Les importations américaines sont mesurées sur une base douanière, sauf entre 1976 et 1981, où les importations étaient mesurées sur une base franco le long du navire (FAS). Note: Les chiffres sont arrondis indépendamment.

VUE D'ENSEMBLE:

Les données rapprochées, pour 1985, du commerce de marchandises entre le Canada et les Etats-Unis montrent un excédent canadien record de \$21.5 milliards, cet excédent avait été au préalable estimé à \$18.6 milliards par le Canada et à \$29.7 milliards par les Etats-Unis. Le Canada a enregistré un excédent du commerce de marchandises avec les Etats-Unis depuis 1976. Cependant, au cours des six dernières années et, en particulier depuis 1982, l'excédent a augmenté à chaque année.

L'augmentation de \$1.5 milliard, par rapport au chiffre de 1984, s'explique par une hausse de \$8.1 milliards des exportations canadiennes (direction sud) - supérieure à celle de \$6.6 milliards des importations canadiennes (direction nord).

COMMERCE SUD-NORD:

Les principaux ajustements de rapprochement pour le commerce sud nord se présentent ainsi:

* Une addition de \$8,252 millions aux exportations américaines,

correspondant à un ajustement résiduel pour la non-réception des documents d'exportation américains. (Cet ajustement représente 12.8% de la valeur publiée aux Etats-Unis, comparativement à 11.3% en 1984. Depuis 1979, l'importance de cette correction est restée relativement stable, s'établissant à 12.9%, en moyenne, de la valeur publiée.)

* Un ajustement de définition pour les exportations américaines totalisant \$835 millions, comparativement à \$462 millions en 1984. Les principaux changements sont dus à la cessation de l'ajustement pour les échanges de pétrole au large des côtes de l'Est, qui représentait \$324 millions en 1984, et par l'inclusion de \$640 millions pour les machines électriques, en raison de méthodes de déclaration différentes pour les pièces d'ordinateur.

* Une déduction de \$469 millions de la valeur des importations canadiennes, due à une révision de l'évaluation des produits automobiles dans le secteur du matériel de transport. Cet ajustement sera incorporé aux valeurs publiées de 1985 au moment de la publication des données finales en décembre 1986.

COMMERCE NORD-SUD:

* Comme dans le cas du commerce sud-nord, le principal ajustement de rapprochement a été l'ajustement résiduel provenant de la non-réception des documents d'exportation canadiens - cet ajustement a totalisé \$3,116 millions et représente 3.3% de la valeur canadienne publiée. La non-réception, exprimée en pourcentage de la valeur publiée canadienne, était de 3.3% également en 1984, et s'établit à 3.1%, en moyenne, par année depuis 1980.

* Un ajustement de \$1,337 millions pour la définition des importations pour tenir compte principalement de la valeur des importations américaines d'électricité en provenance du Canada.

* Un ajustement d'erreur de \$930 millions des importations américaines, principalement pour ajuster des révisions de traitement et les ré-exportations canadiennes de biens d'origine américaine.

CHANGEMENT DE METHODOLOGIE:

A compter de janvier 1985, le Canada a cessé de mesurer les importations à leur juste valeur marchande et les mesure à la valeur à la transaction afin de prendre en compte les méthodes d'évaluation basées sur le système de l'Accord général sur les tarifs et le commerce (GATT). Au premier trimestre de 1985, l'évaluation des importations canadiennes a été éliminée, ce qui s'est traduit par un réduction de \$102 millions en 1985, comparativement à \$1,890 millions en 1984.

NOTE AUX UTILISATEURS:

La statistique du commerce entre le Canada et les Etats-Unis fait l'objet d'un rapprochement afin d'obtenir les meilleures mesures possibles, reconnues par Statistique Canada et le US Bureau of the Census, en ce qui a trait au commerce bilatéral entre les deux pays.

