2. Legal agent in prosecution for Departments of Inland Revenue and Agriculture
3. $478.90.
4. In the counties of Arthabaska and Drummond, Quebec.

CANADIAN NATIONAL RAILWAYS—COLONEL J. CARLETON BROWN

Mr. CHAPLIN:

1. Is Colonel J. Carleton Brown an officer or employee of the Canadian National Railways?
2. If so, in what capacity is he employed, what are his duties and what is his salary?
3. Was the said J. Carleton Brown sent, as a special representative of the Canadian National Railways in the year 1923, to the Far East?
4. If so, what was the purpose of his trip and what were the results?
5. What was the cost to the railway of the said trip?

Hon. Mr. GRAHAM:

1. No.
2. See answer to No. 1.
3. Yes.
4. Engaged as special representative to inquire into matters of importance for Canadian Government Merchant Marine and Canadian National Railways in Australasia and the Orient, including personnel of staffs in those countries, possibilities of traffic developments, etc.
5. May 21, 1923, to March 31, 1924, $19,659.06.

CANADIAN NATIONAL RAILWAYS—RADIO EQUIPMENT

Hon. Mr. MANION:

1. What proportion of the radio equipment of Canadian National Railways is Canadian made?
2. What proportion of the equipment has been imported from United States?
3. Is not radio equipment made in Canada?
4. What is the personnel of the radio staff of the Canadian National Railways?
5. Have any Americans been put in charge of any branch of this work?
6. If so, why has this been done?

Hon. Mr. GRAHAM:

1. 86.90 per cent.
2. 13 1/10 per cent. American equipment was not imported by the Canadian National Railways, but purchased through Canadian dealers handling such equipment.

3. Radio equipment is made in Canada, but not the particular type of set that Canadian National Railways are using, although it is anticipated that this equipment will shortly be made in Canada, when the railways will be glad to make use of same. Meanwhile railway officials are daily engaged in experimenting with various equipment produced by Canadian manufacturers, and hope soon to be able to obtain complete requirements of such equipment in Canada.

4. At Montreal headquarters: radio engineer, assistant radio engineer, director of programmes, foreman of installation, one mechanic, three clerks, ten train operators.

At Ottawa: broadcasting manager, station operator, assistant station operator.

At Winnipeg: one representative.

5. Yes.

6. Due to the fact that the United States has been in advance of Canada, up to the present time, in radio development work, particularly in the application of radio to moving trains. The officers employed represent, in the judgment of the administration, the best qualified experts obtainable.

QUEBEC HARBOUR

Mr. LAVIGUEUR:

1. Has the government received a request from the Quebec Harbour Commission for a certain amount of money to be spent on the improvement and development of said harbour? If so, what is the amount?

2. Is it the intention of the government to include in the supplementary estimates, an amount of money for the development of said harbour?

Hon. Mr. CARDIN:

1. The Quebec Harbour Commissioners have submitted a programme for further development of facilities but no conclusion has been reached respecting it.

2. Answered by No. 1.

QUEBEC RAILWAY STATION

Mr. LAVIGUEUR:

1. Is it the intention of the new board of management of the National Railways to build the proposed railway station at Quebec?

2. If so, have plans been made and what will be the approximate cost?

3. When will the work commence?

Hon. Mr. GRAHAM: The management reply that the matter of improving passenger terminal facilities at Quebec is under active consideration but final decision not reached.

AUDITOR GENERAL'S DEPARTMENT

Mr. SHAW:

The estimates of the Auditor General's department contain an item of $10,000 to cover appointments to positions, proposed to be exempted from the operation of the Civil Service Act.

1. What are these positions?

2. Why are they so exempted?

Hon. Mr. ROBB: No positions have been created or appointments made. Explanation of the item will be made when the estimates are under discussion.

CAMP BORDEN

Mr. BOWEN:

1. Was there a fire of considerable magnitude at the flying corps camp at Camp Borden during the calendar year 1923?

2. If so, what would be the actual replacement value of the equipment, engines and technical stores destroyed?

3. What was the value of the building or buildings destroyed?

4. Was a court of inquiry convened in connection with any such fire or fires and if so, what was the finding of any such board or court?

5. Has the pay of warrant officers, non-commissioned officers and men of the flying corps been reduced during the last year?

6. Have married men on account of reduced pay, had to leave the service?

7. Is the pay of certain senior officers to be increased in the near future?

Hon. Mr. MACDONALD:

1. There were two fires, one on August 29, 1923, which destroyed the aircraft repair section, No. 8 hangar, dope shop, paint shop and latrine.

The second fire occurred on October 16, 1923, and destroyed the technical stores buildings and contents.

2. $230,000.

3. $30,000 (buildings destroyed in both fires).

4. Yes. The finding of the court of inquiry into the first fire is as follows:

"The court is unable to determine the cause of the fire; that the responsibility for the outbreak of fire is not attributable to any person or persons."

The finding of the court of inquiry into the second fire is as follows:

"The court is of the opinion that the fire being due to causes unknown the possibility of an incendiary origin is indicated, warranting an investigation by secret service operatives. This is especially so as the adjoining building containing essential machinery and stores was totally destroyed by fire some six weeks earlier, it not being possible to ascertain the cause thereof."

5. Pay of warrant officers, non-commissioned officers and men has, in a good many cases been reduced on the formation of the permanent Royal Canadian Air Force.

6. Forty-six married men, and twenty single men did not re-enlist in the permanent Royal Canadian Air Force. (This number includes men medically unfit, over age, and also those who did not wish to enlist in the permanent force).

7. No. Pay of senior officers was decreased on the formation of the permanent Royal Canadian Air Force.

THE AUDITOR GENERAL

Mr. BROWN:

1. What was the age of the present Auditor General at the time of his appointment to present office?
2. When did he receive his degree of chartered accountant in the province of Quebec?
3. Was he at the time when degree was received or before or after a member or officer of any accounting society or accounting institute of any kind, and if so, what office did he hold in such society or institute, and for what period of time did he hold such office?
4. When and where did he try his preliminary examination as chartered accountant? (b) Who were the examiners at such examination? (c) Was he successful at such examination?
5. When and where did he try his intermediate examinations? (b) Who were the examiners at such examination? (c) Was he successful at such examination?
6. Do his present qualifications in Quebec entitle him to full membership in the Institute of Chartered Accountants in the province of Ontario? (b) Is he eligible for affiliation with the Institute of Chartered Accountants in Great Britain as a full practising member?
7. Was no one available in the civil service for promotion to Auditor General who possessed all necessary qualifications and who had also the benefit of long experience in handling government business?
8. Did the present Auditor General when appointed, insist upon his offices being decorated and refurnished? (b) If so, who obtained the contract or contracts for supplying such furnishings? (c) What did the new furnishings cost in detail?

Hon. J. A. ROBB: The hon. member will recognize, I am sure, that many of these questions are of a personal character and do not relate to matters of departmental record. I submit that such questions as might arise in connection with the appointment of the officer referred to could be dealt with more appropriately and more fully when the estimates of the department are under review. Under these circumstances I ask my hon. friend if he would drop the question.

Mr. SPEAKER: Answered.

DISEASE FROM IMPORTATION OF CHICKS

Mr. GARLAND (Carleton):

Is the government aware as to whether or not there have been any epidemics such as chickenpox or other disease introduced into Canada by the importation of baby chicks from United States?

Hon. Mr. COPP: No information.

BRIDGETOWN, N.S., POSTMASTERSHIP

Mr. CHARTERS:

1. When did the position of postmaster at Bridgetown, Annapolis County, Nova Scotia, formerly held by the late A. D. Brown, fall vacant by his decease?
2. Has the position of postmaster since been filled?
3. Were applications for the position of postmaster called for by the Civil Service Commission?
4. If so, what applications were received in reply to the request?
5. Were any of these applicants appointed to the position of postmaster?
6. If not, why?
7. Is it true that Dr. Armstrong, a brother of the Prime Minister of Nova Scotia, is acting postmaster?
8. When will his tenure of office cease?

Hon. Mr. COPP:

1. October 3rd, 1923.
2. No.
3. Yes.
4. W. W. Flett, O.A.S., disability; O. A. Lloyd, O.A.S., G. H. Dechman, O.A.S., C. E. Troop, O.A.S., H. V. Lantz, O.A.S., Dr. M. Armstrong, G. E. Nichols, H. A. Goldsmith, Miss M. A. L. Roberts, J. H. Hicks, N. Wentzell, E. N. Marshall, all of Bridgetown, and L. G. Young of Calgary.
5. Doctor Armstrong placed in charge temporarily, pending a permanent appointment.
6. Investigation into the qualifications of candidates not yet completed.
7. No information regarding relationship.
8. Temporary arrangements will cease as soon as a permanent appointment has been made.

CANADIAN NATIONAL RAILWAYS—LOAN

Sir HENRY DRAYTON:

1. With reference to the $50,000,000 loan of the Canadian National Railways of last February, what unused and unallocated balance of this loan is still in the hands of the minister?
2. What is the total of requisitions received from the Canadian National Railways for further payments under this loan, and not yet made?
3. What further amount, if any, representing liabilities of the Canadian National Railways, does the management thereof desire to discharge out of such balance?

Hon. Mr. GRAHAM:

1. $15,184,040.20 held in trust by Minister of Finance.
2. No unpaid certificates on hand.
3. Balance will be applied to payment of capital obligations.

IMMIGRATION CANTEENS

Mr. LAVIGUEUR:

Is it the intention of the Department of Immigration and Colonization to manage the restaurant and canteen at Halifax and Montreal?

Hon. Mr. ROBB: Montreal, yes.

Question of Halifax to receive consideration of department.

BANKRUPTCY ACT

Mr. SIMPSON:

1. Has the government been requested to amend the Bankruptcy Act as follows:—
(a) By establishing in the province of Ontario a bankruptcy division for each of the judicial districts?
(b) By conferring original bankruptcy jurisdiction (concurrent with the Supreme Court of Ontario), on each of the county and district Courts in Ontario in

cases of bankruptcy within their respective territorial limits, subject to appeal to a Divisional Court of the Supreme Court of Ontario?

(c) By eliminating the provision for the appointment of official receivers and by substituting therefor a provision for the appointment of fit and proper persons as authorized trustees, one for each of the said bankruptcy divisions, to whom court order shall refer bankrupt estates, and to whom respectively assignments shall be made by bankrupts carrying on business in his division, and who, by virtue of his appointment, shall become an officer of the court, in respect of the bankrupt estate?

(d) By making such other amendments of said Act rendered necessary by above suggested amendments?

2. Is it the intention of the government to so amend the act during the present session?

Hon. Mr. LAPOINTE:

1. Yes.

2. Under consideration.

MAINTENANCE OF IMMIGRANTS

Mr. LAVIGUEUR:

1. What is the amount paid for board, per day, to the Department of Immigration and Colonization, by each individual immigrant detained?

2. What is the amount paid, per day, to the restaurant keeper for the board of immigrants detained?

3. Has the department the intention this year, of realizing a profit at the expense of immigrants?

Hon. Mr. ROBB:

1. In cases of all detained immigrants rates charged for maintenance are as follows: Medical cases, adults, $2,00, children, $1.00; civil cases, adults, $1.75, children, .90. Certain medical and civil detentions are chargeable to the transportation companies as provided for by sections 34 and 44 respectively of the Immigration Act.

2. At Quebec last year 30 cents per meal. Prices for this year not yet determined.

3 No.

NATIONAL TRANSCONTINENTAL RAILWAY

Mr. CALDWELL:

1. What was the cost of construction of the National Transcontinental railway from Quebec to Moncton?

2. Does the operation of that portion of the National Transcontinental railway between Quebec and Moncton show a profit, after paying interest on cost of construction, cost of maintenance, and operating costs?

3. If so, what is the amount? If not, what is the amount of such deficit?

4. What did the International railway from St. Leonards Junction to Campbellton cost the government?

5. Does the said International railway show a profit, after paying maintenance, and operation cost, and paying interest on the capital investment in said road?

6. If so, what is the amount? If not, what is the amount of such deficit?

Hon. Mr. GRAHAM:

1. $35,000,000, Levis to Moncton.

2. No division of operating revenues and expenses covering the line between Quebec and Moncton made after April 1st, 1920.

3. See reply to question No. 2.

4. The purchase price of the International railway from St. Leonards Junction to Campbellton was $2,700,000.

5. No division of operating revenues and expenses covering the International railway made after December 31st, 1920.

6. See reply to question No. 5.

QUESTION PASSED AS ORDER FOR RETURN

WOODWARD ELEVATOR—VANCOUVER

Mr. COOTE:

1. Why was the Woodward elevator at Vancouver taken over by the Vancouver Harbour Commission?

2. Has the said elevator been leased to other parties? If so, what are the names and addresses of the lessees and on what terms was the said elevator leased by the Vancouver Harbour Commission to the said parties, and to what uses do the said lessees propose to put the said elevator?

3. Has the government sanctioned the leasing of this elevator?

4. Has the government furnished moneys to the Harbour Commission for the acquisition of this elevator, or has the government consented that any moneys advanced to the Vancouver Harbour Commission should be used for this purpose, or for completion and equipment of said elevator?

5. If it was advisable, either in the interest of the grain traffic or the port of Vancouver, to acquire this elevator, why is it not to be operated by the Vancouver Harbour Commission?

HOME BANK INVESTIGATION

On the Orders of the Day:

Mr. H. E. SPENCER (Battle River): I understand that the evidence given from day to day before the royal commission inquiring into the affairs of the Home Bank will be printed, and I would ask the government if sufficient copies can be printed for the members of the House, or at least for the members of the Banking and Commerce committee.

Hon. J. A. ROBB (Acting Minister of Finance): I do not think there is any objection to that.

Hon. JAMES MURDOCK (Minister of Labour): Sufficient copies have been printed for members of the House and the Senate, and are available.

INCOMPLETE ANSWER TO QUESTION

On the Orders of the Day:

Mr. A. W. NEILL (Comox-Alberni): I wish to draw the attention of the government to an error in answering a question. On the 19th of March I asked the following question:

What tonnage of coal was supplied to the boats of the Canadian Government Merchant Marine operating on the Pacific ocean during each of the calendar years of 1921, 1922 and 1923?

The answer I got would convey the impression that all the coal that was supplied was obtained from British Columbia, but as a matter of fact I have it on the testimony of an eye witness that a very considerable portion was obtained and supplied in Japan, mined by woman and child labour. I think it is proper if that is so, that it should have been so revealed in the answer, and I would ask the government if they would submit an amended answer.

Hon. GEORGE P. GRAHAM (Minister of Railways): I will have the matter looked into. I imagine the department thought my hon. friend wanted to know from whom the coal was purchased in British Columbia, knowing that he takes a deep interest in that matter.

Mr. NEILL: "The Pacific ocean" is the language used.

LAUSANNE CONFERENCE

On the Orders of the Day:

Mr. JOS. T. SHAW (East Calgary): I would like to ask the Prime Minister if there has been any change in the position in regard to the Lausanne controversy since his last statement to the House.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I do not know that I quite understand the significance of my hon. friend's question.

Mr. SHAW: I will put it in more detail. Has the matter been the subject of consultation between the British government and the Canadian government, and if so, has the Prime Minister any statement to make at this stage with regard to the present standing of the matter?

Mr. MACKENZIE KING: I have been communicating with the Prime Minister of Great Britain with reference to a statement made by him in the House of Commons during the course of the debate, and which did not seem to me to represent accurately the position he was referring to. I have had some communication from the Prime Minister in reference to it, and later on will be in a position, I think, to make a statement to the House, but I would like to have the permission of the Prime Minister of Great Britain to refer to his communication before so doing.

BEAUCHAMP'S SENTENCE

On the Orders of the Day:

Mr. PAUL MERCIER (Westmount-St. Henri): Can the government inform the House whether or not the sentence of the convict, Beauchamp, from Montreal has been remitted so far as the lash is concerned?

Hon. ERNEST LAPOINTE (Minister of Justice): The sentence referred to by my hon. friend has not been remitted. Under a statute passed last year any person convicted of an indictable offence has the right of appeal to the Court of Appeal of the province that imposed his conviction, and this appeal must be lodged within a delay to be fixed by the rules of the Court of Appeal of such province. In most of the provinces of the Dominion such rules have been made, and the usual delay is thirty days within which an appeal may be instituted by the convict. In the province of Quebec no such rules have yet been enacted, but I am informed that steps are now being taken to enact such rules. Article 1018 of the Criminal Code as enacted last year provides:

> In the case of a conviction involving sentence of death or whipping the sentence shall not in any case be executed until after the expiration of the time within which notice of appeal or of an application for leave to appeal may be given under this section.

Instructions have been issued to all the wardens of the penitentiaries by the Department of Justice that the lash shall not be inflicted until after the expiration of the delay during which the convict has the right to institute an appeal against his conviction. The message which has been sent in the case of Beauchamp was only a reiteration or confirmation of instructions which the wardens have already received from the Department of Justice. This man's sentence neither with regard to the part of it concerning the lash nor the other part, has not been remitted, and if any application has been made for clemency in this case it will be dealt with in the ordinary way.

I may perhaps add that many things have been stated either verbally or in writing which are not justified by the facts of the case.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): May I ask the Minister of Justice if he would lay on the table of the House the actual order issued from the Department of Justice in the Beauchamp case?

Mr. LAPOINTE: With pleasure.

CHINESE IMMIGRANT'S

On the Orders of the Day:

Mr. J. S. WOODSWORTH (Centre Winnipeg): According to the Halifax Herald of April 14th, forty-nine orientals have arrived there to work on the Nova Scotia coal boats. Subsequent investigation seems to show that the Chinese landed from the S. S. Cedric,

Pier 2, Halifax, direct from Liverpool, England, having arrived there from Canton via the Suez canal, and that these Chinese are imported from the Orient as crews for the Wabana, Daghild, and other vessels of Canadian registration. These Chinese are acting in the capacity of sailors, quartermaster, oilers, stockers, stewards and cooks; they are to relieve the hardy Nova Scotians. The Citizen states that they are there in bond and that permission to land and place the Chinamen on the various allotted vessels was given under letter received from the Deputy Minister of Immigration at Ottawa.

I should like to ask the Minister of Immigration whether he can throw any light upon this very peculiar situation.

Hon. J. A. ROBB (Minister of Immigration): This is the first I have heard of it. I shall direct the attention of the deputy minister to the situation and give my hon. friend a reply tomorrow.

ROYAL GRAIN COMMISSION

On the Orders of the Day:

Mr. O. R. GOULD (Assiniboia): I would like to ask the government if they have any information to give to the House as to the probable date when the Royal Grain Commission will make its report.

Hon. T. A. LOW (Minister of Trade and Commerce): I think an interim report of the commission will be presented before the close of the session. I do not expect, however, that the full report will be brought down until after parliament has prorogued.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed from Tuesday, April 15th, the debate on the motion of Hon. J. A. Robb (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into committee of Ways and Means.

Mr. E. B. RYCKMAN (East Toronto): Mr. Speaker, I am very sorry that I can neither think well nor speak well of this budget. I regard it as the most unfortunate financial statement that was ever delivered in this House. Although not an intimate friend of the Acting Minister of Finance, I hold that hon. gentleman in high regard. I had the honour to be born in the same town as the Acting Minister of Finance and I always felt a certain admiration for him. Frankly, Mr. Speaker, I thought he would be one of the last of hon. gentlemen opposite to present such a budget as we heard on April 10th.

My first objection to the budget is that it is misleading. It gives a false impression to the House and the country in that it represents that there were $30,000,000 available at the end of the last fiscal year to be applied in alleviating taxation, reducing the public debt, or used as might be felt desirable. I say boldly that such a representation is misleading. I also charge that the statement of the Acting Minister of Finance to be found at page 1214 of Hansard, is false and misleading, wherein he says:

> These two amounts totalling $9,622,760.37, together with the $20,786,349 surplus of revenue over total expenditures, reduce our net public debt as of March 31, 1923, by the amount of $30,409,109.37.

How is this surplus made up? It is made up by giving a guarantee, a promise to pay, to the Canadian National Railways, a subsidiary of parliament. Now, is that subsidiary solvent? Admittedly it is not solvent, and it cannot pay its debts. The Minister of Railways has suggested that we should forego about four hundred millions in order that the system might be put on a working basis. The hon. member for Brandon (Mr. Forke) has also suggested that we must reduce this indebtedness and give the railway a chance. Unquestionably we have given the railway system a guarantee, and this country will have to meet it, to the extent of $50,000,000. Yet the Acting Minister of Finance tells the country we have a surplus. It is true the Acting Minister of Finance made a reference in his budget speech to this guarantee. This is what he said:

> Moneys raised by way of guarantee, which places the government in the position of an endorser, do not presently affect the public debt in any way, as they are indirect obligations.

I submit, Mr. Speaker, that we have incurred a direct obligation as a consequence of this guarantee to the railway system, during the last fiscal year, of close upon $50,000,000. The country did not expect such action from the Acting Minister of Finance although it would not have been surprised at such statements being made by others.

There was another chancellor of the exchequer who was in the habit of doing that kind of thing, I refer to the Honourable Peter Smith, formerly Provincial Treasurer of Ontario. That gentleman would take all the receipts he could and exclude all the expenditures he could. Then he would strike a balance and refer to the fine financial position that the province enjoyed. My only suggestion to the government on this branch

of the budget is the following: If it wants a large surplus, why not let the railway have a guarantee of $100,000,000, then carry $50,000,000 to the credit of the government. By the addition of $50,000,000 to the so-called surplus of $30,000,000 we might have a much larger surplus of $80,000,000.

Mr. MEIGHEN: That would be just the same.

Mr. GRAHAM: Not a bit of it.

Mr. RYCKMAN: No statement of the affairs of Canada will truthfully represent the actual conditions which ignores that $50,000,000 guarantee given by the government to the National Railways. Having this false premise the government predicates upon it that it has money to dispose of for the reduction of taxation or the reduction of debt. So entangled will the government become in this financial maze that before long it will be clearly evident to the country that not only is there not a surplus but that an immense addition will have to be made to the existing deficits of past years. The debt of the country is actually being pyramided the surplus does not really exist and yet the government tries to impress the country with the idea that it has a surplus for the reduction of taxation or of debt.

I have a further criticism of the budget to make, and it is a very serious one. The Prime Minister and the Acting Minister of Finance were parties to the budget of last year. To be sure that budget was delivered by the Finance Minister himself (Mr. Fielding), but it expressed the will of the government and indicated what the people might expect from it in the way of a fiscal policy. That policy of a year ago is in sharp contrast to the policy as set forth in the budget of April 10. I am not anxious, Mr. Speaker, to use any harsh language, but I will state that if one will read the budget of May 11, 1923, and will place alongside of it and read the budget of April 10, 1924, he will see that the budget that we are now considering constitutes a plain breach of good faith. I may be asked, did I expect anything else? I certainly did. I may be prejudiced, but I felt when the budget was given to the people last year, as it foreshadowed the fiscal policy of the government with relation to the tariff, that we could expect something abiding, after that address which was given so forcibly on May 11, 1923.

Honour in public life, Mr. Speaker, is an absolute necessity. It is the last thing we can part with. Honour in keeping engagements with the people has been the very breath and existence of public men in all British countries. A recent example of this is the action of the late Prime Minister of Great Britain, who, succeeding the Right Honourable Bonar Law, felt himself bound by a statement that the Right Honourable Bonar Law had made to the effect that there would be no material change in the fiscal policy of Great Britain without a submission to the people. A controversy was carried on at great length in the newspapers that the promise which Bonar Law had made did not constitute a binding obligation. In the next place it was stated that the Right Honourable Stanley Baldwin was not heir to that promise, or called upon in any way to implement it; but he took the position that he was not going to run any risk of imputation of bad faith whatever, and he went to the country, with the result which hon. gentlemen know; but with the result also that the good name and the good faith of public men were maintained.

How different the practice in this House! On May 11, 1923, the Finance Minister announced his fiscal policy and gave assurances as to what this policy would continue to be. Now I will say just a word with reference to the Finance Minister. The Prime Minister (Mr. Mackenzie King), when he was seeking office in 1921, from the public platforms practised self abnegation to this extent: "Do not look at me; look at the man whom I propose shall be Finance Minister. He was successful in the years of Sir Wilfrid Laurier, and gave to this country its fiscal policy in the years of its greatest prosperity. He is the man whom I intend to have as my Finance Minister, if I am returned to power." Since he has been returned to power we have had the opinion of the right honourable Minister of Finance, expressed by the Prime Minister in words which could be summed up by saying that he was the very flower and sweet perfume of his ministers: That the fiscal interests of this country were absolutely safe in the hands of the Right Hon. W. S. Fielding. Now, I regret exceedingly—I think as much as anyone in this House—that the right hon. Finance Minister is not here to-day. If he were here, we never would have had, I submit, this budget, which was delivered by the Acting Finance Minister (Mr. Robb).

Let me quote what was said by the Finance Minister in his budget speech of May 11, 1923, to be found in Hansard at page 2648, and pardon me if I read at length. He said:

Tariff Stability

There is a thought which does not receive as much consideration as I think sometimes it should be given in public discussions, and that is the desirability of something like tariff stability. Business men do not

like to be always threatened with changes in the tariff. There is no finality in legislation either as respects that tariff or as respects anything else. That which parliament can do to-day it can undo to-morrow. Everybody knows that. Everybody must conduct his business in the light of that fact. Nevertheless it is desirable that something like an assurance of tariff stability should be given to business men. Exceptions will occur. There will be cases where, in the interest of the consumer, reductions in the tariff ought to be made. There will be inequalities discovered in the tariff which should be corrected; there will be errors which should be remedied. Any minister, any government, any parliament must be free to deal with these cases as they arise. But the conditions to which I refer are exceptional. Speaking broadly, it is possible to give the country a reasonable assurance of stability of tariff. Such assurances are very desirable, for no business man would care to enter upon enterprises which may be brought into peril by frequent tariff changes. The tariff as it will be when the changes proposed to-day come into effect will be a moderate tariff and probably as low as the country can afford to have under present condition.

Then on the next page:

Subject to the exceptional conditions such as I have mentioned, I think the country should be content to accept the tariff as it will now stand as one as fair and reasonable as can be prepared under all the circumstances, and business men should be able to carry on the various enterprises without the fear of being soon disturbed by further changes.

Stability of tariff cannot be expected while tariff rates are high. But where the rates are for the most part, as in our tariff, moderate, a reasonable measure of tariff stability should be assured.

Now, Mr. Speaker, unfortunately the Finance Minister is not here, but we have another gentleman in this House this afternoon who expressed himself on this question of tariff stability and I desire to quote from his statement. This statement, instead of covering three or four paragraphs such as I have read, is spread over seven or eight columns. I will read what I have selected, and if there is anything that I have left out, I want my attention drawn to it, because I want to show this House if I can what was the attitude of the Prime Minister not twelve months ago. On page 3052 of Hansard, I find the following statement by the Right Hon. W. L. Mackenzie King:

May I say just a further word with respect to another feature of the budget—the emphasis which has been placed upon stability as regards the tariff in the government's tariff announcements. Why is it that the present government is seeking stability in the tariff? For the simple reason that what this country needs to-day, as what the world needs, is a little more in the way of stability.

That was his statement on May 23, 1923. Something has happened since. He continues:

What we need to-day is to restore a feeling of confidence in the minds of the business community, and in the minds of the industrial community. The world to-day is still trembling more or less from the convulsion of the titanic struggle of a few years ago, and the highest duty of statesmanship is to seek, so far as it lies within the power of every nation, to restore in the minds of all classes of the community a feeling of certainty, a feeling of confidence, a feeling which for want of a better word we describe as stability. Stability does not mean finality. I notice that some hon. gentlemen oposite have sought to combine the two words.

If there was one thing above another which the hon. Minister of Finance was most careful to emphasize when he spoke of stability, it was that as regards all legislation, and in particular as regards the tariff, there was no such thing as finality. He spoke particularly and specifically of the probable need for a change as respects some items of the tariff affecting consumers and in relation to the necessities of production.

Mr. MACKENZIE KING: Hear, hear.

Mr. RYCKMAN: The Prime Minister says: "hear, hear." Will he kindly say, "hear, hear" to the next two or three sentences?

He mentioned these things, and if there be need for greater emphasis as to what he said, may I direct the attention of the House to the fact that my hon. friend the Minister of Finance had no sooner concluded his reference to stability than he began to speak of reciprocity and of trade agreements with the United States, which would mean changes in the tariff the minute they were brought down.

Mr. MACKENZIE KING: Hear, hear.

Mr. RYCKMAN: Has there been any reciprocity since May 23, 1923? Has there been any action of the United States in relation to the tariff benefitting us as regards this period? Not at all.

Mr. MACKENZIE KING: May I ask my hon. friend a question?

Mr. RYCKMAN: Just a moment. The United States, after this declaration of policy, raised the tariff as against this country.

Mr. MACKENZIE KING: The question I wished to ask my hon. friend is whether, after what he has quoted from me in reference to stability not meaning finality when I drew attention to the fact that reciprocity would mean changes in the tariff, the significance of that paragraph is not wholly that the Minister of Finance, when he spoke of stability, did not wish to have it inferred that there would be no further changes; in other words, that stability and stagnation were not necessarily the same thing.

Mr. RYCKMAN: I have not nearly finished quoting from the statement of the Prime Minister. He continued:

No, what my hon. friend sought to convey to the House in his remarks was that the government, after having carefully studied the situation from all angles, had come to the conclusion that having regard to the situation of Canada to-day in relation to other countries, it should tell the Canadian people that as respects the tariff, unless there were obvious reasons why there should be changes occasioned by necessity, they might be reasonably assured that there would be a steadiness in the tariff for some little time to come.

Mr. MACKENZIE KING: That was a year ago.

Mr. RYCKMAN: What is the measure of "some little time?" This government that had so declared itself in the speech of May 23, 1923, at the very first opportunity at the next session of parliament, changed it all.

Mr. MACKENZIE KING: For obvious reasons.

Mr. RYCKMAN: The Prime Minister continued:

That is what my hon. friend sought to make clear to this House, and he did so for the reason, that what we in Canada can do with justice in the matter of tariff revision is necessarily dependent in large part upon what is done by our neighbours to the south and upon what occurs in Europe.

As I have remarked—and please let this sink in—there has been no change whatever except an adverse change against us since this speech was delivered by the Prime Minister of Canada in the House of Commons. He said further:

What is the position with regard to the United States? Since the Liberal convention was held, there has been enacted by the United States a much higher tariff than ever before existed between Canada and the United States. The Fordney-McCumber tariff, so-called, to-day is operating to the disadvantage of Canada. Is there any member of this House who will stand up in his place and say: Notwithstanding that obvious fact we think we should throw down our bars against the United States and give them an opportunity to come in here and affect our industries in a manner even more seriously than they have already been affected.

Yes, there was a member, and that member sits opposite me to-day in the person of the Prime Minister of Canada. He said further:

We feel that the settlement of conditions in Europe and the favourable change in the American tariff are not likely to be effected for some little time yet, and for that reason we say that pending a change in this external situation we wish to give to the Canadian people the assurance that we do not purpose having an unstable tariff, because that is the significance of it. The one word has to be used in relation not only to its synonym but also its antonym. We do not propose to have an unstable tariff while this unstable condition exists in different parts of the world.

Why the change of opinion? When did the stability occur and become a fact in other parts of the world? Then on page 3053 the Prime Minister continued. I hope he is following me, and I will read any part that he suggests I should. I am anxious to have a plain, truthful account of the attitude as then expressed by the speech of May 23, 1923:

Before I leave that matter, may I add this with respect to our endeavour to bring about stability? We are taking in this connection a stand which we believe to be not only in the interests of our own country but in the interests of the world. I have in my hand a copy of the report which was presented to this parliament some little time ago of the Genoa Conference for the economic and financial reconstruction of Europe. Canada was represented at that conference by two able and distinguished gentlemen and there were assembled there, as hon members will recall, representatives from most of the commercial nations of the world. True, in some respects the conference did not achieve all that was hoped and expected of it, but there were certain matters on which there was general agreement, and in the report of this conference, I find the following. It appears on page 37 of the report printed by order of this House.

Then there is given article 44 of the Genoa conference that was in favour of stability. The Prime Minister cited not only the Genoa conference but the League of Nations, and he showed how the Economic committee of the league was in favour of stability. He quoted a resolution which, in part, is as follows:

The Economic committee is deeply impressed with the inconvenience and injury caused to international commerce which result from the uncertainty arising from frequent changes of customs tariff and associates itself cordially with the resolution of the Genoa Conference on this subject.

The committee strongly recommends that all states should endeavour to ensure that their customs tariffs should remain applicable over substantial periods of time, and that changes in rates and classification should be effected as seldom as possible and only when they are required by the essential economic needs of the country.

After quoting that resolution, the Prime Minister continued:

That resolution, according to the report of the assembly, was unanimously adopted by the assembly of the League of Nations at its last session. Now I read these resolutions not for the purpose of helping to foster the impression that in speaking of stability in matters of tariff the action of the government contemplates finality in any particular or in any direction. I rather wish to bring home to the members of this House, as far as may be possible, what has become so apparent to the statesmen of other parts of the world, that if we are to get away from the unsettled conditions of the present, if we are to restore confidence among the nations of the world, if once more this world is to be brought back to the order which prevailed prior to the Great War, we must all seek, in whatever directions we can, particularly in our international relations, to establish something in the nature of a reasonable stability. That is all we are aiming at. We do not intend to sacrifice in any particular the needs of any class of our citizens or the needs of industry, the needs in any direction of consumers or of producers, but what we do wish to make clear is that, so long as conditions continue to exist as they are at present, so long as on the part of the United States, the tariff wall remains what it is against us, and in Europe the unsettled condition continues to be what it is, and so long, may I add, as Canada remains the only country that has reduced its tariff since the Great War, while other countries continue to put up their tariffs, for that period of time at least we shall give to those who are interested in investing their capital and establishing industry in this country, and who are seeking to restore business to a higher level of development, assurance that there will not be unstability where stability ought to prevail.

Mr. MACKENZIE KING: Hear, hear.

Mr. RYCKMAN: That really is a joke. I am sorry to have had to take up so much time in reading at such great length, but following the statement of the Prime Minister I remember that the hon. member for Saskatoon (Mr. Evans) declared that we had not a tariff of free trade nor one of protection but a tariff of stability. That is what he said the budget proposed; and the hon. member for Nelson (Mr. Bird) said something to the same effect. I appeal to you, Mr. Speaker, whether the members of this House did not get the distinct understanding, from the statements made in this chamber by the Minister of Finance and by the right hon. the Prime Minister, that, so far as industry was concerned, so far as these very interests detailed by my right hon. friend were involved, we might expect that there would be no change in the tariff. I submit emphatically that the country formed that impression. But what do we find? We find that there is not even conceded a little time as promised by the Prime Minister; on the contrary, at the very first opportunity the change is brought about. The consequence is that the country is now in the throes of disturbance, dissatisfaction and uncertainty. But a few days ago, since the delivery of the budget, we saw the Minister of the Interior (Mr. Stewart, Argenteuil) rise in his place and declare that the present budget sounded the death knell of protection. To be sure, he said, not immediately; but he indicated quite clearly that the death knell of protection was the note of the budget. And we get that assertion less than a year after the country was given the policy as set forth by the Prime Minister. Some hon. gentlemen to my left are saying "hear, hear." Well, I can tell them that there is not the least thought in my mind that they are saying "hear, hear" to a breach of good faith on the part of the leader of the House of Commons. Rather, I think my hon. friend's commentary is an indication that what has happened is in keeping with their views as to what the policy of this country should be. If my statements need any re-enforcement, I would ask, what did the hon. member for Pontiac (Mr. Cahill) say? The hon. gentleman said something to this effect: "Don't go away with the idea that this is the last cut that is going to take place; you are only awaiting others." And the same idea was shared, if I mistake not, by the hon. member for Bonaventure (Mr. Marcil), who gave us to understand that he would support the budget: Now, Sir, there is about this whole thing an irony which I cannot help pondering. I submit that the manufacturers of agricultural implements have been sorely hit. I am not interested in that industry in any way, but it does seem to me that it has enjoyed just about the least amount of protection that has been accorded any industry in the country. I lived in Brantford for four years and have lived in Toronto a great many years, and I may say that I have been proud to have had the acquaintance of all those honourable families who in that section of the country have been engaged in this business. There are the Masseys, the Harrises, the Shenstones, the Osbornes, the Melvin-Jones, the Pattersons and the Wisners. I have known them all well; and I say unhesitatingly that they are of the finest families in the country, public spirited people who have left their mark in every one of the cities and towns in which they have lived. In short, they have been real benefactors of the public. To-day I know they are suffering. It may be said that the present reduction is only a slight one. But if one's life depends upon a ten strand rope and four of them are cut, one, I should say, is in a rather precarious state. Now, none of these concerns has made money in the business in recent years. Their books have been open to the government, and we know what the history of this industry has been both during the years of the war and since. And the irony of the thing is that all these noble families were, so far as I know, Liberals in politics. I think it is unfair, in view of the explicit promises made by the Prime Minister and by the Minister of Finance, that an industry as important as this one, with $150,000,000 invested in it, should be thrown into that position where it absolutely does not know what its future will be. If these people had been enjoying what is called high protection, if they were receiving the consideration of 35 per cent which other companies have enjoyed, there might be some reason and some satisfaction in getting back at them now. But there can possibly be no satisfaction, and certainly there is no justice, in the action which the government proposes to take now.

The seriousness of the present situation lies not only in the reduction which has been made in these specific industries—basic industries, as they have been called on the other side—but also in the hesitancy, the absolute doubt, and the uncertainty that characterise the operations of those who are affected. Here are people in the lower scales of tariff protection who have been hit. What have the others to expect? I should like to have the Prime Minister or the Acting Minister of Finance

instruct his secretary to put me on his mailing list and send me the statements of any manufacturers, of any captains of industry, of any labouring men in industry who are prepared to write in approval of the budget which has just been delivered.

The refunding loan has been referred to, and in this connection I have a criticism to offer: The government did not do as well as they could have done. As I make it out, the government sold its twenty-year bonds

4 p.m. on the basis of 5.32, while they sold the five year bonds on a basis within a very small fraction of 5.75. The bond dealers, as will have been observed, received $4,500,000 for placing $200,000,000 of the obligations of this country. The Acting Minister of Finance says that he asked for tenders. I may be wrong, but I do not think that tenders were advertised for. However, let me tell the House what happened in this country at the same time. The province of Ontario, whose credit I am sorry to say does not stand as high in the money market as that of another province in the Dominion, had $40,000,000 of bonds to sell. It advertised in the newspapers. The same bond dealers, who as we all know are anxious to drive a good bargain, as the testimony recently adduced in Toronto will show abundantly, submitted to my hon. friend the Acting Minister of Finance a certain figure which apparently was accepted. The province of Ontario, on the other hand, advertised in connection with the sale of its $40,000,000 and the bond dealers put in their tenders; and the treasurer of the province, under a Conservative government, told them to take their tenders out of his office because he would not accept any of them. With what result? That when my hon. friend's loan was on, Ontario sold its bonds at 5.30. The whole is greater than the part; the credit of the whole ought to be greater than the part, but Ontario, I say, sold its bonds at a price higher than that which the Dominion obtained, simply because they went about it in a businesslike way. I believe that the Acting Minister of Finance could have got a great deal more for those $200,000,000 of the securities of this fair country which he had to sell. But he accepted what was the highest tender, he says, of those whom he asked to bid.

I desire to say a word about the French treaty and it will be only a word. From the statement of the hon. member for Lincoln (Mr. Chaplin) it is very clear that this French treaty has been a bad bargain. When there is some real business to be done by this government, it seems to me that a real business man should be sent to do it. The only reply that comes to that suggestion is from the member for Pontiac (Mr. Cahill), who says that there has been a remission of taxes to the extent of a million and a half. Well, that is a very fine thing for those who get the benefit of it. But that remission is upon brandies, cosmetics and embroideries, and as we have to raise a revenue in this country to pay the national debt, it is obvious that it is upon such articles as these—luxuries—that the money should be raised.

With regard to this French treaty I want to take one article which comes under the treaty and another which does not, so that we may see how the low rate of exchange adversely affects this country. I understand that when the friends of the Acting Minister of Finance who are in the boot and shoe business were here they pointed this out to the Prime Minister and to the Acting Minister of Finance. The story is not an encouraging one so far as Canadian trade is concerned. Take page 71 of the trade returns for January and contrast the period of ten months ending January, 1924 with the same period ending January, 1923. The consumption of non-sparkling wines, which come under the treaty, for the ten months' period ending January, 1923, was 56,000 gallons, and the value was $160,000, while for the corresponding period ending January, 1924, the consumption was 105,000 gallons, nearly twice as much, and the value was $140,000, or $20,000 less. Then, take the item of raw wool, page 135. The exchange has meant this to raw wool: In 1923 the consumption for the ten months' period was 118,000 pounds, with a value of $119,000, while for the 1924 period it was 262,000 pounds, more than twice as much, with a value of only $147,000. Now, I would ask the farmers of this country—

Mr. ROBB: Will my hon. friend allow me right there? Was it a disadvantage to the manufacturer of raw woollens who sells tweeds to the Canadian people to be able to buy so much more wool for less money?

Mr. RYCKMAN: It is a distinct advantage to the manufacturer, but it is distinctly to the disadvantage of the Canadian farmer who raises wool.

Mr. ROBB: May I point out to my hon. friend that the Canadian farmer does not grow this quality of wool?

Mr. MEIGHEN: Oh yes, he does.

Mr. LAPOINTE: Let the farmers complain.

Mr. MEIGHEN: They will if you give them the chance.

Mr. LAPOINTE: They will have the chance some day.

Mr. RYCKMAN: I think this French treaty should be denounced. The hon. Minister of Justice (Mr. Lapointe) should be kept at home unless he goes over merely to sign a treaty, or unless he leaves forthwith to have this treaty denounced. No bit of business that has been transacted by this government dealing with exports from and imports into this country is more worthy of condemnation from a business point of view than this treaty with France.

I desire, Mr. Speaker, to say a word or two with regard to the nuisance and pest taxes. There is a sales tax: I hope an opportunity will be given to discuss it later. But I know the members of this House feel that this tax is most unfair and discriminatory in its application to different businesses. It increases the cost of living ten per cent; there is general agreement on that point. If the government had seen fit to give the farmer the benefit in the matter of dry goods, drugs, boots and shoes—well, boots and shoes are covered—and groceries through the remission of this tax, the benefit to the farmers would have been tremendously in excess of anything they could get from the cut on agricultural implements.

I must say a word about the note tax. This tax is simply grotesque: I wonder if members of the House have really considered what it means? I defy the Prime Minister to find such a tax anywhere else on earth, and that is a large order. How does it work? Suppose two men wish to go into business, or, if they are already in business, suppose their business needs more money. Suppose they want to put into it $200,000, one of them $100,000 and the other a similar amount. One of the men who puts in $100,000 and has the money in the bank can put on the cheque a dollar stamp. The other man has good credit; he goes to the bank and says, "I want $100,000 and I will pay you back $10,000 monthly; here is my security." He gets the loan; it goes through the bank in the ordinary way, and he pays a note tax of $220, or 220 times what the other man pays. Look at the discrimination. The man who is able to sit down and write out a cheque for that large amount might be regarded as being in a fortunate position, and if there is any saddling of tax on one of the two it should be on the man who has the money. But under this splendid taxation scheme of the Minister of Finance the situation is as I have stated it, and that condition enters into the everyday business life of this country. Anyone who borrows money from the bank and reduces the loan by payments every month or every two or three months, as the case may be, is met with this tax, while the man who has the money to pay outright enjoys relatively no taxation.

I desire to say a word about the income tax. The member for Red Deer (Mr. Speakman) suggested that the income tax be increased, and I heard a member sitting behind him say, "Yes, they cannot pass on the income tax." Indeed they can. The income tax increases immensely the cost of living, and just to show you that practically everybody can pass on the income tax, how does the manufacturer do it? The manufacturer says: Well, I give myself a drawing allowance of $10,000, or whatever it may be, and now that I have to pay income tax I will increase my drawing allowance so much to cover that tax, because I have to have the same amount to live on. The increase goes into the cost of the goods, and the people who buy the goods pay that increase; that is the way it is done.

We come to the merchant, and he does it in just about the same way; it is passed on in that case. Then we come to the professional classes. The professional man says: I have so much income tax to pay, and I will increase my charges so much to cover it; he passes it on, and that adds to the cost of living. Oh, but you stick the salaried man, you say. You do not, because everybody recognizes that the man who lives on a stated salary is entitled to more salary now that he has to pay income tax, and so you find our colleges and schools, our manufacturing establishments and every other concern that employs the salaried man, recognizing the fact that he needs more, giving him more, and that all adds to the cost of living.

Oh, you say, at any rate we get the man who by thrift has saved his money and invested it in stocks, bonds and mortgages. You do not get him at all. He can get out from under if he wants to do it. How does he do it? He has a mortgage say for $10,000. He will go to a lawyer and say: Draw up an assignment of half that mortgage to my wife. It is a very easy thing to do, requiring no registration. What does a man with bonds do? His wife gets some of them, and the other members of his family get some until he has reduced his liability to pay income tax to the smallest possible amount. And so through the whole list.

I say, Mr. Speaker, that the income tax in the form in which we have it means that industry is paralysed, that initiative is stifled, and that business suffers tremendously. How does it work in business? Suppose there are

some men who are carrying on a prosperous business, but who need more capital. They say: We have lots of security but we want to raise $250,000, we will say, and they put out a preferred stock issue at 7 per cent. Money is hard to get; it will be a gilt-edged 7 per cent investment, and we will ask the public or our friends to subscribe. But what do they find? They know some of their friends who have money and to whom 7 per cent should be a good investment, and always predicating that there is an abundance of assets behind this proposed issue of securities, they go to their friends and say: This is a good 7 per cent investment; you know what it is; we ask you to take an interest in it. Oh, says the prospect, I require 7.59 per cent to pay my taxes, and I have to have an investment that will yield me 7.59 per cent, or I am far better off by buying tax-free bonds. And the industry that wants the money cannot get it. Practically every broker's office and every bond dealer's office throughout the country has printed lists showing how it would pay you, if your income is a stated amount, to invest in tax-free bonds, and the result is that there is not the money for industry. Are there any flotations to-day? Is there anybody outside of say the pulp and paper industry who knows that since this government came into power there have been many investments in industry? There have not been, and everybody knows it. I would go further and say that just so long as this government is in power, just so long as they are rocking the industrial boat, just so long will there not be money for industry in Canada, and just so long will there be a crowd of men in the bond business such as we have never had before. The bond business has grown tremendously. Take the cities of Montreal and Toronto; the bond dealers there have become a distinct class in the community. Offices are crowded with those engaged in the bond business, and they are not selling the securities of industrial companies.

Now what is the effect of all these taxes? The net effect so far as immigration is concerned, is that we have not got it, and the reason that we have not got it is that those who are coming to a foreign country know well what that foreign country is going to do for them. They know the taxation in that foreign country; there is no question about that, and immigration to this country is stayed simply because this is one of the highest taxed countries in the world and has some of the most inequitable taxation methods anywhere in the world.

[Mr. Ryckman.]

The member for Pontiac (Mr. Cahill) told us, and I will accept his statement because I believe it is true, that people are leaving this country because they can do better elsewhere, the taxation here being so high. The Minister of Justice (Mr. Lapointe) in his remarks tried to tell us that the income tax we had to pay in Canada compared favourably with the income taxation in Great Britain and the British colonies. True, although the Canadian scale is higher in some regions of the tax, but federal income taxation is not the only income taxation we have to pay. We have municipal income taxation, and one or two provinces impose income taxation, and there is no telling when other provinces will not have it. There are even amusement taxes, and all these other taxes that we know of, and which I shall not take up the time of the House to mention. But that is the reason why immigration to this country is stagnant. We want desirable immigrants, and we are not getting them because the fact is known to the world at large that taxation in this country, under this government, is higher than in other countries to which these immigrants can go.

Mr. CARROLL: Would my hon. friend inform the House where taxation has been increased under this government?

Mr. RYCKMAN: I am labouring as earnestly as I can to conclude my remarks in as short a time as possible, and I do not wish to take up the balance of the session.

Mr. Speaker, I hope that the farming community is not going to be influenced by this dole, which has been reckoned at $2.50. The hon. member for East Elgin (Mr. Stansell) said that within his experience, and as he calculated it, it did not amount to more than $2.50. For myself I do not know how even that much is arrived at. But all industry, not only the farming industry but all industry, including, of course, and emphasizing agriculture, needs steadiness and stability, and this can only be got by getting together and by planning for the success of the whole country. The difficulty with this government is that when they go into executive session they plan how they can stay in power instead of how they can benefit the country. I would be very sorry if I thought the measure of the benefit agriculture was going to get was contained in this budget and in the tariff reductions for the benefit of the farmer. I think that agriculture has higher claims which should be recognized, and which would be recognized by any body of business men who sat down together to decide on the interests of the country and

how best to ensure them, just as if they were the directors of a business organization. You will find, Mr. Speaker, that the west and the east and the centre of this great Dominion will not be satisfied with any policy which is a distinct menace to any important section of the country. I wish to say that there is in the minds of certain people—I won't say the most important, but I do say a very important section of this country; I am referring to the manufacturing industry—the greatest unrest, disturbance, uncertainty, and perplexity, and so long as these conditions prevail the country cannot prosper.

The situation with regard to the United States troubles me very much. I am not offering what I am about to say as a solution of the whole matter, not by any means. But I frankly believe it would benefit the farmers of Canada, I am very sure it would benefit the farmers of the province from which I come, if we took a self-respecting, independent stand with regard to the United States. By that I mean this: I never knew anyone to get along very far in this life who had not a good measure of self-respect, who did not adhere to a straightforward policy in his own interest, and did not determine to do the best he could for himself with due regard to the rights of others. If there is a nation on earth that recognizes an upstanding man, a man of self-respect who will look after himself, it is the United States. For many years I have been interested in business in that country. Without any conceit I think I can say I know pretty well all about it, and I want to state now that nothing would condemn Canada in the minds of the people of the United States like a policy of truckling to the latter country, such as, when we have a duty of 4 cents on a particular commodity, allowing them to impose a duty of 8 cents against us. Just so soon as we make up our minds that we are going to look after our own interests, so soon will the United States respect us. But in the past we have truckled to the United States, we have lowered our duties against them, and every time we have done that they have retaliated by raising the duties against us. I am tempted to relate an incident which occurred but a short time ago. I was in the company of American gentlemen, and we were discussing the tariff. I said something like this: Canada is a new country, the United States is a big nation. We have got to have a tariff for revenue and for the protection of our industry. Why could not your country adopt a tariff with respect to us on the same basis as we adopt with respect to the United States? I said, "We are a young country, you ought to do that." What reply do you think I got to that suggestion? I venture to say not one man in this House could tell me the nature of that reply. The reply was, "Canada is not a new country, Canada is just as old as the United States." Read the last number of Current History. It contains an article written by an American. He said with respect to the United States that it stayed out of the war for its own economic purposes, and that when it entered the war it did so for the same reason. Just so long as it suits the United States to place a higher tariff against Canada she will continue to carry out that policy. She will lower the tariff when it suits her and not before. I have not a word of complaint to make against the United States. She is acting in what she conceives to be her own interest, with a desire to develop business for herself, and that is a thing she has a perfect right to do. In behalf of this Dominion I ask that we also should have some national self-respect and, in the light of past experience, attend to our own business.

Mr. HUGHES: When the United States made a reciprocal tariff offer to Canada who were the people in this country who refused it?

Mr. McMASTER: What an unkind question!

Mr. RYCKMAN: I was not the person.

Mr. MARTELL: Did you vote for reciprocity?

Mr. RYCKMAN: But that is now past history. I am not now concerned with the mistake someone is supposed to have made in the past. What I am concerned with now is the present and the future with the policy enunciated a year ago and the policy now outlined in this budget.

Before I sit down I have a suggestion to make. I have not consulted anyone with regard to it. In this respect I happen to be my own counsellor. I have made a statement in which I firmly believe but if I have formed a wrong opinion I am prepared to pay the penalty. I have said that there is no real surplus for the financial year 1923-24 and I reiterate the statement. Now if any reputable chartered accountant will certify that, having regard to the present worth of any guarantees given by Canada to the government railways in the year 1923-24, there is any real surplus of revenue over total expenditures for the same year, I will resign my seat. The chartered accountant may be

named by the Speaker of the House. I am quite willing, however, to take Mr. George Edwards, the consulting accountant to the Minister of Finance who last year represented the department in the committee on Banking and Commerce and who, I feel satisfied, would deal with the question as an accountant should. I have this further statement to make: If the right hon. the Minister of Finance is of sound mind and memory or so becomes and will now or then certify that he fully endorses the budget brought down by the Acting Minister of Finance on April 10th I will resign my seat. Mr. Speaker, I do not wish to act in a manner which may be considered as bizarre, or with any desire to attract notice, but I feel in view of the budget speech of last year, and the action of the government this year, that no man who admires good faith in public men, in the leaders of government, can tolerate such a change as we have witnessed in the recent budget following the preceding one. I make no conditions whatever as to the second proposition. With regard to the first proposition I make this condition. The hon. member for Queens (Mr. Sinclair) and the hon. member for Bonaventure (Mr. Marcil) have maintained that this government has a surplus of $30,000,000—the former was not frank enough to state that $10,000,000 had come from the previous government—but if any other hon. gentleman opposite is going to claim that such a surplus exists and that it will justify a reduction in taxation, I shall expect him to abide by the decision of the accountant referred to, and I think that is only fair.

Mr. ERNEST WILLIAM ROBINSON (King's, N.S.): As a representative from the province of Nova Scotia, at the outset I desire to express my regret at the absence of the hon. Minister of Finance (Mr. Fielding) and also the hope that he will soon come back to us restored in health and vigour of mind. As a new member of this House I am more or less amused at what takes place here occasionally. For two sessions I have listened to speeches in which the Liberal government was held up as breakers of faith because they did not in anyway reduce the duty on agricultural implements, and to-day we are told that they are breakers of faith because they did reduce them. It becomes very difficult for a new member to understand just where he stands.

Mr. MEIGHEN: Let me explain that the pledges that were broken were different. The one pledge was to take all the duty off, and that was broken; the next pledge was to maintain stability, and that was broken.

[Mr. Ryckman.]

Mr. ROBINSON: I think it is very difficult to satisfy the right hon. leader of the opposition (Mr. Meighen), no matter what is done. I find it almost impossible for any hon. member to discuss any question in the House unless he adopts, you might say, the viewpoint or the standpoint of the province from which he comes. Furthermore, he is liable to discuss it from the viewpoint of the constituency he represents. There may be some weakness in this or there may not. There may be an advantage. We in Nova Scotia realize that the interests of the Dominion of Canada are far greater than our interests. We realize that Nova Scotia is a small part of the Dominion, and yet we believe that the prosperity of the part will make the prosperity of the whole, and it is only as the different parts are prosperous that the whole will become prosperous. It is difficult also to legislate for the whole Dominion, our interests are so varied, and the country so great in extent. The gold mining industry is confined to the four provinces of Canada. The fishing industry is confined mostly to the Atlantic and the Pacific coasts. Some of our provinces have not any lumbering industries. Manufacturing seems to be centered in the provinces of Ontario and Quebec. There is, however, one industry that is common to the whole Dominion, and is found in every province in some form or other. That is the industry of agriculture. Therefore, it would seem to me that when the Acting Minister of Finance (Mr. Robb) attempts in any way to lighten the burden of agriculture, he is legislating for the whole of the Dominion of Canada.

I desire to say, Mr. Speaker, that ever since confederation there has been more or less discontent in the province of Nova Scotia. There is no use going back to ancient history to show the cause of our discontent; but I wish to point out that there has been discontent in Nova Scotia, owing principally to the fact that we have not progressed as fast possibly as other parts of the Dominion, and I might say that our not progressing is due to a great extent to our geographic position. After confederation we attempted to develop our industries as well as we could up to the year 1878. In that year the National Policy was introduced, and we were told that in a very short time Nova Scotia would be a great country. They pointed out to us our marvellous resources, and they are marvellous. They pointed out to us that we had great shipping facilities, and we have those facilities. They pointed out that we had the winter wharves of the Dominion of Canada, and we were told that factories would spring up on all sides. We waited for some time. The people were

told time after time that these things would happen, but what did happen? Well, factories did spring up. We had a certain number of woollen mills, a certain number of cotton mills, boot and shoe factories and so on. After a while these were absorbed by larger companies in Quebec and Ontario and finally, when the time came for the curtailing of production, our factories were closed down and we have very few there to-day as a result of the introduction of the so-called National Policy.

I do not want to give the House the idea that we are not making any progress in Nova Scotia. We are making progress along certain lines. I desire to call attention to the coal production of Nova Scotia. In 1891 we produced $3,543,000 worth of coal and in 1921 the production had increased to over $27,000,000. To-day it stands at about $40,000,000. I call attention also to our fishing production. Perhaps, in order to hurry along, I might give the carefully estimated figures for the year 1923. Our figures for that year amounted to something over $11,500,000 in spite of the fact that we have the Fordney tariff against us. The farm products of Nova Scotia for 1923 amounted to $26,000,000 and the products of the forest amounted to some $12,000,000. I call the attention of the House to the fact that these are the products of the basic industries of Nova Scotia. They are the products of mining, farming, fishing and lumbering. One other item I should call attention to is the production of iron and steel. This was virtually nothing in 1891 and has increased in 1923 to something over $12,000,000. Now if we are producing all of these goods—and we are—the question might arise, why is there discontent in Nova Scotia? I would point out, Mr. Speaker, that it is due primarily as I have said to our geographical position.

Mr. MANION: In regard to the production of iron and steel, which the hon. member mentioned, was that not due to a great extent to the bounty which was given for that production?

Mr. ROBINSON: Yes, I think so, and I would ask the hon. member, does he believe in the bounty system?

Mr. MANION: I do.

Mr. ROBINSON: I suppose that is one of the mildest forms of protection.

Mr. MANION: One of the best forms.

Mr. ROBINSON: I would say the production of the iron and steel was brought about by the bounty system. However, what I was trying to point out was that while we produced this wealth, the production and exportation of our products has become so expensive that we reap no profit from our production. We are virtually isolated from the rest of the Dominion of Canada. Transportation rates by rail have gone up so that it is almost impossible for us to place any of our goods on the market, if there were really a market for the goods. Transportation by water is also high. The result is that we have no market where we can dispose of our goods at a profit. Our factories have more or less vanished. When they tell us we should favour a protective tariff which would develop the factories of Ontario, so that we might buy their goods, we are willing to do so; we have no objection to that, but the trouble is that after we sell our goods, having paid the cost of production and the freight charges, we have nothing left to buy with, and I cannot see the benefit it would be to us for these factories to produce goods or the benefit it would be to them if we cannot buy goods after they are produced.

Now there is one item in which I am particularly interested, because it belongs to the county I represent, and that is the item of apples. I come from the centre of the great fruit growing district which we know as the Annapolis valley.

In 1891, we exported from Nova Scotia apples to the value of $211,000. That grew in 1921 to $4,800,000, which will give hon. members an idea of our increase in the production of fruit. For the last five years we have exported yearly over 1,500,000 barrels of apples, and this year the number will quite come up to the 2,000,000 figure. I wish to show what happens in the case of apples, and this is true in the case of other industries, especially those relating to the farm. We have found out by careful calculation that it costs us $2.30 to raise a barrel of apples so as to send it out to market. It costs, in addition to that, $1.70 to put it on the market, and it does not make any difference whether the market be Montreal or Liverpool; it costs about the same to send it to Montreal as it does to Liverpool, England. The great bulk, however, goes to the British Isles. The point I wish to make is this, that we have a minimum cost of $4 to put a barrel of apples on the market, and unless we can get something above $4, it stands to reason that we can make very little profit. Of course, it may be said: Why do you people not attempt to get freight rates down? I believe railway freight rates virtually isolate Nova Scotia from the rest of the Dominion of Canada.

As regards ocean rates, I might say a word in order to show that we have made an at-

tempt to get them reduced and we have been successful. During the war there was an embargo on the shipment of apples, which embargo was removed in 1919. During the year 1919 the rate for carrying apples from Halifax to Liverpool was $5 a barrel, but even at that rate we found that we could make a little because the price in England was good. Later on the bottom dropped out of the market, and the steamship companies found that if they did not reduce the rate we would not send any apples over, so that the result was that of their own accord they reduced the rate to $3.25 a barrel. The price however, of apples continued to fall with the result that there was formed in Nova Scotia what was called a shippers' association, formed by representatives of farmers, buyers and shippers of apples, and they approached the steamship companies to find out if it would be possible to reduce the freight rate below $3.25 a barrel. The strange part of the matter is that they had to go to the city of New York in order to find out about freight rates on apples from one British port to another in a British bottom. These representatives, however, went to New York, and they met this North Atlantic Shipping Board, or whatever it is called.

Mr. McMASTER: North Atlantic Conference, Eastern Board.

Mr. ROBINSON: They met these men, and they got a reduction in the freight rate from $3.25 to $1.10 by simply threatening that if the freight rate was not reduced, they would hire Norwegian tramp steamers, fit them up as fruit boats and use them for carrying the fruit. I am mentioning these facts simply in order to show that we have made every attempt we possibly could to get shipping rates reduced.

The next reduction that we might possibly make would be a reduction in the cost of production. The production of apples would include tilling the soil, fertilizing the soil, spraying the apples and so on, those operations that might be called agricultural operations. Of course, we cannot expect to make any reduction in wages. If we do not pay the men for doing this work as much as they can get elsewhere, they will go elsewhere to work and, therefore, we have not been able to make, prior to this time, any reduction in the cost of production. I have heard it said, over and over again, that farmers have no business sense; that if they would put as much brain power into the marketing of their goods as they do into the production of their goods, they would be able to make a profit. In Nova Scotia, we do apply brain power to taking care of the fruit and everything in relation to it. For instance, we buy co-operatively; we buy barrels, fertilizers and spraying materials in large quantities. We have built warehouses co-operatively. We handle the fruit usually through farming companies, so that we have cut out as far as possible any overhead expenses, and yet we have so far been unable to reduce the cost of production.

I should like to mention one fact about co-operation, because I do not believe it has been sufficiently stressed in this House. I believe it is possible—in fact I know it is possible, because we have proved it in Nova Scotia as regards the fruits industry—for the farmers to do a great deal by co-operation. Last session I was a member of a special committee on agricultural conditions, and I noticed one thing, namely, that in connection with handling fruit and various other crops throughout Ontario and some of the other provinces, there was no attempt at co-operative buying or selling on the part of the farmers. One of the most interesting witnesses that we had before that committee was Professor Jackman, professor of political economy in the University of Toronto, and if I might be allowed, I should like to read a few words from his evidence along this very line. He said:

> There is no question in my mind but that the present system of the individual farmer dealing with the organinzed groups with whom he has relations, is an out-of-date system. The day when the farmer as an individual can match up with the commercial structure from whom he makes his purchases, and to whom he makes his sales, is an outworn system. The farmer looking at his own particular interest has been too strongly individualistic; he is inclined to think that his individualty is at stake if he merges his interests with those of others in the same line in order to form a group to handle his products. The system under which he has worked in the past proved satisfactory; the system under which he is working to-day, the system under which the individual is grouped, the organization that handles and deals in his products is out of date, and the sooner the farmer can learn that, the better it will be; the sooner the farmer can learn that his interests demand that he shall work in concert with others in the same group as himself, so that they can operate together, so that they can present a united front in buying or selling, so that they can use a collective influence, the sooner will the farmer's conditions be rectified with some degree of permanency. But so long as the conditions prevail under which the farmer works as an individual, and buys and sells as an individual, so long shall we have this present difficulty, and the more the other groups become organized the worse will be the farmer's position, unless he follows suit. Now, in the present state we are accustomed to think that supply, the inter-relation of supply and demand determines the price of the product; there is no question in regard to the operation of that principle. There is the thing which is operating against the farmer's interests. When the farmer is putting his supply on the market in the fall or during any other season, and is putting that product on as an individual, and others are doing the same, they are competing against one another, whereas these organizations with which they have to deal are acting more or less in

concert. The buyers of wheat for example are acting more or less in concert, the buyers of live stock know what one another's prices are, and with these conditions prevailing and the individual farmer dealing with organizations of that kind, it simply means that the organized efforts of the group are going to bid one farmer against another, and that the man who is most anxious to sell will be the one who will take the lowest price.

I do not think there is any need to follow this further. In the province of Nova Scotia we have decided that co-operative effort on the part of the farmers is the only thing that will bring results.

Mr. HUGHES: If I may interrupt the hon. member for a moment, I do not think there are any better apples grown on the North American continent than those that are produced in Nova Scotia. Now we find in Prince Edward Island that we are unable to buy Nova Scotia apples because of the price. We can buy American apples, and in fact can get them from British Columbia, a little cheaper.

Mr. SHAW: Good apples too.

Mr. HUGHES: Yes, but not so well flavoured as Nova Scotia apples. Co-operation is a splendid thing so long as it does not result in abnormal prices to your own people. The question I want to ask the hon. member is whether apples are sold at a cheaper rate for export than they are sold for home consumption in the province of Nova Scotia.

Mr. ROBINSON: That is not the point. I should not care to say how few apples it would take to flood the Prince Edward Island market. The member for Antigonish and Guysborough (Mr. McIsaac) says three barrels. When we export apples we must ship them in large quantities and we can export them at a cheaper rate that way. Some of our apples are exported from Nova Scotia to Prince Edward Island and some to the island of Cape Breton, but in such small quantities that the price is enhanced. Furthermore, the railway rate is high. In fact, I would venture to make the statement that it costs as much to send a barrel of apples from Kentville to Charlottetown as from Kentville to Liverpool.

Mr. HUGHES: We buy apples from the United States and British Columbia.

Mr. ROBINSON: I wish to add just a few more words to what I have already said. I have tried to show that we do make, and have made, an attempt to reduce transportation charges on apples, and we have also attempted to reduce the cost of production; and having reached the lowest possible minimum that we can get we still have to do business, so that the margin is very small. The reason why the people in my constituency are more or less pleased with the budget proposals brought down by the Acting Minister of Finance lies in the fact that these proposals will result in lessening the cost of tillage, and so on, through reducing the prices of the necessary implements. Fertilizer is another important item in regard to which the budget proposals promise an improvement in agricultural conditions. The cost of fertilizer and also of spraying material being reduced, surely it can readily be understood why the constituency that I represent is satisfied with the present budget.

One word in conclusion. I have heard astonishment expressed at various times by different people that the farmers should organize politically. I have heard people almost resent the fact that there is in this present parliament a party comprised of farmers who are organized for political purposes. Personally this is nothing surprising to me. We have had preached in this country for over forty years the doctrine that it is possible for one class or industry to derive some advantage from political organization. Having had that doctrine emphasized during all that time is it to be wondered at that the agricultural interests of this country should have come to believe it after all? It is not surprising to me; and if the manufacturers can organize for political ends I do not see why the agricultural people should not. It seems to me the natural outcome and growth of the seed that has been sown during the last forty years. There may be those in this House who will say that any advantage that is gained by any class through the manipulation of the tariff up or down can be gained only at the expense of some other class. I for one believe that is right. I cannot see myself how it is possible for us to legislate a dollar into any man's pocket unless we legislate it out of somebody else's pocket. So that the best we can do is to try to have the least possible injury to the few and the greatest benefit to the many. I therefore favour the budget proposals because I believe that they tend to give the greatest possible benefit to the largest number while doing the least possible injury to a small fraction of the people.

Mr. J. S. WOODSWORTH (Centre Winnipeg): It would seem to me that, from the standpoint of the West, the budget undoubtedly is looking in the right direction; and yet, as I think of the proposals advanced, I cannot see that they go very far towards relieving the ordinary citizen of the burdens

5 p.m.

which are now imposed upon him. It is stated that the budget has been balanced, but I think that anything like a study of the budget itself must reveal the fact that this balancing is more apparent than real. Without discussing that point, however, I would suggest that in so far as it is balanced, it is at a very heavy cost. There has been a cutting-down of certain important services: we have seen the elimination of the agricultural grant and a reduction in the estimates for public health, services which surely ought to be maintained and extended at this time. On the other hand, however, there has been a continuance of the taxation levied on the poorer people involving very considerable privation in a great many homes throughout the country. The necessities of life are still taxed notwithstanding a large measure of unemployment; and what is perhaps the most serious phase of the whole situation, from the national point of view, we face the continued migration of large numbers of our people to the United States. It was stated the other day that over 100,000 of our returned men are now living in the United States. Surely nothing more significant than that could be said to indicate the unfortunate position in which this country finds itself to-day. A few years ago these men went overseas to fight for their country and they returned only to find that that country had no room for them. In my speech on the Address in reply to the Speech from the Throne I outlined some of the positions which we as a labour group took in regard to the general conditions of the country to-day. I should like to run over these very briefly to-day to illustrate some of the points upon which I have not so far had time to enter.

We have an enormous national debt, with its heavy interest charges; that has recently been very graphically set forth in a leaflet issued by the council of the Montreal Board of Trade. Last year I think I gave the figures for Winnipeg and the province of Manitoba; as a variation let me give these for the province of Quebec and for the city of Montreal. The public debt—Dominion of Canada debt and guarantees—has risen since 1913 from $98 per capita to $387 per capita. Adding the debts of the province of Quebec and the city of Montreal, the total of the different items per capita has risen from $241 in 1913 to $612 in 1923. It means that a family of five now owe $3,060, and a family of ten, $6,120; and, as this leaflet points out, "whether they know it or not, they are being taxed for it in high prices." That is what makes it necessary for some of us to urge a more radical change than the government has seen fit to make in the tariff at this time.

Let me refer to the income tax returns. We had a net total from individuals in 1922 of almost $40,000,000 and in 1923 of only some $32,000,000; from corporations in 1922 of over $39,000,000 and in 1923 of less than $29,000,000. This past year we raised all told only $60,000,000 from the income tax, a very considerable reduction on that which was raised the year before. The income tax at present seems to bear heavily upon the very large number of people of comparatively small resources, yet we find that the banks are able to declare large dividends fairly constant from year to year, and that notwithstanding the considerable bungling which certain failures have revealed. We further find that the railways, under the regulations of the Railway Commission, are practically guaranteed high dividends. The questions naturally arise why the railway and the banks should continue, whether the country is in a poor condition or not, to draw and to be practically guaranteed their returns when considerable numbers of people engaged in industry of various kinds have no such guarantee and in fact are losing steadily, and when large numbers of working people are having their wages forced down.

In connection with this income tax, I should like to point out the amounts that people outside of Canada have invested in our country. It has been estimated recently by several very competent authorities that Americans own something like $2,750,000,000 of assets in Canada. Britishers own something like $2,250,000,000 worth and other outside investors around $250,000,000. Putting the returns at 5 per cent, that would mean that this country must pay a tribute to outsiders of something like $262,500,000. The question arises as to why some of these incomes which are spent outside of Canada should not be taxed. In fact I should like to go further and say, why should there not be a supertax on incomes spent outside of Canada? I notice that some of those who are most urgent in their demand that everyone should pay the tax here in this country frequently travel across for the holiday seasons or for all the winter months to the United States and thus escape the indirect taxation which must be paid by those who must remain here twelve months of the year. Undoubtedly there is a great deal of injustice in the present arrangement. With hundreds of thousands of Canadians going to the United States, and with what has been called the economic conquest of Canada—that is,

the increasing foreign investments in Canada—I have wondered just what advantage there is in continually harping upon the old policies and uttering the old war cries. Take for example, the following paragraph from Sir John Willison's pamphlet some years ago on the programme of the Canadian Reconstruction Association—he represents the Tory position:

> We must either manufacture the raw materials of Canada, within the country—thus employing labor, rearing new communities, providing local markets for merchants and producers, strengthening the national structure, making the back of Canada strong to bear its accumulating burdens—or the sons of Canada will follow these raw materials out of the country, establish themselves in foreign industrial centres, and, more and more, from year to year, the national burden will become heavier and the issue of the great political experiment in which we are engaged become more difficult and uncertain. Every sound economic and natural reason, therefore, demands that the raw material of Canada shall be manufactured in Canada, and the Canadian people protected in the possession and control of their natural inheritance.

Might I suggest that all which was in that article prophesied as likely to happen if protection were abolished has actually happened within the last few years. A good deal of it would have happened even under free trade. The fact is we must get down below either protection or free trade to some more fundamental policy if we would meet the needs of the present hour. As it is, the natural inheritance of the people has been forfeited; we find a very large part of our natural resources in the hands of outsiders. And here I should like to refer to what I might term the bogus patriotism which is frequently brought forward in an effort to influence people's minds with regard to certain fiscal policies. During the war the hoardings of my own city of Winnipeg were placarded with big posters reading something like this: "Be patriotic"; "Keep the home fires burning"; "Buy Canadian coal." I remember at that particular time making some investigations as to the nationalities of those who were engaged in mining coal in the western area, and I found that, if I remember, some 70 per cent of them were Austrians, technically our alien enemies, and that a very considerable part of the coal measures was held by American syndicates. "Be patriotic; buy Canadian coal"; and all the time what we were actually doing was paying wages to the Austrian miners and dividends to the American mine owners. I have nothing against either Americans or Austrians, but why should we be deluded by these bogus patriotic cries. I was rather interested in an article which appeared just the other day in the New York Nation—an article which has been commented upon by some of our Canadian papers but, which I think, has not been answered. This is entitled "Economic Conquest of Canada" by Scott Nearing, in the number of April 16:

> The present economic policy of Great Britain is compelling American capitalists to take a larger and larger share of their production business into Canada. The General Motors, for example, from its plant in Ontario exported 18,000 cars in 1922. For at least one month within the past year British imports of motor cars from Canada exceeded in number and value imports from the United States. The reason is apparent. The British government collects a duty 1/6 less on Empire manufactures than on foreign manufactures. This extends in the case of automobiles to those which are 60 per cent built in Canada. The American manufacturer by locating a plant in Canada can thus supply the Canadian market free of duty and undersell his United States competitor in the markets of Great Britain.
>
> Should the British Empire raise a higher tariff barrier with the aid of imperial preferences, United States capital will be compelled to locate a still larger proportion of its plants in Canada. Thus British imperialism is laying the foundations for American control of the strategic economic advantages of Canada.

As the American Economist sums up that part of the situation:

> American capital is year by year obtaining a more complete grip of Canadian manufacturing and commercial business. Branches of large United States corporations are being established in Canada, or Canadian companies are being taken over, at a rate that indicates economic conquest.

What advantage is it to us if these factories are located here, if the profits are enjoyed by people who live outside the country, and the regulations which we make in this country force wages down below the rates that prevail south of the line? I refer to the high taxation, all of which results in the transference of wealth from the many to the few. I am quite well aware that a statement of mine on this subject will not be of any very considerable value, hence I would like to quote a statement of an economist of recognized standing, Mr. J. A. Hobson, who in speaking of this point says:

> This world war, destructive as it was, did not leave the world, as a whole, seriously diminished in its economic resources. It did not, even in Europe taken as a whole, so seriously reduce our productive resources as to make a long spell of poverty and recoupment inevitable. Almost all the economic cost of the war was defrayed out of the current real income of the world.

And again:

> The connection between the inflation which the governments and banks conspired to produce and the magnitude and ownership of the war debt is not obscure. The "money" which the governments got by printing notes, by borrowing from banks, or by inciting banks to give credit to customers in order to increase subscriptions to war loans (all pure inflation), they spent in buying goods and services. Thus prices and profits mounted up the faster, because this easy way of getting

money made governments more careless in the rates they paid for what they bought. The immense and rapid profits—due to the expanding prices, with a lag of wages and a virtual elimination of competition—the recipients invested in war loans, the only authorized and available investment.

Again:

At the end of the depression, virtually the whole of the debt will be held by the well-to-do classes, forming a considerable reduction in the proportion of the current income of the nation available as purchasing power for the working classes.

In discussing this question of the ownership of our war debt, the Toronto Globe recently quoted Mr. A. E. Ames as stating that:

On January 1, 1924, out of a total national debt of $2,516,000,000 not less than $1,969,000,000 was held in Canada, and only $546,000,000 in other countries.

Now the question I should like to ask is why should large numbers of Canadians be forced year by year to pay tribute to a comparatively small group of Canadians who profiteered during the war or made profits since the war and as a result of the war. Viscount Milner speaking of the war debts has this to say:

As regards that portion of the national debt which we owe to ourselves I do contend that it does not represent a diminution of our total national wealth, but a redistribution of it between individuals. It (the national debt) is an almost intolerable embarrassment to the government, which has perpetually to extract money from a great number of people in order to put it into the pockets of a much smaller number.

Sooner or later we shall have to face the handling of our great war debt in an altogether different way from what we have done in the past. People do not like to hear talk of repudiation. People are very fond of saying that we must keep all our agreements in regard to tax-free bonds, and so on, but why should the great majority of the people of this country have to suffer year after year in order to pay tribute to the very small group of those who hold the major part of the wealth of the country to-day? May I venture to say that three kings rule in Canada to-day: Privilege, Property and Precedent, and until these are dethroned the people can expect very little relief indeed.

I speak of the burden of the overhead charges which is crippling industry and commerce. I remember this being brought to my attention some years ago, when in the West we were in the full tide of our real estate speculation. As I went into a small town in western Canada I was met at the station by a friend of mine who had a very fine automobile. It was just when automobiles were becoming common. I said, "How did you manage to make enough out of your business to buy this?" He was running a comparatively small business. He said, "I did not make this out of my business. In fact, this car did not cost me anything." "Well," I said, "You had better let me in on that kind of a deal." He replied, "I had a few thousand dollars to spend, and I managed to make the first payment on a lot down-town. A few weeks later the lot had increased greatly in value, and a man offered me $2,000 on my bargain, and I took it. I had $2,000 to the good, easy money, and I suppose easy money was easily spent. I invested in the car. So you see it cost me nothing." It occurred to me at that time, if it cost him nothing, who paid the bill? There was a good car, good materials, good workmanship and all that kind of thing. Who paid the bill? He confessed that he did not. I venture to suggest that every man who built a house on that lot, or who rented the house after it was built on that lot, helped to pay that bill, that every customer who bought his groceries from the store built on that lot helped to pay the bill. It was a perpetual charge on the productive activities of the community. What is true of real estate is true of these many mergers we have had, from the Canada Cement up or down; it is true of Besco Steel, and similar corporations with what we commonly know as watered stock.

We find that constantly, whether in government affairs or in private business, we are told that fixed charges must have the right of way. I would like some day to see that statement successfully challenged. Why should those who have managed to secure a very heavy mortgage on the country always have a prior claim when other people are suffering? We need to have some revision of our ideals on this matter. I know of no reason other than that advanced by our legal fraternity, who are working largely on precedent, why the poorer people should always have to turn over the greater part of what they make to people who have thus legally or illegally secured mortgages on all their property and the results of their labour.

I think I need not mention here—I adverted to it on a former occasion—that agriculture to-day is in a deplorable condition largely owing to the tariff, high freight rates and inadequate credit facilities. My farming friends have been portraying that condition last year and again this year to the House. As a city man I do not come into quite such direct contact with this question as those in the rural districts, but those of us who live in the cities of the West, which are so directly dependent upon the farming operations cannot but be thoroughly cognizant of the bad conditions which exist at the present time.

I had a letter a day or two ago from which I should like to read an excerpt with regard to a new farmers' organization which is working along very radical lines. This is the extract:

> We were 700 strong last July. Now we are climbing to the 20,000 mark. * * * I am travelling around in this province, and I know the conditions here pretty well. * * * The whole province is in a state of bankruptcy.

By the way, he is speaking of Saskatchewan, not of Alberta.

Then he goes on to say:

> Farmers can no longer be fooled. They know that the bankers have a monopoly over the medium of exchange which governs all commodities. They know that an army of customs officers up the coast lines and across this vast continent and in the interior are millstones on their necks. The government is legislating into the hands of a few the honest earnings of the masses. We know of the watered stocks, and of the railways which are robbing the honest farm workers—women, children and all. We know that the interlocked bankers and like industries—steel trusts, milling companies, packing houses and transportation corporations are the Shylocks.

Now, I am not saying whether that is extravagant language or not, but I do say that very large numbers of people across this country are coming to feel that way, and this is a matter which the government cannot afford to ignore. I spoke of the unemployment resulting from a lack of producing power sufficient to absorb production. I wish I could induce the members of this House to read a recent book by the authority I quoted a few moments ago, Mr. J. A. Hobson. Mr. Hobson is not a Socialist; he may be perhaps termed a radical-Liberal. He is one of the men who has been appointed by the present government in London to investigate, together with a number of financial authorities and experts, the incidence of taxation in England. In his book on the Economics of Unemployment he says that the fundamental trouble to-day is that we have had altogether too much saving of a kind. Owing to the unequal distribution of the world's wealth, a comparatively small number of people have been able to retain as their own the greater part of what has been produced. In this respect Mr. Hobson is simply carrying out the thesis which was proposed by Mr. Maynard Keynes several years ago. This accumulated wealth, which could not be consumed by the people who owned it, had to be invested; it had to be put into fixed capital, and so there came to be an undue proportion of the annual production invested in fixed capital. That was all very well as long as the earning was confined to Great Britain, or confined to a few of the European countries, but as the development of the machine went forward and the organization of capital became more complete we had production on a large scale in almost every country of the world, including the great oriental countries. And so we have the anomaly to-day of goods being produced in enormous quantities, quantities that are too great for the purchasing power of the people, and in some way or another, he points out, we shall have to have a more equitable distribution, or if not that at least in some way, we must ensure that a large proportion of the annual output finds its way to the great mass of the people either in the form of services or wages. Now, this is an economic theory that, perhaps, is novel to a great many who have not studied the question, and yet one that is being endorsed by a growing number of economists who are regarded, at least in the Old Country, as safe and sane. We may ask ourselves whether we ought not to take action in this House more along the newer lines of thinking and less along the lines of economists who lived in the early days of the capitalist era.

Can Canada successfully compete with the mass production of the United States? I venture to say that she can only by lowering her wages, and that in return would result in less purchasing power in this country. Can the Canadian farmer compete with the lower standards existing to-day in southern Europe? I doubt it very much. They can do so only by lowering their standards to those of Europe. This is the world situation which we must face.

I have already referred to the continued emigration of our people from this country. In connection with it, what we ought to recognize is, that in this turnover of immigrants which is being helped by the railroads, and which is, of course, an advantage to them, we are witnessing a substitution of one class of people for another class—a substitution to no small extent of the city-bred people of Great Britain and the peasant people of southeastern Europe for the native born, sturdy Canadians whom we had in this country a generation ago. For whose advantage? Not for the advantage of the majority of the people in Canada. Not for the advantage of the people who are coming over here—at least they will not get the results, although their children may. Primarily it is for the advantage of the railway and other transportation companies. We labour men have sometimes been charged with blocking the immigration policy. We have done all that we could in this part of the House to discredit certain immigration policies which were proposed by the government last year. And we will be glad to do that again if these policies are brought for-

ward once more. But I do not think we can be said to be taking an altogether negative attitude; I would be quite willing to advocate an immigration policy if I might be allowed to outline some of the elements which must enter into such a policy. I would say, first of all, that there should be an expropriation of vacant lands across the country, so that the settlers of to-morrow would have in principle the same position as the settlers of yesterday, that is that they would not have the burden of payments on lands that have been largely held by speculators. We should relieve the immigrants of the burden of taxation just as we advocate should be done in the case of our own people. We would advocate the use of the railroads for the people. If the railroads could not pay and do the work we would say, "Do the work anyway." That is what is urged now in regard to the farmers—that they ought to produce whether they can produce at a profit or not. I would say further that we ought to insist that in some way cheap credits should be supplied. If our present banking system is primarily for commercial needs and not for industry, then we ought to either revise it or institute another system that will be fitted primarily for the producers of this country. We ought to develop our markets, to increase the purchasing power both at home and abroad; and above all we should provide for the social welfare of the settlers. In many parts of the West one whole generation has been sacrificed in order that certain people might profit by the inflation of land values. I remember a few years ago, when I had something to do with investigating conditions in the three prairie provinces, I made a proposal to the then premier of one of those provinces for the institution of a closer community plan by which education, and medical service, and expert advice along agricultural lines would be brought within reach of the settlers. The Premier said to me "That is all very well and very laudable, but how would you finance such a scheme"? I suggested to him that a very few cents additional tax per acre on wild lands would very easily finance the whole proposition. He threw up his hands. "Why" he said, "already the American investors are squealing because of our wild lands tax." This simply means that the premier of that province was carrying on the affairs of that province in the interests of the American investors who came here to put money in the land at, say $10 an acre, hold it till it rose to $25 an acre, and get away with the proceeds. The premier was not carrying on the affairs of the province in the interests of the bona fide settlers who were putting their very life blood into the building up of our Canadian citizenship.

I referred to the instability of our banks, and I do not wish to more than mention that at this juncture. We were told the other day by the Montreal papers that we ought to carry out in the most rigid form a sentence of 25 years and lashes in the case of a bank robber. I ask in all seriousness, what about the penalty for the officials who have wrecked a great many homes in this country? I think I may say that a great many people across the country are asking such questions, and the government is not going to be let go scot free unless it takes very drastic action with regard to those who are looting the people's funds on a larger scale than the bank robbers so-called ever had the opportunity of doing.

I spoke of still another matter, the concentration of economic power in the hands of small groups who are able to direct the policy of industry for their own financial gain rather than towards supplying human needs. Now this is not the place to enter upon a discussion of our present money system, but I would urge that, since money is the measure of all things, the quantity of money in circulation determines the value of the money unit. I use the word money in the sense used by the Hon. Reginald McKenna. Money for him is all currency in circulation among the public and all bank deposits drawable by cheque. At the present time the control of all our moneys—we have not a great deal of gold to-day, but all our paper money and our cheque money, because the cheques perform the function of money—is vested in the hands of banks, with very small supervision indeed by the government. That means that the bankers by inflation and deflation can cause a rise and fall in the price of all commodities, and thus really levy a tax on the people, without the people having any idea how severely they are being taxed. I believe that some of the Progressive members of parliament recently visited the reversible falls at St. John. The water at these famous falls flows one way during a part of the day, and during another part of the day flows the other way; and it has been long thought that perhaps some time the tide of the bay of Fundy might be used on a very large scale for providing power. I would say that the banks have anticipated any such action as that with regard to financial affairs, and with them it is a case of "Heads I win and tails you lose." They are able, whether it is inflation or deflation, to manage to get their part of what is vulgarly known as the rake-off. Through the

interlocking directors undoubtedly, as we pointed out last year, this control is centred in the hands of a very small group. I do not propose to go into any details in regard to the solution. Our natural resources fundamentally belong to the people and they should be taxed until they are forced out of private hands. I think of our great water powers across the country which are capable of electrifying our railroads and of supplying power for our homes if they could be brought into effective use. Our great coal lands have been leased to private corporations, and these corporations have been carrying forward their business with almost entire disregard either of the welfare of their workmen or of the public at large.

We spoke of the necessity of in some way bringing plant equipment under co-operative and democratic management, thus providing more abundantly for the needs of the people. There has been a very great outcry echoed in this House two years ago against the policy of "Go slow," "ca'canny," or "strike on the job," but I would suggest, Mr. Speaker, that when a railroad fails to carry goods unless it can do so at a certain profit, or when the manufacturer closes down his plant unless he can keep it going at a certain profit, he is doing precisely the same kind of thing as the labour man when he says, "If I cannot work at a certain wage, then I am not going to give my service," He is sabotaging. He is reducing production. I think I have heard some of my farmer friends say in private—I hope they will not think I am giving them away—that the only possible thing for the farmers to do is to go slow on the job, produce less, and thus bring the people generally to time. It is the same policy precisely. Looked at in the large, the policy is anti-social. In the case of the railroads and the banks the anti-social effects are undoubtedly much greater in magnitude. To-day we must remember that there is no such thing as private ownership of property. Since we produce collectively in all our larger industries, we must recognize more and more that no one can absolutely say with regard to a huge plant or a large railroad, "This is distinctively my business and I will brook no interference." Rather we must remember that we are advancing to a condition in which the public will claim a very real part in the carrying on of the process of production.

My last point in the analysis of the situation which I made was the necessity of basing our foreign trade policy and international relations on a clear recognition that the world has become an economic unit in which the welfare of each nation is dependent upon the welfare of all others. I venture to say that the movements which are going on in south-eastern Europe to-day, the proposals which are being put forth by the Dawes commission, the possible change of government in France after the next election, are far more vital to the people of western Canada than are the proposed changes in our tariff. We cannot imagine that we are going to solve our problems simply by looking at the situation immediately round about us. World affairs have become so inextricably intertwined, that we must do our share in helping to solve the world's problems, if we would solve those problems close at hand. I was very much interested a few weeks ago in noting that the farmers of the western States were beginning to realize the necessity for action along this line.

The Emergency Foreign Policy Conference of American producers urged the adoption by the American government of a vigorous foreign policy designed to fulfil America's obligations as embodied in her war aims. The main points in the programme are, we are informed, the following:

1. Establishment of reparations within the capacity of Germany to pay, with or without the participation of France.
2. Two-year moratorium to enable Germany to stabilize her government and industry.
3. Opposition to continued military occupation by foreign troops of the Ruhr and other invaded territory.
4. Sympathetic encouragement and support of the democratic German republic and of the trade union and co-operative organizations which are opposed to the restoration of militarism in Europe.
5. Opposition to international armament rivalry in construction of airplanes, submarines and poison gas, with the consequent increase in tax burdens upon the people.
6. Congressional appropriation for immediate relief for starving populations in Central Europe.

I would venture to suggest that something along this line might very well be adopted by our Canadian government. The lack of purchasing power in Europe cuts off our market there. The low standards in England or the low standards in Europe render it impossible for us to compete except by adopting similarly low standards. We were urged the other day to exclude the Chinese from the west coast; but so long as we continue to receive goods from China or Japan or other oriental countries, undoubtedly we are faced with the fact that we must compete with the Chinese who are resident over there. If ships cannot be repaired well enough or cheaply enough in Vancouver, they are taken over to China to be repaired by orientals. We must recognize the fact that to-day we face a new situation. I should like to suggest that we are children of the pioneers. Our forefathers

came into a new world several generations ago and were able to overcome all sorts of difficulties to them entirely novel. We, their children, face another new world. In the closing chapter of his book on the History of Mankind, Mr. Van Loon suggests a very apt comparison. He says that the ship of state might be likened to an old sixteenth-century sailing vessel. Gradually through the years the old sailing vessel has been made over until she has to-day been converted into a thorough-going, first class liner. The sails are gone; the motive power is now in the hold; the sailors have been taken off the rigging and put into the stokehold. They do not altogether like the new position even though it may be less dangerous than that up in the rigging. But he suggests that the fundamental trouble with the ship of state to-day is that the old captain and the old crew are still in charge, and the old charts and the old regulations still hang in the cabin. There is the trouble to-day. We need men with a new vision. We need to work out new theories of government and new regulations if we are to be able to sail the high seas of to-day with any measure of safety.

This numerically small Labour group has difficulty often in expressing its viewpoints. Very often the older groups or parties put forward a resolution, and we are forced to vote for or against it even although such resolution may not express what we believe or its negation accomplish what we want. I venture to suggest an amendment to the budget. I do so because I believe that, in many respects, although some of us advocate theories that seem to be very radical in their character, a very considerable number of the members of this House, especially members on the Progressive side, are quite willing to travel a long way in our direction if they are quite sure that we are not advocating anything that is immediately impracticable. So I have tried to draft a resolution in such a form that it will be found to be quite within the range of practical politics. I beg leave to move:

That all the words after "that" be struck out and the following be substituted therefor:

Whereas the budget proposals would seem to indicate the recognition by the government of the necessity for a fiscal policy designed to encourage industries based upon the development of the natural resources of the country, and to afford some alleviation of the financial burden, bearing upon the people;

And whereas the condition of such industries and the position of consumers in general is such as to demand relief;

Therefore, be it resolved that the best interests of Canada will be served by an immediate and substantial reduction in the tariff on the necessaries of life, including foodstuffs, clothing and building materials;

[Mr. Woodsworth.]

And further, that the loss of revenue, if any, which might result from such reduction in customs duties should be made good by:

(a) The readjustment and extension of the income tax to bear more heavily on unearned incomes.

(b) A direct tax on unimproved land values, including all natural resources;

(c) The institution of a graduated inheritance tax on large estates.

Mr. DEPUTY SPEAKER: With respect to the amendment moved by the hon. member, that will be left to the Speaker for his ruling.

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

Mr. SPEAKER: Mr. Woodsworth moves in amendment to the main motion, seconded by Mr. Shaw:

That all the words after "that" be struck out and the following substituted therefor:—

Whereas the budget proposals would seem to indicate the recognition by the government of the necessity for a fiscal policy designed to encourage industries based upon the development of the natural resources of the country, and to afford some alleviation of the financial burdens bearing upon the people;

And whereas the condition of such industries and the position of consumers in general is such as to demand relief

Therefore, be it resolved:—

That the best interests of Canada will be served by an immediate and substantial reduction of the tariff on the necessaries of life including foodstuffs, clothing and building materials;

And further that it is desirable,

(a) That the income tax should be so readjusted as to bear more heavily on unearned incomes;

(b) That unimproved land values including all natural resources should not be exempt from taxation; and

(c) That a graduated inheritance tax on large estates should be considered.

Mr. C. A. GAUVREAU (Temiscouata): Mr. Speaker, I desire at the begining of the few remarks I have to make on the budget to extend my sympathy to the Minister of Finance (Mr. Fielding) in that he has been prevented by illness from occupying his seat in the House during this session and delivering the budget speech as we have been accustomed to hear it delivered for so many years past. But though we all regret his absence we have been fortunate in the choice of an Acting Minister of Finance (Mr. Robb), who has delivered a clear, short, substantial and unassailable budget speech. That budget speech has pleased the public at large; it has brought joy and happiness to the rank and file of the Liberal party, but I am afraid, Sir, that it has been looked upon as a thunderbolt from the blue sky of the Tory party in this House and outside of it.

Sir, since this government came into power, the Conservative party, and the reptile press that supports them, have assailed the ministry with vituperous denunciations, because, as they used to shout, they deceived the people of this country by not living up to the promises of the platform of 1919.

You are my witness, Mr. Speaker, that in this House, since 1922, our friends to your left, the loyal opposition, one after the other, have waxed indignant over the fact that the Liberal government had not the courage to apply, while on the government benches, the principles they put forward while in opposition.

Mr. MEIGHEN: Hear, hear.

Mr. GAUVREAU: The right hon. gentleman says, "hear, hear." Perhaps he wants to occupy a conspicuous position on the Chinese wall of protection. Well, I leave that to him; he is welcome to it. I would rather be with those who want a reduction of taxes in this country.

But, strange to say, Sir, the moment a Liberal budget is brought down, in which Liberal doctrines and Liberal principles are put into effect, you hear from the same corner the other song, that we are going to ruin the country by killing our best industries. No surprise in that, as far as the Liberals—the true and unselfish Liberals—are concerned; it is the role and duty of an opposition to criticise the government, even at the risk of being accused of inconsistency, and in the face of what we have already heard, I am satisfied that in spite of the cries of the Conservative birds of the capital, this country will continue to prosper, its industries will find their activities not interfered with, and the consumer will enjoy better life, while the industries of agriculture, fishing, mining and lumbering will expand to the great benefit of the mass of the population.

It is very pleasant, Sir, to see the Liberal party going forward and leaving behind it the Tory forces, whose politics are negative of all that a nation desires in order to prosper and be happy and contented.

The hon. gentleman who was Minister of Finance in the Tory government (Sir Henry Drayton) tried to place this government in opposition to what the Minister of Finance (Mr. Fielding) said last session about the stability of the tariff. He read to this House just that part of the budget speech of 1923 which suited his purposes, but he carefully avoided reading what I consider to be essential to prove that the Minister of Finance was not a man to be caught by any claptrap coming from any quarter whatever. It is because he knew that in a country like ours basic industries would need at some further date to be dealt with, that he said in his speech then:

> There will be cases, where, in the interest of the consumer, reductions in the tariff ought to be made. There will be inequalities discovered in the tariff which should be corrected; there will be errors which should be remedied. Any minister, any parliament must be free to deal with these cases as they arise.

He had foreseen that, based on our Liberal platform, a policy of reduction would follow after some time, and it is through this open door on the tariff question that our present government has thought fit and proper to act and to act wisely.

And, Sir, throughout this country, apart from the big interests concerned, a wave of enthusiasm has prevailed since the budget has come down. From the sea east, to the sea west, the people at large are willing to admit that it is a sound policy, a national one which has at heart the welfare of the great mass of the workingmen as well as people in every walk of life. How could it be otherwise when the budget lightens the burden of taxation by reducing the net debt of Canada by $30,000,000, while taxation is reduced by $24,000,000 this year? The Acting Minister of Finance (Mr. Robb) was right in saying:

> It is confidently expected that this reduction will give such impetus to trade that it will result in greater development and prosperity to all the provinces of Canada.

And with this approval, in spite of the attacks from behind and from the opposition benches, the government must go forward, joining hands with the majority of the people who were crying for a change, and who have got it at last.

Now, Sir, if on the one hand, I am prepared to congratulate the government upon its Liberal policy, on the other hand, I must warn it not to forget that while we need economy in the public service and a close supervision of every department, as far as expenses and personnel are concerned, public works must not go by the board for the sake of curtailing expenditures.

It is all very well to build branch lines especially when we see the Canadian Pacific Railway placing bonds on the market for twelve millions of dollars in order to start on a policy of extension and development; and I am not averse to helping our National Railways which are showing such good and efficient results under the management of a reliable and competent man like Sir Henry Thornton, but on the other hand, Sir, I want to see our wharves, our ports, our rivers, and

our public buildings, kept in good order and repair. I am sorry to say, that we are refused some necessary works which will cost more in repairs later on than if we do them just now. I will go so far as to say that we should sanction a certain amount of necessary expenditure on public buildings.

Take the case of Trois Pistoles in my own riding. The post office and the customs and excise offices are located in the city hall of the town of Trois Pistoles, paying rent to the city.

Now that the department is advised that the town needs the whole building for its own purposes, and the Department of Public Works has to go somewhere else for shelter, I think, Sir, it is the opportune time, for the Minister of Public Works (Mr. King) to place in the estimates an amount sufficient to erect a suitable building for the above-mentioned offices—post office and customs, at Trois Pistoles.

Another point to which I desire to call the attention of the government, and especially the careful consideration of the Minister of Trade and Commerce (Mr. Low) is the communication that should be established between the north shore and the mainland, below Quebec. Since the crossing between Murray Bay and Riviere-Ouelle has been dispensed with, there is no communication between the two shores, from Quebec to Trois Pistoles, a distance of more than 130 miles.

All that part of the north shore, from Malbaie to Bersimis, with a population of more than twenty thousand people, is left without communication with the south shore or mainland, except during the season of navigation by sailing vessels.

It is a problem the government should have at heart to solve, and the sooner it is solved the better. These people pay taxes like the rest of us, but are deprived of all facilities for their commerce and industries.

It would cost very little to grant money to a company which will put a boat under commission to give these people communication with the south shore, especially in those hard months after the closing of navigation.

We have had in years past, a ferry boat for winter navigation between Rivière-du-Loup and Tadoussac and Escoumains on the north shore. It was a success and a benefit to the people on both coasts, but unfortunately the Conservative party while in power, for petty partisanship, caused the service to fall to the ground. I hope the government will see that this service is restored so that the population on the north shore, isolated from the rest of the world for so many months during the winter season, may be relieved of a great hardship not understood by those in more favoured places who enjoy efficient transportation.

Now there are complaints in regard to the National Railways which should be aired in the presence of the Minister of Railways so that he may help us in securing justice. First of all, I find that the management is not dealing fairly with the employees, in not bringing down at once a new pension fund. There is to-day in operation the relief and pension fund of the old Intercolonial railway employees but it is inadequate to meet conditions under the present cost of living. The minimum of pension is $30 a month, a paltry sum which is not sufficient for a man with a family to live on. Working men on the government railway should be better treated, and the sooner a new pension fund is created the better it will be for the whole system. I can assure the minister that all the men interested are willing to contribute a higher sum annually to the new fund, provided they receive a better pension when they retire from the service.

Mr. CARROLL: What pension are the men receiving now?

Mr. GAUVREAU: The Intercolonial Pension Fund is the only one which exists at present. I was told by the minister that a new scheme for the whole system is in course of preparation but really think they are taking too much time in formulating a plan which will be satisfactory to all concerned.

Mr. CARROLL: Does my hon. friend know that men who worked on the Intercolonial for seventeen years were discharged in 1911 without any pension?

Mr. GAUVREAU: Yes, the story is so bad that it would take two years to outline it in detail, and I do not want tonight to occupy an undue amount of the time of the House.

I must also complain about the service in the county of Temiscouata, which I have the honour to represent in the House. For example, stations like St. Eloi and St. Arsene, where a business amounting to $100,000 a year is transacted, are left to the care of one man alone. The station agent, after working eight hours a day, from 8 a.m to 4 p.m., closes the doors, and the public arriving or going out on the evening train are left in the dark to themselves; there is no one to help with their baggage, and there is no shelter from inclement weather. Over a

month ago I sent complaints to the proper officers, but up to now nothing has been done to remedy the evils complained of, and I beg to call the serious attention of the Minister of Railways to these facts so that he may cause some steps to be taken for the better treatment of our population, especially in the two parishes above mentioned.

I should like also to deal with the methods employed on the Canadian National Railways in connection with investigation. I will give an example of what I mean. Some time ago accusations were brought against a certain station agent in Temiscouata. The accuser was prepared to submit his case, supported by proofs, to the commissioner appointed by the government. But, Sir, the accused was examined, although not put under oath, and in the absence of the accuser denied everything alleged against him. As a consequence he went scot-free. Another case, and a recent one, had reference to the conduct of a Levis man named Levesque. This man was accused of having used liquor while on duty and was dismissed. The investigation took place but in the absence of the accused who had asked, but with no success, to be allowed to attend with his witnesses. This man sued the National Railway board and Chief Justice Lemieux has given judgment in which he declares the dismissal was unjust and unwarranted. The result was that the railway board were condemned to pay $2,000 to the man who had been dismissed without his case being heard at all. I can cite many instances of the same character.

May I be permitted to say that that is not the way to administer justice on the Canadian National Railways. Are we going to allow the interests of the employees to remain in the hands of those who have shown they are animated neither by justice nor fair play?

In conclusion allow me to read a few lines which may be interesting to the two old-time parties, the Liberals and the Tories:

> The Conservative opposition will, of course, fight the government's proposal to reduce the taxation on Canadian industry, where such reduction means the lowering of the protectionist tariff. There may be some sniping of leaders, too, from behind the Liberal front line. But the government has nothing to fear from a straight contest on the tariff issue.
>
> Against the Conservative policy of negation, the Liberals show, at least, some intention of going forward. It is an uphill fight, handicapped as the government is with the burdens of debt which have been fastened upon the country in years of frenzied finance. But the prospects of a real battle for progress should stir Liberal enthusiasm, and enlist the support of like-minded people, by whatever party name they call themselves.
>
> The Conservative opposition has been magnified out of all proportion in the present parliament, very largely owing to the policy of the government in marking time instead of going forward with the mandate which the country gave to the Freer Traders in 1921. When the time for the next general election comes, even though all the resolutions of the national Liberal convention have not been enacted into legislation, a session of genuine effort to deliver the goods would place the Liberals in a more favourable light. The people of Canada are in the mood for trying something, anything rather than to stagnate, or to keep going round in the vicious circle of timid futility.
>
> Even though the Conservatiive party were able to line up all the reactionary interests in the country to elect another Conservative government, it would avail them nothing. Canada must go forward, along liberal lines.

Mr. C. H. DICKIE (Nanaimo): It is pleasant indeed to hear from members on the other side of the House of the prosperity of Canada under Liberal rule. Several of them have referred to that. I have not noticed though that there is any congestion of passenger traffic at our international boundary line of people coming from the United States back to Canada again. However, the hon. member for St. Lawrence-St. George (Mr. Marler) has not spoken yet and possibly we may hear from him of the return of some of our people from the south. Were I a bigoted political partisan, I would say that I am pleased with this budget speech, because I am quite sure that a wave of resentment will sweep across Canada in consequence of the action of the government at this time. However, being a Canadian I can only confess to a feeling of sorrow that the great Liberal party should at last capitulate to the free trade element of the country, because that is what it means.

An hon. MEMBER: I hope the hon. gentleman is right.

Mr. DICKIE: An hon. gentleman says he hopes I am right. I am giving him credit for that. The government for at best a year or two of power will capitulate to the free trade element of the country, for let it be understood, and it will be understood, that the present proposed reduction in the tariff is only a beginning. The western farmer will experience but slight relief because of this reduction. Our manufacturers are appalled. The Progressive party is not going to stop at this reduction; other manufactured articles, including shoes, clothing and furniture will be next in line.

What person or company will embark in enterprise in this country with the sword of Damocles hanging over their heads. It is impossible to get capital to engage in enterprise unless they have some guarantee that there will not be a continual tinkering with our tariff. A short time ago hon. gentlemen will remember a bond issue of fifty million dollars was subscribed readily in this country

out of capital which should under other conditions have been embarked in industrial undertakings or in developing the potentialities of our wonderful country, as has been ably pointed out by the hon. member for East Toronto (Mr. Ryckman). People are afraid to trust their money in industrial enterprises and prefer bonds. How can it end? It can only end in disaster for Canada. We must have stability, and if we do not have that stability, I should shudder to think what may become of our country. We have going out yearly to the United States $250,000,000 in excess of what we receive from them. Of that amount $188,000,000 represents our adverse balance of trade with that great country. The balance represents interest on bonds, municipal, provincial and federal, and also interest on American investments in this country. Just think of it, Mr. Speaker, one billion dollars every four years! Is it possible for any nation? Can any nation of nine million people stand an expenditure of one billion dollars going across the line every four years?

That is what is happening to-day, and still in the face of that we are lowering the tariff barriers to that country in order to bring in more importations, and to have a larger amount of our capital go across the line. It is inevitable that we cannot go on indefinitely along these lines. Surely the Progressives have not a monopoly of the economic sanity of the world, the principal nations of which have decided against free trade. I say the principal nations; well nearly all nations have, with the exception of England. And what of poor old England, with a million and a half of unemployed men, her factories idle, her shops filled with cheap articles from continental Europe? Premier Baldwin pointed out the only remedy for a part of England's trouble, but England listened to the voices of the theorists and of demagogues and rejected the advice, and so you have what you see in England to-day.

The hon. member for Bow River (Mr. Garland) in a recent speech said that the coal mines of Alberta required no artificial stimulation, and that the normal growth would take care of the business for those coal mines. I think it would be illuminating to the hon. gentleman if he would only study the history of the iron and steel industry of the United States. That country struggled along for some years. It was impossible for it to compete with England with its great supplies of iron and coal, lying side by side, and with its highly organized industries. Then a heavy duty was imposed on iron and steel coming into the United States. That was found to be inadequate. After a heavier duty was imposed, and only when a prohibitive duty was placed on iron and steel was it possible to build up the industry in the United States. Nobody could overrate the importance of that industry, which is recognized as the barometer of trade in the United States to-day. Had the industry not been protected, had the artificial stimulation of which the hon. member for Bow River spoke, not been applied, England would still, or at least until 1914, be sending this iron and steel into the United States.

The hon. member for Lisgar (Mr. Brown) the other day informed the House that he would like to go over to Wisconsin and buy some heifers. It seems too bad that a man should not be allowed such a small privilege; but if he has heifers or if he has wheat, or cows, or chickens to sell, does he suppose that the people from Wisconsin are coming over to buy from him? They have said plainly and distinctly, through their McCumber tariff that they will not do so. You could not sell one of your cattle over there if you tried. They do not want them there. They say "Keep your tarnation critters off our land. Them is our sentiments, by heck." That is what we hear from his farmer friend across the line.

Mr. BROWN: Is the hon. member under the impression that the member for Lisgar wanted to buy cattle to please the Americans or to please himself?

Mr. DICKIE: To please himself. He wanted to take his money over there, buy cattle, leave his money there and bring the cattle back. I do not think that a man who would deal with a country that absolutely refuses to buy from us displays any great Canadian spirit. A man who, in a Uriah Heep kind of way, goes to the States to buy from them when they will not buy from us is not showing the right spirit. We obviously benefit to a degree from the amount of American capital that is invested in our country. The Americans come in here, and we welcome them They have invested their money and made profits. Those profits go to build up their cities and enhance colossal fortunes across the line. But we do not get as much out of our resources as we should get. On the wild north coast of Scotland there is a humble monument erected over the graves of twenty or more drowned seamen. On the monument is inscribed—

Mr. FORKE: That is as old as the hills.

Mr. DICKIE: Well, so are you. On this monument is inscribed "Erected by Scotchmen to the memory of unknown sailors out

of a part of the money found on their bodies."

With respect to this money going across the line from the West, I have seen the up-to-date cities of Spokane, Seattle and other cities fostered and become prosperous because of the mineral wealth and money which they have got from our Yukon region and our Kootenay region, money which should have stayed in Canada. Across the line they have an era of prosperity which we do not have in Canada. In days gone by I have seen Los Angeles, when it was smaller, practically thronged with people from the prairie provinces. Those were in the days when they were making money either by speculation or by wheat mining; but many of them were going down there taking with them money which they had accumulated in Canada and making their homes in Los Angeles as they had a perfect right to do. People called them "wheat miners," and the term "wheat miners" is right, because raising wheat year after year means simply mining out of the soil the nitrogenous element which has been years in accumulating. The people in the West must turn to mixed farming. While it would be presumptuous on my part to tell them how to farm or anything relating to agriculture, it is inevitable that they must turn to mixed farming. In San Joaquin and Sacramento valleys in California in the summer you would once see waving fields of wheat, and in the fall, as far as the horizon, you could see blazing stacks of straw. They were taking everything from the land and giving nothing back. The yield fell from 20 to between 5 and 7 bushels an acre, and then the growing of wheat was discontinued. We all remember when the Dakotas were noted for their magnificent wheat, but we hear very little about that now. History will repeat itself in western Canada, and surely the time is at hand when we should conserve our resources. We are raising too much wheat at the present time. Let us take the copper market, in the big mines in the West when the price of copper drops below ten cents a pound, it is impossible to produce copper at a profit. The smelters close down and the mines close down to a certain extent. When consumption overtakes production again and copper goes up to 13 cents a pound, the mines are started again. If the good farmers of the West could act in a similar way with regard to wheat, they could get $1.50 a bushel for their wheat which is as low as wheat should be sold at. That is the way the thing works out in regard to copper, and I know of no other way in which copper could be worked. Why is that not applicable to the wheat industry? People will say: The farmers cannot do those things and I believe that may be true. The problem is one that cannot be cured by tariff legislation. In 1921 we imported $24,000,000 worth of agricultural implements into Canada. The duty on those implements does not amount to more than one-third of a cent per bushel on wheat, an absolutely insignificant fraction as regards bringing prosperity to the people of the West. Against that one-third of a cent which they might get, but which I do not consider they would get in the long run, we have the appalling case of manufacturers throughout Canada not knowing which way to turn. These manufacturers are honourable men. We must take their word with respect to the business they engage in. We have their balance sheets which show that they are losing money. Some hon. members feel a little annoyed when the word "manufacturer" is mentioned, and I have even heard the hon. member for Saskatoon (Mr. Evans) emit moans as if in pain when the word "manufacturer" is used. I believe he is an absolutely sincere, lovable gentleman; but it seems to me, living in those great lone prairies with too much time on their hands, these hon. gentlemen to my left have imbibed too many theoretical principles and have not adapted themselves to things that are practical.

As regards free trade, the hon. member for North Waterloo (Mr. Euler) the other day in a few words expressed sentiments regarding free trade that cannot be denied. The hon. member said that were conditions of living equal throughout this world free trade would be right and practicable, but until such conditions exist, it is not practicable. That is a fact. For instance, in our

9. p.m.

case on the Pacific coast, supposing America were guaranteed one hundred years of free trade with the Orient, where do you think your manufactures would go? Manufacturing establishments would spring up like mushrooms in those countries of the Orient where labour was worth ten or fifteen cents a day. What would happen to our manufacturing centres in this country? The farmers may say: We are farmers; we can live off the land; but we must look at things in a broader light, and I am sure my hon. friends in their quiet moments do so. Up to date, we have used the farmers very decently, I consider, with their agricultural colleges and experimental stations scattered throughout the country and railroad facilities. Now they want us to build the Hudson Bay railway. Who would build it? Would the cost come out of these gentlemen? It must come out of the industrial parts of Canada, the forests

and mines and fisheries of British Columbia, the forests, mines and fisheries of the Maritime provinces, the industries of Quebec and Ontario. How much would the farmers of the three prairie provinces subscribe to the Hudson Bay railway? Nevertheless, they do not seem to have any gratitude in their hearts; they have no consideration for the manufacturer who shows that he has been losing money for years, with his back against the wall, trying to keep his employees together, trying to do something for Canada. Those are things that make us at times just a little annoyed with the theories which we hear from hon. members to our left.

Undoubtedly, consideration will be given to them in regard to railway rates. I believe the railway rate from Edmonton to Fort William on wheat is about 24½ cents a bushel. For just one-half the distance over an equally good grade to the city of Vancouver, the rate is 22½ cents. Nobody can call that an equitable rate and it must be lowered. The people of the whole of Alberta must have a low wheat rate across the mountains into British Columbia. I do not say that because I am a British Columbian. I am trying to look at all these matters from the standpoint of a Canadian who wants to see our country go ahead, who realises that we are not making the progress that we should make. We are side by side with a magnificent nation to the south of us, a nation that came through the war with half the money in the world and with flying colours. On the other hand, we came through the war, mortgaged up to the hilt, with our young men coming back, battered, and we are fighting up the hill. Let us, like Canadians, turn our backs to the wall to the south and fight in order to make Canada a nation to be proud of.

In order to preserve Canada, let us adopt the only course that is commensurate with dignity and that will make Canada what we wish it to be. That course is to copy other nations, to adopt a protective policy, to nail our colours to the mast. Let the manufacturing interests. let everybody know that these will be our duties twenty years from to-day, and in that way you will see an immediate recovery. Let us make our duties exactly the same against the Americans as those which they have against us. There is not one argument in favour of letting their eggs come into Canada at four cents a dozen while ours go in there at eight cents and our cattle are hardly able to get into the United States at all. They are charging 42 cents a bushel duty on our wheat. I would prohibit every bushel of Canadian wheat from going into the United States. Establish flour mills in the West and make the best grade of flour in the world. Advertise that fact. Ship flour, not wheat. Do not allow our No. 1 Northern to go into the United States to raise their grade of wheat in order to make flour that will compete with ours. Those are bigger things than any tariff tinkerings that have been going on in this House this session. We must stop this exodus of money to the United States. As I have said, we are sending a billion dollars across the line every four years. We cannot stand the strain with a population of 9,000,000. Let us produce and consume our own bacon and coal and let our Progressive friends to our left throw away their can openers and produce more of the commodities that they are buying. It may be presumptuous on my part, and if I am wrong I desire to be corrected; but it struck me in my peregrinations through the prairie provinces that there is a lot of money lost through depreciation in agricultural machinery which is left outdoors exposed to the elements for twelve months of the year. I think that there is lost in this way almost as much as is collected in the way of duty on agricultural implements. I may be wrong in that regard, but I certainly do know that machinery left out in the open in the climate of British Columbia would deteriorate to a very marked degree. Any man who has an elementary knowledge of oxidation of metals and of the effects of alternate dampness and heat on the wooden parts of machinery will, I think, realize that there is at least some justification for the suggestion I have just made.

I think, Mr. Speaker, that we ought to avoid all racial feeling and creed distinctions, and discard as far as we possibly can any differences of this kind that divide us. What care we what a man is provided he is neither yellow nor red, nor turns his face towards Mecca? If a man is honest and honourable, a white man and a good Canadian citizen, there is no reason whatever why he should not make good in this country. Let us give people credit for sincerity in their beliefs. There is no reason for intolerance in this country, whose people are a splendid race. The people of Quebec, with their charming folk lore and their admirable traditions, and the people of old Ontario, who also have traditions of which they may be proud, are all equally good Canadians, and we do not want any line of demarcation between them. I am sure, too, that the people of the prairie provinces are among our finest citizens. It is therefore humiliating, Mr. Speaker, to hear people raising cries of racial

and other differences. This to me seems cowardly and I think we ought to put our backs to the wall and endeavour to make Canada a country to be proud of.

If I have said anything in the course of my remarks that might be construed as a criticism of the business methods of our American friends I take this opportunity to disabuse the minds of hon. members of any such impression, for I have every respect for the American people and am heartily in accord with their tariff policy. I believe that policy a wise one which should be followed by the Canadian people. The Americans have prospered under it, and other countries have adopted it; and here we are tinkering with the tariff, reducing the duty a little here and there, in the endeavour to placate an element that could be pleased in a larger way without such concessions, which have the effect of disturbing the whole industrial activity of the country. So far as the amendment submitted by the hon. member for Centre Winnipeg (Mr. Woodsworth) is concerned, I really do not think that it calls for any discussion.

Mr. HENRI E. LAVIGUEUR (Quebec County): It is customary to congratulate the Minister of Finance who has delivered the budget upon the excellence of his performance, and on the present occasion I take great pleasure in associating myself with my hon. friend (Mr. Dickie) in tendering to the Acting Minister of Finance (Mr. Robb) my sincere congratulations on the very able manner in which he has discharged the duties of the office this year. In the budget speech there are a few announcements which I think will reassure the people of this country, and the present government deserve every commendation on the way in which they have adjusted the finances so as to make possible the promise of a surplus in the administration of the affairs of Canada. It is also a great comfort to learn that the burden which has been bearing so heavily upon the shoulders of the taxpayers is diminishing to some extent. One practical instance of this is the reduction which has been made in the sales tax. It has been wiped out in some instance and on the whole has been reduced from 6 to 5 per cent. True, it is not a great reduction, but I think it may be regarded as a step in the right direction. The present government assumed a very serious obligation in 1921 and they have succeeded in greatly improving the condition of the country. The policy which has been followed by them is one that appeals to the Canadian people, the policy of retrenchment and economy.

If I say that the budget in some of its aspects is a great satisfaction to the people of Canada, I must confess on the other hand that there is undoubtedly an unsettled feeling in regard to tariff reductions, and the manufacturing element is somewhat alarmed as to what will be the future policy of the government. I understand that the reduction on agricultural implements is well received by the agricultural classes of the country, who are the great mass of our citizens and who are a deserving body. A compensation has been offered the manufacturers of agricultural implements by putting upon the free list the raw material that goes into the making of this machinery; and the sales tax has also been removed from this line of manufactured goods. In Quebec city we have a lot of important shoe factories, and as I have already stated, those interested in them are somewhat alarmed, not so much by what is contained in the budget as by certain remarks made by some influential members of the government. The hon. Minister of the Interior (Mr. Stewart), in the speech he made on the budget, said, as reported on page 1337 of Hansard:

> One could not help but be struck this afternoon, in listening to the address of the ex-Finance Minister (Sir Henry Drayton) by the fact that he saw very little wrong with the budget as presented on this occasion, but it was interesting to note the desperate way in which the hon. member declared that it was the death knell of protection. One would have thought that we were listening to a funeral oration this afternoon, and I trust that it will be the death knell of protection. I do not mean to suggest for a single moment that we should vote at this time to abolish the tariff in its entirety, but rather that we should do as we have been doing,—as to which my hon. friend complained so bitterly—continually amend the tariff where it bears too heavily upon the production of the country.

Mr. Speaker, in addition to that declaration of the hon. Minister of the Interior we have the pronouncement of the hon. member for Pontiac (Mr. Cahill) who stated that he would be quite willing to abolish the tariff on boots and shoes. I wish to put myself on record, as a Liberal member supporting the government and a representative of the province of Quebec and the district of Quebec, that we do not share the views of the hon. Minister of the Interior and of the hon. member for Pontiac. We have nothing to complain about in the tariff as it is now, but if I might be permitted to make a suggestion to the government I would ask them to have more protection as regards the British preference in the matter of shoes which are brought in here and which compete with the product of our shoe factories in the province of Quebec. I would suggest also that the sales tax, which has been diminished

from 6 per cent to 2½ per cent on shoes, should be entirely eliminated from that product and imposed to the extent of 5 per cent on imported shoes, so as to show our industries that we are willing to protect them, and also to do away with the feeling of uncertainty which prevails among those engaged in this class of manufacture. As I said a moment ago, I am not partial in my views; I think it is our duty to protect the agricultural interests and it is our duty also to protect the industries of our country. I think the budget as a whole should be well regarded by the citizens of Canada, because it contains many announcements which should be well received.

Mr. MEIGHEN: I do not want to be unfair to the hon. member and I will not ask him a question if he would prefer not. But if he does not object I would like to ask him this: I understood him to object to the present British preferential tariff on boots and shoes, which at its lowest is 18½ per cent, as too low. If such is his objection, does he think 10 per cent on binders, mowers and reapers is too high?

Mr. LAVIGUEUR: I do not think that the comparison can be made between boots and shoes and binders. I understand that the object in reducing the tariff on agricultural implements is to protect the farmers and agricultural classes, but in the other case it would be to protect the shoe industry which has to meet competition from other countries. I do not think the comparison should be made between the two; that is my answer to the question.

I wish to tender my congratulations to the government upon their policy of economy and retrenchment. I am in favour of that policy, but I am in favour of real economy. We in the province of Quebec and especially in the district of Quebec and Quebec city are quite willing to put up with the situation; if there is no money to be spent, no work to be done throughtout the country, we are quite willing to make our sacrifice as we have made it for a number of years. But there are very important works that are urgently required and should be proceeded with in my city and in my district. In the constituency which I have the honour to represent in this House we have made several demands and we hope that they will yet be carefully considered and that justice will be done in respect to them.

I am in favour of economy and retrenchment, and I must confess that I am somewhat astonished at the great amount of money which we are being asked to vote for branch lines. I know that a good many of these new branch lines are probably essential to the good administration of the Canadian National Railways, but we are told that many of them could be delayed for some time without the railways suffering. If we had retrenchment in this matter of branch lines, probably the district and province of Quebec would not have been refused for years its just demands for most essential works. With the money that is being spent on some of these branch lines, which could be delayed for some time without the railways suffering, a good many very necessary works in the district and province of Quebec could be proceeded with. Lately I have been asking the government to repair or rebuild the sustaining wharf at St. Gregoire, which was built by the government, at government expense, and has been maintained by the government since 1905, but as yet we have not been able to succeed in getting a grant of money to repair this wharf. At Loretteville, which is a very important centre, we have been asking for the erection of a post office. We have also been asking for the erection of a post office at Beauportville, which is also very necessary, but the answer to our demands has always been that the government has no money. I hope that these demands will be seriously considered by the government and that the necessary provision for these works will be made in the supplementary estimates.

Another very essential work is the building of a bridge from the island of Orleans to the north shore, where the people in six very important parishes are without any means of communication whatever. I understand, of course, that the government itself cannot build a bridge, but a subsidy could be granted to help in the building of a bridge at this point, just as was done in the case of the bridge from Isle Perrot to Montreal. All these demands have been pressed upon the government, and a good many other demands by members from that district, but they have not been satisfied yet. We do not wish to blame the government, but I think the time has come when the government should seriously consider these demands and do something for the province of Quebec which has sent here sixty-five members out of a possible sixty-five. The citizens of the province of Quebec are counting for something upon this government, which we have maintained in power since 1921. I do not want to be too severe on the government and no one will contend that I have been. I am a supporter of the government; I have always been faithful to the government; and

I intend supporting it, but I would urge upon them that something should be done for our district, and our demands should receive more serious consideration.

Mr. Speaker, I have expressed myself as best I could in a language which is not my own, and one in which I have a certain difficulty in expression, but I use it because it is always more satisfactory for a member to speak in a language in which he will be at least understood. I would suggest, and I think this is the proper occasion, that in this House of Commons, where both English and French are the official languages, every member should be able at least to understand both languages, and in this connection I would like to cite as a splendid example the magnificent speech that has recently been delivered in Toronto by one of our most distinguished and most respected citizens, the premier of our province, the Hon. Mr. Taschereau, who has been giving some good advice to the people of the province of Ontario. I think it is very desirable that many more men from Ontario with the spirit of the Hon. Mr. Taschereau should come to our province of Quebec and speak in the same sense in which he spoke in Toronto.

Mr. J. F. WHITE (London): The budget speech of this year is of particular interest on account of the reference in the Speech from the Throne to "tariff re-adjustments" and the statement that "reduction of taxation should aim primarily at reducing the cost of the instruments of production in the industries based on the natural resources of the Dominion."

That statement was construed in the public mind to mean a reduction of some kind in the case of agricultural implements. We are told in press reports that when a deputation from the makers of agricultural implements waited on the Prime Minister protesting any reduction in duties, he told them he could not understand why they should surmise that a reduction of duty was intended; as a change in, or abolition of the sales tax would have the effect referred to in the address.

Manufacturers, factory workmen and the inhabitants of the cities generally had the word of the Prime Minister, given during the 1921 election campaign, that despite the tariff platform of 1919, he could give them the assurance that, to use his own words "Our tariff is a tariff for revenue. No legitimate industry in this country, making a legitimate profit, need have any concern one way or the other as to what will happen to its future under Liberal policy in the administration of the tariff." He made that statement November 5, 1921, in my city where he spoke in favour of the Liberal candidate who professed adherence to what he called the "Laurier-Fielding tariff." The Prime Minister also made the same statement in the city of Brantford, which is, according to the hon. member for that city, the home of the agricultural implement industry. Other members have referred to that statement being made elsewhere.

Now, for two sessions of this parliament, although many minor changes were made, no changes of a sweeping character took place. **It is true that** the customs duties on many lines of agricultural implements were reduced 2½ per cent in 1922, but those changes were almost completely nullified by the changes made in the sales tax at that time. The sales tax was placed at 4½ per cent on Canadian manufactured goods, and 6 per cent on all goods imported, the difference of 1½ per cent just about making up the loss of protection by the reduction made in the tariff. That legislation remained in force until January 1st of this year when by the legislation of 1923 the sales tax was made operative at 6 per cent on all sales. So that within a few months the makers of agricultural implements face a varying reduction in customs duties of 2½ plus 4 per cent, and in some cases 12½ per cent, actually a reduction of from 6½ to 12½ per cent.

For the first two sessions there was some uncertainty as to the course the government proposed to follow. Then came the statement made in the budget speech last year by the finance minister guaranteeing, as everyone who heard or read it supposed, reasonable tariff stability. Surely that statement was made in all sincerity, and with the object of promoting confidence in the minds of business men as to the intention of the government? Time works changes, and the "personnel of the famous compass" has undergone some variation. The finance minister who guaranteed tariff stability, and the former Minister of Justice who was never uncertain in his utterances on the tariff question have given place to others. Adverse by-elections have deprived the government of its majority. The Prime Minister has appealed to the Progressive party for support, and one form of the appeal, is shown in the reduction of customs tariff on agricultural implements. How will the Prime Minister explain the utter repudiation of last year's tariff stability announcement by the right hon. gentleman who still retains the title of Minister of Finance? How will he explain the pronouncement of his own in 1921 in relation to legitimate industries making

legitimate profits? He will surely not say that the agricultural implement industry, the iron and steel industry, the paint industry, or the boot and shoe industry, are not legitimate forms of activity for Canadian business men. The business men and the workmen of Canada are entitled to an explanation concerning these things. It would appear that the only explanation is that in order to remain in power the Prime Minister has submitted to dictation by the Progressive party, and the Progressive group is now the dominant one in this House. Perhaps the members of the government will tell the House and the country whether or not they have surrendered to the Progressives, or are they starting to give effect to the 1919 declaration of policy. In either case, it seems, the result will be the same. We have the example of the Minister of the Interior (Mr. Stewart) rising in his place and saying that he "hoped the present tariff changes will mean the death knell of protection." We had the member for Dufferin (Mr. Wood) congratulating the government on the changes they had made, saying that the ship of state was proceeding in the right direction but they were looking for greater changes in the protective tariff. All the changes are to be downward according to the Whip of the Progressive party and none up. Then we have the hon. member for Pontiac (Mr. Cahill) who gloried in the fact that a real accomplishment had been recorded and that there was now a line of demarcation between the two old parties.

Business in Canada has been halting for some time. Last fall when the Dominion government loan of $200,000,000 and the Ontario government loan of $40,000,000 were floated, they were both over-subscribed. Newspapers commented on this as an indication that Canada had plenty of money to invest, and that business was sound and industries prosperous. In my judgment, that rush to secure government bonds was proof that business and industry were not in a healthy condition. It was proof that business and industry were not attractive enough to capital to compare with a government offer of a return of about 5½ per cent on the investment. Instead of investing our capital in developing our natural resources we are lending to ourselves at the expense of our industrial activities, a practice which, if persisted in and enlarged is not likely to make us more prosperous than taking in each other's washing. Only a short time ago it was announced in the press that the Ontario Minister of Mines will visit England shortly to try to induce investments from that quarter.

[Mr. White.]

Further proof of the decline in business is furnished by a perusal of the revenue resulting from income tax, which, for the eleven months preceding March 1 last, compared with a similar period in 1922, shows a loss of $5,296,000 odd, and business tax compared with the same period shows a loss of $7,438,000 odd, a loss of twelve and three-quarter millions on the two items of direct taxation which must accurately reflect the general condition of business. Of failures in manufacturing in Canada we had in 1920, 255; in 1921, 599; in 1922, 857; and in 1923, 792, I think it was.

In the city of London, which I have the honour to represent, we have many factories. The last government enumeration of Canadian industries credited us with nearly four hundred factories, with over 11,000 people employed therein. Our factories are nearly all working below capacity or on short hours. For example, one factory making farm machinery which a few years ago employed three hundred men now has but thirty on its pay roll; another, in the iron and steel industry employing over one thousand, is running short time and not averaging five days per week; another employing 150 men is working four days per week—and so it goes. The matter is considered of so serious a nature that our city council, on the 17th March last, passed a resolution which I should like to have recorded. The resolution is as follows:

> Whereas at the present time there are unsettled business and industrial conditions in Canada and an exodus of skilled mechanics and workmen to the United States, which is alarming in proportions;
>
> And whereas the United States has to-day an ultra-high protective tariff, while Canadian industry has in addition to face competition from countries with depreciated currency and lower standards of living;
>
> Be it resolved that this council regrets the intimation in the Speech from the Throne that the government intends to reduce further the duties on certain manufactured articles, and urges the government rather to take such steps as will protect and stabilize the industries of the Dominion so as to give permanent and assured employment to Canadians in Canada; and that the City Clerk be instructed to write to the Right Honourable Mackenzie King, Premier, to the Hon. Jas. A. Robb, Acting Minister of Finance, and the member for London, calling their attention to this resolution.
>
> S. BAKER,
> City Clerk.

I think there are many indications that capital has been timorous, afraid to venture, fearful of the risks incident to investment in industry, and that fear is accentuated to-day by the abandonment of the principle of tariff stability and the substitution of a policy of attrition, which the government is asking the House to sanction. While the provisions of the budget create a serious situation for many

workmen and many manufacturing companies, the most serious effect of these tariff changes will be, in my opinion, the effect on business generally.

Canadian people will remember that the Liberal platform, which is almost identical with that of the Progressive group, contains many provisions regarding the reduction of duties, the increase in British preference and a long list of articles to be placed on the free list. What incentive is there for new capital to go into business, or what incentive is there for a manufacturing concern already established to plan for an enlargement of buildings or plant or to make efforts to employ additional workmen when the prospect is that the axe will fall again next year, when the budget is delivered, in all probability with greater severity? The country knows that the Progressive group, encouraged by the comparatively small success of this year will likely be more insistent next year and demand a much larger and more comprehensive reduction of protective duties, and the country also knows that the government which gave way this year will likely acquiesce next year.

On Tuesday, April 14, the hon. member for Pontiac (Mr. Cahill) made the statement that he hoped the tariff on boots and shoes would be lowered, and in twelve hours a deputation of sixty or seventy men from his own province and Ontario representing the boot and shoe manufacturers and the workmen in that industry, appeared, asking for protection from the competition of English and German goods particularly. They asserted that Canada has factory capacity for 25,000,000 pairs of shoes per annum, while the Canadian market consumes about 15,000,000 pairs; also that English firms on account of lower wage costs and the depreciation of currency, more favourable freight rates and the increase in the British preference last year, had secured a large portion of Canadian business. Will the Prime Minister say that the boot and shoe industry is not a legitimate industry as far as Canada is concerned?

When that deputation presented its case it also called on two of its members who represented labour, to state the case for labour. These men represented both the Catholic Workers Union, and the International Shoe Workers Union. They appealed to the government for protection from foreign competition, so that the factories in which they are employed would be able to work at greater capacity and at full time. They had been assured by the minister from Prince Edward Island (Mr. Sinclair) in his speech in the House a day or two before that this is a wonderfully successful government. They had been assured that a great accomplishment had been recorded in the direction of economy. The Acting Minister of Finance (Mr. Robb) undertook to convince this deputation, which if they know anything at least know their own business, that the Canadian workers were not suffering more than ordinarily, and if I can judge by the expression on the faces of these men they were comparing the short time of the shoe factories with the statement of the minister without portfolio, who asserted that their taxes were to be reduced this year by the sum of $2.70 per man. Perhaps they were wondering what they would do with this $2.70, whether they would spend it all at once, or extend it over several celebrations during the year.

The Liberal party in the 1921 campaign expressed great concern for the welfare of the labouring man. They were quite in sympathy with the conventions of the League of Nations including the shorter working day; they were going to grant all these concessions to the working man, and they have been giving to them the shorter week with a vengeance!

The government is making no effort to check the exodus of Canadian workmen to the United States. We are told that 181,000 of these workmen left Canada last year. The Prime Minister made the assertion that he believed sixty per cent of these had returned. I have had a great deal to do with workmen, I know something of them in my own city, and if six per cent of them returned I think that would be about the extent of it. In fact I am very dubious about the six per cent. I have encountered very few men who have gone over to the States within the last two years and have returned. Those men are leaving the country because the work is being done in the United States and the manufactured goods are being imported into Canada. They left Canada because Canada did not provide them with the living they thought they were entitled to. They believed they could provide themselves with a better living by going to the United States. Some day they may come back when the conditions of industry are improved by wise legislation, but in the meantime our loss is the gain of the United States.

As to the effect of the changes in the customs duties on the manufacture of agricultural implements in Canada, I believe that only the manufacturers of implements can make a forecast. Taking into consideration the change in the sales tax which I referred

to previously, tariff protection has been reduced about 6½ to 12½ per cent on various items.

Some compensation has been extended to implement manufacturers, in that, pig iron, and bar iron and steel, for use in mowers, binders and reapers, instead of being subject to 99 per cent drawback of duty paid, as heretofore are now permitted free entry, and similar lines of goods used in the manufacture of cultivators, harrows, horse rakes, seed drills, manure spreaders and weeders, which were formerly subject to a duty of 21 cents per hundred pounds are now admitted free, and further, to use the minister's words, "other materials which enter into the cost of implements to be reduced will be entitled to entry at 7½ per cent under all tariffs." This last provision will affect a long list of materials; for example, iron castings, malleable iron, rivets and washers, bolts and nuts, pipe, steel sheets, leather, duck and canvas, paints, oils and varnish. These are perhaps the principal items, but the list is quite extensive. These provisions are all calculated to reduce the cost of manufacturing implements, but only those who are intimately acquainted with all the details of the business can tell with any degree of certainty what the effect will be. These men have made the assertion that the changes are a serious detriment to the industry, and will have the effect of still larger importations from the United States.

In my judgment, the iron and steel industry is called upon to make the greatest sacrifice. The protection for foundry and malleable iron works has been reduced considerably. The iron and steel rolling mills, if they are to secure a share of the trade created by the manufacture of implements, must make reductions in price which will mean that they have an average protection of, as one manufacturer estimates, less than 8 per cent, while the factories engaged in these trades are called upon to pay in duties on coal from 11 to 20 per cent; on fire brick 15 per cent; on machinery and repairs to machinery 25 to 27½ per cent. Sales tax is also collected on purchases of all supplies except fuel. While the tariff proposals relieve the agricultural implement maker of the sales tax and some other of his manufacturing cost, the government has not extended this principle to the industries which supply the raw material for the agricultural implements.

If one line of reasoning is correct for one line of business, then surely it is correct for another line which will be affected by the first movement. The changes proposed would indicate that there has been no comprehensive study of the needs of the country or of the effect of the changes on the operation of certain industries. The government it seems, at the behest of the Progressives, has reduced the already low duties on agricultural implements and raw materials entering therein, while other lines referred to in the platform of both Liberal and Progressive parties, which bear much higher duties, have not been disturbed.

The whole situation in relation to the iron and steel trade should be subject to an exhaustive survey and intelligent treatment, if this industry is to be retained in Canada. It should be a matter of the gravest concern to the government that, according to the monthly report of the trade of Canada, February, 1924; while in the first eleven months of 1921-22, under the item of iron and its products, Canada imported, mostly from the United States, goods to the value of $98,000,000, in the same period for 1923-24, we imported $156,500,000, or an increase of 60 per cent in two years.

I would direct the attention of the government to the sentiment of the seconder of the Address in reply to the Speech from the Throne, who said he "might also mention the iron deposits in the northern district from which I come which only await the just renewal of the Dominion government bounty to further contribute to the incalculable wealth of that district." I understand, too, that the province of Ontario has made an offer to the Dominion government to pay a bonus per ton on all Canadian ore mined and smelted, provided that this government will pay a like amount.

The Minister of the Interior (Mr. Stewart) speaking in the House on April 14 said:

> From the standpoint of strengthening our commercial position nothing would appear to be more desirable than to see the growth of mining enterprise, but the Dominion's present position in mineral commerce does not appear to do anything like full justice to her natural capacity.

While the duties on mining machinery are reduced 7½ per cent, the government has made no pronouncement in the budget on the question of promoting the mining and smelting of iron ore. The report of the sub-committee on iron ores of the Advisory Council for Scientific and Industrial Research was made available for members of the House a few weeks ago, and a close study of that report will indicate just about what this committee thinks is necessary to stimulate the iron ore industry in Canada. As far as I can recollect, no country which neglected the development of its iron and steel industry ever became great. We have in Canada a great opportunity

to conserve and develop this one of our basic industries, and if we neglect it, Canada will not have lived up to her opportunities. The iron and steel industries of this country, and their trained workmen, stood us in good stead when the Great War took us unawares, and if circumstances of defence force themselves upon us in the future, those industries, if in a healthy state of development, will serve the country well again. If the United States should become involved in a dispute with another country, if it should even become involved in war, that would have a very embarrasing effect in this country owing to our dependence on the United States for a large amount of the iron and steel supplies which we use.

It will appear that no advantage has been gained by the government in the reduction of tariff duties. We have not had any friendly advances from the United States in regard to matters of this kind. Shortly after the election of 1921, the Finance Minister (Mr. Fielding) made a pilgrimage to Washington, but he received no sympathy there. Shortly after that the Fordney tariff was imposed which levied very high duties on all imports which Canada might be willing and anxious to supply United States users with. A tariff of 30 cents per bushel was levied on wheat, and while this present budget was being considered, a further increase of 12 cents a bushel was imposed. The people of the United States, particularly the farmers, are unwilling that the produce of Canadian farms should find its way into the American market. Why should Canada lower her tariff duties in order that the product of American factories should find its way to Canadian users? This is particularly objectionable in view of the condition of the balance of trade. It has been stated tonight that about a quarter of a billion dollars per annum is the amount of the adverse balance against Canada. It is little wonder that the depreciation of our currency stands where it is to-day, and there is no doubt that if our purchases continue to grow, the adverse exchange will still be where it is or higher.

No mention has been made in the budget as to any change in the income tax. The United States Senate has now before it the consideration of a substantial reduction in their income tax. If Canada retains the present tax and the United States reduce theirs, that will be a further reason why Canadians and their capital should drift to the United States. As to the saving which the government estimates it will make to Canadians in connection with the tariff changes, it has been stated by the minister without portfolio (Mr. Sinclair) that $750,000 is the amount estimated saved. It has been stated by the Minister of the Interior (Mr. Stewart) that 5,500,000 people are to participate in the benefits accruing from the reduction in duties. If either hon. gentleman will just use his pencil a little, he will find that that $750,000 divided amongst 5,500,000 people will amount to fourteen cents per capita for the ensuing year. What increase in trade or in industrial activity will result from that saving of fourteen cents a head remains to be seen.

I believe the budget is a disappointment to the people of Canada. I believe the government has not legislated in the interests of the whole of Canada. I deplore the fact that our markets are being left open to the inroads of American goods while American markets are closed to Canadian goods.

Mr. FONTAINE: Mr. Speaker, I move the adjournment of the debate.

Motion agreed to and debate adjourned.

ADJOURNMENT—BUSINESS OF THE HOUSE

Mr. GRAHAM moved the adjournment of the House.

Mr. BOYS: What is the business for tomorrow—continuing the budget debate, I suppose?

Mr. GRAHAM: The budget debate seems to lag a little. I do not mean in quality, I mean in numbers. We will proceed with the budget debate to-morrow, and should anything intervene by which it comes to an end or to a suspension, we shall go on with the resolutions on the branch lines.

Motion agreed to and the House adjourned at 10 p.m.

SUPPLEMENT

(See Resolution of the House, p. 1434)

THE LAW MEMORIAL

[Amongst those who perished in the destruction of the parliament buildings by fire on the night of Thursday, February 3, 1916, was Bowman Brown Law, representative of the county of Yarmouth, Nova Scotia. The tragic death of Mr. Law called forth expressions of sympathy and high esteem, and as time went on and the new parliament buildings neared

completion the feeling developed that his memory and the occasion of his death should be perpetuated by the erection of a monument on the ground which gives sepulture to his mortal remains. This sentiment took definite form when parliament, during the session of 1920, made provision for setting up a memorial tablet in the lobby of the House of Commons.

The ceremony of unveiling the tablet took place to-day, under impressive circumstances, on the occasion of the reassembling of the House of Commons after the Easter vacation, and was attended by a large company representative not only of the two Houses of Parliament but of the public in general. The chair was occupied by the Honourable Rodolphe Lemieux, Speaker of the House of Commons, and the tablet was formally unveiled by the Right Hon. W. L. Mackenzie King, Prime Minister.]

The CHAIRMAN: Gentlemen, the session which opened on the 12th January 1916, will ever be a memorable one for the parliamentarians of that year. The great world war was raging. The hopes entertained after the battle of the Marne for an early collapse of the enemy forces had been shattered. Though the Allies had won notable victories—in which the sons of Canada had by sacrifice of blood and of life performed deeds of which the glory shall never fade away—yet the march towards the Rhine was checked in that they had failed to pierce the German lines. On the eastern front, our disappointments had been still greater. The only bright spot at the horizon was the effective watch and patrol of the British Navy which left the German fleet impotent and imprisoned in its own waters. Sad as the immediate prospects were, the spirit of the Canadian people remained undaunted. And their representatives in parliament, undismayed by the ghastly welter of blood and fire, resolved to stand by the gallant soldiers who at Ypres, Festubert and Givenchy, had fought and died for a noble cause and to carry on until final victory.

Whilst under the shadow of those stirring events, when the House of Commons was engaged in the all absorbing task of securing more men and assessing more resources to prosecute the war, a sudden and appalling disaster happened here on the hill. On the 3rd of February at nine o'clock in the evening, during the course of one of those week end debates with which we are so familiar, the parliament buildings were destroyed by fire.

[Mr. Mackenzie King.]

It was a noble edifice; indeed, it was a landmark. There, half a century before, as a result of the Quebec Conference had gathered the leaders who after merging their interests in common had launched the newly born union. There, had been sealed the pact of confederation. As we gazed at the next sunrise at the mass of black ruins, projecting its distress upon the wide fields of snow, as we looked in vain for the stately tower which crowned the beautiful structure, the quaint gables, the gothic arches and the stained glass windows around which clung so many memories, there was a deep feeling of sorrow. But these, after all, were only material things.

Far more deplorable was the loss of life—and we are assembled here to-day, eight years after that calamitous event, at the gates of a new parliament to officially record the profound affection in which one of the victims, Bowman Brown Law, member for the constituency of Yarmouth, was held by us all, his fellow members.

For many years, it was my privilege to sit in the House of Commons with him. Quiet and unassuming in his bearing, gentle in his manners, he was none the less a very industrious member, attentive to his duties and well informed. Scarcely an hour had elasped on that fateful evening, when his voice had been raised on behalf of his electors. As usual, he had spoken in all earnestness, on a question of primary importance to Nova Scotia, a province renowned for the inborn ability and common sense of its people.

A God-fearing gentleman, a true Canadian, a devoted and loving husband and father, a faithful and trusted servant of the people, such was Bowman Brown Law.

This tablet will recall to his family and his constituency that, at this very spot, where he so tragically entered in the valley of the shadow, his memory survives;—the sweet memory of one whom we know through his life training, faced bravely the awful ordeal, which he accepted in a Christian spirit, as only a preface to that reward in the realm beyond, where the soul is greeted by a merciful Maker in the white radiance of eternity.

I will now ask the right hon. Prime Minister to say a few words and proceed to the unveiling of the memorial tablet.

Right Hon. W. L. MACKENZIE KING (Prime Minister): Upon the re-assembling of parliament, at the commencement of the present session, there was unveiled the first monument to be placed in our reconstructed buildings. It was appropriate that it should

be to the memory of an honourable member of the House of Commons who lost his life on the field of battle in the service of his king and country overseas. To-day as we re-assemble, after a brief Easter vacation, we are about to unveil a memorial tablet to the memory of another honourable member of the Commons who lost his life under circumstances which also were alike tragic and historic.

The late Bowman Brown Law was first returned to the House of Commons as the member for Yarmouth, Nova Scotia, at a by-election in December 1902, which by-election was occasioned by a vacancy caused by the appointment of the late Mr. T. B. Flint as Clerk of the House. Mr. Law was re-elected at the General Elections of 1904, 1908 and 1911. In the great fire which on February 3, 1916, destroyed the old parliament buildings, he was burned to death. Seven lives in all were lost in that fire, and it is something of a sad coincidence that among the number should have been that of the Clerk Assistant of the House, the late Mr. J. K. Laplante.

Members who enjoyed the privilege of serving in parliament during the years I have mentioned, will recall Mr. Law as a man possessed of singularly fine qualities, alike of heart and mind. He was of a quiet and retiring disposition, affable and companionable, and most punctilious and conscientious in the discharge of his public duties. He was in his seat in the Commons chamber when the alarm of the fire was given, and it is believed that it was in the effort to save from destruction papers in his possession that he took a risk which proved to be fatal.

The memorial tablet which I have now the honour to unveil records the essential facts in the fewest possible words:

ERECTED TO THE
MEMORY
OF
BOWMAN BROWN LAW, M.P.
REPRESENTATIVE OF THE
COUNTY OF YARMOUTH, N.S.
WHO MET HIS DEATH IN
THE GREAT FIRE
WHICH DESTROYED THE
PARLIAMENT BUILDINGS,
3rd FEBRUARY, 1916.
REQUIESCAT IN PACE.

The sculptor has succeeded in executing in bronze relief a remarkably good likeness of the late Mr. Law. To the left, near the top, he has reproduced the coat of arms of the United States, commemorative of the circumstance that Mr. Law was born in the state of Massachusetts; to the right the coat of arms of the province of Nova Scotia, the province with which his public career was so closely identified; and over all, the arms of Canada, the country he served so well.

It is fitting that we should thus preserve and seek to honour the memory of one of our number whose life and whose death were so closely identified with our parliament. The circumstances of Mr. Law's death permitted no place of burial to his mortal remains. They knew no sepulchre save the ruins of the demolished walls within which he met his fate. His ashes mingle with the ashes of the edifice in which for over thirteen years he represented faithfully and well the interests of his constituency and the people of this land. Of him, too, it may truly be said that he died in the service of king and country. In association with his name and memory this, our Westminster, will be not less the Abbey, than the Houses of Parliament.

By fire and the sword, such was the manner of death of those of our number whose memories we have sought to preserve. These mute memorials are imperfect symbols at best. Surrounded as we are by the material evidences of the spirit of resurrection which these reconstructed buildings afford, it may be not without consolation to those who have been bereaved to recall the association which this tablet, placed as it is, will ever bear to the Easter season. To them and to us let it speak of the unfinished tasks of those who are gone, not as of a work that is ended, but as of a greater work begun.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): Mr. Speaker, Mr. Prime Minister, ladies and gentlemen: The inclusion of my name in the ceremony of this afternoon testifies chiefly to the fact that this event has no significance narrower than the whole bounds of parliament and of Canada. No words of mine could possibly add to the expressions of profound regard which fell in such beautiful diction from the lips of Mr. Speaker this afternoon, nor to the fine eulogy uttered by the Prime Minister.

My personal association with Mr. Law was of limited kind. He had entered parliament many years before myself, and had not come in that close contact with me which I would have desired. But looking back to the sad hour that we commemorate now I well recall the tragic night—how, after only one hour of deliberation in the evening, the flames were discovered spreading with almost uncanny rapidity, how the mellow hue of the sky was reddened to angry flame, and this splendid edifice destroyed.

You spoke, Mr. Speaker, of the times, heavy and poignant, through which we were passing then. These need sometimes to be recalled. Nevertheless there was something of a lull at the front, at the very time of this fire. During the winter months, a silencing in some degree of the uproar of conflict had fallen, only, of course, to be resumed in all its horror and slaughter when summer weather came. Likewise on the 3rd February, 1916 a peaceful frosty nightfall, as tranquil an evening as we had ever known, was converted into a night of disaster and death.

We had hoped that the former magnificent parliament buildings, would have remained with us as a tribute to the courage and the vision of our forefathers, a courage and a vision greater than we can very well now encompass. The Canada of that day was weak and scattered compared with the nation as we know it now. We had all hoped that those wonderful buildings would have remained as a legacy to our children, an historic legacy joining the old colonial days with the later days which have witnessed the fruition of this Dominion. This we were denied. The awful disaster of February 3rd lost to us the greatest single material possession of which Canada could boast. But appalling as our loss of that nature was, we lament infinitely more bitterly and lastingly the loss of life. Seven persons, as the Prime Minister has said, were imprisoned in the burning building and died. Three of them were servants of the House. Two were lady visitors of the then Speaker. Another victim was one of our most trusted, one of our most competent officers, Mr. Laplante, the then Clerk Assistant. It is in honour of the seventh that we unveil this tablet to-day and in my judgment properly so. Mr. Law was one of our number and naturally, we feel toward his memory an affection nearer and deeper than that which attaches to others. Fitting it is that with respect to him, as to any hon. member who may die in similar tragic manner in the service of his country, the present noble building should contain a memorial—a memorial that will carry down his memory to the latest generations. He and those others have taken their places in the Golden Chamber but they have left to us the memory of creditable lives, the inspiration of splendid examples. Nothing better can be said of Mr. Law, or indeed of any man than that he died as he had lived, a British gentleman at his post of duty.

Mr. ROBERT FORKE (Brandon): Mr. Chairman. In common with those who are associated with me on this platform, I am not in a position to say anything that would adequately portray the feelings of those whom I represent in reference to the purpose for which we have met here this afternoon.

However, as has been pointed out, in 1916 an incident occurred which might be described as a national calamity, the destruction of the parliament buildings. I can very well remember the occasion when, a few years previous to that time, I had the privilege of visiting the chamber and looking over the seats of the various members of the House. The parliament buildings seemed to me then to symbolize the spirit of nationhood, and the burning of that great structure could only be termed a national calamity. But we had an opportunity to repair our loss; the material loss could be overcome, and now a new building has been erected, which is magnificent in every aspect. While we regret the fact that the buildings were destroyed we can now look back to the event with equanimity, as the building could be replaced and its destruction perhaps in time almost forgotten. But the loss of life is an entirely different matter. We have lost something that can never be restored to us, and we are met this afternoon to unveil a tablet to the memory of one of the members of the House of Commons, who lost his life in that tragic disaster.

I had not the privilege of being acquainted with Mr. Law but we know he was a man in the full vigour of manhood, who could have looked forward to many years of usefulness and service to his country had it not been that in one tragic moment his life was cut short and he was taken away to be amongst us no more.

We look upon death perhaps as one of the greatest calamities that can come to human beings; but there are some things which are sadder than death. When we lose one whom we can respect and admire, whom we can truly love, we have something left, a memory that we can cherish, which may become one of the most sacred things in our lives. This gentleman was lost to the country and to this House, but through all time we can cherish the memory of one who served his country well, who lived a noble life, and who was in every respect a gentleman whom we could respect and admire.

I am very happy to have the privilege of taking part in this ceremony and paying my respects to the memory of one who died in the service of his country.

Hon. E. M. MACDONALD (Pictou) (Minister of National Defence): Mr. Chairman, I had the great pleasure and distinction of having served in this House of Commons for a period of eleven years in conjunction with our friend, Mr. Law, whose memory we are

commemorating to-day, and of having served for a period of seven years with his father who represented the same constituency in the provincial legislature of Nova Scotia. Mr. Law was my personal friend, and we were associated very closely, coming to this House almost at the same period. Those of us who come from our province, who had the opportunity of knowing Mr. Bowman Law perhaps in a closer way than our confreres from other parts of Canada, know what a typical Nova Scotian he was in many ways. He was a most successful business man, and having inherited from his father a prosperous business organization, he dealt with that in a way which indicated his great ability along those lines. He received the confidence of the people amongst whom he lived as a young man, and in every election when he came to them and asked for a renewal of their confidence, he received it in a greater degree than previously.

I always recall, with horror, the events of that night, February 3. I happened to be in the House at the time, and I well remember the circumstances. Almost in the twinkling of an eye the chamber was surrounded by flames. I personally succeeded in getting to my room and securing some papers, and as I was going to my room, I met Bowman Law coming from his. He apparently had endeavoured, when he reached the ground floor, to go to his locker where his coat, hat and other things were, and nobody ever saw him again. We did not know even that he was dead for two days. It was not until Saturday afternoon that somebody began to inquire where Mr. Law was, and then we realized that this quiet gentleman, who went about his affairs so unostentatiously, was a victim of the fire.

I had an opportunity in conjunction with my colleagues from the province of Nova Scotia of saying a few words about him at a meeting of the House of Commons which took place in the Victoria Museum on the following Monday. A singular circumstance which I recall in connection with that fact was that on that day the then Prime Minister, Sir Robert Borden, and Sir Wilfrid Laurier both in most eloquent speeches spoke to a resolution of appreciation of the services of Sir Charles Tupper who was a typical Nova Scotian and one of the great men of the Dominion of Canada. Bowman Law's name was referred to by his colleagues at that time.

Those of us who knew him have wonderful memories of him. He was a sincere and straightforward advocate of the rights of his province and of the Dominion. He was a devoted party man; he was sincerely devoted to the party with which he had so long been associated. He was successful in business to a degree greater than is the lot of most men. During his parliamentary career he gave of his best on behalf of his constituents and province. He was a man of charming disposition, a splendid friend, and those of us who were associated with him will ever have kindly memories of him.

I am sure this tablet which the Prime Minister has to-day unveiled will be a mark for all time to come of him who passed away in that holocaust of February 3, a man who did his duty to his country, who was loyal to his friends, who was a devoted parent and whose memory will ever be cherished, not only by those of us who come from the same province, but those who come from other parts of Canada as well.

Mr. P. L. HATFIELD (Yarmouth and Clare): Mr. Speaker, ladies and gentlemen, having the honour to represent in the House of Commons the constituency which the late Mr. Bowman B. Law represented at the time of his death, I think perhaps it is fitting that I should offer a few remarks at this ceremony. I thank you, Mr. Speaker, for having afforded me the opportunity of doing so. I am sure the occasion which brings us together this afternoon must be one unique in the memory of the oldest parliamentarian here. I believe the records of the Canadian parliament will reveal no other instance in which a member of the House of Commons met death under circumstances so tragic and sad as those that surrounded the death of the late Mr. Law. As has been so well explained by you, Mr. Speaker, the late Mr. Law represented in the House of Commons the constituency which at the time of his death was known as Yarmouth; and I am sure that no member of parliament ever enjoyed the confidence and respect and—may I not add—the affection of the electorate throughout the entire length and breadth of his constituency, to a greater degree than did Mr. Law. Judging from the many eulogies I have heard of him since coming here, from his old colleagues and those who were attached to the government service, who knew him, I am sure that the same happy, genial, unselfish disposition which characterised his private life among his constituents must also have been characteristic of his official life here in Ottawa.

As I turn now more directly to the ceremony which is being conducted this afternoon, I must confess that I find it diffi-

cult to command language adequately and properly to express my feelings. Assembled as we are on the very spot where that terrible tragedy was enacted, and under the influence of the solemn act of unveiling this memorial tablet which has been erected to Mr. Law's memory, what has been said, and the manner of the saying of it, make it difficult indeed for one to control one's emotions. Mr. Law and I were very close personal friends; and what I have witnessed here and heard this afternoon makes me feel, at least in a large measure, the same sense of loss and shock which we all experienced when we first heard the news of the terrible accident that caused the loss of our friend. My thought turns to the late widow of Mr. Law, who survived her husband for so comparatively short a time. She mourned her loss intensely, and without doubt it was the primary cause of her decease so soon after that of him whom she loved so dearly. She bore her trouble with great patience and fortitude; but to those who were nearest her it soon became evident that the blow had proven too heavy and that she would soon be released from her sufferings here to join him who for so long had been her partner and companion in life. I also think of the daughter who is unavoidably deprived of the opportunity of being present, and for whom I am commissioned to speak. It shall be my duty to portray to her, as faithfully as I can, the esteem and affection in which her departed father was held here by all who knew him; and how his memory is honoured. I am sure that the kindly, gracious words which have been spoken to-day, so tenderly and sincerely, by you, Mr. Speaker, and by the other gentlemen who have followed you, will prove a comfort indeed to her, and if possible will render the memory of him whom she loved so dearly even more sacred and sweet than the memory she has cherished of him in the past. On her behalf I desire to thank you, Sir, and through you the senators and the members of the House of Commons, for this very worthy act which marks so well the passing of one who was loved by all, who represented so faithfully the constituency of Yarmouth and who endeared himself so peculiarly to all who knew him. With your permission, Mr. Speaker, I will read one or two telegrams which I have received on the subject of this afternoon's ceremony, and which it seems appropriate I should read:

[Mr. Hatfield.]

Yarmouth, N.S.

P. L. Hatfield, Esq.,
House of Commons,
Ottawa.

The members of the Liberal Association of the constituency of Yarmouth and Clare desire to express to the senators and members of the House of Commons their grateful appreciation for the splendid tribute to their late representative, Bowman Brown Law, in erecting a tablet to his memory in the lobby of the House of Commons. Mr. Law at the time he met his death in the great fire which destroyed the parliament building had long represented our constituency in the House of Commons and was our trusted friend and colleague. Meeting his death while in the performance of his public duties with many years of service ahead of him the memorial service which you are holding to-day strikes a very responsive chord in all our hearts and we look upon it as a splendid tribute to his family as well as to the memory of a true man and faithful public servant.

A. P. Stoneman,
President.

Donald Cann,
Secretary.

Yarmouth and Clare Liberal Association.

Yarmouth, N.S.

P. L. Hatfield, Esq., M.P.,
House of Commons,
Ottawa.

The Conservative Association of the county of Yarmouth joins with great pleasure the senators and members of the House of Commons in the ceremony which takes place to-day when a memorial tablet is to be unveiled to the memory of the late Bowman Brown Law who at the time he met his death in the great fire which destroyed the parliament building was the representative in the House of Commons for the constituency of Yarmouth. Mr. Law was respected and loved by the citizens of our county and this tribute to his memory touches all our hearts and is a generous action on the part of the state to a faithful public servant.

W. L. Rogers,
President.

Edgar Clements,
Secretary.

Halifax, N.S., April 24, 1924.

P. L. Hatfield, M.P.,
Ottawa.

Very pleased with tribute of respect you are paying to the memory of the late B. B. Law. As a warm personal friend and admirer let me in spirit join you in paying tribute to his memory and to his many personal and manly qualities. It will be warmly appreciated by his numerous friends in Yarmouth county who will never forget a true friend and his sacrifice in their interests.

E. H. Armstrong.

Mr. SPEAKER: This, ladies and gentlemen, concludes the proceedings, and on behalf of the House of Commons and of senators and members of the Bowman Brown Law Memorial I wish to thank you all for your presence here this afternoon.

Friday, April 25, 1924

The House met at three o'clock.

PRIVATE BILLS COMMITTEE

Mr. H. B. McGIVERIN (Ottawa) presented the first report of the select standing committee on Miscellaneous Private Bills, as follows:

Your committee have considered Bill No. 14, an Act to incorporate the Roman Catholic Episcopal Corporation of Prince Rupert, and have agreed to report the same with amendments.

Your committee have amended the preamble of Bill No. 14 for the purpose of more accurately describing the position of the petitioner. In accordance with the usual proceedings your committee beg to recommend that the charges levied under such bill be refunded, less cost of printing and translation.

Your committee also recommend that it be given leave to sit while the House is in session.

All of which is respectfully submitted.

Mr. McGIVERIN moved:

That in accordance with the recommendation contained in the first report of the select standing committee on Miscellaneous Private Bills, the fee and charges levied on Bill No. 14, an Act to incorporate the Roman Catholic Episcopal Corporation of Prince Rupert, be refunded, less the cost of printing and translation.

Motion agreed to.

Mr. McGIVERIN moved:

That in accordance with the recommendation contained in the first report of the select standing committee on Miscellaneous Private Bills, the committee be given leave to sit while the House is in session.

Motion agreed to.

UNITED CHURCH OF CANADA

Mr. CLEMENT ROBITAILLE (Maisonneuve): I desire to present a petition signed by Rev. John J. McCaskill and several members of the Maisonneuve Presbyterian church protesting against the form of legislation asked for in the Church Union bill.

Mr. ROBERT FORKE (Brandon): I desire to present the following petitions:

Of Rev. W. T. G. Brown and 376 others of the Dominion Methodist church, Ottawa, praying for the incorporation of the United Church of Canada.

Of Harold Hunter and 57 others of the Methodist church Milbrook, Ontario, praying for the incorporation of the United Church of Canada.

Of Mrs. John E. Parker and 112 others of Unity church near Caledonia, Ontario, and Methodist church, Caledonia, praying for the incorporation of the United Church of Canada.

Of Arthur J. Stevenson and 28 others of the Methodist church, Norwich district, Cathcart, Harley and New Durham, praying for the incorporation of the United Church of Canada.

Of T. H. Turner and 150 others of the Methodist church of Oakwood, Ontario, praying for the incorporation of the United Church of Canada.

Of J. H. Young and 56 others of the Methodist church, Oban, Epworth and Camlachie, Ontario, praying for the incorporation of the United Church of Canada.

Of A. J. Savage and 138 others of the Methodist church, Richmond Hill and Victoria Square, Ontario, praying for the incorporation of the United Church of Canada.

Of W. J. Fiddes and 65 others of the Methodist church, Binbrook and Elfrida, Ontario, praying for the incorporation of the United Church of Canada.

Of Rev. R. D. Hamilton and 36 others of the Methodist church, Burlington, praying for the incorporation of the United Church of Canada.

Of Lilly Start and 39 others of the Methodist church, Currie's Crossing, Oxford County, Ontario, praying for the incorporation of the United Church of Canada.

Of W. F. Price and 356 others of the Centennial Methodist church, Toronto, praying for the incorporation of the United Church of Canada.

Of Hector Sutherland and 27 others of the Congregational church, Embro, Ontario, praying for the incorporation of the United Church of Canada.

Of A. Webster and fourteen others of the Grace Methodist church, London, praying for the incorporation of the United Church of Canada.

Of C. J. Wilson and fifty-one others of the Methodist church, Winona and Fruitland, Wentworth County, Ontario, praying for the incorporation of the United Church of Canada.

Of Henry Mills and seventy-five others of the Springfield and Bethel Methodist church, Appin, Ontario, praying for the incorporation of the United Church of Canada.

Of Gertrude Davis and ninety-three others of the Westmoreland Methodist church, Toronto, Ontario, praying for the incorporation of the United Church of Canada.

Of G. C. Balfour and 171 others of the Beech Avenue Methodist church, Toronto, Ontario, praying for the incorporation of the United Church of Canada.

Of Mrs. J. Coburn and 271 others of the Howard Park Methodist church, Toronto, Ontario, praying for the incorporation of the United Church of Canada.

Of Alex Kennedy and 494 others of the High Park Avenue Methodist church, Toronto, praying for the incorporation of the United Church of Canada.

Of James H. Dyer, 62 Dorval Road, Toronto, Ontario, and 122 others praying for the incorporation of the United Church of Canada.

Mr. T. H. McCONICA (Battleford): I desire to present the petition of C. F. Carson and twenty-eight others of the United Church, Unity, Saskatchewan, praying for the passage of the Church Union bill.

Mr. MURRAY MacLAREN (St. John City and Counties of St. John and Albert): I desire to present a petition from members and adherents of the Presbyterian church of St. George, N.B.; also a petition from members and adherents of St. Paul's church, Woodstock, N.B., both against the passage of the Church Union bill.

Mr. R. B. HANSON (York-Sunbury): I desire to present a petition from James G. Thorburn and thirty-nine others, members and adherents of the Presbyterian church, Stanley, N.B., against the proposed Church Union.

AGRICULTURAL CREDIT

DR. H. M. TORY'S REPORT

Hon. J. A. ROBB (Acting Minister of Finance): I desire to move that 1,000 copies in the English language and 400 copies in the French language of the report of Dr. H. M. Tory on Agricultural Credit, laid on the Table of the House on the 15th inst., be printed forthwith and that rule 74 be suspended in relation thereto.

Mr. SPEAKER: Before putting the question, I am informed that these copies of the report on Agricultural Credit are being printed.

Mr. ROBB: That is true. I understand they are being printed to expedite business, but the copies cannot be released until we have an order of the House.

Mr. SPEAKER: I am informed that if this motion is put to the House and carried, the House will have to pay for the printing. Is it the wish of the House that the printing be paid for by the House, by the committee, or by the Department of Agriculture?

Mr. ROBB: You have sized it up correctly, Mr. Speaker.

Motion agreed to.

INCOME TAX ON HOME BANK DEPOSITS

On the Orders of the Day:

Mr. JOHN MILLAR (Qu'Appelle): I should like to ask the Acting Minister of Finance if that portion of one's income lost on deposit in the Home Bank is taxable for income tax purposes?

Hon. J. A. ROBB (Acting Minister of Finance): Speaking offhand, I should say that the losses through the Home Bank would not be regarded differently from the losses through any other financial or business transaction.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed from Thursday, April 24th, the debate on the motion of Hon. J. A. Robb (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into committee of Ways and Means and the proposed amendment thereto of Mr. Woodsworth.

Mr. FONTAINE (Hull) (Translation): On rising, Mr. Speaker, to take part in the discussion on the budget, I wish to state that I broach the subject entirely devoid of any party feeling; the circumstances are too grave, the conditions of the country are too serious to mix up with politics; I, therefore, think it is the duty of all members of this House to frankly and freely express their opinion.

First, let me congratulate the government on behalf of the electors that I have the honour to represent here for having taken off the duty on a great number of items, among others on farming implements, and, for having found it possible to reduce the taxes. I was under the impression that such an announcement would cause joy throughout the country. I was further under the impression that the Conservatives could hardly criticize this measure, but I had not taken into account their inconsistency. Indeed, Sir, I recall that, during the session of 1922, the hon. member for West York (Sir Henry Drayton) moved an amendment to the budget, seconded by the right hon. leader of the opposition (Mr. Meighen), reproaching the government for not keeping their pledges: "The Liberal party"—they state—"at their great convention, in 1919, had promised should they be returned to power, to remove the duty on farming implements and they are not doing so, they are not fulfilling their pledges; therefore, they do not deserve the confidence of the people." To-day, after a lapse of hardly two years, these same gentlemen taunt the government for living up to their promises by removing the duty on farming implements. Is it possible to be so devoid of sincerity? Can one imagine anything more inconsistent? I do not think so. Let the government take no notice of their critics, let them follow up,

without fear, this national policy that they have just inaugaurated; it is more than time to have this conflict existing between the East and West cease; the time is ripe to put an end to that class politics which has existed throughout the country for some years past by rendering justice to all classes of society. If we want this country to expand, confederation to continue, we must adopt a policy favouring not only capitalists and large interests, but also encouraging the farmers and labourers.

We are passing through a serious crisis. Now that the Americans have raised their tariff, our farmers can no longer export their products to the United States, the European markets are unimportant and there but remains the local markets. Consequently, the farmers are forced to sell at a sacrifice, their hay, wheat, beef, butter, cheese and all the other products of the farm. Is it not, therefore, reasonable that they should be able to purchase at low prices their farm implements, they who toil so hard and often under very unfavourable conditions, and whose labours have only served, up to now, to enrich manufacturers who benefit from a protection of 35 and even 40 per cent on some farm implements. It is more than time that this state of affairs should cease. Agriculture is, among all industries, the first which should be protected. Our population is made up of 45 per cent of farmers. I well remember that after the Great War when everything was topsy-turvy here as well as in Europe, all our hopes were concentrated on the soil.

"Back to the soil" was our motto. If this be true, the government's policy is quite right in helping the farming class. There is, Sir, another point of view which we must not lose sight of; it is that the lowering of duty will bring down the cost of living. In fact, when the farmer will be in a position to produce cheaper, he will sell his products at a lower price and the labourer will benefit by it.

I now come to the decrease in taxation. Here, again, our opponents are greatly disappointed. They had dragged the country so much into debt; they had pledged its credit to such an extent, for a number of years to come! No one, I am sure, has forgotten that precious contract which was awarded for the building of ships—for our merchant marine—which have never been of any service and will never be. It was an egregious blunder which cost the country millions of dollars. They had so much encumbered us with the state ownership of railways, that they felt certain that the present government would never find it possible to balance the budget and lower the taxes. Filled with this hope, the right hon. leader of the opposition (Mr. Meighen), with the concurrence of the whole Tory press, started, throughout the country, a campaign of falsehoods, misrepresentations and "whisper of death" spreading everywhere that the King government was incompetent, that Canada was on the brink of bankruptcy, that the national debt was on the increase and that the people could no further bear up with the taxes. And now comes the budget speech which completely reduces to nothing the whole of this dishonourable display and campaign by proclaiming that, thanks to a strict economy, the government has succeeded in lowering the taxes and balancing the budget.

The leader of the opposition was not very prone to remind the people, during the campaign, throughout our provinces, that it was himself and his predecessor, Sir Robert Borden, who, owing to their imperialist policy and their blind participation in the war, had increased the national debt by two billions and a half of dollars and thereby increased the debt per capita from $47 to $269. The leader of the opposition omitted mentioning, during this campaign, that he was disposed to ruin the country if necessary. His words "to sacrifice the last man and the last dollar to save the Empire" still tingle in our ears. If, while he was imposing blood conscription he had demanded conscription of wealth as Sir Wilfred Laurier suggested; if he had allowed to the manufacturers, who were realizing scandalous profits, but 20 per cent of their profits for administration purposes and if he had obliged them to remit the balance to the treasury, we would now not have to feel the effects of war debts and would thereby have less millionaires in this country; however this would not have suited his political friends.

Now, Sir, ever since the outset of the debate on the budget, the Conservatives have not ceased reproaching the government for having lowered the tariff. Is it an actual fact that this policy of high protection, so much extolled by the right hon. leader of the opposition, is the universal remedy for all our ailments? Is it an actual fact that protection makes for the prosperity of the country and the happiness of the working class? Then, how do we explain, notwithstanding the present tariff, that times are so hard, everybody is complaining, our industries are at a standstill and our people are without work? Is it not rather due to an unfair policy which affords the opportunity to a class of manufacturers of enriching themselves at the expense of the consumers? Is it not a fact that, within a few years, most

of them have become wealthy and that the workman who co-operated in building their fortunes, remains poor? Go through, Sir, the streets of Hull, a city essentially of workmen, ask the passer by if he is wealthy, if he is content with his fate! Most of them will answer that they are poor and without work. How can you explain that, notwithstanding protection, the manufacturers close the doors of their factories? Might it not be, perchance, a pretext to starve the workmen, to reduce their wages or force them to work a greater number of hours per day? If such was the case, it would be simply degrading. I look upon protection as absolutely bad, it furnishes but the appearance of wealth and considerably increases the cost of living. An astonishing feature of the right hon. leader of the opposition, is the sudden love which he has manifested, and which seems to fill his heart, for the province of Quebec. Indeed, Sir, we were witnesses during last autumn of his touring our province, we heard him express his love, stating everywhere that we had misunderstood him; that it was owing to his love for the French Canadians that he had forced conscription upon the country and that it was still owing to the love which he had for our province that he forced upon us the Election Act during the war, a despicable law which had for its aim to isolate Quebec from the other parts of the Dominion; that it was owing to the love he bore to our religion that he had voted in favour of the regulation which obliged the civil employees to work on church holidays. He called at all the presbyteries, he visited all our educational institutions—to the great horror of his friend, the hon. member for West Toronto (Mr. Hocken)—awarding here and there medals. All this would be very praiseworthy if it were only sincere, however, one can only despise such means, when the aim of such a campaign is to capture votes.

Jointly, with Le Droit, an Ottawa newspaper, I want to tell the right hon. leader of the opposition that he would be doing more for education and it would be highly appreciated in our province if he would, together with his friend, Mr. Ferguson, Premier of Ontario, withdraw regulation 17, and allow the French Canadian child in Ontario, the right of learning the French language at school; then, but only then, we might believe in his sincerity. With your kind permission, Mr. Speaker, I shall quote to the House an article of Le Droit which appeared on the 16th of January last:

[Mr. Fontaine.]

Mr. Meighen would save much time and words and secure for his party a precious political asset which his opponents could not rob, if, instead of criticizing the government's actions and trying to shove down the people of Quebec's throat his conscription act and his policy of public ownership, he simply remembered that they were conservatives, members of the political party whose leader he is, that have enacted regulation XVII and are enforcing it. Let him be without illusion! So long as the Ontario school question is not settled to the satisfaction of the French minority, rightly will the Conservative party be looked upon, in the province of Quebec, as a group of fanatics, haters of everything that is French, oppressors, and the French Canadian lovers of justice and freedom, will not place in him their trust. If he sincerely wishes the union of the two races and a perfect understanding between Ontario and Quebec, if he wishes to rest on firm grounds his future and his political success, he will leave no stone unturned so as to wipe out an obnoxious school regulation, both from the standpoint of racial feeling and sound pedagogy, unworthy of a civilized country.

Thus, he may, perhaps, make the population of Quebec forget that the man who, to-day, wishes to please by delivering French speeches, singing with his partisans "Alouette" and awarding medals to the pupils of convents, is the same one who, at the opening of the war, wanted to put the country into bankruptcy to help England, and who also, during the year 1917, arranged for the purchase of the Canadian Northern Railway, imposed upon us the Conscription Act and allowed the province of Quebec and the French Canadians to be insulted by a mercenary press of the Unionist party. It is the same Mr. Meighen, who, in September 1922, was ready to plunge Canada into the Anglo-Turkish turmoil.

Now, Sir, I wish to make a few remarks on the question of immigration. I am well aware that it is a difficult problem to solve; I know that we have vast territories, sufficient to feed a hundred million people; I am aware that we possess natural resources which only await hands to develop them; I well understand that we have an enormous debt distributed among eight million inhabitants only. However, as I stated last year, I question, notwithstanding all this, whether the occasion lends itself to spending large sums in order to bring immigrants from Europe when our sons are emigrating to the United States by hundreds. I, therefore, beg of the government not to spend any further money towards immigration, but to make use rather of this money to start an active campaign throughout the whole country in favour of colonization and agriculture; the time is ripe since we have just lowered the tariff to help the farmers; let the government grant lands to those who cannot earn a living in cities, let them settle the Abitibi district, Northern Ontario or even the West, where we possess rich and fertile lands, let them help if necessary the settlers during the first two or three years, and we shall thus keep our sons in Canada. I think the money would be much better spent than by

bringing over immigrants who have neither the turn of mind nor the traditions which would help them to become Canadians, they make but a short stay on the land and finally drift to our cities to displace Canadian labour. I received, a few days ago, a letter from the Conseil Central Catholique National des Métiers et du Travail of Hull, which, Sir, I shall read with your kind permission:

"Conseil Central Catholique National des Métiers et du Travail," Hull

Hull, P.Q., March 12, 1924

Doctor J. E. FONTAINE, M.P.,
182 Main Street, Hull, P.Q.

Sir,—

I have the honour to forward a resolution passed by the "Conseil Central Catholique et National des Métiers et du Travail," which was adopted at its last regular meeting, held on January 5, 1924. I trust that, on behalf of the members of the society, the well founded facts in this case will be recognized and they will receive the entire consideration that we believe they are entitled to.

Whereas unemployement exists in most of our cities;

Whereas a great number of citizens in this country, in cities as well as in rural districts, have emigrated and continue to emigrate to the United States;

Whereas immigrants are, each day, arriving in large numbers and that the government intends, according to newspaper reports, to encourage this movement of foreigners entering Canada, and who will replace our workmen;

Be it resolved, that the "Conseil Central" of Hull requests the Minister of Immigration and his colleagues in the cabinet to endeavour by all possible means to keep in this country our own citizens before making outlays to encourage immigration. In their opinion this money could be much better put to use by spending it to keep our own people in this country.

I have the honour to be, Sir,

Respectfully yours,

LUCIEN LAPIERRE,

Secretary.

I wish to state that I entirely agree with this resolution. I would propose to the government as a means of stopping the emigration of our people to the United States, the immediate construction of the Georgian Bay canal. It would prove a most useful undertaking for the country, far more advantageous than the St. Lawrence waterway scheme, since, as I mentioned a few days ago, it would be an undertaking entirely on Canadian soil. It would provide work for our labouring classes who would have no need of emigrating to earn their living.

I wish, Sir, to thank the right hon. Prime Minister (Mr. Mackenzie King) for the stand which he took, in London, on the occasion of the Imperial Conference, last summer, when he refused to pledge Canada without first consulting the people. What a contrast with the right hon. leader of the opposition, who is always ready to pledge Canada into European wars! Indeed, I remember that, last year, he taunted the government for not displaying haste in accepting the invitation of Mr. Lloyd George, then Prime Minister of England, who was pressing us to take part in the war which seemed impending with Turkey. It was more than time that someone ended this wild imperialism. If the right hon. Prime Minister had but this deed to his credit, he would be deserving the support and trust of those who are truly Canadians, but his refusal, recently, to ratify the Lausanne treaty, fully shows that he has no intention to depart from the straight path. It is all to his honour and I sincerely congratulate him.

Before resuming my seat, I wish to ask the government to appoint a special committee to consider the advisability of enacting pensions for old age. You know, Sir, how I have this question at heart. And, even should I have to bore the House, I want to state again that it is the duty of the government to provide at once for such pensions, for it is sad to witness that artisans after having toiled during thirty and even forty years in a factory, after having spent the best part of their lives enriching their employer, often receiving starvation wages, find themselves obliged to depend on their children or to take the road to the poor house, the moment they have become too old or unable to furnish the required amount of work. I again state, Sir, that it is the duty of the government to act immediately and protect these working classes by enacting pensions for old age.

In closing my remarks, I want to state that I have faith in the Liberal party; I have full confidence in its leaders, and I shall vote for the budget as brought down by the hon. Acting Minister of Finance.

Mr. WILLIAM BLACK (South Huron): I join those who have preceded me in this debate in extending my regrets that the right honourable the Minister of Finance (Mr. Fielding) was unable to deliver the budget speech of this year. I add the sincere wish that a rapid and complete recovery will soon again enable him to grace this chamber by his presence. On the other hand, if it has been our misfortune to be temporarily deprived of such a capable minister as Mr. Fielding, the generalship of our Prime Minister has given us a second in command who has very ably filled the difficult task imposed upon him. The thanks of this House are due to the hon. the Acting Minister of Finance (Mr. Robb) for the clear and concise manner in which he has presented to us the annual financial statement of our country and

laid before us the changes proposed to our revenue measures.

I do not intend to take up the time of the House with any dissertation on the merits of the respective resolutions to be considered in reference to this year's budget proposals. A better opportunity will be afforded, I believe, to pass judgment upon them when they are being studied in the committee stage, as no doubt the Acting Minister of Finance will furnish with each resolution, in so far as possible, sufficient statistical information to permit hon. members to appraise the respective measures with due enlightenment. I would suggest to the hon. Acting Minister of Finance that he should be prepared to give this House accurate statistical data or, in cases where this is not available, carefully prepared estimated details as to the number of firms to be affected, their total production, their total capitalization, their total number of employees and their total pay roll, together with the imports and exports by countries of the articles affected. I believe that this data can easily be prepared. I would even suggest that it would be very advisable to add the expected loss of revenue from measures proposed, giving details as to where the losses and to what amount they will occur. I believe, Mr. Speaker, that if such a statement was printed and distributed to hon. members before these resolutions are taken up in the committee stage it would enable a much more enlightened discussion and could very reasonably be expected to save considerable of the time of this House.

I desire to limit my remarks to three or four matters which I think deserve serious consideration at the present time. First, however, permit me to take a few minutes to remove from one particular remark of the ex-Minister of Finance (Sir Henry Drayton) some of the political propaganda which I firmly believe it was intended to spread.

On page 1329 of Hansard of the 14th April, the hon. the ex-Minister of Finance is reported as saying that the reductions proposed to the tariff on agricultural implements would average at best seven dollars. With this statement that this saving of seven dollars per year for each farmer will be the only benefit, I find myself in complete disaccord. In this case the average quoted seems to have been purposely chosen to misrepresent the real benefits that these tariff reductions will have for our farming industry. I do not know the method employed in calculating this average, but I am willing to accept it as representing the correct average. The facts of the case, however, cannot be shown by an average saving, because in doing so you are at the same time admitting that the purchase of machinery is evenly distributed. Such is not the case; if it were, the present tariff reductions would be far from possessing the significance that they do under the real conditions. It is true that seldom a year passes when a farmer can carry on his work without replacing one or another of his implements, but if we only consider the established farm holder how can we expect to solve the economic problems arising from the sparse population at present on our immense territory? How can we expect to entice our young manhood and incoming immigrants to successfully add to our agricultural production by settling new farms? No, Mr. Speaker, the proposed reductions in the tariff are intended to benefit primarily our new settlers and to enable them to equip themselves at as low a cost as possible. I have not calculated what the saving would be on a complete equipment, but I have no hesitation in saying that it certainly will be well in excess of one hundred dollars. Who will say that such a sum will not be a considerable contribution to the success of our new settlers?

We, in this section of the House at least, are very much interested in seeing the large agricultural districts of the northern portions of Ontario and Quebec and the vast unoccupied territory of the western provinces more thickly settled. We realize that by increasing our agricultural production, we shall benefit our manufacturing centres and sanely provide for their expansion. Who will deny that greater population in the rural districts of the West and of the East of this country, greater agricultural production with its necessarily greater demand for manufactured goods, is the real economic necessity that will solve the majority of the problems with which we are struggling to-day. These, and these only, are the considerations that have guided our policy. Hon. members to my right must credit the farming population with very little intelligence when they endeavour to show in this House and outside of it that we are trying to buy our return to this parliament by a paltry consideration to individual farmers, and this at the expense of the manufacturing industry. I repeat that our policy of providing cheaper implements of production is guided by the knowledge that the development of our rural communities will at the same time develop our manufacturing centres and that this combination will spell the success of our Dominion.

I will now deal with our postal system and the revenues which it has derived in recent years through the imposition of stamp taxes. In reply to a question, the Acting Postmaster General (Mr. Stewart) furnished the following answer which is to be found in Hansard of the 14th April, at page 1322:

Year	Net Revenue	Total Expenditure
1915..	$13,046,649 57	$15,961,191 47
1916..	18,858,409 93	16,090,138 77
1917..	20,902,384 46	16,300,578 65
1918..	21,345,394 48	18,046,557 90
1919..	21,602,712 65	19,273,583 94
1920..	24,449,916 97	20,774,385 20
1921..	26,331,118 97	24,661,262 26
1922..	26,554,538 24	28,121,533 95
1923..	29,262,232 78	27,794,501 89

To what sources can the increased revenue to the Post Office Department be attributed? There are two sources. The first is the increased postal rate in effect since 1915, and the second is the large number of stamp taxes imposed. The Acting Postmaster General has stated that there is no manner of dividing the revenue as between mailing revenue and taxation revenue. One need only recall to mind the many methods other than mailing, with which we have been familiar in the use of stamps, to realize that the revenue derived from these sources must, indeed, be large. I am convinced that a very considerable, if not the greater part of the increased net revenue, which has risen from $13,046,649.57 in 1915 to $29,262,232.78 in 1923, is due to the new stamp taxes. But what do we find as regards total expenditure?—that the total expenditures of the Post Office Department have risen at an alarming rate from $15,961,191.47 in 1915 to $28,121,533.95 in 1922, and have dropped only some $330,000 to $27,794,501.89 in 1923. Three main factors can increase the expenditures of the Post Office Department. The first is increased work by a large number of mailed packages; the second is increased cost of general salaries, and the third is increased cost of transportation charges. I submit that under none of these headings can you attribute costs against the revenue derived from stamp taxes. The only additional cost to the Post Office Department would be the additional cost of the stamps themselves. Surely the sale of stamps would not add any considerable cost, and we all know that even the cancellation of the stamps so used is outside the field of postal activities. What do those figures tell us? They tell us a very alarming story and this is it. The net revenue has increased by $16,215,583.21, whereas the total expenditure has increased by $11,833,310.42 between the same two years of 1915 and 1922, leaving a net gain of only $4,382,272.79. Who would attempt to maintain that this amount is all that has been paid by Canadians for the numerous stamp taxes under which we are labouring? No, I am sure that the amount is very much greater, and again, where are the results to be found from the organization of this department where we are told that economy is the watchword, and which from its thoroughness of methods and lack of overmanning has been held up to our eyes as a model of efficiency in government administration? Let us analyze the figures from another viewpoint, that of surpluses and deficits which were as follows for the period of 1915 to 1923:

Year	Surplus	Deficit
1915..	.....	$2,914,541 90
1916..	$2,768,271 16	
1917..	4,601,805 81	
1918..	3,298,836 58	
1919..	2,329,128 71	
1920..	3,675,531 77	
1921..	1,669,856 71	
1922..	.....	1,566,995 71
1923..	1,467,730 89	
Totals..	$19,811,161 63	$4,481,537 61
	4,481,537 61	
Total surplus.. ..	$15,329,624 02	

This total of $15,329,624.02 is an average of $1,703,291.56 for this nine year period. The addition of one cent to the postage rate would only need to be paid on 170,329,156 letters each year to produce this average surplus. To realize that the number of mailed letters is far in excess of this amount one need only refer to the number of post offices which was 12,247 in 1922. The total of 170 millions just referred to would average only 13,908 letters per post office per year, or based on a postal year of 310 days only 45 letters per post office per day. Is this not ridiculous? And this calculation, of course, eliminates all mail matter collected on the 3,777 mail routes operated during 1922 with their 202,668 mail boxes. Again, if we only consider the number of three cent stamps issued in 1922—and for what other purpose are three cent stamps used except for the mailing of letters?—we find that the total was 394,869,400. If we eliminate all city letters and all post cards where the two cent rate still applies, and accept the number of three cent stamps as the number of letters handled, we find that, by again applying the one cent rate as surplus revenue, the average per year would amount to $3,948,694.00 or more than double the actual average surplus of $1,703,291.56 given above. If we dig a little deeper we find some amazing explanations: For example, the increase in the cost of transportation by railways from $4,069,695.87 in 1921 to $7,786,548.74 in 1922, an increase in

one year of $3,716,852.87. There does not seem any plausible explanation of such an extraordinary increase, which is greater than the total cost of $3,441,744.65 paid in 1915 for railway mail carriage. Or again, we find an increase in the cost of water carriers from $186,186.98 in 1915 to $584,777.44 in 1922, an increase of $398,590.46 in the nine year period or a total of 214 per cent. It is true that there was a slight decrease in 1923, when the total dropped to $558,394.37. However, a decrease of $26,383.07 between 1922 and 1923 is not very encouraging in the face of the increase of $371,667.02 between 1920 and 1923, from $186,727.35 to $558,394.37. Another difficult increase to accept is the one for city post office salaries from $4,875,294.54 in 1915 to $9,244,099.32 in 1923, or over 90 per cent.

Perhaps the answers of the Acting Postmaster General to questions on the order paper, and appearing on page 1319 of Hansard of April 14, throw just a little light on the very efficient organization of the Postmaster General's department. They do, at least, seem to indicate that the standard of efficiency varies according to locality. In tabular form, with two averages added, the figures appear as follows from the four post offices of Toronto, Montreal, Hamilton and Quebec: All the figures being for the fiscal year 1922-23.

Post Office	Employees	Salaries	Average salary	Revenue	Average rev. per employee
	No.	$	$	$	$
Toronto	950	1,189,917 25	1,252 54	5,798,015 40	6,103 17
Montreal	811	1,230,247 89	1,516 95	3,680,396 67	4,538 09
Hamilton	112	159,579 40	1,424 81	588,297 10	5,252 65
Quebec	171	225,230 09	1,317 13	523,025 91	3,058 63

The foregoing figures show that in Toronto, with a staff of 950, being 139 more than for Montreal, requiring, from every principle of good business administration a larger supervisory and direction staff, the average salary is $1,252.54 or $264.41 less than the average of $1,516.95 for Montreal. If we compare Hamilton and Quebec, we find that in the latter city the 171 employees, greater by 59 than in Hamilton, and necessarily requiring larger administrative staffs, the average salary is $1,317.13 or $107.68 smaller than the average of $1,424.81 for Hamilton. Now let us look at the revenue. We find that in Toronto the average revenue per employee is $6,103.17, higher by $1,565.08 than the $4,538.09 for Montreal. This happens with a total number of 950 employees in Toronto as against 811 in Montreal. Between Hamilton and Quebec, the difference is still more marked, the average being $5,252.65 per employee in the Ontario city as against $3,058.63 in the latter place. The difference in favour of Hamilton is $2,194.02; and in this instance we find that the highest average revenue is for Hamilton where the number of employees is 59 less than for the city of Quebec. Now, Mr. Speaker, is it reasonable to believe that the figures and averages I have just quoted in reference to four important post offices are such as to convince us that the management of our postal service has attained that high plane of efficiency which is claimed for it? On the contrary, if reclassification and reorganization have produced results such as these figures indicate. I am of the opinion that the work has fallen far short of meriting praise of any kind and that they should furnish sufficient incentive for a determined effort to rectify the anomalous conditions shown to exist.

All the figures I have quoted have been taken from answers given to this House by the Acting Postmaster General or from the annual reports of the Auditor General. And I may remark, Mr. Speaker, that the figures shown for net revenue and total expenditures in the Auditor General's reports differ greatly, as to the expenditures, from those furnished by the Acting Postmaster General. I need only quote the expenditures for 1922, which the Auditor General shows as $32,003,188.92, as against $28,121,533.06 given by the Acting Postmaster General, and $31,180,184.40 as against $27,794,501.89 for 1923. I do not know why there should be such a difference. Let us hope that the Auditor General is wrong in this case. Otherwise the total surplus of $15,329,624.02 for the nine year period as shown from the figures of the Acting Postmaster General would be turned to a total deficit of $9,890,954.07. I trust however that the Acting Postmaster General will take note of these figures and furnish us with an explanation as to the reason for the variation. When we consider, Mr. Speaker, that there

4 p.m.

were in 1922 in Canada 4,451 branches of banks and that at an average of only 50 cheques per branch per day for a banking year of 300 days they would handle 66,765,000 cheques, on each one of which there would need to be at least one two-cent stamp, and that stamps are also required for receipts, for notes and for many other purposes of taxation, we cannot help but conclude that the average surplus of $1,703,291.56 is very far below the actual taxation imposed in stamp taxes on the Canadian public. Notwithstanding the increase of one cent in the ordinary postal rate and the doubling of the registration fee, our postal system has been operated at a great loss during the last nine years. I believe, Mr. Speaker, that the apparent surplus of $1,467,730.89 shown for 1923 by the figures of the Acting Postmaster General would be turned into a deficit of many millions of dollars were it possible to eliminate all but actual postal revenue. Surely there is urgent need for an immediate rectification of these conditions. Under present day taxation, when a tax of some kind meets us at every corner; when the interest charges on our huge national debt account in themselves for a greater total than all our expenditures at the beginning of this century, we can ill afford to operate at a loss a service which produced surpluses in the days of low taxation.

We have in recent years, Mr. Speaker, heard both criticisms and praise of the civil service of this country—criticism mostly of the conditions existing in the service and, in rare cases, against civil servants themselves. The praise, on the other hand, was for the far greater part given the civil servants and was in a sense a tribute to their individual efficiency, to rare achievements or to undoubted ability in transacting the public business. This session the government came to us with loud heralding of the reductions they were going to carry on in the civil service, in order to eliminate duplication of work, do away with overmanning, increase efficiency and decrease expenditures. The estimates we have been studying do not indicate any very great progress in that direction this year, and I may say I am rather glad of it. Mr. Speaker, I fully realize that we are traversing a period of financial stress in this country and that there was never a greater need for economy. But I also believe that we cannot hope to achieve efficiency and low costs in our civil service by the process of haphazard elimination which has been practised this year. I mean the reduction of staff here and there with the consequent chopping off of this or that particular piece of work. Furthermore, I do not believe there is a single hon. member in this House, and probably it would be difficult to find a single elector in the country, who, if he knew all the conditions, would want us to economize to the extent of a few dollars in the civil service at the expense of our contracts, written, verbal or implied, with the employees of this Dominion. It is not fair, nay, it is criminal, to engage young men or young girls, keep them for many years, oblige them to train in a line of work which only the government does, and then release them with little or no compensation when it had been more or less definitely understood that the employment would continue as long as the services rendered were efficient and the employee continued his good behaviour, Take the young man who enters the service at a low salary, gives of his best at small remuneration, and by constant application to his work attains a somewhat higher salary rate. He has chosen the service as a career and fitted himself for a particular line of work different from what is required by other employers. I claim that it is not fair to dismiss him after he has passed up chances of being successful in other work in order to accept government employment, often at a much lower salary on the consideration that the work would be permanent.

No, Mr. Speaker, efficiency, removal of overmanning and consequent economy will never be obtained by the method which has been employed in the service this year. Unless a proper system is adopted and worked consistently we can never hope to have better conditions than we have to-day. Can any one honestly claim that civil servants are responsible for the conditions that exist? Is it the fault of the employee when the employer engages him to perform work already being done in another department or for which there is no need? Is it the fault of the employee if the hours of labour are limited to six and one half on week days and four on Saturdays? No, the responsibility for the conditions found to-day lies at the feet of the governments, both present and past. It is the duty of the government to rectify these conditions, and I say that it is also their bounden duty to do so without causing any hardship to the civil servants who have only been the dupes of maladministration, extravagance and political patronage. I dare say that the reductions which are taking place this year will still leave a condition, in permanent departments at least, worse than existed when the government of to-day took office. I mean that I believe the number of appointments in excess of retirements from all causes has been much greater

since 1922 than the reductions which are taking place this year. There is one method and only one, by which better conditions can be made to prevail in the civil service of this country, and I would suggest this method for the serious consideration of the government:

1. A complete survey of the work to be performed with a view to eliminating all duplication of work and expense.

2. The gradual installation of all modern labour-saving facilities so that the greatest amount of work can be performed with the least possible staff.

3. The complete cessation of appointments until overmanning has completely disappeared; With the exception only of technical requirements when investigation has shown that no one within the civil service possesses the necessary qualifications.

4. The filling of all vacancies through transfers from one department to another.

5. An arrangement by which the civil servants would contribute sufficient of their annual salaries to permit of a reasonable superannuation system without adding to the cost of civil government.

6. The gradual increase, according to reduction in total staff, of the hours of labour from six and one half as at present to at least seven and one half or eight hours.

7. A thorough study of salary conditions in order that proper remuneration schedules can be adopted so as to furnish proper incentive for efficient service.

8. No dismissals, except for bad behaviour or inefficient services; as well as in those cases where the appointment has been of a purely temporary nature.

9. The establishment of a consulting group chosen from civil servants themselves to help the government to bring about the necessary changes.

In connection with the last suggestion, there is not a shade of doubt in my mind that if ministers, deputy ministers and the Civil Service Commission thoroughly co-operated with a well chosen body of civil servants, results of a permanent nature would be more quickly achieved than through the adoption of any other method.

I maintain, Mr. Speaker, that the above plan, if followed, will bring about permanent results, will cause hardship to no one, and should remove for all time from the mind of every one the far too frequent cry of mismanagement which is being heard these days. I repeat that civil servants have not in any way been responsible for the conditions that exist to-day, that the governments, both present and past, must shoulder the responsibility and that any policy whereby the innocent must suffer is unfair and unjust and betrays that spirit of British justice of which we are all so proud. I trust that the government will take kindly to my suggestions, and give them serious consideration.

I now come, Mr. Speaker, to the last part of my remarks. We have been accused of representing only one element of this country. It is often stated that we are only interested in the measures that will be of immediate benefit to the farming community of Canada; that we are willing to sacrifice the interests of other sections provided that the farmers' desires are served. Let me say, Mr. Speaker, that if such were our policies we would not deserve the name of Canadians. No, such are not our policies. We are, on the contrary, interested in the welfare and progress of Canada as a whole, in the progress of our manufacturing industries as well as in the welfare of our farming communities. We desire conditions in this country which will permit suitable living and working conditions to obtain for our farm labourers and farmers, as well as for the artisans of our urban centres and our manufacturers. The movement responsible for our presence in this chamber, however, was based on the unfair conditions that have long existed against the farmers of this Dominion, due, no doubt, to their practical lack of representation in the parliament of our country previous to the last election. Such an important section was entitled to a hearing in this Palace of Laws and surely no one would maintain that in devising our legislation their welfare should not be taken into account. To-day unfair conditions exist, and our efforts are directed to equalize conditions as between all sections, in so far as possible.

How can farmers be satisfied with conditions such as are disclosed in the March, 1924, issue of the Prices and Price Index Bulletin of the Dominion Bureau of Statistics, where it is shown, for example, that the index number for grains has risen from 100 in 1913 to 124.9 in 1923, and that the index number for flour and milled products made from these same grains has risen from 100 to 131.1 between the same two years, but that, on the other hand, the tea, coffee, cocoa and spices that the farmers must buy had risen to 201.0 in 1923 as against 100 in 1913; that the vegetables he sold at 100 in 1913 brought him 157.7 in 1923, but that the hosiery for which he disbursed 100 in 1913 cost him 295.2 in 1923? Can he be expected to remain inactive in the face of the index price for hides, for instance, which dropped from 100 in 1913 to 80.9 in 1923, whilst the leather made from

these hides has risen from 100 to 116.3 between the same two years, a difference against the farmer of 35.4? And going a step further, he finds that boots and shoes, again the product of the hides, have risen to 141.9 in 1923 from the base of 100 in 1913. Has not the farmer just cause for complaint when a ten-year period places him at a disadvantage of 60 points between the hides that he produces and the shoes he must buy? The same conditions, Mr. Speaker, apply in the same manner to all the farmer has to sell as compared to what he has to buy. In every instance, practically, the increases which have taken place in the prices of the commodities which he requires are very much greater than the increased prices which he receives for his produce. And in some cases there have been actual decreases in the prices which he receives. The bulletin to which I refer uses a base of 100 for the year 1913 and we find figures such as these for 1923: tools and hand implements, 212.6, bricks, 169.0, lime and cement, 159.6, sugar and its products, 226.4, woollen cloth, hosiery and underwear, 233.3 and so on all along the line of the goods the farmer must buy. But if we look at the 1923 index numbers of the goods he has to sell the story is very much different and it is at once apparent that his revenues have far from kept pace with his increased costs of living and of production. Live stock dropped to 97.6, hides and skins to 80.9, whilst grains have only risen to 124.9, eggs to 130.1—those are last year's figures; eggs have dropped this year 50 per cent—and vegetables, from which in the great majority of cases no revenue is derived by the ordinary farmer, to 157.7.

If we analyse price conditions from another angle we find that the wholesale prices show that wheat was at 88 cents per bushel in 1913 and $1.08 a bushel in 1923, but we also find that a barrel of flour could be purchased for $5.36 in 1913 and that it cost $6.87 in 1923. Now, Mr. Speaker, based on the average of four and one half bushels of wheat to a barrel of flour, we find that between 1913 and 1923 the farmer received 90 cents more for the wheat necessary to produce a barrel of flour, but that when he had to purchase that flour the cost to him increased by $1.51 or an adverse balance of 61 cents against the farmer. Everywhere you look you find the same results. Cattle brought $6.89 a hundredweight in 1913 and only $6.80 in 1923. But sugar cost $9.58 against $4.18 in 1913. There is no need of quoting more, suffice it to say that no matter from what direction you look at these official figures you always arrive at the same conclusion, that is, the farmer pays more for all he needs, and in many cases receives less for what he has to sell, and in no case is the increase to him proportionate to the increase against him.

Can we reasonably expect contentment when such conditions prevail? Can we be blamed for our endeavours to bring about more normal conditions? Surely not, more equitable conditions are urgently required, and until they obtain there can be no real progress. Hon. members to my right have been painting blue ruin for the manufacturers of this country unless we keep our hands off the tariff. Yes, indeed, they endeavour to maintain that rather than a lowering of the tariff we are in urgent need of higher tariff barriers, if we do not wish our manufacturing industry to go into bankruptcy. Mr. Speaker, higher tariffs, and in fact tariffs of any kind, can only bring artificial life to any industry and they never will solve the problems of the manufacturers. Their troubles lie elsewhere. They must pare down their overhead charges, they must lessen their sales costs, they must cheapen the extremely expensive distribution system existing to-day, and they must realize that business expansion can only take place on sound foundations and not on artificial tariff proppings, if they expect to bring a permanent cure to the ills of which they are complaining.

In closing, Mr. Speaker, I wish to repeat that the dissatisfaction and unrest amongst our farming classes is due to the unfair conditions which I have endeavoured to portray. Farmers have a vital interest in the expansion of our manufacturing industries, and their Canadianism is of a brand that extends far beyond the bounds of class selfishness. They realize that true progress cannot be local in its scope. And our efforts to bring about more equitable conditions, are based on the absolute conviction that an adjustment of the unfair conditions of to-day will prove to be the required impetus for true progress for all classes and in every corner of our wonderful Dominion.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): Mr. Speaker, I wish to rise to a point of order. I desire to submit to you, in all respect, that the amendment of the hon. member for Centre Winnipeg (Mr. Woodsworth) is not in order and cannot be considered. The amendment as read by the Chair is as follows:

That all the words after "that" be struck out and the following substituted therefor:

Whereas the budget proposals would seem to indicate the recognition by the government of the necessity for a fiscal policy designed to encourage industries based upon the development of the natural resources of the country, and to afford some alleviation of the financial burdens bearing upon the people;

And whereas the condition of such industries and the position of consumers in general is such as to demand relief

Therefore, be it resolved:—

That the best interests of Canada will be served by an immediate and substantial reduction of the tariff on the necessaries of life including foodstuffs, clothing and building materials;

And further that it is desirable,

(a) That the income tax should be so readjusted as to bear more heavily on unearned incomes;

(b) That unimproved land values including all natural resources should not be exempt from taxation; and

(c) That a graduated inheritance tax on large estates should be considered.

My first objection to the consideration of this amendment is that nobody has moved it. The amendment moved by the hon. member appears in Hansard just preceding the motion which I have just read. That motion coincides precisely with the motion as read until one reaches the words "therefore be it resolved". The recitals are identical, but after the word "resolved", from there on the operative part is not the same. I will read the operative part now as moved by the hon. member:

—that the best interests of Canada will be served by an immediate and substantial reduction in the tariff on the necessaries of life, including foodstuffs, clothing and building materials;

I may say it is identical to there. The amendment proceeds:

And further, that the loss of revenue, if any, which might result from such reduction in customs duties should be made good by:

(a) The readjustment and extension of the income tax to bear more heavily on unearned incomes.

(b) A direct tax on unimproved land values, including all natural resources;

(c) The institution of a graduated inheritance tax on large estates.

It will be observed first of all that the motion as put from the Chair precedes the second operative part by the words:

And further that it is desirable—

These words do not appear in the motion as moved. Secondly, the (b) part of the operative clauses reading in this way in the motion as read by Mr. Speaker:

That unimproved land values including all natural resources should not be exempt from taxation—

Reads as follows in the amendment as moved:

A direct tax on unimproved land values, including all natural resources.

And (c) which reads in the motion as put:

That a graduated inheritance tax on large estates should be considered—

Reads in this way in the motion as moved: Be it resolved that the customs duties should be made good by

The institution of a graduated inheritance tax on large estates.

No reference to this subject being a mere matter of consideration. I do not wish any reflection at all on the officers of the House, and still less on the Chair, in relation to the changes. The design probably was to endeavour to trim the amendment into such shape that it would be in order, or I will put it in any other way that the Speaker might suggest. Whatever the motive was, there was no design to be unfair to any portion of the House. But my point is this: That no motion as moved in this House can be altered after the motion is spoken to and the hon. member's speech, under the rules of the House is a speech to the amendment as he moved it. As every hon. member knows, the hon. gentleman's speech is taken to be a speech to the amendment, not a speech to the main motion. Consequently, the amendment as he moved it has been spoken to at considerable length by the hon. gentleman himself. However laudable the object may have been, it is impossible to alter the motion after it has been debated in this House. Consequently, the motion as now put from the chair has never been moved in parliament, and therefore it cannot longer be debated.

My second reason is this: That in either form, in the form as moved or in the form as put, the motion is distinctly out of order as being in conflict with rule 77 of this House. That rule reads as follows:

If any motion be made in the House for any public aid or charge upon the people, the consideration and debate thereof may not be presently entered upon, but shall be adjourned until such further day as the House thinks fit to appoint; and then it shall be referred to a committee of the whole House before any resolution or vote of the House do pass thereupon.

Perhaps I shall be pursuing the better order of argument if I now refer to certain authorities bearing upon this rule and its effect. I first of all refer to May, page 462, where I find the following:

The principle that the sanction of the Crown must be given to every grant of money drawn from the public revenue applies equally to the taxation levied to provide that revenue. No motion can therefore be made to impose a tax say by a minister of the Crown, unless such tax be in substitution by way of equivalent for taxation at that moment submitted to the consideration of parliament. Nor can the amount of a tax proposed on behalf of the Crown be augmented nor any alteration made in the area of imposition. In like manner no increase can be considered, either of an existing or of a new or temporary tax for the service of the year, except on the initiative of a minister acting on behalf of the Crown. Nor can a member, other than a minister, move for the introduction of a bill framed to effect a reduction of duties, which would incidentally affect the increase of an existing duty or the imposition of a new tax, although the aggregate amount of imposi-

tion would be diminished by the provisions of the bill.

I do not need in this relation to read further, but I will do so in reference to another exception which at times has been claimed. It will be seen though from the rule as read, and from the exposition of the doctrine as set out in May and confirmed in Bourinot, that, first of all, no motion of any kind for the imposition of a tax can be made unless it is introduced into parliament under the sanction of the Crown; that is with the approval of the Governor General. Secondly, that any motion at any time brought in, though properly introduced, and having the effect of imposing a charge on the people, must not be presently entered upon, but shall be adjourned till such further day as the House thinks fit to appoint, and then shall be referred to a committee of the whole House before any resolution or vote of the House do pass thereupon. This motion undoubtedly imposes or leads to the imposition of a tax upon the people, not only one tax but several, and specifies definitely what those taxes shall be. The hon. member is therefore incompetent to introduce the motion. It must be introduced in the House, by a minister alone, and must be accompanied by the approval of the Governor General. In the portion I read it will be observed that an exception is mentioned. The portion where the exception is mentioned reads:

> No motion can therefore be made to impose a tax save by a minister of the Crown, unless such tax be in substitution, by way of equivalent for taxation at that moment submitted to the consideration of parliament.

In the first place there is no motion before the House imposing any tax as to which any hon. member might move a substitution. The motion before the House is that the House go into committee of Ways and Means, in order that when in committee, a motion or resolution imposing a tax may be moved. We are not yet at the stage when any motion is proposed by a minister imposing a tax. But even if we were, what the hon. member proposes is that his new tax shall be a substitute for something not even suggested by the minister. It is to be a substitute for something suggested by himself. Even therefore were we at the stage when a substitute tax for one proposed by the minister might be moved, the hon. member would not be in order, because he is proposing that there be a certain loss of revenue by a method he devises, and then he says: "To make up my loss, not the minister's, I propose that this new tax be imposed." Consequently it is beyond argument to suggest that he can come within this exception.

I now refer to page 468 of May, under the reading of which on one or two occasions certain resolutions that appeared on the order paper, and that did not come at the time, of the budget or at the regular tax imposition time, were allowed. They were allowed, may I say, against my protest, and I still think wrongly, but they were admitted. Even under those precedents, which I want to urge it is very undesirable to follow, as they will lead us into complications and difficulties we know not of, I submit my hon. friend's motion cannot be countenanced now. Under what class of exceptions were those two resolutions that had been put on the order paper admitted. It must have been under this exception at page 468 which I read:

> In like manner motions advocating public expenditure or the imposition of a charge, if the motion be framed in sufficiently abstract and general terms can be entertained and agreed to by the House. Resolutions of this nature are permissible, because having no operative effect, no grant is made or burthen imposed by their adoption.

An instance then is given which will not then be understood unless I read the details of the reference, but an instance which has no family resemblance at all to the case in point to-day. Now we come to the general language I have just read—

> Motions advocating public expenditure or the imposition of a charge, if the motion be framed in sufficiently abstract and general terms, can be entertained and agreed to by the House. Resolutions of this nature are permissible because having no operative effect, no grant is made or burthen imposed by their adoption.

Is this a resolution of that nature? I submit this resolution can by no manner of means be classified in such a way, unless we go to the extent of saying that a resolution, to come under this classification should read, "that John Smith be taxed so much," or, "that William Brown be taxed so much". If we must go that far to make our resolutions specific, then this resolution is not specific. But how does it read? I will read it in the form in which it is put:

> And further that it is desirable:
> (a) That the income tax should be so readjusted as to bear more heavily—

On what?

> —on unearned incomes.

On unearned incomes? Can anybody fancy that this is in "abstract" and "general" terms such as to be permissible as having no operative effect. If it is, then all the resolutions which ministers move in this government or in any other are just of the same kind, and the rights of an hon. member in that regard are exactly the same as the rights of

a minister. By way of illustration I read one of the resolutions which now stands in the name of the Minister of Railways and Canals (Mr. Graham), a resolution as to the construction of a railway. He does not move a resolution which, if it passes, of itself means that a road is to be built, which of itself makes any charge on the people or any loss to the treasury. Not at all. He simply moves a resolution which says "it is expedient." What is the difference between the word "desirable" and the word "expedient?" Is one more general than the other? Is one more specific than the other? Is one abstract and the other not? In that regard both are identical. The minister moves a resolution which reads:

That it is expedient to bring in a measure to provide for the construction of a Canadian National Railway line, jointly with the Canadian Pacific Railway Company, from Rosedale...

And so on. That it is "expedient" to do so. Now we say that it is "desirable" to tax all unearned incomes more. Is that merely an abstract, pious affirmation? It means this, that if this House approves, the House directs that a bill be introduced to that effect. If this step can be taken on the motion of an hon. member who is not a member of the government, then I submit very seriously that we are simply playing fast and loose with the rules of this House; that there is no place to stop; that the rule which has come down through generations in the British House and which has proven a safeguard of their parliament, is to be abandoned by us. Because, if we can move that it is desirable to do a certain thing, even for the moment appropriating the language of the amended resolution, on the motion of a private member, and put the House on its judgment, then all this safeguard is gone. We can move that it is expedient to do a certain thing or we can use any other adjective we like. So I submit most earnestly, out of the regard which I have for the rules of this House and for the future conduct of this parliament, that this motion of the hon. member for Centre Winnipeg (Mr. Woodsworth) is clearly and unqualifiedly out of order.

Mr. J. S. WOODSWORTH (Centre Winnipeg): Mr. Speaker, I think it is, perhaps, a little strange that the leader of the opposition (Mr. Meighen) gave me no notice whatever that he proposed to take action at this time.

Mr. MEIGHEN: The hon. member gave me no notice of his motion.

[Mr. Meighen.]

Mr. WOODSWORTH: I would urge that this is a question of giving notice of a matter that is already before the House. I am under absolutely no obligation to give notice of any motion of mine to the leader of one of the other parties of this House. So again I would say that it would seem as if there might have been some notice given that this matter was to come before the House at this time. I might also call attention to the fact that the leader of the opposition in the earlier part of his remarks proceeded to read me a lecture as to my reasons and motives for preparing such a motion as this, and he also rather implied that there had been changes that had been, perhaps, almost underhand in their character. I should like to make a very brief statement as to the character of the alterations that were made. In the very first place, I should like to ask that the scroll of the House should be produced on this occasion as I believe it was a few days ago, in order that we may see just where we stand in the matter. My resolution, as the leader of the opposition has stated, is given in Hansard at page 1460. Immediately after recess, before the motion had been accepted or read to the House, it was suggested to me by the Speaker that possibly the form was not the best and that it might be modified in order that it might more nearly conform with the regularly accepted rules of the House. In consultation with the Speaker and the authorities of this House, I consented to make such changes in the resolution as seemed to be necessary or advisable in order that it should conform more nearly with the accepted usages of the House. That is precisely how the matter stands with regard to that point. I thought I was on safe ground in introducing the resolution, since in form I followed a resolution which was introduced a year ago by the hon. member for Brandon (Mr. Forke) on May 14, 1923, as reported on page 2717 of Hansard. Mr. Forke moved:

That all the words after the word "that" be struck out, and the following be substituted therefor:

Whereas the tariff policy of the government, as indicated by the Minister of Finance in his budget speech, and particularly his pronouncement in favour of tariff stability at existing rates, and the consequent intimation that the government contemplates no further appreciable tariff reduction, constitutes a repudiation of the tariff planks in the Liberal platform of 1919 and is inconsistent with the Finance Minister's statement last session that the changes then made were a step in the right direction;

And, whereas, the fiscal policy of the government as now brought down is based on the principles of protection, and in this respect is indistinguishable from that of their predecessors in office;

And whereas the condition of the primary industries and the position of consumers in general is such as to demand immediate relief;

Therefore, be it resolved: That while recognizing that changes in the fiscal policy should be made in such a way as to give industries affected a reasonable opportunity for readjustment, this House is of the opinion that the principle of protection as a basis for fiscal policy in Canada is unsound, and that every claim for protection should be heard publicly before a special committee of parliament.

And, further, that the best interests of Canada will be served by:—

(a) An immediate and substantial reduction in the tariff, particularly on the necessaries of life and the implements of production.

(b) An immediate increase in the British preference to 50 per cent of the general tariff.

(c) Reciprocity in trade with the United States as outlined in the proposed Reciprocity Agreement of 1911.

And, further, that the loss of revenues, if any, which might result from a reduction in customs duties should be made good by:—

(a) The readjustment and extension of the income tax to bear more heavily on unearned incomes.

(b) The increase and extension of excise and other taxes on luxuries.

