble, and kill'd ſeveral with their Arrows: The whole body of the Pirats being afterwards forced to croſs the River, they clean'd their Arms the ſeventh Day in the Morning, and leaving St. *Cruz*, arriv'd at Noon at the Village of *Cruz*: They ſaw at a diſtance a great ſmoak, which put them in hopes of good chear; but when they came to the place, found the Village all in a Flame, except the King's Store-houſes and Stables. In theſe they found ſome Cats and Dogs, 16 Jars of *Peru* Wine, and a Leather Sack full of Bread; all which were devoured in an inſtant: Soon after every Man of them falling very ill, they ſuſpected the Wine to have been poiſoned, which put them under an unſpeakable Conſternation, as giving themſelves over for loſt; whereas the ſame was only the effect of their having over-charged themſelves, after ſo much want of wholeſome Proviſions.

They go up the River to *Panama*.

This Village is ſeated at 9 *deg.* 2 *m.* North Latitude, 26 Leagues diſtant from the mouth of the River of *Chagre*, and 8 from *Panama*; and this being the laſt place to which Boats can come, the Pirats were forced here to ſend back their Canoes (for fear of being ſurprized) and to march by Land towards *Panama*.

They leave their Canoes.

The eight Day in the Morning, Captain *Morgan* finding the Roads ſo narrow, that not above 10 or 12 Men could march abreaſt, detach'd 200 Men to diſcover the way to *Panama*. After a march of 10 Hours they came to *Quebrada Obſcura*, where they were unexpectedly ſaluted with 3000 or 4000 Arrows; being not able to diſcover from whence this ſhower came, ſtill advancing forward into an adjacent Wood, they perceived a conſiderable number of *Indians* flying before them, in order to poſt themſelves at another paſs, to annoy them in their march: However one Troop of theſe *Indians* being reſolved to ſtand the brunt, fought the Pirats with undaunted Courage, till moſt of them were ſlain upon the ſpot, with their Leader, who being mortally wounded, would not ask Quarter, but raiſing himſelf up from the ground, ſtruck with his Javelin at one of the Pirats, but before he could accomplish his aim, was kill'd by a Muſquet ball.

Bravery of ſome *Indians*.

The Pirats did all they could to take ſome of the *Indians* Priſoners, but thoſe few that remain'd alive were too nimble to be taken. They march'd afterwards through a Champaign Country full of fertile Meadows, and thence to a Wood, having a Mountain on each ſide; one of which was poſſeſs'd by the *Indians*, the other by the Pirats; both Parties march'd at the ſame time down the Hills, which made Captain *Morgan* expect to be attacted by them; but as ſoon as they came near the Wood, they ſaw no more of them.

They diſcover the South Sea.

The ninth Day he marched forward with his Forces early in the Morning, and after ſome Hours march, diſcovered (to their unſpeakable joy) the *South Sea*. Soon after they paſs'd through a Valley, and meeting with good ſtore of Cattel, they kill'd as many Cows, Horſes, Bulls and Aſſes as they had occaſion for; the Fleſh whereof they carbonado'd and roaſted, and devour'd it like *Cannibals*.

They come in ſight of the Steeple of *Panama*.

After they had ſatisfy'd their hunger, they continu'd their March, and towards Evening diſcover'd the highest Steeple of *Panama*, whereat they expreſs'd their ſatisfaction, by loud *Huzzas*, throwing up of Hats, and ſounding of their Trumpets. Soon after they pitch'd their Tents in ſight of that City, they ſaw 50 Horſe coming from the City, to obſerve their Camp; and no ſooner were they return'd thither, but they began to play furiouſly from their great Cannon, upon the Camp, though without any conſiderable dammage; they being out of their reach.

Encamp not far from the City.

The Pirats having paſs'd the Night in feeding with great ſatisfaction upon the Meat they had got, and in reſting their wearied Limbs, march'd the tenth Day early in the Morning, in order of Battel directly to the City; but being advertis'd by one of the Spies, that the Avenues leading to the City were defended by ſeveral Batteries and Ambuſcados, they took their way thro' the Woods; which the Governour perceiving, he put his Forces, conſiſting of two Squadrons and 4 Regiments of foot, in Battel, in order to diſpute their paſſage towards the City. The Pirats coming to the top of a Hill, from whence they could diſcover the Champaign Country cover'd with arm'd Men, and a vaſt number of wild Bulls under the management of a great number of *Indians*, to break their Ranks, they began to repent their forwardneſs in ſo dangerous an Attempt; but being ſenſible that they muſt expect no Mercy at the Hands of their Enemies, they had no other advice to take, but either to conquer or dye.

They march againſt the *Spaniards*.

With this reſolution they divided themſelves into three Bodies, ſending at the ſame time 200 of their beſt Men, well acquainted with the uſe of Fire Arms, to make the firſt attack. The *Spaniards* expected their coming down the Hill in a ſpacious Field, and as ſoon as they approach'd, the *Spaniſh* Horſe begun the attack, but not being able to wheel about as they ſhould have done, by reaſon of the quaggy Ground, the 200 *Bucaniers* each with one Knee on the Ground, gave a full Volley of ſhot, and put them into ſome diſorder; but being ſeconded by their foot, endeavoured to break the Pirats ranks, by ſending the wild Bulls among them, in the rear; but the wild Beaſts terrify'd with the noiſe of the Fire Arms, turn'd back upon their Drivers, except a few that were kill'd by the *Engliſh*.

Engage them.

After the Engagement had laſted about two Hours, the *Spaniſh* Horſe being ſo totally ruin'd by the continual firing of the Pirats, were forced to leave their Foot; and theſe not able to ſtand the brunt without them, diſcharg'd their ſhot, and throwing down their Arms, ſought for their ſafety in their Heels, the Enemy being not in a condition to purſue them, by reaſon of their wearineſs, and being unprovided with Horſe, many hid themſelves in the Woods, but were taken and kill'd without Mercy. One of the Priſoners, a *Spaniſh* Captain, being examin'd concerning the ſtrength of *Panama*; aſſured them, That they had 400 Horſe, and 2400 Foot, and that 2000 Bulls were committed to the management of 60 *Indians*, to put them into confuſion: That the City was fortify'd with Trenches and Batteries at the Avenues, and that eſpecially on the Highway leading thither they had made a ſmall Fort mounted with 8 Guns.

And rout them.

Depoſitions of a *Spaniſh* Priſoner.

Hereupon Captain *Morgan* gave immediate Orders to march to the City another way, and though upon a review they found they had a conſiderable number kill'd and wounded in this laſt Action, yet, as they were ſenſible that the *Spaniards* loſt no leſs than 600, beſides wounded, they encouraged one another with the hopes of good ſucceſs, taking a ſolemn Oath that they would fight it out to the laſt Man. With this reſolution they march'd on couragiouſly, and maugre all the Fire from the *Spaniards* Batteries (which kill'd them a great many Men) they open'd their way in three Hours time into the City, putting all to the Sword that offered to oppoſe them.

600 *Spaniards* kil-led in the Action.

They take *Panama*.

The firſt fury being paſt, Captain *Morgan* who wiſely foreſaw the Debaucheries his Men would in all likelihood be guilty of, after the hardſhips they had endured, and how much the ſame might tend to their total deſtruction, if the *Spaniards* ſhould happen to rally, ſtrictly forbid, under ſevere Puniſhments, the drinking of any Wine; giving for a reaſon, That he had receiv'd unqueſtionable intelligence, that the *Spaniards* had poiſoned all the Wines they were forced to leave in the City.

Wine forbidden to the Pirates.

§. VI.

Captain *Morgan*, after having given the neceſſary Orders for the ſecurity of the City of *Panama*, ſeized a Boat in the Port; which with ſome others, he ſent into the *South Sea* to Cruize upon the *Spaniſh* Veſſels. The ſame Day he ſet ſecretly fire to ſeveral places of the City, (for what reaſon is unknown) which conſumed the greateſt and beſt part of it: Being blamed for this Action, he laid the fault upon the *Spaniards*; for the buildings of this City conſiſted of 7000 Houſes, 2000 whereof were curious and magnificent Structures of Cedar, and richly furniſhed, a great part whereof was loſt, with the Houſes. And as this City is an Epiſcopal See, it had eight ſtately Monaſteries, (one whereof was for Women) two noble Churches, and a Hoſpital. The Churches and Monaſteries were exceſſive rich in Gold and Silver Pieces dedicated to Divine Service, and curious Paintings, which were all hidden by the Eccleſiaſticks. Beſides theſe, there were reduc'd to aſhes no leſs than 200 Warehouſes, a great many Slaves, and vaſt ſtores of Meal; the Fire not ceaſing till four Weeks after it began. Hitherto the Pirates lay encamp'd without the City for fear of a ſurprize, their number being conſiderably diminiſh'd in their ſeveral Engagements: Beſides that Captain *Morgan* had detach'd a Convoy of 150 Men to the Caſtle of *Chagre*: They were afterwards quartered in the City in thoſe few Houſes that were left, where among the Aſhes and Ruins they found abundance of Plate, both of Gold and Silver; eſpecially in the Wells and Citterns.

Capt. *Morgan* ſends out Boats to the S. Sea with good Succeſs: He ſets fire to and burns the City of *Panama*; Cruelties committed by the Pirates in that City, till their retire to the Caſtle of *Chagre*. Seventeen hundred Houſes in the City.

Riches found in the Ruins.

The next Day Captain *Morgan* ſent 300 well arm'd Men in two Parties, to ſearch the Woods and other circumjacent parts for Priſoners, who brought in no leſs than 200 Men, Women and Children in a ſhort time. About the ſame time return'd the Boat ſent

1671. sent into the South Sea with three Prizes; but these were nothing in comparison of a Galeon loaden with the King's Plate, and other rich Merchandizes, besides the Nuns with all the rich Church-Ornaments: This vast Treasure narrowly escap'd their Hands, for the Galeon being a heavy Sailer, and of no great strength, might have been easily chased and taken, had they not by their Debauchery neglected the opportunity of getting into their Hands, that which was of greater value than all the rest they found at *Panama*.

They lose the taking of a rich Galeon by their Debaucheries.

They sent indeed soon after, a well-arm'd Boat in pursuit of this rich Vessel, but too late, the Galeon being got into some place of security; however they had the good fortune to seize upon some Vessels in the Ports of the Isles of *Tavoga* and *Tavogilla*, loaden with Cloth, Soap, Sugar, and Bisket, besides 20000 pieces of Eight, and many Prisoners of note.

But take some Prizes at *Taboga*, as also near *Chagre*.

At the same time the Convoy Captain *Morgan* sent to *Chagre*, return'd with News, that those of that Castle had sent out some Boats, which had chased a rich *Spanish* Ship (that was ignorant of what had happen'd there) into the Port, and taken her without the least opposition.

The Parties daily sent abroad by Captain *Morgan*, never return'd without a good Booty and many Prisoners, who were put to most exquisite Torments, to discover both their own and other Peoples wealth: Among these was a Servant of a Person of quality, who having in the hurry put on his Master's Silk Breeches, with a Silver Key hanging out of the pocket, they mistook him for a Person of note, and notwithstanding all his protestations to the contrary, put him to the Rack; twisted a Cord about his Forehead till his Eyes were ready to come out; and after all hung him up by the Testicles till he expired. Many other Prisoners underwent the same fate; for they spared neither Age nor Sex: The religious Persons were worse us'd than the rest, and the Women not much better, unless they would submit to their Lusts; in which they follow'd the footsteps of Captain *Morgan* their Leader, who never fail'd to assail the Chastity of such female Prisoners, as did fall into his Hands.

Their Cruelties and Lewdnesses.

Of this I saw an instance in a Lady of good quality, taken in the Isle of *Tavoga*; who for youth and beauty was not inferiour to most Women in *Europe*: This Lady being brought before Captain *Morgan*, he endeavour'd for three or four Days to bring her to consent to his Pleasures by all the enticements he could invent, ordering her to be treated according to her quality, and offering considerable presents of Gold, and other precious things, to engage her to his Will; this vertuous Lady having refus'd both his offers and presents, with a singular constancy and humility; he soon chang'd his tone, ordering her to be stript and put into a dark Cellar, with a slender allowance, not sufficient to sustain her Life. All which the poor Lady bore with such an unparallell'd Patience, that it moved even the Hearts of many of the Pirats to Compassion, who began to murmur at such rigorous proceedings with a Lady of Quality; but *Morgan* to stop their Mouths, alledged, that he us'd her thus for no other reason, but because she had kept a Correspondence with the *Spaniards*.

Chastity of a *Spanish* Lady.

She is severely us'd.

After they had stay'd 3 Weeks at *Panama*, Captain *Morgan* began to prepare for their departure, especially since he had receiv'd intelligence that there was a Combination carry'd on betwixt his Men, to seize upon a Ship that was in the Harbour, and therewith to Pirat in the *South Sea*: But Captain *Morgan* being inform'd of it by one of their Comrades, soon spoil'd the project, by ordering the Main Mast of the said Ship to be cut down and burnt, with all the Boats in that Port.

A Project discovered.

By this time the Pirats having got all the Mony, Prisoners, and Goods, both in the City and circumjacent Country, they left *Panama February* 14. carrying the most precious Spoils of Gold, Silver, *&c.* upon 175 Beasts, besides 600 Prisoners, Men, Women, Children and Slaves. It would have mov'd a Stone to hear the Cries and Lamentations of these miserable Creatures, who, besides the extremity of hunger and thirst they endured, now saw themselves torn away from their Friends and Relations, and likely to be carried into remote Places, to end their Days in perpetual Slavery. Among these the before-mentioned *Spanish* Lady, who had given such eminent proofs of her Vertue, being led betwixt two Pirats, broke out into most doleful Lamentations, telling the Pirats, that *She had entrusted two religious Men to procure her ransome, which they had received accordingly; but instead of employing it to recover her liberty, had bestowed the same for the redemption of some of their Friends.*

1671.

The before-mentiou'd *Spanish* Lady released.

This Complaint being brought to Captain *Morgan*, he examin'd into the truth of the matter, and finding by the confession of a Slave, who had brought the Letter to the Lady, that the same were not ill grounded, he gave her her liberty; but at the same time detain'd the 2 religious Men till they should repay the Sum, which they did in a few Days after. Captain *Morgan* stay'd for some time at the Town of *Cruz* upon the River *Chagre*, to provide himself with what Rice and *Maiz* they could get; and the 5th of *March* continued his march towards *Chagre*: About the middle of the way he caused every one of his Men to take an Oath, That they would not conceal the least thing; and not contented thus, he commanded one in every Company to search the rest, even to their very Shoes; and to remove all occation of murmuring, he would be search'd in the same manner as the rest; notwithstanding which, the *French* who were not accquainted with this way of searching, were highly discontented with it. This done, they embark'd in their Canoes, and the 9th of *March* arriv'd at the Castle of *Chagre*.

The Pirats return to *Chagre*.

Immediately after their arrival there, Captain *Morgan* sent all the Prisoners taken in the Isle of St. *Catherines* by Sea to *Puerto Velo*, and at the same time demanded a considerable Sum as a ransom, to save the Castle of *Chagre* from being burnt; but these refusing to pay one farthing upon that score, a dividend was made of all the Booty taken in this Voyage; which not amounting to above 200 pieces of Eight to a Man, and the same being not without reason judged a slender equivalent for all the Troubles and Dangers they had been expos'd to, both the *English* and *Dutch* murmur'd openly against Captain *Morgan*, some telling him to his face, That he had reserv'd the most precious Jewels for himself; but *Morgan* stop'd his Ears to their Complaints, yet dreading, not without reason, the consequence of this general dissatisfaction, he ordered the Ordnance of the Castle to be carried aboard his own Ship, and having demolish'd the Castle, as far as the shortness of time would permit, he set sail with his own Ship, without giving the least notice to the rest; being follow'd only by three or four Vessels, that were supposed to have had a share in that part of the Spoil which was conceal'd from the rest.

The Division of the Spoil made.

With great discontent.

Captain *Morgan* dreading to be pursued by some of our Ships (especially the *French*) had left us all so destitute of all manner of Necessaries, that each Ship was forced to shift for themselves, in order to their return towards *Jamaica*. The Boat I belong'd to being very foul, we took our Course along the Coast of *Costa Rica*, to get Provisions, and to careen our Vessel.

The Author, Captain Coxon, his return towards *Jamaica*, with his consorts in his Voyage.

In a few Days we arriv'd in the Bay of *Boca del Toro*, which being surrounded with Land like a Wall 4 Leagues in compass, afford a secure Harbour, and good store of eatable Fish and Tortoises. The *Indian* Inhabitants of these Isles were never subdu'd by the *Spaniards*, and are different in their Languages and way of living. Those inhabiting near the East side of the Bay used formerly to exchange the Flesh of divers Animals, with the Pirats, for Iron, Beads, Toys, *&c.* But being cruelly used by them, this Commerce has ceased since. Being not able to meet with any Provisions here but some Crocodile's Eggs, we steer'd to the East to try our Fortune that way; but meeting 3 of our Boats, (left behind by Captain *Morgan*) the Crew whereof inform'd us, that nothing was to be hop'd for thereabouts, we chang'd our course to the West. Here we found as many Tortoises as we had occasion for, but were in want of fresh Water, whereof there was enough in the Neighbouring Isles; but by reason of the Enmity of the *Indians*, durst scarce venture to Land: However, being forced to make a Virtue of Necessity, we all landed together in one of the Islands: but whilst we were busy in filling our Casks with fresh Water, a Troop of *Indians* advanced to attack us, but no sooner had we kill'd 3 or 4 of them with our Fire-arms, but the rest fled to the Woods.

The Pirats arrive at *Boca del Toro*.

Sail to the West.

Are forced to fight for fresh Water.

The next following Night we heard huge Cries ashore, which we supposed to be the Lamentations for their Friends kill'd the Day before, one whereof was a Person of note among them, which we could easily distinguish by his Habit. These *Indians* are so ignorant of the Sea, that they have not so much as a Fisher-boat belonging to them.

From hence we steer'd our course towards *Jamaica*; but meeting with one of our former Comrades in the late Expedition, we were forced by the contrary Winds, to go together into the before-mentioned Port,

call'd

1671. call'd *Boca del Toro*. From hence we directed our course to a place call'd *Boca del Dragon* to get some Provisions, especially of the Flesh of what the *Spaniards* call *Manentines*, and the *Dutch Sea Cows*, because they have a Head, Nose and Teeth like our Cows: They live on the Shallows under the Water, where there is good store of Grass, on which they feed. Instead of Ears, they have 2 holes of the bigness of a Man's little Finger; on each side of the Neck they have a Fin, and under them 2 Tedders like the Breasts of Women: The Hide on the Back is 2 inches thick, and as hard as a Whale-bone: For the rest all along the Belly to the Reins, they are like a Cow, and engender in the same manner, the Male being like a Bull. They have very quick hearing, and therefore those that fish for them must row very softly, and when they come in reach of them, they strike them with a kind of a Harpoon, like as they do Tortoises, except that this Javelin is something longer, and has 2 hooks at the end. I have seen some of these Creatures 20 or 24 foot long. Their Meat is wholesome enough, looks like Beef, but tastes like Pork: Out of the Fat they make Oyl.

Boca del Dragon.

Sea Cows.

How they catch them.

At a certain time we espy'd 2 *Indians* in a Canoe, but they no sooner saw our Vessels but they row'd to the shore, and perceiving us to follow them, not only run into an adjacent Wood, but also carried their Canoe along with them; though it weigh'd no less than 2000 pounds, as we found afterwards, eleven of us having enough to do to bring it into the Water again. One of our Pilots who was well acquainted on this Coast, seeing this action, told us, That some Years before a Squadron of Pirats arriving on that Coast, some of them went ashore in Canoes to catch Birds; whilst they were busy'd in this sport, the *Indians* got upon the Trees underneath which the Canoes lay, and leaping into them seized the Men that guarded them, whom together with the Canoes they carried into the Woods, and thereby cut off all hopes of relief from those that were ashore; for though the Pirates landed 500 Men, in hopes of delivering their Companions; the *Indians* flocking together in vast numbers, made them retreat to their Ships. In the above-mentioned Canoe we found nothing but a fishing Net and four Arrows made of Palm-tree Wood, seven foot long each; with four double hooks on each side. The Canoe was of Cedar, but roughly done, as if it had been made without any Iron Instruments.

Strength and Activity of the *Indians* on this Coast.

From hence we set sail for *Rio de Znera*, where we arriv'd in 24 Hours. The place is inhabited by *Spaniards*, who were all fled upon our approach, and had left nothing behind them but a certain Fruit call'd *Platanos*, wherewith having fill'd our Boats, we continued coasting along the shore for 14 Days, till with much ado we came to the Bay of *Blewfield*, where we refitted our Ship that was very leaky. At the same time some of our Men catch some *Porcupines* of a monstrous bigness, *Monkies* and *Pheasants* in the Woods. It was a pleasure to see the *Monkies* as soon as one of them was wounded, to flock together, some laying their Paws on the Wounded, others to thrust some Mess of the Trees to stop the Blood, whilst others gathered some Herbs, and chewing them in their Mouths, apply'd them like a Poultice.

Rio de Znera.

Vast Porcupines.

Monkeys and *Pheasants.*

Some Days after arrival, our Women Slaves being about their employments in an adjacent Wood, 2 of them were on a sudden kill'd with Arrows; when we came to their assistance, we found many Arrows sticking in their Bodies of an extraordinary shape: They were 8 foot long, and above an inch thick, having a hook of Wood ty'd with a string at one end, at the other a square Box like the Case of a pair of Tweezers, in which were small Stones: They were red and bright, roughly made without Iron Instruments. This accident made us embark with all speed what Provisions we had got, and to prepare for our departue.

The Arms of the *Indians* here.

§. VIII. They sail for the Cape of *Gracias a Dios*.

From hence we steer'd our course to the Cape of *Gracias a Dios*, in hopes to get some Provisions, there being a good Correspondence betwixt the Pirats and these *Indians*, who furnish them with what Provisions they have: For it is the custom, that every one of the Pirats buys himself an *Indian* Woman here for the time of his stay, the purchase being commonly made for a Knife, Hatchet, or old Ax; for which she provides him with all manner of Provisions the Country affords, which stands them in little but their labour; for there is such plenty of *Tortoises* and *Manita's* here, that one *Indian* alone is able to victual with them a whole Ship of 100 Men.

The Commerce of the *Indians* there with the Pirates; they go to the Isle *de los Pinos*, and thence to *Jamaica*.

The Cape *Gracias a Dios*.

They buy Women.

This constant entercourse makes some of these *Indians* speak very good *English* and *French*, as some of our People are well enough vers'd in their Language, Manners and Customs. One of our Crew, who had lived among them, gave us the following Account of them. The whole Isle is about 30 Leagues in Circuit; the Government being Democratick without any Sovereign: Their whole number consists in 1600 or 1700 Persons, and some Negro Slaves, and keep not the least Correspondence with the *Spaniards*. They live for the most part near the Sea shore, and are distinguished into 2 sorts of People; one of them apply themselves to Husbandry, the other sort are so idle as not to build themselves as much as small Huts to live in, neither have they any thing to cover their Bodies from the Rains (though very frequent here) except a few Palm-Trees, and a kind of Apron ty'd about the middle to cover their Privities. These are made of the rinds of Trees, beaten with Stones till they are soften'd; these also serve them instead of Bedding. Their Arms are a kind of Spears pointed with Iron or Crocodile's Teeth. They don't use any Divine Worship among them, though they seem to acknowledge a supream Being; neither do they Reverence the Devils, as some other *Americans* do. Their chief Food is Fruits; as *Bananos*, *Racoves*, *Ananas*, *Potatoes*, &c. as also some Crabs, and other Fish, which they strike with Darts. Of Liquors they have several sorts; that call'd *Achive* is made of a certain Seed of Palm-Tree, well bruised, and infused in hot Water, till it is well settled; and drained off; it is both pleasant and nourishing. They make another stronger Liquor of *Potatoes*: These they bruise into a Pap in great Calabashes, and put cold Water upon them for 8 Days, till it has well fermented: This they entertain their Friends withal upon extraordinary occasions; when they invite their Friends to their Liquors, they comb their Hairs very clean, and anoint their Face with Palm Oil, mix'd with black but the Women besmear their Faces with a Crimson colour: Then he that is Master of the Feast goes with two or three Spears to meet the invited Persons 3 or 400 steps from his Cottage, and as soon as they draw near, he prostrates himself upon his Face, till they come near enough to take him up; then they go together to the Hut, where the Guests perform the same Ceremony to him, and he takes them up one after another. Then the Calabashes of Liquor go briskly round, and the Guests divert themselves with Singing, Dancing, and making Caresses to the Women, which they do to that degree, that I have seen them to wound their Genitals, in Testimony of their Affection to them.

1671.

The Isle's Inhabitants.

Their Arms.

Religion.

For Drink and Liquor.

Their Inclinations.

When they are resolv'd to Marry, they address themselves to the Parents, or next Relations: If the Suitor is able to perform his Exercise, I mean to make a good Dart for Fishing, and to spin a certain Thread, they use about their Arrows, he is commonly approv'd of, and then the Father calls for a Calabash full of *Achioc*, drinks first himself, then gives it to the Bridegroom, and he to the Bride; if she drinks all that is left, the Marriage is concluded without any farther Ceremony.

Marriages.

After a Woman is delivered, she washes the new born Babe in the next Brook or River, and then goes about her ordinary business as before. When the Husband dies, his Spear and Ear-pendants, as also his Aprons are interr'd with him; and the Widow comes every Day to the Grave to bring him the best Drink and Meat, for a whole Year; which they divide into 15 Months. I know that some Authors assert of the *Carib* Isles, that the Devil carries away the Victuals from the Sepulchres; but erroneously, for I have often eaten of these Offerings my self.

Burials.

After the expiration of the first Year, the Widow is oblig'd to take her Husband's Bones out of the Grave; these she cleanses very well, and having dry'd them in the Sun, she puts them up in a Sachel, and thus carries them for a whole Year longer every Day upon her Back, and sleeps upon them every Night. After this she hangs them up in the Bag against the Post of her own Door; or if she has no House, at that of his nearest Relations.

An odd Custom for Widows.

After the 2 Years are over, the Widow may Marry again; but the Men are not oblig'd to the same Rules. The Negroes live here according to their own Customs.

Hence we sail'd to the Isle *de los Pinos*, where we arriv'd in 18 Days, and spent some time in refitting our leaky Vessel, and in fishing and hunting; we got as many Fishes in 7 Hours as would serve 1000 Men, and some of the *Indians* we brought along with us from *Gracias a Dios*, got us as many wild Cows and Tortoises

The Isle *Pinos*.

as

1673. as we had occasion for, wherewith we lived very plentifully, and salted the rest. All the trouble we had was from the Crocodiles, which proved often dangerous to such as went alone in the Woods; nay, they would often in the Night time climb up into the Vessel, one whereof we seized with an iron Hook, which instead of going backwards to the bottom, mounted up the Ladder of the Ship, till we kill'd it with other Instruments. One of our Men was thrown to the Ground by such a Crocodile, but being a strong and courageous Fellow, he kill'd it with a Knife he had in his Pocket. After we had refitted our Vessel, we sail'd towards *Jamaica*, where we arriv'd without any ill accident in a few Days after.

Dangerous Crocodiles.

They come back to Jamaica.

As we were the first of those left behind at *Chagre*, that arriv'd after Captain *Morgan*, so we found him very busy in engaging People into his Service, with an intention to possess and refortify the Isle of St. *Catherines*. But at the same time there arriving a Man of War from *England*, having aboard a new Governour of *Jamaica*, with strict Orders from his Majesty of *Great Britain*, not to permit any Pirates coming from that Port, to molest the *Spanish* Subjects; this Project soon vanish'd into Smoak. 'Tis true, some of the Pirats, then at Sea, did notwithstanding this, pillage the Town call'd *la Villa de los Calos* in the Isle of *Cuba*; but the said Governour having caused some of them to be hang'd; this so terrify'd the rest, that they retired to the Isle of *Tortuga*, and joining with the *French* Pirats there, continue with them to this Day.

The new Governour suppresses the Pirates.

§. IX. In the Year 1673. (whilst the War lasted betwixt *France* and *Holland* in *Europe*) the *French* of the Isle of *Tortuga* had equipp'd a considerable Fleet to chase the *Dutch* from the Isles belonging to them in the *West Indies*. Their first design being upon the Isle *Curasao*, they set sail under the Command of Monsieur *Ogeron*, Governour of *Tortuga*, but coming on the West side of St. *Jan de Puerto Rico*, were surpriz'd with a most violent Tempest, which carried the Admiral's Ship, mann'd with 500 Men, among the Rocks, where she stav'd to pieces, but all the Men got ashore in Boats, not far from *Puerto Rico*. The next Day being discover'd by the *Spaniards* inhabiting that Isle, they kill'd the greatest part of them, but at last finding them without any Arms, spared the rest, but ty'd them together with Cords, and so drove them through the Woods. As they were going along, they were often ask'd what was become of their Commander? They as often reply'd, he was drown'd; so that Monsieur *Ogeron* being unknown among them, and counterfeiting himself a Fool, was ty'd like the rest, but serv'd them for their Diversion. There was at the same time with them a Chyrurgeon, who having done formerly some service to the *Spaniards*, had the same favour granted him: With this Chyrurgeon Monsieur *Ogeron* consulted how to escape the Hands of their cruel Enemies, and finding him inclinable to the same design, they both fled into the Woods, with no other Arms but one single Hatchet. Coming to the Sea side in the Evening, they took a good quanty of Fish call'd *Corlabados* by the *Spaniards*, (which follow the lesser Fish close under the shore) and by rubbing 2 Sticks kindle a Fire to dress their Fish.

Monsieur Bertran Ogeron Governour of Tortuga

Ship wrackt, falls into the Hands of the Spaniards: How he makes his escape. His unfortunate Enterprize against Puerto Rico.

The French of Tortuga form a Design against the Dutch Isles.

The French Admiral's Ship cast away.

His Men partly kill'd, partly made Prisoners.

Ogeron mimicks a Fool.

Fly into the Woods with a Chyrurgeon.

The next Day whilst they were employ'd in cutting of Timber, to make a small Boat, to transport themselves to the Isle of St. *Cruz*, belonging to the *French*, they espy'd a Canoe with only 2 Fishermen in it, approaching the shore; they keeping themselves conceal'd in an adjacent Wood, they saw one of them a *Mulato*, go with 2 Calabashes to a Spring to fetch fresh Water, whilst the other a *Spaniard* stay'd behind near the Boat. They attack'd and soon kill'd the *Mulato* first, and immediately after the *Spaniard* before he could get into the Canoe, which they seized upon, and having taken what fresh Water they thought fit, threw both the dead Carcasses into the Sea, to hide them from the *Spaniards*.

They seize a Boat and kill two Men.

Come to Samana in Hispaniola.

Thus provided, they went along the Coast of *Puerto Rico* to *Cabo Roko*, whence they cross'd over to *Hispaniola*, and by the benefit of the Currents and favourable Winds, arriv'd at *Samana*, a Port in that Isle.

Ogeron returns with a Fleet to the Coast of Puerto Rico.

Here Monsieur *Ogeron* left the Chyrurgeon, to gather as many Men as he could, whilst he did the same at *Tortuga*; and thus having in a little time brought together a considerable number of Men and Ships, they set sail from *Tortuga* for the Coast of *Puerto Rico*, with a resolution to hazard all for the delivery of their Companions. The *French* had done all they could to cover their design, but the *Spaniards* having got some scent of the matter, had posted several Troops of Horse along the shore: These, upon the landing of the *French*, under the favour of their Cannon, retreated to an adjacent Wood, whither being follow'd by the *French*, a good number of Foot laid in Ambush there, gave them so hot a Volley of shot, that many of them being kill'd upon the spot, the rest were glad to get aboard their Ships again, and among them *Ogeron* himself, who ready to dye with Vexation at his ill success, was forc'd to leave that Coast and return to *Tortuga*. The poor *French* Prisoners that were left behind, met with worse usage afterwards from the *Spaniards* than before, and several of them having made their escape aboard the *Dutch* Squadron of Mr. *Jacob Binks*, which about that time touch'd at *Puerto Rico* to refresh themselves, the rest were sent to the *Havana* to work on the Fortifications of that place; the same being brought to perfection, they were by degrees transported into *Europe*; but met for the most part again in *France*, from whence they return'd to *Tortuga*, equipt a new Fleet, and under the Conduct of the *Sieur Alaintenon* a *French* Man, sack'd the Isle *de la Trinidad* (betwixt *Tabago* and the Coasts of *Paria*) and put it to a Ransom of 80000 pieces of Eight; and thence sail'd with the same design for the City of *Caracas* over against the *Dutch* Isle of *Curasao*.

1676.

But without success.

The French Prisoners sent to Europe.

Return to Tortuga.

The Colony setled in the Isle of *Tabago* by the Subjects of the Duke of *Courland*, being oblig'd to quit the same for want of timely supplys, the same did fall to the share of *Adrian*, and *Cornelius Lampsius*, Natives of *Flushing* in *Zealand*, as being the first possessors of it, after it had been quitted by the former. These arriving there with some *Dutch*, erected a good Fort there, for the defence of their new Colony; the strength whereof the *French* sufficiently try'd, as I shall relate anon, after I have given you an Account of what happen'd in 1676 before *Cayana*.

§. X. *What happen'd at the Isles of Cayana and Tabago, betwixt the Count d' Estres the French Admiral, and Mr. Jacob Binks Vice-Admiral of the Dutch, in the West Indies.*

The *Dutch* having resolv'd to recover this Isle from the *French*, sent Vice Admiral *Binks* with a good Squadron of Men of War and one Fireship upon that Expedition. He arriv'd near *Cayana May* 4. and having landed 900 Men, summon'd the Governour of the Fort Monsieur *Lesi* to surrender; who having answer'd, *That they would defend themselves to the last*, the *Dutch* attack the Fort in two places, with such fury, that after some resistance the Garrison was forc'd to surrender at discretion, with 37 pieces of Cannon belonging to the place, with the loss only of 14 Men kill'd, and 72 wounded on the *Dutch* side.

A Bay belong'd to the Duke of Courland, but is quitted by him, and possessed by the Dutch.

The *French* King had no sooner understood this loss, but he sent a Squadron under the Conduct of the Count *d' Estres* to retake the same; who arriv'd on that Coast in *December* following; and having receiv'd intelligence of the strength of the *Hollanders* by a *French* Vessel he met near the River *Aperouaco*, landed 800 Men 3 Leag. from the Castle, who whilst they march'd on by Land, the Fleet follow'd by Sea; *December* 19 he sent Monsieur *de Lesi* to summon the *Dutch* Governour; who having answer'd, *He would defend himself like a Man of Honour*, the *French* assaulted the Castle in seven several places at once the next Night, and put the *Dutch* so hard to it, that after a brave resistance, they surrender'd themselves Prisoners of War, and were carried afterwards to *France*.

They retake the Isle of Cayana.

The Count d' Estres sent to regain it.

The Fort is storm'd and taken.

From hence the Count *de Estres* sail'd to *Martinico*, where having receiv'd intelligence, that the *Dutch* Fleet under Vice Admiral *Binks* was then at *Tabago*, he set sail directly thither; and in two Days after came to an Anchor in the Bay of *Palmit*. At their approach the *Dutch* Admiral had sent all his Land Forces with some Mariners ashore, under the Command of three Captains, to provide for the defence of the Fort call'd the *Star Shans*; and as soon as he saw the *French* land their Men, order'd all the adjacent Houses to the Fort to be laid in Ashes. *February* 23 sent a Summons to the Governour of the Fort for the surrender of it; which being denied, things remained pretty quiet till the 3d of *March*, when the *French* Fleet came with full Sail upon the *Dutch* Squadron, whilst the *French* Land Forces advancing through the Woods, assaulted the Fort on that side most furiously, but in vain, being repulsed with the loss of 150 Men killd, and 200 wounded. All this while the Engagement at Sea continued with great fury, and equal obstinacy on both sides, till at last Monsieur *d' Estres* having lost his own Ship, and two more stranded in the Port, quitted the Bay, leaving the Victory to the *Dutch*; which however they did not purchase, but with the loss of several of their Ships burnt.

He sails to Martinico.

And then to Tabago.

1677.

Storms the Fort, but is repulsed.

Is beaten at Sea.

After this Miscarriage, the *French* Fleet set sail for *France*, and arriv'd at *Brest June* 21. The *French* King having receiv'd an account from Monsieur *d'Estres* own Mouth of this Enterprize, order'd Eight stout Men of

Returns to France.

1677. Comes with another Fleet to *Tortuga*.

War, and as many smaller Vessels to be got ready immediately: With this Squadron the Count *d' Estres* set sail from *Brest October* 3. and being by the way reinforced with some Recruits from *Martinico*, arriv'd at the Isle of *Tabago December* 7. where he landed 1500 Men, and *December* 19. landed his Artillery near a Port call'd *Le Fort*. The next Day Monsieur *d' Estres* took in Person a view of the Fort, and having summon'd it in vain, advanced towards it; the 11th and 12th began the Attack, by casting Fire-balls with great violence. The third Bomb that was thrown happen'd to break in the path-way leading to the Magazine of Powder, where much Powder being scattered by the negligence of those that carried it to and fro; the same took fire, and running in an instant to the Magazine, the same was blown up, and with it Vice Admiral *Binks* himself and all the Officers, except Captain *van Dongen*, who remained alive. During this Consternation the *French* mounted to the assault with 500 of their best Men, and with little resistance made themselves Masters of the Fort, where they found 300 Prisoners, who, (after Monsieur *d' Estres* had demolish'd the Fort) were sent aboard his Fleet into *France*.

1677. The Magazine of the Fort blown up.

And taken by the *French*.

CHAP. V.

The Fourth Part of the History of the Bucaniers *of* America: *Containing the Exploits of Captain* Bartholomew Sharp, *and others in the South Seas.*

§. I. Capt. *Coxons*, *Sawkins*, and *Sharp's* design against the Province of *Darien*, on the Continent of *America*.

THE Fleet of Pirates which had lately plunder'd *Puerto Velo* a second time, having appointed their Rendezvouz at *Boca del Toro*, they met in that place with two other *English* Vessels, Commanded by Captain *Peter Harris*, and Captain *Richard Sawkins*: And being inform'd that the *Indians* of *Darien* had been very serviceable to Captain *Bournano* a *French* Man, in his attempt upon the Town of *Chepo* near the South Sea, and had engaged to conduct him to a rich place call'd *Tocamora*, if he would return with more Men and Vessels, it was agreed to attempt that place. As there is plenty of Tortoises near this Port, and the Coast affords many small Creeks, we here refitted our Vessels; which done, we rendezvouz'd with the Nine following Ships at the Isle call'd by us the *Water-Key*: Captain *Coxon*'s Ship 8 Guns, 97 Men; Captain *Harris* 25 Guns, 107 Men; Captain *Bournano* 6 Guns, 86 Men; Captain *Sawkins* 1 Gun, 35 Men; Captain *Sharp* 2 Guns, 40 Men; Captain *Cook* 0 Gun, 43 Men; Captain *Allefton* 0 Gun, 24 Men; Captain *Row* 0 Gun, 25 Men; Captain *Macket* 0 Gun, 20 Men.

Their Strength by Sea and Land.

The Rendezvouz of the Pirates.

They set sail for the *Zamblas* Isles. 1679.