Dans le présent communiqué de Statistique Canada, dont la diffusion coïncide avec celle du US Bureau of the Census, les valeurs sont exprimées en dollars canadiens et la balance commerciale est présentée du point de vue canadien (excédent/déficit).

1983

Unless otherwise indicated, the Canadian import and export figures in the following tables are shown on a "customs" basis. The figures on a "customs" basis are the totals of detailed merchandise trade data tabulated from customs documents according to procedures and concepts explained in Statistics Canada's Summary of External Trade. The figures on a "balance of payments" basis reflect a number of adjustments applied to the customs totals to make them consistent with the concepts and definitions used in the system of national accounts. The adjustments include timing adjustments to exports of crude petroleum, natural gas and wheat and to receipts and payments for capital equipment; deduction of transportation charges included in the customs returns and the reduction of import values calculated for customs duty purposes to values which reflect transaction prices.

Belgian's own balance sheet as at 31 December 1951, and I mentioned

that even though imports had increased to 4520 million Belgian francs

U.S. imports are measured on a Customs basis, except between 1976 and 1981 inclusive where imports were measured on a free alongside ship (f.a.s.) basis. Note: Each figure is rounded independently.

OVERVIEW

Reconciled figures for 1985 show Canada posted a record surplus of \$21.5 billion in merchandise trade with the United States. The surplus had previously been estimated at \$18.6 billion by Canada and \$29.7 billion by the United States. Since 1976, Canada has reported a merchandise trade surplus with the United States and for the past six years it has increased annually - most notably since 1982.

The overall increase of \$1.5 billion from the 1984 surplus reflected an \$8.1 billion advance in Canadian exports to the U.S. (southward trade) that exceeded a \$6.6 billion increase in Canadian imports from the U.S. (northward trade.)

NORTHWARD TRADE:

The major reconciliation adjustments to the northward trade flow were as follows:

* An addition of \$8,252 million to U.S. exports, representing a residual adjustment for non-receipt of U.S. export documents. (This represents 12.8% of the U.S. published value, up from the 1984 level of 11.3%. Since 1979, non-receipt levels have remained fairly stable,

averaging 12.9% of the published value.)

* A definition of trade adjustment for U.S. exports of \$835 million, up from the 1984 level of \$462 million. Major changes to the adjustment in 1985 were inclusion of \$640 million in electrical machinery, created by different reporting methods for computer parts, and discontinuation of the Eastern off-shore swap oil adjustment which was \$324 million in 1984.

* A \$469 million reduction of Canadian imports of transportation equipment, caused by a revision to valuation in automotive products. This adjustment will be incorporated into the 1985 published values at the time of the December 1986 final data release.

SOUTHWARD TRADE:

* As in northward trade, the major reconciliation adjustment was the residual adjustment for non-receipt of Canadian export documents which totalled \$3,116 million. This represented 3.3% of the Canadian published value, compared with 3.3% in 1984; since 1980 non-receipt, as a percentage of Canadian published value has averaged 3.1% annually,

* An addition of \$1,337 million to U.S. imports for trade definition, mainly to account for U.S. imports of electricity from Canada.

* A reduction of \$930 million in U.S. imports to adjust for processing revisions, and Canadian re-exports of U.S. origin goods.

NOTE TO USERS:

Canada and United States trade statistics are reconciled to arrive at the best measure of bilateral trade between the two countries, accepted by Statistics Canada and U.S. Bureau of the Census. The reconciliation process is conducted quarterly by commodity groupings and summed to annual totals.

In this release by Statistics Canada which coincides with that by the U.S. Bureau of the Census, the values are expressed in Canadian dollars and the trade balance is presented from the Canadian stand point (surplus/deficit).

METHODOLOGY CHANGE:

Effective January 1985, Canada moved from measuring imports at fair market value to transaction value to reflect valuation methods based on the General Agreement on Tariffs and Trade (GATT) Valuation Code System. In the first quarter of 1985, the Canadian import valuation was phased out, resulting in a reduction of \$102 million in 1985, down from the reduction of \$1,890 million in 1984.