If you will compare the resolution as I presented it to the House with that which was presented a year ago by the leader of the Progressives, you will find that the form is exactly similar. Some of the clauses are taken word for word. The leader of the opposition quotes a number of authorities and various precedents to show that it is impossible that a resolution in this form should be accepted by the House. The fact is that a resolution in this form was accepted a year ago, and I ask: If this could be accepted a year ago by the House when moved by the leader of the Progressives, why cannot my resolution be accepted this year? Surely, this is a precedent. I am not going into any detail as to the form of the resolution or whether it conforms exactly with the principle suggested by the authorities on procedure. It seems to me that it would be a very serious thing, indeed, for the conduct of the business of this House if private members are not to be permitted to introduce resolutions dealing with the underlying principles of taxation. It would simply reduce to impotence the entire opposition and we should not be able to submit any constructive suggestions whatever. I take it that if this resolution were passed the effect would be virtually the adoption of a certain principle, and it would then be open to the government to bring down such special measures along that line as they might see fit. As I have not had any opportunity of consulting the authorities on this matter I think, Mr. Speaker, that with your consent and with the permission of the House it might be desirable that this debate should be adjourned until I have had such opportunity.

Mr. SPEAKER: The question is undoubtedly one of importance and I shall deem it advisable to reserve my decision. In the meantime, if other hon. members desire to speak to the question I shall be glad to hear their views.

Mr. MARCIL (Bonaventure): The weak point in the argument of the hon. member for Centre Winnipeg (Mr. Woodsworth), in citing the motion made by the hon. member for Brandon (Mr. Forke) last year, lies in the fact that the hon. member for Brandon did not withdraw his motion after having submitted it to the House, nor did he change it, as is proposed to be done in this instance. Rule 43 is an old established rule of parliament and I beg to quote it:

A member who has made a motion may withdraw the same by leave of the House, such leave being granted without any negative voice.

So that unless permission is given to the hon. member to withdraw his motion it remains the property of the House; it cannot be withdrawn except by unanimous consent.

Mr. WOODSWORTH: Is there any record that I withdrew my motion?

Mr. MARCIL (Bonaventure): I am going by the report in Hansard.

Mr. WOODSWORTH: Then I would ask, for the purposes of the scroll, that my motion be allowed to stand.

Mr. MARCIL (Bonaventure): Under rule 43, I take it that the hon. gentleman may not substitute a second motion for his first unless he obtains the leave of the House to withdraw the previous amendment.

Mr. SHAW: I think the proposal of the leader of the opposition (Mr. Meighen) is a matter of vital importance. Unlike the right hon. gentleman, I do not hold in extreme veneration a great many of the rules which have come down to us from the somewhat dim and distant past. I do feel, however, that the question under consideration is of such vital importance that not only should the matter be adjourned but that an opportunity should be afforded hon. members to discuss it when it does come up again. I think that if the leader of the opposition had followed the suggestion made two years ago, and allowed the leader of a party in this House to propose any amendment or series of amendments to the budget, the difficulty in which he finds himself at the present time would have been obviated. I am of the opinion that his real chagrin in the matter—

Mr. MEIGHEN: Order.

Mr. SHAW:—is due to the fact that the rules of the House bear to some extent upon him at this time.

Mr. MEIGHEN: I submit that the hon. gentleman is out of order in seeking to enter into a discussion with me upon a matter that is not relevant to the question under consideration.

Mr. SHAW: I am prepared to respect my right hon. friend's objection. I repeat, that this matter is one of very grave importance and I do not think it should be hastily disposed of without ample opportunity for the presentation of arguments. The thought occurs to me, presuming that the contention of my right hon. friend is correct, that the entire amendment is not necessarily vitiated; only that part is vitiated which comes within the ambit of his argument. No doubt the amendment may be bad in some respects, but likewise it may be good in part. I am not prepared to argue that question. But if such is the case, then it seems to me that, presuming for the sake of argument that the part to which my hon. friend has referred is bad, the Speaker would be justified in ruling out of order only that particular portion which deals with the raising of revenues in a special manner.

Mr. CARROLL: What would become of the rest of the amendment?

Mr. SHAW: I take it that it would stand. The amendment would then conclude with the words:

> Therefore, be it resolved that the best interests of Canada will be served by an immediate and substantial reduction in the tariff on the necessaries of life, including foodstuffs, clothing and building materials.

If I understand my right hon. friend's position, he has no objection to the amendment up to that point; he particularly objects to the suggestion of the hon. member for Centre Winnipeg (Mr. Woodsworth) as to the manner of raising revenue. I would earnestly suggest that the matter be adjourned in order that hon. members might have an opportunity of discussing it later.

Mr. SPEAKER: If no other hon. member desires to speak to the point of order, I shall reserve my ruling until Monday.

Mr. ALEXANDRE J. DOUCET (Kent, N.B.): May I at the outset join with the many hon. members who deplore the fact that the Minister of Finance (Mr. Fielding) could not be present to deliver the budget this year. As a member from the Maritime provinces, born in Nova Scotia, I regret that by reason of ill-health he has been unable so far to attend the present session of parliament. Had he been privileged to deliver the budget I am sure that he would have weighed the consequences seriously before bringing down a budget that has caused consternation throughout the country. He would have borne in mind what occurred in parliament on April 22, 1897, and would no doubt have seen to it that his budget would be so framed as to satisfy as far as possible all sections and classes of the Dominion. All hon. gentlemen who have so far spoken from the government benches have maintained that agriculture stands to benefit largely from the reduction in what is called the protective tariff. I, Sir, representing a constituency whose interests are centered in agriculture, in the fisheries, and in lumber, fail to see how a reduction in the tariff as submitted by the Acting Minister of Finance (Mr. Robb) is going to be of such great advantage to the people. The hon. member for Kings, N.S., (Mr. Robinson), speaking yesterday on this question, justified his purpose to support the budget by the fact that, as he said, his constituents would be relieved of present burdens inasmuch as fertilizers were going to be exempt from duty. My hon. friend must know, surely, that his constituents who are engaged in the raising of fruit, and the fruit companies in the whole valley of the Annapolis, have been accustomed to bring in fertilizers in the unmixed state to be mixed and compounded at home.

5 p.m.

The ingredients necessary in the manufacture of fertilizer, such as nitrate of soda, muriate of potash and sulphate of ammonia, have been coming into this country duty free. It is true that ground acid phosphate was subject to a tax of 20 per cent, while phosphate rock, unground phosphate, could be imported free. But if the farmers or the fruit growers of any section of the Dominion had to import phosphoric acid in its ground state, that would mean a duty of 20 per cent on each ton value of $12, and as the amount of acid phosphate required for the fertilizing of one acre of orchard is 300 pounds, the hon. member for Kings N.S. (Mr. Robinson) feels justified in supporting the present budget because it does save his constituents 36 cents an acre in fertilizer. I do not believe that the reduction of tariff is going to be a panacea for all the ills, the dissatisfaction and the unrest that prevail to-day among the agricultural classes. And when I speak, Sir, of agricultural classes, I do not refer to the wheat miners, to those who for years have been mining the soil of this Dominion; I speak of the class referred to by the Minister of Agriculture as those en-

gaged in diversified farming. We in the Maritime provinces call it mixed farming, and we get so much mixed up in trying to make both ends meet that I think we shall continue to call it mixed farming.

Now, some of our friends from the eastern section of the country, and possibly from the Pacific section as well, will claim that they are justified in voting for the budget because it means a large reduction in the cost of those things which are necessary in the fishing industry. Why, they say, everything needed in the pursuit of that industry will be duty free, but they take good care not to tell their constituents and the public in general that with the exception of tarred marlin everything used in that industry was already free.

Mr. MARTELL: May I ask my hon. friend who made them duty free?

Mr. DOUCET: If the hon. gentleman does not know it, how can he expect me to tell him?

Mr. MARTELL: You cannot answer. The Liberal government made them free.

Mr. DOUCET: Conditions to-day are such throughout the length and breadth of this Dominion that it is not the time to be meddling with tariffs or to institute any policy which would be detrimental to any one section or to any one industry. In this connection I want to cite a few figures to show that the farming industry, one of the basic industries of this Dominion, is in such a position that it needs more than a little whittling of the protective tariff. The live stock statistics for 1921 and 1923 are, to my mind, conclusive evidence of the fact that all is not well with the agricultural industry. In 1923 there was a decrease of 283,280 horses in the country as compared with the figure for 1921. There was also a decrease of 799,636 in the number of cattle. There was a decrease also of 921,993 in the number of sheep, and an increase of 550,421 in the number of swine. That increase must have been due to the effort of the farmer to bring about the consumption of their over-production of agricultural produce, an over-production due to the supplanting of their products by those which are coming into this country from across the line. But although there was an increase of over 550,000 in the number of swine, the value of that particular line of live stock decreased by $1,730,000. The total number of heads of live stock was 1,615,730 less in 1923 than it was in 1921, and the total value decreased by $152,704,000. That is sufficient evidence to show that something is wrong. For this condition the high cost of transportation is largely responsible; we have not the proper market facilities, and there is an importation of American produce which operates to our detriment. At present eggs are coming across the line in direct competition with our own produce. I am told that in the city of St. John storage eggs were offered last week for 7 cents a dozen. Now, I want to be fair; I do not believe storage eggs were offered at St. John at that price, but I believe that quotations were made to St. John wholesale merchants for American storage eggs at 7 cents a dozen. That is not improbable, because the duty on eggs imported into this country is only 3 cents a dozen while the duty on eggs exported from Canada to the United States is 8 cents a dozen.

Agricultural conditions are not as we would like to see them in the province from which I come, as is shown by the statistics furnished by the provincial Department of Agriculture. During the year 1923 the acreage of our four important crops, wheat, oats, turnips and potatoes, was 131,107 acres less than in the year 1922, and we account for that decrease in acreage by the fact that there were 10,735 more farms vacant in 1923 than in 1922; in other words, only 77 per cent of the cultivated farms of 1922 were cultivated in 1923, and that, Sir, without going into details, explains the large exodus of our population from the province of New Brunswick. I venture to say, Sir, that if I had the statistics before me I would find that the same rule applies to half the provinces of the Dominion, at least from the centre to the Atlantic ocean

But, of course, Mr. Speaker, this great budget and the tariff proposals that have been brought down are going to be a panacea that will cure all evils, and with that policy in force we must expect conditions to become rosy. Sir, I submit that the most important factor in connection with the future of our agricultural interests in this Dominion is to find a home market for our produce. I am not so much concerned about the implement manufacturers in the centre of this Dominion, but I submit that if we wish to create and develop a home market for the purpose of providing consumers for the products of our farms we must have a certain measure of protection for the industrial centres, and I submit that when you are whittling off the duty on farm implements, and are allowing bar steel, bar iron, and pig iron and other semi-finished products to come into this country for the purpose of

manufacturing farm implements, you are striking a death blow to one of our largest industries in eastern Canada. We have in that section of the country an industry that was fostered by both governments. It was the result of the national policy and continued by those who followed the Liberal-Conservative administration of 1896. It was the result of a system of bonusing the Dominion Iron and Steel Company, the purpose of which was to place them in a position to compete in the markets of this Dominion with their bigger competitors in the United States. That bonus was withdrawn, it is true, but to-day besides withdrawing the bonus, when this government withdraws the protection they have enjoyed when they came into direct competition with the products of the United States, favoured by a shorter haul, it strikes a blow, and a stunning blow at that industry which provides a large market for a great portion of the agricultural products of the Maritime provinces.

I did expect, Sir, after the eloquent, sincere, earnest and honest appeal made by the hon. member for Cumberland (Mr. Logan) that we would have seen some encouragement given in this budget to the coal industry. Not he alone is interested in placing a protective tariff on bituminous coal entering this country, the hon. member for Cape Breton North and Victoria (Mr. Kelly), who moved the Address in reply to the Speech from the Throne, and the hon. members for Cape Breton South and Richmond (Messrs. Carroll and Kyte), together with the hon. member who occupies the position of Minister of National Defence (Mr. Macdonald), are all greatly interested in the coal industry. I do not cite anyone to my left as representing the coal mining industries of Alberta, because I do not know the exact portion of the province in which coal may be mined out there, but I do say that in the provinces of Nova Scotia and New Brunswick we have vast limits of coal mines, and that industry could be developed to the point of supplying our share or fifty per cent of the bituminous coal imported from the United States. Of the 16,000,000 tons of coal imported, we could supply our portion, 8,000,000 tons, and that on the basis of $8 per ton would mean that for the mining of the coal and the labour connected therewith, for its transportation from the pit mouth to the manufacturing centres of the Dominion and to the consumers of Ontario and Quebec, we would have the tidy sum of $64,000,000 spread all over the country from Cape Breton right up to Toronto and Brockville. I submit, Sir, this is a matter of vast importance, and having been first suggested by a member supporting the government, the hon. member for Cumberland, a protective tariff should have been placed on coal. We have to-day a tariff of 13 cents per ton on slack coal. That duty was put on when slack coal could be bought at the pit mouth for 75 cents a ton; to-day slack coal sells at the pit mouth for $2.85. Is that a fair comparison? Again, we have a protective tariff of 53 cents a ton on run-of-mine coal. That specific duty of 53 cents a ton was put on when run-of-mine coal was selling for $1.25 per ton; to-day it sells for something like $3.75.

But apart from any protection that might have been afforded by the tariff, I think we might have had a suggestion from the government side of the House for a special transportation rate for the purpose of transporting our fuel. That would only have been in harmony with the resolution passed by this House in favour of a national system of fuel supply.

The hon. member for Hull (Mr. Fontaine), who spoke this afternoon—before referring to his speech I might suggest to you, Mr. Speaker, and to the members of this House, that in addition to the suggestion I made here some time ago, the name of the hon. member for Hull might be added to that famous committee to inquire how best to bring about national unity in this Dominion. My hon. friend's utterances this afternoon in connection with the visit of my honoured leader to the province of Quebec will make very good reading. I would suggest to those who framed the Liberal platform of 1919, and who profess to be so anxious to bring about national unity to this country, that the reading of this speech, when it has been translated will be very edifying indeed, and a source of great benefit to the whole Dominion. I need not dwell any longer upon the question. The House and the country know my stand with respect to it. I have nothing whatever to withdraw and I shall never lose an opportunity of pointing out, here or elsewhere, that such arguments as those of my hon. friend are not conducive to the best interests of Canada.

My hon. friend professed himself greatly pleased because the budget was going to relieve the agricultural class. Now, I have shown how those classes are not going to be relieved to any extent in the matter of fertilizers. The question may be asked: Will they not be relieved with respect to farming implements? I maintain that the greatest bugbear of the farming population to-day—especially where we have mixed farming, I

stick to that expression, Sir, for a reason—is that we have too many farming implements. The state of the market is such that production does not pay, and it is a question of keeping those implements utilized all the time. I may say this, however, regarding certain sections of the country that I know of: If they would only place their agricultural implements under cover in the fall of the year, taking them out when needed in the spring, they would certainly save more than any whittling of the protective tariff is going to accomplish.

My hon. friend told the House that the labouring classes in his constituency would benefit greatly by the reduction in the tariff. It would be interesting to know how they will benefit. Even if there was a slight possibility of a reduction in the cost of living would not the labouring classes of the Dominion prefer to have a full week's pay rather than be idle half the time as will be the case by tariff changes, or mooted tariff changes, throwing the industrial centres into consternation.

I have spoken on the question of transportation, and I should like to say a word or two further with respect to it inasmuch as it vitally affects the section of Canada from which I come. In discussing the question I shall endeavour to treat it from a national standpoint. We have been termed "whiners" in the Maritime provinces so often by the press, and I think the epithet has also been used by hon. members here, that I should like to point out that the question is one of national interest. Transportation, owing to geographical reasons, is of the utmost importance to the Maritime provinces. Certain traffic rates must be granted and adhered to if our natural resources are to have any chance at all of reaching the markets of the central provinces. No special privileges are desired by the fishing industry of the Maritime provinces but it does wish to have a fair opportunity of marketing its products in Quebec and Ontario, and other provinces. Such is not the case to-day. In the eyes of the public the Atlantic region is being discriminated against by the National Railways and is not getting its fair share of what it should enjoy. On the 10th instant, as will be found by reference to page 1207 of Hansard, the Minister of Railways stated in reply to questions that the operating expenses of the Atlantic region for the year 1923 exceeded the operating revenue in the same region by $5,222,145; for the western region there was a deficit of $2,020,709; and that in the central region there was a huge surplus of $18,687,610. Hon. gentlemen, and the public in general, may understand that possibly there is a reason for the deficit in the western section in view of the prevailing rates for the carriage of grain. I have no fault to find because special concessions are given for the transportation of grain, if, even at a loss to the railways. It is one of our basic industries and is entitled to certain concessions and rightly so. But the question is asked, why there should be a deficit in the Atlantic region. The answer to that question is very simple. The deficit exists because the railway system is overmanned, bearing in mind the extent of its mileage. To-day you will find at headquarters at Moncton practically the same staff that existed prior to 1921-22 when the Atlantic region consisted of the Intercolonial and all branch lines into Montreal, and the Transcontinental. Not only is a large staff still maintained but in some cases the salaries of the staff, as a result of recommendations made by the new board have doubled and trebled. Now, a question was placed on the order paper on two different occasions with a view to eliciting certain information. That information was withheld on the ground that to give it was not in the public interest, although it was very necessary if any real comparison was sought to be made of the administrative expenses in 1921-22 compared with the expenses to-day. I ask why that information was withheld, especially when it is borne in mind that the Auditor General's report next year will contain all the information that was asked for by the two returns in question? But it will then be too late. That information is withheld for some purpose or for some reason. Let me tell the Minister of Railways (Mr. Graham) and this House that this information is demanded and will be sought for, and when the proper time comes those who are responsible for withholding that information will feel the effect of ignoring public opinion. The electors of this Dominion are shareholders of the Canadian National Railways. The members of parliament are the elected board of directors. The government in council or the cabinet is the executive appointed by the board of directors. The fact that they have transferred the administration of their authority to another independent body does not to my mind relieve them from direct responsibility to the country and to the shareholders for the administration of the road. We as the shareholders of this railway have the right to know how much the administration of each and every section of the road has cost the country. May I, Mr. Speaker, tell you

why the information is withheld? It is because there has been discrimination in the appointment of officials in the Atlantic region. That discrimination has taken place, and it is very important that the fact should be made known, so that the proper charges against those responsible might be made on the floor of this House, if need be. Some day soon all the information refused will be obtained. The majority of the government supporters who have spoken on the budget have complimented Sir Henry Thornton on the great ability he has displayed in the administration of the Canadian National Railways. I do not wish to detract from the ability of that gentleman, but I am reminded a good deal of a merchant in a small town who, every time he was asked to contribute to any church or any charitable object, would immediately place a half a cent a pound on the price of his sugar or some other very necessary commodity, and before twenty-four hours had elasped he had more than doubled the contribution he had made to the charitable institution. Every time the president of the Canadian National Railways tells us—and he does it openly and publicly—that there has been a saving, and that we are going to have a surplus, it would be advisable to investigate, and we many find before twenty-four hours have elasped that Sir Henry Thornton and his executive staff have curtailed some public service on that road, in order to make certain economies.

Mr. ROBICHAUD: Does the hon. member mean to say that the public service on the Canadian National road has been depleted?

Mr. DOUCET: Yes. The county I represent is not very far from the home of the hon. member for Gloucester (Mr. Robichaud). He may have occasion to travel over my constituency, and I wish to remind him that while, for the last 34 years there has been a daily train service on the Moncton and Buctouche railway for 32 miles, and for the last 28 years a daily mail service on that road, since the 6th January, 1924, no train is run on Wednesdays, and the residents along that road for 32 miles have not the benefit of their daily mail on Wednesday. I say that is depleting or curtailing public service in so far as the Moncton and Buctouche railway is concerned. There are only 32 miles of government railway in the constituency which I have the honour to represent. I feel that it is my bounden duty to myself and to my constituents to set the hon. member for Gloucester right, and to tell the public at large that we intend to protest that there should be no curtailment of the public service of the Canadian National Railways in order to give Sir Henry Thornton or any other man the privilege of declaring economy in the service. True we have the satisfaction of knowing that the radio has been installed, and I say in all earnestness and sincerity that it must be a great comfort to the farmers and fishermen of Kent county. But these people are being deprived of the daily trips on Wednesday and cannot read the daily paper on Wednesday evening, in order that Sir Henry Thornton and other titled men may talk all night over the benefit of radio to the province, when we in Kent county can not get public service. It may be noticeable that the radio system is for the benefit of two regions only, and that we have no installation of any kind in the Atlantic section. As usual the Atlantic section gets the short end of it. Sir Henry Thornton is not alone to be blamed for the administration of this railway. It is true he is president of the board, and not only does he administer the railway in his own way, but he acts also as political interpreter of the Dominion. Hon. members might have noticed in the press that after the reverses on the 6th and 20th December last, Sir Henry Thornton gave his own version as to why the Maritime provinces were dissatisfied. Sir Henry Thornton, when assuming the responsibility of president of the Canadian National Railway board, should not have discriminated against the Atlantic section of that road. We had reason to believe, and we have yet reason to believe, that the Atlantic section has a right to have service on the Intercolonial and all branch lines from Sydney, Halifax and Yarmouth to Montreal, and to connect with the Grand Trunk into Portland. Nothing short of that would satisfy the Maritime provinces. We have one-tenth of the mileage to-day, some 2,283 miles. In that section we have two large grain elevators, one of which has not been used at all for the last two years, and we have the Prince Edward Island ferry which is, I believe, a source of deficit, but we make no complaint as to that. If we gave that province a public service we should be proud of it and satisfied with it. But I say that with two great terminal elevators and the Prince Edward Island ferry, and a number of wharves on the Halifax and South Western Railway, built by Mackenzie and Mann, we have enormous expenditures and we have not the railway system to give us the revenue. Hence it is when the answer is given to us that there is a deficit of over $5,000,000, it is not because we do not have the freight for the roads, but because we do not have the mileage.

I do not intend to delay this House any longer.

An hon. MEMBER: Thank you.

Mr. DOUCET: If I had been guilty of reading a well prepared speech, as I have seen practically one-half the members on the other side and part of them on my left doing since the budget debate has opened, there might have been reason for cutting it short.

I told this House in as clear, concise, and brief a manner as possible that what the agricultural classes of this Dominion to-day want is fiscal stability that will permit our industries to proceed to give work to our labouring classes, that will prevent the great exodus of our population to a foreign country and that will thereby maintain in our midst a population ready to consume the products of our farms. Believing that, I beg leave to move, seconded by the hon. member for Yale (Mr. MacKelvie):

That all the words after the word "that" be left out and the following substituted therefor:
This House is of opinion that the welfare of Canada requires a consistently maintained protective policy.

Mr. DEPUTY SPEAKER: Owing to the fact that there is before the House another amendment on which Mr. Speaker will give his decision later, I will take the liberty of leaving this in his hands.

Mr. ROBICHAUD: I beg to move the adjournment of the debate.

Mr. MACKENZIE KING: I understand some arrangement has been made between the whips as to not continuing the debate on the budget this evening.

Mr. BOYS: That is quite correct. Owing to circumstances over which we have no control, the House meeting rather late in the week and the indisposition of one or two members, it is not found convenient to continue the debate to-night at any length, and a suggestion was made that it might stand over and be continued on Monday.

Mr. MACKENZIE KING: The government has no objection to meeting the wish that has just been expressed of postponing the debate until Monday; but as regards this evening, evidently the Minister of Railways and Canals (Mr. Graham), who was leading the House last night, is something of a prophet, because he said:

We will proceed with the budget debate to-morrow, and should anything intervene by which it comes to an end or to a suspension, we shall go on with the resolutions on the branch lines.

I think we ought to go on this evening with the resolutions on the branch lines, and if they are concluded, to go into supply on the estimates of the Department of Agriculture.

Motion agreed to and debate adjourned.

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

PRIVATE BILLS

OTTAWA ELECTRIC RAILWAY COMPANY

The House in committee on Bill No. 10, (Mr. Chevrier) to confirm an agreement between the Ottawa Electric Railway Company and the city of Ottawa, Mr. Gordon in the chair.

On Schedule B.

Mr. MEIGHEN: Why need parliament pass this bill?

Mr. GRAHAM: I am not very conversant with the bill but I am informed that it is subject to the Board of Railway Commissioners. The company and the city have been endeavouring to make an agreement, which they have arrived at. The matter has been before the Railway committee in all its stages and has been passed without amendment. I understand that the agreement must be ratified by parliament.

Mr. MEIGHEN: It is a mere matter of civil rights, so far as I can see. Of course, the Ottawa Electric Railway Company is a chartered company incorporated by act of parliament; but even the Canadian Pacific Railway Company does not need to come to this House to have a mere agreement ratified.

Mr. GRAHAM: Is it not an inter-provincial matter?

Mr. MEIGHEN: I should think so. However, I have no doubt that counsel has looked into the matter and I presume there is some necessity for this bill.

Bill reported, read the third time and passed.

SECOND READINGS

Bill No. 38, respecting the Esquimalt and Nanaimo Railway Company.—Mr. Humphrey.

Bill No. 60, to incorporate The Life Underwriters' Association of Canada.—Mr. McKay.

CANADIAN NATIONAL RAILWAYS

BILLS PROPOSED TO AUTHORIZE THE CONSTRUCTION OF BRANCH LINES

Hon. GEORGE P. GRAHAM (Minister of Railways) moved that the House go into

committee to consider the following proposed resolution:

That it is expedient to bring in a measure to provide for the construction of a Canadian National Railway line, jointly with the Canadian Pacific Railway Company, from Rosedale, in a southeasterly direction, to a point on Bullpound creek in township 25, range 14, west of the 4th meridian, in the province of Alberta; estimated mileage including existing grading, 39 miles; estimated cost to the Canadian National Railway Company (one half of total), $915,000.

Motion agreed to and the House went into committee, Mr. Gordon in the chair.

ROSEDALE—BULLPOUND CREEK

Mr. GRAHAM: I might read to the House the note I have concerning this:

In 1919 when a conflict of railway routes between the Canadian National Railways and Canadian Pacific Railway was discussed before the Board of Railway Commissioners, for a line easterly out of the Drumheller coal fields down the Red Deer river, the board ruled that this should become a joint line with equal rights to each railway, and that the parties should make an agreement covering the same. This resulted in an agreement, May 9th, 1919, being drawn, making the stretch east from Rosedale as far as Bullpound Creek an equal joint section and fixing certain limitations in reference to the balance of the route.

The Canadian Pacific Railway now wish to proceed with this joint section construction.

This line will open a further area of the Drumheller coal fields. From the end of the joint section this line when finally linked up easterly to the Acadia valley line will afford the Canadian National Railways lighter grades eastbound for coal from the Drumheller fields. It will also serve the agricultural district on either side of the Red Deer river over this distance.

No final running rights agreement has been reached with the Canadian Pacific Railway as to the detailed terms for the use of the joint section, but the estimate is based on the understanding that half the money will be provided by each party.

Mr. MEIGHEN: Is there any one who can give us some information about the district through which this goes, and the need of the line to the people? I have been surprised to be in receipt of communications from the district claiming that there is an unnecessary duplication of lines.

Mr. GRAHAM: This is a joint section.

Mr. MEIGHEN: Yes, I know that, but within a distance of I think about eighty miles or less than that apart, there are six lines, and this district particularly has been virtually given up; I do not mean given up because of lack of lines, but the information given me—I am not saying it is correct—is that the provincial government has moved the people out.

Mr. STEWART (Argenteuil): I think my hon. friend has in mind the end of the line coming in from Acadia into the territory just north of the Red river. This line begins at Drumheller in the coal district, and runs down the Red Deer river. The Canadian Pacific Railway intend to connect with their line from Empress to Bassano, and the Canadian National Railways will eventually connect up with the Acadia valley. My hon. friend will remember they now have a branch from Hanna southward ending at the river, and they can go out that way for the time being. I think the territory to which my hon. friend has reference is a strip of country along the north side of the Red Deer river south of the Goose lake line, through which this line if constructed would run.

Mr. MEIGHEN: I remember distinctly the district was described as the Bullpound district.

Mr. STEWART (Argenteuil): That is quite true. I would not be surprised if there have been a number of people leaving that territory because they were a long way from railway facilities, and the district has suffered from drought for a few years, but I know they had a very good crop there last year. The object of this line, however, is to tap all the coal fields down the Red river. At the present time the Canadian Northern crosses the Red river at Drumheller and serves the area just in the vicinity of Drumheller, but they have a heavy grade out to the north. The Canadian Pacific comes in from the west, taps Drumheller, and goes down the river a short distance till it connects with their line from Bassano to Empress.

Mr. KENNEDY (Edmonton): I wish to take a little time to-night to discuss in a general way this branch line programme. There have been a number of statements made from across the floor of the House and also from my right with regard to the value of the western lines in general to the Canadian National Railways, and it has been suggested by some hon. members that this branch line programme was a means of purchasing Progressive support for the government, and that there is really no justification from a financial standpoint for this construction. I do not want to quote the various statements I have here that were made in the House—the statement, for instance, by the hon. member for Joliette, another by the hon. member for South Oxford, and another by the hon. member for Vancouver Centre, with regard to the question of duplication. The ex-Minister of Finance the other day after the budget was introduced read from a return that had been brought down with regard to the railways especially the National Railways, and this is what he said:

There was a time when our railways in western territory were good assets, but we have got a return to-day by the Minister of Railways and Canals (Mr.

Graham) showing how the earnings of the National system are made up. The hon. acting Minister of Finance (Mr. Robb) talks about the great increase of industrial and agricultural activity that his measure will produce. Why, we have never had a bigger or better year, so far as volume is concerned, than the present year; and yet the whole earnings of all the western territories, the prairie provinces and British Columbia, for the last year amount to $72,000,000 and the operating expenses amount to $74,000,000.

The CHAIRMAN: The hon. member seems to be quoting from another debate which took place this session, and not the debate upon the branch lines bill; I think he said it was from the budget debate. That would seem to be out of order.

Mr. KENNEDY (Edmonton): If the Chairman rules that out of order I am quite willing to accept the ruling, but I am going on with my statement just the same, though not with this quotation: I am trying to justify the construction of these branch lines in a general way.

I asked for a return in this connection and I have the statement here. The Canadian National Railways are divided into three divisions: The Atlantic region, the central region and the western region. The operating revenues and expenses in these different regions in 1923 were as follows:

	Operating revenues	Operating expenses
Atlantic region..	$ 22,000,000	$ 27,000,000
Central region..	127,000,000	109,000,000
Western region..	72,000,000	74,000,000

As regards the central region, while there is a net operating revenue of $18,000,000, almost $17,000,000 of that is made up of Grand Trunk earnings, and it is hardly fair to compare the newer railways that have been built west and east, in a general way, with the old established Grand Trunk. But if we compare the newer railways in the West with the newer railways in the eastern and central regions, we find that against a net operating loss in the West of $2,000,000 there is a net operating loss in the East—that is, taking the central region and the Atlantic region together—of $4,000,000. So it would seem, from this return, that the western lines are justified in spite of the statements that have been made in this debate to the effect that the East was paying for the western lines.

I would like to point out that included in the western division is a large section of Ontario. The western region comes east as far as Armstrong, Ontario, and we have two main lines running about 300 miles east, making a total of 625 miles from Winnipeg east to the eastern boundary of the western division. Then we have out in British Columbia two railways connecting the prairies with the Pacific coast, one running to Vancouver and one running to Prince Rupert, and the prairie lines, as I understand it, have to carry the expenses of a tremendous amount of mileage that is not at all necessary for the needs of the prairie provinces so far as getting out to Fort William and Port Arthur and to the Pacific coast is concerned. We have also included in this region the unfinished Hudson Bay railway and a line to Prince Rupert that is practically valueless until more facilities are constructed at the coast. And then we have about 600 miles, about 300 miles each of the Canadian Northern and the Canadian National Railways, in the province of Ontario.

Mr. MEIGHEN: What line is it going west, out through the mountains, that is unnecessary?

Mr. KENNEDY (Edmonton): So far as traffic is concerned the one to Prince Rupert is not necessary at the present time. It was built far ahead of the needs of the country and its maintenance is saddled on to the business that develops on the prairies.

In connection with the Superior division, the ex-Minister of Finance (Sir Henry Drayton) was at one time Chairman of the Board of Railway Commissioners, and in his judgment in connection with the western rates case, speaking of the Lake Superior division, Canadian Railway cases, volume 17, page 157, he said:

> This division running as it does in great part through a wild and practically unsettled country, accompanied with great operating difficulties and with, of course, the lowest production of local tonnage per mile of line of any part of the C.P.R. nevertheless is shown to make good return.

In spite of the fact that we have that costly construction to the west through the mountains and the costly construction east through the Superior division we have the prairie provinces developing a tremendous amount of traffic and contributing to make both of these comparatively profitable.

We have heard a number of times that if there was any possibility at all of the railways in Canada ever making good, the coming into effect of the Crowsnest pass agreement practically made that impossible. I take it that the suggestion behind the statement was that the railways were once an asset but that from that point of view their value was now very doubtful. I have here a statement furnished by the Bureau of Statistics showing the gross revenues and net operating revenues of the Canadian Pacific and of the Canadian National for 1921, 1922, and 1923. For 1921 the gross revenues of the Canadian Pacific, by months, were as follows:—I will not give the odd thousands:

	Millions
January	14
February	13
March	14
April	13
May	14
June	14
July	16
August	17
September	19
October	22
November	18
December	15

Now, the business that accounts for the increase in the gross revenues is, of course, the grain business from the prairie provinces. But the operating revenues are comparatively low right up to the month of August. These are the figures for the Canadian Pacific, in 1921:

January	$ 717,000
February	870,000
March	2,000,000
April	2,000,000
May	3,000,000
June	3,000,000
July	2,000,000
August	3,000,000
September	4,000,000
October	6,000,000
November	4,000,000

Not only is the net operating revenue higher in the grain moving months, but it is higher in proportion to the gross revenues of the railway. I do not want to take up too much time to-night; I am not going to give the figures for all the years, but I want to take particular notice of 1922, the year in which the Crowsnest pass agreement, affecting the rates on grain and flour, came back into effect. In that year the gross revenues for the Canadian Pacific were as follows:

	Millions
January	11
February	11
March	14
April	12
May	13
June	14
July	14
August	16
September	18
October	23
November	21
December	17

The net operating revenue for 1922 up until the end of August was not higher than $2,900,000. In september it immediately jumped to $4,500,000. In October it jumped to $7,700,000, almost 25 per cent net. In November it was $6,700,000 and in December it went back to $4,000,000. In 1923 we have a bigger crop and a still better showing.

Now let us come to the Canadian National Railways. The gross revenues during 1921 were as follows, by months:

[Mr. D. M. Kennedy.]

	Millions
January	17
February	15
March	16
April	14
May	14
June	14
July	15
August	17
September	18
October	19
November	19
December	17

For the months of January, February, March, April, May, June and July there was an operating loss running from $400,000 up to $3,500,000, but the months of August, September, October and November showed a profit running as follows: August, $1,379,029; September, $595,581; October, $1,954,633; November, $903,410; and then a loss again in December of $274,902.

In the year 1922 there was a bigger wheat crop, and starting in at $13,564,718 of gross revenue in January the returns climbed up gradually to $17,551,719 in August; $19,344,840 in September; $22,177,145 in October; and $20,725,300 in November; and back to $18,326,765 in the month of December. The months of January, February, March and April showed a loss running to almost an average of a million dollars. The months of May, June and July also showed a loss. There was a net operating revenue in August of $469,526 and, in September of $1,441,919. The gain in October was $2,931,266, and in December $3,472,129.

In the year 1923 there was in January a gross revenue of $15,596,858; in February of $13,220,698. Then in the following months gross revenues of $15,509,243 of $16,793,663, of $17,551,526, of $17,192,989, of $17,791,852, and then in August, September and October we have successively $18,584,990, $18,687,880 and $23,150,671; and $21,241,352 in November, and $19,595,358 in December.

In the months of January, February and March there was a net operating loss, the successive amounts being as follows: January, $805,410; February, $2,885,144; and March, $1,188,203. From that on there was an operating surplus, the amounts being as follows: April, $871,584; May, $964,436; June, $314,741; July, $765,742; August, $1,181,451; September, $1,125,167; October, $4,728,008; November, $4,094,048; and December, $2,760,625.

I have a statement here, but I am not going to read it because I do not want to take up too much time. It gives the total originating tonnage in the following commodities: Flour, potatoes, coal—anthracite, bituminous and lignite—coke, logs, pulpwood and lumber. I

have another statement with regard to originating tonnage of manufactured goods, but I shall not read that either to-night. I simply suggest that the statement I have given shows that the operating revenues—the gross revenues and the higher percentage of the net operating revenues—exists in proportion as the grain business increases in volume. I want to say that is my answer to the statement that the western railways are not paying their share of operating costs and are not the asset they ought to be to this Dominion. It is also the answer to those who say that the Crowsnest pass rates on grain are unfair to the rest of Canada.

We have been told by the hon. member for St. Lawrence-St. George (Mr. Marler) that the Canadian Pacific finances the railway on its own credit, and that it is not in the same sense a charge against the Dominion. For my part I cannot see any difference in the Canadian Pacific spending $20,000,000 in constructing a railway and the Canadian National Railways acting likewise. There may be a technical difference but no difference actually as the people of Canada are going to pay for both. I have referred on a previous occasion to the statement of the Board of Railway Commissioners wherein they say that the Canadian Pacific is going to have such rates as will enable it to pay its dividends. Now, whether it is a case of this parliament undertaking to meet the obligations of the Canadian National Railway system or whether it is one of the obligations of the Canadian Pacific being guaranteed by parliament through the Board of Railway Commissioners, the result is the same—it is the people who pay the freight rates and in the last analysis there is practically no difference between them. So long as the order in question stands there is every reason why we in this parliament should demand every particle of information regarding the construction of Canadian Pacific branch lines as well as Canadian National branch lines. I have here a statement of the aid given to the Canadian Pacific Railway in the early days when it was making a struggle in this new country, but I shall not put it on Hansard, it would occupy too much time and too much space.

There is another matter I wish to mention, and it is not new either to the Minister of Railways or the hon. members of this House. I happen to represent a constituency that is one-half of the province of Alberta. and we have just about one-third as much railway mileage in that constituency as there is in the rest of the province of Alberta. I have been after the Minister of Railways for two sessions in order to get a railway built from somewhere near Grande Prairie, from McLennan or some other point, to the Canadian National Railway system. I am very much disappointed that the minister has not been able to get this line included in his branch line programme. I know there are difficulties as to certain parts of the railway. However, some sections have been definitely located, and I do not believe we are going to build another main line through the mountains for some years to come. I have been anxious to see this railway built so as to connect up the Peace river country and the coal area with the Canadian National system. I should like to press upon the minister the desirability of doing something in that connection at the earliest possible moment.

I have here a copy of the Farm and Home published in Vancouver, British Columbia. It contains a few pictures, and one relates to a gentleman who went into the Grande Priarie country a number of years ago and invested $40,000 in farm land. Because a statement was issued some months ago that there would be no railway construction this year this gentleman has sold his forty-thousand-dollar, farm,—640 acres—as they call it, and is going to leave the country. Now, there have been those who have been advocating taking settlers out of that country, but to do that would cost more than to provide them with railway accommodation. Those settlers would be in a very favourable position if only the line in question were constructed.

Mr. MEIGHEN: I have no comment to make on the latter part of the speech of the hon. member. I mean the part in which he referred to the real lack of any very great distinction, in so far as the effect on the taxpayer of Canada is concerned, between the Canadian Pacific and the Canadian National Railway.

Mr. KENNEDY (Edmonton): Would the right hon. gentleman permit a question? When my hon. friend referred to the last part of my statement I thought he was going to allude to the railway the construction of which I was urging. Now, would my right hon. friend give me his support in that enterprise?

Mr. MEIGHEN: I was supporting the hon. member, and he did not seem to take to it very well.

Mr. KENNEDY (Edmonton): I do not recall that.

Mr. MEIGHEN: I hope my hon. friend will not expect me to support everything at

once. I am considering the propositions one by one.

With the control now exercised by the government, or more directly by the Railway Commission, over rates, the other great railway system becomes a public service and a national corporation, compelling the people to take an almost equal interest in the cost of its operation and everything connected with its management, as in the case of the National Railways. There is a distinction but not a vast one. It is not a distinction that in earlier times prevailed. Nor do I quarrel very much with him in his later remarks. I am not making criticism at the present time either at what is being done. I know something of the difficulties that confront an administration of this kind. I want to make some comment on what the hon. member said in the first part of his speech. He was inclined to complain of the treatment received at the hands of this House of the western branch line legislation. I have been a member of this House for a considerable time, and whether as a Conservative or a Progressive, I certainly see no reason to complain of the treatment by this House of these western measures. I have never seen more generous treatment on the part of the House of any measures whatever.

Hon. members to his right, of some of whose words he complained, have supported virtually every one heartily. None have we opposed, and I do not think the hon. member would suggest that it was for political reasons, because if we can gain any of the seats that are to be served by these branch lines, well there would not be many in the Dominion we would not possess.

Mr. KENNEDY (Edmonton): I was not complaining about the support, but with regard to some of the statements made as to the political considerations.

Mr. MEIGHEN: I will come to that phase of it. I do not wish to pose as a great authority on railway traffic, but I think I know enough about it to say that the problem is not quite so simple as it appears to be in the mind of the hon. member. He states that the returns brought down by the government as respects the National Railways in the Maritime provinces, or rather in the Atlantic division, show a loss of some $5,000,000 on operation. In the western provinces—that is the western division from Armstrong and Fort William westward—the returns show a loss of some $2,000,000, and in the central provinces, outside entirely of the more western Grand Trunk route, a profit of some $18,000,000. These figures are correct. In the western Grand Trunk territory I believe a profit of some $8,000,000 besides was claimed. These are the figures brought down by the government. I must emphatically say that a closer investigation of the returns makes it entirely impossible for me to understand the figures. I do not think they are correct, but I think proportionately they are about correct as between the different divisions. I do not think there have been those returns as respects what ought to be called operation and as respects everything that ought to be included in operation. I do not think those figures can be sustained at all, but that point does not arise at the moment. I have no doubt the proportions are correct. But the hon. gentleman says, "You cannot claim that you are losing money in the West and that it is our fault, because we have unnecessary mileage there in the way of far western outlets. We have three far western outlets to the Pacific, and these are more than are necessary." On being questioned to be specific, he admitted very frankly and perfectly correctly that the unnecessary one for the purpose of western outlet is the Grand Trunk Pacific. That may be true, and I believe it is, but we are dealing now with the relative burden, and it is equally true—far more than true—of the central division. In the central division, if the Transcontinental did not carry freight that would otherwise go by the more direct route into the populated part of central Canada, the loss on it would be simply terrific. The unnecessary mileage in the centre bears down as heavily there as the unnecessary mileage in the West, and the same can be said of the Maritime provinces. On the same principle you could not tax any division with its loss; but the trouble is that we have to tax them and we have got to sustain the road, so that the hon. gentleman's argument falls down. Then he comes to the rescue from another angle, and he says it is the grain crop of the West that pays. He says, "That is the crop that pays, so that we are paying sufficient." I do not say that we are not paying sufficient. There is no one who would be more anxious than I to get the rate lower if we could do so. Certainly every cent we take off is saved to the producer, and there should be nothing in the world left undone that would drive down lower and lower the western carriage freights, and especially the rate on grain. But to say that everything is fair to-day, or that rates have been too high, and to base that assertion on the argument of the hon. member is fallacious. He says, "Take the returns month by month, and you will find

that when the grain crop comes in those gross returns increase." Yes, the proportion of profit increases, but what in the world would you expect? That is when the business is done. These are the months in which the business is carried on. Undoubtedly, the more business you do over the same railway line, the more dense the traffic, unquestionably the greater the profit. For example, if we could ship grain out of the West, every month as fast as we ship it out in October, we could afford a much lower rate on grain. The grain rate would go away down, but it is just because it is of a seasonal character that we cannot afford to put the rate down. There has to be maintenance the year round in order to take care of this great rush of traffic in the two or three months.

Mr. KENNEDY (Edmonton): Mr. Lanigan stated last year before the Railway committee that the cars were not idle during the summer. I have the quotation here.

Mr. MEIGHEN: I would require to see the words and the context in order to discuss that. We all know that the great rush of traffic is confined to two or three months. There could not possibly be the same equalization during the rest of the year. I have talked to railway men both on the Canadian Pacific Railway and the Canadian National Railway, and I know that there are times, especially in the cold weather, during which all grain is carried at a loss, and necessarily so. But on the contrary, as against that, there is a profit during the rush season, and the whole thing has to be levelled up on that basis. The return has to be fixed. One could approach the matter from several other angles as well. I do not think I am breaking any confidence when I say that the claim as to loss is not confined to the one railway. The other railway still claims that grain had been carried from the province of Alberta throughout the entire year at a loss. We want to get things down to a common basis and to know what we are doing. We want to be fair to every part of Canada, but it seems to me that these returns do indicate that the West at least has no reason to complain and that there is no reason in the world to say to parliament, "You have been unjust to us". I come from western Canada, and I think I am as much a western man as the hon. member, but I say that hon. members have gone through that country, have complained of the treatment of eastern Canada, and have raised prejudices against eastern Canada and against this parliament without the slightest foundation at all, and to-day I am sorry to say this prejudice exists in a measure that I for one as a Canadian deplore.

Mr. FORKE: Did the hon. gentleman read the speech lately by the vice-president of the Canadian Manufacturers' Association about the western farmers?

Mr. MEIGHEN: I have not read it, but I have read speeches of eastern men that are equally to be deplored.

Mr. FORKE: I do not think you can beat it.

Mr. MEIGHEN: Perhaps not, but hon. gentlemen should take care that they do not provoke it, and if there are those who are guilty of that offence—

Mr. FORKE: Not guilty.

Mr. MEIGHEN:—it is hon. gentlemen to my left. They are not so guilty in this House as they are out in western Canada.

Mr. FORKE: That is not fair, now.

Mr. MEIGHEN: If it is not fair, I am the one that knows it.

Mr. KELLNER: Does the right hon. member remember the speech which he himself made in the last election campaign about a certain part of Canada being more loyal than some other parts?

Mr. MEIGHEN: I do not remember because it was never made. That exists only in the imagination of my hon. friend, or perhaps it was produced by the imaginative pen of some critical foe.

Mr. KELLNER: Did he ever read in the papers a report to that effect?

Mr. MEIGHEN: I have read some very strange reports, even reports that represent themselves to be statements by hon. members to my left. All I want to say is that nothing to justify in the faintest possible respect the statement which the hon. member has attributed to me from the press was ever uttered by myself. He will find, as he goes on in public life, that perhaps he will suffer from some of this kind of thing himself. All I rose to say was this, that the case is not established that there is too high a rate merely by showing that you make a profit during the heavy traffic on grain. Not at all. It is, the hon. member thinks?

Mr. FORKE: I do.

Mr. MEIGHEN: I am afraid my hon. friend will have great difficulty in convincing any who have to do with this subject and

who have made it the study of their lives. I wonder how hon. members would like to have imposed on them and their constituents rates that are imposed to-day on their competitors to the south for the carriage of grain. I fancy that is about what would result if any of this talk that we sometimes hear about secession eventuates in fact. I do not myself see anything else that could result, and as one who has given some study to this matter, I heard yesterday morning that the rates to the south that are there borne by the producers of grain—

Mr. KENNEDY (Edmonton): What about grain for export?

Mr. MEIGHEN: In so far as they have to be borne for the carrying of export grain, their proportion is necessarily much smaller. Those rates if applied to western Canada would mean an increase of twenty-two to twenty-five, or possibly thirty million dollars in the carriage of a crop equal to the crop of last year.

Mr. KENNEDY (Edmonton): Are the grain rates across the line not very largely domestic?

Mr. MEIGHEN: Yes, they are.

Mr. KENNEDY (Edmonton): How do they compare with British Columbia rates?

Mr. MEIGHEN: I wish they were domestic here. They will never be domestic here if hon. gentlemen to my left have their way. In so far as they are comparable with ours, they are so much higher that, if applied to our railways, they would impose a burden on the West of from twenty-five to thirty million dollars a year.

Mr. McBRIDE: It was not my intention to take any part in this debate on railway extension nor would I have done so had the hon. member for West Edmonton (Mr. Kennedy) not made some remarks in connection with the railroad into the Peace river country. When he made that statement in connection with the extension from the Grand Trunk Pacific starting at Brule to Grande Prairie, he failed to tell the committee that Grande Prairie has a railroad and elevators at the present time built by the Alberta government at the request of the people in that district, a railroad that costs the Alberta government in the neighbourhood of a million and a half dollars a year.

My reason for not intending to say anything on this subject just now was that that extension is under consideration by the Railway Board. Another extension is under consideration as well, an extension from Prince George into the Peace river block where this government owns 3,500,000 acres of land. The Alberta side of the Peace river country has a railroad extending from Edmonton to McLennan, another line that runs north and crosses the Peace river, one that runs east to Spirit river and another that runs down to Grande Prairie. There is practically a network of railways, and still they want this government to build another line from Brule into that section to take the freight that justly belongs to the Edmonton railroad for the benefit of the Canadian National road. On the other hand if an extension were built from Prince George into the Peace river country it would traverse a country of good agricultural land where there is no railway, where the people have no transportation not even by a road, and where the country is equally as good as that at Grande Prairie.

Mr. KENNEDY (Edmonton): It is quite true, as the hon. member for Cariboo (Mr. McBride) says, that there is a railway into Grande Prairie and one to the north into the Peace river. That road was built with the intention at some time of connecting it with the Canadian National, and we want to complete that connection at what we consider the best point and in the best way. It does not matter where this line is built, feeders will have to be built to the various parts of the Peace river country. Those will have to be developed no matter whether the line goes west through the mountains or south. The district of Pouce Coupe in the Peace river block will have to be served by a railway, but I believe this is the best method of providing railway facilities for the whole country, and I am advocating it for that reason.

9 p.m.

Resolution reported, read the second time and concurred in. Mr. Graham thereupon moved for leave to introduce Bill No. 61 respecting the construction of a Canadian National Railway line, being a joint section from Rosedale southeast only, in the province of Alberta.

Motion agreed to, bill read the first and second times and referred to the select standing committee on Railways, Canals, and Telegraph Lines.

VICTORIA BEACH SUBDIVISION

Hon. GEORGE P. GRAHAM (Minister of Railways) moved that the House go into committee to consider the following proposed resolution:

Resolved, That it is expedient to bring in a measure to provide for the construction of a Canadian National Railway line from a point on the Victoria Beach subdivision of the Canadian Northern Railway near East Selkirk, in an easterly and then in a northeasterly direction, to Pine Falls in the province of Manitoba; estimated mileage including existing grading, 44 miles; estimated cost, $1,100,000.

Motion agreed to and the House went into committee, Mr. Gordon in the chair.

Mr. GRAHAM: The following is the memorandum I have concerning this line:

Pine Falls—Mile 0—44.	Cost
Proposed in 1924—44 miles grade..	$374,000
Proposed in 1925—44 miles track and ballast.	726,000
	$1,100,000

This branch as proposed will be 44 miles long leaving the Victoria Beach Subdivision near East Selkirk and terminating on the Winnipeg river near the Fort Alexander Indian Reserve. In 1924 it is proposed to do the grading of the 44 miles and in 1925 to lay the track thereon at an estimated cost of $726,000.

The construction of this line is conditional on a paper mill being built at Pine Falls.

One of the purposes of this branch is to serve a pulp and paper plant to be built on the Winnipeg river at Pine Falls. It will also serve a good agricultural country on the way besides shortening the route into the mining district now developing north of the Winnipeg river. The immediate terminus will be near a good crossing of the river so as to make it possible to readily extend this line when necessary.

When complete the proposed pulp and paper plant would supply immediately about 1,500 cars per year of their product, which will steadily grow with the expansion of this industry, besides considerable inbound freight of merchandise and other supplies. The local farm territory would also furnish considerable outbound business. The freight to and from the pulp and paper plant would not only be handled over this branch but would extend for distribution over the company's line to various points, therefore mean considerable long haul traffic to the railway.

I have been told that the construction of the paper mill referred to in the foregoing memorandum has begun, but I am not sure of that. Originally it was intended to build this line directly through the shortest route to the pulp and paper mill but the board after consideration concluded that the line should be extended, in the way set forth in the memorandum, to serve not only the pulp and paper mill but a good farming country as well.

Mr. MEIGHEN: Has the government, through the Department of the Interior, cruised or inspected the area carefully enough to see whether there is probability of any great amount of freight for any considerable length of time even if the mill is built? It is just possible that we might find ourselves with the railway in years to come with no pulp mill erected nor any lumber being used. That is the first question. In the second place, what is the actual condition of affairs in regard to the pulpwood? I understand that these are Mr. J. D. McArthur's interests. Has he managed to finance the business, and if so what concessions were made him?

Mr. STEWART (Argenteuil): So far as I know he has not been able yet to finance the undertaking. One of the difficulties is that in the area in which the mill is located there is only a possible supply of 800,000 cords of pulpwood, and that largely on a concession that was granted to him in the first instance. That, as a result of cruises that have been made, is the most recent information that I have from the McArthur interests in connection with the pulp and paper mill.

Mr. DOUCET: I do not want to offer any objection to this branch line, but inasmuch as references have been made to the alleged opposition of eastern members to western development, some suggestion having been made as to main lines that were not being used to great advantage, and comparisons having been drawn as between the gross revenue of the western section and that of the Atlantic region, I think I ought to tell the committee that the Transcontinental from Levis into Moncton, part of the line between Monk and Moncton being part and parcel of the Atlantic region, is not securing the traffic which it was intended to carry. For this reason the Atlantic region is unable to meet expenses. I should like to ask the Minister of Railways (Mr. Graham) a question regarding railway development in the county of Kent. The statement has been made that a branch line will be constructed between Buctouche and Richibucto which is a section of the country that needs railway facilities, not only to accommodate the people on the line but also to move agricultural produce and the products of the fisheries and the lumber industry between Richibucto and Buctouche as feeders to the main line of the Canadian National Railways. Inasmuch as members of the government have already expressed themselves in favour of that construction, my constituents have a right to know whether the government has come to any decision in the matter. I understand that the proposed line was very favourably reported upon by the engineers who were in charge of the work in 1919-20. It is true that in 1920 the then president of the Canadian National Railways, in view of the financial crisis that faced the country at that time and also of the fact that the government of the day was not recommending the construction of new branch lines, did not implement the report of the engineers. And in 1923 the present president of the Canadian National Railways, without making

any investigation, assumed that that section of the province had sufficient accommodation by water, which is not the case in one sense, since water facilities from Richibucto or St. Louis to St. John are out of the question.

The CHAIRMAN: I fear the remarks of the hon. member are hardly relevant to the question under consideration. He is making a detailed speech concerning a matter that is far removed from the subject of the resolution.

Mr. DOUCET: If I am guilty of any transgression, Mr. Chairman, my offence is only in keeping with that of my hon. friend from West Edmonton, who a short while ago was discussing a branch line that had nothing to do with the resolution then before the Chair.

Mr. GRAHAM: I am glad my hon. friend is so confiding. If he will look up Hansard in the years he has mentioned he will find that provision was made for twenty lines in 1919-20, which did not include the one he is advocating. However, that is a matter of memory or of research on his part. The transportation question in Kent county is one that has been before all governments, but up to the present the line my hon. friend suggests has not been constructed. There is a Kent Northern line, with a mileage of about 27 miles, owned by a private company, and while the matter has been before one or two governments the fact is that the people of Kent county themselves are not in agreement as to what should be done, whether the Kent Northern line should be taken over and rehabilitated or whether the branch line to which my hon. friend refers should be constructed. There has been a good deal of discussion and correspondence from the point of view of both these proposals. I had an interview with the gentleman who was acting for the Kent Northern, and while I thought the property was not a very valuable one I was considering with him the suggestion of making a proposal to parliament concerning it. However, we did not come to any terms, and these matters will all have to be considered. We can do only so many things at a time, and I can assure my hon. friend that the fact that he is here will not make a bit of difference, will not prejudice the investigation of the railway situation in Kent county.

Mr. MEIGHEN: The minister should not repudiate his colleague in that way. He must have forgotten what the Secretary of State (Mr. Copp) said in the county itself.

[Mr. Doucet.]

Mr. GRAHAM: As my right hon. friend knows, we read many things in newspapers with regard to what people are supposed to have said. However, I am speaking at present for the Minister of Railways and pointing out the difficulties that have been met with in the past in the matter of doing something for the county of Kent.

Mr. COPP: My right hon. friend referred to something I had said. I do not know just what he refers to—

Mr. MEIGHEN: I have the words here.

Mr. COPP: Taken from what?

Mr. MEIGHEN: I read it in the debate on the Address. The hon. member did not object then.

Mr. COPP: Well, I take my own time to object to it. What my right hon. friend quoted shortly after the opening of parliament was not what I said in the county of Kent; it was absolutely incorrect. My right hon. friend was, I suppose, misinformed in regard to that just as he has been misinformed in regard to many other matters in connection with his public career. I had the extreme pleasure of being in the county of Kent during the election that was held there, and I referred to transportation matters in a number of addresses I made in the county. I should have thought that the hon. member for Kent would have been quite satisfied with the result of the election without misrepresenting myself or any person else in regard to what had been said. I made no such statement as was reported in the Moncton Times in regard to the building of a railway or the taking over of a railway by the government. I mentioned a railway the construction of which had been talked about, from the town of Buctouche to Richibucto, a matter that had been before the public for a number of years and in connection with which suggestions had been made. I told the people decidedly and emphatically in the course of a number of addresses I made that I had not come there to promise the building of a railway because it took considerable time to give consideration to the building of any portion of a railway, even of short mileage.

The CHAIRMAN: I think it is my duty to tell the hon. member that this discussion has continued to be out of order through several courses.

Mr. COPP: I think, Mr. Chairman, that I should be given the same privilege as that extended to the member for Kent in discussing this matter, particularly in view of the fact

that a promise on behalf of the government to build a railway in that section has been attributed to me. I want to say to you, Mr. Chairman, to my hon. friend from the county of Kent and to the right hon. leader of the opposition, that I made no such promise in regard to the building of a railway or any portion of railway mileage in the county of Kent. What results may come from negotiations that have been proceeding between myself, the hon. Minister of Railways and Canals (Mr. Graham) and the representatives of the owners of the Kent Northern railway, remains to be seen. The matter has been under negotiation for some time. I quite agree with the member for Kent that this transportation question should be given consideration and I sincerely trust that before very long, in spite of the fact that it is he who is here representing that county, it may be considered favourably.

Mr. MEIGHEN: The hon. member's memory is very short. Nobody ever alleged in this House that he promised a railway to the county of Kent. That was never alleged by me in my address. I read distinctly what I attributed to him, and it did not promise a railway. It was the hon. member's habit to be conditional in his intimations; everything depended. I hope the committee will bear with me while I quote the words he used, so that no one will go away with a misunderstanding. They were given to me as having been taken down verbatim. I do not think the paper from which I took them was the one to which he refers, nor do I think that the hon. member, if he will listen to the words exactly, will undertake to deny them. His words were these:

Now, I want to ask you in all fairness, who will be your representative? Who will be more apt to get a more reasonable and fair consideration for you,—

The hon. member must recognize that the language is characteristic.

—Doucet, the Conservative candidate, or Bourgeois? It is to your very great advantage, and I believe it is your bounden duty, if you want better railway facilities for this part of Kent, to elect Mr. Bourgeois, who will co-operate with me and my colleagues to give the people of this county what they deserve and what they want.

Mr. COPP: I never made such a statement in the county of Kent, irrespective of where my right hon. friend got his information.

Mr. GRAHAM: Mr. Chairman, may I break up this little family affair?

Resolution reported, read the second time and concurred in. Mr. Graham thereupon moved for leave to introduce Bill No. 62, respecting the construction of a Canadian National Railway line to Pine Falls in the province of Manitoba.

Motion agreed to, bill read the first and second times and refered to the select standing committee on Railways, Canals and Telegraph Lines.

HALIFAX AND SOUTHWESTERN RAILWAY—LOCKEPORT EXTENSION

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals) moved that the House go into committee to consider the following proposed resolution:

Resolved, That it is expedient to bring in a measure to provide for the construction of a Canadian National Railway line from Lockeport station on the Halifax and Southwestern Railway to the town of Lockeport, in the province of Nova Scotia; estimated mileage including existing grading, 4 miles; estimated cost, $161,000.

Motion agreed to, and the House went into committee, Mr. Marcil in the chair.

Mr. MEIGHEN: Will the minister tell us as accurately as he can the estimated profits on running this road?

Mr. GRAHAM: I could not very well do that, but I will give my hon. friend the amount of business done at Lockeport station. I suppose that if this were a private road they would have the right to build this extension without going to the Board of Railway Commissioners or anybody else, and I suppose the Canadian National Railways could build it as a spur, because the Railway Act allows them to build up to six miles, but the board thought it best to proceed in this way. I have here a statement of the amount of business done at this point:

CANADIAN NATIONAL RAILWAYS

STATEMENT SHOWING EARNINGS AT LOCKEPORT STATION, NOVA SCOTIA

Year	Freight		Total Freight	Passenger		Total Passenger	Grand Total Passenger and Freight
	Inwards	Outwards		Conductors' Sales	Station Sales		
	$	$	$	$	$	$	$
1918.....	10,785	6,894	17,679	45	4,361	4,406	22,085
1919.....	10,808	7,284	18,092	48	5,584	5,632	23,724

NOTE.—1918. Figures include from *May* to *December only*.
1919. Figures do *not* include *July* and *August*.

OTTAWA, ONTARIO,
April 8th, 1924.

This small branch is merely for the purpose of connecting this thriving town of Lockeport with the railways.

Mr. MEIGHEN: I have no desire to oppose this if the minister has evidence that it will pay. Will the minister say that in his belief this road will pay the cost of operation, to say nothing of interest on construction?

Mr. GRAHAM: I am not in a position to say that. In the construction of branch lines throughout the Dominion it is very difficult to outline a profit at the very beginning, but the building of a branch line into a territory where business is expanding develops business to a point where it will eventually pay, and this particular line will be a great accommodation to the people of this town as it will enable them to load their fish and freight at their own town instead of having to haul it four miles each way.

Resolution reported, read the second time and concurred in. Mr. Graham thereupon moved for leave to introduce Bill No. 63, respecting the construction of a Canadian National Railway line between Lockeport station and the town of Lockeport, in the province of Nova Scotia.

Motion agreed to, bill read the first and second times, and referred to the select standing committee on Railways, Canals and Telegraph Lines.

CANADIAN NORTHERN QUEBEC RAILWAY—CHINA CLAY BRANCH EXTENSION

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals) moved that the House go into committee to consider the following proposed resolution:

Resolved, That it is expedient to bring in a measure to provide for the construction of a Canadian National Railway line, being an extension of the China Clay branch of the Canadian Northern Quebec Railway to the town of St. Remi d'Amherst, in the province of Quebec; estimated mileage including existing grading, 2 miles; estimated cost, $105,000.

Motion agreed to, and the House went into committee, Mr. Marcil in the chair.

Mr. GRAHAM: The resolution explains itself. It is to provide for an extension of a small line of railway two miles into the town of St. Remi d'Amherst. With reference to the traffic, the deputy minister received a letter a day or so ago from the Singer Manufacturing Company, which I think would be of interest:

The Singer Manufacturing Company
Factory No. 5
St. Johns, P.Q., Canada,
76-77 Banque Nationale Building,
Rideau Street, Ottawa, Ont.
Ottawa, March 19th, 1924.

Mr. G. A. BELL,
Deputy Minister,
Department of Railways and Canals,
Ottawa.

Dear Sir:

In regard to proposed extension of the Canadian National Railway, from China Clay to St. Remi d'Amherst, and which was included with other extensions in one bill introduced in the Dominion parliament at the last session, and finally rejected en bloc by the Senate, we understand that your department this session is again asking parliament to sanction the construction of this extension, which, if judged on its own merits, there is no doubt but that the estimate would be passed.

2. The service as it now exists at China Clay is very bad, the siding is we understand a private one, subject to an extra charge to shippers, limited to four or five cars and very hard to approach.

3. The building of this short extension of 2½ miles will greatly facilitate the people in that part of the country doing business with your Company, it would also encourage them to deliver for shipment an increased tonnage.

4. Owing to having acquired all the standing timber on government lands lying west of the Rouge watershed, some 500 square miles, we are very much interested that your company provide shipping facilities at St. Remi. This season we have several small mills manufacturing some 2,000,000 feet of lumber, amounting to about 150 carloads, this will be available for shipment over the C.N.R. from St. Remi, providing a suitable service is given. During the twelve months ending July 31st, 1923, there were 343 carloads shipped locally from China Clay, and on which the shippers, we understand, had to pay a private siding charge of $3 per car. Judging from the amount of business obtained in the past, and prospects for the future, the shippers are entitled to relief from the existing conditions, and it is to be hoped that the merits of this extension will get the consideration they deserve from parliament.

In the past this company has received good service from the C.N.R. in connection with freight movements, and we trust that they will maintain their record at St. Remi.

Yours very truly,

TFE/B The Singer Manufacturing Company,
T. F. ELINITT.

I may explain, Mr. Chairman, that in connection with this enterprise some question has arisen with respect to a subsidy. That matter will have to be cleared up, I imagine, before construction begins.

Mr. FORTIER (Translation): I wish, Sir, to make a few remarks with regard to this resolution authorizing the construction of two miles only of railway. Comparing this resolution with similar ones which we have adopted, we notice that it will be the shortest branch line, and yet, it is one of the most important. It is the last resolution with reference to branch lines, and I must remark that in my opinion, it is the most necessary.

These two miles of railway will cost $105,000 and are an absolute necessity for the people of my county. This was acknowledged within the last years and already the company of the River Rouge had made an attempt to build these two miles so as to connect the line of the Canadian Northern from Quebec to the village of St. Rémi d'Amherst. The said two miles only extend the present existing line as far as the village of St. Rémi d'Amherst. It is actually not a new branch, but rather the completion of one of the most important railways and certainly the most useful for this region. The proof that these two miles are important, as just mentioned, is that there was an attempt during the last years, to connect the branch line of the Monfort Railway to the village of St. Rémi d'Amherst. This region and its surroundings are most important from the standpoint of farming, industry and mining. There exists in these parts numerous parishes settled since a great number of years, parishes that are thickly populated and that are at some distance from railways. It is true that the Canadian Northern line, at present the Canadian National, extends towards this region; however, there has never been up to the present a passenger service anywhere near the region of St. Rémi d'Amherst and the surrounding country. The terminus of the Canadian Northern, at present the Canadian National Railways, has always been at Huberdeau, and passenger trains only run on this line, to the village of Huberdeau.

However, about ten years ago, eight miles of railway were constructed, extending towards the county of Labelle. The latter line was only used for freight and especially for the operation of the Canadian China Clay mine, a well developed and prosperous porcelain industry, which was being worked at that time. However, although the eight miles of line are built, there is practically no freight service from St. Rémi d'Amherst and surroundings, and further there is no passenger service from China Clay to Huberdeau or on the remainder of the branch line of the Canadian National Railways. Now, by the construction of these two miles of line to the village of St. Rémi d'Amherst, you will practically put into operation ten miles of railway, in a district which is not at present served by any railway. In that territory, where are to be seen quite a number of parishes, having a prosperous farming population, there are no railways to be found along a considerable portion of it. The nearest railway is the Canadian Pacific, which follows the course of the Ottawa river; it is located at a distance of from 25 to 30 miles from St. Rémi d'Amherst. To the north, the distance is 20 to 25 miles in order to reach the branch line of the Canadian Pacific, which starts at Montreal and extends to the regions of Mont Laurier. It is, therefore, absolutely necessary that this district be provided with a railway.

I have already, on many occasions, expounded the excellent reasons which militate in favour of these two miles extension. I do not wish this evening, to go over the ground again; I shall just draw the attention of the Minister of Railways (Mr. Graham) to a few facts. In case there should be a sale of this branch line to the Canadian Pacific Railway—a sale which I do not desire, on the contrary, for I have already had occasion to protest—for reasons which I am far from admitting are well founded, although the government might consider that they are in the public interest, if the government decided to sell this branch line to the Canadian Pacific Railway, I would request that said sale take

place only on the well understood condition that the construction of these two miles of railway be carried out, so as to complete the branch line and make it profitable for the company operating it, and especially to afford to the central part of the county of Labelle, the advantage of possessing a railway which would be of service to it.

Mr. FAFARD (Translation) Will the hon. member allow me to ask a question? Are the electors of the county of Labelle in favour of this branch line?

Mr. FORTIER (Translation): Certainly, Sir, the electors of the county of Labelle are favourable to such a project, and I think that the aim of the hon. member's question, is to press me to further state with more emphasis that this branch line is necessary to the county of Labelle and that my constituents would gladly endorse its construction. A last advice which I shall give to the Minister of Railways regarding this extension of two miles, is this: There is, along these two miles, works which have already been carried out by the company of River Rouge. The latter, incorporated by authority of a prominent statute and having as its object the construction of a railway line along a distance of about 80 miles, from Grenville towards the northern part of the county of Labelle, this company had attempted to construct two miles of railway along the line to be built and had consequently started work at a place known as the Canadian China Clay, extending as far as the village of St. Rémi d'Amherst. I am aware that the Department of Railways could take no account of the work done previously by the River Rouge Railway Company, however, if it is possible for the Department of Railways to purchase on fair terms the improvements already carried out by said company, I would certainly approve of the department making the necessary advances so as to acquire such assets. These consist primarily in the location of the line, also, I think, in certain rights of way secured on part of those two miles and the grading of the roadbed. Consequently, the work done would be useful to the Department of Railways when constructing the said extension of two miles and would help to complete the work in the shortest time possible. Naturally, on acquiring these works the department could also stipulate that the money be not paid to the representatives of the River Rouge unless the farmers and labourers of St. Rémi d'Amherst and the country around Labelle are paid for their claims in connection with the construction work done on said two miles of railway. A few years ago when this work was undertaken by the River Rouge company, a number of people from St. Rémi d'Amherst and surrounding villages were employed by the company. They have certain claims against this company for wages and material supplied. The River Rouge company stopped the work and it seems did not settle all the legitimate claims of these people. It would therefore, be only fair that in the purchase which the department may make of the road, it should hold back a sufficient amount to settle all these people's claims.

One last remark, Sir, I entirely approve of this resolution as it provides for the construction of two miles of railway which are most important in a region that certainly deserves the government's consideration because these parts are completely deprived of means of communication. It is a vast farming district, very rich in natural resources, and these two miles of railway will be of great advantage, not only to this region but also to the National Railways for it will be one of the most paying branch lines of this road.

Resolution reported, read the second time and concurred in. Mr. Graham thereupon moved for leave to introduce Bill No. 64, respecting the construction of a Canadian National Railway line from the end of the China Clay branch to St. Rémi d'Amherst in the province of Quebec.

Motion agreed to, bill read the first and second times and referred to the select standing committee on Railways, Canals and Telegraph Lines.

SUPPLY

DEPARTMENT OF AGRICULTURE

The House in Committee of Supply, Mr. Marcil (Bonaventure) in the chair.

Cold storage warehouses, $30,000.

Hon. W. R. MOTHERWELL (Minister of Agriculture): The reduction in this item is accounted for by the fact that there has been much less demand during the last two or three years for cold storage, and that we are desirous of keeping our estimates down. The sum of $30,000 will, I think, take care of all the contracts we have entered into with the various plants throughout Canada. There is a plant at Sydney, Cape Breton, that has been under construction for several years. I had the opportunity of visiting this very excellent plant last summer. I think it is almost ready for business now. It is a well finished and well insulated building. We have another one in Quebec and another one in Prince Edward Island. These are the three we have under contract, and this sum we think will take

care of them. In the meantime we are not taking any more under contract for the present. These are established under the terms of the old Cold Storage Act.

Mr. SPENCER: Do these cold storage plants put up at the cost of the government pay their way? If some of them do not pay their way, would the minister tell the House which ones pay and which do not?

Mr. MOTHERWELL: I think possibly the hon. member who asks the question was not in the House last year when we went over this question very thoroughly. The government does not put up these plants. Under the terms of the Cold Storage Act, the government subsidizes them to the extent of 30 per cent of the cost of construction. This $30,000 is spread over four or five payments at different times, based upon progress estimates. After the subsidy is all paid we have the supervision of these plants. Whether they pay or not is up to the people operating them. This subsidy was originally designed with the idea of assisting them to become established. While cold storage is required in Canada, the public itself, until quite recently has not been educated, shall we say, or developed to the importance of cold storage. The result was that up to the time of the war the demand was comparatively limited. During the war there was a tremendous demand for cold storage on account of the necessity for keeping a large quantity of produce on hand for shipment. Since the war the demand has fallen off, with the result that a great many of these plants throughout Canada find it difficult sledding to make ends meet. I would not like to say that none of them pay, but they have a hard time. People are not demanding space. They feel like economizing and not using the space.

Mr. BOYS: Is the department under any obligation to repair, or is this vote for original construction?

Mr. MOTHERWELL: Original construction.

Mr. BOYS: No obligation to repair?

Mr. MOTHERWELL: No.

Mr. BOYS: The department has three original plants now.

Mr. MOTHERWELL: Yes.

Mr. BOYS: Did the minister state where they were?

Mr. MOTHERWELL: I did not quite understand the question. The three I have mentioned are under contract but there are some thirty altogether. One is located at Prince Rupert, and others scattered through Canada right down to Halifax.

Mr. BOYS: I am not familiar with the terms of the act. Are the proceedings leading to this subsidy initiated by private enterprise, or how?

Mr. MOTHERWELL: Yes. We are just proceeding under the provisions of the act. The bill went through last year and my hon. friend from Parkdale (Mr. Spence) will remember that he was not very uproarious about supporting it. The bill did not get past the other Chamber, and the result is that we are operating under the old act that does not make any reservations or restrictions about the kind of cold storage, whether they are municipal or private or co-operative or what they are. The plant at Sydney is a private one; the one on Prince Edward Island is private and the one at Quebec city is co-operative.

Mr. SPENCER: The minister told us a few moments ago that these are not under the control of the government. Under whose control is the cold storage at Montreal at the harbour? I was under the impression that that was under government control.

Mr. MOTHERWELL: The cold storage at Montreal is under the harbour board just the same as the elevators.

Mr. SPENCER: It is government owned?

Mr. MOTHERWELL: Yes. It is under the administration of the Harbour Board of Montreal. They own and administer it just the same as they do the elevators there. I know that within nine months of its opening, 75 per cent of the space was taken. I have not the figures here, but if it is patronised now as well as it was the first year, it is doing pretty well.

Mr. MacKELVIE: Has the minister received any representations from the Okanagan and Salmon river country regarding cold storage, pre-cooling plants for fruit?

Mr. MOTHERWELL: Yes, we had representations by a deputation. Mr. Mutrie and Mr. Bulman were here after the New Year, and while we cannot anticipate the supplementary estimates too much, there is nothing in this item for that and possibly there may be something in the supplementaries with regard to it. Last year we gave two grants for pre-cooling institutions, one at Grimsby and one at New Westminster. The one at Grimsby is doing excellent work for the fruit producers of that district. As regards

the one at New Westminster the parties to whom we expected to make the subsidy did not comply with the conditions and the subsidy was not paid out. At Okanagan, Salmon Arm and at one or two other places, I am pretty well convinced that if we can raise the money it would be a good investment to assist the fruit growers in some measure, on about the same basis as this, namely 30 per cent, and put pre-cooling plants in their fruit packing establishments. They have the buildings, and all that has to be done is to insulate the necessary space properly. With the tremendous rush of fruit on the market, every medium should be taken advantage of to dispose of the fruit at that season, whether it be by pre-cooling, refrigerating, drying or selling the fruit fresh, so that every method of taking care of the glut at that time should receive our consideration.

Mr. MacKELVIE: I am glad to hear the minister intimate that there is some hope in the supplementary estimates of doing something for that district.

Mr. MOTHERWELL: I am not making a definite promise.

Mr. MacKELVIE: I suppose the minister understands that it makes all the difference in the world as regards the shipment of apples to a foreign market if they are pre-cooled first. I should like to ask a question about dehydrating plants, although I understand that comes under another item. One was started at Penticton last year and it was burned down. I noticed in the store windows a few weeks ago some new wonderful exhibits of apples put up in cartons by the department here, and I believe a great industry could be worked up in our country if something is done to encourage it.

Mr. MOTHERWELL: We have an item further down for dehydration:

For experiments in the dehydration of fruits and vegetables, $15,000.

The amount last year was $10,500. I do not know whether we have quite decided to rebuild in the same place or not, but it is our intention to rebuild so as to serve that territory. In view of the large quantity of dried fruit that we import into this country and the large quantity of fresh fruit that becomes a glut on our market at harvest time, there is no reason in the world why a great deal of the fresh fruit that we find it impossible to sell should not be converted into the dried fruit of which we are importing so much.

[Mr. Motherwell.]

Mr. MacKELVIE: Has the minister placed on the market any of the product that has been put out by the department at Ottawa?

Mr. MOTHERWELL: Yes, it is on the market now.

Mr. SPENCE: It is a well known fact that the cold storage at Montreal has lost a great deal of money in the last number of years. Is it possible that the government does not lose some of that when it is subsidizing cold storages? The minister stated that it is paying well. I understand that it is not paying at all, and we want to get the facts.

Mr. MOTHERWELL: I told the committee that that did not come under this item. That comes under the Minister of Marine and Fisheries (Mr. Cardin). The estimate is submitted by the harbour board. I was merely saying that if we may judge from the space that is occupied, it ought to be doing fairly well. I have not been there for a year.

Mr. SPENCE: It does not come under this item?

Mr. MOTHERWELL: No. It does not come under my administration.

Mr. SPENCE: A few minutes ago an hon. member asked a question about the cold storage plant, and the minister said that he was not particularly interested; that it was a private concern. Are we not particularly interested to the extent of 30 per cent? We should want to see these plants pay rather than make a failure of their business.

Mr. MOTHERWELL: My hon. friend is straining a little bit.

Mr. SPENCE: No, I am pretty well posted on this job.

Mr. MOTHERWELL: I do not doubt that, but the subsidies, as a rule, are paid before you can tell whether they are going to be paying concerns or not. We take every precaution to begin with to see that they are placed in an area where they are likely to pay, to see that all the conditions of the contract are complied with. When the regulations and the law are complied with, we pay over the subsidy at some four or five different periods according to the terms laid down in the regulations. After that we are concerned with everything, but we have no responsibility.

Mr. SPENCE: But you have, you have given them so much money.

Mr. MOTHERWELL: Yes, we have that money there, and it was given as a subsidy without many strings to it. I should not say that such a plant is under our control; it is under our inspection, and the rates are only in a measure under our control. In last year's bill we had provision for subsequent control; the question was discussed for a long time in the Agricultural committee, and it was felt that after the last subsidy was paid there was very little control. The bill of last year provided for specific control even after the subsidies were paid; but that bill did not go through, and the result is that we are under the old act. There is some control but not the amount that some people think we should have.

Mr. SPENCE: I am not knocking precooling plants; I think they are an absolute necessity at points like those that have been mentioned; but I do not think
10 p.m. the minister should encourage private individuals to go into the cold storage business if he does not think they are going to make it pay, because people have lost thousands, yes, millions of dollars in building cold storage plants on account of having been encouraged by the government to go into that business. If the minister has not a real demand from somebody who knows something about the cold storage business, he should discourage or, perhaps, to put the matter more mildly, not encourage private individuals to go into the cold storage business.

Mr. MOTHERWELL: We have nearly cut the vote in two, keeping just enough to carry out the contracts already entered into, and we are not entering upon any new ones. The plant at Sydney will take the greater part of the money. It is about five years now since the preliminaries were begun in connection with the work at Sydney, the matter having had its inception before this government came in at all. We had nothing to do with it in the early stages, our duty now being simply to pay the subsidy. As regards the other two, the one in Quebec city is operated in conjunction with the Farmers' Co-operative Association of that province, while the one in Prince Edward Island involves only a small expenditure of $6,000. We are disposed to take my hon. friend's advice and I can assure him that we shall not enter into any new contracts under present circumstances.

Mr. BOYS: So long as the act is in force, any private enterprise or any municipality can erect a cold storage building and call upon the department to provide the subsidy mentioned in the act. While that legislation stands I do not see that the department can help paying the 30 per cent.

Mr. MOTHERWELL: We have of course the option of refusing it if we think there is ample cold storage facility already available. We do not want to repeal the act because we may find it desirable at some time to take advantage of its provisions when money is more plentiful. There has not been sufficiently satisfactory control over these institutions after the subsidy has been paid, and although we made provision last year to meet this difficulty the act did not pass the Senate, so that we are in the same position that we held before. The whole business is petering out now to such an extent that we do not think it advisable to amend the act.

Mr. TOLMIE: Does the department control the cold storage plants by regulation from the standpoint of sanitation, efficiency and so forth?

Mr. MOTHERWELL: Yes.

Mr. TOLMIE: To what extent?

Mr. MOTHERWELL: We have power by statute to make regulations but it is questionable whether that power can be legally exercised. For example, we can apply regulations, say, in Prince Rupert to control rates and to govern the period of time that goods shall remain in cold storage, and so on. But it is very questionable whether federal control in that direction can be exercised. At least that is the advice we have received. The regulations apply, for instance, to such questions as the authorized capital, the subscribed capital, and the rates for storage, which, as originally approved by the Governor in Council, shall not be increased without further approval by the same authority. There is also a regulation in regard to owners entering into special contracts with customers for the maintenance of temperatures other than those specifically provided for.

Mr. TOLMIE: If unsanitary conditions prevail, or if foodstuffs are destroyed, does the Department of Agriculture, or the Department of Health, exercise jurisdiction?

Mr. MOTHERWELL: I think the municipal law would apply in that case. We have had instances of the kind in Winnipeg and Regina and if I remember rightly the muni-

cipal health authorities ordered the destruction of the foodstuffs.

Mr. TOLMIE: I understand that the department has carried out a number of experiments with regard to the various temperatures maintained in the shipment of fruit in refrigerator cars. What progress has been made in that respect?

Mr. MOTHERWELL: In the shipment of fruit from Grimsby west large quantities of ice are used in the chilling of cars, and I believe that it has been decided to recommend the construction of some special cars for the purposes of refrigeration.

Item agreed to.

Fruit, $182,000.

Mr. BOYS: What are the details of this item?

Mr. MOTHERWELL: This vote is largely consumed in inspection work and marketing.

Mr. MacKELVIE: Was it all expended last year?

Mr. MOTHERWELL: I think so. It is well to have a little leeway, but we do not exceed the vote.

Mr. BOYS: What proportion of the vote is used in salaries of inspectors and other officers?

Mr. MOTHERWELL: Between 80 and 90 per cent. Apart from the vote for compensation under "Health of Animals", the fair grants and cold storage, practically the whole body of the agricultural vote is used in salaries for inspection, education, or other work of that nature. The salaries amount to about 85 per cent.

Mr. MacKELVIE: Have there been any complaints in regard to the inspection of fruit in British Columbia?

Mr. MOTHERWELL: We have not had any reports of complaints. We shall be very glad to hear any.

Mr. MacKELVIE: I am glad to hear that. I quite believe that the reason you have not heard any complaints is that the work is carried out in a very excellent manner. I have no doubt that the chief inspector there, Mr. Clarke, is about as competent a man as the department could find if they searched Canada from coast to coast. As one who is very thoroughly conversant with the situation out there, I am very glad to bear that testimony.

[Mr. Motherwell.]

Mr. MOTHERWELL: That is gratifying. We do not get very much of that and I suppose I should express my appreciation of it. My hon. friend will be interested in the investigational work conducted by the experimental farm out there in connection with the Jonathan apple, which in the last few years has developed a disease which has the effect of darkening the apple and breaking it down. The experimental farm carried out experiments in co-operation with the growers with a view to finding out something about this disease; they had the idea that it had something to do with the time that the apple was harvested. After experiments over some eight or nine different periods, starting with the earlier periods and following along later into the season, it was found that up to about the sixth period the apples kept well but when left on the tree after that they broke down. The experts have been unable to define exactly what the disease is, but it has been found to be associated with the time of harvesting, and the solution is to harvest the apple early.

Mr. MacKELVIE: Would there not be some trouble in regard to grading if the apple was taken so early as to preclude danger from this disease?

Mr. MOTHERWELL: No, you can have it sufficiently mature to grade and to keep, but it must not remain too long on the tree. That is a matter of judgment.

Mr. MacKELVIE: Has the department any reports concerning a similar rot in McIntosh Red apples?

Mr. MOTHERWELL: No, It has been confined almost entirely to the Jonathan apple.

Mr. SPENCE: Is there any marked improvement this year in the keeping qualities of the Jonathan apple.

Mr. MOTHERWELL: Oh yes. A year ago we were entirely in the dark.

Mr. SPENCE: You claim now to have discovered the cause for the rot?

Mr. MOTHERWELL: Yes, and, by the way, that discovery can be attributed to the experimental farms.

Mr. TOLMIE: About what amount of early soft fruits and vegetables are imported from the United States?

Mr. MOTHERWELL: Is my hon. friend suggesting that a good many of them come in? Yes, a lot of fruit and vegetables come in from the south before ours are ripe. Has my hon. friend any suggestion as to how we

can ripen ours sooner or how we can satisfy the appetite of our people in some other way until our own product gets ready for the market?

Mr. MANION: Put up a good tariff.

Mr. MOTHERWELL: I was just wondering if that was it. If I were a fruit grower I suppose that would appeal to me a little more than it does now. As a matter of fact there is a substantial tariff on these articles. I see my hon. friends from over the way pricking up their ears at the suggestion of increasing the duty on fruit; they are the great buyers—the home market, if you like—for the fruit of British Columbia. I frankly admit that I would like to see something done to keep our market for our own fruit, provided that the price to the consumer was not increased.

Mr. MANION: If my hon. friend would look a little more in this direction instead of always looking in the direction of my hon. friends to my left, he would probably agree with more of our suggestions.

Mr. MOTHERWELL: Oh, I am not getting squint-eyed at all; I am keeping track of both. If my hon. friend has any method to suggest whereby we can keep out other fruits or vegetables without raising the price to the Canadian consumer, I shall be pleased to consider it and perhaps to make a recommendation in regard to it to the Acting Minister of Finance the next time he comes down with his budget.

Mr. TOLMIE: The growers of early fruits and vegetables in Canada have suffered a good deal of loss on account of the people to the south of us being able to produce these articles earlier in the year, so that by the time the Canadian fruits and vegetables, strawberries, early potatoes and so on, are ready for the market the palate of the people has been largely satisfied by the imported articles and the farmer does not benefit by the higher prices. These goods that are brought in from the south, grown in Carolina, Florida, California and other places, are sold at very high prices. They are luxuries, because they are out of season, and as it is agreed that it is a good thing to tax luxuries under certain conditions my hon. friend might find in that a means of getting revenue. It is a well known fact that during the tree-planting boom in the western States, particularly in Washington, Oregon and Idaho, a great many areas were over planted, and in their large home market, found in centres of considerable size such as Chicago, Boston, Philadelphia, New York and other places, they are able to dispose of their best grades of fruit, nicely put up, at high prices, and they are able then to slump off their poorer grades in this country, much to the disadvantage of the Canadian grower. It would seem that until such time as the fruit growing industry of this country is able to get on its feet it requires a little protection. I understand that there is no duty on the citrous fruits, which are also a competitor with locally grown fruits,. May I ask how far the dumping clause has been applied with regard to the importation of these fruits from the American side?

Mr. MOTHERWELL: The Minister of Customs (Mr. Bureau) is not here and I would not like to give any information offhand without being sure of it. I understand, however, that the dumping clause has been applied in such cases; it may even be applied to articles that come in free. As to the other question that my hon. friend has raised, it is worthy of perhaps fuller consideration than it has ever been given. I have had an opportunity during the last few years of visiting the orchards of Canada, an opportunity that I had not had before. I had often heard of the Annapolis valley, and it was a real treat to go through that country in harvest time, or in blossom time. I was in Niagara in blossom time, and in British Columbia the year before at harvest time. In endeavouring to find a solution we must remember that a straight duty always puts the price up to the consumer. I may say that in view of the dumping and other conditions in connection with inportation it has been a little more difficult for foreign fruit to get in this last two years, particularly this last year, and we have heard no criticism from the prairies about it. I would not like to see it get to the point where there would be criticism because you are establishing friendly business relations with British Columbia, trading back and forth, and therefore I would look in some other direction for a solution than simply a straight jacking up of the duty, which would only mean a higher price to the consumer.

This suggestion has been made. Let us take 100, for convenience, as representing the tariff. It has been suggested that during the three months when the early fruit and vegetables are coming in, and before ours is on the market, the tariff might be put up to, say, 125, and during the other ten months of the year be put down to 75, making an average of 100. I do not know whether it is workable or not, but it might help to solve the situation. Then the man who felt that he could afford to buy the early fruit and vegetables would

pay a duty of 125, we will say, and the man who felt that he had to wait for a lower price would get his fruit in on a 75 duty. There is one objection to that, and it is that you are discriminating against the poorer man. Why should he not be able to buy early fruit and vegetables just the same as the wealthy man? That merely shows that there is no perfect solution, and all you can do is to accept a solution that presents the minimum disadvantages and the maximum advantages. I think that solution suggested is worthy of consideration. I do not know whether it is workable or not, because it would involve changing the tariff twice a year. The tariff would be kept up at 125, let us say, while the early fruits and vegetables are coming in until perhaps the 1st of July, till ours come on the market, and then drop to 75, when the great mass of the public would buy their fruit and vegetables at the lower rate, and at the same time it would not prohibit those who felt they could afford to buy the early fruit and vegetables at the higher price from doing so. That is only one suggested solution. I do not know whether this discussion is in order, Mr. Chairman. The Department of Agriculture may have views on this subject, but they are not considered authoritative or necessarily expert.

Mr. BEAUBIEN: May I help out the minister? I would throw out the suggestion to him and to the ex-Minister of Agriculture to tell the fruit growers of Canada just what they told the farmers of the prairie provinces, to go into mixed farming. I think that would help them out.

Mr. MOTHERWELL: I have been suggesting that, and I think they are going into poultry raising, because you see poultry running in the orchards.

Mr. MacKELVIE: It is a good deal easier to offer advice of that kind than to show the fruit farmer in British Columbia how he is going to adopt it. He has a ten or twenty acre orchard perhaps, bought at high prices, from $250 an acre upwards, and he has to get a high priced crop to begin to pay the interest on his investment. He has to pay high irrigation charges, from $10 an acre upwards, and he has to pay continuous costs, for pruning, spraying and so forth, and on a ten-acre farm there is very little chance of his doing much of a mixed farming business. He does keep a few poultry, as has been said, but I think his situation is certainly deserving of far more serious consideration, and I think a little more sympathy from certain elements in this Dominion and in this House than it has received. We have in British Columbia something over $40,000,000 invested in the fruit-growing business, and in the last three or four years these men have had a very discouraging path to tread. I do not suppose that last year they got more than half what it cost them to produce their apples. The average price for the crop of last year would be 50 cents a box, and it would cost on the average throughout the fruit-growing sections of British Columbia anywhere from 75 cents to $1 a box to produce that fruit, and it is small encouragement to the man who has his all invested in that business to tell him that he must pull up his trees which he has planted, and which have taken six or seven years to come into fruition and go into mixed farming. Any encouragement that can be given by the Department of Agriculture and by the Minister of Finance towards fostering and keeping alive a business which is engaging the attention of a large portion of the population of British Columbia, and of the very best class of our population, is certainly deserving of the serious consideration of this House.

Mr. TOLMIE: I anticipated the suggestion from my friend to my left, that we should advise these men to go into mixed farming. I remember going down the Okanagan valley at a time when it was being changed from a cattle-ranging country into a fruit-growing country. Along with me was a very glib talker from Spokane, Washington. We were doing missionary work in connection with farmers' institutes. My business was to speak first at all these meetings. He was more experienced than I was, and I fell for it, and acted as a sort of house warmer for him at all our meetings. I preached chickens, eggs, hogs, and mixed farming in all its branches to these people, but they would not listen to me. They were all anxious to hear this other man who told them about the ten-acre farm and the big red apple, and the tremendous market for that apple. They could never grow too many. If they could not sell them on the Canadian side, they could sell them on the American side, and even across the water in the Old Country. I remember fifteen years later meeting the same man again at an irrigation convention at Penticton at the lower end of the Okanagan lake, and this time he was preaching to them: "Don't keep all your eggs in one basket; keep a few hogs, keep a cow, keep some chickens, and grow your stuff on the side." "Why," I said, "what is

the matter? You have changed your tune entirely." "Oh," he said, "conditions have changed."

I quite agree with what my hon. friend has said, that if they had gone in for mixed farming and grown fruit on the side they would have been in a safer position than they are in to-day. However, I think that now they are located there, and I feel the minister is anxious to assist them in every possible way, we should try and meet their problems, just as we should try and meet the problems of our friends on the prairies, and the problems of our friends in the Maritime provinces, for we are not going to have a real good Canada until we have done everything we can to meet the problems of all these people, in an endeavour to unite them and make this one great country.

With regard to fruit growing, there is no question at all that we can produce the very best in the world, and I think perhaps one of the best means of helping out these men is to assist in every way possible with cold storage facilities, and also in the development of our export market. I would ask the minister to give us a little description of the exhibit of fruit which he proposes to have at the big exhibition in London this year.

Mr. MOTHERWELL: As a preliminary, and without making it too long, I might say that an investigation made by members of my staff when they were over there last year goes to show that our fruit stands the highest of any on the British market, our fruit and our storage eggs. Those are the only two things in which we take the top-notch place. Last year again we took the sweepstakes for our fruit at the Manchester Fruit Exhibition. Now, having these victories to our credit we feel more encouraged to put up a good exhibit at the British Empire Exhibition which, of course, will consist of this year's fruit. We are going to put on the very best we can. We have one of the finest collections of grass seeds that has ever been brought together on this continent, and we have the best exhibit of tobacco leaf that the Canadian counties engaged in tobacco growing will produce. We are going to do the same thing for fruit. I cannot give any details until the arrangements are completed, but we shall exhibit apples, and peaches and pears. Of course, great care will have to be taken in the selection of the varieties. I understand the exhibition will last for six months. At any rate it will be open sufficiently long to enable us to get fruit from Canada to London in time.

Mr. TOLMIE: I may say that I attended the Royal Show held in Derby in 1921, and South Africa displayed there a magnificent exhibit of all kinds of agricultural products, and in addition a very fine showing of fruit. I think on this occasion when our fruit will be exhibited in competition with fruit from all other parts of the British Empire, we should spare no effort to make the show one of the best we have ever put up.

Mr. MOTHERWELL: Either do that or keep away altogether.

Mr. TOLMIE: Yes.

Mr. MacKELVIE: Who will be in charge of the fruit exhibit?

Mr. MOTHERWELL: We have a represenative over there, he is really an appointee of the Department of Trade and Commerce. Mr. Forsythe Smith will be one of the gentlemen, and Messrs. Rhodes and Nunnick the other two. We will have these three, and I do not know that we shall require the services of any more. Mr. Smith is over there permanently as fruit expert.

Mr. MacKELVIE: I am aware of that but I understood that a gentleman from British Columbia, Mr. F. R. E. DeHart of Kelowna, was to take charge of the exhibit.

Mr. KELLNER: A number of hon. gentlemen, including members from British Columbia, have asked the minister to help out the fruit growers in that province. I should like to know from the minister how he is going to do that. We from the prairie provinces have had the experience of paying considerably more than is necessary for British Columbia apples, and more than we pay for apples shipped from the United States. The British Columbia growers also have the privilege of supplying our market without paying any duty. I think the tariff on imported apples is about thirty cents a box. In addition the British Columbia growers have the advantage of better freight rates and still they cannot compete with the American apple. If the minister can devise any other way of helping the British Columbia growers out when they enjoy such an advantageous situation as that I should like to see it outlined.

Mr. MOTHERWELL: I have already mentioned a number of ways in which we are helping them out. We are doing that by means of dehydrating plants, and then we are establishing pre-cooling plants. That is one way of helping rather than boosting the duties. I may say this: Unless one has been very

closely in touch with the fruit industry he knows very little of what it means to enter a market just hungry for early vegetables and fruits, and then arrive on that market two months later when it is saturated with these products. It is the latter position that we are in. I am not going to bite at the suggestion that we run up the duty, not at all, but I do say that we should do pretty nearly everything else we can think of, because our growers labour under a tremendous disadvantage in regard to early vegetables. I made a suggestion as to an adjustment that might, unless it disturbs the trade or is utterly impracticable, meet the situation without raising the general tariff. It is that the duty should be greater at one time where the wealthy are concerned and lower at another time in the interests of the average man. I may say that there are exhibits outside of Canada which are administered by the Department of Immigration. These are intended to promote immigration and I believe are in charge of Mr. Tolmie, with whom is associated Mr. DeHart. We have a big enterprise under way, but I understand from my deputy that it is not quite ready for announcement yet. It provides for very expensive practical advertising of our dairy products by keeping them before the public. However, I had better not reveal any more with respect to it, otherwise I shall disclose all the details.

Mr. BOYS: What is the estimate for that advertising scheme?

Mr. MOTHERWELL: We hope it will largely carry itself.

Mr. BOYS: Yes, ten years hence.

Mr. MOTHERWELL: We hope the enterprise will largely pay for itself. The scheme is not completed yet. Of course no plan that I know of that the government enters into entirely carries itself. If you are out for education you must expect it to cost you something. There will be little losses here and little losses there, but if the scheme reaches fruition I do not think there will be any cause for complaint. The details are almost complete. At least I thought they were or I would not have mentioned it. I am trying to find a place to get out now in view of my premature announcement. Seriously, I do not think the plan is going to cost the government very much.

Mr. BEAUBIEN: I received a letter—which unfortunately I do not have in my hand at present—from Mr. Burns, secretary of the Western Canada Fruit Shippers' Association. He told me in the letter, and I have his permission to mention it, that one of the reasons why the apple growers of British Columbia find themselves in the position they are in to-day is because they are very poor business men. He claims that they have the advantage of a duty of thirty cents a box. He mentioned Edmonton as the point at which they have an advantage of thirty cents a box duty on American apples, and an advantage of 16½ cents a box in freight. He told me the reason the apple growers in British Columbia are in such a position is because they hold their apples for a higher price and do not sell them at the right time. He tells me in his letter that they are the poorest business men with whom he ever came in contact.

Mr. MacKELVIE: I desire to tell the hon. member and the members of the House generally that if there is one class of agriculturist or horticulturist, engaged in the cultivation of the soil in Canada—

Mr. BEAUBIEN: May I interrupt to say that the statement I made did not originate with me, the words I cited are those of Mr Burns.

Mr. MacKELVIE: I quite understand But if there is one class in Canada that possesses more than ordinary ability it is the fruit growing class, and especially that in British Columbia. The United Farmers and the wheat growers of the western prairies attribute what little degree of success they may have had to co-operative work among themselves. And I will tell them, and will inform the House, that in the fruit-growing sections of British Columbia there is the finest organization of a co-operative nature for handling fruit that possibly exists in Canada. Last year, which was the first year of their operations, they succeeded in building up without a dollar of capital a four million dollar organization. They have contracts from growers covering about 80 per cent of the fruit growers of the Okanagan, the Salmon river and the Kootenay district. I think this should appeal to hon. members from the prairie, as here is an opportunity for them to assist in the co-operative business for which they stand so firmly. I do not believe the gentleman quoted by the hon. member who last spoke was well informed. I know that some of his statements will certainly not bear investigation. These men are not holding their apples to get a price. From the time the apples are ready to be plucked they are anxious, and they are pushing ahead, to get them into the market. Hon. members will understand that when we went into the fruit

growing business in British Columbia on a commercial scale the prairie provinces were absorbing two or three hundred thousand immigrants a year, and it looked as though the market would keep ahead of the production, but such has not turned out to be the case. We have had to push forward for markets all over the world. We sent apples to England last year, and for the first shipment we got good prices, but the next shipment was a drug on the market. The fruit from Washington and Oregon arrived at the time ours got into the market, and we got poor prices for most of the fruit sent to Great Britain. We send shipments to New Zealand, South Africa and to Scandinavian countries, and we are continually reaching out all over the world to find markets to absorb the production which is increasing. A great many of the orchards are still far from mature bearing age, and it is becoming an increasingly hard problem every year to know what to do with the production which has increased so rapidly during the past few years. I am sorry that any statement stigmatizing the fruit growers of the Okanagan valley as the poorest business men of the country should be uttered in this House. I think it is a slander upon them, and I am absolutely certain they will compare favourably as to their business ability and agricultural qualifications with any class in Canada.

Mr. KELLNER: I quite agree with the hon. gentleman who has just spoken that from one angle they possibly excel any business organization in Canada. I do not know of any other organization that has made the extreme use they have of the dumping clause. I think in that regard at least they probably excel any organization in Canada. No doubt they are also very adept at making use of our customs tariff and several other things, but I think that their undertakings are wholly on a different line from those of the grain growers. For instance, they go out, without asking any help of that nature, into the markets of the world and try to establish their business.

I would ask the hon. minister to allow this item to stand. I have considerable matter to deal with, and I did not expect it was coming up tonight; therefore I am not prepared to offer my suggestions for the consideration of the committee. I would appreciate it very much if the minister would allow this item to stand till a future sitting of the committee.

Mr. MOTHERWELL: We have only passed one item. I would like very much to get one more through, and I think the committee will give my hon. friend all the latitude he desires on any item, because perhaps he may not be in the House the next time this item is called. Occasionally such a thing has happened. If he will be good natured and let the item go through, I will be equally good natured and let him present his information on any other item, and I am sure the committee will consent to that. We have had a very interesting and, I hope, useful discussion, but I would like to make some progress.

Mr. COOTE: I think the minister is a little bit over-anxious. He has done extremely well to get one item through so soon, because we have sometimes spent a day on one item, and in case I might not be here on a future occasion, as the minister has suggested with regard to the hon. member for East Edmonton (Mr. Kellner), I would like to put on Hansard part of a letter which came to me from the Western Canada Fruit Jobbers' Association. The matter has been referred to so often here tonight, that I think this is the proper time to place the matter before the committee. This is in reference to the luxury tax on fruit. A resolution was passed at the annual meeting of the Canadian Horticultural Council asking for a luxury tax on fruit. I will read part of the letter, as follows:

> If you will investigate the present duty on fruits you will find that apples carry 30 cents per box; sweet potatoes 30 per cent; all vegetables 30 per cent; melons 3 cents each; cantaloupe 3 cents each; peaches 1 cent per pound, weight of package included; plums, apricots and pears ½ cent per pound; grapefruit $1 per hundred; grapes and all berries 2 cents per pound.
>
> Any luxury tax asked for on fruit shows a lack of intelligence and an impertinence on the part of those making the application. It also demonstrates just how far they might go in asking for protection.
>
> For instance, cantaloupes grown in Ontario are seldom seen in the West, Winnipeg being as far west as they come due to poor carrying quality and lateness of season. This duty was put on to satisfy a few growers in the Niagara peninsula, and the rest of Canada must pay. It is very questionable if there should be any duty on most fruits to-day, especially in western Canada, where none are grown and where the importations are not in competition with the Canadian grown products, either in British Columbia or Ontario.
>
> To demonstrate the absurdity of a luxury tax on all fruits and vegetables, we know that British Columbia could consume all peaches and apricots produced in British Columbia as well as pears. The coast jobbers sold in 1922, 34,222 boxes of pears; 104,501 boxes of peaches and 55,823 crates of apricots, and it was necessary to import some from the United States for their market, so this alone clearly indicates the senselessness of any application for a luxury tax.
>
> We venture to say that nine-tenths of the fruit and vegetables sold in western Canada, outside of apples, must be imported, if we are going to keep the people supplied.
>
> The luxury tax is only increasing the burden on the consumers. Bartlett pears last for two months, while we only have the British Columbia product for 10 days

and at the most, three weeks. Apricots from British Columbia were not available for more than a week last year. Vancouver ordered 10 cars of peaches last season and could only get delivery of five. British Columbia Granvenstein apple circular No. 4, of August 4th, 1923, from Associated Growers, Vernon, stated they had not sufficient to make straight cars. Their plum circular of August 3rd, 1923, stated "Not enough for mixed cars".

As shown above there is not the slightest justification for a further tax or duty on fruits or vegetables.

We have a letter from the Customs and Excise Department, Ottawa, stating that whenever the selling price of goods from United States, to the purchaser in Canada is more than 5 per cent below the fair market value of the goods for home consumption the import is subject to the dumping duty.

The fair market value, this year, for home consumption in the United States as set by the growers in British Columbia on C. grade apples, was $1.10 and the jobbers were assessed 15 per cent on $1.10 because the apples purchased in the United States were purchased at a price which was more than 15 per cent below $1.10.

If it can be proven that the United States growers are selling for export to Canada at a lower price than for home consumption, then probably our industry should be protected, but in the case of apples we could buy good apples at Washington for 80 cents, which was the price sold anyone in the United States. Why pay dumping duty because the British Columbia growers claim the growers in the United States should be getting $1.10?

In Washington the cost of packing a box of apples is figured out at 42 cents, everything included; while in British Columbia they figure their cost up to nearly 80 cents.

The duty on apples was increased in 1916 from 10 cents to 30 cents per box. The reason given was on account of the war and insufficient help in British Columbia to take care of the crop. Is there any justification for this duty remaining on now? We are of the opinion that this 30 cents per box duty and lower freights to some points, is more than sufficient protection for the Canadian grower.

The farmers on the prairies have been called upon to pay some 65 cents per box more than they should and more than the farmer in the neighbouring States, for his apples.

The imposition of the dumping duty means we are trading in the dark not knowing just exactly what our costs are until after the goods are received and reshipped out, the duty in some cases being applied after we have even made collection.

Surely the present duties are sufficient, in view of conditions under which we are struggling at present. The Canadian producer can develop conditions sufficiently to stand up against outside competition if he wishes to.

We wish, as jobbers, to make application to have the Dumping Act amended or customs collectors notified not to impose dumping duty on fruits and vegetables entering Canada and pray that our request receive immediate and favourable consideration.

I am just afraid, because of the wavering attitude which the Minister of Agriculture (Mr. Motherwell) seems to take when he approaches the question of helping out the British Columbia fruit men, that he may be considering the imposition of a luxury tax on fruit, and it seems to me that the wholesale jobbers of fruit have in this letter made out a splendid case against any such tax as that. Further, I think they have made out a good case for the removal of the present dumping act as far as it applies to fruit. I think it is an outrageous law that the Minister of Customs and Excise (Mr. Bureau) can, of his own volition, set the price which he considers it costs the United States' grower to raise apples. I do not think he knows nearly as much about that question as the United States' growers themselves. Surely when there is a protection of 30 cents a box and an advantage in the freight rate, that should be sufficient protection for the fruit men in British Columbia. I am glad to hear that the growers in British Columbia are getting together; that they have such a splendid co-operative association, and if their industry can be saved, surely through this co-operative selling association, with a protection of 30 cents a box and an advantage in the freight rate, they do not need to come to this parliament and ask for anything more in the shape of a luxury tax or a dumping duty.

Mr. PRITCHARD: I have been very much interested in this discussion in connection with fruit in Canada and this matter of protecting the fruit growers on the Pacific coast. It was my privilege last summer to visit the Okanagan valley and to make some observations in the western cities in the Okanagan valley as well as in Seattle and Spokane. I was pleased to see the beautiful fruit, because I was there at the time that the apples were ripe. I was much interested in fruit growing in the Okanagan valley and on the Pacific coast. I think a good deal of credit is due to the British Columbia men for the manner in which they ship their fruit. They deserve a good deal more credit than the Ontario fruit growers for the manner in which they have conducted their business and the way in which they have presented their goods for sale. They have a very favourable climate. Their land is not more expensive than land in the state of Washington. I visited my brother in Washington who has a fruit farm near Spokane. He had an apple orchard of the most beautiful trees that I have ever cast eyes on, and he was so discouraged with it that he was thinking of cutting it down, because there was no profit in it. He was growing fruit on that land that was estimated to be worth $250 an acre; it costs $12 an acre to irrigate it, and he had to ship the fruit to Canada at some distance over the railways. If he could do that under those conditions and undersell fruit growers in British Columbia, there is something the matter. I do not

11 p.m.

see why the British Columbia men cannot compete with men in the state of Washington in marketing their fruit on the prairie provinces. When I came to Edmonton, I noticed that they had Ontario plums in that city. That surprised me because an acquaintance of mine in Ontario a couple of years ago could not pick his plums and ship them about one hundred miles west, and they were allowed to rot in the orchard. I made inquiries in a store as to where the plums came from and I was told that they came from Ontario. I was somewhat surprised because I knew that in eastern Ontario fruit growers in many cases were not able to market their plums at all and they did not intend to pick them because they could not get the freight and the price of the baskets.

I am opposed to the principle of protection to fruit farmers just as much as I am opposed to the principle of protection to men engaged in mixed farming or any other kind of farming. If we Canadians cannot follow any branch of farming in a certain district, we had better go somewhere else where we can compete with the world. I claim that we farmers in Canada are able to compete with the world without any protection whatever; but we want to be able to buy in the cheapest market if we are to compete in the cheapest market of the world. Therefore, the prairie farmers ought to be able to buy in the cheapest market, and the British Columbia fruit men ought to be able to sell them their fruit. While our eastern men are not producing as beautiful an apple as the men on the Pacific coast, they are able to sell their apples in Great Britain. I noticed in one of the reports which I picked up that Nova Scotia had shipped in the neighbourhood of a million barrels or over. I know that Ontario fruit growers, if they cannot ship West, can ship to the Old Country, and in sections of Ontario where we do not profess to produce the best apples in Canada, we can ship either east or west without any protection whatever. Surely, the men with that favourable climate on the Pacific coast can compete with fruit growers in the state of Washington without any protection. We have in western Ontario men who are seeking protection also, men who belong to that element of manufacturers who need protection in order that they may exist in that most fertile section of the Dominion of Canada on the Niagara peninsula. I have not much faith in those men who must have protection in order to carry on their business. I think the remark was rather jocular when the suggestion was made that the fruit men should go into mixed farming. By the way let me say that when I was in Spokane, without any joking about the matter, my brother was seriously thinking of starting a herd of Holstein cows in connection with his farm of ten acres. His idea was that fertilizer was getting so hard to obtain for his orchard that he could keep cows profitably—and I believe he could—and make as much money out of his cows as out of his fruit. I believe that is quite possible.

As regards the fruit in Ontario and the home market, I have wondered where the fruit men are going to get that market. We have heard a lot of talk recently about a home market. Where are we going to get it and how? The manufacturers are not able to make up their end of the market for the fruit growers and the farmers are failing to make a market for the manufacturers. Where are they going to get the home market, with one dependent on the other for a market and nobody having it? That is the situation exactly. I cannot understand the reasoning of some hon. gentlemen. I have been sitting patiently listening for a solution to this home market question. My opinion is that the farmers of Canada, the men of experience in Canada, who have been producing stuff for the market, cannot see that it is anything but a joke when people talk about a home market. I picked up to-day a report sent me by one of the departments at Washington stating that after one hundred years in the United States—and that country, we are told in this House, is far in advance of us—the manufacturers are not yet able, notwithstanding all the immigration there, to provide a home market for the agricultural products of the farmers. Now, if we have to wait one hundred years in this country before we can get a home market for the produce of our farms, I am afraid our farmers will be pretty badly off. To-day we are exporting fruit and all sorts of farm products to the markets of the world and we are not afraid to compete in those markets with producers anywhere. We are bound to compete with outsiders in butter, cheese, beef, wheat and everything else we produce, and there is no use talking about providing a home market; for as I have just stated, if after a hundred years of manufacturing activity in the United States the farmers there are still unable to find an adequate home market, the prospect is very poor indeed for the Canadian farmer. I claim that we are in a position to compete with the rest of the world, and we are going to do so. It was pointed out in the budget debate last night that we were sending a great deal of money to the United States. Surely if we are selling so many million dollars' worth of our products abroad we can afford

to buy a few million from other countries.

Talking about fruit, I might observe that the people in the Niagara peninsula have been giving the manufacturers in Toronto the benefit of the most wonderful dumping clause we have ever seen. Gentlemen from the West may laugh at the business ability of the men on the Pacific coast, but I think they are in advance of the people in the Niagara district, and they are dumping their fruit on the Toronto market when they cannot get the cost of their containers or pay their freight. Owing to circumstances that the fruit growers cannot control, this fruit is being dumped on the market in Toronto at less than cost, and that suits the consumer of fruit in Toronto quite well. Now, I happened to be raised in a garden myself—I was brought up in an orchard, so to speak—and I may tell hon. gentlemen that as a practical farmer I refuse to grow anything unless I can depend upon being able to ship my produce to the markets of the world. I find that the men who do that are the successful farmers in Ontario. If you produce cattle, wheat, cheese, butter or bacon, you have a ready market and cash at all times in the world markets; but if you are content to cater to the home market you have nothing stable to depend upon. Some of the city men of Toronto bought a farm in the fruit section not long ago and they thought that they would reap a great profit from it. I was acquainted with them, but they would not listen to any advice I had to offer, because some of the gentlemen of Toronto are like that. At any rate they bought this farm for $40,000 and started growing fruit on it. It is a rather long story to tell, but out of a total of the first crop of peaches, 25,000 baskets, they marketed 15,000, while 10,000 baskets rotted in the orchards, and so far as the apples were concerned they were unable to pick them. So that the profit which they anticipated proved in the long run to be a considerable loss. We are getting away from that kind of business in our part of the country and are producing stuff that we can sell in the markets of the world. Our people are making a fair success of that method and are certainly doing better than they would if they catered to the home market. The fact is that the home market is governed by the little surplus which we are able to sell. Some people contend that 80 per cent of our farm produce is consumed at home; this would leave 20 per cent to ship abroad which fixes the price for all. I have no patience with those who would grant protection to the fruit men of Niagara or of the Pacific coast, any more than I have with granting protection to the manufacturers of the city of Toronto.

[Mr. Pritchard.]

Progress reported.

On motion of Mr. Graham the House adjourned at 11.10 p.m.

Monday, April 28, 1924

The House met at three o'clock.

UNITED CHURCH OF CANADA

Mr. CHARLES SHEARD (South Toronto): I desire to present a petition from adherents of St. Andrew's Presbyterian church, Toronto opposing the United Church of Canada Bill.

Mr. J. W. KENNEDY (Glengarry and Stormont): I desire to present two petitions, one from the officers of St. John's Presbyterian church, Cornwall, and the other from Maxville Presbyterian church, protesting against the enactment of the bill to incorporate the United Church of Canada.

Sir HENRY DRAYTON (West York): I beg to lay on the Table two petitions, one signed by members of the Woodbridge Presbyterian church, and the other by members of the Presbyterian church, Mimico, protesting against the enactment of the bill to incorporate the United Church of Canada.

Mr. A. B. HUDSON (South Winnipeg): I desire to present petitions from certain members of St. John's church, St. Stephen's church, Westminster church and Knox church, Winnipeg; St. James Presbyterian church, St. James, Manitoba; and Norwood Presbyterian church in opposition to the bill to incorporate the United Church of Canada.

Mr. A. B. HUNT (Compton): I desire to present petitions from certain ministers, elders, members and adherents of the Presbyterian church of Milan and Hampden, Quebec, in opposition to the bill to incorporate the United Church of Canada; also a petition from members of St. Paul's Presbyterian church, Ormstown, to the same effect.

Mr. O. R. GOULD (Assiniboia): I desire to present a petition from the Union congregation at Manor, in favour of the enactment of the bill to incorporate the United Church of Canada.

Mr. R. M. GENDRON (Wright): I desire to present a petition from the Methodist church at Aylmer, Quebec, in favour of the bill for the incorporation of the United Church of Canada.

Mr. R. J. WOODS (Dufferin): I desire to present a petition from certain members of Knox Presbyterian church, Shelburne, Ontario, protesting against the passing of the proposed Church Union legislation and asking that the rights of those opposed to the provisions of the bill be fully safeguarded; also a petition from the Methodist congregation at Shelburne, Ontario, signed by 106, for the enactment of the bill to incorporate the United Church of Canada.

Mr. J. F. WHITE (London): I desire to present a petition from representatives of the Session and Board of Managers, and Board of Trustees, of New St. James Presbyterian church, London, Ontario, against the passing of the bill to incorporate the United Church of Canada, and for the safeguarding of the rights of those opposed to the provisions of the bill.

Mr. WILLIAM ELLIOTT (South Waterloo): I desire to present a resolution from certain Presbyterian women of Galt expressing disapproval of the bill to incorporate the United Church of Canada as being coercive and unfair to those who desire to continue in the church of their choice, and petitioning against the bill as presented to parliament; also the petition of James Marshall and 217 others, members and adherents, St. Andrew's church, Newmarket, against the passing of the bill to incorporate the United Church, and asking for the safeguarding of the rights of those opposed to its provisions.

Mr. PRESTON ELLIOTT (Dundas): I desire to present a petition from members and adherents of Knox church, Morrisburg, protesting against the form of the Church Union bill; also from members and adherents of Morwood Presbyterian church, against the bill to incorporate the United Church of Canada without such safeguards as will conserve the interests of those who wish to continue in the Presbyterian church. also petition from members and adherents of Chesterville Presbyterian church and Dunbar Presbyterian church to the same effect.

Hon. JAMES MURDOCK: I desire to present the petition of Albert E. Jones, chairman, and E. F. Armstrong, secretary, on behalf of thirty-four churches, twenty-one ministers and 5,100 members of the Chatham district, of the Methodist church, praying for the incorporation of the United Church of Canada, and a recognition of the right of self-determination vested in the respective church governments that seek to be united.

Mr. S. CHARTERS (Peel): I beg to present a petition from members and adherents of St. Andrew's Presbyterian church, Port Credit, against the passing of the proposed Church Union legislation and asking that the rights of those opposed to the bill be fully safeguarded; also a petition from members and adherents of St. Andrew's Presbyterian church, Streetsville, to the same effect.

Mr. A. E. ROSS (Kingston): I beg to present a petition signed by members of the Sydenham Methodist church, Kingston, for the enactment of the bill to incorporate the United Church of Canada.

Mr. W. A. BOYS (South Simcoe): I beg to present a petition from members of St. Paul's Presbyterian church, Victoria Harbour; also a petition from members of the Presbyterian church, Coldwater; also a petition from members of the Presbyterian church, Orillia, against the passing of the bill to incorporate the United Church and asking for the safeguarding of those opposed to the provisions of the bill.

Mr. L. P. BANCROFT (Selkirk): I desire to present a petition from members of Knox Presbyterian church, Selkirk, in opposition to the Church Union bill; also a petition from members of the congregation of Old Kildonan Presbyterian church, Kildonan, for the rejection of the Church Union bill.

Mr. ROBERT FORKE (Brandon): I desire to present a petition from members of the congregation of St. Andrew's Presbyterian church, Brandon, against the passing of the Church Union bill.

HOME BANK INVESTIGATION

Mr. W. A. BOYS (South Simcoe): I desire to present a petition from 163 depositors of the Home Bank in the town of Alliston, asking for indemnification for their losses.

QUESTIONS

(Questions answered orally are indicated by an asterisk).

INSPECTION LIFE-SAVING DEVICES

Mr. HARRIS:

1. Has a thorough inspection been made by the inspectors of the Marine department of the rafts and life-saving devices on passenger steamboats plying from Port of Toronto for the season 1924?

2. What is the carrying capacity in number of passengers of steamships: Macassa, Modjeska, Turbina, Cayuga, Chippewa, Corona, Garden City, Dalhousie City, Toronto and Kingston.

3. What is the carrying capacity of the life-saving equipment on these steamers?

4. What part of the life-saving equipment would be classed as "A" No. 1?

5. How many inspections are made each season of the life-saving equipment?

Hon. Mr. CARDIN:

1. Only two of these steamships, the Dalhousie City and the Macassa have had their life-saving equipment inspected for the season 1924.

The other passenger steamers running out of Toronto will have their life-saving equipment inspected before being permitted to operate for the season.

2. The ss. Dalhousie City is allowed by her passenger certificate for the year 1924 to carry 710 passengers.

The ss. Macassa is allowed by her passenger certificate to carry 150 passengers. (Note. This ship is given two certificates in the year, one for the whole season of navigation allowing her 150 passengers, and the other from the 15th of May to the 30th of September allowing her a larger number. This second certificate has not yet been granted).

The ss. Garden City is not operated out of Toronto, and the other ships mentioned in the question above have not yet been certificated for the season 1924.

3. The carrying capacity of the life-saving equipment on the two steamships above-mentioned certificated for the season 1924 is: SS. Dalhousie City—Lifeboats, 104 persons, buoyant apparatus, 498 persons. In addition the ship carries 6 life buoys and 1,135 life jackets. SS. Macassa—Lifeboats, 87 persons, and in addition the ship carries 6 life buoys and 109 life jackets.

4. The department has no classification of life-saving equipment as "A" No. 1.

5. The life-saving equipment is inspected once each season.

MOSER'S RIVER WHARF

Mr. BLACK (Halifax):

1. Was a wharf constructed at Moser's River, Halifax county, in 1922, by the government?

2. If so, under what conditions and at whose request was this wharf built?

3. What public demand was made for this wharf?

4. Was it built by tender?

5. What did it cost?

6. Who built it?

7. Is the government aware that a lobster factory is attached to said wharf and premises?

8. Is the government aware that these premises are occupied by one D. I. Turner to the exclusion of the public generally?

[Mr. Harris.]

9. Does the government know that the so-called warehouse on the wharf is not a warehouse but a three-story building with shop and office, all well finished?

10. What rental has Mr. Turner paid in 1922 and 1923 for these premises?

Hon. Mr. KING (Kootenay):

1. No, but an extension to the present wharf was built during 1922.

2 and 3. The extension was built at the request of a number of inhabitants of Moser's River.

4, 5 and 6. It was built by days' labour under the supervision of District Engineer Dodwell, the extension costing $3,326.74, the shed thereon, $1,000.

7. A lobster factory 25 ft by 32 ft. was built on the wharf extension 10 feet inshore from the departmental shed by D. J. Turner in 1923, without reference to the department.

8. The departmental shed on the extension is used by D. J. Turner acting part of the year as agent for the Hubbards & Boston Fish Company and during the remainder of the year for his own fish business.

9. The public shed on the extension is a two and one-half storey building. The first storey is used for salting, icing and storing fish, the second for storing fish barrels, cases, cans, etc., the attic for general storage. On the second storey is an office roughly furnished, the furniture consisting of a desk and boxes for seats.

10. No rental has been paid but in view of the district engineer's report that Mr Turner's occupancy of the shed is a benefit to the local fishing industry, it is intended to lease him the shed on the wharf for a rental of $10 per month, the shed located at the head of the wharf being available for freight from ss. Dufferin twice each week and other coastal vessels at irregular intervals.

DOMINION AND PROVINCIAL TAX COLLECTION

Mr. RYCKMAN:

1. What are the totals of the several classes of taxes collected by the Dominion government during the past fiscal year?

2. What are the totals of the various taxes collected by the provincial governments?

Hon. Mr. BUREAU: The first question asks the totals of the several classes of collection by the Dominion government during the past fiscal year. The second question asks as to the totals of the various taxes collected by the provincial governments. I do not know that we have any record of that. We have no information and I ask that that part of the question be dropped.

Sir HENRY DRAYTON: I think the minister will find that it is quite proper to ask the government for this information.

Mr. BUREAU: I object to answering questions in matters in regard to which we have no possible information to furnish. The statistical reports are open to everyone, and I do not see why a minister of the Crown should be asked for the information.

Mr. SPEAKER: The second part of the question should be dropped, in my humble judgment. Questions relating to provincial matters are not properly to be answered by a minister of the Dominion government. The first question will stand and the second will be dropped.

First question stands.

CANADIAN NATIONAL SERVICE

Mr. SAVARD:

On April 10, the government informed the House that the nearest railway to Tadoussac was the Canadian National which passes at a distance of 20 miles from said locality, on the south shore of the St. Lawrence.

1. Is it possible for persons on the northern shore of the St. Lawrence to communicate with said railway from November 1, to May 1?

2. If not, what is the distance that they must travel to Tadoussac to reach another railway?

3. Is it possible to place vehicles on board the little motor boat which carries on the service between Tadoussac and Bay St. Catherine?

4. Is the public highway between St. Catherine and Murray Bay, the nearest railway station, an ordinary or very rough road?

Hon. Mr. GRAHAM: I think I can convince my hon. friend that the minister has no information of this kind in his possession. It is all municipal or provincial, so far as I can ascertain. I will be glad to furnish any information that we possibly have in our possession. In regard to No. 3 question, the Department of Trade and Commerce may have a boat between Tadoussac and Bay St. Catherine. As far as the other questions are concerned I have no information or no way of obtaining information.

Mr. SPEAKER: Stands.

Mr. GRAHAM: Of course this is not an answer to the question.

MR. T. L. CORY—INTERIOR DEPARTMENT

Mr. SPENCER:

1. In what capacity and for how long has Mr. T. L. Cory been an employee of the Interior Department?

2. What is his remuneration and out of what appropriation is it paid?

3. Was he appointed under open competition by the Civil Service Commission?

4. If not, why?

Hon. Mr. STEWART:

1. From February 8, 1922, to June 11, 1923, and from September 22, 1923 to January 11, 1924, retained by the Department of Justice for special legal work in connection with revision of the North West Territories Act and orders-in-council, ordinances, regulations and rulings made thereunder. From January 12 employed as temporary departmental solicitor upon special legal work in the Dominion Water Power branch.

2. Salary of departmental solicitor, Dominion Water Power branch, $3,120 per annum, paid from water power appropriation.

3 and 4. Important legal actions pending in United States courts vitally affecting certain international waterway problems made it necessary for department to have the services of a qualified barrister in constant co-operation with engineering division. In view of urgent necessity for immediate action commission authorized department to engage barrister locally pending advertising of position for public competition. Mr. Cory selected on account previous departmental experience.

MONTREAL HARBOUR COMMISSION INVESTIGATION

Mr. SPENCER:

1. Has an investigation been held recently into the affairs of the Montreal Board of Harbour Commissioners?

2. If so, by whom was such investigation held?

3. If a report was made by investigators, is it the intention of the government to place such report before parliament for the information of the members?

4. If not, why?

Hon. Mr. CARDIN:

1. No.

2, 3, and 4. Answered by No. 1.

ROYAL CANADIAN MOUNTED POLICE HEADQUARTERS

Sir HENRY DRAYTON:

1. In what building were the headquarters offices of the Royal Canadian Mounted Police located, who was the owner of the property, and what was the rental, in the year 1921?

2. In what building are these offices located at present, who is the owner of the property, and what is the rental?

Hon. Mr. GRAHAM:

1. Duford Building, 113 Rideau street, owner, J. B. Duford, annual rental $7,225.

2. Larocque Building, northeast corner Rideau and Dalhousie streets, owner J. A. Larocque, annual rental $12,832.

MR. ARONOVICI

Sir HENRY DRAYTON:

1. Was Mr. Aronovici's resignation voluntary or was it compulsory?

2. Did Aronovici have a contract under which his services could only be terminated by notice of a certain length or on payment of 150,000 francs?

3. If there was no contract what justification was there for the payment of a bonus of 150,000 francs, or approximately $7,500?

4. If his resignation was compulsory, was such action taken because of the purchase of the Hotel Scribe made by or through him, and if so, of what derelictions of duty was he guilty?

5. Has the government ascertained what proportion of the total cost to the Canadian National Railways the actual former owners of the Hotel Scribe received?

Hon. Mr. GRAHAM:

1. Resignation requested in connection with reorganization of the traffic, colonization and development departments of the Canadian National Railways on the continent of Europe.

2. Management was advised by counsel that under French law and practice a reasonable settlement would require to be made under the circumstances, and the settlement as made was recommended by the railways' counsel in Paris.

3. Answered by No. 2.

4. Answered by No. 1.

5. Proper notarial documents show the amounts as paid to the former owners.

COLLECTION OF DOMINION TAXES

Sir HENRY DRAYTON:

What was the total amount collected in each of the fiscal years from 1920 to date, inclusive, under (a) the Income Tax Act, and (b) the Business Profits Tax Act, and what percentage does the total so collected bear to the total amount raised by taxation in each of the said years?

Hon. Mr. ROBB:

	(a) Income tax	(b) Business profits tax	Percentage of total of (a) and (b) of Total Taxation revenue
1919 20.. ..	$20,263,739 91	$44,145,184 48	21.94%
1920-21.. ..	46,381,824 31	40,841,401 25	23.65%
1921-22.. ..	78,684,354 80	22,815,666 58	31.72%
1922-23.. ..	59,711,538 37	13,031,461 80	21.68%
*1923-24.. ..	54,204,027 99	4,752,680 89	17.27%

* Not final figures for 1923-4.

IMPORTATION OF BITUMINOUS COAL

Mr. GARLAND (Bow River):

1. What was the total quantity of bituminous coal imported into Canada in each of the years, 1921, 1922 and 1923?

2. What was the total duty collected on this coal in each year?

3. What was the total loss in each year to the revenue, because of the drawback of 99 per cent on bituminous coal used for manufacturing purposes?

Hon. Mr. BUREAU:

1 and 2.

	Imports entered for consumption Tons	Customs duties collected Value
Fiscal Year 1921....	15,407,996	$7,245,565 93
Fiscal Year 1922....	12,752,059	5,685,855 71
Fiscal Year 1923....	11,166,937	4,987,916 87

3. 1920-21.. .. ..$498,946 25
1921-22.. .. .. 324,609 29
1922-23.. .. .. 176,316 14

[Sir Henry Drayton.]

SOLDIER SETTLEMENT BOARD

Mr. GARLAND (Bow River):

What price was paid by the Soldier Settlement Board for the former Hudson Bay land reservation, included in townships 33-R-18-W-4, 32-R-18-W-4, 31-R-14-W-4, 31-R-15-W-4, 30-R-15-W-4, 28-R-18-W-4 and 28-R-16-W-4, and at what price were these lands sold to the soldiers?

Hon. Mr. ROBB:

(a) No price paid.

(b) $188,100.

Mr. GARLAND (Bow River):

1. How many quarter sections of Dominion or crown lands were turned over to the Soldier Settlement Board, free, in Manitoba, Saskatchewan and Alberta?

2. What price was paid by the soldier settler to the board for such lands in each of the Prairie provinces?

Hon. Mr. ROBB (For Minister of Soldiers' Civil Re-establishment):

1. To be answered by Department of the Interior.

2. Alberta, $210,806.19; Saskatchewan, $151,664.00; Manitoba, $488.00.

No. 1. ELEVATOR—VANCOUVER

Mr. GARDINER:

Was Mr. Colin McLean, now superintndnt of No. 1 elevator at Vancouver, formerly in the employ of Davidson and Smith at Port Arthur?

Hon. Mr. CARDIN:

The Department of Marine and Fisheries has no information.

Mr. GARDINER:

1. Was the addition to No. 1 elevator at Vancouver, last year, constructed by contract?

2. Was it constructed by the Pacific Construction Company?

3. If so, who are the officers of this company?

Hon. Mr. GRAHAM:

1. Yes.

2. Yes.

3. Contract was signed by J. L. Davidson as president and W. S. Lane, as secretary.

MONTREAL POST OFFICE EMPLOYEES

Mr. RINFRET:

1. How many employees of the Post Office Department, at Montreal, have been dismissed from the service since January 1, 1924?

2. How many of the said employees were dismissed for personal reasons?

3. How many of the said employees were dismissed to conform with the government's economy programme?

Hon. Mr. STEWART:

1. One.

2. None.

3. None. The employee referred to in question 1, was dismissed from the service on account of prolonged absence from duty without furnishing any satisfactory explanation.

AGRICULTURE DEPARTMENT EMPLOYEES

Mr. SUTHERLAND: Might I inquire of the government with regard to a question placed on the order paper on 7th March last? On 19th March a very simple question was passed as an order for return, and I think the House should have the information before it. The question relates to the Department of Agriculture, and was as follows:

DEPARTMENT OF AGRICULTURE EMPLOYEES

Mr. SUTHERLAND:

1. What was the total number of employees on pay or allowance connected with the Department of Agriculture on January 1st of each of the years from and including the year 1914 to the year 1924?

2. What was the amount paid out or due in pay or allowance to said employees on the dates and years as above?

The estimates for the Department of Agriculture are passing from time to time, and I think the House should have this information.

Hon. Mr. MOTHERWELL: I will have the matter attended to. I think it was overlooked.

UNOPPOSED MOTIONS FOR PAPERS

DISMISSAL OF DANIEL S. McLEAN

Mr. SIMPSON:

For a copy of all correspondence, telegrams, and other documents, passing to and from the Department of Marine and Fisheries with regard to the dismissal of Daniel S. McLean from the position of lighthouse keeper at Darby Point (Piper Cove) in the province of Nova Scotia, and if an investigation was held a copy of the evidence given and the investigator's report.

OFFICIAL SEQUESTRATORS' FEES

Mr. RYCKMAN:

For a copy of all correspondence, letters, telegrams, writings, or other documents, exchanged between the Department of the Attorney General of the province of Quebec and the Department of Justice concerning the fees payable to official sequestrators.

WOODWARD ELEVATOR

Mr. GARDINER:

For a copy of all correspondence, telegrams, agreements, leases, or other documents, passing between the Vancouver Harbour Commission or the federal government, and any other parties in connection with the purchase and lease of the Woodward elevator at Vancouver.

WAINWRIGHT POSTMASTERSHIP

Mr. SPENCER:

For a copy of all letters, telegrams and correspondence during 1923 and 1924 in the possession of the government or any department thereof regarding the appointment of a postmaster at Wainwright, Alberta.

CANADA AND GULF TERMINAL RAILWAY COMPANY

Mr. GAUVREAU:

For a copy of all reports, statements, notices, telegrams and other documents in the possession of the Department of Railways, relating to the request for the granting and the payment of a double subsidy in money, in connection with the construction of the Canada and Gulf Terminal Railway Company, formerly known as the Matane and Gaspé Railway, during the years from 1900 to 1912, inclusive.

BELLE RIVER PROPOSED WHARF

Hon. Mr. STEVENS:

For a copy of all correspondence, petitions, telegrams and other communications received by or passing from the Department of Public Works, respecting the proposed wharf or breakwater at Belle River, Ontario.

ST. PLACIDE WHARF

Mr. ETHIER:

For a copy of all correspondence, documents and engineers' reports relating to the purchase, sale or expropriation of the wharf of St. Placide, in the county of Two Mountains.

CHINESE STEAMSHIP CREWS

On the Orders of the Day:

Hon. J. A. ROBB (Minister of Immigration and Colonization): On Thursday April 24, the hon. member for Centre Winnipeg (Mr. Woodsworth) stated:

According to the Halifax Herald of April 14, forty-nine orientals have arrived there to work on the Nova Scotia coal boats. Subsequent investigation seems to show that the Chinese landed from the s.s. Cedric, Pier 2, Halifax, direct from Liverpool, England, having arrived there from Canton via the Suez canal, and that these Chinese are imported from the Orient as crews for the Wabana, Daghild, and other vessels of Canadian registration. These Chinese are acting in the capacity of sailors, quartermaster, oilers, stockers, stewards and cooks; they are to relieve the hardy Nova Scotians. The Herald states that they are in bond and that permission to land and place the Chinamen on the various allotted vessels was given under letter received from the Deputy Minister of Immigration at Ottawa.

I promised the hon. member to inquire and advise him, and I have this information:

On the 3rd instant a telegram was received by the Department of Immigration and Colonization from Mr. J. R. McIsaac of the Steel Corporation, stating that, owing to difficulty in getting Canadian crews to remain with their steamers after signing up, it was proposed to bring Chinese from England, a number to sail on the Cedric on the 5th instant, and the remainder, about nine, to come forward by a later boat to complete a crew now on this side.

The corporation gave the assurance that, except in the case of one vessel, the Chinese were to be confined to employment as firemen and cooks and that it was hoped to secure white men for the other classes of work on

their steamers. The department consented to the request of the British Empire Steel Corporation on the understanding that arrangements were completed for guarding the Chinese and that the corporation would be responsible for all penalties under the Chinese Immigration Act until a bond, satisfactory to the department, was furnished.

A bond for $105,000 has been deposited with the department, this bond to cover 105 Chinese who are to be engaged on the steamships Rosecastle, Daghild, Wabana, Lingan, Hochelaga and Kamouraska, plying between the ports of Sydney, Louisburg, Halifax, St. John and Montreal. While the bond is for $105,000 it provides for a penalty of $1,000 in the case of each chinaman engaged on the steamships mentioned. Only 76 Chinamen have come forward or are coming forward under this arrangement with the Steel corporation, the bond covering also the cases of 29 Chinese who came forward last fall for employment on the Kamouraska. There are precedents in the department for action of this nature.

These Chinese are regarded as non-immigrants and the bond deposited by the British Empire Steel Corporation will be retained until the department is satisfied that all of the Chinese covered by the same have been checked out of Canada.

Mr. J. S. WOODSWORTH (Centre Winnipeg): I should like to ask just in this connection whether this arrangement by which Chinese are allowed here under bond is not worse than any form of peonage.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed from Friday, April 25th, the debate on the motion of Hon. J. A. Robb (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into committee of Ways and Means and the proposed amendment thereto of Mr. Woodsworth.

Mr. SPEAKER: Before the debate proceeds, I might ask hon. members if they have any further remarks to offer concerning the point of order which was raised the other day. My ruling is, of course, ready to be delivered, but I should not like to prevent any hon. member from stating his point of view.

Mr. W. A. BOYS (South Simcoe): Mr. Speaker, after your announcement, I realise the futility of taking up much time in discussing this matter, but we deem it of sufficient importance at all events to place ourselves very definitely on record in connection with it. I do not propose to quote again the amendment that was moved before recess last Friday, nor the amendment which was moved after recess, at eight o'clock. They will both be found in the remarks of my leader (Mr. Meighen) which appear in Hansard of last Friday. I do, however, want to support the contention that he then made, and I think as a preliminary to what I have to say, I should read the rule of our own House upon the question. Rule No. 77 reads:

> If any motion be made in the House for any public aid or charge upon the people—

"Charge upon the people" are the words that I wish to emphasize.

> —the consideration and debate thereof may not be presently entered upon, but shall be adjourned to such further day as the House thinks fit to appoint; and then it shall be referred to a committee of the whole House, before any resolution or vote of the House do pass thereupon.

This rule has obtained in our parliament for half a century. As far as I have been able to read, it has obtained in the British House for 200 years, and I submit that it should not be lightly disregarded. The objection is two-fold. In the first place, it is contended that the amendment that was made by the hon. member for Centre Winnipeg (Mr. Woodsworth), that reached this House at six o'clock and that was seconded by the hon. member for West Calgary (Mr. Shaw) was subsequently altered. The first point I wish to make is this, that the only amendment before this House that had a seconder was the amendment moved by the hon. member for Centre Winnipeg and placed in the hands of the Speaker before recess. After recess—and we are led to believe as the result of some discussion owing to the fact that that amendment was considered not to be in order—it was changed. Let us first see what is the duty of the Chair on receiving a motion which is considered unparliamentary. Rule 46 reads:

> Whenever the Speaker is of opinion that a motion offered to the House is contrary to the rules and privileges of parliament, he shall apprise the House thereof immediately, before putting the question thereon and quote the rule or authority applicable to the case.

There is no question that the amendment which was moved in the House by the hon. member for Centre Winnipeg (Mr. Woodsworth) was presented to the Chair. There can be little or no question that that amendment was out of order; and I submit Sir, that the first thing to have been done in the circumstances was to have had recourse tc

rule 46. That was not done; but for reasons which cannot be fully disclosed, the amendment that was put by the Chair after recess was absolutely different in form from the original motion. It was different in paragraphs A., B. and C. of the operative part, inasmuch as it involved entirely new features; I refer now to those provisions of the amended motion relating to all natural resources. Now, what authority was there to make that change? Who seconded that amendment? I submit, Sir, that it had no seconder then, nor has it any seconder at the present time. I do not even know that the hon. member for West Calgary (Mr. Shaw), who did second the amendment as originally moved by the hon. member for Centre Winnipeg, was present when the substituted motion was put to the House. I therefore contend that inasmuch as the second amendment as put by the Chair had no seconder it is consequently not properly before the House at the present moment; and I submit that there is no power whatever to make any such changes in the original motion as were made. It would seem to me that if there is any distinction between what has been done in the matter in hand and what might be done in connection with a formal notice of motion, which would first have to appear in Votes and Proceedings, there should be more formality and greater stricture in the case of such a motion as was submitted to the House by the hon. member for Centre Winnipeg. Let me quote May at page 216:

> A modification of a notice of motion standing upon the notice paper is permitted, if the amended notice does not exceed the scope of the original notice. If a motion is proposed, which differs materially from the terms of the notice, it can only be made with the consent of the House, or upon a renewal of the notice.

I would direct the attention of the House again to the ground upon which any modification of a notice of motion may be made, that is to say,—

> If the amended notice does not exceed the scope of the original notice.

Now, Sir, there is no doubt that the substituted amendment does differ absolutely from the motion as originally presented to the House. And if in connection with a formal notice of motion which appears in Votes and Proceedings no change may be made without the consent of the House, how much more imperative, may we argue, that in relation to a matter of this kind, whereof there is not even intimation beforehand, there shall be no change unless the House is apprised of the fact. The amendment has been changed; no one contends for a moment that it has not. I do not know what authority may be cited in support of that change. I am aware of course that there is a reference to a similar situation in the American rules of procedure, but I submit that such would not be a proper authority for this House. Indeed, I do not even know whether the rules observed in the United States are identical with ours. In any event I contend that no precedent available to this parliament can be found for the change that has been made in the present instance; there is no precedent so far as either the British practice or our own is concerned.

Let me now come to the second point. I have already shown what has been the practice in this House for half a century and in the British parliament for two centuries; and I find in Bourinot at page 430 the following:

> It is now a fixed principle of constitutional government that all propositions for the imposition of taxes should emanate from the ministry.

At page 431 Bourinot says:

> All the authorities go to show that, when the government have formally submitted to the House the question for the revision of customs and excise duties, it is competent for a member "to propose in committee to substitute another tax of equivalent amount for that proposed by ministers, the necessity of new taxation to a given extent being declared on behalf of the Crown". It is also competent for any member to propose another scheme of taxation for the same purpose, as a substitute for the government plan. But it is not regular to propose a new and distinct tax, which is not a mere increase or diminution of a duty upon an article already recommended by government for taxation, though it is the function of this committee to impose rather than to repeal taxes.

I submit that there is nothing whatever in that proposition which brings the present case within the category of exceptions. In the first place, there is no tax at all proposed at the present time and therefore there is no question of substituting any equivalent of a plan proposed by the government. An abundance of authority may be cited in support of the position I take on this matter for, as I have said, there are precedents covering a period of some two hundred years. Let me now refer to Redlich's The Procedure of the House of Commons, Vol. III at page 121. Referring to this very principle which has been dealt with in May, he says:

> It is one of the oldest of the standing orders now in force: first enunciated on the 11th of July 1713, it has twice been expressly reaffirmed, on the 25th of June 1852 and on the 20th of March 1866. It runs as follows:
> This House will receive—

And I may remark that this is order 66 of the British House—

> This House will receive no petition for any sum relating to public service, or proceed upon any motion

for a grant or charge upon the public revenue, whether payable out of the consolidated fund or out of money to be provided by parliament, unless recommended from the Crown.

I think it wise to read a few lines further in order that we may gather some idea of the reasons which have prompted the continuance of this rule during the lengthy period I have mentioned.

By laying down this rule the House of Commons placed in the hands of the government all power of initiative in respect of the expenditure of public money, voluntarily resigning, both for itself as a body and for all its individual members, a privilege which in theory nobody had dreamed of contesting. Since the order was made it has not been competent for one or more unofficial members of the House to propose by motion or petition a grant of money for any purpose,—

Of course, there is authority to show that a charge is dealt with in exactly the same manner as a grant of money. That will be found in May.

—or for the House to act upon such a proposal unless the grant is asked for by the Crown: Only when this is done does the House vote definite sums for definite purposes.. ..The limitation of power effected by this action was undoubtedly a constitutional innovation of the deepest importance: It was, however, effected not, as might have been expected, by statute, but by a simple order of the House of Commons, liable at any moment to be repealed by an equally simple action: And yet for almost two hundred years it has been allowed to remain untouched as one of the main principles of British finance..... The limitation is dictated by a wise recognition of a serious danger: It is a measure of protection against the easy extravagance of a large assembly—

I am sure we all agree that this applies here now.

The House well knows how real the risk would be were each member entitled to use his eloquence and tactical ability for the purpose of calling the public credit of the country and its taxpaying capacity to the aid of any object in which he was interested.

We may have in mind, for example, Belle River at the present time.

State expenditure ought to be the expenditure of the responsible administration.

I submit, for the reasons given that the point of order raised by my right hon. leader (Mr. Meighen) is well taken; and I urge that the House should be cautious in permitting any innovation in relation to so valuable and important a rule and one of such long standing.

Mr. SPEAKER: On Thursday, April 24, Mr. Woodsworth (Centre Winnipeg) closed his speech on the motion for the committee of Ways and Means by moving an amendment which was handed to me in order that I might put the question. It struck me as objectionable both in its form and subject matter. I always had some misgivings about the regularity of a similar amendment moved last year by Mr. Forke (Brandon). which, I think, might have served its purpose equally well had it been made less specific; for such motions, in order to be entertained, must be framed in abstract and general terms. Using my unquestioned authority in such a case. I conferred with the mover who agreed to make the necessary corrections.

This circumstance was admitted by Mr. Woodsworth on the floor of the House last Friday when he said:

In consultation with the Speaker and the authorities of the House—

Meaning the officers.

—I consented to make such changes in the resolution as seemed to be necessary or advisable in order that it should conform more nearly with the accepted usages of the House.

May, at page 247, says:

Even when notice of motion is not required—

As in the present case.

—the motion should be placed, in print or writing, in the Speaker's hands; as, except in the event of any informality in the form of the motion which may necessitate the Speaker's intervention, or may compel him to decline to put the question from the chair, the Speaker puts the question in the words of the mover.

An eminent authority, I may say, Redlich, Vol. 2, page 221, declares:

The possibility of the Speaker's refusing to allow a motion to be voted upon can only arise in the case of motions which are out of order either in their subject-matter or in their form. Such are motions which contain unbecoming expressions, infringe the rules of the House or contain reflections upon a vote of the House. Irregularities of this kind, may, under the Speaker's authority, be corrected by the clerks at the table.

Cushing, No. 1,233, says:

When a motion has been made merely, but not yet proposed or stated by the Speaker—

Which was the case in the present instance.

—the mover may withdraw, or modify it at his pleasure. This, consequently, is the time at which objections to motions, especially in point of form, are usually made, either by the Speaker, or by other members; upon which the mover may either explain and insist upon his motion, as it stands, or he may withdraw it altogether; or, adopting the suggestions for amendment, may modify it at his pleasure; and this power of the mover may be exercised, as it seems, without reference to his seconder, if the motion has been seconded.

I could either have ruled the amendment out of order or accepted the corrected draft. I deemed it advisable to follow the latter course, and in doing so I actually observed the customs and usages of this House. Had the question been put, I should certainly not have allowed it to be altered, because once the Speaker has stood up and read a motion

or amendment, it ceases to be under the mover's control and can only be withdrawn by leave of the House to be granted without any negative voice, under rule 43, as so aptly remarked by the hon. member for Bonaventure (Mr. Marcil) speaking on the point of order.

As to the second objection raised by the right hon. leader of the opposition (Mr. Meighen) namely, that such a motion can only be made by a minister with the recommendation of the Crown, the theory is the same whether the motion relates to imposition of taxes or expenditure of public money, but it differs as to reduction of taxation. The amendment asks both for a reduction of certain customs duties and the taxation of unimproved land values. The decision given by Mr. Speaker Denison in 1858 settles the question as to levying new imposts or voting money which is governed by exactly the same principles. This most eminent authority said that there were indeed precedents in which the House had given an expression of its opinion that a certain vote of public money should be made; but it remained for the House to decide how far such intimations of opinion should bind it in the future course which it might adopt. Such intimations certainly created no new charge on the public, but they led to no practical result, and the whole question had to be begun again de novo, and to pass through all the forms of the House. (British Debates, 3rd Series, Vol. 151, p. 1,168).

I may cite the following British precedents of motions made by private members for the expenditure of public money:

On the 9th July, 1858, the House carried an amendment expressing the opinion that the cost of the purification of the river Thames should be borne by the consolidated fund and the metropolitan ratepayers in equal proportion (Commons Journals, p. 113).

On the 24th April, 1863, it carried an amendment stating that the government should give sailors' homes such pecuniary assistance as in its judgment and discretion may be advisable (Commons Journals, p. 118).

On the 30th June, 1869, it adopted a motion stating it was expedient that the judges upon whom new duties and responsibilities might be imposed should receive additional remuneration of 300 pounds a year. (Commons Journals, p. 124.)

On March 13th, 1890, it carried an amendment that it was expedient that all deficiencies of the equipment of volunteers which were necessary to efficiency, and all debts of corps properly incurred on account of the same, be made good from the public revenues. (Commons Journals, p. 145.)

There are, as we know, several Canadian precedents.

My immediate predecessor, Mr. Speaker Rhodes, said from the chair, on March 16, 1921,—and I agree with him—:

> Taking the general view, it does seem to me that if the House were unduly to restrict hon. members in moving motions of this character it would serve to circumscribe debate to a very marked degree, because after all few resolutions are moved which would not in themselves, if carried into effect, involve the expenditure of public money. It seems to me the better principle would be to widen the rule as much as possible in order that the sense of the House may be taken upon these matters, it being understood in all cases that these resolutions merely involve an expression of opinion on the part of the House and that they do not affect the constitutional method of placing upon the government the responsibility of initiating all legislation which has for its object the expenditure of money.

The private member's right to move for a reduction of taxation suffers no limitation under our parliamentary rules and usages. May, at page 469, says:

> It follows as a matter of course that a motion to alleviate the burthens upon the people is not within the scope of the standing orders relating to the imposition of charges upon the people. A bill for diminishing or repealing a tax or other public burthen, unless the imposition of a new tax is proposed by way of substitution, is introduced without the royal recommendation or preliminary committee stage. Amendments, also, strictly confined to relief from pecuniary burthens, can be considered both in committee and with the Speaker in the chair.

And at page 506 he says:

> Proposals to reduce a burthen upon the people may be made in the House or in committee, no special form of procedure being prescribed for such a motion or for the introduction of bills which are strictly confined to the reduction of a tax or charge upon the people.

On the 18th May, 1920, Mr. Fielding—one of the oldest members of the House and, I must say, a very eminent authority on parliamentary procedure—moved an amendment on the motion for the committee of Ways and Means, specifically asking for a reduction of the customs duties on the instruments of production in the industries based on the natural resources of the Dominion.

On the ninth of June, 1919, Mr. McMaster moved, inter alia, in amendment to Sir Thomas White's budget proposals:

> That the tariff should be so framed as to free the food of the people and the machinery used in the development of the natural resources of Canada, together with the raw material entering into the manufacture thereof.

It is true that rule 46 was overlooked in this case, but nobody suffered any prejudice or injustice from the fact. Whether or not the

House was apprised of any irregularity in the motion would not have divested Mr. Woodsworth of his right to modify it before it was put from the Chair. No member could force him to go on with it in the form in which he first read it, and he did not need the unanimous consent of the House to withdraw it as long as the House was not seized of it. So that the non-observance of that rule does not affect the situation in any way whatever, and it cannot be said to have prevented the discussion of any point of order, as it is well known that such a point can be raised at any time, even in the course of debate. This rule is more particularly a rule of practice and it cannot affect the rights of members as long as its non-observance does not cause any prejudice.

In accordance with these authorities and precedents, I must rule that the amendment as put by myself from the Chair is in order. The amendment which was handed to the Speaker on Friday by the hon. member for Kent (Mr. Doucet) is therefore out of order, because no two amendments can be moved to the motion that the House go into committee of Ways and Means.

Mr. J. G. ROBICHAUD (Gloucester): It is not my purpose, Mr. Speaker, to add extensively to this debate. If, however, I crave the indulgence of the House for a few moments I hope that I shall command the generous forbearance of hon. members. It is certainly with the greatest regret that we note the absence of the right hon. Minister of Finance (Mr. Fielding). The tidings of his illness came as a shock to the whole country, especially at a time when his great financial abilities were almost indispensable. I join with other hon. members of this House as well as with the people of the country generally in wishing him early and complete restoration of his health.

An event of great consequence was the visit to the Maritime provinces during the recess of parliament of their Excellencies the Governor General and the Lady Byng of Vimy. Never in the history of my constituency have distinguished visitors attracted keener interest. Received with an open heart by the clergy of all creeds and denominations, cheered by the multitudes of the people, acclaimed by the school children, Lord and Lady Byng of Vimy found a place in their hearts for every one who greeted them. I wish to avail myself of this first opportunity of expressing publicly the deep sense of gratitude which I feel in the signal honour which has been bestowed upon us and to express the wish that the striking spirit of democracy displayed by the vice-regal party amidst my French constituents of the county of Gloucester may serve only to strengthen our adherence to and our love for British institutions.

Much has been said since the opening of the session in connection with the by-elections in the provinces by the sea. One of those elections at least has been the cause of a great column of smoke. The hon.

4. p.m.

member who was successful in the election in the county of Kent certainly deserves our best congratulations on his pluck and his perseverance as a politician. I admire his fine qualities as a debater, and his personality is almost faultless. But Mr. Speaker, I cannot refrain from giving the hon. member a little bit of warning with respect to his aggressive inclinations and urging him to assume an attitude of moderation, an attitude that will win for his constituency the sympathy and good will of parliament. While I hold no brief for hon. members who have been guilty of the atrocious crime of laying bare the errors of the late administration, especially those committed under the leadership of the present right hon. leader of the opposition, and while I dislike acrimonious attacks as much as anyone, especially as between members of parliament, yet I am of the opinion that the people of this country cannot and will never forget the workings of the 1917 War-time Elections Act and its disregard for the sacred principles of responsible government as well as its violation of the confederation pact. Nor will the people of Canada ever forget the lost opportunity of 1911 when through a campaign of class against masses, of camouflage in lieu of true light, the electorate were led into an error that will always be regretted. We cannot forget, either, the situation in which we were left in the fall of 1921, and in an attempt to render his movements more strategic the right hon. leader of the opposition has just placed in the hands of the only representative of the French element to your immediate left, Mr. Speaker, an amendment prescribed by the caucus of his party. I believe that the hon. member for Kent (Mr. Doucet) is treading on unsafe ground, first, in trying to defend his party from the just retribution which is its due, and second, in committing for all time to come the peaceful peasants of the good old county of Kent to a policy of protection. I am certain, Mr. Speaker, that when the time comes the electors of the county of Kent, whose interests are absolutely identical with those of the constituency of Gloucester, will not fail to put him on a better path, and that they will do this with quite a sharp turn.

Much has been said throughout the press and otherwise about the so-called Maritime rights. If such rights exist, and I believe they do exist but only in the abstract, it would be interesting to note who have been responsible for whatever is wrong. Hon. gentlemen representing New Brunswick constituencies who sit to your immediate left, Mr. Speaker, have, at meetings in the constituency of Kent and in the city of Halifax, taken the ground that the present government should be saddled with the responsibility for whatever may be wrong with the present status of the Maritime provinces. But my contention is that those provinces are now suffering from the evils inflicted on them during the ten years of maladminstration which preceded the election of 1921. By the terms of confederation we were given a railroad which was to unite us more closely with the Upper and Lower Canadas of that day; the object was to repay us for the concessions we had to make in the interest of our sister provinces in the West. But what happened? In 1915 legislation was passed with the intention of taking over branch lines, and especially in the Maritime provinces. The purpose of the legislation was good but in giving effect to it the policy was overdone. Certain interests that had made large investments in railways and practically lost those investments manifested a desire to feed at the public crib. In 1917 a policy of nationalization of railways was embarked upon by the federal administration of the time, and the Maritime provinces saw the Intercolonial, a road which was built to give effect to the confederation pact, taken from them and merged into the great National system. That action constitutes part of our grievances in the Maritime provinces. I submit that the Intercolonial railway—which as I already said formed part of the inalienable property of the Maritime provinces—which was built to promote the best interests of that part of Canada, should have been left intact to carry out the object for which it was constructed. An analysis of the stand which hon. gentlemen opposite from New Brunswick have taken indicates that they have been actuated by partisan and not disinterested motives. We know where the trouble lies for the present condition of affairs and where the remedy can be found. Much has been said with respect to the rights of the Maritime provinces, but I doubt whether any one party holds the brief to defend those rights. My hon. friend (Mr. Baxter) and the hon. member for Kent have thrown upon the present government the blame for the grievances which exist to-day and have practically made the issue a political one. Now, to show what serious minded men in the Maritime provinces are thinking about in regard to those provinces and their rights, and the direction in which they think a remedy can be found, I am going to quote what the Hon. C. W. Robinson, a man of great experience and clear vision, who is now Minister of Lands and Mines in New Brunswick, stated in a communication which was published by the St. John Telegraph in January last. I want to read the statement just to show that the question of rights of the Maritime provinces should not be considered a political football, but rather that it should be treated in a serious light by the men of all parties and regarded as too sacred to be dealt with in a political way. This is what Mr. Robinson said:

> Our influence is naturally declining along with our proportion of population. In 1867 we had, roughly, one-quarter the population of Canada while to-day we have only one-eighth. And the outlook of the future does not indicate any improvement. Under the B.N.A. Act, unfortunately, as provinces are not treated alike. British Columbia, for instance, was safeguarded against a reduction in representation, while we have no such protection, and our representation is diminishing. With such a situation staring us in the face, our people are not happy. We are peculiarly sensitive to any action on the part of the Dominion which seems to encroach on what we consider our ancient rights and privileges. The flamboyant prophecies of the Fathers of Confederation as to the future development of our harbours have not materialized. These harbours are convenient national terminals in time of war, but Portland, Maine, looms large in times of peace. When car shortage becomes acute, it is the Maritimes which suffer most. The cost of transportation hems us in—this is not an unmixed evil—it is driving large business houses to establish centres of business in the Maritimes, on the one hand while on the other it cruelly handicaps those local industries which desire to extend their trade to the west. Perhaps we should turn our eyes oceanward and seek to reap some of the advantages of the Maritime position.
>
> Some of us thought that freer trade with the States would help out the situation, but the verdict of the people closed that door most effectively.

Mr. Robinson goes on to say:

> Recently some progress has been made in improving our condition. The establishment of the Atlantic region of the C.N.R., with headquarters at Moncton, was a long step in advance.
>
> The encouragement of our winter ports and giving them a preference under the Fielding tariff is already having its effect. The car shortage seems to have been remedied. The efforts now being made by the C.N.R. to develop greater tourist travel in our direction is bound to have a beneficial result. It is in the power of the railway to do much along this and other lines which will contribute to greater progress and prosperity for this part of the country, and I have confidence that the future will show that they are fully seized of their responsibilities, and in their own interest will assist greatly in our development.

We must realize that national conditions demand that some economics be made. While it is necessary and quite proper for us to keep before the rest of Canada the matters which are so vital to our people, we must also think in wider circles, take pride in our country as a whole, get busy, forget our troubles, take advantage of our many opportunities, and go forth to fill our place in the larger prosperity which, I believe, is slowly but surely coming our way.

This, Mr. Speaker, is to show this House and the country what little, if any, shade of political partisanship our public men of New Brunswick are introducing into this question of Maritime rights. The Hon. Fred. Magee, the minister without portfolio in the New Brunswick legislature, a man standing high in the esteem of the people of the Maritime provinces, a man who has made a special study of Maritime rights, and whose opinion is regarded as commensurate with his immense business ability, gave the following opinion in an article he published in the St. John Telegraph Journal on the 19th January last. Referring to Maritime rights and political partisanship, the hon. gentleman, in referring to a serious question which had been put to him by the editor of the Journal, said:

In reply to your question number two as to what is the best way to secure our "rights," so called, permit me to say that we must have abolition of the doctrine of Maritime rights as a party dogma. It is a Maritime, not a party matter. No party includes all the Maritime patriots and no party should so imagine. Let this be understood. Our federal representatives should co-operate, as party allegiance is not a means to an end, in this case. Careful, sensible, practical, straightforward, impersonal, unemotional and non-partisan presentation of our case at opportune times by those we send to Ottawa is essential. Federal members please note.

In conclusion I still maintain that legislative union with Nova Scotia should be consummated that we may wield greater power and influence in the National council of Canada in which Maritime statesmen have always played a prominent and important part.

I may interject right here, Mr. Speaker, that the Hon. Mr. Magee, is a fervent believer in Maritime union. I doubt very much if he is right in his belief, but after all it is very pleasant to know that he has, in the representatives from Nova Scotia on the floor of this House, quite a number of supporters in this regard.

It has been stated that this government had neglected to take care, or had refrained from taking care, of the rights of the Maritime provinces. It has also been stated that this government was going too far in its policy or in its endeavour to maintain public works in the Maritime provinces. It has been further stated that the matter of public works was becoming a public scandal. These public works have even been termed the notorious pork barrel. I wish to take exception Mr. Speaker,

to these insinuations. It matters not whether they come from Grattan O'Leary, or whether they have been inserted in MacLean's Magazine, the Montreal Star, or the Moncton Times, I claim these insinuations reflect upon the honesty of my constituents as well as upon the honesty of the representatives of the country. In support of my assertion, Mr. Speaker, I may say that when the late administration went out of power on the 4th August, 1911 the fishermen of the county of Gloucester enjoyed a large amount of protection in the way of public accommodation. A good start had been made in the improvement of our harbours, and industry itself was in a very flourishing condition. Much has been said about what has been recently termed, as I said before, the pork barrel. MacLean's Magazine was especially to the fore in articles relating to the doings of this government is looking to the upkeep of those public works in the Maritime provinces. My constituents in the county of Gloucester regard these insinuations as a reflection upon their integrity and loyalty as citizens of Canada. If we want to reconstruct or put our public works on a sound footing, it is because our people desire to pursue their occupations and to remain in the country. It is because we, in the county of Gloucester prize more than anything else the old homestead, and those parcels of the historic land of Evangeline, which were allotted to the sturdy fishermen of the Maritime provinces.

To demonstrate our position before the House and the country, let me enumerate different public works which had been neglected under the late administration, and point out to you the condition in which we found them when the late government went out of power. Of course these details are not very pleasant to listen to, but I want to make clear my point on this subject, and to show that we are not indulging in the county of Gloucester in the luxury of the so-called pork barrel. I want to make it plain that if we want our share of the public money, it is because of our industrial needs, because our fishermen, through their patriotism, desire to remain in the country, because they wish to eke out a fair living for their families, and because they are engaged in an industry which must be maintained for the benefit of Canada.

In enumerating the different public works which have been neglected by the late administration in Gloucester county, I may mention first the Miscou wharf built on the north shore of Miscou harbour where the Baie des Chaleurs herring industry is carried

on most extensively. Situated on the island of Miscou, this wharf was built some 20 years ago and it was of the greatest service to the one thousand inhabitants on that island. In 1921 we found that the superstructure of that wharf was almost completely gone and crumbling into pieces. I would ask any hon. member if he thinks it would be an extravagant expenditure to keep up and repair that wharf for the benefit of those poor people. Some $10,000 will have to be spent by this government: $1,000 two years ago, $3,000 last year, and the House will be asked to vote a further sum of $5,500 this year in order to complete the repairs upon the Miscou wharf. If we have to spend $10,000 to repair a structure which cost the government some $30,000 to build, is it not undeniable evidence, that public works were shamefully neglected by the late administration?

We have another wharf some few miles away at Petite Lameque, where a large fleet of fishing vessels are engaged in the fishing industry. It was found, when the late administration went out of power, that the flooring of that wharf was practically all gone and that it had to be rebuilt immediately. In that instance, we had to spend two years ago a further sum of $2,000 out of the public treasury. At Lameque where we have one of the most important groups of fishermen in the Maritime provinces and where at the expense of some $80,000 of public money a public wharf had been built under the Laurier administration, it was found, as I say, that the structure was broken up, the flooring was gone and the stringers were breaking through, I may state also that the caretaker of that wharf during the late administration wrote to the Department of Public Works telling them that the wharf was in a dangerous condition and, as a reply, he received orders to close the wharf if it was dangerous for public use. That is the kind of regard that the late administration had for our fishermen in the county of Gloucester.

At Shippigan, we found a wharf altogether too small for the great bulk of business that was being carried on there. The wharf was congested from one end to the other. Repeated demands had been made upon the late administration to have the evil remedied, but as in other cases in the constituency of Gloucester, the late administration turned a deaf ear to our legitimate demands. The result was that this government at the last session of parliament caused to be voted a further sum of $7,000 to enlarge and repair the wharf at Shippigan. Under the judicious supervision of the present Department of Public Works, there has been created at Shippigan, at a very trifling expense, one of the finest fishing docks in the Maritime provinces, a dock that can shelter the whole of Gloucester county's magnificent fishing fleet, a dock which is absolutely necessary for the benefit of the people there, and a dock which is certainly a credit to the present government.

At Caraquet—and I am sorry the hon. member for St. John city and counties of St. John and Albert (Mr. Baxter) is not in his seat when I make mention of this structure—we found a great fishing fleet without a wharf on which to land their fish. We found that the old government wharf had crumbled; that all but two or three of the spans were broken. The fishermen were left without a wharf, and it was up to this administration to come to their aid and spend at Caraquet a further sum of about $30,000 in order to enable them to pursue their occupation. The hon. member for St. John city, in his visit to Caraquet last year, while trying to reinvigorate the fragmentary remnants of the Tory party in my constituency, paid a visit to that wharf, and he admitted that the poor fishermen of Caraquet were in a very undesirable plight. The result of my effort in this regard is that a sum of $27,500 has been placed in the main estimates of this year for the reconstruction of that wharf, and I sincerely hope that when this money is voted, neither the hon. member for St. John city nor any other representing his party in New Brunswick, nor Grattan O'Leary, nor the Montreal Star, nor MacLean's magazine will throw in the face of the people of Gloucester county that this wharf has been built for the purpose of capturing the votes of my constituents.

I am about half through with wharves in the county of Gloucester. The fishing industry of my constituency amounts to over $3,250,000 a year. We have engaged in the industry a large fleet of fishing boats owned by men who with their predecessors have followed that industry for over a century, and I maintain that is is the duty of this government to keep that industry in such a shape as to encourage those who are engaged in it to continue to pursue their occupation and to remain within the bounds of this country.

At Inkerman, when I was given the honour to represent my constituency, I found the farmers and fishermen were forced to use sleds drawn by horses to land the fruits of their labour, the products of the sea. I found that those who were not equipped with a horse and sled had to land their fish over the railing of the highway bridge. I made cer-

tain representations to the Minister of Public Works (Mr. King, Kootenay) upon the strength of which there was built at Inkerman a wharf that greatly accommodates that very progressive little village. This wharf was made available to my constituents at Inkerman at the nominal cost of $3,500. At Grande Anse we find that a dock which was built by the Laurier government prior to the elections of 1911 had been left absolutely without repairs throughout the whole administration of the late government, not a dollar having been spent upon it. The basin has been allowed to become silted in those places where vessels of any considerable size should be able to come in, so that where formerly there was a depth of from ten to fifteen feet of water we find to-day that our poor fishermen are obliged to use rowboats instead of fishing schooners, for there is no more than from two or three feet of water.

Now, in spite of the large expenditures to which this government is subjected, I am bound to say that the necessity for further expenditure at Grande Anse is becoming increasingly keener. We have there a class of fishermen who are second to none in the Maritime provinces; but they have had to abandon their occupation and are now leaving our country and going to the United States. This is due to no fault whatever of the present government but to the neglect of the late administration; for the country cannot afford to spend a further amount of between $30,000 and $35,000 in order to alleviate the difficulties that are being felt in that vicinity at the present time but I hope that the time is not far distant when this work will be undertaken and carried to completion. At Stonehaven, I heard a few days ago, the structure of the wharf has gone and, that it must be rebuilt, and rebuilt without further delay. At Petit Rocher, at the time the late administration went out of power, the breakwater, owing to the action of the sea, was breaking in, and had to be repaired by the present government at a cost of some $14,000.

An important matter that interests my constituents is the protection which is necessary for the fishermen at Shippigan gully, which is the eastern entrance of Shippigan harbour. Shippigan gully is the only shelter between the Gaspé coast and Miramichi bay, for the eighteen hundred fishermen of Gloucester county who are engaged in the fishing industry; there is no other place where our fishermen can put in in case of a storm. This passage has been so badly neglected that in 1913 some fourteen fishermen lost their lives off the island of Miscou. This unfortunate fatality was inevitable inasmuch as the fishermen could not depend upon Shippigan gully as an entrance in the darkness of night. I brought this matter to the attention of the present Minister of Public Works and also to the attention of the Department of Marine and Fisheries with the result that the lighting and buoy system in Shippigan gully has been so improved that it is one of the best that we have in eastern New Brunswick. I have enumerated the improvements that have been made, as well as the difficulties which our fishermen have laboured under in the past, in order to show to the country that after all this so-called pork barrel is not a vote-catcher but is an absolute necessity for the pioneer settlers in the Maritime provinces.

Before I resume my seat I desire to deal for a few moments with the budget, and I trust that hon. members will not tax me with exceeding my privileges. The study given to the budget by hon. members who have already spoken is commanding the keenest interest of the public, and from what I have been able to gather it would seem that hope and courage, perseverance and endurance will be restored in this land which we have learned so deeply to love and cherish. Apart from the pessimistic views expressed by hon. members to your immediate left, Mr. Speaker, there is a general manifestation of contentment and satisfaction in the tone of our deliberations; and this manifestation, displayed as it is by the majority of the representatives of the people, is an undeniable evidence of the feeling which is being credited throughout the country by the efforts of this government to extricate it from the predicament in which it was placed by the late administration

It has been abundantly demonstrated that the tariff reforms brought down by the Acting Minister of Finance (Mr. Robb) are quite acceptable to the people of the country and that they are perhaps the best that could have been submitted for our consideration. An analysis of the budget by an unbiased mind will readily show that a great measure of relief is afforded the common people of Canada, who have suffered more than any other class during the period of deflation which has so seriously undermined their position in this country. A substantial reduction in taxation will be enjoyed by the poorer classes, and a large measure of confidence will be created throughout the country, confidence which will have an immediate effect upon the exodus of our people and which will stimulate business and hasten a much needed return to normal. It has been clearly demonstrated that several years of tariff stagnation have been very detrimental to Canada. There was the greatest evidence of this during the

period that elapsed from the termination of the Great War to the defeat of Toryism in 1921. The Canadian dollar had depreciated to an alarming extent, an adverse balance of trade was in evidence, Canadians were losing faith in themselves and unity of strength was lacking as between the different elements of our population. This situation, Mr. Speaker, could not be remedied overnight. It speaks well for this government, that conditions have taken such a decisive and sure return to normal. That the fiscal policy of this government will stimulate this reaction is a foregone conclusion. Surely, Mr. Speaker, no one can deny the fact that the immediate help given to our basic industries by this budget will bring better days to Canada and its people.

It is very interesting to note how easy it is to set the whole political machinery working when an attempt is made to free the common people from the burden of taxation, when such reductions will reflect either directly or indirectly upon the big interests. If hon. members will recollect the campaign launched by the press to defeat reciprocity in 1911, it can very well be stated that the same propaganda is about to be let loose, that the press supporting my friends opposite is ever ready to camouflage the issue in an attempt to mislead the masses of the people.

Already it has been said that manufacturing concerns have had to close their doors as a direct result of a reduction in the import duties. If the reductions suggested in the budget—reductions which are partly upset by a rebate in the cost of raw materials—will force these manufacturers to discontinue their operations, I cannot but infer that these industrials are not imbued with that spirit of courage and determination which should characterize every true Canadian citizen. If our manufacturers cannot loyally and fearlessly put their hands to the wheel and help to alleviate the heavy burdens placed on the shoulders of our people by the extravagant expenditures of the late administration—if they cannot forsake some of their profits in order to stimulate business in Canada, if they cannot muster together enough of self control, enough ingenuity, enough of that resourcefulness which we must reasonably expect the business men of this country to possess in order to carry on their business and overcome the obstacles which they profess to find in these tariff reductions—how then can they expect the farmers of the West as well as those of the East, to support the heavy burden which is imposed upon them by customs duties and otherwise? How can they expect a man with a family of ten or twelve, such as we so frequently find in the provinces of the East, to subsist on the meagre salary of a bushman or the scant revenue of a small farm, and pay into the pockets of the manufacturer large proportions of their earnings so as to increase the earnings of these latter to such an extent that millions of dollars are now available to wage war against the consumers.

The time is opportune, Mr. Speaker, for the country to grasp the situation with a true sense of Canadian citizenship. Never has the opportunity been so favourable to unite under one policy, under one flag, the destinies of our country; and for this reason and in the fulfilment of my most sacred duties towards my electors and my country it will be my pleasure to give my wholehearted support to the budget.

Hon. R. J. MANION (Fort William and Rainy River): Mr. Speaker, I join most heartily in the expressions of sympathy for the Minister of Finance (Mr. Fielding) in his serious illness, and in the hopes which have been expressed that he may soon be in his seat again. May I at the same time express a word of sympathy with my right hon. leader (Mr. Meighen) who has sustained such a serious affliction within the past few days? My sympathy is all the stronger, Sir, in view of the fact that during the past two months, although a very busy man, I know that he always made time to visit his sick father at least twice or thrice every day.

In looking over the budget which is now before the House, Mr. Speaker, anyone who is at all fair in his estimate must, I submit, after considering its various aspects, come to the conclusion that if the budget is accepted and endorsed by the country at the next election, it is the forerunner of free trade for the Dominion.

Some hon. MEMBERS: Hear, hear.

Mr. MANION: I hear some applause from hon. members to my left. Therefore apparently they are hoping that this will be the case, and as they are in a position to command they will probably see to it that this result follows. If this budget is accepted and endorsed by the country, it will be a departure from the fiscal policy which Canada has enjoyed from 1878 to 1923. I use the word "enjoyed" advisedly, Sir, because anyone who looks over the statistics showing the progress which this country has made on the whole from 1878 to the present time must be convinced that Canada has had a fair share of prosperity during those years.

I may be asked on what I base my statement that if this budget is accepted and endorsed by the people it means free trade for Canada. I base my assertion upon two main points. First, upon the slashing cuts in the tariff on many lines of goods which have been made by the Acting Minister of Finance (Mr. Robb), cuts which, to my mind, are more marked than any which have ever been made in the tariff in any previous budget. Secondly, upon the speeches of those who have preceded me in this debate: Upon the speech of my hon. friend the Minister of the Interior (Mr. Stewart) in which he, as the first member of the government speaking after the budget was delivered, in a carefully prepared statement, said that he hoped this budget was the death knell of protection in Canada; upon the speech of the hon. minister without portfolio from Prince Edward Island (Mr. Sinclair), who took practically the same attitude; upon the speech of the hon. member for Pontiac (Mr. Cahill), who congratulated the government on the tariff cuts and hoped that the duty on boots and shoes might be reduced next; upon the speeches of my hon. friends to the left who have rejoiced in the tariff cuts, and have rejoiced also in the hope that further reductions will come in the near future, pointing out that the present reductions were only a beginning. As I stated a minute ago, the Progressive party is in a position of command at the present time; the government cannot retain power without the support of the Progressive party in this House. I say therefore that no party could carry out such a policy as this without the support of my hon. friends to the left. Consequently, being in a position of command, and being sincere in their views in regard to free trade—as I give them credit for—I submit there are very sound grounds for assuming that if this budget is accepted and endorsed by the people it means the beginning of free trade for the Dominion.

At the same time, Sir, there is, I think, great satisfaction in the minds of public men generally that at last this issue is clearly defined. I feel that it is an advantage to the people generally to have this issue defined in such a way that free traders will have to take one side of the political fence and protectionists the other side. No longer will hon. gentlemen like the hon. member for Brantford (Mr. Raymond), the hon. member for North Waterloo (Mr. Euler), the hon. member for St. Lawrence-St. George (Mr. Marler), the hon. ex-Minister of Justice (Sir Lomer Gouin) and other hon. gentlemen in the Liberal ranks be able to take the attitude of protection in their own constituencies, knowing that free trade is being preached in other constituencies, but feeling assured that if the party which they are supporting should win no damage would be done to the industrial interests of this country.

Sir, no longer will those who stand for a tariff for revenue be able to say that they hope there will be enough incidental protection to take care of the industries of this country. As a matter of fact a tariff for revenue is not protective at all: it is a false term when used by any hon. gentleman in this House or out of it as indicating in any way a protective tariff. A tariff for revenue is such a tariff as Great Britain has to-day; it is a free trade tariff, if I may use the expression—though it was stated, I remember, by someone in the last election that that was not a proper term. I submit that it is, Sir, because a tariff for revenue means a tariff upon luxuries, which can be imposed under any system, a tariff upon goods which are not produced in the country, as in England they raise five-sixths of their customs revenue from imposts upon sugar, tea and tobacco, which for the most part are not produced in their own country. But if there is any tariff put upon goods which are produced in the country, then a compensating excise duty must be put upon the commodity produced at home in order to take away any element of protection. So that our tariff for revenue men will not be able to claim that they are protectionists.

It must be a source of satisfaction to the people of the country to feel that in the next election they will be able by their voice and vote to say which policy must be accepted and carried out in the Dominion of Canada. No longer will the Liberal-Conservative party be accused of dragging in the free trade bogey by the scruff of the neck, as they have been accused in the past, because the government in power to-day, by their marked cuts in the tariff, by their promises of more to come, and by their expressed hope that this is the death knell of protection, have defined the issue upon which the next election will be fought in this country, and the people will decide the result. So I believe we may congratulate ourselves, Mr. Speaker, upon the defining of the issue, upon the fact that we are now at least out in the open, and that the people, not this House, will settle this question finally.

Believing, Sir, in protection as the best policy which Canada can have, believing in

the dangers not only commercially and economically but nationally to Canada in a policy of free trade, I have no difficulty in taking sides on this question. I find myself happily associated with the group in this House who have since 1878 stood for a protective policy for Canada. Neither will my hon. friends to my left, out and out free traders, as most of them are, have any difficulty in taking sides on this question. But there are a number of hon. gentlemen in the Liberal party who call themselves protectionist Liberals who will have to come out in the open and take sides either for free trade or for protection. So that

5 p.m.

the government may be congratulated, in a sense, upon having unconsciously defined the issue, even though they have done so much damage to the industries of this country.

There have been more complaints about this budget than have been offered in respect of any budget previously brought down in Canada. The farm implement manufacturers have complained, the wagon manufacturers, the steel manufacturers, the paint manufacturers—these have complained about what has been done; and the boot and shoe and the woollen manufacturers have complained about what might have been done to help them that has been left undone.

There is one quality in this budget upon which I should like to congratulate the Acting Minister of Finance (Mr. Robb) and one quality alone, and that was its brevity, because, Sir, if he did so much damage to the industries of this country in forty minutes I find myself fearing what he could have done had he gone on for an hour and a half. It is said that brevity is the soul of wit. I must confess that I find very little either of wit or of wisdom in this budget. It is a good deal like nitro-glycerine, of which a small amount can cause a great deal of damage: this budget has done more damage in less time than any budget which has ever been produced in Canada. I imagine it was a rather difficult budget for the Acting Minister of Finance to produce, because those of us who have known and liked him for the past seven years or so in this House have looked upon him as one of the outstanding instances of the protectionist on the Liberal side. Of course, I do not suppose any one of us has the right to object to the Acting Minister of Finance standing on his head, but we do object to his standing the whole industrial life of Canada on its head.

Now, Sir, dealing with the budget, I should like to ask what there is in this budget which will do any good to the people. It might be answered that the cutting down of the sales tax will do good. Well, I am not quarrelling with that; I submit that if the sales tax could be cut off altogether it would probably be for the benefit of Canada. But that is only naturally getting away from taxation as we get away from the war; it has nothing to do with the tariff cuts. And what have the tariff cuts done? I shall give my own opinion, for as much as it is worth, but such as it is I must lay it before the House. The tariff reductions will first of all benefit the United States industries concerned. Secondly, they will injure seriously, if not ruin, the Canadian industries affected, and they will depress all other industries, because no industrial leader knows today when the government will feel it necessary to cut off his head and throw it to the wolves in order that the administration may be kept in power. Thirdly, they will discourage, if not halt, the investment of Canadian money in industrial enterprises, because if there are two things which those require who invest in industrial enterprises, they are security for the present and stability for the future, and there is neither security not stability in this budget. Fourth, they will increase unemployment in Canada; they will drive more of the artisans and workingmen of Canada to the United States and so diminish the home market for the farmers, particularly in Ontario and Quebec. Someone has said, I think it was the ex-Minister of Finance (Sir Henry Drayton)—and it was a reasonable statement—that the men who left this country would, had they been employed here, earn an average of about $1,000 per annum each. As we lost 181,000 people last year, even dividing that number by two it means an annual loss to this country of from $100,000,000 to $200,000,000 per annum. In fact, it is one of the greatest exports we have, and I presume that next year this government, which has so little of which to boast and which boasts of so little, may probably boast that they have been the producers of one of the greatest exports in that regard. I notice that this year they included in their exports settlers' effects, the property of those who had permanently left the country.

What are the compensations to the prairie provinces for the destructive features of the budget? The most that any of us, even the most optimistic, could claim would be a reduction of a very few cents in the prices of farm implements bought by the people on the prairies. I submit that it is not the tariff that is injuring the prairie provinces. It is not the tariff which is bringing about a period of stagnation and depression in this

country—at least, not the high tariff. In fact, may I interject that under all systems, whether of free trade or protection, in any country we have from time to time periods of depression and stagnation. But the injury to the prairie provinces has really been brought about by four main conditions. First, the world conditions, the chaotic conditions of Europe which have destroyed markets, lessened the purchasing power of the people, and so to a great extent brought about the lowering of the prices of the products of the prairies. Secondly, there is the long haul over which the prairie products have to pass to the seaboard in order that they may be distributed to the markets of the world. Third, as claimed by the people of the prairies themselves, there are the marketing conditions, in respect to which they are proposing different pooling arrangements. Fourth, there is the lack of proper credits for the farmers of the West—that again is a claim of their own, and I put it forward for what it is worth; they claim there is an intermediate zone of credit which is not looked after. I suppose that any one of these four has a much greater effect upon the depression in the West than any effect that might be brought about by tariffs. The same conditions are injuring the wheat farmers of the prairie states, because they are in very much the same position as our own farmers in the West.

Then what is the object of the changes in the tariff? Sir, it is simply a mad desire on the part of this government to keep in power at any price. It is an attempt to purchase the votes of the West at the expense of the industrial East. Someone has described this budget as national suicide; I should like to describe it as national homicide, because it is a premeditated killing of the industrial East to gain the votes of the West.

It may be said that that language is too strong. Well, in view of the broken pledges of the present government in regard to tariff matters I do not think that the language is too strong. Let me in just a few words review those broken pledges: First, in 1919 there was the platform of the Liberal party under which free trade was proposed in many lines, but the whole was jettisoned as soon as the party got into power. Then, secondly, there was the Prime Minister's promise, quoted the other day in this House by the hon. member for Brantford (Mr. Raymond), that no legitimate industry would be injured if the Liberal party got into power. Certainly some legitimate industries are being injured at the present time, Then in 1922 there were a few minor cuts in the tariff with a promise of more to come, and in 1923 Mr. Fielding, realizing the danger of the course he was pursuing, made a few further cuts but stated that we had gone far enough and that stability was needed in this country if we were to have industrial prosperity. Then in 1924, in the Speech from the Throne, we have stability thrown to the winds and promises made of further tariff cuts. Then deputations came down and waited upon the Acting Minister of Finance and the government, and the Acting Minister of Finance and the Prime Minister, according to the press reports, practically promised to those deputations that they need not fear that they were going to be injured from a tariff standpoint at all. I hold in my hand editorials from strong protectionist journals congratulating the government on that attitude. However, only a few weeks later marked cuts in the tariff were announced in the budget. I do not think that a better illustration of confusion worse confounded could be given than the action of the government with respect to the tariff. I submit, Mr. Speaker, that the whole tariff history of this government has been one of deception, trickery, and vote chasing. It has been a course of promise and recant, advance and retreat, dodge and sidestep,—in fact it may well be considered a sort of improvised political fox trot: a few steps forward, a few steps back, a sideways glide, and then turn around.

May I, Mr. Speaker, now deal with the question of free trade and protection in this country? The question of whether we shall have free trade or protection in Canada is of the utmost importance to this country. I repeat it is of the utmost importance, not only commercially and industrially but nationally. Not only does our national prosperity depend upon this issue but our national destiny also depends upon it, because in the final analysis the decision whether we are to have free trade or protection in Canada will have a preponderating effect upon our relations not only with the British Isles but with the great republic to the south. Is not that logical? Once we come to depend upon the United States as a market for our raw materials—for our timber, for our fish, for our minerals, and so on—how are we going to maintain that market in anything like a stable manner without some form of union with the United States? Suppose that again in the future, just as at the present time, another high tariff party comes into power in the United States, and they adopt another tariff, just as high as at the present time or

even higher, against the raw materials and products of Canada, will not this country be placed in a worse position than it is to-day? And how then can we possibly retain anything like trade stability without some form of union with the United States? Sir, the policy of free trade if it were finally brought into operation in this country—as I think it will be if the people endorse the present changes in the tariff—would finally lead to the economic domination of Canada by the United States. It would then lead to Canada becoming a commercial appendage, a commercial adjunct as someone has said, of the United States. It would lead first to commercial union and then to annexation as stated by Mr. Taft and Mr. Champ Clark during the campaign for reciprocity.

Mr. HUGHES: Those gentlemen denied that they made any such statement.

Mr. MANION: I have their statements under my hand. I do not know that either of them has denied the statements which were credited to him.

Mr. HUGHES: Yes they have.

Mr. MANION: There are perhaps those in Canada who claim it might be a good thing for Canada from a material standpoint to be joined up with the United States, but I believe that even though it involves some sacrifices the vast majority of the people of Canada prefer to build up a great Canadian nation on the northern half of this continent. It might be well worth while to draw the prospect that opens before the people of this country to their attention; it might possibly be well worth while to draw that possible outcome to the attention of the people of the province of Quebec. The people of Quebec are probably the most sincerely attached to the British North America Act as it stands to-day. They do not wish to have any greater liberties than they enjoy; they do not wish to have their destinies committed to the care even of a majority of Canadians much less to a majority of Americans. And, Sir, it might be well for them to realize that if we accept free trade in this country we go a long way towards perhaps wiping out not only their industrial prominence in Canada, but also that which they value even more highly than industrial pre-eminence. I think, Sir, that most red-blooded Canadians believe in the building up of a powerful Canadian nation in this Dominion and are willing to make such sacrifices as are necessary to maintain it. They like the American people, I myself like them, but we object to being swallowed up by them, as we certainly will be if we allow ourselves to become entirely dependent upon the United States as a market for our raw materials and other products.

I have no doubt this attitude will be derided and sneered at by many people in this country, and perhaps by none more strongly than those who hope that prospect may come true. I should like to give some evidence of the statement I make, I should like to give some reasons—not as a flag-waving proposition at all—why I believe that what I have predicted will ultimately result. Let us look for proof to Cobden. When we discuss the question of free trade in England we naturally think of Cobden, the most outstanding example of a free trade apostle, in the English speaking world at any rate. Cobden's whole life, his eloquence, and his great ability were devoted to advocating free trade in the United Kingdom. His object was that not only should the United Kingdom continue to be a manufacturing country but that ultimately it might become the workshop of the world, that it should be put in such a position that it could dominate the manufacturing markets of the world. He made a statement that is well worth quoting. He said that if England adopted free trade, the whole world would adopt that policy in ten years and he added—and this is the point—"When the whole world has adopted free trade it will dig, delve and plough for England". That was his thought regarding countries that did not go in for manufacturing, for a broader national and industrial life. I submit, Mr. Speaker, that if this budget is accepted by the people of Canada, not only will free trade follow but Canadians will finally be placed in the position where they will dig, delve and plough for the United States. They will become hewers of wood, growers of grain and miners of minerals for the United States, and probably for some of the other industrial countries of the world; and any Canadian of courage, energy, enterprise who wishes to employ those qualities in other lines of industry will have to go to the United States to do so. In other words, such a Canadian will have to expatriate himself from his country and join the exodus of his fellow countrymen from Canada, an exodus which is already far greater than it should be and which will make the Biblical exodus by comparison look like a U.F.O. parade in the city of Toronto at the present time.

There is still another difference between the exodus of old and the exodus of to-day. In the exodus of the Old Testament the children of Israel were led into the land of promise by the wisdom of Moses. In the exodus of to-day the children of Canada are being driven

into the land of the Stars and Stripes by the voice of Jacob—the Acting Finance Minister.

I shall now deal to a little further extent with the question of protection. There is a tendency in Canada to-day to accuse any one who upholds the policy of protection of being a friend of the "Big Interests." That, Sir, is done in spite of the fact that if you look over the history of tariff legislation throughout the world you will find that the majority of great statesmen supported protection for their different countries, whereas a very small minority of statesmen in the world supported free trade for their countries. Let me just name but a few of the outstanding men the mention of whose names alone suffices to bring them to the recollection of the people of Canada. In the United States there were George Washington, Alexander Hamilton—perhaps the greatest finance minister the United States ever had—Henry Clay, Daniel Webster, Abraham Lincoln, McKinley and Harding to name only a few of them. Of the men that I have mentioned no nobler or more honourable figure ever appeared before the people of the United States or any other nation than Abraham Lincoln. In Great Britain Joseph Chamberlain and Arthur Balfour supported protection. In France that policy was supported by Colbert, who was the great finance minister during the reign of Louis XIV, and by Napoleon; and from 1865 down to the present day all the outstanding statesmen of France have upheld protection for that country. In Germany, Frederick the Great and Bismarck were supporters of protection, and all German statesmen down to the present day have continued to be protectionists. In Canada we had Sir John A. Macdonald and Sir Wilfrid Laurier. As to the latter statesman I make this statement: Notwithstanding any quotations that can be brought forward from the speeches of Sir Wilfrid Laurier he never made any move to introduce free trade into Canada.

Mr. HUGHES: Reciprocity which the hon. member supported.

Mr. MANION: Reciprocity, Mr. Speaker, was based on protection. Reciprocity was based upon the very fact that you have protection in this country. It was an exchange of favours with the United States. The United States was giving us favours in return for favours which we gave them. It was a reciprocal arrangement, and could not be carried out by any other than a protective country. Great Britain could not have reciprocity with any other country because she has free trade. Neither could we have reciprocity with any country if we were free traders. In addition to the fact that these men whom I have named, who are outstanding men in the history of the world, were all protectionists, there is the fact that all the countries of the world of any importance have prospered under protection, Let me mention a few of them. France before the war was one of the richest countries in the world, a country in which the wealth was more evenly divided than in any other country in the world. The agricultural and industrial life was more evenly balanced than in any other country, and it has had marked protection for over a hundred years, but certainly has had high protection from the year 1865. Germany, from the time of Bismarck in 1870, till the present time, was a highly protected country, and before the war she was not only rapidly catching up to Great Britain in many lines, but had surpassed her in some lines. She was selling more goods to most of the countries in Europe; and if she had had sense enough not to start the war, but to continue along peaceful lines, she would be probably the greatest commercial country in the world. The United States has been a highly protected country since 1861. Previous to that time the United States tried the principle of free trade three times, and on all occasions that trial was succeeded by times of panic, depression and stagnation. Since 1861 the United States has had a continuous period of protection, and I make the statement that in general prosperity, in developed natural resources and in the real wages and social conditions of the people and opportunities of life, the United States has been the most outstanding nation by long odds of any country in the world.

I have stated that all countries have built up their prosperity upon a foundation of protection. I some time ago made that statement in regard to Great Britain, and many hon. gentlemen on both sides of the House took occasion to differ with me. I wish to give two proofs very briefly of my statement that England built up her prosperity upon a protective foundation. I hold in my hand Macaulay's History of England, Volume 1. This history was published for the first time in 1848. It is a voluminous work, and there is a number of volumes. It must have taken Macaulay some years to prepare it. But he makes comparison in the third chapter, which I have here marked between conditions in England in 1685 and 1845, a period of 150 years. That would be rather a long period for Canada, but would not be a long period for England, because she has a thousand years of history behind her. I do not intend to read very much, though the whole chapter deals with a comparison of these different

periods, and bears out what I have stated, but I will read a few sentences:

Younger towns, towns which are rarely or never mentioned in our early history and which sent no representatives to our early parliaments, have, within the memory of persons, still living, grown to a greatness which this generation contemplates with wonder and pride, not unaccompanied by awe and anxiety.

The most eminent of these towns were indeed known in the seventeenth century as respectable seats of industry. Nay, their rapid progress and their vast opulence were then sometimes described in language which seems ludicrous to a man who has seen their present grandeur. One of the most populous and prosperous among them was Manchester.

Speaking of the cotton trade of Manchester, he says:

The whole annual import did not, at the end of the seventeenth century, amount to two millions of pounds, a quantity which would now hardly supply the demand of forty-eight hours.

He is making a comparison between the end of the seventeenth century and 1845.

That wonderful emporium, which in population and wealth far surpasses capitals so much renowned as Berlin, Madrid and Lisbon, was then a mean and ill-built market town, containing under six thousand people. It then had not a single press. It now supports a hundred printing establishments. It then had not a single coach. It now supports twenty coach-makers.

Leeds was already the chief seat of the woolen manufacturers of Yorkshire... But from the returns of the hearth money it seems certain that the whole population of the borough, an extensive district which contains many hamlets, did not, in the reign of Charles the Second, exceed seven thousand souls. In 1841 there were more than a hundred and fifty thousand.

About a day's journey south of Leeds, on the verge of a wild moorland tract, lay an ancient manor, now rich with cultivation, then barren and unenclosed, which was known by the name of Hallamshire. Iron abounded there... It had indeed been mentioned by Geoffrey Chaucer in one of his Canterbury Tales. But the manufacture appears to have made little progress during the three centuries which followed his time.

Most of the Hallamshire forges were collected in a market town which had sprung up near the castle of the proprietor, and, which, in the reign of James the First, had been a singularly miserable place, containing about two thousand inhabitants, of whom a third were half starved and half naked beggars... This is that Sheffeld which now, with its dependencies, contains a hundred and twenty thousand souls, and which sends forth its admirable knives, razors and lancets to the farthest ends of the world.

Birmingham had not been thought of sufficient importance to return a member to Oliver's parliament... Yet in 1685 the population, which is now little less than two hundred thousand, did not amount to four thousand.

These four chief seats of our great manufactures deserve especial mention. It would be tedious to enumerate all the populous and opulent hives of industry which a hundred and fifty years ago, were hamlets without parish churches, or desolate moors inhabited only by grouse and wild deer.

Liverpool contains more than three hundred thousand inhabitants.

And he gives the population of the time which he is comparing it with as four thousand. Then he says:

Into her custom house has been repeatedly paid in one year a sum more than twice as great as the whole income of the English Crown in 1685.

Her endless docks, quays and warehouses are among the wonders of the world.

Further on he says, speaking of London:—

English writers boasted of the forest of masts and yardarms which covered the river from the Bridge to the Tower, and of the stupendous sums which were collected at the Custom House in Thames street... Yet to our generation the honest vaunting of our ancestors must appear almost ludicrous. The shipping which they thought incredibly great appears not to have exceeded seventy thousand tons. This was, indeed, then more than a third of the whole tonnage of the Kingdom, but is now less than a fourth of the tonnage of Newcastle, and is nearly equalled by the tonnage of the steam vessels of the Thames. The customs of London amounted in 1685, to about three hundred and thirty thousand pounds a year. In our time the net duty paid annually, at the same place, exceeds ten millions.

That is sufficient to show Macaulay's views of the conditions of Great Britain for the 150 years between 1685 and 1845, before free trade was adopted in Great Britain.

I will give one more quotation, and this is from Joseph Chamberlain. He made speeches, as hon. members all know, in which he stated that he believed in a preference. In other words he believed in protection for England, and here are two very brief quotations from two of his speeches. At Birmingham on November 4, 1903 he said:

If it were true that protection inevitably brought with it destitution, misery and starvation, and free trade brought with it prosperity and progress, how do you account for the fact that every foreign country without exception that has adopted protection has in recent years at any rate progressed more rapidly and in greated proportion than we, the free trade country of the world.

And he points out that the once great British trade in sugar refining has gone; the iron trade is going; and the cotton trade is threatened.

At Newcastle two years later he said further:

Whereas in the five and twenty years after Mr. Cobden's great reform was carried, this country was an industrial centre exchanging its manufactures with other countries for their food and raw materials. Now we have ceased to hold any such position of industrial supremacy; we are daily sending out more raw materials and coal, and importing more foreign manufactured goods; that is, we are importing more and more of those goods which give the greatest employment to the working classes.

I think in view of those two opinions—and I could quote many more if I wished to—

Mr. FORKE: The hon. member knows the answer the people of England gave to Chamberlain?

Mr. MANION: Yes, and I think I know the answer the people of Canada will give to the present government. In view of these two opinions and quotations which I have read to the House, I think I am basing my remarks

on good ground when I say that the people of England base the foundation of their prosperity upon protection. Practically all the countries of the world that amount to anything have adopted the policy of protection, and practically all with the exception of England, have protection at the present time. Many have anti-dumping laws. These laws are in force in Canada, Australia, New Zealand, South Africa, the United States and the United Kingdom, because while the free traders claim that dumping is all to the good for the people of the country, it is not all to the good, because it is not permanent. If it were permanent it would be all right. There are two classes of dumping, one which is predatory, which is designed for the purpose of stealing the industries, and another which is classed as surplus dumping, which gets rid of the surplus stock. Both types do harm to the country which allows the dumping, because they injure the industries and so destroy business.

Not only are all countries protected except Great Britain, but most of them are increasing their protection. Let me give the House another quotation and this is one which should be interesting to this government, for it is a quotation from one of the Finance Minister's own officers in Australia writing a letter to Canada which bears absolutely on this question. A big boot and shoe manufacturer in Canada who sells large quantities of boots thought he would go into the market of Australia. He had a letter written to the Canadian Trade Commissioner of this government in Australia, Mr. D. H. Ross, and asked him what opportunity there would be for selling boots and shoes in the Australian market. I do not wish to read the whole of the letter in reply, because it is all along the same lines, but this is part of it:

> You state that you had in view the advertising of a line of high class men's shoes of Canadian manufacture, and all we can say is that, outside of rubber footwear, sand shoes, etc., there is practically no chance of a Canadian line selling in Australia.
>
> The manfacture of boots and shoes is an old established Australian industry. In 1922 (the latest figures available) there were 744 boot factories in the Commonwealth, employing 20,290 operatives. The value of output for that year being £10,241,279.
>
> The customs duties are very high, the preferential duty to shoes made in the United Kingdom only being 38½ per cent net, whereas shoes imported from all other countries, including Canada, pay a net duty of 49½ per cent. Add to this the adverse exchange existing at present in comparison with the normal rate of $4.86 to the pound sterling (to-day's rate being about $4.40 to the pound sterling in Montreal) together with the importing charges, and you have some idea of the competition your friends are up against.
>
> Frankly, we think it would be futile to expect a remunerative business in leather footwear.

In other words, Australia has the good sense to be protecting her industries against all countries, including even the United Kingdom to the extent of 38½ per cent, and all other countries including Canada to the extent of 49½ per cent. Instead of carrying out the method of Australia and protecting our industries, we are allowing our industries to go to the wall. Instead of keeping Canadian markets for the Canadian people, we are making Canadian markets for the American people. We are allowing industries of all kinds to get into difficulties and many of them to fail. In the last four years 2,300 industrial plants of various kinds failed in Canada. Let me point out, just in regard to my constituency, three industries which are hit to-day by the tariff. One I mentioned here before is an industry which prior to a couple of years ago employed 300 employees in Fort William. To-day it is closed down absolutely because, as it has stated to the government—and I have the statements on file—it requires a very small amount of protection which it does not have at the present time and which permitted it in the past to run with 300 employees.

There is another industry which usually employs about 300 people also, which to-day is employing 60. It has a branch at Montreal, another branch in the province of Quebec and another in Ontario. It is a very prominent industry; but according to its statements to the government—and I have this on file also—it is being driven out of business by the French, because of the low rate of wages and the low rate of exchange, and if the government does not give it relief, it will close down altogether.

In my constituency there is another industry which when it was running,—and it was running prior to two years ago—employed 1,200 persons. I wish to quote one brief passage from a letter written by this company to the Acting Minister of Finance (Mr. Robb) the other day, a few days before my hon. friend brought down his budget. This quotation was sent to me by the same company, and as they did not mark it "personal" or "private" or anything of that sort, I have no doubt they have no objection to my using it. At any rate I am going to use it because I infer that they do not wish it to be kept personal, or they would have so stated. The quotation reads:

> This company and its subsidiaries, are interested in British Columbia to the extent that we manufacture logging cars and other equipment and we can safely say that any reduction in the tariff on these articles will make it impossible for us to obtain any of this business. In 1912 in order to enlarge our facilities to take care of the development in the western provinces, we erected a car works at Fort William, Ontario, at a cost in excess of $2,500,000 which is fully equipped to take care of the entire requirements of the western

provinces for logging cars, railway freight cars, or any other type of industrial car. Owing to trade conditions in the country, however, it has never been possible to operate this large plant to anything like its capacity, and since the termination of the war, it has remained practically closed down.

That is hardly correct, because to my recollection the plant closed down two years ago, or at most three, but I think two:

For some time we have been investigating the possibility of developing other lines of manufacture in order to utilize this plant as the amount of money locked up is a serious burden to this company, but if we are to remain in doubt regarding the tariff policy of the government, or if reductions are to be made in the tariff now afforded manufacturers in this country, it will forever preclude any chances of this plant being operated, and this state of affairs is not confined to this company but is a problem confronting many other manufacturers.

The whole letter is along the same lines.

Mr. FORKE: I was informed that a good many of those industries my hon. friend speaks about, were not able to compete with other Canadian industries, at Brantford, for instance. I was informed that particularly at Port Arthur large works were put up that could not carry on business because they were not able to compete with Canadian industries, not United States industries. I may be wrong.

Mr. MANION: My hon. friend is wrong. I am not speaking of any industry that was built that was not competing.

Mr. FORKE: My hon. friend admits that some buildings were erected that were not operating?

Mr. MANION: Yes, but I did not mention them. There were some plants which were built at the head of the lakes which were never occupied. But I mentioned one plant which prior to a couple of years ago employed 300 persons at Fort William. I mentioned another, which usually employs about 300 people and which is now operating with about 60. The third plant operated, to my recollection, prior to two years ago or, at most, three years ago, not to its full extent, but it did employ about 1,000 people, and it is now closed down. It was regarding this plant that I read from the last letter which I quoted. Those are industries only in my constituency. There are throughout this country many other plants of various lines which are being hit by this budget and by the danger of having their tariff protection cut. We all know about the agricultural implement industry, the steel industry, which is hit in this budget, the paint industry, and some of the paint manufacturers stated in Montreal the other day that they would have to close down absolutely. There is also the boot and shoe industry and the woollen industry. The boot and shoe industry employed about 14,000 people in this country and to-day it is operating at about 60 per cent of its capacity. The woollen and knitted goods industry employed about 22,000 to 23,000 people and it is now operating to-day at about 40 per cent of its capacity.

Mr. BEAUBIEN: Has the boot and shoe men's employment decreased since the budget has been brought down?

Mr. MANION: I am blaming their being closed down on the fact that the country is being inundated with British goods and French goods, particularly British goods in the case of boots and shoes, and they have not the protection they require which the budget should have given. Last year some cuts were made in the preferential tariff which did hurt the boot and shoe manufacturers. At any rate the boot and shoe manufacturers need greater protection if they are to compete against the low labour costs and the depreciated exchange of Europe, and they cannot continue with the tariff which they have at present in Canada.

Mr. HUGHES: What about those factories that closed down two or three years ago when the late government was in office or shortly after the present government came in?

Mr. MANION: I would criticise exactly in the same way. If they required increased tariff protection to keep them going, I say they should have had it. I do not know if any closed down three years ago. In 1923 some $40,000,000 worth of woollen and knitted goods was imported into this country. I am taking that from the records of this government. Just think what it would mean to the people engaged in those industries if that amount was produced in Canada. It is true that the hon. member for Brome (Mr. McMaster) said the other day that you could not increase employment in a country by protection; all you do if you close up one industry is you simply drive a man into a more remunerative industry. But the trouble is that we are driving them into more remunerative industries in the United States. This is another case of the theory and the fact not agreeing. I have noticed with free traders that if the facts disagree with the theory, it is so much the worse for the facts.

Even the Toronto Globe took, and has been taking, the attitude—I have a number

of its editorials in my possession—in regard to the woollen and knitted goods industry that they are not receiving the proper care and attention that they should be receiving. I submit that the boot and shoe industry and the woollen and knitted goods industry should get the protection which they need to keep them going.

One of our Progressive friends, speaking on this very question in a recent debate, said something to this effect: "Your Protectionists say that your industries cannot compete with those in France, in England, and in the United States". Then, quite dramatically, he asked: "What in heaven's name can they compete with?" Well, Mr. Speaker, there is a simple answer to that question: they can compete with one another; and that is all that any other country would ask their manufacturers to do in the way of competition.

Some hon. MEMBERS: Oh, oh.

Mr. MANION: My hon. friends no doubt are laughing at the fact that there is serious unemployment in this country at the present time. But let me assure them that this unemployment is due to that very fact, that our industries are forced to compete with those outside the country. There are nearly two million people out of employment in Great Britain, and the fact must be significant to hon. gentlemen that, where this enormous unemployment exists, the industries are forced to compete with foreign manufacturers. Indeed, Mr. Speaker, there is no country in the world that I know of that is in so pitiable a condition, from the point of view of unemployment, as the United Kingdom, which is the only free trade nation at the present time. Now, I do not know why we should make such frantic efforts to defend our national freedom when it is threatened by invading troops, and at the same time neglect our commercial freedom when it is menaced by industrial forces that are equally dangerous. And yet that is just the situation to-day.

Look back over the history of the world and you will find that those countries which have lived a broad national life and have carried on a wide and diversified industrial development, are the countries which have been best able to take care of themselves. Look at the United States at the time of the Civil War. What does history reveal in that case? Why, we find that the South was defeated mainly by reason of the fact that, unlike the North, it had no industrial development. From the very beginning it was realised that the South must lose eventually because it could not produce the goods which it needed. Again, take the example we have in the recent war. Why were Great Britain, the United States and France able to subdue Germany? They could do so only because they had had a wide and a marked industrial development. Without that development they would have been beaten, as surely as I am standing here to-day. And as a matter of fact, Sir, Germany herself was able to ward off defeat for a period of four years simply because she had magificently developed herself industrially under a policy of protection.

Mr. STEWART (Argenteuil): Was she not the best equipped industrially?

Mr. MANION: Yes, but she had the whole world against her. Of course she was well equipped industrially, and that is precisely why it took four and a half years for the Allies to subdue her. Had she not been as well equipped as she was she must have succumbed within a year. Now, Sir, if this budget is accepted and endorsed by the people of Canada we shall declare ourselves to be, apart from Great Britain, the only nation that despises that strength and independence with which other countries have developed industrially by means of protection. England is the only free trade country in the world, and if we adopt this budget we shall be the second; in other words we shall be virtually proposing to fall into that state which Russia was in before she decided to adopt protection one hundred years ago.

Mr. STEWART (Argenteuil): Surely my hon. friend would not assert that England could not play her part in the war.

Mr. MANION: No, I do not say that, nor have I said anything of the kind. I showed earlier in my remarks that England had built up the foundation for her industrial life and prosperity upon the basis of protection up to the year 1846.

Mr. STEWART (Argenteuil): The question I asked my hon. friend was, whether he would make the statement that England could not play her part in the war.

Mr. MANION: Not at all. We over on this side are always accused of flag-waving, but it seems that a little of this is being done on the other side now. My hon. friend is trying to make me say that England did not play her part in the war. Of course, I know otherwise.

Mr. STEWART (Argenteuil): I had no such thought. I do not want to interject any remarks into my hon. friend's speech, but he argues that protectionist countries have been better able to protect themselves than free trade countries. I hope he will not accuse me of waving the flag; I never do that.

Mr. GRAHAM: Are we not entitled to do a little of the waving at times over here? Some of the rest of us did our part in the war too.

Mr. MANION: I am not denying that for a moment; and I wish that hon. gentlemen opposite, and to my left, would wave the Canadian flag a little more.

Mr. BEAUBIEN: It is not always those who wave the flag that are the most patriotic.

Mr. MANION: I do not know that you can necessarily prove that. I was about to observe, when I was so generally interrupted, that even those men who have had world wide reputations as advocates of free trade have admitted the necessity in some cases for a policy of protection. Let me put on Hansard a quotation from John Stuart Mill, who was a more outstanding free trader than even my hon. friend from Brome (Mr. McMaster) or for that matter any other hon. gentleman in this House. The following statement by Mill is worth considering:

> The superiority of one country over another in a branch of industry often arises only from its having begun sooner. A country which has this skill and experience to acquire may in other respects be better adapted to production than those earlier in the field; and, besides, it is a just remark that nothing has a greater tendency to produce improvement in any branch of production than its trial under a new set of conditions. But it cannot be expected that individuals should at their own risk, or rather to their certain loss, introduce a new manufacture and bear the burthen of carrying it on until the producers have been educated up to the level of those with whom the processes have become traditional. A protecting duty continued for a reasonable time will sometimes be the least inconvenient mode in which a country can tax itself for the support of such an experiment.

Mr. FORKE: And we have had protection for sixty years.

Mr. MANION: Yes, and I submit that we have been doing well under it, even though my hon. friend thought it necessary to declare recently that he was sick and tired of the policy. I do not wish to burden Hansard again with the figures that I have already given, but I can submit to hon. gentlemen the facts that prove that we have had prosperity in Canada and that it was built up on protection. It is quite true that at the present time Canada is suffering; but she is suffering a period of depression which is common to the whole world, with the exception of the United States, which is the most highly protected country we know of to-day.

In the closing years of John Stuart Mill's life he was asked by Mr. Geo. W. Smalley, of the New York Tribune, whether he still adhered to the statement which he had made as quoted by me a moment ago. He replied:

> Certainly; I have never affirmed anything to the contrary. I do not presume to say that the United States may not find protection expedient in their present state of development. I do not even say that, if I were an American I should not be a protectionist.

So that even John Stuart Mill who was perhaps the most outstanding free trader of his time, admitted that protection was advisable in many cases. If one cared to do so one could cite many industries in the United States which have been built up exclusively under protection. I might mention, for example, the tin plate industry—and there are many others—which did not exist in the United States, except to a very minor degree, until 1890. Up to that time it produced annually about two million pounds of tin plate; but under protection, introduced in 1890, it immediately developed until it produced 2,000,000,000 pounds, sweeping the Welsh tin plate industry off its feet and driving the tin plate workers of Wales into the United States factories. I could cite many other industries which have similarly developed under protection, but I do not wish to take up the time of the House further.

Now, in the final analysis, what is the real object of those who demand free trade? I think I can state it in a single word—cheapness. Cheapness of goods is the sole object of this cry for free trade; and I remember our good friend Dr. Michael Clark, who came from the constituency now represented in this House by my hon. friend from Red Deer (Mr. Speakman), saying on one occasion: "We want cheap goods, and we care not whence they come". That after all is the basis of the free trade argument: cheapness of goods is the sole reason. In other words, we are asked to sacrifice the industrial East in order that the prairie provinces may save a few cents on farm implements and boots and shoes. I say that without the slightest intention of offending the prairie provinces, but simply because it is from that section of the country that the cry comes for free trade. It is debatable whether we shall get cheaper goods under free trade. However, merely for the sake of argument, let us admit that we shall. In that case, is the cheapness worth the sacrifice that we shall make? Is not a diversified national development, a broad national life, the greatest objective at which we could aim? Is it not worth striving for to bring about such conditions as shall prevent our youth from going to the United States? Is not that state of affairs worth something to

the Canadian people? Why should cheapness of goods be worshipped as a god? It is much more desirable that we should provide employment and wages for our Canadian people. I submit that the progress, the prosperity, and the happiness of our people depend very much more upon their ability to earn wages and consequently to purchase goods than upon the opportunity to buy those goods a little cheaper. If you will show me a cheap country, Mr. Speaker, I will show you in return a poor country. Cheap goods are of no use to anybody unless he has the money with which to buy them. I well remember quoting in this House some sessions ago the old story of an Irishman who complained of the fact that he had to pay fifty cents in New York for something which he could get for a shilling in Ireland. He was asked, "Why didn't you buy it in Ireland?" He replied, "I didn't have a shilling." That is the condition in every cheap country. The United States for the past fifty years has probably been the dearest country in the world, and yet it has been the Mecca of all the people of all the cheap countries in the world.

There is no better test of the condition of cheapness in a country than the labour cost test. I may be permitted, perhaps, to give two or three experiences of my own with regard to such tests in other countries. I remember before the war being driven around the city of Naples in a cab for a whole afternoon and paying two lire for the accommodation—forty cents at that time. Naples was then one of the cheapest cities I was ever in—and also one of the most poverty-ridden. Let me instance Ireland for the benefit of my hon. friend from Springfield (Mr. Hoey). I remember taking a tour, at least twenty years ago, through the famous lakes of Killarney. I hired a horse—it was really a pony—to go through the gap of Dunloe. For the use of this animal for a whole afternoon I paid half a crown—sixty cents. I asked the man in charge of the horse, "How much do you get out of this?" He answered, "I get whatever you choose to give me as a tip." He was working for the owner of the horse. I said to him, "Why don't you come out to a prosperous country like Canada?" He replied, "It would take me fifteen years to earn enough money to pay my fare to your country." I remember with pain—because Ireland is also the home of my forefathers—that not only in the country districts did beggars hold out their hands for alms, but right in the city of Dublin the poverty was something pitiable. I remember in the same trip that in the native land of my hon. friend from Brandon (Mr. Forke) at Edinburgh and Glasgow—particularly Edinburgh—poverty was just as marked in the slums there as I observed it in those of London; and I need not particularize the poverty there. In those parts of the British Isles labour was cheap and the cost of living low; but, Sir, at that time, according to a statement made by the late Campbell-Bannerman during the British general election in 1904, thirteen million of the population were on the verge of hunger—and he was a free trader.

Mr. FORKE: Does my hon. friend deny the fact that in every large manufacturing centre of the world you will find slums and poverty?

Mr. MANION: No, I do not deny that, but I make this statement, and I submit that it cannot be disproved: There were at that time more slums and poverty in the British Isles than in the protectionist countries of France, Germany or the United States. I could easily prove this statement by the figures which I put on Hansard a few sessions ago when debating the same question of free trade versus protection, but I do not wish to take up the time of the House now by repeating the figures, and I have not got them at hand.

Mr. HUGHES: Does not my hon. friend agree that the landlord system in Great Britain, the twin brother of protection, is largely responsible for the poverty there?

Mr. MANION: I do not accept my hon. friend's statement in its entirety, although I think that system has had something to do with the poverty. I remember reading a book by the late Earl of Dunraven—who lived all his life in Ireland and must be accepted as a better authority respecting conditions in that country than my hon. friend can be—in which he said that the poverty of Ireland was caused by free trade, which had ruined industry and driven out the business of grain growing.