We set sail *March* 23. and touch'd at the *Zamblas*, certain Isles reaching 8 Leagues in length, 14 Leagues West of the River of *Darien*. Whilst we were at Anchor here, the *Indians* came in great numbers aboard us, with Fruits and Venison, which they exchanged with us for Beads, Needles, Knives, and other such like Toys, but they are most desirous of Axes and Hatchets, for the felling of Timber.

The *Indians* of these Isles.

The *Indian* Males hereabouts go quite naked, having only a tip hollow and sharp at the end, made of Gold, Silver, or Bark, to cover their Genitals, and fastned with a String about the waste. In their Noses they wear a Gold or Silver Plate hanging over their Mouth in the shape of a half Moon, but the Women have a pretty thick ring of Gold or Silver in their Noses; their Cloths are only Blankets wrapt about them; they have very good Features, and some of them are fairer than any Women of *Europe*, and have Hair as white as Flax. 'Tis said that their Eye-sight is better in the dark than by day light. The Men paint themselves with black, and the Women with red streaks.

They change their design.

The *Indians* here having dissuaded us from going to *Tocamora* (as we design'd) by reason of the Mountainous ways and desarts; we chang'd our resolution, with intention to proceed towards *Panama*, which being dislik'd by Captain *Bouriuano*, and Captain *Rows*, two *French* Commanders, we left them at the *Zamblas*, and were conducted by one *Andrew* an *Indian* Captain, to the *Golden Island*, situated a little to the West of the great River of *Darien*.

They go to the Golden Isle. 1680.

Here we all met, (being 7 Sail) *April* 3. and the *Indians* of this Isle having represented to us that a Town call'd *S. Maria* was seated upon a River of the same name, which exonerates it self into the South Sea by the Gulph of St. *Michael*; and that from thence we might easily go by Sea to *Panama*: We approv'd of their proposition, and landed immediately, *viz.* 5th of *April*, 331 Men on the Coast of *Darien*, leaving Capt. *Allefton* and Capt. *Macket* with the rest to take care of the Ships.

Form a design upon *S. Maria*.

They were no sooner landed, but having provided themselves with Bisket, and divided their Men into 7 Companies led by their respective Captains; they began their march towards *S. Maria*, under the Conduct of some *Indian* Guides.

§. II. Their march to the Town of *S. Maria*, are met by the *Indian* King of *Darien*: Difficulties in their march.

The first Day we march'd through a small skirt of Wood, then two Leagues through a woody Valley, lined here and there with Plantations: Afterwards coming to a River side, which was then almost dry; we were met here by another of the *Indian* Captains, named *Antonio*, who gave us great encouragement in our Enterprize; he desired us to avoid lying in the Grass for fear of the Adders, and shew'd us some Stones, which when broken to pieces, discovered some sparks of Gold; these are carried down from the Neighbouring Gold Mountains in the time of the Floods.

Find some Gold Stones.

The second Day passing a steep Hill, we came down the other side of it to the Bank of the River, which Captain *Andreas* told us, discharg'd it self into the South Sea, being the same upon which *S. Maria* stands. About noon we descended a very high and steep Mountain, with so narrow a path in some places, that not above one Man could pass at a time. In the evening we set up our Huts upon the Bank of the same River, having marched 18 Miles that Day.

They come to the River of *S. Maria*.

The third Day, being *April* 7. we kept travelling on along the River crossing it almost every half Mile, sometimes up to the middle: Its Current is very swift hereabouts. About Noon we came to an *Indian* Village, the Houses whereof were both spacious and neat, the sides built of Cabbage-Trees, and the roofs of wild Canes, thatcht with *Palmito* Leaves. They had only Ground Rooms, divided by several Partitions, and stood at a Stone's throw from one another, having each a large Plantane Walk before it. About half a Mile hence the King or chief Leader of these *Indians* of *Darien* had his residence, who came to give us a visit: His Crown was curiously twisted of small white Threads, with a red Silk lining, standing up at the top: About the middle of it was a thin Plate of Gold two inches broad, fastned behind, in which stuck three Ostriches Feathers: Round this Golden Plate was a row of Golden Beads, something bigger than our Peas, underneath which you might see the red lining. In his Nose he had a large Plate of Gold shaped like a half Moon, and in each Ear a large Gold Ring of four inches Diameter, with a round thin Plate of Gold of the same breadth, fastned to the ring through a hole in the Center of it. His Garment was a white Robe of Callicoe, reaching to the small of his Legs, and fringed at the bottom three inches deep, so that you could see no higher than his naked Ancles. He was arm'd with a long bright Launce, as sharp as a keen Knife: His three Sons had also each a Launce in their Hands, and were dress'd in white Robes, but stood bare-headed, as did also eight or nine Persons more that attended him. His Queen had a red Blanket girt close about her waste, and another hanging loosely over her Shoulders; in her Arms she had a female Babe, and two marriageable Daughters, next by her sides, covered all over with red streaks on their Necks and Arms, and with small Beads of divers Colours. The *Indian* Women are generally

airy

1680. airy and brisk, but notwithstanding this very reserv'd in the presence of their Husbands, who are much addicted to Jealousie. We changed several Trifles with the Inhabitants, and found them very cunning in their Dealings. Here we rested our selves for one Day, and the King presented to each Man three Plantanes, with some Sugar Canes, but what we wanted more, we were forced to Truck for, which the King himself would do for his Plantains.

The fourth Day of our march, *viz. April* 9. we kept still along the Banks of the River, meeting now and then some *Indian* Houses, the Owners thereof would stand at their Doors, and take an account of our number, as we pass'd along, by dropping a grain of Corn for each Man, for otherwise they can tell no farther than twenty, nor know any greater number. We quarter'd that Night at some *Indian* Houses.

Some of them embark upon the River.

The fifth Day Captain *Sharp*, Captain *Coxon* and Captain *Cook* embark'd with seven others in fourteen Canoes upon the River, to go downwards with the Current; I was one of their number, and so was Captain *Andrew*, and two *Indians* in each Canoe. But we soon found to our cost, that instead of easing our selves, we had engaged in new difficulties, being forced frequently to hale our Boats over Sands, Rocks and Trees, that lay cross the River, nay sometimes over the very points of Land. At Night we took up our Lodgings in our own Huts.

Meet with great Difficulties.

The sixth Day of our march being the 11th of *April*, we went on with the same fatigues; at Night we saw a Tygre but durst not fire at him, for fear of being discover'd by the *Spaniards*, who lived, as we were told, not far from hence.

They are solicitous about their Companions.

The seventh Day *April* 12. our Pain and Troubles were redoubled, both by the difficulty of our passage, and the absence of our Companions, of whom we had heard no tidings since our Embarkment upon the River; which made us begin to suspect the Fidelity of our *Indians*.

The eighth Day being *April* 13. we continued to fall down the River to a beachy Point of Land, where another branch joins its Waters with this River, being the common place of Rendezvouz of the *Indians*, when they are to draw out against their declared Enemies, the *Spaniards*. Here we halted, in hopes of meeting with our Companions we had left to march by Land, and to our great satisfaction saw them coming towards us in the afternoon. We rested here the remaining part of the Day and the following Night, part whereof we spent in fitting our Arms for Action.

Meet with them.

The ninth Day of our march, *viz. April* 14. we embark'd to the number of 327 *English* Men, and 50 *Indians* in 68 Canoes; which now we managed with Oars and Paddles, whereas hitherto our *Indians* had guided them with long Poles. Thus rowing on with all possible speed, we landed about midnight at about half a Mile distance from the Town of *S. Maria*, the scope of our present design: The place being very deep and marshy, we were forced to lay down our Paddles, and uphold our selves at the same time by the boughs of the Trees, without which we must have stuck in the Mire; we were forced afterwards to open our ways into an adjacent Wood, by cutting down many Shrubs and Trees, where we absconded all Night, for fear of being discovered by the Inhabitants of the Town.

They land near *S. Maria*.

§. III.

They assault and take the Town of *S. Maria* without Difficulty; but are disappointed in their hopes of the Booty.

The next Morning, *viz. April* 15. by break of Day being allarm'd by the discharge of a Musket, and the beat of Drum in the Town, we put our selves in a posture to attack it: No sooner did we march out of the Wood, but the *Spaniards* (who had got intelligence of our coming) retreated into a large Pallizado Fort of twelve foot high, from whence they fired briskly among us; but our Vanguard advancing with all speed to the place, and pulling down two or three Pallisados, enter'd the Fort with Sword in Hand, and soon made themselves Masters of it, (though they were not above fifty strong) without the loss of one Man, having only two wounded. Notwithstanding the same was defended by 260 Men, of which 26 were kill'd, and 16 wounded; most of the rest escap'd by flight.

A Description of the Town, and circumjacent Country and River.

As we had great reason to be rejoiced at this unexpected Success, so on the other hand it grieved us to the Soul, when we found our selves disappointed in our expectation of a vast Booty here: For the Inhabitants had sent 200 Men to convey away the Gold which is brought thither from the neigbouring Gold Mines, by another branch of the River. These Mines are esteemed the richest in all the *Indies*, or at least of all these Western Parts of the World. Besides which, it was not above three Days before, that 300 weight of Gold was sent thence to *Panama* in the Ordinary Bark, which is sent thither three times a Year, to carry what Gold is brought to *S. Maria* from the Mountains to *Panama*. For the rest we found the Town of *S. Maria* to consist only of some Houses made of Cane, and scattered here and there; the place being chiefly design'd for a Garrison, to curb the Neighbouring *Indians*, and to receive the Gold dug in the adjacent Mountains.

The rich Mines near *S. Maria*.

1680.

The Town of *S. Maria*.

Immediately after we had taken the place, our *Indians* who had hid themselves during the assault in the Wood, came also into the Town, where they destroyed all the *Spaniards* they could meet with, because one of that Garrison had ravish'd the before-mention'd King's Daughter, whom we now reliev'd, and found her with Child. By this time finding our selves quite deceiv'd in our expectation of the huge Mass of Gold we had taken so much pains for, and being unwilling to return empty-handed after so much toil, we resolv'd to go to *Panama*, which being at no great distance, and fill'd with the Treasures of the Mines of all *Potosi* and *Peru*, we were sure to make our selves an ample amends, if we could become Masters of that place. With this resolution, having sent back what little Booty we had got, together with the Prisoners, under the Conduct of twelve of our Men, to our Ships, Captain *Coxon* was chosen by unanimous consent our Commander in chief, for the intended Expedition.

They relieve the King's Daughter.

Form a Design upon *Panama*.

Whilst we were preparing for our departure, the greatest part of the *Indians* that had conducted us hither, having got what Toys they could, would needs return home; but Captain *Andrew*, Captain *Antonio*, the King's Son, call'd by the *Spaniards*, *Bonete de Oro*, or *Golden Cap*, as also his Kinsman resolv'd to go along with us to *Panama*.

The chiefest of the *Indians* go along with them.

§. IV.

The *Bucaniers* go from *S. Maria* by Sea to take *Panama*: Accidents and Dangers of this Voyage.

After two Days stay at *S. Maria*, having at the request of the King of *Darien* burnt the Fort, Church and Town of *S. Maria*, we embark'd *April* 17. in 35 Canoes, to row down the River in quest of the South Sea, upon which *Panama* is seated, towards the Gulph of *Belona*, where we were to enter that Ocean: Most of our Prisoners choosing to follow us in such old Boats or Bark Logs as they could get, rather than to be left behind at the mercy of the *Indians*. It happen'd to be my misfortune to be with only three more in a sluggish Canoe; so that being left somewhat behind, and not knowing the true Channel among such variety of Streams, betwixt the Sands, we miss'd the true Channel, and the Tide running against us, we were forc'd to remain there till the turning of the Tide: Then we betook our selves again to our Oars, in hopes of overtaking our Companions, till 10 a Clock at Night, when we were forced to stick an Oar in the River, and stay there till break of Day; then to our great dissatisfaction, we discover'd our People, after we had row'd two Leagues; they having stay'd all Night at an *Embarcadero*, or Landing place to get fresh Water; being told by them that we must provide our selves with fresh Water here, we went to a little Pond not far off to fill our Jars; but by that time we return'd to our Canoe, found the rest gone already out of sight; we row'd after them with all possible speed, but being among a great number of small Isles, we could not without great trouble make that Mouth of the River call'd *Boca chica*, i. e. the *Little Mouth*, by the *Spaniards*: But the Stream by this time turning against us, we were forced to get ashore, just within the Mouth of it. So soon as the Tide was turn'd we row'd from thence to an Isle half a League distant from the Rivers Mouth, in the Gulph of St. *Miguel*, where we took up our resting place for that Night, though not without great danger, our Canoe being every Moment in danger of being over-set by the impetuosity of the Waves. The remembrance of the Danger, together with the violent Rains, made us pass the Night without Sleep, and notwithstanding we saw our selves surrounded with an impetuous Sea, and dreadful Rocks, nothing could have been more welcome to us than the dawning of the Day, which put us in hopes of seeing some period or other of our present Misery.

The Author put to great straits.

Is left by the Pirats a second time.

§. V.

Mr. *Primerose* the Author of this Narrative cast away; taken by the *Spaniards*, and miraculously preserved; with several other Disasters that befel him.

A Description of the Gulph of *Vallens*.

April 19. with break of Day we left the before-mention'd Isle rowing towards the Point of *San Lorenzo*. No sooner were we got into the open Sea, but the smallness of our Canoe put us every Moment in danger of being swallow'd up by the Waves, and though we strugled hard to escape these difficulties, by throwing out the Water without intermission; yet near one of the Islands of this Coast our Boat was over-turn'd, and we were forc'd to save our Lives by swimming ashore. By good fortune our Boat was droven thither also after

They burn and leave *S. Maria*.

1680. us, so that we saved our Arms and Powder-Horns, (being well wax'd down) but lost all our Bread and fresh Water.

Another Canoe cast away.

Whilst we were employ'd in cleaning our Arms, we saw a little to the Leeward of us another Canoe under the same Misfortune: The Persons in them proved to be six *Spaniards*, belonging to *S. Maria*, who for fear of the *Indians*, had follow'd our People in another Canoe. They came to us, and made a Fire, which boil'd us some Meat we had, but our greatest want was fresh Water. Their Canoe being old, soon split against the Rock; but ours being very strong, was in no great danger.

We began by this time to consult what was best to be done in this Exigency; most were of opinion to return and live among our friendly *Indians*, if we could not get back to the North-Sea, to our Ships; but I persuaded them to go forward for one Day longer: Whilst we were busy in debating the matter, our Watchman discover'd an *Indian* running into the Wood, but being overtaken by two of our Men, he proved to be one of our friendly *Indians*. He carried them to 7 more of his Companions, who soon after came to the place where I was, and express'd their satisfaction of seeing us alive; giving us to understand by Signs, That if we would go along with them in their Canoe, they would bring us by next Morning to our Companions.

After this kind Invitation, they began to ask who the other six Men were, (finding them different in their *Lingua* and Dress from us:) And being answered, they were *Spaniards*; they were going to kill them immediately, had I not interposed in their behalf; yet they would not be satisfy'd till I let them have one of them for a Slave; which I was forc'd to do, and to save the other five from the like danger, I gave them our Canoe, to shift for themselves, which they did.

The Author saves the Life of six *Spaniards*.

As we had all the reason in the World to be glad of the kind offer made us by our *Indian* Friends, so we embraced the same with joy, and embark'd in a large Canoe, well fitted for our purpose; and having a fresh Gale we had an easie passage: After the Miseries and Pains we had undergone of late, our Joy was redoubled, when about nine a Clock at Night espying some Fires ashore under the Point of St. *Lawrence*, our *Indians* cry'd out Captain *Antonio*, Captain *Andreas*, the names of their *Indian* Leaders, assuring us that these Fires were made by their Companions. Accordingly they row'd for the shore, but were much surpriz'd to see about sixty *Spaniards* arm'd with Clubs, coming out of an adjacent Wood, and taking hold of the Canoe, hale her upon the dry Land. Our *Indians* seeing their mistake, leapt over-board, and got into the Woods, but my Companions and I were made Prisoners; some of them understanding a little *Latin*, we perceiv'd that they were some of the *Spanish* Prisoners, who had been set ashore here by our People, for fear, if they should carry them nearer to *Panama*, they might perhaps find a way to discover their Design to the Enemy.

He puts to Sea again.

Is made a Prisoner.

They seem'd to be very glad, to have got us into their Hands, threatning to revenge upon us all the Miseries they had endur'd, by our taking and sacking the Town of *S. Maria*. Whilst the Captain of the *Spaniards* was examining me, in came the poor *Spaniard*, whom I was forced to give as a Slave to the *Indians*, and told them how I had sav'd him and his Companions from present Death. His Words had so powerful an influence upon the Mind of the generous *Spaniard*, that he immediately embraced me; saying, We were friendly Enemies, and desir'd me to sit down. Soon after he told us, That he not only gave me my Liberty, but for my sake also to my Companions, and to the *Indians* themselves, that were with us, who having been search'd for and found in the Woods; he conducted us in Person to our Canoe, and by a strange Catastrophe was now the first that push'd off our Canoe as he had before hailed it up. We row'd along the shore all Night, though it rain'd very hard, but the next Morning by 10 a Clock, we espy'd a Canoe making towards us, which proved one of our Companions, who mistaking ours for a *Spanish Periagua*, had sent her in quest of us. We were extreamly glad to meet again, after such various changes of Fortune; and soon after saw our whole Fleet coming out of a deep Bay behind the Point of Rocks, where they had been at Anchor all that Night.

Gratification of a *Spaniard*.

Is set at Liberty.

Overtakes the rest of the Fleet.

§. VI. The *Bucaniers* come within sight of *Panama*; take several Barks and Prisoners by the way; are discovered by the *Spaniards*: They command the *Indians* to kill the Prisoners.

Having with mutual satisfaction rejoin'd our Fleet, we steer'd together towards a high hammock of Land, as it appear'd at a distance, but is in reality an Isle seven Leagues from the before-mention'd Bay. On the highest Eminency of it the *Spaniards* have a Watch-house, or *Look-out*, whence perhaps this Isle has got its name, *viz. Farol de Plantanos*, i. e. the *Plantane Watch*. We landed the same Evening in the Isle, and going up by a steep Ascent to the Hill, where the Watch is kept, we soon took by surprize the old *Spanish* Watch-man, as he lay in his Hut. He assur'd us, that the *Spaniards* at *Panama* had no notice hitherto of our design, which not a little encouraged us to go on in our intended Enterprize.

1680.

They arrive at *Farol de Plantanos*.

Just before Night we saw a Bark come to an Anchor on the out-side of this Isle, which we soon surpriz'd with two of our Canoes well mann'd; the Prisoners declared, that they had been eight Days from *Panama*, and landed some Soldiers not far hence, to curb the *Indians* thereabouts: One hundred and thirty seven of our Men were immediately embark'd aboard this Vessel, and among them Captain *Bartholomew Sharp* and Captain *Cook*. The next Morning leaving this Isle, we row'd all along over shoal Water; in the Afternoon we saw another Bark, which was chased, and taken, after some dispute by Captain *Harris*, and mann'd with thirty of our Men. Towards Night, being for the most part separated from one another, we laid up the Canoe in which I was, ashore four Leagues to Leeward of the Isle of *Chepillo*, whither we had directed our Course.

They take a Bark coming from *Panama*.

They take another Bark.

Come to the Isle of *Chepillo*.

The next Morning we row'd towards the before-said Isle, and in our way espy'd another Bark, Captain *Coxon* was the first that came up with her, and had immediately a Man kill'd, and two wounded; after which the Wind freshing, she got away, to our singular Grief, as not questioning but that she would get before us to *Panama*, and bring them the News of our coming. About two a Clock in the Afternoon we all met at the Isle of *Chepillo*, we where took fourteen Prisoners, and good store of Plantanes, excellent good Water, and two fat Hogs. Our Commander order'd our *Indians* (for what reason I know not) to kill the Prisoners, which they went about with great chearfulness; but notwithstanding their eagerness, they all got away from them (though unarm'd) in spite of their Lances, and fled into the Woods, excepting one that was kill'd upon the spot. It being now agreed on all hands, that our Design had been discover'd at *Panama*, it was resolv'd to make all haste we could thither, that since there was no likelihood of taking the City, we might at least surprize some of their Shipping, and thereby render our selves Masters of those Seas.

Their Design upon *Panama* discover'd.

§. VII. They come in sight of *Panama*, engage 3 small Men of War, and defeat them with only 68 Men: They take divers Ships at the Isle of *Perico* near *Panama*.

We left this Isle (after a stay of some Hours) in the Afternoon, and it being only seven Leagues from thence to *Panama*, came the next Morning before Sun-rise (*viz. April* 23.) in sight of that City, which affords a gallant Prospect to the Sea side. Soon after we discover'd the Isle of *Perico*, two Leagues distant from *Panama*, and the Ships lying at Anchor near the Island, *viz.* five great Ships, and three large Barks, call'd by the *Spaniards Barcos de la Armadilla*, or small Men of War; which were mann'd on a sudden to dispute our Entrance into the Harbour. They no sooner espy'd us, but they came directly towards us: In our five Canoes were no more than 36 Men, and these much tired with rowing, and one *Periagua*, had only thirty two more; so that being only sixty eight in all, we were to engage these three Barks, so much superiour in strength to us; for the Commodore *Don Jacinto de Barahona* had no less than eighty six *Biscayners*, all Volunteers aboard; the second under the Command of *Don Francisco de Paralta*, a Native of *Andalusia*, 77 *Negroes*; and the third commanded by *Don Diego Carabaxal* with 68 *Mestizo's* and *Mulato's*, making in all 228.

The beginning of the Engagement.

Captain *Sawkin's* Canoe, and that wherein I was being much to the Leeward of the rest, the Ship of *Don Diego de Carabaxal* got in between us, and kill'd four of his Men, and one in our Canoe; but we soon repay'd him in the same Coin, killing with our first Volley several of his Men upon the Deck. By this time we were also got to the Windward, as the rest were before. The Commodore came up with us in an instant, but we being so fortunate as to kill his Man at the Helm, his Ship ran into the Wind, and her Sails lay aback. This gave us sufficient opportunity to come under his Stern, and firing without intermission, kill'd all that came to the Helm; and with our Shot cut asunder his main Sheet and Brace. By this time the Ship commanded by Captain *Peralta* came to the aid of the Admiral; whereupon Captain *Sawkins* went into the *Periagua* (his *Canoe* being quite disabled) and met the said *Peralta*: As they layd aboard one another, the

A particular account of the said Engagement.

dispute

1680. dispute was very hard between them; but whilst they were thus engag'd, *Carabaxal*'s Ship tack'd about, to relieve the Admiral, which we perceiving, two of our Canoes, *viz.* Captain *Springers* and ours, stood off to meet him, leaving the other two at the Admiral's Stern. Thus meeting him half way, we engaged him so closely, that having scarce Men enough left to carry off the Ship, he was forc'd to make hard shift to get into the Harbour. This done, we return'd again to the Admiral, and came so close under his Stern, that we wedged up the Rudder, and at the same time killing the Commodore and the head Pilot, and above two thirds of the Men being kill'd, the rest cry'd for Quarter; Captain *Coxon* coming aboard, he first put aboard her all the wounded Men, and among them Captain *Harris*, who was shot through both Legs: Which done, he sent immediately two Canoes to the assistance of Captain *Sawkins*, who had three times boarded *Peralta*, and was as often beaten back. We were no sooner come under *Peralta*'s side but we gave him a brisk Volley of Shot, and in a Minute after saw some of his Men that were abaft the Mast blown up; whereupon the *Spanish* Captain leapt over board, and got several of them into the Ship again, though he was miserably burnt himself; but whilst he was busy in recovering these Men, another Jar of Powder taking Fire, blew up several others upon the Fore-Castle; Captain *Sawkins* taking hold of this opportunity, boarded them once more, with the utmost fury, and soon made himself Master of the Ship.

One of the Enemy's Ships forc'd to fly.

The Admiral taken.

Capt. *Harris* wounded.

Another Ship taken.

Immediately after I went aboard the said Ship, where I beheld the most lamentable Spectacle I ever saw, there being not one Man there but was either kill'd, wounded, or miserably burnt. From hence I went to the Admiral's Ship, where I likewise saw what will scarce meet with Credit, but by those that were in the Action; for of 68 Persons there remain'd no more than 25 alive, and of these only 8 were able to bear Arms, the rest being quite disabled by their Wounds.

A miserable Spectacle aboard the *Spanish* Ships.

The Engagement being over, Captain *Peralta* being ask'd by Captain *Sawkins*, what Men there were aboard the great Ship we could see lying in the Harbour of *Perico*? and how many in the smaller Vessels? He told him, that the biggest alone had 350 Men, and that the rest were sufficiently mann'd to defend themselves against any attempt he could make upon them. But one of his Men, who lay mortally wounded upon the Deck, contradicting him in what he said, and telling Captain *Sawkins*, That they had taken all the Men out of them, to Man the *Armadilla*, or three little Men of War we steer'd our course to the said Isle, and found not one Person aboard them. The biggest of them was call'd *La Santissima Trinidad*, i. e. the *Holy Trinity*; they had set her on fire, which we quenched, and made her for the present our Hospital Ship. During this furious Engagement, which lasted from just after Sun-rise till Noon; we had eighteen Men kill'd and twenty two wounded; and two Days after the brave Captain *Harris* born in *Kent* died of the Wounds he receiv'd in the Engagement, and besides him only one Man more, all the rest being very well recover'd not long after. Whilst we were at Anchor before *Panama*, *Don Francisco de Peralta* our Prisoner, gave me the following Account concerning the City of *Panama*, and the adjacent Country.

Several Ships taken in the Harbour of *Perico*.

Capt. *Harris* Dyes.

§. VIII. An account of the City of *Panama*, and the circumjacent Country: What Vessels were taken, whilst they stay'd near that Harbour. Capt. *Coxon* returns home with 70 men; Capt. *Sawkins* chosen Commander in chief. Its situation. Strength.

The old City of *Panama*, which stood quite East from the Place where you see the Magnificent City of *New Panama*, being burnt by Sir *Henry Morgan*, and three several times since by accident, the Inhabitants remov'd to this Place, some few of the poorer sort excepted, who remain there to this Day, and perform their Religious Worship in the Cathedral, which makes a fair appearance at Sea. This new City, of which I am now going to speak, much exceeds the old one in bigness, being built of Brick and Stone in a circular form (except where it faces the Sea) in a deep Bay in the South Sea, at 9 *deg.* North Latitude: The Churches thereunto belonging are eight in number, but unfinished; the chief whereof is dedicated to our Lady. Its length is a Mile and half, and one in breadth. It has only two Gates, and is surrounded with a good Wall, except in one place where a Creek goes into the City, which at high Water admits Barks to furnish them with all manner of Necessaries. The constant Garrison of regular Troops consists of 300 Men, and their Militia of 1100. but at our coming there most of the Soldiers being absent, we might in all likelihood have carried the Place, had we gone ashore instead of engaging the *Armadilla*, for they had no notice of us, till within 24 Hours of our arrival. The Country for 7 Leagues about it is *Savanato*, as the *Spaniards* term it, i. e. plain and level Ground, intermix'd with some few Groves: In these Plains are many enclosures for Oxen and Cows, but the Ground on which the City stands being fenny, it renders it unhealthful; b sides that, the Water is very full of Worms, which being very pernicious to Ships, the King's Ships are for this reason always laid up at *Lima*, the Capital City of *Peru*, except at the time when the Galeons come from *Spain*, then they come down to *Panama*, to fetch the King's Treasure.

1680. Plains round about it.

At the before-mention'd Isle of *Perico*, we seized five Ships; the biggest call'd the *Trinidad*, (mentioned before) was of 400 Tuns, loaden with Wine, Sugar, Sweet-meats, Skins and Soap. The second Ship carried 300 Tuns, being half loaden with Iron. The third burthen 180 Tuns, her Cargo Sugar: This was given to Captain *Cook*, who had also another Ship of 50 Tuns, which he took along with him when he left us. The fifth was an old Ship loaden with Flower and Meal of 60 Tuns. Soon after our arrival before *Panama*, Captain *Coxon* being upbraided by some of our Company with Cowardice, by reason of his backwardness in the last Engagement with the *Spanish Armadillo*, determined to leave us; and having drawn 70 Men into his Party, they went back in the before-mentioned Ship, and a *Periagua*, to our Ships, we left at the Mouth of the River of *S. Maria* in the North Sea. The *Indian* King, and Captain *Antonio* and Captain *Andrew* went along with him, but the King left his Son and Nephew with Captain *Sawkins*, as a Pledge of his good Inclinations towards us: In his stead Captain *Sawkins* was unanimously declared our Commander in chief, in the absence of Captain *Sharp*, who rejoin'd us *April* 25. having been kept back for want of fresh Water, which he was forced to fetch as far as the King's Isles: Here he took a new Bark, which made him burn his old one; within two or three Days after his arrival, Captain *Harris*'s People also came to join with us, who having also taken another Bark, quitted their old one for her: The next Day we took another Bark coming from *Nata*.

Ships taken at *Perico*. In which they return'd home.

Capt. *Coxon* leaves them with 70 men.

Capt. *Sawkins* chosen in his room.

Capt. *Sharp* rejoins them, and Capt. *Harris* his men.

Three Barks taken.

After a stay of ten Days before *Panama*, we set sail *May* 2. from the Isle of *Perico* to the Isle of *Tavoga* two Leagues farther. It has a Town (bearing the same name) of about 100 Houses. Whilst we stay'd here divers Merchants from *Panama* came hither to exchange with us what Commodities we had taken, for such as we stood in need of; and as from hence we could discry all the Vessels going into the Port of *Panama*, we took several Barks with Fowls, and among the rest a Ship coming from *Truxillo*, loaden with 2000 Jars of Wine, 50 Jars of Gunpowder, and 51000 pieces of Eight. Within two Days after we took another Prize loaden with Flower: About the same time the President of *Panama* sent a Message to us by some of the Merchants, to ask Captain *Sawkins*, what had brought us into those Parts? Unto which the Captain reply'd, *That we were come to assist the King of* Darien, *the rightful Lord of the Country of* Panama; *but that in case he would allow every private Man* 500 *pieces of Eight for his share, and* 1000 *to every Commander, they would return, provided they would not molest the* Indians, *their Friends, for the future.* The next Day one of the said Merchants return'd with a Message from the Governour, to know, *That since he knew us to be* English *Men, from whom we had our Commissions, and unto whom he must address himself, to make reparation for the Dammages they had sustained by us.* Captain *Sawkins* only sent him this Answer, *That so soon as all his Company were met, they would give him a visit at* Panama, *and would make him read their Commissions by the Flame of their Gunpowder.*

They take several Prizes.

Capt. *Sawkins*'s Answer sent to a message from the President of *Panama*.

They go to the Isle of *Otoque*, and thence to *Cayboa*.

Captain *Sawkins* would willingly have stay'd longer here, to wait for a rich Ship, they had receiv'd intelligence was coming from *Peru* with 100000 pieces of Eight, but our Men being so eager after fresh Provisions, that notwithstanding all his entreaties, he could not persuade them to stay; they sail'd from thence *May* 15. to the Isle of *Ozoque*. Having sent our Boat ashore for some Fowls, Hogs, and other Refreshments, we steer'd to the Isle of *Cayboa*, noted for the Pearl Fishery thereabouts, and eight Leagues distant from *Puebla Nueba*, on the Main.

§. IX. Capt. *Sawkins* is killed at the taking of *Puebla Nueba*; they are repulsed there: Capt. *Sharp* chosen their Commander; many of the Company leave them, and return home over Land.

Whilst we stay'd at the Isle of *Cayboa*, Captain *Sawkins* and Captain *Sharp* went with 60 Men to the Entrance of the River, upon which *Puebla Nueba* is seated, *May* 22. coming to the Mouth of the River, they were conducted up the River by a *Negro*, one of our Prisoners; but the Inhabitants had not only (at a Mile's

1680.

Miles distance from the place) laid Trees cross the River, but also made three Retrenchments to prevent our landing. Here it was that Captain *Sawkins* advancing at the head of a few Men, to force one of them, was slain by the *Spaniards*; a Man both courageous and well-belov'd, and therefore much lamented by our Men, some of whom now resolv'd to leave us, and return to the North Sea over Land.

Captain *Sharp* in his return out of the River, took a Ship of 100 Tuns, loaden with Indigo, Otto, Butter and Pitch; and being now chosen Commander in chief, he bestow'd the said Ship upon Captain *Cook*, and his old Vessel upon such of our Men as would return by Land, being 63 in number, besides the *Indian* King's Son, and the other *Indians*, whom they took along with them for their Guides.

63 of their Men leave them.

The Isle of *Cayboa*.

They left us the 30th of *May* at *Cayba*, an Isle lying South south-east from the Mouth of the before-mention'd River: On the South-east side it has a long Shoal stretching a Mile into the Sea, within which we Anchored at 14 fathom Water: On this side are two great Bays, near one of which is a fresh Water Pond, where washing my self one Day under a *Manzanilla*-Tree, a small Rain happen'd to fall on the Tree, and from thence on my Skin; which produced immediately red Spots all over my Body, whereof I was ill for eight Days after. I eat here the largest Oysters I ever saw, being forc'd to cut them into four pieces.

Mutiny against Capt. *Cook*.

Three Days after the departure of our Men, those aboard Captain *Cook*'s Ship refused also to obey his Commands, whereupon he quitted the Vessel, and went aboard Captain *Sharp*'s Vessel, the *Trinadad*; in his stead *John Cox* was made Commander of the said Vessel: One Captain *Juan*, whom we had taken in a Ship at the Isle of *Taxoga*, having promised us to conduct us to several rich Places, but especially to *Guayaquil*; we prepared for our departure.

Capt. *Cox* put in his place.

§. X.

They set sail for the Isle of *Gorgona*, and their design of *Guayaquil*, go to plunder *Arica*.

June 6. we set sail from *Cayboa*, the Wind South-south-west, our Course South-east by East, and South-east. The third Day we discry'd *Quicara*, two Isles about three Leagues in length, the least whereof lies to the South. The fourth Day we were twenty Leagues South-south-west from these Isles.

The Isles of *Quicara*.

June 10. at 6 *deg.* 30 *min.* Latit. we saw abundance of *Tortoises*, *Dolphins*, *Bonites*, *Albicores*, *Mullets*, *Old Wives*, and other Fish. The 11th of *June* we came at 6 *deg.* North Latitude, the Winds being variable. *June* 13. we had very little Wind, the Current setting to the East. *June* 15. we saw vast numbers of Fish at 4. *deg.* 21 *m.* steering our Course to the *Galapagos*, i. e. the *Tortoise* Isles, situated under the Line a 100 Leagues from the Continent of *America* in the South Sea. We were all this while much afflicted with Calms and great Rains. *June* 17. we discry'd Land; which appear'd low and full of Creeks: Captain *Peralta* told us, it was call'd *Barbacoa*, being nothing but a Desart, and that to the Leeward about 10 Leagues distant lay the Isle of *Gorgona* at 1 *deg.* 0 *min.* North Latitude, which was seldom frequented by the *Spaniards*, by reason of the Rains that fall there almost without intermission. As we look'd upon this Place as the most convenient for the careening of our Vessels, we bore away for the said Island: According to the report of our Prisoners, there is on the Continent over against the Isle of *Gorgona* a great Lake, and upon it stands an *Indian* Town, where they are very rich in Grains of Gold. That at five Days sailing up a River of this Lake, live four *Spanish* Supervisers, who have the care of sixty *Indians*, employ'd in picking up the Gold which slippeth from the first Finders thereof, who are no less than seventy or eighty *Spaniards*, with a vast number of Slaves under them, and dwell twenty five or thirty Days sailing up the same River. That once a Year there comes a Ship from *Lima* to fetch the Gold that is gathered in these Parts, and to provide the People with Necessaries. From thence to *Lima* is six Weeks travelling.

The *Galapagos* Isles.

Gold Sand.

The Isle of *Gorgona*, or *Sharp*'s Isle.

The Isle of *Gorgona* is four Leagues distant from the Continent; its circumference is three Leagues and half; for the most part mountainous, and watered with 30 Rivers and Rivulets. Captain *Sharp* gave it the name of *Sharp*'s *Isle*. From *June* 13. to *July* 3. whilst we continued here to careen and refit our Vessels, we had no Rains, which the *Spaniards* look'd upon as a great rarity in this Place. We saw abundance of *Whales* and *Grampusses*, as also *Indian Conies*, *Monkeys*, *Snakes*, *Oysters*, *Crabs*, *Periwinkles*, and four *Tortoises*: We caught also a Beast call'd a *Sloath*, and by the *Spaniards* *Perezoa*, i. e. *Pigritia*.

By this time having no other Provisions left but Flower and Water, we prepar'd for our departure, though unresolved whither to go: Captain *Sharp* having chang'd his resolution of going to *Guayaquil*, as not questioning but that we must have been discover'd before that time. Whilst we were under this uncertainty, a certain old Man, who had liv'd at Sea many Years among the *Spaniards*, offered to carry us to *Arica*, a Place where all the Plate from *Potosi*, *Chuquisaca*, and other rich Mines of the South *Sea* is laid up, till it is fetch'd away by the Ships; which was approved of by all our People.

1680.

They alter their Resolution of going to *Guayaquil*.

§. XI.

They go towards *Arica*; lose one another and meet again at the *Plate* or *Drake*'s Isle: A Description of the said Isle.

A deep Coast.

The Isle of *Gallo*.

July 25. we set sail from this Isle with a North-west Wind: The 26. we found our selves five Leagues and half distant South-west from *Gorgona*; our *Spanish* Prisoners told us, that all along this low Land Coast there is sixty fathom Water. The 27th we saw the Isle of *Gorgona* twelve Leagues from us at East-north-east. The 28th early in the Morning lost sight of Captain *Cox*, neither did we meet again till we came to the Isle of *Plate*. We saw *Gorgona* 16 Leag. to the E. N. E. *July* 29. in the Afternoon, we saw the Isle of *Gallo* nine Leag. distant to the E. from the Continent, and twenty eight Leag. from *Gorgona*; it lies at 2 *deg.* 12 *min.* N. Latit. The 30th in the Afternoon we came in sight of another Isle, seven Leag. from *Gallo*, call'd *Gorgonilla*.

August 2. in the Morning we saw the high Land of St. *Tiago*, where begins the high Land on that Coast. *August* 4. we discovered three Hills to the East-north-east, which make the Land of St. *Matteo*, and in the Evening the Cape of St. *Francisco*. *August* 5. being then about the Cape, we saw two rocky Isles in the Bay, representing two Ships under full Sail. We are now come out of the rainy Region, into a pleasant and fair One, the Weather being dry, and the Sky clear. *August* 8. we sail'd close under a desart mountainous Country, and got sight of Cape *Passao*, at ten Leagues distance Windward of us. *August* 9. we observ'd that Cape *Passao* had three Points, and betwixt them two Bays: The Leewardmost is three, and the other four Leagues long. The *Spaniards* told us, that the Wind is always here betwixt the South-south-west, and West-south-west. The 10th as soon as it clear'd up, we stood a Mile within the shore, where we found seven fathom and half light clayey Ground. It ebbs and flows four fathom perpendicular: The Coast is full of high towring Cliffs. Beyond this Cape South from us, is Cape St. *Lawrence*. The 11th we were North-north-west from the high round Hills, call'd *Monte de Christo*. To the Leeward of it stretches a Point of Land, within which is the Point of *Manta*, a *Spanish* and *Indian* Settlement; seven Leagues to the Windward of this Port is Cape St. *Lawrence* jetting out into the Sea, like the top of a Church, rising higher and higher from *Manta*. We saw this Day about twenty or thirty Houses belonging to this Place, under a Mount. The 12th in the Morning we saw the Isle of *Plate*, five Leagues to the South-west of the Place, where we intended to refit our Rigging, and to get some Goats. The 13th in the Morning we came under the Isle of *Plate*, where we met with Captain *Cox* again; we came to an Anchor near a Gully in twelve fathom Water on the North-east side of the Isle, there being no landing any where else, by reason of the steepness of the shore, nor is there any Water to be found in it, except on the South-west side, where it is inaccessible, by reason of the Rocks and great Sea. This Isle is call'd *Drake's Isle* by the *English*, because Sir *Francis Drake* made his dividend here, after the taking of the *Spanish Armada*. Captain *Peralta* was much surpriz'd to see us advance so far in so little a time, which the *Spaniards* perform seldom under three or four Months, which he attributed to their keeping at too great a distance from the shore. He told us, that if we had gone to the *Gallapagos Isles* (as we intended) we should have been in great danger from the Currents and Calms. The Isle of *Plate* is three Leagues long, and full of dangerous and deep Bays, such as we call Gullies. We catch'd here abundance of *Tortoises* and vast numbers of Goats.

