The relative bearing of the Customs Tariff upon the Commerce of each Province of the Dominion is exhibited in the following table:—

In an examination of this table, it is necessary to bear in mind that the percentage is based upon the value of all goods imported, dutiable and free, and the proportion of free goods imported in one province in excess of another, will so far lessen the percentage of duty. So, also, the province importing the largest proportion of goods subject to the higher rates of duties, such as spirits and tobacco, will show a proportionately higher average percentage.

The percentages in this table are subject to the same variations, from the same causes, as those affecting table No. 7, but as the same amounts of duty, as shown in the former table, are the dividends, while the divisors are smaller, the quotient must, of necessity, show a higher percentage. In other words, the amount of duty is the same in each table, while the values are less in the latter than in the former.