Mr. HUGHES: The enormous land rents were responsible.

Mr. MANION: They would accentuate the trouble, of course. I may mention two other countries, India and China, where you may hire labour for a few cents a day and those countries are mainly agricultural. Every few years millions of people in those countries die of famine and disease. In other words, in all cheap countries the people are trying to get out of them as if threatened by a frightful epidemic of some plague. And

where are they trying to go to—cheaper countries? No, to the dearest country of all, and the most highly protected—the United States. So much so, that the American government, as we all know, has had to put in force a quota law to restrict immigration from those cheap countries.

Again, I submit that what Canada needs is employment for her people—work and wages for her artisans and mechanics. We all deplore the exodus of our young men to the United States. Will anyone tell me that these young men are leaving because of the high cost of living here? Certainly not. Everyone of them is migrating because he has not got work and wages at home. I submit that this budget will lessen work and wages, and so restrict the purchasing power of our artisans and mechanics. In a word, it means for them an empty pocket instead of a full dinner pail; emigration instead of occupation.

Suppose we do get free trade and so cut down the price of goods, will the resultant cheapness which is so much desired continue here? I do not think it will last very long. Aside from the argument—which I think is quite sound—that once the American industrialists have secured control of our markets they will begin to recoup themselves by charging higher prices for their goods, who will pay the main proportion of our taxes? I repeat, I do not mean anything offensive to the farmers in these comparisons which I am making. But who will pay the main proportion of our taxes? There is a tendency on the part of many of my friends from the prairie provinces to take the attitude that they are making all the sacrifices by reason of the tariff duties which they have to pay. I have heard them declare: Let the protectionists get off our backs. That is the attitude which our friends frequently take. I do not admit that all the sacrifices are made by the farmers of the West or by those of any other part of the Dominion. I submit that many sacrifices are made, and made willingly, by the people of our cities and towns. Who pays the bulk of the income tax? Less than 2 per cent of the fifty or sixty millions collected, according to the statement of the Acting Minister of Finance (Mr. Robb), is paid by the rural districts; over 98 per cent, is being paid by the industrial centres.

Mr. FORKE: Why talk so much about sacrifices when everything is all right in the industrial centres?

Mr. MANION: I am talking about my friends to my left claiming that they are making all the sacrifices.

Mr. FORKE: Excuse me, you referred to other people making sacrifices.

Mr. MANION: So they do. If my hon. friend and his associates are correct in claiming that they are making sacrifices, I am pointing out that the people of the East are making sacrifices too.

Mr. FORKE: We admit the sacrifices; you do not.

Mr. MANION: I am pointing out the sacrifices that are being made by the East in regard to other things than the tariff sacrifices that the West complain of.

Mr. FORKE: That is different.

Mr. MANION: I was referring to the income tax. Let me point out also that, although it is difficult to prove, I may venture to assert that 75 per cent—yes, very much more than 75 per cent, of the customs duties are paid by the cities and towns on the luxuries which they buy.

Mr. FORKE: That is right.

Mr. MANION: If my hon. friend admits that that is right, then he must admit also that the cities and towns are paying more than their share of taxation.

Mr. FORKE: We admit that they have the luxuries.

Mr. MANION: Surely my hon. friend does not want to change the whole system of this country whereby men are rewarded for their enterprise and business ability? If so, he is getting back to a proposition coming from Russia with which I do not agree. Not only do the cities and towns pay the bulk of the customs duties and income tax, but they help to pay for rural education, rural roads and rural mail delivery. I have in my constituency rural mail deliveries which do not bring in enough to pay the cost, and there are very many throughout the country. I have pointed out before, but my hon. friends are apt to forget it, that nearly $6,000,000 is given annually by way of direct assistance to the agricultural interests of this country in the estimates before the House. I wish to repeat, because my hon. friend is apparently taking offence at these comparisons—

Mr. FORKE: No.

Mr. MANION: I wish to repeat that I am offering no criticism of these conditions. I simply make the statement that if the industrial centres of the East are willing, as they are, to make sacrifices on behalf of the prairie sections of the Dominion, those prairie sections must not expect to make no sacrifices

at all. If the industrial centres are largely wiped out, who is going to pay the large obligations of this country? Who is going to build the Hudson Bay railway, which is demanded from the West? Who is going to pay the increased deficits on the Canadian National because of the traffic being to a greater extent north and south than east and west? The West is going to pay a greater proportion than she does now, if she is able, and I submit that the last condition of the West might well be worse than the first. It might be well for the people of the prairie provinces who demand free trade—and I do not need to look always to my left; I may look across the way sometimes—to remember that maxim of Shakespeare, which suggests that we should—

> —rather bear those ills we have,
> Than fly to others that we know not of.

I fully realize that there is a depression in the West. I fully realize that relief is needed, so far as possible, but I am not admitting that we should wipe out the industrial East to bring about that relief. I repeat that the tariff is not the cause of the present conditions of the West. I have been in surgery for about twenty years and I have never yet seen an opportunity to save a man's arms by amputating his legs, nor do I think that you can save the agricultural arms of this country by amputating its industrial legs.

Mr. GRAHAM: Sometimes you save a man's life by cutting off his leg.

Mr. MANION: Apparently my hon. friend and his government are attempting to do that in this country at the present time. For myself I do not think it can occur in fiscal matters.

The hon. Minister of the Interior (Mr. Stewart) in his speech the other day pointed out that we who support protection do not realize the importance of the West to Canada. We do realize the importance of the West to Canada. I realize the importance of all sections—of British Columbia, of the prairie provinces, of the Maritime provinces, and I also realize what he and his friends do not seem to realize, the importance of Ontario and Quebec. I do not know whether I should admit that the two million people in the prairie provinces are more important to Canada than the six million in Quebec and Ontario. I submit that some remedy should be worked out whereby we can help the prairie West, and I am entirely for doing that so far as it is possible, but not to the extent of running some other section of the country.

Protection is needed in the East because of the low labour costs in Europe. One instance of that occurred a few weeks ago when there was a strike in Manchester—at least, it was so reported in the press—the operatives of certain cotton mills there demanding to be paid $7.92, not per day, but per week. Those who were running the mills said that the most they could pay and compete with the rest of the world was $7.04 a week, while for the same line of work in Canada they are paying from $15 to $20 a week. This instance will illustrate the cost of labour in Europe. Then, there is the question of depreciated currency. I hold under my hand—I shall not take time to read it—a statement by Professor H. Mitchell, of McMaster University, Toronto, in which he points out what everybody knows well who has given any study to the question, that due to the depreciated exchange of Europe there is an invisible bounty paid on the exports of Europe when they come to the United States or Canada. One of the ways that the government could help the industries of Canada would be to protect them against that invisible bounty. In passing, I suggest that in view of the facility with which this government changes its mind overnight, I should not be at all surprised if they brought in some modification of their resolutions to this end, and I hope they do, for the good of the country. At present, however, there is nothing in the budget to protect us against that depreciated exchange which, according to Professor Mitchell and other authorities, owing to the depreciation in the value of the pound sterling, gives from 7 to 10 per cent less protection to the industries of Canada.

Then, there are the handicaps to industry in Canada, the eight-hour day in many provinces; factory laws; workmen's compensation, and standards of living which are higher in Canada even than in such countries as England. In other words, if, as the labour people state, we permit the cheap products of cheap labour to come into this country free, we will deprive our own working people of employment and drive them to the United States. I believe we must help the prairie West. We must do everything we can which does not go to the extent of ruining the industrial East. A national policy for this country is one which should so far as possible help all classes, agriculturists, artisans and industrialists. I admit that it is very difficult to do anything in the line of protection to help my friends of the prairie provinces who grow wheat; I admit that very freely, I admit also that probably they would gain to a certain extent, temporarily, from free trade. But,

Sir, if we cannot help them by protection, then it is our duty to help them in some other way to make up for the sacrifices which I admit they make to a certain extent through the operation of the protective tariff. But we can help the other farmers of this country: we can help the truck farmers, the fruit farmers, the dairy and poultry farmers. Tens of millions of dollars' worth of fruits, vegetables, butter, eggs and cheese are imported into this country to compete with our own products. Let us keep our Canadian markets, not only the industrial markets but the agricultural markets, for our own Canadian people. The Canadian duties to-day on the agricultural products which I have just mentioned are about half the American duties against similar products entering the United States from Canada. Under a proper national policy for this country agriculture and industry could progress and prosper hand in hand, as they should progress and prosper. That Sir, should be the goal of national greatness to which we should aspire; that is the goal to which we will attain if. in the words of Lord Chatham, on another occasion, "we have no craven fear of being great" in this country.

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

Mr. A. L. HODGINS (East Middlesex): I desire to occupy a few minutes in expressing my views concerning matters which have been brought forward in the budget, and I can assure hon. members that I shall not speak at undue length. First let me extend my congratulations to the Acting Minister of Finance on the concise and businesslike character of his financial statement. I also desire to sympathize with the Minister of Finance upon his illness, and with the leader of the opposition in the loss which he has just sustained.

As to the budget itself I am in perfect accord with some of the criticisms which have been made. I believe that the surplus for which credit has been claimed is largely a matter of bookkeeping. But the tariff changes which the budget makes undoubtedly create a line of cleavage between the protectionist and the free trader in this country. I believe with the previous speaker that the budget has brought the issue of protection versus free trade before the country in a way it has never been brought before. When one studies world history one cannot fail to be impressed with certain peculiar features which have attended the development of this issue. For example the farmers in England to-day are asking for protection while the people who want free trade are the manufacturers. In the United States a few generations ago the farmers were the free traders and the manufacturers were the protectionists. To-day the reverse is the case: The farmers are the protectionists and the manufacturer, or to be quite accurate, the big financial interests of the country, are commencing to clamour for free trade. And why are they doing so. Because they find that in order to market their own products they must trade with foreign countries, and there must be a lowering of the high tariff duties before the products of other countries can secure admission to the United States market. International trade is not trade between nations as nations. What it means is that individuals or firms of a particular nation trade with individuals or firms of other nations. As it appears to me customs duties are simply fines placed upon individuals in return for the privilege of trading with individuals of other countries. If we were to place such fines upon individuals trading with each other in our own country we should look upon it as a very absurd proposition to say the least. But because the other party to the arrangement happens to live in another country the system of imposing fines is regarded as quite proper. But if fines are levied on transactions between different countries why not carry the principle to its logical conclusion and impose duties in the case of transactions between different counties or different provinces of the same country?

If we take the experience of reciprocity in the past doubtless thousands of residents of the United States opposed reciprocity with Canada because they thought it would be profitable to Canadians. Probably, too, reciprocity was opposed by many Canadians because they thought the United States rather than Canada would benefit from that pact. But even if the other country is going to benefit to some degree why should that be disadvantageous to Canada? Under free trade the labour and capital of our country would be forced out of artificial channels and into occupations which would produce with greater efficiency, those articles which we need most. It follows then that if we attain the best results by our tariff policy we shall attract more immigrants and more capital to the country. Then instead of admitting immigrants into Canada indiscriminately we should be able to cull our future citizens from the immigrants that offer and let into the Dominion only the very best.

Taking the four great fundamental industries of our country from which we really derive all our wealth, namely fishing, mining, lumbering and farming, which policy, protection or free trade, will prove the more beneficial to them? If we take the products of those four industries and ask ourselves how much protection has increased the selling price of them, we will have to admit that it is very little, if any. Then we take the materials we have to buy and ask ourselves how much protection has increased the price to us, and in almost every case we must admit it has done so to a considerable extent. We cannot help but realize that protection is far from being a benefit to the people of this or any other country. If it is necessary —and I do not believe it is—to have a protective tariff to enable the manufacturers in this country to live and carry on, we should also have a protective tariff to enable the farmers to live and carry on, and as it is an impossibility to protect the farmer in the greater amount of his products, as he must look outside our country for his market, we should, to place him on an equal footing, grant him a bonus on every bushel of wheat, every pound of beef, every pound of pork and a great many other articles which he produces at the present time. If our protectionist friends wish to come across with a proposition of this kind, they might hope to get some support from the farmer, but I think the foolishness of this is quite evident to them, and I cannot see why they should not be sensible about the tariff arrangements, and be manly enough to stand on their own feet and not to resort to a legalized form of robbery in order to carry on their business. One might just as well allow a merchant in this city who is not making a profit in his business to come down the street and rob a fellow merchant who is not making any more profit than he himself is making.

Reductions have been made in this budget along some lines, but I believe it is just as necessary and perhaps more so, that reductions should be made all along the line. Taking our boot and shoe industry, there is no reason that I can see why it should be protected to the extent of thirty per cent and other businesses have little or no protection. Building is cheaper in Canada than in the United States. The workers in these factories do not receive as large a wage as in the United States. The machinery which is necessary in these factories is put into the factories in the United States and Canada by the same company and on the same terms; the lasts which are necessary are made from Canadian wood which is right at hand, and they have the advantage in freight rates on account of being closer to the Canadian consumer. With all these advantages there is no reason why they should need this protection, and it is the same practically with all the other manufacturing interests. Every other manufacturing business in this country I think would come pretty nearly into the same category. We find to-day a paper company selling paper in the United States cheaper than in Canada and doing so on account of the protection it enjoys, and yet we find the president of the same paper concern going up and down this country preaching the fostering of home industries. It seems to me that that is not exercising very good judgment and is not a consistent policy. If it is necessary that we should retain our custom duties in order that we might raise our revenue, I might suggest to the minister that he place an excise tariff which would be almost if not altogether equal to the present customs tariff, and thereby the country would get the revenue which is at present going into the pockets of the manufacturers; but I would also suggest to the minister that he could collect more money and collect it easier and cheaper by placing a direct tax on the assessed value of the different businesses and occupations throughout the land. I have in my hand a clipping from the California Farmer which says:

> All that the farmer can hope to demand is fair play, the removal of unequal burdens, with free access to the markets of the world.

And I might say that that is all we want.

> This he will not get at once from any political party, but in proportion to his recognition of his real needs, he can compel their alarmed attention. The prosperity of the few, in which half the nation does not share, is built on sand, and cannot be stable until the farmer comes into his own.

Mr. WILLIS KEITH BALDWIN (Stanstead): The tariff of the country is a subject of the greatest controversy and this to a large extent is true of almost every country in the world. The budget in this country and the tariff in the country to the south of us have until very recently been subjects of very great controversy. In the years 1919, 1920 and 1921 we had the strongest evidence of antipathy between the then government and the little group in the far-off corner. Very hard words were spoken in those years. And if the group has grown to its present magnitude, it is on account of the fact that the opposition to the government in 1911 fought desperately against reciprocity in natural products, which had been advocated since the abrogation of the reciprocity treaty with the United States in 1865. The emissaries of this country were

often in Washington trying to renew that treaty. Prominent men of the day, including Sir John A. Macdonald and members of his cabinet, travelled throughout the country and advocated the renewal of the reciprocity treaty. When the time came that President Taft made overtures to this country to renew that treaty, desperate means were taken to defeat it. The acting leader of the Progressives (Mr. Johnston) the other day made a positive statement in regard to it, and I have not the least doubt that what he said was true, that when the Right Hon. W. S. Fielding went to the great metropolis of Montreal in 1911 and told the interests there that they would make a mistake by turning down reciprocity the result was that they fought desperately against it and contributed freely to the campaign funds to be used against the proposition to adopt that treaty. That caused the defeat of the reciprocity measure.

We should remember that about two-thirds of this great country lies to the west of the province of Ontario, and that for the last two sessions the members of the Progressive party have spent a great deal of time and energy in this House advocating such a measure. They have continued to debate for two sessions with their very extensive vocabulary, and with the full force of their personality, and individuality, and I hope their vocabulary is not larger than their hearts. But this country had come to the point where somebody needed to strike out boldly and endeavour to ascertain if anything could be done in this country, by give and take, to make Canada a country worth living in, where the people would be united, with a tariff that would do the greatest good to the greatest number.

I am glad that we have an Acting Minister of Finance who has proclaimed many times in the past six years that he would not destroy any industry in this country. In other words, he might be considered a protectionist, as I am. I represent a very large industrial community as well as an agricultural community, but I recognize the fact that something must be done in Canada. I was out in my constituency during the last few days and I heard no criticism. On my return I stayed in Montreal for a day and I heard some criticism. As I diagnosed the situation, as nearly as I can find out, the criticism all came from the Manufacturers' Association of Canada. Personally, I am a manufacturer. I am identified with many industries as well as a number of businesses. Nearly every dollar that I have is invested, either directly or indirectly in the great industries of this country, so that I would not do and I should not support anything in the shape of class legislation. We cannot continue in the same way as we have been doing, milking the same cow in the same old way for all our revenue. I am proud of the Acting Minister of Finance on broadening out and adopting a policy that will not bring the forces of this House into great antagonism.

Let me say for the good of the manufacturers of this country that they possibly could alleviate their own condition if they see anything facing them that scares them. First, I would recommend that our manufacturers go down to their offices and unlock their doors at seven o'clock, instead of living in better houses than other classes who are watching them closely, living expensively, dressing gorgeously, driving expensive cars, taking long holidays and neglecting their business. If you say to them: "Why can you not get hold of your business as your fathers did?" they will say: "Oh, I have an organization; I cannot dissolve that organization; if business should pick up and the organization was dissolved, I could not handle the business because the organization would be gone." I put the question personally to some of those men. I have an illustration of a man who left Scotland more than fifty years ago. He came to a growing city in Canada and he went into the clothing business. He was his own buyer, his seller, his cutter and his accountant. If he had any assistants, he was the man that guided them on. He built up from a small business to a larger business, a larger business. No less than eight different places did he enlarge. Before his death—and he died too soon—he built a large manufacturing establishment in which he put the name of the company, and he hoped that it would continue. When the son came into the business and one other person whom I well know, I happened to go into the place, and what did I notice? I observed as I went in at the door, that the office had been fitted up with $5,000 worth of mahogany. It was gorgeous, I assure you. Not very many years after I happened to visit the place, and the man whose father had built up the business said: "Things are going bad; do you know where I can get $100,000?" I said: "When I came upstairs, I cast an eye back at the office and I noticed that what you call your organization were not busy; I observed that the female members were chewing gum and probably pinching themselves in order to keep from going to sleep. I noticed that the men were not working. I know another organization that has three stenographers, a financier and an-

other man to assist. The man sat in his office and he wrote five-page letters when two sentences would have been better, and his business went to the dogs. "Now," I said, "young man, will you take an old man's advice?" He said: "This is getting desperate, and I do not know where I am going to land." I said: "Would you rather face bankruptcy than go down to the office with a smile and say to them: 'My father built up a business that I have inherited. He knew his business but I do not know mine. I must come into the office to-morrow morning at fifteen minutes before seven, unlock the door, learn the business and see where I am going.'" His organization was costing him twenty dollars where it should not have cost him over two dollars, and I am right. I might expatiate further, but that is a criterion of what is going on throughout this country. The young men should take their father's place and go down to the business and learn it. When a customer comes in and asks him a question, they will say: "Oh, I do not know, I will find Tom, Dick or Harry." That is true, not in one business alone, but in thousands of businesses that have an organization that is running the business. Be it to the credit of the Jew, he has the clothing business of the United States largely and he will have it in Canada because he is running the organization. Some day he will have saved up enough in salaries to buy the institution which others cannot handle.

I heard the Minister of Finance (Mr. Fielding) speak about free trade in 1920, I think—and he made a fine speech—but in his concluding remarks he said that while it is good in theory, it cannot be in practice, because practically every country in the world is to-day under a protective tariff and therefore we have to have one. I have heard the first leader of the Progressive party (Mr. Crerar) say that we have to have revenue and we have to have a tariff to raise it. During the present session I heard the leader of the Progressive party (Mr. Forke) say: "I would not support a measure that would cripple one legitimate industry in Canada." I ask you, Mr. Speaker: Has the Acting Minister of Finance kept faith and brought down a budget as well as any other man in this House could do? The question was a great one to cope with. In my opinion, although I have not spoken to him nor sent a delegation or any advice,—and I think that is something remarkable throughout this House—he has looked at every thing in the country from all angles. If we consider the

remark that has been made by the leader of the Progressive party that he would not cripple or do injury to one legitimate industry in Canada, is it right for our Acting Minister of Finance to bring down in this House a measure that will assist those who for two sessions have been hammering away in this House? I am not criticising them for doing that; they knew best their personal trouble, but there was about their speeches a personality that was astonishing to the old liners.

The people in the province of Quebec have had their troubles just as the people in the West and in the Maritime provinces have had. Indeed, it has been pretty much the same all over the country so far as the agriculturists are concerned. But we have had to take our medicine. We have heard from the official opposition during the past two years, and particularly from the leader of that party (Mr. Meighen) the statement oft repeated that we on this side are more protectionist than the Conservative party. And shortly before the budget was brought down the right hon. gentleman said that we had only to wait and see and we should find that when the budget was disclosed nothing would be done. I do not think that anybody outside the cabinet had the slightest inkling as to what the budget would reveal, but personally I had perfect confidence in the course the Acting Minister of Finance adopted when he delivered what I think was the shortest budget speech that has been made in this parliament in many years. I believe that the minister has acted boldly and courageously in the interests of the greatest number of the people. I submit that we ought to stand at his back and support him, and if his proposals do not succeed as well as we hope, then they can be changed. As a protectionist I would not only do what the minister has done; I would go further; I would adopt the tariff of the United States in many respects. They are exporting to this country over $90,000,000 of agricultural products, and I suppose that it is because the agriculturists in this House were sincere in their free trade professions that they did not insist on being protected themselves. But I think that we might have kept the agricultural products of the United States out of this country just as they do ours, because I believe in self-preservation. However, there are more years ahead of us, and in the meantime I support the present budget believing that no harm will be done the great industries in my country. There has been a great deal of hue and cry on the part of the woollen manufacturers, but I think that the

reduction in the sales tax will about equal the preference on English goods coming here. I hope so at any rate, and I trust that things will work out well for the woollen men. On the whole I think the minister has given us a balanced budget; there is a surplus of some $30,000,000 in the year's operations and there will be saved to the taxpayers for the next year $24,000,000. How could the Acting Minister of Finance have done better in the face of present conditions.

MacLean's magazine has been writing a lot about the scandalous extravagance of the government and has been comparing the Liberal party to the Conservative party with its corruption; it has been talking about graft in connection with everything, and has dealt particularly with the over-manned Civil Service. I do not wonder that there has been an uprising in this country when we have had the Civil Service increased by the late government from 11,000 to 60,000. It is not surprising that some able man in the press gallery should have undertaken to write the thing up. I have copies of MacLean's magazine and I presume every other hon. member has; and in the face of these facts, what do hon. gentlemen expect, in the name of common sense, that the Acting Minister of Finance should have done but to have brought down such a budget as we are considering to-night? Was he to have given us the old see-saw budget without making any effort to alleviate the conditions of the poorer people? I am pleased indeed that the government should have reduced the Civil Service by some 8,000. Suppose we had a business man who acted in a pussy-footing sort of way, wintering in California or Florida, what would one expect from such a man? Yet this is the type of man who would pray in this fashion:

> O! Almighty Dollar! Thy shining face
> Bespeaks thy wondrous power.
> Make my pocket thine abiding place.
> I need thee every hour.

Let the manufacturers sympathize with the labourer and the farmer. I happen to be one of those who rise at five-thirty every morning and even earlier, and I work fifteen hours a day. I do not like being personal to this extent, but I think that a little outspokenness occasionally does no harm. I have lived nearly seventy years and there is not a better-feeling man in all Canada. I live for the joy of living and work cheerfully, and in the long run I think the cheerful worker has everyone beaten to a showdown. I have demonstrated that hard work hurts neither man, woman nor child. Indeed, some people contend against child labour, but I would let children work if they wanted to. If we did we would have better men and women.

Now, my hon. friends opposite are shouting protection all the time, and this cry was their only hope in the election campaign of 1921. But it did not avail them anything. I might say that the man who opposed me in my county lost his deposit, and I had a thousand to spare on my side.

Mr. SUTHERLAND: The hon. member was not talking free trade then.

Mr. BALDWIN: No, sir, and neither am I now advocating such a policy, but let me tell you something that was said at the nomination convention. A most distinguished lawyer from Montreal got up and said: "If you vote for W. K. Baldwin the people in Magog who work for the Dominion Textile Company will go with empty dinner pails, if they do not even eat rats." But I feared no such talk as that; I am like my hon. friend from Brantford (Mr. Raymond)—there is a closer relation between myself and my constituents than dollars and cents. My constituents live honourably and work hard, and they are charitable to the poor and the deserving. There is not one of them who is an autocrat.

Talking about the customs tariff, I have an absolute experience to relate. I received from Lamonte, Illinois, some very alluring prices on aluminum ware. For instance, teakettles for which I would pay $3.50 in Ottawa in war time were quoted at 80 cents, and every article on the long list was subject to a special discount of 25 per cent during the month of February. After several lists had been sent to me I called up the customs office at Coaticook and asked the tariff on aluminum-ware. They informed me the rate was 30 per cent. Thereupon I sent my order, and in due course the goods came forward. I sent the triplicate invoices down to the customs offices. Did I pay 30 per cent, Mr. Speaker? Not at all. It was plus, plus, plus. The duty came to slightly over 40 per cent. Well, the sale that I had on was slightly embarrassing to me, because on an order of $124.85 the duty amounted to $48.75. The freight was remarkably low, for in that great centre of Chicago they get exceptionally low rates to New England points, and it seemed to me that they got a very low rate indeed to the town of Coaticook. I have no fault to find with the great school of experience, which is the best educator in the world, but I assure this House that the next aluminum ware I want I will order from Oakville, Ontario,—just a little south of the constituencies represented by the Toronto members. Certainly I shall not send

any more orders to the United States, for the duty is not what it appears to be. I am told that when the rate of duty is 40 or 42 per cent the actual percentage paid by the importer is over 50 per cent. So what in the name of common sense is the Manufacturers' Association hollering about? If that is not protection enough for them, what do they want?

I had not intended speaking on the budget, but I have been prompted to address the House by reason of some criticism that I heard in Montreal the other day from the Manufacturers' Association respecting the budget. They have worked very, very hard to get me into the Association, but I prefer to run my own business rather than allow any organization of manufacturers to run it for me. I want to be in touch with my business and be able to do the dirtiest job; while other people are dreading such things. I never saw a dirty job yet that could not be fixed all right with soap and water. If any men are losing business as a result of the budget, I ask them to live as modestly as do the members composing the Progressive group; I ask them to economize, to tell their dear wives, "I am not making so much money, perhaps, as you think I am, and probably it is our neighbours after all who tell you how rich I am." It is a very common practice for an acquaintance to say, "If I had your money I would do so and so." But so far as I am concerned, I spend my money to the extent of my credit, and I do so for the development of this great, grand and glorious Canada, as I am a Canadian first, last and all the time. I believe that we should go north and develop our great resources. I see the hon. member for East York (Mr. Harris) is in his seat. The other night—and I say it in all kindness—he was telling about the Laurier government building a railroad away in the northern part of Quebec. He knows what I am going to say now. I say to him, "Just cast your eye on the map and you will see that more than nineteen-twentieths of the great province of Quebec is north of the railway."

Mr. HARRIS: Will the hon. member tell us about the population north of the railway?

Mr. BALDWIN: There are few people there; but I believe there is untold wealth in that country awaiting development, and I am willing to risk the money I have to help find it. It is claimed that the gold vein which is making the province of Ontario so rich runs through northern Quebec down to the Labrador coast and up to Hudson straits. I ask hon. members to visualize the wealth that God in His wisdom has placed in the midst of that country—wealth that will enrich the Dominion. The great clay belt alone is capable of producing immense wealth. When I read in the newspapers the troubles and deaths by accidents at the coal mines in the United States I say to myself: Canada should rid herself of paying the United States $100,000,000 a year. Instead of sending all this money out of the country we should create a better, a cleaner and a more serviceable power in our own country than we can generate from American coal. Eventually our water-powers will warm us as well as give us power and light.

In conclusion, Mr. Speaker, I stand at the back of the Acting Minister of Finance (Mr Robb) because he has had the boldness and the courage to bring down a budget that few men in this House would have dared attempt. I congratulate him on his sound discriminating judgment.

Mr. M. C. SENN (Haldimand): Mr. Speaker, it is my intention to speak very briefly on several aspects of the budget. The effect of the budget and of the subsequent addresses delivered by several hon. members on the other side of the House, particularly by the members of the government, has been to create a feeling of uncertainty and apprehension throughout industrial Canada. A further result has been to bring the issue of protection more prominently before the House and before the country.

Last year there was an increase in the British preference on knitted goods, and in spite of the bad effect that that had upon industry, this year there has been another reduction in the tariff on farm implements. The injury brought about by these changes in the tariff has been greatly increased by the suggestion involved in the hope expressed by the Minister of the Interior (Mr. Stewart) that these reductions should be the death knell of protection. Last year I pointed out to the House the serious consequences which the increase in the British preference would have upon the woollen industry of this country. There has been sufficient evidence before us during the past year, both through statements in the press and in speeches made in this House, to justify fully the warnings which were given at that time. I think it was the hon. member for Fort William and Rainy River (Mr. Manion) who made the statement in the House not long ago that 40 per cent of the machinery in our woollen mills had been closed down.

Now, these are the results which we have already seen in respect to the change in the tariff on woollen and knitted goods, but there are results which we have not yet known anything about. Our woollen industries and our knitting industries are struggling along as best they can to retrieve their position and to keep their heads above water. There is a certain amount of momentum which a well regulated and a well organized industry always has which enables it to carry along for a certain length of time even under adverse circumstances, but if those conditions do not improve that momentum must gradually fail.

I could inform the House, if I were at liberty, of companies who are in the woollen business who did not feel the immediate effect of the increase in the British preference, whose sales for the past three months of this year have been practically cut in two compared with their sales of a year ago. Many companies are in the same predicament, and the result must be that large numbers of their factory operators will be thrown out of employment and possibly will have to migrate to the States to earn a living for themselves and their families.

There is every indication that the volume of imports will go on increasing. I have in my hand a clipping from the Daily News Record, a financial paper published in New York, of the issue of April 21st, 1924, which shows very clearly that the people across the line are looking to Canada for an outlet for their surplus product in woollen and knitted goods. The caption of the article should, I believe, demand the attention of hon. members. It is this:

Canada One of Largest Outlets for all Classes of Knit Goods.

The article says:

Canada forms one of the largest foreign outlets for nearly all classes of knitted goods, especially cotton and silk hosiery, and cotton underwear, the greatest bulk of imports of these articles being from the United States. Great Britain, however, practically controls the market in Canada for foreign made knit goods.

It goes on to state the amount of cotton, woollen and silk hosiery imported during the past year, showing that the total value of the import of these articles was $5,100,000 for the fiscal year ending March 31st, 1923, as compared with $2,800,000 in 1922. It points out also that for the fiscal year 1923 the share of Great Britain in the total import was 63 per cent. It says further that although the United States share of this trade has shown a marked increase, Great Britain still retains a strong hold on the market for wool hosiery and underwear. That is sufficient to show the House, I believe, that the United States as well as Great Britain are looking to Canada for an outlet for their woollen and knitted goods. Another significant fact is that Mr. Walter Schwaebsh has been in Canada recently on a mission to promote the sale of German knitted goods. Among other things he told us while here, through an interview to the press, that the scale of German wages for woollen operatives was 40 cents per day. It is readily to be seen, how impossible it will be for our woollen and knitted goods manufacturers to compete with a wage scale of that kind.

9 p.m.

I want to make a comparison between the duties imposed by the United States and by Canada on woollen goods and knitted goods, a comparison which I think will be of interest to the House. I have taken for the purposes of comparison the line of knitted sweaters, which are sold at the rate of $15 per dozen by the British manufacturer. The Canadian duty under the British preference on these articles is 20 per cent, which amounts to $3 a dozen, while the American duty on the same line of goods is 45 cents per pound, and 50 per cent ad valorem, which amounts to $9.75 per dozen. This is only a sample of what might be shown in artificial silk goods, stockings, and so on. I have made this comparison to show the difference between the attitude of the United States toward their industries and their workingmen and that which has been adopted by the government of the day in this country. The result is that our operatives are leaving Canada every day to go to help build up the protected industries of other countries particularly the United States.

Under the tariff regulations of 1923 a duty was placed on artificial silk fibre coming into Canada. We were informed by the Finance Minister (Mr. Fielding) that its purpose was to encourage the establishment of an artificial silk industry in Canada. Incidentally I might say that that was an acknowledgement by him of the value of protection. A duty was also placed on artificial silk tops, which are very largely used in our spinning mills. I am credibly informed, however, that this new industry which was expected to be in operation at the beginning of next year does not intend to manufacture artificial silk tops, therefore there is no necessity for adding duty to them with a view to encouraging their manufacture here. This matter has been

drawn to the attention of the Finance Minister on more than one occasion, but as yet no remedy has been applied. It seems too bad that our Canadian manufacturer has to buy these silk tops at a higher rate because of this duty than does the British manufacturer who is selling his goods in competition with ours in the case of the finished article. In spite of the very apparent result of the increase in the British preference upon the woollen and knitting industry the government have seen fit to reduce the duty on agricultural implements. It is contended that this has been done for the purpose of aiding agriculture, but I feel sure that instead of aiding agriculture it will in the end have a disastrous effect.

There is no use denying the fact that agriculture in Canada to-day is not in a prosperous condition. There may be some difference of opinion as to the reason for this, but I believe there are three reasons, briefly stated: The first is the loss of purchasing power in Europe. The second is the high tariff walls raised by the United States against our products, and the third is the large importation into Canada of agricultural products from the country to the south. The third reason, it seems to me, is the most important one and the one to which you must turn for a remedy for the existing state of affairs to-day.

It goes without saying that we have little or no control over the purchasing power of Europe, nor over the tariff barriers imposed by the United States, but it should be the duty of the Canadian government to do everything possible to adjust conditions in respect of the unequal deflation of prices. As usual the government has proceeded in the wrong way. The Minister of the Interior (Mr. Stewart) said in his speech last Monday as reported on page 1338 of Hansard:

> We took into consideration the fact that we should, not to any extent, injure the manufacturers of farm implements in Canada, and it is not the desire of the government to interfere with the interests of any industry in Canada. But let me say that, when the full effects of these reductions are felt and when the encouragement which will be given to agriculture permeates through the business of Canada, there will be less unemployment and less emigration to the United States than under existing conditions to-day.

Now, I should like to examine for a moment or two just what benefit the reduction in the tariff on agricultural implements will be to the Canadian farmer, and in this connection I have taken the trouble to obtain a list of the prices of agricultural implements as they are used on the ordinary Ontario farm. These are the prices at which agricultural implements are offered the Ontario farmer by a well known and reliable firm:

Manure spreader	$227
Disc—No. 16	73
Spring tooth harrow (17 tooth)	37
Harrows—16 ft.	34
13 disc drill	160
6 ft. mower	109
Dump rake	47
Loader	127
7 ft. binder	284
Wagon 3½ x 11	122
Verity No. 8	62
Walking plough	25
Corn binder	256
Cultivator	48
Small tools, axes, forks, shovels etc.	100
	$1,711

To this price list I desire to add the sum of $290 for "sundries" such as light wagon harness, and so on which will bring the grand total to $2,000. If the farmer could get the full benefit of the reduction in tariff on the price of these implements it would only mean a very small amount per year, taking the average life of these implements at ten years—in any case it would not amount to over $10 a year. Yet the Minister of the Interior tells us that when the effect of this reduction is felt, the encouragement afforded to agriculture will cause a wonderful revival of business. Could anything be more absurd than to have a minister of the Crown stand in his place in this House and intimate that because a farmer is going to enjoy a $10 reduction of yearly cost in his implements the government has removed all his difficulties and that all he has to do is to go ahead and prosper. The government are really saying to the farmer "We cannot do anything to increase your revenue, but if you are not prospering we will see to it that other industries are not prospering either—we will do our best to destroy the market you have in our own centres of population."

Before agriculture can prosper in Canada the price of farm products must be equalized in comparison with that of other commodities. In my opinion the way to do this is not to seek to reduce the price of other commodities by the lowering of the tariff wall, thus driving our industries out of business, but to strive to bring the price of farm produce to a higher level. Our people were never so prosperous as when prices were on the high level, of years such as 1920-21. The way to accomplish this is to retain and to enlarge our home market. In spite of a determined effort on the part of certain hon members to minimize the value of our home market, it is and will continue to be our greatest asset.

The Minister of Agriculture the other night, when speaking on his estimates, expressed the view that the imposition of high duties would increase the price of farm products. He was discussing apples at the time but the inference was plain. I contend very strongly that instead of trying to lower the price of commodities which farmers have to buy—by reducing the protective tariff—and incidentally increasing imports and driving our people out of the country to find employment—we should keep them employed and keep them consuming our own farm products. These they would be able to purchase even under a higher tariff which would increase prices.

The hon. member for Queens (Mr. Sinclair) spoke in the same strain as the Minister of Agriculture. He went to considerable length in trying to convince the House that it was not necessary to increase the duties on farm products. Among other things he made special mention of fresh fruit and cheese, and tried to convince the House that the importations of farm products were largely of a kind not produced in Canada. He also told us that a large percentage of the fruits imported were not of a kind produced in Canada, and that the same was true about the importations of cheese. I do not wish to contradict these statements but let me say that every bit of imported fruit and every pound of imported cheese consumed in Canada displaces just that much of our Canadian products.

Then again in regard to eggs. The minister told us that the great bulk of imports are made during the months of December, January and February, just at the time when our own production is at its lowest. The same is true of vegetables. But the effect of the low duty on these articles is that the American producer has been and is still enjoying the benefit of the Canadian market when it is at its best—in other words, he gets the cream while the Canadian producer gets the skimmed milk. There is another side to this question as well. Importations of farm produce at that time of high prices displaces our eggs and vegetables, which are being held and have not been disposed of. I think the Minister of Agriculture the other night made the statement that our cold storage eggs were second to none in the world. I cannot see what difference it makes to the Canadian consumer whether he gets his first taste of new potatoes or fresh eggs in April or later on so long as he gets it at some season of the year. The ordinary artisan or labouring man does not buy new potatoes when prices are at their peak. It is only the well-to-do that benefit from the importation of American products when our prices are high. The producer and the artisan get the worst of the deal both ways. One way we can help agriculture is by increasing and enlarging the home market. There is another way, I think, in which we can benefit very largely as agriculturists. We need a substantial reduction in freight rates. The Ontario farmer is suffering very materially from high freight rates, and I believe great injustice was done him by the restoration of the Crowsnest pass rates in 1922. Mr. Beatty, president of the Canadian Pacific Railway, made the statement before the Transportation Costs Commission that the chief objection to those rates was the fact that it would prevent the downward revision of rates in Canada generally. These rates affect my own constituency very seriously. I do not think there is a constituency in the province of Ontario which ships more hay and straw than my own. These commodities are naturally very bulky and the freights are very heavy. Most of these commodities are shipped only a short distance, namely 60 miles to Toronto, and yet the freight rate on hay and straw leaving the five principal shipping points in my own constituency amounts to $2.75 a ton. There are many thousand tons shipped out during the year, and if we could only have the same reduction of freight rates which the farmers of the West were granted by the restoration of the Crowsnest agreement it would amount to thousands of dollars to the farmers in that neighbourhood.

It is difficult to understand in the face of the serious situation forced upon the woollen and knitting industries by last year's tariff reduction, why the government will threaten the existence of other industries by tampering with the meagre protection which is now afforded. One is forced to the conclusion that the retention of office is the government's first consideration and that it is of more importance than the welfare of our industries.

I am not in a position to speak about the West but am free to say that the Ontario members of the Progressive group do not represent agricultural Ontario on this question. The Ontario farmers spoke in no uncertain way in the reciprocity election of 1911 and will do so again at the very first opportunity. They realize the value of the home market and the policy which will appeal to them more than any other is one which will retain and enlarge their home market; a policy of adequate protection not only for the manufacturing industries but for their own agricultural product.

Mr. JOHN PRITCHARD (North Wellington): In rising to speak for a few minutes on the budget, I feel that it is fitting to make some reference to the fact that death has again visited our midst. While it has not taken one of our number from us, it has affected a gentleman who has occupied one of the first positions in our land, and to-day we have a number of the members of the government prominent in the public life of the country who have not been able to appear in their places on account of ill health. We are again brought to think of the lines:

> Lives of great men all remind us
> We can make our lives sublime,
> And, departing, leave behind us
> Footprints in the sands of time.

We are sorry to think that men who have occupied prominent positions in this land for a number of years will, we fear, never again enter into the active duties of this parliament. I do not want to be pessimistic, but I think we all believe that; and furthermore some of us who believe we are in the activities of life, when we stop to think, realize that it will only be a few short years until we also will be called upon to depart from the scene of our present activities. May it be said of us as we can honestly say of some of our predecessors that we also have played our part in the work allotted to us.

Perhaps I might also pay the Acting Minister of Finance (Mr. Robb) the compliment of saying that while his budget does not please us altogether—for some of us are very hard to please I will confess—it is perhaps a step in the right direction. Now I am going to give my opponents credit for being sincere in their endeavours to do something in the interests of Canada, so far as our trade relations are concerned. I would like for a short time to view the situation as it exists, and to see what the actual conditions are to-day. Any remarks I may make are based on what I have heard while sitting in this House for two years; and, in common with the hon. member for Cariboo (Mr. McBride)—and I came from the same stock politically as the hon. member—I have been persuaded more and more as I have listened to the debates in this House, of the weakness of the arguments of those who are endeavouring to build up this country by a high tariff wall. Perhaps there are no arguments from any corner of the House that have convinced me of the fallacy of their contention more than those which they themselves, have advanced. I have listened to their speeches with great interest, and I will endeavour to-night to make a few remarks about some of them, to show what I consider the illogical line of argument they are endeavouring to pursue.

What is the condition in this country to-day? We hear from that corner of the House to the left of you, Mr. Speaker, of the terrible disaster that has overtaken the manufacturers of this country—the same disaster that has been overtaking them for the last two or three years—and they connect it with the budget which we are discussing to-day. The protective policy has been in operation for about forty years and if there have been any results affecting the economic condition of the country these results have been brought about by the tariff which these hon. gentlemen and their predecessors put into force. We have proceeded, by an over-industrialized condition to bring about a situation in this country, as I remarked the other night, where we have more manufacturing concerns than can find a market for their products. These hon. gentlemen admit that Canadian manufacturers are unable to sell commodities to any other country; but now they wish us to bring other manufacturers into the country and support them, if possible, in order that they may in this way build up the country. I can think of the proposition in no other way than as that of a man endeavouring to lift himself up by the lugs of his boots. It is just as impracticable.

The hon. member for Fort William and Rainy River (Mr. Manion), speaking before six o'clock, endeavoured to show us that while we were paying the taxes, the manufacturers were really paying them. I would like to see how he reasons it out. The manufacturers fix their price, and when they are fixing their price they add their labour, all their taxes, municipal and every other kind, all the cost of the products, all the overhead expenses, and charge everything up to the consumer. We all share in paying the tax to the manufacturer, and as I think the hon. member for East Toronto (Mr. Ryckman) said, we pay even the sales and income taxes. But another hon. gentleman says we do not pay them. Whom are we to believe? Let us look into the situation.

These gentlemen say they cannot carry on unless they have adequate protection. I would like to know how much would be adequate protection. While in Toronto at Easter I was talking to a gentleman and he said "If I were fixing the tariff I would make it so high that the sun would not shine over it." I said, "In any event, suppose you should make the tariff as high as Haman's gallows, what then?" He will stop all intercourse with outside and he will succeed in

developing this country into a manufacturing country. After he has done that, what is the manufacturer going to do with his product? He tells us to-day that he cannot compete with England because they have cheap labour, and he cannot compete with the United States because they have dear labour. What does he want? He will tell us on the one hand that people coming to this country from Europe are going to the United States to produce stuff that they are selling, in many cases, 20 per cent cheaper than the home market with dear labour.

I want to go back to the question of the fruit situation which I was discussing the other night, as I did not bring out my argument fully with regard to that. The hon. member for South Oxford (Mr. Sutherland), when speaking on the Address in reply to the Speech from the Throne, was looking over the statistical reports, and he showed the quantity of agricultural products that we, instead of growing ourselves, were importing from the United States. I think when some of the hon. gentlemen here began to look into and analyse his figures, they found that quite a quantity of that stuff was in the nature of oranges and other fruit that we cannot grow successfully in this country. I believe they do grow them in Ottawa; if not, they grow them in Guelph in very limited quantity as an experiment in hothouses. Supposing we take the hon. member's suggestion and produce this stuff in our country. We start at Ottawa, put up a large hothouse plant and employ a number of men to grow oranges and bananas and all that kind of fruit. We develop a wonderful industry at Ottawa. We then say: "Oh, we cannot make it pay; we must get protection; we shall have to raise the duty on oranges and bananas coming into Canada because we are not making any money in this business and we cannot afford to let these people go out of employment. Look what it will mean. These people will go to the United States because we are not giving them work growing oranges and bananas in Ottawa." Hon. members may think this is ridiculous, but it seems that nothing short of extremes will show these hon. gentlemen the fallacy of their argument.

I remember Mr. Speaker while addressing some of us whom he was entertaining at luncheon, saying that the members of this parliament should be like a board of directors. I should like to look at this matter from that angle for a few minutes, because I thought the suggestion a very good one. We have been advised from the corner where we get so much advice, that we should go into mixed farming. Let us look at that suggestion for a little while. We have a great big farm here in North America, about 4,000 miles one way and about 1,000 miles, more or less, the other way. It is a wonderful farm. We have the finest wheat fields in the world; we have the finest timber reserves in the world, and back in that stony ridge we have the finest mines in the world. We have the greatest fisheries in the world, and the greatest country in the world to absorb a population that is willing to get down to business and produce. But what is the reason that, with this tariff policy for forty years in this country of ours, we have a population of scarcely 9,000,000 people, and we cannot keep them here to-day when they do come. What is wrong? Is it free trade that has brought about that condition? Do you tell me that Canada is prosperous when we stood up in this House last session and opposed the immigration policy of the government of bringing in people from Europe whom we could not keep, and in order to bring them here taxing the people on the land who could hardly make a living? We know we have a country that can support 100,000,000 people; yet we cannot support 9,000,000 people, and we are talking about unemployment. What is the reason for unemployment? We have this big farm, and the policy of the government was to put people on that farm. But what did you do with the few Scotchmen who came over here and who came to Ottawa after this session began? Did you give them any employment? You could not give them employment in your manufacturing establishments, although you have been developing them for forty years and you say that you are building up this country. The farmers could not pay the wages. Why? Organized industry and organized labour have fixed their prices, and they dictate to the consumers what they shall pay for the product of their labour and their plant; whereas the other half, or a little more than half of the population, having no organization to control the price of their output or the price of their labour, have to compete with the cheap labour in Europe, and they are doing that.

Hon. gentlemen talk about keeping the Canadian dollar at par. Look at the statistical reports and see where the money is coming from. Is it coming from the manufacturers or from the farmers of Canada who are working for a dollar a day? If those men cannot make their businesses pay, why do they not follow the example of the farmers, either do the work themselves or go out of business? They will not do that. Last session we had a howl from the woollen

manufacturers. They came to Ottawa repeatedly because there was a little reduction in the tariff on goods coming from Great Britain. Not long ago I picked up the papers and noticed where one of those woollen manufacturers, in this ruinous year of their business, was declaring a dividend of 7 per cent. There is an island in Muskoka—I think they call it Penman's island—of about fifty acres where you will find launches, boats, and I do not know what all. There is another gentleman who comes from a constituency somewhere around Hamilton who also has an interest in that island. What do you find? I believe the manufacturers of the wealth of this country are the producers in whatever sphere they may be moving. If they are not producers, they do not deserve to have the luxuries and the good things of this life. If they toil not, they should not have anything for a reward. When I was making a comparison between the daughters back on that island in the summer time and some of the daughters on the farm, I could not help thinking that back on that island at Muskoka: "They toil not, neither do they spin: And yet I say unto you, that even Solomon in all his glory was not arrayed like one of these."

Where did the money come from? I suppose it came from their fathers in Toronto. They do not want to pay the income tax, they have been telling us from that corner of the House that they should not pay the income tax; that we are interfering with industry. They claim that it is perfectly legitimate for 90 per cent of the money of this country to go into the possession of one-tenth of the people, to be exploited and done with just as they please at the expense of the 90 per cent. I feel that we want a policy that will give at least 50 per cent of the money to 90 per cent of the people. But they personally refuse to stand for anything of the kind. They say that they will fight anything that will interfere with the conditions under which they are living. They have been endeavouring constantly ever since this House met and since I came to this parliament to show that farming is paying. I have been a practical farmer and there are a good many practical farmers in this corner of the House. I have been told—and I know this is correct—that for quite a number of years there were in this parliament few practical farmers, and I think the business of the country is showing the result of that to-day. We have had men trying to represent us in parliament who do not know agricultural conditions. These hon. gentlemen could get away with all this kind of stuff and make people believe it. When we consider the fight that we have to put up in this House to convince the intelligent representatives of this country of the actual facts, it is astonishing to me to think that we should be obliged to reiterate the facts year after year before we can get them to be admitted. Is it possible that men are ignorant of them, or is it that they do not wish to accept the actual facts when they are convinced of them? I do not know which alternative to take. I know that in some cases it is due to ignorance of the situation; but in other cases I am sure that those who refuse to admit the facts are doing so wilfully.

I referred a moment ago to the peculiar situation as regards the competition of our manufacturers, with the cheap labour of England on the one hand and the dear labour of the United States on the other. We farmers produce our goods and sell them to the men who are engaged at low wages in England. I have here an interesting little statement which I prepared in order to show the position of the working man in England as compared with that of the working man in Saskatoon, from the standpoint of the cost of living. And this is only one out of a number of items. The working man in England can buy 6¼ loaves of bread weighing 4 pounds to the loaf, which is a fairly good supply of bread for a small family for 7 days, and can have 15 cents a day over or $1.05 a week for milk. The working man in Saskatoon gets considerably less bread for the same amount of money; in other words, the man in London or Bristol gets 40 pounds of bread for $1.70 as against 25 pounds for $1.70 in Saskatoon. It is obvious therefore that the cost of living in Canada is too high. As a matter of fact I think this is the dearest country in the world to live in. In the United States we can buy things 25 per cent cheaper, as was proved last year, in regard to a good many articles, in the inquiry which was held by the special committe on agriculture. And the same thing is true in England. Yet hon. gentlemen want to tax us still higher; they say that the tariff is not high enough. My opinion is that the tariff is not the whole trouble; I will admit that. Nevertheless the tariff is a considerable item in the high cost of living; and the wage trouble is one of the most difficult problems that we have to contend against. You cannot separate wages, taxes and the tariff; they are all interwoven. The question was asked the ex-Minister of

Finance (Sir Henry Drayton) the other day, why the manufacturers could not sell in the United States; and he could not answer that question, because he was unable to. If the wages of the artisans were reduced to the level of the wages which the farmer is able to pay, the manufacturer would be able to sell his goods anywhere. But the working men refuse to adopt the standard of living which they expect the agriculturists to adopt. In order to exist on what the people in cities are willing to give them for their products, the farmers of Canada would have to live under the conditions of serfs; they would have to adopt the mode of life which some people say the Chinese and the Japanese follow. The tariff is the issue, and it will be fought to the finish. It was said this afternoon by some hon. gentlemen that the tariff would be the issue before the country for some time to come, and I have no doubt as to the truth of that statement. We cannot, as I say, separate the tariff from the question of taxes and from the wages that are paid. In that direction I heard a criticism of the government by the hon. member for Halton (Mr. Anderson) the other night. The hon. gentleman was referring to what he termed the extravagance of the government in connection with the running expenses of the country, comparing the year 1914 with the years 1922, 1923, and 1924. I took the trouble to work out his figures from my way of looking at the facts and I found that wages had gone up practically 60 per cent in that time, whereas the expenses of the country had increased only 30 per cent. Allowing 50 per cent of the cost of running the country now for wages, it would appear that the country is being managed to-day at a lower cost than it was in 1914. A good many charges are levelled at our public institutions and our local legislatures on account of the extra cost which is involved at the present time in administration. But the great trouble to-day is the wage problem.

As a practical farmer I should like to state briefly what I would do, and what I think every intelligent farmer does. I would not attempt to grow oranges on my farm, nor would I raise peaches. As I said the other night, I looked around to see what my particular locality was adapted for growing, and when I ascertained that, I produced that crop. Hon. gentlemen talk about the home market, and it makes me tired. Every one of these high tariff men harp upon that string, and it is no use laughing at them if we do not meet their arguments. They tell us that if we build up the cities we shall have a home market. Well, that would take altogether too long; we should have to wait several hundred years for such a market, and we are too practical to do anything of the kind. We are told that we are producing too much wheat for the market, and the western farmers are described as miners and not farmers. When travelling through southern Alberta last summer, however, I met a real farmer, a man who was by no means a miner. Now, I believe there is some truth in that assertion; I will not altogether refute it. I believe we have men who are not good farmers. But this man had been on a farm twenty-five years and he had a good stable and a good pile of manure. He was taking care of it and I said to him, "Charlie, what are you doing with that pile of manure?" He said he could not do anything with it yet as his crop was ready to cut. The crop was very good in some places, while in other places it was quite heavy; and he said there was only one little spot where in twenty-five years he had found the slightest need of manure. Had he used the manure on his land it would have been all gone; but the time will come when it will be needed. In the older section of Ontario where we have been cropping the land for fifty years I can show any hon. gentleman farms that have been constantly cropped and are yielding as good crops to-day as ever in their history. And a hundred years hence they will be producing just the same. There is one difference between our farms, properly managed, and our mining and other industries. Our timber resources may—and will—fail, our fisheries may fail, our mines may be worked out; but you will never work the land out. The land will be a national asset for all time. And we have the promise that as long as the world stands seed time and harvest shall not fail.

Now, then, the question is: Are we going to encourage our basic industry, or are we not? They tell us that we have over-production of wheat. What did the most expert men to be found on the North American continent testify before the Agricultural committee two years ago? They stated, and I believe them to be correct, that every year a market is found for all the wheat the world produces. We know very well as practical farmers that in Ontario we can consume a great deal of the wheat that comes from the West. We are consuming screenings, and we want more of them. There is no duty on corn coming in from the corn belt of the United States, we have been getting it free of duty for the last forty years. We are not objecting to that. When it is shipped in from the United States to our market it does not seriously

hurt our market because the surplus agricultural products of the United States will reach the same market as our surplus will go to eventually. The same remark applies to importations of eggs or butter or cattle. For instance, a drover from Toronto goes to Chicago and buys cattle by the trainload, brings them into this country and eventually ships them to Great Britain. What difference does it make to us? Ultimately they all go to the one market. As I said before, the 20 per cent exportable surplus regulates the price of the home market. And anything we cannot produce successfully and find a market for we have no business to produce at all. The other night the fruit situation was discussed, and we were told that our British Columbia fruit farmers cannot sell their product in this country without a protective tariff. I noticed in the paper a few days ago that British Columbia apples are shipped as far east as Nova Scotia. But I know for a fact that in the county of Oxford one of our fruit growers made a substantial profit on his apple crop. He did not care about protection; he could compete with the world in growing apples. Therefore when the hon. member for South Oxford (Mr. Sutherland) asks to have price regulation for farmers' produce I am astonished, for we have a soil and climate that will produce almost anything we need in the agricultural line, and consequently we have no competition to fear from any quarter of the globe.

Now, I do not wish to knock our industries, if they are essential; but I believe we have industries that we might as well be without. If they are not self-supporting and able to carry on business efficiently, I say they should be eliminated. We need manufacturing industries, but they should follow agriculture in this country and not undertake to lead our national development. That is my opinion. I believe that certain industries will have to be closed up, for we have too many. I remember fifty years ago in my town we had two foundries and several other small industries. The people left the rural sections for the small towns, and eventually they left the small towns for the cities. What happened? The larger concerns came in and deliberately put the small industries out of business. Having killed the small industries and the small towns, the big fellows now are afraid they are going to be hit and they set up a howl. We had two of the finest packing plants in my district, but they were put out of business by the big packing interests, who used for the purpose the money they made out of our earnings, for they got it from nowhere else.

[Mr. Pritchard.]

As I said before, the budget is not exactly what I would like to have seen. But, remember, I do not mean to say that I want greater reductions. What I want is to have the duties lowered on the necessaries of life for the working men. I am going to vote for the budget for the reason that I think the government have gone as far as I would ask them to go at the present time, but I believe the amendment calls for something that in the future we should have. But I am not going to lie down under the charge of being a free trader. I am not a free trader. I believe that the tariff should be lowered somewhat, for, as I said before, I think wages must be dealt with. The question of wages is the most difficult problem before us. That is one reason why I should like to have seen the resolution of the hon. member for Portage la Prairie (Mr. Leader) brought before the House and discussed intelligently. After hearing the complaints and charges brought by the Civil Service in this city against the government and against hon. members, I think we must admit that they have grounds for their contention that we are willing to cut the other fellow's income but not our own. In one sense I do not think we are getting too much. But Mr. Speaker are we here for dollars and cents or in the interests of Canada? If we are here for dollars and cents we are not worthy of our positions as representatives of the people. But I think we are here in the interests of the country, and that whatever is for the welfare of the Dominion as a whole we want to accomplish. I believe that we cannot convince these men of our sincerity until we set them an example. For my part, I am willing to deal with wages just as I would deal with the tariff, that is, I would apply a 12½ per cent cut to every member of the government service who is getting $3,000 and over; I would not confine the cut to the Senate and the House of Commons. I would attempt to bring things back to a balance so that the man on the farm and the manufacturer could both hire their help and work together harmoniously. In this way we could develop agriculture and so create real business for the manufacturers. It will hit some of our industries, but I believe it is quite possible, if agriculture gets a chance to develop, for it to soon create such a volume of business as will give all our manufacturers full opportunity to employ not only their present hands but many additional ones.

Mr. T. G. McBRIDE (Cariboo): Mr. Speaker, I do not think there is very much left to be said in connection with the budget; the ground has been pretty well covered. To

me the budget is a business statement and has been brought down in a businesslike way, and I think the Acting Minister of Finance (Mr. Robb) and the government deserve a great deal of credit for bringing it down as they have.

A good deal has been said in connection with the tariff. A number of members on this side of the House criticised the people in British Columbia for trying to get a fair price for their apples. The other night they took up two hours of the time of the House on the subject. I hold in my hand a letter from the Grain-grower's co-operative organization which shows that organization makes 60 cents per box, whereas the man that raises and packs their apples only gets a dollar a box. I would ask some of my friends who is the greatest grafter in that transaction, the man who raises the apples or the man who gets the 60 cents. Here is the letter, written by one of the officers of the grain-growers' organizations.

There are many points in connection with the tariff that might be touched on. I think that there was a tariff reduction coming to this country. I am not a free trader by any means, but I do think that the government deserve a great deal of credit for the reduction they have made and I hope to see them go still further in that direction later on.

A great deal has been said about the poor wage earner in this country. Some people make a special plea with regard to the wage earner; they seem to be always fighting the wage earner's battle. The hon. member for Vancouver Centre (Mr. Stevens) made the statement that about 50 per cent of the cost of manufacturing articles went in wages. I would like to quote a few figures in that connection. Before doing so, I wish to say that there has been a good deal of talk about the reduction of the tariff driving people from Canada to the other side of the line and also closing up our factories, but I see by reports from the other side that factories are closing up there also. I saw an item in a newspaper which stated that one United States factory had closed its doors and that 3,800 men had been thrown out of employment. If this cut in the tariff is throwing people out of work on the Canadian side I should think it would increase the activities of the factories on the other side, according to the statements of some members of this House, but people seem to be thrown out of employment in the United States just as they are here.

The following statistics were sent to me since the budget was brought down and since the statements about the poor workingman have been repeatedly made on the floor of this House. The figures are based on what the workingman gets out of the manufacturers' cost, not the retail price. For instance, if the amount paid in wages based on the cost of manufacture was 18 cents, when it would get down to the consumer it would be about 9 cents. Now, here is what the wage earner gets on the dollar: in cotton goods, 17 cents; silks and woolens, 16 cents; hosiery, 18 cents; glassware, 30 cents; sugar, salt and linseed, 3 cents; aluminum goods and gloves, 18 cents; shoes, that we hear so much about, 27 cents; carpet and rugs, 20 cents; gas engines, 23 cents; electric machinery, 23 cents. Where does the rest of it go? We do not hear that mentioned. We do not hear what the manufacturer gets, but this is what the wage earners get. The writer of the letter I am quoting these figures from goes on to say:

10 p.m.

> A girl running a number of machines will knit 1,800 pairs of socks in a day, at a cost of 2 cents per dozen or one-sixth of one cent per pair.

Not very much in wages, is it? He goes on to say:

> A man running a number of machines making spark plugs for automobiles turns out a spark plug in six seconds, at a wage cost of one-eighth of one cent.

That is what the poor workingman, whom we hear so much about, the man we are supposed to be driving out of the country, gets out of making spark plugs. He says in conclusion:

> The next time you hear any of your manufacturers wax eloquent on the high wages paid to factory workers in this country you can produce the above figures to them and ask them for an explanation.

I might say I have not got that explanation yet. Now I would like to say a few words on immigration. I saw in a Montreal paper a few days ago the following words uttered in a speech made by a certain gentleman—I do not know that I will take his name in vain just at this time. He said: "The western farmer and the city worker are both slaves." When I read that I could not help thinking that it was unfortunate for Canada that that class of people was allowed to land on our Canadian shores, as it is not in the best interests of Canada that such statements should be made. That is not the kind of statement that will build up homes in this country or make our Canadians contented. We do want immigration in Canada. I know out West it is a difficult proposition to get help on the farms. I am referring to British Columbia. We want immigration, but we do not want the class of immigration who is whining all the time. We want men who

are willing to work and to make Canada what it should be. After nearly thirty-two years of experience I am here to say that there is no country that offers such opportunities to a young man or young woman as Canada does. There are many resources here to be developed and the country offers many splendid opportunities.

There is another kind of immigration that we do not want. I will refer to that very briefly, because the hon. member for Comox Alberni (Mr. Neill) dealt fully with it the other evening. I am speaking now of oriental immigration and I want to thank this government for what they have done in the past in preventing the oriental from coming to our shores. This government have done more to put a stop to orientals coming to Canada than all other previous governments. They have practically stopped the Chinese from coming in; last year only about seven or eight entered Canada. I would ask them, however, to go a little further and to apply the same act to the Japanese. It has been said that the Japanese have very elevated ideas about their own ability and that the Canadian people do not want to hurt their feelings. What about their hurting the feelings of the Canadian people? What about their coming to a country where they know they are not wanted? No people know better than the Japanese and the orientals in general that they are not wanted in this country. In that case why should they have this right to come and impose themselves on the people of Canada? I would ask the present government to apply to the Japanese the same act that is now in force against the Chinese. If they do they will find themselves commended in history for keeping Canada a white man's country as Australia is doing.

There are one or two other questions I should like to bring to the attention of the House. It is true they are local in their character but they are not the less important because of that. One of them has to do with the transcontinental highway. When British Columbia entered confederation it was with the agreement that the Dominion government would build a railroad from east to west so as to connect the province with eastern Canada. At that time we had a highway from the coast up into the interior of British Columbia. Some people may say that that thoroughfare was not a first class highway, but I have talked with men who frequently used it in trading operations and when six yoke of oxen were able to haul ten tons of supplies the road could not have been a very bad one. In fact I will give some figures which the engineers of the Highways Commission have compiled to further demonstrate its favourable character. They admit the liability of the government to put that road in repair. In the first place they say, "The old Cariboo road varies in places from twelve to eighteen feet wide." They also say that it was in fairly good shape when the Canadian Pacific railway was begun. According to the report of the Canada Highways Commission to the Department of Railways and Canals the location of the road, its grades, the crib work, retaining walls, and other engineering features were all of a high order. For many years after the construction the Cariboo road was the only trunk artery into the interior of the province, and tourist traffic along the scenic Fraser route has given a new value of importance to the old road. Traffic is now impossible, as about sixteen miles have been closed as a result of accumulation of slides caused by the construction of the government built railway. The report continues:

> Owing to the utilization, in part, of the general location of the old Cariboo road, pursuant to the desire of the Dominion government as expressed in instructions to their engineers to secure a good serviceable, reliable railway with the least possible outlay, it would seem that the Dominion government, should not be called upon for the cost of rebuilding the Cariboo road, destroyed in construction of railways, unless the provincial government want to reconstruct the whole Cariboo road.

That is just what the provincial government is doing at the present time. It is constructing the road, and the people out there think the Dominion government should put into condition that portion of the road which was destroyed when the Canadian Northern and Canadian Pacific railways were constructed. The estimated cost of re-establishing that portion of the road injured by the construction of the Canadian Northern would be $153,897, and the making good of the damage done by the Canadian Pacific railway would amount to $217,500. Now the British Columbia portion of the latter railway was built by the Canadian government and accordingly the province's claim in connection with that line is a reasonable one. Under the federal Highway Act a splendid system to connect roads has been constructed on the coast side of the mountains, and also in the interior of British Columbia. The Fraser river road referred to being the only link connecting the two I should say it is exceedingly important that the Cariboo highway should be opened with the least possible delay.

As I have already explained it is in regard to these portions of the old Cariboo road which were destroyed by the railway construction referred to that I am requesting the assistance of this government. The Cariboo highway has been given the status of a

gazetted road by the provincial government, which to date has not abandoned any portion of that highway. I think it is up to the Dominion government to make a special grant in aid of the reconstruction of that road. According to the evidence of their own engineers it was the construction of Dominion railways that put the Cariboo highway out of operation and it is very important at the present time that that highway should be reconstructed. The estimated cost of the work, I should explain, is about $1,500,000. The provincial government is not asking the federal authoritites to defray the whole cost of construction, but only a certain amount of the expense.

There is another matter I should like to bring up. It is in connection with the returned men and I regret that the Minister of Soldiers' Civil Re-establishment is not in his place. At Tranquille in British Columbia there is a sanatorium, which accommodates quite a number of returned soldiers. Those men were deemed good enough to go overseas and fight for Canada. Unfortunately while they were there quite a number of them contracted lung disease and are now in this sanatorium. Some of them have been cured as far as the treatment at the sanatorium will allow, but when they leave the institution and return to the coast they find the climate there too damp for them and very often they experience a relapse. If they seek admission in boarding houses in Kamloops, or any part of that district they are not wanted. When they leave the Tranquille sanatorium they are looked upon by many people as actually having tuberculosis and consequently these poor fellows are not wanted in boarding houses, the other lodgers would not care for their company. If the government would make a grant of say $25,000 it would be possible to purchase ten or fifteen acres of land upon which ten or twelve cottages might be erected as an experiment. By making provision of this character the government would go a long way to satisfy the returned men at the sanatorium. When they left the hospital they could go there and enjoy some of the comforts of life, and have their wives and families with them. It seems to me to be pretty hard that men who went overseas and fought for their country should have to live divorced from their wives and families when they return to Canada. For that is what it means—the wife and family live at the coast while the man himself is compelled to reside in the interior because his health will not permit him to return to his loved ones. Now, a man at Kamloops with a cottage and an acre of land could raise all the vegetables he needed and he would be kept employed for a large part of the summer. I think the government would be well advised if it would set apart an appropriation of $25,000 for the purpose of making this experiment.

There is still another matter to which I wish to allude. The Dominion government owns a telephone system in British Columbia. That province differs from the other provinces in the fact that it is very much cut up by mountains. You can go into some of the mountainous regions and find there only ten, fifteen, twenty or maybe fifty families who are practically isolated from the rest of the country. If the government would be a little more liberal in its appropriations for telephones better facilities could be provided for the people to whom I refer and they would be in a much more contented frame of mind.

While I am in favour of immigration being brought to this country, I have always maintained that a man raised on a farm in Canada is twice as valuable as the immigrant brought in. Men brought up in the country know its ways and can readily adapt themselves to varying conditions.

I should like to say just a word about the value of the telephone in helping to bring contentment to outlying and sparsely settled districts. There are districts where telephone lines have been installed and it seems to put new life into people and to make them content. I am not saying that it is the right and proper thing that the Dominion government should own the lines. I think it should be a provincial matter. However, I am taking the matter as it stands. The Dominion government owns these lines, and has owned them since confederation. I think it would be money well spent if the government would build a number of extensions in the outlying districts. The Minister of Public Works should give special attention to the question.

On motion of Mr. Marler the debate was adjourned.

On motion of Mr. Mackenzie King the House adjourned at 10.15 p.m.

Tuesday, April 29, 1924

The House met at three o'clock.

UNITED CHURCH OF CANADA

Petitions to the number of 151 were presented on the subject of Bill No. 47, to incorporate the United Church of Canada. A list of these petitions and of the names of

the members by whom they were severally presented appears on page 1829.

OLD AGE PENSIONS

APPOINTMENT OF SPECIAL COMMITTEE OF INQUIRY

Right Hon. W. L. MACKENZIE KING (Prime Minister) moved:

That a special committee be appointed to make an inquiry into an old age pension system for Canada, with power to send for persons, papers and records and to report from time to time, and that the said committee do consist of the following named members, namely, Messrs. Fontaine, Irvine, Logan, McConica, Munro, Neill, Preston, Raymond, Robichaud, Sexsmith, Spence and St. Père.

Mr. SPEAKER: Notice is required for this motion, unless by unanimous consent.

Motion agreed to.

JUDGES' ACT AMENDMENT

Hon. ERNEST LAPOINTE (Minister of Justice) moved for leave to introduce Bill No. 65, to amend the Judges' Act.

He said: Under statute of the province of Ontario enacted in 1919 the Lieutenant Governor in Council may designate certain counties to form a county court district, and in many cases counties have been so grouped. The purpose of the amendment is to permit the Governor in Council to fix a place for the residence of the judge or judges in such districts when so created.

Mr. MACLEAN (York): Does the proposed measure make provision for any changes or readjustments of salaries?

Mr. LAPOINTE: No.

Motion agreed to and bill read the first time.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed from Monday, April 28, the debate on the motion of Hon. J. A. Robb (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into Committee of Ways and Means, and the proposed amendment thereto of Mr. Woodsworth.

Mr. HERBERT MARLER (St. Lawrence-St. George): Mr. Speaker, my first duty in rising to address the House to-day with respect to the budget speech—and it is a most pleasant duty—is to offer my sincere congratulations to the Acting Minister of Finance (Mr. Robb) on the very prominent and very honourable position he has attained in the public life of this Dominion. Indeed, I do not think there is anyone on any side of the House who would attempt to deprive the hon. minister of that title to which every public man in this Dominion should aspire, namely, to be known as a good, a loyal and a faithful public servant. That title the minister has worthily gained; that title I feel quite positive he will worthily hold. That being the case, and such being my own personal opinion of the minister. I trust that he and, in fact, every member on this side of the House in particular, in judging the remarks I propose to make to-day in discussing the budget will at least give me credit for that frankness which the minister himself has always manifested. In discussing the budget speech it is possible that I may disagree with the minister in methods of estimation and perhaps in methods of execution, but I hasten to assure him and to assure every member of the House, particularly those on this side, that such disagreements are not advanced in the light of any personal hostility; indeed, Sir, quite the contrary; they are advanced merely on the ground of personal conviction, on the ground of belief in policies which I regard as best for the welfare of this Dominion, to say nothing of their value to those whom I represent in this House.

I should be sadly lacking in appreciation did I not join with the Acting Minister of Finance (Mr. Robb) and other hon. members in expressing my deep admiration for, my great debt of gratitude to the Minister of Finance (Mr. Fielding), that great Canadian statesman to whom we in this House and all the people of Canada owe so much. As a matter of fact, I think I can safely say without any reservation that to Mr. Fielding I owe much of the viewpoint which I take towards the public affairs of this country. To his caution, to his constructive ability, to his desire for stable fiscal policies, but above all to the pre-eminent desire which he has always had to see every interest in this Dominion treated with the utmost fairness, I owe, and I think every person in this Dominion of Canada owes, a deep debt of gratitude, such a debt that it is almost impossible in my opinion to repay. Perhaps it is possible in a measure to repay that debt of gratitude if we follow—and certainly if we follow during the constructive period in the life of this great though young country—all the procedures and policies which Mr. Fielding has undoubtedly given us from time to time.

I will pass now, Mr. Speaker, to the financial part of the budget speech, that is to say, the part dealing with the expenditures and the receipts. It is of importance to understand that part because it shows what we owe

and what we have to spend. Undoubtedly, spending is very much more pleasant than owing, but in spending I think we should always bear in mind that it does not matter to what account we may charge any of our expenditures, sooner or later those expenditures will have to be met. We have also spoken in this House on numerous occasions of the rigid necessity of economy in all spheres of government. The need for economy has been emphasized from the floor of this House time and time again. Where we have actual surpluses over actual yearly expenditures, perhaps expenditures may be warranted; but on the other hand, where we have not actual surpluses over expenditures, perhaps then, in certain cases, expenditures may not be so justified. As a matter of fact, to give the people the idea that the day of abounding surpluses has arrived is merely to encourage spending and a lack of economy, and I therefore ask, Sir, with all due respect, if we do give the people that idea, is it the right idea to put forward? Why should we not, as a matter of fact, take the people entirely into our confidence? Why should we not exhibit to them a simple statement of our financial affairs in language which they can all understand? After all, they are the people to whom we have to account. Accounting to one another across the floor of this House does not bring us to the point where real accountability lies. However, I do not intend to speak at any great length on this question of our accounting or on the question of our receipts over disbursements; most of those matters I took up on another occasion in this House. It will quite suffice for my purpose to-day to treat our revenue as a whole, and to divide our expenditure into two groups, the first group consisting of all expenditure—and I include in that ordinary consolidated, capital and special expenditure—and the second group dealing with railway expenditure. As regards our public debt likewise it can be divided, I think, into two categories; first our ordinary consolidated debt, and second our railway debt, both together constituting, as they do, the total debt of this country. I know that a certain part of the railway debt is at present merged in the consolidated debt; other parts are not so merged. But it does not matter under what account the parts not so merged are taken, the parts, wherever they may be, constitute the total debt of the Dominion of Canada. In other words, we cannot increase our railway debt, without increasing our total debt.

As I stated a moment ago, a part of the railway debt is already merged in our consolidated debt. The part so merged is the cash actually paid out for the construction and betterment of lines and various other expenditures in connection with the railways. Another part of our railway expenditure shows in the public accounts in the form of investments. But there is another part of the railway debt which is not included in either of these categories, and that is the part which has been guaranteed by this Dominion. In other words, guarantees directly or indirectly made, guarantees assumed or guarantees implied—those guarantees, no matter in what form they may have been given, have really become as much a part of the debt of the Dominion as the consolidated debt itself. It may be urged and argued that certain of these guarantees so made represent capital expenditure; that may be true, but in other years amounts expended also represent capital expenditure, and to say of any particular year that a certain part of those guarantees which were made effective are good, and of another year that the guarantee should be segregated into a particular account, is no particular argument, because after all the interest in great part has to be paid out of the consolidated fund of this Dominion.

Now, in past years railway expenditure has been treated in various ways. During the year 1922-23 the railway expenditure and the expenditure on the merchant marine amounted to something in the neighbourhood of $84,000,000. That expenditure was charged during that year directly against consolidated fund account, and the Minister of Finance (Mr. Fielding) that year reported a deficit of $31,500,000. In the year just closed—and I am not uttering this criticism in any hostile spirit at all; I am merely attempting to have the facts clarified before I go on with the balance of my remarks—the railway expenditure amounted in the neighbourhood of $56,000,000. Part of that expenditure was paid by means of cash, and part was paid out of the proceeds of a guarantee issued by the Dominion government, of $50,000,000. Now, it is argued that the guarantee, being an indirect guarantee of the Dominion, does not form part of the public debt of the Dominion. I claim that it does form part of the public debt of the Dominion just the same as any other part of the consolidated debt itself; in other words, the part of the guarantee expended is a part of the public debt to the same extent as if it had been included in the consolidated debt itself. I have no desire—and I would like to make myself abundantly clear in this respect to the government and to all the members—from the floor of this House to detract from what I regard, leaving

entirely out of consideration any book-keeping entries or any accounting, as a most excellent financial statement brought down by the government this year. This government, as I have stated before and can only repeat to-day, has had to bear great expenditures, partly due to the war and partly due to causes over which they have absolutely no control. But what I venture to ask,—and I do it with all respect—is: Why try to place before the public a difficult system of accounting which the public itself cannot be expected to understand? Why not place before the public the actual condition of receipts and expenditures as they may occur from year to year, taking the public into our confidence as questions arise, and asking the public to assist us in governing this country which is so exceedingly difficult to govern? Therefore, taking the railway expenditures to which I have referred and charging back the amount of the guarantee utilized for the purpose, I do not think that what might be called a direct surplus can be brought down this year; as a matter of fact, I would say that there is a small deficit. But let me again repeat, Mr. Speaker, that there is nothing whatsoever to be ashamed of in this account, even with these bookkeeping entries reversed. It is an excellent statement for the government to bring down under all the conditions; it is a step very much in the right direction. When we consider that last year there was a deficit of $31,500,000, and that this year, even with the most drastic system of bookkeeping that one can bring forward, that deficit is reduced at the outside to a very small amount, I think the Acting Minister of Finance and the government itself are very much to be congratulated on bringing forward a statement of that character.

Mr. McMASTER: How does the hon. member treat the guarantee by the government of the Canadian National Railway Company's serial equipment issue of $22,500,000? Does he add that to the debt as well?

Mr. MARLER: I do not know when that issue was made.

Mr. McMASTER: That issue was made August, 1923. I refer to page 1214 of Hansard, top of the second column.

Mr. MARLER No, I have not taken that into account in this computation.

Mr. McMASTER: I am merely asking for information. If the hon. member thinks it wise and proper—and I am inclined to agree with him—that the $50,000,000 guarantee bond issue of the Canadian National Railways should be a charge against the national debt, why does he not treat this $22,500,000 in the same way?

Mr. MARLER: I did not treat the $22,500,000 in the same manner, because I had no particular information as to what that was for. It might have been for the refunding of some previous outstanding obligation. If the hon. member for Brome (Mr. McMaster) can enlighten me as to what it was for, very good. I do not see how the hon. gentleman can tell from the information given, what this $22,500,000 was for, and I do not think it advisable to jump at a conclusion. I would simply treat the railway expenditure during the year 1923-24 on the same basis as the railway expenditure was treated during the year 1922-23, and would have brought down the account accordingly. That is why I say that, in view of the bringing down of the items in the manner as I have just described to the House, I think the government has brought down an exceedingly good statement.

Mr. PRITCHARD: Would it not be necessary in a proper system of accounting to ascertain by some means whether the National Railways is a better asset owing to that expenditure—whether the country has not added to its assets by that expenditure?

Mr. MARLER: Yes. The hon. gentleman's question is a perfectly good one in every way; but I think that in that case he will have to set out all the expenditure made on the National Railways before he can definitely ear-mark this particular $50,000,000 of guarantee that was brought down last year as being an asset of the country. There is no denying for a moment that the proceeds of this $50,000,000 of guarantee is of great advantage to the railway, but the point I am considering now is a cash statement, which is quite a different thing from an investment statement. I hope I have answered the hon. gentleman's question to his satisfaction. I was about to say that one should understand the situation, in order that the various charges made by the budget this year—and there are considerable alterations in the fiscal policy of this Dominion—

Mr. ROBB: I am sure my hon. friend wants to be fair, and before he deals with the fiscal policy, I would like to ask him a question. He has made a comparison as between 1922 and 1923. Would he make a comparison as between 1921 and 1922, when the loans were identically the same amount—$50,000,000?

Mr. MARLER: In answer to the question of the Acting Minister of Finance, I may say that I have not made a comparison. I may also say in answer to his question that I am entirely certain and quite confident that the manner in which he has treated this matter is a perfectly proper way in which to treat it. I am not questioning that for one single instant. I have every reason to believe that this railway expenditure very likely was treated in another way in other years. I am simply treating it, as I answered my hon. friend across the way a few moments ago, as a question of cash received and cash paid out during the fiscal year, comparing it with the year 1922-23. But there is not the slightest question in my mind—and I want to make this perfectly clear to every hon. member in the House—that the Acting Minister of Finance is capable of attempting to make the slightest concealment in any way.

It is in view of this financial state of affairs that the government brings down certain proposals as regards the remission of taxation.

Sir HENRY DRAYTON: The hon. member has not yet told us the amount of deficit he figured. I am asking for information. What does he find?

Mr. MARLER: If I may contradict my hon. friend from West York (Sir Henry Drayton), I thought I had said around $2,000,000 In view of the statement, Mr. Speaker, the government brings down certain proposals as regards that statement. These proposals consist of two parts; first a remission of the sales tax, which is direct taxation; and second, certain cancellations of customs duties, which is indirect taxation, amounting altogether to the sum of $24,000,000. I take it that the basis for bringing down this remission in taxation is the surplus of $30,000,000 which has been spoken of. Whether that surplus exists or not is a question for discussion. But whether it exists or not, no doubt, in bringing down these statements, the government has taken into consideration the expectation that the railways will pay better next year. I sincerely hope they will. No doubt the government has also taken into consideration the fact that very likely there will be a diminution in the public revenues owing to refunds under the old sales tax, and also the fact that business in Canada at the present time is somewhat depressed;—no doubt these things have been taken into consideration by the government. That being the case, I most sincerely hope that next year the government will be able to bring down as good a statement of affairs as it has brought down this year. All these matters I sincerely and earnestly hope for on the part of the government, because, after all, it is the people of the Dominion of Canada whom we wish to see benefited.

But when we are told, through the Minister of the Interior (Mr. Stewart), that the reductions in the tariff mean a loss to revenue of only $750,000 and a consequent gain by reason of such cancellations, I think we have to ask ourselves one of two questions. The first is whether the reduction amounting to $750,000 is worth while owing to the dislocation in business which all these changes will occasion. and the second is whether that is an actual computation or merely an estimated amount. It seems to me that the amount is very largely estimated, and that possibly through a greater loss of revenue the government might not be able to reduce further next year certain war taxes which are now in existence and which, I think, should be reduced. The Minister of the Interior also stated on the floor of the House a few days ago another effect that this cancellation of $750,000 would have. It appears, to me at least, that his reasons were far too visionary even to merit passing notice. The government, however, by reason of these proposals is inaugurating what it calls a real national policy. By reason of the proposals now brought down it expects to effect and accomplish the various matters which the Acting Minister of Finance (Mr. Robb) speaks about in the closing part of his address. This is what he said, and I would commend his words to hon. members:

> We have great natural resources. We have certain basic industries, upon the success of which depend the growth of all other industries, and the greater development of our trade. Of these basic industries, I would place agriculture, in all its varied branches, first. Next to agriculture, I would place our forests, our minerals and our fisheries. A real national policy is a policy that will encourage the growth and development of these basic industries.

Some hon. MEMBERS: Hear, hear.

Mr. MARLER: I am so delighted in this speech to receive applause.

Mr. McMASTER: Go on in that way and you will.

Mr. MARLER: (reading):

> The more of the products of the farm, the fisheries, the mines and the forest we have going to market, the greater will be the earnings of our transportation companies—the greater the purchasing power of the nation and as a consequence we shall have factories running full time and tradesmen working overtime to supply the needs of those who will have money to buy.

Some hon. MEMBERS: Hear, hear.

Mr. MARLER: I am not saying that I disagree with this policy, on the contrary I entirely agree with it; but I disagree with the means of bringing about such a policy. We can phrase this statement in more simple language and put it in this way: That, provided we have a policy which will cure the ills of the farm, the forest, the mines and the fisheries—and I think I should mention the ills of the Progressive party opposite—then our railways will pay and our factories will work at full time. But how does the government go about this? What is this cure? In the first place it reduces the sales tax generally from 6 per cent to 5 per cent. Against that, I have nothing to say. It then picks out certain preferred articles and eliminates the sales tax entirely. Against that I have nothing particular to say excepting, perhaps, that it seems to me that if the sales tax had been reduced to 4 per cent all round such reduction would have assisted those particular industries and industries in general throughout the whole country. But as to what the government has done in this respect I have no very great criticism to offer. If the minister had stopped at that point and had waited until a proper inquiry into the tariff could be made, I think nobody would have had very much cause for complaint excepting, perhaps, a few of our industries which certainly need help at the present time. If an inquiry into the tariff had been made, I think we could then have seen, and seen very clearly, whether or not reductions could properly be made. I believe there are reductions that could have been made. We would have seen in other places where, perhaps, certain slight increases should be effected. I now wait for the cheers of the Progressive party.

Mr. CALDWELL: It is the wrong point.

Mr. MARLER: What we certainly could have ascertained—and this is the point that I desire to bring home particularly to the House— is where our industrial workers could have had steady employment instead of leaving this country and going to the United States. It was not unfair for me to ask, as I did ask in a most temperate manner on another occasion, that this inquiry be gone into, with a view, not of increasing the tariff, but of making a fair tariff, not in the interest of the manufacturers particularly, but more in the interest of the workers, the artisans, so that we could keep our Canadians, and especially our French Canadians in Quebec, employed and continuing to live in this country. But, as the matter has turned out, unfortunately, this request which I made some time ago of the government was not carried out. I think it is only fair to state that the government should have known that, on account of our small population, our climatic and other conditions, and depreciated currency, we cannot in this country compete at the present time with the low paid workers of France, Belgium and England. I think the government knew and knows at the present time that, owing to mass production and slaughtering of goods from the United States, we cannot compete just at the moment with manufacturers in the United States. I think it knew, if I may say so, that owing to the declaration in the Speech from the Throne regarding the question of taxation, business in the country has been marking time for the past eight weeks. And these things I think it is right and proper for one to have expected the government to know and to take into consideration. But its answer to these expectations, its answer to the reasonable requests which were put forward by certain members in the House, is a letting down still further of the bars to the United States. If that policy is to keep our artisans and workmen employed and our mills working overtime, I for one cannot see it; I am quite certain that it will, on the contrary, keep the mills in the United States, and their artisans, engaged overtime. Yes, Mr. Speaker, this is the cure, the cure for the ills of the farm, of the forest and of the mine. All I can say is that I doubt whether the lowering of the tariff is such a cure; at any rate it strikes me as a very Spartan remedy, indeed, as one which will necessitate a lingering illness and perhaps certain death among certain industries. And in the meantime the workman and his family, the clerk and his family, owing to enforced idleness and possible starvation will gradually, I suppose, have became purged of that terrible demon of moderate protection; and after a further period of probation they will probably rise purified and will be ready to sit in the ranks of the Progessive party and sing the glories of free trade. I presume that the Progressives would be quite willing to take them then. It seems to me, Sir, that this particular cure is brought forward so that the blessing of the Progressive party may descend upon the old Liberal party —the old Liberal party with its traditions of Laurier and Fielding—to the end, to use the words of the Minister of the Interior (Mr. Stewart, Argenteuil), that the death knell of protection may be sounded.

Let me examine these tariff changes at somewhat closer range. First of all the tariff is reduced on agricultural implements. I will not attempt, in the time at my disposal to-

day, to take up all the questions that arise in connection with the various changes that are made in the tariff. But the tariff on agricultural implements is reduced by rates varying from 4 per cent to 12½ per cent. Leaving entirely out of consideration for the moment the question whether or not such reduction is going to place the agricultural implement makers in such a position that they will not be able to carry on, let us estimate what especial advantage this lowering in the tariff on agricultural implements will give to the farmer of Quebec and Ontario and to the farmer of the West. I doubt very much, Mr. Speaker, whether the lowering of these particular duties will mean more to the farmer of Ontario and Quebec than $8 a year, or more than from $12 to $15 a year to the farmer of the western provinces. If that is a reasonable supposition, the question arises, is $8 a year going to save the agricultural industry in Quebec, or $15 a year save that industry in western Canada? Why, so far as the province of Quebec is concerned, any small gain of that description will be far more than offset by the losses which will ensue through the depletion of urban markets. But take the situation in regard to the agricultural implement makers. All the small gains which go to the various consumers of their goods are gathered together in the shape of one huge loss to that industry, putting that particular industry in jeopardy; in other words, every gain of $8 or of $15, or whatever it may be, goes to swell the aggregate loss which will be incurred by the agricultural implement industry, an industry which to-day is not in too good a shape. But the government says to the makers of agricultural implements: "It is true we are reducing your duties; it is true that we are doing so, for reasons which it is not necessary to relate at great length. But in place of that we will allow you to bring in free all articles used in the manufacture of your various implements; that is to say, all your rubber, your cotton, your iron and steel, and the hundred and one other things which are utilized in the manufacture of your machines, you shall be allowed to bring in either free of duty or under a maximum duty of 7½ per cent." "And more than that," they say, "under drawback item 1026, on all materials which you had on hand on April 11 we will allow you 99 per cent, under one condition, namely, that these materials on which we shall give you that drawback of 99 per cent shall be materials that are imported and not materials made by Canadian workmen in Canadian factories." Well, Sir, several thoughts are suggested by an arrangement of that description. First of all, this question presents itself: Will this elaborate system of drawbacks, and the permission for raw materials to be brought in free of duty, or practically so, offset the loss in duty to the agricultural implement maker? I do not think it can be said at the present time that it will, nor do I think it can be claimed that it will not; in other words, that particular question is at present quite indeterminate. And the second thought that is suggested is this: Surely no one expects that this is the last cut in the duty on agricultural implements.

Mr. McMASTER: Hear, hear.

Mr. MARLER: My hon. friend from Brome says "hear, hear." The wish no doubt is father to the thought. Now, the duties on agricultural implements have been reduced time and time again, and they will be reduced again, without the slightest shadow of a doubt, so far as I can estimate the situation, until our market is wide open to the United States. The third thought that occurs to one is this: Even if the agricultural implement maker is compensated by reason of the opportunity to procure his materials from the United States in the way I have stated, is it fair to the hundreds of other industries in this country for us to say to the makers of agricultural implements, who consume millions of dollars of materials annually, that they may import their goods at a rate of duty which will give them a cost lower than the factories in Canada can quote? Is it fair to do that at the expense of the Canadian workman? Is it fair to throw those men, as they are being thrown, by this particular article of the tariff, bodily into the hands of the American manufacturer?—I ask, is it fair to the Canadian workmen who are engaged in the hundred and one other industries in the Dominion? I do not think it is; and I am free to admit that this policy astonishes me; for I cannot understand how hon. members from the province of Quebec can fail to realise that while a small saving is proposed to the farmer of $8 a year, there are being thrown out of employment in the cities the sons and brothers of these people, who are at work in these particular factories. Surely hon. gentlemen must see that we are throwing these men bodily to the Americans, from whom these particular French Canadians saved Canada twice in the course of her history, once in 1775 under Voyer and a second time, in 1812, under de Salaberry at Chateauguay. That is how this policy appeals to me, Mr. Speaker.

But what benefit will the West derive even if the entire tariff is taken off agricultural

implements? Surely the West does not imagine for a moment that after our agricultural implement maker is put out of existence they are going to get agricultural implements cheaper.

Mr. HOEY: No.

Mr. MARLER: Oh, my hon. friend from Springfield (Mr. Hoey) says he is not going to put the agricultural implement industry out of existence?

Mr. HOEY: He is not going to be put out of existence; don't worry.

Mr. MARLER: That is the first cheerful remark I have heard for some time.

Mr. HOEY: I am always optimistic.

Mr. MARLER: Will my hon. friend from Springfield guarantee that?

Mr. HOEY: Yes, I will stake my reputation on that for ten years.

Mr. MARLER: I suppose in that case I am justified in stating that my hon. friend will vote against any further reduction of duties?

Mr. HOEY: He will vote for further reductions, believing it will help the industry still further rather than hinder it.

Mr. MARLER: My hon. friend believes in a lingering, rather than a sudden death, then?

Mr. HOEY: No, not death at all; it is inspiration.

Mr. MARLER: My hon. friend believes in inspiration?

Mr. HOEY: Inspiration and animation.

Mr. MARLER: Well, those are two theoretical words which I have heard little boys using when chasing shadows and rainbows.

Some hon. MEMBERS: Oh, oh.

Mr. MARLER: Some hon. gentlemen seem to treat this as a joke. We are playing with human lives in this matter. We have got over the day of chasing rainbows; we are down to facts.

Mr. GARLAND (Bow River): It is about time.

Mr. MARLER: Oh, my hon. friend from Bow River—the place where all the slaves come from.

Mr. GARLAND (Bow River): Yes, slaves of the implement manufacturers and the protective tariff.

Mr. MARLER: The same way with the people in Montreal—they are all slaves too.

[Mr. Marler.]

Mr. GARLAND (Bow River): Not all of them; I know one hon. gentleman who is not.

Mr. CRERAR: I dislike interrupting an hon. member when he is speaking, but my hon. friend is very apprehensive as to the future of the agricultural implement industry in Canada as a result of the reduction in duties brought about by the budget. The cream separator industry in this country has been free for many, many years. Will my hon. friend tell me why, if this industry can be built up without any protection whatever, the plow industry cannot also be built up in the same way where the elements are precisely the same?

Mr. MARLER: I am really very much obliged to my distinguished friend for asking me the question. The agricultural implement industry is, I think, subject to a great deal more competition than the other industry which he speaks about.

Some hon. MEMBERS: No.

Mr. MARLER: But in any event let me say this to the hon. member for Marquette (Mr. Crerar): I am not particularly picking out the agricultural implement industry.

Mr. CRERAR: Then I misunderstood my hon. friend.

Mr. MARLER: I was using it as an example. My hon. friend has brought the matter to my attention better than I could have done myself. As I say, I am not picking out any particular industry, but I claim—a claim which, I know, is diametrically opposed by my hon. friend—that we should be a self-contained nation, manufacturing what we want instead of being dependent on other countries for our needs. I say that if the agricultural implement industry is threatened, or does go out of existence, then we shall be dependent on the United States for our agricultural implements. I doubt if this industry can be built up in course of time in the manner my hon. friend has spoken about. I do not think it can be, but I may be wrong in that respect. But I am speaking generally of our manufacturers throughout the whole Dominion when I oppose tariff reductions, and of course I do not expect my hon. friend from Marquette to agree with me on the point.

If the government thinks that the tariff reductions now proposed are going to cheapen the production of goods generally in this country, I can only say that in my view this will not be borne out by results, for

the reason that in every factory certain overhead costs have to be taken into consideration. Where the factory is producing to capacity the manufactured articles necessarily bear a very much lower proportion to these costs; conversely, if the factory is not working to its fullest capacity, then the overhead costs bear an inverse ratio on the manufactured product. Therefore if the agricultural implement maker, for example, can bring in various materials for use in his manufactured product, to that extent we diminish the output of the Canadian factory which supplies those materials; and so we make goods dearer rather than cheaper. It means that every binder or mower brought into this country simply increases the cost of every binder and mower made in our factories. In like manner, every ton of steel imported diminishes our own production of steel to that extent, and consequently the cost of production of every ton of steel in our Canadian plants is enhanced proportionately. But supposing the actual price of agricultural implements is reduced by reason of the proposed tariff reductions, thus stimulating the importation of such implements, it means that all the materials entering into their manufacture which are produced in thousands of our factories will be increased in price owing to lessened production; consequently the cost of goods generally is bound to be increased by means of such a policy. As a matter of fact, it seems to me that such a policy is not only certain to take work away from our Canadian workmen, but it must inevitably increase the cost of our manufactured goods.

Now, Sir, I am perfectly well aware that in rural ridings of the province of Quebec, and in rural ridings perhaps of the province of Ontario, it will be said: Because we have no factories in certain ridings this policy does not affect them in the slightest degree.

Mr. HOCKEN: Oh, no, Ontario does not say that.

Mr. LAPOINTE: The hon. member for West Toronto (Mr. Hocken) does not say it.

Mr. MARLER: Well, as a matter of fact, I say that this policy does affect the rural ridings just as much as it affects the urban sections of the country—

Mr. ROBB: Hear, hear.

Mr. MARLER: Adversely—not favourably; and for this reason; it means that in the province of Quebec—and I am speaking of this province particularly—at the present time the farmer's markets are not in the United States or other foreign countries, but in the large cities and nearby towns. In other words, the urban population are his best customer. By taking work away from the industrial population—and work is taken away by means of the entry of very many materials from the United States—you reduce that population, and in turn you deplete the farmer's market, with the result that he will not get as good a price for his products, and the small gain which he is expecting to derive from a cheaper harrow or a cheaper plow will quickly fade away. I think hon. members from the province of Quebec should take this into consideration and search their hearts well before they vote in favour of this policy, the adoption of which will certainly prevent any increase in our urban population. And they can also take into consideration the fact that if we have not any place for our rural people to go to work they will certainly go to the United States; they will certainly not stay in Canada.

Mr. BOUCHARD: They will stay on the farm.

Mr. MARLER: The hon. member for Kamouraska (Mr. Bouchard) says they will stay on the farm. Who, then, are the farmers going to sell to? To one another?

Mr. BOUCHARD: In the foreign markets.

Mr. MARLER: How much foreign market has the province of Quebec, say?

Mr. BOUCHARD: We use the British market.

Mr. MARLER: And the urban market too. Is the urban market nothing to the farmer of the province of Quebec?

Mr. BOUCHARD: It is something of course.

Mr. MARLER: Only in some things—nothing of any consequence at all?

Mr. BOUCHARD: Oh no, I do not say that.

Mr. MARLER: Mr. Speaker, may I pass on to another part of my remarks? I cannot believe that these numerous and varied changes in the tariff are in accord with the Laurier-Fielding idea of tariff stability. I know perfectly well that hon. members on this side will immediately retort: "Look at the resolutions which Sir Wilfrid Laurier or Mr. Fielding moved and supported while in opposition; these particular policies are in accord with

those resolutions." I do not think we are so much concerned with what those great and distinguished statesmen did while in opposition; we are more concerned with what they did while in power. While in opposition the intent may possibly be shown, but when in power attention is given to the consequence of the misuse of responsibility. There are instances, in any event, in the Liberal party—and there is no reason why there should not be such instances—where matters have been changed. If I remember rightly, the hon. member for Brome one year moved a resolution as regards directorships in connection with the holding of cabinet positions, and that was approved by the Liberal party while in opposition, but when they came into power, why, they considered that that resolution should not be supported. There is no reason why these changes should not take place.

Mr. McMASTER: I think that certain events that have happened in the financial and other worlds recently have rather justified the position then taken by the member for Brome (Mr. McMaster).

Mr. JACOBS: Does my hon. friend suggest that because members of parliament have been connected with banks, that is why they burst?

Mr. MARLER: Let us look, Mr. Speaker, for our examples of guiding principles to what the Minister of Finance did as regards tariff matters while his party was in power. The guiding principle of the Fielding tariff during the whole course of its administration was stability in tariff, joined with an incidental measure of protection. Hon. members may look in vain through the seventeen budget speeches of the present Minister of Finance for any other basis than that; it is the only conclusion which can be drawn. These principles were affirmed time and time again by Mr. Fielding and were also approved by Sir Wilfrid Laurier whose Minister of Finance Mr. Fielding was for nearly fifteen years.

As regards tariff stability, between 1896 and 1907, a period of over ten years, Mr. Fielding made only sixty alterations in his tariff by act of parliament, and from 1907 to 1911 he made only sixteen alterations in like manner. Yes, Sir, you can read the budget speeches of Mr. Fielding: you will find that when he brought down his first proposals in 1897—that was not his great scientific tariff—certain duties were raised and others were lowered, but the general trend of thought throughout the whole of the tariffs brought down at that time was that every industry should be treated fairly and equitably.

I stated, Mr. Speaker, that the two guiding principles of the Fielding tariff were stability and a measure of incidental protection. In 1898 Mr. Fielding stated, as regards the question of stability:

> But we think, Sir, on the whole, believing as we do that the changes in the tariff should not be numerous or frequent, believing that we should have a large measure of tariff stability, believing that the public understand the policy of the government in this respect and will be content to have us carry it out in that spirit of moderation and caution we have so far evinced, we wish to announce to the House that it is not our intention to make any numerous changes in the tariff at the present session.

And in 1899 he was even more emphatic in regard to tariff stability. He said:

> I wish however to point out several reasons why it is not expedient to change the tariff at present. Tariff stability is always important if we are to have that confidence in business without which we cannot hope to have prosperous times. Therefore even though in all respects the tariff may not be as we would like it, it is better to bear some imperfections than to enter upon revisions which might create disturbances in the business of the country.

In 1901 he brought out an important point, namely, that making changes in one item of the tariff means making changes in many others.

Now, I pass, Mr. Speaker, over certain intervening years as regards the administration of the Laurier-Fielding tariff and come down to 1906. That was the year before Mr. Fielding brought in his great scientific tariff, a tariff which has undoubtedly stood the test of time, a tariff under which industries prospered in every way. Before he brought down this important change in the tariff in 1906 he made a statement in the House which let every business know that although there was to be a revision of the tariff, industry and business need have no fear as to what would happen. This is what he said:

> We hope during the recess, if this session does not extend to too great a length, to take up that work—

He was referring to tariff revision.

> —and at the November session, unless there should be delays in the present session to cause a change in the programme, we hope to bring forward a revised tariff, not one which will make any great changes perhaps, but one which will meet such new conditions as have arisen and we hope we shall have the same measure of success that we have had in the past in devising a tariff which will meet the requirements of all interests in the country and that we shall have again a period of tariff stability under which the industries of Canada will go on and prosper as they have done in the past nine years.

That was the year 1906. Now as you are aware, in 1911 the Liberal party went out of power and did not come into power again until December, 1921. As was to be expected, and as was hoped for by all the electorate

of Canada, Mr. Fielding was again Minister of Finance. When he returned to office the tariff he found in effect was his own tariff, the tariff of 1907. As everybody knows, he was privileged to make two budget speeches only, in May 1922 and in May 1923. In those budgets he made certain small alterations in the tariff, changes made in his cautious way, mostly of 2½ per cent, and one or two of 5 per cent, but not very many. As a matter of fact, he was criticized by the opposition that year, I think by my hon. friend from West York (Sir Henry Drayton) who called these changes piffling and microscopic, and Mr. Fielding's reply to that criticism was in these words, and I commend them to hon. gentlemen in view of the changes that have been made in the tariff this year amounting to much more than 2½ and 5 per cent:

When he goes to the manufacturing districts, he will not find that these are viewed as mild as piffling reductions. They are reductions which account for a great deal. Two and a half per cent of an item in a manufacturing industry is often regarded as a very serious injury, and I know to-day there are many interests in Canada which are alarmed at the reductions that are made.

After that came the last budget speech which this great statesman made in the House of Commons in 1923, and in that budget again there were comparatively few changes in the tariff. Indeed, hon. members will remember that in his speech of last year the question of tariff stability was particularly emphasized. Many members. I think I am right in saying, thought that that was a new idea to be put into Mr. Fielding's tariff speeches, but as a matter of fact, it was an old idea and a good idea that had occurred to him, not once, but time and time again in the seventeen budget speeches which he had made. In that budget speech of May, 1923, he said:

There is a thought which does not receive as much consideration as I think sometimes should be given in the public discussions, and that is the desirability of something like tariff stability. Business men do not like to be always threatened with changes in the tariff.

Later on in the same speech he said:

The tariff as it will be, when the changes proposed to-day come into effect, will be a moderate tariff and probably as low as the country can afford to have under present conditions.

Further on he stresses the question of tariff stability:

Business men should be able to carry on their various enterprises without the fear of being soon disturbed by further changes.

Now Sir, as I said a moment ago there were two inherent principles in Mr. Fielding's tariff administration: The first was the desirability of tariff stability, of which I have spoken and in regard to which I have given certain instances, and the second was the measure of incidental protection which was always a part of that particular policy. Mr. Fielding in 1897, at the beginning of his career as Minister of Finance, said:

It is a tariff policy based on the necessities of our revenue, a revenue tariff which incidentally affords a very considerable degree of encouragement to those engaged in Canadian industries and having as its leading principle the principle of the British preferential tariff.

Later on he spoke at great length on the same subject as regards incidental protection. In the year 1904, if I remember rightly, a resolution was brought forward by the Conservatives stating that the country should have adequate protection. Mr. Fielding in reply to that stated he thought the Laurier-Fielding tariff did afford sufficient protection at the time and had incidental protection in it, and he went on to say:

I think, Sir, as to whether or not it is adequate protection we have some evidence of a gratifying character that when the tariff without being excessive is high enough to bring some American industries across the line, and a tariff which is able to bring these industries into Canada looks very much like a tariff that affords adequate protection.

Then he goes on to speak of the great industries in the city of Hamilton and the city of Toronto, and I think in that speech also he referred to the great industries in the city of Sydney. I have always held Mr. Speaker, that the Fielding tariff had incidental protection in it, sufficient protection to enable our industries to go on in a stable manner, sufficient protection to prevent those industries being swamped by American industries. Hon. members can well remember the anti-dumping provisions which Mr. Fielding himself put forward; they can also remember the duty which he imposed in 1903 on steel rails coming into the country, and the minimum tariff of 30 per cent which he placed on the woollen industry in 1904 when that industry was in a very depressed state. But in all this, and in all that I have said, Mr. Speaker, the two points which I desire to stress and emphasize in this House to-day are that the Laurier-Fielding tariff was a tariff of stability and of incidental protection. And Sir Wilfrid Laurier approved of that tariff time and time again. For example, in 1904 Sir Wilfrid Laurier said:

We have a tariff against the United States varying from 25 per cent to 35 per cent, an average of 28 per cent. Under that tariff manufacturers ought to thrive. I am told, however, that they do not thrive and that we ought to increase the tariff. For my part I am always prepared to consider the case of an industry which being in existence finds itself pressed by foreign competition.

Later on in the same speech, regarding goods coming in from the United States, he said:

> But there is one class of goods which come from the United States which have come in in a manner which we regard as undue and to which we want to put a stop. That is the class of goods that have come in by dumping and slaughtering and by making Canada a dumping ground and a slaughter market. We have taken means to prevent this.

Later on he spoke with reference to present methods of manufacturing, and he ended his speech with these words:

> We have in this country as in other countries, and indeed in all countries, manufactures carried on under a customs tariff whereby a fictitious atmosphere has created artificial conditions under which manufacturers are carrying on their operations. They have a right to expect therefore that the condition of things under which they have built up their manufacturers shall be maintained. This policy which we have adopted we believe will commend itself to the fair judgment of Canadian people the more it is debated.

Now, Sir, I have emphasized to some considerable extent what my conception was of the Laurier-Fielding tariff. I have no desire, Mr. Speaker, to disguise my feelings on the question of tariffs. I believe that a moderate tariff—

Mr. MACKENZIE KING: May I interrupt my hon. friend a moment before he leaves his reference to Mr. Fielding? May I ask him if his remarks are intended to imply that the Minister of Finance (Mr. Fielding) is not heartily behind the Acting Minister of Finance (Mr. Robb) in the budget which he has brought down?

Mr. MARLER: It is utterly impossible to make any such implication in any way. I am simply stating that I do not think the changes in the tariff that have been introduced are in line with the past traditions of the Laurier-Fielding tariff.

Mr. MACKENZIE KING: It is only fair to the Minister of Finance, seeing that he is not here to speak for himself, to say to my hon. friend that he is as wholly and heartily in sympathy with the Acting Minister of Finance in the budget he has brought down, as is every one of his colleagues in the cabinet.

Mr. MARLER: I certainly accept the assurance of the right hon. Prime Minister without the slightest hesitation. There was no implication on my part whatever of any kind or description in that respect. I was merely drawing my own conclusion, which I had a perfect right to draw, in regard to the past administration of the Laurier-Fielding tariff as it appealed to me. The Prime Minister has made a declaration, and whether I am gratified to hear him make it or not does not matter in the very least degree, but naturally I unreservedly accept it, coming as it does from the Prime Minister.

As regards the question of tariff, I have not any particular delusions. Perhaps if we were to have perpetual peace and no tariffs raised against us, we might then be able to have the ideal conditions which possibly the hon. member for Brome (Mr. McMaster) desires that some day we shall have. But we have not ideal conditions in this country, and we have to deal with conditions as we find them I am quite ready to admit, even under certain circumstances that we might be able to buy goods cheaper abroad, but notwithstanding that fact, it seems to me that that is only a temporary condition and is not necessarily a condition that will last. Both Sir Wilfrid Laurier and the Right Hon. W. S. Fielding saw the effect of the temporary advantages which might be gained in buying goods cheaper abroad. Sir Wilfrid Laurier in 1904 said:

> But whilst it may be a benefit to the individual Canadian consumer it is to the detriment of our community as a whole, because it throws a number of our people out of employment and causes the destruction of large amounts of capital invested in these industries.

And as late as 1920 Mr. Fielding speaking on the same question said:

> We came to the conclusion that if big manufacturing concerns, in the United States had come here and closed up Canadian manufacturing interests, it was right that there should be a special duty made to meet that condition. It was considered by some as a piece of freak legislation, but I am glad to know it has been copied in other countries, and that the present government have paid us the compliment of continuing it on the statute book.

Of course the theory will be presented that if we have lower tariff, or no tariff, the workman or artisan might be able to buy his clothing and food cheaper. That to some extent is true. But what use is it for the workman or the artisan to be able to buy his clothes cheaper, unless he has work to do and money wherewith to buy that particular clothing? As a matter of fact, is it not better for the workman or the artisan to have six days a week steady work with good pay, and pay a few cents more for his boots and shoes and clothing, than to have perhaps three days' work per week and receive poor wages? We are very apt, I think, in this country, Mr. Speaker, to look too much for our examples to England or to the United States. We say that England has been successful as a free trade country, and we say that the United States has been successful as a high protectionist country. What is successful in England or what

is successful in the United States does not necessarily apply to us here in Canada. I would like to see in Canada a tariff that will bring forward our manufacturers, and one that will provide the workmen with work, and make us a country dependent on ourselves and not dependent on others.

Mr. MARTELL: Does the hon. gentleman think it is in the interests of the labouring man, the consumer, and the farmer, say in Nova Scotia, to have boot and shoe factories built up many miles away, with heavy freight charges, in order to make this country progressive? Or is it not rather in their interests to have a lower tariff with the United States?

Mr. MARLER: That is a different point entirely. If the hon. member wants to throw the bars down to the United States, I disagree with him. However, others will expatiate upon the advantages derived from the British preferential tariff. That tariff was inaugurated at a time when conditions were different, but since that time conditions have completely and absolutely changed. At that time we had not the depreciated currency to deal with, or the great spread in price between Continental labour and Canadian labour, and in my opinion, with regard to the preferential tariff, it is about time we came to our cool senses, and understood all the injury that that tariff was doing to industries in this country. The sooner we come to that conclusion, the more respect traders from Great Britain will have for us. But I do not belong to the type of protectionist who desires to protect inefficiently. I do not want the type of protection which will mean undue profits to the manufacturer. I simply ask for the type of protection that will enable us to give work to the workmen. If it is necessary in order to protect our markets that we should have a tariff higher than that, then I say that any undue profits made by the manufacturer should be returned to the people. All that I ever have asked, and all that I ask now is that a fair and reasonable cost of living tariff be maintained.

Hon. members from the West, of course, will say that I am not sympathetic with their needs. I do not think that that accusation is fair or well-founded. I am not unsympathetic with regard to what the West needs. No one has a greater admiration for what the people of the West have done, and no one desires to see the West progress and surmount their difficulties more than I do, but I would like to see lasting benefits provided for the West. What advantage can it be for the West if our industries in the East are curtailed, or if our industries in the East happen to go out of existence? I say, "happen" to go out of existence, and I think I say so advisedly, because I have heard time and again from that section of the House that the tariff should be consistently reduced. Hon. gentlemen from the West are frank on that subject, and I admire them for their frankness and I congratulate them on the success they have attained in this matter. But when we in the East are told that this is the deathknell of protection, and hon. members from the West tell us, through their leader, that protection is to be reduced until it reaches the vanishing point, what are we to expect? The hon. gentleman from Brandon (Mr. Forke) said in this House:

> I do not think that members on this side of the House are so much excited over farm implements. What they are interested in is the duties on the necessities of life.

Meaning by that, as we all know, that the duties should be taken off a great many articles, practically prohibiting their production in Canada. In addition to that the hon. member stated as regards the Hudson Bay railway—I may be digressing a little, but it will come into my remarks later on:

> I want the government and hon. members of this House to understand that not for one moment can this subject be downed, because the West is determined to have the Hudson Bay railway built and it will be built, I believe, in the not far distant future.

Then their chief whip, the hon. member for Last Mountain (Mr. Johnston) again stressed the fact:

> Now that the government has taken this step let them not stand still but press forward until the protective element in our tariff is completely eliminated.

I respect hon. gentlemen for these opinions. There is no bitterness in my remarks because they have their opinions on these subjects; but when we in the East hear from all sides of the House that protection is to be eliminated, naturally we have considerable fears as to our industries surviving. And as regards the remission of $750,000 this year, as spoken of by the Minister of the Interior (Mr. Stewart), surely that amount and much more than that amount is not going to help the position in the West very materially. It has always seemed to me that the difficulties in the West are not entirely due to questions of tariff. I frankly admit that I have always been anxious and ready, with any influence or courage I may have, with any ability I may have to work, to sit down with any body of men and find out what really are the difficulties of the West and try to surmount those difficulties. But surely the tariff is not the greatest difficulty. When

the West was prosperous—and the West has had its prosperous times—we in the East heard very little about the question of the tariff. But with adversity, naturally these matters arose. With adversity, due practically to over-expansion owing to war conditions, due, perhaps, to world-embracing difficulties which it is impossible to overcome at the moment, did not the West, through their political leaders, set up on an altar the god of a low tariff, or no tariff, and did they not fall down and worship that idol? Are the greatest difficulties, after all, due to the tariff? Are there not other matters which we in the East can assist the West in, as we are always anxious and willing to assist the West to the fullest extent of our ability? Are the questions of freight rates, rural credits, not questions of great necessity to the West?

Mr. DUFF: Branch lines in the West.

Mr. MARLER: Yes.

Mr. GOULD: As regards the remission of $750,000 which the hon. gentleman refers to, I think he would grant that the Acting Minister of Finance has taken into consideration the fact that the purchasing power of the farm has gone and that, as a result of that, the amount this year will be low.

Mr. MARLER: I did not take that into consideration, but I am quite ready to take into consideration everything as regards assisting the West. That is what I have been trying to say for the last few minutes. But as regards the question of freight rates alone, are conditions going to be more advantageous if our industries in the East are curtailed? Railways have to live; in this country they have to live very largely by east-bound and west-bound traffic. East-bound traffic alone will not suffice, there has to be west-bound traffic also. As regards taxes, will the taxes be more easy to collect? Will they be more easy to levy? Will a larger amount be realized in taxes if our industries in the East are curtailed? As regards rural credits, will it be easier for us in the East, in the event of our businesses not prospering to subscribe money for rural credits, as no doubt we are very willing to do? No, I have said in this House time and time again and I repeat it to-day, that we in the East are ready to co-operate with the West in every particular; but we ask, and I think we ask with reason and fairness, that our industries be allowed to live and that our workmen be given work to do.

[Mr. Marler.]

I come to the part of these remarks which is, perhaps, the most difficult for me to carry out, and I would ask hon. members to bear with me a little while longer. I trust they will forgive me if I infuse into the remarks which I am about to make too personal a tone. I wish to tell hon. members under what conditions I came to this House and the direct reasons I have for taking the course of action which I propose to take to-day. When I was asked to be a candidate in the division of St. Lawrence-St. George Montreal which I now represent in this House I do not think there were many in the Liberal party who did not look upon the winning of that division as a fairly difficult task. It was not the division, I am free to admit, that I would have chosen in a first attempt to enter parliament. As a matter of fact, as all knew, a fight of that description could not be taken up without great consideration. I came to the decision to make the fight. In that decision I was very largely influenced by this factor, that if I was to enter parliament at all, the best way was by having the confidence of people amongst whom I had lived and who had known me and my family for many years; indeed, as regards my family, for generations, and if I had not their confidence, the best thing to do was not to attempt to go into parliament at all. It was under those conditions that I agreed to allow my name to go before the convention for the choosing of a candidate. But before entering into that situation I took the advice of certain leaders of the Liberal party and I placed before them the identical conditions on which I thought I would support and the conditions which I was prepared to uphold if elected a member of the House of Commons, and if I obtained their approval to those particular conditions. Subsequently, at the convention which was called for the purpose of nominating a candidate, I read to that convention, word and letter, those particular, self-same promises to which I have alluded. Subsequently, during the course of the campaign, I again persisted in the same policies, and as all hon. gentlemen know, I was elected to this House by a substantial majority. That is the story of how I came to this House. Since then I have advocated persistently those particular policies. I believe those policies are still approved by my electors and I have seen no particular reason to change my views. As a matter of fact they are precisely the same policies as others advanced in the city of Montreal. As a consequence of what I have told you, Mr. Speaker, I intend

to stand by the promises I made my electors and to accept the consequences of the action which I intend to take to-day. In my humble opinion, while it is quite right that members of parliament should be given the utmost latitude in their decisions, nevertheless I hold, and will always hold, that where definite promises are made by a man to his electors, and where he believes, and in fact knows, that the policies which he has advocated in the past are still approved, he has no right to go back on those promises. To do so is merely to deceive the people whom he represents; and to that deception I will not be a party.

But in addition to that, Sir, let me address one word to hon. members on this side of the House; and I can assure them that the task which I am discharging at the present time is no light or easy one. Let me tell my hon. friends that there is no bitterness in the attitude I take towards any member of the government or any other hon. gentleman on this side. I have always considered it a doctrine of the Liberal party, clearly one of its fundamental tenets, that those who call themselves Liberals shall be entitled to act and think as their consciences may dictate. Liberals have never been bound, anywhere in the wide world, by hard and fast or immutable rules. Individually they have always followed those policies which they considered best in the interests of the countries which they have respectively been privileged to serve. Because, therefore, I see fit on this occasion to disagree with certain tariff policies of the government, I do not think that any gentleman in this House should deny me the right to that freedom of action because that is precisely what Liberalism has taught me to expect.

I do not propose for a moment to take up the time of the House in dealing with all those policies which I brought forward at the time of my election. However, if I may detain the House a few minutes longer, I want to lay particular stress on the question of the tariff as I advocated it then. I stated that my views on the tariff were that the tariff should be framed with the idea of the maintenance of established, legitimate industries, the encouragement of new industries, and the promotion of trade with other countries, and that no measure should at any time be so arbitrarily adopted as to occasion uncertainty in business and effect radical changes without reasonable notice or discussion. I still hold that the declaration I made at that time I was warranted in making, and was in accordance with the Laurier-Fielding tariff as I understood it then and as I still understand it. Besides, that declaration which I then made regarding the tariff, and which I have repeated to hon. members of the House, is a declaration which was approved by the leading Liberals in the province of Quebec in the election of 1921. Of course, I know perfectly well that I lay myself open to an accusation, and I seek that accusation so that there shall be no misunderstanding as to the attitude I am taking. Hon. members will ask, why did I not accept the 1919 platform? The accusation implied in that question is a fair one for any hon. gentleman to make in this House. Well, I did not run on the 1919 platform for the reason that I never have accepted that platform so far as it relates to the tariff; it does not accord with my views. I always considered that that platform had been prepared at a time before there was, more or less, a line drawn between what I understood to be the Liberal party—certainly the Liberal party in the province of Quebec—and what subsequently became the Progressive party. I am not questioning the wisdom of any hon. member in following the 1919 platform; all I can say is that I never accepted it and do not accept its tariff proposals to-day. There are in that platform certain clauses which I think it is not unfair for me to repeat to the House to-day. Two of these clauses are the following:

> That, to these ends, wheat, wheat flour and all products of wheat; the principal articles of food; farm implements and machinery; farm tractors, mining, flour and saw-mill machinery and repair parts thereof; rough and partly dressed lumber; gasoline, illuminating, lubricating and fuel oils; nets, net-twines and fishermen's equipments; cement and fertilizers, should be free from customs duties, as well as the raw material entering into the same.
>
> That a revision downwards of the tariff should be made whereby substantial reductions should be effected in the duties on wearing apparel and footwear, and on other articles of general consumption (other than luxuries), as well as on the raw material entering into the manufacture of the same.
>
> That the British preference be increased to 50 per cent of the general tariff.

Another accusation might be brought against me in this House, namely, that the Prime Minister said he did accept that platform. He did say that he accepted it, but he very properly explained—and I am not throwing this back at the Prime Minister in any way—that he accepted it as a guide to follow. He very clearly gave me to understand that. I hasten to amend that language: he did not personally give me clearly to believe, but he gave us generally to believe, that that tariff declaration in that platform was a guide to follow. Now, sir, I have not the slightest intention of being impertinent; but this is a

matter of vital importance to many industries in the East and I think we should know from the government whether or not it is their intention to fulfil these articles in the 1919 platform. Let the government not misunderstand my questioning in that respect; I ask in all respect for information; and I merely say that if these articles in that platform are to be fulfilled, then it will be exceedingly difficult for certain industries in the East to survive. I was fully justified in taking the position I took in the election of 1921 owing to the utterances of other Liberal leaders in the province of Quebec. Mr. Taschereau, the Premier of Quebec, speaking on October 22, 1921, used these words:

> Is it a time, when our industries are going through a crisis such as this generation has never known before—when our neighbours and even the Mother Country are having recourse to protection against our products, when the mark is only worth a half penny here and the European exchange is exceptionally favourable to us, when we ought to throw down all barriers and invite all foreign competition?
>
> My Liberalism calls for a tariff which protects the consumer indeed but also our industries. These results are by no means incompatible but may well be obtained by a tariff for revenue—such as was proposed by Sir Wilfrid Laurier.

And later on he said:

> May I say further on this subject that we ought to act with extreme prudence. It may be that for many years to come the tariffs of foreign countries will close their markets to our products both manufactured and agricultural. We must then become in a far larger measure the consumers of our own goods. Now, the agricultural interests cannot prosper, cannot survive, without great centres to receive and distribute their products. Our towns on the other hand cannot increase and support their work people unless the rural folks buy their manufactured goods.

And on the 6th December last at Montreal Mr. Taschereau said:

> First, we want a tariff permitting the East to live and the great manufacturing centre of Montreal to prosper and expand. It is true that Quebec is an agricultural province, but our agriculture and our colonization cannot progress unless we have centres like Montreal. We need such a tariff, it is absolutely essential.

Now, Sir, I claim that the attitude I took in the 1921 election was clearly and distinctly taken on a solid foundation. I had the consent of Liberal leaders of repute to take my position with regard to the tariff policy. That policy was what I conceived it to be then, and what I still conceive it to be—the Laurier-Fielding tariff policy. In addition, my action was confirmed by the utterances of my leaders in the province of Quebec. I am pretty well convinced that if the 1919 platform as regards its tariff clauses is to be carried out, the concessions granted this year are only a start in the direction of very considerably lower tariffs.

[Mr. Marler.]

Mr. MARTELL: That is what we hope.

Mr. MARLER: My hon. friend says, "That is what we hope." Later on there will be still further tariff concessions, perhaps the entire elimination of many duties. Ultimately will come a peremptory demand from the Progressive party for the completion of the Hudson Bay railway.

Some hon. MEMBERS: Hear, hear.

Mr. MARLER: Some hon. members say "hear, hear" to that statement. Now, Sir, I feel I must take my stand in this respect. If other members on this side of the House view the future with equanimity, I certainly do not. And if they are not prepared now to take a stand for what I firmly, honestly and sincerely believe to be the policies of the old Liberal party—not those of the Liberal-Progressive party—they are only putting off the stand which they will have to take in the very near future. I intend to take my stand now.

Consequently for the various reasons which I have given in the course of these remarks, Mr. Speaker, I regret to state that I shall vote against this resolution.

Mr. ANDREW McMASTER (Brome): Mr. Speaker, the observations which I have to address to the House to-day fall roughly under three heads: First, a consideration of the financial condition of the country; secondly, a discussion of the complaints of our protectionists; and, thirdly, an indication, by way of respectful suggestion, of the road on which the government should continue to travel.

I would wish at the outset to associate myself most heartily with the very gracious compliments paid by the hon. member for St. Lawrence-St. George (Mr. Marler) to the Acting Minister of Finance (Mr. Robb). I think it is of the utmost importance that we should have a clear understanding of just how the country stands as regards its finances. The Acting Minister of Finance has done what, I think, almost anyone who assumed the functions of a finance minister would have had to do in the treatment of our national debt. The minister who had already upon him the heavy obligations and responsibilities of the Department of Immigration could hardly be expected to recast the method in which the country's books are kept. But I am of the opinion that that method is undesirable. I am of the opinion that it fails accurately to set forth in an easily understandable form the real situation. I am not hostilely critical to the Acting Minister of Finance. Indeed, I think

the observation made a few days ago by one of the members from Toronto, in which he accused the Acting Minister of Finance of misleading the people, was particularly ungenerous in view of the fact that the Acting Minister had followed the procedure in regard to loans of the Canadian National Railways which had been inaugurated by the former Minister of Finance, the member for West York (Sir Henry Drayton). But I do cherish the opinion that the obligations of the National Railways cannot be treated other than as the direct obligations of the Canadian people.

Sir HENRY DRAYTON: Does the hon. gentleman think that a refunding operation ought to be looked upon as an increase in capital?

Mr. McMASTER: No, certainly not.

Sir HENRY DRAYTON: Then just another question. Does he also think that if in a given year refunding operations were far in advance of bond issues, the bond issues should be looked upon as an increase of the capital debt? That is all we ever did.

Mr. McMASTER: I would say that if a refunding operation is merely borrowing, say, $100,000 to pay off $100,000, of course there is no increase in the capital debt; but that if you borrow $150,000 to pay off $125,000 you increase the capital debt by $25,000.

Sir HENRY DRAYTON: If that was the result of the year's operations.

Mr. McMASTER: Yes. I do not think there is any difference of opinion.

Sir HENRY DRAYTON: It never was.

Mr. McMASTER: But I think it is inadvisable to treat the obligations of the National Railways in any other fashion than as direct obligations of the Canadian people. The National Railways belong to us in precisely the same way as the old Intercolonial railway belonged to us; there is no question about that. Now, if we admit this principle, how must we regard the situation? It seems to me that we must regard it as being one in which we have not, as a matter of fact, saved and wiped off our debt to the extent of $30,000,000 odd. We have not done it. We have done it in accordance with the bookkeeping practice which has been carried on. I do not blame the Acting Minister of Finance for the practice, but I do think we had better mend our keeping of the national books.

Now, I would ask members who are interested in this matter, and after all it has an interest for all of us, to look up the Year Book—that excellent publication got out by the Dominion Bureau of Statistics—for the year 1924. At page 762 they will find that our gross debt as at the 31st March 1923 amounted to $2,888,827,237 and that our net debt amounts to $2,453,777,869. He will find that the difference between the gross and the net debt is arrived at by deducting from the gross debt such assets as cash on hand and in banks, specie reserve, advances to provinces, banks, and so forth, advances to imperial and foreign governments, soldier land settlement loans, and miscellaneous current accounts. In establishing this net debt of, in round figures, 2½ billion dollars, the amounts spent on public works, whether by way of canals, railway, or public buildings and the amounts advanced to the railways and to the Canadian Government Merchant Marine, have not been taken into account. They are regarded as inactive assets, but they are not taken in as assets which should reduce the liability, the gross debt of the country.

Now, it is of extreme importance that we should have the position put before us as it actually exists, because once you declare a surplus you open the way for demands for increased expenditure, and one of the matters on which I am in complete accord with the member who has just taken his seat (Mr. Marler) is in his demand for rigorous economy. Now, how should we treat this? Last year we borrowed for railway account 22½ millions of dollars by way of a serial equipment loan, and we borrowed in addition $50,000,000. Well now, that should be added to the debt, but to leave that without explanation would not be fair, because if the money has been properly expended there should be, and we take it for the purposes of the argument that there are, assets by way of betterments, by way of improvements, by way of additional equipment, which should at least offset the $72,500,000 to the extent of which the country's credit has been pledged during the current year. My proposal is that year by year when the Finance Minister makes his statement he should combine the railways and the ordinary consolidated and capital accounts of the country. Now, that is not a new idea. The present situation is open to abuse or to misconception, due, I think, to the fact that the late government refused to follow some very wholesome advice tendered to them in the session of 1919 by the then member for Shelburne and Queen's (Mr. Fielding), seconded by my humble self, in which we urged very strongly upon the government that all the earnings of the National Railways

should go into consolidated account and should be only paid out of consolidated account in the same manner as any other government expenditures are paid out. If that had been followed I think we would have had a juster system of bookkeeping, a system which would have exposed the real financial situation of the country; we would have had a greater control of expenditure by the railroad, and we would not have such an unfortunate adventure as the buying of the Hotel Scribe in Paris, for which the government is not, except most indirectly, responsible, because as I understand it the matter was arranged by the management without reference to the government at all.

Mr. CRERAR: May I ask my hon. friend if he now advocates that change with respect to the administration of the National Railways?

Mr. McMASTER: I do. It is preposterous nonsense to think that we can in this House get away from our responsibilities as trustees for the Canadian people, not only for the wharves which the Canadian people own, not only for these parliament buildings which the Canadian people own, but for the railways that the Canadian people own. I do not want to see the management limited in matters of pure administration, but I do say that we cannot get away from the responsibilities which we possess as members of this House and as representatives of the people. It is idle to talk about taking the railways out of politics in that sense. We must develop in this country a feeling of responsibility among the members of the House and among the people generally, a realization that the National Railways have to be run in the same businesslike fashion as the Canadian Pacific Railway is run.

Mr. MACLEAN (York): Would my hon. friend explain whether this reform which he proposed would allow the establishing of a fixed amount on which the National Railways should not only earn maintenance expenses but also discharge the debt or at least meet the interest upon it?

Mr. McMASTER: I remember hearing the leader of the opposition (Mr. Meighen) state some years ago that he had such faith in our National system of railways that he believed in the long run they would be able to earn interest upon and, if I mistake not, ultimately discharge, all the advances that had been made to them, and earn interest on their capitalization. I am not at all sure that that desirable objective will ever be reached, but I am inclined to the belief that it may be better bookkeeping for us to write down the railways to more nearly their real value and to transfer the amount written down from the railway account to the national debt account. It is purely a matter of bookkeeping.

Mr. MARTELL: Would we still have to pay the interest?

Mr. McMASTER: Yes, of course we would still have to pay the interest.

Mr. MARTELL: Then why not leave it where it is?

Mr. McMASTER: I am going to explain briefly the method adopted in New Zealand and Australia, which, I think, is an improvement upon our present procedure, which differentiates when there is really no difference.

Sir HENRY DRAYTON: Has the hon. member looked into the matter of the extent to which that has already been done, that is, the writing off of these assets and their transference to suspense account? I think when I left office that approximately $400,000,000 had been written off.

Mr. McMASTER: I cannot answer my hon. friend, but I noticed in the balance sheet of our national debt that a great deal was carried in what was called inactive assets.

Sir HENRY DRAYTON: That is where they were written to.

Mr. McMASTER: And I presume that a very considerable amount of the advances made to the railways has been treated in this fashion.

Sir HENRY DRAYTON: Your suggestion has been acted upon to that extent.

Mr. McMASTER: Yes, to that extent there is no difference of opinion between us. In the New Zealand Official Year Book for the year 1923 I find on page 473 that in their statement of gross indebtedness they follow this system: First all the obligations of the state, whether in connection with railways or other public activities, are all shown. What they do, however, is to classify the indebtedness under different headings. Debts incurred in respect of railways, telegraphs and telephones, water power development and electric supply, swamp drainage, and so on, are declared to be "directly productive." "Investment" is the heading given to such items as advances to settlers, advances to workers, advances to local authorities, mining advances, cold storage advances, land for settlement, discharged soldier settlement and lands for native land settlement, fishing in-

dustry promotion, housing and employees' dwellings. Then they have still another heading which they call "indirectly productive," and under this heading are found: Loans made in connection with roads and bridges, irrigation and water supply, development of mining, immigration, and so on. "Unproductive" is the heading given to loans connected with public buildings, scenery preservation, Maori war defence, Great European war. Strangely enough, education figures under this head. Of course, it may be that those expenses of education were for the building of school houses, which do not give a direct return, and therefore are only indirectly productive. But the point I wish to make is that the whole obligation of the state is seen at a glance, that on one sheet of paper one can see exactly what the people of New Zealand are responsible for, and I think it would be well if we adopted the same method.

In Australia very much the same system is followed. In the Year Book of the Commonwealth of Australia for 1923, on page 372, I note that in a statement of their Commonwealth consolidated revenue they divide their revenue under three heads: Taxation, under which heading are found the receipts from customs, excise, land taxes, state duty, income tax, and so on; public works and services, under which heading they place postal, railways, Commonwealth steamers, and so forth, and "Other revenue, which includes such items as interest, discounts, coinage patents, and the net profit on the Australian note issue, which is of some interest to those in this country who think that perhaps the state might get something out of the issuing of notes.

Sir HENRY DRAYTON: What did that amount to?

Mr. McMASTER: I was just going to give that. For the year 1921-22 it amounted to £1,261,482 sterling, not a very substantial amount, but still not inconsiderable.

The railways in Australia are state assets rather than federal ones, and therefore we find on page 414 of their Year Book a statement as concerns the different states of the amount expended on railways and tramways, which amounted in all these states in the year ending 30th June, 1922, to some £10,976,421 sterling. The point I wish to make is that I think it would be wise for us to so change our bookkeeping that whenever we raise public money by loan for whatever purpose, the transaction should be found in our public accounts in a readily accessible form.

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

PRIVATE BILLS

CONSIDERED IN COMMITTEE—THIRD READING

Bill No. 14, to incorporate the Roman Catholic Episcopal Corporation of Prince Rupert.—Mr. Stork.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE.

Mr. McMASTER: If any argument was needed, Mr. Speaker, to show the utter failure to bring about its declared objective, the attitude adopted by protectionist advocates in this House, certainly shows the absolute failure of the protectionist system to bring about the benefits which its advocates some fifty years ago said would be brought about. Apparently the great theme of the protectionist advocates in this House is a declaration of Canadian incapacity. "We are not able", they say in one breath, "to compete against the low-paid labour of Europe; we are unable to compete against the depreciated currency of Europe". In the next breath they say, "We are unable to compete against the highly-paid and highly-skilled labour of the United States". I think I am on common ground with all the students of the economic history of the country when I say that when fifty years ago or thereabouts, Sir John A. Macdonald, the Hon. C. C. Colby and other leading Conservative statesmen of that day asked the Canadian people to adopt the principle of protection as the guiding principle of our fiscal policy, they based their appeal on the infant industry argument. They appealed to the people of Canada, and their appeal, I must say, was a somewhat attractive one. They said, "Give our manufacturers a few years of state-aid by way of a tariff, help them to pass through this crisis, and in a very few years, perhaps a score of years, they will be able to stand on their own feet. We will obtain goods just as cheaply as ever, and we will have in addition manufactures established in our country". That was one argument presented to the people of Canada at that date. Another argument that was presented to those who lived in the Maritime provinces at that time was that the tariff was not going to be raised at all, and that it was merely to be a readjustment of the tariff. I take it that had the protagonists of protection in 1876, 1877 and 1878 told the people of Canada that fifty years later, when on many of the necessaries of life the schedule rates

were just as high as they were when first levied the protected manufacturers of this country would be asking for precisely the same rate of tariff protection, the Canadian people never would have given way to their appeals, never would have adopted the protective principle as the guiding principle of their fiscal policy and would not have rejected Alexander Mackenzie in 1878.

I wish to make a very few general observations on certain protectionist arguments that have been presented. I cannot traverse all these assertions. I said a moment ago "arguments", but I think that is rather too complimentary a term to use. I cannot traverse all the protectionist assertions, for the protectionist speeches as a rule have been extravagant in assertion but parsimonious in argument. Let me deal very briefly with two arguments which were adduced yesterday by the eloquent member for Fort William and Rainy River (Mr. Manion).

In brief, he had two arguments which a hasty perusal of his speech enables me, I trust, to answer. The first argument he brought forward was this: Appealing to the historian Macaulay, he said that very great progress had been made between 1685 or 1688, about the time of the great revolution in England of 1688, and 1845. Without doubt, he was perfectly correct in his historical statement based on the words of that well known historian; but then he went on to say: That shows that Great Britain had so far developed under a protectionist policy that it was able to march forward by the impetus given by protection and apparently was able to prosper under free trade by reason of the start that the industries had received under protection. Let me say this. Throughout the Middle Ages and right down to almost the middle of the nineteenth century, Great Britain, as well as all other countries in the civilized world, was protectionist. If anything, the protection in Great Britain was considerably less hampering to trade than the protection on the continent. For instance, before the French revolution and, I think, perhaps even thereafter, they had tariffs between different parts of France, and wheat and other grains could not move freely from one part of the Kingdom of France to another. They had—and they have had it until quite recently—a little protective tariff or rather a little tariff for revenue purposes around every town of any considerable size in France. They had protection on the continent; they had protection in Great Britain; but Great Britain started to get rid of protection, I think, earlier than any other country in Europe.

[Mr. McMaster.]

Walpole started the work, in 1750, or thereabouts, Adam Smith wrote his great work; he converted to his views the great minister, Pitt, who started taking off duties, and who would probably have had the tariff almost on a free trade basis had the revolutionary wars with France not intervened. During the whole of the revolutionary and Napoleonic wars from 1763 to 1815, there was no movement towards freer trade; but after the revolutionary and Napoleonic wars were over, Huskisson started in 1823 to take off duties. He was followed by Peel, so that in 1842 most of the duties on manufactured goods had been taken off. Then the duties on foodstuffs were removed from 1846 to 1849, and finally the work was completed in 1860 by William Ewart Gladstone. From then until 1903 free trade was accepted without question as the guiding principle of British policy.

What led the British people to get rid of duties on food? During the whole of the eighteenth century Great Britain produced about enough food for itself. As a matter of fact, in years of abundance they were able to ship food from England; but by reason of the invention of the steam engine, an invention for which British ingenuity is largely to be credited, and by the fact that there were in Great Britain coal and iron in close proximity, the industrial revolution, which was really unconnected with tariffs, brought about a development in the industrial life in Great Britain sooner than anywhere else in the world. The centre of population moved from the more southerly and easterly counties of England over towards the north and towards the west, and Lancashire and Yorkshire began to be hives of industry. That was in process before, during and immediately after the Napoleonic wars. Prior to the time of the revolutionary wars, Great Britain was about able to feed itself, but the development of manufacturing caused a great increase in population. That great increase in population ate up all the food that Great Britain was able to produce, and during the years from 1793 to 1815, while the war kept food from coming to Britain's shores from the continent of Europe, wheat went up to between two and three dollars a bushel. That had the result of raising the rent of land, and when Waterloo occurred and the Peace of Paris brought an end to almost a generation of warfare, the price of wheat fell from three dollars to two dollars a bushel. The landlords, who at that time controlled both the House of Commons and the House of Lords—the landed interest was the paramount interest in Great Britain at that time—were not pleased that the food

of the people was being cheapened, because that meant a reduction of their rents, and they combined with the farmers, who had a considerable amount of political power, to place upon the statute books the Corn Laws of 1815, which had the result of imposing starvation by law upon a large proportion of the British people when crops were scarce. The whole generation from 1815 to 1845 of what we call the labouring classes, the plain and common people who worked with their hands, protested against that:

> Bread taxed Weaver, canst thou see,
> What this tax has done for thee?
> See thy children vilely led,
> Singing hymns for shameful bread,
> While the stones of every street,
> Know their naked little feet.

That was the condition of Great Britain under protection. They hold out protection as having made Great Britain strong and powerful! Why, in the hungry forties, people were starving by reason of protection, and I have had an old Scotchwoman tell me that herself. Aye, and one man out of ten was in receipt of public relief. The people were working in the coal mines, young girls, young children, women working like beasts of burden to get the pittance with which they had to buy the high priced food of the time. No, it was not protection that made Great Britain great. What made Great Britain great was following a system of freedom, and that is what will make this country great—following a system of freedom and not a system of restriction.

Mr. Speaker, I do not pretend for an instant that free trade is a panacea for everything; that we would have a second heaven on earth in this country if we had free trade. It is only one of the reforms which we need in Canada. As Great Britain has been an outstanding example of the benefits of freedom of commerce, it is quite in line with the protectionist advocates to endeavour to destroy the value of the evidence of British economists, and the eloquent member for Fort William and Rainy River the other day endeavoured to lead us to believe that Mr. John Stuart Mill, the great economist, believed in the infant industry theory. That is not a new dodge on the part of the Conservative party. In 1876, Sir John A. Macdonald quoted these words from John Stuart Mill's Political Economy, the words which were quoted the other night by the hon. member for Fort William and Rainy River:

> The only case in which on mere principles of political economy protecting duties can be defensible is when they are imposed temporarily (especially in a young and rising nation),—

One would suppose, of course, that the imposition of duties for almost fifty years war a fair "temporary" trial.

> —in hope of naturalizing a foreign industry in itself perfectly suitable to the circumstances of the country. The superiority of one country over another in a branch of production often arises only from having begun it sooner. There may be no inherent advantage on one part, or disadvantage on the other, but only a present superiority of acquired skill and experience. A country which has this skill and experience yet to acquire may in other respects be better adapted to the production than those which were earlier in the field, and besides it is a just remark of Mr. Rae, that nothing has a greater tendency to promote improvements in any branch of production than its trial under a new set of conditions.

That reminds me of a striking instance of the superiority of Canadian over British production, which was cited to me some time ago by a Conservative member, himself a manufacturer. He said that during the war his factory began making shells. After having received from the government payment for the shells on the basis of what it cost in Great Britain to manufacture shells in the government arsenal, they made so much money that as a patriotic citizen he felt that he should reduce the price. Accordingly he cut the price in half and still they made money, so that he decided to reduce it to 25 per cent of the original price. And notwithstanding that reduction they were able to make a profit. True it is that in a new country it may be wise to try out old methods and improve upon them. This argument in regard to production is a two-edged sword: it is hardly right for people who have that capacity which I have just illustrated to play the part of those to whom state-aid is imperative. To continue:

> But it cannot be expected that individuals should at their own risk, or rather to their certain loss, introduce a new manufacture and bear the burthen of carrying it on until the producers have been educated up to the level of those with whom the processes are traditional. A protecting duty, continued for a reasonable time, will sometimes be the least inconvenient mode in which the nation can tax itself for the support of such an experiment. But the protection should be confined to cases in which there is good ground of assurance that the industry which it fosters will after a time be able to dispense with it—

That is a clause which must have escaped the attention of the hon. gentleman who quoted John Stuart Mill to the House.

> —nor should the domestic producers ever be allowed to expect that it will be continued to them beyond the time necessary for a fair trial of what they are capable of accomplishing.

If protectionists desire to take comfort from that statement they are of course perfectly at liberty to do so; but in considering it they should admit the fact that John Stuart Mill withdrew the statement. We have excellent evidence to substantiate that assertion.

Let me read it to you. I take this from a speech delivered by that great leader of his time, the Hon. Alexander Mackenzie, than whom a more faithful public servant and a more honest man never ornamented this House of Commons. He said:

But, sir, before proceeding to discuss some of the matters the right hon. gentleman referred to, let me call the attention of everyone for a moment to his remarks regarding John Stuart Mill. The hon. gentleman may not have made the statement that my hon. friend from Waterloo attributed to him, but he may find, if he recalled a certain circumstance, that he might have done so. He must surely remember that even John Stuart Mill wrote a letter to Mr. Greeley, of New York, withdrawing that passage from his book. He may remember the disappointment felt by the protectionists of the United States with reference to Mr. Mill's passages—how they distorted it, when Mr. Mill really withdrew it and expressed his regret that it had ever been put in. But in order to make doubly sure, I had the pleasure last summer of meeting with a well known English writer—whom the hon. gentleman no doubt knows—Mr. Newmarsh, an intimate friend of Mr. Mill; and I called his attention to this circumstance, sitting at the dinner table one day in London. He said: "Oh, yes; that is well known. We all expressed our exceeding regret to Mr. Mill that the passage should have been written, as it was liable to be misunderstood. He withdrew it, however, unmistakably and completely".

Now I would pass on to the speech delivered this afternoon by the hon. member for St. Lawrence-St. George. I am not at all sure whether the views expressed by him are an accurate reflection of the attitude of the Canadian manufacturers generally. I should regret the fact if they were. But if the attitude displayed by the hon. gentleman to-day be an accurate expression of the general sentiment of our manufacturers, what does it indicate? It simply means that they are not prepared in the public interest to give up one shred or one tittle of the special privileges which they now enjoy. There is not one group in this House, there is not one individual member of this assembly, that does not wish for the growth and prosperity of our Canadian manufacturers. But what we are anxious for is that this growth shall not be at the expense of other interests in the country. It was a French economist who said that there is no use arguing with a protectionist because protection is not a philosophy but an appetite, and it is futile arguing with people about their appetites. Sometimes when I reflect upon the history of those who have enjoyed special privileges of any sort I am inclined to agree with this French economist. But is it wise for the possessors of special privileges to hold on to them with too firm a grasp and to refuse to realize the rights and the desires of other people?

[Mr. McMaster.]

If you will pardon another historical allusion, you will remember that before the French revolution the clergy and the nobility had been able to discharge themselves of all responsibility for public burdens while they enjoyed great public privileges; and they held on to those privileges in spite of the warnings of the physiocrats, in spite of the appeals of the philosophers, and in spite of what their own consciences must have told them was right. They clung to those privileges until finally they saw them wiped out over night. I ask the House to compare with that what happened on the other side of the British channel, where there were also great privileges enjoyed by the few. The landed interest in Great Britain controlled both Houses; and in 1832 the rotten boroughs, practically pocket boroughs, the private property of the great landlords, were in many cases wiped out. Great Britain came almost to the verge of revolution, but that wholesome respect for and fear of their fellow citizens led the British landlords, the British nobility and the British privileged classes generally to give way. Again in 1868 when there was a great movement for the extension of the franchise there were people in Great Britain who were very much put out by the circumstance and desired to prevent the common man from receiving the right to vote; for at that time only about one man in six enjoyed the franchise. Again, however, in the face of great public agitation, and public meetings addressed by the leaders of the movement to the people assembled in thousands, the opponents of the popular movement yielded. It is wise sometimes to give way. I would recommend an attitude of conciliation, an attitude of endeavouring to appreciate the other fellow's position to the privileged interests of this country.

And now I think I can perhaps best take up the various matters connected with the tariff by following the very interesting speech delivered this afternoon by the member for St. Lawrence-St. George, because I take it that he is regarded in this country as the accredited representative of the big interests. Last year, almost twelve months ago, the hon. member followed me when I spoke in the budget debate; it is my turn now to follow him. On that occasion he made use of these words:

Let me turn to the hon. member for Brome who made a speech this evening, and stated he was absolutely against the principle and practice of protection. No doubt hon. members opposite agree with all he said. They have heard his remarks with reference to his defection. I do not intend, Mr. Speaker, to say

very much about the defection of the hon. member for Brome beyond stating it was very regrettable to me that he should have adopted such an attitude towards the party he has followed for so many years. What did the hon. member say? He said he was a Liberal and he was the only man who understood the Liberal doctrine. Well, why does the hon. member for Brome pose as the arbiter of the Liberal party? Can no other hon. members in this House understand what the Liberal doctrine or the Liberal policy is? Why did he say that he, and he alone, is the only man in the House that understands the Liberal doctrine?

The hon. member for Brome is advancing his own personal ideas and views instead of sinking those personal views as many of us have to do for the general good of the country.

Now, I do not propose to administer to the hon. member for St. Lawrence-St. George any reciprocal lecture. I learned at the feet of Sir Wilfrid Laurier that in politics there is no room for resentment On the contrary, I would congratulate the hon. gentleman on his sincerity and courage. If those are the views which he holds—and I believe them to be his sincere views—it is right that he should express them. In the world at present parliamentary representative institutions are on trial. In Italy we see one dictator holding sway; in Spain we see another; we have had rumours that some people in France think they should have a dictator there; and therefore it is for us, who are the inheritors, along with other British countries, of British parliamentary institutions and traditions. to see that those are kept intact and inviolate. One of the things which has destroyed parliamentary government in some countries, and has depreciated its prestige in others, has been the insincerity of public men. I believe that the people of Canada are sick and tired of men who advocate policies in which they do not believe, who advocate one thing at one time and another at another time. And after all the personality of the member for St. Lawrence-St. George and the personality of the member for Brome are nothing in comparison with the importance of the issues which are before the Canadian people today.

The hon. member for St. Lawrence-St. George spoke about agricultural implements. But before I deal with that part of his speech I think I should very briefly refer to something on which he had a good deal to say— the Laurier-Fielding tariff. I have been associated with the Liberal party for a good many years, but I never heard about a tariff called the Laurier-Fielding tariff until quite recently. The tariff which obtained in this country for a great many years was introduced by Mr. Fielding in 1897. It did not go as far in the direction of cutting down duties as I would have liked; but it did cut down some. It did introduce the British preference, first at 12½ per cent, in the following year at 25 per cent, and the year after that at 33⅓ per cent. But I take it that those who presented themselves as Liberal candidates in the election of 1921 were not obliged to go back in the far and distant past to find what the declared policy of the Liberal party was. I think that perhaps if they had looked back for the ten years previous to 1921 they could have obtained a just appreciation of what was expected of those who declared themselves to be Liberal candidates. The member whom I congratulate for the pleasant and courteous way in which he spoke this afternoon was insistent upon picking out here and there statements of a more or less protectionist nature from speeches delivered by the late Sir Wilfrid Laurier and by Mr. Fielding. But, strangely enough, he forgot to mention one of the greatest steps towards freedom of commerce which has ever been taken by a political party in this country; that was the attempt to give the people reciprocity in 1911. That episode was conspicuous by its absence from his speech. I think perhaps that here I should make a few brief references to the views of Sir Wilfrid Laurier in the last ten years of his life.

In 1911 the Liberal party went to the country on reciprocity. In 1912 I well remember Sir Wilfrid Laurier addressing a great meeting in Montreal and laying down his principles to the effect that he believed in reciprocity and that some day the Canadian people would regret that they had rejected it. From 1911 right up to 1917 the Liberal party, by resolution after resolution in the House of Commons, pledged itself to a reduction of the tariff. After 1917 I had something to do with the expression of Liberal views in this House, and on several occasions, with not the entire support but almost the entire support of the Liberal party of that day, I placed on Hansard resolutions—always voted down by the government of that day—in favour of lower tariffs. In the last few weeks of his life Sir Wilfrid Laurier made a great speech to the Eastern Ontario Liberal Association. What did he say on that occasion? I have quoted from his speech before, and I do not propose to repeat those quotations now, but here is something that I do not think I placed before the House when I spoke in the debate on the Address. After speaking of the British preferential policy—which now no longer merits the approval of the member for St. Lawrence-St. George—Sir Wilfrid Laurier said:

We said, "No; we are not going to bargain with the Mother Country upon matters of that kind."

We do it because we are British subjects, and because we believe in the principles of free trade. We believe also it is for the good of the Canadian people that we should adopt that policy, and by that policy we stand to-day also. In your resolution you affirm that the black eye which was given by the present government three years ago should be removed, and, Sir, if it is in our power to do so we shall do so; at all events we shall take the opportunity to bring the matter before parliament at the next session.

Sir Wilfrid Laurier was not in his later days a protectionist. He was a man who believed in reduction of tariffs; he was a real Liberal, and he believed that freedom of exchange was part of the Liberal doctrine, of the Liberal tradition. While we were in opposition, after 1917, we had statements from Mr. Fielding himself that protection was not the principle which should guide the fiscal affairs of this country. It is difficult to imagine how a man could present himself as a supporter of the Liberal party and take the stand that duties were not to come down at all. I realize the difficulty in which many members of this House find themselves in connection with the trade question and I realize that the matter has to be dealt with with prudence and with care. I have every sympathy for the man who has protected industries in his riding which are fearful of what may happen, and I am all for prudence, all for conciliation, all for care, in regard to the trade policy. But the direction must be established, and progress must be made in the right direction visible to the naked eye, as I have said on previous occasions.

The hon. member stated that he had some sort of dispensation from some one or other for an apparent disagreement with the main body of the Liberal party on the trade issue. He did not tell us who granted him that dispensation, and I do not care very much who granted it, because the Liberal party, as I understand it, is not a hierarchy that grants dispensations: we are supposed to hold true to the tradition of the fathers in its entirety. But the hon. gentleman did refer to a very respectable character in the province of Quebec, Mr. Alexandre Taschereau, as one who had made protectionist speeches. I have an admiration for the Hon. Alexandre Taschereau. I had the pleasure last October of going down into the county of Brome and of speaking to my friends there in support of one who was the candidate of the Liberal party in the Quebec House led by the Hon. Alexandre Taschereau. But so far as trade questions are concerned, as far as the fiscal policy of the country is concerned, I decline to admit for an instant that any provincial premier has the right to speak for the Liberal party or for any other party in the federal arena. The dispensation, if obtained from the Hon. Alexandre Taschereau, was not worth the paper it was written on.

Let me now take up the question of agricultural implements. The hon. member gave a good deal of time to the consideration of agricultural implements. He said that reductions ranged all the way from 4 to 12½ per cent and he gave the House to understand, if he did not say so in so many words, that it would be impossible to carry on agricultural implement manufacturing in Canada without the help of a protective tariff. That is the statement made by the hon. member for St. Lawrence-St. George, but unfortunately it does not agree with the evidence given before the Drayton Tariff Commission in 1920. I would like to read to the House some evidence given by the then president of the Massey-Harris Company, Mr. Thomas Findley, who, perhaps, may be taken as a better guide as to the feelings and views of the implement manufacturers than the member for St. Lawrence-St. George. He said:

So far as the Massey-Harris Company is concerned, even to-day, placing no other consideration in the scales but that of money making, we should be quite prepared to have the tariff taken off our implements, if at the same time it were taken off everything that enters into the cost of producing them. In fact, considering how large our foreign trade is, in proportion to the whole, we honestly believe we could make more money under such a free trade condition than we are making at the present time.

And he makes this statement:

On August 14, 1917, following a very full discussion of the whole tariff situation and its effect upon our company the following resolution was unanimously passed by our directors and placed upon the minutes of the board:

"A further discussion on the tariff situation followed, and the president submitted figures illustrating the effect of the tariff on our business; and, while the consensus of opinion was that, given free materials, machinery and all other articles entering into the manufacture of our goods and the operation of our plants, we would be as well off with free agricultural implements, it was not thought desirable to make a statement of any kind at present in regard to the position on account of the unsettled political situation and the feeling that the effect of practically free trade on other Canadian manufacturing industries might be different from its effect on ourselves.

Now, it is true that the Canadian implement manufacturers have not got all that enters into their cost of production free. They have not got free coal, or free steel for the erection of their factories, or free belting or free machinery. But they have got free raw materials; they have got partly at least the condition under which they said free trade would be a benefit to them, and they have not had all the duty

taken off. Surely the plea that they are going to expire is not a plea that can be sustained, in view of the evidence brought forward by themselves.

Mr. HOEY: And they have got relief from the sales tax.

Mr. McMASTER: And they have got relief from the sales tax, as the member for Springfield (Mr. Hoey) says. I am afraid that the member for St. Lawrence-St. George was drawing his information as to the condition of the industry from the Montreal Gazette, which on the 12th of April, 1924, said:

New Budget Shows Immediate Effect. St. Hyacinthe Agricultural Implement Works are Forced into Liquidation. Communication to C.M.A.

That stands for Canadian Manufacturers' Association.

Present Reduction of Tariff Regarded at Board of Trade Merely as First Step. "I have just received notice of the first fruits of the new budget and the reduced tariff on agricultural implements, so far as this province is concerned," said R. W. Gould, secretary of the Quebec division of the Canadian Manufacturers' Association, yesterday afternoon. "That is a letter from the vice-chairman of our St. Hyacinthe branch, who is also head of the agricultural implement works at St. Hyacinthe." He has sent me notice that his firm has to-day been compelled to go into liquidation, as a direct result of the budget brought down the day before at Ottawa, which spelt ruin to his industry.

Mr. CALDWELL: An instantaneous effect.

Mr. McMASTER: An instantaneous effect, as the member for Victoria and Carleton (Mr. Caldwell) says. But it was a cruel untruth; it was absolutely false. There had been no going into liquidation. A withdrawal was made. Two days afterwards the following statement appeared in the same well-known paper—

Mr. HOEY: In small print?

Mr. McMASTER: In small print.

No Liquidation

The statement recently made that an agricultural implement manufacturing firm at St. Hyacinthe has been forced into liquidation by the budget, it was stated, has fortunately proved to be incorrect, the notice of their resignation from the Canadian Manufacturers' Association having been misinterpreted as meaning their liquidation.

Now that is a pretty slim excuse, and moreover it has not even the virtue of being true, because I have it from the member for St. Hyacinthe (Mr. Morin) himself that the firm referred to is the firm of O. Chalifoux et fils, Ltée, manufacturers of threshing machines, hay pressers et cetera: That company is not in liquidation, but expects to have, and we all trust it will have, years of useful growth before it. It never retired from the Canadian Manufacturers' Association, but I would recommend, and perhaps the hon. member for St. Hyacinthe will convey my humble advice to them, that it would be wise to retire from such an association, because it is a pretty hard thing for a company which is in a firm and proper condition, as far as I know and believe it to be, first of all to be branded as being en deconfiture—in bankruptcy—and then when they protested against that to have the association say "Oh, we had a letter from you and we now see it was that you were retiring from our association; we thought you had gone into insolvency." I think that perhaps these may be the sources of information about the agricultural implement manufacturers from which the hon. member for St. Lawrence-St. George has drawn his information, and I would recommend him with all courtesy to seek more accurate sources of information.

Now are the Massey-Harris people likely to expire under this present reduction of duty? Before the war they stated they carried on sixty per cent of their business outside of Canada. They went into Australia, they went into France, they went into the United States itself, they went into British South Africa, they went into the United Kingdom, they went into Belgium, they went into Denmark, and in all those countries they met the competition of the world.

Mr. CLARK: Does the hon. member suggest that the Massey-Harris people were exporting to the United States?

Mr. McMASTER: I presume they were. I will give the hon. member the export figures to the United States, and as the Massey-Harris Company is one of our largest implement manufacturers, I presume they were exporting. I think there is no question of their exporting to the United States. Perhaps I could bring in these figures here as well as later. The hon. member knows, of course, that there is no duty on agricultural implements entering the United States.

Mr. BROWN: I saw their implements on sale in Hanna, North Dakota.

Mr. McMASTER: There we have the evidence of an hon. member who was formerly a Congregational clergyman, so there is no question about it. Perhaps I might put on Hansard these figures because I think they are of real interest.

IMPORTS OF AGRICULTURAL IMPLEMENTS INTO CANADA FOR YEARS 1922, 1923 & 1924

Agricultural implements and machinery	Total imports	Imports from		
		United Kingdom	United States	Other Countries
	$	$	$	$
1922				
Dutiable	5,216,371	36,658	5,176,009	3,704
Free	2,501,661	32,174	2,370,463	99,024
Total	7,718,032	68,832	7,546,472	102,728
1923				
Dutiable	4,571,378	28,798	4,530,947	11,633
Free	3,852,617	2,243	3,821,124	29,250
Total	8,423,995	31,041	8,352,071	40,883
1924				
Dutiable	6,951,681	52,793	6,885,535	13,353
Free	4,814,604	51,726	4,684,479	78,399
Total	11,766,285	104,519	11,570,014	91,752

EXPORTS OF AGRICULTURAL IMPLEMENTS

—	Total exports	Exports to		
		United Kingdom	United States	Other Countries
	$	$	$	$
Agricultural implements and machinery—				
1922	5,345,308	371,642	583,005	4,390,661
1923	6,066,893	290,981	1,346,840	4,429,072
1924	9,339,519	659,679	812,290	7,867,550

Mr. CLARK: How many factories have the Massey-Harris people and where are they located? The hon. member was talking of the Massey-Harris people, and was going to give us figures of their exports to the United States.

Mr. McMASTER: I have not gone into the matter so thoroughly as to be able to tell from what particular factory the implements went into the United States, but what I do say, and what I think is a perfectly fair presumption is that, the Massey-Harris people being one of our largest manufacturers of agricultural implements, if we find that in one year over one million dollars' worth of agricultural implements was shipped from this country to the United States, the Massey-Harris people shipped some of those implements. If not, then the Massey-Harris Company were sending their implements into countries where they enjoyed no tariff privilege in comparison with the United States and were meeting the competition of the United States; so whether they met the competition of the United States manufacturers at home, or whether they met the competition of the United States manufacturers abroad, does not seem to me to make any great difference. Furthermore, the blue books of this country show that our implement manufacturers are sending their implements into the United States itself.

Mr. CLARK: Will the hon. member tell us the balance of trade in favour of the United States as regards agricultural implements?

Mr. McMASTER: I have those figures too.

Mr. CLARK: It might do the members of the House good to hear it.

Mr. McMASTER: I skipped some of the table to relieve the members the tedium of hearing long lists of figures. In 1922 we imported from the United States $7,546,472 worth of agricultural implements. Now I will give our exports for the year 1922. Our total exports of agricultural implements amounted to $5,345,308, of which we exported $583,005 to the United States.

Mr. CLARK: I asked for the balance of trade.

Mr. McMASTER: If I might be deflected for a moment, the balance of trade is one of the fallacies which was held by the mercantilists of the middle of the eighteenth century, and which was exploded by Adam Smith in his Wealth of Nations in 1766 or thereabouts.

Mr. EULER: What were the imports in 1923?

Mr. McMASTER: In 1923 the whole imports were; dutiable $4,571,378; free $3,852,617, making a total of $8,423,995.

Mr. EULER: That is wrong.

Mr. McMASTER: No, these are prepared by the Bureau of Statistics and these are the total imports. I have a table from the Dominion Bureau of Statistics, a comparative statement of the exports of agricultural implements to foreign countries from Canada and the United States. This is a statement comparing the calendar year of 1923. The first column contains the exports of Canada and the next column contains the exports of the United States. In considering these figures it should be remembered the United States has a population from thirteen to fourteen times as great as ours, and that the division between the rural population and the urban population is not greatly dissimilar to ours. Certainly they have a somewhat larger proportion of urban population to rural population than we have, but there is no great discrepancy between the populations of both countries. That should be borne in mind when we consider the figures. What do we find? We find that in the calendar year ending December 31, 1923, the United States and Canada sent goods to foreign countries as follows:

Comparative statement of exports of agricultural implements to foreign countries by Canada and United States for year ending December, 31, 1923

	Canada	United States
Argentine	$1,989,901	$12,975,828
France	2,157,589	4,821,906
Australia	1,359,770	3,610,177
Belgium	159,199	1,836,157
United Kingdom	519,539	1,787,436
British South Africa	305,467	1,463,215

One of the reasons why the American figures are very much larger than ours in certain countries is, first of all, the fact that they have a very much larger production, and it is natural they should have a larger export to the foreign markets, and secondly a great deal of their exports are tractors, and apparently our implement factories have not specialized in tractors as they have in the United States.

Let me turn to the situation in Australia, because I regard that as of real interest. In Australia we do not enjoy the benefits of the British preference. Our agricultural implement manufacturers go into Australia and compete there with the British manufacturers who have a preference, and American manufacturers are in exactly the same position as we are. Now the duties are very high. I notice the member for Fort William and Rainy River held up the Australian government as a wise government because they imposed heavy duties. I do not think our manufacturers of agricultural implements would share the opinion of the hon. member in this regard. But that of course is beside the point. Australia in the year 1919-20, 1920-21, 1921-22, bought goods from the United Kingdom, the United States and Canada as follows:

	1919-1920	1920-1921	1921-1922
United Kingdom	$271,730 82	$ 468 677 52	$ 417,028 56
Canada	977,874 42	1,863,405 30	1,265,565 96
United States	633,623 94	1,663,125 42	1,005,775 02

I have been frank and honest because already I have given the House the last year in which the difference was the other way. The United States sold more to Australia than we did. But in the three years we considerably outsold the United States in the Australian market under precisely the same tariff conditions. After that argument will anybody say that the agricultural implement industry of Canada is on the point of expiration?

Mr. HOEY: Will the hon. gentleman tell us what the Australian tariff on agricultual implements is?

Mr. McMASTER: I think I have it here, and it is very heavy. The tariff on reapers, threshers and harvesters as against British goods is 22½ per cent; as against Canadian and American, 35 per cent. Hay rakes have a specific duty of £1. 15s. under the British preference tariff, and £3 under the general tariff; and if that tax is not 30 per cent ad valorem under the British preference and 45 per cent under the general tariff, the ad valorem duties at those rates are applied. Reapers and binders bear a duty of £6 10s. under the British preference or 30 per cent ad valorem, and under the general tariff £10. or 45 per cent; mowers £2. 8s. specific duty under the British tariff, £4. under the general tariff, and 30 per cent and 45 per cent ad valorem. That seems to me to be a very strong argument as against the contention

that the Canadian implement manufacturers are unable to meet competition.

Mr. EULER: Would the hon. gentleman admit that there are literally scores of smaller manufacturers of implements in Canada in addition to the Massey-Harris and International who might be otherwise affected?

Mr. McMASTER: I presume there are and they might be otherwise affected. I do not see why they should be otherwise affected. I presume smaller manufacturers will manufacture more or less specialized machinery for local needs, and if they have their raw material given to them at a low rate or free, as under the proposed agreement, and have a protection still accorded to them, of from six per cent upwards to, in some cases, fifteen per cent, I do not see why they cannot make it go. That is the answer I would make.

Mr. EULER: That is your assumption.

Mr. McMASTER: That is an assumption, but I think it is a reasonable assumption. I am not going to admit as a Canadian citizen for a moment that my Canadian fellow citizens are less capable than citizens who live in the United States. When I visit the United States, whom do I find are leaders in the life of the United States in those cities to which Canadians have resorted? Do I find our Canadian people in a condition of inferiorty, or do I find them leaders in the professions or businesses with which they are connected? Why, if a man gets really sick in New York, they go out and shout for a doctor and a Canadian nurse.

Mr. EULER: That is begging the question entirely.

Mr. McMASTER: No, that is not begging the question. That is trying to instil into the hearts of the protectionists of Canada self-confidence and belief in their own country:

> O wad some power the giftie gie us,
> To see oursels as ithers see us!

Would that the protectionists would only realise the posture they stand in before their fellow citizens. After having enjoyed special privileges for almost fifty years, they do not seem a whit more willing to let go any of the special privileges than when they asked for them in the first place. The hon. member for Assiniboia (Mr. Gould) says that they are less willing, and I think that possibly he is correct. I do not wish to dwell too long upon this question of agricultural implements; I do not desire to labour the point or to weary the House with figures; but what I wish to draw to the attention of the House is this: My investigation has borne in on my mind two facts, first of all, that where there is a heavy tariff against imports of agricultural implements, our manufacturers are able to meet competition in those countries; but the second is how low the rate on agricultural implements is in the tariffs of nearly all the countries whose tariffs I have examined. France, although it is a highly protectionist country, has a very low rate on agricultural machinery. It is a little hard to calculate because its specific duties are measured in kilograms; but the best information I could get and the best calculation I could make show that a binder that weights about 1,500 pounds pays a duty of only about $11.76, which is very low. That is under the minimum tariff which we have the right to have and retain under the French treaty that our friends in the far corner of this room were so critical about in the earlier part of the debate. Of course, into the United Kingdom and the Irish Free State, agricultural machinery goes free; there is no preference. Agricultural machinery goes into South Africa under the British preferential tariff, of which we have the benefit in this country. In Belgium there is an extremely low duty, about the same as that of France. The same thing is true of Denmark. In New Zealand, agricultural implements are free. Therefore, we find that when the Canadian farmer goes on to the markets of the world to sell his wheat or any other product, he has to compete with countries, the farmers of which enjoy in very many cases either a very low rate of duty on agricultural machinery or their agricultural machinery free of customs duties. I think, perhaps, I have dealt at sufficient length with the question of agricultural implements.

Mr. MACLEAN (York): I am only putting forward a statement made to me in the last day or two. Supposing the Canadian market was guaranteed to the Canadian manufacturer by probably a prohibitory tariff, would he be given that market if he undertook to sell his goods at prices that obtain in the United States? Could he be guaranteed the Canadian market at American prices under that arrangement?

Mr McMASTER: I was reproached a little while ago for having made an assumption. I feel I would lay myself open to the reproach of attempting prophecy if I attempted to answer the question just propounded by the hon. member for South York.

It might be interesting to know, before I pass from this question of agricultural machinery, that in 1922, no less than one-third

of our total production went abroad. Of course, the production in 1922 was low, some $19,000,000, of which we exported some $6,000,000 worth, or 33.33 per cent. In 1921, we exported only 14.5 per cent, but the production was very much higher then, $36,763,000.

The woollen people have been complaining to a certain extent and we have heard a good deal about their complaints. I have been looking into the matter a little, and I find that a number of our woollen mills are doing remarkably well. I think I shall leave the matter of woollens at this point, because I do not wish to delay the House too long, and I feel that after all the hon. member for St. Lawrence-St. George, whom I am attempting to answer, did not dwell to any great extent upon the question of woollens. I would say this in closing, however, on this question of woollens, that I doubt if there is an industry that can ask properly for protection in this country with less grace than the woollen industry, in view of the fact that in our cold climate warm woollen goods are of the most vital necessity. There is a great demand for woollen clothing in this country, and I see no reason why our woollen manufacturers cannot compete with the rest of the world along certain lines. I venture to suggest that they have attempted to compete in lines for which they are not naturally adapted, and that in order to do so they have brought in fine wools from a great distance and endeavoured to manufacture them here, while it might have been better for them to have restricted themselves to goods more native to our country. That, however, is a matter for themselves to settle. I think it should be laid down as a principle that warmth, which means health, should not be unduly taxed in this country.

There has been a disposition on the part of some hon. members of the Conservative party to chide low tariff advocates with a disinclination to descend to boots and shoes, and I purpose to deal with the matter for a short time. The first point that I want to make is that when we talk about importations of boots and shoes, we are talking about something which is of negligible proportions in comparison with the entire production. The production of footwear, both leather and rubber, amounted in 1922 to: Leather $45,503,858; rubber, $14,986,591, or a total of $60,490,449, and the total imports for the same year amounted to: Leather, $1,338,775; rubber, $98,161, or a total of $1,436,936. Therefore, the amount of goods imported into Canada is really negligible, being between two and three per cent. The imports in 1922 were less than 3 per cent of the entire production. I take the evidence given by the two manufacturers before the Drayton commission. At that time—I do not know whether this is perfectly true now—it was stated that practically no farmers' or workmen's boots were imported into Canada. The tariff was able to shut out almost entirely all the boots usually worn by the labouring and farming class. There is at present an influx of British boots owing to the fact, apparently, that our young men while they were overseas got to like the British article. At any rate there has been a greater sale of British boots in Canada lately than for years. It would be interesting, I think, for our shoe manufacturers to realize what the British makers of boots and shoes did when they were confronted with a similar condition some years ago. At a certain period in the history of the British boot and shoe trade there was a very considerable importation of American boots and shoes into Great Britain, due largely to the fact that the Americans had adopted machinery of a better quality than that which was in use in the United Kingdom at that time. Instead of asking for protection the British shoe manufacturers sent over agents to the United States where they learned just in what respect the American manufacturers were superior. Those agents went back to Great Britain and the British boot and shoe manufacturers adopted the improved methods of their competitors.

Let me refer the House to the evidence given before the Tariff Commission by the representatives of the boot and shoe industry, who were pleading at that time for the maintenance of the duty. The duty was then, as it is now, 30 per cent from the United States on the finer boots and shoes. Item 611 in the tariff list, boots and shoes, pegged or wire fastened, gives the rates of duty as 17½ per cent, 22½ per cent and 25 per cent; and item 611A., boots, shoes, slippers and insoles of any material not otherwise specified, gives the three rates of 17½ per cent, 27½ per cent and 30 per cent. According to the statement made by a Mr. Palmer who represented the boot and shoe manufacturers before that commission, it was learned that the Canadian factories were thoroughly up to date. Mr. Palmer said that they were quite up to date, having the best of machinery. On the other hand, Mr. Reider, correcting Mr. Palmer, said in his evidence that they had not the most up to date machinery for the reason that most of the shoe machinery in use in Canada was not sold but only leased. He said that the market in Canada for this

machinery was too small to make it worth while manufacturing any of it here and therefore they could not import it into Canada lest the manufacturers should lose their patents. I think that situation has been changed by the Patent Act which we passed last year. Having read the act I have come to the conclusion that the Commissioner of Patents has now the right to say to the manufacturer of patent shoe machinery, or the manufacturer of any other patented article, "You shall supply the Canadian demand at reasonable prices or lose your patent rights in Canada." If that does not meet the situation then such amendments should be made in the Patent Act as will do so. If there is real malaise in the boot and shoe industry I take it it is due not to competition from the outside but to the fact that there is improper financing; there is frenzied finance in connection with the industry. The hon. member for North Waterloo (Mr. Euler) shakes his head. Well, I come from the city in which the exploits of the promoters of the Ames, Holden, McCready Company are particularly well known, and I know whereof I speak.

Mr. EULER: My hon. friend should not generalize from too small a number of instances.

Mr. McMASTER: The hon. member tells me not to argue from the particular to the general. The instance I have cited may not of course be symptomatic of all the shoe manufacturers, but it certainly is one case in which there was bad financing; and this bad financing is I think responsible for a rumour which I heard—I cannot vouch for its accuracy—from the lips of a member of this House to the effect that this particular company had thrown upon the market at slaughter prices some $2,500,000 worth of boots and shoes. So that this specific instance affects the general situation. I suggest, too, as possibly another reason for the present condition of the industry, that we have too many factories endeavouring to manufacture too many lines. As a rule I am no friend of combinations, but there is in the economic life of this country room for what I may call proper combination; and if several factories got together and one decided to adapt its machinery to the production of one class of goods and another a different class, I think there would be real economic benefit to be derived not only by the manufacturer himself but as well by the public at large. We had a special committee examining into agricultural conditions and we also took cognizance of various other things such as sugar refineries, fertilizer manufacturing, and so forth. And there appeared before us a shoe manufacturer who said that he had started in 1900 with a capital of $2,000 which was largely borrowed; he manufactured a special line, devoting himself exclusively thereto, and as a result of his business methods he was in a position to meet competition from the United States. Now, I do not see why, if he could do that, others should not be able to do the same. Our manufacturers have the American market, so they cannot say that they have to manufacture for too small a market. There is no duty on boots and shoes going into the United States, but there is, it is true, this disadvantage under which they labour: There is no duty on leather going into the United States whereas there is one on leather coming into Canada. And this only goes to show again what a vicious circle protection is; because in order to benefit one man you hurt another. You cannot help everybody and in the end you arrive at that point where every one is more or less hurt, including of course the consumer. No doubt in the finer lines of goods our Canadian manufacturers are at a disadvantage by reason of the tariff. Let me quote the following tariff duties on certain kinds of leather:

Tariff duties on certain kinds of leather

No. 604—Dongola, Cordovan, Calf, Sheep, Lamb, Kid or Goat, Alligator and all leather dressed, waxed, glazed, or further finished than tanned, n.o.p.: harness leather and chamois skin—12½ per cent, 15 per cent, 15 per cent.

No. 605—Skins for morocco leather, tanned but not further manufactured, belting leather of all kinds, tanners' scrap leather, leather not further finished than tanned, and skins, n.o.p.: 10 per cent, 12½ per cent, 15 per cent.

Sole leather 12½ per cent, 15 per cent, 17½ per cent.

I think it must be admitted that inasmuch as their costs of production are increased by the duty on the raw material the Canadian manufacturers of boots and shoes are at a certain disadvantage when they compete with the United States. But of course they enjoy certain advantages. The manufacturers in Ontario, in a town, say, such as that from which my hon. friend from North Waterloo comes, probably get their power at 50 per cent of what it costs the American manufacturer in the New England states. I was informed the other day by a very distinguished member of the House that in the riding from which he comes the factories pay 50 per cent less for their power than do their competitors in the United States. And I have no doubt that this is true in the case of the town from which my hon. friend from North Waterloo comes, because I think it has enjoyed the benefit of the Hydro Electric Commission's exploitation, in fact I believe he is one of those who have

conferred the benefit of that cheap power on that part of his native province.

Mr. HOEY: Do they get a drawback of the duty in the case of export?

Mr. McMASTER: I really could not tell. If they do not get a drawback of the duty, that might be another way of helping them out. But the best cure for all this is to endeavour as far as possible with prudence and care, with due respect for existing conditions and for the revenue, to try and reduce duties all along the line to a lower level.

Now I come to fertilizers. This is one of the items on which the tariff has been substantially reduced—in fact it has disappeared, having been reduced from 10 per cent to nothing at all. Of course that is only what it should be. The idea of taxing that which is to restore and renew the fertility of the soil is certainly taxation run mad. But I do not believe that our Canadian manufacturers need complain very much. The total production for 1922 amounted to $5,533,136. We imported $1,048,620, and we exported $2,213,-351. Therefore in 1922 we exported 40 per cent of our entire production. Of course, when we exported we had to meet the competition of the fertilizer manufacturers in the countries into which we sent our goods. Then we had brought before the special committee examining into agricultural conditions by an unimpeachable authority, by one of the members of the committee himself, the fact that a fertilizer company in New Brunswick was able to charge its New Brunswick customers $9 per ton more than it charged its customers for the selfsame thing across the line in the state of Maine. This tariff, I trust, will go into effect, and consequently next year the New Brunswick farmers will pay the same price as the Maine farmers.

While I was thinking of fertilizers my subconscious mind reminded me of something I had forgotten in regard to agricultural implements, and I crave your indulgence, Mr. Speaker, while I return to that subject for a moment. It is to answer the argument adduced by the member for St. Lawrence-St, George. He asked: What about our people who supply our Canadian manufacturers of implements with their raw material? Well, how much of the raw material is bought in Canada? Mr. Findley, in his evidence before the special committee to which I have already referred, said that two-thirds of the raw material of his company was purchased in the United States; that they got pig iron from Pittsburgh much of their other material of a mineral nature from Buffalo and Tonawanda, and all their wood from the United States also. I think it well that these facts should be known.

Now I pass on to another head of my observations. The government have taken a step, and a decided step in the right direction, and any help that I can give them along those lines I will most readily afford. But I have the feeling that, having started on the right road, they will not mind if a candid friend points out other steps which should be taken at the earliest possible moment. I want to see a modification, if not an entire elimination, of the dumping clause. I think it is an evil thing, and, like most evil things, it likes to work in the dark. I do not think the government quite realize how much they disappointed their friends, before bringing in this budget that we welcome so warmly, when by regulation they did away with the saving paragraph in the dumping clause which prevented its being applied if the difference between the market price and the purchase price was less than 5 per cent. Now, I do not know just what effect that may have. It may not have as much effect as I dread, but I do not like it, and I want to see it removed at the earliest possible moment.

I do not think the public of Canada quite realize what this dumping clause really does, so I am going to try, in the most untechnical language possible, to explain its operations. If I go into the United States, let us say, and buy $100 worth of goods, and the ordinary market price is $100, I come back to the customs house and pay, let us say, 10 per cent—if that is the rate of duty—on that $100 worth of goods, or $10. Suppose I go down a few weeks afterwards and am offered a bargain and suppose, being from north of the Tweed, I am a shrewd bargainer and I buy for $90 what the ordinary American is paying $100 for, when I get to the customs house the Canadian government charges me the whole difference between $90 and $100. The government penalizes me for having followed my national instincts. Then after having charged me the full difference between $90 and $100 it imposes the tariff of 10 per cent, so I pay $20 on that importation of $90 instead of $9 as I should have paid. Before this change in the regulation, if I had only succeeded in getting a bargain for $95, the dumping clause would not have applied and I would have paid only the 10 per cent on the $95. But now, even if I get a bargain of 2 per cent I am going to be charged that 2 per cent, with the duty on top of it.

Mr. GARLAND (Bow River): And the dumping duty on top of that?

Mr. McMASTER: The whole difference between the price, whatever it was, below the market price, and then the duty on top of that.

Mr. GARLAND (Bow River): And the dumping duty as well.

Mr. McMASTER: No, I think that is the dumping duty. It is bad enough already; there is no use making it worse. In my view that is making the Department of Customs, not an engine for collecting revenue for the state, but a barrier against allowing goods to come in, and a direct discouragement to our traders to make the best bargains possible.

The next step I want to see taken is the removal of the right of the Minister of Customs to value arbitrarily imports of natural products. That is a direct infringement of the right of parliament to impose taxation. It is open to the most serious abuse. It is protectionism of the most virulent and unwholesome character.

The third step I wish to see taken is the elimination of the valuation of goods at arbitrary values, such as valuing goods which come from one country at the supposed price that they are selling at in another. It is not a wholesome way of valuing goods. As a matter of fact, this depreciation of currency business has been altogether exaggerated. When you depreciate currency you raise prices. The German mark has practically disappeared—the old paper mark; they have a new currency which they call the rentemark. I am told on reliable authority that prices in Germany to-day are what they were in 1914, plus about from 50 to 70 per cent. After all in the long run this endeavouring to enrich oneself by the issue of paper money defeats its own ends. It may have some temporary effect, but it is an effect which will be very temporary indeed.

Then, the fourth step that I wish to see taken is a general reduction of the tariff after a careful inquiry, and that careful inquiry should not consist merely of a genial minister of the Crown going round and asking the manufacturers what they want. The object of the inquiry should not be to decide whether protection or tariffs are to stay up or to come down. It should be rather to determine how tariffs are to come down with the least disturbance of business and the greatest help to the revenue and to the consumer. When this tariff commission gets to work one of the vital avenues of inquiry should be the real amount of money invested in the business. The commission should be accompanied by an accountant with a clear eye, a courageous heart, and no too great confidence in the assertions of his fellow men.

An hon. MEMBER: Suspicious.

Mr. McMASTER: He should be a man of a somewhat suspicious nature. We do not want exactly to encourage an American at the expense of a Canadian, but perhaps he should be someone whose father or grandfather came from Missouri.

Mr. SUTHERLAND: After making this inquiry, would my hon. friend consent to the tariff being increased if the inquiry justified an increase?

Mr. McMASTER: No, not at all. That has just been the trouble with a number of inquiries in this country; it has been along the line of what Sir John A. Macdonald did. Sir John A. went to Hamilton and he said to the manufacturers there: "Tell us what you want and we will see what we can give you." We do not want tariff inquiries along these lines. No; the point I want to make is this, and I make it with all solemnity: We have got tremendous burdens of taxation to bear in this country. We hope to be able to win our way through. We can only do so if we direct the energy and the capital of this country into those channels where we can obtain the greatest economic returns. We cannot afford to maintain industries in this country that cannot within a reasonable time stand upon their own feet, because such industries do not increase the wealth of the country. There is no question about that; we need all our wealth to carry ourselves along.

Mr. SUTHERLAND: If my hon. friend will permit me, does he insist upon the eventual removal of the tariff entirely?

Mr. McMASTER: In the long run. That is not the next step; that may take years. The next practical step is a tariff which will be framed with the purpose of raising revenue primarily, which will not be, as the present tariff so largely is, a tariff not to raise revenue but to keep goods out of the country. That is my answer.

Mr. SUTHERLAND: In order to raise a revenue, then, it would be necessary to import the goods and not manufacture them at home.

Mr. McMASTER: Let me make myself perfectly clear. We will never import anything into this country that we can make more cheaply in Canada. We will never import into Canada anything which is not

better value for our money than something we can buy inside. The labour and capital of this country can best be employed in creating the value which is to be exchanged Mr. Speaker, if we could only eliminate the idea of money from peoples' heads and hearts and minds, we would get a much truer idea of what national trade is. It is barter between individuals, and no man gets poorer by getting bargains, no man gets poorer by exchanging what he has for something of more value. And as the nation is composed of individual units, no nation can get poorer by exchanging what it has for something of greater value.

Our manufacturers have had the tariff so long that some of them really believe that their very life blood depends on it. I think they are wrong. Prior to the emancipation of the slaves in the United States the greatest part of the public opinion of the southern states held as a unit that without negro slavery no economic life was possible in that part of the United States. They said that without the negroes to cultivate the cotton there was no future for the southern states as a whole. Ministers from their pulpits justified negro slavery; college professors from their chairs stated that without negro slavery the economic life of the south could not go on. But negro slavery was fundamentally unjust, even as it is fundamentally unjust to maintain protection in a country where there the vast body of the people cannot be protected. The feeling that negro slavery was unjust and unrighteous steadily grew. It grew first in the north; the abolitionists were reviled and prosecuted, but their influence increased until the nation trusted and the nation tried. They did away with slavery, and only after a bloody war; but did the southern United States go down? They went down for a while under the turmoil of the reconstruction period, for which carpet-baggers from the north were as much responsible as the southerners, perhaps more so. But the tremendous development of the southern states would have been impossible under slavery. In the same way I say that nothing that is just can be inexpedient, and by following the dictates of prudence, animated by the spirit of justice, desirous of getting rid of special privilege, we may be confident that the future of Canada, not only nationally but economically, is assured.

Mr. J. J. HUGHES (Kings, P.E.I.): Mr. Speaker, I wish to join with the other members of the House who have congratulated the hon. Acting Minister of Finance (Mr. Robb) upon the budget speech he delivered shortly before the Easter recess, and upon the manner of the presentation of that speech. As I have listened to the speeches of the hon. members immediately to your left, Mr. Speaker, and noted their attitude, I have come to the conclusion they are not well pleased over the resolutions proposed in this budget and that they intend, if they get a chance, to vote against them. I am not surprised at that attitude. It was well understood by the country, and by the newspapers supporting the Conservative party, that they would oppose anything which the government proposed. So respectable and staid a newspaper as the Montreal Gazette made this statement on the morning of the day the budget was delivered:

> The Conservatives are confident that they have the government at a disadvantage, no matter what its policy may be. If reductions of account are made in the tariff, they will be criticized as involving a departure from the policy of tariff stability on which Mr. Fielding and Sir Lomer Gouin so much prided themselves last session. On the other hand, if the government does not make worth-while reductions, it will be condemned as unfaithful to its platform and election pledges.

No matter what the government might do, whether its policies are in the interest of the country or not, no matter how wise or beneficial its legislation might be, it was going to receive the condemnation of the official opposition. But there is worse than that. A paper published in my own province, strongly supporting the Conservative party, a paper which in an issue some time ago stated that the present leader of the Conservative party was the ablest statesman now living in the world, in an editorial referring to the threatened strike of the post office employees a few weeks ago said:

> As for the opposition, well, they rather enjoy seeing the government embarrassed, let the trouble come from whatever quarter it may.

They would rather see the government embarrassed than see the country prosper. They would like to see unrest, dissatisfaction, threatened strikes, turmoil, strife—anything at all that would embarrass the present government. I had hoped there was a time in the history of the Conservative party when they recognized their duty in a different way. I had hoped there was at least some period in their history when they thought differently.

Mr. LOGAN: A long time ago.

Mr. HUGHES: Yes, I believe it was a long time ago.

Mr. ARCHAMBAULT: In 1643.

Mr. HUGHES: I see the ex-Minister of Finance (Sir Henry Drayton) in his place and displaying a great deal of jocularity. On

account of his position as ex-Minister of Finance he is the chief critic of financial matters; he is a man of prominence in the country, and a man of very great prominence in his party. In his speech on the budget a few days ago he started out by complimenting the Acting Minister of Finance (Mr. Robb) on the frankness which he displayed in the presentation of his budget speech, but a little later on he said that the surplus shown was manufactured by crooked bookkeeping. Well, that was not very complimentary. He went on to say that the moneys raised by bonds issued by the National Railways and guaranteed by the government should have been debited to the government, should have been charged to consolidated fund just as was done with other expenditures. But when my hon. friend was Minister of Finance, and the government of which he was a member guaranteed in 1920-21 $50,000,000 of bonds of the National Railways, $25,000,000 of that issue was used in precisely the same way.

Sir HENRY DRAYTON: My hon. friend is wrong.

Mr. HUGHES: Your hon. friend is not wrong; the ex-Minister of Finance is wrong.

Sir HENRY DRAYTON: You are entirely wrong.

Mr. HUGHES: The guaranteed loans of the Canadian Northern in 1920-21 and in 1921-22 were used for the retirement of maturing obligations or the repayment of government loans, but the Grand Trunk guaranteed loan of $25,000,000 was used for general purposes.

Sir HENRY DRAYTON: My hon. friend is wrong, quite wrong.

Mr. HUGHES: It was used for fixed charges, deficits, maturing obligations, capital expenditures and Grand Trunk Pacific obligations, just as ordinary loans and advances by the government are used. Now either the ex-Minister of Finance knows that to be correct or he is very deficient in information. In 1921-22, $61,000,000 of bonds were issued, of which $25,000,000 at least were used for the ordinary purposes of the railway, and this can be found in the railway accounts themselves, so there is no question about, it, and I am more than surprised that the ex-Minister of Finance should question this statement—

Sir HENRY DRAYTON: We will give you more surprises and a little light later on.

Mr. HUGHES: No. I am giving the light to my hon. friend.

[Mr. Hughes.]

Mr. ARCHAMBAULT: He is blind.

Mr. HUGHES: I have read the speech of the ex-Minister of Finance very carefully, and on page 1223 of Hansard he made this statement:

> We would further expect something to be done to help the Canadian farmer, who to-day is shut out from his natural market to the south.

From his natural market to the south! Whenever Liberals have said that our natural market was to the south, they were accused of being disloyal. When did the Conservative party come to the conclusion that our natural market was to the south? Was this statement made by my hon. friend in a moment of candour, or because of a sudden ray of light, or was it simply an accident? In the year 1911, when the reciprocity agreement was negotiated with the United States, when this natural market was thrown open to the producers of Canada, to the natural industries of this country, my hon. friend and his associates adopted every device and made every statement they could think of to deceive and mislead the Canadian people in regard to that matter. When those negotiations were being conducted the legislature in the province from which I come was in session. The leader of the Conservative party introduced a resolution stating that the people of Prince Edward Island were in favour of a fair measure of reciprocity with the United States. Another Conservative seconded that resolution and it was passed unanimously. Two or three months later when that reciprocity agreement came before the people of Canada the Conservative party in the federal parliament decided to oppose it. These same gentlemen went out upon the hustings and declared that the agreement that had been negotiated would be ruinous to that province and to the whole of Canada. I asked these gentlemen, in view of the fact that they had put themselves on record as being in favour of reciprocity, could they come to the conclusion that the agreement as reached was not fair? Was there any feature of it not fair? I got no answer. I asked, was there any item on the reciprocal list that should not be there, and I got no answer. I asked them to tell me if there was any item on the list that should be removed, and I could not get an answer. The attitude of the Conservative party in Prince Edward Island was a fair sample of the attitude of the Conservative party throughout Canada.

As I have already stated, I read carefully the speech made by the ex-Minister of Finance (Sir Henry Drayton) and I find he

stated that the reductions in the tariff provided in the budget were made at the behest of the farmers or the Progressive party in this House; and in the same breath he stated that the reductions that had been made, or the changes that had been proposed, would be of no benefit to the farmers of the country. Although they were made at the request of the farmers' party and were satisfactory to the representatives of the rural constituencies, he declared that they were of no advantage to them. He actually stated that the reductions amounted to the small sum of only $750,000; yet at the same time he said that they would destroy the manufacturing and industrial interests of the country. In the next place he stated that the manufacturers of agricultural implements were the only people who would benefit by the changes. The hon. ex-Finance Minister laughs. He has reason to.

Sir HENRY DRAYTON: Yes, I have.

Mr. HUGHES: Yes, indeed you have. Considerable effort is being made in the country and by the Conservative members in this House to mislead and deceive the people engaged in farming and in the production of agricultural products. The province of Prince Edward Island has made a great success of the poultry branch of the farming business. They have also made a success of other branches of farming, and I find the newspapers in the province from which I come are particularly stressing what they call an argument, namely the fact that the United States charge a customs duty of eight cents a dozen upon eggs going into that country, while we, in Canada charge but three cents, and they claim that this is a great injustice to the poultrymen and farmers of this Dominion. We have only to examine the production in this country and the exports and imports of eggs to satisfy ourselves that a higher duty on that commodity would be of no advantage whatever to the poultrymen or farmers of Canada. The estimated production of eggs in Canada is $48,000,000 to $50,000,000 a year. We import $2,000,000 worth and export very nearly $2,000,000 worth. It is a seasonal product. We import eggs largely at the season of the year when we are not producing them here. It is a product the people want to get if possible in a fresh state, and can anybody say that to place a duty on the small amount we are importing at a season when the farmers and poultrymen have no fresh eggs to sell, in the months of December, January and February, could be of any possible advantage to the poultrymen or farmers of this country.

The ex-Minister of Finance (Sir Henry Drayton) referred to the article of cheese a few days ago when speaking on the budget, and intimated that the farmers of the Dominion of Canada were at a great disadvantage and were suffering a great hardship because the duty on cheese coming into the country was not higher, while at the same time our exports of cheese are about 1,000 per cent greater than our imports. We only import a small quantity of cheese of a particular kind that we do not produce in this country. The farmers of Canada have entire control of the local market and export a very large quantity. The estimated value of the cheese produced in Canada in 1922 was $28,000,000. In that year we imported $325,000 worth and we exported $25,440,000, and the same with regard to butter. An effort has been made to show the farmers, particularly in the Maritime provinces from which I come, that they are being injured because there is not a greater duty on butter. I presume that the Americans have a higher customs duty on butter than we have, but we have the butter market well in hand, and the statement I have here covers only creamery butter and takes no account of the private dairy. We produced in 1922 $53,000,000 worth of butter, we imported only $1,000,000, we exported $5,000,000, and we took care of the home market completely.

I have listened to the hon. member for St. Lawrence-St. George (Mr. Marler) and other hon. gentlemen who tell us that a protective policy, with high customs duties, is of great advantage to the people of this part of the country, that is to the people of Ontario and to the western part of Quebec. A day or two ago I read in the Montreal Gazette an editorial commenting on a letter received from a farmer in the county of Middlesex stating that the home market was of very great advantage. I will take at their face value the statement of that newspaper, the statement of the hon. member for St. Lawrence-St. George and the statements of other hon. gentlemen who represent constituencies in the neighbourhood of Toronto and other Ontario cities, or constituencies in the neighbourhood of Montreal, and who tell us that the markets they find in those cities are a very great advantage to them. But I want in fairness to tell those hon. gentlemen that the men who profit by those home markets, by this protection, are the men who should bear the burden, I do not care how it is adjusted. I have no fault to find with any municipality, or city or province that wishes to bonus manufacturing industries. I think the people who profit by that system should pay the piper. What I object to is that

the people whom I represent, the people who live in the Maritime provinces, and particularly the people who live in Prince Edward Island, who never will, never did and never can benefit by those markets, should be called upon to pay their share of the cost of the music and the refreshments. The same is true with regard to western Canada. There is in my opinion no other country in the world where a system of protection could do less injury than in the country to the south of us, a compact country with every variety of climate, every variety of production. The people of that country could, if necessary, live and trade within themselves. On the other hand, there is no country in America, either north or south, and I doubt if there is a country in the world where protection will do as much harm as in the Dominion of Canada, because of our geographical position and because of the fact that our productions are very much of the same character in every province.

The farmers and fishermen of the Maritime provinces—I do not care what the transportation rates may be—cannot enter the markets of this part of Canada. Their natural market lies to the south, in the United States, or in the West Indian Islands, or in the island of Cuba, and very cogent and sensible observations, when we were discussing the Address in reply to the Speech from the Throne, were made by the hon. member for Cumberland (Mr. Logan) in regard to conditions that he found in the West Indian Islands. He found that Canada was not represented by any trade agent or trade commissioner; that no effort was made to get the products of the Maritime provinces introduced into that part of the world. There is nothing in my opinion that the Department of Trade and Commerce could do that would benefit the Maritime provinces more than to send a few properly experienced business men to the West Indian Islands and to the island of Cuba to introduce our products there, to speak to their business men as a business man could, to represent our conditions and to enable us to enter those markets. They want our goods and we want theirs. That is the way that the provinces by the sea could be benefited. The farmers in this part of Canada can take care of all their home market that is now or will be available here for decades to come.

About two and one-half years ago when the present government came into office, what was the condition of things in Canada? We were going into debt at the rate of about a hundred million dollars a year. The last year the Conservative party was in power, the increase in the public debt was $92,000,000, and if they had not taken advantage of the issue of bonds by the Canadian National Railways, which they say now should be charged to the consolidated revenue fund, their deficit that year would have been at least $117,000,000. At that time, there were in Canada many people who were alarmed at the fact that we were taking over the Canadian National Railways, this tremendous burden. No daylight was seen; but in the short space of two years, it has been clearly demonstrated that within two or three years from now the Canadian National Railways will be no longer a liability, but an asset, able to take care of all its fixed operating expenses and fixed charges, and that it will probably be earning a surplus which can be used for reducing transportation costs or paying the interest upon the money or, at least, a part of the money lent by the government.

In two years the present government has succeeded in making a balanced budget. Even taking the word of their opponents, even taking the criticism offered this afternoon by the hon. member for St. Lawrence-St. George, the fact remains that the budget has, at all events, been balanced. If you take the system of book-keeping that has been followed in this country since confederation, there is a reduction in the debt of twenty to thirty million dollars. For the first time since reductions were made by the former Liberal government, there is an actual reduction in taxation. Nobody would have predicted some two years ago that any government coming into power at that time, shouldering all the burdens that this government had to shoulder, with high taxation, an enormous debt and deficits going on from year to year, would be able to change all that within the short space of two years. Only to-day I read an editorial in the Montreal Gazette which no Canadian could read without a feeling of pride. I dare say almost every hon. member in this House has read it, but I will ask the House to bear with me while I quote a paragraph or two:

> The March returns of the foreign trade of Canada bring the statistics to the end of the fiscal year and permit of interesting comparisons. Not since 1921 has this commerce reached so large a value as in the last twelve months, a value far exceeding any pre-war period during which inflated prices far outran the quantity movement. The top figures are those of 1918, when Canada was shipping out great quantities of foodstuffs and munitions at high prices, and having regard to the reaction in prices it is satisfactory, not to say astonishing, to observe how quick the recovery has come. These are the figures:

	Imports	Exports
1915..	$587,439,000	$ 490,408,000
1918..	962,543,000	1,586,169,000
1922..	747,804,000	753,927,000
1923..	802,535,000	931,451,000
1924..	893,335,000	1,045,141,000

The article goes on to state that the trade of Canada is simply astonishing, and every

one must feel proud of the development that has taken place and the progress that is being made. These are the conditions at the present time, and we have much reason to be satisfied. The steps taken by the present government have not only given satisfaction to the members of this House but, I think, have proved that the government is pursuing a course calculated to serve the best interests of the country. That conviction is spreading throughout the country and I believe it is generally shared by our people all over the Dominion. I shall therefore be pleased to support the resolutions which will shortly come before the House in committee.

Mr. ROBERT MILNE (Neepawa): I have listened with a great deal of interest to the discussion of the budget during the last few days. My hon. friends to the right seem to be much concerned over the few reductions that have been made in the tariff and they have been painting gloomy pictures of the deplorable state in which our infant industries are struggling at the present time. These pictures portray the factories as in a condition that is compelling them to close, with consequent ruin and distress; and the pity of it all is, that what seems to affect our good friends most vitally is the fact that the agricultural people are losing their home markets. It is suggested that when the farmers lose these markets the agricultural industry will no longer be able to exist. These gentlemen appear to appreciate the importance of this industry and pretend to be greatly interested in its welfare. Now, they claim that a saving of three-quarters of a million dollars in the tariff will not amount to anything from the standpoint of the agricultural interests, and yet at the same time, strange to say, they want us to believe that the loss of this sum will absolutely put the manufacturing industries out of business in the Dominion. Let me inform them that the farmers are thankful for small mercies. I do not suppose that this amount of money represents much to the industries of the East, but it surely is a quite tidy sum in the eyes of the farmers to-day under existing conditions. The consternation that seized the minds of gentlemen of the Conservative party on the afternoon the budget was brought down appeared to be reflected to a rather remarkable extent in the infant industries in the remote parts of some of the provinces. It was reported that one industry at least had collapsed during that afternoon, and later in the week it was found that there was slight hope for its recovery. The calamity howling this year seems to be coming entirely from the other corner of the House; it is coming from those whom we have always regarded as Canadian statesmen, men who are directly interested in the welfare of Canada and not in any particular section or class of our people. I say, the blue ruin cry is coming entirely from that vicinity. The manufacturers themselves are raising the same cry, and the press of our country seems to be heralding these sad tidings I have heard of individuals spending a week in the city of Toronto on Sunday but it seems that some of our manufacturing friends have spent almost fifteen years within the short space of time since this budget came down. The Canadian Manufacturers' Association held a meeting in Toronto recently; it is astonishing how quickly the effect of the budget seems to have been brought about. I quote from the Montreal Gazette the following statements:

> Mr. Winslow, of the Canadian Ingersoll Rand Drill Company, Sherbrooke, said the budget, so far as his firm was concerned, read like a sheet of their catalogue with severe reductions on everything they made. For 30 years their firm had been one of the leading industries at Sherbrooke, and should employ in normal prosperous times about 1,000 hands. They were now employing about 350, with prospects of a speedy decrease.
>
> "They had a powerful American connection in the Ingersoll Rand," and like other businesses we must get our products where we can get them cheapest, whether we manufacture in Sherbrooke or Philipsburg. With the reduction in duty on our output and no drawback on raw material it looks to me very much as though the rock drill industry in Canada is about to be closed down, because this budget hits us very hard.
>
> Sir Alexander Bertram said he had been in the manufacturing business for 50 years, largely selling machinery and tools to the agricultural machinery industry, but with many of their customers for the past 15 years they had not sold a tool, because of the decline of the industry.
>
> W. R. Granger, Montreal, said the alleged farmers of the West had organized politically, and he thought it time the C.M.A. stopped soft pedalling on politics, and turned to the loud pedal. He thought they ought to start work at once on this. and also on an educational propaganda, while he considered the proposed resolution quite too weak. "What we want to do," he argued. "is to get into as good a position as the Progressives have, so that we can have some weight in Parliament behind our demands." (Applause.)

The whole gist of the report seems to be that the trouble is altogether attributable to tariff reductions, especially to those which this budget will put into effect. I am giving these quotations merely to show the House the ignorance of the people who are discussing fiscal affairs. Further down I notice that Mr. Wilkins, of Farnham, argued:

> The political grain growers of the West were not farmers such as we have in the East, doing their grain mining by contract, and spending the winters in the south. This province consumes almost all its own agricultural products, and he believed 96 per cent of the Quebeckers were protectionists.

Last season while the special committee on Agriculture was sitting one of the witnesses made bold to assert that the farmers of the West should feed steers in the winter instead of going South and enjoying the warmer climate. When he was questioned closely as to how many western farmers he knew who spent their winters in the South—and he was a man who had had quite a broad experience throughout the Dominion—he admitted that he had heard of but one farmer who went South to escape the Canadian winter. We have heard a great deal about the peaceful rural population of Quebec. For many years I envied their contentment and prosperity—or rather the glowing accounts of it which I read from time to time. But I found on making an examination—and it is now a well-known fact—that the exodus of young native born Canadians from the province of Quebec is proportionately as great as from our other provinces. Consequently, I have come to the conclusion that although the Manufacturers' Association may have good intentions, they are very, very ill informed as to actual existing conditions.

Lately we have heard a good deal about our implement manufacturers being in sore straits, and we are led to believe that the whole trouble is due to their not having sufficient protection. On the other hand we have been told that the United States were building up a tariff wall higher than ever in order to stimulate their industries and create national prosperity. In this connection it is interesting to learn of the actual conditions on the other side, and therefore I quote the following from the Literary Digest:

> One organization that realizes to the full the extent of farm distress during the last two or three years is the National Association of Farm Equipment Manufacturers. The Manufacturers' Record, Baltimore, shows that the production in 1922 of farm implements was about one-third or one-half, and in some cases even less, of that in 1914.

Further on appears the following:

> According to the association's circular twenty of the leading companies have lost $50,000,000 in two years.

To emphasize that statement a table is given showing the actual production of a few of the principal agricultural implements in 1914 compared with the reduced production in 1922. I quote the following:

	1914	1922
Plows..	$1,335,104	$431,409
Corn cultivators..	378,934	89,633
Grain binders and headers..	215,386	41,458
Broadcast seeders..	106,018	46,889
Threshers..	13,548	8,885

I refrain from reading the full list. It is very long, but there has been practically the same proportionate reduction of output in regard to all farm implements. This shows quite conclusively that the manufacturers of agricultural implements in the United States are not in a prosperous condition, notwithstanding that they have a supposedly model tariff to stimulate industry.

During the recess we have been bombarded with literature asking for tariff protection. I do not want to spend time in discussing it, but I must frankly confess that the men who are directing some of our industries fall very low in my estimation if the type of letters they have been sending out is any indication of their executive ability. In all the circulars which have reached me there is a strong plea for protection and yet not one of these men will tell us the actual condition of his business. The general tone of the letters indicates an intention to raise prices. There is no apparent desire at all to lower the prices of their products the whole argument being that they must raise prices in order to continue in business. One sentence from such a circular letter will make this very clear. By the way the particular paragraph I am about to quote does not deal with the tariff, but with the sales tax, which the writer wants dropped on certain products of his factory. But this is the sentence:

> This sales tax will have the effect of curtailing consumption, thereby causing the manufacturer to again increase prices to meet his bills.

If we follow this through to its logical conclusion we find that eventually there will be no sales at all. By that time I feel convinced that the individuals who are responsible for this propaganda will have become exceedingly bold, and will be asking the government to subsidize them in order that they may pay their executives salaries from $25,000 to $30,000 presumably on the ground that they are consumers of agricultural products! I repeat, it is unfortunate that throughout all this special pleading for protection there is not one instance of these men attempting to show the actual necessity of protection for their particular business.

Last session several industrial managers appeared before the special committee on Agriculture. We had before us the manager of the Massey-Harris Company. Now, I hold no grudge against the Massey-Harris Company; I wish them every success. But if they need protection, why were they so slow, why did they not give the committee the facts as to how their capital stock was made up and what their profits and dividends had been over a period of years? These things were

kept almost entirely in the dark. The closest we got to it was the information elicited from one witness that between 1913 and 1920 the capital stock had been augmented by $4,000,000 and that of this amount only about $160,000 was new capital. If that kind of thing is going on it is no wonder they are not able to pay dividends.

We had before us another witness, the manager, I think it was, of the Canadian Ford Company. They were very frank in their statements. I shall not weary the House with a statement of the whole financial standing of the company, but I should like to give an example of how an investment in ten shares amounting to $1,000, made in 1907, had increased in 1923 to a value of $310,010. During that period this $1,000 invested, as I say, in 1907, had paid a cash dividend of $32,810 and had increased in stock to the amount of 560 shares, worth at that time $270,200, making the total I have mentioned, $310,010. That, it seems to me was a pretty good investment.

I noticed in Saturday Night a few weeks ago a report with regard to one of our industries, Canadian Steel. I will read a few extracts from this report just to give you an idea of the peculiar circumstances pertaining to that company. The report says:

> The annual report for the year ending December 31, 1923, demonstrates that the Steel Company of Canada is once more on the upgrade in earnings. It won its way into a very enviable position during the war as evidenced by the fact that the profit and loss surplus, which stood at $3,014,642 at the end of 1915, had become $8,740,966 at the end of 1920 in spite of the fact that it paid in every subsequent year dividends on both preferred and common stocks, seven per cent on the preferred and four, six and seven per cent progressively on the common, the latter figure having been maintained since 1919. The huge surplus mentioned was shaved a little in 1921 and 1922 decreasing respectively to $8,298,517 and $7,942,372. But 1923 earning results showed a balance of $627,875.40, after paying all expenses and fixed charges and making the ample provisions considered necessary for various sinking funds and reserves, and this sent the profit and loss surplus once more skiting up to $8,570,247.75. This means an entire recovery of the ground lost in 1921 and 1922 and brings the surplus up within hail of the high point achieved in 1920. Another year like 1923, and it will be in a position unexampled for strength in its own line in Canada.
>
> Add to this its various reserves, standing as follows: furnace relining and rebuilding reserves, $792,972.68; reserves for accidents to employees, $84,811.82; contingent reserve, $546,667.23; betterment and replacement reserve, $1,885,953.82; fire insurance reserve, $200,000; bond and sinking fund reserve, $1,737,748.92; and depreciation account, $7,048,508.28, making a total of $12,296,662.75. At the end of 1915 these reserve funds only totalled $1,257,811.

Further on it speaks of paying off some other liabilities as they came due. From that I think you will see that the industry is not suffering very much so far as profits are concerned.

A few years ago some of us heard of an industry that had been built up not for the glory of God but for the profits of the shareholders, and it was declared that that industry had in 1918 made a profit of 291 per cent. That is just an example of the condition of some of the industries that are asking for protection. Some of our industries may not be in a very good position. I am not going to say whether they are or whether they are not, because they have not given full information with respect to the actual conditions as they exist. In this connection I do not see why I should not offer a few suggestions to our manufacturing friends, because they are not backward in offering suggestions to the agriculturists, and I think I can say without boasting that I am probably just as well fitted to give a little advice to our manufacturing friends as some of them are to advise the agriculturists. We had before our committee last year an analysis of the cost of a binder. The costs of material, wages, and so on, were considered separately, and a comparison was made between the costs in 1913 and those in 1922. I will just read the figures; they are very interesting.

	1913	1922
Material	$45.55	$86.21
Wages	25.10	56.77
Factory expenses	5.51	26.55
Administration	5.10	38.65
Freight	23.91	34.69
Distribution	29.41	63.15
Branch departments	29.41	47.31

That shows a total of $359.99 for 1922 as against $163.99 for 1913. The thing that strikes me there is that the factory expenses and administration have increased beyond all proportions. We are usually told that it is labour that is keeping the price of our implements up, but we find here that the factory expenses and administration have enormously increased. I submit that there is just as much reason for the practice of economy on the part of the manufacturers, as well as the study of more economical production, as there is on the part of the agriculturists.

I have been looking over a report with respect to the pulp and paper industry prepared by the Department of Trade and Commerce, and a startling thing to me is the number of officers and superintendents, and the amount of money that goes to them in salaries. The number of officers and superintendents amounts to one sixtieth of the total number of employees, and they draw one-eleventh of the total wages. It looks to me

as if that was rather out of proportion. In addition to the officers and superintendents there are technical experts and clerk stenographers whom I put in along with the common labourer, and it looks as if there was room for some paring in officers and superintendents. I do not wish to leave a wrong impression. I am absolutely in favour of a man drawing a salary in proportion to his ability. I am not one of those who think that every one should be paid the same wage or salary, but I am of the opinion that many of our industries are loaded down with officers who are not much more than parasites.

In looking over another return from the same source, prepared by the Department of Trade and Commerce, I find that in the hosiery and knitted goods industry the number of employees on salary has increased from the year 1920 to 1921 by 20 per cent, whereas the number of wage earners has increased by only 7 per cent. As I said before, I do not know the reason for that, and I am not able to go any further, but it seems to me that the management cannot be as efficient as it might be. Another place where a good deal of work needs to be done, and it should be done by our friends, is in the matter of distribution. The present system is extremely costly and inefficient. I believe there are millions spent on advertising that is an absolute waste, and in that connection I want to read just a short extract from the evidence of a witness who was before the committee last year, a manufacturer who lives very close to this city. Speaking of a report by Congressman Anderson he said:

My view is and it was before I read this, that the retailer has to a certain extent lost his function, and I am going to make another statement that I know will be challenged outside of here, if it should receive any publicity, that is that one of the tremendous economic ills of this country and of the United States as well, is national advertising. There are hundreds of millions of dollars spent in advertising for which there is no economic return. I contend I have studied the question, and that advertising is an advantage to the advertiser. He makes money out of it. It pays to advertise and it pays the medium of advertising. While I am on that, I would say it has enabled the newspapers to pay more for their editors and employees, and it may be a good thing for the newspaper.

That is what Mr. Sparks says about advertising, and I agree with him heartily. I maintain that our industries have a great big field to work in so far as a more economic distribution of their goods is concerned. I do not confine that to the manufacturing industry at all, for the same thing applies to our agricultural products, which are not in my opinion marketed in an efficient manner. We had our attention drawn last year to the fact that apples for which the producer received $4 a barrel were retailed at the equivalent of $27 a barrel, and many similar instances were given. We found that the farmer who was milking his cows twice daily got five cents a bottle for his milk, while the distributor in the city got six and a half cents. That seems to me altogether out of all proportion.

There is just one other thing I want to say by way of advice to the manufacturer. Let me suggest that you apply the same remedy to manufacturers as you recommend for agriculturists. If you are not making a profit out of the product of your factory, you are not making the right product; that is what they tell the farmers. If you cannot make any money turning out baby carriages, make automobiles. If you cannot make a profit manufacturing wagons, make sleighs. That may sound ridiculous, but it is just about as sensible and reasonable as the advice that is given to the farmer from certain sources. I want to say that it is quite impossible for a farmer who has been making a specialty of growing grain to turn round immediately and produce dairy products profitably. There is a real art in dairying if you are going to make a success of it, and the same is true of poultry. A man who is a good dairyman may not be able to make any money out of poultry. It is quite impossible for a farmer to immediately swing around from one type of farming to another successfully. It is almost as impracticable as to expect a manufacturer to turn from making baby carriages and make a success of manufacturing automobiles.

Mr. CLARK: They grow grain, and raise poultry, cows, and so forth in Ontario. How do they manage to do it?

Mr. MILNE: If the hon. gentleman will have a little patience, I am coming to that. From his question I would judge that he shares the same opinion as many others—

Mr. CLARK: I have not expressed an opinion; I am asking for information.

Mr. MILNE: I said, I should judge from his question. I would like to give a quotation from the Agriculturist Gazette which is published in Ottawa by the Agricultural department. There seems to be a general impression that the farmers of the West are merely wheat growers or wheat miners as they are called. The impression is not well founded, and I think this quotation will perhaps serve to prove that as well as anything I know of.

In the provinces of Manitoba, Saskatchewan and Alberta the dairy industry has developed since 1910 in a remarkable manner. The output of creamery butter having increased from 4,161,947 pounds, valued at $459,254 in 1910, to 28,619,641 pounds, valued at $10,348,762 in 1921 A further increase in 1922 over 1921

is recorded as follows: In Manitoba 23.5 per cent, Saskatchewan 25 per cent and Alberta 20 per cent.

I should think that would indicate that the agricultural people, even in the western provinces, were doing pretty well. What are the conditions that are confronting agriculture today? It seems to me, Mr. Speaker, that there is no use in trying to delude ourselves in regard to actual conditions. We have heard much about the big crops that were produced in western Canada this year. We are told of the tremendous volume pouring into the ports and being exported from the country. But let us analyse this matter as far as the farmers are concerned. The total field crop production for 1923 was $892,572,300, in 1922 it was $962,616,200 and in 1921 it was $931,862,670. Hon. members will see that it is decreasing right along. Let us analyse it a little bit further. Take the commodity of wheat. We find that the production of wheat increased last year by a considerable amount. The production of wheat last year was estimated at a little over 474,000,000 bushels as against 399,000,000 bushels for the previous year. I have the figures for oats, barley and flax but I will not weary the House with them except to say that all down the line we have increased production in 1923 over 1922, but the value of our total production showed that it had decreased. It is decreasing right along. So far as the farmer is concerned, he is surely doing his part in producing the goods. These figures refer to field crops.