Monte de Christo 50 *min.* South Latitude.

Cape St. *Lawrence* 55 *min.* S. Latitude.

The Isle of *Plate* at 2 *deg.* 42 *min.* S. Latitude.

§. XII.

They depart from the Isle of *Plate* towards *Arica*; take two *Spanish* Vessels by the way: Tediousness and hardships of this Voyage.

We sail'd *August* 17. towards *Arica*, and the next Day found our selves eight Leagues to the West of the *Isle of Plate*. *August* 19. we continued a West course. The 21*st*. in the Morning we saw the same Isle again at North, and in the Afternoon another Isle call'd *Solango*, bearing East-north-east from us in the Evening. It lies close under the Continent. *August* 23. at six Leagues distant South by West, we discovered the Point of St. *Helen*, which is eleven Leagues from *Solango*. In the Low Countries hereabouts they make abundance of Pitch, Tar and Salt, and the Land is full of Bays: We found no great Current here. In the Afternoon a little

The Isle of *Solango*.

Point St. *Helen*.

1680. little without the Point we went near the shore with one of our Canoes, in pursuit of two Bark Logs, where we saw some Men, and a path leading up to the Hills. About five a Clock we doubled the Point, and then descry'd the Point *Chandy*, at six Leagues distance South-south-east from this Point.

Point Chandy.

August 24. we lost sight of Land, standing over for *Cape Blanco*, steering our course South by East, the Wind South-west by South. At the upper end of this Gulph which is made by the two before-mention'd Points, stands the City of *Guayaquil*, the Sea-Port of the rich City of *Quito*, whence they bring hither abundance of Gold, strong broad Cloth, Images, but especially Cocoa-nuts, whereof they make the best Chocolate. The Merchants of *Lima* sometimes send hither their Money in Barks, to be transported to *Spain*; by which means they cheat the King of his Custom. This Town has about 150 large Houses, and 300 lesser Ones: Ships of great Burthen anchor without *Lapina*, and send their Goods in small Vessels to the Town. The same Evening we took a *Spanish* Vessel (after a brisk Engagement of half an Hour) mann'd with 35 Men, and among them 24 *Spaniards*, and 5 or 6 Persons of Quality of the same Nation, who gave us a circumstantial Relation of the Preparations of the *Spaniards*, both by Sea and Land against us; and that they were sent with their Vessel from *Guayaquil* to discover which way we bent our course. This Evening we saw Point St. *Helen* 9 Leagues to the North East.

The Port of *Guayaquil.*

They take a Prize.

August 26. in the Morning we stood South; and having shared 3276 pieces of Eight taken in the Prize, a Fryar, who had been Chaplain aboard her, was shot to Death. At 10 in the Morning we saw Land, being then 16 Leagues Leeward of Cape *Blanco*. *August* 27. we saw the Continent to be all high white Cliffs, being then at 3 *deg.* 50. *min.* South Latitude. *August* 28. we brought all our Provisions and other Necessaries aboard the *Trinadad*, commanded by Captain *Sharp*, as also Captain *Cox*'s Crew, making now in all no more than 140 Men, 2 Boys, and 55 Prisoners; we weigh'd Anchor before Noon, and made 7 Leagues. The 29th. Captain *Peralta* told us, That the first Place where the *Spaniards* setled in those Parts, after *Panama*, was call'd *Tumber*, now to the Leeward of us: Towards Evening we came a-breast Cape *Blanco*, 3 Leagues distant East from us; were it not for the Windward Current it would be impossible for Ships to get about this Cape; there being such a violent Current to the Leeward in the offing. As we sail'd along we observ'd many Bays betwixt this Cape and Point *Parina*, of which anon. The 30th. by break of Day we were 5 Leagues to the Windward of this Cape, the Land growing lower and lower the nearer you come to *Point Parina*; towards the Evening we were West from the said Point. *August* 31. we stood out farther at Sea, for fear of being discover'd at *Paita*, a Sea-Port Town, seated in a deep Bay 2 Leagues to the Leeward of this Point; 13 Leagues from this Town higher into the Country is another great City call'd *Piura*, seated in a barren Country. This Day we found our selves at 4 *deg.* 55 *min.* South Latitude.

A Fryar punish'd with Death.

Cape *Blanco.*

The *Point. Parina.*

Paita and *Piura.*

September 1. our Course was South by West. The 2d. in the Morning we descry'd a Vessel about 6 Leagues from us in the Wind's Eye; at Night we were 4 Leagues to the Leeward of her, being then at 5 *deg.* 30 *min.* South Latitude: We were the next Morning 3 Leagues of her in the Wind's Eye, and at Night not above 2 Leagues, and half a League to the Leeward. *September* 4. she was only a League distant, and a Mile to the Windward, and coming up with her in the Afternoon, she was boarded and taken by 20 of our Men: Her Cargo consisted of Cocoa-nuts (for Chocolate) raw Silks, *Indian* Cloth, and Thread Stockings, and some Rigging for Ships. They told us, that they had been 19 Days from *Guayaquil*, and had heard of our Exploits near *Panama*, but not imagining we were come so far to the South, they did fall into our Hands. *September* 5. having embark'd all her Cargo aboard our Vessel, we sent most of our Prisoners (except those of Note) away in the said Vessel, being then 30 Leagues from Land at 7 *deg.* 1 *min.* South Latitude. The 6th we shar'd our Booty, at 7 *deg.* 26 *min.* South Latitude. *September* 8. we saw a Vessel at about 8 *deg.* 0 *min.* South Latitude, but did not chace her; being unwilling to be hindred in our Voyage to *Arica*. We saw here for divers Mornings successively a dark Cloud in the Sky, which in the North Sea is an infallible forerunner of a Tempest, but always dispersed here.

A Prize chased and taken.

An Observation of those Seas.

September 9. we steer'd South-west by South, and found our selves at 8 *deg.* 12 *min.* South Latitude. The 10th at 9 *deg.* 0 *min.* The 11th we lay by to mend our Rigging, at 10 *deg.* 9 *min.* South Latitude, supposing our selves West from *Cosmey* 90 Leagues. *September* 12. we computed our Westing from *Paita* 84 Leagues, being then at 11 *deg.* 40 *min.* South Latitude. The 13th there happening a great Eclipse of the Sun, I took the Judgment of our Longitude from the *Canary* Isles, which I found 285 *deg.* 35 *min.* and our Latitude 11 *deg.* 45 *min.* South. The 14th the Wind blew hard, yet had we no great Sea. The 15th I found my self to be 23 *deg.* Southward of my reckoning, being in the Latitude of 15 *deg.* 17 *min.* South. The 16th of *September* at 16 *deg.* 41 *min.* *September* 18. at 19 *deg.* 32 *min.* And the 19th of *September* at 20 *deg.* 6 *min.* South. Our Westing from *Paita* 164 Leagues. *September* 20. in the Night we saw the *Magellan Clouds*, so much celebrated among the Seamen in the South Seas: By a clear Observation, we found our selves at 20 *deg.* 25. *min.* South Latitude. *September* 22. at 19 *deg.* 30 *min.* South. And the 23d. *September* at 20 *deg.* 35 *min.* South. *September* 25th we were at 21 *deg.* 57 *min.* South Latitude. And the 26th at 22 *deg.* 5 *min.* South Latitude. The 27th having made 35 Leagues, we found our selves by Observation 22 *deg.* 45 *min.* South, our Meridian difference 68 Leagues and half. *September* 28. We had little Wind, but a great Sea at 22 *deg.* 40. *min.* South Latitude by Observation. *September* 29. we had 3 or 4 smart showers of Rain, the first we had, since we left *Cape Francisco*. By Observation we were at 21 *deg.* 59 *min.* South Latitude: Our allowance was now reduced to 3 Pints and half of Water, and one Cake of boil'd Bread to a Man *per diem*.

1680.

§. XIII. A continuation of their tedious Voyage to *Arica*; want of Water and Provisions: They are discover'd at *Arica*, and dare not Land; they go thence to *Puerto de Hilo*, land there, and take the Town. An Eclipse of the Sun. The *Magellan Clouds*.

Their Allowance shortned.

October 1. we began with 2 Pints and half a Day, and the second found our selves at 20 *deg.* 29 *min.* South Latitude: I reckon'd us to be 10 Leagues and half to the East of our Meridian, the Port of *Paita*. The 3d. we were at 19 *deg.* 45 *min.* South Latitude. And the 4th. at 19 *deg.* 8 *min.* South. The 6th we had such strong Winds, that our Main Mast was like to have been brought by the Board: By Observation we found our selves at 19 *deg.* 4 *min.* South Latitude. The 8th. of *October* we saw a huge shoal of Fish, some Water Snakes and Seals. *October* 10th. we had variable Winds and a smooth Sea; we saw some Sea-Grass floating upon the Sea, which gave us hopes of being not far from the shore. The Night was cloudy, and so proved the next Day; our Pilot told us it was always a hazy Sky near the shore on these Coasts. The 13th. we saw another sign of our approach towards the Land, *viz.* a Whale; which was confirm'd the next Day by the sight of several Land Fowls and small Birds, which our Pilot told us, appear only 2 or 3 Days sail from the shore. *October* 15th, we were by observation at 18 *deg.* 0 *min.* South Latitude.

Sea-Grass.

Hazy Sky near the shore.

October 17. early in the Morning we descry'd Land, about 8 Leagues distance: In the Evening being no more than 5 Leagues off the shore, the Land appear'd very high and steep. *October* 18. we could just see Land at North-north-east: By Observation we found Latitude 17 *deg.* 17 *min.* South. *October* 22. we saw the Land plain before us, at 6 or 7 Leagues distance, which our Pilot told us was the *Point of Hilo*, at 18 *deg.* 4 *min.* South Latitude. Every Morning and Evening there appears for 2 or 3 Hours a brightness over this Point, caused by the reflection of the Sun on the barren Ground. Being in excessive want of Water, we could have willingly landed here, but durst not for fear of being discover'd, though we had but half a Pint a Day allow'd us. *October* 24. it was resolv'd to land 112 Men at the Hill of *Mora de Sama* (to the South of the *Point of Hilo*) having 18 or 19 white Cliffs under it; but we only sent about night 80 Men in 4 Canoes, to the River of *Juan Diaz* close by *Mora de Sama*, to take some Fishermen; but they return'd the 25th. having not been able either to find the River, or any Houses thereabouts.

They descry Land.

Point of Hilo.

Mora de Sama.

October 26. being about 6 Leagues distant from *Arica*, we left the Ship about 6 a Clock in the Evening, with an intention to land a League to the Windward of that City; we row'd all Night to come to the landing place before Day; but being come near to the Place, we found to our great surprize, that the whole Country had taken the alarm already, several Troops of Horses appearing well arm'd all round the Bay, and on the top of the Hills: Notwithstanding which we would have landed had not the high Sea, which beats most furiously against the Rocks, prevented us from so doing; so we were forced to return to our Ship. The Hill

They endeavour to Land near *Arica*.

Bucare disappointed.

1680. Hill of *Arica* being almoſt cover'd with the Dung of Fowls that build their Neſts there, appears very white at Sea; to the Leeward of it is a ſmall Iſle a Mile from the ſhore, near which we ſaw ſix Ships at Anchor.

The Hill of *Arica*.

Thus finding our ſelves diſappointed in our deſign upon *Arica*, it was reſolved to bear away thence to the Village of *Hilo*. *October* 27. we were a League to the Windward of *Mora de Sama*, the Land betwixt that and *Hilo* forming 2 Bays, and the Coaſt running along North-weſt and South-eaſt. *October* 28. we ſent 50 Men in Canoes to plunder the Town of *Hilo*. The 29th we anchored with our Ships in the Port, 2 Mile from the Town, and found the *Engliſh* Colours put up, our Men having taken the Place without reſiſtance: The *Spaniards* after the firſt Volley of ſhot, being retreated to the Mountains, where they were conſtantly upon their Guard, which made Captain *Sharp* ſend for all the Men we could ſpare from aboard to be at hand, to obviate any ſurprize. *October* 30. ſixty of our beſt Men were ſent to ſearch the Valley belonging to the Town, which they found very well planted with Fig and Olive Trees, Orange, Lemmon, and Lime Trees, beſides many other Fruits. Some Miles up this Valley they came to a great Sugar Rock, where they met abundance of Oil and Moloſſus. From hence they could ſee the *Spaniards* on the tops of the Hills, unto whom they ſent Meſſengers to demand 80 Beeves as a ranſom for the Sugar Rock, which the *Spaniards* promiſed to deliver the next Day at the Port; but did not perform it, intending only to gain time under ſeveral pretences, till they could gather a greater force, to fall upon and cut us to pieces. Our Men beginning to be ſenſible of their intention, ſet Fire to the Sugar Rocks, deſtroy'd the Mills, Houſes, Canes, and Coppers, and carry'd off what Sugar they thought fit, abundance of Oils and moſt excellent Herbs, Roots, and Garden Fruits.

The Town of *Hilo* taken.

The Valley of *Hilo*.

They agree with the *Spaniards*, but are likely to be out-witted by them.

§. XIV. They ſail from *Hilo* to the Port of *Coquimbo*; land there, and put the *Spaniards* to flight: They take, plunder & burn the City of *Serena*. A Stratagem of the *Spaniards* diſcover'd; they retire from *Coquimbo* without any ranſom for the City. They are troubled with the Scurvy. They deſcry Land, but are deceiv'd. A Comet ſeen.

November 3. in the Morning we ſail'd from *Hilo* directly off to Sea. *November* 4. we ſaw the Port of *Hilo* 9 Leagues diſtant at Eaſt-north-eaſt. *November* 6. we were becalm'd, and the next following Day our People began to be much afflicted with the Scurvy, occaſion'd queſtionleſs by the great want of Proviſions we had been forced to endure for ſeveral Months; for before we came to *Hilo*, we liv'd only upon Bread and Water; and the *Spaniards* having carried away with them all Proviſions of Fleſh, we met only with one Mule there, which we kill'd and eat it for a great Dainty. The beſt was that we got ſome Chocolate, of which every Man had a Pint a Day. *November* 9. we found our ſelves by Obſervation at 20 *deg.* 18 *min.* South Latitude. The 10th. we deſcry'd a high Land to our great ſurprize, as believing our ſelves 35 or 40 Leagues from any ſhore; we ſuppos'd it to be *Mora Tarapaca:* But the 11th. in the Morning the like homing of Land appearing, we were ſenſible it was no Land we ſaw the Day before.

November 15. we remov'd our Weſting from *Hilo* 114 Leagues and one third, and our Latitude by Obſervation 23 *deg.* 25. *min.* South. *November* the 16th. at 23 *deg.* 35 *min.* *November* 17. at 23 *deg.* 46 *min.* And the 18th. of *November* 24 *deg.* 20 *min.* South Latitude. *November* 19th. an Hour before Day a Comet appear'd a degree North from the bright Star in *Libra*, the body dull, and the tail pale, ſtretching 18 or 20 *deg.* in length, and pointing directly North-north-weſt. *November* 21. we judged our ſelves 178 Leagues Weſt from *Hilo*, at 26 *deg.* 53 *min.* South Latitude: And the 23d. at 27 *deg.* 46 *min.* *November* 25. we found our ſelves by Obſervation at 29 *deg.* 57 *min.* The Meridian difference 135 Leagues and one third. *November* 28. we found our ſelves by Obſervation at 30 *deg.* 16 *min.* South Latitude; and Meridian diſtance 88 Leagues. *November* 29. we ſaw two or three great Fowls, which our Pilot told us, us'd to appear 70 or 80 Leagues off from the Iſle of *Juan Fernandez*.

December 2. We deſcry'd Land, which appeareth very high about Noon, at 6 Leagues diſtance, at 30 *deg.* 38 *min.* South Latitude, being the Coaſt of *Coquimbo*, and as we ſail'd with all the Sail we had, at the rate of 9 Leagues every Watch, we deſign'd to get into the Bay of *Coquimbo* before Night; but the Wind blowing too high, we were forced to lower our Sails; however about midnight, it being calm, we put 100 Men in our Canoes, with a deſign to ſurprize *Serena*, a conſiderable City on that Coaſt.

Great Sea Fowls.

They ſee Land.

Bay of *Coquimbo*.

December 3. When we left the Ship, we had two Leagues to row, and as the Canoe wherein I was, prov'd heavier than the reſt, we did not get aſhore till it was broad Day; near a Storehouſe, which we found our Men had paſs'd unperceived in the dark: After their landing, they perceiv'd themſelves to be diſcovered, being immediately encountred by 100 *Spaniſh* Horſe: we that were behind, at the noiſe of the Guns, made all the haſte we could to their aſſiſtance, but before we came up with them, they had already (though no more than 35 in number) forced the *Spaniards* to retreat towards the Town. Here they made a ſhew of rallying, but ſeeing our Forces united, they kept at a diſtance, never coming within the reach of our Guns. Coming to the Town we found the Inhabitants fled with their Riches and beſt Moveables; this City being a conſiderable Place in thoſe Parts, adorn'd with ſeven large Churches (four whereof belong to Monaſteries) and one Chapel: The Houſes had their Gardens and Orchards well ſtored with Fruits, and among the reſt with Strawberries as big as our Wal-nuts, and of a luſcious taſte. The Merchants and Tradeſmen of *Serena*, as I told you, having receiv'd intelligence of our approach from *Arica*, had either hidden or carry'd away all their precious Moveables; ſo our Boatſwain, with 40 Men, was ſent into the Country, to find out where the *Spaniards* lay conceal'd; but they having alſo receiv'd information of their coming, had withdrawn themſelves from thence to more remote places. This Morning our Ship anchored near the Storehouſe, call'd *Tertinga*, where we landed before with our Canoes.

1680. They land and take the City of *Serena*. They rout 100 *Spaniſh* Horſe.

Serena a conſiderable place. Large Strawberries.

Next Morning being *December* 4. a Meſſenger was ſent by the Enemy to offer a ranſom for the City, which was agreed for the ſumm of 95000 pieces of Eight, to be paid the next Day. The next following Day at 9 a Clock at Night there happen'd an Earthquake, of which we were very ſenſible in the Church of St. *John*, where we had our chief *Corps du Guard*. *December* 6. The *Spaniards* having made no account of their promiſe concerning the Ranſom, we ſet Fire to every Houſe in the Town, and thus left it, carrying along with us what Plunder we had got, beſides what we had ſent before with two Parties to the Ship. In our march towards the Bay, we beat up an Ambuſcade of 250 Horſe, laid there to ſurprize our Men, in caſe any Parties had been ſent before with the Booty to the Ship. Coming to the Sea ſide, we underſtood that our Ship had been likely to have been burnt by an unuſual Stratagem contriv'd by the *Spaniards*, they had blown up a Horſes Hide like a Bladder, upon which a Man had ventur'd to ſwim from the ſhore to the Stern of the Ship; where having cramm'd Brimſtone, and other combuſtible Matter betwixt the Rudder and the Stern, he fir'd it with a Match, and ſet the Rudder on Fire: Our Men miſtruſting the Priſoners, were at firſt put under a great conſternation, but recovering themſelves, did run to the place where the Fire was, and by good fortune extinguiſh'd it before it could make any conſiderable progreſs. They ſent a Boat aſhore immediately, and finding the Hide and a Match lighted at both ends, they were ſoon convinced what it was that had occaſion'd this danger: However our Officers, to rid their Hands of the Priſoners, who were only a burthen to them, and might perhaps by this example be enticed to make the like attempts, thought it their ſafeſt way to releaſe as well the Hoſtages given us for the Ranſom of the City, as the other Priſoners aboard us, as Captain *Peralta*, *Don Thomas de Argandona*, and ſeveral other Priſoners of Note: Which done, we all embark'd the ſame Day.

They agree about the Ranſom. An Earthquake. They fire *Serena*. An odd contrivance to burn a Ship. Diſcharge the Priſoners.

§. XV. They ſet ſail from *Coquimbo* for the Iſle of *Juan Fernandez*; miſery, and danger they undergo: They mutiny and declare Capt. *Watling* Commander in chief: They meet three *Spaniſh* Men of War at the ſaid Iſle. The *Iſle of Birds*. Large Birds ſeen.

The next Day in the Afternoon, being *December* 7. we ſet ſail, ſteering our courſe for the Iſle of *Juan Fernandez*, not far from the Coaſt of *Coquimbo*. At Night we were 5 Leagues diſtant thence, at North-weſt by North. The Southermoſt Iſle of thoſe call'd *de los Praxaros*, or *Iſle of Birds*, being North-north-weſt from us; and *December* 8. it bore North-eaſt of us, at 3 Leagues diſtance: It lies 4 Leagues from the Continent, and about 2 Leagues from the next Iſle of the ſame name. In the Evening we were 5 Leagues Weſt from the ſaid Iſle. *December* 9. We ſuppoſed our ſelves 13 Leagues Weſt from the ſaid Iſle. *December* 12. Being a fair Day, we were by Obſervation at 30 *deg.* 6 *min.* South Latitude: And the 13th at 30 *deg.* 45 *min.* The 14th of *December*, we found by Obſervation 30 *deg.* 30 *min.* South; and the 15th of *December* 30 *deg.* 42 *min.* South. The 17th. of *December* we took another Obſervation, and found 30 *deg.* 51 *min.* South Latitude. The 19th. we ſaw ſome of thoſe large Birds we mention'd before, which made our Pilot ſay, we were now in the Meridian of the Iſle of *Juan Fernandez*. The 20th. we found by Obſervation 32 *deg.* 20 *min.* South Latitude, and Meridian difference 123 Leagues. *December* 23d. We deſcry'd Land, we ſaw again in the Evening, and found it afterwards to be the Weſtremoſt Iſle of *Juan Fernandez*,

1680. *Fernandez*, which is nothing but a bare Rock, without Riding or Landing near it.

They see the Isle of *Juan Fernandez*.

December 24. We saw the Isle it self of *Juan Fernandez* 16 Leagues South by East, and at 8 a Clock the same Morning at 5 Leagues distance to the East. I observ'd neither Fish nor Fowls about this Isle, both usually found near other Islands: Our Pilot told me, That he had made many Voyages to this Island, but never saw either Fowl or Fish hereabouts. Our Latitude by observation 33 *deg.* 50 *min.* South. *December* 25. This Morning we were about 8 Leagues from the other Isle, bearing South-south-east from us; at 8 in the Morning we were right abreast with it. For here are 2 Isles together; the biggest being 3 Leagues and half in length, neareſt North-west and South-east, the lesser is only 1 League in circumference: Both the Isles appearing to us like one entire Rock, we sent out one of our Canoes to seek a good place for anchoring and landing; they found a stately Bay at the South end of the Isle, but it lies open to the South and South-east Winds Here we anchored towards Evening, at 11 fathom Water, about a Furlong from the shore; but before we could Land, we were forced to kill abundance of Seals, they lying so thick all along the Bay, that if we had not made room for us, we could not have set foot ashore. By a clear observation from the middle of the Isle, I found it at 33 *deg.* 45 *min.* South Latitude, and Meridian distance 99 Leagues. *December* 26. We sent a Canoe to see whether they could find any secure riding from the South Winds, which blow most on this Coast; they return'd, and brought word, that there was another Bay on the North side, where there was good riding at 14 fathom Water, a quarter of a Mile from the shore; and that there was store of Wood there, which we wanted here. At the same time, some Men sent out to catch Goats, kill'd about 600 of them. The 28th I and 10 more of our Company went ashore in 2 Canoes to fetch fresh Waters; but the Wind encreasing in the mean while our Ship was forced to put to Sea, so that we were forced to hide our selves in a Hole under the sides of a a Hill, where we observ'd abundance of Holes like those of our Cony-Warens, which are the nests and roosting places of certain Birds, call'd *Pradelas* by the *Spaniards*, that breed in vast numbers in this Isle. The 29th we went farther to the North to look for our Ship, where we made a Fire in the Bay, and saw some of the Amphibious Creatures, call'd by most Authors *Sea Lyons*, from 11 to 14 foot long. In the afternoon a Canoe came from aboard the Ship to bring us some Provisions, and to cut Wood; the Men told us, that our Ship came to an anchor in the North Bay, but that the Cable breaking in half an Hour, they were forced to get out again to Sea We reposed this Night upon Beds of Fern, and saw abundance of Trees like *English* Box, bearing a sort of green Berries, smelling like Pepper. *December* 30th. The Ship could not as yet come into the Harbour, but the next Day in the afternoon, they came to an anchor at 15 fathom Water, within a Cables length from the shore. About this Isle is vast plenty of Fish, especially of Seals, which delighting to lye in fresh Water, we were forced to send some Men before to beat them off, when our Men went to fill their Jars with Water.

Come to an Anchor here.

The Birds *Pradelas*.

Sea Lyons.

The Ship forced to Sea twice.

Is got in again.

1681. *January* 1. We catch'd Crawfish bigger than Lobsters: For 3 or 4 Days following we had much ado to keep at Anchors, by reason of the violent Gusts of Wind, and the impetuosity of the Current, and at last were forced to sail *January* 5. into the *West Bay*, where we achored at 25 fathom Water, a quarter of a Mile from the shore. The same time there arose a kind of a Mutiny among our Men, some being for returning to *England*, or some of the *English* Plantations, round about *America*, thro' the *Streights of Magellan*, (as Captain *Sawkins* design'd) others being for staying longer in those Seas, till they had got more Booty. *January* 6. The divisions among our Men were risen to that heighth, that they deposed Captain *Sharp*, and in his stead set up one of their Company, named *John Watling* for their Commander; which Captain *Sharp* and his Friends (being out numbred) were forced to consent to. *January* 7. We found in this Bay a Cross cut in the Bark of a Tree, and several Letters besides. *January* 10. I saw a shoal of Fish above a Mile long. The 11th some of our Men, who had been sent ashore, to fill Water, cut Wood, and catch Goats, return'd the 12th in the Morning, with advice, that they had seen 3 Ships like Men of War at Sea; within half an Hour we saw the Ships to the Leeward of the Isle; so taking all our Men aboard, and slipping our Cables, we put to Sea immediately. In this Isle of *Juan Fernandez* grew certain Trees call'd *Bilby Trees*, the top whereof are like our Cabbages, and used for the same purpose. Here is also plenty of Fish, some of 20 pound weight, and seldom under 2 pound. They abound also in very good Timber. It is situate at 33 *deg.* 45 *min.* South Latitude, 95 Leagues from the Continent. The Flats of both the Isles lie North-West and South-West.

Anchor in another Bay.

Mutiny among the men.

They chose Mr. *Watling* for their Commander.

They discry 3 Men of War.

1681. Cabbage Trees.

Being now out at Sea, we saw the 3 *Spanish* Men of War put out their bloody Flag, which we did also in defiance of them, tho' the biggest of them, call'd *El Santo Christo*, carried 800 Tuns and 12 Guns; the second named *S. Francisco*, 600 Tuns and 10 Guns; and the third, 350 Tuns. We out-brav'd them courageously that day, keeping close under the Wind, tho' we were not very willing to engage them. We observ'd them to be of the same mind, else it would have been no difficult matter for them to come up with us. *January* 13. We saw one of these Ships under the Leeward-side of the Isle, supposing the other two were at Anchor thereabouts, at 7 Leagues distance from us. We stood in towards the Isle as if we intended to engage them; but in the afternoon agreed with joint consent to give them the slip, which we did under favour of a North-east Wind and the approaching Night.

Strength of *Spanish* Men of War.

They give the *Spaniards* the slip.

Next morning, *viz. January* 14. we were 4 Leagues from the Isle of *Juan Fernandez*. The 15th and 16th, hazy Weather. The 17th, we found our selves by a clear observation 29 *deg.* 47 *min.* South Lat. Eastning 70 Leag. and the 18th, 27 *d.* 29 *m.* S. Lat. *Jan.* 19. finding our selves at 25 *deg.* 0 *min.* S. We resolved to steer our course for *Arica*, in hopes to make our Fortune there. In the evening we saw Land at a great distance. The 20th with break of day we saw Land again at 9 or 10 Leagues distance Eastning 92 Leagues. The 21st, we sail'd North by East and North North-East along the Continent. The 22d, we look'd out for the Isle of *Tyneque*. The 23d, we still kept along the Coast North North-East, which appears to be full of Bays, we were at 21 *deg.* 49 *min.* South. The 24th, we were at 21 *deg.* 2 *min.* South Latitude. Captain *Watling* with 25 Men in 2 Canoes, went to seek the Isle of *Tyneque*, being then 12 Leagues from the Shore; they return'd the next day, without being able to find it. One of these Canoes had landed on the Continent, where they found a Hutt made of Whalebones, and some broken Jars; they saw also divers good anchoring places along the Coast. The same evening, we sent another Canoe to seek for the same Island; and the 26th we sail'd North, two Leagues from Shore, at 20 *deg.* 21 *min.* South Lat.

§. XVI. They sail towards *Tyneque*, they resolve for *Arica*, which they attempt, but are repulsed.

They seek in vain for the Isle of *Tyneque*.

Whilst our *Spanish* Pilot was telling that there was very rich Silver Mines on the Continent just over against us, but that the *Spaniards* durst not venture to dig them for fear of an Invasion, we saw a Smoke made by our Men near a white Cliff, which prov'd to be the Isle of *Tyneque*. We sent immediately another Canoe with Men to second them; but soon after the other return'd, bringing along with them two old *Spaniards* and two *Indians*. Windward of the said Isle, is a little Village of 18 or 20 Houses, inhabited by about 50 People, who have a small Chapel of Stone. The poor *Indians*, the Natives of this Isle, are a strong sort of People, but go quite naked, and live like Brutes. Their fresh Water they are forced to fetch from the River of *Camarones*, 11 Leagues to the Leeward of the Isle. They frequently chaw a sort of Leaves, in taste coming near to our Bay-leaves, which make their Teeth turn green. *Jan.* 27. One of the old Prisoners taken the day before on this Isle, being examin'd about the present Condition of *Arica*, and having said several things not relishing according to Captain *Watling*'s sentiments, he was shot to death by his order, notwithstanding Captain *Sharp* was much against it; and seeing he could not prevail, washed his hands, told them, *They would pay for this piece of Cruelty at their next Attack upon Arica*; which prov'd too true to their cost. The other old Man told them, That the Isle of *Tyneque* was the Propriety of the Governor of *Arica*, where the *Spaniards* had made Entrenchments not only round the Town, but also in every Street, to defend themselves to the last extremity; That there were 3 Ships from *Chile* in the Harbour of *Arica*, which was lately strengthened by an additional Fort of 12 Guns, with several other matters relating to the present state of that Place. We found our selves that day at 20 *deg.* 13 *min.* South Latit. about 8 Leagues from shore, and took the Bark that fetches fresh Water from the River of *Camarones* for the Island. Aboard her and 5 Canoes we put our Men the next day, and row'd and sail'd all night towards the shore of *Arica*: whither we got, *January* 29. by break of day, and hid our selves all day

Silver Mines.

They find the Isle of *Tyneque*.

An old Prisoner shot to death.

Capt. *Sharp* opposes it.

They embark for *Arica*.

1681. among the Rocks (for fear of being discover'd) about 5 Leag. to the S. of *Arica* near *Quebrada de S. Vitor*; at night we row'd on; and the 30th by Sun-rise landed among some Rocks, 4 Mile to the S. of *Arica*. Here we landed 92 Men, leaving the rest for the defence of the Boats. At parting we agreed with them upon a certain Signal, *viz.* That in case they should see us make one Fire from the Town or adjacent Fields, they should come after us to the Harbour of *Arica* with one Canoe; but that if they saw the Smoke ascend in two places, they should bring all away. We were scarce come half way to Town, when we saw 3 Horsemen on a Hill, who no sooner got sight of us, but they rid in a full gallop towards the Town. Tho' this gave us sufficient reason to believe we were discover'd, Captain *Watling* order'd 40 of the best Men to attack the Fort, whilst the rest march'd on to the Town. Accordingly we assaulted the Castle for some time, but perceiving our Men in the Valley hard put to it by the Enemy, we advanced very seasonably to their assistance; several of our Men being already killed and wounded in this Engagement; but being reinforced by our Body, we made them give way, beating them from one Retrenchment to another, and filling the Streets with dead Carcases: The worst was, that having not a sufficient Number of Men to man them, the Enemy repossessed themselves of them, as soon as we had left them: Besides that, the Prisoners we took were no small incumberance to us. We thought it therefore our securest way to renew the Attack upon the Castle, which we did with great vigour; but perceiving that the Enemy had repossessed themselves of most of the advantageous Posts of the Town, in order to cut off our retreat, we turn'd against them. Here the Combat grew very hot, the Enemies encreasing still in number, and beating us from place to place: So that finding Captain *Watling* with many of our Men killed, and more of them wounded, we began to remember Captain *Sharp*'s words: And seeing our selves reduced to the utmost Distress, we had once more recourse to his Conduct, intreating him to take upon him the Command, in order to relieve us from this imminent Danger. It was a good while before he could be prevail'd upon to head this mutinous Crew; till at last moved by their earnest Entreaties, he gave his Orders, and carried us out of the Town without any considerable loss; they would have pursued us into the Plain, but perceiving that Captain *Sharp* by his good Conduct had embattled us in such a manner, as that we were ready to receive them, they retreated behind their Entrenchments. Thus we continued our march in good order to the Sea-side; and it was high time we did; for the *Spaniards* having examined our Surgeons, (left in the Town to look after our wounded Men) they were by them inform'd of the Signal we had left with our Men in the Boats, and thereupon immediately made 2 Fires: For no sooner came we to the Sea-side, but we saw our Boats already under sail, so that had we tarried any longer, we must of necessity have fallen into the Enemy's hands.

Land not far from it.

Are discovered.

They Assault the Fort.

Take the Town.

The Fort holds out.

Capt. *Watling* kill'd.

They are beaten back.

And retreat to their Canoes.

§. XVII. A description of *Arica*.

Thus having fail'd in our design upon *Arica* we ply'd *January ult.* to and from the Port. The Houses of *Arica* being built only of Earth, were scarce 11 Foot high. The Town was four-square, standing at one corner, and commanded by an adjacent Hill. It is the only Sea-port Town hereabouts; and hence is fetch'd all the Plate that is carried to *Lima*, the Metropolis of *Peru*. *February* the 1st, we shared some old Plate amounting only to 37 pieces of Eight a Man, at 19 *deg.* 6 *min.* S. Lat. and *February* 16, we were at 27 *deg.* 30 *min.* S. Lat. It being an Eclipse of the Moon, we had Calms for 5 or 6 days after. *March* 1. we found Lat. by observation 34 *deg.* 1 *min.* S. Lat. Now the rainy Weather began in these Seas. *March* 3, a sudden resolution was taken by the Crew to go to the Main for Water, thence to Leeward, and so to return by Land towards home, or at least to the *North Seas*; but Providence was pleased to order it otherwise. *March* 10. we were put to the allowance of one Bread Cake *per diem* for each Man. *March* 12. we fell in with the Main-land to the Leeward of *Coquimbo*. Within the Island of *Paxaros*, are double Lands, in the Valleys whereof the Copper that comes from the adjacent Mines is melted in Furnaces. Off to Seaboard is a rocky Land, and within sandy; 8 Leagues distant to the Leeward, is a rocky Point surrounded with several Rocks; about half a Mile to the Leeward of which Point, is the Harbour of *Guasco*, having three Rocks just against the Anchoring-place, close under the shore. Here we landed 60 Men, but upon our approach the People ran all away.

They sail from hence to the Port of *Guasco*.

They land again at *Hilo*.

The rainy Season begins.

They see the Continent. Copper Furnaces.

The Port of *Guasco*.

They land.

However, we took one *Indian* who conducted us 6 or 7 Miles into the Country to an *Indian* Town of about 80 Houses; thence we return'd back to the Church, which is a League from the Sea-side: We saw vast number of Sheep and Goats, of the first we carried off 120, and 80 of the last; as also 500 Jars of Water out of an adjacent fresh-water River, which was excellent good, but very hard to come at, by reason of the high Banks. They abound also in Oxen, but these they had driven away. The Country produces also Corn, Pease, Beans, and other sorts of Grain: For Fruits it equalizes if not surpasses *Coquimbo*. We saw here also a Corn-Mill, and found in it 200 bushels of Meal, which we carried aboard our Vessel, with the Sheep and Goats. Every House here has small Canals of Water in their Yards or Courts, but we found them empty of every thing except some Provisions. The Hills are barren, but the great Plain near the Port of *Guasco* very fruitful. It is govern'd by a Deputy-Governor and a Fryar, under the Jurisdiction of the City of *Serena*.

1681.

An account of *Guasco*.

March 15. we set sail from *Guasco*. *March* 20. we saw the high double Land call'd *Moro de Horse* to the E. by N. at 24 *deg.* S. Lat. and to the N. at 10 Leagues distance: The high Hill of *Morro Moreno* situate at 23 *deg.* 30 *min.* S. *March* 21. we were W. from the Bay of *Menillones*; the Point of which Bay 1 League upwards, represents a Sugar-loaf. *March* 22. our Canoes went to the River *Loa*, and 2 Leagues to the Leeward of it, to Fisher Town, but could find no landing place. The next day another Company of Men was sent, but return'd with no better success. If we may believe our Pilot, Sir *Francis Drake* watered and built a Church here, which is now standing on the Sea-side near the River, the entrance whereof is now dry. From the said Church goes a broad Path up the Hills leading to *Pica*.

Morro de Horse. *Morro Moreno*.

The River *Loa*.

March 24. we also saw Land at 18 Leagues distance, and found by observation 20 *deg.* 10 *min.* S. Latitude. *March* 27. we could see *Mora de Sama* and *Lacumba*, at 18 *deg.* 17 *min.* S. by observation. The same evening we landed, and surprized the Town of *Hilo*; and as the Inhabitants had no notice of our coming, so we catch'd most of them asleep, and made them Prisoners together with the Fryar. The River was overflow'd at that time.

They land and surprize the Town of *Hilo*.

Here we were inform'd that of the wounded Men we had left in *Arica*, only 10 were left alive, including the 3 Surgeons; but that we had killed 70 of the *Spaniards*, and wounded double the number. They farther told us, That of 45 Men sent from *Hilo* to the assistance of those of *Arica*, there return'd no more than 2. *March* 29. in the evening we set sail again from *Hilo*.

They hear of the wounded Men left at *Arica*.

From the 29th of *March* to the 10th of *April* nothing remarkable happen'd in our Voyage. We could this day hear the breaking of the Sea against the Shore, tho' we saw no Land, it being hazy Weather. However, about noon it clearing up, we found our selves in the Bay *de Malabrigo*. The Land of this Bay runs due E. and W. at 6 *deg.* 35 *min.* S. Lat. From hence we saw the Leeward Island of *Lobos*, a rocky, scraggy Isle, on the S. W. whereof is a red Hill much frequented by the *Indian* Fishermen, at 6 *deg.* 15 *min.* S. Lat. The same evening we descry'd the Point of *Aguja*. *Apr.* 26. we came within a League of the West-end of the Isle of *Plate*: And the next day there happen'd another Division among our People, some being for returning over Land; and accordingly 47 of them left our Ship, the rest engaging themselves to stand by one another to the last. We found our selves at 1 *deg.* 30 *min.* S. Lat. but *April* 18. at 25 *min.* N. Lat. The 21. we saw some Tortoises and abundance of Fish; we caught 26 small Dolphins. The 23d. there fell great showers of Rain, which made us save what Water we could. *April* 24. we had by an observation 7 *deg.* 37 *min.* N. Lat. Merid. difference 92 Leagues. We caught every day some Dolphins and Bonito's. *April* 25. by break of day we found our selves close under the Isle of *Cano*, at 8 *deg.* 34 *min.* N. Lat. we sent a Canoe ashore; they found good Water, but an open Road. The next day we came to an Anchor at the East side of it, where it is not above a League over. But in the afternoon we went from thence, and anchored within shot of the N. E. Point of the Isle. On the North-side it has many Rivulets of excellent Water in sandy Bays. It is full (all over) of Cocoa Trees; we saw also good Hogs, Turtle Doves, and vast store of Fish. *April* 30. we set sail from the said Isle, and stood N. W. We had great Thunder, Lightning and Rains, as likewise the next following day, being then at 9 *deg.* N. Latitude. *May* 5. in the Evening

§. XVIII. They sail towards the Gulph of *Nicoya*. Some observations belonging to that Voyage. The Bay of *Malabrigo*. The Isle of *Lobos*.

Forty seven of their Men leave them.

The Isle of *Cano*.

They set sail from the Isle of *Cano*.

1681. Evening we were right off of the Gulph of *Nicoya*, and *May* the 6th saw the Cape very plain before us. N. by E. from it are some Isles at 8 *Leagues* distance, but close to the Continent. We directed our course N.N.W. to the biggest of them, on whose E. S. E. side are two or three small Rocks. The Continent Eastward discover'd a fine Plain, with a spacious Road in it, to be seen a good way at Sea. At noon the Port of *Caldero* bore N. from us. We anchored near the *Eastern* Keys or Isles at 19 Fathom ouzy Ground. *May* the 8th, in the Morning, Captain *Sharp* went with 22 Men in two Canoes, to surprize some Vessels. Soon after he sent for more Men; so another Canoe with 8 Men went to his assistance to a small Isle call'd *Chira*, where they found about 8 or 9 Houses and a little Chapel, the poor Remnants of a considerable Nation, but now almost destroy'd by the *Spaniards*. Going a *League* up a Creek of the Sea, we took 2 Sail, and the 9th return'd to our Ship. That Night Captain *Sharp* with 24 Men went into another Creek, where they took several Prisoners, and among them a Shipwright with his Men and Tools, whom they brought ashore, as being likely to do us good service in altering our Ship. *May* the 16th, we began to work on our Ship. The 18th, we heard the firing of 30 or 40 Guns on the Continent, and had most prodigious Lightening and Thunder. *May* the 25th, we finish'd our Work, *viz.* the taking down the Deck of our Ship, and the length of every Mast, and so sent home the *Spanish* Carpenters. The 26th, we fell down as low as *Vanero*. The 27th, we drove down with the Tide as low as *Cavallo*, another place in this Gulph, where we took in some more Water. *May* the 28th, we sail'd thence; and at 29 *Leagues* off that rich and rocky Shore had no more than 7 Fathom Water. Behind the Isle is a Town call'd *New Cape Blanco*. *May* 29, we saw *Cape Blanco*.

Puerto Caldere.

The Isle of *Chira.*

They alter their Ship.

§. XIX. *June* the 1st, there being but little Wind, the Tide drove us to the West of the Cape *Blanco*. At 2 Miles distance off of this Cape, lies a very barren Isle, at 9 *deg.* 30 *min.* N. Lat. The Coast thence runs N. W. half W. and grows lower by degrees towards Cape *Gujones*, which we saw at 7 *Leagues* distance, at 10 *deg.* N. Lat.

Cape *Blanco*

Cape *de Gujones.*

Puerto de Velas. *June* the 2d, we saw the Sand of *Puerto de Velas* at N. W. by N. appearing like several Isles, at 7 *Leagues* distance. This Evening it was resolved to bear up for *Gulfo Dulce*, there to careen our Vessel, and then to cruize about the Equinoctial. *June* the 3d, our course was S. E. with a brisk gale. *June* the 4th, in the Evening we stood N. E. and descry'd Land, about 24 *Leagues* from Cape *Blanco*. *June* the 5th, we saw the Isle of *Cano* bearing E. S. E. from us. We saw abundance of Fish, and some Water-Snakes of divers colours. *June* the 6th, we had the Isle of *Cano* at 9 *Leagues* distance, and *Punta Borrica* at the same, lying at 8 *deg.* North Latitude.

Gulfo Dulce. The West-end of the *Golfo Dulce* is very high Land, with a high Rock lying close to it, besides two Rocks which lie farther off, the uttermost a Mile from the shore. The East-side is also high, but breaks into small Points and Bays, growing lower by degrees to the Point of *Borrica*. We anchored in 8 and a half Fathom of Water, a Mile within the Mouth of the Gulph, which is near 3 *Leagues* over. *June* the 7th, we weighed Anchor again, and going 2 *Leagues* higher, anchored in 7 and an half Fathom Water. *June* the 8th, we weighed Anchor again, and the higher we went in, the deeper we found the Gulph, at last to 30 Fathom. We sent a Canoe to fetch Water, and look out for a place to lay our Ship in: They landed, and brought an *Indian* with two Boys aboard us. We received them very civily, and they told us, That lately a *Spanish* Priest having been among them, charged them upon his Blessing not to come near any Ship with red Colours, meaning the *English*. We came to an Anchor close to one of the Isles, in a Bay, where two Rivers of fresh Water were within a Stone's cast off one another, in 27 and an half Fathom Water, not above a Cable's length from the Mark of low Water. The poor *Indians* inhabiting near this Gulph would come every Day aboard us, bring us Honey, Plantains, and other Necessaries, and converse very familiarly with our People. We observed their Darts to be headed with Iron, as sharp as any Razor. About this time one of our Prisoners taken in the Gulph of *Nicoya* inform'd us by what Stratagem the *Spaniards* had forced the *Indians* of *Darien* to conclude a Peace with them since our departure thence. They sent a certain *Frenchman*, who run away from us to the *Spaniards* at the Isle of *Tabago* to the Rivers Mouth, which discharges it self from the Province of *Darien* into the *South Sea*. Being arrived there, he told the *Indians*, that the *English* were come back from their Exploits in the *South Seas*, inviting them at the same time to come aboard them. The poor *Indians* overjoy'd at this News, 40 of their chief Men went aboard the *Spanish* Vessel, which carried them to *Panama*, where they were detained till they consented to a very disadvantageous Peace.

The *Indians* of *Golfo Dulce.*

The *Spaniards* force the *Indians* of *Darien* to a Peace by a Stratagem.

1681.

Our Vessel being careen'd, we began *June* 28. to turn out towards the Mouth of the *Golfo Dulce*, with an intention to cruize under the Line. *June* the 29th, the Gulph bore N. W. by W. 7 *Leagues* distant, and Point *Borrica* 3 and an half *Leagues*. The next Day, we reckoned our selves 18 and an half *Leagues* S. S. E. of Point *Borrica*. *July* the 1st, we were by observation 6 *deg.* 10 *min.* N. Lat. and saw great quantities of Fish. *July* the 2d, we were at 5 *deg.* 20 *min.* N. Lat. and the 5th, at 2 *deg.* 20 *min.* N. This Morning we saw Land to the S. which proved to be the Point of *Manglares*. *July* the 6th, in the Evening, we were close in with low Land, at 2 *deg.* 2 *min.* N. Lat. and the 7th, at 1 *deg.* 48 *min.* *July* the 8th, we made a high Land all along, being the Bay of *S. Mateo*. *July* the 9th, we stood fair in with the Harbour of *Tucames*; we were then at 1 *deg.* 22 *min.* N. Lat. by a clear observation. *July* the 10th, at 1 *deg.* 31 *min.* N. About Noon we descry'd a Sail, and made her prize before Night. She was call'd *S. Pedro*, and had 21000 pieces of Eight aboard her in eight Chests, 10000 more in Bags, and some Plate, besides 40 Seamen, and some Merchants and Fryars. We were the 12th of *July* at 1 *deg.* 20 *min.* N. Lat. *July* the 13th, seeing abundance of Fires ashore, we durst not venture into the Bay of *S. Mateo*, but bore away to the River of *S. Tiago* 6 *Leagues* N. E. from the Bay. *July* the 17th, we found the River of *S. Tiago*, where we spent the two next following Days in providing our selves with Plantains and fresh Water, which we were forced to fetch 4 Miles up the River. We saw several *Indians*, but they would not come near us. *July* the 21st, we stood out and in, and shared the Money in the Bags, reserving the rest till we should be past the Streights of *Magellan*. Our present dividend amounted to 234 pieces of Eight *per* Head. *July* the 23d, we made a clear observation of only 14 *min.* N. Lat. and saw Cape *S. Francisco* to the N. E. of us. *July* the 25th, we were at 1 *deg.* 20 *min.* S. Lat. and *July* the 27th, saw Cape *Passao* 6 *Leag.* distant, at S. S. W. The same Morning we descry'd a Sail; and coming up with her at Noon, she proved to be a Pacquet-boat sent with Letters from *Panama* to *Lima*. We found little of value in her, so we gave them leave to prosecute their Voyage.

§. XX. They sail towards the Line.

The Port of *Tucames*

The River of *S. Tiago.*

Cape *S. Francisco.*

Cape *Passao.*

§. XXI. The next Morning, *July* the 29th, we descry'd another Sail; which we chased, and found her to be a large *Spanish* Merchant Ship full laden. They fired 3 or 4 Guns at us; but no sooner had we given them a Volley of our small Arms, (by which the Captain was kill'd) but they cry'd out for Quarter. We lay at Anchor under Cape *Passao* till the 2d of *August*, where we took a great deal of Plate, some Money, 620 Jars of Wine and Brandy, besides other valuable things, out of the Prize; which done, we turn'd her away, together with the Prisoners, (to save our Provisions) except one *Biscaian*, he being a very good Pilot in these Seas. Then we shared the Plate and Linen, and set Sail with a fresh Gale. *August* the 4th, we shared the ready Money, amounting to 94 pieces of Eight to each Man.

They take a rich Prize

August the 6th, perusing some Letters taken in the last Prize, I understood that the last Party of our Men that left us, were forced to open their way by Land with their Swords, through the *Spaniards* and *Indians*, they having made Peace together since our departure. *August* the 8th, the Current ran so strong against us from the shore that in 24 Hours we lost 3 *Leagues*. *August* the 9th, we came in sight of *Manta*, a Seaport Town, having only a few Houses, but a large Brick Church. This and the next Day we lost in the Night by the Current what we got with the Wind in the Day. However, the 11th, we made hard shift to get to the Windward of the Isle of *Plate*, where we came to an Anchor the 12th.

The Town of *Manta.*

The Isle of *Plate.*

In the Evening, being all pretty much in Liquor, our Slaves took this opportunity to lay a Plot against our Lives, intending to cut us in pieces whilst we were asleep; which they might easily have put in execution, had not one of their Companions discover'd the matter. We staid here till the 16th, making good chear with the Wine and Brandy we had taken. We set sail again the 17th, and the 18th about Noon we were to the Windward of the Isle of *Solango*, being N. E. at three *Leagues* distance. About the same distance from the said

A Plot of the Slaves.

The Isle of *Solango.*

1681. said Isle, are two Rocks call'd *Los Aborcados*. There is also N. N. E. from Point *S. Helen* another high Rock, call'd *Chandny*, & *Leag.* from the said Point, running to the Windward thereof shoaling for half a Mile under Water, about 2 *Leagues* distant from the Continent. *Aug.* the 20th, we saw the Point of *S. Helena* at N. E. by N. 3 *Leagues* distance. *Aug.* the 21st, we reckoned our selves 25 *Leagues* to the S. of *S. Helena*. The 22d, we came close under the shore to the Leewards of a rocky Point call'd *Punta de Mero*. The 24th, about Noon, we were W. from Cape *Blanco*, at 4 *deg.* 13 *min.* South Latitude.

Point *S. Helena.*

The Point of *Mero.*

§. XXII. It being resolv'd among us to surprize *Paita*, Westward off to the Sea, *Aug.* the 25th, (for fear of being discover'd) but about Noon standing in again, we saw the Land, tho' the Weather was hazy. *Aug.* the 27th, we saw *la Silla de Paita* 5 *Leagues* W. S. W. of us. The 28th, at 10 a Clock at Night, we came in close with the Land about half a *League* to the Leeward of the Isle of *Lobos*, and by next Morning under a high and steep Rock, call'd *Pena Horadada*. We sent some of our Men in 2 Canoes to Land, to surprize the Town of *Paita*; but as they had by some way or other got intelligence of our coming, they were reinforc'd by 3 Companies of Horse and Foot, and had made Entrenchments along the Sea side; from whence they gave such a warm salute to our Men, before they got ashore, that they return'd aboard without daring to attempt the Place.

La Silla de Prita.

The Isle of *Lobos.*

They endeavour to surprize *Paita.*

Colan. From hence we stood down the Bay towards *Colan*, a great Town inhabited by rich Fishermen, 2 *Leagues* off *Paita*; they are for the most part *Indians*, as the Inhabitants of *Paita* are chiefly *Spaniards*.

Aug. 29th, finding our selves discover'd, and consequently disappointed of our hopes of making any considerable progress in the *South Seas*, it was unanimously resolv'd to sail towards the Streights of *Magellan*; we reckon'd our selves 13 and an half *Leagues* W. S. W. from *Paita*. *September* the 2d, we had by observation 7 *deg.* 40 *min.* S. Lat. The 6th, at 12 *deg.* 0 *min.* The 7th of *Sept.* 13 *deg.* 24 *min.* S. Lat. The 10th, at 16 *deg.* 40 *min.* S. The 12st, at 17 *deg.* 30 *min.* S. The 13th, at 18 *deg.* 12 *min.* S. The 15th, at 20 *deg.* 9 *min.* S. The 16th, at 20 *deg.* 48 *min.* The 17th, it being Full Moon, and calm, at 21 *deg.* 8 *min.* S. The 18th, at 21 *deg.* 30 *min.* S. The 21st, at 25 *deg.* 15 *min.* S. The 22d, at 26 *deg.* 42 *min.* The 23d, at 27 *deg.* 57 *min.* S. The 24th, at 28 *deg.* 57 *min.* S. We reckoned our selves now distant from *Paita* 302 *Leagues* and two thirds of a *League*. The 27th, at 32 *deg.* 30 *min.* S. with very fair Weather, and a smooth Sea. The 28th, we found by observation 33 *deg.* 16. *min.* S. The 30th, at 35 *deg.* 54 *min.* S.

They bear away for the Streights of *Magellan.*

October the 1st, we had variable Winds, at 36 *deg.* 50 *min.* S. by observation. *Octob.* the 2d, at 38 *deg.* 14. *min.* S. The 4th, at 41 *deg.* 34 *min.* The 5th, at 43 *deg.* 26 *min* S. with a huge Sea. The 8th, the Weather was so tempestuous, that all our Seamen agreed they had never seen the like before: However, it began somewhat to abate at Night. *October* the 9th, the strong W. N. W. Wind had drove us to the S. beyond what could be imagined, if by observation we had not found our selves at 48 *deg.* 15 *min.* S. *October* the 10th, we were at 49 *deg.* 41 *min.* S. Lat. And we reckoned our selves to be E. from *Paita* 69 and an half *Leagues*.

A great Storm.

§. XXIII. *October* the 12th, we were at 50 *deg.* 50 *min.* S. Lat. and our Easting from *Paita* 101 *Leagues*. This Morning at break of Day we descry'd Land to our singular good Fortune, being almost close under the shore before we saw it. Finding the same to be a knot of Islands, we steer'd in for the Continent, where we anchored in a Bay that appear'd pretty safe to us, at 40 Fathom Water, at a Stone's cast from the shore, in very smooth Water. Considering with our selves the time of the Year, and some other circumstances, we resolv'd to Winter here if we could get Provisions. We shot several Geese and small Fowl, and found great plenty of Mussels. Our Captain call'd these Isles *the Duke of York's Islands*. *October* the 13th, we began to moor our Ship into a rocky Point, in a hard and sandy bottom. The Tide flows here 7 Foot. We got this Evening good store of Lamparts. The 14th, we kill'd abundance of Fowl, not unlike Eagles, but with bigger Beaks, and their Nostrils rising from the top of the middle of their Beaks.

They see Land.

Come to an Anchor near the Duke of *York's* Islands.

Fowl and Fish.

A Fowl like an Eagle.

In the Evening, there fell abundance of Snow on the Hills round the Bay, but none where we lay at Anchor; and we caught great store of Lamperts. In some of the adjacent Isles, our Men found Grass of a Fathom long, and some Mussel and Lampert-shells, which made us judge they were not destitute of Inhabitants. 1681.

Sign of Inhabitants.

October the 15th, it blowing hard from the N. the Tree on which our Cable was fasten'd came up by the roots, so that our Rudder touch'd, and breaking our Goose Neck, we were in great danger, had the Wind continu'd. *October* the 17th, it snowed all the Night long on the Hills, and we saw ashore the Footsteps of People, but could find none. The 18th, we were by a clear observation at 50 *deg.* 40 *min.* S. Lat. We had every Day plenty of Lamperts. The 22d, we kill'd a *Penguin*. The 26th, we found Cockles like ours in *England*. The 27th, being a tempestuous Night, but a fair Day, some of our People were gone in a Canoe beyond the Bay where we first anchored, and thereabouts met with an *Indian* Boat, with 3 *Indians* in them, who at the sight of them leap'd over-board; one whereof our Men shot, the 2d being a Woman, got away; and the 3d, a Lad of 18 Years, was taken and brought aboard us. He had no other Covering but a Seal's Skin, was Squinteyed, and his Hair very short. We could understand nothing of his Language, but by the pointing with his Fingers to the Gulph, we understood that there were more People not far from thence with long Beards, and that were Maneaters. For the rest he appear'd very innocent and foolish. His Arms were a Club and a Dart to throw at an Enemy, pointed with Wood. The Boat was flat bottom'd and sharp built at both ends, in the middle whereof they had a Fire-place. The 28th, another Canoe was sent to search narrowly for more *Indians*, they saw several Huts, but the Inhabitants were fled. They return'd in the Evening with store of Lamperts and Mussels six and an half Inches long. The Mussels our *Indian* Prisoner opened with his Fingers better than our Men could do with their Knives. *Octob.* the 30th, we saw many *Penguins*; they will pad on the Water with their Wings very fast, but can't fly by reason of the bulk of their Bodies. This Day the Sun melted the Snow apace. *Octob.* the 31st, one of our Canoes return'd from the Eastern shore, and told us, That they had discover'd deep and safe Harbours, but they had some Rocks in them, which however were not dangerous, having Weeds for two Fathoms in circumference round them.

A Penguin Cockles.

They take an *Indian* Boat.

Large Mussels.

November the 2d, I took the Polar distance of the South Star of the Cocks Foot, and found it to be 28 *deg.* 25 *min.* I observed also the *Magellan* Clouds, the lesser at 14 *deg.* 5 *min.* and the greater at 14 *deg.* 25 *min.* *Nov.* the 3d, we began to prepare for our departure, there being no safe riding here, nor sufficient Provisions. As we went out, we perceiv'd at the East side of the Gulph, that the *Indians* had made a Fire, to give notice, as we supposed, of our departure. About 6 a Clock we got without the Mouth, and with much ado got clear of some Breeks, Riffs and Rocks, lying 4 *Leagues* from the Mouth of the Gulph.

§. XXIV. *November* the 6th, we had lost sight of Land; and the 7th, found our selves by observation at 52 *deg.* 3 *min.* Lat. and the variation of the Needle to N. E. about 15 *deg.* The 8th, we were by observation at 53 *deg.* 27 *min.* S. and saw abundance of Fowls and Seals. The 10th and 11th, we had exceeding tempestuous Weather; but the 12th, the fury of it was quite allay'd, and it cleared up at 10 in the Morning, at 55 *deg.* 25 *min.* S. Lat. We found a violent Current to the S. W. so we resolved for the Streights of *S. Vincent*, or the Streights of *Fernando de Magellan*. We saw this Day a kind of Sea-fowl, with Heads and Feet like *Muscovy* Ducks, with 2 Fins like the fore Fins of *Tortoises*, and their hinder Parts like those of *Seals*; for the rest, they have Feathers on their Bodies: The *Spaniards* call them *Paxaros Nimos*; they are about 1 Foot long, and weigh 7 pounds. *Nov.* the 14th, we saw Land about Noon, at 57 *deg.* 50 *min.* S. Lat. but the 15th we could see none, at 58 *deg.* 25 *min.* S. Lat. The 16th, we saw a very large Whale; and the 17th, it was a very hard Frost; and 2 or 3 *Leagues* to the S. of us, we saw several Islands of Ice about 10 or 12 Fathom above the Water, the biggest of them at least 2 *Leagues* in length, at 58 *deg.* 23 *min.* S. Lat. I found the variation of the Needle 18 *deg.* N. E. *Nov.* the 18th, all the Night was very fair, (if it may be call'd so, it being not dark at all) but the 20th, our Provision beginning to grow very scanty, we were now forced to be kept to a short allowance of such sorry Victuals as we had; besides that, the Cold was so excessive, that most of our Men were not able to endure it. We reckoned our selves this Day 205 *Leagues* and 2 thirds from the Gulph. *Nov.* the 21st, we saw some white Land-fowl, which gave us hopes of Land, but could see none. *Nov.* the 27th, by observation we found 52 *deg.* 48 *min.* S. Lat. and E. from the Gulph

A violent Storm.

A Sea-fowl call'd *Paxaros Nimos.*

Islands of Ice.

No Night hereabouts

Extremity of Cold.

1681. 285 *Leagues.* In the Evening we had a clear sight of the Sun, and found 30 *deg.* variation of the Needle; whence may be concluded, how difficult it is to direct a course of Navigation in these Parts. For, within the space of 25 *Leagues* sailing, we found 9 *deg.* of variation by a very good *Dutch* Azimuth Compass. *Nov.* the 28th, we saw a whole flight of Land-fowl, which gave us once more hopes of seeing Land, but had not the good fortune to discover it. *Nov.* the 29th, we were by observation at 49 *deg.* 45 *min.* S. Lat. The 30th, we had already 4 Hours of Night, and saw abundance of Rock-weed at 48 *deg.* 53 *min.* S.

Great Variation of the Needle.

Rock-weed

December the 2d, at 46 *deg.* 54 *min.* S. The 3d, at 45 *deg.* 28 *min.* and the 4th, at 44 *deg.* 1 *min.* The same Evening we found variation 17 *deg.* N. E. *Dec.* the 5th, we shared 8 Chests of Money still remaining undivided, amounting to 300 pieces of Eight to each Man, at 42 *deg.* 29 *min.* S. Lat. *Dec.* the 6th, we were by observation at 40 *deg.* 31 *min.* S. Lat. and *Dec.* the 7th, at 39 *deg.* 37 *min.* S. This Day Capt. *Sharp* had information given him, That a great part of our Men had framed a Plot against his Life, to be put in execution the next *Christmas-Day*; whereupon he order'd all the Wine to be shared among the Crew immediately, as not questioning that when the same was spent they would scarce attempt any such thing whilst they were sober. *Dec.* 8th, we found our selves at 33 *deg.* 29 *min.* S. Lat. By the observation of the rising and setting of the Sun, I found the variation to be 12 *deg.* 15 *min.* N. E. The 9th, we were at 37 *deg.* 30 *min.* S. The 10th, at 37 *deg.* 1 *min.* The 13th, we saw abundance of Grampusses, Whales, and Porpusses; and the 14th, found our selves by observation at 34 *deg.* 32 *min.* S. our whole Easting at 677 *Leagues* and 1 third. *Dec.* the 15th, we were at 33 *deg.* 46 *min.* S. Lat. and the 16th, at 32 *deg.* 9 *min.* and N. E. variation, 20 *deg.* 30 *min.* *Dec.* the 17th, we were at 31 *deg.* 4 *min.* The 18th, at 29 *deg.* 48 *mins.* and the 19th, at 28 *deg.* 29 *mins.* S. Lat. My whole Easting 760 *Leagues*, the Variation 2 *deg.* 50 *min.* N. E.

A Plot against Captain *Sharp*'s life.

Variation of the Needle.

§. XXV. *December* the 20th, we continued our Voyage, steering our course W. N. W. at 27 *deg.* 25 *min.* S. Latitude. *Dec.* the 25th, we celebrated *Christmas-Day* with a good Meal of Pork, for we kill'd a Hog which we had bred up from a sucking Pig aboard our Vessel, and weigh'd now 70 Pounds. *Dec.* the 28th, we were at 15 *deg.* 30 *min.* S. My whole Easting 825 *Leagues.* We saw some flying Fish, Dolphins, Bonito's, and Albicores, but they would not take the Hook. *Dec.* the 29th, I found variation 4 *deg.* 19 *min.* N. W. *Dec.* the 30th, we were by observation at 11 *deg.* 3 *min.* S. Lat. And the 31st, at 8 *deg.* 58 *min.* My whole Easting 884 *Leagues* and an half.

Abundance of Fish.

1682. *January* the 2d, we found our selves at 6 *deg.* 6 *min.* S. The 4th, at 3 *deg.* 9 *min.* The 5th, at 2 *deg.* 3 *min.* and the 6th, at 1 *deg.* 49 *min.* S. Lat. *Jan.* the 7th, we were at 0 *deg.* 32 *min.* N. Lat. The 8th at 1 *deg.* 55 *min.* N. The 10th at 3 *deg.* 16 *min.* N. The 11th, at 4 *deg.* 6 *min.* N. The 12th, at 5 *deg.* 49 *min.* N. and the 13th, at 6 *deg.* 41 *min.* N. without any considerable alteration of the Needle. *Jan.* 14. we were come to one Quart of Water for each Man *per Diem*, at 7 *deg.* 46 *min.* N. The 15th, at 9 *deg.* 18 *min.* N. with small variation of the Needle. *Jan.* the 16th, we were at 10 *deg.* 48 *min.* N. The 17th, at 12 *deg.* 19 *min.* N. The 18th, at 13 *deg.* 12 *min.* N. The 19th, at 13 *deg.* 1 *min.* N. *Jan.* 20th, we saw a Man of War Fowl, at 13 *deg.* 11 *min.* N. Lat. and abundance of Fish. The 21st, we found our selves by observation at 13 *deg.* 7 *min.* N. Lat. The 22d, at 13 *deg.* 17 *min.* N. The 23d, at 13 *deg.* 15 *min.* N. The 24th, at 13 *deg.* 12 *min.* N. Lat. *Jan.* the 25th, we saw divers *Tropick Birds* and a *Booby*, at 13 *deg.* 29 *min.* N. The 26th, we saw abundance of *Flying Fish*, and some *Booby's*, at 13 *deg.* 17 *min.* N. Lat. *Jan.* the 27th, a certain Bird call'd a *Noddy*, came aboard us, which we took for a sure sign that we were not far from Land; and the 28th we descry'd Land, which proved the Isle of *Barbado's* at S. S. W. from us, two *Leagues* and an half distant from *Chalky Mount*, standing S. W. by S. we saw several Ships at Anchor in *Spikes Road.* Soon after a Sloop coming betwixt us and the shore, and a Pinnace, we were inform'd that his Majesty's Ship the *Richmond* was then lying at Anchor at the *Bridge Town.* This made us bear away for *Antegoa*, standing N. by W. at 13 *deg.* 17 *min.* N. Lat. being 7 or 8 *Leagues* N. W. from the Body of the Isle of *Barbadoes.* We shared some remnants of Money, and in the Afternoon descry'd *S. Lucia*, one of the Western Isles not far distant from *Barbadoes.* The said Isle of *S. Lucia* bore 10 *Leagues* W. S. W. from us, and the Isle of *Martinico* 12 or 13 *Leagues* N. W. by W. *Jan.* the 29th, being at 15 *deg.* 45 *min.* N. Lat. we saw the Isle of *la Desseada*, bearing 8 *Leagues* N. W. from us. In the Evening, we saw the Isle of *Marigalanta*, another of the *Cariby* Isles, at S. W. by W. from us, and that of *Guadalupe*, both Westward and Northward. At 6 a Clock in the Evening we saw the Isle of *Monserrate* at a great distance. *Jan.* the 30th, at 8 of the Clock, we saw the Isle of *Antegoa* to the S. of us, and at Noon to the W. from us, at 17 *deg.* N. Lat.

A Man of War Fowl.

Tropick Birds.

A Booby.

A Noddy.

The Isle of *Barbadoes.*

The Isle of *S. Lucia.*

The Isle of *Martinico.*

The Isles of *Desseada*, *Marigalanta*, and *Guadalupe*, *Monserrate.*

Coming to the South of the Isle *February* the 1st, we sent to the Governour to ask leave to come into the Harbour, which he refusing, we agreed to give the Ship to such of our Companions as were poor, having lost all their Money at play, and then entred our selves aboard two Vessels bound for *England.* I and 13 more went aboard Captain *Robert Porteen's* Ship, call'd the *Lisbon Merchant*, and set sail from *Antegoa*, *Febr.* 11. for *England*, where we arrived and landed at *Dartmouth*, *March* 26. 1682.

CHAP. VI.

A Journal of a Voyage into the South-Sea *by the* Bucaniers *of* America, *from the Year* 1684 *to* 1689, &c. *by the* Sieur Raveneau de Lussan: *And of the* Sieur de Montauban, *on the Coast of* Guinea, *in the Year* 1695.

§. I. I Embark'd and set sail from *Diep* in *France*, *March* the 8th, 1679, and arriv'd without any remarkable Accident at S. *Domingo.* Here I had the misfortune to be chained to the Service of one of my Country-men above 3 Years, till I was released by the generosity of Monsr. *de Franquesnay* the King's Lieutenant. But having contracted some Debts which I was not in a condition to repay, my natural Inclination to Travelling, and the Rupture that happen'd at that time betwixt the Crowns of *France* and *Spain*, soon prompted me to engage with the *Bucaniers* aboard a Ship Commanded by Captain *Laurence de Graff*, Mann'd with 120 Men.

The Author sets sail from *Diep* for *America.*

Islands of Ice.

No Night hereabouts

Extremity of Cold.

1684. We set sail from *Petit Guaves*, *Nov.* the 22d, on the Coast of *S. Domingo*, with a design to join with a Fleet of *Bucaniers* lying then before *Havana*, a large City on the North-side of the Isle of *Cuba*, 14 *Leagues* distant from S. *Domingo.* The 4th of *Dec.* we anchored at the *Tortoise* Island to take in Water, and the 6th sail'd away again to the Coast of S. *Domingo*, (3 *Leagues* thence) where we cast Anchor at Cape *Francis.* We set sail again the 17th, but being pestred with contrary Winds, were put back to the Port of *Plata* on the Coast of S. *Domingo.*

The Author turns Freebooter.

Here we staid till the first of *January*: when setting sail again, we doubled the Cape of S. *Francis*; the 2d in the Morning, the Cape of *Cabron*; and about Noon that of *Sevona*, all situated on the same Coast. The 4th, we pass'd in sight of *la Mona.* And the 5th, about the Coast of *Puerto Rico*, and *la Savona*; and then steering S. E. by E. till the 11th, when we descry'd the Isles of *Ave*, which we made the 12th, and then kept the same course to the Isle of *la Roca.* The 13th, we saw the Continent of *America*; and with a brisk Gale steer'd N. N. E. till the 17th, when we descry'd 2 Ships and 4 Boats, which proved to be some of our Country-men, lying

1685.

1685. lying in wait for a *Spanish* Fleet they expected to come that way. However, the 19th we resolved to go from thence towards the Isle of *Curassol*, (belonging in part to the *Hollanders*) and the same Evening anchored in the Port of S. *Barba*, 2 *Leagues* to the Leeward of the Town of *Curassol*.

The 20th, we sent a Boat belonging to Captain *la Garde*, (one of our Company) to ask leave of the Governour to buy Masts, which he absolutely refus'd, tho' we sent him a Copy of our Commissions. The Isle of *Curassol* enjoys the same Climate, and produces the same Fruits as that of S. *Domingo*, besides *Maiz.* and small *Millet*, and is watered with several Rivers and Brooks. The Town is a Seaport, small but neatly built, and well fortify'd as well as the Fort. As there is a free exercise allow'd for all Religions, so it is inhabited by divers Nations, *Dutch*, *Jews*, *&c.* These Trade in Sugar that grows there; and in Wool, and Hides, the products of their Sheep and Oxen, bred in their low Pasture Grounds. They have their chief Trade with the *Spaniards*, and consequently are well affected to them.

A description of the Isle of *Curassol.*

Capella Vella.

The 27th, we directed our course for *Capella Vella*, on the Continent of *America*, where we intended to wait for a *Patacha*, expected that way from *Margarita*. The 30th, we anchored near the Cape, on the top whereof we placed several Centinels, to give us timely notice, as soon as they discover'd the *Patacha*. We went ashore and view'd the circumjacent Country of the Cape, which we were told was inhabited by a most savage sort of *Indians*, who have no Commerce either with the *Spaniards*, or any other Nation: They feed upon every thing they can lay hold of; are very fearful of Swords, but despise all sorts of Fire-arms.

The Inhabitants thereabouts.

The 8th of *February* it being our general opinion that the beforemention'd *Patacha* would not pass that way; a Council was held aboard our Ship, about forming another Design, but being not able to agree among our selves, 87 quitted the *Neptune* and came aboard the Ship in which we came from St. *Domingo*. The 13th Capt. *Lawrence* in the *Neptune* steer'd for St. *Domingo*, and Capt. *Michael* and Capt. *Rose* for *Carthagena*, and we follow'd the latter. The 15th a brisk E. Wind carried us beyond the River call'd *Rio Grande*, which has sweet Water 3 or 4 Leag. at Sea, from the mouth of it, provided you take it only from the surface. The same Day we saw *our Lady de la Pompa* on the same Continent. The 16th we anchored at the Isles of St. *Bernard*, and in the evening sent from thence 3 *Pirogues*, to get to the Windward of *Carthagena*, and to endeavour to get some Provisions, which is continually carried to that place. They return'd the 18th with 7 *Pirogues* loaden with *Maiz.* The 22d we set sail again, and at night saw *Point Picaron* on the Continent, and the Isles of *Palmas*. The next morning finding our selves separated from Capt. *Michael* and Capt. *Rose* resolv'd to attempt the passage by Land over the Continent, to the *South Sea*. Pursuant to this resolution we steer'd to the *Golden Isle*, inhabited by the *Indians* of the *Samballoes*, to learn what success some of the *Bucaniers*, that had taken that way before, had met with in the same attempt. The 25th we had no sooner anchored at the *Golden Isle* but we fir'd a Gun, for a signal to the *Indians* (our Friends) of our arrival; and having discover'd a Flag ashore, we went ashore, and met with 3 Men, belonging to the beforemention'd Crew, under Capt. *Gregnier* and Capt. *Lescuier*'s, who told us, that they would not go along with the rest to the *South Sea*. The 26th some *Indians* brought us certain Letters directed to the First *Free-Booters* that should come into that Road, to let them know, that 115 *English*, and not long after 170 *French* were gone that way to the *South Sea*. This, with some other Directions they gave us, and the News we receiv'd from some of the *Indians*, that the *French* under Capt. *Gronier* and Capt. *Lescuier* were not as yet past'd their Territories, engag'd us to prepare for our intended Expedition cross the Continent. The 27th Capt. *Mitchel* and Capt. *Rose* turning into the same Port to take in fresh Water, we communicated to them the beforemention'd Letters, which wrought so effectually upon them, that 118 of *Mitchel*'s Men quitted his Ship, and the whole Crew of Capt. *Rose* consisting of 64 Men. Thus we encamp'd ashore the 29th to the number of 264 Persons, with an unanimous resolution, to pursue our intended Journey cross the Continent to the *South Sea*.

The *Free-Booters* part.

Rio Grande.

They take 7 Prizes.

They resolve to pass over the Continent to the *South Sea.*

§. II. They begin their Voyage over Land to the *South Sea.*

March 1. We began our Journey over Land towards the *South Sea*, under the Command of Capt. *Rose*, Capt. *Picard*, and Capt. *Desmarais*, with 2 *Indian* Guides. After having travell'd 3 *Leagues* that day, we encamp'd near the bank of a River, whence we had an unwelcome aspect of those dreadful Mountains, Rocks, Precipices, and almost impenetrable Forests, we were to pass the next Day; the difficulties whereof were not a little encreased by a violent Rain which fell that day, and the trouble we were forced to undergo of carrying our Ammunition, warlike Instruments, and other Utensils along with us. 'Tis true, the spacious Plain that is beyond these Mountains, promised us some relief of our present Fatigues, but this prov'd of no great consequence, because we were forc'd to cross the beforemention'd River at least 44 times among the slippery Rocks, within the space of 2 *Leagues*. 1685.

They cross a River 44 times with in 2 Leag.

The 4th we took up our Quarter in an *Indian* Carbet, being a sort of a Lodging built like our Barns. The 5th we went out a Hunting, and met with abundance of Deer, and divers sorts of Birds: We saw among other Creatures, a kind of Animal call'd *Manipourye* by the *Indians*, and by our People a *Trefoil*, because each of its feet makes an impression, resembling that Plant on the Ground. For the rest it is of the bigness of a small Bullock, but with shorter Legs and Hair, and more slick; its head is like that of an Ass, but the nose somewhat sharper; you shall see it walk in the bottom of the Water, as well as on dry Ground. Their Hogs they call *Vents*, because they have an opening like a Navil on their backs. They have also certain Beasts, call'd by them *Agouttils* and *Oviatitils*, both being very like those Creatures we call *Indian* Pigs. The Monkies here are as big as our Sheep, living in the Forests, and most generally upon Trees, from whence they draw their sustenance; nay, if you happen to shoot them, they will twist themselves with their tails round the highest branches of the tallest Trees till they dye: I saw once one of these Creatures that was wounded in the belly, grasping with one of his Paws one of the branches of a Tree, whilst with the other he thrust his Entrails into that part of the Belly which remain'd entire. We also saw certain Birds call'd *Harats*, altogether like Parrots, but only much bigger and more beautiful, their Wings and long Tails being of a light flaming colour: As also a kind of Fowls call'd *Oecos*, not unlike our Turkeys, except that they have a small tuft of Feathers on their Heads like a Cock's Comb, and a yellow Circle about their Eyes. The Feathers of the Male are inclining to red, but of the Females, to black; they are always seen together. Their Partridges are larger than ours in *Europe*, their Flesh is whiter, but not so well tasted: Their Pheasants are lesser than ours, their note is the same, but their Flesh not quite so good.