Now coming to diversified farming, I will deal first with the commodity of bacon. I took these figures from the Trade and Commerce reports ending March, 1923, so that when I say 1923 it is really not for the calendar year 1923. The amount of bacon exported in 1922 amounted to 992,080 hundredweight, and in 1923 it was 1,015,901 hundredweight. Hon. gentlemen will notice that there was an increase in the amount, but when we come to the value in 1922 it was $23,012,480 and in 1923 it was $22,536,397. Then the live cattle exported in 1922 amounted to 161,483 head and in 1923 to 229,080 head. That showed an increase in the export of live cattle of 42 per cent. The value of our exports in 1922 was $7,852,111, and in 1923, $8,738,243, or an increase in the value of only 11 per cent. In the commodity of butter we show an increase of 260 per cent in volume and 255 per cent in the returns. In the matter of cheese we have a decrease of 85 per cent in volume and 82 per cent in returns. Now if we sum up the whole agricultural industry as it is summed up in the agricultural statistical bulletin we find that we have a total value for agriculture—lands, buildings and so on—of $6,744,000,000 and we find that the gross revenue was $1,420,000,000. These figures are so large that it is almost impossible to grasp their meaning. According to the last census returns we had 798,360 farmers in Canada. We divide our gross revenue and find out what each farmer gets, and it amounts to about $1,700 per farm. It was estimated that the taxes, Dominion, federal, provincial and municipal amounted to about $100 per individual, with an average family of five, so that it would make $500 of a tax bill to start with. Now if we take the depreciation on the implements and buildings, we find that there is a depreciation of 10 per cent on implements and buildings, which I think is very fair. We have $142,737,000 of a depreciation there. If we allow 5 per cent on the total capital investment, that amounts to another $338,723,000. If we divide this for each farm we find an added cost again of about $600. So that if we take our interest and depreciation of $600 and taxes $500 we find we have about $600 per farm left. Out of that the farmer has to pay his hired help and buy his machinery, twine, and so on. That is the actual condition, I believe, so far as agriculture is concerned.

While our products increased in quantity, yet there was a decrease all along the line in value. Everybody is anxious to help the agricultural industry, and everybody is watching it. The manufacturers, the bankers, the railroads, the governments and every financial interest in the Dominion during the summer have their fingers on the pulse of agriculture and a continuous study is being made of conditions. They realize the fact that a big crop or good returns means prosperity to them as well. I wonder if my hon. friends who are asking for protection sincerely believe that we in Canada must wait until our industries will build up so as to provide a home market for our agricultural products. I used to wonder why the buffalo were brought to the park at Wainwright and left at the edge of the prairie, and I have just come to the conclusion that the idea was to turn them loose and let them roam up there when the western provinces are again depleted of the population that is there at the present time. That will be necessary, and a long period will intervene before we need to use those lands again if we have to wait for home markets for our agricultural products.

As regards the home market and the prices of our agricultural products, that does not amount to a hill of beans. We find that the butter market at Montreal, which, I under-

stand, is regulated by the export market, is the determining factor of the price of our dairy products. We find that the price of our wheat and other grain is determined by the price of grain at Liverpool. I cannot see why we agriculturists should be fooled by waiting for and expecting great prosperity when we get a huge industrial Canada that will consume more of our products. What has been done that will benefit agriculture, that primary industry which produces nearly one-half of our total exports? What has been done that will make it more prosperous? Last year I think we had a modest prayer from the Minister of Finance (Mr. Fielding) in which he remarked that if we had a good crop, the West would be prosperous again. The West had one good crop last year; nobody can dispute the fact that we had a big crop, and yet conditions are apparently not very much better. We also had a kick in the ribs from the ex-Minister of Agriculture (Mr. Tolmie), who said that if farmers improved production by improving herds, they could pay the duty on their agricultural implements. That was the sympathy he gave. A little further on in his speech he was speaking of conditions and the time when pea fed hogs were sold for 2½ cents a pound. He said:

> I venture to think that these conditions produced better citizenship than are produced to-day by all the spoon feeding done by federal, provincial and municipal governments.

I have been trying to appreciate what he meant and what he was getting at, but for the life of me I cannot understand when the farmers have been spoon fed. Spoon feeding is the very thing we are trying to get away from. Our industries have been spoon fed for the last forty years and they are taking it well yet. Why remarks like that should be directed at agriculturists is beyond my comprehension. There seems to be an impression in eastern Canada that when a delegation from one of the eastern provinces appears at Ottawa asking for something, they are demanding simply their rights, whereas, when a western deputation appears, it is trying to grab off something at the expense of the remainder of the country. This, it seems to me, is a peculiar attitude to take. We are told by a good many that we are blind; that protection is not the cause of all our troubles. We do not for a moment think that protection is the cause of all our troubles. We are different from our protectionist friends in that respect. They think, if they lose their protection, they are absolutely lost; that there is nothing that hurts them but the lowering of duties.

The solution to our problems, it seems to me, lies in two sources. I am not one of those who believe that the government can

bring about prosperous times over night or in a year or in a couple of years. I am not one of those who believe that the agriculturists should lie down on their oars and not try to help themselves. Both have an important part to fill, and I am not going to deal here with the part that the agriculturists themselves have to play. We have to have cheaper production, and the farmer can do something towards helping that situation himself by improving his methods and so on as best he possibly can. The government can help us in that respect by lowering the tariff and giving us cheaper implements of production and cheaper equipment to carry on our industry with.

We also need cheaper transportation. At the present time, it costs about 33 per cent of the value of a steer to take him from Saskatoon to the Liverpool market. Thirty-three per cent of the value of a steer is used up in transportation. We must do everything we possibly can to bring about lower freight rates. We must develop our ocean ports at the most strategical points. I think in this regard I might mention the Hudson Bay railway which the West is asking for, and I notice, from a report in the paper the other day, that the ex-Premier of Manitoba stated that he believed 95 per cent of the western people were behind him in the belief that the Hudson Bay route was feasible and that it should be given a trial. With the vast amount of money that has been spent there already and the small amount that it will take to give it a trial, it seems to me that it should be tried out. When I suggest development along those lines, I do not mean to develop politically; I do not mean to build elevators where there is no grain to ship; I do not mean to build dry docks where there are no boats to dock. I think conditions are more serious at this time than they ever were in the history of our Dominion and they should be given earnest consideration. In particular, freight rates have been unreasonably high, and yet Canadian shippers are protected by coastal regulations. We find that our products are being discriminated against in ocean transportation. We appear to find ourselves somewhat helpless in this matter, but I do not see why we should not keep up a vigorous howl until we get redress along that line too. It is unreasonable to expect that the Canadian farmer can pay more for taking his goods to the British market than his friend the American farmer. Why should two sacks of flour in the same hold bear a different rate while they are crossing the Atlantic ocean? That seems to me to be extremely ridiculous.

I intended to deal somewhat with rural credits. It is too late, I am afraid, to save a number of our farmers. Many of our farmers to-day are bankrupt, and the only thing left is to assist them through the bankruptcy court and then to turn around and give them the assistance which new immigrants into our country are receiving. Then they will have a new start. They will know the conditions and they will make much better progress than will new immigrants that come in.

We have another class of farmers who are apparently still solvent, but whose credit is exhausted. I do not know what we can do with those, but I certainly think that the government made a big mistake when they practised economy on the Agricultural Instruction Act. These are the people who could be helped in this way by putting men in the field and enabling them to change their system wherever it was possible to do so. If this were done the morale of these people could be stimulated to such an extent that in a great many instances they would do considerably better. Then we have others who still have a little credit left. I am pretty well convinced that if conditions continue as they are at present our farmers' credit will soon have been exhausted; certainly they cannot continue paying 8 to 10 per cent interest on their money. If the government can borrow money at 5 per cent, I see no reason why the farmer should have to pay between 8 and 10 per cent. I know what the argument is: It is contended that there is a risk in lending money to the farmer and consequently the rate must be increased. But that strikes me as a most absurd argument, because the higher the rate the greater the risk must be. Where will you stop? At present the farmers of western Canada are making an heroic effort to launch one of the greatest marketing schemes ever undertaken and I think the government would be well advised to assist them to the extent of giving back to those provinces the money that rightfully belongs to them in order that they may be able to carry on this work that they have begun. I refer to the money left by the Wheat Board of 1919. They are trying to help themselves, but they are handicapped through lack of finances, notwithstanding that their own money is lying in the treasury here and is refused them.

The establishment of agriculture on a sound basis is to my mind a truly national problem. We were never before in such a serious condition as we are in at the present time, and the time has come when every one should cast aside political prejudices so that all might sit around the table in co-operation. The manufacturers, the farmers, the lumbermen and the representatives of all other industries in the country should get together in an effort to solve this great problem. This country, I think, is undertaking a tremendous experiment in connection with agriculture. We heard a great deal yesterday from the hon. member for Fort William and Rainy River (Mr. Manion) in regard to the development that has taken place in highly protected countries. But the hon. gentleman did not tell us anything about the peasantry in those countries. The Dominion of Canada and the United States are engaged in one of the biggest experiments known to history, and we are trying to carry on agriculture without any such peasantry. Agriculture is one of the noblest callings that a man can follow, and there is no reason why we should be ashamed of it. There is no reason why we should have to adopt any low standard of living. The farmers of this country and of the country to the south of us are determined to improve the conditions of agriculture and they will not tolerate any standard of living below that to which they are justly entitled. They are going to make agriculture an industry that they may be proud of. The experiment, I say, is a tremendous one, and I hope sincerely that our protectionist friends will not follow the example of other countries and throw upon our agricultural people such burdens as will impoverish them and make a peasant race of this fair Canada of ours.

On motion of Mr. Clark the debate was adjourned.

On motion of Mr. Graham the House adjourned at 11.25 p.m.

Wednesday, April 30, 1924

The House met at three o'clock.

MARINE AND FISHERIES COMMITTEE

Mr. WILLIAM DUFF (Lunenburg) presented the first report of the select standing committee on Marine and Fisheries.

UNITED CHURCH OF CANADA

Mr. E. R. E. CHEVRIER (Ottawa): I desire to present the following petitions: petition signed by Wm. J. Kerr, elder of the

North Georgetown Presbyterian church in the province of Quebec and 237 others, the petition of James Cullen, Mayor of Riverfield and Howick, in the province of Quebec, and 177 others, and the petition of the Presbyterian Church Association of Ottawa, representing 1,900 members and adherents, protesting against the passing of Bill No. 47, to incorporate the United Church of Canada.

Mr. W. G. MITCHELL (St. Antoine): I desire to present the petition of members of Erskine Presbyterian church, Montreal, protesting against the Church Union bill; also the petition of members and adherents of St. Giles Presbyterian church, Outremont, Quebec, protesting against the Church Union bill.

Mr. W. F. KAY (Missisquoi): I desire to present a petition signed by certain officials, members and adherents of the Methodist church at Farnham, praying for the incorporation of the United Church of Canada.

Mr. G. C. WILSON (Wentworth): I desire to present a petition signed by Bessie M. Telfer and 556 others of the Presbyterian church at Paris, Ontario, protesting against the Church Union bill.

Mr. G. A. BRETHEN (East Peterborough): I beg to present the following petitions: petition signed by James Dutton and others of St. Paul's Presbyterian church, Peterborough, Ont., protesting against the passing of the proposed Church Union legislation; also a petition signed by certain officials, members and adherents of the Methodist church at Havelock, also petition signed by certain members and adherents of the Presbyterian and Methodist churches of Peterborough praying for the incorporation of the United Church of Canada.

Mr. J. E. FONTAINE (Hull): I beg to present resolution passed unanimously by the quarterly official board of the Chelsea circuit in favour of the Church Union bill.

Mr. HUGH C. McKILLOP (West Elgin): I beg to present petition signed by George Geddes and other members and adherents of Knox Presbyterian church, St. Thomas, Ontario, protesting against the passing of the proposed Church Union legislation.

Mr. PAUL MERCIER (Westmount-St. Henri): I beg to present petition signed by certain members and adherents of the Kensington Presbyterian church, protesting against the Church Union bill.

Mr. CLEMENT ROBITAILLE (Maisonneuve): I beg to present petition signed by certain members and adherents of the Pointe aux Trembles College of the Presbyterian Church in Canada protesting against the Church Union bill.

Mr. R. M. GENDRON (Wright): I beg to present petition signed by certain officials of the Methodist churches in the townships of Wakefield, Masham and Hull in the county of Wright in favour of the Church Union legislation.

Mr. J. F. WHITE (London): I beg to present petition signed by J. Kingsborough and 28 others of the session, managing board and members of St. George's Presbyterian church, London, protesting against the Church Union bill.

Mr. JAMES MALCOLM (North Bruce): I beg to present the following petitions protesting against the Church Union bill: Petition signed by certain members and adherents of St. Paul's Presbyterian church, Wiarton; petition signed by certain members and adherents of St. Andrew's Presbyterian church, Southampton; petition signed by certain members and adherents of Ashfield Presbyterian church, Lucknow, and petition signed by certain members and adherents of Knox Presbyterian church, Kincardine.

Hon. CHARLES STEWART (Minister of the Interior): I beg to present a petition from members of the united congregations at Vars, Navan and North Russell of the Presbyterian and Methodist churches praying for the incorporation of the United Church of Canada during the present session of parliament.

Mr. L. P. BANCROFT (Selkirk): I beg to present a resolution from the congregation of Balmoral church praying for the incorporation of the United Church of Canada.

Hon. A. B. COPP (Secretary of State): I beg to present a petition from members of the congregation of the Methodist church at Malden asking for the incorporation of the United Church of Canada.

Mr. J. J. THURSTON (Victoria): I beg to present a petition signed by a number of members and adherents of the congregation of St. Andrews Presbyterian church, Eldon Station, Ontario, protesting against the Church Union bill.

Mr. WILLIAM ELLIOTT (Waterloo): I beg to submit a petition signed by Thomas Ballantine and others of the congregation of Knox Presbyterian church of Preston, Ontario, and a petition from J. K. Fraser and others of Knox Presbyterian church, Galt, Ontario, both protesting against the Church Union bill.

HOME BANK

Mr. NEIL McTAGGART (Maple Creek): I desire to present a petition signed by certain depositors in the Home Bank praying that they be indemnified.

Mr. J. S. WOODSWORTH (Centre Winnipeg): I beg leave to present a petition from 500 depositors of the Home Bank in St. James, Manitoba, asking for reimbursement.

BUDGET AMENDMENTS

CUSTOMS TARIFF AND SPECIAL WAR REVENUE—RESOLUTIONS

Hon. J. A. ROBB (Acting Minister of Finance): I beg to submit, Mr. Speaker, certain resolutions, affecting the customs duties and special war revenue.

Sir HENRY DRAYTON: Is that an amplification of the budget?

The resolutions presented by Mr. Robb are as follows:

CUSTOMS TARIFF

1. That Resolution No. 3 of April 10th, 1924, relating to amendments to schedule A to The Customs Tariff 1907, be amended by adding thereto the following provision:

That tariff item 456, the enumerations of goods and the several rates of duties of Customs set opposite said item be struck out of said schedule A and that the following items, enumerations and rates of duty be inserted in said Schedule A:

Tariff Item	—	British Preferential Tariff	Intermediate Tariff	General Tariff
456	Ingot moulds, n.o.p.; glass moulds of metal.....	5 p.c.	7½ p.c.	10 p.c.
456a	Ingot moulds for use in the production of steel.....	Free.	5 p.c.	7½ p.c.
460c	Articles of metal when for use exclusively in smelting of iron ore or in metallurgical operations, that is to say:—machinery and apparatus for sintering or nodulizing iron ore or dust containing iron; machinery and apparatus for use exclusively in the construction, equipment or repairs of a blast furnace for smelting iron ore, such machinery or apparatus to be used exclusively between the blowing engines up to and including the hoisting apparatus at the skip hoist, and up to and including the point where the metal and slag are discharged from the furnace including foundations; and integral parts of all machinery and apparatus enumerated in this item, not to include valves, wrought iron pipe eight inches and under in diameter, nor structural iron work.....	Free.	5 p.c.	5 p.c.
460d	Machinery and apparatus of a class or kind not made in Canada for use exclusively in handling iron ore and other materials to be charged into a blast furnace, from the dock, car or stock pile, at the iron or steel plant.....	Free.	Free.	Free.
502c	Wood handles or stems for handles, not further finished than turned, when imported by manufacturers of shovels for use exclusively in the manufacture of shovels.....	Free.	Free.	Free.
590b	Racing shells when imported by a bona fide Amateur Rowing Club in Canada for use exclusively by such Club.....	5 p.c.	25 p.c.	25 p.c.

2. That said Resolution be amended by striking out tariff items 445a, 445b, 533b, the several enumerations of goods respectively and the several rates of duties of customs, set opposite each of said items, if any, and by substituting therefor the following items, enumerations and rates of duty:

Tariff Item	—	British Preferential Tariff	Intermediate Tariff	General Tariff
445a	Articles which enter into the cost of the manufacture of goods enumerated in tariff items 445, 446, 446b, 447b, 448 and 591, when imported by manufacturers of such goods for use only in the manufacture of goods enumerated in tariff items 445, 446, 446b, 447b, 448 and 591. Provided that goods which are entitled to free entry or a lower rate of duty than is mentioned in this item shall not be entered at the rate specified in this item.....	5 p.c.	6 p.c.	6 p.c.
445b	Rolled iron, rolled steel and pig iron when imported for use exclusively by manufacturers in their own factories in the manufacture of goods enumerated in tariff items 445, 446, 446b, 447b, 448 and 591..	Free.	Free.	Free.
533b	Linters of short fibres of cotton, bleached, when imported by manufacturers of paper to be used only in their own factories for the manufacture of blotting paper or other grades of paper.....	7½ p.c.	10 p.c.	12½ p.c.

3. That Resolution No. 4 of April 10th, 1924, relating to amendments to Schedule B to The Customs Tariff, 1907, be amended by providing that the following items, enumerations and rate of drawback of customs duties be inserted in said Schedule B:

Tariff Item	Goods	When Subject to Drawback	Portion of Duty (not including Special Duty or Dumping Duty) Payable as Drawback
1042	Materials, including all parts.....	When entering into the cost of cyanide of potassium and cyanide of sodium.....	99 p.c.
1043	Materials, including all parts.....	Which entered into the cost of goods enumerated in tariff items 445, 446, 446b, 447b, 448 and 591, on hand or in process of manufacture, in possession of the manufacturer and unsold, on the tenth day of April, 1924. Provided that drawback payable under this item is in lieu of drawback payable under any other tariff item.	99 p.c.

SPECIAL WAR REVENUE

1. Resolved, that it is expedient to introduce a measure to amend subsection one of section nineteen BBB of The Special War Revenue Act, 1915, by providing that in computing the value of imported matches and of imported playing cards, the amount of the Excise Taxes imposed by Part three Section sixteen A of the said Act and Part four Section nineteen BB of the said Act shall be included in the value of such goods for purposes of this Act.

2. Resolved, that the resolution of April 10th, 1924, relating to amendments to The Special War Revenue Act, 1915, be amended by striking out resolution number two and substituting therefor the following:

2. Resolved, that it is expedient to introduce a measure to amend The Special War Revenue Act, 1915, and amending acts, by providing that the following goods shall be exempt from the consumption or sales tax imposed by section nineteen BBB of the said act, that is to say:—books enumerated in Customs Tariff items 173 and 175; printed text-books authorized by the Department of Education of any province in Canada; goods enumerated in Customs Tariff items 45, 46, 64, 209b, 219a, dry preparations used for the same purpose as goods enumerated in item 219a, 281, 281a, 352a, 410, 410a, 445, 445a, 445b, 446, 446b, 447b, 448, 449, 450, 453b, 453c, 456a, 460, 460a, 460b, 460c, 460d, 461, 461a, 466, 466a, 469 including goods enumerated in this item of a class or kind made in Canada, 506a, 544, 591, 591a, 663b, 666, 667, 696; tubing enumerated in Customs Tariff item 1017; insulin; extract of rennet; poultry feed; ice cream; rice, cleaned; Macaroni and vermicelli; meats, salted or smoked; carbolic or heavy oil, to be used only in creosoting logs and round unmanufactured timber; cream separators and parts thereof;

cars and other similar appliances for use exclusively at a mine or a quarry for mining or quarrying; articles and materials to be used exclusively in the manufacture of goods enumerated in Customs Tariff items 219a, dry preparations used for the same purpose as goods enumerated in item 219a, 281, 281a, 410, 410a, 445, 445a, 445b, 446, 446b, 447b, 448, 449, 450, 453b, 453c, 456a, 460, 460a, 460b, 460c, 460d, 461, 461a, 466, 466a, 469 including goods enumerated in this item of a class or kind made in Canada, 506a, 544, 591, 591a, 663, 663a, 663b, 666, 667, 696; tubing enumerated in Customs Tariff item 1017; articles and materials to be used exclusively in the manufacture of cars and other similar appliances for use exclusively at a quarry for mining or quarrying; articles and materials to be used exclusively in the manufacture of cream separators and parts thereof; materials, not to include plant equipment, consumed in process of manufacture or production, which enter directly into the cost of goods subject to the consumption or sales tax, manufactured or produced by a licensed manufacturer or producer; materials, not to include plant equipment, consumed in process of manufacture or production, which enter directly into the cost of goods enumerated in Customs Tariff items 281, 281a, 410, 410a, 445, 445a, 445b, 446, 446b, 447b, 448, 449, 450, 453b, 453c, 456a, 460, 460a, 460b, 460c, 460d, 461, 461a, 466, 466a, 469 including goods enumerated in this item of a class or kind made in Canada, 506a, 544, 591, 591a, 663, 663a, 663b, 666, 667, 696; tubing enumerated in Customs Tariff item 1017; and by providing that on the following goods there shall be imposed, levied and collected only fifty per cent of the said consumption or sales tax, that is to say:—boots and shoes, including rubber footwear; biscuits of all kinds; goods enumerated in Customs tariff items 86, 105 and 106; creosoted railroad ties.

3. Resolved, that it is expedient to introduce a measure to amend subsection seven of section nineteen BBB of The Special War Revenue Act, 1915, by providing that any bona fide wholesaler or jobber may be granted an annual license for the purposes of the said section and that the license of any wholesaler or jobber who contravenes any requirements of the said section shall be cancelled forthwith and shall not be restored within a period of two years after the date of cancellation.

4. Resolved, that any enactment founded on the foregoing resolution number two shall be deemed to have come into force on the eleventh day of April, one thousand nine hundred and twenty-four, and to have applied to all goods mentioned in the said resolution imported or taken out of warehouse for consumption on and after that day, and to have applied to goods previously imported for which no entry for consumption was made before that day.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

INLAND REVENUE EMPLOYEES

Mr. IRVINE:

1. What is the name or names of person or persons, employed by the Canadian government who inspect (a) bank notes; (b) postage stamps; (c) tobacco, cigar and cigarette stamps; (d) inland revenue stamps; (e) wine and liquor stamps; (f) bonds?

2. What are the qualifications for such a position or positions?

3. What is the salary?

4. Are the present occupant or occupants of the position qualified as plate printers or engravers?

5. Did the present occupant or occupants pass an examination prior to appointment?

6. Is Canadian paper used in the printing of Canadian currency, stamps, labels and bonds?

7. What sums were paid the American Bank Note Company, Limited, during the year 1923?

8. What sums were paid the Canadian Bank Note Company, Limited, during the year 1923?

Hon. Mr. COPP:

Department of Customs and Excise—

1. (c), (d), (e) P. L. Smyth.

2. Thorough knowledge of the provisions of the Inland Revenue Act and Special War Revenue Act and regulations thereunder as affecting such matters. Experience, accuracy and integrity.

3. $2,100.

4. No.

5. No.

6. Yes.

1. (a), (b), (f), 7 and 8. Do not refer to this department.

Department of Finance—

1. (a) Bank notes are printed for and by order of various banks.

1. (f), 2, 3, 4 and 5. Bonds are inspected by competent employees of the Department of Finance before issue.

6. As to currency, no; as to bonds, in part.

7. None.

8. $649,152.51.

Post Office Department—

1, 2, 3, 4, 5, (b). Inspected by competent employees of Post Office Department before issue.

6. (b) Yes.

7. (b) $19,055.13.

8. (b) $199,834.53.

Department of Trade and Commerce—

1, 2, 3, 4, 5, 6. No information.

7. $185.

8. No information.

TERMINAL ELEVATORS

Mr. GARDINER:

1. How many terminal elevators are owned by the Dominion government?

2. Are any of these terminals leased?

3. If so, to whom?

4. On what terms?

5. For what length of time?

Hon. Mr. COPP:

1. Eight.

2. No.

3, 4 and 5. Answered by No. 2.

SOLDIERS' CIVIL RE-ESTABLISHMENT

Mr. COOTE:

1. What was the total number of employees and what was the total amount of wages paid in the Stores branch of the Department of Soldiers' Civil Re-establishment in each year since the formation of that department?

2. What was the cost of stores purchased each year?

3. Were these stores purchased by tender? If not, in what manner were purchases made?

Hon. Mr. BELAND:

1. The organization of the department does not contain a "Stores Branch." There is a subdivision of the Administration Branch known as the Purchasing and Stores Division which is responsible for all purchases, the receipt, distribution and custody of supplies and equipment, and for the disposal of surplus stores. It consists of the following:

As at March 31st.	Staff	Salaries
(a) 1918.	The Department was established 21st February, 1918, to take over the work of the Invalided Soldiers' Commission. Available statistics do not show the distribution of the staff by subdivisions as at 31st of March, 1918.	
(b) 1919.	109	$113,435.00
(c) 1920.	221	232,997.00
(d) 1921.	259	321,708.00
(e) 1922.	172	219,440.00
(f) 1923.	110	139,464.00
(g) 1924.	92	119,228.00

2. The volume of stores handled during each year was as follows:

Fiscal year ending March 31st	Purchase of stores including supplies and equipment	Value of equipment and stores disposed of as surplus
(a) 1919.	$1,807,461.24	
(b) 1920.	3,001,088.51	
(c) 1921.	2,062,916.31	$438,159.22
(d) 1922.	1,229,796.29	1,288,635.24
(e) 1923.	1,117,135.20	276,189.23
(f) 1924.	836,368.50	205,246.36

3. Yes.

HUDSON BAY RAILWAY

Mr. TOBIN:

1. What was the total cost of the Hudson Bay railway on the 31st March, 1924?

2. How much money did the government receive from the sale of lands, the proceeds of which were to apply to the construction of the said railway?

3. What will be the probable cost to finish the said road?

4. Are there any other available lands which could be sold in the said territory, the proceeds of which could be applied to finish this road?

Hon. Mr. COPP:

1. $14,459,941.26, capital expenditure to March 31, 1923. Expenditure to March 31, 1924, is not yet available.

[Mr. Coote.]

2. There was no specific authority under the Dominion Lands Act, 1908, for the sale of land for the purpose of Hudson Bay railway construction, but pre-emptions and purchased homesteads were sold under the provisions of the said Act. The net amount collected on account of pre-emption sales up to March 31, 1924, was $15,984,134.89, from purchased homesteads, $3,146,421.84, a total of $19,130,556.73.

3. $6,250,000 (estimate) exclusive of terminals or harbour developments.

4. By Order in Council of the 16th March, effective 20th March, 1918, P.C. 651, pre-emption and purchased homestead provisions of Dominion Lands Act were suspended and these provisions were subsequently deleted from the Act by the amendment of 1918, Chapter 19, Section 28.

No. 1. ELEVATOR—VANCOUVER

Mr. COOTE:

1. What was the cost of the addition to No. 1 elevator, which was built last year at Vancouver?

2. What is the storage capacity of the said addition?

3. Were tenders advertised for, if so in what papers and on what dates were advertisements published?

4. What were the names of firms tendering for the contract and the amounts of said tenders, if any?

5. If the contract was not let by tender in what manner was the contract given?

6. To whom was the contract given and on what terms was the said contract given?

Hon. Mr. CARDIN:

1. For the concrete storage house, shipping house, and necessary machinery and equipment complete, including the connecting conveyor gallery to Elevator No. 1, to February 29, 1924, $749,875.54.

2. 850,000 bushels.

3. Tenders for the foundation work were advertised for April 16 to 18, 1923, in the Vancouver Daily Sun, World and Province. By the time plans of details for the superstructure were completed, necessity for extreme expedition in order to make the facilities of the addition available at the earliest possible moment suggested the wisdom of arranging a contract by negotiation, and, after considering the proposition with different reliable firms, the contract was given to the Pacific Construction Company the lowest qualified bidder on the foundation work, on a cost plus 10 per cent basis;—the percentage to be paid, however, not to exceed $35,000.

4. Messrs. Cotton & Co., $36,715; C. D. Collard, $41,750. (This man afterwards requested that his bid be withdrawn). Messrs. Paulsen & Co., $49,239; Nickson Const. Co., $72,440; McQueen Const. Co., $46,378; Pacific Const. Co., $42,807.

5. Answered by No. 3.

6. Answered by No. 3.

FEDERAL APPEAL BOARD

Mr. BOWEN:

1. Since the Federal Appeal Board has been instituted how many decisions has it given against the Pension Board?

2. Have any of the Federal Appeal Board decisions against the findings of the Pension Board been translated into cash payments to successful appellants?

Hon. Mr. BELAND:

1. On first appeal, 56. On re-appeal by the Board of Pension Commissioners for Canada, 7.

2. Yes.

MR. J. R. H. BYRNE

Mr. LAVIGUEUR:

1. Has the Minister of Immigration and Colonization received a letter from the member for the county of Quebec, dated December 22, 1923, requesting and insisting upon an inquiry being made with regard to the charges against Mr. J. R. H. Byrne, in relation to the restaurant and canteen at the port of Quebec?

2. If so, is it the intention of the minister to allow the inquiry as requested?

Hon. Mr. ROBB:

1. Yes.

2. No.

THE STAMP TAX

Sir HENRY DRAYTON:

How much money was collected under the stamp tax on cheques (a) during the months of November to March, inclusive, of the fiscal year 1922-23 and (b) during the same period of the fiscal year 1923-24?

Hon. Mr. BUREAU: I do not think we can answer this question, which asks for the amount of money collected under the stamp tax on cheques. My hon. friend knows very well that we have no means of ascertaining how many stamps went out on cheques in the period specified, how many on notes, matches, and so forth. We distribute the stamps, and they are sold to the people.

Sir HENRY DRAYTON: My hon. friend may be right in so far as matches are concerned, but I should not think so. Perhaps the question could be amended to apply to cheques, promissory notes or drafts, so as to meet my hon. friend's point.

Mr. BUREAU: What about receipts?

Sir HENRY DRAYTON: And receipts too. I will amend the question accordingly.

Mr. SPEAKER: Stand.

Hon. Mr. COPP: It is impossible to distinguish the amount of stamp tax collected on cheques as distinguished from amount collected on notes, drafts, bills of exchange, statements of overdrafts, money orders, receipts.

SEASONABLE HINTS

Mr. PRITCHARD:

1. At what intervals during the year 1923 did the Department of Agriculture issue the publication known as "Seasonable Hints"?

2. What number of copies were printed at the different periods: (a) English; (b) French?

3. What was the cost of the several editions: (a) English; (b) French?

4. What was the total cost of this publication for the year?

5. What system of distribution was followed?

6. How many requests for this publication has the Department of Agriculture actually on file?

Hon. Mr. MOTHERWELL:

1. "Seasonable Hints" was issued three times during 1923, viz: March, July and November.

2. Number of copies recommended for printing: March, English, 304,000, French, 83,500; July, English, 312,000, French, 87,500; November, English, 322,000, French, 91,500.

3. March editions, English, $2,688.65, French, $765.46; July editions, English, $2,454.90, French, $753.40; November editions, English, $2,602.28, French, $830.40.

4. $10,095.09.

5. The Publications Branch of the Department of Agriculture sent "Seasonable Hints" to every address on its mailing list and furnished copies on special application. The Experimental Farms branch furnished copies on individual request, and, on request, also, to banks throughout Canada.

6. 375,007.

RAILWAY NEWS SERVICE

Mr. SPENCER:

1. Is the News Service (Agent) Department on the Canadian National Railways run by that railway or is it let to a contractor?

2. If the latter, who is the contractor and how much is paid for this contract?

Hon. Mr. GRAHAM:

1. To a contractor.

2. Canada Railways News Company; on a percentage basis.

CANADA AND GULF TERMINAL RAILWAY COMPANY

Mr. GAUVREAU:

1. What money subsidy has been paid to the Matane and Gaspé Railway, now known as The Canada and Gulf Terminal Railway Company?

2. On what grounds were the double subsidy payments based?

3. Were exaggerated reports sent to the Department of Railways to obtain the double subsidy?

4. If so, is it the intention of the government to institute an inquiry on the subject so as to have any money so obtained returned to the department?

Hon. Mr. GRAHAM:

1. $210,053.59.

2. Because actual, proper and reasonable cost justified payment of more than ordinary subsidy.

3. Subsidy was paid on report of the Chief Engineer of the department after inspection of work by inspecting engineer and of books and vouchers by the departmental auditor.

4. See reply to previous questions.

C.N.R.—OFFICIALS' SALARIES

Mr. DOUCET:

1. How many officials and employees of the Canadian National Railways, Atlantic Division, are in receipt of a salary of $2,400 and over?

2. Of these, how many are French Acadians or Canadians?

Hon. Mr. GRAHAM:

1. The management takes the ground that it is not in the public interest to furnish this information.

2. All Canadians. Proportion of French Acadians not known.

CUSTOMS DEPARTMENT, MONTREAL—DISMISSALS

Mr. RINFRET:

1. How many employees of the Department of Customs, at Montreal, were dismissed from the service since January 1, 1924?

2. How many were dismissed for personal reasons?

3. How many were dismissed to conform with the government's economy programme?

Hon. Mr. BUREAU: I can answer this question orally. Since January 1, 1924, there were none. Questions 2 and 3 answered by No. 1.

IMPORTATIONS OF CHINESE EGGS

Mr. DICKIE:

1. How many dozen of Chinese eggs were imported into Canada during the year 1923?

2. To what points in Canada were such eggs shipped?

Hon. Mr. BUREAU:

Imports of eggs from Hong Kong and China entered for consumption by ports: during the fiscal year ended March 31, 1923.

WAR REVENUE ACT

Sir HENRY DRAYTON:

What was the total amount collected under the provisions of the Customs Tariff War Revenue Act, 1915, and other acts providing for new or increased duties both of customs or excise during the years 1915 to 1921, inclusive?

Hon. Mr. BUREAU:

War tax and excise taxes collected under provisions of the War Revenue Act during the fiscal years ended March 31, 1915 to 1921.

Fiscal Year	War Tax on Imports	Excise Taxes
1915	$ 2,638,473 03	$ 98,056 95
1916	25,256,787 89	1,550,488 35
1917	37,830,427 39	2,072,441 42
1918	45,018,562 27	2,253,421 87
1919	44,726,091 67	11,964,740 03
1920	31,369,296 91	15,744,039 89
1921	4,891,895 55	79,346,814 98

AEROPLANE STATION—NORTH SYDNEY

Mr. HANSON:

1. Were repairs made to airplane station at North Sydney during the fiscal year of 1923?

2. Were tenders called for these repairs and if so, what tenders were received?

3. Who received the contract and at what price?

4. What was the extent of the work?

5. Who were the cheques made payable to for the work done on the job?

6. What is the intention of the government regarding the future use of these buildings and what did they cost the government for maintenance and repairs each year for the past five years?

Hon. Mr. KING (Kootenay):

1. Yes. Repairs to roof.

2. Yes. Jas. M. Cashin and A. J. Steele, $1,464; Robert Cooper, $1,565; Geo. C. Green, $1,595; F. C. Reading, $1,780; F. Haggett, $2,000; P. C. McNeil, $2,270; J. C. McMillan, $2,275; Geo. E. Moore, $2,300.

3. Cashin and Steele: $1,464.00.

4. Covering roofs of stores building, mess building and recreation building with rubberoid roofing and providing necessary flashing around chimneys.

5. Cheque Re87,717 for $1,464.00 made payable to Cashin and Steele; cheque Re89,578 for $2.50 made payable to F. A. Bill and Son.

6. Cost of maintenance 1919-22, no expenditure, April, 1922 to March, 1923:

Repairs	$ 100 70
Maintenance	1,905 90
Total	$ 2,006 60

April, 1923 to March, 1924: Repairs as in answer to (5) above, $1,466 50; maintenance, $2,006.23.

IRON ORE BOUNTY

Hon. Mr. MANION:

With reference to the offer of the Ontario government to give a bounty on iron ore, provided the Dominion government gives an equal bounty, has the government reached any conclusion in this regard?

2. If so, what is that conclusion?

Hon. Mr. STEWART (Argenteuil): The matter is still under consideration.

MANITOBA FISHERIES

Mr. BANCROFT:

1. What was the value of the products of the fisheries of Manitoba for the year ended March 31, 1924?

2. What was the total cost of administering the fisheries of Manitoba during the same period?

3. What was the total revenue of the Department of Fisheries from the fisheries of Manitoba for the year ended March 31, 1924?

Hon. Mr. CARDIN:

1. $1,020,595 for the calendar year 1923.

2. Salaries and disbursements of:

Fishery Officers	$13,041.96
C. G. S. Bradbury	20,051.25
Total	$33,093.21

3. $15,345.88.

C.G.S. BRADBURY

Mr. BANCROFT:

1. What was the total cost, including furnishings, of the Canadian government steamer Bradbury?

2. What has been the cost of maintaining and operating this vessel each year up to the end of the last fiscal year?

Hon. Mr. CARDIN:

1. $203,329.54.

2.

1915-16	$ 7,182.85
1916-17	19,122.24
1917-18	18,943.45
1918-19	22,058.23
1919-20	21,176.75
1920-21	16,787.94
1921-22	23,624.52
1922-23	21,852.05
1923-24	20,051.25

to March 31, 1924.

TRAVELLING EXPENSES OF MINISTER OF LABOUR

Mr. JAMES ARTHURS (Parry Sound): Mr. Speaker, on the 14th April I had a question on the order paper, and the Minister of Labour (Mr. Murdock) in my absence answered it in the following words:

This question will be handled as a part of and answered by the answer to question No. 50.

As you know, Sir, the numbers of questions are changed from day to day, and consequently it is difficult to trace a question by number. After a good deal of trouble I succeeded in finding out that question No. 50 stood in the name of the member for Cariboo (Mr. McBride). He knew nothing about the answer. Finally I dug up the fact that this question, which is very simple in itself, and which the minister apparently did not want to ask directly to be passed as an order for return, was so treated. I do not think it was necessary to adopt this course, as it seems to me the question was of such a simple nature that it might very easily have been answered by the minister.

PULPWOOD COMMISSION

On the motion of Hon. Mr. Stevens:

For a copy of all evidence or statements made before the Royal Pulpwood Commission by Mr. Piché and other witnesses, members or officers of the government of Quebec.

Hon. J. A. ROBB (Acting Minister of Finance): Mr. Speaker, when this motion was moved at a previous sitting I directed the attention of my hon. friend (Mr. Stevens) to the fact that the evidence which he is asking for had been given under an arrangement with the Forestry department of the government of Quebec that it would be considered confidential, and that therefore the Pulpwood Commission do not care to furnish a copy without the consent of the provincial government. Under the circumstances, might I ask my hon. friend to drop the motion? Or I can write the Forestry department of Quebec for permission to furnish the evidence, if he so desires.

Mr. STEVENS: Mr. Speaker, might I ask the indulgence of the House for a moment? I would suggest to the minister that he request the consent of the government of Quebec to make public this evidence. The reason for my suggestion is that the Pulpwood Commission was appointed under the authority of this government, and therefore we are entitled to any information called for by parliament in connection with it.

Mr. ROBB: Mr. Speaker, the proposition of my hon. friend sounds reasonable, and I offer no opposition to the resolution, with this understanding, that if the government of Quebec decline to give their consent, we are not to be held responsible if the evidence is not brought down.

Mr. STEVENS: Of course, we expect that out of deference to an order of this House a rather strong request will be made by the government that the evidence should be brought down. I think the House is entitled to see the evidence, and that is the reason I ask for it.

Mr. BUREAU: The evidence was given on condition that it should be kept secret.

INQUIRIES FOR RETURNS

MR. RICHARD FORDHAM

On the Orders of the Day:

Hon. R. J. MANION (Fort William and Rainy River): Mr. Speaker, I should like to draw the attention of the Minister of Customs (Mr. Bureau) to an order which was passed on March 24th for papers regarding the appointment of Richard Fordham. So far as I can find out the papers have not yet been brought down.

Hon. JACQUES BUREAU (Minister of Customs): I will call the attention of the officers of the department to the matter.

CHICAGO DRAINAGE CANAL

Mr. T. L. CHURCH (North Toronto): Mr. Speaker, on March 19, the House passed an order for the production of all papers (a) re diversion of water by the Chicago Drainage Commission; (b) re an application for the construction of a power dam on the St. Lawrence river near the town of Morrisburg. When will all the papers be brought down on these two important matters? The House and the country are entitled to know. A deputation is now at Washington in reference to the Chicago diversion, claiming to represent Canada. Is the Dominion government represented there or not? What is being done about these two important matters?

Hon. A. B. COPP (Secretary of State): The papers were brought down two or three days ago, and are on the Table.

RIFLE SIGHTS

Mr. JAMES ARTHURS (Parry Sound): Mr. Speaker, on the 9th April a question standing in my name regarding a contract given for the supply of rifle sights was passed as an order for return. As a matter of fact, I do not think it was necessary to so treat the question, the answer to which should be very simple. At any rate the information has not yet reached me.

Hon. E. M. MACDONALD (Minister of National Defence): Mr. Speaker, the return is being prepared, and I think is almost ready to be brought down. I will see that it is brought down.

MR. J. B. LEVESQUE

Mr. ALEXANDRE J. DOUCET (Kent, N.B.): Mr. Speaker, on the 19th March a question standing in my name for a copy of all correspondence with respect to J. B. Levesque was passed as an order for return. So far the return has not been brought down.

Hon. P. J. A. CARDIN: (Minister of Marine and Fisheries): I will draw the attention of the officers of the department to the matter.

ALBERTA MINERAL TAX ACT

On the Orders of the Day:

Mr. G. G. COOTE (Macleod): Mr. Speaker, could the Minister of Justice tell the House whether the government has come to any decision in regard to the application for the disallowance of the Mineral Tax Act passed by the Alberta legislature?

Hon. ERNEST LAPOINTE (Minister of Justice): Yes, the government has recommended the disallowance of the Mineral Tax Act, and His Excellency the Governor General has disallowed it. But not for the reasons which have been mentioned in the press. The disallowance has been recommended because the act was interfering with Dominion rights and was in conflict with Dominion policy and Dominion interests. I shall be pleased to lay on the table of the House the order in council as well as the report of the Minister of Justice, the petitions that have been received with regard to this act, and the representations made by the Attorney General of Alberta.

Mr. RYCKMAN'S STATEMENT

On the Orders of the Day:

Mr. R. A. HOEY (Springfield): Mr. Speaker, in view of the statement made yesterday by the Prime Minister that the right hon. Minister of Finance (Mr. Fielding) had fully endorsed this year's budget, and in view of the statement recently made by the hon. member for East Toronto (Mr. Ryckman), I would ask if the government have received any information which would enlighten us as to whether the hon. member has yet submitted his resignation to His Honour the Speaker.

Hon. GEORGE P. GRAHAM (Acting Prime Minister): Mr. Speaker, so far as the government is aware, the member for East Toronto has remained silent.

Sir HENRY DRAYTON (West York): I think my hon. friend might also add that so

far as the government is aware the conditions mentioned in the statement of the hon. member for East Toronto have not yet been met.

Mr. HOEY: Oh.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed from Tuesday, April 29, the debate on the motion of Hon. J. A. Robb (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into Committee of Ways and Means, and the proposed amendment thereto of Mr. Woodsworth.

Mr. J. A. CLARK (Burrard): Mr. Speaker, the Acting Minister of Finance (Mr. Robb) announced to the country that his government had reduced the national debt for the year ending March 31, 1924, by the sum of $30,400,000 odd. The member for St. Lawrence-St. George (Mr. Marler), speaking yesterday, estimated that the Acting Minister of Finance should have shown a deficit of about $2,000,000, and the hon. member for Brome (Mr. McMaster), who followed him, stated that he agreed with the member for St. Lawrence-St. George and that he also believed that the minister should have shown a deficit.

By a simple mathematical calculation based on the principle enunciated by the member for St. Lawrence-St. George and by the member for Brome—principles which, I may say, I personally believe in, and principles upon which all past ministers of finance have acted—I estimate that the Minister of Finance this year should have shown a deficit of $26,906,850.43 instead of a surplus of $30,400,000 odd.

I would like to examine for a few minutes the statement furnished to the House by the Acting Minister of Finance. He stated that last year the national debt had increased by $31,641,067.01. If this be true, there must have been an improvement this year over last year of $62,000,000. Now, what are the facts? The returns of the Finance department show that this year's total revenues were larger than last year's by $2,383.000 odd. In addition to that, there was some found money, admitted by the minister to be such, of $9,622,000 odd. Similarly last year they had found money amounting to nearly $8,200,000. They were therefore more fortunate this year than last by nearly a million and a half dollars, showing a total improvement of about $3,800,000.

There are four classes of expenditure, ordinary, capital, special, and National Railways. Our capital expenditure increased last year by roughly, $3,500,000. Our ordinary expenditure diminished by $1,000,000 and our special expenditure diminished by $107,000, leaving a net increase in these three classes of expenditure of nearly $2,500,000. If we deduct the total increase of expenditure outside of National Railways from the total increase of revenue, we see that the showing for the year 1923-24 is better than the showing for 1922-23 by $1,385,000. If our ordinary expenditure has only improved by the small amount that I have indicated, how does the minister find his betterment of $62,000,000? Obviously he has issued bonds, one issue for $50,000,000 on the railways, another issue for $22,500,000 on railway equipment, making $72,500,000 in all, but he has not charged that, as has always been done in the past, to the national debt. So that if you deduct the minister's supposed surplus of $30,500,000 it shows an actual deficit of $42,090,000.

Mr. EULER: Would the hon member permit a question? This is merely to clear up what I think is a misconception. In figuring the surplus or deficit, does the hon. member take into account any moneys expended by way of betterment to the railways, what you might call capital expenditure?

Mr. CLARK: I will come to that. What I was going to say was this. The minister has announced that of the $50,000,000 bond issue, he has cash in hand of $15,184,000, so that you may in all fairness, though the minister did not say anything about it in his budget speech, deduct that from what would appear to be the total deficit of $42,090,000, whereupon you arrive at the figure I gave of $26,906,850.43 as the actual deficit.

The hon. member for Brome stated, and I entirely agree with him, that the obligations of the National Railways are direct obligations in the same way that the Intercolonial railway obligations were direct, and that they should therefore be added to our national debt. With regard to betterments referred to by the hon. member for Waterloo (Mr. Euler), the hon. member for Brome suggested that the national debt should be decreased by an amount equivalent to the extent to which the position of the National Railways had been improved by the value of the betterment. With that I do not agree; that would be an entirely wrong principle to adopt. If you value the betterments on the National Rail-

ways and deduct the amount of that value from the total amount paid to the railways, you will have to do the same thing on all public works, on all canals and every other capital expenditure undertaken by the government.

Mr. McMASTER: May I interject something there? Is there not a difference to be drawn between an ordinary public work such as a wharf or a canal which is not productive of any revenue, and a railway, which, properly managed should carry itself?

Mr. CLARK: I do not admit that our canals do not produce a revenue, nor do I admit that we have not other public works that produce a revenue. But in any case the fact is that up until the end of 1923 this country had paid over $580,000,000 more on National Railways than the country considered National Railways were worth to us. Now let us go back to the year 1920, when a new system was adopted by the then Minister of Finance of writing off and adding to the national debt every non-active security. He states in his budget address of May 18, 1920:

> It is obvious that the advances to the Canadian Northern, Grand Trunk Pacific and Grand Trunk Railway Companies cannot be treated as active assets. They are not at the moment realizable; further, no interest is being paid, and in some cases the principal as well as interest is overdue. As is well known, Canada is now the owner of the Canadian Northern, receiver for the Grand Trunk Pacific, and steps have been taken for the acquisition of the Grand Trunk. While the railways have potential value, at the present time the fact is that the country itself owns the Canadian Northern and is responsible for the operation of the Grand Trunk Pacific, with resultant heavy cost to the taxpayer.
>
> Assets which are not readily convertible, as the specie reserve is, or are not interest producing, are not such assets as ought to be deducted from the gross debt. They are inactive, they are items of such a character as might well be placed in a suspense account. At any rate, whatever may be their future value, however great it may be, they are not assets of such a character as to directly reduce the gross debt any more than the other capital accounts of the country ought to be deducted from it.

In that year, 1920, the Minister of Finance wrote off securities and advances to the value of $272,000,000 odd, and added that amount to the national debt. In 1921 he added another $100,000,000 approximately, and in 1922 the Minister of Finance in the present government (Mr. Fielding) added approximately another $100,000,000, and last year another $70,000,000, making a total of $558,000,000 odd of non-active securities that were written off, indicating that the railways had cost us that much more than they were worth to the country. This year we have it suggested that similar securities that have been considered of no value in the past should now be considered as specie securities readily realizable. I submit that that has been done for the purpose of showing a balanced budget and a surplus, with the result that the country has been deceived, and the comparison between this year and last that has been given to this House and to the country is on a basis which is entirely unfair. The result of that system is going to mean that in the future the national debt cannot be ascertained with any degree of certainty, and Canada's credit will suffer accordingly, because investors will never be able to ascertain what the margin of security on this country's assets may be.

To show further how absolutely inaccurate the minister's figures are, he states in his budget speech that the railways have cost us $23,781,664, whereas the Minister of Railways (Mr. Graham) in a return stated that the total deficit for the calendar year of 1923 was $44,962,000. What I would like to know is how this enormous deficit was reduced to $23,000,000 between January 1, 1924, and March 31, 1924, or was it reduced at all, and where did the minister get the money, unless as I stated he got it from the bond issues, and he has used that money for the purpose of paying ordinary deficits on the National railways?

Now I come to a different branch of this budget debate, and it is necessary before going into the general conditions of this country first of all to consider briefly agricultural conditions in Canada. At the outset I am prepared to admit that farming conditions are not satisfactory, and that we must find remedies for the existing conditions. At the same time I want to ask, are farming conditions in any country in a satisfactory condition? Are they in a satisfactory condition in the United States? Are they in a satisfactory condition in free trade England? Undoubtedly farming in free trade England is dead. In the United States farming conditions resemble ours, but our conditions are better because we have cheaper land and because our prairie lands will still grow wheat, whereas in the competing sections of the United States immediately to the south, in the Dakotas, the land will no longer raise good crops. To use an expression which some of my Progressive friends have used, the land in the Dakotas is mined out.

I would like to refer to the presidential address of Mr. Coolidge before congress this year. He stated:

> The distress is most acute among those wholly dependent on one crop. The wheat crop was greatly expanded and has not yet been sufficiently reduced. A large amount is raised for export which has to meet competition in the world's market of large

amounts raised on lands much cheaper and much more productive. He (the farmer) must be assisted by reorganization of the freight rate structure, which will reduce charges on his production. The acreage of wheat is too large. Unless we can meet the world market at a profit we must stop raising for export.

Now that is quite a different policy from that advocated by the wheat growers of this country. The Minister of the Interior (Mr. Stewart) advocates that the way to cure the position of the wheat grower in Canada is to abolish protection; sound the death knell of protection, and that will cure all ills. I might refer for just a moment to his argument. He says, "I trust that it will be the death knell of protection." He refers to the depressed conditions that existed at the time the Laurier government came into power in 1896, and he attributes those conditions practically exclusively to the high tariff. And then he boasts that the best condition Canada ever had existed between 1896 and 1911. But he admits that the tariff structure was not much changed. This is what he said:

> In 1896 we had a change of government; Sir Wilfrid Laurier came into office. Now no one is going to suggest that over night Sir Wilfrid Laurier changed the whole fiscal policy of this country. He did not. But he did one thing—he succeeded in removing the quarantine regulations against cattle.

A great argument for free trade! Now, what I say is this, that at no time since the National Policy came into effect has any government of Canada pronounced a policy of free trade until that policy was announced by the Minister of the Interior in his recent speech. And I say that such a policy will act as a boomerang on those reponsible for it. Furthermore—and to my mind this is the most serious feature of the matter—it will not tend to promote a better feeling between the West and the East. In the past there has unfortunately existed a feeling in the West against the East. That will now be changed I fear to a bitter feeling on the part of the industrial interests of this country towards the section of Canada that is insisting now upon a policy of free trade. You cannot promote the interests of any one great industry by killing another great industry. In addition to that, such a policy will destroy what is more vital to the wheat grower—more particularly to the farmers of Ontario, Quebec, and the provinces other than the prairie provinces—namely, their home market. And even to the prairie farmer, despite the statement of the Minister of the Interior, the home market is absolutely vital. The home market is vital to every interest in this country—whether it be mixed farming, or fruit growing, or manufacturing, or any other walk of life.

I should like now to give a few figures showing what this home market meant to the agriculturists in the year ending August 31, 1923. We will take grains first. The proportion of barley exported was 19.4 per cent. The proportion of beans exported was 7.1 per cent. The proportion of buckwheat exported was 6.3 per cent. The proportion of corn exported was 2 per cent. The proportion of oats was 4.7 per cent. I may point out that the value of the oat crop was over 50 per cent that of the wheat crop of the same year, which means that over 95 per cent of the oat crop of this country was consumed in the home market.

Mr. KENNEDY (Glengarry): Who provided that 95 per cent of the home market for oats and other coarse grains?

Mr. CLARK: I have not the figures. However, I have no doubt at all that the market was provided by all interests; by the wholesalers in the city who use horses; by the lumber men who use horses in the woods, and by the farmers themselves. I am not detracting from the fact that you sell some oats to farmers or that you use some oats yourselves: That is quite true. But how many bushels of oats do you suppose were eaten by the good Scotch Presbyterians in the form of oatmeal? I imagine it would amount to a good quantity. To continue with my figures. The proportion of peas exported was 7.8 per cent and the proportion of rye exported 31.4 per cent. Of wheat the proportion exported was 57.4 per cent.

I think it was the hon. member for Battleford (Mr. McConica) who some time ago asked the hon. member for Vancouver Centre (Mr. Stevens) what difference there was between selling our produce to ten millions of foreigners and to ten million residents of Canada. With respect to that I ask: Is it of no value to increase the population of Canada? Do we want to increase the population of this Dominion, or do we want Canadians to continue their present exodus to the United States—a course that the present government is permitting? I question very much if there is a dairy farmer, or a producer of eggs, or a producer of beef or mutton in Canada who would suggest for one moment that the home market is not more vital to him than any other market that could be provided.

Mr. KENNEDY (Glengarry): When we have an exportable surplus of eggs, and of dairy and meat products, would not my hon. friend say that the price received for those products determines the price in the home market?

Mr. CLARK: That does not for one moment detract from the value of the home market. My hon. friend must remember I am talking of the value of the home market.

Mr. KENNEDY (Glengarry): The price received in the home market is determined absolutely by the price received for the exportable surplus.

Mr. CLARK: In principle that may be true as to wheat. But I think that the wheat growers of Canada to-day are receiving about the same price for their wheat that they received in 1913. Now I suggest that that price would be larger if we increased the home market by an infinitely greater degree. This year we have 180,000 less consumers of wheat in Canada than we had last year; that number of our best Canadians has been driven across the borders of the United States. Is that market of any value to the wheat growers of this country?

4 p.m.

Mr. FORKE: Might I suggest to the hon. member that the 180,000 Canadians who are over in the United States are still eating wheat and eating up the surplus wheat.

Mr. CLARK: Grown by United States farmers.

Mr. FORKE: No. That detracts from the surplus.

Mr. CLARK: Of the United States, yes. I have already quoted the president of the United States on that point, and he says that their exportable surplus is too large and that they must decrease the acreage. He will welcome, I am sure, these 180,000 wheat-eating Canadians to eat up that surplus. It has been disputed in this House; it was disputed by the hon. member for St. Lawrence-St. George that Canada is losing its citizens at the rate that has been suggested. I have taken the trouble of obtaining from the United States Department of Labour the figures on the subject. I have a statement from the United States Commissioner of Immigration, and this is what he says:

Please also be advised that the enclosed table has reference only to bona fide Canadian citizens migrating from your country to the United States for permanent settlement purposes within the fiscal years referred to. The figures of non-citizens of Canada residing in that country who entered the United States for permanent residence purposes during the fiscal years referred to are not given in the figures given in the table herewith sent you.

The figures are as follows:

For the six months ended December, 1923..	104,414
January, 1924..	15,598
February, 1924..	14,092

[Mr. Clark.]

Just to show how these citizens are leaving from the industrial centres where the home market exists for the wheat grower and the mixed farmer of this country, I should like to quote some of the departures from the principal centres in Ontario, Quebec and the Maritime provinces. It must be remembered that the rate at which the people are leaving has increased almost 100 per cent since the end of the American fiscal year of 1923. For that year the departures are as follows:

Through ports—	
Buffalo, N.Y...	4,020
Detroit, Mich..	16,621
Halifax, N.S...	2,533
Montreal, Que..	11,478
Niagara Falls, N.Y..	4,501
Port Huron, Mich..	3,528
St. John, N.B...	4,394
Vanceboro, Me..	4,708
Winnipeg, Man..	6,988

And so on, showing that it is the industrial centres that are being depleted, and that the home market for the farmers is thereby being needlessly lost.

Mr. KENNEDY (Glengarry): Has the hon. member those figures on an occupational basis to show what proportion of farmers and what proportion of industrial workers have left this country for the United States?

Mr. CLARK: I have not those figures, but hon. members might note this, that the tremendous percentage of people who have left have come from that portion of Canada which lies east of Fort William.

I should like to deal for a few minutes with the effect which the present policy of the government has upon the industries of this country. I have made a computation, and I find that ten tariff items of the present tariff amendments vitally affect 917 industries in Canada. There are only 37 tariff changes out of a thousand or more items. Let me refer to some specific industries and the effect upon them.

For the purpose of illustrating the effect of the reductions on logging machinery I will take some industry in my province, British Columbia. For the purpose of illustrating the effect on the mining industry, I will take an industry in Quebec. I find that in my city numerous manufacturers of logging machinery are vitally affected by this tariff. Until the war was nearly over, those manufacturers had made very little equipment for the logging industry; but they built up their plants during the war for

munitions and other purposes, and as soon as the war closed, they adapted those plants for the purpose of making logging machinery. Under the protective system, in the particular lines of industry which they manufacture, we find that last year they controlled approximately 80 per cent of the market for logging machinery in British Columbia. By the way, I do not think this government or anybody else can for one moment accuse British Columbia of having old established manufacturing industries, industries which should have established themselves, got on their feet and be past the stage when protection should be required. I think it will be admitted quite freely by everybody that these are still infant industries. I might also mention this fact, that the logging industry in British Columbia is competing with the logging industry in the states of Oregon and Washington. We find that the logging industry in those two states is making a bitter complaint to the federal government at Washington, asking that something be done to stop our British Columbia logs from flowing in and competing with their logs on the Pacific coast. As a matter of fact, I would rather welcome action on the part of the United States government to that effect, because if our government will not deal with the situation and will not put an export duty upon our raw materials, such as our logs, that we should manufacture into lumber here, I rather hope the American government will impose a duty and thus force our Canadians to manufacture their logs into lumber at home. Let me read what a few of these manufacturers think of the policy of the government as indicated in this budget. It is incidentally significant to me to find that practically the only people who argue against any sort of protection are wheat growers and those who are not engaged in industry in any sense of the word and who therefore know nothing about industrial problems. They advance what I submit are the views of economists, which, elaborated nearly a hundred years ago, are no longer applicable to business conditions in this country, or any other country for that matter. This is what one of these infant industries says:

> The cost to the British Columbia logger is considerably less than to the United States logger and it would appear at first glance that we have no need to worry about American competition, but that is very far from being the case. The logging industry is to a very large extent controlled by American capital and the most of the logging superintendents and foremen are American citizens who have obtained their training in the United States. These men are all partial to American made goods and it is only because of the large difference in the price that we can induce them to try the Canadian product. It is the American influence we have to fight, and reduction of the duty takes away the only weapon we have to fight with.

The hon. member for Brome, last night made the statement that our people would buy Canadian goods in preference to American goods if we could sell them as cheaply. I should like to take the hon. member to British Columbia and let him go through the logging camps and ascertain for himself just what conditions these people have to contend with. I do not know to what extent, but I can say that to a tremendous extent, this industry in British Columbia is controlled by American capital, and many logging superintendents are American men trained in American ways and therefore prefer American machinery. Yet the hon. member for Brome has the hardihood to say that these men would buy Canadian machinery in preference to the American manufacture if they could get it at the same price.

Mr. McMASTER: What I said was that Canadians would always buy, under free trade conditions, where they could get the best value for their money, and my belief is that the American people are governed by precisely the same business considerations.

Mr. CLARK: I wrote my hon. friend's statement down, but at any rate it is not important. This firm goes on to say:

> This business has been established for fifteen years and the earnings have almost entirely gone into development with the result that we have to-day the most completely equipped plant for our business on the Pacific coast.

Now, I am going to give a little comparison between the prices of American made machinery of this type and machinery of Canadian manufacture, for the information of those who are always declaring that our Canadian manufacturers cannot manufacture at as low a cost as the Americans and, further, that they invariably add the duty to the American home price. What we do say, as a general principle, is that our Canadian manufacturers in many industries, under the same conditions, can manufacture as cheaply as the Americans can, wherever they do so in mass production, have a large market, and are not dumped upon. If we expect to develop our industries, we must give our own manufacturers sufficient protection to enable them to control the market and keep out American goods altogether. Just to show that our British Columbia manufacturers can make this logging machinery as cheaply

as the Americans can, I am going to quote some of the prices in connection with some of this equipment:

Vancouver

1—36 x 5 High lead block at $304.00..	$304 00
1—18 x 2 Return block at $85.50..	85 50
2—12 x 2½ Moving blocks at $61.20..	122 40
4—12 x 2½ Haulback blocks at $36.00..	144 00
4—18 x 3 Loading blocks at $94.50..	378 00
2—10 x 2½ Loading jacks at $70.20..	140 40
	$1,174 30

Seattle

1—36 x 5 High lead block at $337.25..	$337 25
1—18 x 2 Return block at $93.50..	93 50
2—12 x 2½ Moving blocks at $68.00..	136 00
4—12 x 2½ Haulback blocks at $37.00..	148 00
4—18 x 3 Loading blocks at $106.25..	425 00
2—10 x 2½ Loading jacks at $63.75..	127 50
	$1,267 25

I have many protests from the manufacturers, but I will consider only one more. This is a well known company operating with English capital. I refer to the Vancouver Engineering Works. During the war they employed a total of 375 hands, and today they have only about 200. This is what they say:

> We emphatically protest against any reduction in the tariff on logging cars. Last year we commenced manufacturing these. They had always been imported previously. Our product is absolutely satisfactory and is standard in every respect and is guaranteed by us to be the equal or better of the imported article. We sell these cars for $1,750 Vancouver; the American price is $1,900 and our actual cost of labour and material is $1,442 without allowing anything for overhead and profit. If duty is reduced we shall have to cease manufacturing. We cannot reduce our price any further and cannot hope to secure the business unless our price is substantially below American, as the loggers, who have American sympathies, will buy their product every day on an even price basis. We had hoped to build up a first-class logging car industry here, but now the government has blasted our hopes and wrecked our initial investment.

I would point out that in every logging car built by this company they incorporate equipment made by our steel and other industries of an approximate value of $500. Is that of any advantage to this country? Apparently not in the estimation of the government, for they have wiped out the duties on many of the articles going into the construction of these cars and on agricultural and other implements. This will spell ruin for our steel industry and it is done in order that some of our manufacturing concerns may be permitted to buy from the United States various component parts entering into their finished product.

I turn to agricultural implements. It has been estimated by various speakers that if the farmers actually got the reduction in duty there would be a very small sum of money coming to them annually as a result. I do not admit that there would be any, because any saving would be more than offset by the destruction of their home market. But I wonder if the Progressive party realize the effect of the budget proposals on the agricultural implement industry? I notice by yesterday's paper that prior to the bringing down of the budget the government passed an order in council abrogating the special provision enabling the American manufacturer to invoice his goods to Canada at 5 per cent less than the market price. Instead, he must invoice his goods and pay duty on the basis of the price payable by the American purchaser. What does that mean? Supposing the grain grower of this country wanted to buy an implement from the United States which was valued and sold in the American market for $100; last year the American manufacturer could have invoiced that implement to the Canadian grain grower for $95, to which would have been added 10 per cent duty, or $9.50, making a total of $104.50. This year the government has reduced the duty from 10 to 6 per cent—a reduction of 4 per cent. The American manufacturer must now invoice his implement to the Canadian farmer at $100, the latter pays 6 per cent duty, and the result is that the implement is laid down here for $106. Did the government tell my Progressive friends anything about this order in council before they accepted the budget proposals? Is the Progressive party prepared to accept the budget with such a condition attached? Is this in line with the platform of the Progressive party?

Mr. McCONICA: When my hon. friend's government allowed the article to be invoiced at 95 per cent, did the manufacturer sell it at $95, or did he put on another $5?

Mr. CLARK: Which manufacturer?

Mr. McCONICA: Your foreign manufacturer who sent in his goods invoiced at 95 per cent. Did he sell them at 95 per cent?

Mr. CLARK: Yes.

Mr. McCONICA: Then would he not invoice them at 90?

Mr. CLARK: Why?

Mr. McCONICA: He invoiced them at 5 per cent below what he sold them for.

Mr. CLARK: Under the dumping act he could not invoice them at 90.

Mr. McCONICA: That was the provision.

Mr. CLARK: No, not at all. My hon. friend is altogether wrong, and if he will allow me to explain the situation once more

I shall be pleased to do so. If the American market price of the implement was $100, the manufacturer would be permitted to invoice it to Canada at $95, and its selling price would be $95 plus duty at 10 per cent, bringing the total price to $104.50. Certainly the American manufacturer would sell his product to the consumer in this country for $95 in order to undercut the Canadian manufacturer. But to-day as a result of the order in council to which I have referred, and which was not announced by the Acting Minister of Finance (Mr. Robb), my hon. friend must pay $106 for the same article. What good is it going to do him? That is the question.

In pointing out how the budget affects the mining industry, I might preface my remarks by stating that a telegram has just come into my hands from the secretary of the Mining Association of British Columbia to the effect that in the opinion of the association the proposed reduction of duty on mining machinery will not materially benefit the mining industry of that province. That has always been my opinion. The very first thing that is going to happen as a result of the budget is that many mining companies will have to close down their mines, because the ore which has heretofore been used by Canadian manufacturers in the building of their machinery will no longer be required by them as they will be compelled to go out of business, and the Americans will ship into this country American machinery made with materials fabricated from American ores.

Let me give an illustration of what might happen in Canada if we adopted a proper policy towards the mining industry. For my purpose I will take the asbestos mining industry in the province of Quebec. Last year our production of all minerals was worth $180,000,000, of which the asbestos industry in Quebec produced $7,500,000, or about one-twenty-fifth of our total mineral production. There are two American companies which have their manufacturing plants in the United States, they are the Johns-Manville Company and the Keesby Mattinson Company. These two companies own mines in the province of Quebec and they produced last year nearly one-half of the asbestos produced in that province, shipped it over to their manufacturing plants, refined it and turned out the finished product there. For the past three or four years the asbestos mining industry of the province of Quebec has been flat on its back. No dividends have been paid, and some of the companies are going into liquidation.

Mr. McMASTER: Will the hon. member allow me to say—

Mr. CLARK: I will allow the hon. gentleman a question, that is all.

Mr. McMASTER: I would be glad to know where the hon. member got his information that the asbestos industries of the province of Quebec are not paying dividends.

Mr. CLARK: Well, I got my information from the Annual Financial Review. I do not think I said that none of them were paying dividends; what I say is that the industry is flat on its back. I ask the hon. member to name the companies in the province of Quebec—and I will accept his statement—that are paying dividends to-day.

Mr. McMASTER: The Amalgamated Asbestos Corporation passed its dividend on its common stock, but is still paying regularly its dividend on its preferred stock.

Mr. CLARK: That may be interpreted as meaning that this company is still meeting its bonded indebtedness.

Mr. McMASTER: And paying dividends on its preferred stock.

Mr. CLARK: It is the same thing.

Mr. McMASTER: It is not the same thing.

Mr. CLARK: It proves my statement. There are in the province of Quebec sixteen concerns in the asbestos business; my hon. friend can name one that has paid a dividend on its preferred stock. Can he tell me the capitalization of that company?

Mr. McMASTER: The capitalization of that company amounts to millions; if I mistake not, it is about $8,000,000. It is a combination of most of the asbestos mines in and about Black Lake and Thetford, and I think produces about half, not more, of the asbestos production in the province of Quebec.

Mr. CLARK: I have the figures and have had them verified by the companies themselves. My hon. friend is absolutely wrong in his statement. Somebody says "as usual;" I will not be so unkind.

Mr. McMASTER: I would be glad if the hon. member would inform the House in what respect I am wrong.

Mr. CLARK: I will inform my hon. friend; unfortunately it is taking time, that is the only trouble. The largest producer in the province of Quebec was the Johns-Manville Company with 53,000 tons. The next largest producer was the Asbestos Corporation of Canada with 39,000 tons.

Mr. McMASTER: That is the company I am referring to. It used to be called the Amalgamated Asbestos Corporation of Canada.

Mr. CLARK: I am glad my hon. friend gives me that. He said that this corporation produced at least one-half the asbestos production of the province of Quebec. Just to show how far wrong he is in his unfortunate statement to the House, I may point out that the total production of asbestos last year in the province of Quebec was 228,345 tons, and this company that he says is paying dividends produced 39,345 tons. However, I did not propose to get into any argument on that score. My point is this: That two of these companies are American companies; they are manufacturing all their product in the United States from probably over one-half the asbestos production of the province of Quebec; and while our companies are all flat on their backs the Johns-Manville Company in the United States paid a ten per cent dividend in 1919, the same in 1920, the same in 1921, the same in 1922 and in 1922 they paid a 40 per cent bonus to their shareholders. Is it of no value to this country to have manufacturing concerns here, or must we continue the policy of allowing our resources to go to the United States and to pay dividends to the Americans instead of having the manufacturing carried out in Canada?

While we are on the question of protection, I wonder if this government informed the Progressives, when the negotiations were being carried on for their support through these proposals, that the duty on lead pencils, an industry peculiar to the Prime Minister's constituency—

Mr. FORKE: Before the hon. gentleman goes any further I would like some information about those negotiations, because I do not know anything about them.

Mr. CLARK: Perhaps I am wrong. The leader of the Progressive party, before negotiations could be opened, hastened to assure the government that the proposals would have his support.

Mr. FORKE: I would again ask the hon. gentleman where he got his information.

Mr. CLARK: It was given in the House once before. The Winnipeg Free Press, I think, was quoted in that connection.

Mr. FORKE: I am not responsible for the Winnipeg Free Press.

[Mr. Clark.]

Mr. CLARK: But that is only one industry. I wonder if the industry that the Minister of Trade and Commerce (Mr. Low) is interested in, the refrigerator industry—I wonder if the Progressives—

Mr. ROBB: Or the cream separator industry.

Mr. CLARK:—were informed that no change in the tariff was to be made. I wonder if the Progressives were informed that the Minister of Justice (Mr. Lapointe), whom I am glad to see here had seen to it that the boot and shoe industry of Quebec would get some special concessions by way of sales tax, special concessions which the minister did not see fit to hand out to the salmon canning industry of British Columbia, which is more on its back than the boot and shoe industry? Nobody knows better than the Minister of Justice—he should have known better than any member of the government—that the salmon canning industry of British Columbia needed looking after, needed encouragement as no other industry in this country needed it. Yet we find that it is singled out—

Mr. LAPOINTE: Will my hon. friend permit me?

Mr. CLARK: Yes, a question.

Mr. LAPOINTE: Yes, only a question. Does my hon. friend say that the interests of the boot and shoe manufacturers were properly safeguarded?

Mr. CLARK: Yes, although a great deal more could have been done.

Mr. LAPOINTE: Oh, I see.

Mr. CLARK: I quite agree that the boot and shoe industry should be fairly treated, and I think more could have been done for it. But what I am objecting to—

Mr. LAPOINTE: What would you suggest?

Mr. CLARK:—is that a minister of the Crown should take advantage of his position to protect the industries of his own constituency to the exclusion of the industries in the country generally. I see the Acting Minister of Finance in his seat. What about flour? Is there any one commodity used by a greater proportion of the people of this country than flour? Was the duty on flour tampered with? Not at all. The Acting Minister of Finance was bringing down the budget, and he had control of the situation.

Mr. LAPOINTE: Keep to the boots and shoes, I like that.

Mr. CLARK: I am sorry the Minister of Railways is not in his seat, because I come now to what is perhaps the most interesting of all—the Canada Foundries and Forgings, Limited, Hon. George P. Graham, vice-president. Now what did this cabinet see fit to do to help that industry? Perhaps my hon. friends to my left would be good enough to turn to the tariff schedule and look at item 450a. Previously that item was contained in 450, and I will read item 450 as it was before the present budget proposals came down:

Shovels and spades of iron or steel, n.o.p.; shovel and spade blanks, and iron or steel cut to shape for the same; and lawn mowers; British preferential tariff, 20 per cent; Intermediate, 30 per cent; General, 32½ per cent.

Now what happened? We find that a new item has been provided for lawn mowers, which are manufactured by the Canada Foundries and Forgings, Limited, of which company the Minister of Railways is vice-president, and item 450, from which lawn mowers have been eliminated reduces the duty on shovels and spades of iron and steel, etcetera, to 10, 15 and 20 per cent. A special item, 450a, has been made, for lawn mowers, which retain the old duty of 20, 30 and 32½ per cent. Is that the sort of treatment my hon. friends to my left are going to stand for? Are they approving of a budget such as that? Are they going to get up and vote for it?

There are other industries; in fact, I think we could probably go right through every member of the government and find that some action has been taken on the part of each minister to look after his colleagues. Take the Minister of the Interior (Mr. Stewart). He is a party to the retention of the same duty on lawn mowers as existed last year. He is a party to taking that article out of the old item and putting it in a new class by itself, so that the industry can be protected. What I am surprised at is that the Minister of Labour (Mr. Murdock), who must sit in the cabinet council, has not taken steps under the Combines Act. Surely there never was such a combine as has been exhibited by the ministers of the government this year in protecting industries in which they are interested themselves.

I cannot understand why the hon. member for Brome sits down where he is sitting; I cannot understand why he does not go back where he belongs; I cannot see why he does not change places with the hon. member for St. Lawrence-St. George. He would help the government in their policy of sounding the death knell of protection. I was very interested last night to hear the hon. member's denunciation of the anti-dumping law. He waved his arms about enthusiastically and said it was a most pernicious instrument and he hoped the day would soon come when it would be eliminated altogether. The hon. member might just as well get up and say that he looks forward to the day when there will be no manufacturing concerns in the Dominion of Canada.

Mr. McMASTER: Nonsense.

Mr. CLARK: The hon. member says "nonsense." Now I will quote from an official report to show what the American people think of this nonsensical doctrine that has been adopted by Canada and is represented by the anti-dumping act. These figures are from a report of the Bureau of Foreign Commerce of the United States, from July 1, 1919, to April 30, 1920, showing the dumping into Canada prior to the anti-dumping law coming into force. They boast of it in their official reports. Here are some figures. In the boot and shoe industry, and I am sure this is one of the things that moved the Minister of Justice (Mr. Lapointe) to see that the boot and shoe industry in the province of Quebec was at least partially protected, I find that children's boots and shoes which sold at an average price per pair of $1.84 to all countries sold at an average price to Canada of 96 cents, or just about one-half. What would happen to our boot and shoe industry under those conditions? Does the hon. member for Brome suggest that our boot and shoe industry in this country could thrive if the trusts in the United States over whom we have no control, with their mass production, were allowed to throw on the Canadian market boots and shoes at less than cost, as they admit they did do, and as they would do again at the first opportunity? If we allowed that it would drive every manufacturing concern out of business in this country, and then what would happen? After the manufacturing concerns are gone, where would my hon. friend's home market be without any industrial centres in the Dominion?

Mr. FORKE: I would like to inform the hon. member that in Manitoba last winter there were lots of children unable to go to school for want of boots, and they would be glad to get them for 90 cents a pair.

Mr. CLARK: What does the hon. member think of conditions in England? Does

he think there are not children there in the same condition, or in Ireland, or in Scotland, my hon. friend's own homeland, in Glasgow, for instance? Does he think there are none there who cannot afford to buy boots? Of course there are, and I do not doubt that there are in Winnipeg, and Toronto, Montreal and in Vancouver, and on the farms of this country also.

Mr. BEAUBIEN: It is not forty below zero in Glasgow.

Mr. FORKE: The hon. member has asked me a question. I should like to state that some hon. gentlemen to my right take a particular pleasure in always talking about the terrible conditions that exist in Great Britain. I do not like to place this statement on Hansard but at the same time I believe there are conditions in Canada today just as bad as there are in Great Britain.

Some hon. MEMBERS: Oh, oh.

An hon. MEMBER: That is humour, Scotch humour.

Mr. FORKE: No, it is not humour.

Mr. CLARK: I will answer my hon. friend in this way. In the United States we find from official figures that the average wages paid there are three times higher than those paid in England—

Mr. FORKE: That does not count for anything.

Mr. CLARK:—and the cost of living is very little higher. The official figures show that. My hon. friend says that counts for nothing. The fact that a man receives three times the wages over there that he does in England counts for nothing. Well, if that is his opinion I have had enough of such doctrine.

Now, I want to go on and develop my argument a little further and compare the industrial conditions in the United States and Great Britain. When free trade was adopted Great Britain had built up her industries by means of a protective tariff. She controlled the industry of the world, she was the workshop of the world. Cobden told the people that Great Britain would always be the workshop of the world, and that in ten years every other country would adopt free trade. That was the basis on which Cobden brought free trade into England—that other countries would have it in ten years. But what happened? Every other continental country built up a protective tariff, and overtook Great Britain in industrial production, and I am going to show what happened in the United States. Undoubtedly Great Britain was the industrial centre of the world when it adopted free trade, and just as truly the United States was a poor farming country. That is borne out by the statements of Henry Clay, one of the greatest Americans that ever lived. This is what he said when they were considering the advisability of adopting protection in the United States:

> The committee will observe that the measure of the wealth of a nation is indicated by the measure of its protection of its industry, and that the measure of the poverty of a nation is marked by that of the degree in which it neglects and abandons the care of its own industry, leaving it exposed to the action of foreign powers. Great Britain protects most her industry, and the wealth of Great Britain is consequently the greatest. France is next in the degree of protection and France is next in the order of wealth. Spain most neglects the duty of protecting the industry of her subjects, and Spain is one of the poorest of European nations. The views of British prosperity which I have endeavoured to present, show that her protecting policy is adapted alike to a state of war and peace. Self-poised, resting upon her own internal resources, possessing a home market, carefully cherished and guarded, she is ever prepared for any emergency. We have seen her coming out of a war of incalculable exertion, and of great duration, with her power unbroken, her means undiminished. We have seen that almost every revolving year of peace has brought along with it an increase of her manufactures, of her commerce, and consequently of her navigation.

Now, let us compare with that what Mr. Coolidge thinks of the situation to-day after sixty years of protection. He says:

> The present tariff law has accomplished its two main objects. It has secured an abundant revenue and been productive of an abounding prosperity. Under it the country has had a very large export and import trade. A constant revision of the tariff by the congress is disturbing and harmful.

Now, in view of what the hon. member for Brome said last night about the balance of trade let me make this statement: The United States in 1921 had a balance of trade in their favour of almost two billion dollars. She controlled the gold reserve of the world and was the most prosperous country on the face of the globe. She paid her industrial workers three times the wages earned in Great Britain, with very little higher cost of living. How has the United States progressed as far as manufacturing industry is concerned? I have before me tables giving the results of a census of industrial production in Great Britain in 1907 and in the United States in 1909. It is difficult to get a comparison for the same years because of the difference in the time of taking the census figures in the two countries. However, I think my figures are the latest that are available

The comparative position of the United States to-day will be found to be very much stronger than in the year in question. First let us take the iron and steel industry, the greatest that Great Britain has. The value of iron and steel and their products—inclusive of land vehicles, railway vehicles, railway repair shops, agricultural and electrical machinery—was £924,000,000 in the United States and in Great Britain £375,000,000. Textiles and clothing; United States, £612,000,000; Britain, £441,000,00. Timber and woodworking trade; United States, £337,000,000; Great Britain, £46,000,000. Leather and leather goods; United States, £198,000,000; Great Britain, £34,000,000. Paper and printing; United States, £235,000,000; Great Britain, £61,000,000. Chemicals; United States, £305,000,000; Great Britain, £75,000,000; Stone clay and glass, United States, £106,000,000; Great Britain, £29,000,000. Productions of metal, exclusive of iron and steel; United States, £248,000,000; Great Britain, £93,000,000. There is a tremendous list here but in only three instances can I find an excess of production in Great Britain over the United States. I will give those and the House will note that they are comparatively small. One is the shipbuilding industry which we are accustomed to think is one of the greatest industries in the world. We find the amount for shipbuilding and repairs, exclusive of war ships; United States, £14,672,000; Great Britain, £41,039,000. Cotton; United States, £125,678,000; Great Britain, £132,000,000 Dyeing and finishing textiles; United States £16,711,900; Great Britain, £18,000,000. Taking these three industries the value in one case is three times greater in Great Britain than it is in the United States, in another case five per cent greater, and in the other case eight per cent greater. In all the other industries common to the two countries the United States exceeds the production of Great Britain all the way from 200 per cent to 1,400 per cent. Surely that is sufficient proof of what a protective tariff means to a country. All that development has been accomplished in the United States under protection. That industrial expansion in the United States was not started until they adopted protection. On the other hand Great Britain, formerly the workshop of the world, has lost her standing as such.

5 p.m.

I should like to touch very briefly on the question of taxation. In the first place, I cannot pass over the statement made last night by the hon. member for Neepawa (Mr. Milne) who estimates that there are 798,360 farmers in Canada. He said:

> We divide our gross revenue and find out what each farmer gets, and it amounts to about $1,700 per farm. It was estimated that the taxes, Dominion, federal and provincial, amounted to about $100 for individuals, with an average family of five, so that it would make $500 of a tax bill to start with.

My hon. friend's estimate would mean that the farmers of this country estimate that they are paying $400,000,000 of the tax bill of Canada. The total revenue of the Dominion is only $300,000,000 odd, yet the hon. member has the effrontery to state that the farmers of this country are paying taxes to the tune of $400,000,000. I do not say that the farmers are not paying their taxes.

Mr. KENNEDY (Glengarry): Did the hon. member for Neepawa not include municipal taxation?

Mr. CLARK: Quite so. I read his statement. I said federal, provincial and municipal taxes. But what is the total provincial expenditure for the whole Dominion of Canada? I am quite sure it is under $150,000,000 per annum. Add that to the Dominion expenditures and you see the enormous sum that the hon. gentleman suggests the farmers are paying in taxes. I think every Progressive member and every farmer in this country will admit that the other members of the community are paying taxes in at least the same proportion as the farmers in this country are paying. I have figures that would suggest a greater proportion, although I do not propose to use them. But if the other classes of the Dominion of Canada are paying taxes on that basis, that would mean that we are paying taxes to the extent of approximately $1,500,000,000 per annum or, if I mistake not, about two-thirds of the national debt of Canada. Such statements as these are palpably ridiculous. The hon. member suggests a round-table conference. I am heartily in accord with such a conference; I am heartily in accord with sitting down with the farmers of Canada and considering what can be done with their industry. I admit quite frankly that I am no expert on agricultural activities, but we expect the farmers to admit just as frankly that they are not experts on industrial activities and are not entirely qualified to get up in their places and quote economic theories which, I submit, are a hundred years old to show that the industrial production of this country would be stimulated if we permitted the Americans to dump their boots, shoes and other products into this country without a duty and without an anti-dumping law.

On the question of the sales tax I want to ask the Acting Minister of Finance (Mr. Robb) to make a note of this situation. Last year I brought to the notice of the govern-

ment an industry in my constituency, a large creosoting industry in which there is invested nearly $400,000 of capital. This industry makes creosoted piling and creosoted railway ties. I asked that protection should be given to that industry, but that, of course, was refused. I was, however, assured by the Minister of Finance and by his tariff expert that the sales tax would be eliminated from the creosote which entered into that product. I know that the Minister of Finance intended to do that, but the Minister of Customs and Excise (Mr. Bureau) interpreted the act otherwise, and the result was that, instead of the industry being subjected to a sales tax of 2¾ per cent on every gallon of creosote that went into its product, it was increased to 6 per cent, although the Minister of Finance intended, as he stated to me, that it should be free from the sales tax. I fancy that the legal interpretation of the act prohibited the Minister of Customs from placing that interpretation upon it, but the result was that that concern has been paying 6 per cent upon its creosote oil. It has in stock to-day 380,000 gallons which retails at about 95 cents a gallon and is sold wholesale at about 60 cents a gallon. There we have an outlay of about $200,000. My point is this, 50 per cent of the value of that company's product consists of the raw creosote that goes into the timber. Therefore, the effect of the law as it stood prior to the bringing down of this budget, was that on every stick of creosoted timber that came into this country, from the United States, a subsidy of 3 per cent was given to the Americans. That has worked out to the disadvantage of that company and I will show how. The Vancouver Harbour Board, the Dominion government itself, the Minister of Public Works, use that product in the wharves of the Dominion of Canada. That company cannot compete with their American competitors in Seattle who ship into Canada large quantities of their piling and sell them in the Canadian market at a price less than the Canadian company can manufacture for, with a subsidy in favour of the Americans of 3 per cent on every stick that comes in. Just the other day that company lost a large contract because its price was $3,000 in excess of the American price. That $3,000 I have no doubt would be accounted for by the subsidy paid by the Dominion to the American manufacturer. I complain of this sort of treatment to our own people and the encouragement of the American manufacturer at their expense. I realize that the situation has arisen through a bona fide error which the government has corrected this year. But it has been corrected without any compensation to the Canadians; no rebate of the sales tax has been given on sales tax paid on 380,000 gallons. This could be done under the Audit Act and I trust that steps will be taken to provide this compensation, because it is certainly only fair.

All of these things confirm the impression that exists in the minds of the people of the country that Canada is adopting a policy of subserviency to the United States. I would suggest to the government that, rather than a policy of subserviency, we should adopt a bold policy towards the United States; even if the government adopted a policy similar to that which they have followed in the case of the Mother Country it would suffice. What folly it is for us in Canada to continue to rely upon the bankrupt countries of Europe for our markets, when there exists to the south of us a country that controls the gold reserve of the world and which is capable of paying us real money? That country would be forced to buy from us if we adopted a policy similar to that which they have pursued towards us. If we did that, instead of having a balance of trade against us and in favour of the United States to the tune of nearly $200,000,000 we could with the greatest ease, turn the tables and have a balance of trade of hundreds of millions in our favour.

I suggest that this policy which the government has adopted is being dictated by a minority, by the Progressive party and by the grain-growing interests of the country. The total vote polled at the last election was 3,000,000. The Liberals gained 1,296,000, the Progressives 769,000 and the Conservatives 971,000; and the total number of voters on the list was 4,722,000. So that the Progressives, who I say are dictating the policy of the government, represent less than one-sixth of the total voters of this country; and I venture to say that of the 1,296,000 persons who voted for the Liberals, 75 per cent did so in the belief, or at least in the hope, that this government would continue the Laurier-Fielding tariff, or a policy practically the same as the National Policy of Sir John A. Macdonald. I repeat, a minority of the members of this House and of the people in the country is dictating this policy of sounding the death knell of protection, and it is unjustifiable to a degree. If this government wishes to follow a manly course and has a true sense of the responsibility which has been placed upon its shoulders by the people of the country, it will submit the whole question in a clean-cut issue to the electorate.

In conclusion I want to re-affirm, that the financial statement presented by the Acting Minister of Finance is a gross misrepresentation of the actual financial condition of the country; and that the minister has adopted a new system of accounting. The minister has eliminated expenditures of large amounts actually required to meet railway deficits, hitherto always properly added to the public expenditures and taken into account when computing the national debt. Under this new system we can never accurately determine the national debt, and Canada's credit will consequently suffer because investors in Dominion securities will not be able to determine the margin of security; in fact, they will not know whether the actual indebtedness of the country is greater or less than the total assets. Furthermore, I reiterate that this policy of the government is being dictated by a minority of the members of the House, representing less than one-sixth of the voters of the country. These dictators represent sectional interests, and no sound government can be carried on for the general welfare of the country which is dictated by sectional interests.

Mr. SEXSMITH: Not even the manufacturers.

Mr. CLARK: Not even the manufacturers, no. This course means not only the wiping-out of the customs duty but the repeal of the anti-dumping law, thus enabling the American trusts to dump their goods in Canada until Canadian industry is dead, and thereafter they will be able to sell to us at whaever prices they may fix, without any controlling voice on our part. There is no mandate for such a course of action, and the only manly thing for the government to do, if it has any manly qualities left, is to take this issue to the people, ask for their opinion, and see what they say in the matter.

Mr. E. A. LAPIERRE (Nipissing): I wish to associate myself with the speakers who have preceded me in expressing my regrets at the absence of the Minister of Finance (Mr. Fielding) and the hope that we may soon again see him in his accustomed seat. The Acting Minister of Finance (Mr. Robb) is to be congratulated upon his first budget; he has achieved this year what has been the ambition of his predecessors, namely, a balanced budget. The budget shows a surplus of revenue over ordinary expenditure of $67,750,000 and it will reduce by $24,000,000 the burden of taxation which has borne so heavily upon the agricultural and labouring classes. The returns for the eleven months ended February 29 indicate a continued healthy growth of Canadian and foreign trade. Already both imports and exports exceed those of 1923, and the balance of trade favourable to Canada for the eleven months is $158,424,707. The balance of trade is regarded by many persons as the barometer indicating trade conditions and we must accept these figures as indisputable proof of a steady return to stability. We are gradually emerging from conditions created by the enormous expenditures and losses incurred in the world's war, and in common with all other countries we have had to adapt ourselves to entirely new conditions. I feel safe in saying that no other country can look forward to the future with more confidence and optimism than can Canada.

Senator Ingalls of the United States said somewhere that out of every great struggle some man or sect or nation has emerged with higher possibilities, greater opportunities, broader liberties, purer religion and a greater capacity for happiness. I venture to say, Mr. Speaker, that Canada is now emerging from its participation in the world's war with greater opportunities for the future. Possessing a sturdy and law-abiding population of instinctive common sense, with unlimited natural resources which all the world requires, with water-power and transportation facilities unequalled anywhere, Canada must, if its people will unite in one national effort and every class of our population do its duty and contribute its fair share to the restoration of our losses and the payment of the debt incurred by war, soon return to normalcy. In order to achieve this end, which is the ambition of every true Canadian, it will be necessary to forget that there exists in Canada an East and a West. There is no room here for sectionalism. The welfare of Canada is the concern of all.

One of the most contentious questions we have had to deal with since confederation is the tariff—always a most difficult problem for a nation that has industries to protect, agriculture to encourage and a wage-earning class of consumers demanding a high standard of living. The adjustment of a tariff in such a way that it will bear equally on all classes of society, without interfering with the progress or stability of industry is, as I have said, a difficult problem. Our tariff has been the rock upon which governments have been most frequently wrecked. Every government has endeavoured to evolve a tariff policy which would be acceptable to all the various classes that compose our population. And it must be admitted that to the Liberal party is due the

credit of having shaped its tariff policy at all times so as to promote the general prosperity in Canada. I may venture to say, Mr. Speaker, that this year's budget is in complete harmony with the fundamental principles of Liberalism and will do more to restore the confidence and prosperity of this country than anything else that has occurred since 1911. The present government has shown its desire to meet the situation squarely and fairly and carry out the tariff policy of the Liberal convention of 1919. It has kept faith with the people, and the people have demonstrated by their unequivocal appreciation that their confidence in Liberalism is unshaken.

In dealing with the budget this session the government had to take into consideration the unusual economic conditions prevailing throughout the country. Some of our industries to-day are finding it exceedingly difficult to adapt themselves to the new conditions brought about by the aftermath of the war—a period such as Canada had never experienced, a time when demands for Canada's products greatly exceeded production. when profits became so great that some manufacturers were ashamed to take them. During this period of high prices, and large profits, many of our manufacturers put some of their profits back into the business either in buildings or in machinery, others paid it back to themselves in bonuses or in increased wages to their employees. They thus created a situation which was found to make it almost impossible for them to return to normal conditions without a complete dislocation of their business and great loss of capital invested in overbuilt plants. The expansion of production, during this era of prosperity is responsible in very large measure for the clamour we now hear throughout the country that industry is not paying. The manufacturers of Canada overestimated the post-war demands for their products. Manufacturing capacity was expanded to meet a demand that never came. Over-capitalization during the inflation period and increased overhead expenses, coupled with a falling demand for their products, brought about a rude awakening to our manufacturers, who were over-accustomed to paying dividends ranging from 50 to 100 per cent. With no reserve to meet these altered conditions they attempted to keep up prices at nearly war-time levels, for it is well known that the prices of most commodities were at their peak in 1920 —three years after the war had ceased. With a decreasing demand for their products some manufacturers endeavoured to pay dividends on over-capitalization and expanded manufacturing capacity by keeping up prices, and then when they discovered that this could not be done they blamed their failure on the tariff and the British preference. This, I might say, Sir, was a deliberate attempt on the part of the manufacturers of Canada, who had overestimated the post-war demands and bought war material at peak prices, and paid big dividends during this period of prosperity, to make the Canadian consuming public absorb their losses. This, of course, applies only to manufacturers who had not provided for the reaction which everyone knew was inevitable. The manufacturers who preferred losing business to enlarging their plants to meet temporary demands are still in business and making money.

Another industry that is now calling for help is the boot and shoe industry. There is no doubt that many boot and shoe factories are in trouble due to the reduced purchasing power of the people and to British competition. Yet I may safely say that no business took a greater toll from the Canadian people and expanded more during the war-time than the boot and shoe business. The industry grew away beyond the requirements of the domestic market, and there is no possibility of the manufacturers finding a foreign market for their surplus production. The cotton industry is another "infant" industry calling for help. The Dominion Textiles, whose products enjoy a protection of 35 per cent, while their principal raw material is admitted free of duty, was organized in 1905 by the amalgamation of four companies. The syndicate which formed the merger received $5,000,000 of capital stock for which they paid $500,000 on that investment. The shareholders have received in dividends from 1907 to date over $4,700,000 and the balance sheet for the year ending March 31, 1921, showed a surplus of $4,636,591. The dividends now being paid on common stock are at the rate of 12 per cent on the par value or $600,000 per annum on an investment of $500,000. Since the merger was formed, the Dominion Textile Company has closed plants at Halifax, Vancouver and Moncton. When the Tariff Commission was travelling all over Canada in 1920 this company employed a lawyer to travel with the commission who protested on every occasion against any decrease in the protection enjoyed by this industry. Sugar and cement are also highly protected industries which benefited greatly by the war and whose war-time profits should have gone in large measure toward paying the cost of the war.

The government well considered this time as not opportune to make a general reduction of the tariff. The manufacturers are passing

through a most difficult period and many are being forced to close down. They have to meet the competition of low priced labour in European countries, and a depreciated currency. Low production costs give the foreign manufacturer a decided advantage over his Canadian competitor, who operates in a country where wages are better and the standards of living are higher. This situation is very well exemplified by an article which appeared in the Montreal Standard, a publication which has always been an organ of high protection. The article, under the caption "The Tariff Situation in Canada," reads as follows:

The proponents of the "National Policy" advocated tariffs as a means of developing infant industries, and of encouraging the creation of new industries. Many Canadian industries are no longer infants, though they may be small in comparison with similar industries in the United States. Quite a number of Canadian industries now have a productive capacity considerably greater than the requirements of their home markets and the present possibilities of their foreign markets. The cement mills last year were only operated to 48 per cent of their capacity; last year twenty-eight shoe manufacturers had to close their factories; various other important industries have developed a productive capacity much in excess of present requirements and very likely to meet all demands during the next cycle of business expansion. This is a fact of first importance; it calls for a reconsideration of tariff policy in so far as the larger industries are concerned. Obviously industries which have already outgrown the needs of the country can only have legitimate claim upon the protection of tariffs in so far as they have to confront special circumstances not contemplated or provided for by the authors of the "National Policy." That such special circumstances exist is evident. But only the manufacturers concerned can appreciate their precise effects; the public can only form a general idea. So manufacturing interests seeking additional protection to-day should place all their cards on the table.

The public is no longer satisfied with general statements that protection having served to promote a great development of Canadian manufacturing industries, more protection will keep them busy. The fact must be faced that quite a number of industries under the abnormal stimulus of war demands, have been over-developed; that they would be if their development had proceeded normally. Their only present title to additional protection rests upon their legitimate need of protection from unfair competition due to abnormal conditions in other countries; and the public have a right to know all the circumstances upon which they have their claims. It is possible to raise the tariff so high that manufacturers would be able to charge prices, permitting them to pay dividends on this excess capital invested in plants which are superfluous at the present time. It might be even desirable to do that if there were good prospects of a big expansion of foreign markets in the near future, but there are no such prospects. But if such a form of protection was accorded manufacturers as a matter of public policy, then, with the next business boom, capital would be encouraged to start new enterprises competing with the already over-developed industries, instead of experimenting with new varieties of industry, based upon unexploited natural resources.

Before the Canadian manufacturer can hope for stability there must be drastic capital reconstruction in many industries which expanded during the war much beyond the domestic needs. There must be complete reorganization where there is an adverse balance and other impediments. Water must be squeezed out of stocks, all accumulated deficits must be written off and over estimates written down to market price. Then if the present tariff does not give sufficient protection, let them throw their cards on the table and show the government that their demands are well founded. This is being done in Great Britain and it will have to be done in Canada. I will give you an illustration of what is taking place in Great Britain. I am quoting now from the Manchester Guardian Commercial of Thursday, March 24th, in an article entitled "Facing Facts in Company Finance."

Since our last issue the directors of two large industrial companies have published proposals for a drastic capital reconstruction. British Glass Industries, Limited, was a characteristic flotation of the "boom" period, and in 1920 it distributed a bonus of 150 per cent in fully paid shares. Since then it has fallen on evil days, accumulating an adverse balance and other impediments which last year led to a complete reorganization. The subsidiary companies were given a large measure of independence and British Glass Industries became a holding company pure and simple. The change was a wise one, and already the trading position is reported to be sounder and the chief subsidiary is working at a profit. A legacy from the period of over-trading, however, is still carried in the balance-sheet, and the board now proposes to write off the debit balance and to write down the paid-up capital from £3,659,709 to £914,927. A scheme of a similar nature put forward by Crossley Bros. Ltd., is described on another page of this issue. The nominal value of the ordinary share capital is to be reduced by 50 per cent, investments are written down to market price, and the valuation of fixed assets is cut down by some £200,000. An accumulated debit balance of £209,504 can thus be written off. Crossley Bros. is a sound manufacturing concern, the misfortunes of which date from an over-estimation of the post-war demand for its products. Manufacturing capacity was expanded to meet a demand which never came. In 1923, however, a trading profit was actually earned, and the tide now appears to have turned. These companies and all who follow suit in blotting out the post-war boom and slump from their financial history deserve support from their shareholders whenever the scheme of reconstruction, however unpalatable, is wisely framed. The British Dye-stuffs Corporation is another instance of a large company about to take the plunge. The example now being set could be studied with profit by a large section of the cotton spinning industry, notwithstanding the premium which our present system of tax rebates may place on over-capitalization. Due attention should also be paid to ways and means of relieving the industry from its system of short-loan repayable at call, useful enough in times of prosperity but an oppressive burden in times like these.

When this has been successfully accomplished, a more economical system of distribution must be found. In Canada to-day we have a highly efficient but very expensive system of distribution. From the time our commodities leave the producer and reach the consumer they pass through the hands of several middlemen, such as wholesalers, jobbers, agents, retailers, and so forth, all of whom tack on from 5 to 50 per cent to the cost of the goods as they pass them along from one to the other and finally to the consumer. There are too many middlemen engaged in distributing commodities. The streets of our cities and towns and villages are lined with stores, shops, emporiums, bazaars, and so forth, many of them engaged in the same line of business, and most of them getting more for the service they render than the wages earned by the producers. The office buildings of our cities are honeycombed with offices of agents and representatives of manufacturing companies, most of them getting more for the services they render than the wages earned by the producers. When you have reduced the cost of distribution and transportation you will have taken the first step towards relieving the wage earner of much of the burden he is asked to bear.

By reducing the tariff on instruments of production such as farming, mining, lumbering and logging machinery, the Acting Minister of Finance (Mr. Robb) has made the first serious move towards fostering our mining and lumbering industries, a movement of momentous importance which will be received with great satisfaction by the mining and lumbering interests, especially in New Ontario and northern Quebec—that vast region possessing potential wealth greater than any other area of its size in the world; a region which is pronounced by eminent geologists as the greatest exposure of mineral wealth known to science; a region that is destined to take a foremost place as a producer of mineral wealth.

The development of our natural resources will help to solve our transportation problems, will give employment to thousands of wage earners, and the great consumption of various commodities required in the development of these industries will stimulate trade and commerce throughout Canada.

The importance of mineral resources in the economic structure of Canada has been vastly magnified in modern times and these resources are the basis of industrial strength and progress. Canada, occupying the northern half of the North American continent, had already achieved wide publicity as an agricultural and lumbering country, and for that reason the people of Canada have been slow in realizing the amazing progress this country has made as a producer of precious metals, and of appreciating what a potential source of wealth lies hidden in the cold embrace of mother earth in the northern hinterland.

The pre-Cambrian area of Canada, surrounding Hudson bay, and occupying more than half of the entire surface of the country, is described by Dr. C. V. Corless, the eminent geologist of the Mond Nickel Company, as the greatest single exposure of mother earth's basement in the world, and it is there we are finding her richest treasures stored for future use. The pre-Cambrian formation appears right across northern Ontario. It extends in from the province of Quebec and extends out to Manitoba. The mines in northern Ontario are on the outer edge of the pre-Cambrian formation.

So far as I am aware, no one has undertaken to specially examine and set forth the broad facts of our mineral trade in their bearing upon the commercial position of the Dominion as a whole. The Dominion's annual deficit of mineral productions, when measured in dollars, is almost staggering, as these figures given in a speech delivered by Mr. Charles Camsell before the Canadian Institute of Mines and Metallurgy in Toronto last March will show:

Mineral Exports and Imports, 1923

	Exports	Imports	Trading surplus (x) or trading deficit (–)
Iron and steel. ..	$ 67,000,000	$173,700,000	–106,700,000
Non-ferrous metals..	56,800,000	42,400,000	x 14,400,000
Non-metallic minerals..	29,500,000	165,100,000	–135,600,000
Totals..	$153,300,000	$381,200,000	–227,900,000

The deficit of exports as compared with imports is $227,900,000. We have a small balance in non-ferrous metals as the result of exchange on such metals as silver, gold, copper and nickel, in various forms. In 1923, our sales were sufficient to cover only $40 out of every $100 dollars worth of mineral bought abroad. Out of every 100 dollars worth of American mineral bought in 1923, by Canada, $54 took the form of mineral commodities.

Our total purchase of non-mineral products from the United States alone in 1923 amounted to $331,000,000. Furthermore, the United States sold to the Dominion $100 of mineral products for every $20 they bought from us. Over 80 per cent of Canada's sales to foreign countries are drawn from agricultural vegetable products, animal products, and

wood and paper products. The products of our mines and mineral manufacturing industries in various forms of iron, steel and non-ferrous metals and mineral metals are only 15 per cent of the Dominion's sales abroad. As a people, our activities in international trade are confined to the "trading of our raw manufactured farm and forest products for the minerals and textiles of other countries."

The most remarkable feature of the pre-Cambrian formation in northern Ontario is the variety of metallic and non-metallic ores, found in a comparatively small area within a radius of a few hundred miles. Gold, silver, nickel and copper mines are operating with increasing production, and the country, as yet, has really only been scratched.

There are three distinct camps within this area—the Sudbury district producing nickel, the Porcupine district producing gold, and the Cobalt area producing silver. The mines of the Sudbury district are now producing nickel and copper at the rate of close to twenty-five million dollars a year, and are running neck and neck with the gold mines of Ontario for the position of leading place in the mining industries of this province.

Mining operations of the International Nickel Company are centered at Creighton mine, where work continues to disclose enormous resources of nickel-copper ore, extending far beyond previously known limits. Some of the recently developed ore contains between 30 and 35 per cent metal as compared with a general average of from 5 to 6 per cent. Approximately 75,000 tons of material are being hoisted monthly from the Creighton mine, of which about 60,000 tons go to the smelter. The ore is yielding 5 per cent metal, in the proportion of two of nickel to one of copper. With nickel commanding about 25 cents a pound, and copper having a market value of 14 cents to 15 cents per pound, the company is producing a value of upwards of $1,300,000 per month, or at the rate of $16,000,000 a year.

The Mond Nickel Company is now employing between 800 and 900 men and is handling about 1,000 tons of ore daily, the operation being at the rate of about one-third that of the International Nickel Company.

The company holds about 29,000 acres of mining land and has a 1,500-ton smelter at Coniston, with refining works at Clydach, South Wales. In one section of the property, work has been carried on to a depth of 3,600 feet.

The British North American Company has a smelter capacity of 1,600 tons per day with a refinery located at Deschènes, Quebec. The combined facilities are sufficient to produce nickel at the rate of 15,000,000 pounds annually. About 1,000 tons per day have been the recent rate of operation. The nickel and copper contents of the area have a ratio of about 55 of copper to 100 of nickel. Ore reserves on the British American are made up of about 16,000,000 tons of ore. These three corporations form the nickel group of our mining industries in the north and produce 85 per cent of the world's production of nickel.

A general summary of the production is as follows: Up to the middle of the current year, the mines of the Sudbury district had produced a little over a quarter of a billior dollars, made up of $185,000,000 in nickel, $70,000,000 in copper and about $3,750,000 in platinum. The mines of the district have paid over $60,000,000 in wages, and $85,000,000 in dividends.

The silver production of northern Ontario is now over 13,000 tons. The province of Ontario has produced 13,744½ tons of silver according to the figures compiled up to June 30th of this year and the production of 1923 was materially ahead of that of 1922. I will give the figures of the silver production by decades, starting with the first year of actual shipment in 1898:

Year	Value
1898..	$ 51,960
1908..	9,136,830
1918..	17,415,882

And the total for the entire period of production from 1898 to 1923 is $209,986,416. During the same period dividends amounting to $95,888,818 have been paid.

On motion of Mr. Lapierre the debate was adjourned.

At six o'clock, the House adjourned, without question being put, pursuant to rule.

Thursday, May 1, 1924

The House met at three o'clock.

JOINT COMMITTEE ON PRINTING

Mr. C. A. GAUVREAU (Temiscouata) presented the first report of the Joint Committee on Printing.

HOME BANK

Hon. T. A. LOW (Minister of Trade and Commerce): I desire to present a petition signed by a number of depositors of the Home Bank in Renfrew asking for reimbursement.

UNITED CHURCH OF CANADA

Mr. W. A. BLACK (Halifax): I desire, Mr. Speaker, to read a telegram, signed by the

Rev. C. E. Crowell, on behalf of a meeting of Methodist and Presbyterian ministers, forwarded from Halifax, Nova Scotia, in reference to church union. It is only brief.

Mr. SPEAKER: Order. The hon. member may only present a petition; he is not in order in reading a telegram on the subject.

Mr. L. O. CLIFFORD (South Ontario): I beg to present a petition from certain members of St. John's Presbyterian church, Port Perry, Ontario, protesting against the Church Union bill.

Mr. DONALD SUTHERLAND (South Oxford): I beg to present a petition from members of the congregation of Knox Presbyterian church, Woodstock, Ontario, protesting against the Church Union bill.

Mr. JAMES ARTHURS (Parry Sound): I beg to present a petition from members of the congregation of Parry Sound Presbyterian church, protesting against the passing of the Church Union bill.

Hon. W. R. MOTHERWELL (Minister of Agriculture): I beg to present a petition from the Presbyterian congregation at Rosetown, Saskatchewan, praying for the passing of the bill to incorporate the United Church of Canada; also a petition from members and adherents of Rose Plain Federated church in favour of the bill.

Mr. R. J. WOODS (Dufferin): I beg to present a petition from the Methodist congregation at Mistioge, praying for the passing of the Church Union bill.

Mr. W. A. BOYS (South Simcoe): I beg to present a petition from members of the congregation of Beeton Presbyterian church, protesting against the Church Union bill; also a petition from the congregation of Tottenham Presbyterian church, protesting against it.

Mr. A. B. HUNT (Compton): I beg to present a petition from the Marsboro, Quebec, Presbyterian church, praying that the constitution of the Presbyterian church in Canada be preserved, and its rights, etc., maintained in the event of the passing of Church Union legislation.

Mr. JAMES STEEDSMAN (Souris): I beg to present a petition from members and adherents of St. Paul's Presbyterian church, Elva, Manitoba, protesting against the Church Union bill.

TRANSPORTATION OF ALBERTA COAL

Mr. W. G. RAYMOND (Brantford): I beg to submit the petition of Arthur Robert Kennedy, of London, Ontario, and 28,000 other persons of western Ontario and Alberta, praying that steps be taken by the government to provide for the cheaper transportation of Alberta coal to western Ontario.

FISHERIES ACT, 1914, AMENDMENT

Hon. P. J. A. CARDIN (Minister of Marine and Fisheries) moved for leave to introduce Bill No. 66, to amend The Fisheries Act, 1914.

He said: The object of the bill is to reduce the license fee relating to salmon canneries. A similar bill was passed last year but was rejected by the Senate.

Motion agreed to and bill read the first time.

QUESTIONS

(Questions answered orally are indicated by an asterisk).

STEAMER SUBSIDIES IN MARITIME PROVINCES

Hon. Mr. STEVENS:

1. What subsidy has been granted by the Dominion government to the steamship service between Pictou, Prince Edward Island, and Magdalen Islands during the last fifteen years?
2. What vessels have been on this route under the terms of the subsidy contract?
3. Was such subsidy contract for a period of years, or annually?
4. If any, was the payment of subsidy dependent upon vote of parliament or was it by contract?
5. What was the population of Magdalen Islands in 1911 and 1921?

Hon. Mr. LOW:

1 and 2.

Fiscal Year—Vessel	Annual Subsidy
1908-09, Amelia, ...	$15,000 00
1909-10, Lady Sibyl	12,000 00
1910-11, Lady Sibyl	15,000 00
1911-12, Lady Sibyl	15,000 00
1912-13, Lady Sibyl	15,000 00
1913-14, Lady Sibyl	15,000 00
1914-15, Lady Sibyl	18,000 00
1915-16, Lady Sibyl	18,000 00
1916-17, Amelia	18,000 00
1917-18, Amelia	18,000 00
1918-19, Enterprise	18,000 00
1919-20, Lady Evelyn	18,000 00
1920-21, Lady Evelyn	18,000 00
1921-22, R. W. Hendry	24,000 00
1922-23, R. W. Hendry	24,000 00
1923-24, R. W. Hendry	24,000 00
1924-25, Lovat	50,000 00

3. Subsidy contracts were annual, except for a 5 years' period, from 1909 to 1913 inclusive; for a 2 years' period, from 1916 to 1917 inclusive; for a 5 years' period, from 1921 to 1925 inclusive; which was afterwards can-

celled, owing to the unsuitability of the steamer, at the end of 2 years; and for 10 years, from 1924 to 1933.

4. Both. Subsidy was paid under contract, but a clause in each contract stated that the payment of the subsidy therein stipulated was subject to the amount specified being provided for the purpose by a vote of parliament.

5. 1911, population, 7,662; 1921, population, 7,127.

TAXES COLLECTED IN 1923-24

Mr. RYCKMAN:

What are the totals of the several classes of taxes collected by the Dominion government during the past fiscal year?

Hon. Mr. COPP:

Department of Customs and Excise—	
Customs Import Duties ..	$135,098,529.42
Sales Tax	100,980,102.52
Other Excise Taxes	22,676,537.33
Excise Duties	38,604,859.22
Sundry Collections	1,351,422.17
	$298,711,450.66
Department of Finance—	
Income Taxes	$ 54,204,027.99
Delayed Business Profit Taxes	4,752,680.89
Banks	928,790.91
Insurance Companies	700,680.92
Trust and Loan Companies	252,340.42

The figures are not final but represent receipts to date applicable to the year 1923-24.

Department of Insurance—	
Special War Revenue Act, 1915, as amended by Chapter No. 47 of Statutes 1922.	
Insurance Companies, (9 mos. ended Dec. 31, 1923)	$624,046.71
Mutual Insurance Companies, (9 mos. ended Dec. 31, 1923)	24,162.69
(Quarter ended March 31, 1924, in course of collection)	
Unlicensed Insurance Tax preceding calendar year, 1923..	55,915.10
Department of the Interior—	
Royalty Export Tax, Yukon Territory, fiscal year 1923-1924 (11 months)	27,858.54

Post Office Department—

Postal revenue $29,262,232.78 for fiscal year 1923. Figures for 1923-24 not yet available.

Department of Immigration and Colonization—

The only tax collected by this department is what is known as the Chinese Head Tax and from this source $312,500 was paid in to the department during the twelve months ended March 31st, last.

Department of Health—

Total payments amounting to $170,347.53 for Sick Mariners' dues for the fiscal year ended the 31st March, 1924, have been received in the Department of Health.

CIVIL SERVICE ACT—SPECIAL INVESTIGATING COMMITTEE

Mr. HUMPHREY:

With reference to that part of the final report of the specialy committee appointed last session to inquire into Civil Service Act, and referring to proposed amendment No. 15, part one:

Is it the intention of the government to provide legislation this session covering cases where revenue post offices are placed on a city basis, the staff of such offices can be granted Civil Service status?

Right Hon. Mr. MACKENZIE KING: I can answer this question orally by stating that the matter is under consideration.

AUTOMOBILE SHIPMENTS FROM NEW LONDON

Mr. MacLAREN:

What ships were employed in carrying automobiles from New London, Connecticut, overseas in 1923?

Hon. Mr. GRAHAM: I would call the attention of the hon. member in whose name this question stands to the fact that it is somewhat vague in its present form. As to what ships were employed in carrying automobiles from New London, Connecticut, overseas in 1923, I think the inquiry is altogether too broad to be answered.

Mr. HANSON: I assume the intention was to inquire what automobiles were shipped by Canadian Government Merchant Marine vessels.

Mr. GRAHAM: I would suggest to my hon. friend that he amend his question by pointedly asking: Did the Canadian Government Merchant Marine carry automobiles. Is that what he wishes to get at?

Mr. MacLAREN: It will be satisfactory if answered as suggested by the minister.

Mr. SPEAKER: Stands.

WHEAT IMPORTATION FROM UNITED STATES

Mr. SPENCER:

How much wheat was imported into Canada from the United States for the crop year 1923?

Hon. Mr. LOW:

For the crop year ended August 31, 1923 the amount of wheat imported (entered for consumption) into Canada from the United States was: Quantity 90,635 bushels; value $95,413.

CANALS AND HARBOUR IMPROVEMENTS

Mr. WARD:

What is the total amount of money spent on the Welland Ship canal, Old Trent canal, Victoria dry dock, and the Montreal harbour, since the discontinuance of work on the Hudson Bay railway in 1917?

Hon. Mr. COPP:

Department of Marine and Fisheries—

Expenditure by the Harbour Commissioners of Montreal on harbour development, 1918 to date inclusive, $10,052,658.12.

Department of Railways and Canals—

	Welland Ship Canal	Trent Canal
Construction.	$ 26,626,791 93	$ 2,314,306 05
Betterments (Income)..		1,246,370 67
Maintenance (Repairs).		451,388 76
Operation (Staff).. ..		617,411 09
	$ 26,626,791 93	$ 4,629,476 57

The above expenditure is all subsequent to March 31, 1918, and as there is no portion of the Trent canal system known as the "Old Trent Canal" all expenditure on the Trent canal system is given.

Mr. WARD: I have before me the answer to this question. It is complete except with respect to the money spent on the Victoria dry dock. I would like to know why that was not included in the answer.

Hon. Mr. KING (Kootenay): I will make inquiry and give my hon. friend the information.

EXPENDITURE ON HARBOURS—QUEBEC, MONTREAL, TORONTO

Mr. MILLAR:

1. What has been the total expenditure by this government from 1912 to 1923 inclusive, on the harbours of Quebec, Montreal and Toronto?

2. What amount of interest has been returned to the government by each during the same period?

3. Have annual reports been received from each of the said ports during the years from 1912 to 1923, inclusive?

4. If not, during which of above mentioned years and from which of said harbours were reports not received?

Hon. Mr. COPP:

Department of Marine and Fisheries—

1. On Montreal by the Harbour Commissioners of Montreal, $23,903,565.72.

On Quebec, by the Harbour Commissioners of Quebec, $7,710,361.33.

As to Toronto harbour, the Department of Marine and Fisheries has no information.

[Mr. Low.]

2. By the Harbour Commissioners of Montreal, $10,273,011.40.

By the Quebec Harbour Commissioners, no payments of interest have been made but the country has been given the use of extensive facilities for handling immigration without payment, while, if a reasonable return were received from same it is estimated the Commissioners could pay a very considerable portion of the interest due on the total of expenditure given above for this harbour.

By the Toronto Harbour Commissioners, no information in the department.

3. From Montreal and Quebec, annual reports have been received each year during the period named.

4. From Toronto, reports have been received for the years 1912, 1913, 1914 and 1920 only.

Department of Public Works—

Expenditure 1912 to 1923 inclusive.	
Quebec harbour..	$2,072,740 13
Lorne dry dock..	283,909 01
Champlain dry dock..	4,200,355 86
Levis..	170,390 54
	$6,727,395 54
Montreal harbour—dredging in 1912..	$ 4,635 00
Dry dock—subsidy..	945,629 99
	$ 950,264 99
Toronto harbour..	$7,068,366 47

VANCOUVER GOVERNMENT ELEVATOR

Mr. MILLAR:

1. How much grain of various kinds remained in the government grain elevator, Vancouver, on August 1, 1922, when the Board of Harbour Commissioners took possession?

2. What financial adjustment was made concerning such grain?

Hon. Mr. LOW:

1. Wheat, 132,193 bushels; oats, 4,185 bushels; barley, 39 bushels and 38 pounds; rye, 1,175 bushels and 40 pounds; oats and wheat, 72,250 pounds; screenings, 788,270 pounds.

2. No financial adjustment has been made between the Vancouver Harbour Commissioners and the Board of Grain Commissioners covering the surplus grain in store when the elevator was transferred to the harbour commissioners.

Mr. MILLAR:

1. Who was government weighmaster at the government grain elevator at Vancouver on August 1, 1922?

2. Was he discharged? If so, why?

3. If not, did he resign, and what reasons, if any, did he give for so doing?

Hon. Mr. LOW:

1. The Board of Grain Commissioners has no person classified as "weighmaster" at Vancouver, Mr. W. S. Mackenrot is senior weighman at that point and was in charge of the weighing department on August 1, 1922.

2. No.

3. No. He has occupied this position continuously since the above date.

QUEBEC HARBOUR COMMISSION

Mr. HANSON:

1. What advances have been made to the Quebec Harbour Commission during the past fiscal year?

2. Is the commission paying any interest whatever, as contemplated by the Statute, on any advances made?

3. What was the amount of the overdraft the Quebec Harbour Commission carried with their bankers at the close of the past fiscal year?

4. What is the total of advances made to the Quebec Harbour Commission as shown at the close of its books for the past fiscal year?

Mr. CARDIN:

1. Total $449,000.

2. No interest payments, in cash, have been made, but other departments of government are obtaining free use of valuable facilities, particularly for handling immigration coming to the country. The revenue that would accrue to the commissioners if these facilities were charged for on a reasonable basis, annually, would meet interest at the rate provided by the Statute, on a large portion of the advances made to the Commission.

3. At March 31 last, $146,988.88.

4. $11,811,995.68.

H. J. SYMINGTON, K.C.

Mr. HARRIS:

What amount was paid H. J. Symington, K.C., in connection with the Great Lakes Rates Inquiry as (a) Fees; (b) Expenses?

Hon. Mr. LOW: Total amounts paid from January 31 to April 12, 1923, are: Remuneration, $9,450; Per diem allowance, $705; Expenses, $471.43.

SHEPODY BAY—HYDRO DEVELOPMENT

Mr. DOUCET:

Is it the intention of the government to have soundings made at the head of Shepody bay, New Brunswick, for the purpose of hydro development?

Hon. Mr. STEWART: The matter of soundings at the head of Shepody bay in connection with hydro power development studies is at the present time under discussion with the New Brunswick Power Commission.

CANADIAN NATIONAL RAILWAYS—EQUIPMENT RETAINED

Sir HENRY DRAYTON:

1. How many cars belonging to the Canadian National Railways and transferred to the Canadian Pacific Railway have not been returned on the first days of each month of the calendar year, 1923?

2. How many cars belonging to the Canadian Pacific Railway and transferred to the Canadian National Railways have not been returned on the first days of each month of the calendar year, 1923?

Hon. Mr. GRAHAM:

1. January 1, 2,206; February 1, 1,968; March 1, 2,068; April 1, 2,399; May 1, 1,414; June 1, 1,964; July 1, 1,748; August 1, 1,525; September 1, 1,691; October 1, 2,050; November 1, 2,757; December 1, 2,526.

2. January 1, 4,355; February 1, 3,479; March 1, 4,025; April 1, 4,110; May 1, 4,495; June 1, 3,413; July 1, 3067; August 1, 3,981; September 1, 2,940; October 1, 3,399; November 1, 3,889; December 1, 3,545.

HALIFAX OCEAN TERMINALS

Hon. Mr. STEVENS:

1. What amount of money was expended on the construction of the Halifax Ocean Terminals previous to December 31st, 1921?

2. What amount of money has been expended on said terminals since January 1st, 1922?

3. What is the total expenditure to date?

4. What further expenditures are contemplated by the government?

Hon. Mr. GRAHAM: Mr. Speaker, my hon. friend from Vancouver Centre will appreciate the difficulty of showing:

What amount of money was expended on the construction of Halifax ocean terminals previous to December 31st, 1921.

This would include all expenditure up to 1921. No doubt my hon. friend means the amount of money expended within a certain term of years.

Mr. STEVENS: The question has reference, of course, to the large modern programme of improvement. You might say between 1911 and 1921, as far as that is concerned.

Mr. GRAHAM: If my hon. friend will allow me, that will not get him the information which I assume he wants. A plan of development of Halifax harbour was entered upon previous to 1911, and quite a large amount of money was expended on it. Does he desire that information as well, or only with respect to the new improvements? I want to furnish the information required, but I find myself embarrassed in regard to the period to be covered.

Mr. STEVENS: I suggest that the motion be amended to read "between the year 1911 and December 31st, 1921."

Mr. SPEAKER: Stands as amended.

QUESTION PASSED AS ORDER FOR RETURN

CANADIAN RAILWAY EQUIPMENT—PURCHASES BY AMERICAN RAILWAY COMPANIES

Sir HENRY DRAYTON:

1. How many cars and locomotives have been purchased in Canada by American railway companies operating in Canada during the past twenty-five years?
2. What is the amount of duty paid by American railway companies for American rolling stock used in Canada during the past twenty-five years?

INQUIRY FOR RETURN

SIX NATIONS INDIANS

Mr. M. C. SENN (Haldimand): I would like to inquire about a motion standing in my name which was passed on March 31, asking for a copy of the report of the royal commission appointed to investigate conditions among the Six Nations Indians.

Hon. CHARLES STEWART (Minister of the Interior): The report is in our hands. I believe the hon. member for Brantford (Mr. Raymond) is also interested in this matter. I shall be very glad to put the report at the disposal of my hon. friends, but for reasons that I do not care to disclose we do not desire to make it public at the moment.

CHICAGO DRAINAGE CANAL

On the Orders of the Day:

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, yesterday the hon. member for North Toronto (Mr. Church) asked a question respecting an order of the House that had been passed for the production of all papers regarding the diversion of water by the Chicago Drainage Commission, and an application for the construction of a power dam on the St. Lawrence river near the town of Morrisburg. In reply, the hon. Secretary of State (Mr. Copp) mentioned that the papers had been brought down two or three days ago and were on the Table. The answer was correct in respect to the second subject, the application for the construction of a power dam on the St. Lawrence river near Morrisburg; it was not correct as regards papers referring to the diversion of water by the Chicago Drainage Commission The delay in bringing down the latter papers is due to our not yet having received the acquiescence of the United States government. I do not think any exception will be taken. It is I understand, the wish of the American government that the papers should be brought down simultaneously at Washington and here. I expect to have the matter settled within the next week.

[Mr. Speaker.]

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed from Wednesday, April 30, the debate on the motion of Hon. J. A. Robb (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into Committee of Ways and Means, and the proposed amendment thereto of Mr. Woodsworth.

Mr. E. A. LAPIERRE (Nipissing): Mr. Speaker, when the debate was adjourned yesterday I was endeavouring by quoting figures to demonstrate the great mineral productivity of Northern Ontario, and I will ask the indulgence of the House to-day if I continue to quote figures in this connection, hoping that by so doing I may make known to the members of this House and to the people of Canada the wonderful wealth which we possess in northern Ontario. I feel, Sir, that we are on the eve of a tremendous development in that north country, and if by making known the wealth that exists there we can attract the attention of the youth of the land I have hopes that we may be able to check the exodus to the United States, for I feel that no part of Canada offers greater inducements to the young people of our country than the great northland.

The northland is comparatively new. The first discovery of silver was made in 1903. I have often heard it stated that the Temiskaming and Northern Ontario Railway was constructed because of the discovery of minerals in the north. Sir, I wish to correct that impression. The Temiskaming and Northern Ontario Railway was built by the Ross government as a colonization railway, and it was during its construction that the first discovery of silver was made close to the town of Cobalt. Since that discovery, which attracted the attention of mining men everywhere, the area has been greatly enlarged. The prospector moving from the silver country gradually extended his operations until, a few years after the discovery of silver, gold was discovered at Kirkland Lake. To-day the gold camp of Kirkland Lake and Porcupine is one of the most interesting in the world, and we now possess in that north country the second largest gold mine. The production of gold has been increasing very rapidly from year to year, and it is the opinion of geologists who have visited this area that northern Ontario will soon become the largest gold producing area in the world.

In order that you may fully grasp how great this development has been, I will give you the figures of the production of gold since 1908. In 1910, the first year in which gold was shipped from the northland, the production was valued at $68,488. In 1915 it was valued at $8,501,391; in 1920, at $20,668,692, and for the six months ended July 1, 1923, the value of the production was $8,643,162. This gives a total shipment of gold from 1908 to 1923 of $116,454,125. This has all been accomplished within the last twelve years, and this great development in the north has taken place without any government assistance. The development is comparatively new, and when we consider the financial situation of the country and our transportation problems, it is easy to realize what an important part the development of these mines in the north is going to play in overcoming our difficulties. The dividends paid by the Hollinger gold mine alone from 1910 to 1922 amounted to $19,632,000. In 1922 the Hollinger mine treated 1,400,000 tons of ore, of a value of $12,700,000, and paid in dividends $3,198,000. When we stop to consider how the development of these mines in the north affects the whole industry of the country, it will be seen that the time has arrived for the people of this country to realize what great assets these are, and to assist in developing these great natural resources.

But northern Ontario does not possess mines alone. It offers greater opportunities for agriculture to-day than any other section of this Dominion. The great clay belt lying parallel to the Grand Trunk Pacific is now being rapidly settled by a hardy class of settlers, who find a natural market for their products in the mines. There is no more fertile land in Canada than is found in this northland, and there is room for thousands of more settlers to go in there and take up agriculture.

We have also in northern Ontario an almost unlimited supply of pulpwood and timber. We are developing sufficient water power for the needs of our mines, our pulp mills, and other industries, and we have besides a hardy, hard-working and intelligent population. Many of them joined the first rush of adventurers after the first discovery of minerals in the north, and they are now assisting in developing that northland. The district of Nipissing to-day is supporting a prosperous population of over 50,000, and we hope to see during the coming summer the biggest rush since the discovery of the camp.

Besides assisting in the development of minerals in the north there is left still another great task for this government, and that is to assist in the development of the iron ore deposits of northern Ontario. Ontario possesses an unlimited supply of ore. It is sometimes called low-grade ore, but we have deposits of siderite which should not be classed as low-grade ore. The only difficulty we have had with our ore is that it requires sintering; that is, it has to be roasted and the deleterious matter driven off, but once it has been sinterized the ore is fully as of high a quality as the ore produced by the high-grade mines of the United States. We have now arrived at the time when the government must take into consideration the importance of developing these iron deposits. The high-grade ore deposits of the United States are now within calculable distance of exhaustion. Those high-grade ore deposits are now controlled by the large steel corporations of the United States, and every year we find the amount available to Canadian refineries considerably reduced. It is a known fact that the large iron and steel corporations of the United States now have their agents here in Canada looking over our ore deposits, and it behooves the Canadian people to see that Canadians be given the first opportunity of securing control of these deposits. We have assisted agriculture, live stock, and industry generally in this country, and if the government will give the same assistance in this case that it has given to others we can easily create in Canada a steel industry which will contribute immensely to our further industrial development. During the last ten years up to March, 1923, Canada had imported from the United States iron ore to the extent of 10,231,451 tons. During the last fiscal year the amount brought in was 701,993 tons. The reason that iron ore deposits in Canada are now closed down is due alone to the difficulty that exists in sinterizing the ore. At the present moment the large American steel corporations, realizing that their high-grade ore deposits are rapidly approaching exhaustion have commenced to sinterize their low-grade ore, and it has been demonstrated to the satisfactior of those interested in the iron and steel business in this country that Canadian ores can to-day, with slight assistance from the government, be made suitable for the furnaces. Canada requires and will require in the future large quantities of iron and steel. Our 3,500 miles of railway and our shipbuilding plants require the manufactured ore for ships, locomotives, rails, cars and other machinery. Our five and a half million farmers

and our mining mills require machinery, agricultural implements and tools. Canada cannot produce these goods until it develops both its iron mines and water powers, and I might state that on the Ottawa river, in northern Ontario and part of Quebec, we have to-day sufficient water power to attract iron reducing plants. With the iron ore and the water power there, there is no reason why Canada cannot develop a great and flourishing industry. We all know how valuable to a country the iron industry is. I think it is safe to say, Mr. Speaker, that the iron and steel industry is the key industry of the world to-day.

Mr. ROBERT FORKE (Brandon): Mr. Speaker, in rising to speak on the budget I do not wish to take up much time in discussing either protection or free trade from a theoretical point of view. A number of years ago I had a friend who was a professor of economics, and he made the statement that no one could teach economics without teaching free trade. However, I am not going to occupy any time in discussing the question—in fact it would be needless—nor, in speaking of a low or high tariff, to add anything to the eloquent, instructive and convincing address that was delivered here the other evening by the hon. member for Brome (Mr. McMaster).

I shall devote the time at my disposal this afternoon to reviewing to some extent the conditions that exist at present in Canada, and I shall say a few words upon some of the difficulties that face us and the possible means for overcoming them. Since the fateful days of August, 1914, we have been living under entirely new conditions. Nations everywhere have been seeking for some way out of the difficulties which now confront them, trying to adjust themselves to the new conditions which have arisen, and to resume their normal course of progress. In almost all cases this has been found to be no easy task. Captain Sinclair, speaking the other day before the Canadian Club in the Chateau Laurier, made the statement that throughout the whole continent of Europe the material and economic conditions could be characterized as nothing but shreds and patches. He also made a further statement, that to me suggested cause for anxiety—that in a great portion of Europe to-day moral and religious feelings have almost ceased to exist. I hope, Mr. Speaker, the latter statement is not true, because if religion and morals go all will go. I hope that the conditions in that respect at least are nothing like as bad as Captain Sinclair portrayed, after having made a tour of Europe which lasted almost three years. I think he also made the statement that in Italy the population was increasing rapidly and production decreasing—that there were more feet below the table and less food on the table. Now, that is the state of affairs we find at the present time; thirty-six nations trying to adjust themselves to new conditions, to new physical boundaries not always drawn in conformity with race, or religious belief, or even economic interests. What are these nations doing at the present time? We find them building up high tariff walls, making it more difficult to have a free interchange of commodities, keeping alive the passions, the hatreds and the jealousies that have worked so much evil in that old continent up to the present time. I think every student of history will admit that after wars have passed away, after the din and the tumult have died down, and people have the opportunity to consider just what the causes of those wars were, it has generally been found that they originated in desire for territorial aggrandizement or commercial expansion. I claim, Mr. Speaker, that the confusion in Europe to-day is greatly intensified by the fact that the nations there have not cultivated any friendly sentiments in the way of commercial intercourse or interchange of commodities; they have rather built up high tariff walls one against the other. We are getting no light or leading from the continent of Europe to-day.

Now, we are told continually that because other countries are adopting high tariffs we should do the same. But that is one example that I am not prepared to follow. When we come to Great Britain what conditions do we find there? Think of those wonderful islands, think of Great Britain the mother of nations, and her tremendous achievements! In these days I think we are very proud of the Old Land. With your permission, Mr. Speaker, I shall read a clipping that I took this morning from the Ottawa Journal. Doubtless most hon. members have read it, but nevertheless it is so good that I wish to place it on Hansard. The article is entitled "Hats Off to Britain." and reads as follows:

> Britain's financing stands as a continuing marvel. Before the war there were those who said (some said it gleefully) that the people were decadent, that her financial, moral and physical foundations were crumbling, that she was going the way of the great empires of the past. Britain's answer was to fight the most colossal war in history, to pour out blood and treasure unstintedly, to buttress and finance most of her Allies, to write deeds of heroism, fortitude and courage that will live while men remember.
>
> And since the war, what has been her record? While other nations bowed before the aftermath of the storm, she has marched from triumph to triumph. Her

word her bond as of yore, this "Perfidious Albion" has fulfilled her every obligation. Reeling under a world-wide catastrophe, beset by troubles at home and abroad, dragged down by creditors who either would not or could not pay, she has paid her debts, paid to the last farthing, asked for no favours other than her due, and is emerging from the tempest with honour unsullied and her credit and name unimpaired. . . . .And that credit is being maintained under the leadership of Ramsay MacDonald. During the past year Britain faced prodigious problems at home and abroad. She encountered unemployment, strikes, and industrial depression. She paid out millions and tens of millions for pensions and doles. She had to maintain a mighty army and navy. And she had to face all the expenditure incidental to the administration of an empire which embraces one-fourth of the world's territory, and one-third of its population.

Yet this week she produced a surplus. Produced a surplus of $240,000,000; and in consequence, reduced her floating debt by $175,000,000; abolished her corporation tax; and lightened the food taxes of her people.

Yes, hats off to Britain! In peace as in war she stands as the spearhead of progress. While other peoples have let strife visit them with chaos, she has toiled for peace and reconstruction. In a world of turbulance and hatred she has not been afraid to disarm. And while racial suspicious and greeds and jealousies have been turning the world into a Witches' night, while parliamentary government has been going down all over the world, she has been giving a magnificent example of the robustness of her democracy, extending the boundaries of freedom in her Empire, and to-day, after 1,000 years, the greatness of her dominion knows no westering sun. To-day, indeed, we can say of her, in the words of a celebrated poet:

> Set in this stormy northern sea,
> Queen of these restless fields of tide,
> Britain! what shall men say of thee,
> Before whose feet the worlds divide?

I want to point out to the House Mr. Speaker that the nation depicted in these glowing terms is free trade Britain. Some hon. members to my right have stated that Great Britain was not a free trade country, that to some extent she is a protectionist land. In the main there is no doubt that the United Kingdom to-day is a free trade country.

Mr. CALDWELL: They also stated that Great Britain was a nation of paupers.

Mr. FORKE: I think I made the remark yesterday that conditions in Great Britain were not really so bad as some hon. members seem to believe. I think the editorial which I have just read from a newspaper which is, perhaps, not friendly to free trade ideas, is well worth repeating. The other day I received a copy of a newspaper published in my old home county, in Scotland, sent to me by someone in Toronto whom I never saw. I read it very carefully, as I was interested in the different items of news from a social and business point of view. Trying to read between the lines in order to find out the social and business conditions existing in the locality in which I was born in Scotland, and without prejudice trying to find out just what was being done over there, I could see no great indications of any tremendous troubles in that country greater than we are experiencing at the present time. Social life seemed to be swinging along pretty much as usual, and, judging from the wage report, I could not see that there was any material difference between the agricultural workers in Scotland and those in Canada at the present time.

I turn now to the United States for a few minutes. The United States is held up to us as one of the great examples of what protection can do for a country, but I would like to point out that the United States has great advantages in climate and natural resources. Perhaps no country in the world has the same advantages as the United States in these respects. Coming to more recent years, the United States was enabled to realize huge profits from war contracts before she ever entered the war, and in no way can you compare protective United States with a country which has been in the same position as war-worn and weary Europe is at the present time. I am going to speak more about the United States later. We have no reason to compare the condition of Canada with the condition of the United States. The burdens which are being carried by the United States, with its wealth and population, cannot be compared to the heavy burdens which Canada carries at the present time. Canada entered the war, made sacrifices in human life, money and wealth and in every way incomparably greater than any sacrifices the United States has made. Therefore United States' prosperity and Canada's trouble cannot be compared in any way, through either the tariff or the want of a tariff; that has nothing to do with the question in any shape or form. In Canada we have a rich and fine country with great natural resources. The hon. member who

4 p.m.

has just addressed the House (Mr. Lapierre) dwelt upon the mineral wealth of Canada. I had the privilege to-day of listening to an address in the Chateau Laurier by Professor Wallace, of the University of Manitoba. He was at one time commissioner for northern Manitoba and I think also president of the Mining Engineers' Institute. He is a man well acquainted with the mineral possibilities of Canada, and it was cheering indeed to listen to the address in which he stated what he considered to be the possibilities of our future development in that line. He spoke of that vast stretch of territory to the north which is sometimes the despair of some of us who wish to see Canada

a united country. Speaking of our mineral wealth, he believed that mining and lumbering and other industries would bring about such vast development in that vast stretch of territory that it would link up what we now call the East and the West into one complete whole. Canada has a temperate climate.

Mr. MANION: Would the hon. member tell the House what Professor Wallace said about industrial development in the prairie provinces?

Mr. FORKE: I thought the hon. member for Fort William and Rainy River (Mr. Manion) was going to ask what Professor Wallace said about the Hudson Bay railway—

Mr. MANION: You can tell that too.

Mr. FORKE: —and I am sadly disppointed. However, since he has mentioned the subject, I think I will say that Professor Wallace believed the Hudson Bay railway and the whole scheme a very feasible project.

Mr. MANION: What about industrial projects?

Mr. FORKE: I was going to come to that later on, if the hon. gentleman had waited. But I will say a few words, now that he has called my attention to it. Professor Wallace pointed out that the vast resources in the prairie provinces in the shape of coal would make it quite easy for that country to be developed from an industrial point of view; and that in time to come industries would grow up upon the prairies, and, that we would have a more diversified production than we have at present. I am sure I do not wish anyone in this House to believe for one moment that I am not in favour of industrial development. I do not think any member in this House would have anything to say against industrial development in Canada. The only fault we have ever found is that an attempt has been made to foster some industries which seemed to be unable to suit themselves to the conditions found in Canada.

With reference to the budget brought down by the Acting Minister of Finance, (Mr. Robb) I am sorry that he is not in his place, because I would like to have complimented him upon the businesslike way and the intelligent form in which he presented that budget. But I have some little criticisms to offer. I think the ex-Minister of Finance (Sir Henry Drayton), in that short speech he made after the budget had been delivered, stated rather jauntily that it was a matter of book-keeping whether you had a surplus or a deficit. Perhaps it is a matter of book-keeping, which is rather staggering to the ordinary man in the street, but I am sure that there must be something more than just book-keeping behind it, and there must, in a financial statement, be either a balancing of accounts, or a surplus or a deficit. I am not going to enter into any discussion or analysis of that financial statement. I think most of us have a complete grasp of it and know exactly what it means. To some extent at least it is very satisfactory from one point of view, namely, that we have at last turned the corner and are moving in the right direction, and that in the not far distant future some reductions will be made in our national debt. I agree with the hon. member for Brome (Mr. McMaster) that a financial statement might be made in such a way that all the commitments of the country and its liabilities could be stated so plainly that the ordinary man in the street would understand just exactly what the financial condition of the country was. I know that almost all finance ministers, Dominion and provincial, have a universal habit of making as favourable a statement as they possibly can. I have heard it said that this is done to help the credit of the country and to make the best showing possible, but really I do not think it can amount to very much after all, because when we are dealing with financial people, surely they are quite able to analyse a financial statement and will do so, and really it does not matter very much if in that statement, the very best showing is made, to help the country, I think that all the liabilities for which the country is accountable should be clearly understood by the people; they should not be charged at random to this account or the other, but should be so set out as to be intelligible to the ordinary man who sometimes is bewildered by our present methods and certainly does not know just where we stand.

Let me say a few words in regard to the necessity for economy. We have great national obligations, huge war debts, heavy fixed charges and liabilities in connection with our national railways, all of which must be met. Unfortunately, all governments, Dominion, provincial and municipal, have spent money rather too freely during the last decade, with the result that taxation has assumed considerable proportions. A great deal of the obligations for which the people of Canada are to-day responsible are fixed charges which will have to be met for several years, and we must realize to-day that for some considerable time yet to come the road before us will be a difficult one. This

increases the necessity for the most rigid economy in the conduct of our public business, whether it be on the part of the Dominion government or the smallest municipal council. Any one who has had anything to do with public business knows that people in office always have demands made upon them which are larger than they can possibly undertake. That is common experience; certainly I know it is the fact in municipal affairs. I believe that society generally to-day is demanding greater services and more conveniences than it is willing to pay for, and that is one reason why people in office should be exceedingly careful about expenditures. I think it was Samuel Butler who said that progress first began when man sought to live beyond his income. On that principle it seems to me that we are progressing rapidly nowadays. I have no doubt there is a germ of truth in the suggestion; because if we are entirely satisfied with our conditions we are not likely to make much progress. At all events, I think that every one who has anything to do with the spending of public money should bear this truism in mind. There are, however, certain public services that should not be neglected, no matter what our views on economy may be. For example, while the question of public health refers perhaps more particularly to the provincial sphere, I think it is one of the utmost importance. Under no conditions should anything appertaining to the health and the physical welfare of the people be neglected; that would be false economy, and I trust that both Dominion and provincial governments will carefully avoid it.

Another important department of public service is the education of our people. I know that a very long address might be delivered on the question of education, and I do not think there is a member in this House who would not have at least some views to contribute to a discussion of our system of education and its results. We no doubt all agree that it is one important phase of our national life that calls for the greatest attention, and while economy should be practised to as great an extent as possible, nevertheless all needful expenditures in this direction must be made. Now, the term "education" is comprehensive, it is very wide in its application; and an important aspect of education is the training of men in engineering, mining and similar industries. Perhaps that is a side of the subject that we never think of, and I would impress upon the House that while our young people are being educated for the purpose of pursuing various lines of endeavour, the dignity of labour should always be upheld. I think that we are going astray a little in this respect. The man who soils his hands in honest labour to-day is not, I think, received with sufficient respect by the great bulk of society. I sometimes feel, as I have no doubt most people have felt, that when one has done a creditable piece of work, either physical or mental, he has created something which in some way or other will be of service to mankind; and there is certainly a great deal of satisfaction to be derived from that source. I want to see labour dignified everywhere as something honourable, so long as it serves society and contributes to the general happiness of the people.

I want to say a few words about manufacturing, and I confess that I enter upon this ground with the greatest timidity. Of course, a number of hon. gentlemen in the House are accustomed to addressing us on this side on the subject of agriculture, telling us what we ought to do in order to carry on our business. So that I may presume to say something to the manufacturing interests, though I shall be rather cautious in what I say. I have no other wish than to see our manufacturing industries prosperous. In the past few weeks there have been many complaints regarding conditions in connection with these industries. I have received letters from almost every place where manufacturing is being carried on in Canada, indicating how dangerous and critical a position that particular industry occupies at the present time. In these communications I am told, virtually, that it would be criminal to do anything that might tend in any way to injure the business. Now, I am not inclined to take so gloomy a view of the thing, nor do I believe that the manufacturing interests themselves are as pessimistic as some of them pretend,—perhaps I should not use the word "pretend," but hon. members know what I mean. I have watched the agricultural implement people and I want to give them credit for this fact, that since the budget has come down I have not noticed very much whining on their part; rather, they are buckling down to work, and the first thing we know, the agricultural implement industry will be prosperous in the next year. It has struck me as something rather strange to notice the general tone of the prospectuses that are put out by several manufacturing concerns to-day. The account that they give of themselves in these documents is very different from the one which they give when writing to some hon. members in this House.

I have no doubt that members of the government get these letters, too. The prospectuses, I say, tell an altogether different story. For instance, I notice a prospectus issued by the Howard Smith Paper Company appearing on the first pages of MacLean's magazine, and the statement is a very bright one. They are selling their bonds guaranteed at 7 point something per cent and they say that they have cheap power, that they cannot supply the domestic demand, and that their export business is growing rapidly. One of the things that bother me a little—and I do not think that I am misinformed—is the fact that this company is selling its products cheaper in the United States than it is selling them to Canadian consumers. I suppose this would be called dumping. We hear a great deal about patriotism and the love of people for Canada, and we are urged to see that Canada shall prosper, and so forth. Yet those people who talk that way turn round and charge their fellow countrymen a higher price than they ask the foreigner to pay. I know very well everything is not flourishing; in the United States also manufacturing concerns are closing down through over-production. I put it another way—not over-production, but under-consumption, lack of demand, inability of the people to purchase the goods that are being produced. We had war industries and over-stimulation; to-day we have industries that are over-developed, over-capitalized, and consequently burdened with too heavy overhead expenses. These are our troubles.

How do some members want to remedy these evils? They would put the tariff up a little higher, in other words charge the people a little more for the goods that even at the present time they are unable to buy. Because, Mr. Speaker, there is no other conclusion to be reached: If you are going to raise the tariff it must be for the purpose of raising the price of the manufactured product. I claim that to-day the trouble is not over-production, but inability on the part of the people to purchase the goods that are being produced.

Now a word in regard to the employees of some of our industries. I know very well what their feelings must be when they get slips in their pay envelopes such as we have received copies of. They are very human, they are people just like you and me. When they open their pay envelopes and find a slip to the effect that if a certain line of fiscal policy is followed the concern for which they are working will be closed down and consequently they will be out of employment, we can easily imagine their feelings. They are going to be afraid of losing their jobs, and therefore when they have the opportunity they will vote in favour of the policy which their employers tell them is the only policy by which the industry can be maintained. I think, Mr. Speaker, that this is a very unfair method to employ. No one presumably is prepared to deny the authenticity of these slips, some of which I have in my office upstairs.

Some hon. MEMBERS: Oh, oh.

Mr. FORKE: Hon. gentlemen may laugh. They may think that an honourable way of doing business; I do not. It is the very cheapest kind of propaganda, for those engaged in it are not even paying advertising rates. We hear a great deal about maintaining the high standard of living of those engaged in Canadian industry. Of course, we are told that it can only be maintained by means of the tariff. The inference might be drawn that if you want to reduce the tariff, then, as a matter of course you want the workers in our factories to accept a lower standard of living. But in reality nothing is further from the fact. None of us want to see Canadian workmen forced to accept a lower standard of living. What are wages—real wages? What are the wages that the average working man or working women gets to-day? Briefly these wages represent food, clothing, shelter, some luxuries, a little play, and something to lay by for a rainy day; that is what I may call adequate wages for working people. Forty years ago I happened to live very near a large manufacturing centre in Scotland—Galashiels and Selkirk. To-day the people there are carrying on just as industriously as they ever did. It is a long time to look back to, but my recollection of the people who were working in the large factories in that district at that time is this: The men and women were neatly dressed, and their standard of living forty years ago was just as good as the standard of living of our industrial population to-day. Such a statement may perhaps be questioned, but I think it is correct. I am inclined to believe that the standard of living of those employed in the free trade factories of England will compare favourably with the standard of similar workers in any protected industry in Canada at the present time.

To-day a dollar buys less in Canada than in any other country. The cost of living is high, the cost of production is high, and consequently our manufacturers are not able to

compete in the outside markets. In a word, we are working round in a vicious circle. I know it is quite natural for a man in receipt of high wages to complain if his wages are reduced. But if you increase the purchasing power of his lower wages he will be just as well off. High wages deceive working men, for certainly they do not add anything to his well-being if everything he has to buy is high in proportion. This, as I said before, is the vicious circle. It may work out apparently satisfactorily while one industry is able to charge another industry high prices, but when the primary industries have to sell their products in the markets of the world they find themselves at the bottom of the pyramid and in the worst state of any class in the Dominion.

We have heard a good deal from time to time in this House about a protective tariff compelling American industries to establish branch factories in Canada. Well, I saw a statement the other day—I hope it is not true—that the economic control of Canada is rapidly passing to Wall street.

An hon. MEMBER: No.

Mr. FORKE: Well, I hope it is not true. But what are the facts? What are the American industries now located in Canada doing to develop this country? They are owned by American capitalists, and a good many of them are absorbing Canadian concerns. But over and above all, most of these American factories are simply nothing more nor less than assembling plants, established here to take advantage of our tariff. I do not think this is likely to develop our country to any very large extent. I saw a statement recently that 31 per cent of our Canadian industries are connected in some way or other with American capitalists. This perhaps may not be true, yet I think probably it is truer than most people will admit. This, it seems to me, may be termed peaceful penetration. So when we boast about our tariff policy compelling American concerns to establish branch factories upon Canadian territory, the effect may be such as we had never contemplated. I am inclined to believe that our national structure will be built on a much safer basis, on a low tariff basis, on almost a free trade basis, rather than on a high protective tariff resulting in the establishment of American branch factories on this side of the line. American concerns have been assembling in their Canadian plants parts of American-made automobiles for export to Great Britain, thus securing the advantage of the British preference and putting money into their pockets.

Just a word in regard to our home market. We hear it remarked so often that the Progressive party have no use for the home market. I do not think anyone despises the home market. The home market is good, and we want all we can get of it. I would be only too happy if Canada could provide a home market for all its products at fairly reasonable prices, so that we might all live happily no matter what industry we are engaged in. But surely, surely, hon. members to my right who have been lauding the home market as the solution of our economic difficulties must realize that, measured by the progress we have been making under the National Policy, it will be generations before the home market can even begin to consume any large proportion of the products that are raised in this Dominion year by year. They have high protection in the United States, where there is a population of a hundred and ten millions. Hon. gentlemen tell us that the condition of the American farmer is a great deal worse than the condition of the Canadian farmer, yet in the same breath they say that if we had a larger and more diversified population the troubles of the farmer in this country would be over. The farmers in the United States are beginning to understand that when that country reduces her imports there is a condition which militates against the prosperity of the agricultural population. But, Mr. Speaker, I believe the day is not far distant when we are going to see a change of policy in that country from the one that is at present being followed. The United States has prospered not because of a high tariff policy, but in spite of a high tariff policy. They have a varied climate, they have great natural resources, they have an immense area within which free trade prevails. Just imagine, if you can, the thirty-six nations of the old continent of Europe cutting down their tariff walls and following the example of the United States—because if they did that they would be doing no more than the United States is doing to-day. If that could be done we would have that old continent rejuvenated in a very short time; at least its condition would be a great deal better than it is now. The United States is no example of the benefits of a protective policy.

I want to say just a few words about the policy of the Progressive group in this House. I think I saw it stated in the Montreal Star the other day that the Progressive movement was more than a political movement and that there was a necessity for it from the economic point of view. The editorial went

on to point out that the condition of agriculture, especially in the West, I think it said, was serious, indeed was almost tragic. I do not want to emphasize that any more than is necessary, but of course the Star had a different solution for these difficulties from that which the Progressives have been advocating in this House. At the same time I think it was a good deal for the Montreal Star to admit that we were not playing politics, that there was something more behind the Progressive organization than a political movement, that it was an economic necessity that brought the Progressives into the prominent part that they have been playing in the public life of this country. In fact, the Star admitted that there was good reason for their existence, that they came into existence because there was necessity for their being—I am paraphrasing the statement of the Star. I hope that we are not going to hear any more assertions to the effect that we are playing politics.

Some hon. MEMBERS: Oh. oh.

Mr. FORKE: Well I am very glad to be able to afford my hon. friends to my right a little amusement. We have been the subject of a good deal of criticism from that quarter of the House during this session. It is the privilege and the opportunity of my hon. friends to do that, and if they are at all pleased to do it I am sure that hon. members on this side have no fault to find with it.

Mr. LAPOINTE: The same with us.

Mr. FORKE: The flowing tide is with this movement. We are confident in the belief that the development of the primary industries will under more favourable conditions make for the prosperity of all the people, and of the secondary industries as well. We want something that will be for the benefit of Canada, not for the benefit of any particular province. We hear a great deal about the policy that was inaugurated by Sir John A. Macdonald, but we are not living in the Canada of Sir John A. Macdonald to-day. Vast commercial and economic changes have taken place in Canada since those days. A great new factor, a huge producing and consuming power, has come into Canadian life. Twenty-five years ago the western prairie provinces had little effect upon the public life or the commercial life of this country. Let any member of this House honestly ask himself what effect the crop prospects of western Canada have upon the whole Dominion at this time. Every year from springtime until the wheat begins to roll over the railways to the markets of the world, every man in business, every man engaged in manufacturing is watching the crop barometer to see what its effect will be on the business life of the whole community. Does anyone say that conditions are the same to-day as they were in the days of Sir John. A. Macdonald? Are we forever to be tied up to traditions of that kind? Are we never to take any step forward? Is there to be no improvement? We have been passing through difficult times; we have been looking for help, for guidance, for a solution of our difficulties, and what are we getting from my hon. friends to my right? A little higher tariff; increase the cost of production, they say, and all your difficulties will vanish. I am well aware that if you were to obliterate the tariff all our difficulties would not be solved, and I do not think any hon. gentleman in this part of the House will think differently. But we believe that a lowering of the tariff will help conditions materially for everyone concerned.

I repeat that there will be no real improvement until the cost of production has been lowered, and this is where industry can help. I do not believe that the condition of industry in Canada is so terribly bad as we are led to imagine. I cannot help but think that we have Canadians with enough intelligence, enough natural ability, enough business sense, given proper conditions, to produce in Canada and to compete with any country in the world. Why can we not do it, if we get the raw material and the labour? We are continually told that labour is higher here than it is in other producing countries. Well, I have questioned that, because wages have to be gauged by their purchasing power and the purchasing power of wages in Canada to-day is not much better than it is in a great many other countries. Of course, we are always asked to look to that highly protected country on the other side of the line, where wages are just as high as they are in Canada, and we are told that we cannot compete with that country of high wages. Sometimes you hear about "mass production", but we can never have mass production under the present circumstances. If you will allow me to make a personal remark Mr. Speaker: When I was home at Easter the young man I have in charge there said he would like to get a double disc drill. I have two very good shoe drills—farmers will understand what I am talking about, and probably the rest of the House will. But this man is young and quite ambitious and I thought I would like to please him. I went over to the town and asked what was the price of a double disc

drill. The reply was, $266. Well, I just gasped. I went home and I said "You had better cultivate ahead of the shoe drills and we will do without the double disc drills". That is exactly the position of the farmers on the prairies; they are unable to purchase the goods that are being produced. Will it help business if you add 10 per cent to the price of that drill and make it almost $300? Will it make industry flourish and prosper to produce another drill that nobody would be able to buy? I want to be clear on this matter; I want to be fair and honest with my friends to my right, because I think if we could really understand each other, perhaps there would not be so much difference in this House as there seems to be sometimes. I speak more particularly with regard to our implement manufacturers to-day; I think the trouble with the Massey-Harris Company, for instance, is not the cost of their production, but that they are not able to produce in sufficient quantities to make their business pay, in view of their overhead expense. I may be wrong, but that is my opinion, and we are not able to get that increased consumption until we get prices lowered, and I have been trying to show how we may be able to reduce prices.

I admit that in rehabilitating this country agriculture has to do its part. I am not going to tell industry and business that they have to do so and so and that agriculture can lie down and accept conditions as they are, even in carrying on its own business. Changed conditions require changed methods, but no artificial bolstering of weaklings will help business or the farmer. There must be business methods and industrious habits. I am not afraid of this country suffering from cheap goods. Sir Frederick Williams-Taylor —and I am sure my friends to my right will take his word, he is not a farmer by any means—made the statement the other day that prosperity cannot return to Canada until agriculture becomes prosperous.

Now I want to say a few words about wheat farming. I went down to that mining banquet to-day, and I wondered just on what terms I was there as a guest, and it struck me that perhaps I might be there as a wheat miner; but really I was not there in that capacity. We have very often heard the expression used in this House with regard to the wheat farmers of the West, that they are "wheat miners." I do not want to make any harsh statements about any members of the House, but I think my friends will admit that when they look over to this part of the House and talk of the wheat miner, it is not very complimentary, to say the least. What is wrong with wheat production? Are we not all anxious to see how the wheat crop in the West is prospering, and how many million bushels are going to come East to grease the wheels of industry? Then why pour contempt on those who are producing that wheat? Mr. Speaker, the people who talk that way do not understand the conditions that have existed in western Canada during the opening up of that great country. It would have been an utter impossibility for that country to be opened up if wheat had not been produced in large quantities, and produced easily. That is how that country has been opened up, and that production is responsible for the factories that have been built in eastern Canada to supply agricultural implements to the people who are engaged in raising the wheat. I believe that for many, many years to come wheat growing is to be the one great industry of the three western prairie provinces. I have no hesitation in saying that, and it is no use talking of "wheat miners" in a contemptuous sort of way. If hon. members would only consider what it means to start and fertilize 640 acres—it might be possible to fertilize a five or ten or twenty acre farm —but when farming is conducted on the large scale on which it had to be conducted in the early process of opening up the West, it would be an utter impossibility. Wheat farming, while it does to a certain extent rob the soil, is an absolute necessity in opening up that country and building up industry there. It is that which enables the farmer to build his home and outbuildings, and buy his implements and all the other articles he needs to carry on production. In process of time, of course, there will be change. As I said before, changed conditions require changed methods, and in our older province of Manitoba a change is gradually taking place now, and no doubt in the future there will be more diversified farming carried on.

This brings me to say just a few words with regard to credit. I have not yet had the opportunity of reading Dr. Tory's report in regard to agricultural credits, and I have only this to say at the moment: There is a need for credit of some kind that will carry the farmer over from three to five years. I can imagine conditions in southern Manitoba to-day where the farmers who are aware that they cannot count on wheat as a safe crop may be willing to turn to mixed

farming, and will need credit to carry them over that length of time in order to enable them to engage in more diversified farming. However, I want no credit that is just going to mean an increase of debt. I am perfectly well aware of the fact that in the West credit has been too easy to get in a great many instances, and it would have been a blessing sometimes if farmers had been refused credit when they were seeking it.

Courage is needed to-day by all sections of people in this Dominion. Whether we are engaged in industry, in commerce or in farming, we all need courage to face the difficulties that are ahead of us, and, Mr. Speaker, I cannot but think at the present moment of the rural homes all over this Dominion. When we speak of the standard of living, I certainly do not want to see the standard of living reduced in the rural homes of this country, and I am perfectly sure that my friends to my right who have been speaking so much on behalf of our Canadian manufacturers will fully agree with me in that sentiment. We do not wish to see the standard of living reduced in our rural homes, but that is what is taking place to a very large extent to-day. Out on the prairies—and I speak of the prairies because I know conditions there, though I believe it is the same in other parts of Canada as well—the standard of living has dropped. There is no denying that fact. And if my blood stirs sometimes when I think of it, it is just because I know the conditions. I know what some of the heroic women who have done so much to develop that country have suffered, and it is no playing politics with me, I can assure you. But let us hope that a brighter day is dawning. Nations, must learn, as individuals learn, that they cannot live to themselves alone, that when one prospers all will prosper to a certain extent.

In closing, I think that politically things look brighter to me in this Dominion than they have done for some time past. I think the hard spell is over. But there is one thing I would like to say to the Acting Minister of Finance (Mr. Robb) in regard to the customs tariff. To be candid, there is something about that dumping clause that I do not like. Something, no doubt, may be said in favour of it, I know it is a complicated question; but it does seem to me to place too much power in the hands of any minister when he is able at any time to enforce a measure of that kind that may actually amount to high protection, if it is not very carefully handled. I do not know what can be done, but I do hope that the government will have some solution, and that some undertaking will be given to us before we are called upon to put the final seal of our approval upon the budget that is now before the House. I do not think anything can be said in favour of a minister having the power to put this clause in force at any time he chooses. I do not want the Acting Minister of Finance or any other member of the House to think that I am accusing them of having made a wrong use of this clause; my only object is to save them from themselves, to avoid placing temptation in their way. I hope that something can be done in that respect.

I wish also to say a word in reference to the amendment that has been moved. I am sure that the mover of that amendment (Mr. Woodsworth) is quite sincere, and that his intentions are good. There may be also some in my own party and group who may differ with me in this statement, but I say that the amendment, as moved at that time, was not in the best interests of the movement which we represent in this part of the Chamber. However, that is my own opinion; I am quite willing to let any other person have any different idea which he chooses to have. I suppose there will be a certain amount of what I may call "unholy glee" on the part of some who think this places the Progressives in a rather difficult position. Personally, I have felt no difficulty whatever. I am conscious that the course I am pursuing is the right course. It has seemed to me that if I voted for the amendment, which in reality would be a vote of want of confidence that I would have to vote against the budget also. That I think would be a mistake under present conditions. I know very well that out in the country—where it takes some time for information to percolate into all the different sections —some people will wonder why I should not be prepared to support an amendment that calls for a reduction of taxation on the necessities of life. However, I am not afraid, Mr. Speaker, but that with time and with full information, and when the whole statement has been received, I shall have the approval of the great mass of the people.

Now, I want to point out why I believe I could not support this amendment. I do not think that it accomplishes anything, I do not believe that it means anything, because it is only a gesture; and no one could suppose for a moment that it is likely to be carried by a majority of this House. On the other hand, there are two clauses in the amendment that I do not approve of, but disapprove of. One clause asks for a tax on unimproved land

values. Now, I took the trouble during my campaign in Brandon of sending out hand bills stating that I was opposed to any plank of this kind. Other members of this House may not have done the same. Nevertheless that is my position in regard to that particular plank and my reason for doing so was this. For several years I had equalized the assessments in the province of Manitoba both urban and rural. I knew the actual conditions of property owners in that province. Nowhere did I know of a single individual who would not be willing to sell his land and sell it immediately at the amounts it was assessed at and as a revenue producer this idea was absolutely and utterly useless—as far as Manitoba was concerned any way.

In regard to succession duties let me say this. The province of Manitoba has a succession duty at the present time and I would be opposed to the Dominion entering into that field until there had been a conference between the federal and the provincial authorities as to the boundaries of taxation. I do believe that such a conference ought to take place, and that there should be no overlapping in this matter of taxation. The boundaries should be clearly fixed showing where the Dominion or the provinces should enter this field. But the provinces are in the field now. They need that amount of revenue and I think they ought to have it. I have spoken in this manner because I really do not know the exact position of all the members in this part of the House upon that question. Each member can vote to suit himself; if he does so there will be no recriminations, there will be no faultfinding. I believe that when a man acts according to his conscience he can always justify his actions.

I have already said that so far as we are concerned there will be no turning back. We have our faces toward the rising sun, and we are seeking to clear away the barriers of special privilege and afford equal opportunity to all. Since I commenced speaking some hon. members have alluded to bargains that have been made. I want to make the statement clearly and without any equivocation of any sort that I am under no obligation to any other group in this House, save and except the group that has done me the honour of electing me as its leader and has given me its friendship and its support. I utterly deny and repudiate the idea that there has been any bargaining, or any dealing of any kind whatever, between the members of this group and those of any other group in this House. I made the statement at the commencement of the present session that the government would get the support of the Progressives when they brought in progressive measures. This has been twisted and used in newspapers in all directions, and by hon. members to my right, to prove that I had made some arrangement with the government in regard to their support. I make exactly the same statement to-day that I did on the former occasion—if the government bring in progressive measures they will get Progressive support.

With this statement I shall close my remarks. I have faith in Canada. I have faith that in the future we are going to solve our difficulties. But if there are any in this House who believe that the day of the progressive movement is over in Canada they are badly mistaken. Great changes have taken place all over the world. We have a Labour government in Great Britain to-day.

An hon. MEMBER: Yes, changes in some places.

Mr. FORKE: Just have patience. We can look forward to changes in the country to the south of us. I am not a prophet but I predict that there will be vast changes in the economic and political life in the great republic to the south of us in the not distant future. We, Mr. Speaker, have reached no standing place in this movement at the present time. As I have already said our faces are toward the rising sun, and we are going to march forward unafraid. We are not going to go back into past history and say that what happened forty years ago must be maintained to-day. We realize that mankind has not made a very good job in the conduct of the world during the last century. When we think of conditions as we find them; when we look at Europe and think of the misery, the degradation, and the sufferings that have occurred, the tremendous blunders that man, in his so-called wisdom, has made in the government of the world, do we feel satisfied that we are moving just as we ought to move? Are we afraid of making some step forward? Mr. Speaker, I look to the future hopefully, and I am not afraid to step forward and to enter upon new and untrodden paths.

Mr. W. F. GARLAND (Carleton): Mr. Speaker, I, like hon. gentlemen who have preceded me, must first of all congratulate the Acting Minister of Finance on the brief and concise manner in which he delivered the budget. But that is the extent to which I can go in congratulating my hon. friend. I also sympathize with the Minister of Finance (Mr. Fielding) in his illness, and hope that he will speedily recover his health.

Before entering upon the questions I desire to discuss this afternoon I wish to deal with a few points that were brought out by the hon. member for Brandon (Mr. Forke). I notice that in his speech my hon. friend has given evidence of having done very little thinking, apparently he has not thought very much as yet. I also notice that he resents extremely the advice tendered from different quarters of the chamber to the agriculturists. He says that the agriculturists resent that advice and properly so. I wonder if my hon. friend thinks the manufacturers of Canada will accept the advice he has given them this afternoon that they should take off their coats and get to work. I am of opinion that the majority of Canadian manufacturers are already working and working very hard. My hon. friend also said that the men who are workers in the factories will simply vote to keep their jobs.

Mr. FORKE: I did not say that.

Mr. GARLAND (Carleton): I think that we will find out there are some people, even members of parliament, who vote to keep their jobs. There might be also some parties who vote to keep their jobs.

Mr. CALDWELL: Speak for yourself.

Mr. GARLAND (Carleton): I notice my hon. fertilizing friend has something to say, but he will be able to make a speech when I am finished. The hon. member for Brandon (Mr. Forke) states that the worker likes to have a dollar to spend. The hon. member, if he will allow me to say it, being of Scotch descent, would know that perhaps the worker and the man in Canada would prefer to have two dollars rather than one, and that is what we are trying to get in this country. He also says that he does not want American capitalists to come here and make money. Personally I would prefer to have Canadian capitalists, and next to them I would prefer British capitalists, but if I could not get either of them, I would be glad to have American capitalists, and give our labourers some work.

Before dealing with the main part of my remarks, I would like to quote a few lines from Hansard with regard to the attitude of the Liberal party in reference to duties on agricultural implements and the like. At page 3343 of Hansard, May 4, 1914, one of the former leaders of the Liberal party, Mr. McKenzie, said:

> If protection is worth anything at all, and of course so far as my own industries are concerned and because I understand those industries well, I am in favour of protection of the industry of the country from which I come—

[Mr. W. F. Garland.]

> Some hon. Members: Hear, hear.
>
> Mr. McKenzie: I am always pleased to get a cheer from my hon. friends opposite. I cannot understand why I get a cheer on this occasion, because I have spoken in this House a great many times in the last ten or twelve years and when iron and steel and coal were under discussion I was always a tried and true protectionist.

Then we will proceed to an utterance by the present Minister of Finance (Mr. Fielding) in 1907 in discussing a motion to reduce the duty on agricultural implements from 17½ per cent to 10 per cent. He said:

> By a careful calculation we are advised that the drawbacks we allow are somewhat less than the disadvantage under which the manufacturer is placed by reduction of the tariff. Even suppose for a moment that he got everything free and had a duty of 17½ per cent on the implements, would that be an extravagant duty as things go in this country? I believe this proposal of the hon. member for Souris, if adopted, would do an injustice to an established industry. My belief is that if this motion were passed we would strike a severe blow at one of the great industries of the country. I believe the International Harvester Company would find it to its interests to close up its business in Hamilton, at least so much of it as is devoted to mowers and binders, and have them made at the American branch and bring them from the United States. The factory in Hamilton is an American concern. With a moderate duty we have induced American capital to come into Canada and to establish that great industry; and after we have brought it in and established it in Canada I believe that if we were to pass this resolution the company operating that industry would find it profitable to close the Hamilton factory and bring in the goods which they make in the United States.

That has been the contention that we have been bringing forward that that is what will happen with all the industries. We have not only our own thought on that, but we have the thought and expression that was given by the present Minister of Finance in that connection. I think this is very clear when he made that statement. With regard to protection, I am heartily in support of the principle of protection. One of the main reasons why I feel we should be in favour of protection, especially in the products of farms, is on account of the Fordney tariff. This matter had been placed on Hansard previously, but I would like to place it on Hansard again, because I want to refer to it later on in my argument.

Under the Fordney tariff the duties were as follows:

	Canadian duty	American duty
Eggs, per dozen,	3 cents,	as against 8 cents.
Butter, per lb.,	4 cents,	as against 8 cents.
Fresh meats, per lb.,	2 and 3 cents,	as against 3 and 4 cents.
Cheese, per lb.,	3 cents,	as against 5 cents.
Wheat, per bush.,	12 cents,	as against 42 cents.
Hay, per ton,	$2,	as against $4.

I would like to know if any business concern can compete with another business con-

cern when they have figures such as these against them. It is an utter impossibility for any man in any mercantile business to do it. If a man in the clothing business were selling goods at $3 and the man opposite selling at $8, I know which would get the business. With regard to these agricultural implements, we have been told what is going to happen. The party to which I belong up to the present moment have always reduced the duty on agricultural implements. They thought they had got in the position in which it could be safeguarded, and I think that perhaps, with all due respect to the hon. member for Brandon (Mr. Forke), this was a good chance to strike something which would appeal very much to the Progressives. He says it was not a bargain, but he can figure it whatever way he likes, it was something that appealed to them very much, and I know they will support the budget for that reason. With regard to the agricultural implements, I feel that the men who are going to be the users of these implements will not gain very much. We have had experience with regard to binder twine, coal oil, barbed wire and such like which went on the free list, but the prices never went down. I believe that the amount saved to the man who is using these articles will be practically nothing, but it will on the other hand as the present Minister of Finance has said—and we say it is true—drive the factories out of Canada and therefore drive our workmen out also, and then things will be in worse chaos than they are to-day. I would like to place some figures on Hansard with regard to some of the staple products that are produced on the farm. For instance we have, fresh pork, pork pickled in brine, pork dry salted, beef, mutton, butter, and eggs. These are staple products of the farm. I have some figures from the Customs department, and they are up to date as well as I could possibly get them. I obtained the figures for the fiscal years 1922-23 and 1923-24. I did not go very far back. The importations and exportations were as follows:

5 p.m.

Fiscal Year	Imported	Exported
Fresh Pork—		
1922-23	$5,134,061	$179,731
1923-24	2,764,489	277,877
Pork, pickled in brine—		
1922-23	1,379,536	48,895
1923-24	948,613	39,123
Pork, dry salted—		
1922-23	258,457	223,056
1923-24	340,402	315,798

Then we brought into this country the following imports:

	Fiscal Year 1922-23	1923-24
Fresh beef	$ 33,943	$ 39,276
Mutton, lamb, fresh	261,383	271,000
Butter	1,349,819	612,991

These are all staple products, and the point I am making is that the imports are in every case very much larger than the exports. I contend that these articles should not only be produced, but should also be consumed, in this country. We are told that the home market, while it is excellent, is not adequate; but I cannot see why we should have to get $5,000,000 worth of fresh pork into this country while our farmers here are able to grow everything that is needed in the production of this particular commodity. Now we come to another item, eggs. In the fiscal year 1922-23 we imported $2,508,504 worth of eggs while we exported $1,410,444, or a difference of over $1,000,000; and in the fiscal year 1923-24 our imports were $1,975,687 as against exports amounting to $1,027,171. In connection with this subject, I notice that the hon. member for King's, P.EI.. (Mr. Hughes) the other day, speaking on the budget, made the statement, as will be found at page 1603 of Hansard, that we imported $2,000,000 worth of eggs and exported very nearly $2,000,000. I would inform the hon. gentleman that he is out, as he generally is, only about a million dollars; in other words, our imports were about double our exports. Then the hon. member for Queens (Mr. Sinclair), minister without portfolio, made a statement, to be found on page 1376 of Hansard, which I was rather surprised to hear form the lips of an hon. gentleman who comes from a province that plays a prominent part in the production of eggs and poultry in Canada. The hon. member is reported as follows:

> Therefore I submit to hon. gentlemen who advocate a higher duty on eggs that it would not be in the best interest of Canada, now or at any future time, to raise the duty upon an article which is really one of the necessaries of life, and thus cause the workers in our industrial centres to pay more for the commodity than they really would have to pay if our producers were in open competition with the producers of other countries.

I do not accept that statement at all. I believe, as the hon. member does, that people in the industrial centres should be able to get fresh eggs when they want them just as other people do. But I would point out that when we import eggs from the United States we bring them in during the months in which our eggs are dearest. I venture to say that there are more people in the industrial centres who are selling eggs when the price is a dollar a dozen than there are people in those centres who are buying eggs. That may appear a strange

statement to make, but I believe it is true. In 1922-23 we imported—not to mention the exact figures—$183,000 worth of eggs in October; in November $276,000; in December $228,000; in January, $194,000; in February, $460,000; and in March, $924,000. Compare that with the fiscal year 1923-24. In the month of December, we imported $248,000; in January, $364,000; in February, $633,000; and in March, $470,000. We are bringing these eggs into Canada during the months in which our own poultry producers and farmers should be producing eggs and getting for them prices that would make the business a profitable industry. The hon. member also stated that the average production of hens in 1922-23 was 78 eggs per hen. I think that is a very low production in view of what we have accomplished at our experimental farm in Ottawa. In passing, I may say that I am heartily in accord with the tests that are conducted at the farm. There are a great many entries from all parts of the Dominion in what is known as the Canadian and the Ontario egg laying contests. The government makes a charge of $15 per entry, and I believe there were 75 entries last year. The owner of a bird that lays 150 eggs is given what is known as a record of performance certificate, while for a production of 225 eggs an "advanced" certificate is awarded. In the contest last year there were several owners whose hens laid 150 eggs. I think that these tests are a splendid innovation, and needless to say they were inaugurated in the Conservative régime. But, while the tests are being conducted satisfactorily, in my opinion there is room for improvement. It is sometimes false economy to curtail expenses, and the truth of this is exemplifield in this instance. I believe that if the poultry houses at the experimental farm were equipped, as they are not at present equipped, with electric light, the egg production would increase some 33⅓ per cent in consequence. Any one who has had any experience in the poultry business will endorse that statement. Our friends to the south of us are equipping their poultry houses in this and other ways, and are meeting with splendid success, and I contend that we should do the same. Last year in our contests there was not a hen that laid 300 eggs. We did have one that laid 298 and she would have laid the other two if the house had been equiped with electric light. Now, this is really a national advertisement for the poultry industry of Canada, and I think that everything should be done to promote efficiency and attain a standard of perfection.

[Mr. W. F. Garland.]

In reply to a question that I put on the order paper as to the number of baby chicks brought into this country in 1923, to my amazement the reply was 467,154; that is, about half a million day-old chicks were imported free of duty. Why? Because there is a clause in our excise legislation that such importations "for the improvement of thoroughbred stock" may be admitted free. Needless to say, all these chicks come in ostensibly for this purpose, and consequently no duty is collected. To my mind, Mr. Speaker, a duty should be imposed, because these day-old chicks cannot be intended for the improvement of our thoroughbred stock when we find them retailed in the fifteen cent stores. Although we are doing everything we possibly can to raise the standard of our poultry industry, we are admitting free of duty scrub poultry from the United States. Obviously that is a serious disadvantage to the poultry industry of this country.

Perhaps the statement cannot be proved, but we have been told that certain poultry diseases common to the southern states have infected our poultry, and we feel that such diseases must have been transmitted to our stock by the day-old chicks which are imported in such large numbers.

The hon. member for King's, P.E.I. (Mr. Hughes) recently gave us his annual speech about potatoes and free trade. I would suggest that when he starts to deliver it next session the House might take it as read, because he has repeated it ever since he was returned to parliament. I am sorry he is not in his seat because I have something which I should like to say to him personally.

Mr. JACOBS: I will go and bring him in if you like.

Mr. GARLAND (Carleton): I notice that on page 156 of Hansard he said with regard to the tariff:

> I have heard our friends the protectionists state, and they had no hesitation in stating, that if we adopted a tariff policy higher than it is now, a policy somewhat similar to that which they have in the United States—although it does not seem to work very well there so far as the farmers are concerned—it would work splendidly here, it would stop emigration, would increase immigration, would give more employment, would raise wages, would raise the price of farm products, and at the same time decrease the cost of living. I think they are too modest in the advantages which they claim their tariff would accomplish. Would it not also cure earache and headache, lumbago and sciatica, remove dandruff and prevent the hair from falling out? Mrs. Lydia Pinkham's pills would be nowhere alongside an adequate tariff, which, in the estimation of these gentlemen, would be a tariff made up by the Canadian Manufacturers' Association.

I might say in passing that, being a druggist, I would remind the hon. gentleman that Lydia Pinkham's pills are usually recommended for female ailments, and therefore do not apply to this side of the House. But I presume that when he delivered his speech he had taken some of these pills, or was badly in need of them.

With regard to the boasted economy of this government, I cannot as yet see that any economy is being practised by it. We had an item in the Public Works estimates asking for an expenditure of one and a quarter million dollars for the acquisition of the Colonial building in London, England, and another three-quarters of a million dollars expenditure on alterations for the same building. At the time I said that this two million dollars might have been spent to much better purpose in our own city in making the "deserted village" between here and the buildings within the next quarter of a mile appear as if the government owned the land. Instead of taking this course and providing suitable accommodation for various government departments, the administration continues to rent buildings from those who are friendly towards it at election times.

The government also boast of the retrenchment they have effected by reducing the number of civil servants. But I notice that in every case the dismissals are of those in the lower grades. I have yet to find that any of the high-salaried men have been dismissed, whereby some benefit to the country might result. Of course, the Minister of Labour (Mr. Murdock) told the unfortunate ones, "We are going to use you well; we have employed you for about nineteen years, and we are going to give you two months' pay when we dismiss you." He, a friend of Labour, would so treat loyal employees after such a length of service!

I am surprised to know that last year over five hundred of our technical men left the service. I am also surprised to know that the members of the technical staff in the Department of Agriculture are not paid the same as are similar staffs in other branches. This, Mr. Speaker, I think is one of the reasons why there is so much discontent in the service to-day. I have already expressed the opinion that the same amount of bonus should be paid to every person who is doing similar work whether he has dependents or not, for undoubtedly civil servants working beside each other and doing the same amount of work should be paid the same remuneration. Nothing is likely to benefit the Civil Service more than a contented staff. We do not need to go outside this building to find that some of the lower grades, such as those engaged in the char service, have not yet received their current bonus. These are the very people who are most in need of the bonus, and it should be paid to them without delay.

Now a word with respect to the retirement fund established in 1898. This is made up of 5 per cent deductions from the salaries of civil servants; the government do not contribute to the fund at all. According to a return brought down recently, the government had on hand on the 31st March, 1922, to the credit of the retirement fund $8,680,112.76. Now, on the amounts so deducted the government pays only 5 per cent half yearly; but at the same time they do not mind floating Victory bonds and paying those who purchase them practically 7 per cent. I consider that the 5 per cent interest should be raised, for the fund is at the disposal of the government and can be made use of from time to time for national purposes.

With regard to the Superannuation bill, I heartily agree with the principle, but I defer dealing with this until the measure is before us for discussion in the committee stage.

One of the most lamentable things that is taking place in this country is our immigration. In answer to a question I placed on the order paper I was informed that the government spent in 1923, $90,171.50 for officials and employees of the immigration staff in the United States, placed there, it must be, to bring immigrants from that country into Canada. I do not know what results have been obtained, but we are led to believe that our people are leaving this country at the rate of about 500 a day, if that is so, there is an excellent opportunity for the government to save $90,000 a year by withdrawing their immigration staff from the United States.

With regard to the policy adopted by the government of bringing immigrants to this country, I believe that there is plenty of room within the borders of Canada for ten times the population we have to-day. I would like to see more people brought from the British Isles, and it would be well in bringing them over to bring some who have money that they can spend on factories and the like to give employment to those who come here. The hon. member for Brandon (Mr. Forke) is going to buy a double disc harrow so that he can do twice as much work with one teamster as he did before;

that is the way he is going to help labour. We are bringing Mennonites into this country. There is room for them all but I think we should try first to get people from the British Isles. We should have, to my mind, a restricted immigration. When the party of the present administration was previously in power they brought to Canada large consignments of Doukhobors and settled them on the best lands of the West. And what has happened? Last year the Doukhobors went back in a body to their own country, with millions of Canadian dollars in their pockets. They lived in this country, they were fed in this country, they were protected in every way, during the war and otherwise; they were even clothed by the government. Now, if a man has five or six sons in Ontario, for instance, and he wants to move to the West, he would not get from any government, a railroad ticket to take him two miles, but to my mind these are the people to whom we ought to give some encouragement—the young boys from Ontario or the provinces further east who have been brought up on the farm. It is unfortunate that the only thought we who are bringing up sons can have to-day is that they are being brought up to become residents of the republic to the south; we cannot see any prospects for a boy in this country. The result is that our young men are going to the United States. A lot of them will come back, but the intelligent, bright young men who go there and make good will remain there; we are really getting only the second rate fellows back. In twenty-five years from now our neighbours to the south will have got all the cleverest men that this country produces.

I do not know that I can say anything further, except that the only consistent course I can follow is to vote against this budget.

Mr. ARTHUR DENIS (St. Denis) (Translation): The economic policy, Mr. Speaker, which the present government has been carrying out, ever since they have been at the helm of public affairs, has produced excellent results. The financial statement which has just been submitted to us by the hon. Acting Minister of Finance (Mr. Robb), allows us to hope for happier days; it assures us that the administration is in better hands, and that, no doubt, we are on the road to prosperity. For my part, Sir, I am quite satisfied with the budget that the hon. minister has brought down. It answers the wishes of the great majority of citizens of this country, and also responds to their needs. It is the return to the old-time and distinctive policy of the Liberal party, the policy to which the country is indebted for its great prosperity in the past.

What is very pleasing to note in this year's budget, is the decrease of the national debt which, under the old Conservative regime, had enormously increased, rising from $340,042,052.03, in 1911 to $2,340,878,983.69 in 1921-22, the last year of an unfortunate Conservative administration, and, without precedent in the annals of our history. The administration of public affairs was under the present government during only the three last months of that fiscal year; consequently, the responsibility for that year's administration rests with the late government. In that year, the national debt increased to $2,422,135,801.73. In 1922-23, the first year of the present regime, the debt increased to $2,453,776,868.74, however, for the year 1923-24 ending March 31, the present government have announced that the debt has been reduced to $2,410,162,174.

The heritage which the late government bequeathed to the present one was not much to be envied. However, inspired by the greatest fortitude and a most determined patriotic desire, they courageously buckled down to work. The whole country, to-day, rejoice in seeing that work accomplished for the general welfare of its citizens. To reach such a result, Sir, a strict economy had to be carried out in the administration of public affairs and certain pressing work postponed, such for instance, as the erection of a post office in my constituency, the need of which has been felt for a number of years, and which I have continually been requesting since I had the honour of respresenting the division of St. Denis. This post office is needed, owing to the large increase of population, the commercial and industrial expansion and especially the importance this northern section of the city of Montreal has taken within the last years; it is to-day the most beautiful part of the great metropolis of Canada. Its population is considerable, having over 100,000 inhabitants, and, within a few years, it will reach 125,000. It is the most favourable locality to reside in, both as regards the sanitary and financial standpoint. It is by practising economy, Sir, that the government have succeeded in bringing down the expenses and increasing the revenues to such an extent that, this year, they were able to announce to the country a surplus of $67,750,000. We must rejoice in seeing such results and congratulate the government on this success. I do not ask our friends who sit on your left, Sir, to do

so; let them, however, cease sowing falsehoods and slanders throughout the country and especially in Quebec, and, instead of spreading the whisper of death, let them breathe the air of prosperity which the present administration is sowing. I think, Sir, that this air does not suit them accustomed as they are to live in an atmosphere contaminated by all kinds of parasites from which the country has suffered during their administration.

The most serious side of our opponents' criticism, is the reproach of our having disturbed the tariff and having been false to our last year's pledge of upholding its stability. Whatever they may think, say or read, they cannot possibly prove such a contention. This government promised to give the country a tariff according to its needs and conditions. Under present circumstances, there are two classes which are in need of protection: The labouring class, which constitutes the large majority of consumers, and the farming class whose industry is threatened, owing to the prevailing low prices of their products and the high cost of implements and the expense of farming. Briefly, the government wished to grant the small wage-earners, the labouring class, as much protection as is offered to the wealthier classes. It is with that aim in view that the government has reduced the sale tax by one per cent. This reduction may appear to us very small, on first sight, but for those who have a large family, this is quite an item at the end of the year. We find these large families especially among people of small means, workmen, farmers, and not among the rich. The former supply the state with man power which is far more valuable than money, especially in a country like ours, whose natural resources are so rich and abundant, and await but strong hands to develop and make them productive for the state. Similarly, we should be very thankful to the government for its decision to raise the income exemption from $300 to $500 for each child under 18 years of age. It is the duty of the government to promote in every way an increase in the birth-rate, throughout the country by giving the greatest possible protection to those patriotic people. The country needs an increase in population. Immigration contributes to a certain extent, but we should favour the increase which comes from births rather than from immigration. It sometimes happens—and it is a misfortune—that these foreign immigrants have not all the qualifications necessary to become good Canadian citizens, for instance, those who are sent from reformatories or other institutions of the kind. I would ask the government to be very particular. Canada must not be looked upon as a dumping ground. There is plenty of place here for all good citizens desirous of settling in this country and becoming good Canadians. Blood ties must not be considered in the selection of immigrants, but what must be especially taken into account is their turn of mind, character and their manhood.

What pleased me very much was to find, in the budget, the lowering of duty on farming implements and the disappearance of the sale tax on said articles. Agriculture is the first and most important of our national industries. It is certainly in need of a little more protection. The government became aware of this and I therefore congratulate them. Let us help to make our farmers prosperous, let us increase their purchasing power and I am convinced that the other industries will feel its good effects. As to manufacturers in general, I think they have no cause for alarm. This government has no intention to hinder them in getting a reasonable profit out of their industries, its aim is simply to help those who are in need, and it requests the manufacturers not to be too selfish, but content themselves with what is reasonable and just. In my humble opinion what is detrimental to the industries of a country is the decrease of the purchasing power of a people. When money is plentiful, we buy; when it is the reverse, business is at a standstill. Protection which can but increase the cost of manufactured products, cannot be the remedy. The secret of a good government is to find the means of increasing this purchasing power. It is the foundation of success. I am convinced that the present government will attain this end.

I had no intention, Sir, of detaining the House very long, but I cannot resume my seat without making a few remarks on the construction of the Hudson Bay railway. I am rather astonished, considering our financial situation, to note that our friends the Progressives are asking for the building of this railway which would require a large expenditure. It is true that our financial situation has somewhat improved, however, we must not undertake further outlays without being very sure that they are in the general interest of the country. I think that this railway construction would be a pure loss for Canada, the open season is too short and ice floes block the Hudson strait during almost

the whole year, with the exception of July and August when it is too early to make use of this route for the transportation of grain. I base my statement on reports made by people having lived the year around in those parts, and therefore, well acquainted with the subject. This railway is not to be looked upon as a luxury, but as a means of communication required for the needs of the population and their trade; it is too expensive an undertaking to be left to the whims of any one. The Hudson Bay railway will not remedy the situation from which the western farmers suffer. such as the high rates of freight and insurance. I would advise them to postpone their request, this would save a great deal of money to the country and would avoid placing a new burden on the people.

I shall close my remarks, Sir, by assuring the government of my entire trust in them. I urge them to continue their Liberal policy and I feel convinced that the country will be grateful to them when the hour for reward has struck. Our friends who sit on your left, Sir, will once more be disappointed, and it will not be the last time.

Mr. DAVID SPENCE (Parkdale): Mr. Speaker, it is not often I take up much of the time of the House, and I am sorry that there are not more hon. members in their seats. No one can accuse me of taking up a great deal of time, and I ask the indulgence of the House this afternoon to bring before it the agreement between the city of Toronto, the Toronto Harbour Commission, the railways and this government in connection with the viaduct.

You are all aware that a representative delegation came down from Toronto on a special train recently and met the Prime Minister and the cabinet in the Railway Committee room. It was a very large and harmonious delegation representing the Toronto Board of Trade, the Toronto City Council, the School Board, and several other organizations which it is not necessary to mention. The delegation asked that the government honour the agreement entered into in 1913 between the Canadian Pacific Railway, the Grand Trunk Railway, and the city of Toronto. I am sorry the Prime Minister (Mr. Mackenzie King) and the Minister of Railways (Mr. Graham) are not present. The reception the delegation got was a very fair one, but the reply to the demands made by the city of Toronto was not just what the city expected to get. The Prime Minister said that he was having difficulty in battling his estimates through parliament, and that no matter how friendly the government might feel towards carrying out this agreement, parliament had to vote the money, and so tonight I wish to draw the attention of parliament to this agreement. That is why I am sorry there are not more hon. gentlemen in their seats.

I have not been asked to bring this matter before parliament by the city of Toronto, but as I was an old member of the city council at the time these negotiations were going on, between 1908 and 1913, and was chairman of the Board of Works and of the Property Committee of the council, I felt it was my duty to bring this matter before parliament.

Before 1908 the city was in negotiation with the railways demanding an elevated track along the waterfront, and in 1908 the Board of Railway Commissioners issued instructions that the tracks should be elevated. The railways opposed that order and appealed to the Privy Council. They lost their case before the Privy Council, and then they began sparring for time until 1913, when they came forward with a proposition of their own and submittted it to the city of Toronto. The city of Toronto came to an agreement with the Grand Trunk and the Canadian Pacific in that year, and the agreement was signed, sealed and delivered, and approved by the railway board. All interests were satisfied, and the city of Toronto thought they were going to have the viaduct built right away. But another year passed and then the war came in 1914. We all know that the government and the city had their hands full as soon as the war came, and the city of Toronto did not then press for the viaduct. After the war came the collapse of the Grand Trunk and the Grand Trunk Pacific, and then finally the taking over of all these roads by the government. The Canadian Pacific has signified its willingness to go ahead with the agreement; Sir Henry Thornton has also signified that he sees his way clear to going ahead with it; and now it is up to parliament to vote the money so that the government can carry out their share of the agreement.

Some people may ask, what is the necessity for this viaduct? I am going to give to parliament the facts that make it necessary that this viaduct should be built. The whole waterfront is cut off from the city by level crossings. Unfortunately, in the early days of Toronto, when it was a small town called "Muddy Little York"—you know how a railway will come into a small town, and how on every occasion it gets the best part of the town or city, and that is what hap-

pened in the early days in Toronto. The railways built along the waterfront, and they have to have room to develop. At present they are a hindrance to the development of the city, because they occupy the whole waterfront and the city cannot get access to its industrial areas along that waterfront. There are twenty-two level crossings in this territory that is supposed to be covered by the viaduct. In 1908, I think it was, the Grand Trunk and the city went in together and depressed the tracks from Sunnyside to Bathurst street. Hon. members who have been to the Toronto Exhibition may remember how in the old days they had to cross the tracks to get there, and how nowadays they can walk right into the grounds, the tracks being below. The viaduct will carry out this scheme in the other end of the city. There are fifty main line tracks, averaging more than two at each crossing, and every now and again an accident happens at one of these crossings. There are sixty-nine shunting tracks in the twenty-two crossings, averaging more than three to a crossing. In the summer time we have a wonderful boat business in and out of the city of Toronto, and all inward and outward waterbound freight has to cross these tracks; you can understand what that means.

At these particular crossings there are from ten to twelve tracks. These have to be crossed in order to reach the coal sheds, elevators, foundries, and fruit warehouses on the waterfront. The whole of the fruit shipments that come across the lake have to be carried across these level crossings, and with the amount of railway traffic that is going on it is a very dangerous proposition. All tourist and passenger traffic to the waterfront must cross these tracks, and the unfortunate thing is that at eight or nine o'clock in the morning, one o'clock in the afternoon, and other hours, when thousands of people are streaming down to the waterfront, trains of the Canadian Pacific railway, and of the Canadian National railway are apt to be coming in or going out on the tracks. It can readily be seen how dangerous these crossings are. Let me give a definite illustration: A man and his wife, accompanied by three or four children come down to reach the waterfront. A train commences to pass and the family get separted. The wife may get safely across but the watchman stops the husband and children. It results in the greatest inconvenience and causes justifiable alarm. Never a day passes but there is a rush to get across to the waterfront before the trains come along and the wonder is that serious accident do not happen. It is not uncommon for parties of eight or ten persons to be separated, and for those first across to start off in one boat while those held back have to sail on the later one. Such are the conditions which prevail, and these conditions the city of Toronto want to have eliminated as far as possible. There are boats catering to the tourist and passenger traffic which leave the waterfront of Toronto bound for the Thousand Islands, Montreal, Quebec and the Saguenay. Boats also leave for Hamilton, Niagara Falls, Port Dalhousie and other points. Then there is Toronto island to which the people of the city gain access from the waterfront. Part of the island is occupied by the residences of people who go there for the summer, the balance is devoted to providing entertainment for the masses. To the crowds thronging to Toronto island these crossings are a menace and a great source of inconvenience. Surely hon. members can easily see the necessity for the construction of this viaduct. I have been engaged in the fruit business on the waterfront of Toronto for thirty years, and I have had to cross these tracks many times each day. It is heartrending to see the danger which is incurred, and the delay which people suffer, owing to the movement of trains over these crossings. It is absolutely necessary that some relief measures should be provided.

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

Mr. SPENCE: The city's industrial area south of the railway tracks comprises 998 acres east of Cherry street. This property cannot be utilized because nobody will establish industries in such a dangerous and inconvenient locality. There are 399 acres from Cherry street west to Bathurst street. Now after taking piers, roadways and sidings from the 399 acres there will be 257 acres for lease by the harbour commissioners. That to-day is not accessible to the city, but we hope to get a revenue from that after the viaduct is built. Out of the 998 acres east of Cherry street there will be 650 acres available for industrial development, the balance being roadways, 348 acres. That makes a total of 900 acres cut off from the city of Toronto by the present level crossings where we hope to have a viaduct built. The cost of the viaduct is supposed to be in the neighbourhood of $29,037,064. The city pays $7,421,946. The railway companies own land to the value of $2,496,100 which will be used for terminals, and they are charg-

ing that to the viaduct. The actual amount to be spent by the railways is $19,000,000. The Canadian National Railways must provide one-half, somewhere around the sum of $9,000,000. We are not asking that this money be all voted this year. It will take five years to build the viaduct, according to the agreement of 1913. It was to be finished in 1916. But suppose it takes five years to complete, it will mean that the government will have to vote for the Canadian National Railways $2,000,000 a year for five years. If it is to be completed within three years they will have to vote $3,000,000 a year for three years, and we are asked to vote that amount in order to honour our obligations, as the Canadian Pacific are prepared to do to-day. I trust the Prime Minister will see that the two or three million which is absolutely necessary will be placed in the estimates. I am glad the right hon. Prime Minister (Mr. Mackenzie King) is in the House at the present time. If this amount is not voted the parliament of Canada, the highest court in the land has not honoured its obligations and how could we expect any other corporation to honour its obligations? The sum of $14,000,000 has already been spent by the harbour commissioners, the city of Toronto and the government. That property south of the railway tracks will be useless unless the work is completed. Private companies have spent millions on properties south of the proposed viaduct, and are not able to carry on their business there. They leased the land on the distinct understanding that the viaduct was to be built, and that they would have access to it; and to-day they are leaving their property—all the result of the agreement of 1913 not being carried out. The government will be responsible for any tragedy that happens on these level crossings. Now, Mr. Speaker, the Prime Minister and the hon. Minister of Railways (Mr. Graham) are in their seats—

Mr. HODGINS: Have there been any accidents on those crossings up to the present time, and if so, how many?

Mr. SPENCE: I may say that hardly a year passes that we have not some very severe accidents.

Going to Cherry street, there are three main line tracks, and there are sixteen tracks altogether. Of course the railways take the opportunity of using every possible track for their cars. The trains come down there full speed on the line, and a fellow gets on the track with his coal wagon, and the wagon goes up in the air. We have had a great deal of trouble in the past and we hope it will be eliminated by the government carrying out their agreement.

Mr. HODGINS: Do the railway companies do any interswitching in the day time?

Mr. SPENCE: Yes, but after the viaduct is built they propose to eliminate switching in the day time. They are taking cars in there every hour of the day, and it is not possible to avoid switching during the whole day, and this switching is done at the foot of Yonge and Bay streets, where people are crossing to catch the boats. Hon. members will know the difficulty there is in getting to a boat when a train pulls in between you and the boat. Some of them take a chance by going in between the cars, and some crawl under. If hon. members were to watch them going from north of the tracks to the wharves to catch the boats, their hair would stand on end. It is a ridiculous condition of affairs. We have put up with it as long as we have been able to do so.

I propose to speak in a general way on the budget and deal with the question of expenditure and of economy.

Mr. PRITCHARD: Would the hon. gentleman tell me if the railways have carried out their contract with the city of Toronto, or did the hon. member deal with that before six o'clock?

Mr. SPENCE: I am sorry the hon. gentleman was not present when I explained that matter at six o'clock. The agreement of 1913 has not been carried out so far. That agreement was signed and sealed, everybody assented to it and all were in honour bound to carry it out. The president of the Canadian National Railways, the president of the Canadian Pacific Railway and the city are prepared to go ahead; they say that they are simply waiting for the government to vote the necessary money to enable them to proceed.

Coming now to the budget, the Acting Minister of Finance (Mr. Robb) has come in for a good deal of congratulations on the speech he delivered the other day. I am afraid I cannot join with those who have congratulated him, and I say this for two reasons. In the first place, I do not think that he ever prepared the budget; I am satisfied that he was subservient to one or two or possibly more persons who dictated the course he should take. And those who have been dictating the policy that the acting minister has set forth have not been very friendly to the industrial people of the provinces of Ontario and Quebec, nor to industry generally. The second reason for my inability to congratulate the acting min-

ister is this: He is a business man of repute and it seems to me that he cannot believe it to be in the country's interest. Having the interests of the country at heart, I feel that the budget has been framed with a view to securing the support for the government of my Progressive friends to my left. Nor is the Acting Minister of Finance to be congratulated on the score of brevity. Apparently the hon. gentleman was not enamoured of it or he would have taken a lot more time. In my opinion he felt embarrassed and was anxious to dispose of the matter in as short a time as possible. The rush budget of this year may truly sound the death knell of prosperity for the urban centres of Canada. Apparently the Liberals have made a concession to secure the support of the Progressive party, and any traditions the old Liberal party had—and they had some—are gone. The old Liberal party henceforth will, in my opinion, be known as the Liberal-Progressive party of Canada,—without progress.

This tinkering with the tariff is a bad thing. Last year the government lost the confidence of the people to such an extent that no investor would freely put money into any industry. I say this without hesitation, for I have met many men who are simply scared to invest a dollar in industry. The French treaty last year was one of the worst things that could have happened in this country; it deprived the country of a revenue of at least $1,500,000 while it took the duties off certain luxuries which to my mind was a most unwise thing to do. The people who buy those luxuries can well afford to pay for them, and should be required to pay fair duties on the goods they get. The increased British preference, too, has worked havoc among our woollen mills, and it is absolutely unfair for the government to put our factories in the position that compels them to compete with the woollen mills of the Old Country and of the continent of Europe generally. Taking into consideration the long hours of labour there, and the working and living conditions, it is utterly impossible for these particular manufacturers in Canada to compete under the circumstances. It is a well known fact that many of the articles in this line of manufacture are made in continental countries such as France, Holland and Germany, and there may be unscrupulous people in England who, taking advantage of this preference, import these goods from the continent and then ship them to Canada and receive the preference on them. That is altogether unfair.

Since this budget was brought down the agricultural implement makers in Canada have been demoralized to a large extent. I may mention one incident in illustration of this. A friend of mine who manufactures malleable iron had an order for $150,000 with the International Harvester Company, and so soon as the budget was delivered the International Harvester Company cancelled that order. It will be seen therefore that the effect is not confined to one company alone; the restriction of business brought about by the budget provisions affects two or three or in some cases half a dozen businesses, and that is the beginning of industrial failure. And the unfortunate thing is that no one knows what is going to happen next. It would be different if there were some assurance that this was the end of the tariff reductions; but no one knows where the policy will lead to. Hon. members emphasized the other night that this was the death knell of protection, and they declared that they wanted free trade. Let me say that what the country needs is not free trade but industrial stability. To my mind it is great folly for the government to hold a club over the heads of the manufacturers and, so to speak, keep them under suspended sentence; for so long as that state of affairs continues you will find no man in the country ready to invest money in business, and you will lose the support of every man in every line of business affected. I am not talking politics now, because, if my party were in power, I would say the same thing. I repeat, it is business stability that we want, and not any policy that is going to result in a wrecking of the industrial fabric of the country. This policy is driving out of business men who are willing to keep the wheels of industry turning; it is doing that every day and forcing such men to tie up their money in safe investments instead of putting it into industry and business that will make for the prosperity of the country. Some time ago the Minister of Finance of Canada and the minister in the province of Ontario filling a similar office floated enormous sums—I do not know how many millions—in bonds, and some of my friends in Toronto who are familiar with the bond business thought it was a great advertisement for Canada to finance itself. And I think that it is one of the surest indications of hard times when men who have money to invest are afraid, through governmental action, to put it into industry, preferring to hide it away in victory and industrial bonds at 4½ and 5½ per cent. There is no money available for industry to-day, so that when a man goes to any bank, unless

he has gilt-edged securities, he cannot secure a loan. Now, I do say that there should be honour in politics. I believe that there ought to be honour in anything, but particularly in politics; and one should have reason to feel that there is stability in the government. This government should carry out the wishes of the majority of the people, and I say that it should carry out the obligations of its predecessors.

Some hon. MEMBERS: Oh, oh.

Mr. SPENCE: I see the Prime Minister laughing; let him laugh.

Mr. MACKENZIE KING: I am only smiling.

Mr. SPENCE: Now, the Speech from the Throne mentioned two specific things, one of which was a reduction in the tariff on the implements of production. That has been carried out. Then they proposed to introduce the single transferable vote. Let me say to the government that that would be the means of introducing more corruption into elections than we have ever had heretofore, and my advice to them is to cease such action entirely.

Some hon. MEMBERS: Oh, oh.

Mr. SPENCE: Hon. members laugh. Naturally they would like to try this innovation in a good Tory constituency, such as the city of Toronto, with a view of winning a few of the ridings; but it would be impossible for them to be successful in any such attempt, no matter what they might do. So they can laugh away. Something should be done to stop the waste of time in this House.

Some hon. MEMBERS: Hear, hear.

Mr. SPENCE: Well, if I lost a quarter of the time consumed by my hon. friends to my left I would be ashamed of myself. I have not talked more than an hour this session, but I think I have said just as much as some of my hon. friends to my left who have talked a week. I repeat, something should be done to stop the waste of time in this House. For instance, something should be done to discourage the introduction of such radical resolutions as have been submitted by my hon. friends to my left. Why, it is ridiculous. I may just instance three. First the resolution to amend the British North America Act. It amounted to nothing but talk—talk and more talk, and every hon. gentleman knew what the result would be. The next was to amend the Criminal Code. The third was to do away with capital punishment. What do you think of such resolutions as those? Do you think it is fair that the country should keep a bunch of men, supposed to have a certain amount of ability, in this House discussing radical resolutions that do not amount to anything at all? I do not know how the government tolerates such a condition of affairs. If I were the government I would do something to stop the introduction of such resolutions.

An hon. MEMBER: How about church union?

Mr. SPENCE: I am not touching church union.

Now, Mr. Speaker, I am a strong believer in protection. I want all my friends to my left to understand that.

An hon. MEMBER: "Moderate" or "adequate?"

Mr. SPENCE: Oh, I am always for moderate protection; that is perfectly all right. I am a strong believer in a protective tariff, and I am more convinced than ever, after watching our neighbours to the south, that we need a higher tariff rather than a lower in order to protect the tillers of our soil and our industries. I want to protect my hon. friends to my left, the tillers of our soil, because I have endeavoured to make my living from them during the last thirty-five years, and I have succeeded fairly well. The reason we need protection is what I will now explain. My hon. friends to my left do not know much about it, and I am going to try to enlighten them. The other night the hon. member for Brome (Mr. McMaster) said: You will never go broke getting a bargain. I reply: No, but the man who gives the bargain goes broke. And that is what my hon. friends would like: everybody would be broke but themselves.

Climatic conditions on the American side operate as a substantial protection to the people there who grow fruit and truck produce of all kinds. In the south they can raise from one to three crops a year while it takes our farmers all their time to raise one crop—and they growl while they are doing it. Take in the southern states,—Florida, Louisiana, Tennessee, Texas, North and South Carolina and Maryland—I will guarantee that the farmers there can raise from two to three crops a year. And yet you are trying to compete with them without protection! Why, it is absolute rot. Take the north shore of Virginia, where probably 50,000 acres are under cultivation to potatoes, which supply this country from the beginning of May to the beginning of July. That crop is sold here when the price is good, but when it

drops the Virginia farmers cease shipping. Then in July I have often sold them carloads of old potatoes, which they plant, and the resultant crop supplies their home market. Can you do that in Canada?

An hon. MEMBER: That is not patriotic.

Mr. SPENCE: What is not patriotic? It is patriotic to make money wherever you can. What I mean by that, Mr. Speaker, is this: If the Americans, being wise to the situation, can grow two crops each year, they are doing right. It is better for them to so apply themselves rather than sit up growling as you gentlemen do. Free trade might help the western farmers temporarily, but it would kill them in the end, as it would also the truck farmers of this country. For free trade would drive away our population, free trade would shut up our industries and the population would leave the urban centres. Take an area within twenty miles of Hamilton—I would talk of Toronto, because I know you gentlemen do not like to hear of that city Suppose one of the big industries there should close down, it would throw out of employment four thousand people—and we anticipate this will happen—and the shutting down of that industry would affect associated industries, and they too would have to close down. As a result the population of Hamilton would soon be reduced from 110,000 to 50,000. This may actually occur, because a free trade policy is bound to bring about such a result if it does nothing else. My hon. friend here (Mr. Senn) is a truck farmer and lives within twenty miles of Hamilton. He does not do any growling. On the contrary, he is bringing in his produce and finding a ready market for it in Hamilton, for the city has a population sufficient to consume all the fruit and garden truck grown within forty miles of its boundaries. But what is going to happen when we depopulate this urban centre? What are we going to do? Land will drop in value fifty per cent, because the price of land fluctuates with the price of farm products. You gentlemen need a little more experience. Your mind is too narrow; you are continually thinking of yourselves to the exclusion of everybody else.

Now, let me tell you something of the class of people you have to deal with in the United States. You gentlemen to my left are continually talking about the great market to the south. I will tell you how selfish the people are there. I happen to be in the nursery business. In 1917, for the purpose of improving their own nursery industry—and I would approve of Canada doing the very same thing—when the United States government saw that the nursery business was being hampered by an over supply of nursery imports from Holland, England and France, they put on a high duty; but they were not content with this, and the next year they put on an embargo, shutting out nursery imports altogether, thus encouraging their own people to propagate nursery stock They have also protected their grape growers; they have forced the people to eat nothing but California grapes, which is the right thing to do, I would recommend the same course for adoption by the Canadian government under similar circumstances, for protection is the only thing. They put an embargo on Spanish grapes, thus preventing the people eating a better grape in order to force them to eat the California product, which is good enough for them. What do we do in this country?

An hon. MEMBER: We have a good government.

Mr. SPENCE: No, we will not say we have a good government. We reduced the duty on wine through the French treaty and killed our grape growers—an entirely different thing from what the United States did with their grape growers. We killed ours; they built theirs up.

Now, I am going to say something else that our hon. friends may think radical, too. As I said before, I am a great believer in protection, and I am a great believer in raising money in the cheapest possible way, that is, by customs tariff. To-day we have entirely too much direct taxation, entirely too many kinds of taxation. We have taxation municipal, provincial and federal, and the condition is such that it would poison the mind of the best citizen against any government. I say there are too many systems of taxation, and they are irritating and annoying everybody. The hon. member for St. Lawrence-St. George (Mr. Marler) told us of an instance just before the war when the revenue of this country was $136,000,000. At that time they raised $126,000,000 by customs tariff and only $1,000,000 in a direct way; to-day we are raising over $155,000,000 by customs tariff and $199,000,000 by taxation, which is absolutely unfair. You are hitting the people who are trying to make an honest dollar, to accommodate and please somebody else.

An hon. MEMBER: Who pays the taxes?

Mr. SPENCE: Everybody knows who pays them. You do not get much out of the farmer, though he is entitled to everything that is coming to him, and if you can find a farmer in Ontario between Toronto and Niagara falls south or from that down east who will say an unkind word about me, I will buy you a good treat. I have farmer friends all over Ontario and I am willing to help them in every way I can. If my hon .friends, however, cannot see what is good for them I am going to point it out to them.

Lower the tariff on anything, I do not care what it is, and you kill industry. I will just mention three or four commodities by way of illustration. There is barbed wire, for instance. At one time there was a duty of ¾ cents on it, but now the duty has gone forever. Cream separators could be made in this country, but no duty is imposed on them and to-day they are made in the United States. Binder twine—that is a thing that touches the farmer; he is always talking about binder twine; the duty was taken off binder twine and what happened? Before the duty was taken off we had twenty-three factories in Canada turning out binder twine, now we have three, and the price has gone up from 7 and 8 cents a pound to 15 cents a pound. That is the result of taking the duty off and killing your industry. That is what will happen if you drive your farm implement people out of Canada: they will go back to the States and say "Now, we will make you pay for your implements; you will pay it all back with good interest."

Mr. EVANS: If my hon. friend will permit a question, may I ask, what is the output of the three twine factories now compared with the total output when there were twenty-three factories operating?

Mr. SPENCE: One-third, I presume. I must say that I had not looked into that, but I am informed on reliable authority—by an hon. gentleman to my left here—that one-third of what we use is made in this country. That is the trouble with the farmer in the West: He has got his eye southward; for goodness' sake let him get it the other way. They seem to be satisfied, now that they have killed the woollen mills, killed more industry and made it more difficult to sell their products. They have killed the home market, which was one of the best markets, after all—and after a while I will tell you something which will make you understand why. You have killed the farm implement business, at least, you have started on the way, and next year the truth of what we are saying now will be shown. That was the case with the hon. member for Lincoln (Mr. Chaplin) in his remarks on the French treaty: He told the House last year what would happen and this year he showed them what had happened. What he said last year was true, and what he said this year was true.

I am a believer in economy. Personally I have always been accustomed to economy. I am not like some people; I was not born with a silver spoon in my mouth, and I have always had to consider economy. I like to see economy practised by the government or a municipality just as I practise it in my own business, but there are very few here who look at it that way or they would not talk so long and so often. Our overhead has increased in this country by leaps and bounds, increased out of all proportion to population. It is caused by too much legislation, too much social welfare, too much spoon feeding of the individual, killing initiative and causing indolence in the country. Is that not right? I think my hon. friends really agree with me but they have not got the backbone to say it. We have heard about widows' pensions, mothers' pensions and old age pensions, but recently we have heard of a new one, the "out of work pension." That was applied in the Old Country, and I heard somebody here advocate the same thing. Just imagine an out of work pension in Canada—why, nobody would ever work; in fact, lots of them do not work now. I heard of an instance in Ireland where you got 27 shillings when you were out of work as against 35 when you worked—now, who would work? I do not believe even my hon. friends to my left would work under those conditions.

We have too many fads introduced into parliament, too many dreamy ideas, too much nonsense all the time. Legislators, representatives of the people, should have backbone, but as my old friend Sam McBride of the city of Toronto would say, the difficulty with legislators is that their wishbone is where their backbone should be.

Another way of economizing is by cutting out all commissions investigating this and that, costing $300,000 for this, $500,000 for that, and so on. Members of parliament should be in a position to accept their share of the responsibility for the government of this country and no commission should be appointed outside of this House. You can get men in this House who are just as capable of investigating anything as you can get outside of it, and in that way you will save the country money. I have always advocated that; in the city council I did the same

thing, so it is nothing new for me. I never yet saw anything come out of a commission; they are usually told the finding, they bring it before you, and that is all there is to it.

We have too many publications coming from the Printing Bureau, and I would advise the government to look into this very thoroughly with a view to seeing what could be eliminated. There is an extravagant waste of paper; the mail carriers of this country are loaded down with useless material. Seventy-five per cent of what the mail carriers carry around in the city of Toronto is junk that nobody ever reads. My cellar is full of it and every other cellar is full of it in the same way. Unfortunately we cannot burn it because we use oil burners. When we used to burn coal we could dispose of the stuff, but to-day it is piling up and we have not even anybody to sell it to. I saw in Hansard a question asked by the hon. member for North Wellington (Mr. Pritchard) in this connection, and it was a good question; it brought out some information. He asked:

1. How many tons of waste paper have been sold by the government during the last fiscal year?
2. What is the total amount received for same?
3. What per cent of this amount was obtained by the Department of Agriculture?

The Hon. Mr. Copp answered the first two questions. In reply to the first he said:

The weight of paper sold is not available.

That is information for you! Just imagine a department with a head giving that out. The answer to the second was: $497.36. Well, that is pretty good. The answer to the third question was:

Does not refer to this department.

As usual, no information from the Department of Agriculture. The question was also answered with relation to the Post Office Department, as follows:

1. 350.
2. $4,199.65.
3. No information.

With respect to the Department of Public Printing and Stationery—and here is where the extravagance comes in—this was the answer:

1. 722 tons, 1,509 pounds.
2. $26,558.30.

Now, this is a serious proposition. It is extravagance, and no matter what government is in power, no matter whether this has been going on for the last half century or not, it should stop, and now is the time to stop it. I presume that half of that amount scrapped was never sent out, but was just baled up as waste paper.

Mr. MURDOCK: Is the hon. member aware that those figures for the Printing Bureau cover all the waste paper from all the departments of the government in Ottawa, and that the price received is for all the waste paper from every department of the government, not from the Printing Bureau alone?

Mr. SPENCE: The Post Office Department sold over $4,000 worth, so they must have sold that independently.