The *Trefoil*, an Animal.

Their Hogs.

Agouttils and *Oviatitils*.

Monkeys.

A kind of *Parrots.*

Of *Turkeys.*

Partridges and *Pheasants.*

After six Days most toilsome travelling, beyond what is to be expres'd, we reach'd the River *Boca del Chica*, which exonerates it self into the *South Sea*. The next Day we went to work with such Tools as we had brought along with us, to make as many Canoes, as we should stand in need of, to carry us down the River into the *South Sea*. Having first purchased good store of Provisions, and the Friendship of the Neighbouring *Indians*, by giving them Cloth, Knives, Thread, Needles, Pins, Scissars, Hatchets, Combs, and other small Wares; without which it would have been impossible for us to pass that way, by reason of the many inaccessible Forests, and difficult Passages; and these *Indians*, unless reconciled by Presents, are a treacherous Generation, void of all Religion, or the Knowledge of God, but keep a certain Correspondence with the Devil, whom they consult in the Forests in the night time, and pretend to foretel certain futurities, which I have known sometimes to prove true in the event. They lead a vagabond Life, yet commonly set up their Huts near some River or other, from whence they part again so soon as they have consumed all the sustenance thereabouts. They wear no Cloths, covering only their Privities with a piece of Gold or Silver, made exactly in the shape, and pointed at the end like one of our Extinguishers. At their Feasts or solemn Meetings they appear, however, wrapt up in a piece of Callicoe, and have an oval plate of Gold, or Caracoby hanging in, and fastned to their Nose, through a hole. The Women wear a kind of short Callicoe Petticoat, from the Waste down to the Knees; and dye their Faces with a kind of small brown red Grain, call'd *Rocou*.

They come to the River of *Boca Chica.*

The *Indians* of those parts.

The 23d the Guide that had conducted the beforemention'd 115 *English* to the *South Seas*, return'd with the good News that they had already taken 2 *Spanish* Ships with Provisions. The 28th we receiv'd a Letter from the *French* Crew, gone along with Captain *Groignier* and Captain *Esmier* to the *South Sea*, in which they advised us to follow them with all possible speed,

in

1685. in order to partake of the Booty they hop'd to be Masters of, by taking of the Fleet of *Peru*; and that they would stay for us at the King's Isles. Having got every thing ready for our departure by the 1st. of *April*, we embark'd in 14 Canoes of 20 Oars each, under the conduct of 20 *Indians*, who were willing to be sharers with us both in the danger and booty we expected to meet with in the *South Sea*. We were forced to rest the 4th of *April*, to expect the coming up of some of our Men, and to refit our Canoes, much dammify'd in our passage over the Rocks and Flats of this River. The 5th we found the River much deeper, but much incumbred with Trees, carried down with the Current. The 6th we came to the place where the River grows much deeper and wider; and the 11th advanced towards the mouth of it, where we were inform'd by an *Indian* sent for that purpose in a Boat, that the *English* and *French Free-Booters* had sent us some Provisions to the little Bay of *Boca del Chica*, situate near the entrance of the River. The same day having receiv'd information, that 1000 *Spaniards* intended to lay in Ambush for us, we did not stir, till in the night time, and then without any noise, and so escaped the snare.

They embark upon the River in 14 Canoes.

Provisions sent them.

The 22d we cast anchor, because the Tide was strong against us, and from noon till night it rain'd most excessively, that we were afraid our Canoes would have been sunk every minute. About midnight we pass'd the mouth of the River into the *South Sea*, steering directly for the Bay of *Boca del Chica*, to make good chear with the Provisions sent us by our Comrades. Hence we set sail the 13th to an Island 4 *Leagues* distant from the mouth of the River, where having refreshed our selves for 2 whole Days, we weigh'd again the 16th, in order to find out the *English* and *French* Fleet, who had appointed their Rendezvouz either before *Panama*, or at the *King's-Islands*, not far from this River. We came to an anchor among these Isles, the 18th about 30 *Leagues* E. of *Panama*, the biggest of which is of a large compass, and very mountainous, and inhabited by such Negroes as run away from the *Spaniards* at *Panama*, and the adjacent places.

They enter the *South Sea*,

And come to the *King's Isles*.

A short account of the *South Sea*.

The *Spaniards*, after the Conquest of the Natives of those parts, are now the sole Possessors of many goodly maritime and inland Towns along this Coast, from the Isles of *Don Fernandez*, situated at the entrance of the Gulph of *Magellan*, or rather from *Chili* to the middle of the Streight, that is betwixt the Continent and the Isles of *California*, call'd *Mar-Bermejo* by the *Spaniards*; through which it is supposed a passage might be found from the *Northern* to the *Southern Seas*, without going about by the Streight of *Anian*: The chiefest of the beforemention'd Towns, beginning from the *South* are, *Arica*, *Sama*, *Nasca*, *Pachacama*, *Lima*, *Ciudade los Reyes*. The Port of *Callao*, *Panama*, *Realegno*, *Tecoantepeqna*, *Acapulco*, &c. The *Spaniards* in these parts having lived for some time in great Tranquillity before the *Bucaniers* found out the way into those Seas, they were scarce acquainted with the use of Fire Arms, notwithstanding they were in some parts frequently alarm'd by a sort of *White Indians*, inhabiting part of the Province of *Chili*, a Nation of a prodigious bulk, and such mortal Enemies to the *Spaniards*, that whenever they take any of them, they take the Plate of their Breasts, and cut out their Hearts.

Spanish Towns in that Sea.

White *Indians* of *Chili*.

The 22d the beforementioned Fleet of *English* and *French* consisting of 10 Sail, came to the *King's Isles*: The Admiral, commanded by Capt. *David*, carry'd 36 Guns; the Vice-Admiral, under the command of Capt. *Sammes*, 16 Guns; the 3d and 4th Ship, commanded by Capt. *Townsley*, and the 5th by Capt. *Groignier*; the others were 2 small Ships, and 2 Barks: The Commanders all *English* except Capt. *David*, who was a *Fleming*, and Capt. *Groignier*, who was a *Frenchman*. Our whole number consisted of 1100 Men, but among our Ships the Admiral and Vice-Admiral only were provided with great Guns. The 25th of *April* we took an Advice Boat, going to the Fleet of *Peru*, then riding at Anchor in the Port *Callao*, and having aboard some Packets from *Madrid* to *Panama*, and Letters from the Vice-Roy of *Lima*, containing an exact account of the number of the Men of War, Fire-Ships, and Merchant Men, whereof this Fleet consisted, and of the time they were likely to arrive at *Panama*. We strictly examin'd the Commander and Pilot, but could get nothing of any moment out of them, but that they had thrown the King's Packquet, and a Casket of Jewels over-board, having taken an Oath to one another, rather to dye, than to let the Packquet fall into our Hands, or to divulge any Secret relating to it.

A List of the *Bucaniers*.

The 28th in the evening we embark'd 500 Men in 22 Canoes, in order to attack *la Seppa*, a small Town, 7 *Leagues* to the Windward of *Panama*. The 29th in the forenoon we were met by 2 *Pirogues*, man'd with *Greeks*, as they call them hereabouts. These are a medley of divers Nations transplanted to this Coast from the *North Sea*, by the *Spaniards*, to serve them against their Enemies, because they look upon them as the better Soldiers. As soon as they perceiv'd who we were, they got ashore on one of the Isles in the Bay of *Panama*, and posting themselves upon a very advantageous rising Ground; from whence they fired most furiously upon us: As the ascent of the place where we landed was very difficult, so we were forced to take a considerable circumference before we could come at them, when after the space of an Hour we forc'd them to retreat into the Woods, with the loss of 30 Men slain, and 2 taken Prisoners.

1685.

Greeks what they are.

Are beaten by the *Bucaniers*.

After this defeat, having remain'd the rest of our Canoes, we continued to prosecute our Enterprize upon *la Seppa*: We were forc'd to go up a fine spacious River, bearing the same name, for 2 *Leagues*; on whose Banks the *Spaniards* having plac'd their Watchmen or Centinels, it was impossible but the Inhabitants must take the alarm before we could be ready to attack them: Notwithstanding which we assaulted and took it with the loss of one single Man; but they had carried away all their best Moveables to Places of security.

The *Bucaniers* take *la Seppa*.

The 1st of *May* we return'd to our Ships, lying then at anchor at a small Isle call'd *Sipilla*, about a *League* from the mouth of the River *la Seppa*, which makes a kind of Channel that forms the Bay of *Panama*, and make up a kind of Ridge or Bar all along, that divides the Channel into 2 parts, one to the East, and the other to the West. These Isles deservedly have got the name of the Gardens of *Panama*, because most Persons of note of that City have their Country Houses, Gardens and Orchards in them, watered with delightful Springs and Brooks, and stor'd with vast variety of Flowers and Fruits; among these the *Sappota*, *Sappotilla*, *Avocata*, and *las Cayemites*. The *Sappota* is like a Pear with a greenish rind, and 2 oval Kernels in the midst, each of the bigness of a small Walnut; when it is full ripe, the Pulp is pure red, very sweet, and of a delicious taste. The *Sappotilla* is of the same shape, but somewhat less, with a white rind, and the Pulp of an admirable taste. The *Avocata* is like our Quinces, except that the rind is much greener; when it ripens, it is soft and white like Cream, and has almost the same taste. The *Cayemites* are a sort of Damasens, of an excellent taste. Besides these they have Apricocks, Pomegranates, Goyaves, Juniperberries, Coco's, Bananoes, Figs, Melons, Oranges of all sorts, Citrons, Lemons, &c. Wherewith and the pure Water we met with here, we feasted our selves, and made our selves an ample amends for our past Miseries.

The *Isles* of the Bay of *Panama*.

What Fruits they produce.

The 8th of *May* we set sail thence, and pass'd in sight of the Old and New City of *Panama*, and came to an anchor near the most delightful Isle of *Taboga*: The which we sent out a long Bark to Cruize, in order to give us timely notice as soon as they should get sight of the *Spanish* Fleet. The 13th we prepar'd for the Engagement, and in the afternoon we heard the firing of many Guns at *Panama*, the cause whereof we could not guess at, at that time, but we were convinced afterwards, that the same was done for joy for the arrival of the Fleet we look'd for, which had pass'd through one of the beforemention'd Channels unperceiv'd by our Ships. As we knew nothing of this, so we anchored at the *King's Islands* till the 19th, when we came to an anchor betwixt the *Great Isle* and those in the East Channel. The 31st we came back again to the *Little Isles of Panama*, where we anchored the 1st of *June*. The 4th we sent out two Canoes, who took a Ship loaden with boards; the Prisoners told us, that the Fleet of *Peru* was got into *Panama* the 12th, and the Guns we heard on the 13th were discharg'd on account of their safe arrival; and that as soon as they refreshed, careen'd and mann'd, the would come out to fight us.

They lay in wait for the *Spanish* Fleet.

Our Men were so well pleased with this News, that they threw up their Hats for Joy, as reckoning all their own; and the 7th Capt. *Groignier*, who lay at an anchor farther from the *Island* than the rest, gave us the signal, that he descry'd the *Spanish* Fleet, consisting of 7 stout Ships, with a bloody Flag in the Stern. That day was spent in coming near to one another, we having the Weather-Gage of them; but the following night the Enemy putting a Lanthorn on one of their small Vessels, 2 *Leagues* to the Leeward of us, to amuse us: This Stratagem succeeded according to expectation

An Engagement.

1685.

An Engagement betwixt the *Bucaniers* and the *Spanish* Fleet.

pectation; for to our great surprize, we found our selves the next Morning, being the 8th of *June*, to the Leeward of the Enemy: We did all we could to recover the Weather-Gage, but in vain, so we were forc'd to engage with an Enemy not only much superior to us in strength, but also back'd by the advantage of the Wind; notwithstanding which we maintain'd the Fight without any considerable disadvantage on our side, till night parted both the Fleets, the *Spaniards* retreating into the Port of *Panama*, and ours bearing away for the *Isle of S. John de Cueblo*, 24 *Leagues* to the West of *Panama*, where we came to an anchor on the 26th. Upon a review, we found that Capt. *David* our Admiral, though he was most warmly ply'd by the *Spaniards* with their great Cannon, and had half his Rudder carried away by it, yet had no more than 6 Men wounded, 1 kill'd: Capt. *Sammes*, tho' he receiv'd several shots betwixt Wind and Water, had also no more than one Man kill'd, and only 3 wounded, and our lesser Vessels lost not one Man, and had no more than a few wounded among them; a thing that will scarce meet with credit, considering that the *Spanish* Admiral carried 56 Guns: their Vice-Admiral 40, and the rest about 16 Guns a piece. Had we had the good fortune to have met them before they got into *Panama*, and consequently were strengthen'd by new reinforcements; nay had we but got the Wind of them, we might in all probability have been Masters of a Treasure, which at once would have put a period to all our Troubles.

The strength of the *Spanish* Fleet.

The 29th we embark'd 300 Men in 5 Canoes at the *Isle of S. John*, in order to surprize the Town of *Pueblo Nuevo*, 6 *Leagues* thence, to get some Provisions: We landed the 31st, but being oblig'd to go up a very fine River for 2 *Leagues*, we were discover'd by their Watchmen, so that the Inhabitants having sufficient time to carry away all their Goods, we found no Provisions nor Inhabitants there: We return'd the 5th of *July* aboard our Ships, when upon occasion of some differences betwixt the *English* and us we parted Companies; and there being of the *French* about 330, we encamp'd separately from them on the *Island*. The *English* weigh'd the 9th, and came to an anchor 5 or 6 *Leagues* to the Leeward of us: When we were building some Canoes for our use, there being here abundance of *Mapou* and *Acanou* Trees near the Sea side, some whereof were so large, that the Trunk of one of them, when hollow'd out, would carry 80 Men.

The Town of *Pueblo Nuevo*.

The *English* and *French* part.

The 15th one of our Centinels, plac'd on a high Tree, brought us word that he saw a Ship at Sea; we gave her chace immediately, and found her to be a small *English* Vessel commanded by Capt. *Wilmot*, and mann'd with 40 *English* and 11 *French* Men. They told us, that having lately taken a Ship loaden with Corn, coming from the Port of *Sansonna*, on the Continent, 30 *Leagues* E. of the *Isle of S. John*, they had understood that there were *Free-Booters* in these Seas, and that thereupon they came to join with us: It happen'd unfortunately for us, that the *English* had at the same time sent a Canoe to meet her, who influenced Capt. *Wilmot* to go along with them with his Corn Prize, to the place where they were at anchor, to our singular regret.

Capt. *Wilmot* comes into these Seas.

The *Isle of S. John Cueblo* is situate 5 *Leagues* from the Continent E. and W. and N. and S. Its circuit is 12 *Leagues*, being separated from the Main by a branch of the Sea. It is very Mountainous and Woody, but watered with several good Rivers, though destitute of Inhabitants. As it is well stock'd with Deer, Monkeys, Agoutis and Tortoises, we did not question but to meet with sufficient Food, but the *English* had destroy'd all the Tortoises before, and we durst not spend what Powder and Shot we had left, in hunting after the Deer and Monkeys; but were forc'd chiefly to subsist upon such Fruits as the Woods afforded. The *English* being not insensible of our present necessity, sent to us to rejoin them, which we refused to do, unless they would allot us a Ship of our own; yet 30 of our Men, no longer able to endure fasting, join'd with them. For the rest this Isle produces a sort of dangerous Serpents, whose stinging proves Mortal immediately, unless they apply to the Wound a certain Fruit, chew'd, growing on a Tree upon the same place, and in divers other parts of this Country, which in its height and Leaves, resembles the Almond Tree, but the Fruit a Sea-Chestnut, of a greyish colour and a bitterish taste, containing a whitish Kernel, which must be chew'd well and apply'd immediately to the Wound. Two or three *Leagues* up the Country they have also a kind of Crocodiles, call'd *Cayamans*, living as well in the Sea and Rivers, as upon the Land.

An account of the Isle *S. John Cueblo*.

A sort of dangerous Serpents.

An antidote against them.

1685.

The 9th of *August* the *English* being gone, we embark'd 120 Men in 5 Canoes, under command of Capt. *Groignet*, to cross over to the Continent, where we landed the 13th in the Neighbourhood of the Town of *S. Jago*, 20 *Leagues* distant from *S. John's Isle*: Here we took some Prisoners in a Sugar Plantation, upon the River of *S. Jago*, and after examination, finding they had no news as yet of separation from the *English*, we sent a Canoe with some Victuals to our Companions at the *Isle of S. John*, and to acquaint them, that we were going towards *Panama*, to see whether we could seize some Vessels thereabouts for our use. The 15th we landed 40 *Leagues* to Leeward of *Panama*, and took 50 Prisoners in a great Beef Farm: Having receiv'd intelligence by some of them, that in a River 8 *Leagues* to the Windward, there lay 2 Barks loaden with *Maiz*, we sent thither and took them the 29th, steering our course thence to *S. John's Isle*, where we arriv'd the 3d of *September*. The 5th having careen'd our Ship, and provided our selves with Water and Wood, we were ready to leave this Isle, had it not been for continual Rains, which lasted 18 Days without intermission, and were so violent, that there was no staying above board; hence it is that the *Spaniards* call the distance betwixt the Bay of *Gorgona* and the *Isle of S. John*, the *Droppings of the South Sea*, there being only 4 Months fair Weather in the Year here, *viz. December*, *January*, *February* and *March*. These continual Rains, occasion not only the Bloody Flux, but also Worms of a Finger long, between the Flesh and the Skin. The 4th of *October* the Weather began to clear up, and the 8th we set sail towards the Sea Port of *Realegno* 180 *Leagues* W. and by N. W. of the *Isle of S. John*, and 260 *Leagues* W. of *Panama*. The 13th we descry'd Land, but the following Days being separated by Tempests, we did meet again the 19th, and discover'd the Bay of *Caldaira*; the 20th pass'd in sight of that of *Colebra*; and the 21st got to the height of the *Morros*, call'd *Papegaya's* by the *Spaniards*. The 22d we found our selves over against *Realegno*, a place very remarkable for the high Mountains, that surround it, but especially for a burning Hill, which emits a continual smoak. The 25th we landed about 100 Men, and after 3 Hours march took some Prisoners, by whom we were inform'd that the *English* had taken the Town of *Leon*, and burnt *Realegno*. The 26th one of our Quarter-Masters, a *Catalonian*, deserted to the *Spaniards*, which made us lay aside our design upon *Granada* for that time. The 27th we made for the Port of *Realegno* with our Canoes, where we found our Ship at anchor.

The *French Free-Booters* land near *S. Jago*.

Eight Months rains in the Year.

Realegno.

November 1. we arriv'd at the said Port, which has 2 Passages, and 2 little Points: The Passage to the Windward is narrow, but the best. A very fine River bearing the same name with the Town exonerates it self into the Road, where there is safe anchorage, and within it are 5 Isles. The Town of *Realegno* it self lies 3 *Leagues* within its mouth. As we went up the River, we saw the Ruins of 3 Entrenchments, and within Musquet-shot of the Town a fine Dock for the building of Ships.

Its Harbour.

The River of *Realegno*.

The Town is built upon the River in a fertile Country, watered with many Brooks and Rivulets, and the Ruins of the Churches and Houses (burnt by the *English*) shew'd it to have been a very beautiful Place. The River upon which it is seated, emits 8 Branches, by means whereof they convey their Commodities to and from their Farms and Sugar Plantations. The 6th we set forward to the number of 150. towards the Town of *Leon*, 4 *Leagues* thence: Having surpiz'd one of their Outguards, the 8th they told us, that above 2000 Men were ready to receive us there; so we return'd aboard the 9th, but the 10th march'd to a Sugar Plantation, 2 *Leagues* from that City, where we found nothing, but in our return were attackt by a body of Horse, whom we put to flight, and made the Captain a Prisoner; he told us, that he had mistaken us for a body of 280 *Mulattoes*, sent out on purpose to fight us.

The 13th the same Company of 150 Men were landed, to take the Town of *Pueblo Viejo*, 3 *Leagues* above *Realegno*. They pass'd through a place quite deserted by its Inhabitants, by reason of its being excommunicated; for it is a custom in those parts, that in case a Place has been several times taken by the *Free-Booters*, it is curs'd by the Bishop, and the Inhabitants lay under an Excommunication till they leave it. The 14th in the Morning we came to *Pueblo Viejo*, where we found the

Pueblo Viejo.

An odd way of Excommunication.

1685. the Inhabitants entrenched in the Market-place, but especially in the great Church, where they defended themselves for some time, but after some brisk Volleys given them, retreated through a back Door. We took all the Provisions and what else we could get, which we brought safely aboard the 16th. The 18th some of our Men took a Prisoner, the Master of an adjacent Beef-Farm, who told us that in our return from the Town, we had escaped an Ambush of 600 Men, by taking another Road; we made him give us some Provisions for his ransom. The 28th we prepar'd for our departure to the Isle of *S. John de Coeblo*, our Rendezvouz.

They take the Town.

December 3. we found our selves 100 *Leagues* out at Sea, and then made again toward the Land, and on the 5th sent 3 Canoes with 70 Men ashore to cross the Bay of *Caldaira*, and to endeavour to get some more Provisions, what we were able to get near *Realegno* being of no great consequence, because the *Spaniards* had carry'd it all deeper into the Country. Betwixt the Port of *Realegno* and *Panama* are many small Creeks and Harbours, but as the Entrances of them are very difficult to be found, so it is dangerous landing along this Coast, the Sea being always boisterous with the least S. E. and S. W. Wind standing upon it.

I have frequently made this observation betwixt the *South* and *North Seas*, That in the first, let the Wind blow never so hard, as soon as it ceases, the Sea is as calm as a River; but in the last, the agitation of the Waves continues for several Days after a Storm. The Storms in the *South Sea* that are formed to Leeward, are much more dangerous than those from the Windward; whereas it is directly contrary in the *North Sea*. Another observation is, That the *South Sea* is generally pacifick upon the Main, but boisterous near the Coast; and that the *North Sea* is for the most part calm under the Shore, but very turbulent at Sea. The *South Sea* produces a peculiar sort of Serpents, marbled with Spots, and about two Foot long; their Sting is so venemous as not to be cured by any Antidote, but the wounded Person dies soon after. If one of these Creatures happen to be cast by the Sea upon the Shore or any Sand, so as to touch the Ground, they die in an instant.

Difference betwixt the *South* and *North* Seas.

A peculiar sort of Serpents.

Esparso.

The 9th, having still kept along the Coast, we landed 50 Men, in order to take the Town of *Esparso*, three Leagues from *Caldaira*; but being inform'd by some of their Outguards we took, that they expected every moment a Reinforcement of 500 Men from *Carthagena*, we thought it best to delay our Design till a more convenient time, after we had kill'd and eaten the Centinels Horses.

The Bay of *Caldaira.*

The Bay of *Caldaira* bears the name of six Magazines, standing three Leagues E. to the Mouth of it, upon the Bank of the embarking place belonging to *Esparso*. This Bay (by others call'd the Bay of *Nicoya*) is one of the finest in the World. It's true, its entrance is very large, but on the other hand, it reaches 12 Leagues deep into the Country, and nothing but an East Wind can hurt it: The Bottom of it has also many Rivers, upon which are many Farms, Villages, and Sugar Plantations. You may anchor all over the Bay, from 6 to 100 Fathom.

The 10th, we went ashore again near a great *Banano's* Walk, where we loaded our Canoes with those Fruits. We took a Centinel belonging to the Town of *Nicoya*, but that being too far distant, we steered our course to the Point of *Borica*, where we arrived the 14th. Hereabouts we were greatly surpriz'd with a Walk consisting of five rows of Cocoa Trees, along the Bank, for 15 Leagues in length, and that in such an order, as if they had been planted by Art, whereas they are the bare product of Nature.

A Cocoa Walk of 15 Leagues long.

The 22d, we landed some Men, to seek for Provisions. After having travelled a League, they took two Prisoners in a Farm-house, who inform'd them, That the Town of *Chiriquita* was not above a League and an half distant, being defended by 600 Men. This made them hasten their retreat towards our Canoes, but were attack'd by 400 Horse, whom they fought, retreating till they came to the Sea side. They challeng'd us in threatning Language to come to their Town, which we did soon after to their cost: In the mean while, we sail'd for the Isle of S. *John*, where we arriv'd *January* the 1st, 1686, and found our Ship and two Barks at an Anchor.

§. III. The *Freebooters* Voyage to the *South* Sea in 1686.

January the 5th, we embark'd 230 Men in 8 Canoes, in order to give a visit to the Townsmen of *Chiriquita*, 20 Leagues distant from the Isle of S. *John*. We landed undiscover'd on the 6th, in the Night; we marched forward by the Moon-light both the 7th and 8th, and concealed our selves in the Woods by Day, not knowing all the while we had landed on the wrong side of the River; but finding our mistake, as much harrass'd as we were, we return'd immediately to our Canoes, pass'd over to the opposite Bank; and having taken the Town Watch, got to *Chiriquita* the 9th before break of Day. As we came undiscovered, so we surprized their *Corps de Guard*, their Men being all at play. In the Afternoon we perceived some *Spaniards* in a House not far from the Town, which made us send out 5 Men in quest of them; but they no sooner perceiv'd us to approach them, but 120 more came out and charged us on all sides; but being resolved to sell our Lives as dear as we could, we fought them, standing back to back for a whole Hour, when only 2 of us being left fit to fight, we were by good Fortune reliev'd by some of our Companions, brought thither by the firing. The *Spaniards* no sooner got sight of this Reinforcement, but they betook themselves to their Heels, leaving 30 of their Men dead upon the spot; so we return'd victorious to the Town, which we set on Fire immediately. The Town of *Chiriquita* is not very big, but most pleasantly seated in a great Plain or *Savannah*, watered by divers Brooks and Rivulets, and full of Farms; their chief Trade being Tallow and Hides.

1686.

They take *Chiriquita.*

5 Men engage 120.

They burn the Town.

The 10th, we went to an Island in the River upon which the Town stands, to stay for the Ransom we expected for the Prisoners we had taken. We were no sooner landed there, but we sent some of our Canoes to look after a Frigat that was unloading some Provisions higher up the River. When they came near it, they found 100 Men entrenched to defend her; but notwithstanding all their Fire, our Men possessed themselves of her. In one of the Letters found in her, information was given, how the Admiral of the *Peru* Fleet, having aboard 400 Men, was burnt with the whole Crew by Lightning; a thing the more extraordinary, because there Thunder or Rain are never heard or seen in the memory of Man.

The 16th, having received the promised Ransom, we return'd towards our Ship then at Anchor at the Isle of S. *John*. The 20th, seing our Ship was become useless for want of Sails, we began to build Canoes and Pirogues, upon the Banks of a fine River of that Island, which had store of tall Trees. The 27th, we descry'd 7 Sail out at Sea; and the 28th, our Centinels gave us notice, that they saw 6 Pirogues plying along the shore, which made us put 150 Men in ambush on both sides of the River, as suspecting them to be *Spaniards*; and such they proved; but fearing a Stratagem, they did not think fit to enter the River, but bore away the first of *February*.

Having finished the Work we were about by the 14th of *March*, we set sail from the Isle of S. *John* with 2 Barks, 1 half Galley of 40 Oars, 10 great Pirogues, and 10 Canoes, built of *Marpon*-Timber. We then renew'd our design of attacking the Town of *Granada*; but as the same was 200 Leagues distant, and that we should want Provisions for such a Voyage, we sent our half Galley and 4 Canoes, to seek for some at *Pueblo Nuevo*, with orders to rejoin us at the Isle of S. *Peter*. The 6th of *April*, before Day, coming near the River of *Pueblo Nuevo*, we saw by the Moon-light, a small Frigat, a long Bark, and a Pirogue, at the Mouth of it. As we supposed them to be *English Bucaniers*, we came within Pistol-shot of them, before we discover'd our mistake by a Volley of great and small Shot sent among us; this being part of the *Spanish* Squadron we had seen off of S. *John*'s Isle. We had 20 Men disabled by this mistake; but after we had recover'd our selves, we fought them briskly till Day-light, when the Enemy retired under the Cover of a Retrenchment; so we steer'd to the Isle of S. *Peter*, where we rejoin'd our Canoes the 8th. The 9th, being under great want of Provisions, we sent our wounded Men aboard 2 Barks we had appointed to meet us in the Bay of *Boca-del-Toro*. This done, we landed near a Town 10 Leagues to Leeward of *Chiriquita*, but met with none. In our return thence on the 11th, we fell into an ambush of 500 Men, through whom we opened our selves a passage with our Swords. The same Evening we set sail again for the Bay of *Boca-del-Toro*, where we rejoin'd our Barks the 13th, and spent 2 Days in hunting for Deer and Birds.

An Engagement with some *Spanish* Ships.

The 16th, we set sail for the Bay of *Caldaira*, and landing the 19th, we reach'd the Town of *Lesparso* about 11 in the Morning, but found it quite abandon'd, the Inhabitants being retir'd to *Carthagena*, 24 Leagues thence. The Town of *Lesparso* is seated 3 Leagues from the Sea side, (the way thither being very rugged) upon

Lesparso.

1686. an Eminency from whence you may see all the Ships coming in or going out of the Bay. It is environ'd with a Rivulet, and the Roads leading thence through the Plains to *Carthagena* are as good and spacious as any in *Europe*.

The 21st, being rejoin'd by our 2 Barks, we entred into a Debate how to Attack the Town of *Granada*; which being resolv'd upon, we left the Bay the same Evening; but being separated in the Night by a strong E. Wind, we found to our great surprize, the next Morning 13 Sail, whereas we knew our selves no more than 12 strong. But not long after, perceiving 5 more, we soon understood it was Capt. *Townsley* lately come from the Coast of *Acapulco*, to seek for some Bonanoes hereabouts. As we were now the stronger Party of the two, we made the *English* sensible, that it was now in our power to revenge our selves upon them for the former injuries we had received at their hands; but that we would rather bury in oblivion what was past, and so engag'd them to join with us in the design we had formed against the Town of *Granada*.

The *French* and *English* join.

Accordingly we embark'd all together in our Pirogues and Canoes the 25th, ordering our Ship and 2 Barks to coast it along to the place we intended to land, 20 *Leagues* to the Windward of Cape *Blanco*. We landed *April* the 7th with 345 Men, and marched all Day and Night till the 9th, when we rested at Night in a large Sugar Plantation, four *Leagues* distant from *Granada*. The 10th, we continued our march, and in our way took a Prisoner, by whom we were inform'd, That the Inhabitants having got intelligence of our design by the *Catalonian* Quarter-Master that deserted us, had raised a Fortification in the Market-place, defended with 14 pieces of Cannon and 6 Patarero's, and that they had 6 Troops of Horse to fall into the Rear.

Their design upon *Granada*.

All this did not in the least deter us from advancing [illegible] to the Suburbs; where having defeated a strong [illegible] *Spaniards* that opposed our entrance, we opened our [illegible] into the Town, and at the same time sent some of our Men to view the condition of the Fort in the Market place; which being done, they told us, that it was a quadrangular Fort, facing as many Streets in a direct Line; so it was resolved to begin the Assault with our whole Body on the side of that Street we were then in, for fear of being attack'd by the Enemy's Horse.

They Attack it.

Thus we advanced boldly notwithstanding the continual Fire from their great Guns; the effects whereof we avoided for the most part, by keeping on both sides of the Houses, and sometimes bowing low to the Ground. At last we got on an Eminency within reach of our small Arms, whence we ply'd them so warmly, that what with th's and the Hand-granado's thrown in by a Detachment of some of our chosen Men, we forced them to quit their Post; which we possessed our selves of immediately, with a great slaughter of the Enemies, and only four Men killed and wounded on our side: a cheap Victory, considering that this Fortification was spacious enough to contain 6000 Men, and was enclosed with a strong Wall.

And take it

After having gathered what Ammunition, Provisions, and other Plunder we could get, we sent out 150 Men to endeavour to get some Prisoners and Provisions, but the *Spaniards* being all withdrawn before, with all their Movables, from the Sugar Plantations, seated along the Lake of *Nicaragua*, into an Isle in the middle of the said Lake, this Expedition proved altogether fruitless. The next thing we did, was to demand a Ransom for the City; but the same being refused, we set it on Fire.

The City of *Granada*.

Granada is a spacious City, seated in a Valley upon the Lake of *Nicaragua*. It has several stately Churches, many well built Houses, and some Convents, but the circumjacent Country is destitute of Water.

The 12th, we left this City in order to return to the Sea side, which is 20 *Leagues* thence. We had scarce march'd a Mile, when we were attack'd by 2500 *Spaniards*, whom we soon dispersed by the help of 1 great Cannon, and 4 Patarero's we had brought along with us from *Granada*. We took up our Quarters that Night at *Massaga*, a handsome Village seated upon the before-mention'd Lake, where we were most courteously received by the Inhabitants, who furnish'd us with Water under hand, the *Spaniards* having spoil'd all the Springs before hand in the Village. These *Indians* were the remnants of those unfortunate Nations that flourished in those Parts before the arrival of the *Spaniards*, and by their cruel usage were forced to betake to the Mountains; from whence they have been by degrees brought down by the same *Spaniards*, who allow them to build and inhabit their own Villages; but after all, keep them under such hard subjection, that they would willingly embrace any opportunity of shaking off their Yoke.

The *Indians* hereabours.

1686.

We rested here for some time to refresh our wounded Men, 2 of whom died of the Cramp, a Symptom very common in these Parts, which seldom fails to kill such wounded Persons as are seized with it. The 17th, we continued our march to another Burrough 3 *Leagues* thence; And the 18th, as we were coming out of a Wood into a Plain, were unexpectedly encountred by 500 Men, headed by the before-mention'd *Catalonian*. But our Van Guard having forced them to quit an Eminency they were posted on, they betook themselves to their Heels, leaving their dead and wounded Men and 50 Horses behind them. The 19th, we lay at a Farm House; and the 20th, at an *Estancia* or Beef Farm, where we spent some Days in salting Provisions. The 26th, we re-embark'd, set sail the 27th, and the 28th anchored in the Port *Realegno*. Here we landed in the Morning, and by Noon came to the Town of *Pueblo Viejo*; which finding abandon'd by the Inhabitants, we gathered what Provisions we could, and so return'd the 1st of *May*.

Cramps Mortal.

Pueblo Viejo.

The 2d of *May*, we fetch'd 6 Caldrons from a neighbouring Sugar Work; and the 4th marched to *Ginandego*, a Town 2 *Leagues* from *Realegno*, where we arrived the 5th. The *Spaniards* had cast up an Entrenchment, which was defended by 200 of their best Men; but after the first Volley they thought fit to quit it, and to leave the Town to our mercy, which we set on Fire, and march'd off again immediately. We were no sooner come out of the Town into an adjacent Plain, but we saw 800 Men, who made a Mine to attack us; we advanced boldly against them, tho' we were only 150 strong; but as soon as they found us within Musquet-shot of them, they retreated, and we return'd the 6th to our Canoes.

Ginandego.

The 9th, a Council being call'd to consult what course we were to steer next, they were divided into 2 different Opinions; one Party being for going up before *Panama*, and the other for taking a contrary course lower to the West, there to Winter in some Island, till the Winter Season and Southern Winds should be past. This division arose to such a height, that 148 *Frenchmen* (besides the *English* under Captain *Townsley*) who were for going for *Panama*, separated from the rest, who put themselves under the Command of Captain *Groignet*.

They part Companies

The 19th, we set sail for *Panama*, under the Conduct of Captain *Townsley*, who on the 26th proposed the taking of the Town of *Villia*, 30 *Leagues* to Leeward of *Panama*. This being unanimously approved of, we steer'd our course thither; and the 29th came in sight of Cape *Blanco*. *June* the 2d, finding our selves between the Bay of *Boca del Toro* and the Point of *Barica*, we sail'd first South and by South E. and then putting out to Sea, bore North East to make the Isle of S. *John de Creblo*.

The 7th, we put in at the Isle of *Montosa*, 6 *Leagues* to the South of that of S. *John*; the last whereof we view'd all round with our Canoes. The 13th, we set sail with a West South-West Wind for *la Villia*; and the 15th, discovered the Point of *Puercos*, and bore off to Sea again. The 18th, we saw the 3 Rocks call'd the 3 *Brothers*, 3 *Leagues* to Leeward of the Bay of *la Villia*, whither we were bound. The 19th, we came in sight of the Point *Mala*, which is Leeward of that Bay, and the next Morning found our selves 6 *Leagues* from the shore. The 20th, we went aboard our Canoes, and rowing on bravely all Night, came the next Morning in sight of the place where we were to land, which we did the 22d, before break of Day; but having not time enough to get up to the Town before Day-light, we return'd aboard again, and landing again in the Evening, marched to the number of 160, all Night, with all imaginable expedition, yet could not reach the place before an Hour after Sun-rising. However, as they had not expected our coming, and most of them were at Mass, we entred without opposition, took 300 Prisoners, 15000 pieces of Eight, and in Merchandizes to the value of one Million and a half. This Booty we sent loaden upon Horses, under the Conduct of 80 Horsemen, to be embark'd in 2 Canoes lying in the River, and belonging to the *Spaniards*, whence they were to convoy them to the River's Mouth, where our Canoes lay at anchor. However, we sent the same Day (being the 24th) to the *Alcaide Major* or Chief Magistrate of the City, to know whether he would buy the Merchandizes, and ransom the Prisoners; both which being refused

The Isle of *Montosa*.

They take *la Villia* with a great Booty.

1686. refused, we set fire to the Town, and the 25th follow'd those we had sent before with the Booty, keeping along the Banks on one side as near as we could, whilst 600 *Spaniards* on the other side watch'd all the opportunity they could to recover their Booty. It happen'd that after we had march'd a *League*, we were forc'd to take a circumference round a Wood from the River side, in the mean while the two Canoes being forc'd by the Current at a good distance from that side of the River where we were, the *Spaniards* gave them a Volley of 50 Musquets from among the Thickets, where they lay conceal'd, by which four of our Men being kill'd and one wounded, the rest abandon'd the Canoes, which were carried by twelve *Indians*, who swam the River, to the *Spaniards* on the opposite side. Not long after we were come round the Wood, three of our Men, who had shelter'd themselves there, gave us an account of the Disaster that had befallen them.

The same is retaken by the Spaniards.

The 26th we went ashore near the Place, where our Men were surpriz'd the Day before: Here we found the two Canoes dash'd to pieces, and the Bodies of our dead Companions miserably mangled, and they had put the Head of one of our Men (whom they took Prisoner after he was wounded) upon a Pole, which so exasperated our People, that they instantly cut off the Heads of four of our Prisoners and put them likewise upon Poles.

The River La Villia. The River of *La Villia* is very large, but not deep, admitting only of 40 Tuns: About a *League* to the Windward of its Mouth is a Rock, which you see always covered with certain Sea Birds, as *Fregates*, *Manbies*, and *Goziers*. The embarking place belonging to the City of *Villia*, is three *Leagues* within the River, and the Town it self a Mile above it, having very regular Streets, well adorn'd Churches, and many other good Buildings. *Plata* the next Town of note near it, is seven *Leagues* distant.

The 27th a Person was sent aboard us to ransom the Prisoners, with whom we agreed for 10000 pieces of Eight, telling him withal, That in case they did not bring it by the 29th, we would cut off the Heads of all the Prisoners; the Messenger return'd the same Evening, and brought Word, that the same should be pay'd in two or three Days; and that in the mean while we should be furnish'd with 10 Oxen, 20 Sheep, and 2 packs of Meal a Day as long as we stay'd; which was perform'd accordingly.