Mr. MURDOCK: That is for waste paper at Brockville and other outlying points shipped into Ottawa to be sold.

Mr. SPENCE: Anyhow, I think hon. members will agree with me that it is the height of extravagance, and I do not care if my own party were in power I would say the same thing. But you are in power, and it is up to you to remedy it. You would almost think there were good times in the country from the way money is wasted; but when you want any money for something useful there is no money. Last year we bought the Hotel Scribe in Paris, which we did not need, for which we have absolutely no use, for $1,300,000, and now we understand it cost $2,500,000, and the manipulator, Mr. Aronovici that we heard so much about—well, there is always a fellow in between. My friends to my left object to the middleman. I do not like middlemen in this case, and that is what Mr. Aronovici was. I saw in a paper that came to my office to-day that they expect to spend another $2,500,000 on that Hotel Scribe, so it may take $5,000,000 altogether. I cannot say whether the report is true or not. At all events we know that it has cost in the neighbourhood of $3,000,000, and we know that everything of this kind that is purchased by a government or a municipality always costs more than the original estimate.

Then we have our friend the High Commissioner in London whom I know well—full of vanity as an egg is full of meat. He is of the opinion that he wants a beautiful building in London with a great big stone front, and the great "I Am" walking up into it. Just imagine spending that amount of money there. If the Salada Tea had made it all, I would not mind so much, but the poor taxpayer has to pay for it.

Now I come round to home, to my friends from the West. Ten years ago there were no industries in the West at all. Very little of anything was raised there except wheat. I do not think there was any dairying done there ten years ago, perhaps five years ago.

Some hon. MEMBERS: Oh.

Mr. SPENCE: What I am going to tell you, you may not know. Yes, even five years ago,

and I want to compliment the people of Alberta and Saskatchewan for the way they have developed dairying out there. Their cheese factories are doing splendidly. Their creamery butter is first class; they are producing the best make of butter in the Dominion right in the province of Alberta; I know what I am talking about, because I am associated with people who are dealing in butter. Alberta is to be congratulated on the splendid make of butter she is turning out, and as some hon. member has said, the whole country will have to do the same before the butter situation will be as it should be in this country. About five years ago people from the East, people that I know, shipped poultry and cheese and butter, condensed milk and everything into those provinces. But to-day we are receiving in the East, in Toronto and Montreal, hundreds of carloads of butter and cheese from those provinces, and this year alone Alberta and Saskatchewan shipped to the East over a thousands carloads of turkeys, averaging 20,000 pounds to the car. So I say they are to be congratulated. They are developing an industry out there, and in the near future my friends to my left will be howling for protection just as loudly as they are howling to-day for free trade.

Mr. COOTE: What did they get for the turkeys?

Mr. SPENCE: As much as they deserved. That just slipped out; I did not intend to give that answer.

Mr. ELLIOTT (Dundas): What did you get out of it?

Mr. SPENCE: To be frank with you, I was good enough to help some of your western friends out with their turkeys. One man came with a carload of turkeys, chickens and eggs, for fifty-six different people, and he had all the stuff from each man packed in one box. I got him a place to put his stuff in, and I sold some of the turkeys for him and it cost him nothing. But that is not the point. The people in the West to-day are aware that they must get proper boxes made to crate their stuff in; they must have proper refrigeration, and kill properly; they must use the proper-sized box. Some have been doing that this year, and they are making a wonderful success of it. This year you have 100,000,000 bushels of wheat in this country more than the world can use, and there is nothing else for it but that wheat must come down in price to create a demand for it. If you drop anything in price you will generally find someone willing to buy it and take a chance on selling it, but I maintain in this case he will lose. I paid 35 cents a pound for western turkeys and paid as low as 23 cents, and some of them should never have been shipped. I do not blame my western friends for that, because they are not fully conversant with the class of stuff that will bring the price. But you are developing this industry in the West, and you people will soon be hollering for protection as loudly as you holler now for free trade, and you will remember what I have told you, don't forget that! The eastern provinces cannot afford to let you men in the West think you rule the country no matter how much we think of you, and we certainly entertain a high opinion of you.

Some hon. MEMBERS: Oh, oh.

Mr. SPENCE: Every farm in the West is not owned by a western man. Many of you gentlemen have done well on the farm. I will guarantee this: If you take fifty men in the retail business and compare them with fifty men selected from yourselves it will be found that you are doing a great deal better, and yet you are growling at your condition. Business men work from early morning until late at night—in fact they are never through—but you gentlemen only work for a few hours.

Some hon. MEMBERS: Oh, oh.

Mr. SPENCE: I will take that back and say that you work all day, but you certainly do not work all night. In order to get along in life many men in business have to work practically day and night. I remember when I started—I do not mind telling, I am not ashamed of it—I had a mind to be at the top in my business. I worked all day in the fruit market beginning at seven o'clock in the morning, and at seven o'clock I went to the office and worked there until two and three o'clock every morning. I did that for three months at a time. I have never been able to get the leisure for a trip across to Niagara. But many of you gentlemen when you work a few months in the spring and fall get an automobile and go off for a hike to Vancouver. You toil not neither do you spin. Now, the point I want to make is this: Take fifty men starting upon the farm and fifty men starting in the retail business, and you will see at the end of ten years the men on the farm will have more money than the men in business. Yet you think business men are better off than you are. I tell you frankly that you have more money than they have. Take any two hundred people in the retail business in the city of Toronto, I doubt whether any fifty of them could square their accounts up.

The middleman has been accused of being a vulture. I happen to be a middleman myself but I have never been a vulture, or a parasite either. To-day conditions are terrible in this country; business is really bad, and these tariff changes are going to make it worse. The bankers are beginning to make you square up if you happen to have an overhead that amounts to anything. The strong has always protected the weak, and we propose to carry out that policy. In Toronto we have to enact by-laws to prevent people from walking in front of the street cars and killing themselves. Similarly, some of you gentlemen will have to be protected, and we are going to protect you. The difficulty is that hon. members from the prairie provinces think that all the wisdom has been extracted from the rest of the country and deposited in the West. Now that is not so. All the wisdom of Canada is not confined to any part of the country. You in the West have some, we in the East have our share, and the balance belongs to people in some other part of the country. Still hon. gentlemen from the West talk as if they "knew it all" and that we knew nothing. What we require in this country—I am talking seriously—is national unity. We cannot secure that without a real national policy, a policy that will keep Canada for the Canadians, Canadian business for Canadians, but keeping in mind all classes. Let us forget our troubles in future; let us bury the hatchet and help each other. I say to you gentlemen from the West: Stop your growling and get friendly with yourselves. Our population unfortunately is not large; it is a shame that this country is not growing any faster than it is. We really have no internal business, and if we do not retain our population conditions in future will be much worse than they are at present not only for the farmer but for the artisan and the man of business. Mr. Beatty of the Canadian Pacific Railway—he must be a fairly smart fellow, he draws a big salary and must earn it—was asked how it was that the United States enjoyed so much prosperity. He said there was a tremendous prosperity in the United States largely by reason of the internal trade developed in the country and which its enormous population made possible. In Canada our internal trade does not amount to anything. But when that country is filled up our turn will come. The United States will be overstocked shortly and then we shall start in on an era of prosperity, we shall be on the eve of a brighter day.

I was glad to hear the speech the hon. member for Nipissing (Mr. Lapierre) made this afternoon. I congratulate him on the optimism he displayed when speaking of the mineral resources of northern Ontario. That is the kind of speech that attracts population to the country, not speeches of a pessimistic character in which there is so much whining and growling. I do not like to hear speeches in this House like that delivered by the hon. member for Macleod (Mr. Coote). That hon. gentleman had a magazine—I do not know whether it was the Christian Guardian or the Grain Growers' Guide—but he was quoting a lot of stuff out of it and trying to antagonize the working man, the middleman, and the man who produces pork one against the other. "The producer," he says "is getting only seven cents a pound for pork and according to advertisements you cannot buy the bacon for less than forty-five to fifty-five cents."

Mr. COOTE: I rise to a point of order.

Mr. SPENCE: Pardon me. When I get through you can talk all you like.

Mr. DEPUTY SPEAKER: Order. A point of order has been raised.

Mr. COOTE: I would suggest the hon. gentleman is out of order, in entirely misquoting the hon. member for Macleod, that is myself. I never said that bacon was fifty-five cents a pound.

Mr. SPENCE: Hansard of the 28th of March will show what my hon. friend said.

Mr. COOTE: Very well, read it then.

Mr. SPENCE: My hon. friend said fifty-five cents or fifty cents and at the time I said, "No".

An hon. MEMBER: Quote what was said.

Mr. SPENCE: Pardon me. When I get through you can refer to Hansard. I said, "You could buy good bacon for thirty cents," and I was laughed at by hon. members to my left. This occurred on Friday night when I had to leave in order to go to Toronto. There was an effort to shut me up very quickly in the discussion because I happen to be a middleman.

Mr. COOTE: I would ask the hon. member to either substantiate his statement or withdraw it.

Mr. DEPUTY SPEAKER: There is no reason now for the hon. member to withdraw the statement; he has made a sufficient explanation.

Mr. SPENCE: I practically tell you what I believe to be the absolute truth. If I am

wrong I apologize. The hon. gentleman can refer to Hansard and see if I am not right. I have the Montreal paper before me where it states that the price of bacon ran from 35 to 45 cents.

Mr. FORKE: I rise to a point of order. If an hon. member in this House makes a statement which is not in accord with the fact, is he bound to produce the evidence to prove that he is right before the member is compelled to retract?

Mr. DEPUTY SPEAKER: Mr Speaker is not required to answer questions, but the hon. member makes an explanation in which he says he thought it was either 50 or 55 cents, and if that is not correct, Hansard will show. That is not saying that he refuses to accept the statement of the hon. member for Macleod.

Mr. SPENCE: This is just what I like—to bring out the cold facts. I never hide from anything I say; I am not going to tell a lie; that is something I do not do. I may have bad habits, but that is not one of them, and I think my memory serves me right ninety-nine per cent of the time.

An hon. MEMBER: Wrong this time.

Mr. SPENCE: If I am wrong I apologize. Get Hansard of the 28th March. That is the thing to go by. The hon. gentleman was whining about the spread between the farmer and the consumer. That is what causes the trouble and statements that are misleading should not be made by any hon. member in this House.

Mr. COOTE: May I ask the hon. member, if he does not believe in making statements which are not true, let him read what it is in Hansard at page 829, where I spoke about the price of bacon, and he will find that he has made statements which are not correct.

Mr. SPENCE: I have here the documents to prove my statements. I say that bacon could be bought at 25 cents a pound, some as low as 20 cents, and some at 30 cents.

Mr. COOTE: The hon. member said to-night—

Mr. DEPUTY SPEAKER: The hon. gentleman has no right to interrupt an hon. member addressing the House.

Mr. COOTE: The hon. member has no right to misquote me and refuse to withdraw the statement.

Mr. SPEAKER: The hon. gentleman has no right to interrupt an hon. member who is speaking.

An hon. MEMBER: Read it.

Mr. SPENCE: I do not wish to hide anything or to make any insinuation which is not absolutely true. The next morning after my hon. friend made the statement in the House I dropped into the store at the corner of Queen and O'Hara, Martin's store, near my own home, and bought four pounds of nice side bacon, at 23 cents a pound. I have here an advertisement in the Toronto Telegram—and we all accept the statements in that paper in this House. This advertisement gives Arnolds price of bacon at 20 cents for real first-class side bacon, and Martin's bacon at 23 cents by the piece, and 25 cents sliced by the machine for first-class breakfast bacon. Other pieces of a lower standard selling at 15 cents. The difficulty is that too many people are asking for fancy cured, fancy cut bacon, and I think if they would take the bacon cured in the ordinary way there would not be so much discontent. Arnolds Limited in Toronto, one of the big concerns, sells sliced bacon at 20 cents, and they were selling it at this price the same evening the hon. member for Macleod (Mr. Coote) made the statement that it could not be bought for less than 45 or 50 cents. Now I will try and find Hansard, to get the matter right. The hon. gentleman said that he had bought several pounds of bacon since coming to Ottawa and the cheapest he had paid was 35 cents, and he said that he also paid 45 cents. But previous to that occasion there is a place in Hansard where he quotes the price—oh I have not time to look it up. I have proved my statement that I can buy good bacon for 20 and 25 cents, and I have brought two papers which prove that I bought it for 23 cents, and down as low as 15 cents. The people who are accused of making so much money in all these years have lost more money than the hon. member will ever be worth. I looked up the returns of the William Davies Company for 1923, the year they are accused of making the big spread between the 7-cent pork and 50-cent bacon. That firm lost $600,000 on bacon alone, and some of the members from the Calgary district will tell you that firms up there lost a few thousands too. Gunn's Limited, lost around $300,000,—and I hate to make the statement, because they are a big reputable firm; why should people of that class be ridiculed by members of this House when they have not done what they have been accused of doing, namely, of having the big spread in their prices? The Harris Abattoir Company was a private concern, and did not require to make a return, but it is known that they lost money. Many other firms have lost

money on the very item of bacon the hon. gentleman is talking so much about.

I want to say to my hon. friends to my left that they should not worry too much about the American market. The people over there do not want their stuff. They are a great big producing country, and produce more than they can consume, and do not need our stuff. You might just as well ship nursery stock to Holland, a country that grows nothing else but nursery stock, as to attempt to force your product on a market where they do not need it. What my friends from the West should do is to cultivate their own market, and increase our population and then you will have somebody to consume your products. After our own market the next best market is the Old Country. We have that market still, and I can show hon. members the benefit of that market to this country. Last year the British Columbia growers formed one big co-operative society. The hon. member for Cariboo (Mr. McBride) quoted the instance where a man made 60 cents on a box of apples. That was the middleman, the man who sold it in the prairie country. It may be possible that that man lost a thousand times sixty cents on apples the year before, and was trying to get some of it back—for these dealers were all in the same boat. However, the British Columbia growers formed one big combine, as I call it—you would call it the same if private individuals were doing it. They were trying to put the re-sale price on their stuff, but luckily the better element decided it was not right and should not be done. They knew that in the two years before that, when their apples went bad, we gave them a good square deal. When the apples went bad after they were shipped, they came to me and paid me $800 back on one or two cars of apples. If it were not for the Old Country market to-day you would all go begging. A broker in Toronto got an agency for the British Columbia people and he obtained a rake-off of 5 cents per box. It takes 750 boxes to fill a car and he sold to firms in London, Glasgow, Manchester and other places about 500 cars for these people in British Columbia. It netted them a big profit and afterwards they sold thousands of boxes in the Old Country. Had it not been for that market they would not have been able to dispose of these apples. Let us bear in mind that we cannot depend on the market in the United States: When they want your goods they readily remove any embargo that may be in force against them, and when they can do without them, they raise up a tariff wall to keep out all your products. That is how much love they have for us in Canada. The trouble is that we are all too anxious to buy American products, American goods and American tools of all kinds. Let us turn our attention a little more to British-made things; let us buy British tools such as hammers, and other articles. If the trade commissioners were doing the proper thing they would get in touch with the manufacturers of old Britain and see to it that they open emporiums in Montreal, Toronto, Winnipeg and other Canadian cities. Why should we buy Scotch tweeds in New York? We do it simply because New York is three days away while England is so much more distant in point of time. I readily admit that sometimes we have to do business with the United States; we are forced into this, and I am doing it every day myself; we all have to make a living, and we cannot altogether avoid doing business with the United States. But I do say we should do business as far as we can with the Old Country. We could get from Great Britain such things as crockery, chinaware, tinplate, tools, such as hammers and saws, and in short most of the things that we require; and I do not see any reason why we should not patronize the business people over there to a greater extent than we do. I remember in the good old days when Canada was prosperous we shipped over to Europe the peelings of apples used in the production of evaporated apples; Germany made some sort of drink out of this waste matter, and at that time we lost nothing. But to-day Germany's money is worthless and we have to depend upon the Old Country market, and that is why I emphasize the fact that we cannot depend upon the United States for our prosperity.

Before I conclude I want to appeal once more to the Prime Minister and the cabinet to give Toronto a square deal in the matter of the viaduct. In making this appeal I am only asking the government to do what it is in honour bound to do by the contract of 1913. Whenever I personally have signed my name to any document pledging myself to do anything, I have always honoured that undertaking. And that is what we all expect an honourable government to do. Unfortunately, as I have already explained, when the war came on we could not press the late government to do anything, and furthermore the Grand Trunk Railway got into difficulties. But to-day the parties are all agreed to proceed, and Sir Henry Thornton has stated that if the government will vote the money he will be willing to begin operations. The Prime Minister is familiar with the condi-

tions and I trust that he will see to it that a sufficient sum is provided for in the supplementary estimates this year to start the work. I am not asking for anything unreasonable. There are many public works that are badly needed in Toronto. For example, we have altogether inadequate customs accommodation and offices that should be concentrated in one building we have spread over a mile in twenty different places. This causes untold inconvenience to business men who have to do business in dark holes where there has to be artificial light day and night. The government is spending more money to-day in the way of rent for customs accommodation in Toronto than would pay 6 per cent interest on a million-dollar building. The customs receipts last year for the city of Toronto amounted to $60,000,000, while the post office revenue was $6,000,000; and I might point out to the government that that city has the best-paying customs and excise offices of any city of the Dominion. Surely we deserve some of the money that is made in Toronto to provide decent accommodation; and the government must realize the reasonableness of the appeal I make to-night for the carrying out of the contract in regard to the viaduct. It has been said that the government cannot afford to do anything for Toronto if hon. gentlemen on this side of the House oppose branch lines—at least something to that effect has been stated. But I do not think that any government should be small enough to deprive the city of Toronto of something to which it is absolutely entitled and which the other party is in honour bound to give, simply because of what any members of parliament might do.

Mr. MACKENZIE KING: I am glad my hon. friend has raised the point. I have no doubt that those who were present at the deputation the other day will bear me out when I say that I made no such statement as was attributed to me, in one or two quarters, namely, that whatever the government would do in relation to the viaduct would depend upon what might be done in connection with the branch lines. I made no statement of the kind although I see that a part of the press so construed my words. What I did say—and I repeat it tonight—was that it was parliament and not the government that had to vote the money; and as hon. members know, there is difficulty in securing from parliament money for a number of purposes, and the help given in one direction other things being equal is not without likelihood of proving helpful in another.

[Mr. Spence.]

Mr. CHURCH: With all due respect to the Prime Minister, I submit that his reply is far from satisfactory. A contract is a contract even though made with the government or with the Grand Trunk Railway. The contract is enforceable by specific performance and the government can be taken into the Exchequer Court of Canada and the contract enforced in the regular way. The Prime Minister's reply is not at all satisfactory and there is a legal remedy by way of specific performance. I submit that something should be done to adjust the matter.

Mr. SPEAKER: Order.

Mr. SPENCE: What the Prime Minister has stated to-night I understand to be in keeping with the statement that he made the other day. But I submit that he has sufficient power to be able to introduce a bill in this House and at least give it a chance; and I think he ought to take the matter up with his colleagues and advocate it, with his followers behind him. If he will do this I shall very much appreaciate his action. Now, Mr. Speaker, I have nothing more to say, but I appeal once more to the Prime Minister and the cabinet to give this matter the most careful consideration.

Mr. L. J. LOVETT (Digby-Annapolis): Mr. Speaker, since coming to this House at the opening of the session of 1922, I have been a regular attendant, an attentive listener, and a close observer of all that has taken place up to the present time. Under these circumstances, it is quite natural that one should form his own conclusions and make his own deductions as to the relative merit or demerit of the business transacted in this House. I have reached the conclusion that fully one-half of the time of the House has been wasted in academic discussions that lead nowhere, besides costing the people an immense sum of money. Sessions that have lasted five months could have been reduced to three, and would have furnished ample time to dispose of the real business before the House. Long-drawn out speeches, occupying anywhere from one hour to two and a half and three hours, have been of too frequent occurrence over matters that are of no earthly interest to the country, but which only serve the purpose of satisfying the vanity of certain members who think they are endowed with great oratorical ability.

I believe, Mr. Speaker, it is customary in our Mother parliament for members to seldom occupy more than thirty minutes in the discussion of the weighty problems with which they have to deal. This being the case,

surely we in this parliament, would have ample time to present our views on any question in the time limit mentioned. I would therefore suggest, Sir, that from now on this session be made a purely business one, and that outside the ministers of the Crown, the right hon. leader of the opposition, and the leader of the Progressive group, all other members, who really desire economy, who really desire that the business before the House be disposed of in the shortest possible time consistent with good legislation, who really desire to make this a real businesslike session, confine their speeches to not over thirty minutes duration.

Having said this much, permit me to offer my hearty congratulations to the Acting Minister of Finance (Mr. Robb) and the government, on the wise, sound, and able budget which has been presented to this House; and especially do I wish to congratulate the Acting Minister of Finance on the splendid manner in which he acquitted himself in presenting his first budget. I know its contents cannot be considered healing balm to the official opposition, but on the contrary it has rung the death knell to their hopes of a speedy return to power, for they must know that this budget will be thoroughly acceptable to the Canadian people. It is a straight tilt between the forces of high protection on the one hand and those of low tariff on the other. The line of demarcation is clear and distinct. The cleavage between the two parties is clear cut and well defined. The gauntlet has been thrown down and we on this side of the House are not only anxious but eager to take up the challenge when the time shall have arrived to go to the country and meet our opponents on the battle ground of reduced taxation and lower tariff, confident in the belief that the downward revision of the tariff will again restore to the country an overwhelming measure of prosperity.

There are, I believe, three distinct lines of thought regarding our fiscal policy: One of free trade, ideal in theory, but impracticable at the present time, as every sane and reasonable man will admit; one of high protection, which is the god of the Tory party, and which has been tried out in this country under the so called National Policy, but has been weighed in the balance and found wanting; one of low tariff, which by the bringing down of the present budget, has received a new impetus and called into being a real "national policy," which will be far reaching in effect, placing agriculture and all our other basic industries on a sound footing, and at the same time preserving and fostering our manufacturing industries.

No matter what the tariff policy may be, you will always find our manufacturing friends clamouring for more protection, in spite of the fact that they have been pap fed for years and years. Why, Mr. Speaker, their field of vision is so limited, so self-centered, that they begrudge concessions, no matter how small, to other interests in this country. They are so blinded by selfishness that they overlook the fact that the success, expansion, and development of our basic industries is the one thing essential to the success or failure of our manufacturing concerns. We have, in the budget just brought down, a tariff policy on sound Liberal lines calculated to give all interests in the Dominion a fair deal, and in no instance can it be fairly said that hardships have been inflicted on anyone.

The member for West York (Sir Henry Drayton) in his opening remarks previous to adjourning the debate, leaped at once to the front, and in his warrior-like style endeavored to detract from the real significance of the surplus as stated by the acting minister in his budget speech, claiming that ten millions should be credited to the former administration, as it was derived from acknowledged Imperial book debts, which had been pending for a long time, a settlement of which had been recently effected. Perhaps there is something in the hon. member's contention, but in order that the matter shall be fairly understood, let me remind the hon. gentleman that when the Liberal government went out of office in 1911, they left in the treasury a surplus of some thirty millions of dollars, so if the ten millions claimed by him is deducted from the thirty millions left by the former Liberal government there would be a balance of twenty millions. This added to the twenty millions surplus of this year would give a surplus of forty millions, instead of thirty millions as announced in the budget speech. So I think the hon. member will not find much comfort whichever way he takes it. Let me also point out to him and his party, that if this $30,000,000 surplus left by the former Liberal administration had not been sqandered by his government there would not be to-day the same reason for the existing high taxation. The people of this country have no one to blame but the former administration and their friends for the immense burdens they are now carrying, and it has been left to the present government to tackle the most difficult task, to disentangle the most awful mess, and to solve the most complex problems, that have ever faced any government in this country since confederation. But I am proud to say that this government grappled with the task

before them in a statesmanlike way, and, as the present budget shows, by strict economy and retrenchment they have relieved the taxpayers to the extent of $24,000,000, a reduction of $2.70 for every individual in this country.

I believe, Mr. Speaker, that when the people have had time thoroughly to study and digest the provisions laid down in the budget there will be on their part—and especially does this apply to the farmers, lumbermen, fishermen and miners—a feeling of high hope and optimism and a determination to carry on with renewed vigour and energy which will augur well for the future of Canada.

It is not my intention to analyze in detail all the provisions contained in the budget. Suffice it to say that at last the basic industries of this country have received that recognition to which they are justly entitled. To those who have closely scanned the provisions of the budget the conviction has come that the right hon. leader of the opposition (Mr. Meighen) is certainly a false prophet, because his prediction, so sneeringly made, of an infinitesimal reduction of duties and taxation has not been fulfilled. It only needs the comments of the Tory press to confirm the fact that this budget is in the interests of the Canadian people as a whole, that it is a budget designed not in the interests of the rich and the powerful but in the interests of the great mass of Canadian people, and at the same time not destructive of legitimate business interests. Looked at from every angle, it is not only fair in its provisions but must be considered an intelligent and honest effort to adjust the financial problems which have been harassing and embarrassing the Canadian people for so long and preventing the prosperity which all true Canadians would like to see in our Dominion.

Since coming into power we as a party have been continually sneered at by the official opposition and accused of not carrying out our pre-election pledges. Now that we are carrying out those pledges we are blamed just the same, so it is a case of "damned if he will and damned if he won't." But the method they are pursuing in dragging a red herring across the trail in order to divert the attention of the people from the awful mess which they made of the finances of this country during their term of office is not, and will not be successful. The people will remember for many years the plight in which the former government plunged this country during the time they had seats on the treasury benches. Well do hon. gentlemen opposite know, Mr. Speaker, that under the legacy of debt and obligations they bequeathed to us it was not possible for the incoming government to reduce at once to any great extent the burden of taxation. Only by determined effort, only by fearlessly cutting expenditure, was it possible to make the large reduction of $24,000,000 in the taxes of the people as outlined in the budget, and also a reduction of $30,000,000 in the public debt. Nor could the government have effected this reduction had it not been for their business ability and acumen, qualities which have resulted in their being able to declare the great surplus which has for the first time in many years replaced the dreary tale of enormous deficits. Surely, Mr. Speaker, all sane, reasonable and fair-minded business men in this country must respect an administration which in two short sessions in power has been able to make such a remarkable record under such adverse conditions. That record is a conclusive and complete answer to the propaganda of pessimists and the "whispers of death" that have been circulated throughout the country by the Tory party and Tory press. I believe that our opposition friends never dreamed that any government could emerge from such trying difficulties as those which faced this government upon attaining office and find the rightful solution, which they have undoubtedly found, to place this country once again on the road to prosperity.

There is one thing certain, Mr. Speaker, that the government's task has not been lightened in the slightest degree by any constructive ideas furnished by the opposition or by the Tory press. They have clung like barnacles to their restricted idea of protection and high tariff walls, and are bitterly disappointed because the government has in its budget cleverly elucidated a policy which will undoubtedly win the admiration and commendation of the majority of Canadians.

I alluded in my previous remarks to a real national policy, a new national policy, if you will, which has been called into being by the pronouncements contained in the present budget, a policy that has given the country true leadership and is bound to renew and stimulate interest in the solution of our national problems. It has awakened in the minds of all true Canadians, young and old, the great possibilities that lie before us. It will not only retain within our borders the young and virile manhood of our country, but will also act as a beacon to attract again to our shores those who have sought other countries and are only awaiting more prosperous times to return to their native land.

The rallying cry has gone forth for advancement and progress. The Tory policy of in-

action and negation which has caused this country to flounder in the slough of despond for many years has at last given place to a true national policy, and in place of the dark financial cloud that has hung over this country like a pall we see upon the horizon the dawn of better times, the brightening rays of hope. All true Canadians will register the vow to press onward, with the firm determination to do their share in helping to complete the task which is still before us.

Mr. D. W. WARNER (Strathcona): Mr. Speaker, I wish to associate myself with those who have expressed regret that our Finance Minister (Mr. Fielding) has not been able to present what would have been his eighteenth budget. I wish also to compliment the Acting Minister of Finance (Mr. Robb) upon the businesslike, lucid and fair budget that he presented to the House. I say fair, because this budget takes the first step that we have had in the direction of a satisfactory reduction in customs duties since I have had anything to do with parliament, and for a long time before that. In fact, it is the biggest step taken in that direction that I know of since I came to Canada. But the budget is not so outstanding or so acceptable for what it does in itself as for what the government have proclaimed in regard to it. Some of the remarks made by some of the ministers on the other side of the House are in my opinion perhaps even more noteworthy than the budget itself, for we have had one minister, the Minister of the Interior (Mr. Stewart), state that he hoped this budget sounded the death knell of protection in Canada. Now that is a significant statement, and we hope that his prophecy will be fulfilled. We as a group are not asking, and the people who have elected us have not asked, for free trade all at once. We have never expressed a wish for absolute free trade all at once, although we believe that we should have our tariff reduced to a revenue tariff basis just as soon as possible, and there are reasons for that.

In my discussion of this subject I think I should take a little different line from what most hon. members have taken who have spoken so far in this debate. We have heard it said many times that the United States has prospered wonderfully on account of the tariff that protects her industries. I challenge that statement. I lived in the United States until I was a man of middle age, and I have some knowledge and definite opinions regarding this question of whether the United States has prospered on account of the tariff or in spite of it. My own opinion, which I will present as well as I can, is that the United States has prospered in spite of the high protection which she has carried. I can remember to as far back as about 1868, soon after the war in that country. The United States was in a bad condition at the end of that war, just the same as we are now, and perhaps their condition was even worse. I have seen people in the United States suffer more from the bad conditions than I have yet seen people in Canada suffer, except perhaps where there has been a drought or some other calamity of that kind. But that is not saying that Canada has done as well as she should have. I do not think she has.

Now I want to give my opinions why I think the United States has reached the state of prosperity she has. The first development that I remember distinctly as a boy in that country was the building of the Union Pacific railway across the western part of the United States. That was followed by the building of a railway across the southern part of the United States, a transcontinental line. Then came the building of the Northern Pacific across the northern part, followed soon after by the building of the Great Northern, another transcontinental line, and all of these went through good country. To be quite frank I think the tariff has had very little to do with the prosperity of the United States up to this time, except at intervals, and there were periods when their tariff bore down very heavily on the people. We are in just a similar period now, with the tariff bearing very heavily on the working and middle classes of this country. To some people it is rather a mystery why Canada has not developed as fast as the United States. It is as old a country as the United States. I do not know so much about the early period after 1868. We knew but little of Canada then in the United States, and we had but little chance to learn about it. All I can do, practically speaking, is to take history and hearsay for what happened in Canada until I came to this country. In the United States after the rebellion we started out to develop a country that was just as big in area as Canada is, although more varied in climate. It was a country rich in all sorts of resources, and we had then a population of from thirty-six to forty million people. Now a country with so many people would have a big advantage over Canada with its seven or nine million people, which is what the population has been since I came to this country twenty-five years ago. I do not know exactly what the population of the

United States was at that time, but it was somewhere in the neighbourhood of thirty-six to forty million people, and with that number you could develop a country much faster than Canada could be developed with its seven or nine millions. Taking it all round, I do not think the United States is a better country than Canada, but they can raise in some parts of the United States things that we cannot raise. In Canada, producing the things we do, we should have prosperity, but we have had handicaps from which the United States has not suffered to the same extent, on account of her big population to start with. Then the United States adopted a policy of soliciting immigrants from all countries. It got many from the British Isles, and a considerable number from the continent: the people arrived so fast that they undoubtedly helped to develop the country very quickly. But I can remember when the United States was handicapped for labour and also suffered greatly for lack of capital. In the period of which I speak nobody talked of the tariff either promoting or retarding development, and yet the tariff was high all the time. But when depression came we noticed the effect of the tariff as we are noticing it in Canada to-day. During the period of which I speak there were times when the United States had to fall back on what it was producing. In the beginning capital came from England, Scotland and Ireland to a greater degree than from any other country. Capital from the British Isles, from France, and from the rest of Europe, poured into the United States for investment, and development was carried on with this borrowed money. The rate of interest was high but in view of the richness of the country not much thought was taken of that at the time. Development went on rapidly—the development of new lands, the construction of railways to those lands, the establishment of new cities. As I have said a large amount of capital poured into the United States from other countries for these purposes. At the time this development was in progress the people were not dependent on what they produced from the soil. They got capital readily for speculation and for future investment and, naturally, everyone spent money lavishly. And things continued to go on in that way. Well, the population grew enormously, and their markets increased. But I can well remember when the exports to what we called "the Old Country" set the price of all that we raised in the United States, and there were periods when it was very hard to stand the price at home which was fixed by the price put on the products we exported. And that is just the position that Canada is in to-day. I have known wheat, not always of the best quality when compared with Canadian wheat, to sell as low as thirty and forty cents a bushel, and hogs on foot to go at as low a rate as $1.60 a hundred. This brought about a change in the economic conditions, and people began to wonder what was the matter. They began to see that the tariff was pressing on them unduly. I remember 1873 as the period when people first began finding fault with the tariff. And hard times prevailed then. I do know the tariff was not beneficial in its operation then. In my opinion all that it did was to keep those people in a poverty stricken condition until production of various kinds mostly agricultural could get things going again. At any rate, the fight began against a protective tariff, and many people who had been Republicans and had asked for high protection turned round and voted the other way. The Democrats then took office and they were supposed to be a low tariff party. They did cut the tariff down somewhat but they were much like the governments that we have had in Canada —they kept the general level of the tariff very much the same. But during this period we had bank failures, and great business depression outside of the depression in agriculture. Clothing, implements, and other necessities were hard to buy. It was evident that the tariff did enhance the price of things the people needed, and they began to study the fiscal question and to understand it. In view of these facts I am ill-disposed to accept the argument advanced by some hon. gentlemen in this House, that it was the protective tariff that brought an immense population and great prosperity to the United States. I do not believe for a moment that the tariff had any such effect, and I think I know what I am talking about. The reasons I have described were rather the cause of the prosperity which came to the country to the south. There was the fact that the United States was a country of great natural resources, there was the restless ambition of her people, and the possibility of easily getting capital to develop the country. I do not say that it was the best possible thing that those people obtained so much borrowed capital, but nevertheless it was an instrument in the rapid development of the country. But the argument of the high tariff policy—and the manufacturing industries profiting by reason of it and thereby giving prosperity to the rest of the country—does not explain the great material advancement of the United States; the facts

are absolutely the reverse of that. The development of the natural resources of the country, and the cultivation of the soil as the republic grew, made it possible for manufacturers to come in and establish themselves and get a market for what they were manufacturing.

I do not know that there is any need for me to progress any further along that line. I simply wanted to express my opinion regarding the effect of a protective tariff on the United States. It does not follow that what happened in the United States can be duplicated in Canada to-day; there were many more people in that country when its period of great development started from forty to fifty years ago than there are in Canada now. Perhaps I may be pardoned at this stage for telling a story regarding the protectionists in this country and the conditions that prevail in Canada after operation of forty to fifty years of a protective policy. There was a coloured man who quarrelled with the rest of the people in his community. He found considerable fault with all the other people and considered that the blame rested with them and not with himself. Somebody questioned him about it and he said that he wished everybody but himself were dead. He was asked what he would do then. "Well." he said "I would keep store." Now, it looks to me, after forty or fifty years of high protection in Canada that nearly everybody not engaged in industry has been killed off financially so that they cannot buy the goods the manufacturers are making, and the industrialists are trying to "keep store" when other people are not able to buy.

10 p.m.

Mr. STEWART (Leeds): May I ask the hon. gentleman one question?

Mr. WARNER: If it is for information, yes.

Mr. STEWART (Leeds): Would the hon. gentlemen be good enough to explain why the farmers in the United States are so much in favour of protection?

Mr. WARNER: Yes, I shall be very glad to do so. I will answer the question at a little length because I want to reply to it in my own way. When land was high in the United States twenty-five years ago I left the country, I wanted to get away from high priced lands. I came to Canada. I found that things looked good enough for me in Alberta to make the attempt to live there. I found no fault with the country, as far as the conditions were concerned, but I was getting to a point in the United States where I could not make an income on the money that I had in my land, it would not earn interest on the capital invested; and that condition has been growing worse since that time and is a good deal worse now. I went back to the States about six or seven years ago and I found that land that used to be held at too high a price, $40 to $60 an acre, had risen to $300 and $500 an acre, on account of the boom and the speculation in land, and not because the land could produce that much money. On account of the high price of land, and not understanding what was going to happen, people bought land, and many of them paid down the earnings of a lifetime when they were middle-aged, all the money they could get, on the purchase and when the crisis came after the war and the price of produce went down they were unable to pay for their land, and after having paid all that they had saved up in their lifetime many of them had to leave the land. The price of the land was above its earning power; the land would not pay interest on the investment. Then they turned around and asked for a tariff to protect them against our wheat being brought in there to make good flour for them. Just exactly what has happened in the United States is going to happen in Canada if we do not come to our senses soon enough. The price of our land is not yet above its earning value, but the protectionists of this country want to protect us as the United States farmer is protected on the other side of the line, where somebody else gets the land and the farmer has to go away on foot. When the price of land gets above its earning power and will not pay interest on the investment, no matter what protection you may have, if you have to depend on the export market, you are not going to be able to protect that farmer. But the United States farmer is in a little different position to-day. He does not get as good a price for the produce he exports at the present time as for that part of his produce which is used at home in case of a few articles and they of course are human. After the bad condition they got into, the politician came along who wanted to make political capital out of the bad condition of the farmers. The position was much the same as that brought by the St. Lawrence and great waterways agitation. They are putting words in the mouths of the people of the West and making them say they want the great waterways. That is what the politicians did to the farmers in the United States who had lost their homes and were unable to pay their way out of the produce they were raising on those farms. I spent five weeks in the United States last summer, and I can tell hon. members that the

farmers there are beginning to see that they are not getting the benefit out of the tariff that my hon. friend thinks they are. They tell me they have had absolutely no benefit from the Fordney tariff at the present time, and it has been the politicians in the United States who asked for the tariff, rather than the farmers themselves. The same thing is going on in Canada to-day. In my opinion it is absolutely dangerous to make political capital out of either tariff protection or free trade. I have never in my lifetime known any subject which has befuddled, mixed, and that bothered the people as much as the tariff has. It is a complicated affair, and people who are not willing to take a great deal of pains and make a study of it could be made to believe it could do anything, and that is what has happened in Canada. I think the time has come in Canada, before we get into a worse condition than we are in at the present time, that people should have some consideration for what is good for the country, rather than for what is good to build up a political party.

Western development as we have had it is a matter that is fresh in my mind. I understand it a little better than the building up and development that went on in the United States, so many years ago, although that is quite plain to me. I left there some twenty-five years ago, and I have been more or less out of touch with conditions. But I feel that I am understanding western conditions and what has happened out West. When I first went into that country we could get land very cheaply. The first land I bought was near the little town of Edmonton; it cost me a little less than $6 an acre, and I bought quite a good sized farm. On that investment in the land we could earn a good return, and things looked bright to me. My boys were growing up on the farm, and we made money under those conditions. By and by the boom came on and people began to throw money into that country for investment, and to buy land for speculation. They bought land to sell again, and not for what they could make out of it by farming. That spirit ran away with the people for a while. The same thing happened in the United States. They boomed the land, and of course the land rose in price. We have stopped short of the calamity which has befallen the farmers of the United States, as far as the price of land is concerned. We can make something out of our land here. If a man buys land in western Canada judiciously, it is possible in ordinary times to earn an income on the money he puts into it. Farming was not so attractive to people for a few years. They wanted to buy a farm and sell it again. They would buy it for an investment, allow it to remain there and increase in value. They purchased the land for the sake of the increased value rather than for what they could get out of the land by way of production. That went on for some time, but it has stopped now, just as it has in the United States. At different periods the same thing happened to the United States that is now happening in western Canada. We are in a condition now in western Canada where we must farm and dig out of the soil what we make, because the money is not coming into that country for future returns on investment or for speculation as it was a few years ago.

It is very difficult for the farmers out in the West now to make any sort of living. It is now that the people are beginning to feel the depression, just as they did in the United States at certain times in the history of those people; and reductions in the tariff are now most welcome. It is simply because the farmers of western Canada have suffered from this depression that they have sent their representatives here to tell parliament that they absolutely cannot stand it any longer. They are unable to dig money out of the ground fast enough to pay for their farms, and to meet their other obligations. So we think that the government has taken a step in the right direction in beginning to reduce the tariff, and we ask that everything possible be done as well in every other way to provide some relief for the people. There are many things that need to be done; one thing alone will not suffice. When money flooded the country we did not feel any depression and the tariff did not appear to the people then as a very great burden; but to-day, labouring under the depressing influence of conditions as they exist in this country, if the people are to be saved, their burdens must be lightened. I repeat, the tariff alone will not do everything; but it certainly will help to a considerable extent, and while I may not live to see free trade adopted in Canada I do hope that I shall live to see the time when we shall at least have a tariff for revenue rather than for protection and just as near free trade as is possible or practical. I know from my experience in the United States that in that country the people were visited with periods of depression just as we are suffering to-day; these times of depression come and they go. But so far as Canada is concerned, I am afraid that if something is not done there may come a time when the depression will come to stay. I do not want

to be considered a calamity howler for a moment because I believe that it is possible for the country to get fairly well on its feet if the government will do all that it can. And we have the promise that they will do more next year, or at any rate at some time in the future, than they have done in the present budget in the way of reducing the cost of living. We also need lower transportation rates, so that the people may get their products to market with the least possible delay and at the lowest cost. These are the problems which we must solve. I know something about manufacturing, because, I may remark, farming is not my only interest. I am connected with manufacturing industries and I know that we must borrow money; and when money is borrowed the concern must pay interest on it first of all before it can make a profit. What happens? That interest is charged in the price of the article we produce or taken off the price of the raw material. And there is no other way out of the difficulty; the business cannot be run otherwise. I am just as satisfied as I am that I am standing here to-night that Canada to-day is paying too much for the use of money which she has to procure to do business with. It is not only desirable but it will be absolutely necessary to reduce the rate of interest, and if the bankers and other money lenders are determined to maintain a high rate they will meet disaster without a doubt. They have no right to hold up the people and make them pay more than they can possibly afford for the use of money. At present this seems unavoidable. There has been a lot of talk about the banking system, and I believe that conditions in western Canada would have been better if it had not been so easy for people to borrow money. The bankers induced them to borrow when things were in a flourishing state and the time is not opportune now to force people to pay high rates of interest on their obligations. If the interest that a country has to pay on the money it requires is higher than it can stand, surely it is in the best interests of national economy that the rate should be reduced, but the individual person or company can not do this alone, it will have to come through a concerted action; it seems to me that it would be better for the money lenders to charge a reasonable interest which people can afford to pay than to demand a high rate of interest which it is impossible for ordinary people to put up. The manager of one loaning company in the West with whom I am acquainted informs me that by reason of the judicious placing of his money he has not lost one cent during the past few years. I cannot remember whether he said it was within the past five or seven years, but I am inclined to think that it was since the war that he said he had suffered no losses, having disposed of his money judiciously, of course. The people to whom he would lend money were those who could afford to pay, while those who could not pay had to go to the wall. Everybody, of course, expects security for money that is borrowed, and it is better that way. But if the interest is 8 per cent and the people cannot afford more than 4 per cent, would it not be better for the lenders to take 4 per cent, even though they might suffer some hardship along with other people until things became normal again?

Mr. STEVENS: Would the hon. gentleman fix the rate of interest by statute?

Mr. WARNER: I do not know about that. My hon. friend is a lawyer and he knows more about these things.

Mr. STEVENS: I deny the soft impeachment.

Mr. GRAHAM: You have to draw the line somewhere.

Mr. WARNER: I am not going to say where we should draw the line but I do say that it would be better for the lenders to take a reasonable rate of interest rather than ask for an exorbitant amount. When I was a young man I was not blessed with much money; I was pretty much in the same position as my hon. friend who spoke a little while ago (Mr. Spence). I often had to borrow money from the banks and I know how difficult it was to meet their conditions. In the state of Nebraska where I lived—and bankers are pretty much alike all the world over—there was a legal rate of interest of 7 per cent, and on special contracts 10 per cent per annum. The remarkable thing was that when a man borrowed money the banker deducted from the sum he gave him an amount covering the first year's interest. I can tell hon. gentlemen that it was not a very pleasant experience for me, for I have paid all the way from 10 per cent to 24 per cent; I have been asked as high as 36 per cent, but I never paid more than 24 per cent, although the bankers were operating under a law of the state of Nebraska that entitled them to 7 per cent interest when rate not specified but with an interest of 10 per cent on special contracts. They circumvented the law, and I do not know that the bankers here would not do the same. I am not saying that they would; I do not know whether they would or not. I do not

know whether we can regulate the rate of interest by statute, but, if possible, it seems to me it would be good business to do so, for if the money is not worth what our people are being charged for it the bankers themselves will suffer because after a while they are going to be like the darkey—they will be trying to do business when there is no business available.

Mr. STEVENS: If parliament were to fix the rate of interest chargeable by banks at a moderate figure, would it not tend to drive the poor borrower into the hands of the rapacious money-lender, who charges ten, twelve or fourteen per cent interest?

Mr. WARNER: That might be so, but I would tell my hon. friend this: I do not believe that the poor borrower is in very merciful or tender hands at the present time.

Mr. STEVENS: I quite agree.

Mr. WARNER: So, after a man is broke I do not think it makes much difference where he goes for accommodation; he is bound to have a hard time anyway. I am not asking that money be loaned to anybody who cannot give security. It is unfortunate, but the human family is built that way: we do not want to put our money out at interest where we see little prospect of ever getting it back. But it is my opinion that our civilization cannot stand the rate of interest which is being charged to-day, and I fear that if the people are forced to the wall one at a time it will eventually lead to their rising as a body and exacting penalties.

I did not expect to get into this line of argument, in fact I drifted into it. But I think it is important to say this: I believe that restricted purchasing power is a part of our trouble. I do not believe that the tariff is to blame for all of our troubles, or anywhere near all. It was said by my leader (Mr. Forke) this afternoon that it is not worth while for the manufacturing interests or the protectionists to undertake to raise the price of their goods by raising the tariff. That that is not the way out is my honest, sincere conviction. I do not think that the manufacturer can help himself out of his troubles by raising the price of his product. I believe that to-day our manufacturers are suffering simply because the people are not able to buy the manufactured goods that are being turned out. It is this inability on the part of the people to buy, this lack of purchasing power, which is hurting the manufacturers to a far greater extent than outside competition. For example, in my own part of the country the people are fixing up their old machines. These old machines are not really capable of doing good work, but their owners are disinclined to pay the price for new machinery. Well, if the price is already too high, how are the manufacturers of such machinery going to increase their sales if they advance their prices? I told the House a little while ago that I was connected with a couple of important business concerns. Our experience there is that the most satisfactory results are obtained by increasing our turnover at low prices rather than by securing higher prices on a small turnover.

Although I presume that some may think it not good taste on my part to offer advice to our manufacturers, still, I think I know a little about how to carry on business, and therefore I tell them that many of them would be better off if they would mark down the selling price of their products, reduce their manufacturing cost, squeeze the water out of their capital stock, and get down to a real valuation of their actual operating capital. I do not care how much money I might make on the transaction, no man could sell me watered stock. I have had lots of opportunities to buy watered stock in various companies, but I am not out to make money in this way. I do not know how many of our manufacturing concerns have watered stock, but certainly I am not in favour of such concerns attempting to get a return on watered stock by means of charging high prices on a lessened turnover, which would be the result of their securing higher protection.

There is just a question in my mind whether my advice in this respect would be absolutely sound. I admit this, because it is my opinion that our farm implement manufacturers already have the power and ability to turn out more implements than Canada would be able to buy, even at lower prices. To meet the situation these manufacturers must be willing to do as we farmers have done; when we raise more wheat than we can sell for domestic consumption we sell it in the world's market and take what we can get for it, and the price we obtain fixes the domestic price. I am well aware that our manufacturers would hold up their hands in holy horror at such a suggestion. They say that they cannot do this. But they are already doing it. They are exporting their implements and selling them for less than we can buy them for in Canada. We have the price of our wheat at home set largely by the surplus that we export. If the manufacturers would take their medicine

and do likewise they would bring money back into Canada and so help business, which would be a great deal better than their trying to make Canadians pay more for what the manufacturers offer for sale. I do not see how our manufacturers would really be benefited if they could raise the price of their product by protection. I do not believe that we farmers could afford to put a price on our wheat and say that we would not sell until we got that price; we could not do it. But I do know that the whole Dominion is dependent very largely on the output of the farm, and that agricultural prosperity is at once reflected in every other channel of business. The money that comes in from our produce sold outside is new money in this country, and we are that much better off each year. Although the farmer may lose money on his personal operations, Canada at large has that much more wealth at home.

The home market is all right, and I want to see more of it. But my hair is too grey to wait till the home market can take care of the extra produce that I want to raise on my farms. I have a note here: Why are our people leaving Canada to go to the United States? There has been a good deal of discussion about this question. I do not claim to be sufficiently well posted to know just how many of our people have migrated to the United States to make their homes there, and I doubt whether anyone else knows either. But there must be something in what everybody talks about. I do not know that I can tell in every case just why our people are going to the United States in such numbers.

It makes me feel that some hon. members are playing politics when they talk about people leaving the country on account of the present budget, though it has not yet gone through the House. It seems to me that is a little previous, a little premature. I believe that more people have gone to the United States on account of protection than ever thought of going on account of this budget. Some of the best people I ever lived amongst came from Canada into the neighbourhood where I was, and settled there, and I grew up among them. I liked the Canadians, and I like them now; they have always treated me well. But why were these people going over there thirty or forty years ago? They did not go on account of this budget, that is sure; but they have been going right along, although we have had protection for forty years. Hon. gentlemen cannot afford to make political capital out of the present condition of this country. If we would come here with the best interests of our country at heart, thinking nothing of politics, nothing of strengthening our party or of whether or not the people would send us back here; if we would simply get down to business and think of the welfare of the country instead of the interests of the party we belong to, we would make more progress. Canada is a big country; it is a rich country and we could have more people; but if we want people to come here we should not be squabbling among ourselves about what keeps them away. We have great natural resources and we should bend our energies to bringing enough people here to secure their development. But when we bring people here we must do everything that is possible to make them prosperous.

It is a fallacy to say that the United States has been made prosperous by its protective tariff; rather it should be said that the United States has been made prosperous in spite of its protective tariff. I say this after living in that country until I was middle-aged, and I know something about it. You will bring Canada to the position you desire much quicker by lowering the tariff so that living will be cheaper and conditions will be more attractive in all lines of activity. And let everybody make up his mind to earn what he gets rather than to make a profit on speculations, increased land values, watered stocks, and so on. The immigrants who come here come, for the most part, to a better country than they left, and the chances of their being prosperous are likely to be much better here than they were in their native land. We could have three or four times the number of people that we now have and still be prosperous, and it would be easier to solve the problems which face us. We want to make living on the land attractive so that the people will make their homes there and stay there; we want to have it so that the people would rather live on the land than anywhere else. I do not know how much it is possible for this government to do, but I believe that the lowering of the tariff would help along that line.

Mr. SUTHERLAND: Would the hon. gentleman favour the lowering of the tariff on agricultural products?

Mr. WARNER: Well, the question is all right, and I am glad to have it. I do not know what the hon. member refers to. I do not believe I raise anything that has benefited by the tariff that is on it now.

Mr. RYCKMAN: How about butter?

Mr. WARNER: The tariff on butter is only four cents.

Mr. RYCKMAN: Is it enough?

Mr. WARNER: I am not asking for a higher tariff on butter. I am not saying anything about the tariff on butter. But there is a duty of 8 cents on our butter going to the United States, and I would rather see them take off 4 cents over there and bring it down to what ours is.

Mr. SUTHERLAND: But they will not do it. What about the tariff on meat?

Mr. WARNER: I do not want to get into a discussion on the tariff on meat. But it is not possible to help the farmers of this country by a tariff on butter or meat or anything of that kind, because we are going to raise more and more of those products and send them out to the world market. That will make the price on the home market rather than the tariff having anything to do with it.

With regard to the amendment, I would like to have an opportunity to support some of the items mentioned in it, although I think it will frighten our protectionist friends and those who are asking for protection on both sides of the House. I do not know that there are any of those in this group to the left; it is the only group that does not have protection in mind.

Mr. STEVENS: There are one or two of them there.

Mr. WARNER: I do not know about them. Now, I am not standing here and boasting of what I have, but I am not a pauper, and I want to say that I am absolutely in favour of increasing the income tax and using any money we have over to pay off our national debt. Where a man has an income of fair amount we know that there is a source of revenue, but if we impose large taxes on the smaller income of the man who has a family we are making it hard for them to get along. It is difficult to get money for business purposes when you have a very high income tax, but if those who have money in this country are patriotic they will put it into manufacturing enterprises and thus help the country to go ahead, rather than hide it away in their stocking. So I say we should get the money where it can be got, and we should increase the income tax. I do not say that I want to see the income tax continually increased from time to time indefinitely, but we have a debt in this country that we have to pay, and we have to dig it out of this country. The money is not going to be sent in here to pay it. If you take the money from the man who is able to pay, it will help pay our debt. I do not see how you are going to pay it unless you take it where it can be got.

There is another tax I would like to heartily support, and that is the inheritance tax. The question is raised whether the Dominion or the provincial governments should impose such a tax, but no matter in which field it lies, I think it would be a good way of raising money. If a man has raised a family in Canada and they are not able to take care of themselves, but are dependent on what money he has made during his lifetime, they are rather a handicap than a benefit to Canada. I am a little doubtful whether anyone who is not willing to work for a living and make his own way, and who lives on the money left by large estates, is not rather a detriment to the country. So I say we should take quite a lot of money from the large estates, and let the children do what the parents did, earn their own living and become good citizens. They will develop themselves much better in that way than if they are allowed to spend inherited money in riotous living. Whether the provincial governments or the federal government impose the tax makes no difference in principle.

Coming now to the amendment and the proposed reduction on clothing and the necessaries of life, there is not much of a tariff on food stuffs of such kinds as we produce in Canada at the present time. So far as clothing is concerned, I suppose that the man who produced the wool in this suit I am wearing would not get much more than two dollars for it. I had the figures, but I have not them with me now, and I am doing a little guessing. This suit cost me with two pairs of trousers $75. That is too much protection for me. The same prevails in many other lines particularly in boots and shoes.

Sir HENRY DRAYTON: Wool is on the free list.

Mr. WARNER: That is one on me, if it is, but I have had scores of petitions and blotters coming to me saying, "Don't blot out this industry; give us protection." So if they have not protection now, they must be asking for it.

Sir HENRY DRAYTON: Woollens are not on the free list, but the raw wool is.

Mr. WARNER: I know what the hon member says is true. I have the patriotism of the manufacturer right down in my head real good. An hon. member to my right during his speech was asked why the manufacturer did not use the native raw material, and he replied that the manufacturer could buy cheaper material from the other side

and get just as much for it when he sold his product, or pretty nearly so. Now that is patriotism with a vengeance. If the manufacturer would stand right up to his work, and turn out his goods as cheap as he could, if he would do as the farmers are doing in this country, we should be a double team then and we could make this country go; but as it is now the manufacturer—and I know because I am in the business of manufacturing myself—passes along all the expenses of his business to the consumer to pay, or takes it out of the producer of the raw material. He wants the other fellow shut out of the country so that he will not have to sell in competition with him, and he wants to put the people out of business, like the nigger that wanted to keep store after the people were dead. That is how patriotic they are, in my opinion.

As to the manufacturer of farm implements, there are millions of dollars worth of farm implements piled up in factories and storehouses in this country, lying on the hands of the manufacturers, which would not be there if we had not had protection to the manufacturer for the last forty years. The manufacturer is reaping the result of that policy now, because the people are not able to buy what he has to sell, and he has to quit business. He has blocked his own game. I am ready for questions on that. He has blocked his own game, and now he wants protection in order to accomplish an impossibility. He wants to try and lift himself by his boot straps.

Sir HENRY DRAYTON: Is that the reason why the farmer is importing some $13,000,000 odd of agricultural implements as against a local sale of some $18,000,000? He can afford to buy the imported article.

Mr. WARNER: I will admit frankly I do not know just what implements are being imported and sold. They may be selling them, but I do not know anybody who is buying many of them. If the manufacturer were as patriotic as I think he ought to be, he would pay an excise duty equal to the duty paid on these implements entering Canada, because he can make them as cheaply as the manufacturer he is competing with. And whenever the manufacturer is ready to pay that excise duty, I am willing to give him protection, because we have to raise the revenue to run the country.

Mr. STEVENS: Would the hon. member also include an excise duty of 4 cents a pound on butter?

Mr. WARNER: Absolutely, if it ever amounts to that much protection to our business. As far as I am concerned I can promise that. I am manufacturing butter, and I know who pays the bill. The man who produces the cream is the man that pays the bill. I am a farmer and cream producer as well as a manufacturer of butter and I would be the goat for myself as well as for all the rest of the Canadian manufacturers. We have to pay interest and overhead, and he would have to take the loss. I do not want to see that, although it would not hurt our concern personally and it would not hurt the other manufacturer to stand it either, because he passes it on to the buyer.

Mr. STEVENS: Would it hurt the farmer?

Mr. WARNER: It would hurt the farmer, he would have to take that much less for his cream. And it has to be that way; a business has got to pay its overhead or it cannot keep running. We cannot pass on that duty in the price of butter, for that price is fixed in the world market.

Now, I was talking about the amendment. I have said that I would like to get an opportunity to vote for some of the things in that amendment but when they are coupled with other questions I do not see how I can do so. Talk about your natural resources! We are going to have our premier down here from Alberta in a few days asking for these natural resources. Now, we do not want the Dominion government to levy taxes on these resources if we get them. We want those resources for what there is in them; and if the Dominion government cannot levy, as proposed by the amendment, on those resources, then they are going to be short the amount of money that taxation would represent. I do not know how they are going to calculate the amount. I could not do it offhand, I should have to study the question out and it would take some time before the system would be running properly anyway. But I want to see the province tax its natural resources. We are already paying on land values, and as to this question there is a whole lot of myth. There is a lot of talk by people who do not own land. I own land myself and I know something about the question. We are paying about all we can pay for land at the present time, but that is not my objection to this proposition. I repeat that land value is a myth. I want to tell you this: I have been a good deal of my time where land was not

worth a cent an acre. Go out into a new country where there is absolutely nothing done. That is the only way that you can put a price on unimproved land values. It has been done otherwise, but it is largely guess work. Some of my land near Edmonton is valued for taxing purposes at $50 per acre. Land farther back is valued at less, considerably less; but it all depends on the improvements in Edmonton. I say again land value is a myth, you do not know what you are going to get when you put a tax on land values. I have worked for a tax on unimproved land values, but since I have been studying the question I have been wondering how much there is in it—I really have.

Now, when I consider the items in the amendment I do not think that I can support it conscientiously, although I should like to get some of the things that are mentioned in it. There is another point. We have a government in Canada and hon. gentlemen opposite are running it for us.

Sir HENRY DRAYTON: With you.

Mr. WARNER: I am not ready to vote a want of confidence in the government at the present time.

Mr. GRAHAM: That sounds reasonable.

Mr. STEVENS: That brings a smile to the face of the Acting Finance Minister.

Mr. WARNER: I am absolutely conscientious when I say this.

Sir HENRY DRAYTON: Could you not do better?

Mr. WARNER: I feel that it would be no benefit to us to defeat the government at the present time. We have their promise that they are going to lower the tariff to a greater extent than any other government has done in Canada.

Mr. STEVENS: Hear, hear.

Mr. WARNER: This is along the line that I would like to see action taken.

Sir HENRY DRAYTON: Lower the duty on what?

Mr. WARNER: I do not care to discuss that question now offhand. I think the hon. gentleman knows better than I do just what is involved. I repeat that I am not ready to give a vote of want of confidence in the government just for the sake of putting them out. Of course it will not be done; I know that amendment cannot carry, still if I am honest and vote according to my conscience, as I try to do, I would want that to carry; but if I voted for it that would mean that I wish the government to be put out of business, if I understand it rightly. Now, I am not ready to put them out of business, because I want to hold them to their promises in tariff reductions with a chance to see results. That is the point—we want results, results in the form of legislation that will give greater freedom for development to the basic industries of this country, and we will join our efforts with those of any other hon. members of this House who are ready to work with us on that line.

[Mr. Warner.]

On motion of Mr. LeSueur, the debate was adjourned.

On motion of Mr. Graham, the House adjourned at 10.59 p.m.

Friday, May 2, 1924

The House met at three o'clock.

BANKING AND COMMERCE

Mr. W. G. MITCHELL (St. Antoine) presented the first report of the select standing committee on Banking and Commerce.

PRINTING OF PARLIAMENT

Mr. C. A. GAUVREAU (Temiscouata): Mr. Speaker, I move, seconded by Mr. Marcile (Bagot):

That the first report of the joint committee of both Houses on the Printing of Parliament as appearing on page 204 of the Votes and Proceedings of this House be amended by inserting Nos. 35, 36a, 37 and 37a under clause 1 which enumerates the documents to be printed, and that the report as so amended do pass.

Mr. SPEAKER: I must advise the hon. member that the motion as worded is out of order. The report ought to be referred back to the committee, and be there amended.

Mr. GAUVREAU: Mr. Speaker, those numbers were approved by the committee, but through an oversight they were not included in the report made yesterday.

Mr. SPEAKER: I understand there is an error. These numbers are already contained in the report.

Mr. GAUVREAU: Mr. Speaker, the documents enumerated were printed during the recess at the request of the Prime Minister. When the committee sat the other day it approved of this printing, and the report should have contained a list of the documents, but this was forgotten at the time and the report appeared without the particulars which are contained in the proposed amendment.

Mr. SPEAKER: The committee on Printing is a joint committee of the Senate and of the House of Commons. Do I understand that the insertion of these numbers was agreed upon by the joint committee?

Mr. GAUVREAU: Yes, Sir, and an order was given to Senator Smeaton White, joint chairman, to take the same course in the Senate.

Mr. SPEAKER: Under the circumstances, I think the House might agree to the motion. Is it the pleasure of the House to adopt the motion?

Motion agreed to.

UNITED CHURCH OF CANADA

Mr. R. F. PRESTON (Lanark) : Mr. Speaker, I beg to present a petition from St. Andrew's and Knox congregations, Perth, against the Church Union bill.

Mr. H. A. STEWART (Leeds): Mr. Speaker, I wish to present petitions on behalf of the Presbyterian church of Westport, and the Presbyterian church of Newboro, against the Church Union bill.

Mr. ROBERT FORKE (Brandon): Mr. Speaker, I desire to present a petition in favour of the Church Union bill from the church at Nesbitt, Manitoba, signed by 133 members. I may say this is a Union church, although it has been denied that there is any such institution.

Mr. L. H. JELLIFF (Lethbridge): Mr. Speaker, I desire to present a petition against the Church Union bill signed by 89 members of Knox Presbyterian church, Lethbridge.

HOME BANK

Mr. J. J. THURSTON (Victoria, Ont.):Mr. Speaker, I beg to present a petition signed by 879 citizens of the county of Victoria, province of Ontario, asking that the depositors of the Home Bank be reimbursed.

Mr. GRAHAM: They seem to be united in that.

ALBERTA MINERAL TAX ACT

Hon. ERNEST LAPOINTE (Minister of Justice): I beg to lay on the Table of the House documents and papers with respect to the disallowance of the Mineral Tax Act passed by the Alberta legislature.

INQUIRY FOR RETURNS

CANADIAN NATIONAL RAILWAYS—APPOINTMENTS—HON. MR. MACDONALD AND FREIGHT RATES

On the Orders of the Day:

Sir HENRY DRAYTON (West York): I desire to call the government's attention to an order passed on 24th March, for papers in connection with appointments on the Canadian National Railway, an order which has been standing ever since; also to an order which has been standing since the 26th of March, calling for the return of papers, et cetera, forming the basis of or justification for the statements of Hon. E. M. Macdonald in North Sydney on the 28th of July, 1923, in which assurance was given of certain reductions of freight rates, and so on. I would ask the government when we may look for these returns.

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals): I will look into the one concerning the railway matter—

Sir HENRY DRAYTON: They are both railways.

Mr. GRAHAM: As to the other one, I will bring it to the attention of the minister concerned.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed from Thursday, May 1, the debate on the motion of Hon. J. A. Robb (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into committee of Ways and Means, and the proposed amendment thereto of Mr. Woodsworth.

Mr. R. V. LeSUEUR (West Lambton): Mr. Speaker, our discussions of the national budget sometimes, perhaps too often, entail comments and criticisms, which at times become rather severe, but in all cases the Acting Minister of Finance (Mr. Robb) should know that the arduousness of his task, the weight of the burden and the difficulty involved in the duties of his office, are fully and constantly appreciated by this House. This year the budget aroused unusual interest, both in this chamber and out of it, and upon that the Acting Minister of Finance is to be congratulated. Within the House it commanded that respect which the most important financial statement of the

year merits; in the country it has drawn to itself an unusually alert attention. There, it is every day becoming more generally recognized that this budget inaugurates a new policy on the part of the government, inaugurates a departure from this policy of tariff stability announced by the Minister of Finance (Mr. Fielding) last year, and that a responsible minister of the Crown has openly announced that he hopes this budget will prove the death knell of protection. If I rightly interpret the sentiment expressed in a number of orations made by hon. members to my left, they appear to have reason to hope that the changes and alterations in the tariff are not at an end, but that they will continue from year to year during the life of this parliament. The suddenness and the radical nature of this change on the part of the government are, I believe, causing widespread uncertainty as to whether the future actions of this government will not be largely influenced, perhaps dominated by, the tenets and dictates of the Progressive party rather than by the old-time principles of Laurier-Fielding Liberalism. Such a budget, Sir, should have a careful analysis in the light of present-day conditions. That analysis, I submit, should not be confined to conditions as they exist within Canada, but should include also a review of world conditions. We do not live unto ourselves alone, and a reasonably accurate knowledge of conditions both within and without Canada and of the general trend of industrial world events is essential to a correct estimate of the changes proposed in the tariff.

Turning to the budget itself and examining it, we find that the Acting Minister of Finance has arranged it in three main divisions. In the first division he discusses the financial condition of Canada; in the second he outlines Canada's trade position as evidenced by her foreign trade; and then, proceeding, I assume, on the conclusions arrived at in these two divisions, he comes to the third division, which deals with the changes he proposes in our tariff policy. I will endeavour in my remarks to adhere more or less to this order.

The first division, namely, that relating to Canada's financial position, has already been fairly well discussed and I will but briefly comment on it in passing. The Acting Minister of Finance pointed out that we have, for the fiscal year ending March 31, 1924, an estimated surplus out of ordinary revenue of approximately $20,800,000, and that this, together with an income from other sources of about $9,600,000, will give us a total of some $30,400,000 to be applied in the reduction of the national debt. The budget also points out, however, that the loan of $50,000,000, made on behalf of the Canadian National Railways and guaranteed by the government, has been so treated as not to affect or influence this result. It has already been pointed out in this discussion that, according to the system of bookkeeping in vogue prior to this year, that loan would be considered as part of our national debt and as a national obligation. But whether we accept the system of bookkeeping adopted this year or adhere to the system in vogue hitherto, is more or less a matter of accounting and does not alter the facts—and it is a fact,—that the Canadian National Railways could not, apart from the government, have secured a loan of $50,000,000 on reasonably good terms, possibly not at all, and that the investors who made that loan looked to the government of this Dominion and not to the Canadian National Railways for the repayment of their interest and principal. It is also a matter of common knowledge that the Canadian National Railways are to-day much over-capitalized, that their physical value is much less than their book value as carried on the ledgers of this government, and it would be a delusion and a snare to increase that book value, already too high. Whether we treat that money as being turned into capital, or into maintenance, or into deficit, it is as a matter of fact being handed over to a railroad already too highly capitalized which cannot pay the interest on the debts already incurred and which cannot for many years, possibly not during our life time, be in a position to have its assets offset it liabilities. In short, the asset, if any, which we acquire is certainly non-active, while the obligation assumed is most distinctly and strikingly active, as will be proved every interest day. Therefore, the only safe and sound course is to acknowledge that, so far as the investors are concerned and so far as we are concerned, we have assumed an obligation of $50,000,000 which cannot be eliminated by any process of bookkeeping or be altered by placing it, as it were, in suspense account as an indirect liability. Of course, the amount of money which still remains in the hands of the government from that loan is an asset. Then, considering this loan as a national obligation, and endeavouring to keep ourselves as close to the facts as we can, I ask, do we realize that Canada has since March 31, 1921, added to its national debt by the sum of approximately $118,000,000, while the country to the south of us has in the same period wiped out and eliminated from its debt $1,860,000,000?

Great Britain in the same period has likewise eliminated from her debt a very considerable sum—I see by their recent budget, this totals £960,000,000 since 1918.

Now, turning to the second division of the budget speech, namely, that relating to Canadian trade, we find it there set out that Canada's commodity trade balance has advanced from an adverse balance in 1914 and in 1921 to a favourable trade balance of approximately $160,000,000 for last year. This result is most gratifying to all Canadians, but it would be neither wise nor businesslike on our part to jump to the too hasty conclusion that therefore Canada is enjoying a period of prosperity; and, whether or not the Acting Minister of Finance (Mr. Robb) intended this inference to be drawn, several speakers who have followed him in this debate do appear to have drawn that conclusion. It is most important in my opinion that this House, as a deliberative body, considering the fiscal policy for this country should have as accurate a knowledge of conditions both within and without Canada as is possible, in order to enable them to properly estimate the changes proposed. The facilities for gathering data, and the science of gauging a nation's actual trade condition, have advanced wonderfully in the last few years. It is to-day fairly well recognized that the commodity trade balance of a nation is neither a true nor yet the best criterion of her condition. Such a trade balance does not take into consideration either the invisible exports or imports or the internal trade of a country. A much truer gauge to-day is the total physical volume and value of a nation's production; but perhaps the most accurate gauge is to be obtained by looking at several phases of national life. The soundness of this contention is easily demonstrated by facts—or perhaps it would be more proper to say, the lack of soundness in the first contention. The United States in 1921, a year of great depression, had a favourable trade balance of approximately $1,900,000,000. In 1923, a year of marked prosperity as compared with 1921, that trade balance had fallen to $376,000,000 or approximately a drop of 80 per cent. If we look at Canada, I believe the same result is demonstrated. Our trade balance this year if it were a true criterion, would indicate a condition of marked prosperity, and yet the statesmen who told our farmers or our merchants, or our manufacturers or our workmen, that we were to-day enjoying great prosperity would be laughed to scorn. Now in following up this subject I wish to take a look at the industrial trend of conditions in the principal countries of the world, Great Britain, France and the United States, and I think a good point of commencement is to be found in 1921, the year of that marked depression which gripped every industrial nation of the world from the most southerly to the most northerly, and from that low point we have a gradual improvement during 1922 and 1923 up to the present time.

Turning to the United States, what conditions do we find there? In 1921 the United States felt that depression most severely. There were between three and four million men out of employment. Industrial life in almost every line was at its lowest ebb, and in addition to that, European conditions were bad. The European trade machine was disrupted and unbalanced. In Europe the standard of wages and of living was receding rapidly and unevenly, exchange was fluctuating wildly and currencies were depreciating. In the face of those conditions the United States adopted the policy of protecting her own industrial life and her own trade machine. In May, 1921, she adopted the emergency tariff, and in November of the same year brought in the Fordney tariff. She re-established the activities of her War Finance Corporation to assist her cotton growers, her grain producers and her live stock raisers, and she raised the restrictions on immigration. The trend of industrial life since that time speaks for itself. What do we find happening in the United States? The Department of Commerce reports and the reports of the Federal Reserve Board, which are now very complete and very accurate, show that since 1921 mineral production in the United States has increased by over 40 per cent, industrial production by over 50 per cent; the movement of live stock to primary markets has increased by over 20 per cent; the movement of fruits and vegetables to primary markets has increased by about 25 and 5 per cent respectively. On the other hand, the movement of grain to primary markets has decreased by about 12 per cent—for reasons which I hope to discuss later. The retail trade and the trade of departmental stores in the United States has shown a similar increase and in some lines that increase has been equal to about 50 per cent. Their bank clearings have increased by about $3,500,000,000; their bank deposits have increased by approximately $1,000,000,000, and their bank commercial loans by over $500,000,000. As to unemployment, that has practically ceased to exist in the United States, and they are now giving employment to considerable foreign labour, which of course includes Canadian workmen.

In short, without taking up unnecessarily the time of the House, let us say that the United States appears to have adopted adequate remedies suited to her industrial life, for the protection of her industrial machine against the destructive attack of the unbalanced European trade machine and that her rapid recovery has been the result; and her reward is a most rapid and startling recovery.

Now, let us look at France for a moment. In 1921 France felt severely the same depression, and apparently adopted the same means for the protection of her industrial life. On March 28, 1921 she raised her tariff to possibly the highest point in its history. Owing to the publicity given to the troubles of French government finance, it is perhaps a general feeling that like conditions prevail in private industry and that there conditions are also unfavourable. Such is not the case. If we look at the trade reports of our own commissioner, the trade reports from Washington, and such other trade reports as are available, we find the actual facts. France commenced to recover and she has continued to recover until to-day her iron and steel industries, her coal mines, and her silk, textile and woollen manufactures, her agricultural and her general industrial life, are enjoying a period of very great and very marked prosperity. Her bank clearings have pretty nearly doubled, not quite. Her bank deposits and her commercial loans, which show the activity of business, have increased by about two and a half billion francs each from the end of 1921 to the beginning of 1924. Unemployment in France is unknown. The latest report we have is for January, 1924, and that shows only 596 men unemployed in Paris. Other reports show that France has been importing foreign labour to meet the labour demands within her boundaries. As to the condition of France to-day I do not know of any more complete conclusion than to read the report of our trade commissioner written in January of this year. He says:

> To sum up, France's balance sheet for 1923 shows a stabilized budget, reduced expenses, the development of fiscal resources and the extension of foreign trade.

Now, let us look at Great Britain for a few minutes. Great Britain likewise suffered from a very severe depression in 1921. Great Britain adopted certain partial and limited means to protect her industries during that depression, and I am glad to say she has made a certain amount of recovery. She has reduced her unemployment very considerably, but there are still about 1,250,000 men out of work in Great Britain. Her bank clearings between January, 1922 and January, 1924, have increased by about £70,000,000; but her bank deposits and her commercial bank loans have decreased by about £150,000,000 and £140,000,000 respectively. Her freight—that is the freight carried by her railways—has shown a substantial increase. Her iron and steel industries have advanced, but generally her other industries are considerably below normal. Her industries are, speaking as a general rule, much stronger financially, have much wider trade connections, and greater world banking facilities than the industries of almost any other country but in spite of these advantages, we must admit, from a general view of the trend in England, that the recovery of her industry has been slow, arduous and irregular, and that it is still far from complete. To be fair we must admit that a considerable amount of this has been due to strikes and labour troubles; but if we take our own trade commissioner's report we find that his view is even more pessimistic. His report likewise for January, 1924, and his general summary of British trade is that while it is to be hoped that the bottom has been reached, the immediate outlook seems somewhat uncertain. I think, perhaps, he is a trifle too pessimistic. But from the general view of affairs in England we may be certain that she is making a hard struggle; that while her comeback is slow and irregular, we believe the advance she is making is solid and finally she will pull herself through without doubt.

Now let us look at Canada and see if we can get a fairly accurate estimate of our trade condition, of just how we stand in our trade situation. Canada in 1921 suffered the same general depression and it was fairly severe. She, of course, was then under a moderate protective tariff which, while it may have been changed slightly by way of reduction has practically remained the same. We find that in 1921, the net value of Canada's total production was $2,728,000,000 while the net value of her total production for the year 1922, was about $2,740,000,000, an increase of somewhat under one per cent. The returns for the year 1923, are not yet completed but such returns as are available lead us to believe that we shall enjoy another slight increase. As to her industries, a grouping of her main manufacturing industries and a canvass of their operations show there has been practically no advance in earnings since 1921—the earnings remain practically

the same. But in certain lines of industry, in our mineral production and in our iron and steel works, advances and recoveries are being made. With regard to our departmental and retail stores it is very difficult to arrive at an accurate conclusion, but so far as we have been able to investigate they are still suffering from considerable depression, and a great many retail stores are barely meeting current expenses. I believe there is plenty of liquid capital in Canada. This was evidenced by the ease and rapidity with which the Dominion loan of $200,000,000 and the Ontario loan of nearly $40,000,000 were absorbed in rapid succession; but the fact remains that so far as industrial development is concerned Canadian capital to-day is more or less frozen. In regard to our railway loadings from points within Canada these have shown a gratifying increase. Our bank clearings have shown between November, 1921, and November, 1923, an increase of about $200,000,000; but our bank deposits have shown a decrease of about $60,000,000, and our bank commercial loans a decrease of about $150,000,000;—I take the corresponding months on account of the seasonal variations which occur in trade. As to unemployment, our number of unemployed since 1921 has materially decreased, but the report for January of this year, the percentage being based upon January of 1920, shows an unemployment in Canada amounting to 7.2 per cent, and that despite the fact of the large number of unemployed who have gone to the United States. Now, much as I should like to report a favourable condition in Canada and a complete recovery and restored prosperity, still, in the face of these facts, and in the face of the fact that our farmers are still despondent, that our workmen are still leaving the country, that our capital is still chary about making any more industrial commitments than are absolutely necessary, we must be frank with ourselves and admit that, while Canada has recovered to some extent, at the same time that recovery has been slow and only partial, and in fact our trade is still below normal.

So far as the trend of conditions in all these four countries is concerned, as well as with regard to the degree of their respective recoveries I think it would serve but little purpose for me to discuss the theory of the situation. The facts, I propose to leave with this House, and I believe they are reasonably accurate and as close to the actual conditions as they can be obtained. I am convinced that anyone who judges these facts with a broad view and without preconceived prejudices, must admit that the tariff policies of these countries have had at least some influence, and I believe a substantial influence, on the rapidity and the degree of recovery which has been experienced in them. The Acting Minister of Finance (Mr. Robb) prefaced his remarks, which explained the proposed tariff changes, by setting forth the trade condition of Canada so far as evidenced by our external business. I believe that was a sound way of approaching a consideration of the tariff changes; but I submit that it should have gone much further and should not only have taken into consideration, or tried to arrive at, the actual trade conditions of Canada, but should have taken into account also the world trend of events, the actual happenings of industrial life in these nations from 1921 to the present time. In my opinion, if this House will judge the industrial conditions of these countries fairly, and will give a certain weight of consideration to the tariff policies under which their respective returns to prosperity have been brought about. we shall be much more chary of making reductions in the tariff or attempting changes which may impair our industrial life than we ordinarily are.

Let me turn for a few minutes to some of these fiscal changes as proposed by the Acting Minister of Finance. To judge the proposal one must first diagnose the malady, and I think we will all admit that the greatest of our present ills is the one now being experienced by the agricultural industry of Canada. I am going to attempt the perhaps too-ambitious task of analysing that condition, and may venture some suggestions but in doing so, I do not want to be considered as forcing advice upon my friends to the left, and such analysis as I may make is offered not as infallible but as an honest endeavour to arrive at the essentials of the situation. Let me preface my remarks in this connection by saying that I fully appreciate the tremendous importance and the basic nature of our agricultural industry, that I have the fullest sympathy with it, and that I quite realize that its prosperity is of vital importance to Canada as a whole. Now, what are the real causes of our farmers' unfortunate plight? In the first place, we should bear in mind that of all our raw materials, wheat is possibly one of the most internationalized and most subject to foreign conditions. Needless to say, there exists a condition of over-production; and let us remember that wheat is produced but once a year and is subject to weather conditions, so that the farmer cannot as promptly adjust himself to conditions as can

the manufacturer or certain producers of other raw material. We must furthermore keep in mind the fact that, as a general rule, and in the absence of abnormal influences, the curtailment or the increase of the total wheat crop is gradual and extends over a number of years. As to the degree of over-production which exists to-day, the figures given in the Book of International Statistics published at Rome show that during the years between 1909 and 1914 the average world production of wheat, exclusive of Russia, was about three billion bushels, which we may take as a normal figure for normal times. On the other hand, in 1921 and 1922, which were abnormal years, we find that production increased to about 3,116,000,000 and 3,120,000,000 bushels respectively. The biggest consumer of our wheat is Europe, and Europe to-day is below normal, is more or less impoverished. It is estimated that her consumption of wheat and rye, from both domestic and foreign sources, is about 20 per cent below normal. Thus we have a condition in which the supply is above normal and the demand below normal; we have a condition of over-production with all its attendant hardships. But that is only one factor and I believe there exist two other important factors coincident, so far as time is concerned, with this situation and seriously affecting our agriculture. The first of these is a world-wide tendency towards falling prices; and it is a general rule, almost a natural law that just as the price of raw material rises more rapidly than that of the manufactured article, so on the other hand the price of the raw material drops more quickly than that of the manufactured article. This is very well illustrated in the case of wheat, flour and bread. If we look at an imaginary chart, we find that the price of wheat rose in a very irregular line to its peak and that the price of flour followed in a more gradual curve behind the price of wheat until it reached its peak; and then, on the reverse side of the curve, that the fall of wheat came first and in an irregular curve, and flour followed. We find that the price of bread on the other hand followed the course of flour, rose in a jerky line until it reached its peak, and that then it again followed flour in its descent to the normal level. The fact is that, under normal conditions, and without other adverse conditions, the price of wheat would naturally fall to its normal level before the price of the manufactured article would.

In addition, I believe there is another factor which is affecting our western farmer. We have had a most tremendous expansion as regards our wheat, both in the acreage sown and in the quantity grown. Under the influence of rising prices and patriotic appeals, our acreage has increased from about 11,000,000 acres in 1913 to about 23,000,000 acres in 1921, 1922 and 1923. It is approximately at that figure to-day. Our wheat production has increased from about 231,000,000 bushels in 1913 to approximately 470,000,000 last year. Such a tremendous expansion in short periods of time is, in nearly all cases, and has been, I believe, in our case, built largely on credit. The credit granted has been very great and the expansion has been very great. The result is that our western agricultural industry is spread out very thin. This alone is a condition which might prove very hazardous; but when there is added to it simultaneously the condition of over-production with its attendant hardships and the hardships which attach to a period of falling prices, then we realize to some extent the actual fight which our western farmer has to face and the real problems to be solved. For the agriculturist, struggling as he is in the grip of economic over-expansion and buffeted about by great and inscrutable world forces of over-production and falling world prices, the remedy is proposed of reducing the tariff on agricultural implements, a remedy which, at its most optimistic view, as I understand the matter, can mean nothing more than a saving of ten or fifteen dollars a year to the average farmer, a remedy which carries with it the joker of injuring his home market by possibly destroying or greatly imperilling a great industry, that is taking the budget at its face value, and the remedy proposed is so insignificant and imaginary—if it is a remedy at all, compared with the giant forces from which we are suffering—that it appears trivial and not worthy of consideration. It is like sending a tin fish against the torrent of Niagara.

4 p.m.

If we go beyond and do not accept the budget as it stands, but look behind the scene at the new regulation which has recently been issued altering the previous regulation of the dumping clause or special duty, then we find that even that amount of remedy has possibly been removed. The situation as regards the dumping clause is, I believe, clear, and I do not know that any purpose will be served by my going into it. I might, however, just say, in reiterating something which has been said in prior speeches, that for some years past there has been in force a regulation whereby, if the difference between the price paid by the Canadian importer and the price which the same article

has as a fair market value in its place of origin is no greater than 5 per cent, then the dumping duty did not apply. The new regulation, however, issued on April 8, 1924, two days before the budget was delivered, repeals that special clause as to the 5 per cent, and now any machinery or other article coming in would pay full dumping duty. That would mean, as I understand the matter, that if an article is selling in the United States at $100 and the price quoted to the Canadian importer is $95, then under the old system there would be no dumping duty added, but the duty of 10 per cent would be added to that $95 making the price $104.50. Under the present tariff and the new regulation the dumping duty of $5 would be added, and in addition to that a tariff of 6 per cent on the $95, making the price $105.70 to the importer to-day as against the $104.50 before. I am not quarrelling with the protection to our industrial industries; I believe our industrial industries demand an adequate protection; but if the above is the situation, then the government is offering no remedy for our agricultural situation.

Mr. GARLAND (Bow River): Will the hon. gentleman admit that the removal of that 5 per cent margin in the dumping clause has really had the effect of increasing the incidence of protection all round? I think that was the hon. gentleman's argument and I want to get it clear.

Mr. LeSUEUR: I believe it has increased protection on agricultural implements.

Mr. SPEAKMAN: In that case would the hon. gentleman consider that the agricultural implement industry has been hurt at all by these changes?

Mr. LeSUEUR: I have explained that I am in favour of the protection of the agricultural implement industry and of all our industries, as I will indicate further on, but I say that under those conditions no remedy is offered either in the budget or in any other action by the government for our western ill.

I will proceed to some suggestions as to our agricultural situation. Are there any real remedies for that ill? Is there anything that we can do to help our agricultural industry in western Canada? If the report of the Dawes commission or some other satisfactory solution is adopted in Europe and Europe recovers, then I think we shall have some benefit from that source, but we must remember that Russia will be again entering the export market, and that the recent agrarian reforms in central Europe are to-day having their effect by way of increased crops, and therefore that we have to face a protracted period in which production will continue to exceed demand.

Under these circumstances, what remedies can we adopt to help our Canadian West? Let me touch first on the foreign market. As I have said, the present situation of overproduction will probably continue for some time. But we have, I believe, a virtual monopoly on one thing and that is on the quality of exported wheat. It is admitted that owing to climatic and soil conditions our wheat contains a larger percentage of gluten than other exported wheats, and therefore it is mixed with soft wheats for maintaining the uniformity and standard of the best flours. Practically all other exported wheats to-day are soft wheats. In Europe it is a well recognized fact that the peculiar quality of our flour is an essential element in the blending necessary for the best standard of flour. In the United States it is also a well recognized fact that this inherent quality is what enables our wheat to jump over any tariff barriers which the United States may erect. Our wheat overcomes the handicap of tariff barriers and finds a firm market in the United States. Now, hardly a bushel of our wheat goes to Central and South America. Those countries to-day have a population of about 90,000,000 people, they can be reached by an all-water route from Vancouver, they are prosperous and can pay for our wheat; they import annually from forty-three to forty-five million bushels of wheat and about twenty million bushels of wheat flour. Their bread is generally of poor quality, and they are anxious to improve it. Therefore I feel satisfied that if we organize and push this business vigourously we can find a market there for at least fifteen million bushels of our wheat every year by reason of its superior quality alone, and a market for at least seven or eight million barrels of our flour, also on the ground of superior quality. The same remark applies more or less to Asia. To-day Asia is importing about thirty-two million bushels of wheat and about seventeen and a half million bushels of wheat flour, of which we are supplying a very small precentage. We have the quality to recommend our wheat and flour, and we should make the most of that weapon supplied by nature in developing a firm and secure market for these commodities. There is no reason why we should not get our trade commissioners in South America busy on this project and so establish a firm and growing

market. It can be done. We might enlist the services of some of our brilliant journalists for the necessary propaganda. And it is generally recognized by industrialists that if you have quality in your goods the marketing of them is only a question of efficient organization. Therefore I would suggest that the development of these new markets be pressed vigourously and sedulously. Let us spend some money for the purpose and forget the completion of the parliament tower for a few years. Of course, we must maintain the quality of our wheat and flour, and I understand that our western provinces are taking steps to this end by encouraging the use of good seed and the adoption of crop rotation, and other similar measures.

As to the home market, let us consider what our attitude should be. In the first place, this is a sure market, or at least, it can be made so, for our agricultural industry. It is also our most important market, as can be demonstrated by figures. We find according to the Bureau of Statistics that in 1919 Canada produced 193,260,000 bushels of wheat, of which she exported 78,000,000 bushels and absorbed at home approximately 115,300,000 bushels, or nearly 59 per cent. In 1920 Canada produced 263,200,000 bushels, of which she exported 129,215,000 bushels, and absorbed at home about 134,000,000 bushels, or approximately 51 per cent. In 1921 Canada produced about 300,000,000 bushels, of which she exported about 136,000,000 bushels, and absorbed at home approximately 163,000,000 bushels, or about 54 per cent In 1922 Canada produced 399,000,000 bushels. of which she exported 215,000,000 bushels and absorbed at home 184,000,000 bushels, or about 46½ per cent. I have burdened the House with these figures simply to show clearly the importance of the home market.

Mr. McCONICA: Does not the hon. member include in his statement of wheat consumed at home the amount that was ground into flour and exported?

Mr. LeSUEUR: I include everything that was used at home.

Mr. McCONICA: So it was not consumed at home.

Mr. LeSUEUR: I include, absorbed by the manufacturing industries.

Mr. McCONICA: Absorbed by the grinding mills?

Mr. LeSUEUR: Absorbed in any way at all.

Mr. SPENCER: Will the hon. gentleman give the House the amount of flour exported?

[Mr. LeSueur.]

Mr. LeSUEUR: I could by looking up the figures, but I have not them at hand. The amount can be easily ascertained by reference to the statistics. I am pointing out the amount of wheat that is taken care of in the home market. It may be eaten, used in the mills, or disposed of otherwise, but the home market takes care of it. I emphasize the fact that the home market absorbs more of our wheat than any other market—more even than the British market absorbs. In this case the home market is first in order and paramount in importance, as it usually is. I feel that any remedy to be a real remedy for our agricultural situation must recognize the fact that the basic unit of our civilization is the nation, must recognize that the integrity of our industrial life must be protected, and the growth of our domestic markets and our internal trade encouraged. In my opinion the present budget does not carry out those conditions. It appears, to say the least, to trifle with the life of the great industries of our country; it appears to extend the black hand of uncertainty toward the throat of a great many of our industrial concerns. That is a most unfortunate and a most unhappy condition, because it stagnates progress and certainly injures our home market.

In connection with our foreign exports especially our exports to South and Central America or other points through Vancouver, I wish to say one or two words on the question of freight rates. I have heard it stated that the regulation of freight rates is an inexact science, and I have no wish to take it out of the hands of those who know something about it. But there is a persistent and constant claim that the rates from Edmonton to Vancouver are out of proportion to the operating costs on that line and out of proportion to the freight rates to the east. As to that, I believe we have a special tribunal which is fitted to investigate, a tribunal which has had experience in railway matters. It has attached to it a body of experts, and there is no reason why the government could not refer the matter to them and get a report setting forth the facts, the decision arrived at and the reasons therefor which might form the basis for any proposed action looking to a change in these conditions. I think that should be done at once; we should get an immediate report on the subject. If these rates can be reduced so that the Edmonton section can get their wheat to Vancouver more cheaply, and thence to the south and other points, it will mean a great relief to

a large section of our western farmers and help all parts of the West.

All these suggestions have more or less the object of helping the farmer to help himself. I believe the farmer has to keep his home market; economically his basic unit should be the nation; our internal trade should be built up and protected. One remedy for some of his difficulties should be found in an energetic propaganda to bring before the southern countries the quality of his wheat, particularly in those sections where the value of the Canadian farmer's product is not known and appreciated, and where the people are looking for and would welcome better wheat, better flour and better bread.

Following out that idea of helping the farmer to help himself, I have always heard since my early days that the farmer was the most independent of men, that he controlled his own livelihood, that his living depended on no other man. If that is not the condition in western Canada to-day, I ask, is there not some feasible scheme whereby it can be made so? Is it not possible to have some co-operation between federal and provincial governments whereby the farmer will be made more or less self-sustaining and thus be able to overcome his present difficulties? Can he not be enabled to produce his own butter, his own eggs, his own meat? It may not be a very high ambition, but it would be sufficient to carry him over the present crisis. My understanding of the situation may be wrong, but we do co-operate in road-building and in many other things; why not co-operate in that? Another question that might be asked is this: How far can the government co-operate in enabling some of the western farmers to shift their crop from wheat to some other line?

Mr. SPENCER: May I ask the hon. member a question? Can he give the House any information with regard to the percentage of the farmers in western Canada who, he believes, do not raise their own poultry and produce their own dairy products?

Mr. LeSUEUR: No, I could not give the percentage. I do not know where that information could be obtained. But I will proceed with the point I was going to make, namely, whether or not the farmers could shift their wheat production to some other production. I read recently a report of the Department of Agriculture of Washington setting forth the results of the efforts of the United States government in some 302 counties to bring about a shifting from wheat production to the growing of alfalfa, the raising of poultry, dairying, and so on, and that report showed that good progress had been made in that direction. Is it feasible to arrange for some co-operation in that respect between our governments with a view to meeting the present situation?

Mr. FORKE: I would like to ask the hon. member a question—and I appreciate the spirit of his address. Does he take into consideration the great difference between the conditions in the United States, with 110,000,000 consuming people, and those in Canada, with a tremendous producing population and a small consuming public? Does he appreciate how much more difficult the question is to settle in this country?

Mr. LeSUEUR: I do take that into consideration. I appreciate it and I am trying to offer some solution that will be a step toward relieving that condition. With regard to the present position of agriculture, I would just like to cite the situation which existed in the southern states. It may not be exactly applicable, but it was more or less along the same line. It was about 1830 or 1835, that the cotton producers in the southern states were experiencing a crisis of low prices and overproduction. At that time the Democratic party thought it would be in the interests of that community that they should buy their implements in the cheapest market and sell their cotton abroad, that they should have free trade or low tariffs. A compromise as to tariff was arrived at and the arrangement prevailed for some eight or ten years. Those years were not years of prosperity. War followed in Europe and there was some prosperity, but shortly after that a protective tariff was adopted in the States and has been followed fairly consistently ever since. To-day the United States is producing about 12,500,000 bales of cotton. Of that amount about 6,000,000 bales are manufactured in the United States, about 4,000,000 of which are manufactured in the southern cotton states. That is just an example which I leave with the House.

In summing up as to this topic, I must admit that I have occupied considerable time and attempted a very ambitious task. I thank the hon. members to my left for their kindly reception of my effort. An analysis of the western situation shows that the condition there is due to this series of causes: Over-production, falling prices and over-ex pansion. I believe further if we are going to look for remedy, real and permanent, we have to look directly and hit directly at those causes, and I would like to reiterate, that the very nature of those causes and the very

nature of these remedies must impress upon us that our basic unit must be the nation, that those ills in the West will be best combatted and overcome eventually by the co-operation and help of our united industrial life, and that the one essential we must keep in mind in our consideration of this subject is the integrity of our complete industrial life. Now let us look for a short time at some of the points in connection with our tariff.

Mr. FANSHER: The hon. member has argued that production of wheat should be decreased in the West and that the western farmer should enter mixed farming. Is he of the opinion that the farmers of Ontario and in the East who have largely ceased growing wheat and entered into mixed farming are to-day in a greater condition of prosperity than the farmers in the West?

Mr. LeSUEUR: I think it would be useless to draw a comparison as to degree, as to whether the farmer of the West is in a worse condition than the farmer of the East, but I would say that the whole agricultural situation of our country needs help in every possible way, and that if you help one section you help the other. As to shifting from the growing of wheat to other lines of farming in the West, I do not suggest that that should be done in a wholesale way, but it should be done simply so far as it can be carried out or needs to be carried out to meet the western situation. There should not be an extensive shifting. An extensive shifting would be impossible. It is only as a minor factor I am speaking of it.

Now, turning to a few points in connection with the tariff, let me say that I feel convinced that a great many of our divergencies of opinion are due to differences in our conclusions as to what the facts are, and if we could come more nearly together on what the actual facts are I think our theories would much more nearly coincide. I am firmly convinced that, so far as present world conditions are concerned, an adequate protective tariff is essential to the growth of a diversified industrial life for our country and for the production of that distinct type of manhood which Canada can produce and should have. I do not favour a tariff which allows any manufacturer to make excessive profits; and I believe that the rate of tariff is something which must be determined by the conditions in each particular case, and having regard to the national needs. Now it is almost impossible for any member of this House or for any minister of the government to determine what rate of tariff should prevail in any one particular industry, without being in constant and close touch with that industry both at home and abroad. Half knowledge is, of course, dangerous, and I believe that this country would be wise to have a tariff commission of a scientific nature to advise as to the regulation of tariff needs. Sir Thomas White, as Minister of Finance, in 1912 brought in a bill which proposed to establish a tariff commission, a commission which would have power to investigate and ascertain costs of production, costs of transportation, costs of material, and inquire into any other matters which pertain to industrial concerns, and that the results of their investigations should be available to the House and to the ministers of the Crown. Such a tariff commission would, I believe, in making one investigation after the other, gradually accumulate and tabulate a series of facts, gather information which would be of vital importance, and would always prove a source of reliable information. If it is true that our differences are to a large extent differences on the facts, and if it is true that suspicions which sometimes arise in the minds of the public are largely due to inability to get at the facts, such a tariff commission would serve a very useful and a beneficial purpose in our national life.

Mr. EULER: Would the hon. member confine the powers of such a tariff board as he speaks of to the making of investigations and giving advice merely, or would he go beyond that? Would their findings have any further purpose than to advise the government?

Mr. LeSUEUR: That, of course, would be a matter for much discussion, but what I have suggested so far is only in the nature of an advisory tariff commission, leaving the responsibility with the ministers of the Crown.

There is one other matter in connection with our tariff which I should like to bring up, and that is in connection with our preference. We give to-day a preference to Great Britain. No person can be more anxious than I am to see our Imperial relations strengthened and grow. The British Empire is to-day a group of free peoples of the same race and the same civilization, and their co-operation and efforts are to-day exercising a very beneficial and a very potent force in the world's advancement. We have a League of Nations, it is true, but I believe that the British Empire is to-day the strongest, the most solid, and the most effective League of Nations which exists in the world, and that in the carrying out of its own interests and its own development it is

advancing the world's best interests. But notwithstanding that, there is no member of this group of free peoples which does not admit the principle that each one of its members has the right and the duty to develop its own resources and its own productivity to the utmost without considering the other; that there will be no quarrel between members of the British Empire in seeing each member develop its own production to the uttermost, and that foreign trade only helps in so far as it is subservient to that idea. In short this would mean: Home trade first; Imperial trade second; and foreign trade third. As to what the policy of the present government is in this matter I am unable to find out; but let me say this: Under our present preferential rates, goods are coming in from Great Britain and are doing serious injury to some of our industrial concerns. If I were asked to give an example of the concerns thus affected I would instance boots and shoes. It is a fact that the agents of several British concerns are visiting various parts of Canada to-day and are selling consignments of boots and shoes to our merchants to the great detriment of our boot and shoe factories. Now, if that injury is due to inefficiency on the part of our boot and shoe manufacturers then the burden must rest on them; but if it is due to differences in cost of production, or differences in wages, or other costs then, I think, our preferential duty should be changed so as to give our manufacturers the proper amount of protection and I doubt very much if the government to-day has the necessary machinery available to determine which of these conditions exist. If so, that is another example where a tariff commission would prove a very efficient and useful body.

Before leaving the question of tariff preferences I might point out that while the home trade should be first, we must not forget that Imperial trade should be second. Thus I view with some regret that the British Chancellor of the Exchequer, in his recent budget, has seen fit to reject the proposals of the Imperial conference and to provide that the McKenna duties which gave the dominions certain preferences should be allowed to lapse. If I understand British politics aright, the policy of the British Labour party has been, and is, more directed to internal and domestic affairs and pays little or no attention to Empire, not, I would say, from a spirit of hostility but from a feeling of more or less indifference to the Empire and this on the ground that the Empire is more or less of a burden and that the principle of Empire is objectionable as implying the oppression of free peoples. But, while I feel that their present pronouncement is in greater or lesser degree due to the policy of "buying in the cheapest market," I feel that world conditions are going to force the abandonment of that policy, in whole or in part by the British government. I also feel and hope that as the present government in its tenure of office comes more into touch with the dominions, and is brought into more direct contact with the feelings of Imperialism and the desire for a close working Imperial trade arrangement we may see a change in its attitude as disclosed by the recent budget.

There is one other point I propose to discuss and that is with regard to our distribution system. I bring this up because I feel that possibly the government may be able to adopt some remedy in regard to it. We hear complaints about the difference between the price paid to the producer and that paid by the consumer, and to avoid properly studying the matter this situation is blamed on the tariff. I had a striking example of this brought to my attention recently. A farmer had several hogs ready for the market. They weighed about 170 pounds apiece, and the most he could get from the Toronto buyer was eight cents per pound. He went to the local butcher who said he could not buy them because he had a market for only a small portion of the animal. The farmer continued looking round and finally sold them to a butcher on the outskirts of the city and obtained, after losing about 35 pounds of weight in dressing the hogs, sixteen cents a pound. By selling the hog locally, instead of to the Toronto buyer he made a gain of $8 per hog. That situation is not, I think, the fault of the central butcher, or of the consumer, or of the producer. The fact is that when the hog is sent to Toronto the meat is cut, trimmed and otherwise decorated. It is then returned in nice shape to the central butcher. The position is that the freight must be paid from the point of sale to the city, then there is the cost of the extra trimming and decorating which the abattoir company makes, and fianlly the cost of freight back. This system has been an insidious growth. I do not know of any one particular branch which is to blame, but this system has grown to such a size that no particular man or group of men can cope with it. However, I believe that a system which is now being used in the United States could be considered by us with profit. They have there what they call the Department of Simplified Practice. The business of that department is to co-

operate in simplifying methods, in cutting out every unnecessary step in the manufacture and production of goods, and in making efficient every stage from the time the article leaves the producer until it reaches the consumer. They frequently call together the principal men in an industry with the object of discussing these matters. Some very remarkable advances have been made in the way of simplifying methods and cutting out unnecessary steps. I see no reason why our government should not adopt a similar plan and put an energetic man in charge. Then if he calls the abattoir men together he would find them most willing to co-operate for I understand they are losing money to-day. If some devices could be arrived at by such meetings for bettering the present situation, and the power of the government were put behind the industrialists to secure results you would undoubtedly get results that could not be achieved if the matter were left solely to the co-operation of those in the trade. I think that might be a very advantageous step. If the government wants to do something of a practical nature and can put some such plan in operation they will remove a terrific weight, indeed one of the heaviest weights, from the backs of the people.

As to the proposed changes affecting steel, and other products, I do not intend to enter into any discussion this afternoon. These matters have already been taken up and dealt with to a greater or a lesser extent and I will not attempt to go into any considerable analysis of them.

Before I conclude, however, I would ask this question: What should the general and proper attitude of this House be towards tariff changes? If we look afield we find that to-day there is a tendency, an ever-increasing tendency among all nations, to produce more than is necessary for their own requirements and to thrust the surplus upon their neighbours; and when we look internally and study our own conditions we find that we have great resources which would make for a great national development. We have the climate, we have the race, we have the mental, moral and physical texture, and we have the educational facilities and other qualifications which should enable us to build up a great and diversified people. In fact, the type of Canadian which this country is producing to-day can be easily distinguished from American or English or French and is a type we may well be proud of. But that there are difficulties we must admit. We have a tremendous area of land and a sparse population scattered along our southern border, but I believe that as our population increases and as northern Ontario develops more, and more, so as to solidify our whole structure, these difficulties will gradually disappear. If we are going to look toward this objective, we should learn what history has to teach us in regard to the development of other nations. History shows us that no nation which has neglected its industrial life or which has been content to be the hewer of wood and the drawer of water for any other nation has ever attained a great development. On the contrary, the growth and power of a nation, the development of its art, of its literature and of its highest civilization and the production of its most advanced manhood, have always followed its great and powerful industrial development. Our objective can never be attained by adopting the policy of "buying in the cheapest market." Our objective should be to make of our nation a genuine household organized to provide a fitting and adequate livelihood for all its members, and governed by an endeavour to establish the rule of a "just profit," a "just price," and a "just wage." This objective, I am thoroughly convinced, can be attained, under present world conditions, only by an adequate protective policy which will guard the integrity of the industrial life of the whole nation; and my view is that that adequate protective tariff could well be regulated and adjusted on the advice of an efficient scientific body. Our immediate aim should be, I think, to eliminate not these principles but the evils which arise in our national life from day to day and to follow the immediately practical step leading towards our objective, refusing to be led astray by the nebulous delusion of the theoretically perfect. This I believe is not the policy of the government; their policy is that this budget should prove the death-knell of protection, a budget which in my opinion does not give a sound view of our financial status and is misleading as to our trade conditions; a budget which inaugurates a policy casting a shadow of uncertainty over our industrial life and trifling with the existence of some of our greatest industrial concerns. So far as this unsatisfactory policy is concerned, so far as its attendant uncertainty is concerned, and so far as the assertion that the budget is to be the death-knell of protection is concerned, I think the government would be well advised if it took to heart the paraphrase of a couplet from Kipling:

> Judgment of nations, Spare us yet
> And please forget—please forget.

Mr. D. A. MACKINNON (Queens): I have listened with a great deal of interest to the speech of the hon. member for West Lambton (Mr. LeSueur), and while I think that we can agree with him in regard to some of the views he has expressed, I do not think that he has given us an adequate explanation of the difficulties under which agriculture is labouring at the present time. These difficulties it is hard to explain; one hon. gentleman offers one explanation, and another gives a different explanation of the causes of the present unfortunate state of agriculture. The fact is that there are a great many causes to which the present situation may be attributed, one of which I think is the fact that the relative prices of things are so uneven; the prices of the products the farmer has to sell are not commensurate with the prices of the things he has to purchase. The two are not compatible. Now, the question that we have to solve is, how we shall alleviate this depression in agriculture. In the United States they proposed to remedy the situation by a different means from the one we have adopted in the present budget; they decided upon protection. The farmers of the United States deemed it wise to have protection because they thought it would solve their problem for them. But the fact is that you will find in the United States to-day that the problem has not been solved and the farmers there are in as difficult a position as they were in before they passed their high tariff protecting their agricultural products from the competition of the world. You will find in New York state, in Minnesota and in other states, that the farmhouses are boarded up just as they are in different parts of Canada. I regret to say that in our own part of the Dominion that condition prevails, and hundreds of farmers have been going to the United States. That is also the case throughout other parts of Canada, and it is due to some condition that is very hard to diagnose. The government has attempted in this way to grant some relief, and I think it is wise to make the attempt at least by reducing the tariff and abolishing the sales tax. The tariff affects our dairying, poultry raising and all the other different branches of farming. It is a wise experiment at any rate, to make this reduction in order to see if it will help the farmers in the business which they are pursuing.

The Acting Minister of Finance (Mr. Robb), in his resolutions, proposes first to extend the British preference to some territories that are under the League of Nations and also to withdraw the preference from some others. I am not going into the particulars of that. His next resolution deals with tea, which will affect households in every part of the country, perhaps in a very small way, but this is a move in the direction of helping households to get through more economically. Other industries that are affected are the fruit growing industry, the poultry industry, the dairy industry. These are industries that we in the East have a good deal to do with, and let us hope that the reductions will be of assistance. I should like to see a little more sportsmanship on the part of those who talk of protection being increased for the benefit of the manufacturers. They realize that the farmers are in this position throughout Canada, and yet I would suggest that they be sportsmen enough to have a unity of feeling with them to help them to get out of that position. It is in the interest of the manufacturers that the farmers should progress, because the farmer cannot buy unless he is able to sell his product at a profit. He cannot let the cream of his work go away to others continually. I am reminded of a little story that I might tell illustrating the struggle that the farmer has. It is an old fable about two frogs going out one morning and falling into a large pan of cream. They struggled for some time and at last one fellow looked at the nature of the liquid and as he could not understand it, he gave up the struggle and dropped to the bottom. The other frog kept struggling along and after a while he found a little lump. He kicked and kicked still more, struggling to get out of that dish, and at last a lump of butter appeared, so he stood on the lump of butter, sprang out, and his life was saved. We need a little of that cream reserved for the farmers so that their lives may be saved. If the cream is going to be taken away from them by the railway freight rates, tariffs and taxes, they cannot make much headway and we want them to succeed.

I wish to refer to the amendment moved by the leader of the Labour party (Mr. Woodsworth). I am in favour of one part of it, that is in regard to the inheritance duty. I think it is the most equitable system of adding to the revenue that the government can adopt, and my reason for saying so is this—and I have studied the philosophy of the matter—that when people accumulate large estates and do so under the legislation that we pass here, it is right, when they pass away, that the country where this money has been earned should in some way receive com-

pensation out of those estates, instead of the money being often carried into foreign countries and expended by heirs or foreigners there. There is also this bit of philosophy about the matter, that while people are living and getting quite wealthy, the tendency to do others from motives of selfishness and greed would have the edge taken off. If it were known by those whose only aim apparently is to make money that there would be this inheritance tax, they would not be so keen and they would live and let live, because that is the struggle between the person who is trying to be a millionaire and the one who is not. While I am in favour of the inheritance tax as a scheme, at present when we are having the government reduce taxes in every other direction and with a very high income tax on those who are earning large incomes, I do not think it would be well to bring that amendment into force, and it should be deferred. I hope that at some future time the Canadian government can see its way clear to impose this tax, because there is no tax that will fall so lightly as a burden upon the people living in this country. Those who are to receive the legacy, supposing it is a $500,000 estate, have not had the enjoyment of the money; it is the parent or uncle or friend who has left it, and it is just as well for them to receive $400,000 or $300,000. Such a legacy is a splendid thing for them to come into; they are not suffering at all, and the man who has gone does not need the money any more. I am pleased the government is doing its part in reducing in some measure the taxes that are working most harshly. We want more capital, more money in circulation, and if the income tax could also be reduced, that would be a great help. Doing away with the sales tax in some cases and reducing it in others will be of great assistance to the country.

As regards the debt of Canada, this is Canada's century, and at the beginning of it the debt was about $265,000,000. Ten years after that the debt was about $340,000,000. In 1921 the debt was over $2,340,000,000, so that we have during the decade a large increase of over $2,000,000,000. Men who are in parliament and who have been studying public affairs have been thinking in millions in our earlier life, and the power and ability of the best men we have is tested when one has to think in billions. I suggested to the Prime Minister a year ago that his Minister of Finance was overworked and that he should take two or three of the most skilled political economists to be found anywhere, put them upon the subject of the public debt and ask them to provide some method of meeting that debt of $2,000,000,000 out of the assets of the country. You may say what you like about this thing or that causing depression in agriculture, but one of the main causes is the public debt. The relationship of prices that I mentioned is another, but that burden of debt has to be met in some way. I think the ablest men who can be secured should be engaged to devote their minds to the subject, and in speaking in this way I am not casting any discredit on the Minister of Finance or the Acting Minister of Finance. They are fully occupied with the administration of their departments, and this is something that should be straightened out by a separate body. Much credit was given by the last speaker to the British government for the steps they have taken to reduce the public debt. I observed about a month ago that Ramsay MacDonald, the Prime Minister, appointed a committee of nine men, outstanding figures in finance, economics, commerce and labour, to go into the question of how best to deal with the public debt of Great Britain. I would suggest that the government appoint a committee of outstanding Canadians to deal with our problem of public debt. For instance, it would be a great relief if we could float a fifty-year loan of one billion dollars at 3 per cent, for our victory bonds at 5 per cent are a heavy national burden and should be redeemed as opportunity offers. I have no doubt the government is struggling with this problem, and I make this suggestion in the hope that it may be of some assistance to them.

5 p.m.

In the Maritime provinces we are also suffering from an exodus of our young people. When the leader of the opposition was down there he described the situation as deplorable. Sir Henry Thornton was also impressed with its gravity, but he acknowledges that he is unable to make out what is the matter with the Maritime provinces. The only remedy so far suggested is that of protection, but Sir Henry thought that a committee should be appointed to investigate the causes of this depopulation and of the lack of progress. I think it would be well for the government to appoint such a committee, because it is a serious menace to our national welfare that so many of our young people migrate to the United States. Of course, some years ago the depopulation was easily accounted for. The West called out to us:

Give me men to match my mountains,
Give me men to match my plains,
Men of empire in their purpose,
Men with eras in their brains.

We sent West this type of men from Ontario, Quebec and the Maritime provinces, and they have taken a leading part in developing the West. Some of them have since been returned to this House. To-day they have railroads over the mountains and over the plains. and the colonization of that vast area is one of the greatest events in modern history. We acknowledge the great work that those pioneers have accomplished, and to-day we are trying to do the best we can for them in helping them to solve economic problems with which they are now confronted.

We have a considerable industrial development in the Maritime provinces, in which over $145,000,000 has been invested. My friend across the way (Mr. Grimmer) has a number of thriving industries in his constituency at St. Stephen and other places. I believe the country needs plenty of busy workshops. We all desire to help along our manufacturers, but in our plans for their assistance and development we think that we can see a little further ahead than some of our friends who recommend protection as the only remedy. We have got to furnish our manufacturers with a home market capable of absorbing a large part of their manufactured goods, and in order to do that we must allow certain cheap goods into the country, which means that we must have a lower tariff.

In comparison with the rest of Canada we in the Maritime provinces are not doing so well industrially as we ought to be. I think we can have as large and important factories down there as in any other part of the Dominion. A few years ago I wrote to the then president of the Canadian Manufacturers' Association in Toronto to the effect that our people would have to go in for free trade, unless the manufacturers opened their eyes and ceased to so selfishly centralize capital in Montreal, Toronto and a few other big cities. I suggested that the remedy would lie in decentralization both of capital and industry and I asked him if it would not be possible for the members of his association to establish branch factories from ocean to ocean in places where the raw product appropriate to the particular line of manufacture was obtainable. That is what we must do if we are to go ahead industrially and commercially, because with the long haul of thousands of miles separating the Maritime provinces from the great commercial and industrial centres of the country not only are we in the East handicapped, but the disadvantage reacts on the manufacturers of Ontario and Quebec. About 1919 freight rates had been increased to such an extent that it was no longer commercially practicable to attempt to ship commodities beyond a certain distance, otherwise the transportation charges soon exceed the value of the freight.

In Prince Edward Island we have soil that is superior to Germany's for the growing of sugar beets, but unfortunately we have not the capital to develop this industry, because the big banks have swallowed up our small local banks and the financial resources of the Maritime provinces have been withdrawn to Toronto and Montreal. At one time we had factories turning out mowing machines, carriages, plows and many other articles, but these small industries have all been swallowed up by the larger concerns, and this centralization of industry and capital has been the ruination of industries in those parts of the Dominion that are far distant from our great banking and industrial centres. I repeat, we should have decentralization of capital and of industry. We grow the best tasting vegetables of any province, and our sea trout is the best obtainable anywhere. Though we have had ample occasion to feel gloomy, we are not downhearted.

Mr. FORKE: If I had a little money I would be down there.

Mr. MACKINNON: Well, you would find our sea trout unexcelled. We would like to have some of you make a visit to the island during the summer in order that you may enjoy a healthy dip into the breakers on the north shore. It is a country that will go ahead; the production was better last year than it had ever been, but what is missing is an adequate price for our products. Our position is something like that of the West, where there was a very large yield but not enough realized because the price was wrong and freight rates were too high. We are in the same fix. It is not the fault of the present government, mind you. It was under the former government that the freight rates were made so high; it was under the former government that the Crowsnest pass agreement was changed and the rates put up. You remember how we were criticized in respect to the Crowsnest pass agreement the year before last; we four members from Prince Edward Island were denounced for voting for the legislation then introduced. But what has

happened? The return to the Canadian Pacific since the restoration of the old agreement has been better than it was during the period when the suspension was continued. It is well that we should have these facts in mind, because we have been accused of losing to the Maritime provinces $17,000,000 by our vote in favour of the restoration of the Crowsnest pass agreement. Men like Mr. Beatty and Mr. Hanna predicted that they would lose millions by the change, but it turned out the very opposite; their judgment did not happen to be right.

I have referred to this matter of freight rates because it affects us a great deal. We pressed very hard to get the freight rates reduced, because our people were carrying their goods with horses owing to the fact that they could not afford to ship by rail. The railway returns in the Maritime provinces have not been good, simply because the people are too independent to ship by rail when they have to pay such high freight rates. The new board made some reductions very soon after their appointment, and the situation improved accordingly. But we cannot hope to have the country prosper unless our workshops are kept going and unless we have easy and cheap means of conveyance from one place to the other both for goods and for people; I think that goes without saying. These are the greatest drawbacks that affect us down there. Special rates for tourists would be appreciated.

I wish the Minister of Railways (Mr. Graham) were here. I had intended to bring a matter to his attention, but perhaps the Minister of Justice (Mr. Lapointe) will do it for me. We have a good many people leaving our province. It is proposed to spend a considerable sum for immigration. There were two little branch railroads proposed and agreed to both by Liberals and Conservatives in this House as far back as 1911, the New London and Rustico branches. Plans were prepared and sites allotted for buildings and so on, but the work was never gone on with. In New London we have people whose fathers or grandfathers came from Scotland a hundred years ago, and in Rustico we have the descendants of French Acadian settlers. It is two hundred years since the first settler went into the Rustico district. What I ask the Minister of Railways, through the Minister of Justice, is that while he is providing for the settlers in the new districts in the West by twenty-six branch line resolutions he should not forget the descendants of the old settlers in the districts I mention, who have been there for 100 and 200 hundred years. Let him give us these branch lines this coming summer so that we may have a celebration and the return of our own people.

Yesterday a man well known in public life who came from Prince Edward Island passed away in the person of the late Chief Justice of Canada, Sir Louis Davies. He was highly honoured in the province and in Canada as a whole; his career was long and honourable and an inspiration to the young men of the province. Undoubtedly his field was larger than it would have been had he remained in the province and practised law, but his illustrious career is only one instance. Go to another room in this building and you will find Sir Robert Falconer and the Reverend Doctor Pringle who came from Prince Edward Island, fighting on one side of the church union question, and on the other side the Reverend Doctor Fraser and one or two others. Doctor Pidgeon is a descendant of the Pidgeons of New London, Prince Edward Island. I mention these simply as instances of men now in the struggle who came from the province by the sea. Had they remained down there they probably would have worked at farming or something of that kind, but their education was good and they have gone out to other parts of the continent. You find them from California to Massachusetts and all through our western country—workmen, clergymen, doctors, lawyers and judges. I could give you the names of many who have gone out and have attained eminence in different parts of the world. I will mention just two others, if you will permit me; one is J. Gould Schurman, who grew up on a farm in Prince Edward Island, was president of a university in the United States and to-day is ambassador for the United States in China. Another was Franklin K. Lane, who was a distinguished member of the cabinet of President Wilson during the war.

I do not mention these things in a spirit of boasting; I am simply pointing out that although the place is small it is turning out men who have proved their worth in other parts.

We have fewer people there by ten thousand than we had when we entered confederation, but we are not inclined to secession; we believe in standing by the union; we believe in Canada going ahead. But we cannot get population without industries. There is a splendid opening for industry in Prince Edward Island if the capitalists would, instead of concentrating their activities in large centres, establish branch houses in other parts of the Dominion. I admit that the practice of concentrating in the large centres

is good from the point of view of foreign trade, but it is ruinous for our local industries. Many of our sons have gone out to the world, so that part of the intellectual force of the island has been spent in other provinces and countries, and although we do not have the benefit of it, I think it is well spent and that we have no reason to regret it.

Mr. T. H. McCONICA (Battleford): Mr. Speaker, I have no disposition to prolong this discussion, but there are a few observations that I should like to make. To my mind this budget and the amendment offered by the hon. member for Kent (Mr. Doucet) raise a very important issue in Canada to-day, the question whether the future fiscal policy of Canada is to be a tariff for protection or a tariff for revenue. That, it seems to me, is the issue. That is where we stand to-day as a parliament and as a country. Now, for my part, if that issue is fairly joined, I would take my position in favour of a tariff for revenue. We have had a good deal of talk about free traders, but there is no use discussing this question except as it stands. I do not think any one in this House to-day is in favour of putting this country under free trade at any time in the near future. We believe in a revenue tariff, with such incidental protection as that affords.

Now what is a protective tariff? It is a tax levied for the purpose of protection. It is levied for the purpose of taxing the many to protect the few. It taxes the money out of the pocket of one private individual into the pocket of another private individual, and I do not think that is the proper function of government. I deny that a government has the moral right to say to one man: I will help you, and I will do so by hurting your neighbour. That is what protection is when you reduce it to its final essence. Now what excuse is there for this proceeding? What good end is obtained by this discrimination between our citizens, for that is what it is? It is taking from one and giving to another, for what purpose? Why, the hon. gentleman says, we will be able to build up the home market; that is the great desideratum. Well, in the first place, can we do it? In the second place, what does it amount to if we can do it? So long as the price is the same, I cannot see that it makes any difference to the man who sells whether he sells in the home market or abroad. There may be some sentimental reason why he would prefer to sell at home; perhaps he would like to bring in people to associate with him and to whom he could sell, but so far as the money that goes into his pocket is concerned, I cannot see that there is any difference between the home market and the foreign market. So far as bringing relief, for instance, to the wheat grower of the West is concerned, there is no difference.

Take our wheat. Our price is fixed in Liverpool, and the Canadian consumer pays the Liverpool price, less the cost of sending the wheat to Liverpool. The producer in western Canada realizes exactly the same price in both cases, and it makes no difference to him financially whether the wheat stops in Ontario or goes on across the water. So as far as relief is concerned, the home market is not of any particular consequence. Suppose we bring people in here. Well, the price of our wheat is fixed by the world price, and if we could transport enough people to Canada to eat our wheat, they would not eat any more wheat here than they would if we left them in Europe, would they? Not a bit; perhaps not quite as much, for there I understand the ration is a bowl of soup and a loaf of bread, while over here we have meat and potatoes, vegetables and fruit and everything else, so I think they would eat rather more wheat on the other side of the water. So far as a market is concerned, this home market is a myth.

Another thing: We are raising about 300,000,000 bushels more wheat than we consume. We raised last year 470,000,000 bushels, and we eat about 50,000,000 bushels or a little less than that. A man eats between five and six bushels of wheat a year, or about 50,000,000 bushels for eight and a half million people. We also sow about 50,000,000 bushels a year, or a little less than that. We have at least 300,000,000 bushels of wheat to ship abroad. Now suppose we tried to consume that wheat at home; 300,000,000 bushels divided by six means 50,000,000 people to bring in here to consume that wheat, and not one of them would be raising wheat. What would they do? That is the question. If we build up this home market they talk about, what are we going to do with these 50,000,000 people? Are they going to manufacture? Where will they sell their stuff? The hon. gentleman says that we should be self-contained; we should live on what we produce. Now we can produce enough to keep ourselves and still have a large surplus. What are we going to do with it? Send it abroad? We are self-contained, we are raising what we need and we should send our stuff abroad; load a shipload of our products, send it to the markets of the world and

sell it, and bring back a shipload of money; then load another ship and bring back another shipload of money. But how long could we keep that up? We would not get three cargoes out of this country till they would say: We will buy your stuff if you will buy ours; our money is all gone. Yes, Mr. Speaker, we must depend for our foreign trade on our ability to buy foreign goods. There is no other way of doing business, and we cannot build up a foreign market unless we buy abroad. Fifty millions of people brought into Canada and engaged in manufacturing or any other vocation you could put them at would not eat a bit more wheat than if they had stayed in Europe. We would not have a market for an additional bushel.

The hon. gentleman says we are producing too much wheat. Well, they are buying all we send to them; they take all we produce. He also says the price is too low. But the price is not going down; it is as good this year as it was last. That is not saying much for it, but that is the situation. He also offers very good suggestions as to how we can relieve our farmers. They should not produce so much wheat, he says, and they should sell at a better price. But how are you going to get a better price? Then he says we must go into other lines of farming. Now what other line, I would like to know? I am a farmer and I am ready to shift to some other line. I have shifted to other lines, and it does not pay. There is nothing else that can be suggested for a farmer in the West to engage in. Talk about the dairy business—we cannot compete with eastern Canada in that. Why our cows are practically all dry fed for ten months in the year. We have a little fresh grass for feeding purposes along about the beginning of June, and then it dries up and our cows are practically fed on hay for the balance of the year; they give scarcely any milk. We cannot manufacture dairy products and compete with the farmers of Ontario and Quebec, even if we were as close to the market as they are. We are told to go into some other line, go in for raising cattle. I have raised cattle; I am raising cattle now. It takes ten acres of our prairie grass to keep a steer. That ten acres will cost $200. At 8 per cent that is $16 a year. You can summer the steer on that ten acres but then you have got to winter him. Sixteen dollars a year for three years. That is $48 and you will do mighty well if you can sell him for $30. That is the cattle business. We are told to go into some other line. I want to say to you that the other lines are worse than wheat, and I have tried a good many of them. We are told that the aggregate reduction in the price of agricultural implements is not going to help us much. The reduction will not help us a whole lot, but it will help some. The hon. gentleman to my right (Sir Henry Drayton) told us that we would only save about $750,000 by this tariff reduction on agricultural implements.

Sir HENRY DRAYTON: Altogether, and you get only a little bit of it.

Mr. McCONICA: Well, it is not so much the revenue, it is the bounty we pay to the manufacturer. Then the hon. member for Brantford (Mr. Raymond) said "Why the farmers of the West need not complain about their agricultural implements because the member for Brandon (Mr. Forke) says they are not buying any implements." That is true, they are not buying implements to any great extent. They are, Mr. Speaker, using old worn out implements, and there is not much economy in it. It is the worst waste they can be guilty of to drive a poor seeder across a field and probably lose two or three bushels per acre when if they had a good machine it would pay for itself in a single year. It is the same with a binder that does not work well. If you had an efficient machine you would soon make up the cost. The reason the farmers are using old machinery is not because they are economical but because they have not the money to buy the new machinery which they need. The farmers of the West have got to the position where they have to save every dollar, or not spend money that should be spent, in order to make their operations profitable.

Hon. gentlemen to our right have told us that the tariff is the great panacea. They say "Take the United States. It has become rich and opulent because it has a protective policy." Well, as another hon. member very truly said, the United States has become rich and opulent in spite of its protective tariff. The republic to the south is in a very different situation to Canada. The United States is practically a world by itself. It is a self-contained nation. It has a diversity of products and climate. It produces practically all it consumes, and consumes practically all that it produces. Its foreign trade does not amount to anything to speak of—that is from a percentage basis.

The states of the Union trade among themselves. The cotton raiser sells to the north, and buys from the north, and so it is. Over there they supply their own wants, manufacture for their own industrial needs, and

their exportation of commodities is very little. I have here a statement from the United States Minister of Commerce, the Hon. Herbert Hoover, in an article entitled "Economic prospects of 1924" in which he says: "Less than 6 per cent of our total production is exported." Less than 6 per cent! It is a free trade nation, a nation that trades with itself. There are no trade barriers in the United States. He also says "Less than one per cent of our manufactured products find a market in Europe." So it is a great free trade country. Thirty-five or forty years ago the manufacturing was done in the New England states. They had a tariff but no internal tariffs. The factories were old and well established, and well financed and managed. They were located in Massachusetts, Connecticut and the eastern states. They had all the advantage of mass production and everything. They had, according to the theory of our protectionist friends, the best of the situation down there. Take Fall River, Massachusetts. It was the centre of the cotton manufacturing industry. They had great mills there that were supplying the world's market. They controlled that market. They thought their climate was the only climate in the United States where cotton could be manufactured—just the right amount of humidity they told us and just the right temperature, and so the only place where cotton could be manufactured. What happened? They started to manufacture cotton down in the southern states. Free trade! Why in New England they thought they were right in the position to kill out those fellows who started down there. According to the theory of the protectionist they could just crush them like an egg shell. To-day, as an hon. member stated here, four million out of the six million bales produced are manufactured down below Mason and Dixon's line.

What is true of the cotton business is true of every other line of manufacturing in the United States. The great manufacturing establishments of the United States are in the West, not in New England. They have been started and built up in the central and western states where there are great hives of industry. That is where you find the manufacturing trade of the United States, and it has all grown up in the last thirty-five years under free trade conditions. Now, if they can do that over there why can they not do it in Canada? They tell us that fortunes have been made down there. It is true. Probably the most successful manufacturing establishment in the United States is the Standard Oil Company. I apprehend it is probably the most successful enterprise the world has ever seen. It took a comparatively unimportant product, a natural product, a product that is found the world over—

Sir HENRY DRAYTON: Do not forget Ford and the tin Lizzie.

Mr. McCONICA: —and they manufactured that into a commodity that is used generally, for which there is a universal demand. They work that product up into a hundred different commodities to-day; it is the most closely manufactured article in the history of the world. That company have paid good wages and have never had a wage strike in their entire existence. Still they have competition. There are hundreds of other refiners and thousands of independent producers, and yet they have built up fortunes fabulous in amount. Their directors are founding colleges, financing great enterprises, and establishing hospitals. It is a wonderful business which has never had a single farthing of protection, and what it has done other companies can do. It has stood firmly on its own feet and has done business with the whole world. It has met universal competition and has held its place in the trade of the world, so that its products are to be found wherever there are people to buy them. I repeat, this great enterprise has grown up without the slightest protection. Now, why cannot Canada do the same? Here we are with boundless natural resources, with our own food supply at home, and with the cheapest and best power in the world. We have a great inland system of waterways that gives us access to the markets of the world at cheap rates, and we have a class of workmen as intelligent, as industrious, and as efficient as can be found anywhere. Yet we cannot compete at home, we cannot compete abroad, we cannot compete anywhere. After fifty years of coddling, and nursing and boosting, our manufacturing enterprise is so frail and wobbly that it is crushed with a shadow. That is the situation. Why, an hon. member yesterday told us that the agricultural implement business was ruined entirely; whereas before a $100 implement was listed at $95, paid $9.50 tariff and was sold for $104.50, to-day, under our present arrangement, it was going to be listed at $100, with a tariff of $6 and would sell for $106. Our implement dealers, he said, could not stand the competition and were going to be ruined. Imagine, $1.50 of a rise in price and it spells ruination to our home industry. That sort of competition means their destruction, their annihilation. I do not understand the logic of it; at least that logic is a little involved.

I am not in favour of the proposed amendment (Mr. Woodsworth). There are some things in it that I like, but as I understand the proposition, it seems that we are to condemn the government or at least to vote a want of confidence in them. Now, we are not trying to improve their budget with the amendment. If this amendment were carried it would not change the budget but would simply be a vote of lack of confidence in the administration. That is all it would be. And having voted for the amendment declaring a want of confidence in the government, ten minutes later we would vote for the budget and so sustaining the government that we had no confidence in! I do not want to put myself in that position; I do not believe that it is a position which we ought to assume as a party over here. I should have preferred to have seen a square issue between the proffered amendment of the hon. member for Kent, N.B. (Mr. Doucet), and the budget as it has been brought down. I congratulate the Acting Minister of Finance (Mr. Robb) upon his budget speech and upon the underlying principle of it. I accept the statement that has been made, that the question is as between low tariff and high tariff, and I am for the low tariff. The fight is on, and I say to my hon. friends to my right, "We will meet you at the next election on that issue and will trim you."

Sir HENRY DRAYTON: Wait till we get at you.

Mr. McCONICA: At any rate, the question is one which we want to have settled in Canada. We should approach it in all candour and there should be no political jockeying about the matter. It is a square business proposition: Can we tax ourselves rich or can we not? For my part I am in favour of the reduction of the tariff as gradually as is feasible, without disturbing industry over much. At all events, I want to see a firm, persistent and well carried out programme of tariff reduction here in this Canadian country of ours.

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

PRIVATE BILLS

CONSIDERED IN COMMITTEE—THIRD READINGS

Bill No. 15, respecting the Canada Southern Railway Company.—Sir Henry Drayton.

[Mr. McConica.]

Bill No. 16, respecting the Detroit River Tunnel Company.—Sir Henry Drayton.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

Mr. T. J. STEWART (West Hamilton): Mr. Speaker, considering the important question now before this parliament and the fact that I represent an industrial centre of such importance as the city of Hamilton, the third largest industrial city in Canada, and possibly the largest in proportion to population, I would not be doing my duty to the city, or my constituents, if I failed to register as strong a protest as possible against the ruinous tariff tinkering proposals contained in the budget of the hon. Acting Minister of Finance (Mr. Robb). My responsibility at this time is the greatest by reason of the absence overseas of the hon. member for East Hamilton, (Mr. Mewburn) in whose constituency the majority of the city's industrial establishments are located. I am sorry that I am not just as well as I was before my illness; at the same time I must try to do my duty to my country and to Hamilton in particular.

After making a thorough canvass of the situation during the Easter vacation, I am convinced that if this government persists in the tariff reductions contained in the budget it will strike industrial Canada, and Canada as a whole, one of the most severe and serious blows this country has been dealt in many a decade—a blow that will spell total ruin to many branches of industry and one from which the country will not recover for many years. If these annual tariff reductions are persisted in and the tariff instability of the past few years continued, while the United States year by year continues to build higher its wall of protection against our agricultural products, I can foresee the day, and that not very far hence, when our cities will be depopulated and the home market of our western farmers so reduced that the plight of the whole country will indeed be pitiful.

We, in industrial Ontario, and I believe in Quebec also, realize that the western farmer has been having a struggle as a result of war and after-war conditions, and as our prosperity in the East is very largely dependent on his success in the West, we are eager that some measure of relief should be found for him. But we do not think that you can make the West flourish by killing the East, for agriculture is dependent on industry just as industry is dependent on agriculture; and only by all classes pulling together can we hope

to make this God-favoured Canada of ours the great nation within a nation that it should be. The tariff reduction proposed on implements of production are not nearly sufficient to be even noticed by the individual farmer, much less bring him relief. I may say that I have taken the trouble of looking into the amount of goods that the farmers in the West have to buy, and on a liberal estimate I find that the total amount the average farmer stands to lose works out at $10 if the tariff is left untouched. I think it is very bad judgment on the part of the farmers of the West to want to ruin the manufacturers of this country for the sake of $10 apiece, and I think the day will come when they will realise that they made a mistake. But when these tariff reductions are bulked on the manufacturers' turnover they mean, in many cases, the difference between profit and loss, the difference between busy factories and smokeless chimneys and, I fear, the difference between progress and stagnation in our country as a whole. I have heard it remarked there are at least two reasons for this: First, the majority of the residents of Alberta and Saskatchewan are American citizens and have a warm corner in their hearts for their native country. There never was a more important time for a reduction of the tariff than right now. The government has not a working majority behind it and could not very well say no in the face of our friends from the West agreeing that if the government would give them a reduction in the tariff on agricultural implements, they would give the government their heartfelt support. There appears to be something in this because we have the statement of the hon. Prime Minister on the floor of the House that his government had given a promise to the western members and they were not going to be stopped by the Conservative party. The Prime Minister may say this statement is not so. Of course, I am aware that it does not appear in Hansard, but the remarks were made just the same.

I would call the attention of the government to the fact that the western agriculturist is not the only one who has suffered or is suffering as a result of after-war conditions. In like proportion to the amount of his investment the manufacturer, the wholesaler and the retailer have also suffered, and in many cases have suffered to the extent that they have not been able to survive. The foreign trade of the Canadian manufacturer has been practically wiped out; by reason of depreciated currencies and low wages paid in other manufacturing countries, he has been forced to meet unfair competition in his home market, while our neighbours to the south have thrown up a tariff barrier against him that precludes the possibility of his seeking relief in that direction. Just how much industry has suffered and is suffering is shown by industrial statistics prepared by this government's own statistical department, and which, therefore, I assume, are quite accurate. I will quote only comparative figures for the years 1920 and 1922, the latest figures available, for the city of Hamilton, but they reflect the condition of industry throughout the whole country, showing the alarming extent to which it is falling off and explaining why our Canadian young manhood is crossing the border in thousands to secure employment while this government is spending millions annually to bring to this country foreign immigrants who become a burden on the cities as soon as winter sets in. These are the figures:

	1920	1922
Establishments .. ..No.	790	636
Capital.. .. ..$	142,051,013	145,686,297
Employees.. .. ..No.	30,454	25,469
Salaries and wages.. .. .. ..$	39,712,039	28,424,483
Cost of materials.. .. .. ..$	81,959,053	53,334,004
Value of products.. .. .. ..$	167,190,671	106,088,704

This shows conclusively that our manufacturers are getting less in number, irrespective of what any one may say to the contrary, and if this budget goes into effect I do not know what is going to happen; it looks to me as if there will not be many of them in business a few years hence.

I do not know, Mr. Speaker, that my personal opinion on the proposed tariff changes would carry much weight, but since the budget was brought down by the Acting Minister of Finance, scores of letters have been addressed to my hon. friend from East Hamilton, my hon. friend from Wentworth (Mr. Wilson), whose constituency includes part of the city of Hamilton, and myself, by Hamilton manufacturers. They know what the effect of these tariff changes is going to be not only on their own industries but on Canadian industries in general and the country at large and the government would do well to heed what they say. From these letters I will take the liberty of reading some extracts. I have the originals here and any member who desires to see them may do so.

The government has been decidedly disloyal to the manufacturers in this country. When the tariff was fixed many years ago, a preference was given to British goods; just recently the present government gave a

further preference of 5 per cent to the British manufacturers. I am interested in a knitting mill in Hamilton, which has about $250,000 capital invested, and it has been running nearly four years now without making a cent profit. This company has been in existence fifteen years and it made money until about three years ago, but since then has made nothing. Of course, preference has not been given to the British manufacturers that long, but we were hoping that the further we got away from the war the better chance we would have to get back to normal. In place of that happening, this preference was given and it has placed our knitting mill in such a position now that I do not see any chance whatever of making a reasonable and fair profit. I could never see any justification for the government's giving this preference to the manufacturers, unless they saw fit to do so.

There is one other thing which I wish to refer to, and that is the western members taking great pride in hollering poverty in reference to the western farmers and trying to show that they are suffering very greatly on account of hard times and therefore require some special consideration. The tariff reduction, which is at present under discussion, was one of the aids given them, I presume, to help them out of the position they claim they were in. Now, I happen to be very well acquainted with the West. I have brothers living out there on farms and I am out there often myself. I do not think that the farmers in the West are any harder up to-day than the farmers in the East; the farmers in the province of Ontario are just as hard up as the western ones. I can well remember advancing quite a large sum of money to a man who had a family of four boys and wished to go out West where it was thought he could do a good deal better than here, and through him I have been kept posted as to the prosperity of the West in the farming line. This man owns to-day 2,200 acres of land within nine or ten miles of Macleod, Alberta, and he has done well. I wonder where you will find men in Ontario or elsewhere in this part of the country who in a few years accumulated 2,200 acres of land. They cannot be so hard up in the West as they pretend to be. The information I have does not agree with the statement that is being sent broadcast that the farmers of the West are harder up than the farmers of the East.

Mr. Speaker, with your consent and that of the House I would like permission to have placed on Hansard a resolution passed by the Hamilton city council in regard to the Canadian Libbey-Owens Sheet Glass Company, a copy of which was forwarded to the Prime Minister (Mr. Mackenzie King) and the Acting Minister of Finance (Mr. Robb). This company, located at Hamilton, had something over $2,000,000 invested in plant, but they have gone out of business. I do not know whether or not it was due to the tariff reductions, but I know they have closed their doors, and the city of Hamilton passed a resolution calling upon the government to do something in the way of assistance. I do not want to take up the time of the House by reading this resolution and if there is no objection I would like to have it placed on Hansard.

Mr. GRAHAM: A bad precedent, but we do not mind.

Sir HENRY DRAYTON: You did it already this year.

Mr. STEWART (Hamilton): Well, if there is no objection we will have it that way; it will save time. The resolution is as follows:

Resolved, that the city clerk be instructed to write to Rt. Hon. W. L. Mackenzie King, Premier, to Hon. James A. Robb, Acting Minister of Finance, and to the local members of parliament, calling their attention to the fact that depreciation in foreign currencies, coupled with insufficient protection under existing conditions, has resulted in the closing of the Canadian Libbey-Owens Sheet Glass Company's plant in this city and threatens the life and existence of many other Hamilton industries, more especially the agricultural implement manufacturers.

We should respectfully call attention to the fact that the Libbey-Owens Company has an investment of something more than $2,000,000 in Hamilton and up until a year ago operated day and night shifts, thus furnishing employment for hundreds of men, mostly skilled, and the closing of the factory, due, according to officials of the company to foreign competition, has greatly aggravated the unemployment situation, which has become a serious problem, more especially in industrial centres such as Hamilton and has resulted in thousands of desirable Canadians leaving the country of their birth, adoption or choice to secure employment in and help to build up foreign countries.

We would also respectfully call attention to the fact that during the past three years industrial conditions have been such that many large and important industries have been forced to close their doors, while others have been so badly crippled that they are now operating on short time or with greatly reduced staffs and are threatened with total extinction, chiefly because of depreciated foreign currencies, which enables industries of European countries to manufacture at low costs and permits them to unfairly compete with Canadian-made articles. This condition has resulted in much unemployment and, in many cases, great hardships, more especially in industrial centers such as Hamilton (where the unemployed men and heads of families alone number not less than 3,000) and this council would therefore urge that the government move very cautiously in making any further downward tariff revisions, giving consideration to the fact that the further hampering of Canadian industries will lead to ever greater unemployment and develop a situation that may prove very serious in its consequences.

On the contrary, this council would urge that the tariff be readjusted so as to permit of the Libbey-Owens Company resuming operations at the earliest possible date and to sufficiently protect other existing industries as well as encourage additional industries to locate in Canada.

All of which is respectfully submitted.

T. W. JUTTEN,
Mayor.

I am sorry to take up the time of the House in the reading of these letters which I have here, but I had nothing to do with their being written. The manufacturers had a meeting of their own, which was very largely attended, and as a result they decided to send these letters for presentation to the House. They come from men representing firms with capital investments of anywhere from $3,000,000 to $10,000,000, in one case even $20,000,000. They are written by good respectable citizens of Hamilton and what they say can be relied on. I would ask hon. members to take the time to examine these letters, and if they do so and are fair in their conclusions, they will, I am sure, agree that there should be no reduction in the tariff at the present time. If it is the wish of hon. members to know who the letters are from, I have no objection to giving the names, so that if they want the names they can ask for them. The first letter is as follows:

Sawyer-Massey Company, Limited

In looking over the budget as proposed by the Hon. J. A. Robb, we find that changes are proposed that will seriously affect us in the manufacturing of threshing machines, windstackers, self feeders and saw-mills, because the tariff or protection on these articles has been reduced 33 1/3 per cent and 20 per cent, respectively, the 20 per cent applying to the saw-mills only. This change, you will understand, can only lead to one end, and that is the discontinuance of the manufacturing of threshing machinery in Canada. During the past few years, we have found it very difficult, in fact almost impossible in many cases, to compete with the American made machine, due, perhaps, to the fact that they can manufacture in larger quantities, having a much larger market. They start very early in the year and make provision for the machines for their most southerly territory. If the crop in those southern territories goes bad, they simply use them to fill the orders in their more northerly territories, and if the crop goes bad there they ship them over into Canada at a reduced value, using some stated percentage off their factory list price for the purpose of computing duty. In cases of this kind, their policy is to turn over the goods, even if they only break even, and with this further reduction there can only be one thing happen to the situation, and that is that it will follow in the footsteps of the tractor, and no doubt you are aware that that means the discontinuance of the building of these machines in Canada.

Since the duty was removed on tractors, every company building tractors in Canada has been forced to discontinue the manufacture of same, we along with the rest, and to-day our business has developed into a distributing branch of one of the American tractor manufacturers, and that is what will become of the thresher situation in a very short time with the protection practically removed.

Of coure, a sop has been handed out in shape of of 7 1/2 per cent entry on the materials entering into the construction of these machines, but if you analyse that carefully you will find that that means little or nothing to us because we cannot go to the States and buy everything that enters into those machines. Very true, some parts of it and some materials can be brought in providing they are brought in in large quantities, but the smaller shipments that would have to come L.C.L. could not be brought in any lower on account of the L.C.L. freight even though you had a 7 1/2 per cent entry any cheaper than they would be bought in Canada. Furthermore, is it fair to penalize the manufacture of the raw material that enters into a threshing machine for the sake of catering to the entry of American goods into Canada, and we fear very greatly for the future of the country and the business conditions of the country as a whole, to say nothing of the direct loss to the agricultural manufacturing interests as a class.

We also notice that certain concessions have been made in the sales tax and that the sales tax on threshing machines, windstackers, self feeders, registers, and weighers, and saw-mill machinery, has been abolished, but no provision has been made for the exemption of steam or gasoline engines to drive these threshing machines. Surely one is as much entitled to exemption as the other, also the parts used for repairs on these machines. We also notice that no provision that we can find has been made for the draw-back of the sales tax that we paid on the goods that were on hand at the end of 1923 in our various branch houses, also that we paid on other machines that have been shipped since that date to our branch houses, including repairs, and that are not yet sold, and it does seem to us that there should be incorporated in that budget something that would entitle agricultural companies to a draw-back of that sales tax where it has been paid on goods shipped to branch houses and that are not yet sold. We feel that this section, as well as that referring to exemption of sales tax on tractors, has been an oversight, and how they managed to miss catering to the farmer in these two cases, as well as in the other changes, we can hardly conceive, unless they felt that the manufacturer had already paid this money and that he would be the "natural goat" and that a few dollars more or less towards the ruination of him would not make any difference.

The next is a letter from the Canadian Shovel and Tool Company, Limited, Hamilton, Ontario.

Canadian Shovel and Tool Co., Limited

The general programme of the government seemed to be the reduction of duties on "Instruments of Production," which appears to us to be entirely at variance to the policy of building up "A Greater Canada," as any system that will break down the present status of certain great Canadian manufacturing industries and numerous other industries largely dependent on those affected by the tariff revisions, with the obvious result that a huge army of employees and their families will eventually reflect adversely on the agricultural, mining and lumbering communities of the various provinces.

After carefully analysing the subject broadly and separating our own interest for particular consideration, we cannot understand why our products should be placed in the category of "Instruments of Production." Probably not more than 15 to 20 per cent of our lines are used in the farming, mining and lumbering industries, but nevertheless moulders, foundry, contractors, corporation, railroad track, sand, general purpose and snow shovels, as well as firing scoops, house furnace scoops, garden spades and sidewalk

cleaners are included in the tariff classification "Shovels and Spades" although the items enumerated cannot reasonably be grouped in the category mentioned above. Such items however, represent the big end of our business.

The life of a good shovel or spade, according to use or abuse, varies from one year to ten, and if by permitting foreign shovels and spades to come into Canada through lowering of the tariff at, for example, an extreme saving of $3.00 per dozen or 25 cents each it is apparent that the economy effected would be negligible so far as individuals are concerned, but in the aggregate would mean a large amount to a shovel manufacturer.

Competition from England during the last year has been unusually keen and disturbing, resulting in reductions of our prices in the face of stiff markets on raw materials—the reductions made not being warranted by production costs. The duty of 18 per cent provided by the 1923 budget gave English manufacturers an opportunity to further enlarge their activities in Canada, coupled with low ocean freight rates, cheap labour market, inferior goods and depreciated currency, to the detriment of Canadian manufacturers.

Reducing the British preferential duty to 10 per cent in conjunction with the depreciated value of English money entirely eliminates the protection previously in force, and will cause Canadian makers to operate at a loss to compete, if possible to do so. Assuming that a percentage of Canadian purchasers will always prefer goods made in Canada of excellent quality and absolutely refuse to buy imported lines, for patriotic reasons, and allowing for a certain quantity of English shovels and spades that will now come in, on which Canadian manufacturers will not be able to meet prices due to the lack of protection, it is a conservative estimate that the production and sales of our own plant will be decreased in the neighbourhood of 50 per cent. Similarly this will effect about half of our employees (fifty) by reductions in number and to the extent of approximately $60,000 in wages in a year's time; also we cannot expect to continue the high scale of wages we are now paying.

Hundreds of dozens of English shovels and spades were imported last year at prices which appeared to us to be less than cost of production, but on appealing to customs authorities at Ottawa, it developed that no evidence could be found which would make the application of the dumping duty necessary. Undoubtedly the low wages paid in English factories make possible production costs that cannot be effected in Canadian factories, in justice to employees, in whose welfare employees must take a huminatarian interest.

English manufacturers are our greater competitors as we have not felt the competition from the United States so keenly of late, but the reduction of the general tariff from 32½ per cent to 20 per cent will give an impetus to imports from over the line and further add to our present serious problem of sustaining the complete operation of a factory that has grown from a small beginning in 1904 to a leading position in the shovel industry, through honest efforts to produce reliable goods at reasonable prices.

While the sales tax on our products has been withdrawn, and we intend to pass on the saving to our customers, it likewise has been discontinued on imports, so that we have no protection in this respect.

In revising the duty on shovels and spades, the government did not provide for the reduction or elimination of the duties on the raw materials we are required to import. Any saving that would accrue to us in this manner would, of course find its way very shortly to the trade.

Then here is a letter from The Canadian Drawn Steel Company, Limited, Hamilton, Ontario:

[Mr. T. J. Stewart.]

Canadian Drawn Steel Co., Limited

With reference to the changes in the tariff brought down by the new budget, we would like to point out to you as one of our members, the disastrous results it will have on our industry if it goes into effect.

Our business was started twenty years ago for the purpose primarily of supplying steel to the agricultural implement makers, and has steadily grown with that trade. During the first few years, owing to inadequate protection, the company lost money and it was only by securing protection that we have been able to build up the business we now possess. The question of our competing on an even basis with United States mills was threshed out at that time and it is quite apparent to anyone familiar with the steel business, that we cannot manufacture as cheaply as the United States mills for a great variety of reasons.

Another feature which has always appeared, due to the drawbacks given to material on agricultural implements, it that we have to import our raw material, and in the case of the Massey-Harris Co., or Frost & Wood Co., and practically all other implement makers, we have to pay two freights, namely, the freight from Pittsburgh district to Hamilton on raw material, and the freight from Hamilton to the implement maker. If the implement maker imports direct, the freight rate, say from Pittsburgh to Toronto, is practically the same as from Pittsburgh to Hamilton, so that we would be out in our price to the extent of the freight rate from Hamilton to Toronto.

According to our statistics, which can be easily verified, we supply 1460 tons per annum to agricultural implement makers, which represents approximately 25 per cent of our yearly business; in addition to this we supplied to companies, material for making parts for the implement trade, such as bolts, nuts, screws, etc., which represents 650 tons per annum, or about 12 per cent of our business. In other words, these two items if admitted free, with a total loss of this business to us means 37 per cent. We can easily add a further 13 per cent for tonnage which goes indirectly into the implement trade in the form of materials supplied for tools, shafting, etc., so that this action as outlined in the tariff, would mean a loss of 50 per cent of our present business.

Our yearly wages run approximately $100,000 and we buy steel and other materials to the extent of $400,000, thus these figures would be cut in half with a loss of $250,000 of business, but it would go further than this as the demoralized conditions of other industries all contributing to the implement trade, would be very serious. In man-power we would give a conservative figure when we say it would represent the discharge of 40 employees, and in this way indirectly would affect at least 200 people; the indirect effect to tradesmen and other would be proportionately great.

We sincerely trust that opposition to this tariff will be sufficiently strong to prevent its being put into effect, as we are only one small unit of the industrial world of Canada that would be wrecked by such free trade principles.

Yours respectfully,

THE CANADIAN DRAWN STEEL CO., LIMITED.

I now wish to read a letter from the Tallman Brass and Metal Co., Limited, as follows:

Tallman Brass and Metal Limited

Any tariff reduction that hurts the agricultural manufacturers is felt by us. We sell the agricultural manufacturers and will certainly feel a loss of business if agricultural implements are bought outside of Canada. We sell principally babbitt metal and bronze castings to these manufacturers, also babbitt and bronze castings to machinery builders who sell to the

agricultural manufacturers. It is difficult to arrive at our loss, but would say approximately $10,000 to $15,000 per year.

This will mean a direct loss because we cannot compete against American, English or competition from other countries. Labour is cheaper in England and taxes are lower in United States. Depreciated currency is playing havoc with some of our lines. German competition on thermos bottles is such that our customer has held up an order for 50,000 sets as he cannot meet the German laid down price. If the duty was figured on the par value of foreign currency it would give the manfacturers in Canada a chance to compete.

We recently lost Ford Motor Company business on automobile tire pumps. We had been making these in 20,000 lots. Our last quotation was figured on half our normal overhead and one cent per pump profit. Seventy-five per cent of the work was done by girls on piece work. We quoted 46 cents each. The American price laid down in bond was 35 cents, full duty 42 cents and with 50 per cent draw-back for export cars 38 1/2 cents. We cannot ascertain if these are dumped into Canada or not, but we are quite certain that no manufacturer in Canada can meet the American price.

We do considerable work for the automobile manufacturers and believe that if our government would increase the percentage of 25 per cent that now exists, of work to be done in Canada on an automobile to be exported in order to get the 99 per cent of refund, that it would be a good thing and also protect the manufacturers of automobiles who build the car over here. Some firms only assemble cars here and buy parts to the extent of 25 per cent. A larger percentage would make it necessary for them to go into manfacturing.

Ontario and Quebec cannot pay 77 per cent of the taxes required by our federal government, unless the government protects the industries and makes it possible for these two provinces to first earn the money.

We certainly cannot pay our share of these taxes if the United States or foreign countries are allowed to undersell us.

Yours truly,

TALLMAN BRASS & METAL LIMITED.

April 21, 1924.

I have a number of other letters here and perhaps in order to save time the House will permit them to go on Hansard without being read.

Mr. GRAHAM: I do not think there will be any objection to that.

Mr. SPEAKER: If the House consents.

[The letters handed in are as follows:

The Brown Boggs Co., Limited

The writer feels certain that you are well aware of what a misfortune it would be to Canada if this proposed legislation goes into effect. While most of the changes do not effect this company directly, indirectly it will have a very serious effect, when you consider the large number of manufacturers of agriculture implements and saw mill and mining machinery operating in this country.

These people are among our customers, and we probably sell 25 per cent of our product to them. If they are working under a handicap, and their business shrinks, it is only reasonable that our trade with them will be cut off, as no company will purchase new equipment unless they are expanding or prospering. This will also react of necessity on other manufacturers from whom we purchase our raw materials, as our volume of business will be lessened.

The working-man will also feel the effect of this curtailing of production, and necessarily the merchants from whom they buy.

We will suffer from U.S. competition as some of the largest manufacturers in this country are branch concerns, and will be able to import considerable of their products from the parent factory in the United States where they can manufacture certain lines more cheaply than in Canada, owing to the greater production.

The preferential tariff on English goods interferes with us directly to quite an extent as it allows goods made in England under a much lower wage rate than we must pay, to come into Canada and under-sell us.

Then, as you are aware, Germany is making great efforts to get a foot-hold in this country, and is advertising very extensively here now. When one considers the difference between what the German workman can live on and what the Canadian workman has a right to receive, it is not hard to understand how they can ship goods in here and sell them at less than our actual cost.

The "Dumping clause" which was put into force some years ago had a good effect at one time, but the writer doubts very much if it has been enforced recently.

Yours very truly,

THE BROWN BOGGS CO., LTD.

April 24, 1924.

The Ford-Smith Machine Company

Dear Sir:—

We wish to draw your attention to the anxiety with which we view the proposed tariff changes now before the House. We are not manufacturers of agricultural implements, and we are not directly affected, as far as we can see at the present time, by these proposed changes, but we are indirectly very greatly affected, and view these changes with great alarm.

This company designs and manufactures machinery, dies, jigs and fixtures which are used by other metal working plants, including implement manufacturers, and anything that affects them, naturally has its consequent effect on us, and our employees.

This company located in Canada well aware of the disadvantages of a small market, and with a full knowledge of the growth of the machinery business in United States under their protective tariff. Had we ever thought that it might be that this tariff would be reduced materially, we would have considered it business suicide to locate a business of our nature in this country, and we would not have done so.

If the present tariff changes go into effect, though it is difficult for us to estimate our loss of sales and employees, because there are many other industries whom we serve and who themselves will also be indirectly affected, we would say that this legislation might depress our sales from 25 to 40 per cent, causing us to lay off skilled mechanics to this extent.

You no doubt have heard in a general way about our mechanics leaving for the other side, but if you were in touch with the situation as we are here, you would get a shock that would surprise you. I am sure that this condition is not properly appreciated in Ottawa. The present position is that we are training young men as apprentices in our technical schools built at tremendous public expense, for the benefit of the United States manufacturer. It is not idle talk, but is the plain statement of facts, that the opportunity for a skilled man to-day is across the line. Our largest competitor is of course the United States manufacturer. It is only by the most strenuous efforts that we are able to compete even at the present time, and if the present advantage of the tariff is

reduced, it is very problematical whether such people as ourselves can stay in business in this country.

We cannot impress upon you too strongly the seriousness of the present situation, and we would repeat in conclusion that if this country has to be a manufacturing as well as an agricultural country, that we shall have to have a proper measure of protection till such times as our Canadian quantities are large enough to allow us to specialise in the same way as our foreign competitors; and we would again point out that the strong home competition will insure the proper prices to our consumers.

Yours truly,

THE FORD-SMITH MACHINE CO., LTD.

April 21, 1924.

The International Harvester Company

F. M. Morton, general superintendent of the International Harvester Company of Canada, Limited, Hamilton branch, issued the following statement, regarding the situation arising from the new budget tariff.

"The situation produced by the new budget tariff is a matter of grave concern to the International Harvester Company of Canada, Limited. We do not see how the lowered duties can fail to have a serious and prejudicial effect upon the company's manufacturing operations at Hamilton and Chatham. How serious only the future can tell. All we can say is that the company will do its best to meet the situation and keep its plants in operation so long as tariff laws and business conditions will permit. This will be done not only to protect the investment of the stockholders, but the means of livelihood of its employees and their home investments made in the belief that Hamilton and Chatham would continue as prosperous manufacturing communities, assured of encouragement by the country at large.

In the same way as the prosperity of these communities is bound up with that of the industries located in their midst, so in a larger sense the prosperity of the farmers of Canada is also affected. They cannot profit in the long run by making unprofitable the industries which have heretofore supplied their needs. The future of Canada must depend on the mutual prosperity of agriculture and industry, just as in the United States the prosperity of the country has been dependent on the prosperity of these two activities.

We hope the farming communities will come to recognize this relationship and insist on fair treatment to industry, not only as a matter of justice to the investors and great number of their fellow-citizens employed as workmen therein, but for their own enlightened self-interest.

INTERNATIONAL HARVESTER CO. OF CANADA LIMITED.

April 17, 1924.

Dominion Sheet Metal Corporation, Limited

For the past several years our main competition has been against the United States producers, where a duty of 12 1/2 per cent is somewhat assisted by average United States exchange rate of one to three per cent.

Now, however, the import competition has swung around almost entirely to the British sheets with their low labour cost, and the 7 1/2 per cent duty on galvanized sheets from United Kingdom is entirely wiped out by the present depreciated English currency, being about 10 per cent or more below the Canadian par.

You will thus see that the man who buys galvanized sheets can take the money with which he would pay us and can pay the 7 1/2 per cent duty and have 2 1/2 or 3 per cent left over when buying the English sheets.

[Mr. T. J. Stewart.]

We are the only concern doing this work in Canada, and have had a very difficult time for several years but finally have the industry pretty well established, but it is only on account of an efficient organization and low overhead cost that we are able to compete at all and that in a restricted district.

We sincerely hope that something will be done in the way of adding a certain amount, based upon the per cent of depreciation, this amount to be added to the duty, as it seems only fair to us that this duty being figured on a normal value of currency from the exporting countries should be increased when their currency becomes depreciated; otherwise the original intent of the duty is not being carried out.

We and our entire staff and force of employees, together with co-operation industries furnishing us with raw materials here would certainly appreciate some release from this situation.

Yours very truly,

DOMINION SHEET METAL CORPORATION, LIMITED.

April 17, 1924.

Collins, Never-Fail Products, Limited

We are producers of a line of poultry raising supplies including incubators and brooders, as well as a line of spraying equipment for use by horticulturists.

In view of the new changes in the tariff we have decided to suspend the manufacture of brooders and incubators as well as the sprayers with one or two small exceptions, and to import these and job them.

This will cut our expense down because we will dispense not only with a considerable number of workmen but some of the office staff as well, and the small jobbing profit will be one we can depend upon rather than take a chance on a larger manufacturing profit.

Might say for your information that last year under the old tariff we came within a few dollars of breaking even, sustaining a slight loss on the manufacturing of the incubators and brooders and the spraying equipment, and this year we were hoping for an increase in the demand and an opportunity to make a profit, but in view of the change we have decided to suspend manufacturing and go into jobbing, selling U.S. lines. which we are able to import now at less than we can manufacture.

This comprises about half our manufacturing operations and we pay out from twelve to fifteen thousand dollars a year in labour, and four or five thousand dollars a year in clerical and staff payroll, and this will be cut in two.

The worst feature in our estimation is the fact that instead of progressing and growing we will now be entirely obliterated as far as the Canadian industry is concerned, and we are quite sure that if we cannot manufacture at a profit no one else can in Canada.

Yours very truly,

COLLINS, NEVER-FAIL PRODUCTS. LIMITED.

April 17, 1924.

P. B. Yates Machine Company Limited

We are greatly concerned and apprehensive as to the general effect tariff reduction is having and will have on business at large in Canada.

As a result of the war, a greater number of diversified commodities have been produced and can be obtained in the Dominion, with the result that 99 per cent of our purchases have been made in the home markets, and 90 per cent right here in Hamilton, a thing not possible prewar.

With assurance, under a stabilized tariff, have been able to measure the future with some degree of confidence, resulting in investment of our money in materials and labour, in other words, building up stock against future prospects, thus creating markets

for materials and keeping labour employed over low business areas.

To meet conditions which the lowering of the tariff and increase in British preference has brought about, we must seek the lower or cheaper foreign markets that are thrown open to us to the exclusion of our home markets; if that situation exists with us it also affects hundreds of others. That is the condition we are apprehensive of, we live with and upon each other, —what affects one affects all.

There was such a reversal of business in our line, during the interval the Speech from the Throne to the time the budget was brought down, as to result in a complete change in our producing policy.

There is not that confidence in the future facing us as to warrant our taking the financial risk in accumulating material and keeping labour employed, only as can be applied to actual orders in hand, resulting in our having to lay off a number of men and curtail hours of employment, of the balance, to 30 hours per week, and material purchases.

This not only adds to the unemployed, it means the loss of our and their purchasing power, further loss to the city of Hamilton and to the Dominion.

From a beginning in 1907 to a business in 1911-12-13 giving employment to 380 under the stabilized tariff of the Laurier government to a dwindling to 96 employees under a shifting tariff of the King government, the like of which we have not had in our career of 17 years.

The increase in British preference has thrown open to English competition a market for machines, under Item No. 453-B, that they have heretofore not been able to enter, competition in respect of wages paid, hours worked and cost of materials we have little hope of meeting. We know what this competition is, as we have learned from our losses in Australia, and competition which Australian manufacturers are complaining seriously of to their own government.

The attention of the government has been called to the fact that Canada alone has seen fit to reduce her tariff, the results of which are fast becoming apparent in comparison to the country to the south of us, with its protective wall against us and our western contemporary, "the Farmer", in particular.

On the one hand our government is spending money to increase immigration, while that to the south is spending money to keep it out, except our own favored artisans and mechanics, no quota is placed against them; there is, however, a tariff,

Item—Human beings, $8.00 per head.

Money will go where business is to be had, and employment and immigration will follow; every restriction, every obstacle placed in its way will cause it to flow in the opposite direction, and those obstacles are now placed with the adoption of this budget which are going to be felt, not by the individual, not by a faction, not by a section, but by all the people and our country as a whole.

Yours truly,

P. B. YATES MACHINE CO. LTD.

April 24, 1924.

Imperial Cotton Company Limited

April 19th, 1924.

On the basis of our sales to the agricultural implement manufacturers during 1923, our future annual sales will be reduced over ten per cent and our yearly production will be decreased approximately twelve per cent; which, in terms of our personnel, would affect about thirty-five employees, whose earnings aggregate over $30,000 per annum.

By the terms of the proposed reduction of tariff on materials supplied the agricultural implement manufacturing industry, our protection as against the United States will be cut twelve and one-half per cent, whereas England will now have a preference over us, on the present rate of exchange, of at least three per cent in the Canadian market; and other countries with depreciated exchange will have an opportunity afforded them to offer severe competition.

Under the present method of assessing duty on depreciated exchange from foreign countries, it is now a hardship to compete with the protection afforded us by the present tariff and, in many instances, we are obliged to accept business at a distinct loss in order to hold the trade which we have endeavored to build up over a period of nearly twenty-five years.

While we are a small industry comparatively, a substantial portion of our production is sold yearly to the manufacturers of agricultural implements—very largely on a quality basis, as their specifications are exacting. There is thus no opportunity afforded us to meet the additional competition which the proposed tariff changes will invite by lowering the quality of our product through utilization of waste or by-products.

Yours very truly,

IMPERIAL COTTON CO., LIMITED.

April 19, 1924.

Bird & Son Limited

Owing to the restricted purchasing power of our customers which has shown itself during the past few months, and particularly during the past one or two months, we have been forced to reduce the number of employees to a lower point than at any time during the past six to eight years. An investigation leaves no doubt in our minds that the cause is nothing else except a lack of confidence in the fiscal policy of the present government.

While our business is not directly affected by the proposed tariff reductions in the budget recently handed down, nevertheless it is already apparent that these reductions will reduce the number of customers by emigration from Canada to the United States, and that the earning and spending power of those customers who remain in Canada will be materially reduced.

Based upon the present outlook therefore, we can only anticipate lower production in our plants and consequently higher costs, all of which will place United States manufacturers of our lines in a stronger position to take a larger share of the business which would otherwise come to our own plants and other plants similar to our own in Canada.

The employees of our plants both here and in Quebec are consumers of the farm products of the surrounding districts, and it is not only probable, but almost certain that as the purchasing power of our employees decreases, the sales of the farmers in the surrounding district will proportionately decrease.

Yours very truly,

BIRD & SON LIMITED.

April 25, 1924.

Stanley Steel Company Limited

We are drawing to your attention the charges in tariff as brought down by the recent budget, and how it will affect our business.

We have been manufacturing cold rolled steel for implement manufacturers for some years. This change in the tariff means that not only do we lose the tonnage that we have been selling the implement manufacturers, but the labour that they are employing in manufacturing parts from the steel we sold them, will be gone, as it is now cheaper for them to bring these parts in from the States in a manufactured condition, the tariff arranging for their entry on the free list.

Our production will be considerably affected by this change, and if similar changes are on the programme,

it means that the number of our employees will be decreased.

We also wish to point out that on cold rolled steel being imported into this country for export work, there is a draw-back on this material of 99 per cent. We are forced to pay the government, on 12 gauge and heavier (hot rolled steel) that we import to cold roll in Hamilton, a duty of $7 per ton. This duty which we pay, is again paid out by the government to concerns who are bringing in their cold rolled steel from the States on a 99 per cent draw-back basis.

You will agree with us that this is not a fair condition. It is a hardship imposed on Canadian manufacturers who have started plants in Canada, since these items were put on a draw-back basis by the government. If we are to employ labour, pay taxes to the government, and build up this country, is it not possible to get some relief, to allow us to increase the number of employees on our pay-roll, and be in a position to pay them wages which will ensure their staying in the Dominion of Canada?

Yours very truly,

STANLEY STEEL COMPANY LIMITED.

April 17, 1924.

National Steel Car Corporation, Limited

I might draw to your attention the fact that tariff item No. 453-B, among other things, includes logging cars, the general tariff on which has been decreased from 30 per cent to 20 per cent.

The writer happens to be president also of a car company in the United States, who are probably the biggest logging car producers in that country, and whose patents are based on steel constructed logging railroad equipment. Steps have been taken to give this National Car Corporation here in Hamilton the use of these patents and construction details, and the writer recently returned from the Pacific coast where he looked over the logging operations in that section of the country.

Of course, this action of lowering the tariff is much more detrimental to the development of Canadian industry, and particularly Hamilton, than it is to the investors and owners of this corporation. It will simply mean that business will be done through this company instead of by it. It will mean, however, loss of pay-roll for the workmen, and loss of purchasing power for the many things required to maintain operations, to say nothing of the purchasing power of the workmen's families.

Yours very truly,

R. J. MAGOR,
President.

April 21, 1924.

E. T. Wright Co. Limited

With reference to the tariff reduction budget of 1924, beg to state that this budget hits us very hard. Business was bad enough before, without a reduction in tariff, but now we are cut out of a lot of business. It is hard to know where it is going to finish.

They are trying to pass through all sorts of tinware as kitchen ware and hollow ware at 20 per cent, whereas it should be 25 per cent.

We note that shovels come under the "free" list. We make fire shovels and snow shovels.

We also make a line of dairy pails which they are trying to pass in as farm implements.

In affecting the farm implements it affects us very materially, as we supply these companies with large quantities of oilers, etc., and where it breaks up their business it also affects ours.

We sincerely trust that there will soon be something done to stabilize a trade policy in Canada which will encourage industrial business. To-day it is impossible to get any new capital invested in the industrial business.

Very truly yours,

E. T. WRIGHT COMPANY, LIMITED.]

April 28, 1924.

I now wish to read a statement showing the reductions that have taken place in the staffs of a number of Hamilton industries in the period from 1920 to 1923. Not only does this statement illustrate the unfortunate results that have already occurred but it serves to show other changes along this line which may be expected in future if reductions of the tariff are continued:

Branches of American Industries
Manufacturing in Hamilton

Name and Address	Employees 1919	1923
American Can. Co., New York, N.Y...	300	175
Beaver Motor Truck Co., Chicago, Il..	100	...
Bird & Son, Ltd., East Walpole, Mass.	75	50
Can. Libbey-Owens Sheet Glass Company, Charleston, W. Va..	200	...
Can. Hoseshoe Co., Erie, Pa..	100	80
Can. Westinghouse Co., Pittsburg, Pa.	3,000	2,500
Chipman-Holton Knitting Company, New York, N.Y..	588	400
Dominion Belting Co., Cambridge, Mass..	100	50
Dominion Foundries & Steel Limited, Buffalo, N.Y..	2,500	400
Frost Steel & Wire Co., Cleveland, Ohio..	200	100
Firestone Tire & Rubber Company, Akron, Ohio..	500	250
Imperial Cotton Co.,..	300	200
International Harvester Company, Chicago, Ill..	2,500	300
International Plow Works, Chicago, Ill..	1,500	150
Laidlaw Bale Tie Co., Ltd., Kansas City, Mo..	160	80
Meriden Britannia Co., Ltd., Meriden, Conn..	200	100
National Fireproofing Company, Pittsburg, Pa..	100	60
National Steel Car Co., New York, N.Y..	1,500	1,200
Norton Company, Worcester, Mass..	100	40
Otis-Fensom Elevator Co., New York, N.Y..	750	200
Parson & Parson Can. Co., Cleveland, Ohio..	100	50
Proctor & Gamble Mfg. Co., Cincinnati, Ohio..	400	200

Standard Underground Cable Co., Chicago, Ill..	200	100
Stanley Steel Company, New Britain, Conn..	100	50
Union Drawn Steel Co., Ltd., Beaver Falls, N.Y...	100	40
P. B. Yates Machine Company, Beloit, Wisc..	250	120

I have taken up more of the time of the House than I had intended, but I feel very strongly that this country has reached a crisis. Under the National Policy of Sir John A. Macdonald and the reasonable protective policy of Sir Wilfrid Laurier, this

country grew and prospered. American industrial capital was attracted here by millions, and apparently we are now going to say to these Americans: "Take your capital back across the border and manufacture at home and we will throw our market open to you. We will send you our raw materials and our brains and our brawn and we will buy from you, at whatever prices you may care to dictate, the finished products they turn out while you close your door to our wheat and the other products of our soil." Have our Liberal friends so soon forgotten the proposed reciprocity pact that sounded the death knell of the Laurier government? Even under that agreement we were to get something in return for what we gave, but the present Prime Minister (Mr. Mackenzie King) and his government, in the largeness of their hearts, would give all, even of our rich heritage, and ask nothing in return from our American neighbors, not even a mess of pottage.

Before I sit down I want to ask the government to consider the budget carefully before putting it into effect. I am well acquainted with the manufacturers in the city of Hamilton and while I know that there are some firms that are making between 5 and 10 per cent, I can assure the House that they are only a very small minority; the large majority of the manufacturers in that city are not able to do more than come out even. I believe, as a matter of fact, that if the balance were struck as between all the profits which the manufacturers in Hamilton make and the losses that are sustained by others it would be found that the average profit would not amount to more than 3 or 4 per cent. That being the case, what will happen if the budget which the Acting Minister of Finance (Mr. Robb) has presented to parliament this session is put into force? I again ask the government to look into this matter very carefully, for I have no doubt whatever that if the present tariff proposals are carried out the result will be disastrous to the industry of the country.

Mr. FERNAND FAFARD (L'Islet) (Translation): I must admit, Mr. Speaker, that I found it difficult to follow the hon. member for Hamilton (Mr. Stewart) in the sonorous speech which he addressed to himself! However, as a good Liberal, I wish to congratulate him on the worthy effort he made in trying to criticize the present administration. Moreover, in keeping with custom, the inadequacy of the arguments of the opposition members shows the weakness of their cause. Although it is part of the duty of the opposition to criticize the government, I think, if these gentlemen in the minority do not share our views as regards the lowering of duty on instruments of production, they might have shown proof of far more sincerity by congratulating us for having decreased the national debt by $30,000,000 and reduced the taxes which burdened the people, by $24,000,000. On the contrary, they reproach us with having been false to our pledges of last year, because we did not lower the duty on farm implements, and this year we are taunted for not having lived up to our pledges, because we have lowered them.

These gentlemen preach economy; we are always glad to receive advice on economy, because it is a virtue which we practise; however, it does not become the Conservatives, who caused the country to run into debt for hundreds of millions, to lecture us, especially when we are aware that even after the war, in 1919, they showed a deficit of $382,000,000, in other words, that the increase of the public debt in that year was greater by $50,000,000 than the whole debt of Canada previous to the war. This, however, is not to be compared with 1920 when the deficit rose to $674,000,000; these gentlemen who are not satisfied with a decrease of $30,000,000 on the public debt, had run the country into debt for more than a billion dollars during the last two years of their administration. In my opinion, Sir, a budget which shows a reduction in the national debt and decreases the taxes certainly deserves our approval. This budget equally protects the basic industries which help the development of our national resources, such as agriculture, lumbering, mining and our fisheries, and it will benefit our farmers, labouring classes and manufacturers.

There is no denying it, the farming class has passed through hard times during the last three years. Not only have the crops been poor, but, moreover, the prices of farm products fell to previous war levels, while the farmers are forced to pay for what they need, the same prices as during the war, Further, the farmers sell their products on every market, thus competing against the farmers of the whole world, even on their own markets. In no way do they benefit from protection, for when they purchase what is needed for their farms and themselves they must buy on a protected market and pay exorbitant prices. The farmer is tired of this state of things and his position has become intolerable. This is why many have been obliged to leave their farms, and others are on the brink of bankruptcy. I congratulate the government for having taken an interest in their fate.

The present budget will be a great help to the labourer, and I am sorry to see the old

Tory tactics crop up again which consists in sowing division and prejudicing the classes against one another.

The farmer is the friend of the labourer —whom he needs—as the labourer is the friend of the farmer, who feeds him. The latter is one of those who desires most the success of the farming class, since it is upon this class that hinges the success of the industry of which the labourer is in need.

You try to prejudice the people by telling them that the East is sacrificed to the West. The latter has received no special favour; the duties on instruments of production have not only been lowered for the West, but they have been lowered from the Atlantic to the Pacific. The people who are the most protected by the present budget are the industrial classes.

When an architect replaces another to supervise the erection of an important building, which will serve as a monument to future generations, he must first ascertain the strength of its foundations, and, if he thinks that his predecessor has made errors, it is his duty to discontinue the work and take the necessary time to repair what might become disastrous to the whole building.

The Liberal party's architect, the Right Hon. W. L. Mackenzie King, before proceeding to carry out in this country the policy of Laurier, observed that, since 1911, numerous rents had appeared in our economic system, rents due to the war and far more to the bad administration of our predecessors.

Mr. d'ANJOU: Hear, hear!

Mr. FAFARD (Translation): The economic structure was threatened at its foundation and we would certainly have had to deplore an economic disaster if our leader had not protected the very basis of industry, which is farming.

Mr. McMASTER: Hear, hear!

Mr. FAFARD (Translation): From times remote, all classes of society have acknowledged that agriculture bears the same relation to industry as foundations bear to a building. The industry in question is that of farm implements and it is very little affected, for, what has been taken away with one hand has been returned with the other. The only loser is the Department of Customs and Excise. This industry of farm implements is one which cannot exist without farming, on which it is entirely dependent. It has had time to establish itself on solid bases, under the shield of protection, and it is certainly in a position to compete with the United States in our country, since it is able to compete with the Americans in foreign lands.

Mr. McMASTER: Hear, hear.

Mr. FAFARD (Translation): Moreover, I recall the remarks which the hon. member for Brome (Mr. McMaster) made, a few days ago, in this House, when he quoted the words of the president of the largest company manufacturing farm implements—The Massey-Harris Company—who stated that he was able to carry on without protection.

The boot and shoe industry is somewhat affected by the British preference; on the other hand, how can the manufacturers complain, when the United States market which is unlimited is open to them without any protection whatever? The working classes are not blind, Sir, and when they see manufacturers paying two dollars for a raw hide, they cannot help noticing that boots at $7 and $8 a pair represent a profit which they in no way benefit by. We, who hail from the country, all wish to see the welfare of the workman and manufacturer, as we wish for the success of the farmer. The rural districts are directly interested in industries, for it is with our small savings which automatically find their way towards the industrial centres, by means of the banking system, that most of the industries are kept alive. I might even add that it is one of the causes of the straitened circumstances of the farming class. Formerly, it was an easy matter for farmers to borrow in their own parishes; but, for several years past, money is loaned on municipal and school debentures, yes, even, on industrial debentures, which are sometimes more or less doubtful investments. This state of affairs is one more reason to state that farming is the true foundation of industry and that it was urgent to help it through the difficult crisis which it is experiencing. I, therefore, think that the banks could be more generous when it is a case of helping the farmer, and more careful than they are in their dealings with the speculator.

Some hon. MEMBERS: Hear, hear.

Mr. FAFARD (Translation): If an inventory was taken of money lost by banks in our old province of Quebec, we could establish that 99 per cent of these losses arise from money loaned to speculators who do not have —or barely so—any other security to offer, than their cleverness in obtaining funds.

When the manufacturer bewails the fate of the poorly paid workman, to justify a request for higher protection, he lacks sincerity; for when certain companies were realizing, during the war, profits of 25, 50 and even

100 per cent, the manufacturers did not raise the salary of the workman, on the contrary they even increased their capital fourfold in "watered stock" so as not to show too large a dividend.

I am aware that a very high tariff may have for its effect the accumulating of colossal fortunes, but it is a policy which in no way helps the revenues of the country, on the contrary, it paralyses industry which needs to be stimulated through competition. I am aware that industries which are affected by the lowering of the tariff may experience a certain set back, but this will be more than compensated by the number of small industries which will spring up, built on sound foundations, not over capitalized, and which can more easily sustain the shock of industrial crises than some of our large industries that owe their existence to the trust placed in them or even sometimes to the friendship of bank directors. It is not from want of protection that the country suffers—for it is under the protective system that our people emigrated to the United States—it is for want of population. After the war, the shell manufacturers organized so as to supply various products, consequently our manufacturers, as at present outfitted could supply a population of 25,000,000 inhabitants. This is one of the reasons which induces me to favour immigration providing it is the right kind. This policy is an excellent thing to help in decreasing out national debt, and, it will afford us the occasion of developing our natural resources, as intended by the government.

I am sorry, Sir, that I cannot agree with the statements made by the hon. Minister of the Interior (Mr. Stewart) regarding his policy for curtailing the geodetic and topographic surveys, and I trust he may somewhat alter his plans. Maps are absolutely necessary for the development of our forest and mining resources.

Mr. McMASTER (Translation): Three cheers for the surveyors!

Mr. FAFARD (Translation) The hon. minister, himself, fully knows that if he wishes to draw foreign capital to Canada his first duty is to supply maps which may induce foreigners to invest their money. A lumberman, whether he be Canadian or American would not take the slightest interest in the purchase of a limit, if he had no knowledge of the rivers which cross it and which can be utilized for the driving of logs and the development of water powers, likewise mining prospectors do not venture far into the bush without a knowledge of the various canoe routes which they can follow, and maps to enlighten them as to the geological formation; and such is the case with all other vast resources we possess, for instance the hydrographic information for the study of the water-powers. I think I have shown the necessity of these surveys which are essential to carry out the policy of development of our natural resources. I also regret to note that the eastern provinces are not given their share in the outlay of these public funds, which are expended in the West, not always on Crown lands but in a number of cases on private property. I ask the hon. minister to do us justice with reference to this matter. I would also request more protection for our forests. The provincial government does its great share and has an excellent organization which deserves our encouragement.

I am convinced that the present budget, as brought down in the House, will benefit all classes of society, and the enthusiasm with which it was received in the business centres fills us with hope for a revival of activities in trade. The time has come to give the right aspect to our policy by establishing a tariff for revenue, so that the people, being unburdened, will love their native country.

Mr. McMASTER: Hear, hear!

Mr. FAFARD (Translation): I beg of our friends in the opposition to desist in their policy of hatred and disunion and to extend their help, so as to bring back to the country, the sunny days that we knew previous to 1911, when Sir Wilfrid Laurier was at the helm of affairs in Canada.

Mr. PRESTON ELLIOTT (Dundas): Mr. Speaker, while I was sitting listening to the hon. member for West Hamilton (Mr. Stewart), there was brought to my attention a question which was asked a very prominent witness before the Banking committee last year. The answer was "I do not know what you mean or what you are asking for, but I will say no, anyway." In connection with what the hon. gentleman has just said, I shall have to say no because I did not understand what he said.

An hon. MEMBER: Why do you not say, yes?

Mr. ELLIOTT (Dundas): I may change my mind afterwards when I know what he said.

Referring to the speech of the hon. member for West Hamilton we in this part of the House found it almost impossible to hear what he said, but I understand from some who did hear him that he was quoting letters of protest against a reduction in the tariff. I

thought, if that were the case, hon. members in this corner of the chamber would require, perhaps, a week's time to read all the letters in favour of lowering the tariff. If I heard some of the things correctly, I think the reduction in the number of employees in the different factories constitutes an admission that the time is ripe for a change in our present fiscal policy.

I should like to tender my congratulations to the Acting Minister of Finance (Mr. Robb) on the deliverance of his first budget, the manner of delivery and the substance. To many of us on this side, perhaps the outstanding feature was the brevity of the speech, brevity for the reason that it did not go as far as we would wish it to go. We believe that the necessaries of life should also have been included in the cuts in the tariff, but we realize that as Rome was not built in a day, we cannot change our fiscal policy over night. If we can take the information given by the Minister of the Interior (Mr. Stewart) as the correct intimation to the manufacturers that this is the beginning of the end of protection, I think we in this part of the House will hope that that prophecy is only too true. Some of our friends to the right of us have been saying that this is no time for a tariff revision. I must take exception to that statement for this reason: We remember the year 1896, when the government which was returned to power was returned on the platform of "tariff revision downwards." The question was again fought in 1911 and again in 1921. The number of us who are sitting at this end of the chamber who were elected in 1921, were elected, perhaps, to see that the tariff policy which was being advocated by those who are to your right, Mr. Speaker, would be carried out. We find, through the press and from many speakers to the right of us here, that we are being given credit for forcing this. I am not saying or claiming that we deserve the credit; but if this is the case, we feel that we have done one of the things that the people who sent us here asked us to do. We believe that in 1921 the question of tariff revision was prominently before the people. In that connection I remember in my riding a placard or poster which was posted in some of the halls. On this poster was this:

> The Americans have passed the Fordney bill to shut out Canadian products.

The next line was:

> If the Progressives are elected to power, they will so lower the tariff bars that we shall be flooded with cheap American goods.

Those two statements are not consistent and some of the arguments that were put forward last night from that corner of the House are as inconsistent as that.

I want to touch on a few different points. I represent a constituency, in which, possibly 95 per cent of the people are engaged in dairying. The people in that constituency have been blessed with a very fertile soil. The farmers there have had the advantage of a good education, and if I do say so, I believe they are a good average class of farmers with, perhaps, above the average quality of soil. Those farmers are today in a very depressed condition due to the market value of their products. Some hon. members claim that by this lowering of the tariff the manufacturers will go out of business. I think the hon. member for Dufferin (Mr. Woods) stated in this House a few days ago the amount of capital invested in manufacturing concerns and the amount of capital invested in agriculture, and he showed that the amount invested in agriculture was almost double the amount invested in manufacturing concerns. While none of us wishes to see those manufacturing concerns go out of business, if they are up against it, I want to tell them that there are farmers in Ontario who are up against it also. In the constituency from which I come we have the Finch dairy station, a station which was started by the government. I have the report for the year 1923 which shows that each farmer sending milk to the Finch dairy station—and the report takes an average of thirty farmers—produced that year 72,918 pounds of milk. At the present time cheese is selling on the market for 13¼ cents per pound.

Mr. McMASTER: That will be the wholesale price.

Mr. ELLIOTT (Dundas): Yes. Anyone who knows anything about dairying knows that you can make about eight pounds of cheese out of 100 pounds of milk. Eight pounds of cheese at 13¼ cents a pound would give $1.06 per 100 pounds of milk. The cost of manufacture is two cents per pound. That is the price charged at the Finch dairy station, and I think that is a little below the average throughout the country; let us take the cost of manufacture at two cents per pound. So that the net return to the farmer would be 90 cents per one hundred pounds for his milk. An average farm in my constituency would be about 100 acres, and on that farm the dairyman would have twenty cows. The milk production per farm on an average, according to the report of the Finch dairy station is 72,918 pounds. The provincial average for milk production in Ontario is about 4,500 pounds per cow. Take the price of 90 cents

per 100 pounds of milk and an average of 4,500 pounds per annum and figure out what a man has on 100 acres of land to-day.

To my mind the cause of depression in the manufacturing industry is not the lowering of the tariff, but the lower purchasing power of the men who have to purchase. The average milk production in my constituency is a little above the provincial average; it is somewhere about 6,000 pounds. As I have shown, the net return to the farmer on 100 pounds of milk is about 90 cents, but let us allow him one dollar per 100 pounds which is above the milk price to-day. That would give this man $60 per annum per cow, and this at twenty cows for 100 acres would give him $1,200.

Now, I would ask the manufacturers how this man can hire help and raise his family and have anything left for the purchase of agricultural implements. It would make no difference whether the tariff on these implements was wiped off entirely, or, as some of our good friends suggested a few years ago, "placed as high as Haman's gallows." This lack of purchasing power is, to my mind, the real cause of the present industrial depression, and the budget has done one thing to help the purchasing power of the people—the lowering of taxation. I think that is one of the principal features of the budget. The Acting Minister of Finance (Mr. Robb) has told us that the lowering of taxation would mean a loss in revenue of $24,000,000. That reduction will make conditions such that the people will be in a better position to purchase the various commodities turned out by our manufacturers.

The home market has been pretty fully discussed during the course of this debate. But to the average farmer to-day the home market is a myth, unless he has some perishable truck products to sell on the local market. I am going back to my own county again where dairying is the principal industry. Along with dairying naturally goes the raising of hogs. Let us suppose that one of our farmers takes a load of twelve hogs to market. He sells them to a drover. The latter probably ships half of them to the city of Montreal and the other half are sold to local butchers. The six hogs sold on the Montreal market we will assume are purchased by a packing house and converted into bacon for export. Now, does the raiser of those hogs get any better price for the hogs which are exported as bacon over those which are consumed at home? There is no difference in price. This applies also to any other line of farm produce. We are in this position to-day, that the selling price of our agricultural products is fixed in the markets of the world where our surplus is sold. The farmer will get the price paid in those markets, minus the transportation cost. Then again he is not being fairly treated, for he has to pay more in transportation costs than anyone else in the country, simply because his product must be sold on the large markets, where the price is fixed. The farmer to-day is practically as big a buyer of finished products as anyone in town or city, and on these finished products he must also pay his share of the transportation costs. Consequently he gets it coming and going.

It is contended by some of our political friends that what the farmer needs to-day is protection in his home market. I do not think many farmers in this country will put much stock in that statement, for the simple reason if we cannot compete with the surplus of other countries in our home market, we cannot compete in the foreign market. To-day we are competing with all the countries of the world that export products similar to ours, countries such as the United States, France and so on. Now, we can and do compete with those countries right here, because they have to pay transportation costs to reach our market, and to that extent, of course, they are handicapped.

The hon. member for Parkdale (Mr. Spence) in the course of his speech yesterday made several pleas for economy. Every hon. member in this corner of the House is strongly in favour of economy. But it seems to me rather funny that the people who occupied the treasury benches for ten years did not practise economy when they had ample opportunities to do so. In this connection I have a clipping from the Victoria Times, as follows:

> Conservatives in the House of Commons are displaying an unwonted zeal for economy these days. Not having to do the cutting themselves they are keen to have somebody else do it. Last week they appeared to be displeased with the comparatively small estimate of expenditure on the Dominion observatories, and they even looked askance at the $18,500 proposed for the maintenance of the observatory at Victoria. It is unfortunate for the country that their concern for economy in the public service did not develop when they were in power.
>
> It may surprise our readers to learn that the largest increases in the public debt were made after the war by the gentlemen who have now become such zealous advocates of retrenchment. In 1919 the increase was $382,000,000 which broke all records up to that time. That increase alone was greater by $50,000,000 than the total public debt of the Dominion prior to the war. But it was a mere trifle in comparison with the increase in 1920 which was $674,000,000.

I notice that the hon. member in concluding his address appealed very strongly to

the government for an appropriation to build the Toronto viaduct. Perhaps there is some reason why the viaduct should be proceeded with without further delay. But in other parts of the Dominion people who have been asking for expenditure on federal buildings and other public works have been told that the government is trying to practise economy, and thereupon they have been big enough to back up and wait. I think the city of Toronto should also wait for the viaduct.

According to the report of his speech in Hansard the hon. member for Parkdale also said:

> What will happen if you drive your farm implement people out of Canada? They will go back to the States and say "Now, we will make you pay for your implements."

I call particular attention to the sentence, "They will go back to the States." Is that an admission by those who are trying to protect these manufacturers that so-called Canadian industries are really American? We were told that in 1921 there were about seven hundred American branch plants in this country. If this is not a slip of the tongue by the hon. member, it is an admission that these industries are not really Canadian.

A little further on, speaking of the effect of tariff reductions on the city of Hamilton, he said:

> As a result the population of Hamilton will soon be reduced from 110,000 to 50,000.

The point I would make there, Mr. Speaker, is this: None of us would like to see our cities depopulated, but it is not fair to ask the taxpayers of this country to tax themselves to keep up the population of the city of Hamilton to the 110,000 mark if the business of the country does not warrant it.

Another thing that has been touched on in this debate is the number of Canadians who are leaving this country for the United States. Many reasons are given why these boys and men and women are leaving Canada. Here is the reason given by the hon. member for Parkdale (Mr. Spence):

> Free trade would drive away our population, free trade would shut up our industries and the population would leave the urban centres.

According to the statistics available, over 200,000 Canadians left this country last year, when the protective system was in vogue which has been followed in this country since 1878. These 200,000 Canadians left this country under a moderate or adequate or high protectionist system, whatever you want to call it. If the people are leaving because of that protective system, why should we not try to keep them here by changing that system? There is no reason why the young men of Canada should go to the United States. There is no use in repeating what has been so often said about our resources and so on; to my mind the solution of the whole thing is to make Canada a cheaper country to live in. We can do that in many ways, and the first among these is the practice of economy.

As I said before, one of the principal things in the budget was the relief in taxation. If you relieve the indirect taxation by removing the tariff barriers, you will find that the people of Canada can and will compete with anyone in the world, and there is no reason why they should go to some other country.

I noticed the other day in the Ottawa Citizen an article which said:

> Mr. J. B. M. Baxter, M.P., of St John, has been impressing the Progressive visitors with the argument that the Maritime province ports are Canada's natural gateways for ocean commerce. He would like to see them more generally used, in preference to Portland, New London and Boston. Under the circumstances, it is remarkable to find Mr. Baxter voting every session in favour of maintaining a heavy toll against the shipment of cargoes from Great Britain through the Maritime province ports.

The desire of the hon. member for St. John and Albert to promote trade at the ports of Halifax and St. John meets with general approval from all quarters of the House. There is no one who wishes to do anything detrimental to either of these ports, but the argument here is that the hon. member for St. John and Albert will vote against the present budget or vote to keep protection in this country, which means that every shipload of goods which comes to the ports of Halifax or St. John is taxed before it is allowed to unload.

Mr. BAXTER: May I ask the hon. member a question? Is he quoting any statement of mine?

Mr. ELLIOTT (Dundas): I just read a clipping that I took from the Ottawa Citizen.

Mr. BAXTER: May I inquire when I began to use the Citizen as a medium for the expression of my ideas?

Mr. ELLIOTT (Dundas): Great men always get reported in the press of this country. I do not say and did not infer that the hon. member for St. John and Albert made any particular statement. But I believe it to be true, and I do not think he will deny it, that he tried to impress and did impress the Progressives while they were on their trip to the Maritime provinces with the im-

portance of the great ports of Halifax and St. John. Is that true? Is there anything wrong with that?

Mr. BAXTER: The hon. member and his colleagues saw with their own eyes the ports of Halifax and St. John and were duly impressed with them. Good wine needed no bush from me.

Mr. ELLIOTT (Dundas): I understand that hon. gentlemen in that corner of the House have had a monopoly on prophecies during the past few weeks, but I venture to make this prediction, that the hon. member for St. John and Albert will vote against the present budget.

Mr. BAXTER: Hear, hear.

Mr. ELLIOTT (Dundas): Then there is no disputing it, in view of that "hear, hear." Now, when he votes against that budget he votes to tax goods which will come into his own port of St. John.

Mr. BAXTER: May I ask my hon. friend another question? If my hon. friend votes for the budget will he not vote against the declarations of the Canadian Council of Agriculture which he came here pledged to support?

Mr. ELLIOTT (Dundas): I will answer that in this way: We were sent to this House to use our own good judgment. We stood on a certain platform and we are going to use our own methods of getting that platform put into effect.

Mr. BAXTER: You are going against it.

Mr. ELLIOTT (Dundas): If the hon. member will wait a moment I will explain my position. We did not expect that the fiscal policy of this country would be changed in a minute. We are willing to back up any government, and we would be only too pleased to back up our friends to the right if they proposed something along the line of our own platform. Unfortunately, however, they have got so far into the rut that I am afraid they will never do it.

What I have predicted about the vote of the hon. member for St. John and Albert will, I believe, be fulfilled and I maintain that that vote goes to tax goods that will come into his port. So far as we in this corner of the House are concerned we do not look upon this budget as a finality. We believe that the government in going as far as they did this year should be encouraged, but we want to make it very plain that we do not believe that this is the end, and we do not want it to be the end. When the hon. Minister of the Interior (Mr. Stewart) said that this was the death-knell of protection he voiced the sentiment of hon. members in this corner of the House. In their speeches last week the whole tenor of the remarks of some hon. members was that they were afraid that this was the beginning of the end of protection, and I hope they were prophets also. It is not so much what this budget is doing as what budgets which follow will do, and the present government will be well advised to do what the majority of the people of this country are expecting them to do, namely, make a great deal more reduction in the tariff another year.

We in this corner of the House have been taunted with having been bought and sold, with being the overflow of the Liberal party, and so on, I may say to my hon. friends that we do not believe the people put them in here as our official guardians. We will do what we think is right and the people will hold us responsible; we will go back and face our constituents and accept the responsibility.

I see that the hour for adjournment is approaching, and I shall not take up very much more of the time of the House except to say this: The people who are defending the manufacturers to-day have, of course, a perfect right to do so, but I believe that we also have a right to defend the people who sent us here. Now as far as agriculture in this country is concerned we are in this condition; unless we get relief and can find better markets for our produce the exodus from the farms of this country is going to increase instead of decrease. I am going to go a little bit further, and say that I do not believe that all the ills of the farmer are going to be cured by legislation. I believe that this lowering of the tariff is going to help us, but I believe that we must also help ourselves in the marketing of our goods. For centuries the people of this country have been learning how to produce, and for perhaps the last ten or fifteen or twenty years we have been told how to produce by people who knew no more about it perhaps than the man in the moon. We have to-day a great expense on our experimental farms along the line of greater production and my advice to the present Minister of Agriculture (Mr. Motherwell) would be to cut out a great deal of this expenditure and spend more on the development of our markets.

The hon. member for Parkdale (Mr. Spence) last night told us that he would have no truck or trade with the Yankees unless there was some money in it. I do not think it makes any difference to the people of this

country, when they want to buy goods, who makes them so long as they can get them at a satisfactory price and the goods suit them. There is no reason why the people of this country should spend one dollar in the United States unless they believe they are getting value for their money. There is a market which the people of this country in 1911 turned down, due to a campaign not appealing to the people's common sense at all, but to their passions and sentiments. That market was turned down, and the statement has been made in this House that it is now closed to us. Now I am going to give you an example of how a factory in our own district is doing business in the United States to-day in spite of the high protection they have on dairy products entering that country, and making more money for the producer than we can get in our home market. A skimming plant was started in our town, and the cream is being shipped into the city of New York. This cream has to pay a tariff rate of 20 cents a gallon. That will net the farmers in that district to-day about thirty cents a hundred more than the milk producers are getting from the local cheese factories. There is an example of how even with this high rate of duty we can make more money dealing with the United States than we can in this much lauded home market of ours.

In conclusion, I am going to say this: According to the speeches that have been made by our Conservative friends, we are being given credit for the concessions made in this budget. We are not egotistical enough to think that we have pulled them over at all, but if such is the case, we can feel satisfied that we have done something for the betterment of Canadians generally.

On motion of Mr. Hudson, the debate was adjourned .

On motion of Mr. Graham the House adjourned at 9.55 p.m.

Monday, May 5, 1924

The House met at three o'clock.

REPORT PRESENTED

Second report of the select standing committee on Banking and Commerce—Mr. Cahill (for Mr. Mitchell).

CHICAGO DRAINAGE CANAL

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, I beg to lay on the Table a return to an address, dated March 19, by the hon. member for North Toronto (Mr. Church) asking for a copy of all correspondence, petitions, protests, letters, resolutions, and other documents exchanged between the government and any person or persons or organizations, or provincial governments or other public bodies in Canada, protesting against the illegal diversion of the waters of the Great Lakes by the Chicago Drainage Commission and of any and all correspondence with the government of the United States, the Joint International Commission or others on the subject.

ST. LAWRENCE WATERWAY

Hon. A. B. COPP (Secretary of State): Mr. Speaker, I beg to lay on the Table a further supplementary return to an address by the hon. member for North Toronto (Mr. Church) asking for a copy of all memoranda, correspondence, telegrams and other documents exchanged between the government of Ontario and the Hydro-Electric Commission of Ontario and the government of Canada relating to the development of certain water powers on the St. Lawrence waterway.

UNITED CHURCH OF CANADA

Mr. L. P. BANCROFT (Selkirk): Mr. Speaker, I beg to present a petition from the Presbyterian church of Little Britain, Manitoba, asking for the passage of the bill to incorporate the United Church of Canada.

Mr. F. L. KELLY (Cape Breton North and Victoria): Mr. Speaker, I beg to present a petition from St. Andrew's Presbyterian church, Sydney Mines, N.S., signed by John A. Patterson and 790 others, and a petition from the Greenwood Presbyterian church, Baddeck, N.S., signed by J. A. McDermid and 219 others in opposition to the Church Union bill.

Mr. G. G. COOTE (Macleod): Mr. Speaker, I desire to present a petition signed by J. Kennedy and 167 others of the Presbyterian church, Macleod, Alberta, protesting against the Church Union bill.

Mr. W. J. HAMMELL (Muskoka): Mr. Speaker, I desire to present a petition from Raymond, Ontario, signed by the Rev. J. Macartney; also a petition from the Presbyterian church of Port Sydney, signed by the Rev. J. Macartney, praying for the incorporation of the United Church of Canada.

PRIVATE BILLS

FIRST READINGS

Bill No. 67 (from the Senate), for the relief of Rilla May Freeman.—Mr. Gordon.

Bill No. 68 (from the Senate), for the relief of Jessie Maria Watchorn.—Mr. Rankin.

Bill No. 69 (from the Senate), for the relief of Walter Scott Miller.—Mr. Logan.

Bill No. 70 (from the Senate), for the relief of Harriet Bertha Wiser.—Mr. Rankin.

Bill No. 71 (from the Senate), for the relief of Esther Mary Edwardes St. George.—Mr. Chew.

Bill No. 72 (from the Senate), for the relief of Mabel Peters.—Mr. Stewart (Leeds).

Bill No. 73 (from the Senate), for the relief of William Thomas Trott.—Mr. Stewart (Leeds).

Bill No. 74 (from the Senate), for the relief of Lucy Elizabeth Smith.—Mr. Carruthers.

Bill No. 75 (from the Senate), for the relief of Florence Luella Patterson Kelly.—Mr. Ross (Kington).

Bill No. 76 (from the Senate), for the relief of Arthur Harold Mingay.—Mr. Rankin.

Bill No. 77 (from the Senate), for the relief of Isabella Guild.—Mr. Hudson.

Bill No. 78 (from the Senate), for the relief of Albert Lawrence.—Mr. Harris.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

INCOME TAX

Mr. WOODSWORTH:

1. What is the amount of income tax computable from returns actually made, that is overdue and unpaid for the years 1917, 1918, 1919, 1920, 1921, 1922, 1923, respectively?

2. What proportion of income tax unpaid in each of the above years was derived from incomes of between: $1,000 and $5,000; $5,000 and $10,000; $10,000 and $25,000; $25,000 and $50,000; $50,000 and $100,000?

3. What means are used by the department for checking the accuracy of income tax returns?

4. Are the bank accounts of taxable persons open to the inspection of income tax officials?

5. Do the chartered banks make any returns to the government of the amounts on deposit to the credit of those liable for income tax?

6. Is the income tax levied at the same rate on earned income as on income derived from investments? If not, what is the difference?

Hon. Mr. ROBB:

1 and 2. No information available as taxpayers accounts are only recorded in the ledgers kept at the various district offices throughout the Dominion. From the inception of the Income War Tax Act, 1917 to 31st March, 1924, the assessments levied amounted to $267,004,599.88, while the collections, exclusive of penalties and interest, during the same period amounted to $265,228,-674.55.

3. Information is compiled covering the income of each individual taxpayer, whether such is obtained in the form of salary, revenue from estates, dividends, sales of natural products or from other sources, and is checked with the return filed by taxpayer. Should a discrepancy exist an investigation is made. In the case of businesses, whether incorporated or not, financial statements are obtained and audited, which includes, if deemed necessary, an examination of the books and vouchers at the place of business of the taxpayer.

4. Paragraph (c) of subsection two of section 8 as amended provides as follows:—

(c) Every person who, in whatever capacity acting, is in receipt of any money, thing of value, or of profits, or gains arising from any source, of or belonging to any other person shall, when required to do so by notice from the minister prepare and deliver to the minister any information required, within thirty days from the date of the mailing of such notice.

5. No.

6. No. In respect to dividends corporations are required to pay from 10 per cent to 10½ per cent on profits realized in excess of $2,000, while shareholders are only relieved from payment of normal tax.

OUTGOING FREIGHT BY UNITED STATES PORTS

Mr. MacLAREN:

1. What amounts of freight for transportation through the United States ports were carried during the year 1923, respectively, by the railways which formerly constituted: (a) Canadian Northern Railway system; (b) Grand Trunk Railway system; (c) Grand Trunk Pacific Railway system; and (d) National Transcontinental Railway system?

2. What were the names of the United States ports and the amounts of such freight each received?

Hon. Mr. GRAHAM:

1. It is impossible to say what of the export business in question originated on each of the component parts of the Canadian National system, or any one part, without examination of each way-bill involved, which, it is stated by the management, would take several months and necessitate employment of special staff.

2. Portland, Me.—	Tons
Originating in Canada..	592,445
Originating in United States..	117,415
Total..	709,860

New London, Conn.—	Tons.
Originating in Canada..	6,004
Originating in United States..	1,660
Total..	7,664

VANCOUVER GOVERNMENT ELEVATOR

Mr. COOTE:

1. What was the number of bushels of grain handled by the government elevator at Vancouver for the year ending July 31, 1923?

2. What was the handling charge per bushel on said grain?

3. What were the total receipts and total expenditure in connection with this elevator during this period?

4. What was the total cost of this elevator?

5. What was the value at which this elevator was transferred to the Vancouver Harbour Commission?

6. What changes, if any, have been made in handling charges by the Vancouver Harbour Commission, and why were these changes made?

7. How many bushels of grain have been handled by this elevator from August 1, 1923, to the end of February, 1924?

8. What were the total receipts and expenditures during this time?

9. What were the port dues on vessels receiving grain from this elevator while under operation by the Board of Grain Commissioners?

10. What charges in port dues on wheat have been made by the Vancouver Harbour Commission since this elevator was transferred to them?

Hon. Mr. COPP:

1. 34,309,172 bushels of all grains, which includes receipts and shipments.

2. Handling charges on clean grain one-half cent per bushel, grain requiring cleaning being subject to additional charges according to amount of dockage.

3. Total receipts, $203,477.96; total expenditures, $106,329.10.

4. $850,281.15.

5. $550,000.

6. The department is not aware of the tariff charged by the previous management of the government elevator before the commissioners took charge nor is the elevator operated by the commissioners on the same basis as previously. The commissioners' charge for elevating with free storage and insurance against fire for 15 days on ordinary grain, is 1 cent per bushel. There is a slight variation in these charges for special conditions of grain. The cargo rate is 1 cent per ton on all grain

[Mr. Graham.]

up to the first of September next; after that period the rate will be 6 cents per ton, which charge will provide transportation over the conveyor system and piers and also free berthage for ships loading grain cargoes.

7. 31,076,900 bushels.

8. Receipts, $392,294.08; expenditure, $200,-519.04, on operation; and on equipment necessary to make the old elevator function efficiently and in proportion to its rated capacity $59,291.98, a total of $259,811.02.

9. Harbour dues, 5 cents per net registered ton on the registered tonnage of the ship, payable five times a year only; $50 per day berthage charge on ships taking grain cargo.

10. The change, effective September 1, 1924, in the cargo rate on grain, from 1 cent per ton to 6 cents per ton. In addition, charges on the ship have been reduced from 5 cents per ton to 3 cents per ton on her net registered tonnage, payable 5 times a year (effective since the first of this year), and after September 1, the berthage charge of $50 per day for ships taking grain cargoes will be abolished.

CANADIAN NATIONAL RAILWAYS—REVENUE FREIGHT TRAFFIC

Sir HENRY DRAYTON:

1. What was the volume of revenue freight traffic during the year 1923 transferred to the Canadian Pacific Railway Company for furtherance to United States points, which traffic it is now proposed to handle by the new line from Kingsclear, a point on the St. John and Quebec Railway in the province of New Brunswick, to a point on the St. Croix river opposite Vanceboro, in the state of Maine?

2. What was the amount of freight tolls earned on such traffic in the said year (a) on lines owned by the Canadian National system (including the Transcontinental and the Intercolonial); (b) on the St. John and Quebec lines (of which tolls sixty per cent are received by the Canadian National)?

3. What additional gross revenues based on the traffic of 1923 would the Canadian National have received had the new line been built?

4. What were the operating ratios on the existing lines on which the Canadian National has carried such traffic in 1923?

5. How is it proposed to make connection with the Maine Central at the "point on the St. Croix river opposite Vanceboro"?

6. Is it proposed to hand traffic at that point over to the Canadian Pacific for furtherance over its connections, if any?

Hon. Mr. GRAHAM:

1. The tonnage of such traffic handed to Canadian Pacific Railway during 1923 was 187,909 tons and tonnage received during same period from Canadian Pacific Railway was 8,419 tons making a total of 196,328 tons.

2. (a) Canadian National earnings on above traffic were $321,606.65. (b) The St.

John & Quebec Railway earnings were $53,-255.69 of which the Canadian National retain 60 per cent.

3. The Canadian National would have received one hundred per cent of the the tonnage shown in reply to Question 1 and additional revenue amounting to $246,917.33.

4. Railway accounting methods do not permit of this information being obtained.

5. Not yet known, as question will depend on running rights over Canadian Pacific Railway.

6. No; traffic will be handed to the Maine Central Railway.

TICKET OF LEAVE ACT

Mr. CASGRAIN:

1. How many former convicts, within the last five years have benefited by the Ticket of Leave Act?

2. What was their criminal record?

3. What was the last offence for which they were convicted?

Hon. Mr. LOW:

1 and 3.

Prisoners Liberated on Ticket of Leave and Class of Offence for which Imprisoned 1918-1922

Class of Offence	1918	1919	1920	1921	1922
Assault, all kinds	53	54	36	43	52

Total	703	840	751	847	1,182

2. Statistics not available.

"THE POPE LEASE"

Mr. IRVINE:

1. What consideration or compensation was paid to the holders of what is known as "The Pope Lease" on Knee Hill Creek, near Carbon, Alberta, when they gave up their lease so that the land would be taken over by the Soldier Settlement Board?

2. How many more years had the lease to run?

3. What was the area in acres of the said lease?

4. What was the minimum number of cattle that the holders of said lease were compelled to graze thereon to hold said lease?

5. Is it a fact that the holder of said lease had the option of purchasing any or all of the said leased land at $3 per acre, or what was the figure for which the land in question could have been purchased?

6. How much land of this lease was so purchased, and on what dates, and amounts paid?

7. Did the lessee have the required number of cattle in each and every year to hold said lease?

8. At what rate was the raw prairie land sold to the returned soldiers through the Soldier Settlement Board?

Hon. Mr. COPP:

1. $27,000.

2. From November 29, 1919, the date upon which the lease was cancelled to February 1 1924, the date upon which the lease would have expired.

3. 23,879 acres when granted, and 15,250 acres when cancelled.

4. At the end of three years the lessees were obliged to have one head of stock at least one year old for every twenty acres held.

5. The lease did not contain any provisions for the purchase of the leasehold or any portion thereof by the lessees.

6. By Order in Council of the 12th May, 1919, P.C. 969, authorizing the sale to members of the West View Ranch Company, Limited, of certain of the lands lying within the limits of the grazing ranch (1,631.8 acres) disposed of for the sum of $20,691.53, being at the rate of $10 an acre with accrued interest. This sale was the result of an application previously submitted under the provisions of the former coal mining regulations.

7. The lessees furnished stock returns yearly from 1906 to 1916, both inclusive, with the exceptions of 1907 and 1914, showing that they had much more than the required number of stock on their leasehold.

8. The land was divided into farm units, each containing from 160 to 320 acres, depending on the character of the soil and the value of the units for agricultural purposes. These units were sold at prices varying from $2,600 to $4,800, or, approximately, $19.90 per acre.

CANADIAN NATIONAL RAILWAYS—TORONTO PROPERTY

Mr. BOYS:

With reference to the Canadian National building at the corner of Yonge and King Street, Toronto, what was the cost during the year ending March, 31, 1924, of (a) repairs; (b) heating; (c) general up-keep; (d) cleaning and janitor service?

Hon. Mr. GRAHAM:

(a) Repairs	$ 2,541 86
(b) Heating	3,327 22
(c) General up-keep	1,067 52
(d) Cleaning and janitor service	8,106 58
Total	$15,043 18

CANADIAN GOVERNMENT MERCHANT MARINE —AUTOMOBILES EXPORTED

Mr. MacLAREN:

What ships of the Canadian Government Merchant Marine were employed in carrying automobiles from New London, Connecticut, overseas in 1923?

Mr. GRAHAM: Canadian Constructor, Canadian Ranger and Canadian Miller.

CANADIAN NATIONAL RAILWAYS—AUTOMOBILES EXPORTED

Hon. Mr. BAXTER:

1. During the year 1923, how many automobiles were carried to New London, Connecticut, for export shipment, and during what months were they so carried?
2. What was the point of origin of such automobiles and by what routes were they carried to New London?
3. Who were the shippers of said automobiles and what routing instructions did they give with respect to said automobiles?
4. What was the overseas destination of said automobiles?

Hon. Mr. GRAHAM:

1. Record of shipments is in carload quantities; number of automobiles not ascertainable.

2. Walkerville, Ontario; London, Ontario, and Oshawa, Ontario; also certain American points; shipments routed via Canadian National railways and Central Vermont.

3. It is not considered fair to Canadian National railways to publish names of shippers. The business was handled during winter months and the shippers specifically routed the traffic as forwarded for seasonal reasons.

4. Australia and New Zealand.

CANADIAN NATIONAL RAILWAYS—MR. E. A. FIELD

Mr. HANSON:

1. Is E. A. Field in employ of the Canadian National Railways?
2. If so, what position does he hold?
3. What is his salary, and what were his expenses for 1923?
4. Is his expense account audited and approved before payment?
5. If so, by whom?
6. Is he given an advance for current expenses?
7. If so, how much?
8. How many acres of land did he sell in 1923 in the United States?
9. What was the average cost for selling each acre?
10. Was any commission paid for selling the land?
11. If so, to whom were the commissions paid?

[Mr. Boys.]

Hon. Mr. GRAHAM:

1. Yes.
2. Land Commissioner.
3. Such information is not divulged by the management.
4. Yes.
5. Auditor, Land and Townsite Department.
6. No.
7. Answered by No. 6.
8. 1,440 acres.
9. 75 cents per acre.
10. Yes, $383.20.
11. N. E. Mahoney, Tisdale, Sask; $125.60 on 160 acres. L. Wreede, Wadena, Sask., $257.60 on 320 acres.

CANADIAN NATIONAL RAILWAYS—SUPPLIES

Mr. HANSON:

1. Does the Canadian National Railways purchase railway supplies from the Canada Supply Company?
2. If so, how much in value was purchased from said firm in the year 1923?
3. Who composes the said firm?

Hon. Mr. GRAHAM:

1. The management state that the Canadian National Railways have not purchased any railway supplies from the Canada Supply Company, and no firm of this name is known to the railway.
2. Answered by No. 1.
3. Answered by No. 1.

CANADIAN NATIONAL RAILWAYS—BRITISH EMPIRE EXHIBITION

Mr. DOUCET:

1. What are the names of the representatives of the Canadian National Railways from Canada at the British Empire Exhibition?
2. What are the respective positions and addresses of said representatives?
3. Has a representative been sent from the Atlantic region?
4. If not, why?

Hon. Mr. GRAHAM:

1. Mr. W. Stapelton, Mr. Percy Cotton.

2. Mr. W. Stapelton, district passenger agent, Saskatoon, Sask.; Mr. Percy Cotton, sleeping and dining car inspector, Winnipeg, Man.

3. No.

4. The officials named will represent the Canadian National Railways as a whole, not one particular region.

C.P.R. TELEGRAPH—ST. JOHN-HALIFAX

Mr. STANSELL:

1. Does the Canadian Pacific Railway Company pay for its telegraph line which runs over the Canadian National Railway right-of-way from St. John to Halifax, and from Truro to Sydney?
2. If so, what is the amount?
3. If not, why not?

Hon. Mr. GRAHAM:

1. No.

2. Answered by No. 1.

3. The question of rental has been the subject of negotiation with the Canadian Pacific Railway Company, who have recently been notified that they must pay or make other arrangements. They have agreed to pay and the amount of rental is now under consideration.

HALIFAX OCEAN TERMINALS

Hon. Mr. STEVENS:

1. What amount of money was expended on the construction of the Halifax ocean terminals from the year 1911 to December 31st, 1921?

2. What amount of money has been expended on said terminals since January 1st, 1922?

3. What is the total expenditure to date?

4. What further expenditures are contemplated by the government?

Hon. Mr. GRAHAM:

1. $16,645,879.56.

2. $379,552.53.

3. $17,025,432.09.

4. $8,000 in 1924 for laying double floor in shed No. 25.

DEPUTY MINISTERS

Mr. SEGUIN:

1. What is the name, salary and date of appointment of the deputy ministers of the departments of Immigration, Indian Affairs, Customs, Post Office, National Defence, Labour, Interior and Agriculture?

2. What is the number of employees in each of the above departments, including both the Inside and Outside Services?

3. What is the amount of the expenditure controlled by each of the above departments?

Hon. Mr. COPP:

Department of Immigration and Colonization—

1. William J. Egan; salary $6,000 per annum: date of appointment, October 10, 1923.

2. 978.

3. $4,321,035 for 1923-24.

Department of Indian Affairs—

1. Deputy Superintendent General, Duncan C. Scott; salary, $6,000; date of appointment to the service, December 15, 1879; date of appointment as deputy superintendent general, October 11, 1913.

2. Number of employees, inside service, 78; number of employees, outside service, 957; total, 1,035.

3. Consolidated Fund, 1923-24, $3,830,978.70; Indian Trust Fund, capital, $11,931,386.74; Indian Trust Fund, interest, $1,209,294.76.

Department of Customs and Excise—

1. R. R. Farrow; salary, $8,000; permanent appointment, June 1, 1884; appointed deputy minister, July 1, 1919.

2. Outside service, 3,650; inside service, 304; total, 3,954.

3. $24,661,068.03.

Post Office Department—

1. Louis Joseph Gaboury; salary, $6,000; date of appointment, 28th December, 1899.

2. 34,935.

3. $31,180,814.40.

Department of National Defence—

1. G. J. Desbarats; salary, $8,000. Appointments, Marine and Fisheries, November 4, 1909; Naval Service, May 5, 1910; National Defence, April 1, 1924.

2. Civil Employees, 1,304; permanent (Military Force), 3,642; Royal Canadian Navy, 425; Royal Canadian Air Force, 358; total, 5,729.

3. Nineteen and one quarter millions of dollars.

Department of Labour—

1. Mr. H. H. Ward; salary, $6,000; appointed to the civil service, February 1, 1911.

2. 153, including 58 part time Labour Gazette correspondents.

3. $2,957,762.94 in the fiscal year 1923-24.

Department of the Interior—

1. W. W. Cory; salary, $8,000; appointed December 31, 1904.

2. 2,495, including 440 seasonal.

3. Fiscal year 1923-24, $7,853,265.27.

Department of Agriculture—

1. Dr. J. H. Grisdale; salary, $5,500 and use of residence; first appointment in department, February 1, 1899; appointed deputy minister, April 1, 1919.

2. 1,597 (January, 1924).

3. Expenditure 1923-24, $8,194,785.05.

D.S.C.R.—AUTOMOBILE INSURANCE

Mr. JACOBS:

1. What amount of motor insurance is carried on property handled by the Department of Soldiers' Civil Re-establishment?

2. What is the sum paid out annually for premiums for the carrying of such insurance?

3. Did the firm of Lougheed and Taylor of Calgary act in the placing of the above insurance?

4. Is the firm of Lougheed and Taylor still acting for the government as brokers in the above business?

Hon. Mr. BELAND:

1. The only form of automobile insurance carried by the Department of Soldiers' Civil Re-establishment is "Property damage and personal liability" insurance. This covers, in respect of each automobile:—

(a) Liability for bodily injuries or death:
(a) One person .. .. $ 5,000.
(b) One accident $10,000
(b) Liability for damage to property of others:
One accident $1,000

2. During the period May 25, 1923, to May 1, 1924, inclusive, $1,438.

3. No.

4. Answered by No. 3.

TRAIL AND ANYOX SMELTERS

Mr. BLACK (Yukon):

1. Do the smelters at Trail and Anyox, British Columbia, receive any assistance by way of bonus, grant or otherwise from the Dominion government?

2. If so, what are the details of same?

Hon. Mr. COPP:

1. No, not yet, but the smelter at Trail will avail themselves of the copper bounties on bars only as soon as their plant is completed.

2. The bounties which may be authorized by the Governor in Council under the Copper Bounties Act of 1923, on copper bars manufactured in Canada and sold for consumption therein, from copper produced in Canada from ore mined in Canada, during the periods and at the rates following, that is to say:

From the twelfth day of May, 1923, to the thirtieth day of June, 1924, both inclusive, one and one-half cents per pound;

From the first day of July, 1924, to the thirtieth day of June, 1925, both inclusive. One and one-fourth cents per pound;

From the first day of July, 1925, to the thirtieth day of June, 1926, both inclusive, one cent per pound;

From the first day of July, 1926, to the thirtieth day of June, 1927, both inclusive, three-fourths of one cent per pound;

From the first day of July, 1927, to the thirtieth day of June, 1928, both inclusive, one-half of one cent per pound.

The sum to be paid as such bounty shall not exceed two hundred thousand dollars in any one of the said periods.

ST. ANDREWS LOCKS

Mr. BANCROFT:

1. What was the total cost of St. Andrews locks and dam?

2. What has been the cost of maintenance each year up to March 31, 1924?

3. What tonnage has passed through the locks during this period?

4. Does the government derive any revenue from St. Andrews Locks?

5. If so, what amount of revenue has been received?

Hon. Mr. COPP:

1. $1,626,619.51.

[Mr. Béland.]

2.

1910-11	$10,000 93
1911-12	11,088 09
1912-13	14,042 40
1913-14	13,779 39
1914-15	14,817 96
1915-16	24,795 43
1916-17	17,050 46
1917-18	14,179 27

1921	27,514	6,231
1922	46,524	25,387
1923	50,498	37,364

4. No .

5. Answered by No. 4.

YUKON TELEGRAPH SYSTEM

Mr. BLACK (Yukon):

1. What was the cost of maintaining Yukon telegraph system within Yukon territory from and including Tagish, Yukon territory, north to and including Forty Mile, Yukon territory, during the year ending March 31, 1923, including salaries and all expenses, but not including any expense in connection with any office or part of the line south of Yukon territory?

2. What was the cost of maintaining Yukon telegraph system main line only from Ashcroft, British Columbia, to Tagish, Yukon territory, during same period?

3. What was the cost of maintaining the office of the superintendent of Yukon telegraph system at Vancouver, British Columbia, including salaries and all expenses during same period?

4. What was the cost of maintaining each branch line from Yukon telegraph main line outside of Yukon territory for same period?

5. What was the cost of maintaining Yukon telegraph system from the point at which it intersects the telegraph line of Grand Trunk Pacific or Canadian National Railway at or near Fort Fraser, British Columbia, and parallels said railway telegraph line to Prince Rupert, British Columbia, during same period?

6. What was the cost of maintaining Yukon telegraph system outside the boundaries of Yukon territory including main line and all branch lines and offices outside of Yukon territory charged to Yukon telegraph system during same period?

7. What was the revenue from Yukon telegraph system during same period?

8. What was the revenue from messages sent and delivered within British Columbia during same period?

9. What was the revenue during same period on said system from messages (a) sent and delivered within Yukon territory; (b) sent within Yukon territory and delivered elsewhere; (c) sent from points outside Yukon territory and delivered within Yukon territory?

Hon. Mr. KING (Kootenay):

1. $41,858.94.
2. $130,294.11.
3. $12,055.08.
4.

HARBOUR DEVELOPMENT—VANCOUVER, TORONTO, MONTREAL, QUEBEC

Mr. CHURCH:

What amount has been spent by the municipalities concerned on works of development in each of the following ports—Vancouver, Toronto, Montreal and Quebec, and what sums by the government for the past 15 years?

Hon. Mr. COPP:

Department of Marine and Fisheries—

By the following Harbour Commissions with government advances:—

Montreal	$24,386,837.30
Vancouver	7,902,808.45
Quebec	7,735,040.50
Department of Public Works—	
Vancouver harbour	$4,406,705.32
Toronto harbour	8,507,841.71
Montreal harbour	42,291.06
Montreal dry dock (subsidy)	1,050,629.99
Quebec harbour	3,103,816.79
Levis	837,971.50
Champlain dry dock	4,241,147.78
Lorne dry dock	474,737.73

DR. W. A. MACDOUGALL

Mr. DOUCET:

1. Did Dr. W. A. MacDougall, agent and doctor of the Indians at Seven Islands, district of Saguenay, resign or was he dismissed?

2. What was his annual salary as doctor and agent of these Indians?

3. If a successor was named, who was he?

4. Who recommended the nomination of this person?

5. What is the salary or remuneration of the new appointee?

Hon. Mr. STEWART:

1. Dr. MacDougall was dismissed.
2. $1,500 as Doctor; $575 as Agent.
3. L. H. Michaud, M.D.
4. Dr. Michaud was appointed by the Civil Service Commission.
5. $1,500 as doctor; $575 as agent.

GREENER'S COVE WHARF

Mr. HANSON:

1. What is the present condition of the government wharf at Greener's Cove, Sydney mines?

2. How much money was spent on it during the fiscal year 1923?

3. Was the work done by contract or by day labour?

4. Was the contractor or foreman in charge of work a wharf builder or a butcher, and by whom was he recommended?

5. From whom were the materials used in connection with this wharf purchased?

6. Where was the ballast taken from, who supplied it, and at what cost?

7. Who owned the boat or boats that carried the ballast and what was the hire or contract with such boats?

8. Was there tenders called for this work, and if not, why?

9. Could not ballast be supplied direct from vessels carrying it to the harbour for a much less cost?

Hon. Mr. KING (Kootenay):

1. It is in need of repairs.

2 and 3. $4,626.89 expended by day's labour fiscal year 1923-24.

4. Competent foreman employed; nature of his usual occupation unknown; recommended by Mr. F. C. Kelly, M.P.

5. Logs and lumber, James Dunlop, James Cann; iron, Musgrave & Sons, F. A. Bell & Son; ballast, Dennis Lamie, James Cann.

6. Part lightered from vessels, part from Ballast Harbour, North Sydney; supplied as follows: Dennis Lamie, 1,310 tons at 50 cents, $655; James Cann, 871 tons at 50 cents, $435.50. Vessels from which ballast ob-

tained: Tug Maggie M, James W. Gordon, registered owner; schooner Garfield, P. Rive, registered owner; schooner Alama, not registered; schooner Florence, owner not known; schooner Hopedale, owner not known.

7. Ballast supplied from schooners Hopedale, Florence, Garfield and Alama, and tug Maggie M., 50 cents per ton paid.

8. No, because the district engineer reported that the work could be more economically and expeditiously performed by day labour.

9. No, there was not sufficient room at the site of the work to permit storage of ballast. Even had there been room to store ballast it would have necessitated one additional handling.

GEORGE MALECK

Mr. DOUCET:

1. Did George Maleck, Indian resident at Seven Islands, in the county of Saguenay, in the course of the year 1923, receive from the government or its agents the right to repair houses for the Indians of Seven Islands?

2. If so, in what month did he work, and how much did he receive per month for this work and for the materials furnished?

Hon. Mr. STEWART:

1. No.
2. Answered by No. 1.

R. E. BEATTIE

Mr. SPENCER:

1. What salary is R. E. Beattie receiving, as superintendent at Vancouver harbour?

2. Is he also harbour commissioner, and if so, what salary does he receive for this position?

3. Is it one of the duties of the Harbour Board commissioner to supervise the work of the harbour superintendent?

4. Has the cargo harbour rate at Vancouver of six cents per bushel been definitely fixed and confirmed by the Department of Trade and Commerce, and if so, will this rate come into effect before September 1, 1924?

Hon. Mr. CARDIN:

1. $4,000.

2. Yes, $4,000.

3. The following resolution of the Harbour Board defines the duties of the superintendent, and is the basis on which he was appointed; "It is the opinion of the board that a general superintendent should be appointed under the board, whose duties shall be to supervise and co-ordinate the work of all departments and who shall be responsible to the board that their instructions and policy are efficiently carried out."

4. No.

[Mr. J. H. King.]

B.C. POST OFFICES—REVENUE

Mr. NEILL:

What was the gross revenue of the following post offices in British Columbia for the fiscal year ending March, 1924—Courtenay, Union Bay, Ashcroft, Ladysmith, Port Alberni?

Hon. Mr. STEWART (For the Postmaster General):

Courtenay, B.C., $8,088.82; Union Bay, B.C., $2,302.18; Ashcroft, B.C., $4,103.25; Ladysmith, B.C., $8,059.40; Port Alberni, B. C., $6,253.63.

QUEBEC AND LAKE ST JOHN RAILWAYS

Mr. LAVIGUEUR:

Has the board of management of the National Railways the intention of reimbursing the amount of $650,000, subscribed by the corporation of the city of Quebec, for the construction of the Canadian Northern and Quebec and Lake St. John railways, which, at present, form part of the National Railways?

Hon. Mr. GRAHAM: So far as the government is aware, this matter has not yet been considered by the board of management of the National Railways.

CANADIAN PACIFIC RAILWAY—GRAIN HAULED

Sir HENRY DRAYTON:

1. How many tons of grains and grain products did the Canadian Pacific railway haul in western territory to the head of the lakes during the calendar year 1923?

2. In making this haul, what was the resultant total of tons of this traffic carried one mile?

3. What was the average length of haul of this traffic?

4. What additional total gross revenues would have been earned had this traffic been carried under existing rates on similar traffic in the United States?

5. How many tons of grain and grain products did the Canadian Pacific railway haul in western territory to Vancouver in the year 1923?

6. In making this haul, what was the resultant total of tons of this traffic carried one mile?

7. What was the average length of haul of this traffic?

8. What additional total gross revenues would have been earned had this traffic been carried under existing rates on similar traffic in the United States?

9. What was the total percentage of grain and grain products hauled in western territory to the entire tonnage of that territory in 1923?

10. What percentage of the entire ton-mileage in the western territory in the year 1923, did the carriage of grain and grain products entail?

11. What was the percentage of the total revenue earned in western territory in 1923 by the carriage of grain and grain products?

12. What was the average rate per ton-mile earned by such traffic in said territory and year?

Hon. Mr. GRAHAM: The information sought here must be given by the Canadian Pacific Railway Company; it is not in the possession of the Department of Railways. However, I will write to the Canadian Pacific Railway Company and ask if they can give these details for the benefit of the House.

QUESTION PASSED AS ORDER FOR RETURN

CIVIL SERVICE APPOINTMENTS

Mr. SUTHERLAND:

1. How many appointments have been made by the Civil Service Commission, inside and outside, in the year 1922?
2. How many of such appointments were made in 1923?
3. How many of such appointments have been made in 1924?
4. How many increases in salary (outside of statutory increases) have been made in the civil service, inside and outside, since December 29, 1922?
5. How many requisitions have been made to the Civil Service Commission for new appointments to the civil service since December 29, 1922?
6. Of these requisitions, how many have been made in the months of January and February, 1924?
7. What is the total amount in annual salary of the new appointments to the civil service since December 29, 1922?

CANADIAN NATIONAL RAILWAYS—TIES

Mr. CHAPLIN:

For a copy of all letters, papers, reports and other documents relating to the purchase of railway ties by the Canadian National Railways or any of its officials, including correspondence with the firm or firms from which the said ties were purchased, reports on the price or prices of same, and also returns and vouchers showing the cost of all creosoting plants either under construction or completed by the Canadian National Railways, during the year 1923.

Mr. GRAHAM: This motion has been on the order paper for quite a time, and my hon. friend and I were to have had some consultation in regard to it. We do not seem to have had that, and I would suggest that we let this motion pass. I know my hon. friend will not be unreasonable, and for my part I will bring down all that can rightly be brought down under the order.

Motion agreed to.

UNOPPOSED MOTIONS FOR PAPERS

DUMPING DUTY

Mr. BOYS:

For a copy of an order in council or orders or regulations of the Minister of Customs affecting valuations for the purpose of assessing dumping duty.

CANADIAN NATIONAL RAILWAYS—LAND DEPARTMENT, WINNIPEG

Mr. HANSON:

For a return showing all financial statements made by E. A. Field, Land Commissioner, Canadian National Railway Company, Land Department, Winnipeg, Manitoba, in reference to land sales for the years 1922 and 1923, showing the amount of cash received and disbursed and showing all expenses, with a list of employees' salaries, expenses, commissions paid, rentals and net profit or loss.

DR. L. H. MICHAUD

Mr. DOUCET:

For a copy of all correspondence exchanged between the government and all persons whomsoever on the subject of the nomination of Dr. Michaud as doctor and agent for the Indians at Seven Islands, county of Saguenay, including (a) copy of all instructions given him on the subject of the purchase of provisions and merchandise necessary to the reserve, (b) copy of all instructions given him on the subject of patronage in his district, (c) copy of all tenders obtained from different merchants for the merchandise necessary, (d) list of merchandise purchased, and the names of the vendors and the prices paid up to December 1st, 1923, (e) copies of all instructions given the agent authorizing him to make advances to certain Indians with guaranteed privilege on their furs, without notifying the public.

YUKON TERRITORY—MAIL

Mr. BLACK (Yukon):

For a copy of all letters, telegrams, documents and correspondence since January 1st, 1923, between the Postmaster General, acting Postmaster General, any official of the Post Office department, any other minister or official of the government and other persons concerning the carrying of His Majesty's mail between Whitehorse and Dawson, Yukon territory, for the winter of 1923-1924 and for the winter of 1924-1925.

SCRIBE HOTEL, PARIS

Sir HENRY DRAYTON:

For a copy of all papers, reports, valuations, letters, receipts, vouchers and any other documents relating to the different transfers of the Scribe Hotel, Paris, France, and its purchase, including copies of instructions given to the Deputy Minister of Railways and his reports to the minister; also a return of all letters, papers, reports, estimates and other documents relating to the renovation and repair of the said hotel.

WALKERVILLE—ENSENADA WHISKY SHIPMENT

Mr. HOCKEN:

For a copy of all the correspondence and other documents relating to a shipment of whisky from Walkerville, Ontario, to one Watson, Ensenada, Mexico, and the cancellation of the bond given in connection therewith.

VANCOUVER HARBOUR

Mr. SPENCER:

For a copy of the contracts between Vancouver Harbour Commissioners and the Pacific Construction Company, with respect to: (a) reconditioning of elevator number 1; (b) annex to elevator number 1; (c) construction of elevator number 2; (d) completion of elevator number 3, otherwise known as the Woodward elevator. Also particulars of the contract between the harbour commissioners and any company with respect to the leasing of the number 3, or Woodward, elevator.

ABRAHAM NOONAN

Mr. CHAPLIN:

For a copy of all correspondence, letters and other documents, received by or sent from the Post Office department or any other department of the government with regard to the dismissal of Abraham Noonan as postmaster at Albany, Prince Edward Island. If an investigation was held, a copy of the evidence and the investigator's report.

BUSINESS OF THE HOUSE—FORM OF MOTIONS FOR RETURNS

On the Orders of the Day:

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): An answer or rather a comment made by the Minister of Railways (Mr. Graham) on the first motion called this afternoon impels me to bring to the attention of the House a practice into which the government have fallen, and which, I think, is not in compliance with a proper procedure or, indeed, at all a dignified treatment of parliament. I refer to the practice of permitting motions to pass, and then not complying with them as passed. I am not asking that all the information called for by this motion, for example—and others may be used equally well as examples—should be brought down, I am not arguing that the motion itself as written should pass; but I do say that if the government permit the motion to pass then they should comply with its requirements. If the government feel that the motion should not pass they should take the responsibility of specifically amending it, or making a definite reservation—no other course, to my mind, is justified. There have been cases where motions have passed this House calling for the production of certain information, the government not taking the responsibility of objecting. They permitted the motions to pass but took no responsibility; then, when the return was made the government said it was not in the public interest to give the information asked for. It is unnecessary to add that this is merely treating parliament with contempt. The government, I submit to you, Mr. Speaker, should take their stand on each motion on its merits. If they desire to have the motion amended they should take the responsibility; and then when the motion passes it should be complied with in the form in which it passes.

AGRICULTURAL CREDITS

On the Orders of the Day:

Mr. M. N. CAMPBELL (Mackenzie): I should like to ask the Acting Minister of Finance if it is the intention of the government to submit Dr. Tory's report on agricultural credits to any select standing committee of the House for consideration, or to appoint a special committee to consider it?

Hon. J. A. ROBB (Acting Minister of Finance): It has been suggested that the report might with profit be submitted to the committee on Banking and Commerce. We will be able to give my hon. friend a definite reply to-morrow, or next day, as to what disposition will be made of the report.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed from Friday, May 2, the debate on the motion of Hon. J. A. Robb (Acting Minister of Finance) that Mr. Speaker do now leave the Chair for the House to go into committee of Ways and Means, and the proposed amendment thereto of Mr. Woodsworth.

Mr. A. B. HUDSON (South Winnipeg): Mr. Speaker, the statement of the Acting Minister of Finance has been justly praised for its clearness and brevity. The statement brings directly before us for consideration the most difficult of Canadian problems, a problem which must sooner or later be settled and settled rightly, or the consequences will be most disastrous. It has been said that the proposals mentioned involve a very direct departure from the policy which has hitherto prevailed. Assuming that to be correct, it is necessary for us to consider whether or not the proposals are consistent with the expressed will of the people, and if so whether they are wise in themselves. The minister makes a number of specific proposals in the way of reduction of taxation, and then states the general principle upon which he has proceeded. We are not at present concerned so much about the specific proposals as about the general principle. This general principle he has stated towards the end of his remarks, and as it has not been quoted for several days I will take the liberty of again reading it. The Acting Minister of Finance said, as reported at page 1218 of Hansard:

> We have certain basic industries, upon the success of which depend the growth of all other industries, and the greater development of our trade. Of these basic industries, I would place agriculture, in all its varied branches, first. Next to agriculture, I would place our forests, our minerals and our fisheries. A real national policy is a policy that will encourage the growth and development of these basic industries.

And then, Sir, a little lower down the Acting Minister of Finance is reported to have said:

> In that belief, Sir, we submit to-day proposals to lighten the burden of taxation on these primary basic industries.

Now, let us inquire whether the policy thus proposed is or is not consistent with the will of the people. During the election campaign of 1921, and indeed for a number of years before that the Liberal party—both inside of the House and out—proclaimed their

adherence to a policy of lowering the tariff, and particularly on the implements of production of the basic industries. That policy was very distinctly outlined in a resolution which was proposed to the House by the member for Brome (Mr. McMaster) in the session of 1919. He was then supported not by all the Liberal members but a great majority of them. In 1919 the supporters of the Liberal party met in convention and adopted a platform which incorporated that principle. Again in the session of 1920 and the session of 1921 resolutions were presented to the House, and supported by practically all of the Liberal members, and they involved the same principle. So much for the Liberal party. Now, the Progressive party who presented themselves for the first time in the election of 1921 were even more emphatic in their demands for a lowering of the tariff, and they too paid special attention to the duties on the implements of production. The Conservative party took the attitude which they still take. They are consistent in taking the view that a protective policy is vital to the interests of Canada, and it is not unfair to say that before the people at that election they were regarded as a high protectionist party; they might disclaim that but they were so regarded by the electorate. Now, at this election, a few more than two millions of people voted for the Liberal and Progressive candidates combined, and a few less than one million voted for the Conservative candidates. It would not be fair to say that all of those who voted for Liberal candidates approved of the declared policy of the party, because as we have heard from the hon. member for St. Lawrence-St. George, and as we may hear from several other members on this side, they expressly disclaimed any desire to disturb the existing tariff and either expressly or impliedly disclaimed approval of the Liberal platform. But there were not many of these members, as far as my knowledge goes, and in fact if we make a very generous allowance for the people who voted for candidates holding these views among the Liberal party, there would still be an immense majority of the electors who must be taken to have approved of a policy of lowering or obliterating the duties on implements of production in the basic industries.

The facts that I have stated seem to me to show beyond question that there is no lack of consistency in the action of the government so far as the will of the electors is concerned; in fact, I think that the government would have been liable to most severe criticism if they had failed to proceed along the lines that they now propose to follow. When a government comes into office it is seldom able to fulfil all of its pre-election promises, but in all good faith it is bound to do all in its power to implement all such promises as are of a fundamental character.

The merits of the proposals of the government have been subjected to a great deal of discussion. Most that can be said for and against them has been said, and very little is left open to me that has not already been touched upon. In the first place, I would like to make some reference to a number of letters which were read the other night by the hon. member for West Hamilton (Mr. Stewart). He read letters which seemed to indicate that the manufacturers of the city of Hamilton were in a very depressed and unhappy condition, because they conceived that the present budget was going to destroy the industries of their city. A copy of the Hamilton Spectator of Friday, April 25, has been placed in my hands. In this paper, which was published about two weeks after the budget was brought down, appears an article of considerable length, which reads in part:

> New industries have decided to establish here.
> Industrial commissioner secures two for city.
> And has prospects of landing some others.
> Prospects brighter this year than for long time.
> Representatives of two other large manufacturing concerns, one an American company and the other a Canadian firm, were in consultation with Industrial commissioner, Kirkpatrick, yesterday afternoon, but while they were favourably inclined to Hamilton as a location for their industries, arrangements were not yet completed. One requires—

And so forth. I will not take up time reading the article, but it indicates that there are at least cross currents in the good city of Hamilton.

I would like to refer to another matter that has been mentioned by a number of hon. members this year and last year—the statement that it is desirable that Canada should become a self-contained country. That statement has obtained certain currency throughout the country, perhaps because it has a highly patriotic flavour, but it seems to me that it is a vain hope, a futile desire, a rainbow which even the most optimistic can never hope to witness. If we look round the world for a country that enjoys this enviable condition we are met with some disappointments. Our thought would naturally first turn to Great Britain; that country is probably less self-contained than any other first-class nation in the world; she is dependent to a very large extent on the outside world for her food, and

to an even larger extent for her raw materials and for all sorts of things that enter into the life of the community. She lives by external trade. Never since she was a nation has Great Britain been self-contained; and she never will be unless the day comes when Macaulay's vision of the New Zealanders' visit is realized. The next nation we might turn to is Imperial Germany. That country is probably the place where this conception of a self-contained nation was first fully developed. For over 40 years she strove, with all the aids of science, and with all the ingenuity, energy and persistency of her people, to become self-contained. After a few years, finding that her efforts were failing, she reached out to other parts of the world to acquire possessions which might provide all that she needed to use from within her own jurisdiction. The result of this policy contributed largely to bringing about the Great War, and it was because she was not self-contained that the Great War was concluded at as early a stage as it was.

Another country in Europe that might be considered is France. She is much more self-contained than most other nations, and yet she is dependent on the outside world for a very large portion of her food, and for an even larger proportion of her raw material. She, too, is reaching out into the outside world trying to supplement what she lacks. The smaller nations of Europe such as Belgium, Holland, Denmark and Sweden, all depend to a very large degree on the outside world. So that in Europe there is no comfort to those who proclaim their wish that a country should become self-contained, and their belief that if it did become such it would be happy.

Turning to the United States, that country is probably more favoured by nature in the diversity of its climate and in its natural products and its geographical position than any other country in the world. She too has sometimes thought that she might be self-contained, but the result is that she is importing more and more year by year. She sets up a high protective tariff against Canada, and yet notwithstanding that tariff each year sees an increase in her imports from Canada. So that if we look over the whole world we do not find any civilized country which seriously attempts to be self-contained in this present year. It is said that the only people that are really self-contained are negroes of central Affrica, and even they trade coconuts for calicoes.

[Mr. Hudson.]

Mr. GRAHAM: They do not use very much calico at that.

Mr. HUDSON: Probably not. In Canada we have great natural resources and we are proud of them, but there are a great many things that we lack and a great many things that we cannot get along without. In 1879, when the so called National Policy was inaugurated, the fathers of that policy had this same idea of a self-contained nation. They said: We will soon become great if we shut out these industrial products from elsewhere and live within ourselves. The result of that policy, which has been in force ever since with a few modifications, has been that Canada has imported more and more, year by year, from that time. The truth is that no country can maintain its place in our advancing civilization without drawing largely on the outside world. As somebody said, to attempt to do so is a fruitless struggle against the spirit of the age. When you have free communications, free trade in literature, free trade in ideas, you cannot persuade people to do otherwise than insist on procuring material things from wherever they can get them to their liking. It seems to me that if we keep that in mind, the true policy is along the lines indicated by the Acting Minister of Finance (Mr. Robb) in the latter part of his statement; we should turn our thoughts to the development of our resources where we have an advantage, to doing and making the things we can do and make better and more cheaply than anybody else. If we do that, we have ample resources to provide for the profitable employment of the energies of all of the people who are now here and all that we can hope to have for generations to come.

There is another matter which, perhaps, has not been referred to directly by any member during this debate, but which is mentioned sometimes in the press and sometimes on the street, and that is, retaliation. People complain, perhaps rightly, that we are sometimes dealt with unreasonably by the people of the United States or of other countries in regard to tariffs. It is not unnatural that a person who is injured by such a move should feel resentment and should ask for retaliation. But it seems to me that anything of this sort should be proceeded with very slowly, because it seldom happens that you can repair the injury to the injured person by retaliation. You may vent your feelings, but, except in rare cases, you do not benefit by retaliation. There is another reason why we should proceed very slowly with any idea of that sort, and that is this. The United States is a great nation, twelve times at least our size in

population and more than twelve times in wealth. We live side by side on a border of 3,000 miles, and to large extent our resources are complementary to theirs. We cannot get away from nature, and nature intended that we should live side by side in a neighbourly way. If we are going to do anything, I think our policy should be one of conciliation, and that, for the furtherance of such a policy, the government as soon as it possibly can, should get a competent representative at Washington and do all in its power to bring about better trade relationships with the United States.

One hon. member, I think the hon. member for St. Lawrence-St. George (Mr. Marler), remarked that we could not afford in Canada to take our trade policy from either Great Britain or the United States. It seemed to me that there was a great deal of truth in that remark, but it also seemed to me that we could not afford to ignore any lessons which we might learn from what had happened in either of those countries, applying them to our own conditions. In the course of the debate quite a number of members have referred to the value of the home market. The argument has run something like this; Bring in more people, raise the tariff, stiffen it up a little bit; we shall have more people in the cities and industries flourishing, and then our farmers' troubles will soon disappear, because the people in the cities will eat and pay for what the farmers produce. This is a case where we might fairly look at what has happened in the United States before deciding on the validity of that argument. The United States, as all hon. members know, is a nation of over 100,000,000 people. It is highly industrialised, its industries, as a whole, are probably thirty or forty years in advance of ours—I mean in the extent to which they are industrialised. They have enjoyed the blessings of a highly protective policy for several decades, probably for generations; they have as many large cities as they can very well support; they have an urban population in the whole country greatly exceeding the rural population. That being the case, what is happening? During the last few years the agricultural population of the United States has fallen into distress, distress to the degree that they had to seek federal assistance and the federal government came to their aid, providing various methods, for instance agricultural credits, long-term credits, short-term credits, intermediate credits. All this was put in force, but while it may have helped, it did not cure the situation. The next thing that happened was this: The United States' farmers, unlike our farmers, have been educated to believe in the efficacy of a protective tariff. They think it is right, so they go to congress and ask congress to pass a law imposing a very high tariff, a prohibitive tariff, against the products of Canadian farmers. Congress accedes to their request and imposes what they thought was a prohibitive tariff. But that did not cure the situation; they found soon that that did not improve prices, it did not remedy their distress. The next step was a measure which is now before congress, probably being discussed there to-day, known as the McNary-Haugen bill. This bill, when I heard of it first, seemed to me to be a most fantastic production, a scheme which could hardly be hoped to work, or to be considered by thoughtful business men. To put the matter very shortly, those back of this McNary-Haugen bill argue thus: The troubles of our farmers arise because they have an exportable surplus and the price of their products, of what they have to sell, is determined in a world market. The world market is a bad one at the present time, and we have to deal with it on that basis. So, we will form a government corporation having a capital of $200,000,000. That corporation will be empowered to ascertain what the amount of the home consumption of various agricultural commodities will be, then to take the exportable surplus and to sell it at the best price that can be secured in Europe, the government taking the loss. In the meantime the prices of these commodities are to be fixed in the United States by the rather curious procedure of ascertaining what the relative prices of agricultural products and other commodities were in 1914;—prices of farm products, that is to say, have not gone up, while other prices have gone up, and the relationship of these prices in 1914 will be found out—and, having ascertained that, they will then fix the prices for the domestic market on that basis; and in order to prevent that figure being disturbed, they will give to the President, under the advice of the commission, power:

> To determine the rate of duty upon any agricultural commodity, or upon any derivative of or competitive substitute for such commodity, necessary to maintain or to assist in maintaining the domestic price of such commodity at the level of the ratio prices fixed therefor.

There are in the bill several sections which it may be of interest to this House to quote as disclosing the nature of the proposal, and the conditions which the United States legislators feel that they have to deal with. Section 21 reads:

> It is hereby declared that there exists a general emergency in respect of agricultural commodities by reason of—

(1) The continued economic depression in agriculture.

(2) Inequalities in prices between agricultural commodities and other commodities, resulting in a relatively inadequate return to the farmer for his labour and upon his investment.

(3) The existence of surpluses available for export in agricultural commodities.

(4) The necessity in part for the existence of such surpluses in order to safeguard the domestic market against uncertainties of yield and the economic impracticability of immediately preventing the continued production of such surpluses.

(5) The dependence of the prices of such surplus commodities upon the lower prices in foreign markets due to unsettled world conditions and lower costs of production.

Section 22 declares this to be applicable:

If the commission finds that (1) there is a surplus for export of wheat, flour, corn, raw cotton, wool, cattle, sheep, swine, or any food product of cattle, sheep, or swine, and that the domestic price thereof is determined by the world price, and (2) according to estimates made by it, the ratio prices, as defined in section 24, in respect of the commodity would be in excess of the domestic price thereof. . . . .

That, as I say, seems to me to be fantastic. However, I find that it has received the approval of the agricultural committee in the House of Representatives and also of the agricultural committee in the Senate. It was reported to the House of Representatives on Friday or Saturday last and is, I believe, being discussed in the United States Senate to-day. Looking at the matter in the first place, I felt a certain curiosity about the underlying reasons which would justify men in apparently approving of this scheme, some of them being in fact among the most eminent financial men in America. I wondered what prompted them to approve of the scheme; and on Friday I found an article in World's Work, which, as every one knows, is one of the sanest and most rational journals in America, and one that is not given to endorsing anything that is not sound in a business way. In this article I found the plan in question discussed, and with the permission of the House I desire to read from it:

Has the agricultural problem at last been solved? Such is the claim made by those who are advocating the passage of the McNary-Haugen bill, now under consideration by Congress. . . . .

The new proposal, which has made greater headway than any of its predecessors, has at least the virtue of ingenuity. It recognizes, as the basic problem, the fact that the price of agricultural products is not made in the United States. American industry, for the larger part, is not obliged to compete with foreign industry. The tariff protects it against such competition. The American workman pits himself against American workmen exclusively; his wages are fixed by domestic conditions, not by the standards of "pauper labour" in other countries. That, of course has always been the pet argument of the advocates of a protective tariff.

But the situation of the farmer is quite different. He exports his surplus product; he sells this surplus product in the markets of the world; a tariff, therefore, helps him not at all, since the products of foreign farms do not enter this country in sufficient quantities to compete with the American product. Because the American farmer sells abroad, his competitors are the farmers of Russia, of India, of Australia, of the Argentine and other remote countries, and the price of his output is made, not in Chicago and New York, but in Liverpool. It is also true that the price fixed in this world-market rules in the United States as well as in all other countries. No protective tariff can change this situation so long as the American farmer remains an exporter. And the American farmer suffers in two ways. He competes with the whole world, which means—at least it means at present—a low price for the things he raises. On the other hand, nearly everything he buys is produced in a protected market, which means high prices. Here is a gross injustice. About 60 per cent of Americans are engaged in industry and about 40 per cent in agriculture. The government interferes in behalf of the former, sets aside economic law, and protects industry from competition, which is merely an artificial method of increasing prices. The farmer, on the other hand, is compelled to shift for himself. There is, of course, one obvious solution of this problem. The abolition of the protective tariff would place the two elements in our population upon precisely the same level. The price of American industrial products, like the price of American agricultural products, would then be made in the world market. The American workman would be forced to compete with the "pauper labour" of Europe and Asia precisely as is the American farmer under present conditions. The farmer would then purchase the things he consumes at much lower prices than now, a change that would compensate him in large part for the low price at which he sells.

These arguments have not an altogether unfamiliar sound, and I have referred to the bill not with any idea that its principles could be adopted in this country:

4 p.m.

we in Canada could not afford to pay the price, because agriculture enters much more largely into the economic life of the country than it does in the United States. We have still a very large rural population and in the matter of production the agricultural industry is still considerably the largest. For that reason it is not possible for us to consider any such scheme as that. I merely refer to this bill to show the extraordinary length to which our neigbours have been driven to produce equality because of the inequality of the protective policy which they adopted many years ago. This, it seems to me, throws a great deal of light on our own problem.

I do not propose to discuss in detail the measures advanced by the Acting Minister of Finance (Mr. Robb). All I wish to add is, that I intend to vote for the budget as being, in my view, a move in the right direction.

Mr. JOS. T. SHAW (West Calgary): Mr. Speaker, I join with the member for South Winnipeg (Mr. Hudson) in expressing my

warmest congratulations to the Acting Minister of Finance (Mr. Robb) on the concise, lucid and businesslike presentation of the people's affairs which he has made. With his and the government's desire for a reduction in expenditure, I need not say, I most heartily agree. In considering the tremendous revenue drawn from the people by the federal government one must be impressed by the fact that it represents a very serious tax burden indeed, and amply justifies a demand for the strictest economy.

The revenue last year, according to the minister's statement was $394,000,000, representing a per capita tax of $44, which to the breadwinner of a family of five represents an annual expenditure of $220 to meet his federal obligations alone. When one adds to this the municipal and provincial taxation, one gets some idea of the tax difficulties under which the people are labouring to-day. So I most heartily commend the action of the government in expressing to parliament its desire that expenditure shall be cut to the bone. I trust that when the main estimates are considered and the supplementary estimates are presented we shall find that the government has done much more than pay mere lip service to the insistent demand of the country for the strictest economy in public expenditure.

The practice of economy is all the more necessary now in view of the fact that returns for the month of April, the first month of the new fiscal year, indicate a drop in the revenues of the customs and excise department of three and a half million dollars. I want not only to impress upon the government the necessity of reduction of expenditure, but also to present to the Acting Minister of Finance one means at least by which I think he can get much-needed revenue. We have in our midst a Royal Mint, and I think from that source we can supplement very considerably the national revenue. I find upon examination of the payments made by the Mint to the government that since 1908, the time of its formation, until 1923, it has paid to the government in receipts over and above all expenditures a total of almost seven and a half million dollars. During the last three years, for some reason or other with which I am not familiar, only $181,450 has been received from this source. The Mint makes this large amount of money for the treasury principally by calling in American coinage outstanding in Canada and reporting it to the country of its origin, and substituting Canadian coinage for the amount so deported. I find that while during the years 1921, 1922 and 1923 no deportation has taken place, yet in the years preceding very large deportations took place varying from about $1,800,000 down to $900,000. Now, I am informed on credible authority that there is much American coinage in circulation in this country, between three and five million dollars. The cost of exporting it to its source is comparatively insignificant, as one will find by reference to Appendix No. 43, of the Public Accounts for 1923. So I suggest to the government this means of supplementing the national revenues.

One of the most important items presented in the budget, in my judgment has, so far, received the least attention; I refer to the public debt. On March 31, 1914, the year of the war, the gross debt of Canada stood at $544,391,360. There were assets outstanding against that, leaving the net debt at $335,996,850. On March 31, 1923, just nine years later, the interest bearing debt stood at the figure of $2,653,869,212. Let me make a comparison of the two sums. In the first place, the debt represented by the 1914 figures was largely incurred for productive purposes, and consequently there stood against that expenditure a large amount of productive assets, such as railways, canals and other public works. The average interest rate was 3.52 per cent, the yearly interest charge in that year being $14,687,797. The debt itself was largely held outside of Canada. With regard to the debt on the 31st of March, 1923, it was incurred almost entirely, with the exception of the amount included from pre-war years, for war purposes, and consequently was not represented by any productive assets. The average interest rate had increased to 5.215, that increase alone representing an additional expenditure for interest of $44,000,000 annually. Then again, a large portion of that debt is exempt from income taxation. The yearly interest charge stands at something over $138,000,000—a sum in excess of the total annual expenditure of this country in pre-war years.

Now, I suggested that the national debt at the present time is largely internal. I will give some figures to establish this fact. On March 31, 1923, of the Canadian public debt there was payable in London $304,770,796; in New York $210,933,000, and in Canada—making allowance for a small sinking fund—$1,937,031,954, to which must be added temporary loans in the form of treasury notes, unpaid bills and so on, amounting to $95,432,000. There is our problem to-day . What are we going to do about it? What does the Acting Minister of Finance propose,—what

does anyone propose in connection with it?

For the purpose of throwing some historic light upon this subject, the most important before us at the present time, I want to turn back the pages of history and examine some public debts of other countries. The hon. member for Brome (Mr. McMaster) went back to the Middle Ages; I do not intend to go so far, but I want to give some figures which I think may be of value, and then draw a few deductions.

The English debt starts with the year 1689. It amounted then to the small sum of slightly over one million pounds. After the peace of Ryswick in 1697 it had increased to £21,000,000. In the four years of peace following, it decreased £5,100,000. The Treaty of Utrecht which ended the war of the Spanish Succession in 1713 found the debt increased to about £53,500,000. In 1748—I am just taking the outstanding years—after the War of the Spanish Succession the debt stood at £78,000,000. In 1756, after the eight years of peace following, it had been reduced by £6,000,000. In 1763 following the conclusion of the Seven Years' War, the public debt, including the floating debt, stood at approximately £139,000,000. Then we had an era of comparative peace until 1775, by which time the debt had been reduced to £130,000,000; I am just giving the round figures in all cases. The war of American Independence then started, and at the conclusion of that war, terminated by the Peace of Versailles in 1783, the debt stood at £238,000,000. Ten years of peace followed, during which the debt was reduced by £10,000,000. Then we had another long series of wars, the Napoleonic war to which there was a short truce by the Treaty of Amiens in 1802. In that year the debt had reached the total of £500,000,000. The reason for that increase was the unwillingness to impose adequate taxation at the outset of the war, and that is very clearly indicated by the fact that in the first four years beginning with 1793 only £70,000,000 were raised in taxes whereas in the following four years almost double the amount, or £134,000,000, was raised. In 1816, which year represented the conclusion of the Napoleonic wars, the public debt stood at £876,000,000, representing an increase of $25,000,000 per year during all these war years. During this period some heavier taxation was imposed.

Now it is pointed out by the writers that the difficulties in finance at that time arose from two causes: First, there was a natural dislike, for political reasons, to impose adequate taxation, but what was natural perhaps on political grounds was absolutely indefensible on financial grounds; secondly, there was borrowing at a higher nominal capital than the amount actually received, a practice which perhaps has not been forgotten during the ensuing years.

Then followed a long period of peace, and by 1841 the debt had been reduced to £792,000,000. That was made possible by reason of numerous conversions taking place in the interim and the interest rate being reduced sucessively from five to four, and then to three-and-a-half per cent. Next came the Crimean war, which cost some £70,000,000. There was raised by taxation during that war only £36,000,000, and so it became necessary to increase the public debt by an additional £34,000,000. In 1860 the public debt stood at £790,000,000, and thirty years later it had been reduced to £579,500,000. By 1902 at the end of the South African war, it had increased to £748,000,000, and on the 31st of March, 1920, it stood at £7,832,000,000. At the conclusion of the last fiscal year, March 31, 1924, it stood at the exact figure of £7,680,480,000. From December, 1918, to March 31, 1924, the British government has applied the immense total of £650,000,000 to the public debt, but the amount has been swallowed up on account of the conversions, the increase of nominal capital, but at the same time a decrease of interest rates; in other words, these conversions have apparently disguised the fact of payment of that very large amount.

That is just a short synopsis of the development of the English public debt. The history of the public debt of any country in the world would illustrate the deductions I desire to make but I want now to discuss shortly the American public debt and synopsize it for the benefit of the members of the House.

The American public debt practically starts with the year 1791, when there was a total indebtedness of $75,000,000. Alexander Hamilton, a very distinguished American, had a very peculiar notion apparently about public debts; he thought they should be paid. He was the gentleman of whom Daniel Webster later said that he "smote the rock of national resources and copious streams of wealth poured forth; he touched the dead corpse of public credit and it stood forth erect with life". As a result of his ideas the public debt by 1812 had decreased to $45,000,000. The war with Britain and Canada increased the debt by the year 1816 to $126,000,000. In 1835 the debt had been reduced, or perhaps I should say wiped out, because it stood at the insignificant figure of $37,000. By reason of the Mexican War and difficulties with the Indians the debt had increased in 1861 to $61,000,000.

At the conclusion of the Civil War in 1865, it had increased to $2,756,000,000, an amount comparable with our public debt of to-day. In 1892 it had been decreased to $585,000,000, and the yearly interest charge had been reduced from $151,000,000 to $22,900,000. How was that accomplished? First, the high credit of the United States in those years enabled it to convert its six and five per cent loans to four and finally to three-and-a-half per cent. In addition to that there were large annual surpluses which were applied on the debt. Another war came on, the Spanish-American War, and in addition the country suffered from depressed conditions and difficult times generally, so that the debt in 1899 stood at the figure of $1,049,000,000. The present indebtedness of the United States is approximately $24,000,000,000.

I have given these figures to the House, and very probably hon. members are tired of listening to them, and I want now to draw some few deductions from them. First of all, the debt growth is due almost entirely to war; that is the first proposition. I need not remind the House that in the period from 1793 to 1816 the English debt rose by £600,000,000. In the forty years of peace following the debt was decreased by only £75,000,000. The Crimean War added £34,000,000, and it took twelve years of peace to pay that off. The two or three years of the South African War exhausted the twenty preceding years of peace effort in debt reduction. That is the first proposition, and I think it is incontrovertible.

The second proposition is that the continuance of debt is due largely to financial weakness, first to the failure to tax, and then the system of carrying loans to excess. These deductions apply equally to Canada as to other countries. May I just here interject, because it is a matter of interest, the different procedure adopted by New Zealand for raising money by way of war loan? New Zealand insisted on people subscribing to the war loan, and paid a lower interest rate than was paid in Canada. They did not ask people whether they wanted to subscribe or not; they were compelled to subscribe. I just wish to read very shortly the prospectus of one of the war loans. The prospectus stated:

> It is confidently anticipated that the full amount of $47,500,000 will be voluntarily subscribed, but should there be any deficiency it will be necessary to raise the amount of such deficiency by compulsory levy. The total subscriptions amounted to $42,500,000, as against the required $47,500,000 and consequently compulsory subscriptions were enforced where necessary.

The interest rate was 4½ per cent in the case of bonds exempt from income taxation, and 5 per cent where income taxation was levied. In Australia during the war a bill was introduced by the prime minister of that dominion providing for compulsory subscriptions but was not proceeded with because in view of the threat the public took time by the forelock and subscribed. I interject that information here because it may be of some interest, not that it relates particularly to the matter I am discussing.

The next thing I want to suggest is, that the great increase of the public debt has caused a redistribution in all these countries of private wealth. I have some figures indicating the situation: In England in the year 1914, two per cent at that time owned 64 per cent of the private wealth. These, of course, are only estimates; they can be only estimates. Ten per cent of the population owned 24 per cent of the private wealth. Eighty-eight per cent of the population owned only 12 per cent of the private wealth. In the United States in 1915 the figures were almost indentical. Two per cent owned 64 per cent of the private wealth. Thirty-three per cent owned 35 per cent of the private wealth. And 65 per cent owned 5 per cent. Speaking broadly the effect of the war has been to create more unequal distribution than before. I cannot give the figures because they are not available, but the small percentage of rich have not only retained what they had but by reason of their holdings of war loans are enabled to demand of present production, and of the production of future generations, a much enlarged share—in other words, the war has accentuated the tendency towards the concentration of wealth. Let me, Mr. Speaker, read for confirmation of that view a statement by Lord Milner who had this to say, speaking of the war debts:

> As regards that portion of the national debt which we owe to ourselves I do contend that it does not represent a diminution of our total national wealth, but a redistribution of it between individuals. It (the national debt) is an almost intolerable embarrassment to the government, which has perpetually to extract money from a great number of people in order to put it into the pockets of a much smaller number.

Now, what considerations do these propositions invite? First of all, how can we, in this and other countries, overcome the baneful effect of war, the great increase of the debt represented by war activities? Secondly, what taxation can we impose? Again, what reduction of expenditure, if any, can we legitimately make? What prospect is there of reducing interest rates by a conversion? And further, is money liable to depreciate or appreciate in the coming years? And lastly is the ratio of wealth as compared to the debt likely to increase so that the debt thereby

becomes of less significance? Adam Smith, who has already been referred to in this debate, predicted over a hundred years ago that England was coming to bankruptcy because of her over-borrowing. But Adam Smith did not know about the possibilities of steam, and he could know little about the advent of the industrial revolution, The effect of that industrial revolution was to change the ratio of wealth to such an extent—that is the ratio existing between the debt and wealth—that the debt became comparatively insignificant. Is there, I ask, any hope for the future that we may in any way change this ratio so that the public debt will bear much less heavily comparatively speaking, than it does at the present time? May I now suggest some things that we may do?

First of all we can take steps now to eliminate future wars. I suggest that that can be done by passing—not in the future, but now—a universal draft law that will mobilize not only wealth but men, so that in time of the nation's peril every fit man and woman will know that back of him or her in the effort to preserve the country is placed all the available wealth, every resource, and every activity of the country. In other words, to pool the country's resources of both men and wealth to meet the national peril, whatever it may be. I think that would take much of the profit out of war. The best way to prepare for war is to prepare for it in the piping days of peace. I think this method would effectively discourage war. That is the first thing that I suggest. We do need security against war for the future. Now is the time to obtain that security.

Now, what about this public debt? We pay little attention to it. It is pyramiding year after year. What are we going to do about it? Are we going to do anything until we are face to face with calamity? Well, several plans have been suggested, and I simply want to mention them here in passing. There are those who suggest that repudiation is the proper thing. Personally I do not think that is advisable. In the first place it would constitute a gross breach of faith towards those to whom we are under an obligation. It would not only raise interest rates to speculative figures but would shatter the confidence in this country held in other lands, and would invite confiscation of the property held by Canadians in foreign lands. It would necessarily destroy the whole fabric of our industrial life and, in addition, would invite international hostility.

Mr. ROBB: Can my hon. friend say who, in Canada, suggests repudiation of the debt?

[Mr. Shaw.]

Mr. SHAW: I am not implying that anybody in Canada has suggested it. I have not heard it suggested here; as a matter of fact nothing whatever has been suggested here. But other countries are suggesting it, either inferentially or otherwise. Then there are others who propose that we should have a moratorium as far as our public debts are concerned, which, of course, is another although less obnoxious form of repudiation. There are those who suggest that the debt may be reduced by inflation; and then, of course, there is in England a very large group of people who are in favour of what they designate as a capital or a wealth levy. The Labour party of England declared that when they came to power they would bring into effect a capital levy for the purpose of reducing the public debt. That party is in office in England at the present time. In a capital levy there are several vital principles involved and various considerations of technique with which I am not going to deal. These are some of the plans suggested. There is another plan, and that is the one which we in Canada follow—that is do nothing at all. In this country we are sweating away on the treadmill under the delusion that we are mountaineering. That is our situation in Canada. I say: Why wait for opportunities, why not make the opportunity? Unfortunately our entire history is a melancholy record of not doing things in time. What can we do before events will force upon us the formulation of a policy which perhaps in that event will be ill-considered and hasty. I think we should follow the practice pursued in England at the present time and appoint a responsible committee which will investigate the public debt—not only investigate the debt itself but inquire into the incidence of the debt taxation itself, its effect upon employment, and the effect upon the nation's life generally. I think a necessary step if we want to deal with this matter intelligently is to appoint a responsible committee that can make full investigation into all the facts surrounding this important matter. It will at least give us the information. Then of course we should at the earliest possible date convert our loans at lower interest rates. It should be done.

Again there can be no doubt that we should learn to discipline expenditure, in order to secure results which amply justify our outlay. Further there is the question of the investigation of various taxation methods, suggested, I think, in the Speech from the Throne. I think it is highly desirable that we should investigate our taxation methods thoroughly, in order that we may bring to light the proper means for a debt reduction. In this connec-

tion I want to speak very shortly about one method of taxation, because it is referred to in the motion of the hon. member for Centre Winnipeg (Mr. Woodsworth) and that is the Inheritance Tax. It is undeniable that during the war vast fortunes were made out of the nation's peril. It is also undeniable that those who made these vast fortunes gave no adequate return to the state. I speak not only of Canada but elsewhere. Now should these beneficiaries go longer without taxation? Should we call upon the workers and legitimate industries to bear a still larger share of the burden? To be perfectly frank, I do not think that wages or legitimate profits can bear any heavier taxation than is being imposed at the present time. If there is one principle upon which our property system depends, it is that a man is entitled to the property which he creates. That is the sound principle upon which our institutions stand to-day. But I want to point out to you, in the light of that principle, three questions in connection with this proposed method of taxation. First of all, what right has a deceased person to give property? Why should the founder of an estate bind or control a coming generation? One generation ordinarily cannot bind another. This parliament cannot bind another parliament which may follow. It makes its own laws. Can a father, presuming him to be the founder of an estate, bind his son to contribute in labour to the welfare of an individual or to the welfare of society? He cannot do it. Inheritance means that the founder of an estate compels society to feed, to clothe and to shelter the beneficiary whom he may nominate; and in that way a living generation is bound by the wishes of a wealthy deceased. On the other hand, if this is a good principle, why not compel the son of an indigent father to pay his father's unpaid debts? That would undoubtedly be unfair to the son. If there is going to be inheritance, it would seem logical that there should be inheritance not only of assets but of debts; and if ancestors are to be obeyed, and if we pay respect to the wishes of wealthy ancestors, why not pay respect to the wishes of all ancestors, no matter who they may be? The government to-day should be by those who are not only physically but geographically present.

Then the second question, what right has the heir to receive? I have already suggested the principle that the title to property can only be morally based on the result of one's own effort. One has no right to property because his father earned it. The father is under obligation, of course, to maintain his son during the years of dependency, but no further. Blood or kinship confers no merits whatsoever upon the claimant to an estate. It is not a natural right, because if it were society would insist on a father transferring his estate to the son. As a matter of fact it is left to the father's own volition. It is not a contract right, because in contracts there is always consideration moving from one party to the other. In this case the heir gets something for nothing. President Lincoln put the matter very clearly on one occasion when he said, "I have no right to any special privilege of receiving money without earning it, because I thus deprive another of part of what he has earned." A will is merely a direction, as I have already suggested, that the next generation shall support and feed and clothe and shelter the beneficiary according to the terms in the document itself. Again, suppose for instance, a penniless man should suddenly claim from society the right to live in receipt of a princely income, what would society do? Why such a claimant would be promptly sent off to some lunatic asylum. But suppose he produces a document signed by some wealthy deceased, then we honour it. You can see that the position is entirely illogical. Thirdly, why do people consent to this condition of affairs, if there is no right in the founder to give and no right in the heir to receive? Because the fact is that they do not understand the significance of the question, and the only way by which it could be brought to their attention would be if it should happen that all the wealthy deceased should die on the same day and all beneficiaries come into their property on the same day. Do hon. members think for a single moment that the rest of society would tolerate such a state of affairs? I think not. They would then realize how vain it would be to struggle against an economic status fixed for them before birth. There can be no doubt that this inheritance principle makes for concentration of wealth. It is a comparatively difficult matter to acquire a fortune. In these latter days, with tax exempt securities and bonds and similar securities, it is comparatively easy to retain and even to increase a fortune. Let me illustrate by reference to some figures from the United States the exact concentration which this represents. In 1913 there were 29 people in that country who held fortunes totalling 2,756 millions. They had yearly incomes of above 176 millions. In 1915 there were 7,509 people in the United States with fortunes totalling 33 billions. Suppose the United States government had handed a million dollars to each one of those families and taken the rest by inheritance taxation, it would have secured the sum of approximately

26 billion dollars, which it would obtain in the course of a generation, and which sum represents practically the same amount as the total expenditure of the United States government for the first 127 years of its history. The argument I suggest for the inheritance tax is incontrovertible. It cannot be successfully controverted, but there are those who say that the provincial governments levy such a tax. True it is they levy a tax. Let us compare the situation in the United tSates. I made some investigation of the problem last summer. I found, with the exception of two states—and they may have changed their minds since—that practically every state in the American union levies an inheritance tax, and they levy it on substantially the same basis so far as percentage is concerned as our Canadian provinces. But in addition to that, the federal government levies a very heavy inheritance tax. It exempts incomes up to $50,000, but after that it levies a tax which brings the maximum taxation, counting both state and federal, on one inheritance to something over sixty per cent on large estates. Now, if they can do that in the United States there is absolutely no reason why we cannot do it here. If the American states of the union and if the federal government can each levy an inheritance tax, there is absolutely no reason why we cannot do exactly the same thing. It is true it may not amount to much at the outset. It would at least involve very little expenditure, but it would make provision against the day when these tremendous estates fall by reason of the death of their holders and founders. It would be comparatively easy to collect, because all this government would have to do would simply be to make an arrangement for each provincial government to collect on a commission basis, or failing that for the federal government to levy the taxation through their already constituted Income Tax department. So I say, Mr. Speaker, that it seems to me that the argument for this system of taxation is incontrovertible. I think it should be instituted now in order to provide for the future. Not that I am hopeful that it will provide much revenue in the immediate future, but in days to come it will be of increasing significance, and from what source can we secure by taxation money which can more justly be applied to the reduction of our public debt? I shall not further weary members of the House by reference to this question of the public debt.

I want to deal now, and very shortly, with the fiscal proposals which have been proposed by the government, to obtain during the coming year. The government propose several reductions, first by way of sales tax,

a general reduction of one per cent, on special articles a larger amount, and in some cases, articles are exempted altogether from the sales tax. With that reduction I have no quarrel whatsoever and I have no objection to it. Then the government propose certain tariff reductions on implements of industry, on the primary implements required in the development of our natural resources. I think that is highly advisable, highly desirable. If I had any complaint at all, it would be that the proposals do not go far enough.

Mr. BEAUBIEN: What would be the result if this inheritance tax was put into force? How could one prevent a man from dividing up his fortune before he died?

Mr. SHAW: Just the same as that is prevented now. As a matter of fact, it would be difficult for a man to do that, because we already have the income tax returns for the last few years, and we know pretty well, if the income tax returns amount to anything, exactly what he has. Therefore, he should not be allowed, as he is not allowed now by the provincial governments, to defeat inheritance tax laws by transferring his fortune before his death. Might I say also to the hon. gentleman, as this occurs to me now, that the Dominion government can collect this tax much more efficiently than a provincial government? How can a provincial government be sure that it is levying the tax fairly where the deceased has property in a number of provinces in the Dominion? As a matter of fact, the Dominion government is in a much better position to levy inheritance taxation and to collect it than any provincial government. The sway of the Dominion government covers all the provinces of Canada, while a provincial government is circumscribed by its boundaries.

I have taken the trouble to figure out exactly what this reduction of taxation means as regards particular implements of industry. As agricultural implements have apparently received primary attention, I want to suggest to the House just what the reductions amount to, and they are as follows:

Implement	Reduction
Eight-foot binder	$8 00
Six-foot mower	2 92
Twenty-inch double disc drill	8 56
Eight-foot cultivator	4 36
Two-furrow gang plough	5 37

That is the amount represented by the customs reduction on those agricultural implements I have mentioned.

Mr. GARLAND (Bow River): Does that include the sales tax reduction?

Mr. SHAW: No, that is an additional reduction. I want just at this point, by way of comparison, to invite the attention of the government to the reductions that would accrue, presuming that the government is prepared to allow the Crowsnest pass agreement to come fully into effect on the 7th July next. Supposing that that agreement is allowed to become effective, that is that the government takes no action, this will mean that on a shipment of a binder from any of the competing eastern points, Montreal, Toronto, Hamilton and similar points, there will be a saving in transportation as follows:

If shipped to	Saving
Lethbridge	$8 34
Medicine Hat	7 84
Regina	6 23
Saskatoon	7 04
Brandon	3 52
Winnipeg	2 81

Let me apply to other agricultural implements the savings that will accrue by reason of the application of the Crowsnest pass agreement. On a shipment to Calgary from the same competing eastern points in Canada the following savings in freight charges will he effected:

Implement	Saving
Five-foot mower	$ 4 00
Farm wagon complete	7 40
Twenty-inch gang plough	4 40
Sixteen by sixteen disc harrow	3 03
Eight-foot cultivator	4 95
Twenty-inch single disc drill	8 25
Manure spreader	11 00

Nor do I forget the saving that will accrue on the transportation of furniture, fruit, binder twine, barbed wire and all the other commodities that are covered by the Crowsnest pass agreement.

Mr. MACLEAN (York): While I quite agree that the farmer may get the benefit of the reduction in connection with freight rates, has the hon. member any assurance to offer the House that the proposed reductions of the Acting Minister of Finance are really going to reach the farmer who buys these implements?

Mr. SHAW: If they do not reach the farmer, all I can say is that the manufacturer will not be seriously hurt. But I am frank to say to the hon. gentleman, for whom I have the highest regard, that I am not in a position to say whether the full amount of that customs reduction will, either now or ultimately, reach the primary consumer. I may say, however, as is suggested to me by the hon. member for Springfield (Mr. Hoey), that there can be no doubt that the freight rates will reach the farmer immediately. I am not giving these figures because I object to the customs reduction. I do not want that impression to prevail at all. I want to give these figures to the House so that we may get a proper perspective of what relief we are receiving. Then I want to take time by the forelock and suggest to the government what the restoration of the Crowsnest pass agreement will mean to the primary producers.

There are a few matters that I want to speak about with regard to the tariff. My hon. friends to my right are fearful of this reduction. They have told us in no unmeasured terms about the difficulties under which Canada labours to-day. They have pointed to the exodus; they have specially urged that the manufacturing industries of this country have suffered very severely. I have taken the trouble to figure out a few computations from a comparison of income taxes paid during the fiscal years 1921-22 and 1922-23. This statement indicates that the agrarian portion of the population has suffered much more severely than the manufacturing portion of the population. It indicates that the number of agrarians paying income tax has lessened by more than one-half and that the decrease in the tax paid has varied on a per capita average from $69 to $57. It indicates that the number of manufacturers in Canada—I am speaking now about unincorporated manufacturers—has actually increased from 1,629 to 1,732 during that period, but there has been a substantial decrease in the income tax paid. If that means anything, it would, I suggest, mean that the manufacturers have not suffered comparatively more, but, as a matter of fact, have suffered comparatively less than other portions of the community. Then I ascertain from the figures that while there has been a substantial decrease in the number of manufacturing corporations paying income tax, there has not been anything like a comparative decrease in the percentage of income tax paid, because—and it may interest hon. members to know this—whereas in 1921-22 the average income tax paid by manufacturing corporations in Canada was $7,602, a not inconsiderable item when you take into account the exemptions, this amount has been reduced to only $7,133 in the last fiscal year. Again, I have worked out in some detail the percentage of decreases in income tax payments in the various provinces of Canada between the years 1922 and 1923. I find that in the agricultural provinces there has been

a much larger decrease than in the manufacturing provinces. The decrease in Ontario is only 19.5 per cent, and in Quebec 20.7 but in Manitoba the decrease has been 34.3 per cent, in Saskatchewan 36 per cent, in Prince Edward Island 25 per cent and in Nova Scotia 28 per cent. These figures only illustrate, I think, that it is not primarily from lack of protection that the manufacturers suffer, but that they suffer perhaps on account of protection in common with, though to a less extent than, many other people in Canada.

I have been rather impressed with the arguments advanced by my protectionist friends who tell us about the dire distress that is experienced by the manufacturing industry, and I have taken the trouble to consult the Year Book. I may interject the remark here that this book is a veritable mine of information. I have looked up the percentage of the failures in Canada during the past year as compared with other years and I find that there has been only a comparatively small increase. This of course covers not only the manufacturing concerns but, as well, every variety of trader and merchant; and the interesting fact is that while the Year Book has classified the causes of failures, lack of protection, which we are told is an important cause for failures in Canada, is not taken into consideration at all by the Dominion Statistician. This is strange; but it is perfectly clear that the Dominion Statistician in his figures has taken no cognizance of the lack of protection as a cause for failures. If he has then all I can say is that, so far as the reasons for business failures in Canada are concerned, there does not seem to be any difference in percentage of failures as compared with the United States, that alleged highly protective country.

Hon. gentlemen to my right seem to be under the delusion that the United States tariff is the very acme of fiscal perfection, the thing for which we should strive, the thing towards which we should set our faces, rather than harking back to anything like free trade. The analysis of the percentage of goods, taking them by value, entered free into the United States and Canada discloses, however, a rather interesting fact, namely, that in the year 1922 61.43 per cent of goods imported into the United States entered free of duty whereas in Canada only 33 per cent of our imports entered free. Not only that, but the average percentage of duty on all imports into the United States was, for the year 1921, 11.44 per cent, and in 1922, 14.68 per cent, as against an average percentage of duty on all imports into Canada of 14.1 per cent in 1921, 16.2 per cent in 1922, and 16.7 per cent in 1923. So that apparently, from that standpoint, we have a higher average percentage than the United States. Then, too, I find that in the year 1922 the United States, with a population of 110,000,000, collected $456,000,000 by customs taxation whereas we in Canada collected $105,000,000 in other words, the United States in 1922 collected per capita $4.07 while we collected per capita $11.75. And the figures through all the years substantiate the facts I have given. In the United States they depend on customs taxation only to the extent of 10 per cent of the revenue, while in Canada we depend upon it to the extent of 30 per cent. I have taken the trouble to make up a list, only a few items of which I shall give, in relation to the American tariff. I find that shovels and spades, which are very necessary articles to a great many people, are imported into the United States subject to a tariff of 30 per cent whereas we in Canada impose against these articles a duty of 32½ per cent. Boots and shoes enter free into the United States, but we have a tariff on them of between 25 and 30 per cent.

Mr. CHAPLIN: I want to make a correction. If the hon. gentleman will apply to the Acting Minister of Finance (Mr. Robb) he will find that the duty on shovels and spades is 20 per cent.

Mr. SHAW: The hon. member is referring to the recent reduction in the budget. I have a note of it, and I regret that for his sake I did not mention the fact. To proceed: cement enters free into the United States as against a tariff of approximately 10 cents per hundred pounds when it is imported into Canada. Again, cowhide gloves, which are necessary for a great many labouring men, are imported free into the United States; when we import them into Canada we have to pay 35 per cent. Leather is imported free into the United States, but it pays a duty of 15 per cent in going into Canada. Sewing machines pay a duty on importation into the United States of 15 per cent.; when they are imported into Canada they are subject to a duty of 30 per cent. Harness and saddlery are in certain cases imported free into the United States, but they are subject to a duty of 30 per cent. when imported into Canada. Typewriters, which are used by a great many people, especially young people in earning a livelihood, are admitted free into the United States whereas they pay a customs duty of 25 per cent. when imported into Canada. And automobiles, which pay 25 per cent. in the

United States, are taxed 35 per cent. on importation into Canada. There are a great many more items in this list but I shall not weary the House by referring to them.

Now, there are those who suggest that the greatest necessity of the time is stability in regard to the tariff. The present advocates of stability, condemned the government last year for not carrying out their pre-election promises, now they condemn them for making an attempt in that direction. What I suggest to my hon. friends to my right is that the policy of the government up to the presentation of the present budget has been substantially that bequeathed them by the late administration. But we cannot expect stability in this day and generation, at a time when the whole world is in a state of flux and change. Under these circumstances, it seems to me the height of absurdity to ask for stability in anything. In England about a year and a half ago a government was elected upon a policy of stability and tranquility. It lasted just a year; and the wonder is, not that it was elected but that it lasted so long. The voice of any one crying for stability or tranquility at the present time is simply the voice of an infant crying in the night, and with no language but a cry.

5 p.m.

It is suggested by those who favour the protectionist theory that the policy is designed to develop industry, and create the fullest employment. If you ask the protectionist to give you some evidence of prosperity he hastens to the trade returns and rejoices if they indicate any increase over the previous year. But in asking for protection, or in desiring to place a protective barrier against importations, he finds himself on different ground, because if the tariff means anything it means the exclusion of imports and he consequently negatives the argument which he first suggested. It is quite apparent that imports depend upon exports and exports upon imports. I do not think anybody in this day and generation can controvert that statement. Payment for our exports must come by way of goods and services; it can come no other way. And if you limit exports of this country you necessarily clog the wheels of industry, you necessarily lessen employment in this country. No country can enrich itself by erecting a tariff barrier and so isolating itself commercially from the rest of the world. It does not in the long run benefit our own country to produce at excessive cost what another country can produce cheaply and more efficiently. It is idle to imagine that it profits a country to allow manufacturing industry to take a certain toll from the people by reason of customs taxation which otherwise it would not be entitled to. So far as consumers are concerned, this constitutes legal spoliation. I would suggest that the tariff places a premium on incompetence and inefficiency, for the manufacturing industry which has to rely upon a protective tariff exploits citizens of its own community and therefore is necessarily inefficient and incompetent.

But if my hon. friends think the policy of economic isolation is a proper policy, why not apply it to every province; why not have every province isolate itself? Why not apply it also to every city, indeed to every hamlet? No one would suggest for a moment that such a policy would be desirable. There can be no doubt, Mr. Speaker, that artificial interference with the natural flow of imports really narrows rather than expands markets. We want to-day expanded markets; that is our main requirement. A tariff policy cannot make for steady employment; it can only give an artificial stimulus to industry. It increases the cost of living, and, more than that, it is the worst and most exhausting form of raising public revenue, because with every increase in the tariff the manufacturer is able to exact just that much more from the unfortunate consumer. So, Mr. Speaker, I would suggest that a protective tariff is not justifiable, I care not if you take it on the ground of revenue, on the ground of the development of industry, or on the ground of increasing employment; and still less can it be justified, on the ground of common morality.

Now, surely fifty years' experience of this protective policy should be sufficient. For fifty long years we have followed this policy. For fifty years we have primed the pump of Canadian industry with this policy, designed at the outset for two purposes; first, to assist infant industries; and, secondly, to force reciprocity from the United States. It has miserably failed in both particulars, and only those engulfed in the quicksands of protection would for a single moment deny the fact.

Now, why do we tolerate this system? Is it because of the grip of selfish interests on this country? I think not, because I am satisfied that if the sunlight of fact were allowed to illumine the fiscal darkness even for a short time, these interests would be readily dispersed from their slender defence. Is it because the people believe in the policy? Surely not. Everybody is a consumer, and surely everybody has learned by costly and bitter experience that this system does not profit them. It seems to me that one of the main reasons

for the continuance of protection is due to what I may call the more or less spineless attitude of those committed to the policy of free trade. Knowing the facts, inspired by sound principles, they have not hesitated, before election, to proclaim from the housetops their devotion to the principle; but their pre-election militancy and the urge to action seem to die with the declaration of their election. I do not know why it should be so, for it seems to me that there are enough free traders in this country now to serve notice upon our industrialists that we are going to give them reasonable time, perhaps five years —limit the time—to get down to a free trade basis, and that after that period has elapsed we shall insist upon free trade as the fiscal policy of the nation.

But there is another and very important reason, Mr. Speaker, why we should develop the free trade policy of this country. I am thinking now particularly of the world situation. Despite rulers, despite parliaments, the people everywhere are gradually coming back, if I may say so, to their normal senses; there is observable in all parts of the world a restoration to sanity. When the common people of all the belligerent countries come into control and take charge of their affairs, they are going to find out the causes that make for war and prevent them from living in peace and harmony even with their own countrymen. I remember that one of the conditions of the Armistice, incorporated in the Fourteen Points, provided for the elimination of customs barriers. The late ex-President Wilson saw with a very clear and statesmanlike vision that tariffs make for war. But unfortunately the peace of Versailles did violence to that condition. I say "unfortunately" advisedly, for under that peace, to-day the world has little chance. In deference, apparently to nationalistic sentiments that treaty set up ten additional nations in Europe. They promptly, as they fought for self-preservation, commenced to set up tariff barriers to protect themselves, presumably from their neighbours. Armaments necessarily followed, because militarism and protection always walk hand in hand and keep step with each other. So to-day as a result the whole industrial fabric of Europe is in ruins, and the tragic sacrifice, the awful suffering and the heroic endurance displayed in the last war have apparently been largely in vain.

But, as I suggested, there is some hope for the future. Let me give the House my reasons for thinking so. Hungary, under the aegis of the League of Nations, has adopted free trade. England, the home of free trade, despite all her domestic difficulties and problems, and despite the efforts of tariff propagandists, has recently reaffirmed the principle of free trade more strongly than ever. Not only that, but the neighbouring country of Ireland recently appointed a tariff commission which, after fully analysing the facts, came to the conclusion that free trade was the proper policy for Ireland to adopt. In addition, Russia, which has recently entered into the comity of nations again, is now making trade arrangements with the other countries of the world. These are hopeful signs. But not only on the continent of Europe are there signs of better times. Even in the country to the south I think the people are gradually awakening to the futility of their protective policy, and I am hopeful that in the coming presidential election they will see to it that steps are taken to cast this thing from their midst.

Now, Canada cannot do better than to set the pace for this movement. She occupies a particularly strategic position in the world to-day. I see no reason why she cannot take a step in advance of other nations.

I come now to speak particularly on the motion and the amendment which are before the House. The motion before the House is that the Speaker do now leave the chair for the House to go into Committee of Ways and Means. But that is really not what is meant at all. I am sure there would not be a single one of us but would gladly give the Speaker an opportunity to leave the chair and escape from the present and future floods of language; I am sure of that. But it does not mean that at all. We have old forms and old fictions, and the real question we are asked to vote on in this motion is whether or not we approve of the government policy incorporated in the budget. That is the question we have to consider.

Then there was an amendment proposed by my hon. friend from Centre Winnipeg (Mr. Woodsworth), which goes just a little bit further than the proposals of the government. The hon. member for Battleford (Mr. McConica), whom I see in his seat, is very, very sorry indeed that the Conservative amendment was not allowed, because that amendment provided for tariff stability and he wants a battle over that issue. Perhaps he may be pardoned for not knowing that in this country for the last fifty years that is the very issue we have been battling on, the issue of the tariff. It has been a sham battle through all these years, and it will continue in the future, as in the past, to be nothing more than a sham battle unless we get it put on a proper and a solid basis. But as I say, perhaps my hon. friend may be

pardoned, coming, as we know he does, from the republic to the south. I was interested in reading the remarks in Lord Bryce's book on the American Commonwealth, written twenty years ago, where he says that the Republicans and the Democrats in the United States have lost all vital differences, and that there is now only a struggle between them for power and position; party names, he says, still persist, while principles and causes have vanished. And so as they have been having these sham battles over there, I presume my hon. friend from Battleford wishes to import them over here. For him to ask in this day and generation for the perpetuation of these sham battles of the past is to court the character of none other than Rip Van Winkle.

I come now to deal particularly with the amendment proposed by the hon. member for Centre Winnipeg, and I would direct the attention of the House particularly to the preamble of his resolution. He says:

> Whereas the budget proposals would seem to indicate the recognition by the government of the necessity for a fiscal policy designed to encourage industries based upon the development of the natural resources of the country, and to afford some alleviation of the financial burdens bearing upon the people;

In other words, he distinctly, if I understand the language at all, approves of the government policy to the extent that it has gone. Then he says:

> And whereas the condition of such industries and the condition of consumers in general is such as to demand relief ;
>
> Therefore be it resolved:—
>
> That the best interests of Canada will be served by an immediate and substantial reduction of the tariff on the necessaries of life, including foodstuffs, clothing and building materials.

In other words, if I understand the language, expressly and by implication, he means this: So far as the government policy applies to reduction of the customs tariff on the primary industries of this country he is content, but he wants them to go just a little bit further in order to give further relief other than the mere incidental relief which will be given to consumers by reason of the government's policy with regard to primary industries. He wants them to give further relief to consumers by reducing the burden of customs taxation. Now that is not any policy that is new; there is nothing new about it. I hold in my hand the policy of the Liberal party; I hold in my hand the policy of the Independent Labour party of Manitoba, upon which my hon. friend was elected; I hold in my hand the new national policy of the Progressive party, and in every one of those platforms adherence is given to the very things which the hon. gentleman asks for, and some of them, including his own, are almost identical in language with his amendment. That I may say frankly is the policy to which I adhere. It is the policy upon which I was elected; it is the policy which I intend to support.

But it is suggested by other hon. gentlemen that to support the amendment constitutes a vote of want of confidence in the government. Well, I did not know that. It does not constitute a vote of want of confidence in the government unless the government tells us that that is the way they are going to look upon it. But is the government going to call it a vote of want of confidence because some hon. members feel that attention should be directed to further necessary reductions in order that the consumers of this country may get further and larger benefits. This mere fiction, this question of a lack of confidence in the government is something that is inherited from a prehistoric past. Why cannot we get rid of these fictions? Why cannot we eliminate them from our procedure, and to that extent at least be modern and up-to-date? Why not say to the government: We approve of your policy as far as you have gone, and without expressing any lack of confidence in you we think you should investigate and go into these other matters not only of reduction in customs taxation, but also the matter of introducing new forms of taxation to which you and various other parties in this House are already committed? How can I, elected on a platform containing the principles outlined in the amendment, justify my vote against the amendment by telling my constituents that there is some rule of the House which says that this would mean a vote of want of confidence in the government? I suggest to the Prime Minister, and I do it with all seriousness and in all sincerity, that here would be a splendid opportunity for him to ask the free and unfettered judgment of this House. The question he might direct to the House is this: Are you in favour of a further substantial and immediate reduction of the customs tariff on the articles that are so necessary in the home, and which minister to the shelter, food and comfort of the people? Why cannot he do it? Because of this ridiculous rule to which I refer. Only that and nothing more. This rule, like some other things, should speedily be cast into the limbo of forgotten things, and I suggest to the Prime Minister, here is a time to prove his real democracy and to show that he wants to find the real judgment of the House on this important matter.

There are one or two other matters to which I wish to refer. I regret very much that the government the year before last saw fit to introduce an amendment to the Customs Act. I am reading the resolution which was incorporated subsequently into law, in 1922:

If at any time it appears to the satisfaction of the Governor in Council on a report from the Minister of Customs and Excise that natural products of the class or kind produced in Canada are being imported into Canada either on sale or on consignment under such conditions as prejudicially or injuriously to affect the interests of Canadian producers, the Governor in Council may, in any case or class of cases, authorize the minister to value such goods for duty notwithstanding any of the provisions of this act, and the value so determined shall be held to the fair market value thereof.

I want to give just one illustration of the operation of that provision. In the province of Alberta I regret to say we do not produce as yet any fruit; I am hopeful, however, as to the future, but in the neighbouring province of British Columbia they do produce considerable fruit. Last year fruit was produced in the state of Washington and available for sale on the open market in that state at 80 cents per box. The present customs taxation is 30 cents a box; so disregarding the freight charges the cost to the purchaser in Canada would ordinarily be $1.10 per box for that fruit. But was it that? Not at all. The Minister of Customs, although he could not do it under the Dumping Act, because the Dumping Act takes as its basic figures the fair market value for consumption in the place where produced, under this amendment levied a 15 per cent dumping duty in addition to the duty already imposed, making the cost, disregarding freight, to the consumer $1.26½ a box. To that amount must be added, however, the necessary handling charges and the commission agent's charges. What was the result? Simply this: Last year in the province of Alberta the price of apples was so high that the people were denied the opportunity of buying that fruit. What happened? My hon. friend from Brant (Mr. Good) told me last summer that he found them dumping boxes and boxes of apples—I think he said thousands of boxes of apples—in the Okanagan lake somewhere near Vernon. That was the situation—the price was so high that the consumers went on strike, and the whole situation is traceable to this nefarious protectionist legislation of 1922. Now, I think the government should do something to relieve that situation. I do not think they should give us freer trade with one hand and take it back with the other. I think the government should take the earliest step to change that legislation so that it will at least give the consumers of western Canada opportunity to purchase fruit at reasonable prices

Mr. STEVENS: Will my hon. friend permit me to ask him a question? Do I understand him to say that the apples alleged to have been dumped in Okanagan lake were over-plus that could not be sold or marketed by the grower in the Okanagan valley, or is it not possible—I am not quite sure myself and I think, perhaps, my hon. friend may have this information—that a very large quantity of apples were found after they had been packed to be rotten in the core, and on account of that had to be destroyed?

Mr. SHAW: The information I have, for the accuracy of which I cannot vouch, does not suggest that the apples in question were rotten or otherwise undesirable. That may be so, but I would recommend my hon. friend to get in touch with the hon. member for Brant from whom I received the information.

Mr. STEVENS: Would my hon. friend permit me, in justice to the people who are marketing these apples, to say this: There was a disease in a certain variety of apples, I think it was the Jonathan, I am not quite sure, and a large compensation bill had to be met in England because the fact was not discoverable until after the apples were shipped and a large number had to be destroyed. I know that. I do not know if some may have been dumped because of an over-plus, but I never, in the thirty years I have been in British Columbia knew of such a condition obtaining.

Mr. SHAW: I am afraid I cannot give the hon. gentleman the information he asks for. I understand the hon. member for Brant proposes to speak later in the debate and he may be in a position to give further details. I am not concerned particularly with the reason for dumping these apples into lake Okanagan. I can understand from the hon. gentleman's viewpoint that that is a matter of considerable importance, and rightly so. I want to do no injustice, I simply state the fact and I have no doubt the whole of the circumstances will come to light later.

There is another matter to which I personally take very serious objection, and that is the elimination of the exemption clause in the dumping regulations on April 8 last, two days before the budget was introduced. I am not prepared to argue the full effect of that exemption but there can be no doubt it is another step in the direction of protection—it cannot be otherwise. It may be that there is some substantial reason which the government has for this and similar legislation. I

mean the similar legislation of 1922. I trust there is some substantial ground for their action. Personally, although I have been anxious to secure information which would justify me in condoning the removal of that exemption legislation, I have not been able to do so.

I want to say in conclusion that many members take the occasion at this time to renew their faith in Canada. I do not think it should be necessary for me to renew my faith in this my native land. I was interested, however, in observing that over one hundred and fifty years ago the habit of expressing faith in the future of this country was then a comparatively common habit. I notice that Dr. Benjamin Franklin, when he was asked by the British Colonial Secretary whether or not it would be a good thing to restore Canada to France, wrote these rather historic words:

> I have long been of the opinion that the foundation of the future grandeur and stability of the British Empire lies in America, and though like other foundations they are low and little now, they are nevertheless broad and strong enough to support the greatest political structure that human wisdom has yet erected. I am therefore by no means for restoring Canada to France.

Again, standing upon the threshold of the twentieth century Sir Wilfrid Laurier, a statesman for whom I hold the highest admiration, expressed his faith in the future of Canada and claimed that the twentieth century belonged to this Dominion. More than one hundred and fifty years have passed since Benjamin Franklin wrote the message to which I referred. A quarter of the century has passed which Sir Wilfrid Laurier claimed for Canada. And yet I would ask any hon. member here if he is impressed with the progress which we have made in the interim. That is the question. Faith is a good thing. Faith is highly desirable, faith is necessary, but faith itself will not avail—faith without works is dead. As a matter of fact our economic future is being welded to-day upon the anvils of continental Europe, and we allow the existing rusty and creaking old legislative machinery to go on quite indifferent to the settlement of our future in those distant countries. The termination of the war brought great hope for reconstruction. Hundreds of thousands of men returned from overseas with a broader outlook and with a new vision for Canada. Thousands here who had been spared contact with Europe also shared in that optimistic outlook. We turned aside from the high opportunity that we had. We deserted the pathway that invited our feet, and we went back as a nation to the old order and to the old control. These things still persist. That is one reason why 100,000 of those soldiers who offered, for a mere pittance, their services to their country in the time of its peril, accompanied by thousands of others—all denied the security of a livelihood in this country—have sought shelter and asylum in other lands. That is the situation to-day. The plain fact, Mr. Speaker, is that the domestic and international problems of our day lie outside the scope of our present political parties. These problems are economic and geographic in Canada; they do not yield to the same treatment as our problems of fifty years ago. Our forefathers were then disturbed with the questions of political freedom, of the right to vote, and of equality before the law. In that struggle the political parties of to-day undoubtedly took an active and a worthy part, but in the struggle they exhausted themselves and are unable to cope with the new situations arising to-day. As a matter of fact their achievements lie behind us on the battlefields of political freedom. What we need at this time are men and women who will face the problems of to-day.

The main economic problem is now the equitable distribution of the products of industry and, in conjunction with that, to ascertain a common denominator that will weld out of this country, out of its varying and diverse interests, a harmonious whole. That is the problem before the people of Canada to-day. I venture to say that the solutions of these problems will not come from within this parliament. I think perhaps it will come from without parliament from men and women who, with minds receptive to new ideas, who, freed from and unembarrassed by political considerations and affiliations, will bring to the solution of these problems their best, their most earnest and disinterested judgment.

Appropriately enough, Mr. Speaker, for the guidance of all members who enter the portals of this House, is found that old proverb:

> Where there is no vision
> The people perish.

We are the heirs of a doubtful past. We are the trustees of a challenging future. Shall we as Canadians allow our country to perish for lack of vision? The challenge to-day is to us and to our generation. I have no doubt, Mr. Speaker, that if we together united seek the salvation of this country we will be able to weld a real nationality, bounded only, like the shield of Achilles, by the blue rim of ocean.

Mr. T. L. CHURCH (North Toronto): I did not take any part in the debate on the Address, and would not have taken any part in the present debate were it not for the fact that I come from an industrial district which is very much affected by the present financial policy announced in the budget. The district of Toronto has been built up by protection, a great industrial centre having been established there under that great principle. My remarks to-day will deal simply with that great subject of protection, which affects cities and towns in this country; and the financial policy of Canada and the Empire. My remarks to-day will relate to all phases of the problem, the psychology of protection. I support it not because of its own sake but as essential for Canada's sake.

Fortunately we cannot all think or see alike, but while that is so we can respect each other's opinions for what they are worth. We can appreciate the sincerity with which they are held, and give and take, and show moderation and good will. Canada is a difficult country to govern, especially during days like these of stress and strain; and as every government has its troubles, I hope this government will not think that any criticism of the present budget is not made for the good of the country.

Coming from Toronto, I want to express the high regard the people of that city had for the Minister of Finance (Mr. Fielding) during his long public career. His unfailing courtesy and kindness won the respect of all members of the House as well as of the people of the country. So far as the Acting Minister of Finance (Mr. Robb) is concerned, I think it but proper to say that he has proved himself to be a most painstaking and obliging minister, and deserves a great deal of credit for the manner in which he has performed his duties since taking over the department.

I had intended placing before the House a number of letters in regard to the very serious injury done to Toronto's industries by the instability of tariff, the doubt, uncertainty and unrest resultant industrially from the lack of stability and the tinkering with the tariff. Similar letters to these were read by the member for West Hamilton (Mr. Stewart) and therefore I shall not take time to read them as he has fully covered the ground of the damage done to industries.

If Canada is to have free trade or semi-free trade, why are we spending such a huge sum of money on the Wembley Exhibition? When the Prince of Wales, as president, attended the opening of the exhibition at Wembley he made a speech in addressing the King from which I quote the following:

> I hope, Sir, that the result of this exhibition will be to impress vividly upon all the peoples of your Empire the advice you have given to them on more than one occasions, that they should be fully awake to their responsibilities as heirs of so glorious a heritage and that they should be in nowise slothful stewards, but that they should work unitedly and energetically to develop the resources of the Empire for the benefit of the British race, for the benefit of those other races which have accepted our guardianship over their destinies, and for the benefit of mankind generally.

I may say that the free traders of Manchester and the Northwest Free Trade Union have, under government auspices in England, been endeavouring to turn the British Empire Exhibition into a free trade affair and they have secured space for their free trade exhibit. The Wembley exhibition was designed to help forward the cause of Imperial trade, to show the wealth and completeness of the natural resources of the British Empire and the enormous possibilities of development represented in Imperial trade, and it might, I think, have been left free of the efforts to capture it.

The Progressives in this House, not to be outdone by their friends in England, might seek to exhibit their free trade wares at Wembley by asking the government to give them over part of the Canadian space at the exhibition. As the member for Brome (Mr. McMaster) and the Progressives practically believe that the whole future of Canada depends on free trade, I hope that such an exhibit, if made, will be thorough and that it will at least present a candid and truthful view of our economic situation. I venture in all modesty to suggest to the Progressives and Liberals some suitable models and diagrams for this suggested Canadian exhibit at Wembley: A model of the vigorous enforcement of the Combines Act and trusts by the Minister of Labour: a portrait of the hon. member for Brome, with a shadow of his riding being wiped out by the Redistribution Act, crossing back again to the government side and of the hon. member for St. Lawrence-St. George (Mr. Marler) exchanging places with the member for Brome on the cross benches; a painting in oils of the hon. Minister of the Interior (Mr. Stewart), tolling the church union bell, announcing to the world the death knell of protection in Canada. As there is such a stiff economy contest for branch lines, Hudson bay canals, towers and breakwaters, I suggest that the Progressives include an oil painting of all these works. The unused timber and planks in the Liberal platforms of 1896, 1911 and 1919 might also

be used. The shattered planks of the United Farmers of Ontario might be included; also an exhibit of the Progressives branch line economy planks, to be built only according to the free trade law of supply and demand.

A further section of the exhibit might show how the Progressives are aiding the exodus to the United States by their free trade fallacies. A section might be devoted to the roadbuilding methods of the United Farmers of Ontario under the Hon. Mr. Biggs and their way of handling bonds and loans in Ontario, under the so-called group system in that province, with a portrayal of the leader of the Progressives (Mr. Forke) assuring the government before the session that they would have his support. Further, there might be a tintype of three prominent government members talking one way and then voting another way on the tariff. There might also be a miniature of the Progressives ceasing to be the "dilapidated annex," and becoming an overflow, and "the spare men" on the government team, with the leader of the Progressives the star pinch hitter on the government team whenever called into play. They might begin by having the hon. member for Brome (Mr. McMaster),—who is so fond of free trade and the dead text books of the past, which he quoted the other night while dealing with free trade—and ask him to quote the frenzied prophecies of Cobden and Bright that the whole world would follow England's example of free trade. They might also show the fulfilment of that prophecy in the rising tariff walls of every country but our own. They might show the comparative positions of British, German, French and American industries, when free trade was adopted by England and protection by the other three countries I have named. Then Germany was the poorest country in Europe, content, or forced to export such raw products as corn and timber in exchange for the manufactures of industrial England. They might show the Prussian peasant of that time, as contemporary travellers describe him, dressed in rags, breaking the clods with a wooden mallet because he was too poor to buy an iron plough. They might also quote the pathetic and almost despairing description of the German economist List, who described England about 1840 as:

> Supreme in every branch of manufacture,—

Contrary to what the hon. member for Brome said the other night.

> —as a world's metropolis which supplies all nations with manufactured goods, a treasure house of all great capital, a banking establishment for all nations, which controls the circulating medium of the whole world, and by loans and the receipt of interest on them makes all the peoples of the earth her tributaries. In vain,—

List added.

> —did the Germans humble themselves to the position of hewers of wood and drawers of water to the Britons; the latter treated them worse than a subject people.

Then we should see the United States at that same time, in 1840, almost wholly an agricultural country invaded every year by an army of British commercial travellers. We should then have a picture of a comparative situation of the three countries at the outbreak of the war, Germany producing twice as much steel and iron as England, the United States with an even vaster production, the two countries towering in their industrial strength above the nation which had once supplied both with everything they required except food and timber. These comparative diagrams might be accompanied by others to show how national power was a reflection of industrial power, and how free trade England which, as a protected country, had once ruled the world, was compelled to invoke the aid of one great protected country, the United States, to assist her in repelling the attack of another.

There are endless possibilities for this free trade exhibit. We might have a very pretty model of England in 1840 as the workshop of the world, and another in 1924, under free trade as described the other day by the hon. member for Brome and this afternoon by the hon. member for South Winnipeg (Mr. Hudson), as the workhouse of the world with a dole system as the fountain. We might have a beautiful and moving reproduction of a labour exchange, for the benefit of the hon. member for East Calgary (Mr. Irvine), with the clerk handing out, not work, but doles to a queue of about a million and a quarter people. We might have exhibits of crumbling factories, rusting machinery and cold furnaces. The National Union of Manchester could contribute some very interesting statistics, the result of a questionnaire which they sent recently to their members. It seems that 567 manufacturers who replied, estimated that with adequate protection they alone could employ over 100,000 extra hands. But the most interesting exhibits of all would be a list of the German and other foreign members of the Cobden Club and the German cheques which have come in to assist the free trade cause in England. Do we want to head for such a state of affairs in Canada? Then you have only to adopt the platform of the Canadian Council of Agriculture and you will have in Canada such a state of affairs as I have described as existing in the Mother Country to-day under free trade.

In speaking of the subject of protection I wish to refer for a moment or two to the psychology of protection as applied to this country. Great Britain, France, Germany, Russia and the United States have all been built up and their manufactures developed and maintained by protection in every method and manner possible which the legislatures could devise, those methods varying down the ages, although there have been free trade lapses. After great wars through the centuries between these great powers protection was brought up to date to meet changed conditions. For many centuries protection to native industries was the leading policy of all the states foremost in industry and commerce—protection to home industries on land as well as shipping and that protection enforced on both land and sea. Under such high protection, established and made adequate to foster native industries, the great basic manufactures of these states were developed and sustained. Chronic free traders will tell you that they were established and developed in spite of protection. Not so. They give us no table of facts to substantiate their argument. England is no example of free trade. In England, 1,500,000 to 2,000,000 men are out of work under free trade and a man cannot get a job there because of free trade.

> Ill fares the land to hastening ills a prey,
> Where free trade flourishes and men decay.

Rural depopulation is acute also. A man cannot get a job in Canada because for practically all intents and purposes we have semi-free trade in this country, and the situation will become more acute under the low tariff before us. Nearly 200,000 people have swelled the exodus to the United States during the past fiscal year, and that exodus will be greater than ever under this new tariff with five cents off here and ten cents off there, and with nobody able to say where the end will be. Under this condition of affairs the industries of the city from which I come are very much disturbed and the unrest is becoming more acute. This instability of tariff is going to paralyze business, make it stagnant and cause hard times. England, as I say, is no example of free trade, because her manufactures for centuries had been developed beyond those of other nations under protection long before the adoption of free trade there. England was built up under a rigid system of protection, protection not only by a tariff, but by navigation laws and many other agencies which her legislature during those 200 years could develop and put into force. In economic questions, this country will be guided by facts, by experience and by actual conditions as to free trade and protection and not by any abstract theory of any theoretical school of thought, as propounded the other evening by the hon. member for Brome in quoting John Stuart Mill and John Bright.

Mr. John Bright made many prophecies and lived to see most of them falsified. In his speech at the Cobden celebration in 1877 he saw this vision:

> If we look into France we see that protection is becoming weaker.

Is that true to-day? Why, Sir, you have only to look at the high wall of protection which France has erected since the war.

> If we look at the United States or consult any intelligent American we shall find that there it is shaken and tottering to its fall.

Nearly fifty years have passed and protection, in all the great countries of Europe and America, has a firmer hold on the public mind now than then; and during sixty-eight years since the repeal of the Corn Laws public opinion in all the great commercial and manufacturing countries has gradually settled down more and more in favour of protection.

At six o'clock the House took recess.

After Recess

Mr. CHURCH: Mr. Speaker, when the House adjourned at six o'clock I was pointing out the relation of protection to the greatness of the British Empire. It is apparent that the great republican nations are the most rigid protectionists. The nations of Europe which are coming more and more under the influence of the working classes more and more favour protection for their industries. France may be cited as an outstanding example, and on this side of the Atlantic we have one of the most highly protected countries in the world—the United States. Canada adopted protection many years ago. After the first experience under Cobdenism in 1860, not of free trade but of partial reciprocity, the rest of the continent of Europe reverted to the principle of high duties. The refusal of the French to be enticed any further along the path in which free traders are trying to lead them, will indefinitely prolong the reign of protection on the continent.

The great industrial expansion of England came, not from free trade but from protection. England had protection for over two hundred years before free trade was introduced in the early 40's, and the foundations of her great wealth had already been laid. Steel and coal were responsible for England's manufacturing and commercial greatness, not Cobdenism. In 1613 the woollen industry had made such

rapid strides that it dominated the world's markets. In the reign of Elizabeth, 1558-1603, England's fiscal policy was to protect her industries, and she built up her manufactures by the most rigid system of protection, reinforced by bounties and prohibitions and even by fines and forfeitures and the death penalty itself for breaches of certain commercial laws. In fact, one might term it double-header protection.

Unfortunately, in this country the tariff has always been a political football. When Canada has built up an industry, it is later torn to pieces by tariff tinkering, until ultimately the industry is practically unprotected and languishes. But when England once possessed an industry she preserved it for centuries, surrounding it with every fiscal protection from the reign of James I down to 1841. I repeat, her entire industrial greatness was built up under a rigid system of protection, supplemented by navigation and other laws, so that nothing was allowed to be imported except in a British-owned ship, of which at least two-thirds of the officers and crew had to be Britishers. She commanded the markets of the world as a result of this policy. For instance, in the fourteenth certury she prohibited the import of iron, until in 1841 she was manufacturing more iron and steel than all the other countries of the world put together, and the annual value of the industry was over £18,000,000. By double protection—heavy import duties and stringent navigation laws—she built up this industry. As a result of centuries of rigid protection her industries were given uninterrupted security and the country became one of the wealthiest in the world. That is the policy we should adopt—a national policy to develop our iron and steel industry, our mines, our fisheries and our forests, paralleling the protective policy of England in the years before 1841. That is the only way to build up these great basic industries. England became the mart of the world by her protective policy and rigid navigation laws. The influence of free trade on England's commercial and industrial development has been over-estimated. For the three years following 1842 her trade was less, notwithstanding what the hon. gentleman from Brome (Mr. McMaster) said the other night about the wonderful development of British trade and commerce. Her great commercial and manufacturing development since the early 40's is not due to free trade but to world conditions, to the union of coal and steel, and the improvements of transportation facilities by land and sea, bringing in their train wider markets and of course greater volume of trade.

Protection has existed in that glorious land of France for two and a half centuries, beginning in 1661. If France has now the most beautiful manufactures of silk and woollens, she is indebted for it to protection. Protection stands among the ruins of the past era of free trade in that land, and remains standing to this day as a monument of French progress notwithstanding the shock of revolutions. It opened the way at once, first and regular. To protection is due the fact that France ceased to be exclusively agricultural, and became enriched by the new value given to her land and the labours of her people in industrial pursuits.

The United States started like Canada as an agricultural people. As soon as she obtained her independence she adopted high protection measures for native industries, with added navigation acts. The limit is not yet reached, not even by the Fordney-McCumber tariff. From the time of Washington in 1789 down to Harding and Coolidge, protection has been their watchword although interfered with by free trade periods, which only brought back protection stronger than ever. Washington was a strong advocate of protection for domestic industry; his first act proclaimed that a tariff was required for the support of the United States and for the encouragement of domestic manufactures. He was the father and saviour of his country, as Sir John A. Macdonald was of Canada.

Canada notwithstanding the present lull in protection will soon come back to its own after the next election, and will become the home of manufactures and commerce on this continent. We have in our natural resources and our raw material the makings of one of the greatest industrial countries in the world. We are independent of the United States and should day by day become more so, with a national policy brought up to date for our industries, to retain our own markets for our own products and our own work for our own workmen; a national policy for coal, iron, minerals and other basic products, for pulpwood and for power; a national policy that will give adequate protection to the agricultural industry of this country East and West alike, and help in the solution of our transportation problems on land and sea and lake and help to solve our immigration problem. No country in the world is so adapted to protection. Its wonderful physical features, its innumerable rivers, lakes and streams and water powers, its rich resources of the products of the sea, the soil, the forest and the mine, the vast areas of its

food zones, the thrift of its people, its invigorating and salubrious climate all point to Canada as bound to become the great industrial country of America.

The tariff should be taken out of politics. It is not a political question in any sense. Authorities should be set up in this country to act in an advisory capacity to the government in relation to this problem. I would not advocate the appointment of another tariff commission, because commissions have not been a success in this country. The Railway Commission for instance, does it regulate railways? No. sometimes it gets lost, strayed or stolen. You have a grain commission, does it regulate matters respecting grain? I trow not. The government of the day should be responsible for the tariff. The Minister of Finance is the minister responsible with respect to tariff matters, and I would suggest that instead of appointing a tariff commission, a rate expert with a staff should be appointed under the control of the minister, to figure out the fair price ratio of tariff for agricultural implements and everything else that belongs to the manufactures and after allowing for overhead and other costs he should fix a price, and that price should be stabilized and standardized. In that way you would have all the advantages of a tariff commission without its defects.

The Liberal-Conservative party have always been protectionist from Sir John A. Macdonald down to to-day. In the last general election our very able and capable leader the right hon. leader of the opposition (Mr. Meighen) preached this same doctrine of adequate protection for the industries of this country, down in the Maritime provinces, in central Canada, and out in the West. There was no beating about the bush with him. Everyone knew where he stood on the tariff, and that has always been the policy of the Conservative party. They have always stood for moderate protection—adequate protection for the industries of this country.

After all, it was not any political party that made Canada a nation. The people themselves had something to do with making this Dominion a nation, but in my opinion it was the National Policy that made Canada the country it is to-day. You may criticise the National Policy as you like, you may criticise the principle of protection, but we never had anything else but protection in this country except for a brief period so far as I know. I have placed the tariffs of the respective governments in Canada in parallel columns and compared them; and I doubt whether anybody could call the tariff that has been in operation from 1896 down until the present budget anything but a protective tariff. I think that any economic writer would certainly consider that the tariffs for which my hon. friend the present Minister of Finance (Mr. Fielding) is responsible were all highly protective.

Eighty-five per cent of the crops produced in the province of Ontario have a home market in the near-by cities and towns, at the highest price that can be got in open competition in the world to-day. That home market is a steady market; it is not one that is here to-day and away to-morrow. It is to be found in the cities and towns that surround the many very fine agricultural counties of Ontario. I do not think the farmers there believe in free trade. If it were not for protection, in view of the hostile tariff in the United States these farmers would be one hundred per cent worse off than they are to-day, and I believe that remark applies to eastern Canada generally.

The late Hon. J. Israel Tarte once said that platforms were made to get in on, but not to stand on. Probably that accounts for the Liberals from 1896 to 1911 not carrying out their free trade policies, but returning and sticking to protection. I do not blame them for it. Any prosperity that this country had during that period was due to protection. All the main cities and towns of Canada have been built up under protection. That is true of Brantford, of Toronto, of Hamilton, of Montreal and all our other large cities. They have all been built up by the National Policy. Take the city of Toronto, which I represent. In 1878 soup kitchens had to be established there to meet the wants of the large number of men who were out of employment; vacant houses and stores were many; and there were evidences of distress on every hand. But the policy of protection was adopted and it stimulated the growth of our city in many ways. The trade and commerce of Toronto greatly increased; the population has doubled almost every ten years; the receipts from customs and excise, and post office, to say nothing of bank clearings grew prodigiously, and Toronto is only one of the many cities of Canada that has made tremendous strides as the result of protection. Now, geography has taught the people of Canada a lesson in more ways than one. It has taught them not to leave themselves at the mercy of a foreign country in regard to their fiscal affairs, especially when that country is one

of the most wealthy, powerful, prosperous and ambitious in the world—I refer to the United States. Every country in the world including the United States, is increasing its tariff. Not only are the United States and the various countries in Europe doing that, but Australia, New Zealand, and the South American republics are all adding to their protective tariffs. Is it to be argued that these countries are all wrong, and that the Progressives and Liberals of Canada are all right? I say no. I maintain that as a result of the Great War and of world industrial conditions, more protection will be required to meet the changing conditions that arise as the years go by.

I once heard Sir Richard Cartwright and Sir Oliver Mowat say that if the Liberals were returned to office in 1896 they would remove the last vestige of protection, but they did not do so. Examine the sixteen budgets of the present Minister of Finance and what do we find? We find that each and every one is highly protective in character. But that cannot be said of the budget we are now considering. I do not see what the Canadian farmer is going to do. He is shut out of the United States by a tariff of 42 cents a bushel on his wheat and therefore must depend on his home market. That is the best market for him that I know of. It will take care of from 80 to 85 per cent of his crop in the central part of Canada. If the government can solve the railway problem and bring the railway rates down, a great step will have been taken. A great deal of disturbance and harm has been wrought in the city from which I come by the present budget. Very few people realize what a large proportion of the population of such cities as Toronto, Hamilton, Brantford, and the towns of an industrial character surrounding them are dependent for livelihood upon our basic industries. There are merchants, clerks, tailors, dressmakers, milliners, doctors, lawyers, school teachers, carpenters, bricklayers, plasterers, painters, decorators, plumbers, electricians, real estate agents, insurance agents and many others who get their living by supplying the varied wants of the industrial population. All these people contribute in a variety of ways to the general revenues of the government. If they were living in the United States instead of Canada they would contribute nothing to Canadian government revenue. The loss of revenue resulting from even the partial wiping out of the agricultural implement industry would greatly exceed the amount required to pay the freight charges on agricultural implements from the factory to the farm.

In a new country like Canada essentially agricultural, one of the chief wants has been markets. Now food markets at home mean better prices and better profits and better wages. They stimulate production and lead to wealth. If we all produced the same articles there would be no market. It was because British farmers had their customers, the British manufacturers, almost at their doors, and that many corn producing countries had no manufacturers that Britain became so prosperous. It is as true to-day as it was in Adam Smith's day when he said that "the increase and riches of commercial and manufacturing towns contribute to the improvement and cultivation of the countries to which they belong in many ways by affording a great and ready market for the rude produce of the country." We must have home markets for a hundred products of the farm and garden and the fields that are too bulky or perishable to bear transit to other countries. Under the present tariff we are heading for the same conditions that prevailed in 1878—for depression, closed industries and hard times.

The present budget is injudicious and not judicious protection. By "judicious protection" I mean protection brought up to date to meet the varied conditions created by the war and conditions at home and abroad—a protection which will promote and maintain on a living basis our own domestic industries in this land of abundant resources. It must be such a tariff as will conserve and strengthen our existing industries, further develop them, and nurse other struggling ones and those needing aid, such a policy as would call into existence other new industries and assist in maintaining them after they are created; such a tariff as would in effect stop the present exodus to the United States by creating profitable employment which would accumulate wealth and minimize the waste now going on in the country and check the economic wastage of the present exodus. The greatest problem confronting this parliament is to adopt such a national policy as I suggest here brought up to date as will bring "the field and factory" together; will preserve our own home markets for our own resources and products; will eliminate all unnecessary hauling to and fro and cheapen production and make it more accessible to the masses rather than develop a system which elevates trade above production.

As has been said Cobdenism has the defect of considering the exchange of commodities as being more important than their production. The aim of protection as we had it in Canada under the Conservatives was to promote production and avoid waste—the only economic policy that will ever endure in Canada. How will the so-called reductions benefit those out of work? Will not the departure from last year's declaration of the Minister of Finance for stability of tariffs ead to a wobbling and meddling tariff policy, and add to the number of industries closed down with attendant unrest, uneasiness and unemployment. Will there not be a further economic waste by way of further exodus to the United States if we keep on nibbling at our tariff and lowering the same? Will we not lose what industrial supremacy we have? At present Chicago is the "third largest Canadian city in the world" and Detroit is the fourth. I use these designations to illustrate the number of Canadians now living in these two cities of the United States. Where will this exodus stop under "a vaster free trade policy than has been"? What will be the next industry to be attacked? The International Harvester Company can now close up its factory in Hamilton, manufacture in Chicago and just ship its agricultural implements over into Canada. The money invested in the Hamilton plant, can be considered wasted and the plant can now be scrapped.

What does this budget mean to a city or town man who pays most of the taxes of this country? What reduction is there for him? We might just as well admit there will in fact be none. His income tax is the same, a double-header—one from the municipality, another from the Dominion. A reduction of one per cent in the sales tax will not change the selling price any to the consumer; the seller will charge the same for clothing and everything on the breakfast table. His freight and passenger bill from the railways is the same. High prices for money, labour and material still continue. Will the resolutions now before the house make for a cheaper breakfast table or a free breakfast table? They will not. The consumers postage costs the same instead of being reduced as is being done in every other country. A mathematical calculation has been made that taxes have been reduced $2.70 per head. It will be hard to get the consumer to locate this pin money, Municipal taxes are going still higher. Will the rent bill be any less, or the cost of clothing, food, coal and fuel bills? Will the food bill for the breakfast table be any less.

[Mr. Church.]

I answer no. The consumer will still have to pay the same taxes both direct and indirect. The reduction to the individual, as to the nation, will be more fanciful than real. Has the budget made the Canadian public rich? To that question I return an emphatic response that it has not.

On the 2nd April this year the Canadian Council of Agriculture came to Ottawa and presented a memorandum to the cabinet in which they urged that relief be granted to the agricultural industry. They stated that protection has been an unmitigated evil for many years, and that the farmer has been exploited and plundered by those who enjoyed special privileges under it. They asked that the farmer be relieved of the artificial burden which it was claimed had been unjustly imposed on him. A declaration was made in favour of reciprocity with the United States, and an immediate abolition of the tariff on the implements of production was asked. The Canadian customs tariff so long as retained, to be based solely on the requirements for public revenue. From this it will be seen that we recognize a definite distinction between a protective tariff and a tariff for revenue. We look forward to a time when possibly the tariff may be altogether abolished, and in the meantime we urge that so long as the tariff is retained it should be on a revenue basis.

All I can say is that if such a policy of free trade and reciprocity is adopted by the people of the country, it means that we will go back to where we were in 1878. Industries will be ruined; people will be out of work and the times will be ten times worse than they are now. I may say further to the Canadian Council of Agriculture that free trade and reciprocity with the United States would make a Lazarus out of a country that Sir Wilfrid Laurier proposed to have made a nation. That proposal would exhibit the Canada of Queenston Heights, or St. Julian, of Vimy Ridge, of Passchendaele, of Amiens and many other fields of glory, as a beggar for the poor favour of reciprocity and free trade.

I propose to show that the only remedy for the condition of the grain growers is in protection and cheaper transportation.

Canada is not being carried along the road to a fulfilment of the destiny that awaits this country as fast and as far as we could wish. Too many Canadians are being driven to carry themselves along the road that ends in a job under the Stars and Stripes. I am no more a despairist on the issue of Canada's future in peace than I was a defeatist on the issue of Britain's victory in war. I believe in the certainty of greatness for the Canadian nation inside the British Empire.

I admit the height and number of certain obstacles to the attainment of that greatness. These obstacles are no visitation sent upon us by Providence. The worst of these obstacles are of home manufacture. Ontario has not yet recovered from four years of free trade preaching and blue ruin prophecy. Ontario gave a negative answer to the question, "Shall a province that was saved by a Brock be ruled by a Drury?" Ontario sent the Ontario end of the Progressive party about its business. Ontario has learned that a few months will not suffice to bring back the business opportunities that were driven away from Ontario by Hon. E. C. Drury and the other would-be Progressives who called themselves farmers. These Liberal-first agrarians proved that they were caricatures of the genuine patriotic farmers of Ontario. When the issue of protection is raised in peace the farmers of Ontario have never failed to stand by their country in the polling booths. When the issue of Canada's existence is raised in war the farmers of Ontario—I mean the genuine farmers, not the kind of party-first farmers—have never failed to go themselves or to send their sons to defend their country on the battlefield.

We had four years of blue ruin preaching and free trade predictions in Ontario. Manufacturers were denounced as thieves and robbers. The province could not expect capital to be invested in industrial enterprises when the premier and the government of that province were denouncing industrial enterprises and refusing fair play to manufacturers. I said that we could not blame Providence for the impediments that obstruct Canada's pathway to greatness and prosperity. These obstacles are made in Canada, the work of our own voters. Ontario got one obstacle out of the way last June, the so-called Farmers' government, but the policy of the Ottawa branch of the party that was destroyed in Ontario last June, is still a hindrance to the growth of this country. That party is the worst enemy of prosperity for its own supporters engaged in grain growing and other forms of agriculture in the provinces of Manitoba, Saskatchewan and Alberta.

I wish now to deal with the wheat growing industry showing that its future depends on adequate protection, that it is not a continental but the most Imperial of all our industries, and that protection is the best friend of the wheat grower, and the day will come when he will see it.

The wheat-producing industry was very much disturbed by the war. Previously an important part of the supplies received by importing countries came from Russia and the Balkan countries; the war cut off these supplies, which greatly stimulated production in other countries, notably the United States and Canada. Since the war grain production has recovered all over Europe and Russia has reappeared as an exporter with the result that there is an over-supply of wheat. The United States has reduced its acreage in some degree, but not to the pre-war area, while Canada and Argentina are producing much more than heretofore. This is a case where production was increased to meet an emergency.

It cannot be too plainly stated or too often repeated that the United States is now a relatively small factor in making world wheat prices. Canada is a much larger factor and European markets are receiving large quantities of wheat at lower prices than even Canada is making. Moreover, Canada and other countries are able to produce wheat at lower costs than those ruling in the United States. The Wheat Council in the United States bases its appeal for a higher tariff upon a showing that costs are much lower in Canada.

I believe in free trade only to the extent, I repeat, that if I had sat in the last parliament I would have tried to prove myself a free trader, when the hon. member for Marquette (Mr. Crerar) without protest or let or hindrance from the Progressives and the other sort of Liberals proved himself a protectionist. I believe in free trade, especially free trade in grain inquiries. The Progressives and their leaders proved themselves believers in protection, yes, in the worst kind of protection, the protection that surrounded the alleged robbery of the western wheat growers, and protection against an investigation into the workings of that system of robbery. The hon. member for Marquette and others combined courts and lawyers and injunctions into a prohibitive tariff against inquiry into the methods of the big interests that handle wheat, not excepting the big interests in this country represented by the hon. member for Marquette. I was never an extremist in my enthusiasm for Union government. But the Union government honestly tried to protect the western wheat producer against the big interests. The western wheat producers have fulfilled in their experience with the hon. member for Marquette and his followers in this House, the words of scripture, "A man's foes shall be they of his household." The worst enemy of the western wheat growers is the policy of the Progressive party, its leaders and its representatives in this House. The next opponent of the western wheat grower is the present policy of the Liberal party, its leaders and representatives in this

House and in the capitals of the prairie provinces. The best friend of the western wheat grower is the policy of protection, as that policy has been and should be extended and administered by the founders and soldiers of the National Policy, the Conservative party of Canada. The western wheat grower has eaten the sour grapes of free trade. No wonder the western wheat growers' teeth are set on edge. The western wheat grower has taught himself to believe, or has allowed so-called leaders to persuade him, that wheat growing in western Canada is a continental industry, an industry that must prosper by reason of the admission of the product to the United States market or perish because of its exclusion. I submit that wheat growing in western Canada is the most truly national, the most widely imperial of all Canada's great industries. The markets of the British Empire mean more and the markets of the American section of the North American continent mean less to the wheat growers of Canada than to any other class of Canadian producers.

I said that the Progressives in this House are not progressive any more than the Liberals in this House are liberal. Progressive Liberals or Liberal Progressives profess that they are the best friends of the western wheat grower. They insist that their quack medicine of free trade is a sure cure-all for all the ailments of the western provinces. They suggest that so long as the United States market of 100,000,000 bushels per annum is open to the wheat growers of the West it does not matter what becomes of the British Empire and its market. The market for Canadian wheat is not on this continent, where the United States always grows enough wheat to feed her people and is still able to export a surplus. The market of the Canadian wheat grower is the British market of the United Kingdom, the allied markets of France and Italy, and the foreign market of Germany. These British, allied or foreign markets imported wheat from Russia and overseas to the extent of 565,000,000 bushels in the twelve months of 1920-21, and 545,000,000 in the twelve months of 1922-23. The export of wheat from Russia and the wheat producing countries outside of Europe may vary 100,000,000 above or below the 500,000,000 bushel mark. I submit that 600,000,000 bushels is a large estimate of the demand for imported wheat in Britain, France, Italy and Germany, and that 600,000,000 bushels demand represents the only market open to the Canadian wheat grower except the home market. Russia, although recovering, is at present incapable of exporting as much wheat as formerly to the 600,000,000 bushel market in Europe. Canada's competitors in that market, so long as Russia is a non-exporter of wheat—and she is even now exporting—are India, Australia, Argentina, and the United States. The overseas market for wheat is the only market other than the home market open to the wheat growers of our prairies. The wheat acreage of Manitoba, Alberta and Saskatchewan was 21,665,276 acres in the last year of record. The number of cultivated farms in these same provinces was 255,557 in the last year of record. The total wheat crop of these provinces was 454,000,000 buhels in the last year of record. Canada's total export of wheat from the crop of 1923 is estimated at 250,037,749 bushels, valued at $262,038,943. We are told that Canada and other wheat exporting countries cannot hope for an overseas demand that will average over 600,000,000 bushels per annum, and that demand represents the only market for Canada's export crop of wheat. That market must be shared with the United States and other wheat exporting countries. The problem is as clear as sunshine. On one side of that problem is the overseas market that will take an average of 600,000,000 bushels of imported wheat per annum. On the other side are the Canadian prairies; an area of 20,665,226 acres on these prairies cultivated by 255,657 farmers raised an export crop of 250,037,749 bushels of Canadian wheat in 1923. Add 26,000,000 acres to the prairie wheat field of Manitoba, Alberta and Saskatchewan. Add 300,000 wheat growers to the 255,657 wheat growers who raised an export crop of Canadian wheat in 1923. The result of these additions would give Canada an export crop of nearly 600,000,000 bushels of Canadian wheat, and that export crop would flood the overseas market for imported wheat. Let Canada's three prairie provinces produce an export crop of 600,000,000 bushels of wheat. Let the overseas market for imported wheat from Russia and all other wheat-exporting countries be stabilized at a yearly average of 600,000,000 bushels per annum. Canada's export crop of wheat would meet the demands of the European market that takes an average of 600,000,000 bushels of imported wheat. Let Canada's export crop of wheat reach the proportions of 600,000,000 bushels, and the world's market would not be able to absorb more than Canada's production of wheat. Canada's wheat would have to compete with the low costs of wheat production in India, Russia and the Argentine, and with reasonably high cost of wheat production in Australia and the United States. The results of that competition would drive the price of wheat down to 50 cents or

60 cents per bushel until such times as low prices decreased the wheat acreage.

Low prices would decrease the acreage sown in wheat by the farmers of wheat exporting countries, and that decrease of wheat might slowly increase the price of wheat. That slow increase in the price of wheat would never rescue the wheat growers of Canada from the dire disaster that will come upon them if they trust their industry to the workings of the great free trade law of supply and demand. The wheat growers of Manitoba, Alberta, and Saskatchewan have only to trust to their present leaders and their present policy, go ahead raising wheat on the prairies and listen to free trade howls on the platform, and the price of wheat will go down to 50 cents a bushel. Nobody could receive any profit out of wheat at 50 cents per bushel other than the middleman, who buys and sells the wheat, and the railways and steamship lines that carry the wheat to the overseas market. The wheat growing industry of Manitoba, Alberta and Saskatchewan has more deadly enemies than the big interests of the East. I am no friend of these interests; these interests never were and never will be friends of mine. I have suffered from their enmity as every public man must suffer if he tries to stand up for the people, as the government headed by the present leader of the opposition tried to stand up for the people on the historic occasion to which I have referred. That occasion was the time when a government of this country tried to investigate the methods of the big interests that were plundering the wheat growers of the West. Did the wheat growers support the demand for an inquiry? No, the wheat growers supported the same old triple alliance of Liberals who are the worst enemies of real Liberalism, Progressives who are not the friends of progress, and free traders like the Progressive party and their Progressive leader, who went to the courts with his allies, the grand combine war to the death against free trade in grain inquiries. The wheat growers of Manitoba, Alberta, and Saskatchewan have more to fear from the big interests west of the Great Lakes than from the big interests east of the Great Lakes. Liberals who are not true to real Liberalism, Progressives who are not the friends of progress, teach the grain growers to believe that they owe nothing to the British Empire and that the British Empire means nothing to them. The British Empire and especially the British market mean everything to the wheat growers of the West. Free traders tell the wheat growers that the American market will take care of all the crops that the prairies of the West can ever raise. I am not one of those Canadians who apologize for their party's share in the defeat of reciprocity in 1911. I would not belong to any party that voted to have Canada's tariff made in Washington. Reciprocity would have lasted only until some agricultural bloc in the United States imagined that reciprocity was putting a dollar in the pockets of Canadian farmers. Then the United States would have ended reciprocity as suddenly as the United States began the 42 cents per bushel tariff on Canadian wheat. The British and overseas market is and always should be a market of customers for Canada. The United States market is and always will be a market of competitors with Canada. The wheat growers of Manitoba, Alberta, and Saskatchewan have had to sell, and will have to sell their export crop in the British and overseas market, to the extent of 600,000,000 bushels of imported wheat per annum. The United States share in that market in the years of record were:

1920-21—300,000,000 bushels out of a wheat import of 565,000,000 bushels.
1921-22—185,000,000 bushels out of a wheat import of 535,000,000 bushels.
1922-23—140,000,000 bushels out of a wheat import of 445,000,000 bushels.

In these three representative years of record the overseas market for import wheat averaged 348,000,000 bushels per annum. For the same three years the export of the United States to that overseas market averaged 208,000,000 bushels. These figures prove that the market of 100,000,000 people in the United States was served with homegrown wheat plus the following imports of Canadian wheat:

	Bushels
1920-21	57,082,575
1921-22	17,250,790
1922-23	19,943,430

The Progressive party, the Liberal party, with their triple alliance of non-Liberalism, lack of progress and semi-free trade, teach the wheat growers of Manitoba, Alberta and Saskatchewan to believe that they can get rich selling wheat to the United States. The figures show that the United States gets rich feeding the American people from the American wheat fields and still exports American wheat to the extent of 148,000,000 bushels. The average annual export of American wheat for the last three years is more than 25 per cent of Canada's entire wheat crop. That export of 148,000,000 bushels per annum was more than 30 per cent of the world's total wheat export to the British and overseas market.

Canada's wheat growers never had, and never will have, worse enemies than the triple alliance I have tried to describe. That

alliance includes three parties; that alliance includes three policies. The three parties are the Liberals who are not liberal, the Progressives who are not progressive, the free traders whose idea of free trade is to set up a prohibitive tariff against grain inquiries. The policies included in that triple alliance are the policies of error, pretence, and reaction —or, to use the words of the Council of Agriculture—exploitation and plunder. Free trade has nothing to offer the wheat growers of the west but the piffle that represents protection as the worst enemy of the wheat growing industry. I submit that protection is the only policy that is capable of being developed into the best friend of the wheat growing industry. Free trade has nothing better to offer the wheat growing industry than the pretence that wheat growers can be poured into the prairies of the West and the free trade law of supply and demand will take care of the illimitable expansion of Canada's wheat crop.

The laws of supply and demand have, through a course of years, stabilized the export market for wheat at about 600,000,000 bushels. Canada's wheat crop in the last three years was:

	Bushels
1921..	285,337,900
1922..	380,830,400
1923..	454,834,000

Canada has only to add two-thirds to the present number of wheat farmers and Canada alone will have an export crop of wheat more than equal to the total world consumption of export wheat from the chief wheat exporting countries of the world. That consumption is stabilized at about 600,000,000 bushels. I am not forgetting the United States market. The United States wheat fields now supply almost one-third the wheat sold in the export market. The total United States wheat crop for the last three years has averaged 800,000,000 bushels, or 200,000,000 bushels more than the wheat consuming power of the present population of the United States.

A country that raises a total yield of 800,000,000 bushels of wheat and exports an average of 138,000,000 per annum is no market for Canadian wheat. The American wheat yield averages nine bushels to the acre. A slight increase in the fertility of the American wheat fields would take care of the growth of the United States wheat consuming population for the next thirty years. The pretence that Canada's wheat growing industry has anything to hope for from the United States market is a free trade fallacy. Every 10,000,000 wheat consumers added to the population by the United States would add less than 60,000,000 bushels per annum to the demand for Canadian wheat if the Americans opened their market to Canadian wheat growers instead of closing that market against them. The advocates of free trade are guilty of a fraud and a false pretence in the declaration that wheat growing in Canada is a continental industry. Wheat growing in Canada is an Imperial, an overseas industry, and must depend for prosperity, not on a market of competitors on this continent but on a market of customers in the British Isles, in allied countries, yes, and in foreign countries. The prairie wheat growers of the West have only to follow free trade far enough and stick to free trade long enough and they will be trying to get rich selling wheat at 50 cents and 60 cents a bushel. Free trade and false leaders have put the prairie farmers of the West in this position.

Protection properly applied would maintain the individuality of Canada's wheat crop all along the line, from the primary producer to the ultimate consumer. I want to see a policy of protection applied to the wheat growing industry so that the high price that should be commanded by the high quality of the Canadian wheat will go into the pockets of the Canadian farmers who raise that wheat. The prairie farmers support leaders who rise to apply false principles in a free trade policy that puts the high price commanded by the high quality of the Canadian wheat into the pockets of the Yankee middlemen, who handle that wheat, instead of into the pockets of Canadian farmers who grow it. That is what free trade has done for the wheat growers of western Canada. Let these farmers cling to free trade and permit a lot of United States-bossed grain combines to drive Canada's export wheat crop into American routes to the world market! That is the free trade idea. Free trade permits the individuality of Canada's wheat crop to be destroyed so that the high price commanded by the high quality of that crop shall mean a high profit to the American middlemen who handle that crop. Protection should seek to maintain the individuality of Canada's wheat crop so that the high price demanded by the high quality of that crop shall go into the pockets of the Canadian producers who raise it. Free trade, with its triple alliance of cant, humbug and bunkum, takes millions of dollars out of the pockets of the Canadian wheat grower every year by destroying the individuality of the Canadian wheat crop. Protection, with its all-Canadian or other all-British routes to the export market, would maintain the individuality of

the Canadian wheat crop and put millions of dollars into the pockets of the Canadian producers who raise that crop.

I am not here to argue for protection because protection is good for Ontario. I am here to argue for protection because of my conviction that protection is the only hope of building up Canada as a nation within the British Empire. I am here to argue for protection because of my conviction that the only hope of profitable wheat growing in western Canada or any part of Canada is in a system of protection that will give the Canadian wheat grower a quality price for his quality crop.

Free trade as they have it in the Winnipeg Grain Exchange and other centres affiliating with the big free trade allies of the hon. member for Marquette (Mr. Crerar) and other Progressives will permit Canada's high quality wheat crop to be mixed with low quality wheat of foreign origin en route to the world's market. The result of that mixture will be a repetition of the same old free trade story of the foreigner getting a high profit for handling high quality Canadian wheat and the Canadian farmer getting a low price for growing that wheat. I believe that the only principle that can extend and make prosperous the industry of growing wheat on the Canadian prairies is the policy of protection. Protection, and protection alone, as applied to the marketing of Canadian wheat will maintain the individuality of Canada's wheat crop and give the producer of that crop a quality price in the world's market. Free trade that leaves the marketing of Canada's wheat to the law of supply and demand will destroy the individuality of Canada's wheat crop, deprive that crop of the price its quality should demand in the world's market, and require the Canadian farmer to get rich trying to grow wheat and sell it at less than 75 cents per bushel.

Free traders in this country have encouraged the Yankee middlemen and the native grain exchanges to take $2 out of the pockets of the Canadian wheat growers in excessive profits for every 10 cents that the Canadian implement manufacturer has taken out of those same pockets.

The big grain interests that the hon. member for Marquette represents are interests that want more, and yet more, free trade. Free trade enables the alien allies of these big interests to handle Canada's high quality wheat at an estimated excess profit of millions per annum. The protection that I advocate would enable the constituencies of the self-styled and so-called Progressives to keep that profit in their pockets. Free trade destroys the identity of Canada's wheat crop and enables the United States beneficiaries of free trade to take a toll of $25,000,000 per annum in high profits on the handling of Canada's high grade wheat. Protection in the form of shipping conditions or export duties would enable the farmers who grow Canada's high grade wheat to add to their revenue that $25,000,000 per annum as the high price of high quality wheat. Protection, rightly understood and rightly applied, would give the farmers of the West cheaper agricultural implements than these farmers would ever get from free trade, as they have had it in this budget. I am not pleading for protection for the manufacturers' sake. I plead for protection for Canada's sake and for the sake of every interest in Canada. I believe that protection should protect the consumer against unjust prices just as truly as protection protects the manufacturer against unjust competition. The only chance the Canadian manufacturer ever had to show what he could do in mass production was in the war. The work of Canadian manufacturers and Canadian men and women in the shell industry proved that Canada's industrial genius equalled the industrial genius of any other country on earth. I believe that protection should equalize conditions so that the Canadian manufacturer who manufactures in small units should have the chance to live in competition with the American manufacturer who manufactures in large units. A truly national policy would cover the difference in cost and price ratio between agricultural implements made in small units in Canada and agricultural implements made in large units in the United States. The tariff should cover that difference. A truly National Policy would not allow the Canadian farmer or any other consumer to be stung for an unfairly high price for agricultural implements, automobiles or any other production of Canadian industry. A truly national policy would provide an excise duty that would put into the public treasury every cent charged for agricultural implements or automobiles or any other product manufactured under protection a price that represented fair wages to the workman and fair profit to the manufacturer. I know this proposal will be met with the shout of "paternalism." I would sooner have the paternalism of a protectionist government than the paternalism of the Winnipeg Grain Exchange and its allies, and the paternalism of a free trade that robs the growers of the best wheat in the world out of $25,000,000 per annum in the price of wheat, and puts that $25,000,000 into the

pockets of the Americans who handle that wheat. We will have to have more paternalism in the management of this country's reserves and the promotion of this country's welfare.

I plead for a departure from this free trade law of supply and demand and acceptance of the principles of the old National Policy in our dealings with all provinces from Yukon to Prince Edward Island. I plead for a departure from the free trade law of supply and demand and an application of the principles of the old National Policy to other industries in this country from the manufacturing of agricultural implements up to wheat growing. Leave the wheat growing industry of the West to the workings of the law of supply and demand and that law would not fill the West with wheat growers. If that law did fill the West with wheat growers, wheat would not be worth 50 cents a bushel. The free trade law of supply and demand now costs the wheat grower of the West $25,000,000 per annum. I am advised, and believe, that free trade conditions supported by those free trade organizations, the grain exchanges, keep $25,000,000 per annum out of the pockets of Canadians who raise high quality wheat, and put that $25,000,000 per annum into the pockets of the native and alien exploiters who handle high grade Canadian wheat. The Progressive and non-Progressive sections of the Liberal party support grain exchanges and oppose grain inquiries. That party or those parties would sooner talk about agricultural implements than to try to protect the wheat growers of the West by a departure from free trade conditions. The only cure for these free trade conditions is a return to the ideals of the National Policy, the application of the principles of protection. Free trade conditions have failed to maintain the identity of Canada's high grade wheat from the point of production to the ultimate market for that wheat. On this point I can quote the words of a writer who has studied the wheat business and followed the course of the grain inquiry.

> Positive evidence was found by the Royal Grain Commission at its sessions in Buffalo and New York in October that in spite of the governmental safeguards thrown around Canadian grain passing in bond from Buffalo, Cleveland and Duluth to Europe, United States soft wheat is steadily and persistently mixed in with this superior hard grain from the Canadian northwest. The extent of this practice only is in doubt. The London Corn Exchange has taken up the most flagrant case disclosed and it is in litigation now. Opinions vary widely with reference to what it costs the Canadian producer by failure of Washington restrictions to preserve the identity of this grain it undertakes to handle in bond but with the increase of the duty in the States levelled against Canadian grain the motive for this bootlegging of Canadian grain passing through the States is nearly doubled. Until two months ago the duty on Canadian wheat entering the States to remain there was thirty cents. By the new regulations it is forty-two cents. The increased temptation to substitute United States grain for the Canadian article operates in this way: A certain quantity of Canadian hard wheat must be used by American millers to turn out a quality of flour relatively the equal of that milled in Canada. This averages 25,000,000 annually and is increased at the rate of three or four million bushels annually. In other words, every bushel of this hard grain that can be removed from the cargoes passing in bond from Buffalo and other border points and a bushel of soft United States grain substituted means practically double the duty for the doctored cargo is still protected by the Canadian certificate and has been sold on that grade and under the practice must go through and the buyer pay for it unless he can establish that it is a substituted article. The soft wheat is disposed of on the Canadian hard wheat basis and the hard wheat extracted which remains in the United States to be milled pays no duty and takes the place of forty-two cents worth of hard wheat which some United States mill would have to bring in from Canada.

[Mr. Church.]

The Progressive party in this House has in the result proved itself to be the friend of the American implement manufacturer, the grain exchanges and other big interests that take an unfair profit, conservatively estimated of $25,000,000 per annum out of the constituencies of the so-called Progressive party. Wheat growers are entitled to a quality price for quality wheat. They will never get that price so long as the free trade law of supply and demand is operated so as to loot the industry that grows the wheat and enrich the interests that handle the wheat. A party that has in effect allied itself to the interests I have described which take out of the western farmer $25,000,000 every year, accuses the Conservatives of being the allies of the big interests that manufacture agricultural implements. I can speak for myself, and I believe for the Conservatives when I say that we serve no big interests and we receive support from no big interests. Some of us have suffered in the battle against the big interests and are prepared to suffer again. The Progressive party shouts "Stop, thief!" against the agricultural implement industry in Canada and the Council of Agriculture calls the manufacturer an exploiter and plunderer while the big interests I have described that hide under the Progressives' platform are plundering the western wheat grower out of $25,000,000 per annum. I hold no brief for the Canadian agricultural implement industry. I do not know any other Conservative member who does. If any other Conservative member feels that he owes some gratitude to the Canadian agricultural implement industry he can speak for himself. The agricultural implement industry did its best to keep the Drury government in power in Ontario and

failed. The western farmer should realize that the agricultural implement manufacturer and all other manufacturers did not begin to plunder the western wheat grower as the western wheat grower is plundered by the allies of his own party and the erroneous policy of his own leaders. The value of the agricultural implements made in Canada is estimated at $26,000,000 per annum. The value of agricultural implements imported into Canada in the last year of record is $12,000,000 per annum. The estimated number of Canadian hands employed in the manufacture of farm implements and agricultural machinery is 15,000. The estimated number of hands employed in the manufacture of farm implements and agricultural machinery in the United States for export to Canada is 6,000.

The Progressive party does not seek to disturb the free trade conditions that enable aliens and native big interests to take an unfair profit of $25,000,000 per annum out of the grain growers and united farmers who handle high quality wheat. The Progressives who are not progressive and the Liberals who are not liberal did seek to destroy the same protectionist conditions that enabled 15,000 of their own countrymen to earn a none-too-generous living in the manufacture of farm implements and agricultural machinery. Canada's demand for farm implements now supplies an industrial population of 25,000, counting workers and their dependents in the United States. The whole aim of this tariff is to depopulate the industrial centres of Canada and populate industrial centres in the United States. If this tariff succeeds the $26,000,000 worth of farm implements and agricultural machinery now made in Canada will be made in the United States. If this tariff succeeds 15,000 returned soldiers and other Canadians and Britons now employed in the manufacture of $26,000,000 of farm implements in Canada will manufacture the same implements in the United States. The big interests that handle Canadian orders for farm machinery and agricultural implements in the United States will plunder the western wheat grower and other Canadian farmers just as the western wheat growers are plundered out of $25,000,000 per annum by the American big interests that pay low prices for high quality Canadian wheat. If free trade conditions are so profitable and the law of supply and demand is so excellent in its workings, why do not the gentlemen opposite depend for their supply of railways on free trade competition between the Canadian Pacific Railway and the Canadian National Railways? Why do they not leave the building of the Hudson Bay railway to the free trade law of supply and demand? The whole free trade policy is a policy of greed beyond any greed ever dreamed of in the creed of protectionists. The whole country is to be taxed to build a Hudson Bay railway that is to carry wheat to a part where the wheat will be exchanged for goods. The goods made by producers who do not pay a cent in taxes for the railways, are to be consumed by a population that does not spend, and does not want to spend, a cent in wages for their own countrymen. How are these countrymen to help pay for the Hudson Bay railway and all other railways if free trade conditions are to isolate the industries of the West from the general economic life of the country? The number of farmers in the West is misrepresented in this parliament. The farmers of Ontario have always shown themselves patriots on the battlefield and protectionists in the polling booth. Free trade theories have already encumbered the western wheat grower with conditions that rob him of $25,000,000 per annum. Free trade conditions must be supplanted by protectionist principles in the shipment of grain, in the solution of the insurance problem and, if necessary, in the excise and export duties, or the wheat growing industry will be ruined.

Canada is able to offer two possible answers to a United States tariff increased to 42 cents per bushel on Canadian wheat. Answer No. 1 should be written in regulations that will prevent the Canadian milling combines and grain exchanges from wolfing the Canadian wheat grower out of his crop at low prices. Answer No. 2 should be written in a tariff of export duties that will make it impossible for United States millers to import a pound of Canadian wheat. Exclusion of Canadian wheat from the United States market must mean the exclusion of United States flour from every export market. Flour ground out of American wheat cannot compete in the export markets of the world with flour ground out of Canadian wheat. Let the United States increase the American duty on Canadian wheat. A higher United States duty on Canadian wheat will compel the American millers to seek, and vainly seek, an export market for the inferior flour they are able to feed to their own people.

The American tariff does not much affect the American export as rebates are made on all wheat imported and ground into flour which is exported. The United States looks after its millers as will be seen from this despatch to the Mail and Empire of Toronto:

Little Effect Felt in Canada From New U.S. Tariff on Wheat

Exports Became Greater as Date of Increase Drew Near—American Officials Look for Bigger Volume in This Class of Business.

Ottawa, April 14.—The new United States tariff of forty-two cents per bushel on wheat went into effect last week, but it had no effect here nor in any other part of the country, as far as officials can learn. As the date for the incoming of the increase drew near exports of wheat to the Republic increased, chiefly of that intended for milling in bond for export purposes.

The information here is that American federal trade officials consider that a considerable increase in this class of business is to be expected. If the American mills cannot get at a reasonable price Canadian wheat for mixing for flour for home they will get more to mill in bond for export. As a matter of fact, during the last month the number of bonded United States mills grinding Canadian hard wheat for export has increased from two to six.

Many Americans who follow the milling industry closely are of the opinion that one of the effects of this higher duty on wheat will be to make Buffalo, rather than Minneapolis, the centre of the hard wheat grinding in bond for export business. The largest mill of this kind is now located at Buffalo. It has a capacity of 12,000 barrels, and the company operating it is building another there. Further evidence of the tendency for this form of industry to locate in Buffalo is to be seen in the additional fact that the well-known Palisade mill at Minneapolis is being taken down and transferred to Buffalo.

Ontario gave to Adam Beck the chief stewardship of $160,000,000 invested in Hydro on behalf of 2,200,000 shares in Hydro properties. The results that Adam Beck achieved by his stewardship of Hydro are set down in the following statement:

1. Every dollar of the $160,000,000 Hydro investment is earning interest and sinking-fund.

2. Hydro investment saved Ontario from a coal famine that would have bankrupted the province in war time.

3. Hydro investment saved 2,200,000 shareholders over $75,000,000 in reduced coal, light and power bills.

4. Hydro investment saved Ontario over $100,000,000 on coal prices, which would have gone to $30 per ton in war time but for the Hydro investment that gave Ontario the equivalent of 3,000,000 tons of United States coal per annum.

The force in the national life of Canada that most truly proved itself Liberal in the best sense and Progressive in the best sense of those two much abused words, Liberal and Progressive, is the force represented by the Hydro Conservatives in Ontario. The triumphs achieved by the Hydro Conservatives of Ontario under the leadership of Sir James Whitney and Sir Adam Beck have cut Ontario's coal consumption in half, and cut 75 per cent off Ontario's light and power bills. If free trade as worked out in the alleged competition of private ownership conditions in Quebec has given Quebec or any other province cheaper light and power than protection, as worked out by public ownership, with its support of competition, has given Ontario I congratulate that province. I believe that a comparison of light and power bills under public ownership as established by the Hydro Conservative protectionists of Ontario would show that Ontario pays the same relationship to three cents per unit that Quebec pays to eight cents per unit under private ownership, as established by free traders, in excess charges for light and power. The Hydro Conservatives of Ontario are the protectionist party. They supply the protectionist principles of public ownership, and if any gentleman doubts that public ownership is a protectionist principle I reply that public ownership is protectionist in the true sense of utilizing the public resources of the country for the benefit of the people of the country. Protection as applied by the Hydro Conservatives of Ontario has fought the battles of the masses against the classes, of the people against their oppressors; I mean what the Hydro Conservatives have done for the sections of Ontario that get their power from public ownership; I mean what the Hydro Conservatives of Ontario were prevented from doing for the gold mining country that is forced to get its power from private ownership. The Hydro Conservatives of Ontario supported Adam Beck in his effort to electrify the Temiskaming and Northern Ontario railway after Sir James Whitney's great victory in 1905. The Hydro Conservatives wanted to protect the mining industry with a supply of Hydro power at cost. The Hydro Conservatives believed with Adam Beck that the Temiskaming and Northern Ontario railway should be electrified, and that that railway should serve as a trunk power line. From that trunk line, power could be carried to every camp opened up in the mineralized zone.

The gold and silver areas of Ontario have produced since 1895 a total of $150,000,000 in silver and $125,000,000 in gold. The gold and silver production in Ontario supports a large population. That gold and silver production was achieved, that population was supported, under free trade conditions that leave the supply of power to the workings of the free trade law of supply and demand. The workings of that law have failed to protect the mining industry, as the workings of that law must fail to protect every industry. The Hydro Conservatives were kept out of northern Ontario with their great protectionist principle of hydro power at cost. Northern Ontario was forced to depend

on the free trade law of supply and demand for power. The results of that dependence are seen to-day in the importation of a supply of power that has proved so uncertain in quantity and so high in cost that Diessel engines are being brought into some mining camps from Germany. That is what comes of leaving the great industry to free trade. Mining camps in the midst of natural water-powers have to bring in engines from Germany to manufacture power produced from American oil cheaper than they can buy power produced from Canadian electricity. If protection in the form of hydro power at cost had got into the camps of northern Ontario when the Hydro Conservatives fought, and fought in vain, to help Adam Beck put in that power in 1905, the population of northern Ontario to-day would be 400,000 instead of 30,000; the gold and silver production of northern Ontario to-day would be at least $300,000,000 per annum instead of a yearly production of $6,000,000 in silver and $20,000,000 in gold or a total yearly production of $26,000,000.

This budget is described as a new national policy. Free trade is going to build up a mining industry in Canada by taking away the manufacture of drills and other mining machinery from Canadian factories and putting that manufacture in the hands of wage earners in American factories. We are told that gold and silver production is to be encouraged by a tariff change that will reduce the price of drills by $40 per drill. The Hollinger mine with its gold production of $12,700,000 per annum is worked with less than 1,000 drills. The budget will reduce the tariff or other revenue taxation on the Hollinger mine on drill account by $20,000 per annum; taking the life of a drill to be two years. That is the boon that free trade has to offer to the Canadian mining industry. The mining property that is not rich enough to buy mining machinery manufactured in Canadian and other British factories is no good to Canada. The mining industry will not justify our hopes or fulfil our expectations if that industry is to give dividends to aliens and patronage to alien factories, leaving nothing to Canada but the holes in the rock surrounded by shacks and company stores. I have no faith in free trade conditions as applied to mining industries. The mistake of Sir James Whitney's lifetime was when he surrendered to the anti-Hydro Conservatives who blighted the mineral future of northern Ontario by applying the free trade law of supply and demand to the production and distribution of power. That free trade law has kept back mineral production in Ontario eighteen years. That free trade law to-day makes it cheaper for some properties to be developed from electricity produced by Diessel engines imported from Germany than from electricity generated by the energy of Canada's own water-powers. That free trade law has restricted Ontario's production of gold and silver to $2,000,000 per annum, when protection in the form of hydro power would have enlarged that production to $300,000,000 or $400,000,000. That free trade law has restricted the population dependent on Ontario's mining industry to 20,000 when protection in the form of hydro power would have enlarged that population to 400,000.

I uphold protection and want protection applied in the form of customs duties, excise duties, insurance rates, shipping and navigation laws, railway rates, public ownership in the production and distribution of light and power and in transportation. I believe that the principles of protection can be applied in an enlarged and modernized national policy so as to add an industrial population of 10,000,000 workers and their dependents to the population of Ontario. I believe in protection because I believe that the right sort of protection is the friend to every province and of every industry in every province. I would put export duties on the shipment of newsprint to the United States. With the proceeds of these duties I would help to solve British Columbia's Asiatic problem and Canada's coal problem and every economic and industrial problem.

Free trade in the British Columbia fishing industry creates an Asiatic problem in that industry. We leave the fishing industry of British Columbia to the workings of the free trade law of supply and demand. These workings provoke complaints to the effect that Asiatics are driving Canadian-born and other British-born fishermen out of that industry. The total of 6,439 fishing licenses was issued in British Columbia in 1923. Of these licenses 3,046 were issued to British-born fishermen other than Indians, 1,668 to Indians and 1,725 to Asiatics. I believe that the principles of protection properly applied would put the fishing industry of British Columbia on a British-born basis. The proceeds of export duties would supply them with British-born fishermen so that fishermen born in Asia and other non-British places would be crowded out of the fishing business by subsidies granted to British-born fishermen. I believe that the principles of protection in the form of sub-

sidies to British-born fishermen would go far to solve British Columbia's Asiatic problem. I am certain that free trade conditions will never help in the solution of that problem. I am equally certain that adherence to free trade conditions will never build up Vancouver. As Chairman of the Toronto Harbour Commission I represent all the citizens of Toronto, as well as my own constituents, in congratulating Vancouver on the traffic in and out of that harbour. I rejoice as a protectionist and as a Canadian in the figures showing its growth.

The people of Toronto and all the people of Ontario will be glad to hear that the port of Vancouver is prospering. The report comes east that as many as thirty ships a day are in Vanccouver harbour waiting for grain cargoes. If the wheat growing industry of the Canadian west had enjoyed protection in the form of protectionist insurance conditions and other shipping conditions, a hundred or a hundred and fifty ships should be waiting for grain cargoes in Vancouver harbour.

Canada's wheat growing industry has no future if that industry is to be based on free trade conditions of shipment. These conditions permit the alien or native middleman to keep the Canadian wheat grower from getting a quality price for his quality crop. Free trade conditions of shipment permit the identity of Canadian wheat to be destroyed in transit. The high quality of that wheat is turned into high prices for the alien or native middleman who handles the wheat. Protectionist conditions of shipment would protect the identity of Canada's wheat in transit, and turn the high quality of that wheat into high prices for the Canadian producer who grows the wheat. The prinicples of the good old National Policy should be applied to join the wheat fields of the prairies to the port of Vancouver thus promoting the growth of British Columbia.

The principles of the good old National Policy should also be applied to join the coal fields of Alberta to the furnaces and kitchen stoves of a great section of Ontario. The coal fields of Nova Scotia should also share with Alberta the benefits that would follow an attempt to apply the principles of protection to the problem of Canada's coal supply. My motto is Canadian coal for Canadians. The principles of protection should fast be organized into an economical system that will ensure an all-Canadian or other all-British supply of fuel to take the place of the almost 3,000,000 tons of American anthracite and almost 11,000,000 tons of bituminous coal consumed in this country. The exact figures are 2,814,650 tons anthracite and 10,583,396 tons bituminous coal imported from the United States in the last year of record. Let the supply of all-Canadian or other all-British coal be assured, and then put on a duty that will not permit a ton of American coal to be sold in Canada. Canada's money now goes out in payment for $24,705,536 worth of American anthracite, and $39,281,245 worth of bituminous coal, every year. These figures mean that Canada's coal bill pays $32,000,000 in wages to 15,000 United States workers every year. These figures means that Canada's coal bill maintains United States workers and their dependents almost equal in number to the population of Ottawa. These United States workers and their dependents should be Canadian workers and their dependents, earning good wages around the coal mines of Alberta and Nova Scotia, and helping to supply a home market for the products of Canadian agriculture. The distribution between Nova Scotia and Alberta of the $64,000,000 that now goes to pay Canada's yearly coal bill to the U.S. would help to spread prosperity beyond the bounds of these provinces. The protectionist policy of power at cost would have given Ontario a gold and silver production of $250,000,000 or $300,000,000 per annum instead of, as in 1923, a production of 1,000,000 ounces of gold valued at $20,000,000, and 11,000,000 ounces of silver valued at $7,000,000 a total value of $27,000,000 per annum. The protectionist policy of power at cost would have given Ontario a population of 80,000 miners and their dependents instead of a population of less than 10,000 miners and their dependents. The free trade fad of removal of duties will never do anything for the mining industry compared to what would have been done for the mining industry by the Hydro-Conservative protectionist principle of power at cost.

Ontario would not profit any more than the western provinces would by the establishment of National Policy principles enlarged to meet the needs of the present hour as the economic law of this country's relations with the United States. Canada's imports from the United States reach the appalling figure of $532,633,384. This total of imports from the United States includes raw cotton to a value of $123,334,627. Canadian protectionists cannot look forward to a native supply of raw cotton but they must live in the hope of a good time coming when Canada can get cotton from consumers employed under the British flag instead of competitors under a foreign flag. Imports of raw cotton and the balance of $400,000,000 goes from Canada every year in payment for imports from the United States.

These imports include a wage bill that employs not less than 700,000 American workers and their dependents in the production of exports from the United States which take the form of imports into Canada. The sort of protection I believe in is the protection which had its foundations in the good old National Policy. These foundations should be built upon in the extension of every industry in every province. The fishing industry, the grain shipping industry, and the industries of British Columbia need protection. The wheat growing industry of the prairie provinces needs protection against free trade conditions. These conditions now permit the Canadian wheat grower to be plundered out of $25,000,000 per annum for the benefit of America and native middlemen. The coal-fields of Alberta and Nova Scotia need protection against the free trade or semi-free trade conditions that now permit these fields to be isolated from the demands of the home market. That market absorbs $64,000,000 worth of Canadian coal every year. That $64,000,000, or at least an overwhelming percentage of it should stay in Canada. Canada's home market for coal should provide wages for 15,000 Canadian miners instead of the same number of American miners. Canada's home market for coal should support seven or eight bright Canadian towns, populated by 15,000 miners and their dependents, instead of supporting the same number of towns in the United States. The record of imports from the United States shows American imports of $400,000,000 exclusive of $123,000,000 worth of raw cotton imported. The record shows $200,000,000 in wages paid to Americans engaged in the production of products for the Canadian market. That $200,000,000, or a large proportion of it, should be paid in wages to Canadians in their own country.

I am not uttering whispers of death. Every member of this House knows conditions in his own constituency. He knows that no basic industry in Canada could be built up so as to serve Canadian industry, Canadian mills and Canadian workmen without protection. There are hon. members here representing constituencies that are not losing Canadians to the United States. I am glad of it. I wish I could say the same about by own constituency and the other constituencies in the city of Toronto and the constituencies that I know something about in the province of Ontario. I am no specialist in the Book of Exodus or the Book of Lamentations. Canada's life past and present is an open book. On the pages of that book I can read the truth that this country has too long followed free trade prejudices in dealing with exports and imports, transportation, insurance and other conditions of economic life. Free trade or semi-free trade conditions have permitted foreigners to take—I am speaking from memory—a raw product of asbestos worth $9,000,000 out of the province of Quebec and turn that $9,000,000 worth of raw material into a finished American product that sells for $60,000,000. Everywhere and always in regard to every province and every industry free trade or semi-free trade conditions make us hewers of wood and drawers of water for the United States. I am not speaking in bitterness. I admire the Americans so much that I would imitate their praiseworthy tendency to look after themselves. Canada has too long halted between two opinions. This country has elected parliament after parliament that is nothing better than a debating society capable of nothing but talk on the abstract merits of free trade or protection. I believe that protection thoroughly understood and properly applied would have made Canada the home of at least 15,000,000 happy, contented and prosperous people. I believe that the free trade and semi-free trade conditions that curse Canada to-day support an American population of not less than 1,000,000 that gets its living out of American exports to Canada. I believe that protection would bring many of these workers and their dependents back to their own country. I believe that protection would transplant a wage bill of at least $200,000,000 to Canada. I believe that protection would so stimulate the agricultural, industrial, and commercial life of Canada that another $200,000,000 would be added to the wages paid in Canada. Free trade or semi-free trade conditions rob Canada of a population of at least 1,500,000 Canadian and other British workers including 13,000 Canadian Expeditionary Force returned soldiers who should find homes and prosperity in peace, under the flag they defended in war.

I am a protectionist. The protection I believe in is not for the manufacturers' sake but for the country's sake. I am a protectionist, not for the sake of ill-will to the United States, but for the sake of good-will to Canada. I have no ill-will to any allied country, but I would apply to the upbuilding of Canada, yes, and to the upbuilding of the British Empire, the great protectionist ideal the Americans have followed in building up their own country. The Americans export 882 million dollars worth of United States products to Great Britain and 911 million dollars worth of United States products to the British Empire, exclusive of Great Britain of which Canada takes 652 millions every year—the best argument for preferential trade within the Empire. Great

Britain or the British Empire is not offended while the United States passes an immigration law that restricts the number of Britons who can enter the American republic to 70,000 per annum. The United States could not be offended and would not be offended if the exclusion of British-born producers from the American labour market was answered by the exclusion of American made products from all British markets. The wider question of protection or free trade as applied to the nations of the British Empire outside of Canada belong to the parliaments of these nations. The question that belongs to us is the question raised, not by a theory but by the conditions, that confront us. Free trade or semi-free trade conditions have been tried and found wanting. These conditions must more and more depopulate Canada and populate the United States. I plead for a restoration of the good old National Policy. That policy and that policy alone represents the principle—the great principle of protection—that alone can unify Canada. It is true we applied protection to import duties, to export duties, to the supply of power, transportation and insurance to every industry in every province, and this gave protection a chance, Canada a chance and the British Empire a chance for life, strength and prosperity.

The new national policy of the Liberals is all estimate and no saving, so we need not lay much emphasis on the phrase used in this House "estimated savings." No doubt some of the implement manufacturers will feel happy over it in the land of the Star Spangled Banner. What will it profit the average Canadian if his taxes are $2.70 less if his earnings are interefered with by tariff tinkering and if he has to migrate to the United States? Canadian agriculture is the most imperial and least continental of all the Canadian industries and interests. The British Empire's fortunes govern the fortunes of Canada's farmers more closely than the fortunes of that Empire govern the fortunes of our industrial workers. Canadian agriculture has progressive leaders who talk reciprocity and free trade, as if the British Empire meant nothing and the United States meant everything to the farmers of Canada. Canadian agriculture unfortunately follows leaders whose policy will have the effect of wrecking the whole British Empire and Canadian nation while securing in return not an effective pledge or contract but a promise impossible of fulfilment of 5 cents per bushel more for Canadian wheat, $1 per head more for Canadian cattle and $2 more per head for Canadian horses in the United States. Ontario smashed the Drury's, the Doherty's, the Morrison's and other foes of that agricultural province. The worse opponent of the western wheat farmers is the policy of the gentlemen on my left and the anti-Conservative premiers, Hon. Mr. Bracken of Manitoba, Hon. Mr. Dunning of Saskatchewan and Hon. Mr. Greenfield of Alberta. The elevator monopoly and other domestic agencies of grain manipulation rushed to the courts for technical defence against inquiry into the operations of the grain interests and their allies.

The Union government instead of going to the country should have gone on with the grain inquiry and not have the high court of parliament submit to the technical injunction granted by a judge. The Grain Growers' Association supported by the western members, headed by the hon. member for Marquette, were the chief allies of the elevator and other agencies of grain monoply against inquiry.

One of the greatest questions before the country to-day is that of transportation, and I am sorry to see, after the inquiry into the lake shipping combine, that the government has decided to sell a large number of the merchant marine vessels, because the only opposition that this shipping combine had on the lakes was in the boats of the Canadian Government Merchant Marine. They could have gone from the ocean to the head of the lakes with coal and the manufactured products of the East and from the head of the lakes back again with the basic products of the West.

The exports of the United States to the British Empire alone in 1923 amounted to pretty nearly one and three-quarter billion dollars. Argentina took 33 per cent of her total imports from the United States in 1920 as against 15 per cent in 1913; Brazil in 1921, 32 per cent as against 16 per cent in 1913. Chili, 32 per cent as against 17 per cent; Peru, 55 per cent as against 28 per cent; Australia in 1920, 24 per cent as against 12 per cent in 1913; New Zealand 19 per cent as against 10 per cent; India in 1921, 10.5 per cent as against 2.6 per cent in 1914; China in 1920, 18 per cent as against 6 per cent in 1913; Egypt in 1921, 15 per cent as against 2 per cent in 1913. So we see that the United States, as a result of the war, and with a great merchant marine, has gone out into the seven seas to-day and is turning the balance of trade against the British Empire, including Canada, and every other country in the world.

These are some of the causes of the agricultural and general depression:

1. The continued economic depression in agriculture.

2. Inequalities in prices between agricultural commodities, resulting in a relatively inadequate return to the farmer for his labour and upon his investment.

3. The existence of surpluses available for export in agricultural commodities.

4. The necessity in part for the existence of such surpluses in order to safeguard the domestic market against uncertainties of yield, and the economic impracticability of immediately preventing the continued production of such surpluses.

5. The dependence of the prices of such surplus commodities upon the lower prices in foreign markets due to unsettled world conditions and lower costs of production.

6. The loss of purchasing power in the great food consuming countries consequent upon the Great War.

7. The practically prohibitive tariff of the United States, in the main directed against Canadian farm products.

8. Deflation of prices, in particular of grain and live stock, without similar reductions in his costs of operation.

9. A period of high prices in money, labour, exchange, materials, high freight and passenger rates brought about by the war and world disturbances. of industrial equilibrium.

10. Instability of tariff and tariff tinkering.

11. Tinkering with the sales tax.

According to the experts every million dollars' worth of coal and steel imported into Canada displaces 500 men who should be employed in Canada and not in the United States, and that is true of various other industries which I have described.

It seems to me that the main game which is being played in this legislature by the Progressives and the Liberals is the game of rugby. The football used is the dinner pail, the strong boxes, the tariff tinkering, the budget and the sales tax. But when you kick the football to and fro like that, it is going to lead to depression, instability in tariff, unrest and many other conditions of hard times. To-day the manufacturer and the toiler in the cities and towns of Ontario are wondering what is to become of them.

As regards the income tax I am surprised at the answers of the government, that they cannot tell what the income tax bill of Toronto is. A return was brought down in the House the other day, and it is, if not the most illustrious, the most illuminating document ever brought down by the respected and honourable Secretary of State (Mr. Copp), who is one of the most obliging ministers I think we have. Hon. members from the city of Toronto asked what the amount of income tax from Toronto was, and the answer was that Toronto is not a district, but that it is linked up with London, Hamilton, Guelph and many other places and they cannot give any amount. I read the Globe, and the Globe to-night says that of nine million dollars collected from this district, eight million dollars belongs to Toronto, and one million dollars for the rest of the district from London right up to the head of the lakes. Therefore, if the minister cannot get the information, I would refer him to this evening's Globe.

Another return brought down shows the customs returns for Toronto as $28,000,000. The customs returns, according to the return presented by the Collector of Customs of Toronto, amounts to $60,000,000 for the present year. The sales tax is another important item, and the post office receipts of Toronto amount to some $6,000,000. That magnificent organization, the Canadian National Railways, say that they cannot tell us what they are making in Toronto, Hamilton or Oakville. The answer which is given to that particular question by Mr. Graham Bell, is so illuminating that I think the House should receive the benefit of it. The management of the Canadian National Railways advise that it is impossible to give the revenue earned by the Canadian National Railways in the form answered by the hon. gentleman. The question was:

What are the earnings of the Canadian National Railways in Toronto and in Ontario?

It was the old province of Ontario in which the Grand Trunk made all its money. They took $122,000,000 worth of credit and $22,000,000 worth of cash out of the Grand Trunk and they invested that in that western scheme known as the Grand Trunk Pacific, with the result that the Grand Trunk went bankrupt in Ontario with no money for extensions, betterments, branch lines or stations, or for the building of a station in Toronto or the Toronto viaduct. Originally the city of Toronto spent $15,000,000 providing a right of way.

Before I leave the railway situation, I may say that the Canadian National Railway management object to telling us the salaries of the higher paid officials in that railway. According to the order in council, the salary of Sir Henry Thornton is $50,000 per year. They will give the salary of the head of that railway, but not the salaries of the officials under him. Is that not a nice business method in the administration of the Canadian National Railways? We are told that the Canadian National Railways must be taken out of politics. The Canadian Pacific Railway Com-

pany tell their board of directors all those facts. They have a schedule of the railway system before them every morning. They can tell down to a dollar what the Pacific division is making in freight and passenger traffic, what the overhead is, what the cost of operation is, the number of trains on time, the number of trains behind time, the number of freight trains hauled over that division. The same is the case of the prairie division and other divisions of the Canadian Pacific. They have that information before them next morning in the head office. But under the administration of the Canadian National Railways, the high court of parliament is not entitled to any information, if we are to believe their brilliant geniuses such as Mr. Graham Bell and others. I can say that the revenue of the National Railways in Toronto is the largest of any city in Canada, if not double that of any other city, and yet we cannot get a few million dollars to build a viaduct. We are not asking for a fabulous amount. Some ten or twelve years ago a contract was made. That contract was passed on by the non-jury sittings of the Supreme Court in the city of Toronto, by the Court of Appeals in Ontario, by the Supreme Court of Canada, by the Privy Council of this Empire, and finally by the Privy Council of the Dominion of Canada. It was decided in 1913 that the order was binding on all parties; that the parties had power to conduct; that the order was intra vires of this legislature; and that the Esplanade was a highway under the Railway Act. It is going to cost each of the railways about eight or nine million dollars, and it will cost the city of Toronto through its Harbour Board about the same amount. The city of Toronto has spent, as a municipality, $21,000,000 of its taxpayers' money on its own harbour. There is no city in Canada which has contributed, as Toronto has done, one cent of the taxpayers' money to the upkeep of its harbour. Has Vancouver done so? No; nor has Quebec. Money has to be voted by this parliament for the purpose so far as these cities are concerned; but out of a cost of $26,000,000 incurred in the city of Toronto the taxpayers have supplied $21,000,000, only some $5,000,000 or $6,000,000 being put up by parliament. That $21,000,000 was the hard-earned money of the manufacturers, the workingmen, the business men and the taxpayers generally of the city. The total cost of the Toronto viaduct to this parliament would amount to about $8,000,000 or $9,000,000 spread over three or four years, or the cost of one or two branch lines. Our free trade friends have great confidence in the law of supply and demand, and we shall be satisfied if they will apply the same principle in the case of the Toronto viaduct; for I can assure this House that if the work in connection with the viaduct is carried to a completion it will more than justify the expenditure which this parliament may vote towards it. With the increased volume of business which would follow, both in freight and in passenger traffic, the viaduct would pay for itself.

[Mr. Church.]

Coming now to the post office, some questions have been asked about the receipts in the city of Toronto. In this regard, it will interest the House to know that the receipts of the post office in Toronto are equal to those of many cities put together, having amounted last year to the sum of $5,798,000. This year it will exceed $6,000,000, and notwithstanding this fact the city of Toronto cannot get decent post office accommodation. It has to put up with a lot of ramshackle buildings in which its business men find it extremely inconvenient to do business. In this connection, I must express my disappointment at the fact that the budget has not disclosed a return to the two cent postal rate. This reduction would in my opinion be a step in the right direction, because nothing retards trade and commerce so much as high postal rates.

So far as the sales tax is concerned, it seems to me that the ingenuity of a Philadelphia lawyer is required to work out the government's scheme, which strikes one as a makeshift affair. The impression that one gets is that we have a landed aristocracy and a retail aristocracy in Canada. The tax in its new form is on the basis of robbing Peter to pay Paul—one figure being taxed one class and another figure another class of the population. I believe that the city of Toronto pays between $8,000,000 and $9,000,000 of this tax, although it is difficult to get at the returns, that city being linked up with other places.

In regard to the Canadian National Exhibition, I may say that the taxpayers of Toronto have spent between $13,000,000 and $14,000,000 on grounds of permanent buildings, permanent exhibits, and so forth; and during the war the exhibition was continued, thus keeping up the morale of the people. How much has this parliament contributed towards the maintenance of that institution? In 1920 parliament voted $5,000 but in 1921 the grant was disallowed, and since then the Dominion has given nothing; it has not even offered what one might call pin money to this highly deserving national institution. The taxpayers of Toronto, I would add, have

also paid out of their pockets nearly $2,000,000 for the purpose of carrying on the educational work of the Department of Agriculture, having spent this money on the erection of a Coliseum for the Royal Agricultural Winter Fair. But out of this expenditure the city has got nothing, although other parts of the country have profited thereby.

I hope that this year something will be done to improve present conditions in regard to the income tax. The United States are doing something for the working classes in that country in this connection, and I am personally absolutely opposed to any double-header tax; I do not believe that people should be called upon to pay an income tax to the Dominion in addition to what they pay to the city. On May 1, the income tax will be payable to the Dominion and on May 9 to the city of Toronto, and this double tax reacts on all the working classes of the city. In my opinion no one should be called upon to pay a federal income tax on an income below six or seven thousand dollars; and as a matter of fact I do not know whether it is just constitutional to compel people to pay that tax to the Dominion at all. To my mind, it is just a question whether this parliament has power to impose an income tax upon the people except for war purposes or for the purposes generally of militia and national defence. And the war having concluded years ago, I think the time has come when we should do away with that tax because it bears heavily on small wage earners in the cities and towns. Even the poor school teacher has an income tax to pay as well as those who are in better financial circumstances than himself.

With regard to the subject of public health, I want to say a word in approval of the policy of President Coolidge, who has appointed a commission to look into the question of public recreation and to formulate a programme in this connection. A few years ago we had no public health department in this country, but such a department having been established is now doing good work, and I would commend to the attention of the government what President Coolidge has done in regard to outdoor recreation for the people. No doubt some responsible minister of the Crown could take this matter up and do something for the good of the people.

Before I conclude I want to say a word concerning the necessity of a grain elevator in Toronto.

Some hon. MEMBERS: Oh, oh.

Mr. CHURCH: Hon. gentlemen may laugh, but if that is all the argument they have it will not carry much weight. No doubt a similar reason prompted Oliver Goldsmith to write the following lines:

> The watch-dog's voice that bay'd the whispering wind,
> And the loud laugh that spoke the vacant mind.

Let me tell hon. gentlemen that their own party, the United Farmers of Ontario, represented by Mr. Manning Doherty, Mr. E. C. Drury and Mr. J. J. Morrison, proved to the Union government that Ontario was paying a huge sum of money for the establishment of grain elevators all through the West while that province had no central elevator of its own. They came down to Ottawa —a whole carload of them—accompanied by Mr. L. H. Clarke to make their representations; and I may say that I came with them as one of the harbour commissioners. We presented a memorandum to the government showing that neither Toronto nor central Ontario had an elevator, although Ontario grew a lot of grain for feed purposes, that an elevator was a great necessity, and that Toronto had been paying taxes to provide elevator accommodation for Alberta, Saskatchewan and Manitoba. Elevators are necessary to the grain growing provinces, and we hope they will get more accommodation of this character. A central elevator has recently been built in Edmonton, and another in Halifax—with a by-election in sight there. We had a number of old but small elevators in central Ontario some years ago, since abandoned, and we hope to have a government elevator established very soon, because we have had a promise from the former Minister of Trade and Commerce (Mr. Robb) that he would come up and study the situation.

In conclusion I may say that while I could go on indefinitely—

Sir HENRY DRAYTON: Go on.

Mr. CHURCH: Thank you. The hon. member for West York says: "Go on." He can go on himself if he wishes, I will give him part of my time. I have prepared, after a great deal of study extending over pretty nearly a year, a voluminous brief, and if he or any other member from the Toronto district wishes to carry on, I shall be very glad to hand this brief to him, although I could go on at greater length proving the psychology of protection and the need of its being brought up-to-date.

Mr. W. G. RAYMOND (Brantford): Mr. Speaker, I have listened with very much interest to the hon. member for North Toronto (Mr. Church) I am sure his account of the trials of Toronto tax-payers affected the House quite visibly, and, with others, I wept at his recital. I have to say that the constituency which I represent is probably more affected by the changes in the tariff than any other constituency in the country, and therefore it may seem appropriate that, although the hour is late, I should say a few words upon the motion and the amendment before the House.

I was trudging along the government highway contentedly when I came to a fork in the road—not necessarily spelt with an "e" Mr. Speaker—and surveyed the path. I thought I would keep to the right hand road, for that to the left seemed to lead down to a land of swamp and muskeg, of sloughs and quagmires, where parties were chasing that ignis fatuus, that will-o'-the-wisp,—free trade. It has been said that imitation is the sincerest flattery, Mr. Speaker, so I will endeavour to follow the very good example set by the Acting Minister of Finance (Mr. Robb), in his speech, which was a model of brevity and conciseness, and explain in as few words as possible my position upon this question.

In the budget presented by the Acting Minister of Finance there is, of course, a great deal that must be a source of congratulation to everyone in the country; there is no denying it. For the first time for many years the account has been settled on the right side of our national ledger; we have been able now to produce a surplus that will go toward reducing the national debt, and I look upon it as the turning of an important corner in the country's financial history.

Taking off the sales tax on many articles entirely and reducing it on some others is something for which also we must add a word of congratulation to the minister.

As to what he said about the condition of our national railways, I have always regarded the system as one of the most important to this country. It is a system that we should all watch with the greatest interest, for it is not only the greatest railway system in the world, it is Canada's greatest national asset, and upon it depends all our avenues of wealth, of commerce and of industry, all our basic industries, and every other industry. The progress that has been made by our national railways in the last year and a half in efficiency, in the service they render, and in the improvement of their financial position, is phenomenal. From the time when the president, Sir Henry Thornton, was appointed, is not much more than a year and a half ago, and what has been accomplished in that time is extraordinary and is something that should be a source of hearty congratulation to every Canadian who takes an interest in his country and feels the importance of this great national asset.

One matter that I should like to have seen touched upon in the budget—I have mentioned it before—because I think it is one of the forms of taxation which touch everybody, and perhaps the general population almost equally, is the war stamp on letters. I should like it to have been possible for the Acting Minister of Finance to remove this tax. We are almost the only country, I believe, that retains it. I hope the time will come in the not far distant future when the general taxation of the country will be reduced by the removal of the war stamp on letters. It would be a boon not only to business men but to correspondents all over the country and would do away with the anomaly that I pointed out last year, namely, that letters can be sent cheaper to Mexico and the United States than to the Old Country and many of our British possessions.

These are matters of congratulation; but when it comes to changes in the tariff I cannot congratulate the minister, I cannot say that they quite meet with my approval in the same way, and I shall endeavour to show the reasons why, and in doing so to point out that those reasons are applicable not only to Brantford, the constituency which I have the honour to represent, and to the province of Ontario generally, but to the whole Dominion. A great American, Bayard Taylor, said, that as no two human beings observed any object by the same ray of light, it could not appear exactly the same to any two of them; and it seems to me that I observe these tariff changes from a different point of view to that of any other member. Therefore I shall endeavour to justify my attitude, and if it seems to you, Sir, that I am ploughing a lonely furrow, I assure you I shall endeavour to do so with a Brantford plough.

I may say that duties on agricultural implements have a kind of history which, if you will bear with me, I will briefly relate. I believe in the time which has been so often referred to by gentlemen opposite, when the National Policy was introduced, the duty on agricultural implements was not less than 35 per cent. That duty was from time to time reduced,—indeed on an agricultural necessity of production, binder twine, it was removed altogether, and the article made free. We had then two factories in Brantford, and there were

some 24 throughout the Dominion; to-day we have one factory in Brantford and there are two others in Canada, the other 21 having vanished. Now, when the duty on agricultural implements was reduced in 1919 it was 22½ per cent on ploughs and 17½ per cent on binders. An additional 5 per cent was taken off in that year. The duty on binders was reduced to 12½ per cent, and on ploughs to 17½ per cent. Representations were, of course, made in this House. At the same time farm tractors below a value of some $1,400 or $1,500 were made free. The result was that in the next two years $20,000,000 of farm tractors were imported, and the two farm tractor industries in Brantford went out of that line of business entirely. That so much affected the industry in Brantford, and the feeling of the people in Brantford at that time—I am speaking of five years ago—was such that the representative of Brantford then found it necessary to vote against the adoption of the budget of his own party, because he was a loyal Conservative and it was brought down by a Conservative government. He voted against that budget protesting against the reduction of the duties on this industry, because it seemed as though the agricultural implement industry had been singled out for reduction ahead of all other industries.

Two years ago, in 1922, a still further reduction was made of 2½ per cent on ploughs and 2½ per cent on binders, reapers and mowers, reducing the duty on ploughs to 15 per cent, and on harvesting machinery to 10 per cent. At the time of the general election when I became a candidate in 1921, we had felt these various reductions in the duties on our principal industries, because as you are aware the agricultural implement industry is the principal industry of Brantford. The present duties will affect some seven or eight of our largest factories in Brantford, and at the time of that election the question of the duty was, of course, a very, very delicate one, and it was felt that it was not in the interest of the city, and not in the interest of the workmen in the industry and those who had their homes there, nor in the interest of the factories, that the duty should be still further reduced, and when I became a candidate at that time a part of my platform was that I would oppose any further reduction in the duties on the industries of Brantford, any duties that would act in a way that would be inimical to the best interests of the factories or industries of Brantford. I did not think at that time that I would be called upon in the first year I came into this House, that was two years ago, to see a still further reduction of 2½ per cent, which, as you will remember, was made; but that having been made, it seemed to me that we had reached the irreducible minimum on agricultural implements. The duties were then lower than on any other articles of manufacture that were made in Canada, and I thought, and it was the opinion generally of the people of the city and of those engaged in the industry, that having reached that point it should be considered the irreducible minimum, and that no steps should be taken below that to give American competitors the advantage of obtaining access to our market. Now when that is the case, I think that every member of this House will see that my duty is clear as far as this budget is concerned, with reference to those resolutions that still further reduce the duty on agricultural implements.

Mr. SUTHERLAND: Was it not the policy of the party which the hon. member represents to remove the duty entirely from agricultural implements?

Mr. RAYMOND: Do you refer to the reduction made in 1919?

Mr. SUTHERLAND: I am referring to the tariff on agricultural implements.

Mr. RAYMOND: The tariff on agricultural implements in 1919 was reduced by the government then in power, and that was not the government of the party of which I am a member.

Mr. SUTHERLAND: I am referring to the issue in the last election. Did not the hon. gentleman support the policy of the party with which he is now associated, which was to remove the tariff entirely on agricultural implements?

Mr. RAYMOND: That was never a part of my policy. I will tell the hon. member from South Oxford (Mr. Sutherland), I was not in politics in 1919, if he refers to that platform. I never subscribed to it, I had nothing to do with it, and I was not in politics at that time. When I referred to that year I was referring to the reduction of the duty on agricultural implements that was made by another party, not the one I belong to, when they reduced the duty on ploughs from 22½ per cent to 17½ per cent and on harvesting machinery from 17½ per cent to 12½ per cent, when they made tractors free and swept two tractor industries out of Brantford, and led to the importation in the next two years of $20,000,000 of American tractors. The hon. member must know what party was in power

in 1919. With me it is not so much a matter of party; it is a matter of principle. My idea is this: Whatever party it comes from or came from, there is a lack and has been a lack of equity in the placing of the tariff on agricultural implements. I fail to see the reason why they alone of all articles in the tariff should be made to sacrifice; that is my position. It has been done not by one party, nor by the other alone. This party here took off 2½ per cent last year, but before that when there was not the same demand for it, when the West was not making the same appeal for it, the reductions I have spoken of were taken off in 1919.

Mr. SUTHERLAND: Was my hon. friend a candidate in 1919?

Mr. RAYMOND: No. When I told my hon. friend I was not in politics in 1919, he might have understood that I would not be a candidate because I could hardly be a candidate without being in politics.

Mr. MEIGHEN: Does the hon. member say the reductions of 1919, from 17½ to 12½ per cent, were unjustified?

Mr. RAYMOND: I say that from the Brantford point of view, when those reductions were made upon these Brantford industries, we resented them.

Mr. MEIGHEN: Then why did the hon. gentleman support a further reduction in 1922?

Mr. RAYMOND: I did not support a further reduction in 1922.

Mr. MEIGHEN: Not in the budget of that year?

Mr. RAYMOND: There was 2½ per cent taken off in the budget of that year, and it was opposed by me in committee, but it was only one item of a very important budget, and I did not see fit to oppose the budget on that account. Is that not satisfactory?

Mr. MEIGHEN: I think it is as skilful an answer as anybody could be expected to give.

Mr. RAYMOND: It is not so much the skill of the answer as its plain truthfulness that I am concerned with. This is not as far as I am concerned, a matter for skill at all. It is a matter rather for plain statement, and I say that was the condition then, and that was why it was I ran on the understanding that I would oppose any further reduction. I might say that that was why it was that when the right hon. leader of the opposition came to my constituency at that time, and spoke as he did very eloquently of the benefits of protection, we had a large number of idle men at that time, and it was remembered that this reduction had been made, and therefore it was felt by the people of Brantford that the agricultural implement industry had been singled out for all the free trade experiments that had been made in the tariff, and that is what appears to me not to be fair, and not to be equitable. I do not think that all the duty should be taken off agricultural implements, while other articles just as necessary just as essential, are left with the full protection of the tariff and enjoying all its benefits. Why, the right hon. leader of the opposition himself (Mr. Meighen) in his election address or in one of his speeches at that time made use of a sentence which appealed to me as very good. He said that system could not endure which stripped the protection off some industries and left others enjoying the benefit of protection. That was our position exactly in Brantford, and I think that was how his speech on that occasion did not have the effect that he wished it might have upon the electorate. I should like to point this out, that if hon. gentlemen are anxious, as they claim they are anxious, to help our basic industries; if that is the reason why duties should be taken off agricultural implements and saw-milling machinery—both of which are made in Brantford; I do not think there is a country in the world where lumbering is carried on to which that machinery has not been exported—at some time or other from Brantford—there is something that could benefit each one of these industries—these basic industries as they have been termed—and that would benefit the key industry, as I call the industry that makes the tools for them, and that has to do with our national railways. Now, hon. gentlemen who can look with such keen eyes into what the duty is, what the profits are, and what the dividends have been in the implement industry, who rise in this House and speak as though they were anxious to do a good thing for our basic industries, seem to have overlooked the fact entirely that all the supplies that go to our National railways have to pay a duty of 30 per cent, some of them I believe 35 per cent. Why not take the duty off locomotives, off railway cars, off the thousand and one other things that are used on a railway and not simply off ploughs. Hon. members opposite have said several times that they believe in justice and in a square equal deal for all, and special privileges for none. The feeling of a man who is working in an industry where his product, we will say, is sold in an unprotected market has been expressed many times by the hon. members of the Progressive party. They

have told us that they had to sell their products in an unprotected market where they cannot be helped and therefore must buy their goods cheap. Does not the same thing apply to a man who is working in a factory? It seems to me that if he is asked to abandon protection on the goods he produces, that then all that he requires for his own use, for his family's use, for his household use, as well as his raw material should be produced to him free or else he is not on an equal basis. Unless that is the case you will find yourself with the idea either of a certain rational and reasonable protection or else free trade. It must be one or the other it seems to me, and as far as I can view the matter I cannot see that it is in the best interests of this country to adopt the policy that is entirely free trade. I do not think it is although I have listened to the kind of academic discussion that we have here from the philosophers every year upon the question of free trade or protection. When the tariff is mentioned we are taken away back into the past and treated pretty much to the same discourse on Cobden and Bright. But this year we were taken back even as far as Walpole and Pitt. The hon. member for Brome (Mr. McMaster) began his speech this year, I think with Walpole and Pitt, and then went on from Cobden and Bright down to John Stuart Mill. I was pleased to hear John Stuart Mill. But I could not help thinking that it is the part of an advocate to take just what he wants and use it in his argument and leave what he does not want for somebody else. Why did the hon. gentleman quote John Stuart Mill to us? He never knew anything of Canada, he died before the industrial movement was born, he was not a business man, and yet the hon. gentleman quoted John Stuart Mill. The hon. gentleman in his speech quoted the dictum of John Stuart Mill and then he quoted his retraction. What does that matter to-day? Supposing we were to quote John Stuart Mill to the hon. member for Brome and tell him that according to the confession in his own autobiography he was an avowed atheist, would that suit the hon. member for Brome? Would he want to take his religious philosophy from where he took his business philosophy when we knew that John Stuart Mill knew nothing about business?

Mr. HOEY: I think it is only fair to the hon. member for Brome to state that in quoting John Stuart Mill he was replying to a letter quoted by the hon. member for Fort William and Rainy River (Mr. Manion).

Mr. RAYMOND: Very well. I do not know the exact circumstance that caused him to bring it in, but I presume that when he introduced the great philosopher's name he expected it would have some weight with us. I could not say what weight it could have in Canada, which he did not know, and on a business question when he knew nothing whatever of business. His principles were so peculiar and so erratic it seems to me he would hardly be considered an authority even on an economic question when that question is to be decided in Canada.

But with regard to John Stuart Mill, if the hon. member wishes to pay attention to that great philosopher I would respectfully refer him to his work on logic, his unrivalled work on logic. If he refers to that work he will find in it many times cautions against misstating a coincidence for a consequence; that one of the fatal mistakes in logic is to mistake a coincidence for a consequence. And when the hon. member tells us that in Britain, along in the times he mentions and close to the "hungry forties," trade began to grow and expand and increase by leaps and bounds—when he attributes that to free trade he will find if he looks a little more accurately into it that while it was a coincidence it was not by any means a consequence. Because there were authorities in that day who said that that wonderful progress came from what has been called "the industrial revolution"; that it came from the fact that English inventors in the textile industries, in the engineering industries, in the shipbuilding industry, and in others, made wonderful advances; that steam was applied to technical use and used in all her factories—used in all her factories to such an extent that writing at the moment Emerson said, "Steam may be called an Englishman," and that has been said by some to be the cause of the wonderful progress and advancement that was made in her commerce. It was also the time of Britain's colonial expansion, it was the time when Australia was settled, when business was opened up with India. These are some of the reasons given for the commercial advancement of that time. So I say it is impossible to prove that it was a consequence of free trade, although it was a coincidence. And when gentlemen say, as they have said in this House, that the United States has progressed and got wealthy in spite of and not because of protection it seems to me that we may take that just in the same way. I do not think the tariff has made or marred either of these two countries. I do not think it has been the one essential that made

the United States have a protective tariff, nor do I think it was free trade that made England so happy and prosperous as she was.

But these gentlemen talk of the wonderful attainments in England at that time, and the leader of the Progressive party (Mr. Forke) read a very delightful editorial from the Journal, I think it was, on "Hats off to Britain." It was a most delightful article and I was very glad to hear my hon. friend read it, I quite enjoyed it. But the gentlemen who take that side of the argument and use Britain for an illustration, lose sight of just one point of the British character—they seem to me to have completely lost sight of it. Why, the British tariff or the American tariff is only an incident. It is not a cause of a nation's success or failure; a tariff is a tax. I maintain that the quality that these gentlemen lost sight of is the predominant quality in the British character—it is their love of justice. They would not support a tariff that stripped the protection off one set of industries and left others enjoying it. So that if these gentlemen want to applaud Britain, if they really want to endorse and sympathize with the British character, never let them forget that one quality of justice. It was that quality of justice that led to all the great advances in that country, not perhaps commercial or financial; but it was the quality of justice that made them remove the disabilities on Roman Catholics. It was the quality of justice that made them enlarge the franchise in the Reform Bill of 1832. It was the quality of justice that made them in 1833 free the slaves and pay the bill out of their own pocket. The quality of justice should never be forgotten, and what I complain of in the treatment of Brantford in reference to agricultural implements is that I do not think that quality has been observed. Brantford seems to have been always made the goat for all the experiments in the treatment or reduction of the tariff, more than any other manufacturing city in Canada.

Some seven or eight of our largest factories are now affected by the reduction in the tariff. They do not like it of course, because it came at a time in their history when, on account of the depression in agriculture, their sales had been slow. The sales had fallen off in the United States, and consequently it was simply an invitation to the United States manufacturer to send his surplus to the Canadian market. The importation of implements increased 50 per cent last year, if I am not mistaken. They increased from $9,000,000 to something over $13,000,000, just at a time when our factories needed the money, and our workmen needed the work, in order to support their families. When the work was of the greatest importance we had the mortification of seeing between $13,000,000 and $14,000,000 worth of agricultural implements brought into the countrq, when in the year previous only about $9,000,000 worth of machinery was brought in. The same year some $7,000,000 worth of binder twine and $6,000,000 worth of tractors were imported, making some $26,000,000 that should have gone to employ Canadian labour, keep up Canadian homes and help support Canadian industries, but which went over to the United States to give employment to Americans. I do not think it is strange that that should seem mortifying to the people engaged in these industries.

People have said, and hon. members have sometimes said, "Oh, they pay no duty in the United States; why don't your implement factories export implements to that country?" Someone read something from a book which said we had exported over a million dollars' worth to the United States. Very good, we imported thirteen to fourteen millions at the same time. Some of the goods we send over there—and I say this without fear of successful contradiction—are sent over simply because they are absolutely unrivalled by any of the manufactures in the United States. One particular implement used in the southern part of the West, I think it is called a reaper-thresher, is a very exclusive machine, for which there is not much market in Canada, but a large market in the States, and a large number are made by the Massey-Harris Company, Toronto, and sent over there. With that exception, it is impossible for us to send much over to the United States, and why? Because when our salesmen go over there, and tell them these implements are just as good as theirs—and perhaps they recognize that they are—they will say, "Well, they may be good implements and may be just as cheap or even a few dollars cheaper, but I am 100 per cent American, and I want my money to go to the American people, to build up and support American interests." I do not know if it is necessary to point out the inference, but to me it is very plain, that we want in this country people who are rather more than 100 per cent Canadian, and I think if we had enough of that class we would never find such a large importation of implements as we had last year. Speaking of the importation of that large number of implements, it is an acknowledged fact throughout the West that there was a decided and determined propaganda urging the farmer to buy American implements. Part of it I believe came from the grain growers and part of it from other agricultural associations, and that led to an increased importation of some-

thing over 50 per cent more than the previous year.

I wish to make my position plain. With regard to agricultural implements, I have stated my position and why I feel it my duty at the present time to vote against any reduction in the tariff on these articles. When, as at present, the American manufacturers have a surplus of implements on account of the depression in agriculture in the United States particularly, it is simply an invitation to them to send more implements to this country. Again I considered that when ploughs were at 15 per cent and harvesting machinery at 10 per cent we had what might fairly be considered an irreducible minimum, and attention could be paid to something else that might require the duty to be taken off. If our national transportation is of the importance I think it is and when we have some $400,000,000 worth of rolling stock imported, if a part of the 35 per cent duty on that were taken off, it would conduce more to the general good of Canada of the basic industries, and of merchants and consumers alike; than to pick on the poor agricultural implement manufacturers and reduce the duties on their production, while other articles are left entirely untouched.

Referring to the amendment which has been introduced by the hon. member for Centre Winnipeg (Mr. Woodsworth) who stands in this House as the leader of the Labour party, I have always thought that that title was an anomaly, because I have heard views expressed in this House that I was quite certain were not the views of the Labour party of Ontario, and not the views of the Labour party at Brantford. The amendment is quite contrary to the policy of the Labour party in Canada, as expressed at page 55 of this book which I hold in my hand, which is the report of the convention of the great Trades and Labour Council, the chief arm of labour in the whole country. This is the annual report of the convention held in Winnipeg in 1921. Hon. members would think that when this labour convention was held in his own constituency, the leader of that party would be heard from, but his name is not in the book from one cover to the other. And why not? Because by the Trades and Labour Council of Canada he is not recognized as a leader or labour representative, and yet he stands in this House as a representative of labour, and as a representative of labour introduces that amendment. I want to say on behalf of the labour people of Brantford, and on behalf of the great industrial centre I represent, that the sentiments of the Labour party are not contained in his amendment at all but are quite contrary to it; and that the expressed opinion of the Trades and Labour Council, as set forth in one of the articles, is that they believe that a tariff should be maintained for the protection of Canadian workmen against competition from outside the country, and that no change should be made in that tariff until a tariff board has been established and the matter looked into with the greatest care. I am not quoting the exact words but they are in this book, if anyone wishes to read them.

Now in order that we may be exact, I have here a letter from the secretary of the Trades and Labour Council of Brantford enclosing a resolution dated 7th March, which reads:

> Moved by Del. Sevigny and seconded by Del. James:
> Be it resolved that in the opinion of the Trades and Labour Council of the city of Brantford the most satisfactory solution of the recurring tariff controversies, which have raised so much political confusion and instability in matters of trades and commerce, and thus of serious concern of the workers employed in industry, is to be found in the very clear and decisive declaration, repeatedly adopted by the Trades and Labour Congress of Canada in annual convention an extract of which appears in the annual reports of the Hamilton convention of 1919, the Windsor convention of 1920, the Winnipeg convention of 1921, and the Vancouver convention of 1923. Said extract reads as follows:
> "During past years there has been carried on a very active campaign by certain interests for the adoption of a free trade policy in Canada. To the numbers of workers engaged by Canadian branches of United States industries, and other industries claiming tariff protection as necessary for their existence, this question is a vital one. Your executive are of the opinion that tariff decisions should cease to be made a matter of political expediency and the decision for their maintenance or abolition, should be reached only after exhaustive inquiry and with a view to enabling the worker, in such industries to be paid proper wage standards without destroying the industry by unfair competition from industries outside of Canada. We recommend the formation of a tariff board, on which organized labor should have proper representation, created with full powers to deal with this subject in a similar manner to the powers exercised by the Railway Commission on railway matters."
> This resolution was unanimously adopted.
> Yours very truly,
> The Brantford Trades and Labour Council
> C. L. SEVIGNY.

That is really the Labour party of Ontario. A second letter is dated the 23rd April, 1924, which I would also like to have copied in Hansard and which is to the same effect, giving the platform of the Trades and Labour Council exactly. It reads:

> Mr. W. G. RAYMOND, M.P.,
> House of Commons,
> Ottawa, Canada.
>
> Dear Sir,—I am instructed by the Trades and Labour Council of Brantford to address you and request your serious consideration to the following resolution.
> Resolution: "Tariff decisions should cease to be made a matter of political expediency, and the decision for

their maintenance or abolition should be reached only after exhaustive enquiry and with a view to enabling the worker, in such industries, to be paid proper wage standards without destroying the industry by unfair competition from sources outside of Canada. We recommend the formation of a tariff board on which organized labour should have proper representation, created with full powers to deal with this subject in a similar manner to the powers exercised by the Railway Commission on railway matters."

The above resolution is the attitude expressed by the Trades and Labour Congress of Canada and we think a very fair and impartial attitude protecting all industry, labour, and consumer.

We are also willing to offer for your consideration, if you should think the resolution too severe, the adding of the advisory reading. We recommend the formation of an Advisory Tariff Board.

Hoping this will receive your consideration and be brought forward on the floor of the legislature for discussion.

Respectfully yours,

C. L. SEVIGNY.

The third letter that I have here is apparently an answer to some communication that they have had with the hon. member for Centre Winnipeg (Mr. Woodsworth). In it they do not appear to have quite agreed in the course of their communications with one another, but they state that at the last provincial election in Ontario the Independent Labour party, which, I believe, is the one represented by the hon. member for Centre Winnipeg, were not able to elect a single man, although they ran candidates in all the chief industrial centres of Ontario. It goes on to say that the party was so far disorganized by this that they did not hold their annual convention on Good Friday as they should have done. That was apparently, the writer says, the end of the party, and they even asked for no flowers at the funeral. I say then that, in order that the stand of the workmen of Ontario shall be rightly understood, this position should be rightly understood. They are not in favour of that amendment; they do not want it, and if there is that sympathy between labour as the Progressives have claimed from time to time in this House, they should vote against this resolution as every representative of the Trades and Labour party in Brantford would vote against it. I maintain—and I do so with respect—that the hon. member for Centre Winnipeg stands in a false position in this House when he pretends to represent the Labour party of that part of Canada from which I come, and I know whereof I speak. Therefore, from what I have said, hon. members will imagine that I cannot vote for the amendment.

In conclusion, let me say just this, that I think the true aim and policy of all people in this country is to arrive at some kind of a policy on which we can be agreed. It is certain that if we follow in one direction so that certain parts of the country are under a free trade system, then, in equity and in justice, the whole country will have to go on with that system. I am aware that at the present time efforts have been made by the manufacturers to make representations to the government that if certain concessions were made on their raw material, that would help them to stand the cut in the duty, and I believe the government have done what they can to meet this. But in spite of that, I think and I maintain now seriously that the duty as it existed should be considered as an irreducible minimum upon agricultural implements. I think we should endeavour to establish a board of tariff reference, as the Labour party have asked for—and it has been part of their platform for years— a board which, of course, we understand, could not have any legislative power, which could not impose or take off tariffs, but which could obtain from an independent source whatever information was required by the government of the day and place before it that information in order that it might make for the country the most scientific tariff possible.

I am not going to be drawn into the old argument of free trade and protection, because I do not think free trade is sensible or practical. It is a mere theory; it is something that does not exist. I do not believe, if the hon. member for Brome (Mr. McMaster) were Minister of Finance, he would go any nearer free trade probably than the present budget, in spite of all his protestations. There are certain things that exist in theory and that, in theory, are very nice, but in practice are utterly impossible. One of them is universal peace. Who would find fault with the man who advocated universal peace and loved the idea, and yet what word was more hated during the war than the word "pacifist"? It was hated just as much as the word "traitor", because when the country was fighting for its very life, we knew that the pacifist was almost as much an obstruction to our success as the traitor.

Another thing that great professors and minds have sought after is perpetual motion. No sane man ever started after perpetual motion and remained sane very long. No man ever attained perpetual motion, unless, perhaps, the hon. member for North Toronto. (Mr. Church). I mean to say that no man ever followed the pursuit of that subject and retained his sanity. I am rapidly coming to the conclusion that the question of the-

oretical free trade is very much the same. When I listen to those men who follow it and who rise and discourse here eloquently upon free trade and its advantages, I often think of what has become of that other will-o'-the-wisp, perpetual motion, and those who have pursued it, many of whom you will find in lunatic asylums. I hope that will never be the case of those men who advocate that financial and fiscal policy for our country.

What we want is a policy that will build up the industries of the country, that will tend to the development of its resources, that will bring from northern Ontario those vast treasures that were so eloquently described by the hon. member for Nipissing (Mr. Lapierre) in his admirable speech. What we want too. is a tariff policy that will protect labour in this country, that will protect the labouring man, and as labour is added to every article from the raw material to the finished articles, let there be enough protection on that man in the way of a tariff that his industry may be protected. In that way we can in time develop this country so that the raw material that we are now exporting to other countries and that they are making money on by manufacturing, we shall be able to manufacture in this country. I do not advocate a policy of exclusion; I do not say that we can be absolutely self-contained. But Canada should export manufactured goods instead of raw material, allowing somebody else to export the manufactured goods, because we know that the one who exports the manufactured goods makes by far the larger profit.

Mr. FORKE: Why can we not export the manufactured goods?

Mr. RAYMOND: I say: Why can we not? Those that we have to export we can and do export; but when it comes to the raw material, the hon. member might have heard the hon. member for North Toronto a few minutes ago instance asbestos down in Quebec, how that was dug out of the bowels of the friendly earth, how we sent it to the United States where some $9,000,000 worth was turned into a value of $60,000,000.

Mr. FORKE: Why do we send it to the United States?

Mr. RAYMOND: Because we have no factories here to manufacture it. We want to develop those factories, those industries. If we do not do that, we shall never be able to export the manufactured article, because they have the factories in the United States and we shall have to send the raw material to their factories to be manufactured. The difference between the American tariff which gives them protection and ours was rather hidden by the hon. member for West Calgary (Mr. Shaw) this afternoon, when he said that they collect in duties $450,000,000 and we collect $105,000,000. What is the truth about the American tariff? If hon. members examine it for themselves, they will find that articles that the Americans want in free they allow to come in free; but as regards those articles which they do not want, you cannot climb over their tariff wall. Their duty on woollens is 100 per cent; their duty on cottons and textiles is over 50 per cent. As regards the duty on everything which they want to make and on which they fear the competition of Britain or Germany, they impose such a tariff that no imports appear on their list at all. To-day we import cloth in worsted and tweeds, about as many square yards as they import into the United States, because where we have a duty of 25 per cent, they have a duty that runs from 75 to 100 per cent. That is why that article does not appear to swell the amount of their imports.

But to go back to the development of Canada, we want a policy that will develop these industries, that will develop factories to manufacture these raw materials, that will protect the labouring men working in Canada, not unreasonably, not irrationally, but so as to give them a chance to carry on their business in this country. If that is done, as it may be done equitably, I believe the tariff board such as is asked for by the Trades and Labour Council, to act in an advisory capacity to the Minister or Acting Minister of Finance, will be found to be of great assistance. With such a policy, and with the wonderful natural resources of the country developed, then I think we should enter upon the era of prosperity that we are all looking for. It is true that the returns now show in certain respects that it is even coming upon us; there is a sign as though trade were now beginning to improve in this country. I always like to look at these situations in a hopeful way; I do not like the shadows in my path to be any that I cast myself, either from imagination or reality. I think that times are mending and business will improve; and such a tariff policy, so framed, so formed to protect labour and industry, would act wonderfully in the development and expansion of our trade, our factories and our natural resources.

Mr. G. A. BRETHEN (East Peterborough): No matter how we may differ in our conclusions from the hon. member for Brantford (Mr. Raymond), we all listen with great interest to his addresses and we certainly agree that they are kindly and that the hon. member's earnestness for the city he represents would draw tears almost from the very stones themselves. However, what is the situation in Brantford? I am reminded that just a few weeks ago a certain delegation from the city of Brantford, including these very same implement manufacturers of which the hon. member has spoken and to whom he is so admirably loyal, arranged several meetings with different groups in this House including a number of representatives of the Progressive party; and the question occurred to me whether these implement manufacturers of Brantford were as loyal to the hon. member who represents them as he has been to them. To our surprise, after waiting for half an hour or more, the implement manufacturers from Brantford who were on this delegation failed to show up. However, a certain manufacturer from the city who undertook to speak for them stated their case, but I do not know that he succeeded in putting it very well before us. Several questions were asked, among which were the following important queries: First of all, what is the condition of the different manufacturing concerns in Brantford, with special reference to the binder twine industry? To this question that gentleman was forced to confess that the binder twine industry, although on the free list and without any protection, was the only manufacturing concern in Brantford that was running on full shift and making full speed ahead. The question was next asked him: What is the problem of the manufacturers in the city of Brantford—is it a question of protection or one of lack of sales? Further, if any government in this country were to increase protection would it have the desired effect of giving impetus to the manufacture of implements in Brantford, or would it solve their problem? In reply to this question he was also obliged to confess that the problem was one of lack of sales and that not only would protection fail to solve it but that it would only aggravate the situation; in other words, if sales were the result of conditions favourable to buying, an increase in price due to increase in protection would simply aggravate the situation by reducing the purchasing power of the consumers. Now, there is a direct relation between the implement manufacturer and his purchaser, who in this case is the Canadian farmer; and the real problem is not so much one of protection as one of inadequate purchasing power on the part of the farmer. So that anything we can do in this House to increase that purchasing power will indirectly bring added prosperity to the manufacturer.

We have to-day been discussing in this House the fiscal policy brought down by this government, which has aroused unusual interest throughout the country. As the hon. member for Winnipeg (Mr. Hudson) showed this afternoon, while some two-thirds of the electors of this country supported in the last election candidates advocating a line of action similar to what is proposed in the policy of this budget we find that until now the government has taken little action in that direction. For two sessions in this House we have had budgets that have only made a gesture towards tariff reduction, and this is the first budget brought down by the present government that has actually budged. Because, therefore, this budget follows a line of action which we in this part of the House believe will not only promote the best interests of the agricultural community but will also improve the condition generally of the people of Canada, we feel more kindly towards it than we have done to any budget that has been presented to the people for several long years. While we can and do agree with our friends to the right that the reductions proposed by this budget may provide little immediate relief to the producers of the country through the medium of the reduction on the implements of production, at the same time we deny that the proposed changes will have either the disastrous or even harmful effects upon the makers of these implements which some of our friends to the right prophesy. It is true that certain manufacturing concerns in this country are in a bad way financially. But the crying need of the Canadian manufacturer to-day is sales; his most remunerative market is the home market, that is to say, Canada, and particularly agricultural Canada. His sales bear a direct relation to the purchasing power of his customer, who in the case of the implement manufacturer is the Canadian farmer. No group in this House is bold enough, facing conditions as they are, to suggest that the condition of the Canadian farmer is in any way bright; in fact, his purchasing power is extremely limited. And such being the accepted fact in regard to the condition of the customer, what is the proper course to pursue to provide the remedy? Some like the hon. member for Brantford would suggest more protection. But this, we believe, would only aggravate

the trouble. Higher protection, if it means anything, means the power to increase the selling price of the protected goods. Would anyone be bold enough to say that by raising the selling price we are going to make the purchaser buy more freely? Fifty years of this policy has proven the fallacy of attempting by such a system of taxation to make the country rich. I insist, Mr. Speaker, that you do not increase the taxable wealth of Canada by taxing a gentleman in East Peterborough and giving the benefit of that tax to a gentleman in Toronto. Such a course prevents the natural and honest distribution of wealth, but it does not create or augment wealth.

Let me illustrate the very important relation which exists between our producers and consumers. Last September I paid a visit to the western provinces, including British Columbia, and from Kamloops I took a motor drive of 370 miles through the Okanagan valley. There to my surprise I learned firsthand from the fruit growers that their condition was probably the most discouraging of that of any other producers in the Dominion. I was very sorry to learn this because the evidences of great production were to be found everywhere. One particular fruit grower told me he had cut down his peach orchard and was planting it with apples, and although the fruit was of immense size and quality only one-half of the peach crop would be harvested. He added that only one-half of the cherry crop had been harvested. In asking for an explanation I got the following, and I give it for what it is worth. I was told that the fruit industry in British Columbia was built up upon the prairie market when the prairies were in a more prosperous condition than they are to-day, and that when the purchasing power of the prairie farmer failed the result was instantly reflected in the returns to the fruit farmer of British Columbia. Talking to a man on the train who had some experience in growing fruit and also in selling it on the prairies, he told me: "It is just this way, when the prairie farmer is properous he does not go into a store and ask for one or two baskets of peaches, as you do in Ontario; he says to the storekeeper, "What are your peaches a crate today?" And upon being told the price he added: "I will take four or five crates.'" The fruit industry of British Columbia was evidently built up on that kind of market. But in a year like last, when in spite of a bumper crop, the largest in the history of Canada, he finds his cash returns depleted to the extent of seventy million dollars, somebody besides the farmer is going to feel it; it is going to be reflected in some other industries besides farming, in fact it will be reflected in every industry of this country.

This question of sales has a very important bearing upon every industry. A week or so ago while I was down in the city of Halifax I noticed in one of the local papers this headline: "Cross Fertilizer Company Goes into Liquidation, due to the Reduction of the Tariff." I thought the budget was acting very quickly on the fertilizer industry, so I made inquiries. To my surprise I found the explanation given by the farmers was that for the past couple of years this particular company had been unable to sell their fertilizer because it was unsuitable, not being water soluble, and after the farmers had tried it and got no results they simply quit buying. Thereupon the fertilizer company went into liquidation not because of any lowering or raising of the tariff, but simply because they were turning out a product which the farmers would not buy. But see the camouflage of the situation!

I was interested to-night to hear the member for Brantford (Mr. Raymond) refer to farm tractors. We hear in this House that the manufacture of tractors ceased in Brantford and in other manufacturing centres of Ontario because of the removal of the duty. I have often wondered if that were really the explanation. In my trip through Manitoba, Saskatchewan and Alberta last year I only once saw anything that looked like a tractor operating on summer fallow, and it was so far away that I could not be certain whether it was a tractor or not. I saw several threshing machines running, but the great work of the tractor in past years on the prairies was conspicuous by its absence, the reason being not because in war time days the tractor was not considered a valuable asset to the farmers of the West, but because in these days when horse flesh is very cheap—practically unsaleable—when harness is cheaper and when horse feeds net the farmer little or nothing at his own barn, it does not pay him to operate tractors, and therefore the farmer has ceased to buy them. As the manager of the Brandon experimental farm expressed it to me, "We are past the tractor stage." The very fact that all the farmers of the West have ceased buying tractors would seem to me some explanation why the tractor industry in this country should cease—lack of sales. Possibly that had as much or greater influence on its cessation than the removal of the duty.

The prosperity of industrial Canada is certainly based upon the prosperity of agricultural Canada, and the sooner this truth is recognized the quicker will come that national prosperity we so fondly look for. Without any bitterness in my heart to our great industrial magnates, I am reminded that the present situation in which they find themselves, due to the lack of sales, in other words, due to the lack of purchasing power of their best customers, the Canadian farmers, is very largely the result of their action in 1911. In that year there was offered a market to the Canadian farmer that to-day the people very generally believe was a real market and would have meant very much in bettering our agricultural condition. But what did we find? At that time these very industrial magnates and financiers, although this was a question of reciprocity on natural products and, in a sense was none of their business, butted in and robbed the farmer of that market and of that industrial encouragement which would have been theirs. And so, to-day we find these very men, largely as a result of their action at that time virtually frying in their fat. The crying need of the hour is to make the basic or primary industries of this country prosperous. Then general prosperity will follow as naturally as day follows night. By attempting to bridge the chasm between the high cost of everything which the farmer buys and the low price he receives for everything he has to sell, the government in this budget I believe has made an honest attempt to bring about better conditions and greater prosperity for the people of Canada. I am not one of those who have altogether lost faith in Canada. Neither do I belong to that cult in this House who seem to think because we have lost a good many real Canadians to the country to the south of us that we should advertise in this parliament to all the world that Canada is going to the bow-wows. I have here a letter from a young man who was employed for some years in the Civil Service and who a few weeks ago considered that he could better his condition by seeking employment in the great city of Detroit. After he had walked the streets of Detroit for two weeks he wrote imploring me to try and find him something in the way of a job. This is what he says: "Employment is very scarce here. Hundreds, yes thousands, walking the streets." This bears out the knowledge I have with regard to certain other young men who left our locality for different places in the States, very many of whom, at least fifty per cent, are now back home again because they could not get work. Some of them have already secured jobs of a permanent nature at home, which indicates that they have not the slightest intention of going south again to try their luck. I have here a clipping from the Toronto Globe of April 24 last:

> The only large cities in the United States in which there is still an acute shortage of houses, accompanied by increasing rents, are Philadelphia, Chicago and Pittsburg. Canadian building trade mechanics who have been taking part in the building boom across the border will soon be coming home again.

I cannot help believing that much of the emphasis that has been placed on this emigration to the United States has been done purely from a partisan attempt to discredit the work of this government, and I would say that if the tariff policy of this government has had anything to do with sending these men to the States in the last two years, the onus must be shared equally by both the old parties because the present budget represents the first real distinction in the fiscal policy of the two old parties for several years.

I am about to ask a question that I wish I could answer: What is wrong with Canada? I think if some of the brightest minds in this House would pay to this question the attention it deserves, instead of wasting their efforts in fighting their election battles over again, it would be far more in the interest of Canada. What is wrong with Canada? The increase in the national debt from $336,000,000 in 1913 to $2,453,000,000, which was the figure that the Acting Minister of Finance (Mr. Robb) gave for 1923, cannot fail to mean increased taxation, and not only an increase in direct taxation but a much greater increase in indirect taxation, and this increase in indirect taxation I believe is reflected in the increased cost of distribution, in the increased cost of manufacture, in increased labour costs, rent costs, and so forth, which combined to bring about that very grave situation in Canada, the high cost of living. The protective tariff does not benefit the producer of our wheat, of our meats, our fish, or our cheese, because these products are sold in the markets of the world, and while a very large percentage of these products may be consumed in Canada it is the exportable surplus that sets the price. A lower cost of living is the only salvation for such a producer in the face of world competition.

I believe, Mr. Speaker, that this is the time for a national audit. Can we cut the cost of government, or the high cost of distribution that is throttling the very life of this country? Can our House of Commons and

enate be reduced to a size commensurate with our ability to pay? I believe that the co-ordination of portfolios, that of the Solicitor General with the Minister of Justice, for instance, is just as important as the co-ordination of railroads. I would also suggest to the government that the intent of the resolution of the hon. member for Portage la Prairie (Mr. Leader) be put into effect, and the war time indemnity be reduced to harmonize with the present condition of affairs. Economy, like charity, should begin at home, and no strong appeal for economy in the country at large can come without the members of this House showing their willingness to blaze the trail by attacking their own purses. I have heard it suggested in this connection that not merely the present indemnity but possibly an increased indemnity is necessary to attract the best men to this House. That I do not believe. I do not believe that the lure of the dollar will ever in this country, or in any other country, appeal to the truly great man like the call to service. In coming up from Halifax with the rest of the Progressive members a week or so ago we had the good fortune to meet an Australian on the train, and upon our invitation he gave us a very interesting talk upon that dominion. He was well informed and I doubt if any press agent was better fitted for the task of placing his country in a good light before the world at large. That experience made me think that probably we might follow the Australian gentleman's example and apply the same attitude to our own country. Let us have faith in Canada. Let us, if I may be allowed to use the term "Sell Canada to Canadians." I am not pessimistic enough to believe that because they have cheap labour in France, or Italy, or some other European countries that we cannot in Canada compete with it. As the Australian already referred to said, "In Italy they just muddle along in agriculture. The idea of one man leading a horse attached to a plough, and another man holding the plough handle!" And just such conditions as these render it impossible for European countries, even though they have cheap labour, to compete with the efficient agriculturists of Canada.

I believe that the greatest asset of the National railroads of Canada is the patriotic spirit of the people of the Dominion toward their own railway system. I quite agree with the hon. member for Brantford (Mr. Raymond), when he suggests that we should be 100 per cent Canadian, and whenever we can buy Canadian made goods at anything like the same price as foreign goods I believe we should do so. It will be this "get together spirit" on the part of the man on the farm, the man in the shop, and the man in the home to buy Canadian made goods—because they are the best and because they were produced by Canadians,—that is going to solve, or help very largely to solve, the financial and economic difficulties through which Canada is passing.

On motion of Mr. Ross (Kingston) the debate was adjourned.

On motion of Mr. Graham the House adjourned at 11.28 p.m.

Tuesday, May 6, 1924

The House met at three o'clock.

COMMITTEE ON RAILWAYS, CANALS AND TELEGRAPH LINES

Mr. F. S. CAHILL (Pontiac) presented the third report of the select standing Committee on Railways, Canals and Telegraph Lines.

Mr. CAHILL moved:

That, in accordance with the recommendation contained in their third report, the select standing Committee on Railways, Canals and Telegraph Lines be given leave to sit while the House is in session.

Mr. SPEAKER: By unanimous consent, of course.

Hon. H. H. STEVENS (Vancouver Centre): I offered my objection to this when the motion was presented in the committee to-day, and I desire to repeat my objection now. My objection is this—and I think it will appeal to the Prime Minister and the government—that we have a very important and large committee sitting while the House is in session, and, as far as I can see, there is no particular rush for the bills that are immediately before the committee. I think that about half of the Canadian National Railway bills passed the committee this morning, and the committee passed several other bills, as the report will show. There has been no delay, in fact everything was done to facilitate the passing of the bills this morning. Under these circumstances, I see no reason whatsoever why this committee should sit while the House is in session. I think that we ought to bear in mind that the privilege of sitting while the House is in session should be granted to a committee only under extraordinary circumstances; that is, when we have a large committee, or when they have an important question to deal with, such as the revision of the Bank

Act last year, or any matter of major importance. The ordinary routine work of a House committee should not occasion the sitting of the committee while the House is in session. Personally, I very strongly object to it.

Mr. CAHILL: Many members of the committee are anxious that the business of the House should be proceeded with as rapidly as possible. As my hon. friend from Vancouver Centre knows, it is necessary to have a number of the officials of the Canadian National Railways present at the committee meetings. It is true, a large number of bills were passed this morning, but they were passed largely with the consent of members of the opposition who have been opposing these bills. It would hardly be possible to get through in the two hours in the morning, without taking up a very long time; and in every case the representatives of the railway would have to be asked to come here. I do not think it is the desire of the government nor of the committee that the work should be rushed any more than is necessary even if this resolution be passed. I think we can have an understanding with the opposition that we can proceed with the bills while the House is in session, so that we can keep the officials of the railway here and continue the work from day to day until it is completed, at whatever time would be suitable for the members of the opposition. I do not think it would be necessary to sit this afternoon, as suggested by the committee, but I think the motion should be allowed to go through so that we can have the officials here to continue the work, instead of calling them for a morning session once or twice a week.

Mr. SPEAKER: The motion can only be passed by the unanimous consent. If the House is unanimous the motion will carry; if not, notice of motion will have to be given. Is it the pleasure of the House to adopt the motion?

Mr. MEIGHEN: No.

Mr. SPEAKER: Lost.

Mr. CAHILL: I beg leave to withdraw the motion, and give notice of motion.

Mr. SPEAKER: The motion has been declared lost. Another notice of motion can be given later.

UNITED CHURCH OF CANADA

Petitions were presented from certain members of the following congregations, severally praying that the proposed legislation incorporating the United Church of Canada be not enacted:

St. Stephen's Presbyterian Church in British Columbia,—Mr. Clark.

Knox Presbyterian Church, Red Deer, Alberta; St. Andrew's Presbyterian Church, Olds, Alberta. —Mr. Speakman.

Collingwood Presbyterian Church; West Nottawasaga Presbyterian Church; Nassagaweya Presbyterian Church; Duntroon Presbyterian Church; Nottawa Presbyterian Church; Penetanguishene Presbyterian Church, all of the Province of Ontario,—Mr. Wilson.

Chalmer's Presbyterian Church, Toronto.

Petitions were presented from certain members of the following congregations and bodies severally praying that the bill now before the House to incorporate the United Church of Canada be passed during the present session:—

Deer Park Presbyterian Church, Toronto; Wesley Methodist Church, Montreal, Quebec; Methodist Churches at Walsingham, St. Williams and Port Rowan; Union Churches at Monticello, Campania and Tarbet; Wellington Street Methodist Church at London; Mount Zion and Rockford Churches at Townsend Township; Methodist Churches at Mallorytown, all of Ontario; Union Church at Tregarva, Sask.; Methodist Church at St. Mary's, Ontario,—Mr. Maybee.

Bloor Street Presbyterian Church, Toronto; Hope and Ebenezer Methodist Churches at Alvinston, Ontario; United Church at Marmora; Methodist Church at Bear River, Nova Scotia; Presbyterian Church at Esterhazy and Little Harbour, Sask.; Methodist Church at Ford, Ontario; Union Church at Wananesa, Manitoba; Methodist Church at Flinton, Ontario; St. Andrews Presbyterian Church, Winnipeg, Man.; Methodist Churches at Cottam and Aberna,—Mr. Stevens.