They are paid the Ransom for the Prisoners.

July the 4th we set sail thence, and came to an anchor at the Isle of *Iguana*, to get some fresh Water, but finding none, resolv'd to land on the Continent, though the shore was guarded with no less than 4000 Men: Accordingly we set ashore 200 Men, whom the *Spaniards* made a line to oppose, but finding them resolute, retreated, and let them fill their Casks with Water without molestation.

The 7th we set sail for the *King's Isles*, and the 9th came to an anchor at *Point Puercos*, 14 *Leagues* to Leeward of the Isle *Iguana*. Here having provided our selves with more fresh Water, we set sail again the 10th, and 13th pass'd in sight of the Isle of *Galera*, which is to the Leeward of all the *King's Isles*, but the Currents that run all the Year round betwixt these Islands, made us soon go farther out at Sea. The 15th a strong North West Wind brought us nearer to the shore; and the 18th we discover'd *Cape Pin*, and kept all Day close under it, for fear of being discover'd by the Inhabitants of the circumjacent Isles.

Point Puercos.

The Isle of Galera.

The 21st we landed about Midnight in some of our Canoes, but were notwithstanding this discover'd by some of their Men that fish for Pearl Oysters here, that stick to the bottom of the Rocks, that surround these Isles. The 22d we descry'd from one of these Isles we had landed in, a Ship under sail, unto which we gave chace, and took her before Day-light. The Prisoners inform'd us, That those of *Panama* did not imagine us to be so near at hand; and that 36 *English* and *French* who were come from *Peru*, with an intention to pass by the way of the River *Boca del Chica* to the *North Sea*, had been met and defeated by the *Spaniards*, and that two *English* Parties of 40 Men each, intending to go from the *North* to the *South Sea*, had been all cut to pieces, except four, who were then Prisoners at *Panama*. They added, That in the River of *Boca del Chica* there lay a Vessel, expecting to have shortly 800 Pounds of Gold, dug in the Neighbouring Mines, in order to be transported to *Panama*.

The same Day we return'd aboard our Ships, which lay then at anchor at the biggest of the *King's Islands*.

The 30th we surpriz'd in one of these Isles a certain Person, whose Master being Commander in chief of the *Greek Ptrogues* mention'd before, was sent thither on purpose by the Governour of *Panama*, to draw us into a Snare, by giving us false intelligence. Pursuant to his Instructions, he told us several things of less moment, which we knew to be true, the better to gain credit among us, as that the Governour being inform'd that 30 more of our Men intended to pass from the *South* to the *North Sea*, had posted 100 Men near the River of *Boca del Chica*, to surprize them; but as his main Design was to draw us under the Forts of *Panama*, and knowing that we stood in need of good Vessels, he added, that there lay in the Harbour of *Panama* a small Frigat; and that every Day they sent out a Galley to observe our motions. 1686.

The Bucaniers are deceiv'd by a Spy.

According to this intelligence we sent four Canoes well mann'd, to seize the two beforemention'd Ships in the Harbour of *Panama*; and it being a bright Moonshiny Night, we thought we saw one of the Ships with her Sails loose, we made the best of our way towards her, but as good Fortune would have it, seeing a Vessel at the same time going out of the Port, we chased and took her without the least opposition: The Captain of the Vessel being strictly examin'd, frankly confess'd that a certain *Greek* was sent by the Governour to draw us into the Snare, and that the Sails we saw loose, was only a sham Ship built upon firm Land of sorry Planks, on purpose to draw us ashore, and by that means to destroy us.

August 1.

The Design discover'd, and the Author punish'd with Death.

This seasonable Discovery saved us from a most imminent Danger; and after we had given our *Greek* Intelligencer a Halter for his Reward, we went to possess our selves of the Isle of *Tavoga*, which had been repossess'd by the Inhabitants, since our leaving of the Coast of *Panama* the last time.

The 3d of *August* we sail'd thence, and took the Isle of *Ottoqua*, two *Leagues* North and South from it. The 4th as we were going to the Isle of *Sipilla*, we met our Galley with a Prize she had taken near the River of *Seppa*. The 5th we saw 5 sail between *Tavoga* and *Panama*, which prov'd our own Ships, which had taken another Prize coming from *Nata* with Provisions. The 6th we anchored at *Tavoga*, and the 7th sail'd for the *King's Islands*, where we came to an anchor the 9th, to stop the Leaks of our Ships, and in the mean while sent our Galley with 4 Canoes well mann'd for the River *Boca del Chica*, to burn the Town call'd *Terrible* upon that River, and to attack the before mention'd 100 *Spaniards* that lay in wait there for the 30 *Free-Booters*.

The 11th we came to an anchor at the Mouth of the River *Boca del Chica*, whence we were carried up with the Tide beyond the place we intended to land at, and on a sudden receiv'd a warm salute from the 100 *Spaniards*, placed in ambush there, but our Patarero's made them soon quit their Entrenchments, which we possess'd our selves of, after having kill'd them abundance of Men. The Prisoners confirm'd to us what we had been told before, concerning the Murther of the three beforemention'd Parties that were to cross the *Isthmus* by Land.

The Bucaniers force the Intrenchments on the River Boca del Chica.

The 12th we took a Pirogue with some Pounds of Gold Dust, and the 13th return'd down towards the Mouth of the River. Here we met one of our Barks, which not long before had surpriz'd another Pirogue with some Pounds of Gold. The same Evening we set sail towards the *King's Islands*, where we rejoin'd our Ships the 17th.

The 20th we went out again to cruize about *Tavoga*, and the 21st descry'd three sail, who no sooner perceiv'd us to make ready, but they got the Weather-Gage of us, and gave us some Guns: However they soon lost the Wind again for want of resolution, as not daring to pass between the Isle of *Tavagnilla* and a Rock, which we did; we engag'd them till Noon without any remarkable advantage, but then boarding the biggest, we set Fire, by the help of our Granadoes, to some loose Powder, which burning a good number of their Men, gave us an opportunity of making our selves Masters of the Ship, whilst one of our Barks at the same time boarded and took another of the Enemies. The third being a Galley, seeing her self pursued by our Galley and two *Pirogues*, ran ashore, and was stav'd to pieces. Their biggest Ship had 80 Men kill'd and wounded out of 120. and the second 70 out of 88. But of the Vessels that ran ashore not above 10 or 12 were saved; and there was not one Officer of all the Ships but what was either kill'd or sorely wounded.

A Sea Engagement with the Spaniards.

1686. Whilst we were employ'd in mending our Rigging, we saw 2 sail more coming towards us from *Panama*; and being inform'd by our Prisoners, that they were sent to their relief, we put up *Spanish* Colours with *English* and *French* ones under them. The *Spaniards* being deceived by this Stratagem, boldly approached their biggest Vessel we had taken, but were highly surpriz'd when they met with so hot a salute, as sent one of their Ships to the bottom, whilst the other was boarded and taken by one of our Pirogues; in this they found four packs of Cords of the same length; and it appearing by the Captain's Commission, that they were to give no quarter, except to the Chyrurgeons, we play'd them the same game they intended for us.

The 23d as we were sailing away to anchor at *Tavoga*, we took another Vessel as she was going to *Panama*, and found that in the whole Engagement we had but one Man kill'd, but no less than 20 wounded, (among whom was Captain *Townsley*) who dy'd for the most part of their Wounds, because the *Spaniards* had poison'd their Bullets.

The 24th we sent a Letter to the President of *Panama*, requiring him to deliver up five Prisoners they had taken out of the 3 Parties that were massacred in their passage over the *Isthmus*. As he refus'd to deliver them, and our Men were highly exasperated at the loss of their Companions, who dy'd daily of their Wounds, it was resolv'd to send 20 Heads of our *Spanish* Prisoners to the President, and to let him know, that unless he sent us the five Prisoners by the 28th, all the rest of the Prisoners in our Hands should pay with their Heads for it. This dreadful present had such an effect upon the haughty *Spaniard*, that the 27th we receiv'd a Letter from the Bishop of *Panama*, wherein he promised the releasement of our Prisoners, which was perform'd accordingly the 28th, then the Governour sent us our five Men, *viz.* four *English* and one *Frenchman*, with some Refreshments for the wounded Men, of which we sent him twelve in exchange for ours.

They send 20 Spaniards Heads to the President of *Panama*.

The same Day we came to an anchor again at *Tavoga* to take in Water. The 4th of *November* a Bark was sent from *Panama* to bring us 10000 pieces of Eight as a Ransom for the *Spanish* Prisoners, whom we sent back by the same Messenger. The 5th, we came to an anchor at *Ottoqua*; where on the 8th, our *Indian* Guides we had brought along with us from the *Isthmus* in our passage over Land, were either taken or murther'd by the *Spaniards*. The same Day, Captain *Townsley* died of his Wounds. The 10th, we cast anchor at the *King's Islands*, and afterwards cruized betwixt *Tavoga* and *Sipalia*, tho' the Winds were very boisterous and uncertain in this Channel all this while till the 28th, when the Weather growing more moderate, we discovered a Ship sail along the Coast of the Continent, which was endeavouring to get into the Port of *Panama*; but those in the Fort mistaking her for one of ours, she was forced to stand off, and was taken by 2 of our Pirogues. She came from *Nata*, and was loaden with Provisions and Sugar for *Panama*.

The Sea about the *King's Isles* produces abundance of Whales, who are at constant enmity with a certain Fish call'd *Espadon*: These have a Fish-bone like a Cymetar on their Heads, wherewith they wound the Whales, and make them take vast Leaps. Here are also (besides *Pear Oysters*) exceeding good and large Oysters, so that when they intend to eat them, they cut them into four pieces.

Whales and large Oysters.

The 24th, we came to an anchor again at the Isle of *Ottoqua*, where having gathered some *Maiz* and *Rice*, and put 19 Prisoners ashore, we set sail again the 29th, and came the 30th over against the Bay of *la Villa*. The 31st, at Midnight, we went ashore, but being led out of the way by our Guides, we were discover'd and charged by their Outguards, some of whom we dismounted, and made our Prisoners. They inform'd us, that being gone out of the way, we were still 3 Leagues distant from *la Villa*, and that they had been reinforced by 600 Men from *Panama*, we judged it the safest way to return aboard, which we could not do however till the 2d of *November*, being constantly charged in the Rear by the *Spaniards*. The same Evening we anchored betwixt the Isle of *Iguana* and the Continent, and went ashore the 3d to get some Provisions. We were forced to skirmish with a Body of *Spaniards*, who were not able to hinder our going to a neighbouring Farm; but finding little or no Provisions, we return'd aboard the 4th.

The 5th, we kept out to Sea, but could not double the Cape of *Puercos* before the 12th. The 13th, being still 13 Leagues to Leeward of the said Cape, we steer'd West North West to the Isle of *Tigres*, being 6 Leagues North and South from the Continent, between the River of S. *James* and the Cape. 1686.

The 16th, we came to S. *John's* Isle; and the 18th, brought our Vessels and Canoes ashore to clean them.

The 24th in the Morning, we went ashore 2 Leagues to the Leeward of the River *Pueblo Nuevo*. About 2 in the Afternoon we took a Horseman, who being examin'd, told us, that we were within half a League of the Burrough of S. *Lawrence*, where accordingly we arrived before Night, and made a great many Prisoners, with whom we return'd aboard the 26th. The Village of S. *Lawrence* stands upon a River one League and an half from the Sea shore, in an open Country, being inhabited both by *Spaniards* and *Indians*. Having agreed with our Prisoners for the Provisions to be given us for their Ransom, we sent the 27th the Curate of the Place to procure the same with all possible speed. We staid for his coming till the 2d of *December*, but no-body appearing, we set Fire to the Village. The *Spaniards* had no sooner discover'd the Flames, but they offered us a sum of Money a- a Ransom for the Prisoners; but as we wanted Provisions, we let them know, that unless they perform'd the Agreement made with the Prisoners, we would cut off their Heads: But instead thereof finding them busied on the 3d in raising an Entrenchment, we put the Prisoners ashore in an adjacent Island, without expecting their Ransom, and in the Evening set sail towards the Bay of *Boca del Toro*. The 5th, we doubled the Point of *Porica* 10 Leagues to Leeward of that Bay; whereabouts we were becalmed till the 10th, when a small Breeze brought us to the Mouth of the Bay, but was follow'd by so stupendious a Tempest, that had it not happen'd that our Sails and Rigging had been torn to pieces, we had been swallow'd up by the Waves.

They take S. *Lawrence*.

Are in danger of being cast away.

The furv of the Tempest being quite allay'd by Night, we came to an anchor in the Bottom of the Bay the 11th, where you may anchor within Pistol-shot from the shore. The Mouth of it is 4 or 5 Leagues from one Point to another, and 5 Leagues deep; but if you will enter without danger, you must avoid the East side. To the East and North East very near to the Continent, it contains 4 Isles, but being surrounded with Rocks, there is no good anchoring near them. Into this Bay disembogue themselves several very fine Rivers, inhabited by a sort of *Indians*, who maintain no Commerce or Correspondence with any other Nation, no more than those inhabiting betwixt the Cape *La Villa* and *Boca del Drago*: notwithstanding which the *Spaniards* carry their Caravans from *Lima* to *Panama*, through their Country, about 6 Leagues from the Sea side, but this they must not attempt without good Convoys. The 12th, we look'd out for some tall Trees to provide ourselves with new Canoes: and on the 25th, one of our Quarter-masters was stabb'd by a Cook in six places with a Knife, but was happily reliev'd and the Malefactor punish'd with death.

The Bay of *Boca del Toro*.

January the 1st, our Canoes being ready, we set [illegible] from hence to the Bay of *Caldaira*, where arriving [illegible] the 2d, we imbark'd 200 Men in our Canoes, to go [illegible] *Cagna*, a small Isle of difficult accels, a League North and South from the Continent, betwixt *Boca del Toro* and *Caldaira*.

§. IV. The Buccaneers leave the Bay of *Boca del Toro* to go to the *South Sea*. 1703. The Isle of *Cagna*.

As we put only forward in the Night-time, it was not till the 6th we got into the Bay, where our Guide put us ashore in the Night-time; but in so [illegible] a place, that we sunk to the middle in Mud. Not knowing where to turn our selves, we hi'ed up our Guide to one of the Trees, in hopes he might discover by the Moon-light, where to meet with some sound Land; but he no sooner found himself at liberty, but he skipped from Tree to Tree, and soon got out of our reach, leaving us to shift for our selves in that dismal condition.

They are led into the Mire.

By break of Day being return'd with much ado to our Canoes, and having cleaned our selves and our Arms, we found a River, which we entred, and going up two Leagues, landed near an Entrenchment, where we saw the Wrecks of two Ships once belonging to an *English* Bucanier, named *Bedshars*, but burnt by the *Spaniards* whilst they were careening here. We marched along the Road we found there for 2 Leag. when discovering by the Barking of the Dogs that we were near some Habitations, we on a sudden came to the Town of S. *Catalina*, and took all the Inhabitants Prisoners.

Take S. *Catalina*.

Being

1687. Being inform'd by them, that we had no farther than 3 Leagues to *Nicoya*, we mounted 60 Men to surprize that City; but these meeting with 2 Horse Centinels, they could not get thither before the Inhabitants got intelligence of their coming, and consequently had saved their best effects. Coming to the City, they met with some opposition in the Market-place; but after having sustain'd the first discharge, the *Spaniards* retreated and left the Place to their mercy.

Take Nicoya.

The 8th, having got some Money, and all the Governour's Plate and Furniture, we carried it back with our Prisoners to S. *Catalina*; which place we left the 9th, and the 10th got aboard our Ships, then at anchor in the Bay. We staid in expectation of the Ransom till the 12th, when we return'd to *Nicoya* to get some Provisions. Coming thither, we were inform'd that the Governour of *Costa Rica* had given no orders for any other Ransom but for the Prisoners. We staid till the 19th, when the said Ransom being paid, we sent back the Prisoners, and a Letter to the Governour, That if he did not send us a certain quantity of *Maiz* and Biscuit to ransom the Town, we would certainly burn it.

The 20th, we sail'd to one of the before-mentioned Isles in the Bay; and the 22d went ashore at *Caldaira*, and thence marched on to the little Town of *Lesparso*, which we found quite abandon'd. The 23d, we follow'd the first great Road that came in our sight; but scarce had marched a League, when we discover'd a Body of 200 *Spanish* Horse following our Rear; one among the rest frequently advancing at some distance from the Troop, in a menacing posture; which being perceived by some of our Men, five of them hid themselves among the long Grass till our main Body was pass'd, which being follow'd at some distance by the before-mention'd *Spaniard*, our Men took an opportunity to dismount and to seize him, before he could be relieved by his Companions. To be even with him for his Insolency, we gave him a taste of our usual Welcome, by putting him severely to the Rack immediately.

The Insolence of a Spaniard punish'd.

He declared we were on the High-way of *Carthagena*, which was 27 Leagues thence; that the Horse we saw in the Rear, were part of 400 sent out to observe our motion; and that in case of necessity, they were to retreat to an Entrenchment lately made 6 Leagues on this side of *Carthagena*. This being sufficient to stop our Journey, we return'd the 24th to our Canoes, by the way of *Lesparso*.

The 26th, we went on shore again, under the Conduct of our new Prisoner, when we had the pillaging of 2 large Farms, and were inform'd by some of the Prisoners, that a Body of *Free-booters* was lately landed at *Calebra*, which we supposing to be Captain *Groignet* with his Crew, we were soon convinced of the truth of it, when we found the said Captain with 3 Canoes in the same place where our Ships lay then at anchor. Captain *Groignet*'s design was to land in some uninhabited place, in order to pass by Land to the North Sea. But his Crew, consisting only of 60 Men, we dissuaded him from that Enterprize.

They are join'd by Capt. Groignet.

He told us that he had made several successful Descents in the Bay of *Napalla*; but that they had been in danger of being betray'd by 3 of their own Men, (corrupted by the *Spaniards*) who under pretence of conducting them to a rich Gold Mine 14 Leagues from the Sea side, and as many from *Tinsigal*, intended to betray them to the *Spaniards*, who were to have surpriz'd them by an Ambush laid in the way; but that they coming sooner to the Mine than was expected, they escaped the Snare, but got but little Booty, the *Spaniards* having carried away 450 Pounds Weight of Gold not an Hour before.

His Adventures.

They were in their return met by a Body of *Spaniards*, but they had not Courage enough to attack him; and so they return'd safe to their Canoes. He farther added, That some time after they got to *Pueblo Viejo*, by the way of a River that exonerates it self into the Bay of *Napalla*, which they took; but in their return were attack'd by 600 Men from an Entrenchment, which they took with the loss of 3 Men only on their side, tho' they made a great slaughter of the Enemy, and made a great number of Prisoners. That some Months after, 85 of his Men having taken a resolution to go to the Isles of *California*, he with the 60 remaining went in 3 Canoes towards *Panama*; where happening to meet some of ours, we gave him and his Crew room in our Ship.

The 30th, while we were busie in searching several Rivers that discharge themselves into the Bay of *Caldaira*, we 1687. went into a very fine and large one 10 Leagues, and all the way found her of the same depth and breadth. The *Spaniards* told us, that this River had its source out of a Mountain 50 Leag. thence; and that the River of S. *John* which falls into the North Sea at the *White Cape*, ow'd its rise to the same Mountains. Having refresh'd our selves till *February* the 6th in this River, we return'd aboard, and the 12th set sail in order to give them a third visit at *Nicoya*, where we arrived the 13th in the Evening; and the Ransom formerly demanded by the Town being once more refused us, we burnt and left it the 17th.

They burn the Town of Nicoya.

The Town of *Nicoya* was small but pleasantly seated upon a pretty River that waters one half of the Town, which is on all sides surrounded with Mountains. Their Churches (which at this as well as at other times we spared) are very stately, but the Houses meanly built. In our return, we were like to have been hemm'd in by the Fire which the *Spaniards* had set to the *Savannah's*, which is very dreadful in those Parts, where the long Grass and Woods dry'd by the excessive heat of the Sun, sometimes runs for several Leagues together, according to the course of the Wind, before it can be extinguish'd.

Burning of the Woods by the Spaniards.

The 23d, we proposed certain Conditions to the *English*, in order to attack *Quequilla*; which being not accepted by them, we parted Companies, 140 remaining with Captain *Groignet* in his Ships, and 162 embarking in our Frigat and long Boat.

The Bucaniers part Companies

The 24th, we set sail towards *Quequilla*, the first Sea-port Town on the South Coast, as you go thither from *Panama*. After various courses, we pass'd the Line on the 8th of *March*, leaving the 3 Isles, call'd the *Gallapa's*, situated North and South of the *White Cape*, and East and West from *Quequilla*, 12 Leagues to Leeward of us.

The Isles of Gallapa.

The Woods in these Isles swarm with *Tortoises*, *Lizzards*, and *Agouties*, and the Sea affords vast store of Fish: But on the other hand, they are destitute of Water. The 18th about Noon, we saw a Ship to the Windward of us, which proved to be the same Ship we had parted with in the Bay of *Caldaira*; and finding her the better Sailer, and consequently fearing she might get to *Quiaquilla* before us, we desir'd them to join with us in the same design.

The Bucaniers rejoin.

We were much puzzled to know what Latitude we were in, having not seen the Sun in ten Days; but the same appearing the 19th, we computed our selves to be 25 Leagues to Windward of *Quequilla*, and 60 Leag. from the shore. The 28th, finding our Provisions to decrease apace, we were reduced to one Meal in 48 Hours. The 29th, we computed our selves to be opposite to the Isle of *Plata*, 30 Leagues to Leeward of *Quequilla*. The 30th, we found our selves at 1 *deg.* North Lat.

The 6th of *April* in the Morning, we descry'd Land both to Windward and Leeward of us. The 8th, we were 4 or 5 Leagues off the Cape of *Pulao*, which is under the Equinoctial 30 Leagues to Leeward of the Isle of *Plata*; and the 11th, we were got to the height of that Isle 18 Leagues out at Sea. The 12th, we got sight of the Point of S. *Helena*, which is 15 Leagues to Leeward of *Quequilla*; and forms the beginning of the Bay that has given name to the Town. The next Morning, we descry'd a Ship, which proved to be a Prize laden with Wine and Corn, taken by one Captain *Davis*, who had put 8 Men aboard her, but was now separated from her.

They meet with another English Ship.

The Men told us, that they had made several descents at *Sagoa*, *Arica*, and *Pisca*; near the last of which they had routed 800 *Spaniards*; and having got near 5000 pieces of Eight a Man, they resolved to return to the *North Seas*, but that in the mean while many of their Men having lost all their Substance at gaming, and happening to meet with Captain *Wilmot*, another *Englishman*, in the Road of the Isles of *Don Fernandez*, (near the brink of the Streights of *Magellan*) who was come thither with the same design of going to the *North Sea*. Those of Captain *Davis*'s Crew who had lost their Money, altered their resolutions which made those that had made their Fortune by gaming, go over to Captain *Wilmot*'s Ship; as those of his Crew who were without Riches did aboard Captain *Davis*'s Ship; who thereupon, with 60 *English* and 20 *Frenchmen*, came back into the *South Sea*. As this Prize was well provided with Victuals, and they were uncertain when they might rejoin Captain *Davis*, we were easily induced to accept of their Company.

The

1687.

The 14th, we steer'd to the Bay, which is 30 Leagues in breadth; and the 15th discovered the *White Cape*, the Windward Point of this Bay. About 10 in the Morning, we embark'd 260 Men in our Canoes, and at Sunset came up with the Isle of S. *Clara*, which is only a Rock standing East and West 6 Leagues from the Continent.

They enter the Bay of *Queaquilla*.

The 16th, we were five Leagues from the shore, betwixt S. *Clara* and the Isle of *La Puna*. This Island may be seen at a great distance at Sea, standing 2 Leagues East and West from the Continent, opposite to the entrance of the River *Queaquilla*; and is 20 Leagues in circumference. It has a large Town belonging to it, where formerly were kept the King of *Spain*'s Magazines, because Ships of great burthen cannot enter the River betwixt this Isle and the Continent.

The Isle of *Puna*.

The 17th, we concealed our selves in a covered way of this Isle; and being informed of the true condition of the Town of *Queaquilla*, we disposed our Forces under the Command of Captain *Picard*, *Groignet*, and *Hewit*. In the Evening, we left our covert place in hopes to enter the River of *Queaquilla* before break of Day; but with much ado we could gain the Point of the Isle, directly opposite to the River, which we could not enter till the 18th at Night, by one of the two Mouths, and were carried up by the swiftness of the Current at least 4 Leagues in 2 Hours. The largest part of this River being half a League over, we concealed our selves under 2 Isles the 19th all Day long, and in the Evening advanced briskly again by the advantage of the Current, without the help of our Oars. Our Guide would fain have landed us beyond the Town, where it is weakest; but the Tide turning too soon against us, we were forced to go ashore within Cannon shot on this side of it, 2 Hours before break of Day, from whence we discovered many Lights, which they keep here all Night in their Houses. After our landing, we were forced to cut our way through shrubby Woods, which we had no sooner pass'd, but we heard the discharging of a small Pattereroe, which being readily answered by a whole discharge of Cannon, we did not question our being discovered; tho' we were not able to guess at the reason of it, being it seems occasion'd by the striking of Fire of one of our Men left to guard the Canoes, contrary to our express orders.

They enter the River *Queaquilla*.

Land near the City of that Name.

Notwithstanding this discovery, we march'd the 20th with break of Day, with Drums beating, and Colours flying; but at our approach to the Town, found 700 well arm'd Men posted behind a Wall 4 Foot and an half high, enclosed with a Ditch towards the River side. They kill'd us some Men as we were advancing against them; so that flush'd with this success, they would needs sally out upon us with Sword in Hand; but meeting with a hot reception, they soon retreated, and broke down the Bridges behind them: But our Granadiers following them close, soon after forced them from their Retrenchments into their Houses, and thence to the Market-place. Here they defended themselves very briskly for an Hour, from a Redoubt they had cast up; but being likewise chased from thence they retreated to another, and from this to the third, the largest and strongest of all the rest. From this Fort they fired most furiously upon us: and when we were got to the Foot of the Pallisado's, they sally'd upon us not without some success, but were at last forced to retreat into the Fort again, not without a considerable loss. At last finding our Ammunition to fail after 11 Hours Fighting, we resolved to carry the Fort, or to dye in the Attempt: And so redoubling our Force, carry'd it with Sword in Hand, tho' not without the loss of 9 Men killed and 12 wounded, which was inconsiderable however in comparison of the loss of the Enemy, which appear'd by the Carcases found in the Streets and Forts to amount to above 900, besides 700 of both Sexes taken Prisoners, and among them the Governour and his Family, he being sorely wounded, as well as all the Men of note, who fought bravely upon this occasion.

Attack and take it.

The City of *Queaquilla* is seated round a little Mountain, the Houses being only of Boards, and built upon Wooden Piles, to keep out the Water during the rainy Season, which begins with *January* and ends not till *April*. The Churches and Convents are goodly Structures. The largest Fort we had occasion to mention before, is fortify'd only on that side where it fronts the River, and was then furnish'd with 7 pieces of Cannon: The other two stand upon the descent of the Hill, where it [illegible]wards the River; they were surrounded with a [illegible] Wall, but defended only by *Pateroo's*. The great Fort is a Communication by a covert way, on each side whereof are 2 rows of Palisado's filled with Earth.

A Description of the City of *Queaquilla*.

1687.

Their chief Commodity here, is Chocolate; besides which we found also several sorts of other valuable Merchandizes, great store of Pearls and Precious Stones, a vast quantity of Silver Plate, and 70000 pieces of Eight; tho' they had carried away above 3 Millions whilst we were busied in taking the Forts. We sent 4 of our Canoes in pursuit of the Shallops that had these Riches aboard, but too late, for they got only 22000 pieces of Eight more, and a Vermillion Eagle gilt (belonging to some Church) weighing 68 Pounds, having 2 great Rocks of Emeralds instead of Eyes. The Governour's House was so sumptuously furnish'd, that nothing in *Europe* could exceed it. We found 14 Barks, and the same Galleys we were engaged with near *Pueblo Nuevo*, in this Port, besides 2 of the King's Ships upon the Stocks, almost finish'd. We agreed with the Governour for the Ransom of him, his Family, the City, Fort, Cannon, and Ships, for a Million of pieces of Eight.

They get a vast Booty.

The Women of this place were very handsom, and the Fathers here live in great familiarity with them. They had taken care to represent us to them as Man-eaters, and who had nothing of Humanity belonging to us.

The Women and Fathers.

A certain Waiting-Gentlewoman belonging to the Governour's Family being fallen into my Hands, begg'd with Tears in her Eyes, *not to Eat her*. Whereupon being ask'd, who had told her we used to devour People? She answered, the *Fathers*; who had also assured her that we were more like Monkeys than Men. But after they had once been undeceived from this opinion, they became sufficiently kind to many of our Men. The 21st, some of our Men set Fire to the Town by accident, which burnt one third part of it before it could be extinguish'd. Being sorely afraid that the *Spaniards* would refuse to pay the promised Ransom; under this pretence we sent them a Letter the 22d, intimating, That some of their own People must needs have fired the Town, in order to defraud us of the Merchandizes and Provisions, which they knew we stood in so much need of, and that in case they did not make good to us the Damage we had sustained by the Fire, we would cut off the Heads of 50 of the Prisoners: Whereupon they promised us entire satisfaction.

May the 2d, Captain *Groignet* dy'd of the Wounds he had receiv'd the Day we took the Town. The 4th, we sent our Galley to the Isle of *Plata*, to look for Captain *Davis*. The time appointed for the payment of the Ransom being expir'd, and we having sufficient reason to suspect that this delay proceeded from some treacherous design of the *Spaniards*, (which was afterwards confirm'd by an intercepted Letter from the *Tenient* of *Queaquilla* to the Viceroy of *Lima*) we were oblig'd to use the utmost severity to our Prisoners, and to make them cast Dice for their Lives; and the lot falling upon four, their Heads were cut off immediately and sent to *Queaquilla*.

Capt. *Groignet* dies.

The 14th, our Galley return'd from the Isle of *Plata*, being chased by 2 Ships about the Point of S. *Helena*, which we supposing to be Captain *Davis*, we sent a Canoe to get farther intelligence. She return'd the 22d, having met with Captain *Davis*'s Frigat and 4 Prizes he had taken the 16th; the last they brought along with them, and desired a Main-mast for Capt. *Davis*'s Ship, his having been much damnify'd in an Engagement with the Prize, which was a strong and rich Ship, call'd the *Catalina*.

During our stay at the Isle of *La Puna*, for above 30 Days, in expectation of the promised Ransom, we lived both very pleasantly and in great plenty: For, besides the daily allowance of Provisions brought thither from *Queaquilla* by the *Spaniards*, we had good store of Refreshments of our own; and the Town Musicians (our Prisoners) entertain'd our Ears with Lutes, Theorbs, Gittars, Harps, and other Instruments. Our Women Prisoners also added not a little to our satisfaction; for being once undeceived in the opinion the *Fathers* had infused into them concerning us, they were not sparing even of their last Favours, without the least violence. Among the rest, we had a young Gentlewoman, the Widow of the Treasurer of the City in our Hands; she having taken a liking to me, proposed her Husband's Place and a considerable Estate in case I would marry her.

§. VI. The other Transactions of the *Free-booters* in the *South Sea*, 1687.

They live plenteously at *la Puna*.

A Love Adventure of the Author.

I must confess, the temptations of a young pretty Woman, a good Place, and a plentiful Fortune, were no small inducements to a young Man in my circumstances,

1687. stances; but all these Advantages, tho' attended with the Tears of this young Woman, were not able to counterbalance the just fear I had of the revengful temper of the *Spaniards*, and therefore resolved to prefer the continuance of my present toilsom Life, before the torments of the perpetual suspicion I should have lived in, of the Treachery of the Inhabitants. The 23d, we sent a *Father* to *Queaquilla* to procure the before-mention'd Ransom; and soon after a Bark brought us 24 Sacks of Meal, and about 20000 pieces of Eight. The 25th, word was sent us, That the Tenient of *Queaquilla* would not pay any more than 220000 pieces of Eight for the remaining Ransom. Whereupon it was resolved to accept rather of the same, than to run any farther hazard, and to shed more innocent Blood. Accordingly it was order'd, that 50 of the chiefest of our Prisoners should be sent aboard as a security for the rest of the Money, and the others of less quality to be deliver'd as soon as the 22000 pieces of Eight should be paid to those we left with 2 Canoes at *Puna*, whilst we set sail to the Point of S. *Helena*, where our Canoes join'd us the 27th, and brought the 220000 pieces of Eight. The 27th, Capt. *Davis*'s Prize came to give us notice, that 2 *Spanish Armadilla*'s were cruising before the Bay to expect our coming out, and that Capt. *Davis* lay by to stay for us.

They leave Queaquilla.

We discover'd the Enemy by break of Day betwixt the Isle of S. *Clara* and the Point of S. *Helena*; and Captain *Davis* having join'd us soon after, we put 80 Men aboard him, because he wanted Men to manage his Guns. This done, we reserv'd only 2 Ships and a long Bark for the present occasion, and sent our Prizes with a guard of some Pirogues upon the Flats, where the *Spaniards* could not come at them. We endeavoured to get the Weather-gage of them, but could not, the Wind blowing always at this Season from the Sea. About Noon, the *Spaniards* coming upon us, we fought till Night, but without any considerable damage on either side: We cast anchor at Night, and prepared for a second Engagement the next Morning. We try'd again to get to the Windward of the Enemy, but could advance but little for want of our Pirogues to tow us. About 2 a Clock in the Afternoon, the two *Armadilla*'s bore upon us, and ply'd us with their Cannon till dark Night. We were much shatter'd, but had only one Man wounded.

A Sea Engagement betwixt the Spaniards and the Bucaniers.

The 29th, we remained at anchor till 3 in the Afternoon, when the Enemy attacking the biggest of our Prizes that lay only on the side of the Shallows, we prepared to relieve her. We came to so close an Engagement, that both our Cannon and small Arms came into play on both sides; yet we lost but one Man. The 30th, we spent in endeavouring to get the Weather-gage of one another; and the 31st, the Enemy having intercepted one of our Prizes before she could join us, we fired upon one another most furiously, from 2 in the Afternoon till an Hour within Night; during which they spoil'd most of our Tackle and Sails; but we had not so much as one Man kill'd or wounded.

June the 1st, about 10 in the Morning, the Enemy came close upon us, and giving us a Volley of their small Arms, with a discharge of their Cannon charg'd with Cartouches, we thought they would have boarded us; but we got clear of them, and gave a furious Volley in our turn, which made them stand off to refit. After an Hours time, they renew'd the Fight, which continued till Night. We had only 3 Men wounded that Day. The 2d, by break of Day, the Enemy being still Windward of us, ply'd us most vigorously with their Cannon and small Arms, but we gave them so hot a reception with our Fusees, that they were glad to bear away, having wounded us only 2 Men, but much endamag'd our Rigging. We did all we could to make ready to renew the Engagement the 3d of *June*; but in the Morning, to our great surprize, found they were grown weary of the sport; so we steered for, and anchored at the Isle of *Plata* the same Evening.

The Spaniards fleer away.

We weighed again the 6th, keeping along a level and fertile Coast inhabited by the *Spaniards* as far as *Barbacoa*. Being come to an anchor betwixt Cape *Pastoa* and that of S. *Francisco*, we put our Prisoners ashore the 10th, and the 11th made a dividend of the Gold, Precious Stones, and Pearls, by way of Auction, which were sold at a prodigious rate for Silver; which being of no such ease carriage, was scarce valu'd among us at that time, which was the reason that we left a vast quantity of Plate and Coined Silver behind us at *Queaquilla*, or at least would not take the trouble to look after it; for in this part of the Country they possess such a prodigious quantity of Silver, that they have all their Utensils, made of Steel, Copper, and Iron in *Europe*, of this Metal. 1687.

Prodigious quantity of Silver.

Besides the great quantity of Gold and Silver the Country of *Peru* affords, the Ground is exceeding fertile, and produces 3 Crops of Corn and Wine every Year. They have no more than 2 Seasons, the Summer of 9 Months, and the Winter of 3, when it freezes very hard on the Mountains, tho' the same is scarce to be perceiv'd in the Plains. They are well stock'd with Sheep (besides other Cattel) weighing 250 and 300 Pounds: These they use also for Carriage; for they will kneel down and take up 2 Jars of 20 Quarts each, and when they are to be taken off, will do the same to be discharged of their burthen.

A short account of Peru.

Large Sheep used for Carriage.

The 21st, Capt. *Davis* left us in order to return to the *North Sea* by the Streights of *Magellan*; but as our Vessels were very old, and we had not room to stow a sufficient quantity of Water, we resolved to go to the Eastern Coast, in order to go over Land to the *North Sea*. Accordingly, we set sail 13th, and the 15th anchored 20 Leagues to Windward of Point *Mangla*; whereabouts having surprized an Outguard of 15 *Spaniards*, they inform'd us, That they were set to guard this River call'd the *Elmeralda*, from the many great pieces of *Emeralds* found thereabouts: That in 8 Hours we might with our Canoes go from the Mouth of the River to *Quito*, a well peopled City, and formerly the Capital of a Kingdom of the same Name; but that to go thither by Land, we must take a compass of 80 Leagues through a Country well stor'd with Inhabitants.

Capt. Davis sails for the North Sea.

The 17th, we set sail for the Isle of *Gallo*, which stands 100 Leagues to Leeward of *Queaquilla*, at the Mouth of the Bay of *Barbacoa*, where we came to anchor the 20th.

The Isles of Gallo and of Cocos.

The 25th, we sail'd for the Isle of *Coco's*, which stands North and South of *Realegno* 100 Leagues distant. The 30th, we discover'd the Isle of *Malpalla*, which stands 40 Leagues South off that of S. *John's*, and from thence sail'd to the Bay *Mapalla*, the Wind being contrary to go to the Isle of *Cocoes*.

The 13th of *July*, we found our selves 30 Leagues out at Sea from *Realegno*. The 16th, we discover'd the Mountains; and the 17th sent some Canoes to see what place we were near. They return'd in the Evening, and brought us word it was S. *Michael's* Bay, and not that of *Mapalla*, (as we supposed before) which stands 40 Leagues to Windward from the first. The 23d, we anchored at the Isle of *Tygres*, the nearest Isle to the Mouth of it; and the 24th, in the Morning, descry'd 3 sail of Ships that doubled the Point of *Harina* to Windward of that Bay, and 10 Leagues to Leeward of *Realegno*. We bore up to these Vessels, which proved a Galley and 2 Pirogues, and engaged them till 2 in the Afternoon, when they left us, after having wounded us a few Men, and done some damage to our Rigging. The 25th, being rejoin'd by our Canoes (upon a Signal given) that had laid concealed under the shore, we anchored the 26th at an Isle in the Bay; and the 28th took a *Spanish* Captain in a Canoe, who being put to the Rack, declar'd, that in the same Bay 30 Men were gone ashore not long before, who had fought no less that 600 *Spaniards*, and kill'd *Don Albarada*, their Leader, one of the most valiant Captains in those Parts.

A Sea Engagement with three Spanish Vessels.