Davenport Presbyterian Church, Toronto; Methodist Church, Wyoming, Ontario; United Church at Moosbank, Sask.; Methodist Church at Baldoon, Ontario; of Isaac Bowman and others, Miami and other places; Methodist Church at Ancaster, Ontario,—Mr. Lucas.

Members of the Presbyterian Church at Toronto, Ontario; Methodist Church at Allenford, Ontario; Presbyterian Church at Rollingdam, N.B.; Methodist Church at Tiverton, Ontario; Presbyterian Church at Oakner; Fairmont Ave. Methodist Church, Montreal, Quebec; Union Church, Anglia, Sask.; Young Methodist Church, Winnipeg, Manitoba; Presbyterian Church, Waweig, N.B.; Methodist

Churches at Prospect, Manchester and Prince Albert, Ontario; Presbyterian Church, Montreal, Que.; Methodist Church, Lansdowne, Ontario, St. Mathews Presbyterian Church, Montreal, Que.; Presbyterian Church, Pointe Claire, Que.; United Presbyterian and Methodist Churches, at Cedar Hill; Methodist Church at Antrim, Ont.; United Presbyterian and Methodist Churches, Pakenham, Ontario; Methodist Church, Gesto, Ontario; Methodist Church, Granby, Quebec; MacVicar Presbyterian Church, Montreal, Que.,—Mr. Caldwell.

Methodist Church at Southampton, Ont.; Union Church at Hawarden, Sask.; Methodist Churches at Greenwood, Ont.; Mary E. Mather and others, of Melbourne, Ontario; Memorial Methodist Church at St. Catharines, Ontario; Union Church at Cabri, Sask.; Methodist Church at Point Edward, Ontario; Kew Beach Presbyterian Church, Toronto, Ontario,—Mr. Halbert.

Central Methodist Church at Sarnia, Ontario; First Presbyterian Church, Alix, Alberta; Methodist Church, Vankleek Hill, Ont.; Union Church at Donville, Quebec; Presbyterian Church, Norwood, Winnipeg, Man.; Springfield Church, Springfield; Presbyterian Church, Oakney, Man.; Congregational Church at Point St. Charles, Montreal, Quebec; Methodist Congregations at Waterloo and Warden, Que.; St. David's Presbyterian Church, Toronto, Ontario; Methodist Church at Armstrong, B.C.,—Mr. Charters.

United Church, North Rosedale, Toronto, Ontario; Methodist Church at Gananoque, Ontario; Presbyterian Church at Sonya, Ontario; Session of the Presbyterian Church at Clinton, Ontario; Methodist Church at Shiloh; Methodist Church at Sharon, Ontario; Port Simpson, B.C.; Methodist Church at Tillsonburg, Ontario; Congregation at Ethelbert, Manitoba; Methodist Church at Sunny Brae and Cherryfield, N.B.; College Street Methodist Church at Toronto, Ontario; First Congregational Church at Granby, Que.; Methodist Churches at Salem, Peniel and Manilla, Ontario; Rosemount Methodist Church, Ottawa; Wesley Methodist Church at Toronto, Ontario; Knox Presbyterian Church, Miami, Manitoba; Methodist Church at Paris, Ontario; Presbyterian Church, Strathclair, Man.; United Methodist and Congregation Churches at Georgville and Tomafobin and Fitch Bay, Quebec; St. Cuthbert's Presbyterian Church at St. Lambert, Que.; Union Church at Rossburn, the Methodist Church at Liverpool, N.S.; Methodist Church at Morven, Switzerville and Violet, Ont.; Griffen Union Church, Griffen, Sask.; Dominion Methodist Church, Ottawa, Ont.; McDougal Methodist Church, Winnipeg, Man.; Saltcoats United Church at Castleton, Sask.; United Churches at Fillmore, Crieff and Huronville, Sask.,—Mr. Hoey.

Methodist Church at Adolphustown and Sillsville, Ontario; Augustine Presbyterian Church, Winnipeg, Man.; St. Andrews United Church, Winnipeg, Man.; St. Pauls Methodist Church at Harrowsmith; Holleford Methodist Church at Holleford and Hartington Methodist Church, Ontario; St. James Methodist Church at Simcoe and the Methodist Church at Lynnville, Ontario; Presbyterian Church, Bay Fortune, P.E.I.; Presbyterian Church, Talamagouche, N.S.; Presbyterian Church at Souris, P.E.I.; Methodist Church, Ormstown, Que.; Victoria Presbyterian Church, Toronto, Ont.,—Sir Henry Drayton.

[Mr. Speaker.]

SINGAPORE NAVAL BASE

Right Hon. W. L. MACKENZIE KING: I beg to lay on the Table of the House return to an order dated 9th April, 1924, for—

Copy of all correspondence, telegrams, writings, or other documents, passing between the Department of External Affairs and the British government with respect to the naval base at Singapore.

AGRICULTURAL CREDITS

Hon. J. A. ROBB (Minister of Immigration): I beg to move that the report of Dr. Tory, tabled on the 15th April, be referred to the committee on Banking and Commerce.

Motion agreed to.

PRIVATE BILLS

FIRST READINGS

Bill No. 79 (from the Senate), for the relief of Douglas Lewin.—Mr. Boys.

Bill No. 80 (from the Senate), for the relief of Mary Quinn.—Mr. Wallace.

Bill No. 81 (from the Senate), for the relief of Marie Darling Irving.—Mr. Wallace.

Bill No. 82 (from the Senate), for the relief of Margaret DeMello.—Mr. Wallace.

Bill No. 83 (from the Senate), for the relief of Mary Caroline Dooley.—Mr. Stewart (Leeds).

Bill No. 84 (from the Senate), for the relief of Barbara Gibb Duncan.—Mr. Martell.

Bill No. 85 (from the Senate), for the relief of Nellie Sinkins.—Mr. Martell.

Bill No. 86 (from the Senate), for the relief of Catherine Jean Livingstone.—Mr. Sheard.

Bill No. 87 (from the Senate), for the relief of Alice Maud Knowles.—Mr. Sheard.

CRIMINAL CODE AMENDMENT—HALF BREED SCRIP

On the Orders of the Day:

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): I wish to call the attention of the government to an order that appears under Public Bills and Orders, namely, the third reading of Bill No. 5, to amend the Criminal Code, by the hon. member for Edmonton (Mr. Kennedy). This is a bill which has been introduced, I think, every year since this parliament opened. It is a bill which treats of a subject that is more appropriately dealt with in a government measure. It does not look as if, in the ordinary course, we are going to reach it this session. I am not aware of the fact, but it may have been called and not gone on with. I would suggest to the government that they should take this legislation over. Nobody in this House that I know of is opposed to it. Why, then, should we not get rid of this annual whine on this subject and have it disposed of?

Hon. ERNEST LAPOINTE (Minister of Justice): I do not know that it is necessary for the government to assume the paternity of the bill, but I agree with my right hon. friend that an opportunity should be given, by unanimous consent of the House, to have the bill read a third time.

CIVIL SERVICE SUPERANNUATION

On the Orders of the Day:

Mr. E. R. E. CHEVRIER (Ottawa): What is the intention of the government, with reference to the proposed Civil Service superannuation measure?

Hon. J. A. ROBB (Acting Minister of Finance): My hon. friend will recall that on April 15, the government gave notice of a resolution to advance this measure, and just as soon as the budget is disposed of we propose to proceed with that resolution and pass the bill on to a special committee for consideration, where all interested parties will have an opportunity of being heard.

Mr. C. A. GAUVREAU (Témiscouata): In case the Superannuation bill should not pass, does the government intend to extend the Calder Act for another year?

Mr. ROBB: That will be a matter for consideration later on as we proceed in the session and see what progress will be made in committee.

POSTAL SERVICE SALARIES

On the Orders of the Day:

Mr. JOS. T. SHAW (West Calgary): I should like to ask the Prime Minister, what is the present position in connection with the application of the government postal employees for a revision of their salaries?

Right Hon. W. L. MACKENZIE KING (Prime Minister): The matter is under consideration; I think that is about all I can say.

LAUSANNE TREATY

On the Orders of the Day:

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): When are we to have any further illumination on this subject of the Lausanne Treaty correspondence? I thought my hon. friend (Mr. Shaw) was likely on that again.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I think I stated that as soon as the budget debate was over, I proposed to take up the estimates of the Department of External Affairs and that we could then deal with the matter very fully.

Mr. MEIGHEN: I thought the Prime Minister would make a statement on the matter later on when correspondence under way had reached a further stage.

Mr. MACKENZIE KING: I have been endeavouring to get the British government's consent to have the correspondence laid on the Table of the House. I am still hoping it will be possible to get that assent, but up to the present time I have not been able to obtain it.

Mr. MEIGHEN: I notice the British government keep repeating that they are trying to get the consent of the dominions. Where is the trouble?

Mr. MACKENZIE KING: Having noticed the despatch to which my right hon. friend refers, I sent a cablegram this afternoon to each of the dominions to ask if they had any objection to this correspondence being laid on the Table, that is, such of it as relates to Canada and Great Britain, and I hope the replies received will indicate which of the dominions is opposed to having it laid on the Table.

Mr. MEIGHEN: The point is this: This is correspondence, so far as we are concerned, between Canada and the British government. We are now in the position that both governments are ready to lay it on the Table and make it public. Does the Prime Minister take the position that, with both governments consenting, we have to get the consent of every other part of the Empire?

Mr. MACKENZIE KING: I do not take that position, but I understand that is the position which the British government takes. I hope to be able to inform the British government that the other dominions acquiesce in the desire of Canada to have the correspondence placed on the Table of the House, either here or in Great Britain, or possibly in both places.

Mr. MEIGHEN: If Great Britain is willing and we are willing, what difference does it make about the other dominions?

Mr. MACKENZIE KING: The right hon. gentleman informs me that the British government is willing. The only reference I have seen to the effect that the British government is willing is the one that comes in today's news despatches stating that they are willing, but that the other dominions will have to be consulted. I hope the other dominions will agree to have the correspondence placed on the Table. I think the whole of it should be laid on the Table both here and in Great Britain.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed from Monday, May 5, the debate on the motion of Hon. J. A. Robb (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into committee of Ways and Means and the proposed amendment thereto of Mr. Woodsworth.

Mr. A. E. ROSS (Kingston): Mr. Speaker, much has been said in this debate by way of congratulation to the Acting Minister of Finance (Mr. Robb); but for my part I can find only admiration for his apparent coolness and courage as a messenger in the great surrender of the once great Liberal party. For some time, we have watched the contest waging between the Liberal trenches and the Progressive trenches as to which one of them would be the greater. Here a post office gift, there a breakwater, here a branch line railway, have gained supporters, and we have seen one deserter from the Liberal trench crossing over the aisle, two from the Progressive trench going over to the Liberal trench; but finally illness overtook some of the great warriors on the Liberal line and laid them aside from the fight. Then the white flag was hoisted, and after a consultation between the great leaders, the terms of surrender were accepted by the Liberal party. Or, we might put the matter in nautical language, of which the hon. member for Brantford (Mr. Raymond) is very fond, and say that the pilot, realizing his difficulties and recognizing the black flag of mutiny being hoisted on his ship, has decided to save his life, has scuttled the great Liberal ship and has taken refuge on the Progressive cruiser; —I may be pardoned for calling the group across the way a party; for, if we accept the definition of that word as given by the hon. member for Brome (Mr. McMaster), they can hardly be regarded as coming up to that standard; the hon. gentleman's definition of the word "party" given last year was this: "A party is a group of men who have decided to advance the public interest along certain lines which they hold in common." This is a splendid definition; but if we measure the group across the way by the standard therein stated we cannot come to the conclusion that they are of the full stature of a party. The hon. member for Brome construed the principle of common interest to mean an attitude of mind concerning the trade question; while the late member for Halifax said that it was a Liberal mentality towards a reduction in taxes. But if we consider the speeches of hon. members who have composed the group opposite, both in the past and up to the present time—and one might include, if one cared to venture a prophecy, those who may compose it in the future—we can find no common interest actuating the whole party.

It is interesting to note the effect of this budget on different members of the House, and, I think, most interesting of all is the effect that it has had upon the Minister of the Interior (Mr. Stewart, Argenteuil). He at once began to toll the funeral bells of protection and to pronounce its death knell, and in his speech he declared that after having lived in Ontario he could see no signs of industrial prosperity there. Let me inform him that since he left that province there has been a great deal of progress therein; and I should like to cite a bit of history in regard to the industrial progress not only of the province of Ontario but of all Canada. There are four or five points from which it would be well for the House to consider this question. First of all, there is the point of the capital invested in manufacturing. The following table shows the comparative sums invested in the period from 1870, in round figures:

Manufacturing Industry in Canada

Year	Capital Invested
1870	$ 77,964,000
1880	165,300,000
1890	353,213,000
1900	446,916,000
1905	833,916,000
1910	1,247,583,000
1915	1,958,705,000
1920	3,443,000,000

It will be observed that the figures for the year 1920 show a large increase due to the effects of the war. The second point from which we may consider the subject is the number of employees engaged in the manufacturing business in this period. The table follows:

Manufacturing Industry in Canada

Year	Number of Employees
1870	187,942
1880	254,935
1890	369,500
1900	339,100
1905	383,000
1910	515,000
1920	685,000

The third point is wages paid:

Manufacturing Industry in Canada

Year	Wages Paid
1870	$ 49,000,000
1880	59,000,000
1890	100,000,000
1900	113,000,000
1905	162,000,000
1910	241,000,000
1915	283,311,000
1920	816,000,000

We come now to the value of the products manufactured in Canada:

Manufacturing Industry in Canada

Year	Value of Product
1870	$ 221,000,000
1880	309,000,000
1890	469,000,000
1900	481,000,000
1905	706,000,000
1910	1,165,000,000
1915	1,381,000,000
1920	4,024,000,000

It will be seen what remarkable progress has taken place in the industrial activities of Canada over the period of years I have given. In 1900 there were 14,650 industries employing five or more hands while in 1920 there were 43,200 of these concerns. I need do nothing more than give this table in order to show the remarkable development that has taken place industrially in Canada, and I have no doubt it will be sufficient to disprove the testimony of the Minister of the Interior. I would also remind the hon. gentleman that since he went to Alberta a pitiful change has come over the situation there. When he left Ontario for that province, Alberta was a land of prosperity; the young men were going from the East to the West, and we all remember how they would return in the winter with money easily won from the fields of Alberta and of western Canada generally, decrying and criticising the young men who stayed at home tugging at the stumps and rocks in these eastern parts. Since the Minister of the Interior has had his guiding hand over that province, sunny Alberta has gone back; but we observe that only one year after his departure from the province, Providence has seen fit to bless that land with one of the finest crops the people have ever had there. I have no doubt therefore that Alberta is praying for his continued absence. The hon. gentleman's knowledge of the history of the former Liberal party and its relation to the tariff is, I think, about as poor as his knowledge of the industrial growth of Canada: he ascribes all the ills of the country to the high tariff of the Conservative party and says that with the introduction of the low Laurier-Fielding tariff he can see signs of prosperity on the horizon.

Let me deal in a few words with the history of this country in its bearing on the tariff. From 1854 to 1866 we had a reciprocity pact, and there was an agreement between the United States and Canada, or at all events what was known as Canada in those days, that the treaty might be abrogated after one year's notice. That notice was given by the United States in 1865, the treaty was abrogated in 1866, and there ended our reciprocity with the country to the south. This reciprocity treaty was ended for two reasons: first, Canadian and British sympathy towards the southern states; and, secondly, the heavy internal taxation of the United States following the Civil War. By this treaty there were reciprocal rights in fishing: Canadians had rights on American shores north of the thirty-ninth degree of latitude, the Americans having rights along the shores of Nova Scotia, New Brunswick, Cape Breton and other parts of this country. The Americans also had the use of our canals and of the St. Lawrence for purposes of navigation, and there was a reciprocal free admission of nearly all natural products of farm, forest, mine and sea.

Now, I would draw the attention of all parties to this fact, that Canada took no steps to abrogate that Reciprocity treaty. It was generally agreed that Canada had not by any means the best of the agreement, but she was willing to keep her promise and

so preserve her national honour. I would also point out that Canada took steps to continue the Reciprocity treaty. In 1865, Galt, the then Minister of Finance, went to the United States and endeavoured to secure a renewal of the treaty; in 1866 he and Howland made another unsuccessful attempt; and even during the years 1866 to 1868 our canals were allowed to be used by the Americans under the terms of the expired treaty. In 1867 the first confederation tariff was put in operation, its maximum rates being from 15 to 20 per cent. In 1869 Sir John Rose, the then Minister of Finance, again renewed the offer to the United States to put in operation the Galt terms of 1865. It is very interesting, in the light of what is said about Sir John A. Macdonald and his "high tariff government," to note that at that very date John A. Macdonald, as he then was, was in the United States endeavouring to get free entry to their markets in return for our fisheries and transportation facilities.

From 1869 to 1873 there was a period of world-wide prosperity, in which Canada had a large share. Unfortunately Nova Scotia alone was suffering, and to her honour and credit be it said that in spite of the disadvantages which handicapped her under confederation she has never been greedy in her demands. In 1874 the Mackenzie government came into power. Now set in one of the worst periods of depression in the history of the country. Industrial depression was prevalent in nearly all other countries, and while George Brown was in the United States seeking, on the instructions of the Mackenzie government, to secure the restoration of the markets of the United States, Canada was becoming the dumping ground for manufactured products from every other country. It is very interesting to note that while at this time depression was rampant in most countries, the United States was the most prosperous nation in the world. She was extending her boundaries and filling her western lands with endless streams of immigrants. And it is significant that she was protectionist beyond all her rivals. Canada, on the other hand, with her low tariff of 15 per cent, was having serious deficits year after year under the financial administration of Sir Richard Cartwright. In 1878 came into office John A. Macdonald with his National Policy. This was a policy of moderate protection, but always containing—and this is an important point, contradicting the statements made in this House day after day—always containing the offer of reciprocity with the United States. Not only so, but in 1886 an unsuccessful attempt was made to renew the treaty of 1866, and again in 1891 another unsuccessful attempt was made.

Now I come to 1896, when Sir Wilfrid Laurier was returned to power. His government at once made a further attempt to renew the Reciprocity treaty and open up trade relations with the United States. An embassy was despatched to Washington for this purpose, but returned without success, and as a result of this last breakdown Sir Wilfrid Laurier uttered those words which are so well known throughout the Dominion, that "there would be no further pilgrimages to Washington." He then inaugurated what is now known as the Laurier-Fielding tariff, of which the following are the outstanding features,—although they are often forgotten, notably so by the Minister of the Interior (Mr. Stewart)—: First, raising the Canadian tariff to the level of the tariff of the United States,—that sounds very similar to the position we should assume to-day; second, instituting an anti-dumping clause; third, inaugurating a policy of tariff administration, calculated to be just as exclusive in its operation as the tariff administration of the United States was found to be. These were the bases of the Laurier-Fielding tariff. The tariff also included these further points: First, "no further pilgrimages to Washington;" second, no appeal to foreign gods; third, no reduction in tariff; fourth, stability for the business of Canada. These are the strong points of the Laurier-Fielding tariff which brought prosperity to this country.

4 p.m.

Now, what happened at that time on the United States side? This brings out a very interesting fact. In 1896 the Republican party gained power and under a strong protective policy established a new high level of tariff rates towards the whole world. The result of that was—and I would draw the attention of the House to this point—that the Laurier government was forced to establish a tariff much higher than any which had heretofore been put in force. So the myth of the Laurier-Fielding tariff being a low tariff is exploded. Theirs was the policy which should be adopted to-day. Included in that tariff was a British preference, thereby gaining for the Liberal party a large increase of English-speaking support throughout the Dominion. The Laurier regime lasted from 1896 to 1911, and under its tariff policy this country, we are told, enjoyed the most prosperous period in its history. But in 1911, at the request of the United States government, Sir Wilfrid

Laurier sought the sanction of the people to a reciprocity agreement with the United States, an agreement which would have given to our neighbours concessions even greater than those which had been asked for in the past. The Laurier government was defeated, and was succeeded by a Conservative government, which, so far as the tariff was concerned, introduced little or no change. In 1922 the Liberal government lowered the intermediate tariff schedules to France and other countries and increased the British preference. Unfortunately Mr. Fielding did not realize that the depreciated currency of those continental countries placed Canadian manufacturers at a great disadvantage.

Now, Sir, in opposition to the declaration of Sir Wilfrid Laurier that there were to be no more pilgrimages to Washington, which he supplemented by a policy of protection higher than that inaugurated by the National Policy of the Macdonald government, the hon. Minister of the Interior asserts that his government to-day is opening the door to American industries, and, in his imagination, has "rung the death knell of protection." The Laurier-Fielding protective policy brought prosperity to Canada. The King-Robb-Stewart-Crerar tariff has already brought about lessened receipts in this Dominion of ours, and the funeral bells which they are ringing are deadening the factory whistles of Canada at the present time.

Let us now examine some of the points contained in this budget. There is first the matter of a surplus. Apart from the criticism of that surplus on this side of the House we have the strong stand taken by the hon. member for St. Lawrence-St. George (Mr. Marler) and the hon. member for Brome (Mr. McMaster), that there is no surplus, and as a party we are quite content to let that idea go to the country, because when a government differ among themselves you may be quite sure that there is something wrong. This surplus that is so often mentioned reminds one of the speech made by the hon. member for Brantford (Mr. Raymond) lately in which he pictured the little boy praying for a toy. We might continue that story and say that the speeches on the other side, following the deliverance of the budget, put one in mind of the little boy after he has got his toy, saying: "I have a toy, I have a toy," for the speeches one after the other continue to repeat: "We have a surplus, we have a surplus." But when they differ among themselves I think that surplus can rightly be considered only a myth.

Second, there is the trade of Canada. There is always something to be said on the matter of our increasing trade, but it is worth studying to see whether or not this increase in trade is worth anything to the country. The imports under the French Treaty mean a lot of money going out of Canada, and nothing coming in. According to our Bureau of Statistics, there is contained in this statement of trade the fact that we have imported half as much whisky and exported twice as much as we did in the two years previous. That. of course, increased our trade, but it did not add very much to the prosperity of our country. I would also draw to the attention of the House that our friends to my left, who are perhaps the strongest supporters of this treaty, have perhaps not studied its results. I have here a table which concerns the trade of our country, and no doubt these imports are included in the total trade. It is a very interesting table and I would like my friends to my left to study it and see what they have done for the benefit of this country. There has been imported into Canada from September 1, 1923, to February 29, 1924, the following imports of brandy and other potable spirits and wines:

Potable Spirits—		Value
Brandy.. .. ..gallons	93,759	$ 594,049
Gin.. .. .. "	101,543	1,404,831
Other potable spirits from France and other countries.. .. .. "	527,533	9,245,885
Wines, non-sparkling.. .. "	344,138	521,144
Wines, sparkling in doz. 1 pt. bottles	3,996	33,678
Wines, sparkling in doz. 1 qt. bottles..	6,632	98,882
Wines, sparkling in doz. ½ pt. bottles..	529	1,723

The total quantity of wines imported from France was 221,816 gallons, valued at $434,-276. Those are wines imported into this country to compete with our own industry. These figures will all be counted in our trade returns, and unless one examines into all these things one would come to the conclusion that we were building up a great trade that was of some importance to Canada, instead it is a great injury.

This budget which has been presented to us is one of "Wait and see." The funeral bells are ringing, and we are told that they will be ringing much louder next year. It is a policy of a hand-out to the United States without any return for us. It is a policy which divides us as a people into classes. It hits one class of manufacturer, but not the others. It benefits one class, the farmer. Why not other classes? If it is for the advantage of the farmer to get his plough free, why not for the carpenter to get his hammer, and the mason his trowel? This budget illustrates the government's habit of jumping without looking where they are going.

The government made the French treaty without a proper study of the situation; it made a Fisheries treaty without a proper study of the situation; it bought a hotel in Paris without a study of the situation and not through a proper representative of this government; and now it makes a tariff without a proper study of the situation.

One point that is strongly emphasized, and which perhaps has brought about this great surrender and the disappearance of the Liberal party in its amalgamation with the Progressive party, is the western situation. On our tariff policy of the past has been laid the blame for all the troubles of the West at the present time, but a careful study of the West will show that there are certain conditions which have not been sufficiently considered by this House. There is first of all the survey of the West which divides it into sections, half sections, and quarter sections. By that survey the roads were not at all convenient for those living in the West, and it clearly prevented community living, which is the proper ideal of agriculture.

There is next the careless farming. If the early settlers of any one of the eastern provinces had farmed in the same way as a great many have done in the West there would be a different story to tell to-day in the provinces of Ontario, Quebec, New Brunswick and Nova Scotia. The eastern part of this Dominion had just as many hardships to contend with, and I believe more severe ones, than the West has ever had.

Mr. SPENCER: The hon. member spoke of the carelessness of the western farmer, but he just made a blanket statement. I should be very glad if he would give some examples of that carelessness.

Mr. ROSS (Kingston): It would take all afternoon to develop the question, but if you will listen for a few moments I will mention one or two. I am very sorry I have not with me at the moment a letter that I received from a very prominent Liberal who is much opposed to this tariff, and who was a former agent of the Liberal government. This letter was written, not by a man simply passing through the West on a train, but by one who had been through all parts of the West, and I will refer to one or two points—there are too many for me to take them all up. The farmers of the East who came here from the Old Country took up their abode on the shores of lakes and rivers. In those days they isolated themselves; there was no possibility of their returning to visit their friends or relations during their lifetime; they absolutely cut themselves loose from their former home ties. But in the case of those easterners who went to the West in the early days—I am speaking of some of my own relations now—they returned to the East each year and spent the winters here living on the easy money they had made and causing dissatisfaction among the people they encountered. But—and that is what this letter in question points out—the careless handling of the land and of implements in the early days of the West resulted in great waste—a greater waste than any tariff will be able to make good. Another point in regard to the western situation was the development there, following prosperity, of land booms and all sorts of frenzied speculation. In the next place there was the adoption of all sorts of fads with respect to taxation. These land booms and foolish forms of taxation have strongly militated against the introduction of capital into the prairie provinces of the West. A point that has been raised in connection with the tariff has been the cry that so much has been done for the manufacturers and so little for the agricultural interests. It may be asked what the manufacturer has received from this country outside of a protective tariff, to which we all contribute our small quota of some eight or ten dollars a head. On the other hand, what have the agricultural interests received from Canada? First of all federal contributions amounting in 1923 to $7,110,500. Towards agriculture Ontario contributes $1,529,000; Quebec contributes $824,200; New Brunswick, $92,912; Nova Scotia, $46,073; Prince Edward Island, $17,621; Saskatchewan, $1,060,975; Manitoba, $664,245; British Columbia, $398,370; and Alberta, $330,000. These sums do not include the grants that have been made by the different provinces towards the construction of colonization roads, a total almost as much as the direct contribution to agricultural development. So that when we compare these two aspects of our life in Canada—and I wish to be fair; I am no more interested in manufacturing than I am in agricultural development—we must admit that our industries have not been the only ones aided.

Mr. WARNER: Was the federal grant to which the hon. member alluded given altogether for agricultural roads?

Mr. ROSS (Kingston): No, I did not say anything of the kind. The colonization roads referred to have been aided altogether by the provinces to encourage the development of sparsely settled districts, and to provide avenues for transportation and marketing.

Mr. WARNER: Are not these roads used by cars generally; they are not limited to cars owned by farmers, are they?

Mr. ROSS (Kingston): In the early history of these colonization roads there were very few cars in use, in fact we might say none at all. To-day almost every farmer has a car, and I am going to speak later on the subject of cars. Instead of destroying industries we should build them up as far as we can believing that they add to the development of the great agricultural interests. Just here there is one point I would like very much to stress. There seems to be a demand in certain quarters for a low tariff. Now, it is very interesting to know that every country with a low tariff is a cheap labour country. The other night the hon. member for Brome (Mr. McMaster) spoke of the southern states. Those states were always supporters of low tariff, and it is largely because their vote was absent from congress in 1865 or 1866 that the treaty providing for reciprocity with Canada was abrogated. The southern states had Negro or slave labour. They were low tariff communities, and you can set it down as a regular thing that where there is a low tariff there is cheap labour. Do we wish to make Canada revert to the condition of these low tariff countries? I say, no. We have to maintain a different standard of living for our citizens, and I do not think it is in the interest of the Dominion as a whole that Canada should ever become a cheap labour country. I maintain that the budget, instead of considering the public good, has been devised in order to promote the political advantage of the government. Instead of considering all the conditions I have mentioned they have considered only party advantages.

In the budget a reference was made to economy. The government loudly proclaimed the necessity for economy, and that theme has been dwelt upon by several speakers during the present debate. But instead of acting upon their own advice the government have been most extravagant in their expenditures. Instead of placarding the country with notices advising the people to move cautiously the government have shown a bad example by their extravagant outlays. They should have again and again advised the people that the easy-money days were passed and it was time to exercise thrift. Instead of following that course, however, the government have devoted themselves to weakening the industrial position of Canada. They have embarked upon the extravagant and unnecessary construction of buildings to the extent of $6,000,000; they have appointed partisan officials at staggering increases in salary; they have made unnecessary additions to the public service. Typical of the latter class is the recent appointment of a Commissioner of Immigration to China. This is one of the acts of the Minister of the Interior (Mr. Stewart) and illustrates well the methods employed by him in his department. The government have simply capped the climax in the matter of expenditures. They have encouraged feverish expenditures upon railways, and it is well to recall that this is not a new era inaugurated by them. From 1853 to 1860 the same wild expenditure existed. Ontario was the field of foolish expenditure at that time, as the West is to-day. In Ontario we had charters and requests for such parallel branches of railway as from Cobourg to Peterborough, Port Hope to Peterborough, Belleville to Peterborough, Brockville to Ottawa, and Prescott to Ottawa, all parallel lines within a few miles of each other. And what was the result?—I am only mentioning these few because they are close to my home, but cases of those kind were found all over Ontario and other parts of Canada. While this form of speculation was going on municipalities were going head over heels in debt under what was known as the municipal loan fund system that was permitted by the provinces. The result of it all was that half of the projects had to be given up. Many of the railways after being started were stopped, because wages rose to a dizzy height, men with contracts gave them up, and the contracts had to be relet at higher prices. The result of all this was that the capital expenditure in these railways became very much higher than anybody expected, and municipalities could not meet the interest and had to default. This old part of Canada received a severe blow, from which we have hardly recovered. The same thing is going on at the present time. Railroads are being built now without any question as to whether they are necessary or unnecessary. There is demand coming from people who have to draw their produce many miles from the market, that a railroad should be built. Even at the present time, with all the railroads we have in the oldest counties in this country—Dundas for example—a farmer has to draw his produce a considerable distance. If we take the map and measure straight across as the crow flies we find a distance of eight miles, but the farmers in that locality would have to draw their produce perhaps sixteen miles. In North Renfrew where the distance

in a direct line is ten miles, and South Renfrew where the distance is twenty miles as the crow flies, they have to draw their produce twenty-five and thirty miles. In Peterborough county they have to draw eighteen miles. In Bruce the distance to a railway is fifteen miles, in Grey eighteen miles, Peterborough twenty miles, Northumberland twelve, Hastings ten, Addington eight to ten, Lambton fifteen, Frontenac eighteen to twenty miles, Leeds twelve, Grenville twelve. In an old well settled county like Lambton they have to draw their produce fifteen miles in certain parts, and even in the constituency of the Minister of the Interior (Mr. Stewart) (Argenteuil) they have to draw their produce twenty to tweny-five miles to a market. I am taking the distance to the nearest point of the railway, but we must also consider that these points on the railway are not always market points where a farmer can make a sale of his produce. So that even in this old part of Canada the farmers have to draw their commodities long distances. And yet we are not looking in all cases for a railway to relieve the situation.

In addition to this feverish haste I have mentioned, there is also a lack of energy shown by the government in dealing with very important things that should be dealt with and which should come under this budget. I wish to remind hon. members of the condition that I spoke of in the Speech from the Throne, and that was in reference to continuing the levels along our Great Lakes. This is a very important matter to us in the East. I spoke of it from a health or sanitary point of view, and I wish now to speak of it from an economic point of view. The United States are taking steps to protect themselves, but Canada will be a great sufferer in this matter if the lowering is allowed to go on, unless drastic steps are taken to prevent it. The West will suffer more than any other part of the country that I know of. I do not know whether it is generally known, but it is a fact that the boats coming down through the Great Lakes at the present time are lightering from ten to twenty thousand bushels a trip. Each boat is carrying from ten to twenty thousand bushels less each trip owing to the lessened depth of water in our harbours. That means a great loss to the steamship companies who are not making much at the present time. The lowest loss they are suffering is $675 a trip, but it means also, if it means anything, the very possible increase in transportation rates along the Great Lakes. I know that the government might take the stand, "What can we do? We have an International Waterways Commission, now we are going to have two or three other commissions; and what can be done in the matter?" I quite admit that there is no action the government can take to change the physical condition. But we can retaliate, and this is the course that has been adopted all these years in regard to tariffs. How can we retaliate in this matter? We have, I think, two practical methods of retaliation. The first is the closing of our canals. If the Americans persist in the system which is lowering the water level, we can refuse them the use of our canals. Of course some of our steamship companies might suffer if we adopted that course. But there is another alternative. We are to-day the only possessors of several natural resources owned in Canada. One is asbestos, another is mica, another is feldspar, and last, pulpwood.

Mr. MACLEAN (York): And nickel.

Mr. ROSS (Kingston): Yes, and there are others I could name. Here we have in our possession means of retaliation and means of bringing this matter to a head in the United States. But above these methods, I think pulpwood is the one article that we can hold for retaliation. We are shipping millions and millions of dollars in pulpwood to the United States, and we are not getting very much for it in return. In addition to sending out these natural resources from our own country, we are injuring some of our industries. And speaking of those industries, I would like to draw attention to the position of the newspapers. I have here a letter from a prominent Liberal newspaper, one of the strongest supporters the government have at the present time, the British Whig, published at Kingston. I think, carrying out my idea of some retaliation to prevent the lowering of our waters we might take some stand with regard to pulpwood. The editor of that paper writes to me as follows:

Dear Dr. Ross:

Re Sales Tax on newsprint

Owing to the condition prevailing in the newspaper field in Canada to-day, publishers are compelled, in self-defence, to urge upon parliament a relief from the sales tax as it affects newsprint.

The mortality list among newspapers since 1914 is appalling—

This is advice from a Liberal newspaper, and here is the list of papers which has been strangled to death, or had to co-operate with one another to make a living.

Mr. FORKE: Is the hon. member aware of the fact that the Canadian manufacturers are selling paper more cheaply to the Americans than they are selling it to their own Canadian users of paper?

Mr. HOCKEN: Because of the six per cent tariff.

Mr. ROSS (Kingston): If the hon. member for Brandon (Mr. Forke) will wait and see the matter through, he will see exactly the position we are in.

Mr. FORKE: All right.

Mr. ROSS (Kingston): The letter continues:

The mortality list among newspapers since 1914 is appalling, and I do not believe that the concentration of the control of the newspapers of this or any country in a few hands is a good thing for the public. The more freedom that exists in respect to the press the better for the public. I am enclosing herewith the mortality list above referred to, and I think you will agree with me that the newspaper publication business has been extremely hard hit by the rising costs of production. Unless some relief is afforded, many another paper will be added to the list of those which have ceased publication.

There is another aspect of the situation which is a very unfair one to Canadian newspapers. I refer to the fact that, whereas we have been obliged to pay 6 per cent sales tax, and from now on a 5 per cent tax, American newspapers and periodicals are permitted to buy our forest product free of sales tax and return it to this country free of duty to compete with our papers.

Mr. FORKE: I may be wrong; I want information; but I have been informed that fine paper was being sold in Canada for, I think, seven cents per pound, and the same paper was being sold to American users of that class of paper for five cents per pound, irrespective of the sales tax altogether. I may be wrong in that information. I have no hesitation in giving names, and the firm that I refer to was the Howard Smith Paper Company.

Mr. ROSS (Kingston): Of course, there are a great many kinds of paper.

Mr. FORKE: The same brand of paper.

Mr. ROSS (Kingston): But there are many brands. That, however, does not offset this statement that our own newspapers are being put out of business by this unfair handling of the pulpwood. I quote further:

Thus, they neutralise all our efforts at building up a Canadian national spirit. The peaceful, but no less persistent, infiltration of American ideals thus encouraged, does not make for the good of our nation.

For this and other reasons it might be stated that Kingston papers are requesting total relief from the sales tax on newsprint. May we ask that you give this request your support.

That is a letter which, perhaps, indirectly bears upon the statement that I wish to make, that we have in our hands certain natural resources with which we can retaliate against any steps taken by our neighbours to the south, and the use of our pulp and paper is one that I would very strongly draw

to the attention of the government, so that they may deal with this matter of lowering levels on our lakes which is destroying our Canadian harbours at the present time, interfering very much with navigation, and leading to the very possible increase in rates of transportation.

Before I finish I should like to make reference to a very interesting speech delivered yesterday by the hon. member for West Calgary (Mr. Shaw). In that speech he pleaded with this House that our tariff should be towards the line of free trade. He, curiously enough, and in the interest, not only of the members, but of all Canadians, referred to three countries in the old world which were giving prospects of free trade, and he said that they would be lights on the horizon for us as Canadians. Who do you think were the three countries mentioned by the hon. member. The first was Ireland, the second, Hungary, and the third, Russia. Those were the countries now leading towards free trade, and he would like to draw the eyes of Canada to those three countries. We are more interested in a nation that is very similar to our own in speech, in civilization and in all other ways that one would like to make the comparison, and that is the country to the south. He would like to have drawn our attention to the fact that the United States, as I would gather from his address, was very rapidly approaching a state of free trade. I have here a pamphlet which is called the Tariff Act of 1922 on imports into the United States:

To provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

So, I say that this is the country we would like to study as they as a people are more akin to us by blood, by language and in many other ways. What is the tariff that they have, this "looking to free trade" tariff which has been spoken of by one or more members. I have a number of points marked in this document, but I do not like to take up the time of the House in referring to them all. This tariff goes as high as fifty and sixty per cent. In every schedule—and there are 1,400 of them—very particular provision is made that any of the articles brought in will not compete nor interfere in any way with American manufactures. For instance, take the tariff on coal tar products, which is a very extended list of articles and on which the tariff varies. This provision is inserted:

That for a period of two years beginning on the day following the passage of this act the ad valorem

rate of duty shall be 60 per centum instead of 45 per centum.

There is no possibility of introducing any of those articles into the United States. So, you can go on from article to article through these 1,400 schedules with the ad valorem duty rising as high as 75 per cent on some of them. It is also very interesting to turn to their free list which contains some 200 articles. I should like those hon. gentlemen who are talking about the free trade of the United States just to get this book into their hands, to study the text and the tariff on the different articles, and the special provision made whereby this tariff protects every manufacturing industry in that country. Articles allowed in free include:

Acids; agates, unmanufactured; agricultural implements, provided, that no article specified by name in Title I shall be free of duty under this paragraph.

Here is an interesting item of the free list:

Articles the growth, produce or manufacture of the United States, when returned after having been exported, without having been advanced in value or improved in condition by any process of manufacture or other means if imported by or for the account of the person who exported them from the United States is admitted free.

There is nothing in the history of tariffs that shows the patience and care taken to protect, even on the free list, the manufacturer, such as that provision. Another article on the free list is:

Barks, cinchona other, from which quinine is manufactured.

None of that is found in the United States, but it is all imported from South America. This is another very interesting provision:

Bolting cloths composed of silk, imported expressly for milling purposes.

There is no possibility of any competition there. This is another very interesting one of the 200 articles of the free list:

Books and pamphlets printed wholly or chiefly in languages other than English.

Does that give any opportunity for competition? Linotypes, typesetting machines, typewriters, sand glass machines, all made in the United States, are free, if there were any possibility of bringing them in; but there is no possibility. This list also includes cobalt and cobalt ore; in fact, every mineral that is allowed in free is an ore, and its free entry is allowed in order to encourage manufacturing. Then we find cocoa, coffee, coins gold and silver, copper and other metal compositions of which copper is a component material, of cheap value not specially provided for. These are free. Also free are copper ores; and coral, but, observe, uncut and unmanufactured. There is also included in the list one article which hon members would like to know, for the religious benefit of the Chinese in their constituencies. I refer to joss sticks. The House will note with what particular care the United States protect themselves. Minerals are free—but minerals crude, and not advanced in value or condition by refining or grinding, or by any other process of manufacture which is not specially provided for. Then we come to oils, spermaceti, whale or other fish oils of American fisheries, which are all in the list. And here is another very interesting free list: personal effects, not merchandise, of citizens of the United States who die in foreign countries. Quinine and sodium also are free. And last of all is the list in connection with agriculture. In short, there is nothing on that free list in the whole 200 items which would compete with any manufacturing business in the United States. This, I say, is the country that we should study, and if it is necessary to imitate any country, the United States is the country we should follow. I am not particularly an advocate of imitation, but I certainly say that if there is one nation whose fiscal policy we should copy, and might copy with profit to ourselves, that nation is our neighbour to the south of us. And she is not a low tariff country but one that is well protected.

One wonders what course one should take for the general good in regard to this matter of tariffs. Many have recommended the appointment of a board; but if such a body would take away from the government its responsibility for the trade policies of this country then I for one would not support it. I believe that the government should be composed of individuals strong enough to take upon themselves individual responsibility for the management of their several departments and who would not seek to depute that responsibility to any board. If, however, by a tariff board is meant one that would gather information for the use of all classes and groups of people in this country, which information would be readily available at all times, then we can see nothing but good as a result of its appointment. It would be highly advantageous if that board were every day on the job collecting material, gleaning information from all sources for the benefit of the Canadian people. Such information would not be biased politically, would not be coloured by any partisan predilections, and we should be able to have some guidance in the treatment of the question of tariffs.

I thank you, Mr. Speaker, and the members of this House who have borne so patiently with me this afternoon, and before I resume my seat I would ask the government to take these representations into consideration.

Hon. E. J. McMURRAY (Solicitor General): My apology for rising to address the House on a subject which has been so widely canvassed already is the fact that I am one of the few Liberal representatives in parliament from western Canada. At the commencement of my observations I wish to associate myself in all sincerity with the feelings, which I am sure all members of this parliament share, of regret at the continued illness of the Minister of Finance (Mr. Fielding) which prevents him from occupying his accustomed place in this House and which has made impossible the delivery by him of the budget on this occasion. At the same time I wish to congratulate my colleague the Acting Minister of Finance (Mr. Robb) on the exceedingly able budget which he has presented to the House on this the first occasion on which he has undertaken that difficult task. The budget is an epitome of clearness and has proved the business capacity of its author and shown his comprehensive grasp of the situation with which it deals. Rightly, it did not enter into any question of theory but confined itself entirely to dealing with the conditions as they actually existed in Canada to-day. And assuredly it is the duty of a minister of finance, not to speculate on conditions in regard to either free trade or protection but to consider the facts as they actually are and in the light of those facts to submit to parliament such measures as will promote the prosperity and welfare of the people. Judged from that point of view, the budget, I think will find a ready reception at the hands of the Canadian people.

What are the prevailing conditions in Canada? I think it will be readily admitted that our people are suffering from a heavy burden of taxation; and this is true not only of our agricultural communities but of all sections of the country as well. This heavy burden is due in a large measure to the war. The war has disjointed industry in every direction, and that is particularly true so far as agriculture is concerned; for apparently the prices of farm products have been far slower in returning to normal than have those in any other industry. Agricultural prices have not so readily stabilized themselves; and apart altogether from any question of extravagance on the part of the farmers in western Canada, as has been alleged, the outstanding fact is that there have been remarkably low prices for all agricultural products as compared with a continuing high level of prices for the things which the farmers are obliged to purchase. The result has been that the large farming population of the country, the people who are engaged in the major industry, find themselves in dire straits, hardly equalled within the last twenty-five years. Indeed, it is questionable whether we can find, in a much earlier period of the country's history, such conditions of hardship as exist in Canada to-day. In the light of these conditions the budget has been drafted. It has been drafted not with any desire to interfere with the protected interest but as a practical measure to relieve the burden of taxation and encourage industry.

The budget is entirely consistent with the Liberal platforms of the past. The platform of 1893 was opposed to protection as a principle and declared:

> That the customs tariff of the Dominion should be based, not, as it is now, upon the protective principle, but upon the requirements of the public service.

The platform of 1919 contained a clause declaring the desirability of reducing the duties upon the instruments of production; indeed, it apparently contemplated their entire removal. Another clause pledged the party to lower the cost of living. I submit that this budget is a partial carrying out of these principles. It has been charged by our Conservative friends that the government has struck a bargain with the Progressive party. But I have shown that the budget is entirely in keeping with the party's platforms of 1919 and 1893. I wish this declaration to go out to the country: The Liberal party has made no bargain whatever with the Progressive party. On the contrary, the budget is simply the carrying out, in part, of the Liberal platforms of 1919 and 1893 which I have quoted. In these respects we have been true to the policy and traditions of our party.

The budget is a clear-cut indication that the government is committed to the development of the great natural resources of the Dominion, and affords an opportunity to distinguish between those who adhere to the policy of protection and those who adhere to the policy of a tariff for revenue.

Mr. MEIGHEN: Perhaps the hon. gentleman will recall that his 1919 platform promised, among other things, free cement. Will he tell us why cement has not been touched?

Mr. McMURRAY: I would remind the right hon. gentleman that Rome was not built in a day. I said that the budget is a partial fulfilment of the policy laid down in the platforms of the Liberal party. I also said at the outset of my remarks that it was the duty of the Minister of Finance to take into consideration the conditions prevailing in the country and in the light of those conditions to bring in legislation that would be beneficial to the country as a whole. Does my right hon. friend think we should take the duty off cement?

Mr. MEIGHEN: Certainly not. I never said so, though; that is where I differ from the hon. gentleman. He tells us that this is to be only a partial fulfilment of the party's platform. Are we to expect free cement next year or the year after?

Mr. McMURRAY: The policy of the Liberal party will be to effect a gradual reduction of duties and a consequent lowering of the cost of living. It may be that the duty will be taken off cement, it may not be; I am not here to announce the future budgets of the Liberal party.

Mr. MEIGHEN: How is it that the hon. gentleman was so positive in 1919?

Mr. McMURRAY: I was not announcing budgets in 1919, neither had I any idea at that time that I would be standing in this House and speaking on this budget.

Mr. MEIGHEN: A great difference.

Mr. McMURRAY: Yes. I have already said that this budget would be received with great satisfaction by the people. The knowledge that there will be a reduction in taxation of $24,000,000 is good news in the homes of struggling people, to whom a reduction of three or four dollars in taxation is a considerable relief. This reduction in taxation is also very satisfactory to our farming population, who complain that they have been heavily taxed for the benefit of a comparatively small agricultural implement manufacturing class, an insignificant class numerically compared with those engaged in agriculture, and even compared with those engaged in manufacturing generally, for all told it numbers only about eight thousand people, with an invested capital of about $94,000,000; a mere fraction compared with the great number of our people employed in agriculture and their capital investment.

5 p.m.

Now, what are the arguments of our Conservative friends against the budget? The only objection that we hear in this House proceeds from those who are in close contact with manufacturing districts. Our Conservative friends never argue the economic justice of protection. We have listened this afternoon to an able speaker, the hon. member for Kingston (Mr. Ross), but not once in the three-quarters of an hour during which he addressed the House did he attempt to justify protection as an economic principle. Protection lays a burden upon one section of the country for the benefit of another section. But our Conservative friends attempt to discount this economic injustice by bringing forward a series of so-called arguments in support of protection. In a word, they are strong in assertion, weak in argument, and lacking in proof. Their first argument is that of the lawyer in court: They are thinking not of themselves but of the poor workingman. Invariably the supporters of protection speak about the necessity of providing work for our working people and declare that they should not be obliged to go to the United States and other countries to seek employment. Let us examine the soundness of this argument.

Mr. MEIGHEN: Before the hon. gentleman proceeds, I should like to get him to the point. If he believes that protection is an economic injustice, why does he tolerate it for so many months, why does he not see that it is got rid of at once?

Mr. JACOBS: He is only one member of the government.

Mr. MEIGHEN: The rest are fighting him?

Mr. McMURRAY: As I have already told my right hon. friend, Rome was not built in a day. One of the evils of protection is that once established in a country it is very difficult to remove it without causing undue hardship not only to the working people, whom the Conservatives pity so much in their arguments, but to the country as a whole through the disjointing of business. We are all drawn more or less together in every way, and reforms can only be made step by step.

Mr. MEIGHEN: How, then, does the hon. gentleman explain the new protection introduced last session for artificial silk?

Mr. McMURRAY: My right hon. friend cannot get over that French treaty apparently.

Mr. MEIGHEN: Oh no, it is not the French treaty at all, but the budget of last session.

Mr. McMURRAY: I will touch on that. I wish my learned friend would try and keep to the subject of my argument, instead of wandering afield.

Mr. MEIGHEN: This is keeping to the subject. Do not forget my point.

Mr. JACOBS: He was not a member of the government when that was introduced.

Mr. MEIGHEN: He supported it.

Mr. McMURRAY: I suppose the workingman is not worrying very much about artificial silk to-day at any rate. Now what is the position as to the workingman? The hon. gentleman who has just sat down (Mr. Ross) argued that protection keeps up high prices, and that the workingman gets good wages, possibly the highest wages under protection. It is true that protection will keep up prices to a certain extent, but only to a certain extent, as the history of protection in this country shows. The workingman may get higher wages, but it is debatable whether he gets steady employment or not under protection. He has to pay more for what he consumes just the same, and the financial critic of the opposition was going to benefit the workingman by protecting the farmer and raising the price of the eggs and the cheese and the other things that the workingman eats. He and his friends would put the workingman's employer in a protected market, but is the workingman protected? No, because the doors of immigration stand open, and he must face the competition of those who are coming into this country. He always had had to face that competition in this country, and on more occasions than one employers have come to parliament and urged the bringing into this country of trained artisans, in order as they said, that industry might develop and operate better. So the argument of my Conservative friends that protection is beneficial to the workingman is obviously weak, because he has to buy at a higher price the necessities of life in a protected market and the door is always open to let in immigrants to compete with him. The employer is protected, but the workingman is not. So the argument of our protectionist friends is without foundation.

The second great argument that our protectionist friends make is that protection will build up a home market in Canada. I suppose what is meant by a home market is that there will grow up in this country large industrial centres, giving employment to a large population, which will consume the products that the farmer produces, and in that way supply him with a market for his goods, but one thing our Conservative friends have never been able to do is to show just exactly what protection has done for Canada, just exactly how much of a home market it has built up. Australia, for instance, is no great industrial country at all. I would judge from casual reading and the knowledge I have of the large cities of Melbourne and Sydney, that they have grown up without the aid of manufactures or high tariffs. Will my hon. friends contend that Edmonton, Regina, Vancouver and Winnipeg, cities which have had a phenomenal growth, were built up by protection and by manufactures in those cities? They are distribution centres for a large section of the country, and they would distribute just the same under a low tariff. Goods coming from the United States would develop them just as much, because they are cities that have been built up on the export and import trade passing through. I would doubt very much whether the city of Montreal, which has had a remarkable growth, has not been built up in part by the passing of goods in and out through its doors.

The next great argument of the protectionists, indeed, the favourite one of my right hon. friend and those who follow him, is loyalty to country. We always have had that argument, that the goods consumed in Canada should be produced in Canada by our own people, for our own people. That must be done, no matter what the goods cost, and our protectionist friends charge their opponents with knuckling down to the Americans, with not standing up and fighting them and putting up a high tariff wall. I would ask, who is it that is knuckling down? Who is it that will not stand up and fight the Americans? It is the manufacturer. He asks the agricultural interests to put their shield and buckler out in front of him to shield him. He is the one who is constantly sounding the bugle of retreat; he is the one who will not fight and compete against the Americans. So the argument of knuckling down or backing up goes right home to my hon. friends opposite. They ask the agriculturist to protect and shield the man who is in a position to compete.

Now what has been the real policy of the Conservative party, and have they been sincere in their contentions and arguments? The policy of the Conservative party, as was well stated this afternoon by the hon. member for Kingston (Mr. Ross), was laid down by Sir John A. Macdonald on the 7th of March, 1878, in the old parliament buildings here.

In concluding his speech Sir John Macdonald said that protection would—

—encourage and develop an active interprovincial trade, and moving as it ought to do, in the direction of a reciprocity of tariff with our neighbours, will greatly tend to procure for this country, eventually, a reciprocity of trade.

Later on, another eminent chieftain of the Conservative party, Sir George Foster, speaking in this House in 1893 said:

But, Sir, if there is anything like honourable reciprocity, anything like reciprocity with mutual advantages, and which can be bought by not paying too dearly from the life blood and industrial blood of this country, if there is any reciprocity of that kind this government stands committed to take it and to strive to get it.

That is the stated policy of the Conservative party. I have often thought, and I believe many others have entertained the same opinion, that the National Policy was a "pick-up" policy. Owing to the condition of hard times prevailing in Canada, a condition that was world-wide Sir John A. Macdonald, astute politician that he was, picked up for the time being a policy of high protection, but he took good care to state that it was to be a moderately low tariff and that its object was, as it ought to be, reciprocity of tariffs with our neighbour to the south. Sir George Foster, as I have said before, emphasized that attitude. When the time came the Liberal party, true to their platform of 1893, brought forth the policy of reciprocity with the United States. In 1911 an election took place on that issue, and where did our Conservative friends stand then? Where did the leader of the opposition stand on that occasion? What was the course of the party who were committed to a policy of reciprocity of tariffs? They opposed reciprocity absolutely in the belief that it would hurt their protégees, the manufacturers of Canada.

An hon. MEMBER: That was the trouble.

Mr. McMURRAY: Reciprocity was not going to hurt them but they were afraid it would. So the Conservative party lost courage and trembled at the approach of danger. Reciprocity was in the interests of the people of Canada, as I shall prove by figures before I close, but the Conservatives claimed it meant the insertion of the thin end of the wedge and that although it might be in the interests of the consumers it would injure the manufacturers with whom they are associated and who are their political friends. The so-called National policy at its inception failed to visualize the Canada of to-day. It was evolved when we were a small pioneering people in Ontario, Quebec and the Maritime provinces and conceived of a market in the towns of the Canada of that day, for the poultry, eggs, vegetable products, and other commodities, which the farmers were able to produce in a small way. That policy never contemplated the great world-wide trade that we enjoy to-day. It never conceived of the great Canadian West with its production of 400,000,000 bushels of wheat a year. If the National Policy had foreseen such a prospect it would never have had the audacity to propose to build up in the manufacturing parts of Canada a home market sufficient to take care of the vast production of the Canada of the future. The National Policy was restricted, it was confined in its outlook, it was not constructive, nor was it really national in its character. It never took into account the development of the vast area of western Canada at all, that portion of our country which to all appearances in the years to come will contain an overwhelming proportion of our population. It took no account of the West, and what did it give to the Maritime provinces? If any section of Canada is entitled to praise for its great loyalty and steadfast adherence to confederation it is those little provinces down by the sea. They maintained this attitude in spite of the hardships they had to encounter, and notwithstanding the fact that they could hardly ever hope to get into the market of central Canada. The only thing I can conceive the National Policy has done for them has been to give them a little protection on coal, and some assistance in the shape of the Intercolonial railway. Why call the policy introduced in 1878 a national policy at all, when it was not national in its character and did not embrace any proportion of Canada? Why call it national when its benefits, such as they were, were confined entirely to a limited section of our people?

Now, let us see what happened in the way of developing Canada as a result of the inauguration of the National Policy? When the National Policy was introduced in 1878 our exports amounted to $67,989,000 and after eighteen years reached a total of $109,000,000, a gain of some forty millions in eighteen years, or 3½ per cent per annum. Our imports under the National Policy in 1878 amounted to $90,000,000. In 1896 they had increased to $105,000,000, a gain of fifteen millions in eighteen years or less than one per cent per annum. The total trade of the country increased from $158,000,000 to $215,000,000 in eighteen years, or a growth of 1⅘ per cent per annum The population from 1878 to 1896 increased one million.

Under the Liberal policy adopted in 1896 a different story has to be told.

Mr. BRISTOL: Was the tariff higher or lower than previously?

Mr. McMURRAY: I will go into that whole matter. The tariff was consistently lower. The hon. gentleman may differ with me but I contend that it was lower. I will endeavour to show my hon. friend that it was another policy altogether than the National Policy that made Canada great and prosperous. Under the Laurier policy our exports increased from $109,000,000 in 1897 to $274,317,000 in 1911, or a growth of 120 per cent in that period, at least three times the rate of growth under the National Policy. The imports were more marked than that. Our imports increased from $106,000,000 in 1897 to $452,725,000, or 327 per cent in 1911, or at the rate of over twenty-three times what they were under the old policy, and our total trade in those fifteen years increased from $230,000,000 to over $727,000,000, or at the rate of nearly fifteen times what it was under the old National Policy.

Mr. BRISTOL: What was the tariff on agricultural implements in 1897?

Mr. McMURRAY: I will give my hon. friend all that later if he will allow me to develop my argument. The population of Canada in these fifteen years increased by two and a quarter million. I well remember in Ontario a portion of the time when the National Policy was in operation. Those were dark and dismal days in our country. Our people were leaving Canada by the thousands. The National Policy could not supply employment for them at home. The young Canadian, the manhood of Canada, went to the States, to build up Chicago and Detroit, to populate Minnesota, the Dakotas and Montana. Prices fell in the country. I well remember my father selling milch cows, good quality, at $18 and $20 apiece, and horses at $50 apiece. I boarded in Stratford with a man who worked for $1 a day shovelling coal. Wages fell. The market was not in Canada. It had reached its full development. They could employ no more. There was no more market. The Conservative party never had the capacity, or the National Policy never had the capacity, to settle the Canadian West.

Mr. BRISTOL: Did the Conservative party have anything to do with the construction of the Canadian Pacific Railway?

Mr. McMURRAY: The Conservative party probably had something to do with the construction of the Canadian Pacific Railway to the West, but if the Conservative party were not favourable to settling the country, Canada would be better without the road if that party were to remain in power. While they may have started the construction of that road, my hon. friend would probably be frightened if I were to recite the circumstances of the connection of the good old Conservative party with the building of that road. We know what happened in Canada in the eighties. Our people went out of this country. The many statistics that I have before me will show that native-born Canadians were going out of Canada at the rate of 116,000 to 120,000 a year, and that was not at a time or under conditions such as exist in Canada to-day. During the war, while Canada was wasting its blood and treasure, the United States was accumulating tremendous amounts of money and was gathering together vast stores of wealth that had to find an outlet in the development of the resources of that country, calling to our artisans in Canada to go over there. It is not to be wondered at that there would be an emigration from this country to the United States under those circumstances. These are exceptional circumstances in the country. But when that great emigration went from this country to the United States during the fifteen years of the National Policy, there were no such differential circumstances between this country and the United States. The two countries had great natural resources to be developed, and they were populated by a race of people very much akin, but the National Policy could not keep the people on the farm, and could not give work to the people in the city. Wages were low and prices were poor. They could not develop the country and Canada was in a very serious predicament. Had there not been a complete change of policy by Sir Wilfrid Laurier and his government, had they continued merely the National Policy, the great Canadian West would never have been settled, and we in all probability would have been in a serious condition financially.

Mr. SUTHERLAND: What policy did they give us?

Mr. McMURRAY: I will tell my hon. friend the policy they gave us, and I will also answer the questions asked by the hon. member for Centre Toronto (Mr. Bristol). They gave us a great immigration policy, a policy that opened up the doors of the great Canadian West to the people of the country. The Conservative party had absolutely nothing to give to the West, never gave anything to it and never would. They cannot show in all the years they were in power in this country a single thing they gave to the West.

Mr. BRISTOL: They gave the people the railway to get there.

Mr. McMURRAY: They gave them the railway? That railway was first started by the Liberal government under Alexander Mackenzie.

Mr. BRISTOL: To what extent did the Laurier tariff increase or decrease customs duties, particularly with reference to agricultural implements which you have been discussing?

Mr. McMURRAY: I have it all right here. The first thing that the Laurier government did when it came into office was to look over the resources of this country, and proceed with their development. One of the first things that government did was to establish a cold storage system to take care of the products which the farmer had to sell in his home market. The National Policy had failed to establish a home market. It could never have dreamt of establishing a home market as its advocates prophesied to the people of Canada. A home market might have been established for a small section of Canada where they were producing in a limited way; but taking this country with all its great resources, the National Policy was one of restriction, one of walking slowly, something that might have developed this country in thousands of years to come, but which never could have developed Canada in any reasonable time. Things had to be brought into the country in order to build it up. Outside markets had to be established. The goods of the country had to go out of the country, and, as one hon. gentleman said the other evening, when you sell your goods you must be prepared to buy. The Liberal party established a great cold storage system, and they commenced to lower the rates on the railroad. The Crowsnest pact was established at that time to protect the farmers of western Canada in the rates they had to pay. They did reduce the duties my hon. friend speaks of. The duties were reduced all along the line in 1907 on agricultural implements.

Mr. BRISTOL: I was asking about 1897.

Mr. McMURRAY: The condition of this country at that time by reason of the National Policy was such that there was a positive danger if too active and drastic action were taken. We simply had to take things as we found them and carry them along; and true to our pledges, we turned to reciprocity and reduced the tariff all along the line in 1907. Four years later we proposed reciprocity with the United States, and, true to our policy, we fought it out. There is a suspicion, and more than a suspicion, abroad in this country, that vast capital was gathered together of those interests who were not being injured at that time at all by the reciprocity pact, to fight for their own selfish advantage against the welfare of the vast consuming and producing population of this country.

Mr. SUTHERLAND: Under the reciprocity pact, was not the tariff on all agricultural implements, everything the farmer has to buy, and particularly cement, much higher than the tariff is to-day?

Mr. McMURRAY: Then I will ask the hon. gentleman: Why did he vote against reciprocity? Why did the Conservative party oppose it if those tariffs were higher as he alleges? Is there any consistency in their attitude?

Mr. SUTHERLAND: I asked if that was not a fact. It is no answer to ask another question.

Mr. McMURRAY: It is a very fair answer.

Mr. FORKE: That is the usual Scotch method.

Mr. McMURRAY: The method is well recognized.

Mr. SUTHERLAND: Does my hon. friend want an answer to his question?

Mr. McMURRAY: No.

Mr. SUTHERLAND: I may say that I opposed reciprocity because it was placing on the free list everything the farmer had to produce and nothing he had to buy.

Mr. McMURRAY: My hon. friend's views, apparently, were at great variance with those of the farming population of this country in that regard.

Mr. SUTHERLAND: Not at all.

Mr. McMURRAY: We find, however, in 1907 a substantial reduction all along the line on articles from what they were in 1894 and very much from what they were in 1883. If my hon. friend will pardon me, I will come in due course to the question of reduction of those duties.

The immigration policy of the Laurier government, carried on in spite of the high tariff conditions in which we found ourselves, brought into Canada in fifteen years 2,250,000 people; it multiplied our trade by 500 per cent; it multiplied our imports by more than

that amount, and it found for the manufacturing interests of this country a market that their Conservative friends could not find for them at all. In those fifteen years the great cities of the West grew, the cities of Ontario grew, Montreal grew, Vancouver grew; they grew because of a great immigration policy, and they proceeded to develop the resources of this country and to open it up.

Mr. SUTHERLAND: Was this immigration not owing to the fact that railways had been built through the western country enabling the country to be settled? In the earlier days of the National Policy, those railways were not there and consequently the country could not be settled.

Mr. McMURRAY: Those railroads were there for a long time. The Canadian Pacific was built through in 1882, 1884 and 1885. The country was there and just as rich as it is now, just as rich as Montana, just as rich as the Dakotas, to which the National Policy was sending 100,000 to 125,000 of our young Canadians every year to settle and populate that country. Why could the National Policy not have sent those young men to western Canada? It could not do that.

Mr. BRISTOL: They were all scared that the Liberal party were going to bring in free trade.

Mr. McMURRAY: They are not very much afraid of it now. In western Canada the people have never been afraid of free trade. It was that immigration policy that built up the very city which my hon. friend has the honour to represent. What the manufacturers of this country want is a home market for themselves. The producing people, the agriculturists of Canada, can never have a home market of any adequate size supplied to them here. They must go out to the world with their supplies. The great failure of the National Policy was that it destroyed the home market for the manufacturers. My hon. friends have asked me concerning the reductions in the duty on agricultural implements, and it is very interesting to consider the attitude of manufacturers of agricultural implements from the day of Sir John A. Macdonald's tariff, his so-called National Policy, to the present time. I say without fear of contradiction, that manufacturers of agricultural implements in this country have been opposed to or, at least, have never demanded a high protection policy. I have the examination of Mr. Frost, of the Frost and Wood Company, held before a committee of this House away back in 1876. He was asked whether his company wanted protection. He was asked this question:

[Mr. McMurray.]

How does the cost of material, rent, and labour in the United States compare with the cost in Canada?

He replied:

The machine we sell at Prescott at $75, twelve months' credit, is sold by the American manufacturers at Ogdensburg, at $100.

Q. Still you sell cheaper than the manufacturers in the United States?

A. Yes, 25 per cent. By competition we succeeded in driving them all out of the country.

John Watson of Paris, Ontario, a well-known manufacturer there, giving evidence on the same occasion, said:

I have worked up my business, commencing with two men up to what it is to-day, increasing each year. Just as my capital increased I put it in the business.

Then he was asked this question:

If we adopted a policy which would require protection to iron manufacturers as well as other trades, the effect of that would be injurious to your trade?

A. Yes; I think our business is protected just as much as it is necessary to protect it. The Americans can do nothing in the way of sending their goods here. We can compete with them in any shape, and we produce an article which they cannot excel.

Mr. SUTHERLAND: What was the tariff at that time?

Mr. McMURRAY: It was 15 per cent. Then Mr. Watson was asked this question:

Do you believe the policy of the present government in not protecting home industries is a good policy, allowing the Americans to flood our market with goods?

A. I think it is better to do that than to increase the tariff—

And I would call the attention of my hon. friends opposite to this.

—because the foundation of this country is agriculture and if you increase the tariff for the benefit of manufacturers, of course it must be disadvantageous to the farmers. I have noticed that in a season when the farmers were prosperous the better position they were in, the better position I was in.

And, the better position that the agriculturists of western Canada, indeed of Canada as a whole, are in, the better for the manufacturers of this country. They should cultivate the home market, not destroy it. I have this letter, dated in 1876, from Mr. Massey of the Massey-Harris Company. In conclusion, he says:

We may also add that the existing tariff is satisfactory to us—

It was 15 per cent at that time.

—and is sufficient protection, perhaps even a little less would also be. A still further advance in the tariff would certainly prove adverse to our interests.

Mr. BRISTOL: I do not want to disturb my hon. friend, but I should really like to know what they got in 1897.

Mr. McMURRAY: Never mind disturbing me; I shall probably disturb you before I

am through. I will tell my hon. friend what they got in 1911.

Mr. BRISTOL: No, 1897.

Mr. McMURRAY: This was the evidence of Mr. Metcalfe, of the International Harvester Company, given before the committee of Ways and Means in the United States. He was asked the following questions:

Mr. Cumpacker: Do you manufacture any cheaper in Canada than in the United States?
Mr. Metcalfe: They do not.
Mr. Cumpacker: As cheaply?
Mr. Metcalfe: Comparatively.
Mr. Cumpacker: Can you manufacture cheaper than the English manufacturer or the German manufacturer?
Mr Metcalfe: I think they can, otherwise they could not compete with them in Germany and England.

And last year, before the special committee of this House that was appointed to inquire into agricultural conditions in Canada, Mr. Thomas Bradshaw, general manager of the Massey-Harris Company, testified as follows to the chairman of the committee, the hon. member for Brome (Mr. McMaster), in regard to the company's plant in New York state:

Q. Do you find that your costs of production in Toronto are lower than your costs of production in Batavia?—A. They run about the same.
Q. They run about the same? I should judge from your answer that there was just some slight advantage on one side or the other.—A. I would think that the Batavia plant on certain machines only has the advantage. I would not say that in all machines it has.
Q. Do I correctly gather from your evidence that it costs your company about the same amount to manufacture their machinery in the United States and in Canada?—A. I will not say all our machines, because that is not the case, but some machines are manufactured more cheaply in the States than they are in Toronto, and vice versa.

We have the testimony of these manufacturers of agricultural implements, and if my hon. friends of the Conservative party will do themselves the justice of reading this evening's Journal, published in the city of Ottawa, they will see in that newspaper the statement of the Massey-Harris people that they are very well satisfied with this tariff and are capable of making a reduction on machinery sold to the agricultural people of the country. The real fact of the matter is that, so far as the agricultural implement industry in Canada is concerned, there has never been any need of protection; and to show that this statement is true I will now oblige my hon. friend (Mr. Bristol) and the hon. member for South Oxford (Mr. Sutherland) by citing some figures in regard to the tariff on certain lines of agricultural machinery. I think that this will show that while we have not by this budget hurt the manufacturing industry of Canada to the slightest extent, we have on the other hand done something that will prove beneficial and encouraging to the farming population of the country. In 1867 the duty on mowing machines, and so forth, was 15 per cent; in 1879 it was 25 per cent; in 1883, in the halcyon days of the National Policy, it was 35 per cent; in 1894 it was down to 20 per cent, which was also the rate in 1897. In 1907 it was 12½ per cent, 17½ per cent, and 17½ per cent.

Mr. SUTHERLAND: Under the Laurier tariff?

Mr. McMURRAY: Under the Laurier tariff it was cut 8 per cent. In 1914 it was 12 per cent., 12½ per cent and 12½ per cent; in other words, I take it that my hon. friend's party in 1914 reduced the tariff to a certain extent. I do not know why they did so; evidently there must have been some mishap: their friends the manufacturers in that particular branch had not been conducting themselves properly in some way. In 1921 the duty was 12½ per cent and we made a reduction; and this year it is reduced to 6 per cent. This notwithstanding, however, the Massey-Harris people say that they can stand the reduction and that it will not hurt them. All along the line there will be noticed a diminution of the terrible burdens which our people have borne. In 1883 under the National Policy the average tariff was 35 per cent, and we have reduced it to 20 per cent, 12½ per cent, 12 per cent and now 6 per cent. But that is not all. My hon. friend's leader (Mr. Meighen), who I regret to say is not present, placed himself on record unqualifiedly in this House, and in the right direction in my opinion, in opposition to the tariff on agricultural implements. He said it was too high, and in his argument he did not select agricultural implements alone; he said that what argument he had to make would apply with equal force to a good many others. He argued against protection for these implements, and he took the ground of Foster and Macdonald, saying that these were to be encouraged only as nascent industries and that as they grew up the burden which they imposed on the people should be thrown off. Apparently he took as his criterion the capacity of these industries to manufacture; that was to be the test as to whether they needed further protection. He referred to the amount of goods which these companies were exporting; and if that was a true test then it ought to hold to-day, when we are exporting so much more than we did in those days. The export of agricultural implements has increased steadily in the last four or five years, and in

order that I may reinforce the argument I am making I propose to put the figures on Hansard. My right hon. friend made the statement that these industries were entrenched behind ramparts of gold, a statement which he had to meet during his last campaign in western Canada. He went further and said that we had built a Chinese wall around them, and while he did not propose to wipe the duties out altogether he was going to reduce them. I say therefore, in the light of the hon. gentleman's remarks at that time, that he cannot argue against any reduction on agricultural implements to-day. He took as his test the export trade of the agricultural manufacturers at that time, and that trade is greater to-day than it was in 1910. Not only was that his position; the Hon. Mr. Lake, the then member for Qu'Appelle, and Mr. Herron, a Conservative representing the constituency of Macleod, contended that the duties should be absolutely removed from agricultural implements. That is the history of the agricultural implement industry in Canada; that is the history of the attitude of the right hon. gentleman who leads the official opposition; that also is the view of some Conservative members representing constituencies in western Canada on that occasion. These being the facts, how can we be charged to-day with trying to do by this budget what is unfair, or putting a heavy burden upon our manufacturing industry? The history of the agricultural implement industry, the assertions of the implement manufacturers themselves, and the assertions of representative men in the ranks of the opposition, prove conclusively that this industry is quite capable of standing upon its own feet; and we have adopted our policy after taking these conditions fully into consideration.

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

PRIVATE BILLS

THE NORTHERN LIFE ASSURANCE COMPANY OF CANADA

Mr. G. N. GORDON (West Peterborough) moved:

That the order of the House for consideration in committee of Bill No. 36, respecting the Northern Life Assurance Company of Canada, be discharged, and that the bill be referred back to the Banking and Commerce committee for further consideration.

[Mr. McMurray.]

Mr. SPEAKER: This is due to a slight error in the report from the committee the other day.

Motion agreed to.

THE TRAVELLERS' LIFE ASSURANCE COMPANY OF CANADA

The House in committee on Bill No. 8, to change the name of the Travellers' Life Assurance Company of Canada to "Montreal Life Insurance Company."—Mr. Jacobs.—Mr. Gordon in the chair.

On section 1—Name changed.

Mr. MEIGHEN: May I ask what is the idea of this change? I would think it rather serious to change the name of an important company. What is the purpose of it?

Mr. GRAHAM: I am not sure that I can tell my hon. friend. I was for years the president of that company, and negotiations had taken place between the Travellers' Life Assurance Company of Canada and the Travellers' Life of Hartford to have the name of the former changed; in fact, suit was taken at one time when I was president, but I did not pay any attention to it because parliament was supreme and had given the company that name. It may be that they have come to some arrangement, although I am just speaking from what I have in my mind, whereby the name of the Travellers' Life should be changed and another name assumed so as to avoid confusion.

Section agreed to.

Bill reported.

On motion for the third reading of the Bill:

Mr. CALDWELL: I feel that I was wrong in not registering a protest when this bill was in committee.

Mr. GAUVREAU: You are too late.

Mr. CALDWELL: I do not know whether this is one of the life insurance companies that issues a special rate for travellers or not.

Mr. GRAHAM: It really has nothing to do with travellers although its name might indicate that it had. The company does a general life insurance business.

Mr. CALDWELL: At the same time I think we should have full information before the name of the company is changed. We should know whether the outstanding policies are going to be affected by this legislation and whether the obligations of the old company are going to be assumed by the new concern. I think we should have full infor-

mation in a case of this kind because it is a matter that affects the public pretty widely.

Mr. GAUVREAU: The committee has dealt with this bill.

Mr. SPEAKER: Is the motion carried or lost?

Some hon. MEMBERS: Aye.

Some hon. MEMBERS: Nay.

Mr. SPEAKER: I am of opinion the ayes have it. I declare the motion carried.

Motion agreed to and bill read the third time.

THE T. EATON GENERAL INSURANCE COMPANY

The House in committee on Bill No. 9, respecting The T. Eaton General Insurance Company.—Mr. Sheard.—Mr. Gordon in the chair.

On section 2—Limitation.

Mr. GRAHAM: I am not sure that it might not be a good thing if it were intimated that bills should stand if the member in charge was not present. That would perhaps secure us more information concerning these bills. Bills come before us of which the right hon. leader of the opposition, not being a member of the committee, has, of course, no knowledge. I have no knowledge of this bill myself, and as it is we have to take it on faith.

The CHAIRMAN: This has been reported from the committee.

Mr. GRAHAM: I am not objecting to the bill, but I am not sure that it would not be a good thing if intimation were given that the member in charge ought to be here so that we could ask questions in committee with the hope of getting an answer.

Section agreed to.

The CHAIRMAN: Shall the preamble carry?

Mr. MEIGHEN: I think that is a good place to stop. I thoroughly agree with the minister. I do not think there is very much common sense in going on with these bills if the only member who can explain them is not here.

The CHAIRMAN: The hon. member for South Toronto (Mr. Sheard) is here.

Mr. MEIGHEN: That was doubly applicable to the last bill. I do not see any reason in the last bill yet and I would like to know a little about these bills before they go through.

The CHAIRMAN: The bill has been reported by the Banking and Commerce committee, and, of course, it has to be read a third time.

Mr. MEIGHEN: I know that, but why is the bill before us? It is before us that we may give our consideration to it, and we cannot give any consideration to it if we have not the slightest notion what it is here for.

Mr. CALDWELL: I agree with the leader of the opposition. I think the bill that has just been reported is a very serious one, although I presume I am out of order in speaking about it now. I would ask that this bill be not reported until we can be given some information regarding it.

Mr. GAUVREAU: Let this one pass. It will be a warning to them next time.

Progress reported.

COMMERCIAL TRAVELLERS' MUTUAL INSURANCE SOCIETY

The House in committee on Bill No. 23, respecting the Commercial Travellers' Mutual Insurance Society.—Mr. Ryckman—Mr. Gordon in the chair.

On section 1—Incorporation.

Mr. CALDWELL: Mr. Chairman, other commercial travellers' insurance associations carry a special kind of insurance. I have had that insurance myself for years past. You get a special rate on account of your occupation but it is only given by certain companies. If any change is contemplated in this bill we should have full information as to what is proposed before it is passed.

Progress reported.

SECOND READINGS

Bill No. 67, for the relief of Rilla May Freeman—Mr. Gordon.

Bill No 68, for the relief of Jessie Maria Watchorn—Mr. Rankin.

Bill No. 69, for the relief of Walter Scott Miller—Mr. Logan.

Bill No. 70, for the relief of Harriet Bertha Wiser—Mr. Rankin.

Bill No. 71, for the relief of Esther Mary Edwards St. George—Mr. Chew.

Bill No. 72, for the relief of Mabel Peters—Mr. Stewart (Leeds).

Bill No. 73, for the relief of William Thomas Trott—Mr. Stewart (Leeds).

Bill No. 74, for the relief of Lucy Elizabeth Smith—Mr. Carruthers.

Bill No. 75, for the relief of Florence Luella Patterson Kelly—Mr. Ross (Kingston).

Bill No. 76, for the relief of Arthur Harold Mingay—Mr. Rankin.

Bill No. 77, for the relief of Isabella Guild —Mr. Hudson.

Bill No. 78, for the relief of Albert Lawrence—Mr. Harris.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

Mr. McMURRAY: During the course of my remarks this afternoon, possibly at the risk of being exceedingly wearisome to the House, I produced a considerable quantity of figures which I assert substantiate the proposition that high protection, as established under the National Policy by Sir John A. Macdonald, was not a national policy at all, as it was confined to a very small area of the Dominion of Canada, practically to the province of Ontario and a small portion of the province of Quebec, and had not considered the great Canadian West, and had nothing to offer to the Maritime provinces. I maintain that those figures prove that that policy failed lamentably to advance our trade, that it failed to hold our population, that our people went by the thousands and hundreds of thousands to the United States, that during that time prices had fallen, that the National Policy was incapable of supplying the labouring men with work, that it absolutely failed, as it must do, to provide a home market in a country of vast natural resources such as Canada possesses, and that it was not fair to the farmer, consumer or the working man. I endeavoured further to prove, in dealing with the facts and figures of the 15 years of the Liberal regime under Sir Wilfrid Laurier, that Canada had advanced with wonderful rapidity, had become known to the world as a great exporting and trading nation by reason of the well-founded and active immigration policy introduced by Sir Clifford Sifton, that the National Policy was incapable of setting or developing western Canada, that the prosperity that existed and the success achieved in manufacturing in eastern Canada during that time were due largely to the fact that an aggressive policy of immigration had developed a home market for the manufacturers, and that instead of, as my hon. friends the Conservatives argue, a market being required for the agriculturists and those producing natural resources, what is really required is a home market for those who must manufacture.

I further asserted, and still assert, that the Conservative party have never been sincere in their protestations of a desire to obtain reciprocity with the United States. It is true that their outstanding leaders have asserted in the past that reciprocity was their aim and that they should endeavour to procure it at the earliest possible moment; but in 1911, when the field was open, and the Americans had a reciprocity treaty on their statute book, our friends showed their true colours and rejected reciprocity. I claim, Sir, that reciprocity would be a good thing for Canada. Following the dark and dismal days immediately preceding the year 1854, the period from 1854 to 1865 was one of wonderful prosperity in the development of Canada's trade and production. I am fair enough in my argument to admit that there were certain exceptional circumstances to encourage the development of the great natural resources of Canada at that time. There were the Russian and American wars, but still in spite of that Canada had no such prosperity except such as she later enjoyed under the Laurier regime. It is interesting to have the figures before us, and I take the liberty of placing them upon Hansard. To show how great an extent Canada's export trade with the United States increased under free trade—1854 to 1866—I give the following figures:

Article	1854	1865	Percentage of increase
	$	$	
Lumber	753,000	4,887,000	550 per cent.
Live Stock	73,000	5,503,000	Over 75 times as much.
Flour	1,792,000	2,970 000	65 per cent.
Barley	55,000	4,093,000	Over 70 times as much.
Oats	37,000	2,216,000	60 times as much.
Fish and fish products	1,004,000	2,213,384	120 per cent.
Coal (chiefly from Pictou and Liverpool)	254,000	1,223,000	500 per cent.
Butter	126,000	668,000	430 per cent.
Wool	69,000	1,527,000	Over 22 times as much.
Hides and skins	34,000	228,000	Over 6 times as much.
Furs and fur skins	13,900	214,000	Over 15 times as much.
Potatoes	88,000	147,380	Over 67 per cent.
Provisions	4,400	851,000	193 times as much.

In the face of that showing, because of the fear that artificially protected interests always have of any attack which might be made upon them, the manufacturers of Canada and the Conservative party turned down reciprocity. In the face of those facts every person conversant with Canadian affairs will realize that, with reciprocity in force, the result would have been tremendous in the development of trade and the progress of Canada.

I have always endeavoured to prove that our manufacturers, if they had the courage, are quite capable of going out and competing with the Americans across the border, or as a matter of fact, with all the other countries of the world. I may say that we shipped out of this country into the United States a considerable quantity of manufactured articles. In 1910 the manufacturers of agricultural implements in Canada were shipping $86,000 worth of goods to the United States. At the same time they were shipping to the other countries of the world nearly $5,000,000 worth. It was at that time my right hon. friend, the leader of the opposition made his argument in this House that by reason of the big export trade with these other countries, the factories of Canada were quite capable of standing on their own feet with a small protection because they were able to go out into the world and compete. The farmers of Canada were paying for protection to the consumers of another country. If that be true in 1910, with $5,000,000 of an export trade, it is doubly true to-day when they export over $812,000 to the United States and $9,339,519 to other parts of the world. That clearly proves that they are quite capable of standing on their own feet, if the argument of the leader of the opposition was good in 1910, and we in the West are absolutely sure that it was a sound and reasonable argument at that time.

There are within our country many manufacturers who can stand on their feet without any protection at all; for instance, the great pulp and wood industry, the paper manufacturing industry, the flour industry, with our splendid electric power and in a country that produces a vast quantity of cheap food. There is no reason whatever why this country cannot compete successfully with the United States. I have before me a list of statistics dealing with the manufacturers of Canada. In 1922-23 we exported to the United States $248,988,128 worth of manufactured and semi-manufactured goods from Canada. The particularly interesting thing about this from the point of view of my argument is that fully or chiefly manufactured goods to the amount of $135,521,437 were manufactured in Canada and shipped by Canada to the United States.

During last summer we had the interesting experience of having the leader of the opposition come to western Canada and we are particularly proud of him in that western country. We look upon him as one of our own there. He was with us for a long time and after 1910 when he made that speech on "The ramparts of gold and the Chinese wall," we were quite prepared to take him to the bosom of the West as one of our own. He came to the West this year. Conditions were bad and he told us that they were very bad in all parts of Canada. The picture that he painted to us was a gloomy one, and then he prescribed a remedy. The Conservative party is a real, genuine Conservative party in its remedies. It is like the old time doctor who had but one remedy which was to bleed; bleed the patient on all occasions. When our good friend the leader of the opposition came to western Canada this year, he prescribed for our ills his one and only remedy, the remedy of the Conservative party, the remedy of Macdonald, Foster and the leader of the opposition. He told our farmers and the people generally in western Canada that they wanted high protection.

Mr. MEIGHEN: Will the hon. member be good enough to quote where I said that? He has been talking at random for a long while, and it is about time I checked him.

Mr. McMURRAY: I had it currently from the newspapers. I did not have the honour of going to hear my right hon. friend.

Mr. MEIGHEN: I will take the chance of saying that my hon. friend never read that in a report in any paper of any speech I made.

Mr. McMURRAY: The right hon. gentleman will have to give me credit; I may have misread him. I naturally thought that would be his argument. I knew it was not his argument in 1910. He was then a western man; but since then a great deal of water has flowed under the bridge and my right hon. friend has grown closer to those in the Conservative party. I have heard a great deal of high protection talk during this debate, and I presume it is in keeping with the right hon. gentleman's opinions on that question. At any rate, it seemed to produce a feeling like a cold breeze throughout the prairies. It seemed as if the wind had swung away north over the Hudson bay again. The farmers put their overcoats on and turned up their collars. He had with him on that occasion the great Sachem, Ferguson, from the dominant province of Ontario, and he evidently talked high pro-

tection. He was going to benefit the good old province of Ontario by having them consume the coal of Alberta. It did not matter if that coal was going to cost them three or four dollars more a ton, it was to be hauled over all the distance from Alberta to Ontario and laid down there at a high price. That was honesty; that was real, genuine protection; but I feel that the people of Ontario would not welcome the application of that form of protection which we have enjoyed in western Canada for so long.

The people of western Canada, as I alleged this afternoon, have received no benefit whatever from the National Policy. The home market has not been able to take a fraction of what they produce. This is the proof that the home market has not succeeded. In the days of the McKinley tariff, disaster fell upon Canada. There was no market for the farmers' products. The home market had not developed. When the Fordney tariff was imposed upon cattle, that industry perished in western Canada. There was no home market for it. Our capacity to produce from our great natural resources is so tremendous that a home market idea is something of a terrible joke. So it is that the people of the West in regard to many of these industries feel that they are like Sinbad the Sailor. The old man of the sea is on their backs; they have carried him a long while; he has booted them in the ribs, and they will be glad to be relieved of that burden.

What is to be the future development of our western country? Sometimes my hon. friends of the Conservative party, in a moment of forgetfulness, state their true thoughts upon this question. I have before me the smiling face of the hon. member for Centre Vancouver (Mr. Stevens). In the Listening Post in April, he is dealing with conditions in western Canada and I read with marked interest his very able statement. I considered it able, because we always think anything is sound and solid that agrees with our own views. He was talking of that magnificent city of Vancouver and the fine province of British Columbia. The article is headed "The Outlook for the Pacific," and the hon. member modestly stated:

> During the year 1923, there has been exported by deep-sea shipping from British Columbia 550,000,000 feet of lumber which is approximately double that of last year, and about ten times what it was eight years ago.

In addition to this, he says, it is evident that large quantities have been exported by rail to the United States and eastern Canada. He says that there has been exported through the port of Vancouver between September 1 and March 1 29,429,000 bushels of wheat. I believe it has now gone up to something like 42,000,000 bushels. Of that 29,000,000 bushels, he says that 20,000,000 went to the United Kingdom and about 9,000,000 to the Orient, while for the month of March there were charters for 47 deep sea ships to convey 7,000,000 bushels to the United Kingdom and 2,900,000 bushels to the Orient. Then he speaks of the export of canned salmon, and refers to the growth of business by export through the port of Vancouver. The hon. gentleman then closes his statement with these remarks:

> I am firmly of the opinion that the development of trade through the Pacific portals of this great Dominion will perhaps be the largest contributing factor in Canada's progress in this decade.

What did the hon. gentleman see there? Did he see anything resulting from the National Policy? No. He saw the development of the prairie provinces and of British Columbia by means of a great immigration policy; and I am glad to say that at the present time in western Canada immigrants of a very fine type are pouring into the country from all the nations of Europe whose people came to Canada years ago to open up that part of the country and develop it. To-day the streets of Winnipeg are assuming something of the appearance they had some ten or twelve years ago when these sturdy Canadians were coming in to develop our natural resources. Possibly it was this that the hon. member had in mind in the statements he made. He saw the grain pouring down from the prairies, the coal of Alberta and the lumber of British Columbia being shipped, without the aid of high protection, and all going to develop the Pacific port.

I believe, Sir, that the next fifty years will see a marvellous change in the development of this North American continent. It was natural that those who came from Europe should have settled along the Atlantic coast and in the vicinity of the inland lakes and the rivers. But in view of the great change which is coming over Europe to-day, the countries of which are impoverished as a result of the war, I believe that the next fifty or, at any rate, hundred years will see a tremendous trans-Pacific trade built up with Japan, India, China and Australia, and then the west coast will see the building of great cities which will be the making of Canada, inasmuch as they will create in our own country a competition in trade between the Pacific and the Atlantic. In my opinion the most desirable thing for this Dominion to-day is to continue that immigration policy which is bringing to the country vast numbers of

European people. There are in western Canada 140,000,000 acres of arable land, and with some proper policy of colonization these lands could be put under cultivation so as to produce in Canada the home market which the manufacturers need.

As I said at the outset, I believe that the present budget is a step in the right direction; it is an endeavour to reduce the cost of living in the country and encourage the development of its great natural industries, namely, farming, mining, lumbering and fishing. The only stability which manufacturing possibly can have must consist in cheap manufacturing conditions; without those conditions no sort of artificial barrier will protect these concerns. But with a tariff similar to this that we are considering to-night we may hope to have the manufacturing industry established in this country upon a substantial and natural basis. Coupled with that there should be, in my opinion, a keen searching-out of all sorts of trade with the various countries of the world. I was greatly taken with the address of the hon. member for Cumberland (Mr. Logan) some time ago dealing with the possibilities of trade with the West Indies, and I do not think we can over-emphasize the importance of looking to other countries than those of Europe for an outlet for our vast natural resources. With that, despite the heavy burdens we have, I am satisfied that there is a bright future for this Dominion.

There are some figures which I desire to put on record in Hansard before I conclude. Our Conservative friends have gone about throughout the land telling of the deplorable conditions that exist in this country, but the figures I am now going to submit to the House have something of a ring in them which I think must be gratifying to all Canadians. First of all, in regard to immigration, let me point out that in 1921 there came to this country a total of 100,413 immigrants from Great Britain, the United States and other countries; in 1922 from the same sources we had 70,423, and in 1923, 134,096. This year the increase, I believe, will be considerable. As regards our field crops, Canada's harvest last year reached a total value of $899,166,200. And the mineral production of the Dominion for the year 1923 aggregated $214,019,832, which is 16.1 per cent over that of 1922 and 24.1 per cent over 1921. The figures in connection with our forestry show that for the last 12 months of the fiscal year 1923-24, ending February 1924, the exports of wood and paper amounted to $270,346,000 as compared with $221,592,000 in the previous 12 months, and $182,207,000 in the 12 months ending February 1922.

Coming now to our external trade, I may tell the House that there has been a rapid increase. For the 12 months ending February 1924 our exports amounted to $1,042,724,670 and our imports $898,338,916. Our exports for the 12 months ending February 1923 amounted to $928,356,656 and our imports $790,032,342; while for the 12 months ending February 1922 our exports amounted to $762,547,390 and our imports $761,026,261, showing a trade balance running strongly in our favour. The exports to Great Britain increased in the 2 years from $293,666,295 to $355,838,316; while the exports to Australia increased from $11,314,906 in 1922 to $20,401,275 in 1924. Our exports to New Zealand increased during the same time from $4,584,349 to $12,541,405. And as for the United States, both exports and imports show a rapid increase, although the former show the greater absolute as well as greater relative increase, the excess of exports in 1922 being $222,905,433. as against $177,580,418 in 1921, or an improvement of $45,000,000 in two years. This is directly reflected in the improved position of the Canadian dollar. In 1920 it required 112.27 cents to purchase an American dollar; in 1921, 111.61 cents; and in 1923 only 101.97 cents. Our railway passenger traffic in 1923 was 9 per cent greater than in 1922, and the freight traffic last year was the greatest on record. The revenue increased by $28,667,000. Our latest information is that for the first two months of 1924—usually the dullest of the year—the net earnings of the Canadian National Railways were $262,376, as compared with a net deficit of $3,270,052 in the same two months of 1923, or an improvement of $3,532,428. There has been a decrease also in the public debt of over $15,000,000. These figures show the present comparatively satisfactory condition of the country despite our heavy debt and the post-war conditions which we are passing through.

I agree with the hon. member for Vancouver Centre (Mr. Stevens) that Canada has a great future. And I share the desires of the people of Alberta and British Columbia for the reduction of the mountain scale of freight rates. I believe such a reduction is in their interest and that they are entitled to it, and that it would set up a healthy competition which would be beneficial to all the western provinces.

During the course of my remarks this afternoon the right hon. leader of the opposition asked me to explain my attitude in re

gard to protecting artificial silk. I have looked up the item. I find that a certain measure of protection is granted to artificial silk. It has never been contrary to Liberal policy, either in theory or practice, to encourage by protection, for a brief period of time, the establishment of any manufacturing industry for which there is reasonable ground to believe that it may be successfully developed. Two years ago I supported the bill to encourage our hemp industry, my reason for doing so being that it was necessary to assist the establishment of an industry that promised to be successful. In Manitoba we produce the finest raw material for such an industry, we have any amount of electrical power and a very large home market. The only factor lacking to the successful establishment of the hemp industry was protection to overcome a large combine in the United States. And so it is with artificial silk. I understand it is made from wood fibre.

Mr. MEIGHEN: Was the hon. gentleman in the House when his colleague the Minister of the Interior (Mr. Stewart) stated that protection was a mistake from the beginning?

Mr. McMURRAY: Let me tell my right hon. friend that I cannot agree with the arguments of all the gentlemen on the other side, in fact their arguments are very weak. And at times there are differences of opinion within the Liberal party on the philosophic attitude to be adopted upon the question of protection.

Mr. MEIGHEN: Philosophic!

Mr. McMURRAY: My hon. friend the Minister of the Interior may have his own private views upon the subject; but what I have asserted is, I think, correct, and I can find authority for it by referring to some of the most eminent political economists. For instance, John Stuart Mill, who has been quoted before in this debate, has declared that it is reasonable and proper to encourage an industry which has good prospects of success. I believe that is the view of the right hon. gentleman himself; he stated it in 1910 in that famous western speech of his in much better form than I would be capable of expressing it. With our cheap power, our energetic people, our ample timber resources, I see no reason why the artificial silk industry should not be a success in this country, provided it is not handicapped by those protectionist elements that work so grievously against a legitimate industry being established. We have had before us from time to time deputations protesting against the reduction of the tariff upon certain manufactured goods, and always the burden of their arguments is that if they were not handicapped by the duty on their raw materials—which were in turn the manufactured product of other concerns enjoying protection—they could and would stand up against any reasonable competition. That is the curse of protection, that it results in the development of gigantic corporations well capable of looking after themselves, and along with them a crowd of helpless cripples economically.

In conclusion, Mr. Speaker, I have great pleasure in announcing my entire concurrence in the budget, which I look forward to as likely to be productive of substantial relief to our great basic industries and to be non-injurious to our manufacturing interests, whom I would not want to see adversely affected in any degree whatever. Not only do I think that our great basic industries will be benefited in large measure, but I am also confident that the great consuming public will be afforded substantial relief.

Mr. J. J. THURSTON (Victoria, Ont.): Mr. Speaker, just to relieve the suspense that possibly prevails throughout the chamber, I beg to announce at the outset that I am not in the Marathon class. I rise to take part in this debate mainly for the purpose of correcting an impression that apparently exists in the minds of some hon. members, and also in the minds of some of our citizens, an impression that has been created during the course of this debate, mainly by members of the Conservative group, who would lead the country to believe that the majority of the electors of Ontario and of their representatives in this House are protectionists. I would inform the House that Toronto, Hamilton and a few other of our industrial cities do not constitute the whole province. For divers reasons we are changing our opinions in Ontario in connection with the tariff and are gradually seeing the light of day. We welcome the opportunity that our Conservative friends promise to give us in the next general election of fighting it on the straight tariff issue of protection versus free trade or tariff for revenue. We will be glad to meet them on that issue, as we were glad to meet them on it in the election of 1921, when I think the change in tariff sentiment in Ontario was demonstrated by the return of twenty-odd members to this House in favour of free trade. After the next general election we are going to double our numbers on the same issue. For different reasons possibly we look upon

9. p.m.

the question of the tariff to-day differently from what we did in 1911. Since 1911 the people of Ontario have studied the economic question and the tariff question and they have been forced to the conclusion that a tariff for protection is morally, socially and economically unsound, and the old cry of losing or gaining the home market will have very little effect to-day in Ontario.

I wish to join now with hon. members who have preceded me in complimenting the Acting Minister of Finance (Mr. Robb) on his presentation of the budget this year. In reading over the debates for a number of years past it seems to have been customary for hon. members to always compliment the Minister of Finance of the day on his budget presentation, but I feel that in this case there is an element of sincerity in the congratulations that did not prevail to the same extent in days gone by, and mainly for the reason that the Acting Minister of Finance has brought down a budget that clearly defines the line between protection and a tariff for revenue. The budget was also welcomed throughout the Dominion as no previous budget has been for other reasons, and one was that a good many loyal Liberals throughout Canada from the Atlantic to the Pacific had reached the point of being discouraged and of almost wanting confidence in the Liberal party that had been elected for years on a tariff for revenue or a low tariff cry, and which after it had been returned did not touch the tariff at all except to juggle with it; it did not lower the tariff. And so unless the government brings in further resolutions, a second budget which is often brought down to the House, dealing with the anti-dumping law and the pricing of articles entering this country, which comes under the same law, and in that way offsets the good effect the budget is otherwise bound to have upon the basic industries of this Dominion, the staunch Liberals throughout this country will offer their congratulations to the Acting Minister of Finance with a degree of sincerity that they did not feel in the past.

In connection with the lowering of duties on different lines of manufacture, I should like to take this opportunity of issuing a note of warning to some manufacturing firms in this country. We have been told by a good many, mainly by hon. members in the Conservative group and by Conservative members in the Liberal group that many, many manufacturing firms would be forced out of business and be compelled to close up if there was any reduction in the tariff. Now, I purchase farm implements and machinery of different kinds, as all agriculturists do throughout the Dominion and when I am considering a purchase and looking over different machinery I always consider that the day will come when I shall probably need repair parts for those machines, and I always ask myself whether the firm manufacturing those implements is on a good sound business footing and likely to stay in business so that I can get spare parts if I should need them; and if I were to see a statement from the Massey-Harris firm that they were going to be forced out of business by this reduction in the tariff I would immediately cease buying Massey Harris implements. So if these manufacturing firms do not want to deal a death blow to themselves they had better steer clear of this "blue ruin" cry over any monkeying with the tariff, because it will act as a club against themselves more than anything else that I can think of at the present moment.

I was a little surprised this afternoon to hear the hon. member for Kingston (Mr. Ross) undertake to tell the farmers of the West just why it was they were in such hard economic circumstances at the present time. It was due, he said, to their careless methods of farming. I wondered as I listened to him, is it not possible that our manufacturing friends, who are putting up the same cry of hard times to-day that the farmers were a year ago, are careless in their manufacturing methods? I think the argument would work both ways. Now as I promised the House, I am not in the Marathon class, and I am not going to say anything more on the tariff except to promise our protectionist friends that when the opportunity does come to the people of Ontario to declare themselves upon the question of protection or a tariff for revenue, we shall be there with the goods.

I want to take up now two questions that are of a local nature, and I suppose if I had followed the custom of most hon. members in this House I would have mentioned these matters upon my first appearance in the House after the election of 1921. In the constituency of Victoria and Haliburton from which I come, we have contributed our allotment to the national menagerie of the Dominion of Canada in the form of white elephants. We have running all the way across my constituency the Trent canal. We can thank both the old parties for that animal. Some have criticized the expenditure on the Trent canal, and I think it deserves all the criticism that anybody can give. The canal should never have been constructed, but the fact remains that it is constructed. We have thrown money into it, and we cannot sell it.

We would get rid of it if we could; we would carry it down into lake Ontario if possible. But there it is, and it is up to the government to make the best use of the canal possible, in order to increase any revenue that can be derived from it. Now the only thing the Trent canal is useful for, to my mind, is tourist traffic. For some years back governments have neglected making the slight improvements on the canal that might encourage tourists to come to that section of the country. Now that we have spent millions of dollars on the Trent canal, the only way we can get anything out of it is to bring summer visitors there from other countries and so get the benefit of the money they will spend in our country, and I think it is only wise on the part of any government to remember the expenditure that has been made and to make the slight improvements necessary. An hon. member asks me if it is worth seeing. Yes, visitors will not only see the canal, but as picturesque a country as it is possible for summer visitors to see, through North Victoria and Haliburton and possibly Muskoka; the scenery will well repay a visit.

We also have another beast in the shape of the Dominion arsenal at Lindsay.

Miss MACPHAIL: A real monster, that is.

Mr. THURSTON: Parasite might be the proper name. This is an expenditure for which there is absolutely no justification, it should never have been made. I do not know why the building was constructed. I suppose it is simply another example of the wild expenditures that were made during the years of the war. Some people may be under the impression that the construction of the arsenal in Lindsay was a boost to that town. That is not so. Previous to its construction the government of the day agreed with the municipal corporation of Lindsay that if they would carry out certain improvements the arsenal when built would run continuously and employ from 200 to 250 hands. As a result of that promise the town of Lindsay spent practically $77,000 in constructing pavements, laying water mains, and making other improvements. Immediately after the expenditure of that money the arsenal was closed down and has not been opened since, and now the town is out the money that it expended. Discussing the matter with the town council last year, they said that making the greatest allowance they could for the growth of the town from the time the arsenal was built until then the cost to the town through the arsenal being there was $45,000. In the meantime the people have been taxed for the interest payable on the balance of the $77,000. I should like to recommend to the government that if any opportunity arises for disposing of the arsenal they should take advantage of it. Of course it is unfair for the present government to assume a burden that was left on their doorstep by the previous administration. Nevertheless, I would urge them, if the opportunity ever arises, to dispose of the arsenal to some manufacturing firm, because it is of no use whatever in its present form to the town of Lindsay. It has involved an expenditure of several millions of dollars and will cost a great deal of money to keep it in repair, it has never yielded a single dollar af revenue to the Dominion treasury. Not a dollar's worth of ammunition, the product of that arsenal, has ever been shipped out of Canada. It has been of no use whatever to the Dominion, and is a white elephant to the town of Lindsay. In all fairness to the town if the slightest opportunity of disposing of the arsenal to some manufacturing firm presents itself I advise the government to seize it.

Mr. HALBERT: Is there any expenditure at present for caretakers?

Mr. THURSTON: There are three or four caretakers, and I suppose these will continue to be employed while the building remains as it is.

Now, Mr. Speaker, I have occupied a seat in this chamber for two sessions and part of a third. During that time I have not spoken but have taken every opportunity of sizing up the respective parties represented here. I have one advantage, perhaps, over older members of having had no previous political ties. For this reason I have been able to view the actions of the respective parties in the House from an impartial standpoint, and should now like to give a short summary of my conclusions as to their characteristics. The government party naturally comes first. Until the presentation of the present budget I must say that I was greatly disappointed in the record of what we had been taught to believe was "the grand old Liberal party". They were supposed to represent a party from whom much might be expected; but during the last two sessions I was convinced that if they were standing anywhere at all they were pretty nearly standing on their uppers. They were shuffling first in one way, and then in the other direction, and it seemed that they would accomplish little. Now I must say they show strong indications that they are going to do something. That is, unless they weaken by not rescinding the order in council with respect to the dumping regulations passed before the bud-

get was brought down. I repeat that the government show indications of proving to the Liberals throughout the Dominion that they have some slight intentions of fulfilling the expectations of those who have consistently voted for them year after year.

The Conservatives, the official opposition, must be considered next. I have been greatly disappointed in hon. gentlemen to my left who, I believe, are termed "His Majesty's loyal opposition." To live up to that title they should at some time or other be prepared with constructive suggestions for the better governing of the Dominion, but apparently they think differently. During the time I have sat in this chamber I have not heard any suggestion of a constructive nature from the Conservative party. At the present time I think they are fully entitled to the honour—I suppose they will look upon it as such—of being the opponents of the Canadian National Railways. Their attitude towards the programme of branch line railways brought down by the Minister of Railways has convinced me that for some reason or other they are no longer favourable to the Canadian National Railways as they appeared to be when I first entered parliament, but are now the opponents of Sir Henry Thornton and his board of directors. It is a regrettable position for any political body to take, because if there is any one person in Canada who is making good to-day it is Sir Henry Thornton, and in the fight he is waging he deserves the moral support of every true Canadian citizen. I think too that I am justified in giving the Conservative party a monopoly in the matter of calamity howling and raising the blue ruin cry. We have heard more from them along these lines this session than we ever heard from the famous "notorious Alberta representatives" a year ago.

I should like to speak for a minute or two on the subject of the amendment. I am sorry that in the matter of amendments to the budget we are limited by the rules that have been handed down to us for generations back. For some reason or other the rule in the past has been that any amendment to the budget, whether it be similar to or contrary to the principles expressed in the budget, was a vote of want of confidence in the government. This session an amendment has been submitted by the hon. member for Centre Winnipeg (Mr. Woodsworth) which, in subject matter is quite similar to the budget itself; and I think the rule should be changed so that when an amendment similar in subject matter and in principle to the budget is moved, the government would be at liberty to adopt some of the clauses of the amendment. I do not see the sense of submitting an amendment at all, if a vote for the amendment is a vote of want of confidence in the government, no matter what we vote for. If that is the way the vote is to be taken, why all this discussion in introducing an amendment of any kind to the budget? Why not let it go without an amendment and vote yes or no on the budget? That is what the vote means anyway. I would like to see the rules changed so that the government could accept, as an addition to the budget, certain clauses contained in the amendment, or the whole amendment if necessary. If the rules were framed to permit that, I think we would be getting down to the true principles of democracy in allowing the will of parliament to be expressed and accepted by the government.

I propose to reserve my decision as to how I am going to vote on the budget and on the amendment.

Mr. EMMANUEL d'ANJOU (Rimouski) (Translation): Mr. Speaker, on behalf of the electors whom I have the honour to represent in this House, and the great majority of whom are worthy and hardy tillers of the soil, I extend to the government and its able Acting Minister of Finance (Mr. Robb) my sincerest thanks and congratulations for having found it possible to present this year, to the country such a praiseworthy budget. After having taken over, in 1921, the administration of the country, which was in such a deplorable financial situation, the government had to display a great deal of fortitude, energy and wisdom to attain such a result. Therefore, it is not astonishing that throughout the whole of Canada this splendid budget was received with praise and satisfaction by all classes of society. The farmers, especially, have reasons to be gratified for what the Liberal government have done for them, and the consumer has the same reasons to rejoice, owing to the fact that the present budget considerably decreases the cost of living. It is, therefore, the great mass of the people who will largely benefit from the benevolent policy of our government. The only element of our population who find fault with the wise policy of the government is the one that has always lived upon and enriched itself through the hardships and toil of our farmers and workmen. The big interests, the magnates of the financial world, the mergers and the trusts, these are the enemies of tariff reduction and

measures of relief on behalf of the farmers and workmen. They already see, with fear, their excessive and sometimes scandalous profits decreasing considerably, and they are conceited enough to think that they are the only ones in this country who are entitled to all privileges, thereby denying to others the very legitimate share of justice to which they are equally entitled.

The government will have well earned the thanks of the country, by championing the interests of the people against the privileged classes. The country has been imposed upon far too long a time by the capitalists. The farming industry, which is the basis of the prosperity of all nations, is granted to-day, by a Liberal government, not special favours, but simply justice. And all true friends of the farming class must rejoice with me and sincerely congratulate the government on such an act.

The lowering of duties on farm implements will turn to the great advantage of our farmers, since it will allow them to purchase at lower cost the necessary farm implements and thereby highly contribute to better, in general, the conditions of the agricultural class.

The first duty of all governments, conscious of their responsibilities is to energetically work in unburdening the tireless tillers who, after all, make up the great mass of consumers and producers. Thus, as the first result of tariff reductions on agricultural implements, the farmer, when purchasing these articles will pay five, ten or twenty dollars less for each and will, thereby, be that much in pocket. Certainly, this is something tangible and appreciable and, no doubt, our worthy farmers will return thanks to the government when the time comes. Whatever may be held to the contrary, the government by lowering the duties on farm implements was inspired by the old Liberal tradition. During the present debate, many hon. members who spoke before me, tried to establish that the tariff policy of the government was not that of the late lamented leader of the Liberal party, Sir Wilfrid Laurier. The few lines which I shall read, Sir, with your kind permission, will prove, beyond doubt, that the Liberal government by reducing the duties on farm implements, followed in all points, Sir Wilfrid Laurier's policy and that they put into practice one of the most cherished wishes of the great deceased. Thus, in his manifesto to the people of Canada, in 1917, Sir Wilfrid Laurier said:

> Should the people entrust me with the administration of the country, I would make it a point to immediately unburden the farmer of all vexatious custom duties.
>
> I would immediately abolish the duties on farm implements and other necessities with reference to farming as requested by the western people. And I would consider as an essential duty of my administration a general and thorough revision of the tariff aiming at encouraging production in Canada and relieving the Canadian consumer.

The budget brought down by the hon. Acting Minister of Finance (Mr. Robb) is really a Liberal one and the government's policy is certainly in perfect harmony with the idea of the great Canadian who so much contributed to the welfare of his country and whose memory will always be cherished by all Canadians, whatever race or creed they may belong to.

If we wish Canada to attain its manhood, we should adopt a policy purely Canadian and help by all possible means, the great farming industry, the first of the national industries; for let us not forget it, our country is essentially agricultural, its future and welfare are entirely based on the progress and development of the farming industry. The crisis we are passing through is serious, very serious indeed, and no one will gainsay that the farmers are those who suffer the most. The United States tariff is so high that our farmers can no longer export their products to that country. This state of things obliges them to sell these products at ridiculously low prices and often at a loss. Nevertheless these worthy sons of the land have obtained these products from the soil, thanks to their unceasing labour and exertions; for, we must not forget, the farmer toils twelve to fifteen hours per day; the eight-hour day is an unknown thing. Consequently, he expects at least to sell his products at a remunerative price. The reduction of duties on farm implements will be of material help since it will allow him to purchase them at a lower price. It will enable him to produce cheaper than he could previously, and, therefore, realize a larger profit on his products. When agriculture is prosperous, the country is prosperous. Therefore, the government will never be too generous towards the worthy farming class, who deserve on more than one score the support and self-sacrifice of all those who love their country and wish its greatness and prosperity.

The balancing of our budget, the surplus of $30,409,000 in our revenue over expenditure shows conclusively the efficiency of the present Liberal administration. This happy state of affairs allows the government to reduce considerably the various taxes which weigh so heavily upon the Canadian people. The reduction and doing away with certain taxes, as well as some changes made to the

tariff, will contribute in a large measure, to the lowering of the cost of living, and consequently will be to the advantage of the consumer.

Since the outset of the debate on the budget, a great number of hon. members have spoken; very few, however, have seriously touched upon the so important problem of immigration and the exodus of our people to the United States. Yet, in my opinion, the subject is of the utmost importance to Canada, the future of our dear country depends on its immediate and right solution. In the speech which I delivered on March 10, last, on the Address in reply to the Speech from the Throne, I discussed this very important question of immigration and exodus of our people to the United States. Realizing more than ever the importance of the subject, I wish to broach it again to-day, and endeavour to discuss the problem more thoroughly than I did on March 10, last. I would, first, advise the government to entirely discontinue their immigration policy, at least for several years. We have no place in Canada for these immigrants gathered at great expense on the docks of London and Liverpool. Certainly, it is not with that kind of immigration that we shall make Canada a healthy, moral and strong nation. And, while these undesirable immigrants reach our shores by ship-loads, a very sad sight meets our eyes. It is an uninterrupted trek of our people—these sons of the soil—towards the neighbouring republic, in the hope of finding there, the comfort and easy circumstances that their country denies them.

I again state, the problem of the exodus of our people to the United States is saddening, painful, even discouraging. In my opinion, the best policy to adopt would be to use all the means and resources that Providence has been kind enough to endow our country with, so as to keep our people at home. The money spent each year for immigration could be given in grants of all kinds, to those of our people, farmers or settlers, who, in a moment of discouragement might feel inclined to abandon the land of their forefathers. Our country is immensely rich in farming land, which only awaits the labour of vigorous and worthy settlers to produce the golden wheat which feeds the world.

How many of those who emigrate each year, sick at heart, would gladly accept the grant of a parcel of land and settle there immediately, with the firm resolve to establish for themselves a homestead and contribute their share to the welfare of the country. Moreover, why should the government not help them at the outset, which is always hard for these good settlers, by loans on as easy conditions as possible. The establishment of an agricultural loan institution would be a great blessing for our farmers and settlers. I would suggest to the government to take the initiative regarding such a step. They would be carrying out a truly national and patriotic duty, and greatly helping to stop this exodus of our people to other lands.

To my mind, one of the main causes of this exodus is the Bankruptcy Act. This act should be unsparingly struck off our Dominion statutes. This law has been the ruin of a great number of our farmers. It has completely destroyed the farmer's ability to get credit, owing to the fact that it prevents our farmer from obtaining the money which he needs to settle his affairs, even at a high rate of interest, because he cannot give the required guarantees demanded by those who are willing to make the loans. That is certainly, one of the main reasons of the desertion of our rural districts and the trekking of our people towards the United States.

Therefore, if we are sincere in our desire to stop the exodus of the sons of Canada to foreign lands, we must cut out immigration, help by all possible means our farmers and settlers, either by giving them lands, or by granting them a bonus as a means of encouragement. or still, by loaning them money under the most favourable conditions possible. Finally we must establish an agricultural loan institution and abolish for ever the Bankruptcy Act which has been so disastrous to our farmers and which has ruined so many of them. The repatriation of our people would be an excellent thing if it was possible of accomplishment. For my part, I maintain that it will always be easier to keep our people at home, if we take the necessary means, than to repatriate those who have departed, and, to give weight to my statement, I shall read an extract from an editorial published recently in the Tribune, of Woonsocket, R.I., and reproduced lately by Le Droit of Ottawa:

> There seems still to exist, in Canada, the hope of repatriating the French-Americans. This is a dream that our brothers over there should try to dispel. We do not wish to impose our views, but we are free to think that they would be doing much better by concentrating their efforts on keeping those among them who have made up their minds to depart, by making life at home easier for them.
>
> It would cause much merriment, if the French endeavoured to draw, to their country, the French-

Canadians who have settled on the banks of the St. Lawrence. The true, the only country of Canadians, is Canada.

The same may be said for the French-American. The more generations succeed to one another, the greater becomes the affection of the French-American for the United States. The true French-American also has but one country; the United States. "Ubi bene, ibi patria"!

After having read this editorial, we must necessarily conclude that the chances of repatriating our people are very slight.

Now, I wish to make a few remarks with regard to the question of railways. Under the able management of the present president, Sir Henry Thornton, the National Railways have continuously made progress. On the other hand, we must not decrease the deficits to the detriment of employees, either by reducing their salaries or by seriously handicapping them. In my county, the village of Mont Joli has been rather set back by a recent order given by the board of management of the National Railways. For over thirty-five years, Mont Joli has been recognized by the Intercolonial Railway as the home of its employees. Some time last summer, one of the principal officials of the National Railways published an order obliging the employees of this company, residing at Mont Joli, to go and live at Campbellton. You can fully understand, Sir, the situation of these employees who have built a house and made their home there for the last 35 or 40 years, and who are forced, to-day, in their advanced age, to leave their native village in order to reside in a strange city. All this to economize. I am not adverse to economy but Sir Henry Thornton should apply his economy somewhere else. Not only does this order, given by the authorities of the National Railways, affect 75 families of employees of Mont Joli, representing 400 to 500 inhabitants who disappear from that municipality and are forced to reside in Campbellton, not only are the employees themselves affected by the fact that their properties lose at least 50 per cent of their value, but it is the village itself which is threatened with ruin. And this is so much the case, that the church-wardens of the parish of Mont Joli had decided to build a church, plans had been prepared, and all this was set aside because the railway employees of Mont Joli are obliged to go and reside at Campbellton, and that such a change has on all scores, disastrous consequences on the population of Mont Joli. I would request the hon. Minister of Railways (Mr. Graham) to use his influence with the authorities, with Sir Henry Thornton, and have this order cancelled so that the employees may be allowed to have their residence at Mont Joli and receive the same salary as before while they are retained in Campbellton.

It may be quite proper to economize a few thousand dollars here and there, however, I think that, in the interest itself of the National Railways, this regulation should be abolished. And, moreover, it is not to economize a few thousand dollars that the future of an entire village should be sacrificed. I referred a few minutes ago to the emigration of our people to the United States. It would be encouraging this exodus to compromise the economic future of this prosperous village. I appeal to the hon. Minister of Railways and I beg of him to kindly point out to the board of management of the National Railways the injustice which has been done, so that it may be redressed as soon as possible and that the citizens of Mont Joli may further trust in the future of their municipality and rest assured that they may reside, live and die in their native village.

By the way, allow me to state, Sir, that Sir Henry Thornton appears to me very well disposed towards the province of Quebec and the French-Canadians, and I admire him for it. To-day, on all the National Railway trains, from Montreal to Halifax, thank Heaven, we have been able to obtain bilingual menus. I see no reason why all the employees of the National Railways, from the first to the last, should not be bilingual. Consequently, knowing the good disposition of Sir Henry Thornton, I beg the Minister of Railways, who also is favourable to the French language and the French-Canadians, to use his good offces with the president of our railways to request that in the future, on the Montreal and Halifax line, all employees be required to speak both languages. For, after all, who are the best clients of that section of the National Railways? It is the French-Canadians who are responsible for three-quarters of the revenue of this railway line. It would only be just that the employees be bilingual.

In the course of his speech on the budget, my worthy friend, the member for Temiscouata (Mr. Gauvreau) appealed to the Minister of Railways in order that, in the shortest delay possible, this session, a new pension fund be established in the interest of the employees.

I know in my own county a great number of old employees of the National Railways, these good people who have reared large families under difficult conditions and who, to-day, after having spent 35 to 40 years of

their life in the service of the Intercolonial, receive but the small pittance of $30 per month. Is this not ridiculous, when we know that pensions of six to seven thousand dollars per year are allowed to most of the justices of Canada, who, when in office receive salaries of nine or ten thousand dollars per year? As to the poor railway employee, he receives the small pittance of $30 per month. All this seems very ridiculous. Now, this pension was established for the railway employees; it is their money, after all; they are the ones who contributed so as to receive, later on, a reasonable pension, in order to live decently. It would be very unjust not to take an interest in the fate of these good and faithful servants of the state. Like my hon. friend, the member for Temiscouata, I appeal to the hon. Minister of Railways and I request of him to settle this question of pension as soon as possible.

Now, Sir, before closing my remarks, I have a little account to settle with the leader of the opposition. On March 10 last, in the speech I delivered on the Address in reply to the Speech from the Throne, I made, against the leader of the opposition, serious charges which he denied a little later, but which I maintain on all scores. I have not a word to retract. I never charged the leader of the opposition with having uttered speeches against the province of Quebec; I never stated that he had said, here and there, such and such a thing; but I had a right to draw my own conclusions of his actions, and the leader of the opposition's actions are more convincing than his speeches. When the leader of the opposition was a minister in the Borden cabinet, when he was Prime Minister of the country, perhaps he imagined that he was the Kaiser of Canada and that he could always govern without the help of the province of Quebec. Did he, then, take the trouble of coming to the province of Quebec to fawn upon our population; did he endeavour to learn a few French words so as to mutter them out in our colleges and convents? It is evident that he expected to remain in power the balance of his days. When Dr. Edwards and people of the same stamp attacked on the floor of the House, the province of Quebec and the French population, did the leader of the opposition rise to protest? No. He asked me to quote one word which he might have said against the province of Quebec. I again challenge him to tell me on what occasion he rose in this House, to defend the rights of the French Canadian race and of the province of Quebec. Let not the leader of the opposition think that he frightens me. Let him pay a visit to my county and I shall be there to face him. My electors know both of us. I know beforehand the opinions of the electors of Rimouski. They are fully aware that I have never lied to my electors or to the parliament of Canada. Now that this gentleman needs the province of Quebec so as to assume power, he is ready to come to our province to mutter a few French words, after having had us insulted. Did the leader of the opposition protest against the campaign of falsehoods, insults and slanders which was carried on against the province of Quebec, in the province of Ontario, in 1917, when they stuck poster after poster on fences to proclaim that a vote for Laurier was a vote for the Pope, and that we of the province of Quebec were slackers, and that the Conscription Act had been adopted to force us to go to the war. Did the leader of the opposition protest on that occasion? No. I shall not, Sir, add anything further. Should the leader of the opposition wish to visit my county, I am ready to face him and I shall leave it to my electors to judge whether he or I told the truth. I drew my conclusions from his actions, and, I again state a man is judged rather by his actions than by his words. Moreover, the leader of the opposition's actions are much more convincing than his words. Consequently, I further state that I have not a word to retract; I maintain all the charges that I brought against the leader of the opposition and I am ready to repeat them in my county or anywhere else he may choose.

Mr. SAMUEL CHARTERS (Peel): Mr. Speaker, since the delivery of the budget, very much has been said for and against the proposals of the Acting Minister of Finance (Mr. Robb). While there is the widest possible difference of opinion regarding the value or otherwise of the changes suggested, there is practical agreement that the government has, at last, decided to eliminate the element of protection from the tariff. The utterances of the ministers and their supporters during the last few days lead to no other conclusion. It was probably not the desire of the government that their action should be so interpreted, but the change is taking place probably because of circumstances over which they had no control. Today, once more, the tariff is definitely before the people, and it will be the issue in the election that must be fought in the next few months. On the one side of that contest will be those who believe in tariff for protection purposes, those who believe in pro-

tection that will protect, those who believe that Canada must work out her destiny in her own way. On the other side will be those who believe in free trade, or near free trade, regardless of the consequences of its adoption upon the future of the Dominion.

The situation which is thus created must be very satisfactory to the hon. member for Brome (Mr. McMaster) and his free trade associates. When last year he crossed the floor, he was very sternly rebuked by the Prime Minister (Mr. Mackenzie King) for forsaking, as he put it, the faith of his forefathers and setting up a little altar of his own. The hon. member for Brome has his reward or his revenge. The government to-day is worshipping at his shrine, sacrificing on the altar of free trade which he has set up. The Acting Minister of Finance, in the opinion of the hon. member for Brantford (Mr. Raymond) is ready to sacrifice the implement industry of a city, and indeed of a country. The minister without portfolio (Mr. Sinclair) expresses a desire to sacrifice the very small protection enjoyed by the farmers and others engaged in poultry raising and kindred occupations. The hon. member for Pontiac (Mr. Cahill) comes forward with an expression of readiness to sacrifice the tariff on boots and shoes, which, in the opinion of the great mass of the people of the country, is required as much to-day as at any other time in the history of Canada. But it remained for the Minister of the Interior (Mr. Stewart) to make known the full extent of the sacrifice which the government was prepared to make on this free trade altar. He tells us that he is ready to go the whole distance, and reading carefully from his manuscript, he declares that the budget is, he hopes, the death knell of protection. So then, Mr. Speaker, as I said a moment ago, the death knell of protection is to be the war cry, the battle cry of the Liberal party in the next election.

The announcement of such a policy has not been recived very favourably in the House or out of the House. From all parts of Canada protests are coming in day by day, protests from municipal councils of all kinds, from boards of trade, from organizations of labour men, from employers of labour, from organizations of fruit growers, vegetable growers and others engaged in similar industries. Protests have come in also from the press of the country. By the way, the very large number of protests that are coming through the press of Quebec must, I think, attract the attention of hon. gentlemen opposite. There have also come protests in the House very directly. The hon. member for St. Lawrence-St. George (Mr. Marler), who two years ago was being boomed as a coming minister of finance, sees nothing but trouble in this budget and he will not support it. The hon. member for Brantford, somewhat hesitatingly, it is true, but none the less effectively, declares his opposition to the proposition and he will not vote for the budget. So, too, there are quite a number of others in the House, timorous souls that are shivering on the brink and, perhaps, fearing to plunge away. We shall hear from them in a day or two, and their decision will, no doubt be the same as that of hon. members who have already spoken. Then we have a number of members who are supporting the budget, but somewhat conditionally. For instance, the hon. member for Bonaventure (Mr. Marcil) expresses a willingness to support the budget, but in the speech in which he does so, he says to the government: "It will be a very nice thing if you will make a grant of $200,000 for increased harbour facilities in my constituency." I suppose that will be the reward for the support of this veteran parliamentarian for a budget which cannot be popular in the constituency which he represents. Then the hon. member for Témiscouata (Mr. Gauvreau) is a little more enthusiastic; he is willing to support almost anything the government may bring down. He congratulates the government upon what he calls its Liberal policy, and then he expresses the hope that their liberality will continue, and that they will give him a customs house and post office in one of the parish towns of his constituency and also provide him with a ferry boat, for purposes which are not stated. Then, too, the hon. member for Quebec county (Mr. Lavigueur) is very doubtful of this budget. He does not like it. He is not a free trader. He takes issue with the hon. member for Pontiac regarding the reduction in the tariff on boots and shoes, and he expresses the belief that the tariff should be increased rather than decreased on that industry. But after going that far, he too expresses a willingness to take the chance provided that the government will give him repairs to a wharf at St. Gregoire, a post office at Loretteville, another post office at Beauportville, and he says that they should be provided for in the supplementary estimates. He is also anxious for a subsidy for the building of a bridge from the island of Orleans to the north shore; so the feeling of the hon. member regarding the popularity of the tariff proposals in his constituency may be inferred from the demands which he makes for his support of it.

Then, too, in Prince Edward Island the hon. member for Queens (Mr. Mackinnon) suggests that while the Minister of Railways and Canals (Mr. Graham) is throwing branch lines all round the other provinces, Prince Edward Island should not be passed up. He asks for a branch line at New London and one at Rustico. He also asks for some other additional grants along the same line. Then the hon. member for Brandon (Mr. Forke) was probably a little alarmed at the demands that were being made, and it got into his mind somehow that he might be accused of receiving something for his support. Those, however, who know him in this House need have no fear along that line. The hon. member for Brandon (Mr. Forke) said he had made no bargain of any kind, nor did he get a rural mail route for Pipestone valley or any other place in Manitoba in which he is particularly interested. But these are some of the demands that are made, and others are made which have not been publicly expressed on the floor of the House. From all over the country the same demands will be made, or demands of a similar nature, in order that the party may be kept together until the election which must very soon follow this announcement of the new policy. A good deal has been said in this and the former debate regarding the effect of the tariff on the different provinces and on particular constituencies, and I want to say a word or two concerning the conditions in the county of Peel. We are to a considerable extent a manufacturing community and we also raise stock and produce fruit and vegetables. This afternoon letters were read from various organizations and from different individuals setting forth their views on the tariff. The expression of opinion of these men was regarded as evidence of the popularity of a low tariff or of free trade, and if it be a good argument on one side it must be equally good on the other. Well, let us take an industry that is pretty strong in the county of Peel, the brick-making industry. There are several factories employing a good many men and doing an extensive business, and the Clay Products Association of Ontario, of which these manufacturers are members, at a meeting a short time ago at which the question of the tariff was discussed, passed the following resolution without any dissent:

> In view of the fact that freight rates in the United States are lower than in Canada and that the United States manufacturers of brick are situated so advantageously with regard to coal supply as to be able to absorb customs duties in full through fuel savings, and are at still further advantage in the superior quality of their raw materials, the Canadian manufacturers are at a decided disadvantage from a competitive standpoint. Be it therefore resolved that the association bring to the attention of the federal government that a substantial increase in tariff protection on building brick is required.

These men surely know their own business as well as those who are engaged in any other line, and if they feel that under present conditions additional protection is necessary, then their request must be given full value, and I have no doubt it will be responded to in due time as many other changes are being favourably considered by the government. We have also a considerable number of boot and shoe factories, and in this connection I may repeat what has been said once or twice before. This industry in the province of Quebec is very extensive and is demanding further protection. The industry in Canada has a capital of $30,000,000, employing from 13,000 to 14,000 men. During the last year 26 of the factories failed, making a total of 70 since the war, which is an indication that at least they are not making very great profit out of their products. And the remaining companies operate only at 60 or 70 per cent of capacity, the reason for which condition was given by a large deputation that waited on the government a few weeks ago. They pointed out that the importation of boots and shoes has increased lately by between 150 and 225 per cent, one-third of all the shoes sold in British Columbia being imported. One reason for this was that the freight on a pair of shoes from England to Vancouver was only 5 cents whereas the freight rate on a similar pair from Montreal to Vancouver was 16⅔ cents, the water rate accounting for the difference. The shoe factories that operate in the county of Peel provide considerable employment, enabling men to buy properties, build houses, take care of their families and render the usual services in the community in which they live. If they find, as they do find, that the tariff is not sufficient to maintain the industry, then I submit that it is incumbent on the government to give them sufficient protection in order that the industry may exist rather than that we should contribute to the maintenance of an industry in another country at the expense of our own men who have invested their capital and devoted their energy to building up a business in Canada.

Another industry in which we are concerned is the woollen business. This matter has been referred to on many occasions, but it is of such importance that I think the facts will bear repetition. We are told that the factories in Canada employ 22,000 people and pay $17,000,000 annually in wages, producing $70,000,000 worth of goods. The importations of woollen goods have of late, however, very materially affected the prosperity of these

factories. Let us take one instance: In 1921 there were imported woollen socks and stockings to the number of 2,813,860 to the value of $1,201,793 and in 1923 8,101,572 pairs valued at $2,951,372. On March 21 a deputation waited upon the government to press their claims in connection with this industry, and a petition was presented on behalf of 21,000 employees asking that the tariff be increased rather than reduced. It was pointed out that wages in this industry in Canada were twice as high as those paid in Manchester and 25 per cent higher than in the southern mill districts of the United States, while a man working in the woollen mills in Germany received the equivalent of 40 cents a day in Canada. Under these circumstances it is impossible for the workmen of Canada, living as they do and ought to live, to compete with outsiders, and therefore the woollen industry has a right not only to the protection which it enjoyed in days gone by, but if that is not sufficient, then it should be given a protection which will take care of those employed in the industry and provide work for those who require it at the present time. There is in Brampton the largest cut flower industry in Canada, and the second largest in the world. That industry covers 30 acres, required 2,000,000 square feet of glass in the construction of the houses, burns 18,000 tons of coal a year and gives employment to 300 hands. It has been developed as a result of the development of the industrial life of the country. It pays good wages and under it and because of it very considerable support has been given to the people in the town who have been enabled to build houses and bring up their families as they should be brought up. Now, if we destroy the industrial life of Canada we shall incapacitate not only this industry but others like it. Under present conditions, if an American wishes to send cut flowers into Canada a duty of 17½ per cent must be paid. If the people of Canada desire to send flowers to the United States the duty is 40 per cent. Two years ago the conditions were somewhat different, the American duty was only 25 per cent; but the government of the United States discovering that some small import trade was being done, increased the tariff to 40 per cent. If there is anything that is a luxury surely it is cut flowers, and if our people cannot secure at home the supplies they require and desire in this the second largest industry in the world, then if they wish to import them surely they should be ready to pay a duty. My contention is that so long as the American duty is 40 per cent against our product going into that country, the Canadian government should impose a like duty upon the United States product coming into Canada.

[Mr. Charters.]

During this debate and in nearly every other debate in this House we have heard a great deal about the poverty of those engaged in agriculture, and for its lamentable condition the greatest possible blame is attached to the Conservative party. I never could understand why a tariff administered by a Liberal government should bring prosperity, such as that we have been told prevailed throughout the Dominion from 1896 to 1911, while the very same tariff administered by a Conservative government should bring nothing but disaster. The difficulty is not with the tariff, as everybody knows who has taken the trouble to investigate. Take another instance of taxation. In the provinces there are all kinds of taxes, including municipal. The provincial debt, I might remind the House, is $428,000,000, and the interest on it is a very considerable tax upon the people. But if legislation can affect the people beneficially then we should have improved conditions, not because of what the Conservative party did or left undone, but because of what the present government, or what the Liberal party in general, has done and should be doing at the present time. Take the provincial governments; British Columbia has had a Liberal government for many years; Saskatchewan and Alberta are also favourable to the present administration, and so too a number of the other provinces. Alberta started with a clean sheet in 1905. For nineteen years the government has been carried on there by the administration of which the present Minister of the Interior (Mr. Stewart) was a supporter, afterwards a member, and finally premier, during which time they incurred a public debt of $67,000,000. In the province of Quebec, which started with a clean sheet in 1867, the public debt to-day is $55,000,000. So the evidence of what we may expect from western representatives, and in particular from the Minister of the Interior, is indicated by the course that has been pursued in Alberta. If we can be benefited by the provincial governments, as we were promised, how are we to regard what has happened in the province of Ontario? During the past four years we had the Drury government in power—and we know the results. We have also for the past three years had the present Liberal government in office, and we to-day have forty or fifty western members working over-time to keep it in power. Why, then,

under all these circumstances should the farmers be suffering more than they were before the government succeeded to office?

The Minister of the Interior told us the other day that during the past two or three years the western farmers have been unable to buy agricultural implements. Two or three other members have repeated his statement. There may be some reason why they cannot buy agricultural implements, but they are certainly buying other things, and buying them at very considerable cost. For instance, in the three provinces of Manitoba, Saskatchewan and Alberta there are no fewer than 150,000 automobiles. These at a valuation of $1,000 each represent a total expenditure of $150,000,000. If the people of Alberta, where there is one car for every thirteen persons, prefer to buy automobiles instead of threshers, harvesters, plows or other agricultural implements, surely they have no good reason to condemn the government or anyone else but themselves. The fact of the matter is that what is required is not more legislation—especially such legislation as is being proposed at this time—but economy on the part of the individual, economy on the part of municipal councils, economy on the part of provincial legislatures, and certainly very much greater economy on the part of the federal government than is being practised at the present time.

The home market has been mentioned by nearly every speaker who is supporting the government, and has been ridiculed by many. One gentleman referred to it as a myth, another as a joke. Well, so far as the county of Peel is concerned the home market is not a joke. Let me remind the House that the population of Toronto and York is 588,195, while the population of Alberta is 588,494—almost identically the same. We are spending days and nights, weeks and years, endeavouring to create conditions under which the people of Alberta and Saskatchewan will benefit, and there seems to be a disposition in the House to sacrifice the interests of the 588,000 people of Toronto and York, if by so doing the interests of the people in the western provinces can be in any way advanced. We have in Montreal and Hamilton 732,000 people, and in Saskatchewan 750,000 people—again practically the same number. Surely the interests of the people in those two cities deserve as great consideration as the interests of the people in Saskatchewan. They have furnished a home market, they have developed industry, they have paid a large percentage of the taxes, and they are ready at all times to bear a share of the country's load. When that is so it is not good for the Dominion, it is not good for the western provinces, for the representatives from those provinces to continually complain about Toronto and Montreal, and about the taxation that is being imposed upon the farmers of the West when as a matter of fact the cities and towns are paying a very much greater percentage of taxation than is being paid by the rural communities.

Let me point out two or three facts. In the county of Peel, which I may cite as an example, although the same will apply to all the counties surrounding Toronto, there has been provided a home market that has made for prosperity in those districts. There is no poverty, and has not been for many years, in those counties. One evidence of the value of a home market to the people in the surrounding country is indicated by the fact that the county of Peel, for instance, sends daily to Toronto not less than 10,000 gallons of milk, as well as large quantities of poultry, butter, eggs, vegetables and fruit. That is their profitable market. I repeat, if we are going to spend time and money in an endeavour to create markets for those engaged in other lines of industry, then we have a perfect right to give attention to those who are not growing wheat and are not living west of Winnipeg.

It may interest the House to listen to one or two quotations somewhat different from those that have already been presented. For instance, in 1922 Canada produced 677,317,600 pounds of beef, and consumed 651,946,166 pounds, or 96 per cent. We produced 710,449,872 pounds of pork, and consumed 661,977,326 pounds, or 93 per cent. We produced 90,046,395 pounds of mutton, and consumed 87,419,020 pounds, or 97 per cent. We produced 252,501,900 pounds of butter and consumed 237,393,928 pounds, or 94 per cent; we produced 92,909,000 bushels of potatoes and consumed 90,110,000 bushels, or 97 per cent; we produced $48,000,000 worth of eggs and consumed 98 per cent of the total production. Surely when that is the condition, and it is according to the report sent out by the department, we have here a home market that means a very great deal to the farming people not only of the province of Ontario but the province of Quebec as well. The vegetable growers of the provinces of Ontario and Quebec, who met in convention a short time ago in the city of Toronto, evidently believed protection of some value to them because at that convention they passed this resolution:

That we realize from reports from all parts of the province that our farmers, especially those engaged in supplying vegetables during the winter and early summer seasons, are gradually being driven out of business by the importation of cheap, field-grown products of the semi-tropical parts of the United States. We therefore humbly beseech the hon. Minister of Finance to help us obtain some relief from these disastrous conditions. Knowing as all Canadians do, that money must be obtained through taxation to carry on our governmental activities and pay our portion of the great war debt, we think that those most able to bear the burden should do so, and therefore petition you to impose a 10 per cent luxury tax, in addition to our present taxes on our vegetable and fruit imports, which are undoubtedly a luxury in the seasons during which we find competition impossible.

The same idea is expressed in the Montreal Herald of March 10th last, in an editorial discussing the increased duty on wheat imposed by the American government. The article concludes as follows:

Even in agricultural and vegetable products we import far more from the United States than the United States imports from us. For instance, during the 12 months ending December last we imported from the United States agricultural and vegetable products to the amount of $78,814,028, while our exports of agricultural and vegetable products to that country amounted to $49,225,234. Therefore, Canada imported from the United States about $30,000,000 more of agricultural products than the United States imported from us. Obviously, the United States is not playing the game, and if there is not a prompt demand for tariff retaliation we shall be surprised. Now is the golden opportunity for the King government at last to give a taste to our Canadian farmers of the benefit of protection. Why should not that $78,000,000 of imports of agricultural products be raised as far as possible by Canadian labour and Canadian farmers on Canadian farms? Putting the question brings the obvious answer.

That is an article from the Montreal Herald, which is advertised as the organ of the Liberal party.

Mr. CALDWELL: Can the hon. member tell us what proportion of that importation was comprised of tropical products, cotton for instance, and sugar?

Mr. CHARTERS: I have not the figures, but if there are any tropical fruits being imported into Canada free of duty, I should say that a duty should be imposed so that the apples and other fruit of the Canadian farms will be used in place of that imported, and I would apply that in every department; for instance, where the American tariff is 8 cents against us on eggs, we should increase our tariff to the same amount; where it is 8 cents a pound on butter, we should increase our tariff to the like amount.

The pretence, or perhaps I should say the intention, of the government is to bring relief to these suffering people. Well, it has not done so. The alleged surplus of $20,000,000 existed only in the mind of the Acting Minister of Finance (Mr. Robb). The ex-Minister of Finance (Sir Henry Drayton) clearly established that fact in his opening address, and the same position was taken by the hon. member for St. Lawrence-St. George (Mr. Marler), and endorsed by the hon. member for Brome (Mr. McMaster), and approved, I think, by the hon. member for Brantford (Mr. Raymond). The promised reduction in expenditure of $27,000,000 will be eaten up, judging by the demands that are being made, by the supplementaries. The burden of taxation which we were told weighed so heavily upon the people has not been materially lessened, the reduction in sales tax being only about one-third the amount imposed by this government two years ago. Unemployment still continues, and continues to an alarming extent. The emigration of from 150,000 to 200,000 Canadians annually to the United States has not been stopped. The public debt is many millions greater than when the present government took office. When that is the case, and I think it is the case, I do not see how congratulations can be poured upon the ministry from either its western or its eastern supporters.

What has been done elsewhere should be done, or at least be attempted in this country. Great Britain has reduced her expenditure by nearly one-half since the war, a saving of $37,000,000 being shown in the estimates for civil service and revenue departments alone for 1924-1925. This, I think, should be notice to the departments in Canada to follow along the same lines. Great Britain has reduced her public debt by nearly $2,000,000,000, and the United States has reduced her debt by a very much larger amount. New Zealand has done even better. Premier Massey in an article in the Nineteenth Century last year said:

For the year ending March 31st, the government was able to announce a surplus of £1,315,638. Last session it became possible to reduce the income tax by 20 per cent; to reinstate penny postage; to remove the income tax from farmers, and leave them subject only to the land tax; to assist ex-soldier settlers to the extent of probably two millions sterling; to increase soldiers' pensions in the aggregate by about eighty thousand pounds per annum; to abolish the amusement tax on admission on all tickets not costing more than one shilling, and also the duty on tea.

I say that what has been done in England, what has been done in the United States, what has been done in New Zealand, should be done also in Canada, and would be done but for the fact that the administration is so busily employed keeping itself in power that it is unable to attend to the business of the country and bring the relief such genuine measures would produce. By the exercise of even reasonable economy and the employ-

ment of business measures, the annual expenditure of Canada could be reduced by $30,000,000, and the public debt by a corresponding amount. We have a right to look for reduction. We should have had a reduction last year in the postal rates. They should be to-day what they were prior to the war. The stamp tax should be abolished. Public works not absolutely necessary should not be proceeded with, no matter what the demands of the supporters of the government may be. The commissions that are going around this country, and they are very numerous, should all be abolished. We have, I believe, eight or nine commissions going about now, and I am quite sure when the account is presented to the country the cost will be very much greater than the amount alleged to be saved to the people by the tariff changes which have been made. The members of the government should set an example of economy in the numerous expenditures under their direct control. But, above all, the tariff should be placed on a stable basis. We should have a tariff sufficient to protect the industries of this country, provide employment to our workers, discontinue emigration and restore that confidence which is greatly lacking at the present time. That confidence will be restored and conditions will be improved just as soon as the government musters up courage enough to appeal to the people and submit their proposition to the electorate. When that is done, there will be a return to power of the Conservative party which will advance the interests of the country as in days gone by.

Mr. A. E. MacLEAN (Prince, P.E.I.): I congratulate the hon. member for Peel (Mr. Charters) on the excellent address from his own point of view that he has given. With some of the hon. gentleman's remarks I can agree. In others I cannot by any means concur.

In commencing his speech my hon. friend said it could be easily seen that the present government intended to wipe out the tariff. How the hon. gentleman arrived at this conclusion I cannot tell. I think everyone will admit that notwithstanding the changes made by the budget there is a fairly substantial tariff left with sufficient protection to existing industries. My hon. friend also stated that the government has sacrificed the implement manufacturers. I think we can also show good reasons why these manufacturers should not object to the budget proposals and that in reality they are not hurt very much by the changes made.

The hon. gentleman spoke about economy and with much of what he said I agree. He made a statement which I think is deserving of the utmost consideration. It was that a large amount of the money that should be available for different enterprises in this country is locked up in automobiles. I think the general consensus of opinion will be that a large amount of the savings of our people has gone in this direction.

My hon. friend asserted that we on this side wished to sacrifice the home market and thereby seriously damage Toronto and other industrial centres. The hon. member is quite astray in that statement. I do not think any good Canadian wishes to do anything to injure the home market. If I may be allowed to describe the policy of the government, it is that they purpose giving to the dollar its proper purchasing value in order that our industries may flourish, and that those who cater to the home market may receive a fair return for their labours.

The hon. member for Peel stated that he thought it would be only fair to enforce a retaliatory tariff against the United States. I think the hon. gentleman is arguing from false premises. Why does he not look at the matter in a different light. The United States admits free of duty agricultural implements, cement, coal, boots and shoes, leather manufactures, newsprint, tea, and a large number of other articles from Canada that I will not take time to enumerate. On the other hand we enforce against these articles a high rate of duty. Now, would it not be a more statesmanlike proceeding to say to the United States "We will allow you to send into Canada on the same terms the articles which you admit into your country free of duty;" if that course were pursued it would be only fair in view of what the United States is doing with regard to these Canadian products, or is he willing for the United States to put on a retaliatory tariff on those articles.

I wish to congratulate the Acting Minister of Finance on the splendid showing made in the budget, and the fact that he has succeeded in converting a long list of deficits into a surplus. The Prime Minister and the other members of the cabinet are also deserving of praise because they have made it possible for the budget to be brought down in its present form. I think I am safe in saying —apart altogether from what members of the Conservative party think—that the budget will be received with approval by all our people. It will bring a large measure of relief to those who have been looking for cheaper agricultural, mining and lumbering machinery, to those engaged in the fishing industry, and to the consumers of a large number of articles that may be characterized as household necessities. I think our Con-

servative friends, when they are paying their money over the store counter, will be just as willing as the rest of us to welcome the reductions in the cost of articles they buy.

The hon. member for South York (Mr. Maclean) argued in his speech on the Address in reply to the Speech from the Throne that the government's tariff proposals should have been submitted to the people for their approval. I maintain, Sir, that the people voted on this very question in the winter of 1921, and I would remind the hon. gentleman in question that 180 members were elected to this House to carry the policy into effect. I am glad to know that to-night we are able to congratulate the government in carrying into effect a policy which was advocated by the Liberal party at that time.

Some hon. gentlemen opposite have twitted us with applauding the statement of the Minister of Finance last year on "tariff stability." There is no gentleman in this chamber for whom I have a higher regard than the Minister of Finance, and I regret that he is not able to be with us at this time. However, on the occasion of the budget debate last year I made the assertion—as will be found on reference to page 2,973 of Hansard for 1923—that no matter what interpretation might be placed on the word "stability" as used by the Minister of Finance I for one, and the Liberal party as a whole, would not be satisfied until we saw further reductions of the tariff and relief granted from the burdens under that tariff. To-night I adhere to that statement. However it is only fair to say that if the Minister of Finance had been here he would have presented a budget of the same character as did the minister who acted for him. I make this statement notwithstanding many announcements to the contrary that have been heard.

Before proceeding to discuss the tariff reduction, I wish to refer briefly to the financial improvements as shown from year to year since the government came into power. I pointed out last year where economy should be practised and where large savings could be effected in all the departments, and I am pleased to see that a very effective showing has been made along many lines.

But the members of the opposition state that there is no reduction of debt, that it is visionary and delusive. What do we find? The total revenue receipts are $405,622,760, and the expenditure $375,215,651, showing a net decrease in the public debt of $30,409,109. In addition to that, if our hon. friends refuse to follow the bookkeeping that was established when they were in control of the finances of the country, and refuse to accept their own statements, as it were, made up along the same lines as was practised by the former administration, and if they think they cannot discover a surplus, I think there is one way that a financial improvement can be shown. If we turn to the interest tables on page six of the estimates we will see that there is a reduction in the interest of $4,133,592 for this year. This should be convincing evidence that the budget has been balanced, that the debt has been reduced, and that we are having a balance on the right side of the ledger, and should convince everyone of the marked improvements in the financial showing. Last year I pointed out that we had the war burden with us, and no man will deny that statement. With our total war indebtedness standing around $1,693,000,000 and an annual interest charge of $100,000,000 on that account alone we have brought home to us the fact that the war burdens are with us in a very real way. When we realize that our net debt before the war was only $335,996,850 and our annual interest charge $12,893,504, compared with a net debt on March 31st, 1923 of $2,453,776,868 with an annual interest charge of $136,000,000, I think everyone in Canada should welcome the good news that our deficits are stopped and the balance on the right side of the ledger. Before the war our pensions were only $311,900, and to-day our pensions are over $32,000,000.

It is very easy to blame the present government for high taxation, but we must be fair, analyse the exact situation, see where the blame lies and see if the present situation is not largely due to reckless financing of the past government even in the period before the war when they were in office. And if you take into consideration the purchasing power of the dollar now as compared with the pre-war period, the individual taxpayer is paying less for administering the public service so far as the controllable expenditure is concerned than he did in the three years previous to the war; not only that but the late government not only left us the total war indebtedness but failed to meet the ordinary cost of administration for that period, by $13,773,733, and this at a time when money might have been easily raised by various means of taxation.

In three years this government has so reduced controllable expenditure that all our obligations are now met out of ordinary revenue, except the railway expenditure, and the legacy left us in the merchant marine, but I will deal with this later.

When the Laurier government went out of power in 1911 on the reciprocity issue, one of the cries that helped to defeat Sir Wilfrid was, "Let well enough alone." Revenues were abundant to meet all charges on consolidated fund and nearly all charges on capital account; trade figures were steadily soaring; the immigration tide was still running at the full; every index of national prosperity was buoyant and cheering. There was no Jeremiah in all the land to cast a doubt on the future, no troubles about the burden of taxation, no "Whisper of Death," no cry of "Retrench." What happened in the three short ensuing years? The official records in the light of the present day of reckoning are sadly illuminating. In 1911 Canada's controllable expenditure on consolidated fund account totalled $65,528,512 or $9.09 per capita. With the advent of the new government, however, in the autumn of 1911 there came an immediate change. In 1912, the controllable expenditure jumped to $74,920,944; in 1913, to $85,455,679 and in 1914 to $102,411,415. Worked out on a per capita basis, this represents $10.17 for 1912, $11.35 for 1913 and $13.31 for 1914. The increase from $9.09 per capita in 1911 to $13.31 per capita in 1914 means an increase of no less than 46 per cent in the three years, of Conservative rule. To use a street phrase this is "going some" and this at a time when economy was imperative, when revenues were beginning to fall, trade to stagnate, unemployment to increase, and cost of living to rise. In 1913, the total revenue was $168,689,903; in 1914 it fell to $163,174,395; and the following year to $133,073,482. In the Public Works department, under Hon. Robert Rogers, who is even now pleading for a return to power of the true Conservative patriots of the pre-Union days, the increase in three years of expenditure on consolidated fund account alone was $25,592,413 or over 96 per cent as compared with the preceding three years of the Laurier-Fielding regime. In the Customs department, under the Hon. Dr. Reid, the cost of collecting $100 of revenue rose from an average of $2.78 in 1911 to $4.77 in 1914 or about 62 per cent. In the Post Office Department a surplus of $1,310,219 in 1911 was turned into a deficit of $2,914,541 in 1914. My hon. friend who resumed his seat a few moments ago had the audacity to take the government to task for not returning to the two-cent postage rate. I think I am safe in announcing that the Post Office Department is this year showing a surplus, notwithstanding the tremendous deficit that was rolled up when our friends opposite had charge of that department.

This was the beginning of our present financial troubles. Whereas in 1911 the per capita amount of our total disbursements on consolidated and capital accounts was $17.03 and the per capita revenue $16.34, in 1914 the per capita disbursement was $24.21 and the per capita revenue $21.21; in other words, the government then in power were piling up our national debt at the rate of $3 per capita three years before the war.

When the world plunged into the devastation of war, Canada, under the Conservative administration was already well started on the path of piling up financial obligations for the uncertain future to take care of. As has already been noted, the controllable expenditure had increased by 46 per cent in three years while capital expenditure had increased by nearly 70 per cent in the face of falling revenues and growing industrial depression. To the present government is left the task of paying the principal and interest on the total deficit of $1,860,113,241 accumulated during the eight years of the war and demobilization period. Now is the present government making its grade back to normal conditions in finance? I wish to submit figures to prove that it is. The struggle has been hard, and that fact is all the more reason why the people should appreciate what has been accomplished, and this is the reason the Robb budget of this year is hailed with delight. I wish to submit figures now for the past eleven months of the present fiscal year.

The controllable expenditure on consolidated fund account—that is for the costs of the ordinary government services—totalled, $132,319,846 for the last fiscal year, a decrease of $8,195,215 as compared with the previous year. Taking the Census Bureau's estimate of our present population as 9,146,457, this works out to $14.47 per capita. It marks the first decrease in per capita controllable expenditures since 1911 when it was $9.09 per capita of population, as I showed at the beginning. In 1921, it was $15.12 per capita, and in 1922, it was $15.68 per capita; but these fiscal years, as hon. members will remember, were both under the parliamentary control of our hon. friends opposite.

Let me turn now to the figures of expenditure on capital account, and the recent record is equally gratifying. Exclusive of the deficits on railways and merchant marine accounts, the capital expenditure in the fiscal year ended March 31, 1923, was only

$9,807,373, or $1.07 per capita, as compared with $16,295,332 in 1922, or $1.82 per capita. I think the following table should be put on Hansard just to show since 1921 what has been accomplished:

Year	Total disbursements	Total receipts	Net debt increase
1921..	$528,618,199	$436,292,185	$92,317,628
1922..	436,652,436	382,262,571	81,389,865
1923..	437,056,736	405,415,064	31,641,067

Coming to the year 1924, we find the following budget estimate:

Total disbursements	Total receipts	Net debt decrease
$375,213,651	$405,622,760	$30,409,109

Or a betterment of $60,000,000, if you take the deficit of the last year and the surplus of this year. This brings us to this year with a balanced budget, the first since pre-war days, with our exports exceeding our imports for the eleven months by $158,000,000, with our revenue increasing and with our expenditures going down. I think we may look to the future with bright hopes for our country and on the achievement of the present administration with pride and satisfaction.

It is often remarked that out of the large revenue, around some $400,000,000, possibly a saving of $60,000,000 in expenditure is not very much. I just wish to state that this saving of $60,000,000 in expenditure is made, not out of total expenditures, but out of what is known as controllable expenditure, which is very small indeed as compared with total expenditures. The principal uncontrollable items are: Interest on the public debt, $134,258,371; pensions, $34,122,078; superannuation, $1,252,500; subsidies to provinces, $12,375,153; or a total of $182,008,113. There are other items due to the war such as Soldiers' Civil Re-establishment, Soldier Land Settlement, Imperial War Graves Commission, Battlefields' Memorials, League of Nations Secretariat, adjustment of war claims and so on, which amount to something over $17,000,000. In addition, there may be considered such fixed obligations as those authorized by statute in connection with the Department of Labour, of $150,000 for organization and co-ordination of employment in Canada—see page 51 of the Estimates. Loans to railways for 1921 amounted to $56,000,000 and loans to the Canadian Government Merchant Marine, $900,000. This leaves a balance, as hon. members will see, of $117,971,524 of controllable expenditure out of a total estimated expenditure of $375,213,760.

[Mr. A. E. MacLean.]

Some will take objection to the figures that have been submitted to the House in connection with railways. I do not know that it is worth while going into that, but I think we can easily show that the same manner of bookkeeping was followed by our friends who preceded us, and if you look up their accounts, you will find that they charge all loans and guarantees to railways to the loan account and not to the public debt. If you look at the loan account of July, 1921, you will find that $25,000,000 was raised for the Canadian Northern and a further amount of $25,000,000 for the Grand Trunk, making $50,000,000 in all charged against the loan flotation of 1921-22. There was also a further guarantee of $11,000,000—

Mr. GRAHAM: For equipment.

Mr. MacLEAN (Prince): Yes, for equipment. When you are speaking of equipment, I do not think it is fair to charge up equipment to the public debt, because if I am correctly informed, when equipment is issued, it should be a charge against capital account, as I have said, because a lien is taken upon it; and it is an asset that could be turned over possibly for face value for a great number of years, so that the argument of charging up railway equipment to the public debt is not, in my estimation, a fair method of bookkeeping. If, however, they wish to charge up the actual cash advance to railways, it can be shown that the budget then is not too far from being balanced, even when charging up any guarantees or loans clear of equipment.

There is one thing to which I wish to refer, and I am sorry the hon. member for St. John City (Mr. Baxter) is not in his seat. It seems to me that the unpardonable sin that we members on this side of the House commit in the eyes of our hon. friends of His Majesty's loyal opposition is, in the first place, that we will do anything that favours our Progressive friends of the West, and, in the second place, that this government will do anything which will help the ordinary labourer in this country and the farmers in general. The task of our hon. friends opposite seems to be to set the East against the West and the West against the East. I would not refer to this at this late hour to-night, but it is a question that has, I may say, nation-wide significance. Our friends have endeavoured to sow this distrust in the minds of the people against the present administration. They

have endeavoured to make the farmers of the West believe that the government has done and will do nothing for them; that the government did not live up to its pre-election promises; that there would be no tariff reductions or sales tax exemptions. This has been their song during the past two years; we have been accused of not living up to the 1919 platform. It seems to be the purpose of hon. gentlemen to sow distrust in the minds of the people of western Canada and to give the impression that this government is dominated by a voice behind the scenes. We are told that when the West asked for bread the government gave them a stone and that the government was legislating in the interests of the East to the disadvantage of the West. In the language of the hon. member for St. John (Mr. Baxter), the government deliberately sacrificed the rights of the Maritime provinces and threw them as a bribe to the grain growers of the West. Now, I think it is only fair at this stage that I should read what the hon. gentleman said at the time, because as it happened I myself was a member of the Railway committee to which this despatch has reference. It is dated December 2, 1923, and was published in the Montreal Gazette. It is as follows:

(By Canadian Press)

Halifax, Dec. 2.—That the government of Right Honourable Mackenzie King had deliberately sacrificed the rights of the Maritime provinces and had thrown those rights as a bribe to the grain growers of the West, was the charge of Hon. J. B. M. Baxter, of St. John, addressing a meeting in the interests of W. A. Black, Conservative candidate in Wednesday's by-election, at Dartmouth Saturday night. The government had, he repeated, bought the votes of the Progressives with that which belonged to those provinces—and, most humiliating of all, he said, the sixteen members from Nova Scotia had been a party to the "great betrayal". Not one of them had offered the slightest protest against a piece of political treachery that had robbed New Brunswick and Nova Scotia of what was theirs by all dictates of justice and national fair dealing, said Mr. Baxter.

"We want men who will present our needs and rights", declared Mr. Baxter, "men—not voting machines".

I do not know that I need read the rest of the article, which is couched throughout in similarly strong language. It goes on to state that the hon. member said the government had the solid sixteen who were voting machines that would support the government in anything and everything, so that the Prime Minister was in a position to deal with the Progressives and sacrifice Maritime rights. That is the sort of propaganda which men who claim to be statesmen in this country are disseminating from the Atlantic to the Pacific. As one who was a member of that committee I want to declare right here that in my opinion the prairie provinces had a grievance, for it was shown to the committee that the people of those provinces were being imposed upon by every organization in the West, the banks included; and we believed as members of the committee that in the interests of fair play, between the people of one section of Canada and those of another, the Crowsnest arrangement should be put into effect again. I supported that proposition in the committee, I supported it in the House, and I am willing to stand by it on any platform in the country and defend it. I desire now to put on record a few facts to show just how far-reaching the effect may have been so far as the people of the Maritime provinces are concerned, and the prejudice it may create against the government and the West if not contradicted. The hon. gentleman at that time must have known that reductions were given over the Atlantic division which would largely offset any reductions that were made in connection with the Crowsnest pass. True, they may not be as large as we wish or run into as many millions of dollars, because there is not the traffic over the road; but I wish to make the statement that in my opinion the railway management and the government have been as fair to the East as to the West. Let me read the following questions and answers which I asked of and received from the management of the Canadian National Railways:

Question 1: What reductions in freight rates have been given on the eastern division of the Canadian National Railways since 1922 (or since the reduction of the Crowsnest pass came into force)?

Answer: Memorandum of important reductions in freight rates from and to also between points on the Atlantic region, Canadian National Railways, since July 1, 1922.

General Reduction

On August 1, 1922, rates on basic commodities, as listed below, were reduced to 17½ per cent over the rates in effect prior to September 13, 1920, equal to a 6 per cent reduction. The basic commodities are as follows:—

Building material.	Iron and Steel Articles.
Brick	Billets
Cement	Blooms
Lime	Scrap iron
Plaster	Wire rods
Fertilizers	Pig Iron
Lumber and forest products	Potatoes
Ores	

General Adjustments

The rates between Prince Edward Island and all points on the mainland have been revised to the

basis applicable on the mainland. This readjustment included class rates and the following principal commodities:—

Building materials	Grain and grain products
Coal	Hay and Straw
Lime	Lumber
Limestone	Live stock
Slag	Potatoes
Fertilizers	

On export and import traffic—Halifax arbitrary of 1 cent per 100 lbs. over St. John, N.B. on export and import traffic, eliminated.

Class Rate Adjustments

	Remarks
Between Ontario and Quebec points and St. Peters sub-division.	Reduced to main line basis.
Between Maritime provinces and western Canada.	Arbitraries over Montreal reduced to approximately basis in effect prior to 1918. Reduction of 4 cents per 100 pounds on first class rate with equal reduction on other classes.

Specific Reductions

Commodity	From	To	Reduction
Coal	Coalburn, N.S. Thorburn, N.S.	All points	Arbitrary of 5 cents per ton over Stellarton eliminated.
Coal	Westville, N.S.	Points in vicinity of Trenton, Pictou and New Glasgow, N.S.	20 cents per ton.
Coal	Springhill Jct., N.S.	Woodstock, N.B.	20 cents per ton on traffic destined to United States.
Coal	Springhill Jct., N.S.	Bathurst, N.B. Chatham, N.B.	Reduced approximately 40 cents per ton, to maintain traffic against U.S. coal moving by water.
Coal	Springhill Jct., N.S.	Prince Edward Island.	Reduced 60 cents per ton.
Grain and Grain Products.	Between all stations in the Maritime provinces, including Prince Edward Island.		Mileage scale established. Reduction from 3½ to 4 cents all round per 100 lbs.
Grain and Grain Products.	Port Arthur, Ont. also Ontario and Quebec.	Branch lines in Maritime provinces.	Reduced to approximately main line basis.
Grain Products	Bay ports	Atlantic ports for export, milled in transit.	Reduced 2½ cents per 100 lbs. Rates to Halifax were further reduced by elimination of arbitrary 1 cent over St. John.
Oats	Prince Edward Island.	Charlottetown, P.E.I., for furtherance by water.	Established on same basis as to mainland ports. Reductions 5 to 6 cents per 100 pounds.
Lumber and Forest Products.	Caraquet branch	Main line stations	Reduced to approximately main line basis.
Newsprint Paper	Bathurst, N.B.	Consuming points in Canada and the United States.	New rates established on same basis as from other producing points.
	Ontario and Quebec.	Prince Edward Island	
Woodpulp	Pulp Mills, on Bridgewater division.	Halifax, N.S. Lunenburg, N.S. Bridgewater, N.S. Liverpool, N.S. Shelburne, N.S. for export.	Reduction 6 cents per 100 pounds. Reduction approximately 10%, to assist mills in reaching export markets.
Fertilizer	St. John, N.B.	Prince Edward Island	Reduction $1.65 per ton.
Limestone	St. John, N.B.	Prince Edward Island	Reduction $1.40 per ton.
Potatoes and turnips for export.	All stations in Maritime provinces.	St. John, N.B. Halifax, N.S. North Sydney, N.S. Sydney, N.S.	For movement of 1922 and 1923 crops, rates prior to 40% increase were restored.
Potatoes and turnips for export.	Prince Edward Island stations.	Charlottetown, P.E.I.	Reduction from narrow gauge territory of 2 cents per 100 lbs.
Potatoes	Tignish	Charlottetown	Reduction from 24 to 13 cents per hundred pounds.

There has been a reduction of four cents per hundred pounds on ten classes of commodities from St. John, Halifax, and Prince Edward Island to Montreal. Now, I think this shows conclusively that when that gentleman was making this statement down in Halifax he must have known that these rates had been put into effect, and was simply endeavouring to work on the feelings of the electorate in the by-election.

I could quote the Crowsnest pass agreement. I have no doubt that those hon. gentle-

men who have been spreading this propaganda in the East know full well that the rates in that agreement are more favourable to the East than to the West. A large number of commodities covered by the agreement can be shipped from Montreal and St. John to the West at much lower rates, I venture to say running from 20 to 50 per cent lower than the rates from Vancouver to Winnipeg. So the Crowsnest pass agreement was just as favourable to eastern as to western Canada, in fact nothing would help the manufacturers of the East more than to have those rates go into effect. I do not think it is necessary for me to stress this point, because those hon. gentlemen must be perfectly well aware of the facts, and I can see only one reason for their propaganda—an endeavour to divide the East from the West in an attempt to make political capital out of what the government has done in the interests of the whole Dominion. But our friends have, I think, wasted two years of valuable time. They have been, as the saying is, barking up the wrong tree. They had been endeavouring to persuade the farmers and workingmen of this country that the government was standing by the manufacturer to their detriment. But when the budget was brought down those propagandists woke up to the fact that they must immediately go into reverse gear, speaking in automobile terms, and endeavour to undo their work of the past two years. It is really a pity that so much splendid energy was wasted during that period, for certainly the budget has disabused the minds of the masses as to the direction in which the government is shaping the national policy. One of the best signs of the times is that the government is working mainly in the interests of the people in an endeavour to bring them relief.

In our province the fishing industry is of great importance. I have received a number of letters from my friends there regarding the industry and asking what is being done for its encouragement. I have obtained a list from the Department of Customs, and after studying it carefully I feel sure that very little further can be done in the way of tariff relief, because nearly everything that is used by the fishermen of the eastern provinces is now upon the free list. Last January the sales tax was taken off all lobster cans, labels, wrappers and cases. In fact, everything that can possibly be done has, I think, been effected along that line. A number of people complain of the sales tax being imposed upon canned lobsters and claim that it should be removed. Under the present regulations the sales tax is imposed only upon lobsters for domestic consumption; when the lobsters are exported the tax is rebated. Now, my information is that fully 95 per cent of the lobster packed is exported. Therefore I think the Customs department are only wasting time and energy in retaining the sales tax on this commodity. We have endeavoured to bring this to the attention of the cabinet with a view to the complete removal of the sales tax, but I understand the cabinet regard lobsters as a luxury. But as the government is making nothing out of this tax, whereas its imposition created a great deal of difficulty to lobster packers and dealers, I think it might well be taken off altogether. In the province of Prince Edward Island the fishermen have formed a co-operative union to sell their live lobsters in the States. In the last few years a considerable trade has been developed in this commodity, and it will be largely augmented this year. There is no doubt that those engaged in the industry are proceeding on the right lines in acting co-operatively and sending a man into the American market to handle their output there.

At one time the oyster industry brought more money into the province of Prince Edward Island than any other industry. A few years ago something affected the extensive oyster beds and they were almost wiped out. We have been urging the federal government to clean up some of the beds and reseed them to see if with proper care and cultivation these wonderfully productive oyster areas could not be brought back to their former condition. We hope the government will look further into this matter and give us some assistance along these lines.

Our friends opposite have twitted us because we sometimes refer to railways and branch lines. Speaking for the county I represent, I acknowledge the splendid assistance which the government and the railway management have given us in standardizing the gauge, so that now all our shipments go through to destination without breaking bulk. This was accommodation which was long overdue, and on behalf of the people of my county I thank the government and the management of the Canadian National Railways for this great improvement. I hope the good work will be continued. There is a portion of the province where the work is not completed, but I have no doubt that it will be pushed forward with all possible speed.

There are a few matters that I wish to refer to which are of vital interest to the railway, and as the Minister of Railways (Mr. Graham) is good enough to remain in his seat and listen I will bring them to his attention

To the wharf at Albert known as the railway wharf there was a short spur line from the station, and in the years gone by a large fishing industry was carried on there. Even as late as two or three years ago some five or ten thousand dollars' worth of fresh mackerel was shipped over that wharf, to say nothing of the large trade that may develop in fresh lobsters. A very small outlay would improve conditions at that wharf and give better shipping facilities for the people of that section. The same thing applies to the railway wharf at Summerside, P.E.I. Now that the car ferry is running, on the Borden-Tormentine route the boats have been taken off the Summerside—Pointe du Chene route and the railway wharf has not been used. It is a question as between the Public Works department and the Railway department which should take over this wharf and put it in repair. We have a splendid harbour there, and if the rails are laid again on the wharf and it is put in repair, there is no doubt that it will bring a large amount of traffic for the Canadian National Railways. It would facilitate also the shipment of potatoes and other products from that point. I hope that this matter will not be overlooked. These are really not branch lines we are asking for, but just a little accommodation for the improvement of shipping facilities.

At a place known as Cape Traverse on the branch line to Borden, when the new car-ferry system was put into force the rails were taken up, on what was known as the Cape Traverse branch and that left the people in that vicinity in some cases eight or ten miles from a railway siding. The roadbed is there, splendid stone bridges are there, the sleepers are there, although perhaps not in as good condition as they were, and the people of that vicinity are asking for the rails to be laid on that roadbed for a distance of about one mile and a half to what is known as Campbell's Crossing. This would allow the people of that vicinity to ship possibly hundreds of carloads of potatoes that are grown by the farmers of that thriving section.

Another scheme that was under consideration was the building of a branch line to Richmond bay to tap the large mud deposits there. A survey was made of that line and estimates were submitted, and it is asked now by the people of Lot 18 that if the branch is extended to the bay, it be put on the Lot 18 side of the bay in order that it may give transportation facilities to the people in that section who are from eight to ten miles from a railway. I just mention these matters in passing, but I sincerely trust the government will not overlook them when the time comes for going into them more carefully.

[Mr A. E. MacLean.]

Fur farming in Prince Edward Island and the whole of Canada is a very important industry at the present time, and I think it should secure a little more consideration than it has in the past from the government. The fur companies in the different parts of Canada were formed at a time when prices were exceedingly high, and there is no other business in the world that would have succeeded under similar conditions, but these companies have been able to pull through and are now in a fairly well established position. However, they are very heavily taxed on income and I think that under present conditions this industry which is bringing into the province of Prince Edward Island alone around $1,000,000, a year should receive some encouragement, and we are asking the Department of Agriculture at Ottawa to give us some assistance along the line of investigational work.

Our friends opposite have been telling us that we have ruined the implement industry by removing the protection from the manufacturers. I hold in my hand a little booklet published a short time ago by the Massey-Harris people in which they give some quotations on prices, and it shows that in 1913 a binder could be purchased for 266 bushels of wheat, or $170. Prices commenced to go up and in 1918, with the same 266 bushels of wheat at $1.99 cents per bushel a farmer could purchase a binder for $257 and have $272 left over. In 1919 prices rose even a little higher, but in 1921, 1922 and 1923 the situation changed, and we find that the farmers on account of the very, very low price of wheat had to give 266 bushels of wheat and in addition $138 in cash to purchase that same binder. This table shows how farm products have dropped to such a large extent, while at the same time the price of the farm implements has been soaring or at all events the price has not come down to the same extent as agricultural products. Our friends opposite say the Laurier-Fielding tariff was a proper tariff. Well, for the sake of argument let us say that we had the Laurier-Fielding tariff in 1913. At that time I think the tariff was 12½ per cent on farm implements, possibly more, but for the sake of argument we will say 10 per cent. Now in 1913 a binder cost $170, and a duty of 10 per cent gives $17 duty. In 1923 a binder cost $280, and six per cent on that gives a duty of practically the same amount, namely $17, so I do not think our farm implement manufacturers can complain under those circumstances. You will see

that the manufacturer has the same protection on a single binder as he had in 1913. At the same time, owing to the increased price of a binder the farmer is saved $18.20 duty and a further saving of $16.80 sales tax, making a total of $35.20, which would be the duty and sales tax that he would pay on a binder at $280 under the old tariff of 12½ per cent. Now, the present saving on a binder at $280 and a tariff deduction of 4 per cent is $11.20 and sales tax removal of 6 per cent is $16.80, making a reduction of $28. While these reductions have brought great relief to the farming community the manufacturers are not hurt in any way, as the increase in price of their machinery, on which the rate of duty is fixed and collected, gives them the same protection on each binder as they had back in 1913, namely $17 on one machine, and the same thing applies throughout. The high price increases the protection. So I think the argument of our friends opposite with regard to these tariff reductions hurting the manufacturers does not hold water. I see by to-day's paper that the Massey-Harris Company are fairly well satisfied with the budget proposals that have been submitted.

Before concluding, I just want to say that last year I supported the budget, rather reluctantly. Although I never advocated free trade I did advocate a tariff for revenue purposes, a tariff that would allow the consuming public to import at a reasonable price, and at the same time contribute a certain amount of revenue to the treasury. I stand by that position still, and I claim that the budget this year has got nearer to that point than anything we have yet had in this country.

Again I wish to congratulate the Prime Minister, the Acting Minister of Finance, and the rest of the cabinet upon having brought down a budget which I feel will stabilize industry, will give confidence to the people as a whole, and will produce in Canada in 1925 a boom such as we have not seen for a number of years.

On motion of Mr. Motherwell the debate was adjourned.

On motion of Mr. Graham the House adjourned at 11.29 p.m.

Wednesday, May 7, 1924

The House met at three o'clock.

CANADIAN NATIONAL RAILWAYS

BILLS PROPOSED TO AUTHORIZE THE CONSTRUCTION OF BRANCH LINES

Mr. F. S. CAHILL (Pontiac) presented the fourth report of the select standing committee on Railways, Canals and Telegraph Lines as follows:

Your committee have considered the following bills and have agreed to report the same without amendment:

Bill No. 32, an Act respecting the construction of a Canadian National Railway line between Sunnybrae and Guysborough in the province of Nova Scotia.

Bill No. 63, an Act respecting the construction of a Canadian National Railway line between Lockeport station and the town of Lockeport in the province of Nova Scotia.

Bill No. 64, an Act respecting the construction of a Canadian National Railway line from the end of the China Clay branch to St. Remi d'Amherst, in the province of Quebec.

OLD AGE PENSIONS

Mr. W. G. RAYMOND (Brantford) presented the first report of the special committee appointed to make inquiry into an old age pension system for Canada, recommending that they be given leave to have the proceedings of the committee printed from time to time when deemed advisable, and that rule 74 be suspended in relation thereto.

On motion of Mr. Raymond the report was concurred in.

UNITED CHURCH OF CANADA

Petitions were presented from certain members of the following congregations, severally praying that the proposed legislation incorporating the United Church of Canada be not enacted:

Avondale Presbyterian Church, Tillsonburg; Knox Presbyterian Church, Norwich.—Mr. Sutherland.

St. David's Presbyterian Church, Campbellville.—Mr. Anderson.

St. Andrew's Presbyterian Church, Guelph; St. Paul's Presbyterian Church, Guelph; Presbyterian Church of Salem; Knox Presbyterian Church, Elora; St. Andrew's Presbyterian Church, Village of Fergus.—Mr. Guthrie.

John Street Presbyterian Church, Belleville; St. Andrew's Presbyterian Church, Belleville.—Mr. Porter.

Zion Presbyterian Church, Hull, Quebec; Knox Presbyterian Church; Glebe Presbyterian Church; Chalmers Presbyterian Church; St. Andrew's Presbyterian Church; Erskine Presbyterian Church; Bethany Presbyterian Church; Stewarton Presbyterian Church, all of Ottawa.—Mr. McGiverin.

First Presbyterian Church, Chatham; St. Andrew's Presbyterian Church, Chatham.—Mr. Murdock.

St. Andrew's Presbyterian Church, Stratford; Atwood Presbyterian Church.—Mr. Rankin.

Avonmore Presbyterian Church; St. Andrew's Presbyterian Church, Martintown.—Mr. Kennedy (Glengarry and Stormont).

St. Andrew's Presbyterian Church, Creemore; Presbyterian Church, Dunedin; Presbyterian Church of Nottawasaga.—Mr. Ross (Simcoe).

Division Street Presbyterian Church, Owen Sound; Erskine Presbyterian Church, Meaford; Knox Presbyterian Church, Owen Sound; Union Presbyterian Church, Owen Sound.—Mr. Duncan.

St. James Presbyterian Church, Yarmouth, Ontario.—Mr. Stansell.

Dunnville Presbyterian Church, Ontario.—Mr. Senn.

St. Andrew's Presbyterian Church, Lindsay, Ontario.—Mr. Thurston.

Kew Beach Presbyterian Church, Toronto.—Mr. Harris.

St. Paul's Presbyterian Church, Lakeport; St. Andrew's Presbyterian Church, Cobourg.

St. Andrew's Presbyterian Church, Colborne; Hastings Presbyterian Church.—Mr. Maybee.

Vista Presbyterian Church, Manitoba.—Mr. Hudson.

St. Paul's Presbyterian Church, Sault Ste. Marie; St. Andrew's Presbyterian Church, Sault Ste. Marie.—Mr. Simpson.

Knox Presbyterian Church, Cannington.—Mr. Halbert.

Morningside Presbyterian Church, Swansea; Long Branch Presbyterian Church; Old Presbyterian Church, of Weston.—Sir Henry Drayton.

Prescott Presbyterian Church; Cardinal Presbyterian Church; St. Andrew's Presbyterian Church, Barrie; Simcoe St. Paul's Presbyterian Church; Bradford Presbyterian Church.—Mr. Boys.

Knox Presbyterian Church, of Port Elgin.—Mr. Malcolm.

Bristol Brick Presbyterian Church, Wyman, Quebec.—Mr. Cahill.

Central Presbyterian Church, Galt; St. Andrew's Presbyterian Church, Hespeler.—Mr. Elliott (South Waterloo).

Arnprior Branch of the Presbyterian Women's League; St. Andrew's Presbyterian Church, Renfrew; St. Andrew's Presbyterian Church, Arnprior; Oxford Mills Presbyterian Church.—Mr. Low.

St. Andrew's Church and Chalmers Church, both of Quebec; St. Andrew's Church of Levis, and the Presbyterian Church of Charny.—Mr. Power.

St. Matthew's Church of Montreal, in connection with the Presbyterian Church in Canada.—Mr. Walsh.

Knox Presbyterian Church, Belmont.—Mr. Hodgins.

Westboro Presbyterian Church, Ottawa; St. Andrew's Presbyterian Church, of Carp.—Mr. Garland (Carleton).

St. Andrew's Presbyterian Church; Alexandria Presbyterian Church, Brantford.—Mr. Good.

Magnetawan Presbyterian Church, Ontario.—Mr. Arthurs.

Knox Presbyterian Church, Port Dover, Ontario.—Mr. Wallace.

Emmanuel Presbyterian Church, Cowan Avenue Presbyterian Church, Rosedale Presbyterian Church, all of Toronto.—Mr. Sheard.

Westminster Presbyterian Church; Knox Presbyterian Church; St. Andrew's Presbyterian Church; St. Paul's Presbyterian Church; Central Presbyterian Church; Erskine Presbyterian Church; St. John's Presbyterian Church; McNabb St. Presbyterian Church, Hamilton.—Mr. Stewart (Hamilton).

St. John's Church, and First Presbyterian Church, of Brockville; St. Andrew's Presbyterian Church, Gananoque; Lansdowne Presbyterian Church; Chalmers Presbyterian Church, Cooke's Presbyterian Church, St. Andrew's Presbyterian Church, all of Kingston, Ont.—Mr. Ross (Kingston).

Cobden and Wolftown Presbyterian Church; Calvin Presbyterian Church; Alice and Petawawa Presbyterian Church, all of Pembroke; Calvin Presbyterian Church, Pembroke; Beachburg Presbyterian Church.—Mr. McKay.

Davenport Road Presbyterian Church; College St. Presbyterian Church; Eglinton Presbyterian Church; North Broadview Presbyterian Church; Oakwood Presbyterian Church; West Presbyterian Church; St. James Square Presbyterian Church; St. Columbia Presbyterian Church; Westminster Presbyterian Church; St. Paul's Presbyterian Church; Alhambra Presbyterian Church; Dale Presbyterian Church; Knox Presbyterian Church; Old St. Andrew's Presbyterian Church; Bloor St. Presbyterian Church; Deer Park Presbyterian Church; Victoria Presbyterian Church; St. David's Presbyterian Church; Glebe Presbyterian Church; Riverdale Presbyterian Church; Avenue Road Presbyterian Church; Cook's Presbyterian Church; Dovercourt Road Presbyterian Church; Royce Avenue Presbyterian Church, all of Toronto.—Mr. Church.

Knox Presbyterian Church, of St. Mary's, Ontario.—Mr. Forrester.

Dufferin Presbyterian Church, Toronto.—Mr. Spence.

Presbyterian Church of Lucknow, Ontario.—Mr. Findlay.

St. Paul's Presbyterian Church, Vancouver, B.C.,—Mr. Clark.

Knox Presbyterian Church, Port Arthur, Ontario,—Mr. Kennedy (Port Arthur and Kenora).

Petitions were presented from certain members of the following congregations and bodies severally praying that the bill now before the House to incorporate the United Church of Canada be passed during the present session:—

Quarterly Official Board of the Ashfield Methodist Circuit.—Mr. King (Huron).

Methodist congregation of Sussex, N.B.—Mr. Caldwell.

Presbyterian congregation of Merivale.—Mr. Garland (Carleton).

James Williams and others of Springfield.—Mr. Stansell.

Shawville Methodist Church.—Mr. Cahill.

Copper Cliff, Ontario.—Mr. Lapierre.

Kerrisdale Presbyterian Congregation, Vancouver, B.C.; Tolmie Street Methodist Congregation, Vancouver, B.C.; Mount Pleasant Methodist Congregation, Vancouver, B.C.—Mr. Ladner.

Colbourne Street Methodist Church, London; First Congregational Church of Hamilton, Seagrave; Methodist Churches at Brooke Township and Bethesda; Methodist Church at Innerkip; Methodist Church at Dorchester; Methodist Church at Smithville; Congregational Church at Guelph; Union Church at Powassan; Union Church at Douglas, Manitoba; Session of Knox Church, Owen Sound; Presbyterian Church at Mono Mills; Methodist Church, Fenelon Falls; Norfolk Street Methodist Church at Guelph; Methodist Church in Paisley; Elderton Methodist Church, London District; Birr Methodist Church, London District; Methodist Congregations at Verona, Bellrock and Godfrey; Glenmount Methodist Church, Toronto; Bathurst Street Methodist Church, Toronto; First Presbyterian Church School, London; St. Andrew's Church, London; St. James Presbyterian Church, London; First Presbyterian Church, London; Presbyterian, Methodist and Congregationalists, London; Methodist Churches at Dunsford, Bryanston and Ebenezer.—Mr. Pritchard.

Methodist Churches at Westover, Sheffield and Rockton; Tomlinson Methodist Church at Humberside; Southern Congregational Church, London; Congregational Churches at New Durham and Burford; Sherbourne Street Methodist Church, Toronto; Methodist Churches at Bronte, Palermo; Methodist Churches at Auburn and Westfield; Methodist Church at Chatham; Methodist Church at Stouffville; United Churches at Cobalt who have had a Union of the Presbyterian, Methodist Congregations; S. N. Fripp and 80 others of Forest; Congregational Church at North Plympton; Methodist Churches at Grand Bend; Methodist Church at Wooler; Methodist Congregation at Louisville Circuit, Chatham Township; Methodist Churches at Denbigh and Vennachar; Kingsville Methodist Church; Methodist Church at Watford, East Lambton; Methodist Church at Mount Albert.—Mr. Woods.

Kirkton Methodist Church, Perth county; Knox Presbyterian Church at Shelburne; Argyle and Knox Presbyterian Congregations at West Lorne and Ciman; Methodist Church at Wiarton and Ottewell; Methodist Churches at Ebenezer, Sheppardton and Nile; Methodist Churches at Kinloss, Bervie and Purple Grove; Methodist Church at Westwood; Chalmers Presbyterian Church at Woodstock, Methodist Church at Delaware; Avenue Road Presbyterian Church at Toronto; Methodist Church at Napanee; Methodist Church at Thorndale; United Churches at Gravenhurst; Methodist Church of Westport. Official Board of the Methodist Church at Jordon Station; Members and Elders of the Board of Management of the United Presbyterian and Methodist Churches at Claremont; Methodist Church at Harrow; Childerhose Memorial Presbyterian Church at Depot Harbour; Methodist Churches at Pickering and Audley; Simpson Avenue Methodist Church at Toronto; Methodist Church at Amherstburg; Earlscourt Methodist Church, Toronto.—Mr. Sexsmith.

Reverend Charles A. Pekin of Glenallan; Methodist Church at Londesboro; Methodist Church at Lions Head; United Church at Kenville, Man.; United Churches at Table Butte, Stavely and Parkland; Union Church at Vanscoy, Sask.; Methodist Industrial School at Brandon, Manitoba; Methodist Churches at Howard, Stoughton and Walton; Presbyterian Church in Carroll and Nesbitt; Union Church at Cypress River, Manitoba; Union Church at Moline, Manitoba; Union Church at Plumas, Manitoba;

United Church at Deloraine, Manitoba; Union Congregations at Kentville, Harlington and Thunderhill; Union Congregation at Sheguiandah; Quarterly Official Board of the Methodist Church, Souris, Manitoba; United Church at Sperling, Manitoba; Methodist Church at Oil Springs, Ontario; Presbyterian Church at Roseisle.—Mr. Good.

Methodist Church at Heathcote; Methodist Church at Alton; Methodist Church at Flesherton, Ontario.—Mr. Spencer.

Wesley Methodist Church, Chesley, Ontario; Methodist Church at Shelburne, Ont; Broadview Congregational Church, Toronto, Ontario.—Mr. Sexsmith.

Methodist Church at Kemble, Ontario; First Methodist Church at St. Catharines, Ontario; Chalmers' Congregation at Kingston; Presbyterian Church at Wyevale; Methodist Church at New Liskeard, Ontario; Methodist Church at Malton, Ontario; Queen Street Methodist Church, Kingston, Ontario; Churches at Waldemar, Laurel and Blacks Corners, Ontario; Methodist Church at New Toronto, Ontario; Clinton Street Methodist Church, Toronto, Ontario; Princess Street Church at Kingston, Ontario; Union Church at Portsmouth, Ontario; Methodist Church at Brighton, Ontario; Methodist Churches at Morrish and Wesleyville.—Mr. Spencer.

Sharon Methodist Church, Delaware Township, Ontario; Byron Church, London, Ontario; Queen Street Methodist Church at Toronto, Ontario; Broadway Tabernacle, Toronto, Ontario; Methodist Church at Putnam, Ontario; Members of Grove, Zion and Siloam Methodist Congregations, Siloam Circuit, Ontario; Robinson Memorial Methodist Church, London, Ontario; Presbyterian Church at Callander; St. Andrew's Presbyterian Church at Mattawa; Methodist Congregation at Zion (Drayton), Ontario; Methodist Churches at Keene, Bethel and Zion, Ontario; Presbyterian Churches at Westwood and Keene; United Church at Alma Heights, Lefroy Township, Ontario; Zion Church at Thessalon, Ontario; Methodist Churches at Sulphide, Actinolite and Potter's Settlement; North Street Methodist Church, London, Ontario; Askin Street Methodist Church, London, Ontario; First Methodist Church, London, Ontario; Belmont Methodist Church, Belmont, Ontario; Westminister Methodist Church, London District, Ontario.—Mr. Findlay.

F. T. Shaver and others of Aultsville and other places.—Mr. Elliott (Dundas).

Presbyterian Church, Carberry, Man.; Westminster Presbyterian Church, Winnipeg, Man.; Methodist Church, Arden, Man.; Methodist Church, Miami, Man.; Presbyterian Church, at Scotia; Congregational Church, Brantford, Ont.; Methodist Church, Roland, Man.; Victoria Methodist Church, Calgary, Alta.; of Rev. P. F. Langill and 32 others, of Burnside, Manitoba; Methodist Church at Burnside and Macdonald; United Church at Milden, Sask.,—Mr. Hudson.

Belmont Methodist Circuit, Ontario; Congregational Church at Forest, Ontario; Methodist Churches at St. Johns, Melrose and Hyde Park, Ontario; Lincoln Road Methodist Church, Walkerville, Ontario; Marten Presbyterian Church, Marten; Congregational Church at Barrie, Ontario; Union Church, Lyleton, Man.; Westside Methodist Church, Owen Sound, Ontario; Methodist Church, Wellington, Ontario; Presbyterian Church, St. Andrews, Winnipeg, Man.; Union Church, Halkirk, Alberta; Wesley Methodist Church, Clinton, Ontario; United Church at Sintaluta, Sask.; Danforth Ave. Methodist Church, Toronto, Ontario; Presbyterian Church, Wetherhill, Sask.; Methodist Churches at Strafford-ville, Eden and Guysboro and Eden, Ontario; Zion Methodist Church of Ashfield Township, Lucknow, Ontario; Presbyterian Church at Abbotsford, B.C.,—Mr. Stansell.

Methodist Church, Park Hill, Ont.; Methodist Church, Michel, B.C.; Methodist Church, Irma; United Church, Bow Island; Presbyterian Church, Stoughton, Steward and Hillhurst; Maclean Methodist Mission, Manitoba; Rosedale Methodist Church, Winnipeg, Man.; Union Church, Glenboro; Union Church, Forestburg, Alberta; Methodist Church, Fairlight, Sask.; Mount Pleasant Presbyterian Church, Omemee, Ontario; Central Methodist Church, Kleinburg and Nobleton, Ontario; Methodist Church, Walton, Ontario; United Church, Alexander, Man.; United Church, Waskada, Manitoba; Methodist Church, Bright and Bethel, Ontario; Presbyterian Church, Emo, Ont.; Methodist Church, Verdun, Quebec; Presbyterian Church Russeltown, Quebec, Union Church at Coveyhill, Quebec; Union Church, Wadena, Sask.; Carleton Street Methodist Church, Toronto, Knox Presbyterian Church, Saskatoon, Sask.; Methodist Church at Laurel, Ontario; Parkdale Methodist Church, Toronto, Ontario; Presbyterian Church, Graysville, Man.; Gerrard Street Methodist Church, Toronto, Ontario—Mr. Hammell.

Union Church at Elgin, Manitoba; Methodist Church at Omemee, Ontario; Methodist Church, Uxbridge District, Ontario; Westminster Presbyterian Church, Saskatoon, Sask.; United Church at Kenmay; Methodist Church in the Orton Circuit; Crediton and Ailsa Craig Circuit of the Methodist Church at Crediton, Ontario; Presbyterian Church at Priceville, Sask.; Methodist Church at Wakefield and Masham, Que.; Union Church at Bowden, Alberta; Methodist Church at Whitby, Ont.; Methodist Church at Innisfree, Alberta; United Church at Merna, Alberta; Methodist Church at Silverdale and Centenary; Presbyterian Congregations at Dummer, Wagner and Truax Presbytery, Weyburn, Sask.; Knox Presbyterian Church at Mitchell, Ont.,—Mr. Garland (Carleton).

Methodist Church at Sherbrooke, Quebec; Presbyterian Union Church at Sturgeon Falls and Cash Bay; Methodist Church at Beeton, Ontario; Methodist Church on Oil City Circuit, Ontario; St. Andrew's Presbyterian Church at Sault Ste. Marie, Ontario; United Presbyterian and Methodist Congregation at South River, Ontario; Methodist Church at Mervale, Ontario; Union Churches at Emsdale, Ontario; Methodist Church at Cannifton, Ontario; Union Church at Delburne, Alta.; Methodist Congregation at Stirton, Goshen and Goldstone, Ontario; Union Church at Bowsman; Union Church, Togo, Sask.; Methodist Churches at Huttonville and Churchville; Union Church at Kelwood, Manitoba; Methodist Church on the Bath Circuit; Napanee District; Bartonville Congregation of Bartonville Church; of the Stone Church Congregation at Barton Township and Burkholder Church at Barton Township; Hyatt Avenue Methodist Church at London, Ontario,—Mr. Wallace.

Methodist Church at Lambeth, Ontario,—Mr. Hammell.

Presbyterian Church, New Mills, N.B.; Methodist Church at Maidstone, Ontario; Knox Presbyterian Church, Galt, Ontario; Grace Methodist Church at Essex, Ontario; Knox Presbyterian Church at London, Ontario; Eastern Methodist Church at Ottawa, Ontario; Methodist Churches at Bethel, St. Lawrence and Maple Grove, Ontario; Presbyterian Church at Springside, N.S.,—Mr. Hatfield.

Methodist Church at Belwood, Ontario; Union Church, Kisbey; Union Church, Bulyea, Sask.; St. Paul's Methodist Church Walkerton, Ontario; Methodist Church, Milverton, Ontario; First Presbyterian Church, Camrose, Alta.; Methodist Churches at King, Laskey and Teston, Ontario; Union Church, 365 Delisle street, Montreal, Que.; Presbyterian Church, Madawaska; George Street Methodist Church at Collingwood, Ontario,—Mr. Hammell.

QUESTIONS

(Questions answered orally are indicated by an asterisk)

SALES TAX COLLECTIONS

Sir HENRY DRAYTON:

1. What was the total amount of sales taxes collected in each province in each of the years 1922 and 1923?

2. What was the cost of collection of such taxes in each province?

3. What is the number of firms and individuals by provinces who have not paid sales taxes and what the amounts due by provinces, on the first of February, 1924?

4. What steps have been taken to collect such taxes from firms in default, if any?

Hon. Mr. BUREAU:

1. Sales Tax Collected in Each Province during the Calendar Years 1922 and 1923

Province	1922		1923	
	Imported goods	Domestic goods	Imported goods	Domestic goods
	$ cts.	$ cts.	$ cts.	$ cts.
Nova Scotia	546,880 52	955,186 57	632,480 09	1,244,680 09
New Brunswick	614,824 13	911,356 09	698,885 86	1,141,507 90
Prince Edward Island	37,613 66	66,378 21	34,601 33	71,944 27
Quebec	6,871,770 90	17,121,086 42	9,004,581 40	23,827,120 62
Ontario	12,292,828 22	29,472,408 72	16,245,604 01	37,032,514 32
Manitoba	1,506,506 21	2,923,849 22	1,857,930 58	3,476,140 94
Saskatchewan	377,700 87	803,207 48	540,378 29	984,835 74
Alberta	390,231 95	1,194,120 92	573,078 48	1,532,540 69
British Columbia	2,212,945 78	2,753,554 10	2,746,353 37	3,483,430 79
Yukon	20,545 73	1,332 50	21,214 68	2,146 36

2. It is not possible to state separately the cost of collection of sales tax as distinguished from other taxes and duties collected by the Department of Customs and Excise.

3. It is not possible to state the amount of sales tax due by provinces, as at 1st February, 1924, as audits have not been completed to that date.

Provinces	Total arrears three months and under	Total arrears over three months	Grand total
Nova Scotia	36	103	139
Prince Edward Island		8	8
New Brunswick	14	14	28
Quebec	377	870	1,247
Ontario	169	938	1,107
Manitoba	25	156	181
Saskatchewan	21	75	96
Alberta	15	78	93
British Columbia	47	224	271
	704	2,466	3,170

Of the 2,466 firms and individuals in arrears of sales tax for a period of over three months, 431 are retail bakers and confectioners who have refused to pay sales tax pending the decision of the Supreme Court in the case of Rex vs. Versailles Sweets; 442 are cases of firms and individuals in liquidation; 363 firms and individuals are paying arrears by instalments and prosecutions have been entered in 463 cases.

In the balance of the cases the department is corresponding with the firms and individuals concerned with a view to making satisfactory arrangements for payment of arrears before legal action is taken.

These latter cases require nursing as drastic action would probably result in financial failures.

4. In default of satisfactory arrangements for payment of arrears legal action is taken.

STAMP TAX COLLECTIONS

Sir HENRY DRAYTON:

How much money was collected under the stamp tax on cheques, notes, drafts, bills of exchange, statements of overdrafts, money orders and receipts (a) during the months of November to March, inclusive, of the fiscal year 1922-23 and (b) during the same period of the fiscal year 1923-24?

Hon. Mr. COPP:

Department of Customs and Excise—November 1, 1922 to March 31, 1923, $2,530,696,-35; November 1, 1923 to March 31, 1924, $3,801,004.10.

Post Office Department—Proceeds of stamp tax on money orders:

(a) $101,286.08; (b) $113,485.76.

CANADIAN NATIONAL RAILWAYS—ADVANCES

Mr. RYCKMAN:

What amount of money, including guarantees, has been advanced by the government in excess of revenue for all purposes on account of the National Railways, including Canadian Northern and Grand Trunk systems and all subsidiaries, since they have been under government control (also including the Intercolonial Railway for same period) and including both revenue and capital account, in each fiscal year up to March 31, 1924?

Hon. Mr. GRAHAM:

ADVANCES AND GUARANTEES BY DOMINION GOVERNMENT

From September 30, 1917 to March 31, 1924

Canadian Northern Railway Company

MR. SANFORD EVANS

Mr. HAMMELL:

1. Was Sanford Evans, of Winnipeg, employed at any time by the Dominion government during the last twelve years?

2. If so, by whom, and under which department of the Dominion government?

3. What services did he render, and in what capacity did he work?

4. What remuneration, salary or wage did he receive in toto from the Dominion government?

Hon. Mr. KING (Kootenay):

Department of Public Works—

1. Yes.

2. By commission under order in council of March 18, 1914, and under supervision of Department of Public Works.

3. He was employed as chairman of the Georgian Bay Ship Canal Commission which reported on the economic and other advantages of the proposed Georgian bay ship canal.

4. $18,130.

Department of Marine and Fisheries—

1. Yes.

2. (a) Royal commission dated 2nd July, 1917; (b) Department of the Naval Service (Fisheries branch).

3. Comissioner and chairman "Special Fishery Commission, 1917."

4. $2,925.

CANADIAN NATIONAL RAILWAYS—RADIO BROADCASTING STATIONS

Mr. HANSON:

1. What amount has been expended to the 31st of March, 1924, by the Canadian National Railway Company for radio broadcasting stations and equipment?

2. Has such amount been charged to capital expenditure?

3. If so, under what authority and from what moneys was the sum taken and what vote of parliament?

4. From whom was such radio equipment purchased, were tenders called for and were purchases made by tender or otherwise from the Northern Electric Company?

Hon. Mr. GRAHAM:

1. $21,941.12.

2. Yes.

3. This expenditure was authorized by vote of parliament No. 139.

4. The broadcasting station at Ottawa was erected under contract, with the Northern Electric Company, it being considered to the best interests of the Canadian National Railways to have this firm undertake this work. Other radio equipment and supplies have been purchased from the following companies:

Beatty Bros., Montreal.

Bartram, Robt. W., Montreal.

Continental Equipment Co., Ltd., Montreal.

Canadian General Electric Co., Ltd., Montreal.

Devoe Switch Co., Montreal.

Hart Battery Co., Montreal.

Jack, James, Co., Montreal.

Millen, John and Sons, Montreal.

Myers, F. B., Ltd., Montreal.

Munderlich and Co., Montreal.

Marconi Wireless Telegraph Co. of Canada, Montreal.

[Mr. Hammell.]

Northern Electric Co., Ltd., Montreal.

Phillips Electrical Co., Eugene F., Montreal.

Radio Ltd., Montreal.

Radio Distributors, Montreal.

Steel Co. of Canada, Ltd., Toronto.

Canadian Independent Telephone Co., Toronto.

De Forest Radio Corporation, Ltd., Toronto.

In all cases where practical the purchasing department called for bids, the business being distributed to the best advantage of the company.

MEMBERS' STENOGRAPHIC SERVICE

Mr. SEGUIN:

1. What are the names of those who, with the exception of the stenographers and typwriters at the service of members, are employed, in connection with that branch, as chief, assistant chief, messenger, etc., and what are their respective salaries?

2. Are there any who are bilingual? If so, what are their names and salaries?

3. Who are those who, among the chief, assistant chief, and messengers of said branch, are in receipt of a yearly salary?

4. How many employees come under the said chief and assistant chief during recess and what are their names and salaries?

Right Hon. Mr. MACKENZIE KING:

1. J. H. Smith, $2,880 per year; no assistant chief; Leonard Hill, desk clerk, $4 per day; W. Copping, junior clerk, $3 per day; A. Fisher, messenger, $2.50 per day; A. Chene, page-messenger, $1.75 per day.

2. Two: W. Copping and A. Chene.

3. One: the chief.

4. Two: Miss M. E. McEwen, and Mrs. Garneau, at $4 per day.

CANADIAN NATIONAL RAILWAYS—PRINCE RUPERT TOWNSITE

Hon. Mr. STEVENS:

1. How many lots in the Prince Rupert townsite are owned by the Canadian National Railways?

2. How many of the said lots, if any, have been sold during the past two years?

3. To whom and at what price have said lots been sold?

Hon. Mr. GRAHAM:

1. 37.

2. 9.

3. Messrs. S. E. Parker, Chas. K. Ytreberg, J. J. T. Collart, H. F. Wearmouth, John Dybham, and Mary E. Gordon, $7,450.

PICTOU COAL PIER

Mr. JONES:

1. What was the cost of dredging operations at the coal pier at Pictou landing during the year 1923?

2. Is said pier a public wharf?

3. If not, by whom is it owned and used?
4. If said coal pier is a private wharf was the cost of said dredging paid by the owners and if so, to whom was the money paid?

Hon. Mr. KING (Kootenay):

1. $13,262.02.
2. No.
3. Owned and used by The Acadia Coal Company.
4. Dredging was done at government cost.

PICTOU HARBOUR DREDGING

Mr. JONES:

1. What was the cost of dredging operations performed by contract at Pictou harbour, Pictou, Nova Scotia, during the year 1923?
2. What was the cost of dredging operations performed by the Public Works Department's dredges at Pictou harbour, Pictou, Nova Scotia, during the same year?

Hon. Mr. KING (Kootenay):

1. $16,185.93 for dredging at C. N. R. wharf. $13,262.02 for dredging at Acadia Coal Company's wharf.
2. Departmental dredge "Fielding" worked all season of 1923 dredging channel at entrance to harbour through Cole Point shoal and Murdock shoal at a cost of $101,259.21.

ABERCROMBIE DREDGING

Mr. JONES:

1. Has the contract been awarded for dredging at Abercrombie in the county of Pictou, Nova Scotia?
2. If so, to whom has the contract been awarded?
3. What is the amount of the contract and what is the rate per cubic yard?
4. Were tenders called for?
5. If so, was the lowest tender accepted?
6. What other tenders were received and what were the amounts?

Hon. Mr. KING (Kootenay):

1. No, but tenders will be called for shortly.
2, 3, 4, 5 and 6. Answered by No. 1.

ST. GEDEON STATION POSTMASTERSHIP

Mr. DOUCET:

1. Has the postmaster at St. Gédéon station in the electoral district of Chicoutimi-Saguenay been dismissed?
2. If so, for what reason?
3. Who is the newly appointed postmaster and by whom was he recommended?
4. Have complaints been received against this postmaster since January, 1924, and from whom?
5. What is the nature of these complaints?
6. How many were applicants for the postmastership and what are their names?

Hon. Mr. STEWART (Argenteuil) (for the Postmaster General):

1. Yes.
2. Active political partisanship.
3. Léandre Tremblay—recommended by Doctor Edmond Savard, M.P.
4. No.
5. See 4.
6. No applications received.

SOLDIER SETTLEMENT BOARD

Hon. Mr. STEWART (Argenteuil): On the 28th April a question asked by the hon. member for Bow River (Mr. Garland) was partly answered. A return from the Department of the Interior was not put in, and I desire now to finish the information.

Mr. GARLAND (Bow River):

1. How many quarter-sections of Dominion or Crown lands were turned over to the Soldier Settlement Board, free, in Manitoba, Saskatchewan and Alberta?
2. What price was paid by the soldier-settler to the board for such lands in each of the prairie provinces?

Hon. Mr. STEWART (Argenteuil):

1. (a) Dominion lands transferred (patented) by Department of Interior to the Soldier Settlement Board of Canada under section 27 of the Soldier Settlement Act. (Salvage cases).

Province	No. quarter-sections and parts thereof	No. of acres approximate
Manitoba	182	29,120
Saskatchewan	157	25,120
Alberta	316	50,560
British Columbia	27	4,320

(b) Dominion lands transferred (patented) by Department of Interior to the Soldier Settlement Board of Canada under Order in Council P. C. 1821, dated 4th June, 1921, (at request of settler).

Province	No. quarter-sections and parts thereof	No. of acres approximate
Manitoba	123	19,680
Saskatchewan	367	58,720
Alberta	250	40,000
British Columbia	23	3,680

(c) Dominion lands reserved by Department of Interior for the purposes of the Soldier Settlement Act under authority Order in Council P. C. 2,659, dated 30th October, 1918.

Province	No. quarter-sections and parts thereof	No. of acres approximate
Manitoba	1	56.16
Saskatchewan	220	33,480.1
Alberta	311	47,473.75
British Columbia		

(d) Dominion lands reserved (unpatented) by Department of Interior for the Soldier Settlement Board of Canada. (Approximate area).

Porcupine Forest Reserve (Saskatchewan), 221,175 acres.

Riding Mountain Forest Reserve (Manitoba), 172,200 acres.

(e) Dominion lands covered by Soldier Grant entries. (Approximate area), 1,333,280 acres.

2. This information to be furnished by the Soldier Settlement Board.

UNOPPOSED MOTION FOR PAPERS

ST. GEDEON STATION POSTMASTERSHIP

Mr. DOUCET:

For a copy of all correspondence, telegrams and other documents exchanged between the Post Office Department, the Civil Service Commission and all other persons since January 1st, 1921, to date, on the dismissal of the postmaster at St. Gédéon station, Quebec, and the nomination of a new postmaster. Also copies of the investigation that was held, and of the report of the investigators, as well as copies of applications made to the Civil Service Commission for the said postmastership, and all petitions and certificates given in favor of or against any of the applicants.

ANTI-DUMPING REGULATION

On the Orders of the Day:

Mr. A. B. HUDSON (South Winnipeg): I should like to ask the government if any order in council has been passed cancelling the 5 per cent allowance in the anti-dumping law, and if so, why?

Hon. JACQUES BUREAU (Minister of Customs and Excise): This is a matter that is dealt with not by the Governor-in-Council, but by the department. The regulation is a departmental one. The Minister of Customs is the party who suspended the regulation on the 8th April. This regulation was made on the 24th August, 1914. Since the regulation has been passed, a good many protests have been lodged with the department, and in view of the fact that the Department of Customs is now preparing legislation providing for the appointment of a board whose duty it will be to make a special study of taxation, and who will act as advisers to those who are to administer the tax laws as well as to those who are to make them, we have seen fit to suspend the suspension and the old regulation remains in force. But I want to emphasize the fact that the idea which seems to have gone out, that this is a governmental measure, is erroneous. It is not; it is departmental, and your humble servant is the sole and only responsible party. He has no apology to make either.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): Is this new board that is to advise on taxation also to advise the government with respect to tariff schedules?

Mr. BUREAU: When the bill is brought down, it will specify the duties and powers of the board.

[Mr. C. A. Stewart.]

Mr. MEIGHEN: I would suggest to the minister that he let his memory go as far back as 1912.

Mr. BUREAU: What for?

Mr. MEIGHEN: He might find some interesting speeches of his own about that time.

Mr. BUREAU: In the House?

Mr. MEIGHEN: Yes.

Mr. BUREAU: I have nothing to take back. They are all right if I made them.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed from Tuesday, May 6, the debate on the motion of Hon. J. A. Robb (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into committee of Ways and Means and the proposed amendment thereto of Mr. Woodsworth.

Hon. W. R. MOTHERWELL (Minister of Agriculture): Mr. Speaker this budget has now been before the House for almost the last three weeks with no visible effect except to demonstrate more and more its general acceptability by the Canadian people as the days of the weeks go by. By some parties it is referred to as a low tariff budget, by others it is spoken of as the Robb budget, while others again speak of it as a Progressive budget. I think myself that the larger portion of its friends refer to it as a real Liberal budget, with the accent strongly on the word "real"—a real Liberal budget. You will observe, however, that no one thus far has ever thought of designating it a Tory budget. Mark that. Now, I think we can all sense in the not-too-far-distant future a battle on the tariff. We are lining up our forces for it, and it is well that the issue should be plain; for it is better that we should know exactly what we are fighting about and that the battle line should be clearly defined. So that, whatever else the budget has done, it has certainly effected a distinct cleavage between the low tariff and the higher tariff forces in Canada.

Before entering upon the budget proper I beg to refer very briefly to the environment, the setting in which parliament met on February 29. Prior to that and since the last prorogation our Conservative friends were engaged actively in strong propaganda for the purpose of convincing the people of Canada

that this government was not very much good and that it should be replaced by themselves; they said that we were impotent and incapable of doing things. The people were told that on one side of the government was a hostile Senate and on the other a not-too-friendly Civil Service Commission; and that with no majority in the House nothing could be hoped for. That was the impression that was conveyed by hon. gentlemen opposite. Unless some of us have forgotten the kind of propaganda that was engaged in to spread distrust and suspicion among the electors, and in case the House may have forgotten what took place during the recess I will refer to a few passages from speeches made by the right hon. the leader of the opposition (Mr. Meighen). I am not going to drive them home too forcibly, nor shall I be very harsh; I shall be merely sufficiently effective to bring out the facts of the case. My right hon. friend toured the West and, in Winnipeg, he is reported under date December 17 to have spoken of the King government in this fashion:

The King government has a record of political perfidy unapproached in the history of responsible government the world over,—

Mark you, there are no limitations, there is no reservation, in that indictment—it embraces the whole world.

—because of its record on the tariff and every other subject of importance in relation to which it bound itself by pledges to the people of Canada.

No limitation at all; we are not only the limit, but we exceed the limit in impotency and general perfidy—"perfidy" and "apostasy" seem to be favourite terms in the vocabulary of my right hon. friend, and hon. members may recall that he used the latter expression in reference to my humble self last year when he described me as an apostate in relation to the tariff. I do not know what he will call us on this occasion, but we shall see about that later. About the same time he also addressed a meeting at Three Rivers. The House will remember that my right hon. friend and some of his lieutenants at that time were flitting about the country with wonderful rapidity, being here to-day and there to-morrow. And just shortly after the time he spoke in Winnipeg as I have quoted him, he addressed a meeting in the interesting city of Three Rivers. Let me read as nicely as I can what he said there:

The name of the government is a stench throughout the West to-day—

He had just returned from the West and so he ought to have known.

—and the concessions they are fishing for are at the price of the rest of Canada, of Canadian industries and Canadian trade.

As to whether the name of the government was at that time, or is now, "a stench" in the West, that is something we shall hear about later. Now, these are not nice things to say, and I shall refer only to one more, just to show that the intention of the opposition seemed to be to sow so much distrust in the minds of restless people that, as they evidently hoped, the government would be crowded off the map. Well, there was a sort of reunion of the Conservative party in Saskatchewan. As you know, that party had got to be pretty limp up there, and a united effort was made by Hon. Robert Rogers, Premier Ferguson, and my right hon. friend, to breathe life into the dead flesh and bones of western Toryism. And that is a big contract. To show that birds of a feather usually do flock together, let me read the following report of the remarks of Hon. Robert Rogers on that historic occasion:

Mr. Rogers said that the people of Saskatchewan, never having enjoyed the benefits of a Conservative government, were living in darkness. This was the time to correct that situation. "You have as Libgrals in Saskatchewan," he went on, "as unscrupulous men as there are anywhere in the Dominion of Canada."

There is no equivocation about that; none whatever. Well, having read these things I have come to the conclusion that they were not really intended seriously; I do not think they can be considered as having much more than political significance. These gentlemen were on the stump and were obliged to make a showing, and so this is what they said. I do not think that they believed it themselves. Every time we meet here after a recess we gather together as good friends, and if I thought for a moment of my hon. friends what from their language they would give us the impression that they think of us, why, I would not be so friendly with them. But I rather like them—right where they are. Now, so much for that; let us forget it. Indeed, I am sure that some of my hon. friends opposite would like to forget it because it is nothing but a blunder; the people did not accept it. The trouble is that my hon. friends overdid it; and speaking for myself, I want no better campaigners in the interests of the Liberal cause in the West than that trio. Those gentlemen did far more good for us than the Minister of Justice (Mr. Lapointe) and I did in the effort we put forth. And we had a good time. Let us see what occurred later on. They seemed to be encouraged by the victories they

won in Halifax and Kent; and so no wonder they were on their toes thereafter. What with themselves and their press they had the whole of Canada in a remarkable state of expectancy as to what was going to happen when the House convened on February 29; everybody was speculating as to what was going to take place. Not only that; various dark rumours were being whispered around that something was going to befall some members of the government. I do not know who it was that had the brand on him, but three or four cabinet ministers seemed to be under suspicion, and there was an undercurrent of feeling that anything was apt to happen. These were the conditions under which parliament met, when our friends of the opposition were almost elevated into the third heaven of hope. What as a matter of fact did happen? Well, the first crack out of the box was the Speech from the Throne, and instead of seeing the whitening gills of the government, as the leader of the opposition has spoken of, we had the pleasure of witnessing the blanched faces of the opposition when the Speech was delivered. And from that affrighted state they have not to this day recovered.

Some hon. MEMBERS: Oh, oh.

Mr. MOTHERWELL: Well, there is nothing else for the opposition to do than to laugh it off; I am aware of that. They were full of hope, for the situation seemed to them to hold some promise; and now that they see their expectations falsified they declare that the Progressives have sold themselves for a mess of pottage, a mess of pottage that will not be delivered.

Well now, that was the first blow, but it was followed by another. Long before the effect of the Speech from the Throne died away in the distance the Acting Minister of Finance (Mr. Robb) brought down his estimates showing a reduced expenditure of $46,000,000. Some hon. member estimated, rather generously, that the supplementaries would cut this saving down to $26,000,000; that is to say, there would be $20,000,000 expenditure in the Supplementary Estimates. Although it is not safe to guess about political matters, I make the guess that the supplementaries will not amount to half of $20,000,000. However, the reduced expenditure was generally accepted throughout the land with great favour as an indication that the government was making a real effort to effect economy. That was not quite as hard a blow to the Conservative party but it was hard just the same.

When the budget came down and, all the prognostications to the contrary, showed a genuine desire on the part of the government to lessen taxation and at the same time maintain the national revenues, why, the cry went abroad throughout the land: This is something we have been looking for for years. Liberals threw out their chests and said: Here is something we can fight for now. And the stock of the Tories went down correspondingly; there is no question about it. A man who has been in politics for twenty years can sense these things, he does not need to be told. The Tories were going to wipe up this floor the very first day of the session with any Liberal that came in sight. They went roaring around the Dominion like raging lions in search of what Grits they could devour, but when they got their "prey" corralled inside these four walls those raging lions were as tame as pet lambs. Nothing happened, and nothing is likely to happen. Here are all the Liberals in the flesh ready for anything that may happen. But the very fates have been pursuing the Tories. Surely they must have been doing something wrong that such retribution should come upon them!

When the budget comes down usually an amendment is moved by the official opposition. By some tacit arrangement it was expected that the Conservative party would move an amendment. You will remember, Mr. Speaker, that it took the ex-Minister of Finance (Sir Henry Drayton) over Sunday to recover from the first shock of the budget; he wanted the week-end to think it over before he would reply. And they got into a nice little discussion the following week. But they forgot there was a fourth party, represented by two modest Labour men that we very seldom hear from. The fourth party were not going to lie quiet any longer; they could not see why they should not be in on this amendment business. So they brought in an amendment. It took the official opposition two days to recover from that before they even protested. The thing was monstrous—the great Conservative party vieing with two Labour gentlemen, representing the fourth party, for a place in the sun, for precedence! You, Mr. Speaker, when the matter came before you, let it stand over another Sunday and then gave your decision in favour of the younger party. Now, that was real hard luck for the Conservative party.

Some hon. MEMBERS: Oh, oh.

Mr. MOTHERWELL: Our two friends here know there is nothing else to do but to laugh. The Conservative Organizer (Dr. Tolmie) is not laughing. He knows what it means. That is the fourth blow.

Sir HENRY DRAYTON: You are losing your good joke; he is not here.

Mr. MOTHERWELL: The next one is a joke.

Sir HENRY DRAYTON: It is all a joke.