The Bay of *Mapalla* is a glorious Bay, full of large Islands, and formerly well inhabited. There is good anchorage here, but no shelter against the blasts of Winds, which often break your Cables. The 6th, one of our Men as he was hunting upon the Isle where we lay at anchor, met with 2 *Frenchmen*, who told them, that they were 2 of the 30 that had engaged the before said 600 *Spaniards*, who had separated themselves from the 85 that left Capt. *Groignet* in order to go to *California*. As they had hid themselves after the beforemention'd Engagement in this Isle, so they call'd the other 28 their Companions, who having join'd Company with us, we sail'd from the Coast of *Acapulco* to look after the 55 that had separated from them, and must needs be reduced to a miserable Condition. We steer'd with an East Wind till we came to the height of *Sansonnat*.

The Bay of Mapalla.

The 27th, we discovered Land to Leeward of the Bay of *Tecoantepequa*, into which we went with our Canoes, ordering our Ships to rendezvous at the Port of *Vaulco*. The 29th, we found an embarking place, but so strongly fortify'd and guarded, that we thought it best to sail 2 Leagues more to Leeward. Here finding

They land in the Bay of Tecoantepequa.

1687. ing 320 Men posted upon a rising Ground, we detach'd 50 of our number, who soon put them to flight, and took 2 Prisoners. They told us, that the Road we were upon tended to the City of *Tecoantepequa* 4 Leagues thence. Pursuant to this intelligence, we continued our march the next Day, when about 2 in the Afternoon we had a full view of the place from an Eminency 2 Miles from thence. As the City is surrounded with 8 Suburbs, and was defended by no less than 3000 Men, whereas our whole number consisted only of 180. We were put to a great nonplus, whether to go forward or not; but as the extream want of Provisions had reduced us to that pitch, that we must either starve or purchase them with the hazard of our Lives, we soon resolved to confront our Enemies. After half an Hour's march, we found our selves at the brink of a rapid River, which divides the body of the City from 4 Suburbs, we found a body of *Spaniards* entrenched on the opposite Bank; notwithstanding which, we pass'd it, and made our selves masters of the Entrenchment after an Hour's Engagement, tho' we waded up to the middle through the Water. Then entring the Town, we penetrated with such fury to the Market-place, that the Enemies not being able to sustain the Assault, quitted the same by 2 in the Afternoon, and retreated to a fortified Abby which commanded the Town; but we sent a Detachment of 80 of our best Men, who soon dislodged them, and thereby made us absolute Masters of the whole City. We were extreamly surpriz'd at the spaciousness of the Town, the regularity of its Streets, the beauty of its Churches, and the strength of the beforemention'd Abby of S. *Francis*.

Come to the City of *Tecoantepequa*.

They attack and take it.

The 31st, we requir'd a Ransom for the City, for the payment of which we staid in one of the Suburbs (for fear of a surprize) till the 3d of *September*, when receiving no answer, we return'd towards our Canoes, without reaping any advantage by this Enterprize, and rejoin'd our Ships the 9th, in the Port of *Fanlco*. The 15th, we landed again, and marching up 12 Leag. into the Country, plundered several Villages, and in one of them took the Governour of *Merida* with his Family, who having promised us a good quantity of Provisions for his Ransom, we carry'd him aboard the 25th. We staid for the said Ransom till the 4th of *November*; for which we were not very pressing, because we found great plenty of Tortoises here, and good store of Victuals in the adjacent Farms; and we were in no danger from the Enemy. From *Sansonnat* to *Acapulco* is no landing place, except in the Bays: That call'd the *Salt-pits* is but small, 20 Leagues to Windward of that of *Tecoantepequa*. About 20 Leagues to Leeward of the Bay of *Tecoantepequa* is the Port of *Vasulco*, so small as not to be able to contain above 12 Ships, and is extreamly narrow at the entrance; 4 Leagues lower is another Habour, but not very safe; and a little farther is the Isle call'd the *Sacrifice*; 8 Leagues lower there are three other small Ports, the best whereof call'd the *Angels* is 60 Leagues from *Acapulco*, and betwixt these 2 is no Harbour. The Country betwixt the Bay of *Salt-pits* and *Acapulco* is the best inhabited of any in the *South Sea*, having many rich Towns and more Gold Mines than *Peru*, but the Metal is not altogether so fine. Those of *Tinsigal* alone are preferr'd before the Mines of *Potosi*, whence this Western Coast is call'd *Costa Rica* by the *Spaniards*, tho' in the Geographical Maps this name is given only to a small part of this spacious Tract.

They leave *Tecoantepequa*.

The Port of *Vasulco*.

The 7th, we made a Descent, and attack'd a small Town call'd *Mucmelma*, seated 8 Leagues to Windward of *Vasulco*, and 6 up the Country. Within 2 Leagues on this side of the place the *Spaniards* had made an Entrenchment on a Rock upon the Bank of a River; but at our approach, they quitted the same without much resistance, and left the Town also to our mercy, where we provided our selves with good Victuals. The 16th, we return'd aboard; but by the 20th, being not able to hear any thing of the 55 Men we look'd for on this Coast, we steer'd our course for the Bay of *Mapalla*, where we were to consult concerning the place by which we were to repass to the *North Sea*.

They take the Town of *Mucmelma*.

The 1st of *December*, we were separated by a Storm, which put us to great extremity for want of Water, all our Casks being run out; we endeavoured several times to land, but in vain, by reason of the boisterous Waves; and on the 10th, got some, not without great danger, 15 Leag. to Leeward of *Sansonnat*. The 12th, we took a Village, and some Refreshments in it, by the help whereof we arrived at last safely the 15th in the Bay of *Mapalla*, where we found the rest of our Vessels at anchor near one of the Isles within that Bay. It is observable, that all along this Coast we had favourable Land Winds in the Night-time, for 10 Leagues out at Sea; and these blew so briskly at certain seasons, that the Mariners are obliged to lower their sails. The 17th, it was debated what Passage we should pitch upon to go by Land to the *North Sea*, according to the Prisoners relations; but as we were not fully convinced of their sincerity, we sent the 18th 70 Men ashore to take some others, to see whether these would agree in their depositions with the rest. We march'd till the next Day at Noon, without seeing any body, which made most of our Men stay behind, only 18 of us follow'd the Road we had taken. After an Hour's march we took 3 Horsemen, by whom being inform'd that not above a Mile thence there was a small place call'd *Chiloteca*, inhabited by 400 white Men, besides *Mulatto's*, *Negroes*, and *Indians*. As we had all the reason to imagine that we were not discover'd as yet, we ventured upon the boldest or rather rashest Action that ever was undertaken; for, without sending for our Companions, we attack'd and surpriz'd (tho' only 18 in number) the Town, took the chief Magistrate and other chief Persons (about 50 in all) Prisoners, and frighten'd the rest to that degree, that they got on Horseback, and left the Town to our disposal; and well it was they did, we being scarce sufficient to guard the Prisoners we had taken already; which we did in a Church, where we entrench'd our selves. Soon after, those that were fled being recover'd of their first fright, entred the Town again; and approaching to the Church, charged some of our People very briskly. Our Prisoners within seeing us enter with some precipitation, and imagining we were routed, run to the Arms we had laid up there and wounded one of our Men; but we soon made them understand the truth of the matter, for we ceased not to fire at them till they were all kill'd except 4 Men and Women.

1687.

Debate about their return to the *North Sea*.

Eighteen *Bucaniers* take the Town of *Chiloteca*.

Being attack'd by the *Spaniards*, they kill the Prisoners.

The 20th, we rejoin'd our Companions that had staid behind; and the 22d return'd aboard our Ships, where the Prisoners being examin'd concerning our intended Passage, they told us, that we must expect to open our way through 6000 Men, posted in the Province of *Segovia* to obstruct our passage; besides many other Difficulties they proposed to us, which put many of our Men out of conceit with this Enterprize. But as there were but 2 ways left us, either to perish for want of Subsistance, or to open our passage by our Swords, we chose the last; and to cut off all pretences of returning aboard, we run our Vessels ashore, except the Pirogues, by the means whereof we must be transporttd from the Island to the Continent, where we arrived the 1st Day of *January*. Here meeting with 68 Horses, some of our Men (sent hither before hand) had got together, every one pack'd up his Baggage, and those that had the most Silver, beyond what they were able to manage, gave part of it to their Companions, who had none, under condition that they should have one half for their carriage; tho' my charge which cost me 30000 pieces of Eight, but consisted only in Gold, Pearls and precious Stones, was not very burthensom to me; yet having certain intelligence, that a certain Gang coming to us who had lost all their Money at play, had laid a plot to destroy such as had the most Riches, I judged it absolutely requisite for my safety, to divide what I had among several of my Companions, thereby to avoid the danger that threaten'd my Life, tho' with the loss of part of what I had gathered with so much toil and hardship.

The Port of *Vasulco*.

1688. Preparations for their Journey cross the Continent.

The 2d Day of *January* we began our march, and lay that Night near the Sea side, being 260 in number. The next Day we refresh'd our selves at a Farm House. The 4th. we came up to the Mountains, from whence being first discover'd by the *Spaniards*, they follow'd us afterwards either in our Flanks or Rear. The 5th, we lay at a great Farm; and the 6th, baited at a Beef Farm. The 7th, we met with the first Ambuscade, whom we soon made to retire, but they burnt all the Provisions and Grass in the Roads through which we were to pass, which together with the Trees they had cut down, much retarded our Journey, the chief thing they aimed at, that their Men might finish a Retrenchment, of which we shall say more anon. The 8th, as we pass'd by a fine Plantation, we took a Prisoner, who told us, that the *Spaniards* were drawing all their Forces together to oppose us; coming to a great Burrough, we saw 300 Men, who for ever after never left us, but so as to keep always on the other side of the Woods of Pine Trees. We encamp'd that Night upon a rising Ground

§. VI. They begin their Journey another way cross the Continent.

They anchor in the Bay of *Mapalla*.

1688. Ground (according to our constant custom) near the said Burrough. The 9th, having reinforced our advanced Guard, we ordered them always to fire at the entrance of any Woods, in order to discover the Ambuscades; which they neglecting but once, we had 2 Men kill'd before we were aware of the Enemy. The 10th, we beat up the Ambuscade, forcing them to leave their Horses behind them; we lay at another Burrough that Night.

They come to Segovia. The 11th, as we came near the Town of *Segovia*, we forced them out of another Ambuscade; which done, we entred the Town without opposition, but found no Provisions. However, we got a Prisoner, who conducted us to the River, from whence we were to go to the *North Sea*. The Town of *Segovia* is seated in a Bottom, being surrounded with Mountains of a great height, which makes the access to it very difficult, about 40 Leagues from the *South Sea*. The Churches are not very beautiful here, but the Houses in the Market-place exceeding magnificent. We found it very cold on and near the Mountains, but very hot in the Valleys, after 10 in the Forenoon.

Segovia described.

The 12th, leaving the Town, we pass'd over the Mountains with incredible difficulty, the Ways being barricaded up by the *Spaniards*. The 13th, as we were marching along an Eminency, we saw on the descent of a Mountain (from which we were divided only by a little Valley) 12 or 15 Horses, which made us send 40 Men to see how matters stood on that side, because we took them for Oxen: But we were not a little surprized, when at their return they told us, these Beefs were really saddled Horses, and that near the same place they had observed on the side of the Mountain 3 Entrenchments within Pistol-shot of one another, and of so difficult an access, that not above 1 or 2 Men could approach them abrest at a time. This unexpected News was no small allay to the hopes we had conceived of satisfying our hungry Stomachs with good Beef; but the worst of all was, that we saw no means how to go either forward or backward, having the Enemy both in our Front and Rear, and not being able to subsist long in this place without Provisions.

A most advantageous Entrenchment.

The Author's Advice.

Divers Counsels were proposed, but none but what appear'd very difficult in the execution. At last I proposed that we must go round about cross the Woods and Precipices, and surprize the Enemy in the Rear, whereabouts they were (as I supposed) not covered by their Entrenchments. Whilst we were deliberating upon the matter, some 4 Men, who had been sent abroad to take a view of the adjacent Mountains, brought word, that they saw a Road upon the highest of them, which they took to be the continuation of the Passage shut up by the *Spaniards*. This intelligence having determin'd the matter in favour of the advice I had given before, we order'd 80 Men to be left in our Camp with the Baggage, to amuse the *Spaniards* both in our Front and Rear. At the same time we set forward to the number of 200, and spent the whole Night to climb over the Precipices and Rocks cover'd with Woods, tho' in a streight Line we did not advance half a quarter of a League. By break of Day being got over the most dangerous passage of the Mountain, above the Entrenchment, we saw some *Spaniards* that went the Rounds, but thanks to the Fogs that usually hold here till 10 a Clock in the Morning, they did not perceive us: So after having taken breath for half an Hour, we follow'd the Road we had seen before, which leading us from above to their Camp, we met with 2 Centinels, on whom being forced to fire, this gave the alarm to the *Spaniards* in the first Entrenchment. These, tho' 500 in number, seeing us on that side where they so little expected us, quitted the same as soon as we came within reach of them. Those in the 2 other Retrenchments defended themselves for an Hour, but theirs being commanded by that we were Masters of, and we attacking them with extraordinary Vigour from above, they betook themselves to their Heels; but being stopt in their flight by the same Trees they had cut down on purpose to stop our passage, many of them were kill'd, and not a few taken Prisoners.

Is pursued.

And succeeds.

Immediately after this Victory, we sent 60 Men on Horseback, to give notice thereof to our People left with the Baggage. These were in great danger of having been surprized by the 300 Men that follow'd our Rear, who imagining that we were gone to attack the *Spanish* Entrenchments in Front, had sent a haughty Message to them, with a Summons to surrender themselves Prisoners of War: But they having found means to detain the Messenger till they saw us advance at a distance, we advanced with our join'd Forces against them, and cut a great many to pieces before they could get on Horseback. Both these Actions cost us not above 2 Men killed and 4 wounded, tho' we made a great slaughter of the Enemy, who lost their General among the rest upon this occasion.

They route the Spaniards that follow'd their Rear.

1688

Some of the Prisoners we had taken, told us, that about 6 Leagues thence, upon the same Road, there was another Retrenchment, which made us cut the Hams of 900 Horses, for fear the fugitive *Spaniards* should get thither before us. The 15th, we came to the said Entrenchment, which being as yet unfinish'd, we pass'd without opposition; and the 17th, arrived at the so much desir'd River, where we immediately fell to work to cut Timber to build Floats, by the means of which we were to convey our selves to the *North Sea*, where this River, which has its rise in the Mountains of *Segovia*, exonerates it self at the Cape of *Gracia a Dios*. The Floats (call'd *Piparies*) are composed of 4 or 5 Trunks of a Tree call'd *Mahot*, being a light floating Wood, tied together with a sort of Lines growing in the Woods, and clinging to the Tree like *Ivy*. Upon one of these they put 2 or 3 Men, who for the most part must stand upright, because sometimes the Floats go 2 or 3 Feet under Water. With such a Float as this we ventured upon a River, which besides the swiftness of its Current, has above 100 Cataracts or Waterfals, of such a stupendious height, that it makes a Man tremble at the very sight of them. Notwithstanding which, we were forced to go on, having no other Instrument to guide us but long Poles, to keep us from being forced with too much violence against the Rocks, which notwithstanding all our precaution, happen'd too frequently, and put us in no small danger, tho' we did all we could to prevent it, by keeping at a considerable distance from one another, having found by experience, that in keeping near each other, we often fell foul upon one another.

They come to the River which brings them to the North Sea.

Where they build Floats.

Tho' there is no want of good Game hereabouts, and that we had brought good store of salted Horse-flesh along with us, yet as our Arms and Powder were spoil'd by the wet, as well as our Meat, we were forced to be contented with the Bananiers we could find upon the Banks of this River, planted by the *Albavins* an *Indian* Nation inhabiting hereabouts. As we pass'd along, the before-mention'd Wretches who had laid a Plot against the Lives of their Companions, took an opportunity to put the same in execution; for having concealed themselves behind the Rocks upon the brink of the River, they kill'd 5 *Englishmen*, whom they knew to be best provided with precious Moveables. The 20th of *February*, we had still 60 Leagues to go; but finding now the River more large, and without Cataracts, Rocks, or Trees, we all staid for one another, and having built a sufficient number of Canoes for our farther Transportation, we got by the help of them happily the 9th of *March* to the Mouth of the River, and consequently to the *North Sea*, at the Cape of *Gracia de Dios*. After having travell'd above 300 Leagues upon this River to the South East, tho' the *Spanish* Maps don't allow it above 80 Leagues South. The ancient Inhabitants of this Cape were an *Indian* Nation named *Mosticks*; but a *Spanish* Ship, the Cargo whereof consisted in *Mulatters* and *Negroes* of both Sexes from *Guinea*, being cast away on this Coast, the Natives, who were Enemies to the *Spaniards*, received them with open Arms, and assign'd them a certain Tract of the most fertile Grounds in the *Savannah's* or Plain extending for 5 or 6 Leagues up the River. Here they planted *Maiz*, *Banano's*, and *Magniots*, and the Natives instructed them in the way of making a pleasant Drink call'd *Hoon*, prepared of a certain Fruit growing on the top of a kind of wild Palm-tree of 10 Foot high growing in the Woods. Each of these Trees bears no more than one Branch or Grape, the Grain whereof is of the shape and thickness of an Olive, some yellow, some red, with a very hard Stone containing an oily Kernel. One of these Branches is sufficient for a Man's carriage. The Fruit they bruise with Stone and Kernels, and so boil it together, which affords both a nourishing and pleasant Drink. These *Mulatters* are very tall of stature, wear no Cloaths, and only cover their privy Parts with a Kind of grey hairy Substance growing on the upper part of the Bastard Palm Tree. Of these they make also a kind of Rugs to cover themselves with. They are very bold and skilful Fishermen.

Their Food.

Five Englishmen murthered by their Companions.

The extent of the River.

The Cape of Gracia de Dios.

The Indians near the Cape.

As for the ancient *Mosticks*, they live now in those places they call *Sambey* and *Samibey*, 10 or 12 Leag. to Windward of Cape *Gracia de Dios*, being a kind of a lazy Generation, who neither plant nor sow, and are always served by their Wives. If press'd by Hunger, they

The Mosticks or Native Indians.

1694. go a Fishing, in which they are very expert; and never go out again till all is consumed. They lead a vagabond Life, go naked like the *Mulatters*, and are much afflicted with a kind of small Flys that sting most dreadfully.

The 14th of *March*, an *English* Vessel, of which we had some advice before, coming to an anchor here, 50 of us took the first opportunity to croud aboard her; and to prevent the rest from doing the same, (she being already over charged) we weigh'd anchor. We agreed with the Master for 40 pieces of Eight *per* Head to carry us to S. *Domingo*, where we arrived in the Port of *Petit Gnaves*, from whence we had set out 4 Years before.

An Account of a Voyage made by the Sieur de Montauban, *a Captain of a Privateer, on the Coast of* Guinea, *in* 1695.

NOT to trouble the Reader with the several Adventures that befel me in my former Voyages on the Coasts of *New Spain*, *Carthagena*, *Mexico*, *Florida*, *Cape Verd*, and of *Guinea*, I will confine my self to a succinct account of my last Voyage, begun in the Year 1694.

The *Sieur Montauban* takes two *English* Merchantmen, with their Convoy.

After having ravaged the Coast of *Caraqua*, I sail'd towards S. *Croix*, where understanding that some Merchant Ships with a Convoy from *Barbadoes* and *Nevis*, were going to *England*, I steer'd to the height of *Bermudos*. I was no sooner got thither, but having discover'd the Fleet I look'd for, I engaged the *Wolf*, their Convoy, which I took, and 2 Merchant Ships laden with Sugar, the rest making their escape during the Engagement. In my return to *France*, I took another *English* Ship of 16 Guns, which as well as the former Prize I carried to *Bourdeaux*, where I arrived in *September*.

1694.

Having disposed of my Prizes, and revictuall'd our Ships which carried 34 pieces of Cannon, I set sail again from *Bourdeaux* in *February*, with an intention to cruize on the Coast of *Guinea* in *Africa*. From the *Azores* I pass'd to the *Canaries*, where I cruized in hopes of some *Dutch* Ships for 14 Days, but they being got into Port, I sail'd for the *White Cape* and the Isles of *Cape Verd* at 18 *deg.* N. Lat. meeting with 2 *English* Interlopers of 30 Guns each, riding at anchor in the Road of the Isle of *May*, I resolved to board them, but they smelling the Rat, got away before I could come at 'em. This done, I steer'd for S. *Vincent*, another of the *Cape Verd* Isles, where being inform'd by a *Portuguese* Master of a Bark, that at the Isle of *Fugo*, not far from S. *Vincent*, there were 2 *English* Ships of about 30 Guns each: I made all the sail I could thither, but finding them gone some Days before, I steer'd for the Coast of *Guinea*; and coming to the *Cape of three Points*, I met thereabouts with the *Dutch* Guard Ship carrying 34 Guns. We saluted one another with a broad-side each, and fought in the same manner from Morning till 4 in the Afternoon. I not being able to get the Weather Gage of her, or to make use of our Fusees, so that I could not prevent the *Dutchmen* from anchoring under the Fort of the said Cape where there lay 2 *Dutch* Ships more, one of 14 and the other of 28 Guns. I staid for some time within a League of the shore, but finding they had no inclination to revenge their quarrel, I resolved to sail for Cape *Lopez*, and S. *Thomas*'s Isle.

1695.

He narrowly misses of several *English* Ships.

He engages a *Dutch* Ship.

I pass'd in sight of Cape S. *John* on the Continent, and happening to meet with an *English* Vessel of 20 Guns laden with Elephant's Teeth, Wax, and 350 *Negros*, I took her with little resistance. She came from *Ardra*, one of the chief Towns in *Guinea*, seated upon the Sea side, and the Residence of a Prince of that Country. From thence I set sail to *Princes Isle*, near which I took a *Brandenburgh* Privateer of 8 Guns, and sent away my *English* Prize to S. *Domingo* in *America*, but the same was retaken by the *English* not far from *Little Goave*.

Takes an *English* Vessel.

And a *Brandenburgh* Privateer.

After I had revictualled my Ship at the *Princes Isle*, I sail'd for the Isle of S. *Thomas*, where I gave chace to a *Dutch* Interloper, but she running ashore at the Isle of S. *Omers*, I lost 150 pounds of Gold Dust she had aboard her. From hence I sail'd to the Coast of *Angola*, which is 250 Leagues on the other side of the Line. Here I arrived *Sept.* the 22d, and 3 Leagues off of the Port of *Canada*, I understood that 2 *English* Vessels laden with *Negros* were in that place. As I bore out to Sea to Leeward of the said Port, I discover'd a Ship with *English* Colours, which proved to be a Man of War of 54 Guns. We were no sooner come within Cannon-shot, but the *English* Captain gave me 2 broad-sides, which I received without returning one, my intention being to come within the reach of our Fusees, which I kept concealed upon Deck. I no sooner found him come nearer, but I fired so briskly with small Arms, that without making any farther use of their Cannon, they boarded us with a great shout; but our Men ply'd them so furiously for 2 Hours with their Fusees, that they ran down between Decks, and cry'd out for Quarter. Whilst we were busied in taking possession of the Ship, and putting the *Englishmen* aboard their Sloops, the Enemies Powder suddenly taking fire by the means of a Match laid on purpose by the *English* Captain, both the Ships were at the same instant blown up into the Air, with so dreadful a Noise, as is rather to be imagined than described. I was then upon the Fore Deck of my own Ship; whence I was thrown backwards into the Sea; where taking hold of a Mast, I call'd to some of my Men swimming in the Water to lay hold of a Sloop we saw near us, which they did, and loosening a Canoe that was fastned to her, sixteen of us got into her, and with the help of some pieces of Boards instead of Oars, and a small Sail we made, we committed our selves to Providence. As we had no Provisions, so we made to the Cape of *Cathersica*, (the next we could reach) and landed notwithstanding the Bay that makes it unaccessible. Here we found Oysters sticking to the Branches of Trees, wherewith we satisfy'd our Hunger. We saw also whole Herds of Boufflers as big as Oxon, but they were so wild, that there was no coming at 'em. Thence we went to Cape *Corsa*, 12 Leag. farther, where being met by many *Negroes*, who came thither in hopes of trucking some of their Commodities with us for Toys, but finding we had nothing they wanted, we could not get any Provisions among them, tho' we were ready to dye for Hunger. At last, I prevail'd with them to carry us to Prince *Thomas*, the Son of the King of that Country, upon whom I had put several Obligations in my former Voyages.

1695.

He engages an *English* Man of War.

And takes her.

Both Ships blown up.

He is saved, and gets ashore.

Near Cape *Corsa*.

They gave us a few Bananiers or Figs, and the next Day brought us to the Prince's Habitation. I was in so pitiful a condition, that had it not been for a Scar I had in my Thigh, he would not have known me; but finding me to be the same Person he had so many Obligations to, he entertain'd me at his own Table, provided us all with Cloaths, and carry'd us to his Father's Residence about 6 Leagues thence. This was a Village consisting of 300 Huts cover'd with Palm Trees. The King himself was a large *Negro* of 50 Years old, and well shaped: He met me without his Doors, supported by 4 or 5 *Negro* Women. His Guard were *Negroes* arm'd with Launces and Fusees, and several Drums, Trumpets, and *Spaniards* marched before him. He gave me his Hand as a testimony of his Friendship; and having ask'd several Questions concerning the King my Master, he drank his Health in a great Crystal Glass, whilst all the *Negroes* held up their right Arm with a most profound silence. Prince *Thomas* ask'd me, what my King's Name was? And I having told him, it was *Lewis le Grand*; he answer'd, that I should stand Godfather to a Child of his of 8 Months old, which he intended to give the same Name. I could not but smile at it, but was forced to comply with his request; the Ceremony was performed accordingly soon after, and the Child named *Lewis le Grand* by a *Portuguese* Priest. Whilst I was thus entertain'd with all imaginable Civility, an *English* Ship happening to come to the Cape *Lopez*, I contracted so intimate a Friendship with the Captain, that I did not in the least scruple to commit my self and my Men to his Conduct, who brought us safe to *Barbados*. Colonel *Russel* being at that time Governour there, he received me with all imaginable Civility; and tho' it was not in his power to treat us otherwise than Prisoners of War, yet was I very conveniently lodged; he himself presented us with a Purse of 40 Pistols to defray my Charges, and at last discharg'd us all without any Ransom. Not long after, a Bark sent by the Count *de Blenat*, General of the *French* Isle, arriving at *Barbados* about the exchange of Prisoners, we went aboard the said Vessel, and soon after arrived happily at *Port-Royal* in *Martinico*. Having paid my respects to the Governour there, I embark'd aboard the *Virgin*, a Ship bound for *Bourdeaux* in *France*, where we arrived after a prosperous Voyage.

Is kindly received by the Prince of the Country.

He goes aboard an *English* Vessel.

Comes to *Barbados*.

To *Martinico*.

And to *Bourdeaux* in *France*.

CHAP.

CHAP. IV.

An Account of Captain William Dampier's *Voyage round the World, &c.*

1681.

The Author sets Sail from England.

I set Sail from *England* as a Passenger aboard the *Royal Merchant* of *London*, bound for *Jamaica*, commanded by Mr. *Knapman*. We sail'd with a fair Wind along the South Sea of the Isle of *Hispaniola* by the small Islands call'd *Vacca* or *Ash*, and arrived safely at *Port-Royal* in *Jamaica*, in *April* 1679. I sold what *English* Commodities I had brought along with me, intending to undertake a Voyage to the Bay of *Campeachy* in the Gulph of *Mexico*; but changing my Resolution I remained all that Year at *Jamaica*, till about *Christmas*, when being ready to reimbark for *England*, Mr. *Hobby* engag'd me to go along with him on account of a trading Voyage to the *Moskito's* (of whom anon) which I having accepted of, we set Sail for the *Negril*-Bay at the West end of *Jamaica*, where we had no sooner cast Anchor, but meeting there with Captain *Seaor*, *Saukins*, *Sharp*, and some other Privateers, *Hobby's* Men went all over to the Privateers, and left not so much as one remaining with him, besides my self, which after some days Consideration, at last obliged me also to joyn with the rest in their intended Expedition. Accordingly in *January* we set Sail for *Porto Bello*, where succeeding according to Wish, we agreed to pass by *Lapond* Cross, the Isthmus of *Darien*, into the South Sea. We landed *April* the 8th. on the Isthmus near the *Golden Isle* (one of the *Sambaloes*) near 400 Men in all, provided with all sorts of Necessaries, and after 9 days Journey came to St. *Maria*, which we took, and after a stay of 3 Days went on to the South Sea Coast, where we imbark'd in divers Canoes and other Boats, furnish'd us by the *Indians* that were our Friends. *April* the 23th. We got sight of *Panama*, but being repulsed in our Attempt upon *Puebla Nova* (where Captain *Sauking's* lost his Life) we came to an Anchor at the adjacent Isles of *Quibo*. Here we resolv'd to go more to the South of the Coast of *Peru*, and accordingly sail'd thence *June* the 6th. first, to the Isles of *Gorgonia* and *Plata*, and thence to *Ulo* a small Place on the *Peruvian* Coast which we took in *October*, and in *November* following came to *Cequembo* on the same Coast, and towards the latter end of *December* to the Isle of *John Fernando*, the farthest to the South we came to.

Forts with some Privateers.

1680.

They cross the Isthmus of America by Land.

Are repulsed before Puebla Nova.

Whilst we stay'd at this last Isle, Captain *Sharp* our Commodore, was by general consent displaced, and Captain *Watling* put in his Place; but this last being kill'd afterwards before *Arica*, the younger Sort were for restoring *Sharp* to his former Command; but the elder Sort (disliking his Conduct) vigorously opposing the same, it was agreed, that what Party should appear the strongest should remain Masters of the Ship, which being done accordingly, it was carried on Captain *Sharp's* Side. For you must know that in *January* we sail'd back to the North to *Arica*, a Town strongly seated on the Coast of *Peru*, which we attack'd, but were vigorously repulsed; so continued our Voyage more to the North, till the middle of *April* in the sight of the Isle *de la Plata*, lying a little South to the Equinoctial Line; here it was that I joyn'd with those that were against Captain *Sharp*; so that having (according to agreement) provided our selves with what Necessaries we wanted to carry over Land (pursuant to our Resolution) we prepared for our Departure. The Success of which Voyage you have before in the History of the *Buccaniers*.

Arica attack'd in vain.

1681.

The Author sets out for the South Sea.

Parts from Captain Sharp.

April the 17th. We parted from Captain *Sharp* 12 Leagues N. W. from the Isle *de la Plata*, and imbark'd to the number of 44 (besides a *Spanish Indian* and two *Moskito Indians*) into a Lanch or kind of long Boat and two Canoes, with a design to sail for the River of St. *Mary's* in the Gulph of St. *Michael*, 200 Leagues distant from the Isle of *Plata*; having spent three whole Days in lifting of Flower, and providing us with Chocolate and such like portable Provisions. We got the same Night by two of the Clock 7 Leagues to the Windward of Cape *Pastao* under the Equinoctial, where being becalmed till the 18th. in the Afternoon, we then stood with a S. S. W. Wind to the North. About 7 of the Clock in the Evening we spied a small Bark at Anchor in a Creek near Cape *Pastao*, to the Leeward of it, loaden with Timber from *Galleo*, and bound for *Guiaquil*; our Boats being too small for our purpose, we seized her for our use.

1681.

They come to Gorgonia.

The 19th. early we anchored 12 Leagues to the South of *Cape St. Francis*, where having spent some Hours in cleansing our new Vessel, we kept our Course with a S. S. W. Wind along the Coast towards *Gorgonia*, where we arrived the 14th. but did not land till towards Night for fear of the *Spaniards*. We were no sooner come a Shoar, but by a House lately built (able to contain a 100 Men) with a large Cross upon the Door, we found that they did expect us thereabouts; in this Opinion we were soon confirmed by the Confession of our Prisoners, who told us, that a *Pereago* (or large Canoo) had of late come once in two or three Days from the Continent to *Gorgonia*, to look after us, and that the same was to return to *Panama*, to give Advice of our Arrival there.

We spent most part of the Day in careening our Bark, to make her the nimbler, and having provided our selves with Water, set Sail the 25th. with a brisk Gale from S. W. but the Wind encreasing, we lost one of our Canoes, which would have been very Serviceable to us in the River. The 27th. we sail'd on with a moderate S. W. Wind, and the 28th. descried a League and half to the West two large Ships, being then two Leagues from the Shoar, and two Leagues South of Point *Garrachina*.

Anchor at Point Garrachina.

Knowing them to be Cruisers, we rowed close under the Shoar; for in case they had been bound for *Panama*, this Wind must carry them thither; and had they come from thence, they would have kept on the North Side of the Bay as far as the Isles of *Quibo* to the West: It proving cloudy soon after, they could not get sight of us; so the 29th. in the Morning, we came safely to an Anchor at Point *Garrachina*, seven Leagues S. from the point Gar Gulph of St. *Michael*. Here we went on Shoar and spent rachina. all the Day in drying our wet Cloaths and Ammunition, and cleansing our Guns, and kept a strict Watch for fear of the Enemy.

At Night we set Sail thence, and the 30th. early entred into the Mouth of St. *Michael's* Gulph; at nine of the Clock we cast Anchor near a large Isle, lying 4 M. from the River's Mouth; we sent a Canoe on Shoar on the Isle, where we discovered a Ship close to the Shoar at the Mouth of the River, and a large Tent near it. After the return of the Canoe with this News, being sensible we had no other way left now, but to take the first Opportunity to get safe over Land, we rowed again to the Island, to observe the Enemy's Motion: Here having dispersed our selves in several Parties, we saw at high Water a small Canoe coming from the Ship to the Isle; we got presently into our Canoe, and lying close to the Shoar till she came within Pistol shot of us, we surprised her with one white Man and two *Indians* in her; upon examination they inform'd us, that the Ship we saw had waited for our coming there six Months, being mann'd with 150 Men, and 12 Guns, and that besides these, 300 Men belonging to the Mines, were arm'd and near at hand: They assured us also, that betwixt this Gulph and *Gorgonia*, 2 Ships, one of 20 Guns and 200 Men, the other of 10 Guns and 150 Men were cruising upon us, being the same we had seen before.

They land near Cape St. Lawrence.

Being sufficiently convinced there was no safe staying here, we brought our Prisoners on board, and got under Sail with the Ebb-Tyde; But it blowing hard out of the South, and the Tyde pretty well spent, we could not get far. I would fain have persuaded them to make the large River *Congo* (but three Leagues thence) whither the South Wind would easily have carried us; but they remaining resolv'd to land somewhere else, we rowed and towed against the Wind all Night, till we got about the Cape of St. *Lawrence* in the Morning, and then sailing to a small Creek four Miles further to the West, rowed up betwixt two little Isles about a Mile into the Creek, where we landed *May* the 1st. and no sooner got every thing on Shoar, but sunk our Ship, with which whilst we were busied, our two before mentioned *Moskito Indians* got us good store of Fish, which were a welcome Dish to us.

The Moskito Indians.

These *Moskito Indians* are a certain Tribe consisting not of above a 100 Men, who have their Habitations on the North Side of the Continent, near Cape *Gratia Dios*, between Cape *Honduras* and *Nicaragoa*; they look upon the King of *England* as their Prince, and upon the

1681. Governor of *Jamaica* as a great King and their Chief; they will appear there in good Apparel, but when they come into their own Country again, wear nothing but a Linnen Cloth ty'd about the middle, and hanging down before: For the rest, they are tall and strong of Stature, nimble, with long Visages, lank black Hair, and a dark olive Complexion. They are extreamly dexterous at throwing a Launce, Dart or Harpeen, to which they are trained up from their Infancy, as likewise how to put by either of these Arms. This they perform thus. Two Boys placed at a small distance, dart blunt Sticks at one another, each having another Stick in the right hand, wherewith either of them puts by that thrown at him, this renders them so dexterous by continual Exercise, that with a small Stick they will defend themselves against divers Arrows darted at them, provided two are not sent at a time at them. With their Darts and Harpeens they strike Fishes, Tortoises and *Manatees* or *Sea Cows* (of which more anon) they have very good Eyes at a distance, are very good at the management of Fire-Arms (when once taught) and will never flinch in an Engagement from the Christians; having an opinion of them, that they know best, how and when to engage; but they don't much love the *French*, and abominate the *Spaniards*, but are very kind to the *English*, yet you must let them act in every thing after their own manner.

Their Dexterity.

Bravery.

I could never observe any thing resembling Religion among them, except that they seem to dread the Devil, call'd by them *Pallasaw*, who they say, appears to no body but their Priests, and that they must take great care not to disoblige him: They have no more than one Wife; immediately after their Marriage they erect a small Plantation where they please, near the Sea or some River; but these containing only some few Plantain Trees, Potatoes, a little *Indian* Pepper, as also a small quantity of Pine-Apples (whereof they make a kind of strong Liquor) the same are not sufficient to maintain the Family, the further want whereof is supply'd by the Husband, who, whilst the Wife looks after the Plantation, either strikes Fish in the Sea or River, or kills *Peccary* or *Warree*, i. e. wild Hogs and Deer in the Woods, but does not stir abroad again to get more, till all is consumed.

Manner of Living.

We landed as I told you *May* the 1st. and at three in the Afternoon set forwards on our Journey towards the N. E. according to the direction of our pocket Compasses; it raining very hard we travel'd but two Miles to the foot of a Hill, where we wrested our selves in Huts built by us for that purpose. Next Day early coming up the Hill we found a small Path, which we follow'd for some time, till perceiving it to lead too far to the East, we got upon some high Trees (of which there were many upon the Hill) whence we discover'd some Huts in a Valley on the North Side; but the Hill being excessive steep on that side, we were forced to follow the former Track, which brought us down on the East Side to an *Indian* Village, having travel'd six Miles that Day. Among all the Inhabitants we met but with one Man who could speak a little broken *Spanish* by whom we understood that we were not above three Miles from the entrance of the River *Congo*, where we saw the Ship two Days ago: We supp'd very well upon Fowls and wild Hogs, and brought some Potatoes and Plantains for our further use. Having agreed with an *Indian* Guide for a Hatchet to carry us to some *Indian* Plantation where they could speak *Spanish*, we continued our Journey the 3d. early in the Morning (leaving one of our Men behind who was tired) and travell'd 8 Miles by 12 of the Clock, when coming to a certain *Indian*'s House upon the bank of the River *Congo*, who spoke *Spanish* very well, we asked him such Questions as were most proper for our present purpose; but tho' we did all we could to engage him, by presenting him with Mony, Beads, Hatchets, Knives and other Toys, yet could we get no satisfactory Answer of him, till one of our Company pull'd out a blew Petticoat and presented it to his Wife, which had so marvelous an Effect upon her, that she soon prattled her Husband into a good Humour, so that he not only shew'd us the way to the North Side: but would have gone himself along with us, had his Foot not been lamed some Days before; however he engaged the same Guide that had brought us hither (for another Hatchet) to conduct us two Days further. We travell'd 3 Miles further the same Day, and lodged at Night in our Huts.

Their passage over the Hills of Darien.

May the 4th.

The next Morning we set out early, because the Forenoons were generally fair, but the Afternoons rainy. We travell'd 12 Miles and cross'd the Rivers above thirty times, the *Indians* guiding themselves by the Rivers. It rained violently all the Night, and tho' we lay in our Hutts, yet having but little Fewel and Belly-Timber, we pass'd our time but scurvily. 1681.

We continued our Journey in the Morning, and after 7 Miles travelling the pathless Woods, came to a young *Spanish Indian*'s House, who being well vers'd in the *Spanish* Language entertained us very kindly, and furnish'd us with Potatoes, Eggs, *&c.* but no Flesh: 'Tis true, we shot two fat Monkeys, but these were distributed among our sick Men. A *Spanish Indian* belonging to our Company, being intreated by our Host to stay with him, with a Promise of his Sister in Marriage, we would not consent to dismiss him, for fear of any Treachery, but promised to send him back in two or three Days, which we did accordingly. The same Day Mr. *Wafer* our Chirurgeon, as he was drying his Powder, had the Misfortune to have his Knee scorch'd by the carelessness of a Fellow, who pass'd by accidentally with his Pipe lighted. This *Indian* Plantation being just seated at the West Side of the River *Congo*, where we must ferry over to the East; we might have come thus far in our Canoes, if the rest would have taken my Advice.

The 5th.

Being now provided with a fresh Guide, we pass'd the River *Congo*, and after we had travell'd two Miles to the East were forc'd to foord another River, as well then as several times after, tho' it was very deep, which put us to no small Difficulties, which I foreseeing, had provided my self with a large joint of a Bamboe Cane, in which I preserv'd my Journal and other Writings, and stopt both ends with Wax. Two of our Company not being in a condition to keep pace with the rest, came after us as well as they could; we stay'd for them some time, but the River swelling so high, that they could not come over, we Marched on four Miles further, and there set up our Hutts on a rising Ground, but had scarce finished them when the overflowing of the River obliged us to remove them again: There we were forced to stay all the next Day and Night in the Woods, the Water coming up very high into our Hutts; which together with the tempestuous Weather accompanied with Thunder and Lightning, made us forgetful of setting our Centuries, and gave Opportunity to our Slaves (except one) to run away, and to carry off our Chirurgeon's Gun and Mony.

May the 6th. They ferry'd over the River Congo.

The next Morning the River being fallen considerably we endeavoured to foord it again, which being not able to do, we tryed at swimming, but the Current running too swift, it was agreed, to send over one Man with a Line to be fastened on the opposite Bank, and so to hall over our Baggage, and afterwards the Men. One *George Gayny* undertook this Task; so that one end of the Line being fastened about his Neck and the other left on Shoar to be managed by another to see it go clear he swam away, but was scarce got into the Stream when the Line entangled, and he that had the other end, endeavouring to recover it, stopt on a sudden and threw him upon his Back, and he having 300 Dollers ty'd to his Back was carried away with the Current, and never seen afterwards alive. The two Men we left behind (who did not rejoyn us till we came into the North Sea) saw him lying in a Creek with the Mony on his Back, but would not take it, for fear of incumbring themselves.

May the 8th.

The only thing we had left us was to fell a tall Tree cross the River, which we did, and so got over to the other side, where whilst we were busie in gathering Plantains in an Orchard our Guide left us for some Hours, but afterwards return'd with an old *Indian*, under whose Conduct we march'd forward, and after we had pass'd another River came into one of the most fertile Vallies that ever I saw, full of very stately Trees; through this we march'd for four Miles successively, and then came to our Guide's Hunting-House, where we refresh'd our selves with some Potatoes and Plantains that grew there: Here it was that we dismiss'd our beforementioned *Spanish Indian*.

May the 9th.

The next Day the old *Indian* led us five Miles thro' the same Valley, and then five Miles further over divers Hills to his own House or Plantation; coming to a Path half a Mile on this side of the Village, we saw many wooden Crosses, but found only *Indian* Inhabitants there, who received us very obligingly, and entertained us with what they had, which was but little, their Settlement consisting of new Plantations; they had only two Lads among them that understood a little *Spanish*, these we engaged to be our Guides by some Presents; and Mr. *Wafer* our Chirurgeon being in great pain ever since the burning of his Knee, we left him with

1681. with two others that were not in a condition to travel further among these good natur'd *Indians*. We continued our Journey the next Morning, descending the
May the 10th. Hill on which the Village was seated into a pleasant Valley, following the Tract of a River which we cross'd 32 times. After we had travell'd nine Miles we set up our Hutts for our Night's rest. Our Guides observing us to look frequently on our pocket Compasses, and to point out the way we judg'd we ought to go, would smile and tell us they were pretty Baubles, but uncertain Guides. This Evening the only Slave we had left, run away, and I shot a *Quaum* (a Bird of the bigness of a good Turky) which served our Guides for a Supper. The 11th. we marched 10 Miles and
May the 11th. slept supperless in our Hutts. The next Morning early we pass'd another deep River by the help of a Tree
May the 12th. laid across, and marched 7 Miles thro' very marshy Grounds, till we came to a large and deep River, where we fix'd our Hutts. Next Morning finding the
May the 13th. Banks overflown, our Guides gone, and our selves reduced to live upon nothing but *Macaw* Berries, we began to repent our haste in leaving the last Settlement, where they would fain have kept us a little longer, but
May the 14th. the Waters being return'd to their Bounds the next Day and our Guides returning, we took fresh Courage, and setting our Axmen to work they fell'd a very tall Tree just cross the River, by the help whereof we got over, and afterwards cross'd another River 3 times, till after 6 Miles travelling we came to a Plantation inhabited only by one *Indian* and a Boy his Servant, where we were kindly entertained that Night, and kill'd four Monkeys.

May the 15th. The next Day this *Indian* and his Boy would needs conduct us in his Canoe over divers large Rivers for 2 Miles. 5 Miles further we took up our Nights Lodgings at a large Plantain Orchard, where we fed plentifully, both upon ripe and green ones. We travell'd no
May the 16th. more than 3 Miles the next Day, then coming to a large Village we rested our selves, our Feet being blistered all over with the ruggedness of the Ways; we also kill'd three Monkeys which served for Supper: Hitherto it had been very rainy Weather, but from this Day it continued fair till our Arrival on the North Sea.

May the 18th. Next Morning early the *Indians* carried us in five Canoes three Miles up a River; after our landing we travell'd three more and then set up our Hutts. The next
May the 19th. following Day our Guides having lost their way we made only two Miles, and came the next by twelve
May the 20th. of the Clock to the River *Cheapo*, the last on this side that falls into the South Sea, as do all those we had cross'd before. After we had foorded the River we marched nine Miles to the foot of a high Mountain where we set up our Hutts.

May the 21st. Our next day's Journey was to the top and on the ridge of the Mountain; after we began to descend we came to a delicious Spring, where we took up our
May the 22d. Night's Lodgings. The next Morning we marched further over the ridge of another high Mountain for five Miles, and as soon as we came to the North Side we saw to our signal Joy the Sea; we descended in three Companies and took up our Quarters upon the Bank of a River, the first that exonerates it self into the North Sea.

May the 23d. Our Passage the next Morning was thro' large Plantain Walks and Orchards till ten of the Clock, when coming to an *Indian* House we got some Canoes to car-
They come to the North Sea. ry us down the River of *Conception* having travell'd seven Miles that Day. At the entrance of the River we found many Habitations of the *Indians*, who used to exchange their Potatoes, Plantains, Sugar-Canes, Fowls and Eggs with the Privateers for such Commodities as they bring thither. By these we were informed that several *English* and *French* Privateers were lately gone thence, but that one of them, a *French* Man, was still at *Lasenia*d's Isle, which lies about three Leagues from the Mouth of the River *Conception*, being one of
The Sambello Islands. the *Sambelloes*, a range of small Isles of twenty Leagues in length reaching to the East from Point *Sambelloes* to the *Golden Island*. They were in 1679 made the first Rendesvouz of the *Freebooters*, for the conveniency of careening their Vessels.

Thus at last we accomplish'd our intended Journey from the South Sea to the North Sea in twenty-three Days amounting in all to 110 Miles, in which we pass'd divers high Mountains, but many Rivers and deep Grounds with the loss of one Man only, who was
A shorter Passage over the Isthmus. drowned, tho' at the same time we travell'd at least fifty Miles more than we need to have done: For, had we first of all gone up the River *Cheapo*, or of St. *Mary's*, a Man may from either of them go in three Days from one Sea to the other, and the *Indians* perform it in one Day and a half. 'Tis true, as the *Indians* were our Friends, so they served us for our Guides, and assisted us with Provisions; but in case such a thing was to be undertaken by 500 or 600 Men, they might encompass it easie enough without being beholding to the Natives, tho', no doubt but it is better to have their Friendship

1681.

Having taken our Night's rest at the River's Mouth, May the we went aboard the *French* Vessel riding at *Lasound's* 24th. Isle, Captain *Tristian* Commander, where having *They go aboard a French Privateer.* bought as many Beads, Scissars, Knives and other such like things as we could get, we gratify'd our Friends with them, and half a Rix Doller a piece, at which they were so highly satisfy'd, that after their return they and their Friends shewed all manner of kindness to those of our Men that were left behind; and as these stay'd a considerable time longer among the Natives, so I will leave the future Description of the Inland Countries to Mr. *Water*, who, I understand is preparing a full account of it for the Press.

Within two Days after we set Sail on board our *They go to* *French* Privateer for *Springer's* Isle, another of the *Sam-* Springer's *belloe's* seven or eight Leagues hence, where we met *Isle.* with these following Privateers: Capt. *Coxon*, ten Guns, *from with other Privateers.* 100 Men; Capt. *Payne*, the same number of Men and Guns; Capt. *Wright*, four Guns, forty Men; and Capt. *Williams*, a small Bark, all *English* Men; Capt. *Yanky*, a *Dutch* Man, carrying four Guns and sixty Men, *English*, *French* and *Dutch*; Capt. *Achemboe*, eight Guns, forty Men; Capt. *Vodeker*, six Guns, seventy Men; and Capt. *Rose*, in a small Bark, all *French* Men.

Just before our coming to the Fleet, Capt. *Wright* was return'd from betwixt *Chagre* and *Porto Bello* (which is a great Passage to *Panama*) to take some Prisoners, which he had done accordingly, by taking a large Canoe or *Periago* laden with Meal. We found all the Commanders aboard Capt. *Wright* busie in examining all the Prisoners, who being come but six Days before from *Panama*, they told them the news of our coming by Land over the Isthmus: But no sooner did they hear of our Arrival but they came aboard Capt. *Tristian*, being all overjoy'd to see us, especially Capt. *Consultation about attacking Panama.* *Coxon*, who had left us a Year ago in the South Sea: As they had a design to alarm *Panama*, and for that purpose to pass thither over Land, so they asked us many Questions in relation to our Passage, and what Discoveries we had made betwixt these two Seas; all which we having answered according to the truth of the matter, they were so much discouraged at the many Difficulties they were likely to encounter, that they laid aside that Design.

Several other Propositions were made concerning what Places were to be attempted, but after divers Debates Pro and Con, nothing was resolved upon at *The Freebooters know all the Places along the Coast.* that time: For you must know, that the *Freebooters* have an exact account of the condition of all Places seated within twenty Leagues of the Sea side from *Tridado* to *Vera Cruz*; this they learn from the Prisoners they take at Sea, whom they examine upon pain of Life, about the Strength, Riches Traffick, Inhabitants, their Out-wards and Watchmen, Harbours, Creeks and such like Questions; and thus by comparing the Answers of such Prisoners examined separately and at divers times, they are able to form to themselves so exact an Idea of these Parts as is to be admired.

After seven or eight day's Debate, it was resolved to attempt a certain Town (the Name whereof I don't remember) seated a good way into the Country, but not so far as *Panama*; in order to which we were to go up *Carpenter's* River, sixty Leagues distant from the West of *Porto Bello*. But as we had no Canoes or Boats, *The Isle of St. Andrew.* it was resolved to sail to the Isle of St. *Andrew*, a little uninhabited Island not far from the Isle of *Providence* to the West of it, at 13 *d.* 15 *m.* N. Latitude and 70 Leagues N. N. West from *Porto Bello*. Besides the nearness of this Isle to *Carpenter's* River, we should here meet with plenty of Cedar Wood, which being excellent good for the building of Boats, is to be had without any other charge but the cutting; this is the reason that those of *Jamaica* frequently build their Sloops *Cedars fit for the building of Boats.* here, tho' the mountainous Part of *Jamaica* is well stored also with Cedars, but those of St. *Andrew* are much the larger, from fifty, sixty, to seventy Foot long, and proportionable in bulk: They are also found in the *Bermudos* Islands and *Virginia*, where the Soil is for the most part sandy. I never observed any on the Coast of the South Sea, except on the Isthmus, nor e-

1681 ver met with any of them in the *East-Indies*. This Tree is reckoned the best to build Canoes and Paraguas with; they are both nothing else than the Trunk of the Tree hollow'd out, with a flat Bottom; the Canoes are pointed at both ends, but the Periago is flat at one. What is related of the Cedars to be never Worm-eaten, is a vulgar Error.

Periago.

With this resolution we set sail for St. *Andrew*'s Isle, the first Day with good success; but the following Night a strong N. E. wind scattered us pretty well; and the next Day the Tempest encreasing, we were dispersed one from another, and the succeeding Night lost all our Company; I and the rest of those that were come over the Isthmus, were then aboard Captain *Archembo* a *French*-Man, who wanted Men; we liked our Captain well enough, but the *French* Seamen were such idle Fellows, that even in the greatest Storm they would not stir out of their Hammocks. With much ado we got at last the 4th day to the Isle of St. *Andrew*, whither Captain *Wright* was come the Day before with a *Spanish* Prize, having thirty Men aboard; they related that they came from *Carthagena* in company of eleven *Armadillos*, or small Men of War, but parted from them two Days before: They assured us, that this Squadron was ordered for the *Samballoes*, to look for us there; and in case they did not meet with us thereabouts, to stay at *Porto-Bello* for further Orders.

They come to St. Andrew's Isle.

They go aboard the Spanish Prize.

By this time we that had travel'd over the Isthmus, were acquainted by the *French*, entreated Captain *Wright* to keep his Prize for us; as he lived among the *French* in *Hispaniola*, and was well respected among them, so he was willing to grant our Request; but seeing us resolved to go ashoar and to build some Canoes for our selves (a thing allowed among the *Freebooters*) he at last comply'd, under condition that we should remain under his Command as if we belonged to his own Ship.

We staid here ten Days in expectation of the rest, but none coming except Captain *Tucker*, we resolved to go in quest of them to *Boccadelataw* or *Blewfield*-River, on the Continent; especially since this Isle afforded neither Fish, Fowl nor Deer. We steer'd our Course towards the *Coral*-Isles, lying near the Continent at 12 deg. 16 min. N. Lat. These I take to be the same known in the Maps by the Name of the *Pearl*-Isles. The next Day we got ashoar in one of them in hopes of getting some Corn, but met with none but a few poor Wretches, who had been strip'd of all by the Privateers, who also frequently make them their Slaves, for they are very fit for that purpose, being of a low stature, but strong Limb'd; for the rest they are of a dark Olive Colour, with round Faces, black Hair, and small Eyes of the same Colour; with Eye brows hanging over their Eyes, low Fore-heads, short, thick and flat Noses, full Lips, and short Chins. They have a peculiar Fashion of cutting holes in the Lips of the Boys whilst yet Infants, which they keep open with small Peggs till they are fourteen or fifteen Years of Age; then they put in them something resembling a long Beard, made of Tortoise-shell, as you see it represented here. At the pointed end is a little notch which they put through the hole betwixt the Lips and the Teeth, and so the other part hangs down below the Chin; they take it out every Night, but seldom appear without it all Day. Both Boys and Girls have holes bored in their Ears, which by degrees they stretch to the bigness of a Crown-piece, and wear in them round and smooth Pieces of Wood, so that their Ears seem woode unless only in a small Skin. As they have very little Feet, (notwithstanding they are bare footed) so the Females take a great pride in their Legs, which they tie very hard from the Ankle to the beginning of the Calf with a piece of Callicoe, which renders their Calfs very round and beautiful. They have no other Cloathing but a Clout about their Middle. We set sail hence for *Blewfield*-River, where whilst we were cleaning our Tartane, Captain *Archembo* and *Tucker* left us, and sail'd to *Bocco-del-toro*.

The Coral or Pearl Isles.

The Inhabitants.

Blewfield River.

Blewfield-River exonerates it self into the Sea, betwixt *Nicaragua* and *Veraguay*, being deep at the mouth, with a fine sandy Bay near it, but shallow within; no Barks above 60 or 70 Tuns being able to enter far into it. This River has got its Name from *Blewfield*, a noted *Freebooter* or Privateer, who lived in *Providence*-Island, then Inhabited by the *English*, and belonging to the Earl of *Warwick* long before the *English* settled at *Jamaica*. We saw a Canoe coming down the stream but no Body in it, nor in any other part (tho' we saw some footsteps of them) and by the meanness of the Canoe, guess'd they had no correspondence with the *Spaniards*, nor with the other *Indians* that have. 1681

Whilst we lay at Anchor here, our *Moskito Indians* were very useful to us in striking divers *Manatees* or Sea Cows. These Creatures I have seen also in *Campeachy*-Bay, on the Coast of *Bocca del Drago*, and *Bocca del Toro* on the River of *Darien*, and among the small Isles of *Cuba*, as also at *Mindanao* one of the *Philippine*-Islands, and on the Coast of *New Holland*. I have been told they are also seen sometimes on the North side of *Jamaica*, and in the Rivers of *Surinam* in vast numbers. The *Manatee* is of the bigness of a tall Horse, but ten or twelve Foot long; it has thick Lips and a wide Mouth like a Cow, instead of Ears two small holes in each side of the Head, and two Eyes of the bigness of a small Pea. The Neck is so short and thick, that it exceeds the Head in bulk, but its biggest part is about the Shoulders, underneath which it has two large Fins on each side of the Belly, and under each of these Fins, a small Dug for the suckling of their young Ones. It is of the same bulk about a foot from the Shoulders downwards to the Tail, and so becomes smaller by degrees to the very Tail; which is flat, about 14 Inches broad, 2 long, and 4 or 5 thick in the middle; but near the edges scarce 2 Inches thick. I have been inform'd that some of these Creatures have weigh'd One thousand two hundred Pounds; but those that ever I saw were not so large. For the rest, their whole Body is smooth and round, without any Fins except the before-mentioned.

Manatee.

They delight in brackish Water, but chiefly in the Creeks and near the entrances of Rivers, where they meet with a sort of Grass of seven or eight Inches long, but of a narrow blade, growing in the Sea near the shoar of the Continent, among the Isles, and in the Creeks of great Rivers, which they feed upon; and this I suppose to be the reason why they are never met with in the South Sea, where there is a bad Shoar and deep Water. Their Flesh as well as their Fat, is white, sweet and wholsome Food, especially of the sucking Calves; and the Tail of a young Cow is esteem'd a Dainty; whereas the Head and Tail of an old one, are tough and hard Meat, but a piece of the Belly of the old ones, is not despisable when roasted. The Privateers make use of the Skin of this Creature, for they cut it into Straps, and fastning them to their Canoes, put their Oars through them instead of Tholes or Pegs. The Skin of the Back being very thick, they cut their Thongs whilst green, and twist them, and afterwards dry them, which serve for Horse-whips.

Their Food.

The *Moskito Indians* have peculiar Canoes of a small size for Fishing: These are not managed with Oars, but Paddles, the broad part whereof does not go slanting towards the Staff or Handle as in an Oar, nor is it used on the side of the Boat; but they hold it perpendicularly by the Staff, and so with both Hands force back the Water with very quick stroaks. Two Men always belong to one of these Boats, the one sitting in the Stern, and the other kneeling in the Head; they both move thus to and fro with a quick motion, till espying what they look for, they go on more gently, and he in the head lays by his Paddle, and arising takes hold of his striking Staff, to be ready as occasion requires. This Staff or Pole is near eight Foot long, of the thickness of a Man's Arm at the biggest end, where it has a hole to fasten the Harpen-Iron in. At the other end of the Pole is fastned a piece of light Wood, call'd *Bobwood*, having a hole through which the end of the Staff comes; to the light Wood is fastned a Line of ten or twelve Fathoms wound closely about, the end of the Line being ty'd to it; the other end of the Line being made fast to the Harpen-Iron, and the Fisherman holds a fathom of it in his Hand. When he strikes at the *Manatee*, the Harpen-Iron comes out of the Pole or Staff, and as the Fish swims away, the Line follows running from the Bobwood, which will soon rise again after it has been under Water with the Staff. The *Moskito* or Fisherman paddles after the Fish as she swims away, and as soon as they have taken up the Staff and Bob, begin to draw in the Line, which the *Manatee* perceiving swims away as fast as she can, and they with the Canoe after her with a most violent motion, till perceiving that the *Manatee*'s strength begins to fail, they draw in the Line by degrees, and finding her quite spent, they hawl her close to the Boats side, and so knock her on the Head, and afterwards hawl her into shoal Water; where laying their Boat upon one side, they rowl her into it, and so carry their Prey ashoar. I have known two *Moskitos* thus bring two *Manatees* ashoar every Day for a Week together, the least whereof weighed six hundred Pounds. After they have struck a Cow they are sure of her Calf, for the either carries it under

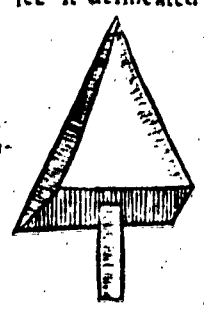
How the Moskitos go on a fishing.

How they catch the Manatee.

one

1681. one of her Fins, or if it be too big, it will certainly follow her wherever she swims, so that they can't miss to strike her.

How they strike the Tortoises. They catch the *Tortoises* much after the same manner with this difference only, that with these they need not be so cautious in managing their Paddles without any noise, which they must carefully observe with the *Manatees*, who have a quick hearing; but the *Tortoise* has much better Eyes than Ears. For these they use also a square Iron instead of the Harpen: This is four square, of the length of an Inch, and pointed at one end as you see it delineated *. To the small spike at the broad end the Line is fastned, and goes into a hole at the end of the striking Staff, which flies off as soon as the *Tortoise* is struck, and the Iron with the Line fastned to it enters quite within the Shell. The *Moskitos* make their own Harpens, Lines, and other Fishing Instruments. These last are made of the Bark of a certain Tree or Shrub, call'd *Maho*, which grows in vast plenty all over the *West Indies*; it is composed of very strong Threds or Strings, and consequently used sometimes for Cordage by the Privateers.



Their Fishing Instruments.

Bocca-del-Toro. But to return to our Voyage. We sail'd from hence to *Bocca del Toro*, being a kind of small Harbour or Creek betwixt two Isles, at 10 deg. 10 min. N. Lat. betwixt the Rivers *Veragne* and *Chagre*; a Haven much frequented by the Privateers, as affording a good careening place and vast plenty of *Tortoises*; besides that the Natives have no Commerce with the *Spaniards*, nor indeed will they have any with other Europeans, being a very barbarous Generation, whereof several of the Privateers have had most direful Experience, and among the rest Captain *Pain* of late, who had four of his Men murthered by them in the Night time in a Tent. This Coast produces abundance of *Vinelloes*, which is used to Perfume Chocolate, of which more in another place. Here we met Captain *Tanky*, who told us how Captain *Tristian*, *Pain* and *Williams*, had been chaced by the beforementioned *Armadillos*, in their way to *Bocca del Toro*, but that he remained undiscover'd by the *Spaniards*, and believed the others had also escaped their Hands.

Thus as the case stood, there being but little hopes of meeting together again, Captain *Wright* and Captain *Tanky*, resolved to cruise on the Coast of *Carthagena*, and I went along with the first. The wet Season being near at hand, we set sail immediately, and pass'd in sight of *Scuda* a small Isle, where according to common report, were interr'd the Bowels of Sir *Francis Drake*. Hence we came to a little Isle to the W. of *Chagra*, where we seiz'd two new Canoes, and carried them along with us to the *Sambelloes*; coming at last with a west Wind to the point of *Sambelloes*, Captain *Wright* and *Tanky* sail'd forward to the Coast of *Carthagena*, leaving us with the Tartane to get ready the Canoes. We spent part of our time in fishing among the Isles where we recruited, and whilst our *Moskitos* provided us with half green Tortoises, we went ashoar every Day into the Woods, where we never miss'd either of wild Hogs, Deer, fat Monkeys, *Corrosoes* (a kind of large wild Fowl) Pidgeons, Parrots and Turtle-Doves. In some of these Islands we met with whole Woods of *Sapadilly* Trees, bearing a Fruit not unlike a Pear, but more juicy; underneath the Trees we found a kind of Testaceous Animals having but small Bodies, but large Claws like Crabs; we found them very good Food. But one time some of our Men met with some large ones in another place, and feeding very heartily upon them, they grew very sick after them; we attributed this to the *Manchancel* Trees, of which there grow great store in this Isle; the Fruit of them is not unlike a Crab, and has a very agreeable scent, but is extreamly unwholsome, and so are all the Creatures that feed upon it. Hence it is that the Privateers take it for a general Rule, whenever they meet with any unknown Fruits, that unless they perceive them peck'd by the Birds, they never eat of them. Most of the other *Sambelloe* Isles abound likewise in these Trees.

The Isle of Scuda.

The Products of the Sambelloes.

The Manchancel Tree.

One Day as we were a cruising among these Isles, we accidentally met with a Sloop from *Jamaica* to Trade on this Coast, she sail'd along with us to *La-sounds* Isle, where we came to an Anchor, and the next Morning fired two Guns as a Signal to the *Indians* living on the Continent, who were our Friends. Accordingly the *Indians* came aboard us with the five Men we had left behind us in *May* last (it being now *August*) Mr. *Wafer* being Painted and Dress'd like an *Indian*, was some time aboard before any of us did know him, and one *Richard Colson* dy'd within a few Days after.

How they meet with their Men left behind them.

Then we sail'd to other Isles more to the E. in quest of Captain *Wright* and *Tanky*; who having been in chase of a whole Fleet loaden with *Indian* Wheat, Hogs, and Fowls bound for *Carthagena*, had forced them and their Convoy ashoar, except two which they took.

1681.

Thus being well stor'd with Corn, we sail'd for the Coast of *Carthagena*, and pass'd by the Mouth of the River of *Darien* which is very broad, but has not above 6 foot Water at high Tide. Captain *Coxen* did some Months before go up that River with a certain number of Men; they went at least a hundred Leagues upwards, before they met with any Town or Village, but which was Inhabited by *Spaniards*, who used to Trade with the *Indians* in Gold. The Inhabitants were surpriz'd to see them there and much more how they could come thither, without being attack'd by a certain barbarous *Indian* Nation, who as they said would not keep or admit of the least Correspondence with any white People: They told them that they lived betwixt them and the Rivers mouth and both sides of it sixty Leagues from the Sea, and were always in War with the *Darien Indians* our Friends. Their chief warlike Instrument is a Trunk of eight foot long, out of which they blow poisoned Darts made of *Macaw*-wood, no bigger nor longer than a knitting Needle, wound about with Cotten on one end, and sharp and knotched on the other, like a Harpen. I had this from several of Captain *Coxen's* Men, who accompany'd him in this Expedition; and among the rest from one Mr. *Cook*, a Person of unquestionable Credit.

We sailed, without any remarkable Accident by the way, in sight of the famous City of *Carthagena*, which lying upon the Sea, we had a full view of it, as well as of the Convent of *Madra de Popa*, or *Nuestra Senora de Popa*, dedicated to our Lady, and seated on the top of a very steep Hill on the back-side of the City; it contains an incredible Wealth, gathered by the Offerings made there by the *Spaniards* of these Parts, who come hither on Pilgrimage, as the *Europeans* do to our Lady of *Loretto*.

We sailed forward to *Rio Grande*, where we took in some fresh Water a League without the Mouth of the River. Thence directing our Course to the East, we passed in sight of St. *Martha*, a goodly place, and commodious Harbour, belonging to the *Spaniards*, built close to the Sea shore; within few Years before it has been twice ransack'd by the Privateers; it is at 12 d. North Latitude. Deeper into the Country is a vast peeked Mountain, which I judge to be higher than the *Tenariffa* of the *Canaries*; I have seen it 50 Leagues at Sea, and I have heard others say, they saw it 60 Leagues off; I have heard others say, that they have seen at once *Jamaica*, *Hispaniola*, and the Mountain of St. *Martha*, tho' the nearest of these two Places is 120 Miles from it, and *Jamaica* near 150 Leagues; but I must doubt whether either of these two Isles can be seen 50 Leagues off. The top of this Mountain is commonly covered with Clouds; but when it is not it appears white, perhaps from the Snow wherewith it is covered.

Rio Grande.

St. Martha.

After we came 6 Leagues to the East of St. *Martha*, we went back in our Canoes to the entrance of *Rio Grande*, which exonerates it self into the Sea near St. *Martha*, with an intention to attempt some Places within the River, but finding them upon their Guard we return'd to our Ships and sail'd to *Rio la Hacha*, where there is a strong Town, bearing the same Name, seated on the West side of the River, where is a good sandy Road for Ships. This Town had been several times ransacked by the Privateers, but was lately rebuilt again by the *Spaniards*, who drive a considerable Trade with the *English* of *Jamaica*. We soon made our selves Masters of a Fort with two great Guns, which we carried aboard; then we march'd to two small *Indian* Villages, call'd the *Rancheries*, near which, within five Leagues from the Shore is a Pearl Bank, whither the *Spaniards* send their Barks, and by the help of certain *Indian* Divers, who go down two and two at a time, with a Basket let down after them, bring up the Oisters till the Vessel is fill'd, which being carried ashore, *Indian* old Men and Women, appointed for that purpose, open the Oister, and in the presence of a *Spanish* Surveyor gather the Pearls; notwithstanding which, the *Indians* sometimes keep some of the choicest for themselves, which they sell to the *Jamaica* Men. The Meat of the Oisters they dry in the Sun. We saw great heaps of Oister Shells, but no People, nor any thing else. But betwixt this and *La Hacha* we took some of the Natives, who appear'd to us a barbarous and fierce sort of People, with longish Visages, black

La Hacha.

Pearl Banks.

The Natives Hair.

1681 Hair, and high Notes. The *Spaniards* say they are a considerable Nation, who live under their own Government, yet admit some *Spanish* Priests among them. They inhabit a barren sandy champain Country, which however produces some thin coarse Grass, which maintains a considerable quantity of Cattel, and belongs in common to the Natives, they having no other Propriety but as far as their Houses and small Plantations, or Inclosures reach, which they are at liberty to remove when they please. Hereabout they are not so much pester'd with Rains as to the West of St. *Martha*, yet are they not free from Thunder shores; but these are also neither so violent, nor so frequent, as on the Coasts of *Porto Bello* and *Carthagena*, no more than the West Winds in the W. *Monsoon*.

After some stay here, we sail'd again to the Coast of *Carthagena*; but being met by the West Winds, betwixt *Rio Grande* and that place, we were kept three or four Days to the East of it. Here we descry'd a Sail, which Captain *Wright*, who sail'd the best, chac'd, and engaged by Noon, and in half an Hour after Captain *Young* coming up with her, they boarded and took her, before our Tartane could come to their assistance; she prov'd a Ship carrying 12 Guns, and 40 Men, loaden with Sugar, Tobacco, and Marmalet, bound for *Carthagena* from St. *Jago* in *Cuba*.

They take a Prize near Carthagena.

We were no sooner return'd with her to *Rio Grande*, to repair our Rigging, but a contest arose betwixt Captain *Wright* and *Young* about the Prize, which in Justice belong'd to the first; but the Men being most against him, the Prize did fall to Captain *Young*'s share.

We set sail again for *La Hacha*, where having set the Prisoners on Shore, and in the beginning of *Novemb.* steer'd our Course to *Curisao*, under favour of the West *Monsoon*, where Captain *Wright*, going a-shoar, offered the Sugar to sale to the Governour, which he excused, alledging his good Correspondence with the *Spaniards*; but that if we would sail to St. *Thomas*, an Isle under the Jurisdiction of *Denmark*, he would lend both Goods and Money to deal with us for the Sugar at a certain Rate.

The Isle of Curisao. The Isle of *Curisao* is the only considerable Island under the *Dutch* Government in the West *Indies*, at 12 Deg. 40 Min. North Latitude; the North point eight Leagues from the Continent, opposite to *Cape Romano*. Its length is near five Leagues, and its Circuit about ten Leagues. At the East end, on the South side, it has a goodly Haven, call'd St. *Barbara*, but its chiefest Harbour is on the same South side, three Leagues from the S. E. Point, where is a strong Fort, and a pretty large Town, inhabited by the *Dutch*. Ships that are to go in must keep close to the entrance of the Haven, and have a Rope ready to send one end a-shore to the Tent; for the Current setting to the West, there is no safe Anchorage at the Mouth, but within it is secure riding. The Island is for the most part level, except two high Hills at the East end, which formerly was all Pasture for Cattel, but of late they have made some Sugar Works and Plantations. But what makes this Island considerable is, its Traffick with the *Spaniards*, who used to come from *Carthagena* and *Porto Bello*, and buy up Negroes and *European* Commodities there; and tho' a great part of that Trade is now manag'd by those of *Jamaica*, yet the *Dutch* still drive a vast Trade in all sorts of *European* Goods all over the West *Indies*.

The Isles of Aruba and Bon Airy. There are two other Isles (but of much less moment) belonging to the *Dutch* in these Parts; one is called *Aruba*, eight Leagues West of *Curisao*; the other *Bon Airy*, ten Leagues to the East of it; these furnish the *Dutch* of *Curisao* with Provisions. I was inform'd that the first is in all respects like *Bon Airy*, only something less, therefore I will give you a description anon. There lies another Isle not above a League long, call'd Little *Curisao*, betwixt Great *Curisao* and *Bon Airy*.

Curisao being so conveniently seated for Traffick, the *French* about 25 Years ago, tempted the Governour to betray the same to them for a good sum of Money, which he did accordingly; but his Death prevented the execution of that Design. Notwithstanding this, the *French* did not lay aside all their hopes, but after the taking of *Tobago*, the Count *d'Estree* was sent with a Squadron of Men of War to *Martinico*, where being join'd by two Privateers, they sail'd towards *Curisao*; but in their Voyage were all lost on a ridge of Rocks jetting out from the Isles of *Aves*, except two Ships, one a Privateer, and the other a *French* Frigot.

The French enterprize against Curisao.

Finding that we could not succeed with the *Dutch* Governour of *Curisao*, we sail'd to *Bon Airy*, where we truck'd some of our Sugar for *Irish* Beef. 1681

Bon Airy lies the most East of the *Dutch* Isles in these Parts, and is also the largest, tho' not the most considerable, being 17 Leagues in Circumference, at 12 Degrees 16 Minutes. The Harbour is in the middle of the Isle, on the South side of it, in a deep Bay, where Ships may ride securely in sixty Fathom Water at half a Cables length of the Shore, where they must take care to fasten the Ship with a Rope, for fear of the Land Winds which blow in the Night time, the Ground being so steep as not to be able to hold the Anchor against the force of the Wind. Half a Mile to the West of this Haven, some low Lands jet out into the Sea, with a Channel betwixt them and the Isle. About half a Mile from the Shoar, directly opposite to the Harbour, is a small Village, inhabited by a few *Indian* Families, and Soldiers, and a Deputy Governour, tho' there is no Fort there. The *Indians* live upon Husbandry; upon feeding of Cattel, Goats, Horses and Cows, but have no Sheep. They also plant Maiz and *Guiney* Corn. There is a fresh Water Spring near the Village, and at the West end is another, near which live three or four Families more; besides which there are no other Springs, nor Houses, in the whole Isle. But on the South side, not far from the East end, is a good Salt-pond. *Bon Airy.*

From hence we set Sail to the Isle of *Aves*, i. e. the *Birds Isle*, situate about eight or nine Leagues to the East of *Bon Airy*, and fifteen Leagues from the Continent, at 11 Degrees 45 Minutes North Latitude. It is scarce four Miles long, and at the East end not above half a Mile broad. The North side is all low Ground; but on the South side is a rocky ridge. The West end is a Champain Country without any Trees. About the middle of the Isle, on the North side, is a very Commodious Harbour, especially for Careening, which makes it much frequented by the Privateers, who have found out divers good Springs thereabouts. The ridge of Rocks, where, as we told you, the *French* Fleet was lost, begins at the East Point, and extends three Miles to the North; then turning off to the West runs in the shape of a half Moon. To the West of this rocky Bank (which has three little Isles, three Mile from the Main within it) is safe Anchorage and Sandy Ground. *The Isle of Aves.*

The before mentioned *French* Squadron, coming from the East, the Admiral's Ship fell in unexpectedly on the back of this ridge, and fired several Guns as a warning to the rest; but these misconstruing the matter, and imagining he was engaged with some of the Enemy's Ships, made all the Sails they could, and run after him upon the Rocks, within half a Mile of one another, his Light on the Main top being an unhappy Guide to them. Most of the Men got on Shoar, but dy'd with the hardships they endured; whereas the Privateers, that were better accustom'd to such Disasters, lived very well upon the Wines, Brandies, and other Provisions that were not ashore, which served them for three Weeks, without Bread, till they met with an opportunity of being transported to *Hispaniola*. They saw about 400 *French* men carried with part of a Ship into the Sea, without ever being heard of afterwards; they were all drunk, and went off singing and roaring, having not the least sense of their Danger. *The French Squadron lost near this Isle.*

Soon after, a pleasant Adventure happen'd to Captain *Pain*, a Privateer of six Guns, who wanting some new Rigging, came to this Island to furnish himself with Masts, and such other things as he wanted, and as he supposed were cast ashear thereabouts; but before he had done, a *Dutch* Man of War of twenty Guns came thither from *Curisao* to take up the Guns; but perceiving a Vessel within the Riff, prepared to attack her the next Morning. Captain *Pain* made all possible preparations for a brave defence, but with little hopes of saving himself, when in the dusk of the Evening, he saw a *Dutch* Sloop come to an Anchor in the Harbour, at the West end of the Isle; looking upon this as a favourable opportunity to make his escape, he sent in the Night time two of his Canoes, who boarding the Ship without any resistance, took her, and finding her a rich Prize, he went away with her, leaving his empty Ship to the Enemy. *The first Prize that Capt. Pain takes.*

The Isle of *Aves* has got its name from the vast quantity of Birds found there, especially those called *Boobies*, and *Men of War*. The *Boobies* are a kind of Water Fowl, of an Ash colour, and of the bigness of a small Pullet; they have Bills longer and bigger than those of a Crow, and somewhat broader at the end, with *The Isle of Aves has its name from the Birds.*

1681 with flat Feet like a Duck. I took notice that these Birds are whiter here than in other places, and that they build their Nests on the Ground, whereas every where else, that ever I saw, they build upon Trees Their Flesh is black, and tastes much after Fish.

The Man of War. The *Men of War* is a Bird resembling both in shape and bigness to a Kite, but is black, and has a red Neck. It feeds on Fish, which when she intends to catch, she comes down Head-foremost, like a Kite, to the surface of the Water, and nimbly snatching the Prey, with the Bill, out of the Water, soars aloft again. Her Wings are long, her Feet like those of the other Land-fowl, and she builds her Nest on Trees, if she can meet with any.

The little Isle of Aves. About four Leagues to the East of this Isle is another, call'd the little Isle of *Aves*, destitute of Inhabitants, and producing scarce any thing else but *Mangrove* Trees, some Pines, but especially *Boobies*.

1682 We stay'd at the Island of *Aves* till *February* 1682, when we sailed thence to the Isles of *Roca*, where whilst near one of them, we were employ'd in Careening our Sugar Prize, we made a kind of a House to shelter our selves in. About the same time a *French* Man of War of 36 Guns coming into the Road, thro' the Isles, we sold about ten Tuns of our Sugar to her, and I was kindly entertained aboard her by the Captain and Lieutenant, who was a Knight of *Maltha*.