Mr. MOTHERWELL: But it is a real joke on my friends opposite—but I will come to that later. Let me refer to the statement of the Massey-Harris Company in yesterday's Citizen. The manufacturers on whose behalf our Conservative friends were willing to bleed and, if necessary, to die—of course politically—tell their sympathizers: Don't worry, friends; keep your wind to cool your porridge if you like, but we don't want your sympathy; we can get along under this budget. Let anyone examine the concessions that have been given in the way of free raw materials, with the added prospect of the balance of the Crowsnest pass rates coming into force, which is equivalent to a 3 per cent advantage, and he will realize why the manufacturers are not alarmed. Take the tariff rate on binders, reduced from 10 to 6 per cent. That is nearly half, it is true, but by a careful computation the implement manufacturers estimate that if the Crowsnest pass agreement was restored in its entirety it would be equivalent to a 3 per cent advantage to them over the American implement makers. That restores 3 per cent of the reduction of 4 per cent off in duty, and the further advantage of free raw materials will at least make up the difference. The Massey-Harris people are wise. While the public generally are benefited, the Massey-Harris people have not been hurt seriously. We do not intend that they should be. Why should we massacre industry, Mr. Speaker? We never have in the past—why should we do it now? We try to put an even doubletree between the various sections of the community; that is all. That is the series of misfortunes which has overtaken our Conservative friends at every step—a reward for their bad conduct all last summer in going about the country abusing the government! Why, the worst word in their mouth was too good for us over here. But that is the retribution they might expect, and that is what they have got.

Now, what about the budget itself? Why do not our Conservative friends like it? The simple fact of the matter is that it has got the Conservative party right on the hip, and that is the reason why they do not like it. Let us examine some of the speeches delivered by my friends opposite. I think the hon. member for Fort William and Rainy River (Mr. Manion) has been credited with the best speech thus far from the opposition side—I should make an exception in favour of the ex-Minister of Finance of course, but outside of him, and what does the hon. gentleman from Fort William say? I had not the pleasure of being present to hear him, but I read his speech carefully afterwards, and I have it before me now. If I had not read it I would not have believed that my hon. friend with all his geniality and likeable qualities would get off such "bunk." But still, seeing is believing. He asks:

> What is the object of the changes in the tariff? Sir, it is simply a mad desire on the part of this government to keep in power at any price. It is an attempt to purchase the votes of the West at the expense of the industrial East.

Because, after the manufacturers have been privileged for fifty years to levy tolls on the farmers of this country and others, we ask them modestly to loosen up a bit, we are told that we are going to destroy them. They have been riding on our backs for fifty years. At last we simply say to them: Get off and walk for a little while, try your feet. And the Massey-Harris Company comes back and says: I will try my feet; maybe I will grow stronger by that method; the goodwill of the farmer is better for me than any protection I am enjoying at the present time; all right, I will walk. Here is some more of my hon. friend's speech:

> I submit Mr. Speaker, that the whole tariff history of this government has been one of deception, trickery and vote chasing.

That is not as bad as "apostasy" and similar expressions that we have heard from the official opposition at one time and another. But where is the deception? The very first session after the government was formed we did what no other government had done since confederation—we lowered the tariff. You may call the reduction small, but we were that much further to the good than any other government that has preceded us, because none of our predecessors ever touched the tariff at all in their first session. Last session we pursued the same course and increased the British preference. That increase may be said to be small, if you like, but nevertheless it has been appreciated. Indeed, it was said to be sufficiently large to close a number of our mills, and our calamity howlers went up and down the land complaining that this would be the result. Surely there was no

deception there on our part. We are beginning to do slowly what we had endeavoured to do rapidly on three historic occasions and failed. —in 1878 and in 1891, unrestricted reciprocity, and in 1911 reciprocity in natural products. We endeavoured to go rapidly, but we were told we were going too quickly and we were defeated in each instance. Now we have been reaching out to the same objective by easy stages—so easy the first two years that our action did not meet with very much approval. We have this year balanced our budget, so that we are at liberty to go faster, and we are going faster. We could not go rapidly the first two years, because we would lose too much revenue, but having now balanced our budget, the logical thing to do this year is to speed up. And we have speeded up, there is no trickery about that. It is not a case of selling out to the Progressives, because our platforms are identical. It is obvious that if we take any step to carry out our platform we take a step also toward the carrying out of theirs. Do you suggest that they should run away in the opposite direction and say "We will not take it from you"? Oh, all this talk about selling out and buying out and messes of pottage—it is all nonsense. Whether or not we should be in two camps is another question, but our platforms are the same and the government cannot carry out its platform without carrying out theirs. The natural thing happened, therefore; they looked upon our budget with favour.

"If you have tears, prepare to shed them now"—because this is the gem of the lot. He says:

Sir, the policy of free trade—

Who is talking about free trade? Look at what the Massey-Harris people said about what is left being the necessary amount of protection. It is down to the minimum of protection; he does not say it is free trade. Our hon. friends coin these phrases for effect. They think that some terrible spectre can be discovered in free trade. What is free trade but natural trade? However we are not discussing free trade; it is not in the budget. But, for the purposes of—shall I charitably say?—argument, the hon. member for Fort William and Rainy River (Mr. Manion) uses the term, and he goes on:

—if the people endorse the present changes in the tariff—would finally lead to the economic domination of Canada by the United States. It would then lead to Canada becoming a commercial appendix—

Oh, how familiar that term is.

—a commercial adjunct—

[Mr. Motherwell.]

More familiar terms; more resurrected campaign dope of 1911.

—a commercial adjunct, as someone has said, of the United States.

One would hardly think these expressions would have been resurrected, but what else have my hon. friends left to say or do? Some people say that every ten years you have a new batch of people that you can flim-flam, and no doubt there will be a lot of new electors in the next election and apparently my hon. friends are going to take a chance on working these things on the uninitiated, telling them that they are going to be gobbled up by the United States if we deal with the people to the south any more freely than we are now doing The tariff wall, we will say, is four rails high; if you pull down one rail, ruination will follow; if you leave it where it is everything will be O.K. Did you ever hear such nonsense? If you pull any of it down, they say, we will be gobbled up by Uncle Sam, I am sure that in his quiet moments—and I know my hon. friend must have them like all the rest of us—he will be heartily ashamed of these remarks; anyway I am going to try to make him ashamed of them.

Mr. SUTHERLAND: Will my hon. friend permit a question?

Mr. MOTHERWELL: Yes, that kind of thing works fine; it is very clever. In fact it was the only thing that could have defeated reciprocity, and now they are hoping to turn the trick again with the annexation cry.

Mr. SUTHERLAND: Will my hon. friend permit a question?

Mr. MOTHERWELL: Yes.

Mr. SUTHERLAND: Was there any minimum tariff referred to in the platform of the Liberal party? Was not the

4. p.m. policy advocated of the abolition of the whole tariff on agricultural implements?

Mr. MOTHERWELL: When was that?

Mr. SUTHERLAND: In the 1919 platform of the Liberal party.

Mr. MOTHERWELL: Well, of course, but are we not getting there by stages? If you leave us here fifteen years, as the Liberal government was left on the previous occasion, we shall have obtained our object—yes, and before that. Oh, do not be in a hurry, there are more years to come.

Just to show you that the hon. member for Fort William and Rainy River is not alone

in this campaign, I may point out, Mr. Speaker—and you yourself were in the government of Sir Wilfrid Laurier at the time—that when the campaign of 1911 was launched, the Montreal Star, the originator of the "whisper of death," got out a great big front page article with Sir Wilfrid's photograph in the middle of it, imploring him to save Canada from the Americans. And now no less a paper than Saturday Night, a highly respectable publication printed in Toronto, says:

> The truth of the matter is that the King administration is actuated by motives difficult to fathom but clear enough in the application.

Here is what this article says about the Prime Minister:

> For two years the Prime Minister has been advertising his endeavours to shake off the "British yoke" in constitutional relations; and he is now inviting the "United States" yoke in our industrial relations.

Well, now, what do you know about that? So there is method in their madness. We might as well be forewarned, because forewarned is forearmed. I am endeavouring to tell the people of Canada to watch these gentry; they do not want any fight on the tariff. As the hon. member for Battleford (Mr. McConica) said the other day in his western style, "If we go to the country on the tariff we will trim you to a feather edge," or words to that effect.

Now, I will not be cruel to the extent of quoting any more of that speech. It is a very readable document; it was very fluently delivered, but it exceeds the limit in nonsense. On the other hand, if I were in my hon. friends shoes, what else could I do? There is nothing left. The longer you examine this budget the more you will find that it is impregnable. Why? Because it lowers the taxes of the people where they want them lowered, with due regard to the revenues of the country; in other words, it is a revenue budget. The reduction has been constant and consistent; there has been no trickery. We have not made our objective, and I do not know whether the people of Canada will leave us, if you like, in power long enough to make it. We hope they will; it is up to them. If what we are doing is acceptable to them, the logical thing is that we shall go along the lines of a revenue tariff. We cannot get away from the revenue idea. Nobody in this country has been preaching absolute free trade, therefore that question is not in issue to-day.

Now let me come to the general attitude of my hon. friends opposite. What do they want, after all? They belong to a school which have always built strongly on the idea of manufacturing, on the idea of industry,—good in itself, but surely not the primary thing in this country. You will never hear them talk about farming except to suggest to our Progressive friends and all western men that they throw away their can openers and grow something else besides wheat. That is all they do, and the less they know about farming the more they urge us to go on to some other system of farming. They talk everlastingly about industry. Well, what must their feelings have been when they got that slam from the Massey-Harris Company the other morning? I noticed nothing about it in the Morning Journal, however, or in any other Conservative paper, though I presume it went over the wires of the Associated Press.

Mr. RYCKMAN: Yes, it was in the Ottawa Journal yesterday.

Sir HENRY DRAYTON: The hon. gentleman is not sufficiently informed on the subject.

An hon. MEMBER: He does not want to be informed on that.

Mr. MOTHERWELL: I knew you would not like it at all. Do we Liberals entirely disregard the industries? Not at all, but our primary thought is the development of our natural resources, the first of which is, admittedly, agriculture; then, if you like, lumbering, then mining, then fishing. Which is the correct thing, to forget all about agriculture and think only of building up industry, which after all must be a secondary institution? Why, the early settlers all around Bytown here, one hundred or one hundred and twenty-five years ago, had no manufacturing institutions to support or to get their implements from. They hoed the ground with crude hoes and got their crops in without agricultural implements. I had the pleasure, Mr. Speaker, of seeing a collection of agricultural implements at Budapest some ten or twelve years ago which illustrated the development in implements of agriculture in the course of hundreds of years. Some of these instruments were very primitive indeed, and yet the people who used them managed to grow crops with their aid. I do not want to go back to those primitive aids to agriculture, neither do I want to be made insolvent by buying high-class machinery although high-priced machinery may be necessary in employing the best methods of cultivation to-day. But there is a happy medium between these two extremes. We believe the primary industries must be given primary consideration; after we have developed them all we can, let us see to the advantage of the manu-

factures that are indigenous to the country and get along with reasonable assistance in their early days. By all means develop them, but do not develop them by crucifying the primary industries—that would be a mistake. Some countries must export raw material. How is it that Great Britain became the greatest manufacturing country in the world? Through the medium of her mercantile marine, through her access to the raw materials of the world, through cheap labour, and through a low tariff or no tariff at all. If she has to buy the raw materials that she needs some other nation must sell them, and we in this country are producers, essentially producers, of raw materials. Do not misunderstand me. Do not gather the impression that I say that we should not manufacture any of these raw materials. We should manufacture all of the raw materials possible when we can do so profitably without injury to the rest of the people; but to compel a lot of us to be made the goat in order that other people should profit is a mistaken policy and one that cannot last. We have stood it all these years because in the past there has been enough to go around; but when there is a great war debt to be paid then the burden must be equalized, it must be properly distributed. One of the most hopeful signs of the times to-day is the manner in which the Massey-Harris Company is accepting this budget. They say "All right. If you are going to give us raw materials we will do our best but we rely upon the good will of the Canadian people to patronize Canadian manufactures." And that is right. The manufacturers will get popular support far more quickly in that way than they will by compulsion under a high tariff, because you never can compel people in the long run to assume an obligation if they can evade the obligation at all. Let me say that this is not a western budget alone; it is accepted just as freely in the Maritime provinces, in nearly all Quebec, in a great deal of rural Ontario and some parts of urban Ontario, as it is in the West. It is a budget for the whole of the people, and I am particularly glad that the manufacturers are showing a disposition to accept the situation and try it out. Then later on, if they cannot operate under a budget like this, let us inquire into the situation and see if anything is due to them —not from their former victims but from the state itself. I take this ground: if we have to have industries, and if they cannot support themselves, although that has not been shown yet, then we will accept them at their own classification—that is that they put themselves in the class of industrial pensioners. I am not doing that, the Massey-Harris firm has not done that; but I take the ground that if our industries are not self-supporting, if they cannot operate, if they cannot navigate the commercial waters of Canada under their own steam as it were, then we should devise some other way than that of authorizing them to levy on their customers as they have been doing the last fifty years. If such a proceeding is necessary in Canada's interests, if these manufacturers admit now that they are not self-sustaining and cannot operate without protection, then they become industrial pensioners and should be supported by the state like any other pensioners, and not by their customers upon whom they have been living all these years. When the returned soldiers came back to Canada we were glad to contribute towards a pension for them. But that pension was not levied on any one particular class. When a civil servant is superannuated by parliament the money for his superannuation comes out of the general treasury. Now, if we are going to have industrial pensioners—and I do not believe we are; but if that is the position the industries are in as claimed by our opponents, if they are not self-supporting—then I say that these industrial pensioners should be supported by the state, out of the public treasury, and not by the customers as the practice has been.

Examining into this whole system I doubt very much whether the system of giving the power to levy taxation—and this power has practically been delegated to companies and to manufacturers—is sound at all. I take the ground that the power to impose taxation belongs to the state and the state only. When I say the state I mean either the Dominion, the provincial, or the municipal governments. When we introduce a protective tariff it is a tax which is double-barrelled in its character. One feature consists of a straight tax levied by the state through the medium of the customs. That is one barrel. The other is the excess price that the manufacturers are permitted to charge by reason of the protection which that tariff affords. Virtually these manufacturers adopt a system of taxation whereby they are permitted by law to levy a higher price on their customers. After a person has submitted to such a system all his life that fact is as plain as the nose on a man's face—and that sometimes is fairly conspicuous. I contend, Mr. Speaker, that the right to tax is a function that should be reserved for the

state and for the state alone; and if the manufacturers are to be helped the state should do it and not the individual.

Now, I do not wish to be harsh. I have never taken the ground in this House that a new industry should not be supported, I have always taken the very opposite ground. I have always held that if an industry was worthy of the name, if it was indigenous to the country with some reasonable likelihood of succeeding, it might be justifiable to lend it some aid in its infantile days, some sort of help that would recede with time, get less and gradually disappear. But I am not satisfied that these industries should be infants for all time. That is the difference between myself and hon. gentlemen opposite. In nature young life requires nursing; I do not care whether it is a human being, a denizen of the jungle or a domestic bird on a farm, infancy always requires to be taken care of; and at this particular time when new industries are established I believe they will require to be taken care of in some way. But what has been the result of the system we have followed in the past? The effect has been to establish a privileged class in Canada that you cannot shake free from protection. That system has grown to such an extent that industries though established for half a century want to continue under it in perpetuity. I see the friendly face of the hon. member for St. Lawrence-St. George (Mr. Marler), who spoke about the possibility of establishing a "cost of living tariff." I wonder what that means. A cost of living tariff in Montreal would be a sumptuous affair to the man on the prairie or on any of the farms of Canada. Personally I do not know what it means. However, I wish to make myself quite clear on that point—that while I am opposed to protecting institutions after they have got on their feet, I have never opposed at any time in my public career giving some form of reasonable receding assistance to young institutions. That is a vastly different thing to adopting protection as a principle in the case of industries of old age such as has been the system followed in Canada.

When this kind of talk is indulged in we are told by our Conservative friends, "Well, if you would do something else besides growing grain, you would not be putting all your eggs in the one basket, you would not be in the condition you are in now and would be able to get along nicely under the present tariff". I do not think the hon. member for Nanaimo (Mr. Dickie) realized just how his advice sounded when he was handing it to us. I took it to myself, although he directed it to the Progressives I come from the same part of the country as most of those hon. gentlemen, and his remarks indicated that he thought the people of the West should farm their property. Of course our farming methods can be improved, that is admitted; but my hon. friends across the way seem to think we do not do anything in the West except grow wheat. Although this is not directly connected with the budget, I would like to disillusionize the House on that question. We are rapidly becoming a general farming community out there; so much so that I am sure some of you who have not seen these figures will be inclined to doubt some of them. My hon. friend from West Calgary (Mr. Shaw) is interested in dairying, but if somebody had said offhand that if the farmers on the prairie produced more butter than the farmers in Ontario, that would be a wild-looking statement. And yet it is a fact. Why all this gratuitous advice to us? They say, "Leave the tariff where it is, and go and throw away your can-opener; get busy at something else rather than wheat growing." The figures I have before me come from the statistical department; I checked them up and I think they are right. Take first the product of butter. The figures are as follows:

Product	Province	Per capita
Butter	Alberta	37 pounds
"	Saskatchewan	30 "
"	Ontario	25 "

It is true that part of their dairying goes in other directions, but I am speaking only of butter. In the matter of poultry, the figures are as follows:

Product	Province	Per capita
Poultry	Saskatchewan	11 pounds
"	Alberta	10 "
"	Ontario	5 "

Mr. HARRIS: When the hon. minister is expounding his view on this matter, will he give the House the information per capita, rural and urban?

Mr. MOTHERWELL: We do not take our census that way.

Mr. HARRIS: Does he expect the city people to make butter?

Mr. MOTHERWELL: I will refer the hon. member to the department. I took the figures as I got them and these are the right figures. Oh yes, these figures spoil all their little song over there; they will have to get some other story, because these figures puncture their story.

Mr. HARRIS: Will the hon. minister give us the urban population?.

Mr. MOTHERWELL: There is a statistical branch to which the hon. member can go and get the information. We do not give these figures on any other basis; and furthermore when we give grants it is on a per capita basis, irrespective of urban or rural. The Agricultural Instruction Act was operated on a per capita basis, irrespective of rural or urban population, and I am giving these figures on the basis the census returns are given. I am glad to know that my hon. friend feels he is up a tree.

Speaking of eggs, I have heard my hon. friends talk about eggs all this session, and every time they talk about them they give a culprit-look in this direction, as if I were responsible for there not being more eggs in this country. In the province I come from there are more eggs produced per capita than in the province of Ontario. The figures are as follows:

Product	Province	Per capita
Eggs	Saskatchewan	46
"	Alberta	43
"	Ontario	24

Mr. SUTHERLAND: Does my hon. friend not realize that carloads of eggs have been imported into Ontario during the past three months as a result of the low tariff on butter and eggs?

Mr. MOTHERWELL: That makes it worse.

Mr. SUTHERLAND: And that they are sold cheaper than the Ontario farmer can produce them.

Mr. MOTHERWELL: That makes it worse. They should produce more here. That is why they are shy of eggs. "Produce more eggs" says the hon. member for South Oxford (Mr. Sutherland). Why not have less hog cholera? Then we come to hogs. In that commodity Alberta leads again. The figures are:

Product	Province	Per capita
Hogs	Alberta	1.11
"	Saskatchewan	0.84
"	Ontario	0.57

Again we find Ontario away down, about half as much as Alberta—.57 per capita. Why can our friends from Ontario not develop the hog industry instead of lagging behind? They are all slaughtered for the cholera in that province.

Mr. SUTHERLAND: Would the hon. minister like an answer to that question?

Mr. MOTHERWELL: Yes.

[Mr. Motherwell.]

Mr. SUTHERLAND: All you have to do is to refer to the quantity of American pork that is imported into Ontario to answer your question.

Mr. MOTHERWELL: That does not affect these statistics. These are live hogs. When I took the census return of 1921 it was a great surprise to me, although I knew the position with reference to butter and other articles. I knew that per capita we had more production of butter than any other province. Saskatchewan has the greatest amount of poultry next to Ontario—not merely per capita, but taken as a province. The pork industry has developed there to a remarkable extent, has flooded our eastern market, and to a large extent supplied the New York market last year. So that we are headed right in the direction that our hon. friends are pointing, and they will have to present some other argument than the one they have presented to switch us off the tariff, because it will not work.

Coming to dairy cows; Ontario should excel in this product. I am not speaking of this disparagingly because I know there is a large urban population; but man for man and woman for woman and child for child, we produce more out West than is produced in the eastern provinces. I did not take the figures for the province of Quebec, because I did not want to give the department too much work, and I had to do it in a hurry. I did not take Manitoba, but I believe they would show up much better.

Mr. FORKE: Sure.

Mr. MOTHERWELL: But I took the two provinces that were looked upon as the greater culprits. Referring to the product of dairy cows, the figures are as follows:

Product	Province	Per capita
Dairy Cows	Alberta	0.65
"	Saskatchewan	0.50
"	Ontario	0.42

The figures for the production of beef cattle are as follows:

Product	Province	Per capita
Beef Cattle	Alberta	1.75
"	Saskatchewan	1.39
"	Ontario	0.52

I am going to give these figures to Hansard, so as to have them placed correctly on the record, and if anybody desires to check them up with the statistical department he can do so. I checked these statistics twice, so that there would be no doubt about their accuracy.

Then we come to manufactured goods. It has been suggested, "If you cannot make this form of production pay, why do you not develop industrial life out there and go into manufacturing?" Well, we are doing so now. There again we are taking their advice. We are also working along the lines of the middle western states of the United States. I do not know that in our time we shall ever be a great manufacturing country, but nevertheless the manufactures that are being developed there are wonderful. I have a list of them before me, and I may as well explain, in reading this statement, that the Statistical department has classified the milling industry as a manufacturing industry—and strictly speaking, I think that is right—and the packing industry as a manufacturing industry. I merely make that explanation. The milling industry is a manufacturing industry; we manufacture wheat into flour. If we have regard to that, in round figures Alberta manufactures on a per capita basis, $113 worth per capita; Manitoba manufactures $202 worth per capita. Saskatchewan is away down, as we might expect, because it has not devoted so much attention to manufacturing. In Saskatchewan there are no large urban centres and such like. Saskatchewan manufactures only $66 worth per capita; Ontario manufactures $481 worth per capita, and Quebec, $332 worth per capita. It will be noticed that the figures as regards Manitoba are less than one-half of those of Ontario, but they constitute a great deal more than one-third of the manufactured products when you count flour and abattoir. Surely then we are not doing so badly.

Mr. LADNER: Has the minister the figures for British Columbia?

Mr. MOTHERWELL: I am sorry I did not get those, because it was from British Columbia that we were receiving this kind of advice. I was not so much concerned with British Columbia; that province was not looked upon so much as an agricultural country as some of the other provinces, and I did not ask for the figures for that province. Alberta and Saskatchewan were alleged to be the chief sinners, and as the advice came largely from Ontario, I wanted to make the comparison between the ones that were alleged to be committing this grievous offence of not doing anything but growing wheat, and the ones that were giving the advice. The figures for British Columbia will be interesting, because that province has developed wonderfully along the lines of poultry raising as well as fruit growing during recent years. Those are the figures, and that is the answer which I would give to those who are trying to becloud the tariff issue by telling us to go into mixed farming. I am not deprecating mixed farming, but I am glad to be able to produce this evidence that the people of the West as well as the people of the East are taking this advice without waiting for it to come from the sources to which I have referred. They are using it, not because they think these hon. gentlemen know anything about agriculture. They do not; they simply put it out as the only line of thought they have in order to try to divert our attention from the tariff.

Long before this budget came down, in fact, last January, I had the opportunity of giving an address in Montreal before the Rotary Club, who were good enough to invite me there, and that club being non-political, I could not mention the word "tariff." I have not a copy of my speech as it appeared in the Montreal Gazette, but I can give the substance of it. The subject of my address was that we should develop the practice of using more of "made in Canada" goods. That was before the House met and in the city of Montreal where this policy would meet with favour, although we might differ as to the best methods of attaining that end. I pointed out that some people believed that the way of attaining that end, that is, the end of having more "made in Canada" goods used, was to shut out other goods—I did not use the word "tariff;" I used the word "restriction" —by excluding goods by restrictive measures. I said that that will not work; that it never has worked. As a matter of fact, while there has been no systematic determination in the West not to use eastern goods, ever since reciprocity was defeated and we were denied the benefits of that market, western men have found it more and more difficult to prevail upon themselves to use eastern goods. That is human nature. That attitude, however, is wearing away. Time heals up those things, and now I have dared to preach in Montreal —I do not know whether they agreed with me or not; they did not look black at me—that trade restrictions will never develop a spirit of using "made in Canada" goods. I will venture to guess—and the same idea was promulgated by the hon. member for Brandon, the leader of the Progressive party (Mr. Forke)—that if they could see their way to take the stand of the Massey-Harris people, they would double and treble their sales to the Canadian farmers in the next four or five years. Is that not a better policy to pursue than that of sticking us to the full extent of

the tariff and then selling cheap implements abroad? Those practices cannot prevail any longer; the people will not stand for them. We have no enmity towards the manufacturers, and this is purely a political question. They tried to make out that we are the enemies of industry and that we think in no other terms than those of agriculture; but the industries themselves have demonstrated right in the midst of this debate what they can do; they have come out in the public press saying: "I am going to accept this tariff, to try it out and to rely upon the fairness of the Canadian farmer to patronize home industry." This is a statement made in the public press yesterday by the Massey-Harris Company:

> The new rates, now effective, represent a minimum of protection, and it is believed that apart from goods which are permitted to be imported free of duty, the customs rates now carried by farm implements are lower than those applicable to any other class of imported goods.

It represents the minimum of protection. This is a manufacturer that admits that 6 per cent is protection, that 10 per cent is protection; that 7½ per cent, 12½ per cent is protection. Our hon. friends opposite take the ground that because this tariff is reduced to as near as one can conceive a revenue basis, it is free trade. That is free nonsense and humbug, for effect. The manufacturers do not designate it as that. They know that every one per cent that is imposed is that much protection although it is revenue producing. Its protective features are incidental; the outstanding feature is that it is revenue producing. Further on the Massey-Harris Company state:

> We shall endeavour to adjust ourselves to the new conditions and we will give to the Canadian farmer every possible advantage arising out of the changes made. We rely upon him to do everything within his power to stimulate Canadian industry by the purchase of Canadian-made-machines.
>
> The provisions of the budget which exempt farm implements from the sales tax are most welcome, and these, combined with the lowering of customs duties on raw materials announced in the government's amendments, now enable the manufacturer to make an immediate reduction in his prices.

That is the proper kind of spirit. That is a vastly different spirit from that with which the manufacturers met reciprocity. If they are willing to forget it, I am willing to forget it. We cannot develop Canada to the utmost by harking back to our difficulties and differences. Let us forget them. This company is a manufacturing concern of outstanding merit. Its implements, notwithstanding reciprocity, I have bought for forty years, and I intend to continue to buy them; but I, as well as thousands of others, would buy them more freely so long as we are ready to pull on an even and double whipple-tree along with the other industries of Canada.

[Mr. Motherwell.]

Mr. JAMES ARTHURS (Parry Sound): Mr. Speaker, I have no desire to follow the Minister of Agriculture (Mr. Motherwell) in his wandering remarks; but, after all, he said very little about the question before the House, his speech being more amusing than instructive. There is one day that is interesting to every member of this House and, I believe, to every man in Canada. That is the day upon which the budget is announced. The reason is that we are all Canadians and all taxpayers, and it is interesting to us to know exactly how there is going to be extracted from our pockets the money that is necessary to carry on the affairs of the country for the following year.

We have had a succession of tariffs, and while I do not intend to go at any great length into the history of the subject I desire to refer to one or two facts. In the year 1879 the government brought down what was known then, and is still known, as the National Policy. This was a policy of moderate protection for all our industries; a policy of protection for our labouring men and for our farmers as well. This policy was in force, with very minor changes, throughout the existence of that government until it was defeated in 1896, that defeat being due to causes that had nothing to do with the tariff. The succeeding government, that of Sir Wilfrid Laurier, which assumed office in 1896, carried on exactly the same policy as had their predecessors. It is quite true, as the Minister of Agriculture has told us this afternoon, that there were minor changes; but during the fifteen years of office of that Liberal government they reduced the duty only by one per cent. So that if we should leave this government in until we get free trade, I am afraid they would be in office for life. I said that throughout their life the Liberal government that succeeded to office in 1896 pursued the policy of their predecessors, but I was overlooking the fact that in 1911 they brought in what was known as the reciprocity pact upon which, on their appeal to the electors, they were beaten by a large majority. And succeeding governments have retained the old policy in the main, although it is to be remarked that during the years following 1911 the duties on these agricultural implements and similar articles have been

brought down to a much lower rate than was contemplated in the Reciprocity treaty itself.

In 1921 the government of the day in common with other governments in the Dominion, went down to defeat, and control was handed over to the present Prime Minister (Mr. Mackenzie King) who, both personally and through his followers, had declared as many trade policies as there were electoral divisions in the country. The people of Canada were therefore more than usually interested in the budget of 1922. That budget made small reductions, mostly on farm implements; but practically no diminution in price was effected on these articles, because the budget increased the sales tax by 50 per cent, or from 2½ per cent to 3 per cent to 4½ per cent. This had the result desired by the government; it gained for them the support of the majority of hon. gentlemen of the Progressive party. But it did nothing to reduce the cost of implements; or it has been shown in this House many times during the present debate that while the duty on agricultural implements was reduced approximately 2½ per cent the price went up 10 per cent notwithstanding. One marked consequence of this change, however, was the increase in the importations of implements, and this in spite of the fact that there was no reduction in the price. We imported from the United States approximately $3,500,000 more annually in these implements after that change than we did before, thus driving work from our factories and creating unemployment in places where none had existed previously. As a matter of fact there was nothing in the tariff of 1922 that tended to alleviate unemployment in Canada or that could induce capital to invest in any part of the Dominion.

The budget of 1923, as the Minister of Agriculture has also indicated, made less change than any budget I have ever heard presented. It made some very small change in the British preference, but it increased the sales tax from 4½ per cent to 6 per cent. The government, however, had another bribe for our western friends, and during the course of the session they brought about a partial return of the Crowsnest pass rates; they gave the western people a reduction of 30 per cent in the cost of the carriage of wheat, and this was done, Mr. Speaker, at the expense of the whole of Canada. The railway companies had gone before the committee on various occasions and they offered to reduce by 20 per cent the rates on all basic commodities; but when they were forced to give the Crowsnest pass rates on grain, that reduction of 20 per cent was brought down to 7½ per cent. And the other provinces of the Dominion have had to meet the extra deficit which last year, it is said, amounted to $14,000,000. The fact that no change was made, notwithstanding the chart which the government had before them, elicited from the leader of the Progressive party (Mr. Forke) last year an amendment which he was fortunate in having had put to the vote. That amendment read:

> That all the words after the word "that" be struck out, and the following be substituted therefor:
>
> Whereas the tariff policy of the government, as indicated by the Minister of Finance in his budget speech, and particularly his pronouncement in favour of tariff stability at existing rates, and the consequent intimation that the government contemplates no further appreciable tariff reduction, constitutes a repudiation of the tariff planks in the Liberal platform of 1919 and is inconsistent with the Finance Minister's statement last session that the changes then made were a step in the right direction.

It is unnecessary for me to read the whole of the amendment, but it condemned the government because of their failure to make any changes. Reverting for a moment to the subject of the Crowsnest pass, and the benefit that would have accrued to the whole of the Dominion had we received the 20 per cent reduction on basic commodities. We all know that such basic commodities as hay, grain, lumber, brick, cement, pulpwood, coal, the products of the mines, and most of these things, are sold on a delivered price, and the result of the action of the government in this matter has been that the burden has fallen entirely on the producer. As a matter of fact, the freight rates are to-day the greatest problem that confronts either producer or consumer in Canada. We have long debates in this House on the customs tariff, but we fail to consider that the customs collections amount to only $132,000,000 per annum whereas the freight paid to various railways amounts to nearly $500,000,000; in other words, while we pay an average duty of $15 per head, or $75 per family of 5, we pay at the same time some $50 per head to the railways, or $250 per family, per annum. Every dollar of this freight is a direct tax on the working people of the country, and it will be seen how much more important a reduction in railway freights is than any other financial question, even to the Progressives, who in common with other people have to pay both going and coming. Some may answer that the railways must keep up rates or incur larger deficits. But that is not necessarily true. Lower rates would mean a vastly increased volume of business and general revival of trade. Even if the government had to make good a larger deficit, it would be a splendid investment because it would increase

the volume of production and provide employment for thousands who to-day are idle, many having been forced to go elsewhere to find work.

I was very much interested in an address by the hon. member for Bow River (Mr. Garland) who took this matter up in the House on March 31. He pointed out how inconsistent some of these rates were, particularly in regard to coal. After considerable negotiation last year the Canadian National Railway management offered on coal in train lots during certain months a rate of $9 per ton from Drumheller to Toronto, or $450 per carload. My friend from Bow River (Mr. Garland) pointed out that the railroad would carry from Vancouver to any point in Quebec a carload of Epsom salts for $350, whereas they wanted $450 to carry a carload of coal one thousand miles less. On looking into the matter I find that the hon. member is correct. A number of other articles may be instanced on which the rate is lower than that offered on coal. Chinaware, one of the most fragile of commodities, is given a rate from Vancouver to Montreal or any other ocean port of $360 per carload, as against this $450 rate from Alberta to Toronto, a shorter haul by one thousand miles. I have already pointed out that this rate offered on coal was for train lots and at a time when the railroad had very little business; in other words, this traffic would keep their freight cars in use and their men on the job. In this connection I might point out that our importation of coal last year from the United States amounted to 4,840,713 tons of anthracite and 15,072,285 tons of soft or bituminous coal, representing a cost to Canada of over $90,000,000. I think, Sir this is one of the most important questions we have to deal with. We must see if there is not some way by which we can stop this leak of $90,000,000, in addition to the payment of heavy railway rates, and so keep the money in Canada for Canadian workmen.

An hon. MEMBER: Particularly the miners of Nova Scotia.

Mr. ARTHURS: Yes, particularly the miners of Nova Scotia. This brings me to another question, Mr. Speaker, which I think is also more important at the present time than the tariff—the question of emigration and immigration. According to Canadian government reports we have received during the past fiscal year 133,000 immigrants; and according to equally reliable reports of the United States government we have sent to that country alone 183,000 emigrants who paid the head tax as settlers. We must remember that almost as many men enter the United States who do not pay the head tax—young men who go over as visitors and do not come back. If the Americans are ready to admit that last year we gave them over 183,000 men, it is a most distressing state of affairs. It has been calculated that the average workingman earns and spends $1,000 each year. If that be true, then Canada last year lost $183,000,000—not only for that year but for all future years while these men stay away. I can remember when it was a common practice in Ontario and other provinces to bonus factories. small towns were always willing to give a considerable bonus to induce a factory to locate with them which would have a pay roll say, of $100,000 a year. Yet our exodus to the United States alone last year would represent the pay roll of two thousand such factories if we could keep those men at home.

Some one has said during the course of this debate that we are losing to the United States immigrants whom we brought in at considerable expense. I think the government have been taking a certain amount of comfort out of the thought that they were not losing true Canadians, they were just losing immigrants brought over from the various continental countries. But I have in my hand a return of the United States immigration authorities for the fiscal year which ended in June last, showing that during that year there were officially entered to the United States, 117,011 immigrants from Canada, and they were classified. We must remember that we have no classification as Canadians in our census returns, consequently a Canadian is classed according to the racial origin of his father. Those immigrants were classified as follows by the United States authorities:

English	39,295
French-Canadian	30,438
Scotch	17,045
Irish	12,000
Welsh	656

Or out of a total of 117,011 who proceeded officially from Canada to the United States during the fiscal year over 99,500 were absolutely Canadians who had been brought up in this country for years.

Mr. MACKENZIE KING: My hon. friend, I presume, knows that the figures he is quoting from the returns of the United States immigration bureau are not regarded even by the United States government as

in any way corresponding to the true situation; that the census of the United States, for example, is entirely different from the showing made by the immigration statistics?

Mr. ARTHURS: My right hon. friend is perhaps correct in the main, but he is wrong regarding these particular statistics, because they refer to men who paid the head tax, and consequently must be correct. The men were officially entered as settlers.

Mr. BUREAU: All people entering the United States who pay the head tax do not remain there.

Sir HENRY DRAYTON: They just go there to throw away their money.

Mr. BUREAU: The head tax is refunded when they return to Canada.

Mr. ARTHURS: Thousands of young men go over who do not pay the head tax, and do not return either. One evidence that we are losing ground so far as immigration is concerned is the returns of settlers' effects inwards and outwards. The value of such effects imported for the fiscal year ending February 1922 was $8,144,000; in 1923 the value had fallen to $6,291,000; in 1924, again to the end of February, there was a further drop to $5,914,000. In other words, we were importing 25 per cent less settlers' effects than we were two years ago. On the contrary, the settlers' effects outwards show a steady increase. In 1922 to the end of February their value was $6,000,000; in 1923, $7,977,000; in 1924, to the end of February again, $10,712,000. Or an increase of 60 per cent. This is one reason why our exports are increasing.

Mr BRISTOL: Those are the figures relating to settlers' effects going to the United States?

Mr. ARTHURS: Yes. I might remark in passing that the man who takes with him to the United States a quantity of settlers' effects is not a foreigner, he is a man who has had a home here and is taking his household goods with him; he is going there to stay. A pertinent question, I think, is: What is the government doing to remedy this state of affairs, or are they doing anything?

Mr. MACKENZIE KING: Yes, lowering the duties on agricultural implements.

Mr. ARTHURS: That is the secret of the whole thing. They are spending millions of money to bring immigrants from central Europe in an endeavour to replace Canadians who are going to the United States. As a matter of fact they are spending almost half a million dollars a year in the United States on officials whom they keep there to induce Canadians to return home. I do not think folly could reach much greater heights. We are sending to the United States hundreds of thousands of the best of our people—the worst advertisement we can have over there. What I would like to learn from the Minister of Agriculture (Mr. Motherwell) is: Will this budget bring back any of these men? Will it makes any wheel turn that is not turning now? No; it will have the opposite effect. But if hon. gentlemen would put a tariff on, something that would give extra business to our railroads and increase employment in our factories, they would soon find these men coming back to Canada.

The present budget differs from any ever presented in Canada. It was prefaced by an intimation in the Speech from the Throne that certain duties would be lowered. Tne government sat back and listened to some of their own supporters who opposed the lowering of duties and who did not believe that the Speech meant what it said. After the debate had ended, the government apparently decided that while they might lose two or three supporters from Ontario or Quebec it would be better to pay the price in order to secure the vote of the party to my left, and they acted accordingly. There is no record in the Canadian or any other parliament where such a deliberate purchase of an opposition party has occurred. As I have previously said, the motion of the leader of the Progressive party last year describes almost word for word the action of the government this year. I think it was the Prime Minister the other day who stated to the House that the Minister of Finance (Mr. Fielding) was in perfect accord with the budget brought down by the Acting Minister of Finance.

Mr. MACKENZIE KING: Yes, and I would like to say that since I made that statement I have had a conversation with the Minister of Finance, who desired me to repeat it the next time the subject was mentioned in the House.

Mr. ARTHURS: There has been a rumour around the country that the mental condition of the right hon. gentleman is not of the best.

Mr. MACKENZIE KING: My hon. friend is quite wrong. I hope he will have the courtesy to take back a statement of that kind.

Mr. ARTHURS: I had no intention of saying it seriously.

Mr. MACKENZIE KING: I would ask him to take it back.

Mr. ARTHURS: I simply say there was a rumour of the kind, which would be justified if the hon. gentleman—

Mr. MACDONALD (Pictou): I rise to a point of order. I do not think the hon. gentleman has any right to make a statement of that kind, based upon what he says is a mere rumour. As a colleague of the Minister of Finance and a personal friend, I desire to say that that statement is absolutely untrue; there is not the slightest warrant in fact for it. Furthermore, he (Mr. Fielding) intimated to me, as he did to the Prime Minister, that the budget brought down by the Acting Minister of Finance had his entire approval.

Mr. ARTHURS: I have no desire to cast any reflection on the Minister of Finance.

Mr. MARTELL: Make it on your own responsibility.

Mr. ARTHURS: I am not making any charge at all.

Mr. MARTELL: Then do not repeat rumours.

Mr. ARTHURS: I do wish, however, to place on Hansard the remarks of the Minister of Finance made last year when he was introducing the budget. I quote from pages 2648 and 2649 of Hansard, 1923:

> Any minister, any government, any parliament must be free to deal with these cases as they arise. But the conditions to which I refer are exceptional. Speaking broadly, it is possible to give the country a reasonable assurance of stability of tariff. Such assurances are very desirable, for no business man would care to enter upon enterprises which may be brought into peril by frequent tariff changes.

Yet we find the Minister of Agriculture to-day openly stating that he is going to keep biting away until he gets the whole structure destroyed.

> The tariff as it will be when the changes proposed to-day go into effect—

I am quoting now from the Minister of Finance.

> —will be a moderate tariff and probably as low as any country can afford to have under the present conditions. It will not meet the desires of those who would rigidly apply the principles of free trade. It will not meet the wish of the advocates of high protection. After all life is largely made up of compromises. In the realm of political affairs orderly government can be possible only where a spirit of compromise exists. Subject to the exceptional conditions such as I have mentioned, I think the country should be content to accept the tariff as it will now stand as one as fair and reasonable as can be prepared under all the circumstances, and business men should be able to carry on the various enterprises without the fear of being soon disturbed by further changes

"Without the fear of being soon disturbed by further changes."

> Stability of tariff cannot be expected while tariff rates are high. But where the rates are, for the most part, as in our tariff moderate, a reasonable measure of tariff stability should be assured.

Those are the remarks of the Minister of Finance made last year in the course of his budget speech.

The government are claiming great credit for having reduced the sales tax. We must all remember that they are the parties who were responsible for the sales tax; it is only a few months since it went into force at the rate of 6 per cent as proposed by these hon. gentlemen themselves. They have increased the number of items which are not subject to the sales tax, but I notice that they have missed many very important items which should have just as much consideration as those which have been exempted. For instance, take the case of lumber. Every farmer, every householder, almost every man in Canada, uses lumber; it is an essential to the farmer and the householder, yet we find that the taxes upon it are retained. And to make matters worse, throughout Canada we have hundreds of small saw mills, little planing mills, little factories of one kind or another, the product of which until the present year had been exempt from taxation, and while the rate has been lowered from 6 to 5 per cent, the output of these small mills is now subject to taxation.

5 p.m.

I have no desire, Mr. Speaker, to prolong this debate, I am satisfied that the people are well acquainted with the lack of sincerity on the part of the government. The fact is that the government are prepared to sacrifice any one, any industry, any political tradition, for the purpose of retaining power.

Mr. MARTELL: May I ask my hon. friend a question? Where does he get his evidence that the people are aware of a lack of sincerity on the part of the government? Is it not only a statement made by my hon. friend himself to bolster up his case.

Mr. ARTHURS: My hon. friend will have a chance to talk.

Mr. MARTELL: I will talk at the right time.

Mr. ARTHURS: The whole budget this year has been prepared for the purpose of purchasing the support of our western friends, and has, I believe, succeeded in that object. But the rest of Canada, the vast majority, must know that they pay for all this. The friends of the present tariff proposals claim that the reductions will benefit the farmers of the West to the extent of $10 each per year. If that be true, it surely will not make them rich. Tariff reductions do not usually mean lower prices; in fact, if competition in business is lessened by the lowering of duties, prices go up, not down. If factories are closed for any reason the farmer loses a market accordingly and is forced to export to other countries, generally protected against him. The greatest need of the farmer to-day is a market near home where his profit will not be taken away by transportation charges. I have heard it stated by a man who has made a study of these matters that the difference between the freight rate in 1914 and that in 1924 from the middle West provinces to Liverpool on one carload of wheat would pay the duty upon all the agricultural implements used on a farm over a period of ten years.

It has been often said by hon. members to my left that the farmer pays it all, but has to compete without protection in the world's market. Both these statements are misleading and untrue. It is quite true that the farmer pays his share of the customs duties in proportion to the amount of goods used by him, but so does the mechanic and the labourer—in fact every citizen of Canada. In most cases the amount of duty paid is in proportion to the purchasing power of the buyer which is one of the good points of a customs tariff. The only exceptions to that rule are articles which are taxed for revenue purposes only. Hon. gentlemen to my left, and hon. gentlemen opposite, are fond of asserting that they believe in a tariff for revenue only, but the most oppressive tariff on the poor man and the settler is the tariff for revenue only. I notice that for many years there has been a tendency on the part of various ministers of finance to commend a tariff for revenue on the ground that it is more quickly and readily computed and easier to collect. For instance it is only a few years since we first had a duty upon sugar. But since then we have had duties imposed upon tea, coffee, and other articles that constitute a direct tax upon the people.

I want to point out in answer to some remarks made by the Minister of Agriculture that the farmers of Canada at the present time are enjoying a very considerable measure of protection. I have here some returns brought down by the government which show the amount of duty collected upon various articles imported. For instance there is a duty of approximately 19 or 20 per cent upon frozen mutton and lamb, and the importations for the year 1922, the latest period I have, amounted to $520,669, in value, whilst the amount of duty collected was $94,024. I also have the imports of pork for the same year. The value amounted to $4,420,440 and the duty paid was $854,114, a rate of 20 per cent. On imports of barrelled and pickled pork the rate of duty was about 21 per cent, and the duty collected $162,901. Even on eggs we find there is a duty of approximately 10 per cent, and we imported last year from the United States upwards of 8,000,000 dozen. The average for many years past has been in that vicinity. So that if we take these articles—and I am only selecting those which come into open competition with our Canadian producers—we find that our farmers do enjoy a considerable amount of protection. But I do not believe they enjoy enough, and I am willing to support any man who will give our farmers the benefit of exactly the same tariff that another country enforces against them. If the United States imposes a duty of 8 cents a dozen on eggs entering that country I believe we should impose a corresponding duty on American eggs sent to Canada. The same with butter and other commodities. If we do that we have a chance to bargain with our competitors, we have a chance of making better terms with them. In the meantime, through the medium of these duties we have a chance of helping our farmers out of the existing situation.

Now, Mr. Speaker, I do not intend to detain the House by speaking at much greater length. We have in this chamber substantially three parties at the present time. To my left we have the Progressive party whose principal object seems to be to get what they can for themselves regardless of anybody else. They say openly that they do not care what happens to any industry, that they do not believe in helping any industry which is not native to the country—that they do not want any exotics. May I point out to hon. gentlemen to my left that the largest silk producing country in the world is the United States of America, a country that does not grow any silk. The largest cotton producing country in the world, I believe, is Great Britain and yet no cotton is grown in the United Kingdom. The two countries named have built these industries up and they are just as valuable to them as any other form of industry could

be—and they give employment to the people. Our Progressive friends apparently believe that all they are here for is to make certain demands for free agricultural implements, and a few other things and go home happy.

Mr. MARTELL: Would the hon. gentleman give authority for his statement?

Mr. ARTHURS: If you read Hansard you cannot get away from that conclusion. Then there are hon. gentlemen opposite who are more or less of a mixture. They have one free trader among them, and they have several other hon. gentlemen who are absolutely in favour of free trade on everything except the article that is produced in their particular part of the country. I refer to the representatives from the coal mining districts. They comprise eight or ten men who are perfectly willing that every other industry should go to the wall provided they can only get an increased duty on coal.

Mr. MARTELL: Name them; do not confine yourself to making declarations.

Mr. ARTHURS: Then we have another class of men—

Mr. MARTELL: That is only an assertion on your part.

Mr. ARTHURS:—who are quite willing to sacrifice any industry except one. There are sixty-four gentlemen in that group.

Mr. MARTELL: That is only your assumption.

Mr. ARTHURS: They are all in the province of Quebec and they are quite willing that any industry should suffer except the boot and shoe industry. They do not want that industry to be touched at the present time.

Mr. GRAHAM: What is the matter with the boot and shoe industry?

Mr. ARTHURS: It is all right. As a matter of fact hon. gentlemen opposite have almost as many policies in the House as they had in the country. They are quite willing to grasp at anything that will be of advantage to them politically. On the other hand everybody knows where the official opposition stand. We advocate the same policy that we did in 1879, and we intend to adhere to it. When the people have another opportunity to express their opinion they will declare that they are in favour of a policy which will protect our industries and our workmen, a policy which will protect Canadian workers from competition with German labour at forty cents a day, and will at the same time protect and build up the farming industry in this country.

Mr. W. J. HAMMELL (Muskoka): The Acting Minister of Finance is entitled to the thanks and appreciation of this House for his able budget. The annual financial statement was presented to us in a clear and concise manner, and reflected the undoubted business ability of the minister in charge of our financial affairs. The seat to the right of the Prime Minister, vacant as it is at present, inspires me with a feeling of sorrow for our Minister of Finance. I only hope that the Right Hon. Mr. Fielding will make a rapid and complete recovery from his present illness, and that very soon we may enjoy his presence in this chamber.

I find myself in complete accord with the tariff policy of the government, and I am certain it is a step in the right direction. I hope that a thorough study of the tariff situation will continue, so that in another year we may have more numerous and more substantial reductions all along the line. I have sufficient faith in our Canadian manufacturers, and sufficient respect for their business abilities, to believe they are capable of competing with the producers of any nation, and that the great majority of them will receive with joy any efforts and policies directed toward alleviating the burdens of our people.

I do not intend to take up the time of the House with any dissertation on the merits of the respective measures proposed. I realize that both from this side of the House, and from members of the Progressive party, a very able and clear defence of this year's budget proposals has been made during the course of this debate and I feel sure further arguments are unnecessary. I regret, however, that there should be lack of complete accord in this regard. I would ask the hon. members who form the official opposition to consider that their policy of high tariff and complete protection from outside concurrence has been followed for more than half a century. During this long period our manufacturers do not seem to have progressed towards the goal of tariff independence which our past policy has attempted to find for them. Would it not be showing a truer spirit of Canadianism to unite in an effort to give a thorough test to this change of policy. Why can we not get together and endeavour to accomplish under this new policy the results which we have been endeavouring to bring about since the adoption of a tariff policy of protection and failed?

I would ask the attention of the House to the matter which I am about to discuss, and

in giving the House the assurance that I will not repeat what has already been said during this debate I add that I have reason to believe that I will find support for the policy I wish to advocate in every section of this chamber.

Mr. Speaker, great stress is continuously laid on the necessity of developing our natural resources and often we hear very able discussions on our agriculture, our mines, our forests and our fisheries. Has it ever occurred to you that one of our important natural resources, which is indeed a basic industry of this country, seldom receives attention? Yes, indeed, we too often forget our tourist industry and the scenic beauties of our country which form that great national asset from which we draw our invisible exports and which is a source of great revenue under present conditions where it is the subject of nearly total neglect and which could produce many times the revenue now derived if only we would give that part of our foreign and internal trade some attention. In taking up the time of this House in an endeavour to portray the immense undeveloped wealth with the great possibilities of this field, I believe that I am pointing a certain way to provide more employment, a greater home market for the farmers and to increase our revenues without depleting our resources.

Twenty-five or thirty years ago anyone who possessed sufficient temerity to include the natural beauty of his country in a tabulation of the national wealth would have been regarded as a sentimentalist and likely a subject of derision. It is true that John Ruskin, some fifty years ago, in his political economy had pointed out that exceptional beauty might be the highest value that land could possess. I doubt if hard-headed business men ever took this policy seriously until more recent years. It is true that political orators have long been accustomed to refer with a vague and impressive gesture to "our wealth of natural scenery." This was regarded as one of those high-sounding meaningless phrases which always express more or less than the truth. Yet to-day, Mr. Speaker, everywhere exceptional natural scenery is being recognized as one of the most valuable assets a nation can possess. Its conservation and delevopment is receiving ever-increasing attention in practically every civilized country in the world. The Great War forcibly brought to the fore this immense asset and even the unsightly devastation in the war zone has been and is still being exploited for its scenic value and in this case it would be difficult even to imagine that that desolated area is possessed of beauty. On the other hand, it is only natural perhaps that it should have taken so much time for the value of natural scenic beauty to be realized. Beauty after all is a very intangible thing, as compared with those other products of nature. You cannot touch our scenic beauties. When we trade in them we deliver our merchandise through the eyes of the purchasers. Such, however, is not the case with our farm products, our timber, our mineral products and the products of our fisheries. In these cases we deliver something very tangible; articles of commerce that can be measured or weighed, and upon which supply and demand generally recognizes a price of sale. The requirements for these articles do not have to be created, they are part and parcel of our everyday existence. In the case of beauty we can only deal on the demands for pleasure and recreation, on the desire of humans to explore new fields and discover new playgrounds. This trade, though perhaps intangible as compared to our lumbering industry, has become very real and I hope to convince hon. members that it is to our interest to hasten its development.

The importance of exceptional natural scenery from the economic point of view lies of course in the tourist traffic it is capable of attracting. The desire to travel, to see the beauties and wonders of other lands than our own is almost universal and with the improved methods of travel of the last half century, its gratification has been placed within the reach of people of even moderate means. Once a journey of some two hundred miles was a costly and tedious affair and it was even considered dangerous. To-day conditions have entirely changed and we are apt to look at a journey of that length more as an outing than travel. This, of course is specially true since the advent of the motor car; travel can now be enjoyed by almost everyone, and upon this form of recreation and education increasing millions are being spent from year to year.

It is admitted generally everywhere that previous to the Great War foreign tourist travel in Europe was worth annually to the countries visited well over a billion of dollars. In France alone this revenue was placed by economists at something between $500,000,000 to $600,000,000. For Switzerland the sum of $150,000,000 was claimed from this same source and in Italy $100,000,000. The Rhine, that great show river of Europe, was said to be worth about $100,000,000 annually to Germany as were also the numerous seaside resorts of

the Baltic and the North sea. It is claimed —and this is said to be a conservative estimate —that Americans alone spent in excess of $450,000,000 in one year in Europe and that their additional outlay on this continent amounted to another $300,000,000. Figures carefully compiled by hotel and transportation companies in the New England states show a revenue from tourist traffic of over $100,000,000 per year. No resources are destroyed by such a trade. The national wealth increases without depleting the national resources. Take the pine woods of Maine, for example, where revenues are estimated at over $40,000,000 per year, not a single stick of timber needs to be cut to produce this revenue. And, again, it has been proven, beyond doubt that such places as Bermuda, Florida and California are adding more to their wealth through the commerce in their climate and scenic beauties than through the products of the soil.

The war, probably was the greatest factor in making statesmen realize the immense economic value of the tourist traffic. For the first time Europe realized the magnitude and very great importance of the revenue they lost by the cessation of this traffic. Travel is necessarily international and national in character; but, as is apparent, the greatest benefit is derived from outside travellers as they are bringing in outside wealth. In France, a full year before the end of the World War, it was publicly declared that the country must look to tourist travel as one of the easiest ways of replenishing her depleted treasury. They at once created a special department of the government known as the Tourist bureau for the purpose of developing the tourist business of France, and voted 30,000,000 francs for this purpose. Italy has taken official steps along the same lines as well as Switzerland, whilst in other countries official recognition has been given to the great importance of this basic industry. For such it is.

As regards our own Dominion, it is pleasing to note that probably the greatest step towards the conservation of natural scenery and beauty was taken by our federal government. I refer to the creation of national parks. Has it ever occurred to hon. members that though this was one of the last of our resources to be recognized economically, it was also the first in regard to which the great principle of public ownership was adopted.

The first serious step in this direction was in 1885 when the government set aside 10 square miles for public park purposes including Banff Hot Springs. This area was increased to 260 square miles about two years later. During the discussion on this bill, I noted with special interest the words of Sir John A. Macdonald, speaking in this House on May 3, 1887. He foresaw with his usual shrewdness the economic value of such a park, and he stated that, in his opinion, not only would it recuperate the people, but it would recoup the treasury as well. I believe I am on safe ground when I say that this prophecy has proven true. To-day this area comprises 2,751 square miles and has the additional charge of protecting wild animal life. Gradually were added Jasper park, Kootenay national park, Waterton lakes national park and other smaller, but nevertheless beautiful and important sections, until we now have practically 10,000 square miles of National parks in Canada. And from information I have been able to gather, several areas are again being considered by the provincial governments for addition to this reserve of beauty.

Unhappily the original step of reservation was not followed by any intensive policy of development, and it was not until 1911, a few years only before the Great War, that the National Parks branch was created, as a special division of the Department of the Interior. That this step was amply justified is evidenced by the rapid development which has taken place since that date. It is a matter of common knowledge that the very active policy of this department, the development of good roads and other conveniences, the advertisement of our railways and steamship transportation companies and widespread publicity from other sources have resulted in a steady growth of travel from other countries to these parks which now bring in many millions of dollars a year. Now, Mr. Speaker, though the extent of our National parks may appear to be great, in reality they represent only less than one half of one per cent of the total area of this country, and they do not begin to represent the great areas eminently suitable for this purpose. We possess a great number of areas extremely suitable for the attraction of the tourists of other lands, and the sooner we realize the economic importance of such a trade, the sooner we shall actively develop this element of our foreign trade.

I might instance a few of the very outstanding territories, beginning in the extreme east. First, we have the well known Bras d'Or lakes of Cape Breton and the many beauty spots of the Land of Evangeline. We then have that wonderful Garden of the Gulf in Prince Edward Island. Travelling west up the St. Lawrence river, we have countless

quaint and historic points in the old province of Quebec, including the far famed Murray Bay, of which I hope we may hear more from the hon. member from that wonderful district. Who will deny the beauties of the Laurentides and of the Saguenay district? Coming to this city in which we legislate, we are at the entrance of that wonderful district of the Gatineau rapidly becoming known from end to end of this continent and beyond. Who will not admit the wonderful beauties of the Thousand Islands at the head of the St. Lawrence river and the attraction which they have for thousands of visitors annually. Still further west we have the Muskoka lakes district and the Georgian bay country, and the same condition is found through to our Pacific coast. There is not, in my opinion, a single province of this Dominion which does not possess some territory of outstanding beauty and interest capable of attracting tourist traffic and providing a real benefit to the entire country.

Because I am more familiar with my own district and believe it to be one of the very best from the tourist standpoint, I will devote particular attention to it and endeavour to make my point for the development of this part of our basic resources by showing what this district has already done and what it is capable of doing. The Muskoka lakes district and the Georgian bay country are really the " Playground of America" in the making.

I do not desire to tire hon. members with a mass of statistics bearing on this important phase, but I would ask their indulgence for a few moments and that they allow me to quote a few of the most important. First it is necessary to realize the value of this industry, and I believe a fair conception of what it is now worth is possible by the following statistical comparison. Taking only those industries which are absolutely basic we get this amazing comparison. The figures are for the year 1923, and are as follows:

Agriculture and agricultural products.. ..	$407,760,000
Wood and wood products..	228,756,205
Tourist travel, estimated..	136,000,000
Animals and animal products..	135,000,000
Minerals and mineral products..	123,142,653

Is it not amazing to find this item of production to which we have paid so little attention with a value higher than that of our animal and animal products or than the wealth produced by our mines? What could we not expect from this important national resource if we were to give it the attention which it undoubtedly deserves?

In the Georgian bay we have, not a thousand islands but thirty thousand, and in the Muskoka lakes district we have scores and scores of wonderful lakes of various sizes in that wonderful district of the Highlands of Ontario. At the present time some development has taken place and the country is fairly well supplied with navigation and railway transportation. There are also some good roads, but I say without hesitation that only a very small start has been made and the development is not at all commensurate with what is possible and with what should take place. A carefully planned development would make of this locality just what nature seems to have intended for it, the playground of America.

Taking only the three districts of the Georgian bay, the Muskoka lakes and the Lake of Bays, all within the electoral district of Muskoka, we find that, taking only the principal hotels and resorts, there is already accommodation in 155 such public places for over 10,000 guests. Besides this there are a large number of cottages and many people spend their holidays under the protective shelter of tents. But this is not all; there are besides a large number of summer resorts and residences privately owned and privately occupied, and each year sees an increase in the number of these. Hundreds of these places are owned by our American friends and you may rest assured that they are our unpaid advertisers.

Let us for a few moments look at the visitors who came to these hotels. In the Royal Muskoka, alone, that wonderful summer resort, set like a sentinel in the midst of that myriad of sparkling lakes, brooks and rivers that are everywhere to be found, that district which is the holidayers' preferred haunt, the fishermen's paradise and the ideal place, if one there is, where the strength, waning from a season's labours can be recuperated with the unparalleled enjoyment of the beauties and tranquility of nature, 14,950 guests were registered, during 1923, of whom 45 per cent were from the United States. Supposing that each of these guests spent only $100 on their holiday we have for the visitors of this hotel alone a total of $1,495,000. At the Bigwin Inn, on Bigwin island in the Lake of Bays, another diamond set in a district so beautiful that it beggars description, the season of 1923 saw 1,720 guests of whom 42 per cent came from the country to the south. The total given is exclusive of 455 guests comprising four separate parties staying from two to four days.

At this point I would quote some figures taken from the register of Bigwin Inn showing the number of guests from the various prov-

inces of the Dominion who stayed at the hotel in the year 1923. From Alberta there were 3, from Manitoba 1, from Ontario 923, from Nova Scotia 2, from Quebec 54 and from Saskatchewan 2. From the United States there were the following: California 3, Connecticut 4, Delaware 3, District of Columbia 5, Florida 3, Illinois 63, Indiana 15, Iowa 2, Kentucky 1, Maryland 14, Massachusetts 13, Michigan 76, Minnesota 2, Mississippi 2, Missouri 1, New Jersey 12, New York 227, North Carolina 1, Ohio 162, Oklahoma 4, Pennsylvania 99, Rhode Island 3, Virginia 2, West Virginia 2, Wisconsin 2. This makes a total of 721. Taking as a survey, that each of the 155 places referred to, with their accommodation for 10,000 guests only, filled their rooms five times each during the entire season, we have a total of 50,000 guests, which at an average expenditure of only $100 each would mean a total expenditure of $5,000,000. From a very conservative estimate of the value of the investment in that region we find that in cottages, resorts and launches the total investment in the three sections of Muskoka, Lake of Bays and Georgian bay, and Muskoka lakes, is well in excess of $20,000,000. And the investment is rapidly increasing from year to year.

On the Muskoka lakes alone we find this remarkable summary of investment, and my authority is no less a person than the manager of the Muskoka Lakes Navigation Company:

	Summer cottages
Lake Joseph	175
Lake Rosseau	230
Lake Muskoka	490
Total	895

At an estimated average value of $5,000 this represents alone an investment of $4,500,000.

	Resort houses
Lake Joseph	12
Lake Rosseau	32
Lake Muskoka	26
Total	70

The estimated total investment of these resorts is conservatively placed at $2,000,000. There are besides a fleet of 22 steamers valued at $367,000 and 390 gasoline launches estimated to be worth $1,000,000. The total investment represented is $7,867,000. In this district alone the number of visitors during 1923 is placed at over 30,000, which at the average expenditure of only $100 each would mean a total of $3,000,000.

To handle this traffic, the help engaged on steamers, in the resort houses and in the cottages would represent 3,000 at an average of $7,500 per day for wages alone. The average daily population would be about 7,000 visitors and 3,000 employees, a continuous population of 10,000 per day during the summer months. So that, at an average of $1 per day per person, you would have a total of $10,000 per day for food alone. One could go on endlessly quoting statistics of the importance, from the tourist standpoint, of this locality; and what applies in one part of our country would be more or less general to all those wonderful sections that our country possesses.

I have here a mass of statistics from different parts of the country, but at this late hour I will not attempt to read them. They are along the same line and perhaps some other hon. gentleman at a more favourable opportunity may allude to them. Just recall to mind the number of already famous places from the Pacific to the Atlantic and it is easy to realize that this Dominion can be made the playground of America, the paradise of holiday seekers. Why, the possibilities of the Muskoka district alone are practically immeasurable A careful study of population and travel distances has shown that within one day's journey to this famous region there are in the United States 43,000,000 of people who own and operate 5,200,000 automobiles.

I want to put on Hansard at this point some statistics prepared for me and published in Automotive Industries of February 21 of this year. From these figures it will be seen that Ontario has a tourist field to draw from which has a population of nearly forty million people, operating over six million motor cars:

State	Total registrations	Passenger cars	Trucks	Ratio to population	Approximate population
Illinois	969,331	847,005	122,326	7·05	6,833,783
Indiana	583,342	510,114	73,228	5·18	3,021,911
Michigan	730,658	657,148	73,510	5·58	4,077,071
New Jersey	430,958	341,853	89,105	7·93	3,417,596
New York	1,214,642	966,386	248,256	8·97	10,825,338
Ohio	1,068,700	927,000	141,700	5·77	6,166,399
Pennsylvania	1,064,624	899,696	164,928	8·60	9,155,766
	6,062,255	5,149,202	913,053	.....	43,497,864

If only one in the hundred of the automobile owners could be enticed to spend a vacation in the Muskoka lake district and that each party consisted of three you would have a total of 156,000 people from that section of the United States alone spending at least $15,000,000. And this of course is a very conservative estimate.

Turning for a minute to the automobile traffic over our borders, we find still more amazing results. In the year 1923 the Customs department recorded entries of 1,936,598 cars. A large number of this total of cars stayed in Canada for a period of only 24 hours or less; on the other hand, more than 200,000 stayed for a period ranging from two days to one month, and some 3,000 cars stayed from one to six months. Even taking a most conservative estimate of three passengers per car, and an average expenditure of only $20 per car, we obtain a total expenditure from this source alone of $40,000,000. And when we consider the cost of maintenance and upkeep, gasoline, oil, and so forth, for the car and the food and lodgings for the passengers, without even including the large sums spent for souvenirs, entertainments and so forth, we readily realize that this is a most conservative total.

One need not however consider these figures large, as they are very much below the business which we have a right to expect. With our immense resources for pleasure making and the unsurpassable natural beauties which we possess, it is within our power to develop a tourist traffic which will be one of our largest assets of external trade and one which, whilst producing immense revenue, will take nothing of our wealth of natural resources. Yes, indeed, Mr. Speaker, we could develop a tourist traffic which would go far towards replenishing our treasury and bringing to us a trade which would be the source of much employment and considerable revenues to our transportation companies.

At this point let me read a paragraph from a letter dated April 23, 1924, which I have received from the Canadian National Railways. The writer says:

> During the months of June, July and August, 1923, which would be considered the tourist months, the lines of the Canadian National Railways in the United States sold approximately 250,000 tickets for Canadian points, representing a revenue to the Canadian National Railways of approximately $2,000,000.

It has been estimated that Canadians spend annually approximately $50,000,000 in seeking vacation, health and pleasure in the United States. Is it not right to believe that if our 9,000,000 of people furnish that revenue to our neighbours, we can reasonably expect from their 110,000,000 of population at least ten times as much, or some $500,000,000?

In this connection I may quote no less an authority than Dr. P. E. Doolittle, President of the Canadian Automobile Association. In a letter addressed to me under date of April 14, 1924, he says:

> I have several times made a statement on the public platform that our objective in cash value for tourist business should be $500,000,000 annually, or ten times the amount Canadians spend at winter resorts in the United States; the population being more than ten times ours would make it an even trade off for them to visit us in ten times the numbers that we visit them.

This should be our objective, and we should also endeavour to convince Canadians that there are within our borders natural beauties that are well worth a visit to see and to enjoy. I am not asking that we should discourage visits to the United States. I realize that a great part of this traffic takes place during the winter months, when their latitude supplies such places as California and Florida with a climate which is naturally much sought for during our cold winter months. I would ask these people however, if they have not already done so, to visit our beauty spots during the summer season,—then when they again journey to the warmer climes they would be anxious indeed to become the advertisers of our wonderful playgrounds.

I repeat, Mr. Speaker, that the most profitable source of revenue, in so far as export trade is concerned, is produced by our tourist traffic, and these invisible exports should furnish a very great source of revenue. I firmly believe that our government can no longer afford to neglect this basic industry, for such it undeniably is, and should at once give it the consideration which it truly deserves.

I would point out, especially to my friends the Progressives, that great benefits to the farming industry of this country would ensue from the development of our tourist traffic. It is conservatively estimated that one-half the expenditure of tourists goes for food, and that one-third of every dollar finds its way into the rural sections. Such being the case —and from a wide study of the conditions I am convinced that this estimate is very near the mark—if we developed our tourist traffic to produce even $300,000,000 per year it would add a market of $100,000,000 for our farmers. Is there any one who would deny that this large sum would be of very considerable influence and benefit towards rectifying the conditions of which we are complaining to-day?

I would suggest, Mr. Speaker, for the serious consideration of the government,

first, that a thorough study of the situation be made in order to establish a special government department, preferably in charge of a cabinet minister, for the purposes of developing our tourist trade.

There should be established active co-operation with the various provinces and with every interested organization. Advertisements should be carefully arranged so as to coincide with the advertisements carried on by transportation companies and others. Every effort should be made to see that tourists receive the best treatment possible and that they be warned against any—and there exists some, unfortunately—who charge exorbitant prices. Good roads should be developed with national aid, where they are built in those beautiful scenic places which we possess, such as for instance, the Gatineau valley in the province of Quebec, the Bras d'Or lakes in Cape Breton and the Highlands of Ontario in the region of the Georgian bay and the Muskoka lakes. Careful planning would be necessary, and I am sure that within a very short time the expenditure would be more than justified. And after all, I am convinced that one very good way of obtaining really desirable settlers in our country is to enable them to see how beautiful it is and how great are the advantages. It is also one of the very finest of methods to encourage the development of all our industries. When an investor realizes for himself the immense natural advantages which we possess it will not be long before he is looking for places where he can invest capital in the development of industries.

If I had the time, Mr. Speaker,—I wish to finish before six o'clock—I could instance some very outstanding cases in your own province where very great development has taken place, especially along power lines, simply due to the mere accident of some tourist happening to visit that country.

I do not wish to take up more of the time of the House with this subject, which is so important, but I truly am convinced, that the government should give this matter full and earnest consideration. I believe that approval will follow from every corner of this chamber and that it will be looked upon very favorably by all the diversified interests melted into our national life.

Suffice it to say in closing that there seems no better way to develop and settle our country from every standpoint than to take advantage first of our natural scenic beauties and by their very attraction prove to one and all the wonderful possibilties of this great Dominion.

[Mr. Hammell.]

At six o'clock the House adjourned, without question being put, pursuant to rule.

Thursday, May 8, 1924

The House met at three o'clock.

CANADIAN NATIONAL RAILWAYS

BILLS PROPOSED TO AUTHORIZE THE CONSTRUCTION OF BRANCH LINES

Mr. F. S. CAHILL (Pontiac) presented the fifth report of the select standing committee on Railways, Canals and Telegraph Lines as follows:

Your committee have considered the following bills and have agreed to report the same without amendment,

Bill No. 33, an act respecting the construction of Canadian National Railway line, Kamloops-Kelowna division, province of British Columbia.

Bill No. 34, an act respecting the construction of a Canadian National Railway line to Cowichan Bay, on Vancouver Island.

Bill No. 35, an act respecting the construction of a Canadian National Railway line to Mile 100 on Vancouver Island.

Bill No. 44, an act respecting the construction of a Canadian National Railway line between Hanna and Warden, in the province of Alberta.

Bill No. 45, an act respecting the construction of a Canadian National Railway line from Loverna westerly in the province of Alberta.

Bill No. 61, an act respecting the construction of a Canadian National Railway line, being a joint section from Rosedale southeasterly in the province of Alberta.

Bill No. 62, an Act respecting the construction of a Canadian National Railway line to Pine Falls in the province of Manitoba.

Your committee have also considered the following bills and have agreed to report the same with amendments,

Bill No. 40, an Act respecting the construction of a Canadian National Railway line to Mile 41 of the Melfort Branch near Nipawin in the province of Saskatchewan.

Bill No. 49, an Act respecting the construction of a Canadian National Railway line between Dunblane and Mawer in the province of Saskatchewan.

Bill No. 54, an Act respecting the construction of a Canadian National Railway line between Radville and Fife Lake in the province of Saskatchewan.

Your committee recommend that the titles of the three last mentioned bills be respectively amended to read as follows: viz.

Bill No. 40, an Act respecting the construction of a Canadian National Railway line either to Mile 41 near Nipawin or in a northwesterly direction to a point in township 49, range 13, west of the second meridian, in the province of Saskatchewan.

Bill No. 49, an Act respecting the construction of a Canadian National Railway line between Dunblane and Mawer or a point west thereof, in the province of Saskatchewan.

Bill No. 54, an Act respecting the construction of a Canadian National Railway line from or near Radville, Bengough or Ritchie, in the province of Saskatchewan.

UNITED CHURCH OF CANADA

Petitions were presented from certain members of the following congregations, severally praying that the proposed legislation incorporating the United Church of Canada, be not enacted:

E. H. Tew and others, of Assiniboia,—Mr. Hopkins.

St. John's Presbyterian Church, Vancouver, B.C.; St. Andrew's Presbyterian Church, Vancouver, B.C.,— Mr. Stevens.

William Carruther and others, members or adherents of the Presbyterian Church,—Mr. Warner.

Petitions were presented from certain members of the following congregations and bodies praying that the bill now before the House to incorporate the United Church of Canada be passed during the present session.

Presbyterian Church at Govan, Sask.,—Mr. Motherwell.

Methodist Church at Boharm, Woodslee and Ruscomb; P.E.I.; Presbyterian Church at Wardsville, Ontario; Wesley Methodist Church, Fort William; Presbyterian Church at Khedive, Sask.; Methodist Church, Sydenham, Ont.; Methodist Church at Charlottetown, P.E.I.; United Church of Holmfield, Man.,—Mr. Reid.

Brown's Corners, Central and St. John's Presbyterian Congregations at Unionville, Ontario; Methodist Church at Fonthill, Ontario; Methodist Church at Plattsville, Ontario; Union Church, Oak River, Manitoba; Presbyterian Church at Elmwood, Ontario; Fenwick, Forks Road East and Mount Vernon Methodist Churches; Methodist Church at Thamesville, Ontario; Presbyterian Church, Carman, Man.; Methodist Churches at La Havre, Mount Pleasant and Dublin, Nova Scotia; United Church, Snowflake, Manitoba; Presbyterian Church, St. Lukes Congregation, Cape Breton; Grace Methodist Church at Fort William, Ont; Presbyterian Church at Kinmount, Ontario; Methodist Church at Elmvale and Allenwood, Ont.; Presbyterian Church, Maple Creek, Sask.; Methodist Churches at Northwood, Botany and Beechwood, Ontario; Union Church at Decker, Isabella and Orrworld, Man.; Methodist Church, Tweed, Ont.; United Church at Toulon, Sask.; Methodist Church at Petrolia, Ont.,— Mr. Pritchard.

Methodist Church at Heborn and Port Maitland; Rae Street Methodist Church, Regina, Sask.; St. Andrews United Church, West Summerland, B.C.; St. Pauls Methodist Church, Calgary, Alta.; St. Andrews United Church, Montague, P.E.I.; Methodist Church at Chumah and Hamiota; Presbyterian Church, Valleyfield, P.E.I.; Union Church, Ponoka, Alberta; Methodist Church, Clifton; United Church at Thessalon, Ont.; St. Pauls Methodist Church, Ottawa, Ontario; Presbyterian Church, Watson, Sask.; Trinity Methodist Church, Toronto, Methodist Church at Exeter, Ont.; Zion Methodist Church at Moose Jaw, Sask.; United Churches at North Antler and Pierson, Man.,—Mr. Sexsmith.

Union Churches at Avonlea and Hearne, Sask.; Methodist Church at Carleton Place, Ontario; Presbyterian Union Church, Edam; Presbyterian Ukrainian, Fort William, Ont.; Wesley Methodist Church, Ottawa East, Ottawa, Ontario; Methodist Church at Haleys Harton, Ontario; Methodist Church, Rosemount, Montreal; Methodist Church, Wroxeter, Ont.; Union Churches at Hargrave, Harmsworth and Victor, Man.; St. Andrews Presbyterian Church at Sunderland and St. Johns Presbyterian Church at Creswell, Ont.; Methodist Church at Riceville, Ont.; United Methodist and Presbyterian Church at Ballersea and Sunbury, Ontario,—Mr. Woods.

Methodist Church at Yarmouth, N.S.; United Church at Elkhorn, Manitoba; Methodist Church at Canning, N.S.; Presbyterian Churches at Grand Coulee and Sherwood, Sask.; Methodist Church at Plainfield, Ontario; Presbyterian Church, Pilot Mound, Man.; Methodist Church at Lethbridge, Alta.; Union Church Markinch, Sask.; Methodist Church Kildonan, Man.; Presbyterian Church, Clanwilliam, Man.; St. Pauls Methodist Church, Montreal, Que.; Union Church, Beaver, Man.; Union Church, Selton, Sask.; Methodist Church at Teeswater, Ontario; United Church, North Portal, Sask.; Methodist Church at Wheatley, Ont.; Presbyterian Church at Hanay and Hammond and Pittmeadow's, B.C.,—Mr. Rankin.

Carmichael Presbyterian Church, Regina, Sask.; Methodist Church at Fullarton, Ontario; Westminster Presbyterian Church, Regina, Sask.; Methodist Church at North Earls-

court, Ontario; Rhodes avenue Presbyterian Church, Toronto; Presbyterian Church, Argyle and Stonewall; Methodist Church at Wilfrid, Ontario; Strathroy Methodist Church at Strathroy, Ontario; Mrs. W. C. Smith and 124 others, Oak Lake, Manitoba,—Mr. Drummond.

Presbyterian Church, Gabarus, C.B.; Union Church, Rose Plain, Sask.; Lucky Lake Congregation, Lucky Lake, Sask.; Methodist Church, Stratford District, Ontario; Methodist Church, Phippen, Sask.; Union Church at Treherne, Manitoba; Methodist Church. Munson, Alberta; First Presbyterian Church, Wilton, Grove, Ontario; Union Church at Heron, Sask.; Methodist Church at Magogue. Que.; Methodist Church at Monkton, Ontario; St. Andrew's Presbyterian Church, Glamworth, East Middlesex; Methodist Churches at Prestonvale, Boyds and Playfair, Ontario; Union Congregation of the Union Church at Port Sydney and Utterson; Talbotville circuit Methodist Church of Talbotville, Ontario; Toronto District Association of Congregational Churches; Shaw Memorial Methodist Church at Montreal, Quebec,—Mr. Hodgins.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

CANADIAN NATIONAL RAILWAYS—OPERATING RATIOS

Sir HENRY DRAYTON:

What were the operating ratios of the Atlantic, Central and Western regions of the Canadian National system for the year 1923?

Hon. Mr. GRAHAM:

Atlantic Region.. .. .. 123.23
Central Region.. .. .. 85.38
Western Region.. .. .. 102.80

QUESTION PASSED AS ORDER FOR RETURN

GOVERNMENT PURCHASES OF AUTOMOBILES

Mr. McBRIDE:

1. How many passenger automobiles have been purchased by the government in each of the years—1919, 1920, 1921, 1922, 1923 and 1924?
2. What has been the cost of upkeep of such cars in each year?

BEAUCHAMP'S SENTENCE—THE LASH

On the Orders of the Day:

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): It is two weeks to-day since the Minister of Justice (Mr. Lapointe) made a statement to the House with reference to the Beauchamp case. On that occasion I asked him whether he would lay on the Table the actual order issued from the Department of Justice in the case and his answer was, "With pleasure". He has not given himself that pleasure yet. I do not know why two weeks should be required to lay on the Table one paper from the Department of Justice.

Hon. GEORGE P. GRAHAM (Minister of Railways): The Minister of Justice is giving himself the pleasure of attending a wedding to-day, but I will call his attention to the remarks of my right hon. friend.

Mr. MEIGHEN: Will my hon. friend break in on the wedding to advise his colleague that I should like laid on the Table, as well, the general order in respect of prisoners to be lashed, referred to by the minister in his own statement? I have reference to the general order covering all cases and which, according to the minister, rendered the issuance of the order in this case, superfluous.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed from Wednesday, May 7, the debate on the motion of Hon. J. A. Robb (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into committee of Ways and Means and the proposed amendment thereto of Mr. Woodsworth.

Mr. W. J. LOVIE (Macdonald): I wish to congratulate the Acting Minister of Finance upon the able, businesslike and statesmanlike manner in which he has introduced this his first budget in the House of Commons of Canada. It was not a lengthy address; but it was clear, concise and to the point, and left no doubt in the minds of all who heard it that a serious, determined effort had been made to fulfil the promises made in the Speech from the Throne.

The Speech from the Throne hinted at a balanced budget, and we find in the budget that there was a surplus of revenue over expenditure for the past year of $67,750,000 with a $30,000,000 reduction in the national debt, and a promised reduction in taxation of $24,000,000. Also we find that the customs tariff on agricultural implements has been reduced, and the sales tax done away with on these articles. The sales tax on boots and shoes has been reduced by half, and the general sales tax has been lowered from 6 per cent to 5 per cent, which, although it is not much of a reduction, will assist in a small

measure to reduce the cost of living for the workingmen all over Canada, who for the past few years have found it very hard to make ends meet and carry on.

For the past number of years Canada has had the unenviable reputation of being the most expensive country on the face of the globe to live in, and an appreciation of that fact by those in authority, and a determined effort to do something to change these conditions, will go a long way towards restoring confidence in Canada by those who are seriously asking themselves the question: Is it worth while to carry on any longer in the face of conditions such as prevail at present, and have prevailed for the past few years?

What are the conditions that prevail in Canada at the present time? Hon. members who have preceded me in this debate have each and every one described conditions such as actually exist in his own particular part of the country, and have made an honest attempt to find a cure for these unfavourable conditions, therefore, I will endeavour, with the permission of this House, to describe the position of agriculture in the province of Manitoba, the province that includes within its boundaries the city of Winnipeg, the gateway to the great West, and often named the Chicago of Canada, and which is destined in the future to outrival even that great American city. The city of Winnipeg is a large distributing and railroad centre. All the wheat raised in Manitoba and Saskatchewan, and until quite recently, Alberta, passes through Winnipeg, and is graded there en route to the head of the lakes. Large stock yards are located at St. Boniface for the handling of the live stock for the three prairie provinces, and large wholesale warehouses for the distribution of agricultural machinery and implements. There are also available all the necessaries of life to make Winnipeg a large distributing centre; but it is not a manufacturing city—at least not yet. These stock yards are a credit to the Department of Agriculture as well as to the United Grain Growers in Winnipeg, to the extent to which these institutions have contributed to the success that has been attained. And these are co-operating splendidly in order to retain the farmers of Manitoba in the business of fattening cattle in winter. The Department of Agriculture is paying fares of farmers to Winnipeg and paying half freight on all cattle taken from the stock yards for winter feeding. The United Grain Growers are doing an admirable work in the collecting and grading of cattle in carload lots for shipment, and these carload lots are made available to the farmers.

The province of Manitoba is largely agricultural; wheat is its main product, but in conjunction with wheat the farmers raise oats, barley, rye, flax, potatoes, vegetables, horses, cattle, sheep and swine, and have for sale butter, cream, poultry, eggs, and so forth. The soil is really choice, being in most cases a deep black loam on a clay sub-soil, and the climate is admirable.

What is the financial situation of farmers in the province of Manitoba to-day? If the House will bear with me I will describe conditions in the exact words of one who described them to me, and who is experiencing these conditions. The language is not parliamentary, but is is expressive. Here it is: "We are getting enough to eat, but we are most viciously short of money." In the municipality in which my farm is situated the secretary-treasurer informed me during the Easter recess that on January 1, 1924, only 50 per cent of taxes were paid, and no mention is made of taxes that were paid by money borrowed from banks, loan companies, and so on as that cannot be ascertained. The crop of 1923, which promised a heavy yield, rusted badly, and was a financial loss, as the expense of harvesting and threshing was very great. The crop of 1922 did not pay more than 50 per cent of the cost of production, although it was a fair crop of splendid quality. The cost of production in Manitoba is so high that agriculture since 1920 simply cannot be carried on profitably.

To get a foundation upon which to study this question, everyone should seriously put before himself this problem: Is a farm in Manitoba to-day an asset or a liability? Frankly, in answering this question I would say, both from experience and observation, that a Manitoba farm is a liability. When we admit the fact that a Manitoba farm is a liability is it not a good premise from which to start to find a remedy for such conditions?

Now, the two main sources of revenue for Manitoba farmers are wheat and fat cattle. Wheat there is always a market for—at a price; but with cattle it is different, the demand being seasonal, but it is generally conceded that the spring market is the best market in Manitoba for beef cattle. Of course, there are other sources of revenue, such as sales of horses, swine, butter, eggs, poultry, and so forth, but these are only incidentals, wheat and cattle being by far the main money crops and wheat the principal one.

Mr. SPEAKER: Order. There is too much conversation going on in the chamber. I think in justice to the hon. gentleman who is

addressing the House hon. members might keep silence.

Some hon. MEMBERS: Hear, hear.

Mr. LOVIE: Western Canada raises a large surplus of wheat which has to find an outlet on the open markets of the world in competition with wheat from all the great wheat producing countries. Her farmers are thus compelled, by circumstances over which they have no control, to take for their wheat, their main money crop, what it is worth on the open markets of the world, less storage and transportation charges. Their surplus cattle find an outlet in Great Britain, but again this is the proposition of a free trade market, and after long rail transportation charges are paid to the seaboard, and ocean carrying charges, about all that is left to the farmer is the pleasure that he can take out of the steers' company.

What are the main features that go to make a Manitoba farm a liability? High taxes, high cost of necessaries of life, including clothing, boots and shoes, high cost of agricultural implements, high freight rates, high express rates, and high interest charges on borrowed money. All these combined compose a dose of foes and woes, which are sapping the very heart blood, and demolishing the morale of every farmer in Manitoba.

To those who are giving the matter serious consideration, the most pressing problem in Manitoba to-day is: How to make Agriculture profitable? It is a recognized fact that if agriculture is profitable, every line of business will be profitable also, but if agriculture languishes all industries in turn suffer. Here I will quote from an editorial in the Free Press of recent date. It says:

> Farming is the real business of western Canada. Western Canada, country, town and city lives on what is taken out of the soil. The more wealth produced out of the soil the better off the country will be. If the farmer is going to be put out of business by conditions that make it impossible for him to get even a small profit on what he produces, then the whole country is in for a bad time. Enabling the western Canadian farmer to make a profit on his grain and on his live stock should be the job of every citizen in this western country. To-day Europe is the main market for the farm products of western Canada, and the genius of the country should be devoted to making it possible for our grain and our live stock to be sold across the ocean in competition with the world and at a profit to the western farmer. It is a truism that if the western farmer is making money a condition is created wherein the general business of the country is put on a firm foundation and is able to look after itself.

What has been the position of agriculture in the past and why was there no whisper of such conditions previous to the last few years? The answer is this. From the year 1907 to 1913 there was on an average 74 million dollars per year being circulated in Canada for railroad building, as the Grand Trunk Pacific and the Canadian Northern were then under construction. The money expended on the building of these railways going into circulation kept the wheels of industry in Canada turning in good style and everything was prosperous. But about the middle of the year 1913 this expansion came to an end. Hard conditions and unemployment would have struck Canada then, only for the fact that the war intervened and enlistment for overseas service gave employment to thousands who otherwise would have been idle. Added to this was the phenomenal crop of 1915, and the money obtained for the manufacture of munitions, which, combined, brought a lot of wealth into Canada.

When the world war started in 1914, and for years previous, prices between farm products and other commodities had been fairly established and presumably in accord with economic law extending over a series of years. Then during the years of the war prices of all farm products jumped to unprecedented heights. Those conditions we need not discuss, except to say that it is astonishing how little our farmers have to show after this great outburst of seeming prosperity. High prices, aided and abetted by a cry from those in authority, to "produce, produce, produce, if we wish to win the war," led to expansion, extravagance, and real estate speculation, and during that time labour climbed the ladder very rapidly. If now we compare the present ratio between the prices of the things the farmers have to sell, and what they must purchase, we find that the balance has been rudely disturbed, and until that relationship has been restored we cannot look for a genuine and permanent prosperity. Looking at the question from the view point of permanent national well-being, we may well shudder when we contemplate the consequences in the coming years unless this disparity between agriculture and industry is removed, and there is no doubt but one of the great problems confronting us to-day is how to restore a proper and healthful relationship between our industries and our agriculture.

Now, how are you going to make agriculture profitable? The hon. member for Fort William and Rainy River (Mr. Manion), and every Conservative member who has spoken, suggests one method, and the Acting Minister of Finance in delivering the budget suggested another. I am going to give the Conservative plan and I will take it first-hand from an editorial in the Manitoba Free Press, which puts it in shorter and much better form than I possibly could. Here it is:

Make it possible for capital to embark upon large manufacturing enterprises; these will give employment to large numbers of men; this will build up towns and induce prosperity; there will thus be opened up markets for the products of our natural industries; everything will then be lovely and flourishing, and pulling ever more vigorously upon our own bootstraps, we shall rise higher and higher into the warm sunshine of prosperity.

The Acting Minister of Finance (Mr. Robb) in his budget has suggested another remedy. He says:

Of these basic industries I would place agriculture in all its various branches first. Next to agriculture I would put our forests, our minerals and our fisheries. A real national policy is a policy that will encourage the growth and development of these basic industries.

That is the soundest bit of fiscal wisdom that has been heard from a Canadian Minister of Finance for many a long year. An economic policy in keeping with these views is what Canada requires, and it is highly encouraging to note that the modifications and changes proposed by the hon. gentleman (Mr. Robb) are all in keeping with such a policy.

Now, the Conservative policy in a very few words might be summed up in the amendment, which was really the logical amendment to a low tariff budget, introduced by the hon. member for Kent, N.B., (Mr. Doucet) in these words:

That the welfare of Canada requires a consistently maintained protective policy.

That sounds good. Who and what is going to be protected? Canada depends upon her natural resources for revenue, and of the four basic sources of wealth, namely, the ocean, the mine, the forest and the farm, the farm easily holds first place, the value of agricultural products exported being greater than the value of the products of the other three sources of wealth. Is it too much to ask that the attitude of the government in a country where agriculture holds first place should be to encourage and develop the basic industry of that country? Remove all handicaps that stand in its way and see that its produce has access to the best markets of the world at the lowest cost, at all times. Would a protective policy do that? Would it encourage and develop agriculture?

What is claimed by the exponents of a protective policy is that the tariff will shut out importations and enable industry to charge a big price to the people in the country. By getting a big price for their output owners of factories will be enabled to pay big wages to their employees, who in turn will be quite willing to pay an enhanced price for the products the farmer has to sell. But do these employees of factories pay the farmer an enhanced price for his surplus products? Not much! There is at present a great disparity in quantity between what the farmer raises and what the city man consumes; so an export market must be found; and the exportable surplus—be it small or large—regulates the price the farmer receives for his goods on the home market. Consequently, a protective tariff gives him no advantage in selling, and works to his disadvantage in buying. Were the population of a country evenly balanced between agriculture and industry, and that country entirely self-sustaining, a protective tariff would do no preceptible harm; it would simply be a merry-go-round which would hurt no one as long as no export trade was done.

Protection blooms and flourishes when the people of one section get an advantage by legislation over the people of another section of the same country, and this goes by the name of special privilege, but the real name is legalized robbery.

Will the protective policy advocated secure a home market for the farmer? Well, it might in a hundred years, but what agriculture needs is relief from the present unhealthy conditions; not a hundred years hence or next year, but now, at once, or else the farmers will be all in the poor house. Prompt action is imperative if Manitoba agriculture is to be salvaged. An increased dose of that protective tariff which has been largely responsible for the difficulties of Manitoba farmers in the past would mean sudden financial death to the majority of them, and agriculture in that fair province would become a thing of the past.

Would the protective policy that is advocated assist marketing conditions for the Manitoba farmer? No! It could not do so because, first and foremost, the protective tariff would cut off importation and would stand in the way of the selling of our products. No nation can trade with another nation unless the trade is profitable to both. No nation can sell to another nation unless each is prepared to take goods in exchange for goods exported. One nation exports its surplus, which the other nation needs, and takes in exchange the surplus goods of the country it sells to. International trade is not carried on by the use of money, but goods pay for goods and imports exceed exports if the trade is profitable. The reason for that is that the value of the exported article purchases goods on the foreign market which after being taken to Canada are of more value than the ex-

ported article; thus it is in the interest of a country to stimulate and encourage trade rather than hinder it. Besides, with assured traffic two ways, transportation charges would be far lower than would obtain with traffic on a one way basis, and the trade would be profitable to both nations engaged.

When a nation having a protective tariff wants to carry on trade, their method is—send an ambassador to the country to which they wish to sell their surplus to arrange for trade, and then raise a tariff wall against the surplus products of that nation, either to prevent those products from getting into the country, or else to make them so expensive that it is unprofitable to purchase them. It has been abundantly proved that the protective policy which is advocated cannot protect agriculture in Manitoba nor make it profitable. Those who will benefit by a high protective tariff are engaged in industry, and those who are going to suffer by this protective tariff are engaged in agriculture. No one engaged in agriculture is asking for protection; they know such a thing is impossible unless it take the form of a bounty, and they realize that that is impracticable as well as dangerous. But what they do ask for and demand in no uncertain terms is that the handicaps imposed upon agriculture by a protective tariff be removed, so that they may have a fair share of the good things of life which those engaged in industry enjoy. Should the tariff be raised, good-bye to the free, independent, courageous spirit which carried the young Canadian manhood so gallantly through the world war; the Manitoba farmer will be so crushed between the upper millstone of high protective tariff, and the lower millstone of high transportation charges that he will be reduced to the position of a slave or a Russian peasant, not the sturdy, clear-thinking yeoman we all wish the Canadian farmer to be.

If the protective tariff was raised, would anyone in Manitoba be benefited. Most emphatically I say, no. Manufacturers and dealers think they would be benefited; that they could succeed in extracting a little higher price for their output than they can get at present. But let me tell the manufacturer and the dealer in all articles which the agriculturist purchases that the farmer's purchasing power is down to a very low ebb, and a little more will put him out of business altogether. The matter with agriculture to-day is that the price of things the farmer buys is altogether too high in comparison to the price he receives for what he sells, and to pass legislation to make these necessaries of life and production higher in price would mean swift and sudden death to the farmer's business.

What is needed to make agriculture profitable in Manitoba is for the farmer to be able to purchase the necessaries of life and implements of production on the ratio of the price he receives for his produce—in other words, at a price set by the competition of the open markets of the world. The farmer knows that only under such conditions will agriculture, the basic industry of Canada, receive a square deal, and he is looking forward to a time when such conditions will obtain. He sees no reason why industry, which is catering to his requirements and which without him could never hope to keep alive, should be bolstered up by a protective tariff and given privileges for which he has to pay. The Manitoba farmer cannot understand why agriculture, which is the primary industry of the country, should be made to pay tribute to a secondary industry, neither can he understand the howl that comes from the owners of these industries that they must have increased tariff protection or else go out of business. The farmer argues this way: That the ability of any industry to establish and sustain itself in a free field is the measure of its public utility, and industries which cannot support themselves are not wanted or needed, the proper maxim being "A fair field and no favour." A protective tariff was introduced into Canada to protect infant industries, but though a great many years have elapsed since then, these industries still continue infants in their desire for protection, and the length of time they would continue to cry out for protection can only be measured by eternity, Experience has shown only too plainly that these interests figure that the fleecing of their fellow-citizens is a God-given right which no one has any liberty even to hint at taking away from them.

Let us now turn to the budget itself. The official opposition claims that the government has no mandate from the people to entitle them to lower tariff duties and that, therefore, before they do so they should appeal to the people; in other words, that there should be a general election. Let us analyse this demand. We all know that the Liberal party went to the country upon a platform of lower tariff; therefore it is obvious that their election on that platform gives them a mandate to make the duties lower. As the Manitoba Free Press says, it is hard to realize why a party elected upon such a platform should be censured and challenged for

reducing the tariff the little bit that has been done.

An attempt has been made by the Acting Finance Minister, in the budget he has just brought down, to grapple with the desperate situation which confronts farmers in the prairie provinces, but it is only an attempt and will not do very much towards relieving the situation. One thing it will do, and has already done, is to put the tariff squarely before the people of Canada as an issue, and personally I have no doubt the next election will be fought upon the tariff issue.

The one unfortunate thing about general elections is the fact that the real issue at stake is intentionally beclouded and sidetracked. Between flag-waving and the cry of loyalty and patriotism, the attention of the electors is drawn away from the real issue at stake; they are bamboozled and confused. The real issue in the next election will be high or low tariff, and it is up to every elector to make every prospective candidate declare himself squarely on that definite issue.

Now, what is wanted is a method of making agriculture profitable. The farmers of the three prairie provinces are doing their level best to have a wheat pool operating in each province to handle the 1924 and subsequent crops. The idea is to have an interprovincial pool in four years' time, and later an international pool to handle the wheat of the continent. They know they cannot raise the price of wheat on the world's markets, but they expect by the application of business methods and the prevention of dumping of wheat on the world's markets in a few months, to steady and regulate the price. The price of bread will not be raised to the consumer, as bread has been on the basis of $1.50 wheat for some time, but the pool will endeavour to see that the same intelligence and the same knowledge of world conditions are applied to the marketing of wheat for the benefit of the producer as are available to men engaged in marketing our manufactured products. The wheat pool is a big thing, the biggest yet undertaken in our western country, and something which may yet revolutionize marketing conditions for wheat.

That there can be money saved on marketing wheat, no one will deny. Last fall feed wheat sold at from 35 to 40 and 45 cents per bushel, sixty pounds, and it had to be all wheat, otherwise it would be docked. Wheat worth 40 cents per bushel by the load would be worth about 45 cents by the carload. At 35 cents the price would run to about $11.60 per ton, at 40 cents to about $13,25, and at 45 cents to nearly $15. At the same time that feed wheat is being bought on the open market at that price, recleaned screenings at Fort William are quoted at $23 per ton. Recleaned screenings consist of small wheat, cracked wheat, buckwheat, and wild oats with the black seeds screened out. On that price of $23 a ton, freight has to be paid. Bran is quoted by the milling companies at $23 a ton, and shorts at $25. Not so much money can be saved on the high grades. but a lot of low-grade wheat is included in the output every year, which no one can help, and which goes to the dealers practically at their own price.

Now I wish to say a few words on the question of transportation. The long freight haul operates against the Manitoba farmer but that can be easily overcome as the Hudson Bay railway, which we expect to have built and completed at an early date, will cut off a thousand miles of haul by rail and bring the prairie provinces close to seaboard. When the question comes before the House, more will be heard about the Hudson Bay railway.

Then there is also the fact that the Crowsnest pass agreement will come into effect on the 6th of July next, which will give relief to both East and West in the matter of freight rates, if the government just sits back and lets the agreement come into effect.

Express rates are also very high. During the Easter recess while I was West there was a meeting of farmers to be held in the town of Carman to discuss the express rate situation, but unfortunately on account of a snowstorm the meeting did not materialize. I was however, given specific instructions to bring before the House this question of express rates and to see if something could not be done to reduce them and bring them more in line with the price the farmer and his wife are receiving for the products they have to sell.

Then, with regard to export rates on cattle, which have been proved time and again to be too high, I wish to quote from a speech delivered by Sir Clifford Sifton before the Canadian Club last January. He said:

> Then take the question of cattle. Our government got the embargo taken off cattle. The rate on cattle from Montreal to Liverpool was $15. The ocean steamship companies put it up to $25 a head. And let me tell you, gentlemen, the Canadian Merchant Marine, the organization built with our money, at a cost of $70,000,000—instead of helping the Canadian farmer in this matter, they were in the job against the farmer, right up to their necks!
>
> There is nothing easier than to adjust this matter. The harbours of the world are filled with ships that have nothing to do—they can be hired, rented, chartered, without the slightest trouble. In twenty minutes the government of Canada could ensure a $10 rate from Montreal to Liverpool if they chose. Any well-informed person knows that $10 is a good profitable rate for carrying cattle from Montreal to British ports.

Colonel Mullins who is a very large feeder of cattle has this to say, with reference to the treatment he received in shipping a load of cattle across on the Victor, of the Government Merchant Marine:

> The capacity of the Victor is 230 spaces, those in authority say, and you must put 270 head on and pay at the rate of $25 per head. I put 247 head on and paid for 270, making the ocean freight cost $27.33 per head. This is an injustice and goes a long way to discourage the producing of cattle.

The Manitoba Free Press, commenting on this, says:

> The Canadian government's boat charged him $25 a head on the basis of 270 cattle for the boat, though the capacity of the boat at the standard rate of two-and-a-half feet per animal is 230 head.
>
> Although only 247 cattle were put on the boat the Canadian Government Merchant Marine charged on the basis of 270, making the actual charge $27.33 per head.
>
> When Col. Mullins made a protest to the Dominion Minister of Agriculture he got, in reply, a telegram stating that as he had shipped to Dundee in expectation of a better market the higher rate charged him was "warranted."

It is an acknowledged fact that rail transportation costs seven times as much as water transportation. We find that the rate from Winnipeg to Montreal by rail is from $10 to $11 per steer, while the ocean rate from Montreal to Glasgow is $20 or over, and as the distance is twice as great, the rates are practically the same. The ratio between land and water rates is generally seven to one.

Now I wish to say a word about income tax. I am not going to kick about the income tax, because I believe in it. In this debate we have heard a good deal both for and against the income tax as a means of raising revenue, and I am not going to enter into the controversy for or against, except to say that I believe the income tax has come to stay; but what bothers the farmers is the filling up of the income tax returns, as their system of bookkeeping does not lend itself to accuracy in detail. I have been asked to suggest to the Acting Minister of Finance (Mr. Robb) the advisability of appointing some official in each municipality, probably the municipal clerk if it was thought advisable, to assist the farmers in making out their income tax return. As all hon. members know, any member of parliament can call in the assistance of a gentleman, Mr. Gray, who is an expert, in filling up their returns, and he certainly does the job in a very short time, and there is no trouble afterwards. It does seem to me a hardship that farmers should be put to all this trouble, and they are asking that someone be appointed to assist them in filling out their returns who would guarantee that there would be no trouble afterwards. The filling up of the returns bothers the farmer considerably, but snappy letters asking for further information six months after the returns have been made antagonize them, as these letters have a tendency, and are intended, by all appearances, to make farmers feel they are criminals instead of what they in the main are, decent, law-abiding citizens. A change would certainly be welcomed in the line of assistance to farmers in filling up income tax returns.

4 p.m.

Now a word as to mixed farming. Farmers are very often urged in this House to go in for mixed farming if their farming operations are not profitable, but no specifications are given as to the particular branch of mixed farming they should go into. I see by the Manitoba Free Press of 3rd December last, that the Solicitor General (Mr. McMurray) speaking before the Reform Club in Montreal, said:

> Mixed farming is urgently needed in Manitoba. It is the only remedy in Manitoba for the problems confronting the farmer.

Mixed farming has been held up as a panacea for all the ills the farmers are suffering from. Well, Mr. Speaker, advice is cheap to give and those who know their subject the least are often the readiest to give advice. I should like to tell the House something that was told me by a gentleman actively engaged in mixed farming. He is a neighbour of mine and he and I were in Winnipeg buying steers for feeding. He said that the superintendent of the experimental farm at Brandon last summer sent out a request to all the farmers in the vicinity that any who felt they were not getting returns from their farms should write him a letter, and he would tell them how to put their farms on a paying basis. This friend of mind wrote to the superintendent, and the answer he received was this:

> I do not know what to advise you to make your farm pay. You are doing everything now I could advise you to do.

This gentleman raises wheat, oats and barley, also pure-bred Clydesdale horses and pure-bred shorthorn cattle; he milks from twelve to fifteen cows, feeds a carload of steers every winter, raises Yorkshire hogs, and raises also all kinds of poultry; and yet he cannot make farming pay, and the superintendent of the Brandon experimental farm says, "I do not know what to advise you to make your farm pay."

Mr. GARLAND (Bow River): Ask the Solicitor General (Mr. McMurray).

Mr. LOVIE: Yes. There is another thing I want to touch on, it was drawn to my atten-

tion in a letter not very long ago. In Manitoba this year conditions are very much the same as last, because the spring is late and wet, and we are very much afraid of rust. This writer says:

I am afraid the spring will be so late the rust will get us again. The rust is supposed to winter over on the barberry bushes. The United States seems to be cutting them down and destroying them as fast as they can, and I have often wondered if Canada had any barberry growing wild, and whether they were doing anything to get rid of them. It might be a good idea to ask a few questions on the subject. The Canadian government should take steps to find out if there are any barberry bushes. I believe there are some in the Riding mountains, and if there are they should be destroyed as quick as possible. It would be a whole lot better for Canada than these far north survey parties who get free cigars and cigarettes because it is a hard country to work in. Give them work of more consequence nearer home and let them buy their own luxuries. I want you to look into the barberry bush and rust business and if nothing is being done, make them get to work pronto. Just think of all the work I did on that 200 acres of summerfallow, and if it gets rusted the whole thing is a ruination business, as far as I am concerned.

I would like to bring to the attention of the Minister of Agriculture (Mr. Motherwell), if it is in his department, or to the attention of the Minister of the Interior (Mr. Stewart), the matter of these barberry bushes, in order to see that they are destroyed, or else I will get into trouble with the writer of this letter.

Cheaper money is needed for the farmers. Farmers are borrowing money at high rates of interest. They cannot afford to pay the rates of interest they have paid in the past. The following is part of an editorial which appeared in the Free Press:

Something worth while has been gained by the now general acceptance of the view that our commercial banks are not equipped to supply short term credits. Dr. Tory says this explicitly. The banks, until very recently, stoutly disputed this contention, declaring that the farmers who were entitled to credit could get it from them and pointing to their very substantial losses as proof that perhaps an excess of credits had been granted. No one will deny that the aggregate of loans given to farmers throughout the West within, say, the last ten years by the banks runs into large figures and that the losses have been great; but the lesson from this is that our banks are not equipped to attend to this business of giving rural credit and make a bad job of it, both from the point of view of their own interests and with respect to the interests of the farmers. Commercial bankers are not, in most cases, competent to determine the extent and character of credit that should be given for farm operations. Also countless farmers have been ruined by being given credit and having it called in the middle of the farming operations which were intended to produce the money to pay the debt, under peremptory arbitrary orders sent out broadcast from a head office in Montreal or Toronto. No system of banking based upon a ninety-day turnover with renewals dependent upon conditions over which the borrower has no measure of control, is fitted to supply short term credits for farm purposes. These credits need to run from nine months for ordinary farm operations to three years for the growing of live stock. Commercial banks cannot be relied upon to give these credits; and they should be retired from the job and the task of financing agriculture given to other agencies.

Nearly everyone who knows anything about financing farming realizes that a three months' loan is not of any use, and if the credit given to the farmer is going to be cut off at a critical period, he is going to be put out of business altogether.

In conclusion, I may say that this budget does not go far enough on the road I would like to see Canada travel, but I have consulted with some of my constituents and they are of the same opinion as I am, that it is moving in the right direction, and is only a forerunner of better things to come in the not very far distant future. Therefore I will have much pleasure in voting for the budget.

Mr. AIME BOUCHER (Yamaska) (Translation): Mr. Speaker, ever since my entering this House, I have anxiously been awaiting the budget which is, at present, under consideration. I am, therefore, pleased to congratulate the hon. Acting Minister of Finance (Mr. Robb) for having prepared and delivered such a budget, confident, as I am, that it conforms to the true Liberal principles as I have understood them heretofore and that it will be beneficial to the whole community.

I am astonished, Sir, to hear members who occupy seats on your right, in small number it is true, but whose talents and sincerity cannot be questioned, contending that the budget does not conform to the programme traced by the great leader who, during twenty five years, presided with so much glory and dignity over the destinies of the Liberal party. I am astonished, for if the contention of these hon. members is well founded, I am forced to confess that I have not understood anything of the political history of this country, and that I have preached, during the two electoral campaigns which I made, a gospel which does not conform to the teachings of my leaders. However, I know that I have not been a heretic and this I can prove very conclusively by Sir Wilfrid Laurier's public statement to the Canadian people, in 1917:

Should the people entrust me with the administration of the country, I would make it a point to immediately unburden the farmer of all vexatious custom duties. . . .

I would immediately abolish the duties on farm implements and other necessities with reference to farming as requested by the western people. And, I would consider as an essential duty of my administration a general and thorough revision of the tariff aiming at encouraging production in Canada and relieving the Canadian consumer.

Is there any need of further proof? The extract which I have just quoted is a distinct, certain and absolute pledge, and, this pledge does not stand alone; all Sir Wilfrid Laurier's speeches contain similar ones; the whole of his life, his policy has had for its aim the lowering of duties in order to help the consumer, and it is thus the people understand it. It is especially in that spirit that his opponents understood it, when in 1896, playing the part of birds of ill omen, they spread all over, proclaiming to the people that the return of the Liberal party to power would mean the ruin of our industries and the closing of the doors of our factories.

False prophecies! Wrong conjectures! On June 23, 1896, the Liberal party assumed power, in spite of these inauspicious prophecies, and, what happened? The factory did not close its doors, bankruptcy did not appear on the threshold of ruined industry; on the contrary, the wheels of industry moved more rapidly and powerfully, the chimneys belched out greater volumes of smoke and the country experienced an era of prosperity, such as it had never enjoyed previously, and which all agree to look back to as "the golden age of Canada."

What was, Sir, the reciprocity pact as to natural products put before the Canadian people, in 1911, if not a measure destined to favour the consumer, and especially to open up for the farmer, a market having behind it a population of 100,000,000, without gainsay, the most advantageous in the world, which, at present, is unfortunately closed to our farmer by the high tariff wall which the United States have erected? What opposition did this project so advantageous to the farmer and consumer, meet in the country, this project that had been the cherished aim of Canadian statesmen for a great number of years, and which the neighbouring republic had finally accepted? By whom and by what means was it fought by the same gentlemen who, to-day, oppose the Liberal party; by launching a wild campaign where cries of treachery and disloyalty filled the air by flaunting in our faces the phantom of annexation—Tory tactics, always using the same means. It is thus that Canada was deprived of one of the most precious advantages from an economic standpoint, and for which it may have to wait again many long years for its return.

In the course of the last two sessions, Sir, I have heard the members of the Opposition together with their leader, state and proclaim that the government has no policy, that it lacks sincerity and that it does not put into practice the principles expounded in its programme. And when the opportunity presents itself for the government to bring down in the House a budget, which although it is not the realization of the whole of its policy, yet is an important plank in its programme, we witness a repetition of what took place in 1896. There are still birds of ill omen which cry out the ruin of our industries, the closing of our factory doors, but not one of them has the courage to rise in this House to tell us: At least we admire you for keeping your word and we give you credit for your actions.

The seat which I occupy in this House, was not won by misrepresentations. During the two elections which I went through, one of which made quite a stir throughout the country, I came forward as a straight Liberal and I can state that the present budget is absolutely in keeping with the policy which I proclaimed and that I pledged myself to carry out. I consider that in public life as well as in private life, the first duty of an honourable man is to keep his word, and I am glad that the government offers me, to-day, the opportunity of fulfilling the pledge which I took towards the electors of my county, by voting for a budget framed with the ideals set forth in the one at present submitted to us.

From the outset of the debate on the budget, Sir, I have listened with much interest, either from one side or the other, to the expounding of two old principles which have used up much ink and brought on much discussion—protection and free trade. Let me make, what I may call, a statement of principles and define clearly my position. I think that such discussions are rather useless and do not shed much light on the problem to be solved. I do not favour a system of high protection which is countenanced apparently by a class of producers to the detriment of the consumer; neither do I believe in complete free trade which under the present circumstances, strikes me as an impossibility. I do not place much faith in these two political schools which belong to the past and whose methods are no more in keeping with the new conditions that have cropped up in the world since the general upheaval brought on by the greatest war of all times. A new epoch is at hand; blind is the one who is not aware of it. The economic axis, the social axis have shifted; yesterday differs from to-day. A new spirit is born; new needs exist, to which the statesman must adapt himself. In the economic sphere, in the scientific world, enormous progress has taken place within the last few years, which we must reckon with and I think it is impossible to tread the old beaten paths. It may be said

of economic systems, as well as of philosophical ones, that they are beneficial only in a fragmentary way. What suits a country at a given period, may certainly not suit it at another period of its development.

The nation whose legislators pass their time in discussing the old decrepit systems of protection and free trade runs the risk of remaining a long time stuck in the mire.

I have faith in a business-like tariff, aiming at giving all classes of society an equal share of justice and disturbing, the least possible, objects of general consumption and of first necessity I am in favour of continuing to give to the manufacturing industries the just share of protection to which they are entitled to develop and prosper, and I would be the last person to hinder the progress of these industries.

However, there exists in this country another industry, to my mind, far more important than the manufacturing industry upon whose success depends the prosperity of all the others, it has a working capital estimated at $6,500,000,000, and, its tillers, men, women and children represent 50 per cent of the population; they are the most peaceful the most law-abiding, the most industrious, the most worthy class from every standpoint, and yet this industry is in danger, it totters under the burden and is sadly going to ruin. I should like to see the farming industry receive the same protection, although by different means perhaps, as other industries in Canada. We have often heard, Sir, the contentions of the Western farmers in the course of the last two sessions; those of the East, although less clamorous, more discreet, are not the less afflicted and worthy of sympathy. This is a problem necessitating a solution. Canada will never be prosperous if farming lingers and dies. There still exists a marked unrest; one must realize it fully. I cannot say that the agricultural crisis which is being felt in this country, in the East as well as in the West, has received from the legislator all the consideration which its importance demands. How many members of this House still doubt that farming is in a critical stage? How many look upon the farmers as grumblers, extravagant people, impossible to satisfy? Nevertheless, it is an undeniable fact that, outside of a certain area around large towns, the farms do not pay for their upkeep. What would happen if the manufacturing industries found themselves in such an impasse? The powerful influence exerted by the manufacturers would be set in motion, parliament would be taken by storm, and no one doubts that in a very short while legislation would be enacted to remedy that state of things. The reason is that the manufacturing industry is organized, it possesses all the necessary means to protect its interests; the factory worker by slow progress, acquired through hardships, has also founded for himself an organization; he wields a powerful sword to have his wrongs redressed—strikes—and capital must reckon with him. The tiller of the soil, the man on the land is left to his own initiative. The farming industry lacks all those means and it should receive from the state the protection which is due to it so as to expand, develop and flourish. I think, Sir, that the farmer, the manufacturer and the artisan should make reciprocal concessions to one another. If I had to appeal to the natural impulse of the Canadian manufacturer, I feel confident that this appeal would bear its fruit. I shall simply point out where his interest lies, and may I tell him this: The farming class represents 50 per cent of the consumers of this country; they, therefore, constitute the half of your best clients. If you want them to buy your products, give them the purchasing power. The country trader complains of the lack of business, that sales are on the decrease; the wholesale merchant does less business with the retailer and the manufacturer will soon find himself obliged to reduce his output. Does the fault lie in the lack of protection? No, it is not for lack of protection, but because the most important class of society, owing to its numbers, the farming class, has lost its purchasing power. Change this state of things, make the agricultural industry prosperous and immediately a reaction takes place in all branches of industry. This argument seems to me self-evident. I am, therefore, right in stating, Sir, that the manufacturer should relinquish his selfish plans and accept with an open mind all measures of a nature to relieve from taxation the tiller of the soil so as to re-establish agriculture on a solid basis and give it a chance to rise and develop on an equal footing with other Canadian branches of industry.

To obtain this result, it is not enough to merely give advices to the farmer, the wisdom and seasonableness of which may be questionable. Advices are a good thing, no doubt, but it is the easiest thing in the world to give. To obtain such a result we must, first, do away as much as possible with taxation on instruments of production and the articles of first necessity. This is the present policy of the government and I want to heartily congratulate them. Secondly, we

must unburden ourselves of the public debt by means of the most rigid and strict economy. I wish to add, Sir, that I am a most determined partisan of economy in the administration of public affairs. I wish to give credit to the government for having suppressed this year, important amounts which were in the past uselessly spent, and I hope that it is just a beginning and that they will carry further this economy; for whoever in this House is observant in the slightest degree will readily notice that there is yearly not thousands but millions of dollars, which are squandered without any benefit accruing to the country. I strongly urge upon the government the advisability of carrying out this economic policy which the people demand and have a right to claim, and, I can predict to them that no one will be more welcome on election day. No doubt, there are other means which I do not intend to suggest; however, I think that we must not fear to depart from the trodden path and seek new remedies to meet new conditions. The legislator will not have fulfilled his duty towards the farming class if he does not give to the solution of this problem a special and continuous consideration. I am fully aware that the difficulties are numerous, but it behooves the statesman worthy of that name to rise to the level of such difficulties and solve them in a just manner. This problem must be solved by the party who constituted themselves the defenders of the people and the protectors of the weak, the champions of all the great causes, and who are actuated by the principles of equal justice and protection for all classes. I feel certain, Sir, it behooves the Liberal party to solve it.

Mr. H. C. HOCKEN (West Toronto): Mr. Speaker, before proceeding to make a few remarks upon the budget, I should like to associate myself with my colleagues from Toronto in presenting to the government a plea for an appropriation to begin the work of elevating the railway tracks across the water front of the city of Toronto. That may not interest some members of this House; but the request for that appropriation rests upon an agreement made between the two railways and the city. The government has now assumed the responsibilities of one of those railways. The other one—the Canadian Pacific—says it is willing to go on with the work; and all that is required is for the government of the day to make an appropriation sufficient to begin the work. In connection with this matter, there are two or three facts that I should like to lay before the House. In the first place, this is the most dangerous series of level crossings in the Dominion of Canada, and with regard to two of them, I think I might say, the most dangerous on the continent of North America. On holidays, and sometimes on Saturdays, as many as 100,000 people are compelled to cross twelve tracks to reach the water front, in order to enjoy the benefits of a city park across the bay. Those 100,000 people have to cross those tracks while trains are running up and down, east and west continually. What adds to the danger of that crossing is the fact that the coach yard of the Canadian Pacific lies to the south of the train shed of the Union station. Every passenger train that is made up by the Canadian Pacific must run out of the coach yard over those crossings and back over them again to the station before the train can start. Every train that comes in and is broken up has to go through the same performance. In addition to that, every train not only passenger, but freight, that comes from the east and every train that goes to the east has to use those tracks. Hon. members will see, therefore, that I am justified in describing this as the most dangerous level crossing on the continent of North America. The people who cross those tracks are very largely women with children,—Sunday school picnics where thousands cross to Island park at one time. That situation has been recognized as dangerous by the city and by the authorities for a long time. In the latter part of 1912, the city submitted to the railways a plan for the elevation of the tracks from the station to Cherry street, or further east to Logan avenue. The railways took the plan submitted by the city and they said to us: "It is not a good plan; it is not big enough. Our engineers have prepared a plan which is a great deal better than yours, and if you will take this, we will agree to it." The plan submitted by the railways increased the cost, as nearly as I can recall, about thirty per cent. It may have been thought at the time that the city would not be prepared to share the additional expenditure. The city authorities, however, at that time accepted the situation as presented by the railways. They agreed to pay their share of the more costly work. And from that day to this, nothing has been done. I appreciate the fact that during the war expenditures of that kind should not have been incurred; but to-day we are some distance from the war. Heavy expenditures are being made in other parts of the country, and surely for the protection of the lives of hundreds of thousands of people of the city of Toronto, some expenditure should be made

in order to remove the dangers of those crossings. Therefore, with as much energy as I possess, I press upon the government that an appropriation should be made this year for the beginning of that work which it will take some time to complete.

In the few remarks that I have to make upon the budget, I am not going to give any figures. The House has been surfeited with statistics which have been used to prove contradictory statements. I have no inclination in that direction, anyway. The way in which the Acting Minister of Finance (Mr. Robb) figures out a surplus simply by ignoring a bond issue of $50,000,000 reminds me of the fact that, as far back as I can remember, our provincial government in Ontario and this government, no matter which party was in power, claimed surpluses which existed by reason of juggling of figures. I do not think the people are impressed with that, and they are inclined to believe that a surplus produced by this kind of figuring indicates simply insincerity upon the part of those who are guilty of it.

For a portion of my remarks, I want to take my text from the gospel according to the hon. member for Brome (Mr. McMaster). He told us in his address the other day that one thing that has destroyed parliamentary government in some countries, and that has depreciated its prestige in others, has been the insincerity of public men. He continued:

> I believe that the people of Canada are sick and tired of men who advocate policies in which they do not believe, who advocate one thing at one time and another at another time.

The hon. member for Brome evidently had in mind the present administration. So fully convinced is he of the insincerity of the government that in order to preserve his self-respect he was compelled last session to cross the floor of the House and to take a position of complete isolation.

I entirely agree with the hon. member for Brome when he emphasizes the value of sincerity on the part of public men, of parties, and of governments. There is a spiritual quality in sincerity that makes the possession of it inescapable to the man of ordinary intelligence; and it is just as difficult to hide insincerity as it is to obscure sincerity. I submit therefore that if there is any one thing which a man going into public life should cultivate it is sincerity. People will forgive all kinds of mistakes in their public men, and they will respect their opinions no matter how much they may differ from them. But they will not tolerate for any length of time any insincerity on the part of their representatives either in this House or in any other representative assembly. I am going to try to prove—and I do not think it will be a difficult task—that for insincerity the present administration outclasses anything we have ever had in the history of Canada. They have attempted to overlay their unreliability with an appearance of sincerity, but in that they will not succeed.

Let me go back to the platform of 1919, when the Liberal party in solemn conclave adopted a plank practically of free trade, or at least one looking towards the continuous lowering of duties until free trade should be approximated. That was done, of course, as an appeal to the free trade party in Canada. And there are a good many men in the different provinces who believe in free trade. At any rate, the purpose of that plank was quite evident to the people. Well, when the time of the general election came along in 1921, instead of standing squarely on that plank of the platform, men representing the party at present in power gave secret promises to the business interests of the country that there would be no lowering of duties. In that act they proved their insincerity as a party. They had publicly declared their intention of reducing the duties, but they went behind the backs of the masses of the people to the business and financial interests of the country and said, "We will not do anything of the kind."

Now we have the hon. member for St. Lawrence-St. George (Mr. Marler) telling us in his address that he had the consent of Liberal leaders of repute to take a position on the tariff policy altogether different from that enunciated in the platform of 1919. And that hon. member has declared in this House also that his action was confirmed by the utterances of his leaders in the province of Quebec. He came into the House understanding that the tariff plank in the platform of 1919 was designed for the purpose of getting in upon but was not intended to be carried out and applied in the management of the public affairs of the country. He came in under misrepresentations. Now he has been convinced by the present budget that the Liberal platform of 1919 in regard to the tariff is after all to be carried out. And not only that, but the concessions which have been made to-day by the present budget are only a beginning in the direction of considerably lower duties. I submit that in this declaration of policy in the platform of 1919, and in the promises and the pledges which the party opposite made behind the backs of the people, the insincerity of the government is amply established. But we can go further than that. As the Liberal leaders, according to the hon. member for St. Lawrence-St.

George, gave these pledges that they would not reduce the duties, so in the first two sessions of the present parliament they implemented the promises they had made. They carried out the undertaking given to the business interests of Canada for the first two sessions. But now, in the third session, finding themselves in a minority, and having a desire to cling to office no matter what kind of violation of pledges is required, no matter how clearly they may betray their insincerity, they proceed to carry out the tariff plank of 1919. For two sessions the government adhered to the secret understanding which they had had with the manufacturers of the country, and they adhered to it so closely that hon. gentlemen to my left, the Progressives, found it necessary last year to introduce an amendment to the budget. And the hon. member for Brome was forced, by his conscience I suppose, to cross the floor of the House into a place of opposition. This year, I say, after having observed the secret understanding with the manufacturers for two sessions, the government, driven into a corner, proceeds to carry out the tariff plank of the 1919 platform and has brought down a budget which in itself, and in the method by which the duties are to be reduced, is an act of insincerity almost without parallel, as I shall endeavour to show.

In order to secure the support of the agrarian group in the House the government, apparently, a short time before the session opened, discussed the matter with at least leaders of that party and then came into the House, first with a Speech from the Throne that threatened reductions in the duties, and then with a budget making good that threat. By that action they have secured the support of the Progressives. They have reduced the duties on agricultural implements and implements of production, and then they proceed to bonus the industries that manufacture those implements, while reducing the duty 4 per cent or thereabouts, they hand to the agricultural implement industries concessions which carry more protection for these industries than they enjoyed before. I say that is an act of duplicity towards the manufacturing interests of the country. The government having reduced the duties on implements, hand over to the manufacturers a bonus of 5 per cent from the public treasury; for the removal of the sales tax is equal to a bonus of 5 per cent. And they give these industries their raw materials free, which is another concession the exact percentage of which I have not been able to calculate. Then, according to the Minister of Agriculture (Mr. Motherwell), they are going to put into effect freight rates for the benefit of agricultural implement makers which will amount to another 3 per cent. So that, to sum up, the government has reduced the tariff by 4 per cent, and has handed to the manufacturers concessions equal to about 8 per cent entirely in addition to the advantages they will derive from free raw materials.

A more devious method of reducing duties could hardly be devised. On the surface, they have reduced the duties on implements, as a matter of fact, the burden of that reduction has been placed entirely upon the steel and other industries that provide the raw material for the implement manufacturers. I ask hon. members in all seriousness: If it is fair and just to levy a 5 per cent sales tax on our industries generally, why should the agricultural implement industry be exempt? Are there not other industries just as deserving of consideration as this favoured industry? If the principle is right, if it is fair to levy a 5 per cent sales tax on the lumber industry, which is one of the most important of our industries, so that the cost of all building construction is increased to that extent, is it not equally as fair to reduce this cost for the benefit of the people generally as it is to reduce the price of agricultural implements for the benefit of a small percentage of the people? But I submit, Sir, that it is repugnant to sound principles of legislation that certain classes of business should be relieved of imposts, the burden of which has to be borne by others. No government can afford to play favourites in respect to the tariff, the levying of the sales tax, and the granting of preferential freight rates.

In my opinion, Sir, from the beginning to the end this interference with the tariff has demonstrated the insincerity of the government. First we had a declaration for lower duties, then the secret promises that those duties would not be lowered, then the violation of those promises, followed by the lowering of the duties and putting the whole burden on an entirely different industry. If that is not a proceeding unique in the political history of this country, then I have not followed it correctly.

Mr. SPENCER: Did I understand the hon. gentleman to say there had been secret promises given that the tariff duties would not be lowered?

Mr. HOCKEN: Yes, sir.

Mr. SPENCER: Will my hon. friend kindly specify those secret promises?

Mr. HOCKEN: We had a statement to this effect from the hon. member for the St. Lawrence-St. George division (Mr. Marler). Perhaps I had better give the statement to my hon. friend again, and then add some others for his information. The hon. member for St. Lawrence-St. George is a responsible member of this House, and this is what he said as I have copied his remarks from Hansard:

He had the consent of Liberal leaders of repute to take a position on the tariff policy altogether different from that which was enunciated in the platform of 1919. He declared that his action was confirmed by the utterances of his leaders in the province of Quebec.

If my hon. friend wants some further evidence let me quote from the French newspaper La Minerve, as it appeared in the Montreal Gazette of April 23rd last.

Mr. MACDONALD (Pictou): Does La Minerve support this government?

Mr. HOCKEN: I am assuming that the paper tells the truth.

Mr. MACDONALD (Pictou): I think it is a paper very close to my hon. friend and his party.

Sir HENRY DRAYTON: Then it is more likely to be truthful.

Mr. HOCKEN: I am going to read what the newspaper says, because its statements are very definite. This is the article:

The King government is finally deciding to throw aside the mask and reveal its true traits underneath —those of a sworn enemy to the tariff policy inaugurated by Macdonald and followed next by Laurier, the national policy of protection. It does not hesitate to betray the formal promises made to the electorate of this province in the course of the 1921 campaign, by Sir Lomer Gouin and the other Liberal leaders. It no longer hesitates to repudiate the solemn assurances of tariff stability given at the last session by Sir Lomer Gouin and Mr. Fielding. Laurier dead, Sir Lomer absent, Mr. Fielding sick, free trade comes up on the bill as the first article of the Liberal programme, while protection, on the contrary, becomes the enemy to be fought, whose head must be cut off, trampled under foot, and the rest scattered to the four winds of heaven. Since those who should serve it, betray it, it is necessary that the Canadian people take a hand in its own defence, as it did in 1878, and as it did in 1911. The older ones have not forgotten "the terrible years" which marked, fifty years ago, the first trial of free trade.

Mr. MACDONALD (Pictou): Does my hon. friend think this extract from a strong Tory paper like La Minerve is any evidence on the subject which he is discussing?

Mr. HOCKEN: I offer it as confirmation of a statement by a very prominent member of the Liberal party in this House, a man who entered parliament with the expectation on the part of a great many people that he would become finance minister.

Mr. MACDONALD (Pictou): Who told you that?

Mr. HOCKEN: That was the current report in the lobbies.

Mr. CASGRAIN: Not the best source of information.

Mr. HOCKEN: However, the Minister of National Defence (Mr. Macdonald) will not deny that the hon. member in question is a prominent Liberal member.

Mr. MACDONALD (Pictou): You were talking about whether he was going to be Minister of Finance.

Mr. HOCKEN: I said he was reported to be training for the post.

Mr. MACDONALD (Pictou): Training?

Mr. HOCKEN: Not now.

Mr. MARTELL: Will my hon. friend tell us what the Orange Sentinel said?

Sir HENRY DRAYTON: That also would be accurate.

Mr. HOCKEN: My hon. friend can depend on this. Mr. Speaker, that whatever the Sentinel says is the truth, although the paper has not yet dealt with this particular question.

Mr. MARTELL: Truth according to the hon. member.

Mr. HOCKEN: Truth according to the truth.

Mr. MARTELL: That is, according to the hon. member.

Mr. HOCKEN: Not according to the Nova Scotia idea of truth.

Mr. MARTELL: Truth according to the quintessence of hypocrisy.

Sir. HENRY DRAYTON: He does not mean that.

Mr. HOCKEN: I do not think he means anything.

Mr. MARTELL: He would not expect to take the hon. gentleman seriously.

Mr. HOCKEN: I do not know, Mr. Speaker, whether anyone takes the hon. member across the way seriously. We find him butting in on every debate and interrupting with irrelevant remarks every speech that is made on this side of the House.

Mr. MARTELL: Because it is all nonsense.

Mr. HOCKEN: If there is any member who should not be regarded seriously in this House I think it is the hon. gentleman himself. This statement may be by a Conservative paper, but no paper would dare to go as far as it has gone and mention the names of men who gave those secret assurances if it had not sufficient ground to warrant its assertions. Besides, the article confirms the statement made by the hon. member for St. Lawrence-St. George.

Mr. GUTHRIE: And the hon. member for Brantford (Mr. Raymond).

Mr. HOCKEN: Yes, and the hon. member for Brantford too. I have another quotation from a paper published at Three Rivers, Le Nouvelliste. I do not know whether it is a Conservative paper or not. However, it says:

> The present budget is like a finger placed in the wheel. The act is always exceedingly dangerous. If the whole arm is not drawn in, there is the risk of leaving at least a part of the skin. What will be the result of this new orientation? It will please the Progressives as much as it will displease the protectionists, not only the Conservatives, but the Liberals also. It outlines in advance the ground on which the next political battle will be fought. The immediate result is that it will increase the uneasiness from which a number of our industries already suffer. The workman who finds his source of livelihood in the work which the industries provide for him will not be the last to resent the reaction. Then there will be the farmer producer, of whom the workman, in the role of consumer, is the client. His buying power being further reduced, the workman will consume less of the farm products.

That is the opinion, evidently, that prevails in the province of Quebec—that this budget is a desertion of the Laurier policy. I am not surprised at the business men of the province of Quebec accepting the representations made to them, as was stated by Le Nouvelliste, giving the name of Sir Wilfrid Laurier. These same men, Mr. Speaker, had received similar pledges and promises from Sir Wilfrid Laurier years back. In 1896 assurances were given to the manufacturing interests of this country that they were in no danger from the lowering of the tariff. They acted upon that; they took Sir Wilfrid Laurier at his word. Sir Wilfrid was a man of his word and he carried out the undertakings that were given at that time. Naturally these same men or their successors in the industries of the country would suppose that similar assurances given at this time would be similarly carried out, but they quickly discovered that they had a different set of men to deal with.

I stated, Mr. Speaker, that while the duties have been reduced on agricultural implements, the agricultural implement manufacturers are not the ones to suffer; the burden has been placed upon others. I want to read a paragraph from an interview given by the secretary treasurer of the Steel Company of Canada, located at Hamilton. He says:

> Our industry is absolutely dependent upon an adequate protective tariff. In the past we have sold the International Harvester Company as much as $3,000,000 or $4,000,000 worth in one year. It seems to me as if the government has made a butt of the steel and iron industry. The budget certainly strikes us hard. Under the conditions imposed upon us by the budget I don't see how we can hope to compete with the United States.

So the relief to the farmer is a reduction of duties on implements, and the implement manufacturer is relieved by the handing of this burden over to the steel maker—the whole thing done in such a way as, I am sure, will convince the people of the country of the insincerity of the government.

But the worst feature of this budget, as I see it, is the widespread unrest that it has caused throughout the country. No manufacturer in Canada feels so sure of the immediate future that he would invest $10,000 in any enterprise at this time. These men have been living on their reserves for the last three years, and in many cases those reserves are exhausted, they certainly cannot hang out much longer. This threat of the "death knell of protection" has put all our manufacturers and many of our business men who are not manufacturers, in such a position that they are afraid to make any investments, afraid to make any expansion of their business, and they are retrenching in every possible way. Could any other result have occurred than an exodus from the country such as is now going on, and has been going on almost ever since this government got into power? If you go to the Detroit river you find the ferry boats crowded with Canadians who are going over to work in the United States, the trains are filled with the settlers' effects of Canadians who have gone to that country, to reside permanently. This exodus is not going to be stopped by lowering duties, by putting the manufacturers of Canada in such a position that they are afraid to make any extensions and are forced to retrench.

5 p.m.

That it is the intention of the government to continue the lowering of duties until we get approximately free trade must be taken, I think, as an accepted fact. The Minister of the Interior (Mr. Stewart) read a carefully prepared memorandum which must be accepted as a declaration of government policy. While it is unnecessary to follow his remarks

in detail, one phrase he used stands out with great vividness, namely, that the "death knell of protection" had been sounded.

Mr. SPENCER: Hear, hear.

Mr. HOCKEN: My hon. friend says, "hear, hear." What do hon. gentlemen to my left care whether the people of Toronto or of the county of York—as the hon. member for Peel (Mr. Charters) pointed out the other night, having as many people as there are in the whole province of Alberta—what do they care whether they drive those people over to the United States? What does my hon. friend care as long as he can save $5 this year on his implements? That kind of spirit will never build up a great country, you must have something different from that.

The hon. member for Brome (Mr. McMaster) spoke of protection as an appetite. Well, I would describe free trade as a delusion. My hon. friend will know how futile it is to argue with the man who is suffering from a delusion; in fact, when he reaches a certain point he is put under restraint. A man who is deluded with the theory of free trade is just about as hopeless to argue with as a child who knows nothing about it.

Mr. WARNER: I would like to ask a question. Does my hon. friend think that the Massey-Harris Company is under a delusion?

Sir HENRY DRAYTON: They are under a bonus.

Mr. HOCKEN: Not at all; I thought I had made it plain to my hon. friend that while this budget ostensibly hits at companies such as these, it increases their protection. It relieves them of the 5 per cent sales tax. It give them the benefit of 3 per cent in freight rates.

Mr. CAMPBELL: Will the hon. gentleman tell us if he is complaining about—

Mr. HOCKEN: Just a moment; one at a time. It gives them 3 per cent advantage in freight rates; it gives them their raw material free. Their protection, I should think, would be at least 30 or 40 per cent more than it was before the budget came down, but the burden is carried by other industries which have to rest more or less upon the implement industry.

Mr. FORKE: It may be an advantage, but it is not protection.

Sir HENRY DRAYTON: It is privilege.

Mr. FORKE: It is not protection.

Mr. HOCKEN: I do not care what you call it; it is a concession that enables the Massey-Harris Company to make more money under this budget than they made under the previous budget. Call it anything you like, but if that is not protecting industry then I do not know how to do it.

I will tell you how it came about that the western men got this free trade bug into their heads. For a good many years the Grain Growers' Guide talked free trade. The farmers of the West—the grain growers' organization, of course—grew up; they started a great weekly paper, and that paper talked free trade, free trade, free trade, to the people of the West day in and day out. The people never heard the other side of the argument. Nobody ever said to them that it was better to have a moderate tariff to build up industries, to have diversified industry in this country, than to try to make the whole country rest upon the agricultural industry. Nobody ever went that far, and by the propaganda carried on by the Grain Growers' Guide the people of the three prairie provinces have got it into their heads that no matter what the government does the only thing that will help them is free trade. A greater fallacy could not possibly exist. If free trade were inaugurated in this country tomorrow I am perfectly satisfied that those who would ultimately suffer the most would be the farmers of the western prairies. This is the way it would work out: In the first place, the industries of Canada would be destroyed and then they would be at the mercy of the great trusts of the United States, and those great trusts might be under some restraint by their own government, but could not be restrained by the Canadian government.

Mr. FORKE: I am not objecting to the hon. member's argument so much as to his statement as to the ignorance of the people in the prairie west.

Mr. HOCKEN: I think the hon. gentleman is hardly fair in saying that I called them ignorant.

Mr. FORKE: You said they read nothing but the Grain Growers' Guide.

Mr. HOCKEN: I say they never hear the other side of the story, and in my judgment the manufacturers of this country are to blame for that, for while the people of the West are being fed free trade there should have been some antidote administered to keep their minds from being poisoned. It

would have been much to their own advantage.

Now Mr. Speaker, I venture to make this assertion: There is no nation in the world to-day that is great, and no nation can become great, without a policy of protection to build it up. There is no great nation in the world to-day that has not got a protective policy except Great Britain, and Great Britain established its industrial pre-eminence through protection.

Mr. FORKE: That has been repeated time and again.

Mr. HOCKEN: But it seems necessary to repeat it to get it through the thick head of my hon. friend from Brandon.

Mr. FORKE: Hear, hear.

Mr. HOCKEN: There is only one way to get an opening into some people's brain, and that is with a hammer.

Mr. HOEY: Repetition does not necessarily make it true.

Mr. HOCKEN: No, but I am asserting it because it is true. If my hon. friend will go back to the time when industries did not flourish in Great Britain, he will find that at one time immense quantities of wool were grown in England. England at that time was a wool exporting country. It sent the wool to Flanders, where it was made into cloth, and then it was shipped back to England and bought at high prices by the English people. After a while the English people woke up and said: Why cannot we make this cloth ourselves? And they put an export duty on wool and stopped the wool going over to Flanders, and the result of that was that they established weaving industries all over England. The English people began making their own cloth, and from cloth they went on to cotton, and from one thing to another until England became the greatest industrial nation in the world. But all that rested upon a policy of protection in the first place. And that is what made the United States great also. You have not got to go very far back in their history, to the time of the Civil War only, when the United States was the greatest customer the British industries had. But after that time the United States established a policy of protection, and the exports from England to the United States have been falling off ever since and the United States has been growing in population and wealth. So I contend, Mr. Speaker, that this country which has such enormous natural resources ought to adopt a trade policy that will enable us to sell our finished product. Providence has endowed us probably to a greater extent than any other country in the world with great natural resources, and in some particulars Providence has given us a monopoly. We have all that is necessary to make this a great country both in population and in wealth, but in order to do that we must have diversified industries established in the fitting sections of this country, in order to provide employment for the artisans who will work in our factories.

I said before, Mr. Speaker, and I repeat now, that if our friends in western Canada have sufficient patriotism and are willing to assist in making Canada the great country that it is capable of being made, they should accept a moderate protective tariff, or as my hon. friend from St. Lawrence-St. George (Mr. Marler) calls it a cost of living tariff, a tariff not high enough to secure excessive profits to the manufacturer, but a tariff high enough to secure employment to the artisans of this country. If our friends were reasonable enough to accept that they would find—and even without showing any willingness to accept that, they are finding now—that the eastern provinces of Canada, both through their business men and through their representatives in this House, are ready to do everything that can be suggested to add to the prosperity of the western provinces.

Mr. WARNER: I would like to ask my hon. friend why protection has not done in the last forty or fifty years what he claims it is going to do now?

Mr. HOCKEN: Well, we have nine millions of people and our friends over the border have one hundred and fifteen millions. They are able to engage in mass production that is impossible in Canada, and it is quite impossible that this country could have been built up to the point where it could adopt free trade against the high tariff of the United States in the short period we have had to develop our industries. That is my answer to my hon. friend whether he will think it sufficient or not.

Mr. WARNER: Will protection create more people and more wants?

Mr. HOCKEN: I can tell my hon. friend this: When the protective policy was established in this country, the city of Montreal had about 250,000 people or less; to-day it has about 800,000 people. The city of Toronto had less than 100,000 people and to-day it has almost 600,000 people.

Mr. FANSHER: I would like to ask my hon. friend how much the rural population of Ontario has been depleted in the last twenty years to help build up Toronto.

Mr. HOCKEN: I think those members who come from western Canada ought to be able to answer that question better than I.

Mr. FORKE: The hon. member knows that the population of Toronto increased last year.

Mr. HOCKEN: I was answering the other hon. member. I say that if the rural population of Ontario has decreased, it has been for the benefit of the West. There are tens of thousands of Canadians in western Canada who were born in the province of Ontario and have gone out West to take up land there.

Mr. FORKE: I would draw the hon. member's attention to the fact that while he speaks of the depletion of the population of Canada and the exodus to the United States, the population of Toronto increased very much during the last year, so Toronto cannot be such a bad place to live in, notwithstanding all the hard tales we hear.

Mr. HOCKEN: We have the figures for last year which show there was a slight increase in the population of the city of Toronto but it was stated at a Rotary Club dinner in Toronto the other day by a responsible man that there are 7,000 vacant houses and apartments in the city of Toronto to-day. That will indicate to my hon. friend the extent of the exodus that has taken place from the city of Toronto since the last returns have been compiled, which would be April or March of last year.

Mr. FANSHER: Where did they go?

Mr. HOCKEN: Largely to the United States.

Mr. FANSHER: Why are they not patriotic like the agrarian citizens; why do they not go to our own Canadian West?

Mr. HOCKEN: I understand from what my hon. friends have said, that the patriotic citizens of the West are going over to the United States too. Have we not heard some calamity howling from that part of the House about the exodus of farmers from the West to the United States, of men who had abandoned their farms and their homes and left their debts to somebody else, and gone over to the United States?

Mr. WARNER: I do not think protection has helped them.

Mr. HOCKEN: Certainly free trade is not going to help populate the country. When you consider the decrease in the rural population it must be remembered—

Mr. FORKE: Keep in mind that we are not saying anything about the citizens of Toronto, not in the way in which you speak of the people of the prairie provinces. We never find any fault with the citizens of Toronto, about the way they live and what they are doing.

Mr. HOCKEN: I am not finding fault with the people of the West. I say they have a wrong idea of the tariff.

Mr. FORKE: We hear day by day of the blunders and mistakes and the foolishness of the West.

Mr. HOCKEN: There may be some reflections once in a while upon the members from the West, but I do not think I am guilty. It is only necessary to say one word about Toronto, and from this side of the House and the other side of the House we hear—

Mr. FORKE: No, no, no.

Mr. HOCKEN: Yes, yes, yes, over and over again.

Mr. FORKE: I deny it.

Mr. HOCKEN: We hear the expression "Oh, that is Toronto." That is the kind of stuff we get and we get a great deal more of it than others get from the city of Toronto.

Mr. FORKE: I defy the hon. member to find anything in my speeches in this House directed against Toronto.

Mr. HOCKEN: I concede that, but there are other members to my left besides the hon. leader of the Progressives.

Sir HENRY DRAYTON: They are all free members.

Mr. HOCKEN: When I was interrupted I was proceeding to point out to the members from the West what this House is doing for the West. What is eastern Canada, which is well represented here, doing for the West? In the first place, we voted $28,000,000 for branch lines, the greater number of them to be built in the western provinces, and I venture to say before they are completed the expenditure will run over $50,000,000.

Mr. SPENCER: Do you begrudge the building of these railways?

Mr. HOCKEN: No, I do not. My hon. friends are hypercritical. I am not begrudging them. I say that is what we have agreed to do for the West. If the hon. members of this House begrudged the expenditure they would not pass the measure.

Mr. SPENCER: Do you begrudge it?

Mr. HOCKEN: No, I do not begrudge it either. The people of eastern Canada are anxious to do everything to promote the prosperity of western Canada, and as evidence of that I offer the fact that this House voted $28,000,000 for the construction of branch lines on the prairies, to bring every farmer as close to a railway as he could get. That is only one thing. Money was voted last year, and more will be voted if it can be shown to be required, for an exit for the produce of the West by the port of Vancouver which is being developed. Two million dollars was voted last year for the construction of an elevator in that city, and this House will do more than that to give the prairies another outlet for their grain. In addition to that, I think this House on the whole looks favourably upon the completion of the Hudson Bay railway. I do not believe there is going to be any relief secured there, but the House has certainly not put itself on record as opposed to that project. In addition to that we have under discussion now—and I hope the project will be carried through—an enormous expenditure to deepen the canals of the St. Lawrence river, and save from five to eight cents a bushel on every bushel of grain grown in the prairies.

Mr. CAMPBELL: Does the hon. gentleman suggest that that will be a material benefit to western Canada?

Mr. HOCKEN: If my hon. friend does not regard the saving of five to eight cents a bushel on transportation of western grain to the ocean as any advantage—

Mr. CAMPBELL: That is not proved yet.

Mr. HOCKEN: That is what the experts tell us. That is what we are investigating, and if it be found that that will be the result, this work will be undertaken, $250,000,000 will be spent upon it, and the primary benefit, in fact practically all the benefit, will go to the people in the three western provinces.

Mr. CAMPBELL: The three western provinces are not asking for it.

Mr. HOCKEN: In addition to that they get lower freight rates for their grain than any other part of Canada. The Crowsnest pass rate is given to the West, and the result is that Ontario and Quebec are unable to get a single cent reduction in freight rates. There was talk two years ago of a general lowering of the freight rates; but when the Crowsnest pass rate was given to the West all the rest of the country had to go without any reduction in rates.

Mr. GARDINER: Have the Maritime provinces not received substantial reductions?

Mr. HOCKEN: They are promised now.

Mr. GARDINER: Have they not received them?

Mr. HOCKEN: I do not understand that they have, but they have been promised.

Mr. MEIGHEN: A very slight reduction.

Mr. HOCKEN: Ontario and Quebec had to go without any reduction in order that the West might get the advantage. I am not cursing the West or anything of that kind. I am trying to convince my hon. friend,—if it is possible for a man from Toronto to do it—of which I have some doubt—that the people of the eastern provinces of Canada are as keenly desirous to see the West prosper as they are desirous to prosper themselves, and they are showing it by a willingness to incur enormous expenditures to advance the prosperity of the West.

I believe that every section of Canada should be considered in the national policy. I think that, if we are to reach that point and get a policy that will serve the interests of all the different divisions of this country, every one of us must be willing to make some concession, and the concession I ask from the West is the acceptance of a moderate protective policy.

I was disappointed to hear the hon. member for Last Mountain (Mr. Johnston) talk of secession. He made a remark to the effect that unless the West got what it required there would be "political disintegration." I do not think that is the kind of language to use in this House. I do not believe it represents the sentiments of the West. He made some other remarks that were altogether incorrect but perhaps it is not necessary to deal with them. I do not think the people of western Canada sympathize with any such declaration as he made. When we look over the war record of the provinces of Alberta, Saskatchewan and Manitoba, I for one conclude that there is no more loyal element in our population than the people residing in those provinces, and if it were the purpose of my hon. friend from Last Mountain to throw a scare into us, I would like to tell him that he failed.

We do not hear very much in this House about the sufferings endured by the business interests of Canada. I think it is about time someone ought to say a word on that point. We have heard continually about the suffer-

ings of the farmers, and the most of the talk is in reference to the sufferings of the prairie farmers. But I can tell my hon. friends that the figures given in the business profits tax returns show that the business interests of this country are and have been suffering during the past three years just as keenly as the agricultural interests. If you will take the last returns for the business profits tax brought down in this House a few days ago, you will see that the amount collected has dropped from $44,000,000 in 1921 to $4,000,000 in 1923-24. What is the meaning of that unless it is that there is a terrible depression in business. If you take out of that $4,000,000 the amount paid by the pulp and paper industries and the mining industry,—perhaps the only two industries that are enjoying prosperity in Canada,—you find that general business and general manufacturing have been hardly able to pay anything in that respect.

Mr. FANSHER: Is the business profits tax in force in this country now?

Mr. HOCKEN: You bet it is.

Mr. FANSHER: I understand the business profits tax was repealed by the late government.

Mr. HOCKEN: I am paying taxes on the business profits I make. My hon. friend the ex-Minister of Finance (Sir Henry Drayton) tells me I am giving it an incorrect name.

Sir HENRY DRAYTON: It is the corporation income tax, which is a good deal higher to-day than the excess profits tax was.

Mr. HOCKEN: I have just a word or two more to say. Yesterday the Minister of Agriculture (Mr. Motherwell) said that the issue of protection and free trade is joined by this budget, and that it will be the question on which we shall go to the people at the next general election. The hon. member for Battleford (Mr. McConica) says: "Yes, and we will trim you to a peak". I do not like his spirit. I do not want to trim anybody to a peak.

Mr. FORKE: It is the sentiment which the hon. member does not like.

Mr. HOCKEN: It is the fact that I entirely deny. Instead of trimming us to a peak, I think the hon. member for Battleford will be trimmed to a peak. The result cannot be otherwise. In the provinces contained in this confederation seven-ninths of the population are favourable to protection. Is it conceivable that the three prairie provinces occupied by two-ninths of the population of Canada will be able to swing the seven-ninths at the next general election?

Mr. SPENCER: Would the hon. gentleman lead the House to believe that the three prairie provinces are the only provinces wanting free trade?

Mr. HOCKEN: Yes.

Mr. SPENCER: How about the Maritime provinces?

Mr. MEIGHEN: Did the Minister of Agriculture not assure my hon. friends that nobody was talking free trade?

Mr. HOCKEN: I think the political history of this country shows that there are only three provinces that favour free trade.

Mr. SPENCER: What about the Maritime provinces?

Mr. HOCKEN: Whenever the issue in this country has been protection versus free trade, the Maritime provinces have voted for protection—I do not think my hon. friend can dispute that—it was so in 1878, 1891, and in 1911.

Mr. FANSHER: There has never been a free trade issue.

Mr. HOCKEN: No free trade issue in 1878? My hon. friend was not born then and perhaps, he is to be pardoned for not knowing that fact. I was alive then and I know the fight that was made in 1878. I know the fight that was made in 1891 when the Liberal party went to the country on a policy of unrestricted reciprocity, when the Hon. Edward Blake deserted his party because he did not believe in unrestricted reciprocity. I know what happened in 1911, and those were the three occasions when the issue in the general election in this country was protection versus free trade. So, if we are to take what has happened in the past as an indication of what will happen in the future, we must conclude that the hon. member for Battleford will be trimmed to a peak, and that we shall have in this Dominion a government that will give us a cost of living tariff.

I have never had anything but the warmest possible feelings of friendship for the people of every province in Canada. I am a Canadian. I was born in this country. I have lived here all my life. I have never lived a year out of it. I have a love for Canada such as is held by men who are born in the country. I have a vision of this as, perhaps, the greatest country in the world at the end of this century. But we can never reach that objective—we can never fulfil the destiny which the Almighty has designed for us,—unless we sit down, province by province, and figure out a national policy that will take

care of the interests of every one of them. The province of Ontario, under such an arrangement, will have to make some concessions. So will the province of Quebec and the Maritime provinces, and so should the western provinces. The one thing that I ask them to do is to look at this question of protection from the standpoint, not of whether they can save a dollar or two dollars or three dollars on a binder, but of whether the great industrial cities of this country are to be preserved as places of population, of wealth, reservoirs from which to draw taxation with which to meet the war debt of this country, and to contribute in the thousand ways in which big centres do contribute to the welfare of this Dominion of Canada.

Mr. PIERRE F. CASGRAIN (Charlevoix and Montmorency) (Translation): Mr. Speaker, I do not wish this debate to close without associating myself with those who preceded me in expressing my regret at the absence of the right hon. Minister of Finance (Mr. Fielding) who, owing to a protracted illness, has been prevented from delivering his seventeenth speech on the budget. All acknowledge that he is an outstanding figure, an able statesman, a financier without an equal and of undaunted courage, who so well managed the finances of the country during the fifteen years of Liberal administration of the late and lamented Sir Wilfrid Laurier, that he was able to give the country this era of prosperity of which he was an eye-witness from 1896 to 1911. If we did not always agree with his views on certain questions, we must, however, state that he has been a man absolutely sincere and convincing.

Allow me, Sir, to congratulate the Prime Minister on his able choice in appointing to the post of Acting Minister of Finance, the hon. Minister of Immigration, the member for Châteauguay and Huntingdon (Mr. Robb). A consummate man of business, tried by experience, resourceful, he has proved worthy of the task which was confided to him. He energetically buckled down to work and was able, in a short time, under very difficult circumstances, to master all the details of the Department of Finance. Distinguished economist, he understood the present needs of the people and was able to present to the House and country an entirely acceptable budget. We had been for a long time expecting this budget. Those on the right with confidence—the others —those of the official opposition—with fear, and our friends, who sit opposite me, with doubt and great interest. Those who sit on your right, Sir,—and I am one of them—are fully satisfied with this budget. It discloses, so we see, a satisfactory state of affairs throughout the country, under present conditions. We have first, a surplus—according to the statement of the Acting Minister of Finance; secondly, a decrease in the debt; thirdly, a reduction in taxation, and fourthly—something rather astonishing—the lowering of the tariff and, neverthless, the balancing of the budget. The hon. Acting Minister of Finance must be congratulated on his work, and I think that the whole population of Canada and the party to which he belongs must acknowledge that he has done good work. The Canadian government under the able and wise leadership of the Right Hon. W. L. Mackenzie King, must be congratulated for having been able, in the space of hardly two years, to put our finances on a solid basis and improve our situation, in a general way, without harming agriculture, without injuring the manufacturing industry or the other industries of the country. These are the points which I want to touch upon in the course of my remarks that I shall submit to the House.

Immediately after the budget had been laid on the Table, we read, in many newspapers throughout the country, of rumours and criticisms of a nature to please certain classes of the population opposed to this budget. Nevertheless, all the members representing rural districts, all those who are not closely connected with the big interests, briefly all free men, all those in whom a generous heart beats and are thoughtful of the people's interests can say with confidence: Here is a government who has well sized up the situation and endeavours to do something for the people; here is a government who is trying to lighten the burden of the consumer, by reducing the taxes—which will have for effect to bring down the cost of living; here is a government who tries to fulfil its election pledges and put into practice the policy which it proclaimed when in opposition. Those that we hear recriminating and complaining as regards the budget, are the wealthy bankers, the large manufacturers, the trusts, and those who, protected by certain laws, were able to build up colossal fortunes and become magnates of finance, multimillionaires of the country. Those are the people who wish to dictate a line of conduct to certain governments, through their subsidized press. No doubt there are exceptions, but in a number of large towns it is not less true that, since the delivery of the budget speech, important newspapers have endeavoured to convince the people that the budget is not in their interest. I think we must put the people on their guard against this faction who try to misrepresent the question and induce the people of Canada to believe that the

government has not at heart the best interests of the country.

The principle applied in the budget is one of the soundest and most equitable of economic principles. Providence decreed that the people should reap the products of the soil with the least restrictions possible, and all impediments to trade and exchange of these products—if it is done without discretion—may become a hardship, may bring on a calamity for the population in general, although incidentally it may enure to the advantage of certain classes of people. However, what every wise government having the interest of the people at heart should endeavour to effect, is to place on the statutes of the country laws which, while giving revenues for the administration of public affairs, will better the conditions of all the classes of society. It is important that the taxes should not weigh too heavily upon those who are the least able to bear them. We must endeavour to distribute the taxes among those who are able to withstand them more easily. While on the subject, I may point out to you, Sir, the example given by the province of Quebec which, in its legislation, on a smaller scale than that of the Dominion government, apportioned the taxes among the wealthiest class, in such a way as to unburden the poorer classes, and better the conditions of the farmers in particular.

By the drift of this debate, we are aware that, to-day, as in the past, the great question is to know who wants a high tariff and who favours a low one, in other words who stands for protection and who desires free trade.

Judging from certain of their utterances, hon. members sitting on your right, Sir, endeavour to hold the Liberal party as a whole responsible for these sentiments, their words implying that the government is going to wrong the people and change the policy of this country for unlimited free trade. Those who conclude from various speeches that the Liberal party is an absolute free trade party, are entirely mistaken. No one, belonging to a party, not even a member of the government can tie down the other members of that party, if they do not share entirely his views. The true policy of parties is known, the line of conduct they must follow is known, because when in opposition they proclaimed that policy and when in power they endeavour to put it into practice. The hon. member for St. Lawrence-St. George (Mr. Marler) stated, a few days ago, that one must only consider what has been done by a party when in power and take no account of the policy which it proclaimed while in opposition. We cannot set aside the programme of a political party in opposition and merely go by its policy when in power so as to judge of the line of conduct which it will adopt in the future.

We know that the first to taunt us, to-day, for our attitude, because we lower the tariff on farm implements, are those who, last year and the preceding years, even when we were in the opposition immediately after our 1919 convention, were asking us to enact some of the most important articles of the programme of this convention. And to-day, because we try, so as to lighten the burden of the farming class, so as to better the general conditions of the country, to enact a certain part of our programme, they tell us that our policy was not the right one, yet, they are the same gentlemen who, at that time, told us to put it into practice. They taunt us also for giving too much to the western farmer's party, and, on the other hand, they ask for a higher protection and state that we shall be able, with such a protection, an adequate one, a protection to cover all our industries, to remedy all the evils which are supposed to be the present cause of the instability of the country. I do not think, Sir, that what we are actually doing is of a nature to hurt the industries, the factories and the large commercial institutions of our country. I think that on the contrary, the lowering of duties on farm implements as mentioned in the present budget is of a nature to improve the lot of the farming class, and representing an entirely agricultural county, a county situated in the province of Quebec, where there are some factories, but especially pulpwood mills, I cannot do otherwise than give my entire support to the government for the sound policy which they have inaugurated.

We often speak of the government's policy, and the same line of argument is followed as that made use of last week by the hon. member for St. Lawrence-St. George. If we look over the speeches delivered in the past by the leaders of the Liberal party, by the Right Hon. Mr. Fielding when he was Minister of Finance in the Laurier cabinet, we notice that the policy of the Liberal party has always been to maintain a certain stability in tariff matters, and that the party never disturbed this stability but carried on the policy inaugurated in 1878, the National Policy.

But, Sir, if we examine the tariffs which were established at that time, the truth is seen. We notice that, in all circumstances, the Liberal party endeavoured to lower in a moderate way the tariffs, nevertheless allowing a protection, which I might call "in-

cidental," mild and moderate, to the industries which needed it the most. If we study the political history of this country, we shall notice that it has been the privilege of the Liberal party to inaugurate that policy which is so much spoken of, "the Laurier-Fielding tariff policy," and to gradually lower the tariff so as to lighten the burden of all classes, while not hurting manufacturers and industries. We also notice that two tariff reductions have taken place under the heading of British preference, in Sir Wilfrid Laurier's time, and it is evident that the reciprocity pact with the United States was another step forward, a preliminary measure towards Sir Wilfrid Laurier's policy, such as he had proclaimed while in power as well as in opposition. And, to this effect, I shall quote an editorial of the Montreal Witness, dated May 7, 1924, which is as follows:

The Laurier-Fielding Tariff

To found any appeal to uninformed Liberals on the Laurier-Fielding tariff is to show oneself badly uninformed. If there is any fact notorious in the history of Canada, it is that the Laurier-Fielding fiscal policy was a downward one. There were two reductions in the form of British preference, and one was attempted in the form of reciprocity with the United States in natural products. By the grace of the protectionists, what they call the Laurier-Fielding combination went out of power flying that flag; so that if anything can be called the Laurier-Fielding tariff it is that one. Utterly discredit any one who would build a plea for protection on the attitude of Laurier and Fielding, who were only stopped in their process of undoing the people's shackles by the scare the people got from the screech of the affrighted industries, though these had not even been touched. The wailing of those industries then showed what they then thought was the Laurier-Fielding policy. For the same people who opposed every Laurier-Fielding move when it occurred just as they are opposing the King government now to plant themselves on the Laurier-Fielding tariff, is to own that so much ground has sunk beneath them. To invoke that tariff as being the Laurier-Fielding policy is disingenuous. It is an ill service to any young statesman to make that blunder the ground for glorifying him.

And if we wish to learn the policy of the late Liberal leader during the last years of his life, we have but to read the manifesto which he addressed to the people of Canada in 1917, in which he said:

Should the people intrust me with the administration of the country, I would make it a point to immediately unburden the farmer of all vexatious customs duties.

I would immediately abolish the duties on farm implements and other necessities with reference to farming as requested by the western people. And, I would consider as an essential duty of my administration a general and thorough revision of the tariff aiming at encouraging production in Canada and relieving the Canadian consumer.

That was the policy of our late leader in 1917; that is briefly his policy while he was at the helm of the government from 1896 to 1911, also his policy before he assumed power in 1896.

To find out, Sir, whether the policy which is followed to-day, is of a nature to harm or not our industries and be detrimental to the merchants and manufacturers of farm implements, we must inquire from those who are more directly interested in that industry, so as to ascertain whether the results will be as disastrous as our friends of the official opposition of His Majesty maintain. Now, we know, Sir, that already traders in farm implements made statements as far back as 1920, on September 14. This is what the president of the Massey-Harris Company said at that date:

Speaking on behalf of the company which I represent, I emphatically state that the privileges which are conferred on us by the protective duties have not been of very great advantage to us. . . .

So far as the Massey-Harris Company is concerned, even to-day, examining it from the only standpoint of money making the company would perfectly be willing to face the withdrawal of the protective duty on farm implements, "if at the same time the tax was lifted upon all material which enters in their manufacture."

That is what those manufacturers stated in 1920; and we were not astonished to see that they were consistent with their statements and that after considering the budget just brought down, after having examined it closely, they published, a few days ago, for the benefit of the public a statement making their position known on this subject, and letting the whole people of Canada know that the government's policy was satisfactory to them and that it even was of a nature to give good results. I know not if the speakers who preceded me have quoted this statement, but I deem it my duty to read it to the House, in order that it may appear in Hansard.

Here is what we read in one of the newspapers of Ottawa, dated May 6, 1924:

Budget Enables Immediate Drop Implement Cost

Exemption From Sales Tax and Cut in Duty on Raw Materials Ground for Reduction

Massey-Harris Co. issues statement

Rely on Canadian Farmer to Endeavor to Stimulate Canadian Industry

(Canadian Press)

Toronto, May 5.—The following statement was issued by the Massey-Harris Company, Limited, after a study of the budget changes, more particularly as they affect farm implements:

"It is only now that we have been able to determine with any degree of accuracy the likely effect on prices of farm implements resulting from the changes made in the tariff as set forth in the resolutions and in the subsequent amendments thereto brought down by Hon. Mr. Robb, Acting Minister of Finance.

"Upon harvesting machinery, binders, mowers and reapers imported into Canada the duty has been reduced from 10 to 6 per cent; upon tillage goods, cultivators, drills, harrows, etc., from 12½ to 7½ per cent;

upon threshers, hay loaders, etc., from 15 to 10 per cent, and upon farm wagons from 17½ to 10 per cent. The new rates, now effective, represent a minimum of protection, and it is believed that apart from goods which are permitted to be imported free of duty, the customs rates now carried by farm implements are lower than those applicable to any other class of imported goods.

Say Inconsistencies Remedied

"The Canadian manufacturer of farm implements has been in a measure compensated for the loss of protection on the finished goods by modification of the customs tariff on the materials, etc., which he uses. Heretofore, many material items carried a rate of duty greater than that which applied to the finished implements, and in this respect the industry was handicapped. The lowering of these duties together with further adjustments just made have remedied these inconsistencies, and so far as the Massey-Harris Company is concerned, we shall endeavor to adjust ourselves to the new conditions and we will give to the Canadian farmer every possible advantage arising out of the changes made. We rely upon him to do everything within his power to stimulate Canadian industry by the purchase of Canadian-made machines.

Immediate Cut in Cost

"The provisions of the budget which exempt farm implements from the sales tax are most welcome, and these, combined with the lowering of customs duties on raw materials announced in the government's amendments, now enable the manufacturer to make an immediate reduction in his prices. So far as the Massey-Harris Company is concerned (and no doubt this applies to other implement companies) there will be passed on to the farmer in the way of reduced prices the complete saving effected in the remission of the sales tax and the lessened duties on raw material."

Statement by Premier

Premier King last night made the following comment on the statement issued by the Massey-Harris Company:

"The statement of the Massey-Harris Company bears out the contention of the government that the tariff changes effected by the present budget should prove of benefit alike to the farming community and the agricultural implement industry. If, as is indicated, the farmers of our country are immediately given the benefit of the lowering of duties and abolition of the sales tax, by a corresponding reduction in the price of implements, it is up to every farmer, in the words of the statement issued by the Massey-Harris Company, 'to stimulate Canadian industry by the purchase of Canadian-made machinery;' and I believe they will."

These are Sir, the views expressed by persons who have a full knowledge of the situation which will result from the budget resolutions and the reductions we are making. There is no need of going any further to answer the objections of those among our friends who maintained that we were going to ruin this industry by favouring another which wanted to have, at all costs, reductions on instruments absolutely required in their pursuits.

Mr. MEIGHEN: (Translation): May I ask the hon. member a question?

Mr. CASGRAIN: Certainly.

Mr. MEIGHEN: (Translation): Do you repudiate the statement of the hon. Minister of the Interior that this budget is the death knell of protection?

Mr. CASGRAIN (Translation): No; I do not think that, when the hon. Minister of the Interior stated that the budget was the death knell of protection or the "whisper of death" of protection, I do not think that it was what he meant, I do not believe that in this country, in the province of Quebec which I represent and in the party that sits on your right, Sir, there can be found a majority ready to abolish all protection; I do not think, as I stated at the outset of my remarks, that such was the intention and the thought of the hon. Minister of the Interior. Moreover, I do not think that a political party can be tied down by such a statement, I do not believe that the members of the province of Quebec can be tied down by the statement of one man which was made under such circumstances.

Some hon. MEMBERS: Hear, hear!

(At six o'clock the House took recess.)

After Recess

Mr. CASGRAIN (Translation): I was saying Sir, when the House took recess at 6 o'clock, that you could not tie down the policy of a whole party and all those who support the government by a few words which, during the heat of a debate, might have been uttered by one of its ministers, or by persons well up in the party I also added that I did not think there was room, to-day, either in the province of Quebec or in the whole of Canada, for free trade, and that, under no consideration, the party to which I have the honour to belong would ever do anything of a nature to destroy or ruin the industries which, for a number of years, have largely contributed to the prosperity of our country.

The government, in the budget which it has just introduced, has adopted the Liberal policy as it was prepared and handed down, by the leaders who preceded us, by the late Sir Wilfrid Laurier and those, who before him, had the destinies of the Liberal party in their hands.

In the course of the speech of the hon. member (Mr. Hocken) who preceded me, I was astonished at some of his remarks. He stated that the Canadian workmen were emigrating in great numbers from large centres to the United States and he bewailed very much the treatment which was meted out to them in the new budget.

I think the same remark was made by the ex-Minister of Finance (Sir Henry Drayton) at the outset of this debate. They are, to-day, very anxious over the lot of the working class, especially over the lot of the tillers of the land. However, they had not, it seems such great concern in past years when, in 1911, the government of Sir Wilfrid Laurier submitted to the people for approval the reciprocity pact which would have benefited all Canadians. With reciprocity, the whole country would have progressed, and we would not have to brood over this disquieting state of affairs that these gentlemen of the opposition, to-day, are so much fretting about.

Let us now examine what the Conservative party has done for the farming class. If we go back to the year 1920, when the government of those who sit on your left, Sir, had appointed a commission to inquire as to changes in the tariff which it would be necessary to effect, we shall see that the farmers requested, at that time, in Quebec, from the commission presided over by Sir Henry Drayton, a lowering of duties on farm implements. The farmers foresaw, then, that profits might dwindle down, that there would be a crisis to tide over and they wanted to prepare to face it. They had been careful to request the government to adopt the necessary measures to guard against periods of hard times which might intervene and be detrimental to their interests. But the Conservatives declined to rescue them and dismissed their just claims, with the results that we now know.

The hon. member who preceded me in this debate also stated that the Liberal party was not faithful to its pledges, that it was not the old Liberal party that carried on the policy of Laurier and Fielding. But, Sir, is it not a cause for regret to see those who insist, to-day, that we should take up the policy of Laurier and Fielding, were the first, during the years when the government of Sir Wilfrid Laurier presented its budgets, to oppose them and prevent the enactment of the Liberal's budget policy which is so highly praised to-day and which is said to be the best? Are they not the same gentlemen who, in the year 1911, carried on the whole campaign against the late Sir Wilfrid Laurier to prevent the enactment of that policy known as the "Laurier-Fielding tariff policy?"

The hon. member for West Toronto, Sir, is fretting for the future of the steel industry which, he states, will suffer great losses through the lowering of the tariff on farm implements. If we consult for a moment the statistics, we shall notice that the company known as the Steel Company of Canada, which my hon. friend mentioned, is making large profits. For the year 1921 their profits amounted to $810,292, in 1922, they were $903,596, and in 1923, they amounted to $1,432,875. So that, during the last three years, this company increased its profits from year to year, to such an extent that, to-day, the small setback which it might have to suffer would be greatly compensated by the profits it has accumulated in the past.

If we listen to the remarks which are made by the hon. members who sit on your left, Sir, we gather the impression that they are great alarmists and pessimists. On the other hand, if we read the financial newspapers, we find that we have no such cause for alarm and fear for the future. I was looking over, not long ago, a journal that has a certain influence in Montreal, the Montreal Financial Times, dated April 11, 1924 and this is the heading I found:

Twenty-Seven Companies Have Reported Increased Net Profits During Past Year

Over 50 Per cent of Corporations Whose Annual Reports Have Appeared in Last Few Months Indicate Increase income Available for Dividends—Showing Practically the same as Year Ago—Some interesting Earnings Changes Revealed—Two Successive Years of Progress.

Evidently, Sir, one should hear both sides of a question. Some hon. members state in this House that business is bad, that industries are threatened with ruin, that no alteration should be made to the tariff; on the other hand, these same gentlemen carry on a propaganda in their newspapers and assert that business is improving and that the financial situation of the country seems brighter from day to day.

And the editorial continues:

It is gratifying to note that in the majority of cases, substantial progress has been recorded in the matter of earnings. In a compilation showing respective net incomes available for preferred and common dividends for the fiscal years ended in 1923, 1922 and 1921, comprising 48 companies, it is interesting to note that no less than 27 companies reported increased net income in 1923 over 1922, which in itself was a year of fair progress. In that year 28 out of 48 companies had net incomes registering increases over 1921.

Fifty Per Cent Increase

This showing is extremely interesting inasmuch as it indicates that progress during the past two years has been along comparatively stable lines despite the vicissitudes of general business and the constantly fluctuating influences. The past two have undoubtedly been years of comparative hardship, and industrial betterment has been confined to a large extent to specific lines. At the same time the fact that approximately 50 per cent of the companies listed in each of two years have been able to make headway speaks well for the position in which industrial and commercial companies to-day find themselves.

I also came across in the same journal, a few weeks later, another editorial headed thus:

Seven Canadian Industrial Groups Earn $32,760,440 Per Annum in Over 5 Years Period

These are excellent results and there is no fear that such large and powerful corporations will really suffer to-day, by the small changes we are making to the tariff as regards farm implements. My hon. friend from St. John and Iberville (Mr. Benoit) who is in the business and is thoroughly acquainted with the farming class, inquires whether the farmers have earned as much as that. I think the answer is an easy one. I do not know that any farmer has ever existed who accumulated such large profits.

The editorial further states:

While industrial prosperity is still a rather elusive factor it is gratifying to learn that since the end of the war leading industries of the Dominion have had their fair share of whatever was possible in the way of profits.

The editorial further divides the companies into various groups: Heavy Manufacturing, Miscellaneous Manufacturing, Cottons and Textiles, Pulp and Paper, Public Utilities, Flour Milling, Mining and Development, and shows exactly the results obtained and the profits earned during the last five years:

Five-Years' Average of Common Capital and Earnings

	Common Capitalization	Net Earnings	P.C. Earned
Heavy Manufacturing.	$106,399,000	$3,853,371	3.62
Miscellaneous Manufacturing..	21,265,280	1,957,524	9.41
Cottons and Textiles	14,616,100	2,927,732	20.03
Pulp & Paper.. ..	57,128,280	7,844,326	13.67
Public Utilities.. ..	121,849,978	8,908,753	7.23
Flour Milling..	11,992,008	2,180,483	18.09
Mining and Development..	39,633,700	5,088,251	12.84
Total of 5-yr. averages	$372,884,346	$32,760,440	8.79

There is still another basis and criterion: the market price of certain shares of these corporations. In the remarks that I am addressing this evening to the House, I wish it to be well understood that I am trying in no way to deny the usefulness of these corporations and that I am ready to recognize all the work they may have done for the development of our country and the expansion of our commercial centres. Only, it is but right to observe that all these corporations have made enormous profits which are not to be compared in any way with the farm profits.

This journal then takes up the cotton industry; it says, referring to the Dominion Textile Company:

On March 31, 1922, net assets applicable to the old common stock amounted to $10,007,701, or $200.15 per share of $100 par value, or approximately $66.75 per present no par share.

And regarding the Canadian Cotton Company:

On March 31, 1923, net assets applicable to the common stock amounted to $5,522,145, or $203.36 per share of $100 par value.

My hon. friend from St. John and Iberville inquires whether there is "watered stock", whether these companies have been over-capitalized. I am not in a position to answer, I am not prepared to give these facts to the House and supply the necessary evidence in that connection, but I only wish to quote the facts which were published in the press throughout the country and show up the satisfactory financial situation of these large corporations.

That is not all, we read in the same journal, that business is in excellent shape and besides is on the increase in the Western provinces.

In a despatch forwarded from Edmonton, Alberta, we find this extract:

Banks and loan companies are more satisfied with the outlook than they have been in several years. Alberta's productive wealth has been greatly increased and saner methods are in evidence in every department including the agricultural. Collections have been well sustained although they have not been sensational.

And a number of companies which, in past years, had not been able to pay to their shareholders substantial dividends, were lately able to do so. We have the Goodwins Ltd. Co. of Montreal, who gave out that it was paying all arrears of dividends on its stock "Goodwins Ltd pay all arrears on its stock," and all this is to be found in the same financial journals which on the other hand, try to impart to the public that business is bad and that we are passing through, to-day, a period of depression. If we examine the commercial sheets and consult the business people, we find that in a great number of cases they are not so pessimistic as our friends who sit, Sir, immediately on your left.

I have before me a circular from one of the largest firms of brokers of the city of Montreal—and we receive many of this kind of circulars.

This document is dated April 11, 1924, after the budget had been presented to the House and thereby made known throughout the country.

At the beginning of the second quarter, we have advanced sufficiently far into 1924 to get some line on the probable outlook for the remainder of the year. One thing that seems assured is that it will be a year of easy money conditions, so that with plentiful funds available for investment there is likely to be a steady demand for high grade bonds and stocks, etc.

And they refer to large industrial corporations and companies in which they encourage the public to make investments and place their savings, because they state, business being on the mend the profits will be larger. There is also another test; we often take advice

from economists and it is well to inquire at that source so as to learn from these persons who are continuously in touch with these questions, what is the financial situation and if it is improving. Here is the opinion of Mr. Roger W. Babson, a distinguished economist, who publishes statistics and reports on all financial questions; speaking of the financial situation in Canada, he goes over the ground thoroughly and says, among other things:

The Situation in Canada is Improving

Roger W. Babson has published of late, on the present conditions of business in Canada, an interesting review in which he states, among other things, what follows:

"The close trade relations between Canada and the United States, says Babson, are not appreciated to their full value by the business people of both countries. In the matter of economic relations the boundary counts for very little. The different conditions existing in those two countries arise especially from a different equilibrium between the manufacturing and agricultural industries. The manufacturing centres are the first to react from an economic depression; business flourishes many months before the productive regions of raw material. Although manufacturing industry is rapidly developing in Canada, this country is still looked upon as producing raw material. Thus, it is always later than the United States in its movements of fall and rise. That is why the Canadians can look upon the economic situation existing in the United States like a barometer pointing out what will take place in Canada a little later."

"Up to now the readjustment has been somewhat slow in the provinces, but it may become more noticeable during the year.

This proportion will improve, and not only will business transactions increase, but work will be distributed in a more general way throughout Canada. At present the advertising and sale must produce the best results in the eastern provinces. The industrial situation should continue to improve in 1924."

So that, Mr. Speaker, you may judge that all the members who sit nearest to your left and the press of the country, especially the influential English press, which has endeavoured to tell us that industries are in danger, that trade is fading and that the time is ill chosen to bring on the few changes to the tariff by which we are trying to improve the conditions of the farming class, all these gentlemen, I say, are not entirely right, for we know, on the other hand, from people absolutely disinterested, that business is looking up, and that the financial situation is improving from day to day.

In the budget which is, at present, under consideration we note—a remarkable thing—that there are less taxes than might have been expected, when the government faced with numerous difficulties, might have been forced to enact further taxation or at least maintain those taxes which were already in existence. The slight changes that have taken place are not of a nature to bring on the

imaginary unrest that some endeavour to flash in the eyes of wrongly informed people. Pessimism is one of the causes of the straitened circumstances in which the country finds itself at present. By means of advertisements and newspaper editorials an effort is made to convince the working class and the business people that all is going wrong. That is why I ask all the members who have at least the interests of the middle class, the farming class and the working class, and who share the views expressed in the budget as brought down by the Acting Minister of Finance, to rise in this House so as to explain to the country their position and convince the people who might, perhaps, be badly informed, that the situation is not so critical as it is made out to be in certain quarters, and that the budget brought down by the government of the Right Hon. W. L. Mackenzie King is a budget which reaches all classes of society but especially the farming class.

The depression which took place in the farming industry, is due to the fact that the government which preceded us paid no attention to the just claims of the farming class, and, consequently, did not endeavour, immediately after the war, to distribute more equitably the taxes and reduce them if possible. Wrongly did we abandon the farmer to his own resources although he had practically no more market in which to sell his products. The enormous expenses brought on by our exaggerated participation in the European conflict and the heavy taxation which the Dominion government had to have recourse to, was another cause of unrest. The Bankruptcy Act enacted by the late administration and which, up to the present, is highly depressing, is again another cause. We amended it last year. I am glad to hear that it has given better results and that bankruptcies were not as numerous as in the past, in farming districts.

I feel confident that under the administration of the hon. Minister of Justice, the member for Quebec East (Mr. Lapointe), new amendments will be added to the act and will have for effect to dispel the unrest which the farming class have to face.

We must congratulate, Sir, the King government, seeing the difficulties to which the farming class is exposed, for having acquiesced in the just claims of the farmers, the country people who, after all, make up the greatest part of Canada's population.

Now, I do not wish to be charged with bringing up local questions, however, I think it would be proper to draw the attention of the government to an industry which, in my

county and elsewhere, has become important and deserves to be better encouraged by the government. It is the maple sugar industry. It is stated that the last crop brought $5,500,000 to the farmers of the provice of Quebec, and there is no doubt, according to information which I have gathered, that should the government help this industry, to a certain extent, the farmers could still more increase this output, and that this branch of the farming industry would become more productive and give better results. The surest way would be, perhaps, to help the farmers as it was done in the past for the dairy industry. I trust that the Minister of Agriculture will find means of doing something in that line for the farming class.

We notice in the budget that is now under consideration and also in the policy which the government has proclaimed and put into force since we have assumed power, that it has always endeavoured not to go to extremes neither on the side of free trade nor on the side of protection, but has always tried to establish a moderate policy, that is has always steered the middle course, which is the one we should adopt in a country like Canada, where there exists various opinions in all classes of society, also marked differences owing to geographical conditions which are very exceptional. I wish to add a few words with regard to the British preference. I am not an expert on the subject of trade and I have not a knowledge of all the results of this policy; but from what I hear through a number of tradesmen and manufacturers, this policy, when it was adopted, could to a certain extent have given good results; but to-day it may not be satisfactory, and may be of a nature to prejudice certain industries. I hope that the government, while considering this question, will take care of the industries which in the province of Quebec, might suffer from such a policy.

We have read, Sir, in the press throughout the country, on more than one occasion, that the provinces of Quebec and Ontario should unite with the view of giving the country a better bearing, a policy aiming at furthering the interests of Canada. It has been stated that the two oldest provinces of confederation should unite to carry high the torch of progress so as to enlighten the other provinces. Nevertheless, let me say that if we had not at our sides the other provinces of confederation to attain our end, I fear that we would not succeed. I think that the present policy of the government is broad enough and sufficiently attractive for all our provinces. What the country needs to-day, to my mind, is not class legislation or legislation favouring certain districts or provinces, but a government for all classes of society, that will endeavour as much as possible to promote the interests of all citizens, farmers, manufacturers, tradesmen and labourers. And the policy which the government proclaims takes in all the interests of the farming class as well as those of all other classes of society.

Before closing my remarks I must not forget the question of immigration which may have given the government many anxious moments, on its assuming power. Under the wise and just administration of the hon. Minister of Immigration, pro tem Minister of Finance, the member for Chateauguay and Huntingdon (Mr. Robb), immigration will push ahead, I have no doubt. I am aware that the means which have been adopted will bring to this country a great number of immigrants gathered from the four corners of the globe and that they will be settled as much as possible on farms. We need people to help in tilling the soil and also, perhaps, others to live in the large centres and help in carrying the burden of taxation which still weighs on our people. However, we must not forget that we shall have to select the immigrants and give preference to those who are most able to adapt themselves to the conditions of the country and become good Canadian citizens. What strikes me most in the government's policy is that it tends to furthering the interests of all classes and keep our people at home. To reach this end, it gave its first thought, its first help to the farming class.

I think that we must congratulate the government for having succeeded, during its three years in office in obtaining such good results and having been able, notwithstanding the hard times we are passing through, to balance the budget, reduce the taxes and improve the general situation over the whole country. I further wish to congratulate it for having acquiesced in the just claims of my hon. friend for Chambly and Verchères (Mr. Archambault) and having brought relief to the heads of family burdened with taxes, by raising the exemption for children from $300 to $500. This is of a nature to help all classes of society throughout the country but especially in the province of Quebec, where there are so many large families. I notice, Sir, that the government is doing well, notwithstanding all the false prophets and all those who insist that its policy is not a good one. All the governments are more or less forced to give way to the just and popular claims, and, we must return thanks to the Prime Minister

and acknowledge that he has endowed the country with the best policy, the one which is in the interest of the whole country.

Allow me, Sir, in closing my remarks, to remind the House of the few lines from a poem which characterizes exactly the policy that the government has adopted and tersely describes the wise course of its administration during its three years' occupancy.

Remettez en honneur le soc et la charrue,
Repeuplez la campagne aux dépens de la rue,
Grevez de taxes le riche et dégrevez les champs,
Ayez moins de bourgeois et plus de paysans.

Mr. W. C. GOOD (Brant): During the course of the present debate, Mr. Speaker, and during the course of the debate on the Address in reply to the Speech from the Throne, the fiscal policy of Canada has been discussed from almost every conceivable angle, and I should not feel justified in now participating if I had merely to repeat and reaffirm those professions of faith and opinion that have been so well and so frequently made in this House; but I propose to break somewhat new ground this evening, and that is the sole reason why I ask the indulgence and patience of hon. members.

Two years ago when I spoke in the budget debate I reviewed the whole argument in favour of protective tariffs and I referred briefly to what might be called the fundamental principles of taxation. On the present occasion, Mr. Speaker, I purpose to deal somewhat fully with the latter part of the remarks which I then addressed to the House, namely, the general question of taxation, its principles and practice, and with special reference to the taxation of land-values.

First, however, I venture to make a few brief observations on the amendment and on the budget itself. I think it is unfortunate that the wording of the amendment lends itself to differing interpretations. Some hold it to be a substitute motion involving a rejection of the proposals for tariff and taxation relief already brought down by the government and a direct vote of want of confidence. Personally, I am satisfied and assured that the mover had no such intention; the preamble of the amendment makes this abundantly plain. It seems to me it would be desirable that the House should permit such alteration of the wording as would make the meaning perfectly clear, but I do not suppose this would be permitted now. Therefore I prefer to vote for the obvious intention of the amendment, rather than reject it on technical grounds. I regard it as supplementary to, and not as a substitute for, the proposals contained in the budget.

[Mr. Casgrain.]

The whole situation, Mr. Speaker—especially the plight of the Conservative party, which is very much the same as our own plight two years ago—gives renewed emphasis to the demand which we then made, inferentially at least, for an amendment to the rules of the House. The rules were devised under the two-party system. Political conditions have altered fundamentally since these rules were framed, and I think it is absurd to try to apply rules devised for one situation to a situation so conspicuously and so definitely different; and therefore I would suggest that we face the question of amending the rules of the House at a very early date. Otherwise I fear we may have a repetition of the ancient story of the new wine bursting the old wine skins. In this connection I was rather impressed by an article that I read recently dealing with this very matter. It is from the pen of one of England's women members of parliament, Miss Dorothy Jewson, and I should like to read a few excerpts for the benefit of the House. She writes:

A big national assembly must have rules and forms and ceremonies and to take all symbolism and pageantry and colour out of life would be to make it dull and bare, but the Houses of Parliament are overloaded with a heritage of tradition and precedent and archaic customs that fritter away valuable time and energy, cause immense delay, and clog the wheels of progress. The discriminating use of some sort of axe is needed. Instead of being masters of the parliamentary machine we are in danger of becoming its slaves.

How many men have come to the House of Commons, not only full of enthusiasm and animated by high ideals, but with a definite intention and the determination to get something done, to find themselves up against a huge, rusty machine that, when it is not standing still or going backwards, moves with ponderous slowness, causing impatience and bitter disappointment, and provoking members to rebellion, or reducing them to despair, or making them merely cynical.

Further on she says:

Leisurely and picturesque parliamentary methods would not matter so much if the nation were in a better condition instead of the desperate state in which it now finds itself. Certain reforms, essential to an even comparatively low level of civilization, are long overdue, and the fact that they have not been achieved is a condemnation of the way in which our national affairs have been conducted. Only a fraction of the resolution, energy, promptitude and money that were forthcoming during the war could be made the means of transforming large numbers of lives that are now almost everything that they should not be.

I submit that these remarks have a very direct application to the situation here in Canada. I am under the impression—I speak, of course, subject to correction—that the limitations under which we are operating are perhaps greater than those existing in the Old Land.

In regard to the budget, one has to confess a series of surprises. I must admit frankly

at the outset that I was surprised and pleased at the extent of the tariff reductions announced in the statement of the Acting Minister of Finance (Mr. Robb). At the same time I was disappointed that the range over which these reductions were made was not wider, and that is my chief criticism of the proposals brought down. But a short time after the proposals were originally made, and when I felt justified in supporting them, I was astonished and dismayed to find that a regulation had been passed, two days prior to the announcement of the budget, which, so far as I could make out, nullified very effectively the remedial measures that had been proposed; and I was wondering whether I could under those conditions support the budget. However, I am very glad to say that a day or two ago the Minister of Customs (Mr. Bureau) announced in this House the withdrawal of that recent amendment to the regulations, and therefore I feel again justified in supporting the budget proposals. I would like to suggest, however, in passing, that the whole administration of the Dumping Act has a sinister aspect—I would like to emphasize that word "sinister," and I hope I give no offence. It needs a thorough overhauling, and unless the government will do something in that connection I prophesy trouble.

Returning to the main topic, that is, the question of taxation, I do not think it should be necessary in this House to stress its political importance. History, indeed, is replete with examples. The rebellion of the ten tribes of Israel under Rehoboam was due to crushing and onerous taxation. The history of the Roman Empire will show that the strength of that great political organization was sapped by iniquitous taxation methods. In England during the seventeenth century we find a great civil war arising at the time of Charles I, due almost entirely, I think, to arbitrary taxation. Later on we have the American war of independence in the eighteenth century, also emphasizing and based upon the unfairness of taxation without representation. The French revolution, following shortly afterwards, was another instance of the same sort, again emphasizing the political importance of this question of taxation. I would submit, Mr. Speaker, that the present farmers' movement in Canada, which is represented in this House by over sixty members, is one of the most modern protests against unfair and unjust taxation; and even now, from coast to coast, an emphatic protest is being made against unjust taxation. To sum up the importance of this subject I submit a very significant statement made by Professor Richard T. Ely, of the University of Wisconsin, in his book Taxation in American States and Cities. It is as follows:

> Taxation may create monopolies, or it may prevent them; it may diffuse wealth, or it may concentrate it; it may promote liberty and equality of rights, or it may tend to the establishment of tyranny and despotism; it may be used to bring about reforms, or it may be so laid as to aggravate existing grievances and foster hatred and dissension among classes; taxation may be so controlled by the skilful hand as to give free scope to every opportunity for the creation of wealth or for the advancement of all true interests of states and cities, or it may be so shaped by ignoramuses as to place a dead weight on a community in the race for industrial supremacy.

Further, Mr. Speaker, I think we may say that the teaching of all history, particularly that of the English-speaking peoples, leaves with us this lesson; that the power of taxation must be retained by the people, either directly or through their representatives. We have claimed that right here in this House, and the British House of Commons claims it. We have gone even further in connection with our municipal governments, where money by-laws are subject to the obligatory referendum.

Now, I made certain observations during the debate on the Address respecting unsound methods of taxation, and the Minister of Railways and Canals (Mr. Graham) was good enough to ask me, on that point, whether there were any sound methods of taxation, or whether the people would admit that any methods of taxation were sound. I replied that at all events some methods were sounder than others, and I proceed now to elaborate that thought.

First, I think we shall have to define our terms, and I ask the question, what is taxation? In olden times, if we consider the feudal structure of society, the taxation then existing really had the purpose and effect of giving the individual serf or peasant, protection of life and property under his lord. The system was abused only as and to the extent that, the lord or king taxed for petty or personal causes. Leaving that condition of society and coming to what we may call modern democratic institutions and organizations, what shall we say as to taxes? I submit that the following may be a fairly satisfactory definition: Taxes are payments by the individual to the community for the protection of life and property and for the carrying on of collective activities. In other words, taxes are payments by the individual to the community in return for services rendered the individual by the community. Let me take some examples in order to illustrate my point a little more fully.

Take the rural municipalities in this country. We have there for instance, certain common or collective activities that are carried on such as schools and the maintenance of roads, bridges, and things of that sort. Then take our urban municipalities where we have the same collective activities carried on and in addition such enterprises as police and fire protection, water, electric and sewage services, health, recreation and so on; and as these communities develop we find a growth in the variety and importance of these collective activities. Then in our Canadian provinces we have further collective activities that are carried on, such as the administration of law, the support of education, the maintenance of some roads, the care of unfortunates, and so on. And so far as our Dominion is concerned, we have only to look over the estimates to see the variety and extent of the services which as a Dominion we perform for individuals in Canada and for which we exact taxes from individuals in Canada.

I submit, Mr. Speaker, that if these services are necessary and desirable, and if there is efficiency in the administration or in the execution or carrying out of these services, there is no cause for complaint against the aggregate amount of taxation. That is a comment I would like to make on many speeches that have been made in this House. It goes without saying, of course, that we can afford to provide the services: that I think must be taken for granted; and in such cases the presumption is we would not undertake these services collectively if we could get better results by individual action. For instance, unless we can educate our children better by operating collectively in the establishment and carrying on of our schools, we would not do so; we would do as was done in former times, have each family educate its own children. I take it, Mr. Speaker, that the scope of our collective activities is constantly widening, and that that must be so in the case of a developing civilization. Therefore, the aggregate of taxation is likely to grow. I do not think there is anything regrettable or objectionable in this. I wish, however, to submit this thought to the House, that these various collective activities which are now paid for by taxation may be carried on under other auspices than state auspices. We find, for instance, in many cases that they are being carried on by voluntary, co-operative organizations, and it is quite possible we may have what has been called the fading state as civilization develops, where more and more of the activities which are now carried on under state auspices, where coercion exists, where taxes are enforced, shall be carried on by voluntary co-operative organizations under entirely different psychological conditions, at all events. But the tendency in that direction is not apparent at the present time; in fact, there has been in recent years, in many countries at least, a tendency towards the enlargement of collective activities under state auspicies. My own feeling, however, is that ultimately there will be a turning of the tide and that it will seem better that many of these activities should be conducted by voluntary co-operative organizations rather than under state auspices.

Now taxation is not only payment for present services, but also for past debts, which I presume may be taken to represent services rendered to the individuals of the past. This is particularly the case in all wars, and I was very much interested, as I think the House was, in getting the information submitted the other day by the hon. member for West Calgary (Mr. Shaw) which showed conclusively that practically all national debts were incurred only during wars and for war purposes. I should like to read in that connection some remarks made by Professor Irving Fisher recently in a pamphlet entitled "Europe's Big Debt." This is something that we should take to heart. I quote:

> The greatest economic problems before the world to-day are those growing out of the big war debts and post-war debts. These debts constitute one of the two millstones around the neck of Europe. The other millstone is that of armaments. Under the weight of these two millstones, much of Europe is sinking into chaos.

Further on he says:

> The common notion that the present misery of Europe is directly due to the war, and so was unavoidable, is erroneous. That misery is due to certain by-products of the war—especially militarism, debts, and inflation—which were very largely preventable.
>
> To understand this we must first disabuse our minds of the common impression that in paying these debts "the world is paying for the war." The truth is the war cost has already been paid for. It was paid for during the war itself when the shells were exploded, when the soldiers' clothes were worn out, when their food was eaten. The debts that are now left merely mean, that, during the war, some people paid more than other people, so that now the latter are asked to reimburse the former. That is, the taxpayer is asked to reimburse the bond-holder. The world as a whole not only pays but receives. It distributes from one set of pockets to another.

War unfortunately, Mr. Speaker, furnishes a splendid opportunity for money makers and money lenders to fasten chains upon their victims more tightly and to lay the masses of the people under tribute. I think if the methods whereby war debts are piled up were well known and analyzed, the widespread repudiation now going on would be more intelligible. But we are not repudiating, at least as yet:

9 p.m.

in fact, we have vastly increased our war debt through deflation. I would like to suggest to the House that members should read in that connection a recent work written by John Maynard Keynes on Monetary Reform, which deals exhaustively with that question. Possibly there should be some repudiation of debt; possibly there will have to be in the future. But, Mr. Speaker, it is difficult to discriminate with justice. We cannot tell as yet what is going to happen, but I want to submit to the House as did the hon. member for West Calgary the other day, that this question of our debt has not yet received any serious consideration by the Canadian people, and I think it ought to. I should like to read in that connection some extracts from this book by J. M. Keynes. He says.

> There is a respectable and influential body of opinion which repudiating with vehemence the adoption of either expedient—

He is referring there to what are known as the capital levy and devaluation.

> —fulminates alike against Devaluation and Levies, on the ground that they infringe the untouchable sacredness of contract; or rather of vested interest, for an alteration of the legal tender and the imposition of a tax on property are neither of them in the least illegal or even contrary to precedent. Yet such persons, by overlooking one of the greatest of all social principles, namely, the fundamental distinction between the right of the individual to repudiate contract and the right of the state to control vested interest, are the worst enemies of what they seek to preserve. For nothing can preserve the integrity of contract between individuals except a discretionary authority in the state to revise what has become intolerable. The powers of uninterrupted usury are too great. If the accretions of vested interest were to grow without mitigation for many generations half of the population would be no better than slaves to the other half. Nor can the fact that in time of war it is easier for the state to borrow than to tax, be allowed permanently to enslave the taxpayer to the bondholder. Those who insist that in these matters the state is in exactly the same position as the individual, will, if they have their way, render impossible the continuance of an individualist society which depends for its existence on moderation.

I should like to read further in that connection, but I forbear, as the time is passing. This matter, indeed, Mr. Speaker, is somewhat outside the immediate subject for discussion this evening, and therefore I sum up thus: Taxes constitute payment for services rendered.

The analysis which I propose to give further differs somewhat from that given by Professor Henry C. Adams in the Science of Finance; but it covers practically the same facts and is I think a little more applicable to our existing situation. I refer to his book in passing as dealing in an exhaustive way with the whole question of public finance. I propose therefore to examine and classify the different kinds of taxation that we find existing at the present time.

My first classification is that of direct and indirect taxation. Politicians are very fond of saying that people will not stand for direct taxation. I would like to submit to the House that no enlightened people will stand for indirect taxation, and I emphasize the point that, other things being equal, direct taxation is always preferable to indirect taxation. I want to issue that challenge to the country, to the House and to those politicians who are fond of saying to the people, for purposes which it is not hard to discern, "Now, of course you will not stand for or endure direct taxation". I say that direct taxation is always preferable to indirect taxation because it is honest and above board, less easily shifted or evaded, and the taxpayer knows what he is paying, and therefore he will be very vigilant to see that he gets his money's worth.

My second classification is on a different basis and is as follows: First, taxes on consumption, for example tariffs and sales taxes. These may be either direct or indirect. Let us take for an example the case of the average man with a large family. He necessarily bears the largest share of taxation on consumption; and I would submit, Mr. Speaker, that he renders the greatest services to society in the matter of raising his family. In fact I have often heard it said that every child that is brought up to a state of manhood or womanhood is worth a thousand dollars to the state. I do not know whether that figure is accurate or not. It may be much too small. At all events it expresses the obligation the state is under to the individual in this connection; and yet taxes on consumption place the burden on those who render service to the state, and in proportion to the services which they render. I submit, Mr. Speaker, that such a tax is absolutely indefensible. I should like in that connection also to refer briefly to two cases which I mentioned two years ago; first that of a rich mine owner who, by reason of the fact that the state guarantees to him peaceable possession of his property, is in the receipt of, say one hundred thousand dollars a year, for which he makes no effort whatever. Contrast his situation with the situation in which one of the miners is placed, say with a family of five, and in the receipt, we shall suppose, of five dollars a day. Now, Mr. Speaker, there is a contrast worth dwelling upon in connection with our consideration of taxes on consumption. The other case that I referred to two years ago was that of the Canadian Pacific Railway western lands, increasing in value every year by reason of the

labour of neighbouring settlers. The railway company which has title to these lands is in receipt of a large amount, has indeed a large claim upon the services and commodities which society produces without rendering any services in return, whereas the poor settler in the neighbourhood pays heavy customs and sales taxes on all his supplies. Here again is a case where the rich idler is exempt or nearly so, and the poor worker has to bear the brunt of the burden. I think there is no tax so utterly indefensible as the tax on consumption. The only thing that makes it tolerable, or the only ostensible and nominal justification for it is in the case of commodities which are needless or harmful in use. Now it is difficult to find such commodities, for this reason, that what is useless or harmful to one person is often useful and necessary to another. Perhaps we might specify such a commodity as alcoholic beverages, which we might very sensibly subject to a consumption tax; but in regard to most of those things which we call luxuries, I think it will be difficult to justify even a consumption tax; although if we are to retain any taxes on consumption, the distinction which is made for convenience, and somewhat illogically, between necessaries and luxuries, ought to be retained. I am prepared to admit the propriety of a tax on luxuries if we can decide with satisfaction to ourselves, what luxuries are. On the whole, however, taxes on consumption are unwise and unjust and ought to be abolished.

Secondly, I mention taxes on incomes, inheritances and profits, whether such are graduated or otherwise. These taxes are usually justified on the ground of "ability to pay", a principle which I shall shortly examine.

Thirdly, we have taxes by monetary inflation, whether that inflation is carried out by governments or by other agencies. This unfortunately is not generally recognized as a method of taxation, but it is a very important method of taxation and resorted to very frequently. When a government inflates the money volume with its own promises to pay, it thereby decreases the purchasing power of the money already in the hands of its citizens. Therefore. it taxes them to that extent. I should like to read in this connection another extract from this book on Monetary Reform by John Maynard Keynes. I quote:

> A government can live for a long time, even the German government or the Russian government. by printing paper money. That is to say, it can by this means secure the command over real resources—resources just as real as those obtained by taxation. The method is condemned, but its efficacy, up to a point, must be admitted. A government can live by this means when it can live by no other. It is the form of taxation which the public find hardest to evade and even the weakest government can enforce, when it can enforce nothing else.

Further on in his book I quote again:

> It is common to speak as though, when a government pays its way by inflation, the people of the country avoid taxation. We have seen that this is not so. What is raised by printing notes is just as much taken from the public as is a beer-duty or an income tax. What a government spends the public pay for. There is no such thing as an uncovered deficit. But in some countries it seems possible to please and content the public, for a time at least, by giving them, in return for the taxes they pay, finely engraved acknowledgements on water-marked paper. The income tax receipts, which we in England receive from the Surveyor, we throw into the waste paper basket; in Germany they call them bank notes and put them into their pocketbooks; in France they are termed "rentes" and are locked up in the family safe.

It would be a good thing for our people generally if they would use some discrimination, insight and discernment in respect to this matter.

Mr. WOODSWORTH: Who were the beneficiaries of the deflation which took place in Canada? Did the government benefit?

Mr. GOOD: If the hon. member for Centre Winnipeg will wait just a moment, I propose to deal briefly with that subject, and I will try to answer his question when I come to it. Inflation is not always brought about by governments. Banks also inflate the money volume and thus bring about taxation. I should like to read in that connection just one sentence from John Maynard Keynes and also an extract from a speech by Professor Adam Shortt. This is the sentence from Mr. Keynes' book.

> The internal price level is mainly determined by the amount of credit created by the banks, chiefly the Big Five.

This has reference, of course, to Great Britain. That is a clear statement of a fact which is not generally recognized and admitted, and a fact which was denied last year in the Banking and Commerce committee by a good many of the Canadian bankers, but which Mr. Keynes, as an economist, and other economists have stated very clearly, namely that the banks, through their expansion and contraction of credit and the consequent alteration of the money volume, influence the price-level.

The reference which I submit from Prof. Adam Shortt is taken from an address which he delivered before the University of Manitoba on May 12, 1919, and is as follows:

> The credit expansion came mainly, however, through the advances made by the banks, especially the ad-

vances of credit to the government—largely in anticipation of future loans. Under the suspension of specie payment and taking the banking system as a whole, the indefinite continuance of this process is quite practicable because a credit once granted and poured by the issue of cheques into the general money volume of the country never passes out of the circle until it is retired, usually by conversion into another form, as when the bank advances are paid off by the further government loans. Thus a credit of $5,000,000, granted to the government is merely an entry in the bank's books, and when drawn upon by the government in favour of munition industries, transportation companies, and supply purveyors of all kinds, much of it may not leave the books of the individual bank involving nothing more than debit and credit entries in its ledgers. Even when the parties to whom the credits are transferred, keep their accounts with different banks, the interchange of such credits between the banks through the clearing house, practically offset each other in the long run. Thus a credit of even $5,000,000, on government account makes little or no drain on the individual bank, and none at all on the general circle of banks, unless it comes to a matter of foreign exchange.

These are very clear statements of the connection between the operation of our banks and the matter of inflation or deflation. I should like to submit that we have had in recent years sufficient evidence of the extraordinary danger and damage which may result from the unregulated, bungling and stupid lack of control or mismanagement in this regard.

Governments and banks also often combine to inflate when the former issue bonds which are paid for by borrowings and not out of savings. Instead of such a procedure it would be just as well, if not better, for the government to print paper money and thus save the interest. The effect on the price level is identical whichever policy is pursued, and we might just as well, as a people, pursue the more economical policy. In the United States and Canada during the war years we witnessed a tremendous inflation, and a large part of the inflation which was noticed was, no doubt, due to the issuing of bonds and the payment therefor by the extension of credit by the banks, the banks taking the bonds as collateral security. Now inflation is bad enough, but the mischief is made much worse by deflation, and, unfortunately that usually follows. I shall here answer, in part at least, the question which has been asked me by the hon. member for Centre Winnipeg. And I shall read in this connection some remarks by Mr. Keynes. I think this is particularly important for us to take to heart. I quote:

> In the first place, deflation is not desirable, because it effects, what is always harmful, a change in the existing standard of value, and redistributes wealth in a manner injurious, at the same time, to business and to social stability. Deflation, as we have already seen, involves a transference of wealth from the rest of the community to the rentier class and to all holders of titles to money; just as inflation involves the opposite. In particular, it involves a transference from all borrowers, that is to say from traders, manufacturers, and farmers, to lenders, from the active to the inactive,
>
> But whilst the oppression of the taxpayer for the enrichment of the rentier is the chief lasting result, there is another, more violent, disturbance during the period of transition. The policy of gradually raising the value of a country's money to (say) 100 per cent above its present value in terms of goods—I repeat here the arguments of chapter 1—amounts to giving notice to every merchant and every manufacturer, that for some time to come his stock and his raw materials will steadily depreciate on his hands, and to everyone who finances his business with borrowed money that he will, sooner or later, lose 100 per cent on his liabilities (since he will have to pay back in terms of commodities twice as much as he has borrowed). Modern business, being carried on largely with borrowed money, must necessarily be brought to a standstill by such a process. It will be to the interest of everyone in business to go out of business for the time being; and of everyone who is contemplating expenditure to postpone his orders so long as he can. The wise man will be he who turns his assets into cash, withdrawn from the risks and exertions of activity, and awaits in country retirement the steady appreciation promised him in the value of his cash. A probable expectation of deflation is bad enough; a certain expectation is disastrous. For the mechanism of the modern business world is even less adapted to fluctations in the value of money upwards than it is to fluctuations downwards.

We have seen in Canada, in the United States, and in many other countries a very serious inflation between the years 1916 and 1920 and a very marked and rapid deflation during the succeeding two years. The hon. member for Centre Winnipeg (Mr. Woodsworth) asked who was responsible for that. It is a big contract to answer that question, but in my judgment banks, governments, and a number of parties and institutions were responsible, although it would be difficult to fix the responsibility definitely upon any one group of people. At the same time, while it is difficult to fix this responsibility, it is absolutely certain, that immense damage has been done; and so far as this country is concerned we as legislators have a responsibility in that connection, to prevent a recurrence of this sort of thing in the future. No kind of taxation has been more frequently resorted to in recent years than that of altering the purchasing power of money, and nothing has done more harm.

Mr. MACLEAN (York): The hon. member has quoted a number of experts on taxation, and certain suggestions have been submitted. Would a permanent board of experts, men of extensive business experience, always in session, studying the changes that occur from time to time, prove of essential value as an advisory body available to parliament in dealing with these questions with a view to improving the system of taxation?

Mr. GOOD: I propose to deal with that matter definitely at the conclusion of my address, if the hon. member will be good enough to wait until then.

In the fourth place—to resume—I note what the hon. member for North Waterloo (Mr. Euler) has very properly termed "nuisance taxes." We have a variety of trivial imposts, such as stamp taxes, receipt taxes and I know not what, on all kinds of documents, which are a penalty on exchange. These are very similar to the taxes on consumption and there is little if anything to be said in their favour.

In the fifth place, and lastly, we have property taxes. Now, what do we mean by property? I submit that there are two kinds of property: First, there are those kinds of property which are not the products of labour, such, for example, as unimproved farm land, mineral resources, water powers, timber limits, and so on. Secondly, there is the property which is the product of labour such as wheat, houses, clothing, and so forth. And this distinction is given expression to in the farmers' platform by the phrase "unimproved land values including all natural resources." Briefly stated, therefore, property consists of two kinds, land-values and labour-values, which I think are two very concise terms, describing adequately two different kinds of property. As I shall attempt to show later on, a tax on land-values is a payment for service rendered to the individual by the community; and I submit that there is no other tax which conforms so completely to that principle of payment for service rendered as does the tax on land-values. The tax on labour-values, though it may be to some extent based on the principle of ability to pay, is largely in proportion to what the individual does for the community and not vice versa; in fact, it is very much the same in principle as the tax on consumption, where a man is taxed not in proportion to what he gets from society but in proportion to what he gives to society. And that, I submit, is a most anomalous and questionable procedure, particularly from the standpoint of common morality.

Now, I have surveyed the field of taxation which is familiarly known to us, and the question arises as to what principles are discernible in these various kinds of taxation. There are I submit only two principles discoverable in these systems of taxation that have any show of justice. Only two principles need we study any further, namely, first, taxation according to benefits received, or service rendered, which is another way of putting it; and, secondly, taxation according to ability to pay.

The principle of payment for benefits received is that which normally prevails in our business life. If for instance we go into a store to buy a pair of boots or a suit of clothes we do not pay in proportion to the amount of money we have in our pockets. The rich man pays no more than the poor man; every one pays for what he gets. That is the common principle that is accepted everywhere in ordinary commerce. Occasionally, however, this principle is departed from, as for example when a doctor charges a rich patient more than he does a poor one. That however, I submit, is the exception that proves the rule; and I think the world would be a rather topsy-turvy place if we departed very far from that sound common sense idea, of payment for benefits received. But some departure from the general principle is justifiable. And that leads us to the second principle, of taxation according to ability to pay.

The general argument upon which this principle is defended is based on the proposition that the individual is a social product; that all he has and is are due to social influences and forces; that society owes all to him and he all to society; that there is no real distinction between "mine" and "thine." To put it in brief, as one United States writer has said, the individual is "society at a point." I should like hon. members to retain that phrase in their memories: the individual is "society at a point." They will recall perhaps also some words that are put by Tennyson into the mouth of Ulysses when he says:

> I am a part of all that I have met.

This reasoning leads us to the well known motto of the socialist: "From each according to his ability, to each according to his need." It leads to communism, to that condition of society pictured by Edward Bellamy in two or three of his books. I am prepared to admit very frankly that there is a good deal of truth in such reasoning, and as an ultimate ideal it may be impossible to successfully challenge it. I suggest however that it is wise not to push its application too far or too fast. We have a long road to travel yet before we can safely deprive the individual of all rewards of individual effort and sacrifice. I think that would be safe only when, and as, the motive of rendering service to the public becomes dominant. Of course, it is true that the old and infirm and unfortunate are supported by the able-bodied and enterprising; the strong must bear many burdens for the weak, so that to this extent we oblit-

erate the distinction between "mine" and "thine." But we do not generally, or at least we should not, give the rewards of labour to the idler. Unfortunately, Mr. Speaker, we often do: unfortunately idleness often eats the bread of industry. But I think we should hesitate to endorse that principle. I think we should hesitate to make no distinction in reward between two farmers side by side on land equally fertile, equally well situated, one of whom is thrifty and industrious and the other extravagant and indolent. Are we prepared to ignore completely the difference between those two individuals and give no recognition to their individual efforts and individual sacrifices? I think not. Gradually I hope and believe the truth of the co-operative motto, "Each for all and all for each," will come apparent; gradually I hope and believe people will learn that the individual serves his own interest best in serving the public interest.

In this connection I have one or two quotations that I shall submit to the House in order to clarify the point. My first quotation is from the Public, an American journal which no doubt hon. members are familiar with, as follows:

> The proposal to tax land values to the exclusion of labour values should not be confused with either socialism or communism. It is individualism, pure and simple. It secures to the individual all that he produces as an individual and also his share of the social value that he helps to produce as a member of the community. It involves no new idea of property, no change in land titles, no increase of officials, and no complication of accounts.

The point there is simply this, that the taxation of land values is not socialistic. Whatever truth there may be in socialism would suggest a modification of the taxation of land values. This taxation is strictly individualistic as contrasted with socialistic. I now read a rather humorous letter from an ex-congressman of the United States, written some time ago to an American paper. It deals with this very point, and I think the House will appreciate its humour. It reads:

> I wish I felt equal to dictating an entirely profane statement of present conditions and where they are leading.
>
> With the same inevitable tendency that destroyed agricultural production in Russia by taking away peasant initiative, we are destroying every productive enterprise in this country, and need only a few million more bond salesmen, bankers, and rakeoff experts, to reach a millenium where everyone will live on the interest of his debts.
>
> We should go ahead wrecking commerce and destroying cargo by protectionist insanity and then restore the carrying trade by subsidizing vessels to haul bad air from New York to Rio de Janeiro and from San Francisco to Hong Kong. We especially need as a prophecy of prosperity high-priced land upon which to raise cheap foodstuffs and to conduct manufacturing operations. Four or five more agencies between the production of coal and the man with the chilblains will furnish a competence for millions of our people. We ought to give away our natural resources to philanthropists who will fence them in and who are willing to divide with many unnecessary distributing agencies but not with the producer or consumer.
>
> I sincerely hope you will publish a mean, nasty sheet that will devote itself to drastic criticism and avoid the attempt to provide theoretical Utopias.

I quote also from a speech recently delivered in the United States congress by Congressman Keller of Minnesota. I will refer to his activities later. The following deals with the point under consideration:

> But again it may be objected that my land value tax does not conform to the "ability-to-pay" principle of taxation. My answer is that it is a great improvement over this principle. The present ability-to-pay principle of taxation has two very serious defects:
>
> 1. It makes no distinction between incomes that are earned and incomes that are unearned, and
>
> 2. It penalizes the man who properly uses his land and rewards the man who deliberately keeps from using it. In other words, the ability-to-pay principle—or income tax—discourages industry and production and encourages idleness and speculation.

I come to this conclusion, Mr. Speaker, which I submit to the House, that the basic principle of sound taxation is payment for service rendered; that it is logical and necessary, however, that this principle should be modified to a limited extent by that of "ability to pay." Also, I think it goes without saying, a sound system of taxation should be such as cannot easily be evaded and shifted, and whose cost of collection is a minimum. In that connection I would submit to the House the four classic maxims of Adam Smith, as follows:

> The best tax by which public revenues can be raised is evidently that which will closest conform to the following conditions:
>
> 1. That it bear as lightly as possible upon production—so as least to check the increase of the general fund from which taxes must be paid and the community maintained.
>
> 2. That it be easily and cheaply collected, and fall as directly as may be upon the ultimate payers —so as to take from the people as little as possible in addition to what it yields to the government.
>
> 3. That it be certain—so as to give the least opportunity for tyranny or corruption on the part of officials, and the least temptation to lawbreaking and evasion on the part of the taxpayers.
>
> 4. That it bear equally—so as to give no citizen an advantage or put any at a disadvantage as compared with others.

Now, Sir, I ask the House: What system or systems best fulfil the above requirements both as to principles and methods? The quotation from Adam Smith deals largely with methods; the arguments that I have been advancing deal mainly with principles. I submit that the taxation of land values, above all other systems of taxation, is the one which conforms most closely to the requirements both as to principles and methods. Time will

not permit full elaboration, but I quote some authorities in this connection. I shall examine the subject under the following headings:

First, a tax upon land values is in proportion to service rendered, in regard to which I quote the following from C. J. Buell, author of The Minnesota Legislature:

> All the benefits of government are accurately measured—not by any man-made statutes—but by a law of nature as irresistible as the law of gravitation.
>
> What is that measure? The measure is this: The benefits of all good government are accurately reflected in the value of land. Why is a lot in one part of a city worth five, ten, a hundred, a thousand times as much as the same sized lot in another part of the same city? Everybody knows the answer. Where the streets are improved—paved and curbed, with sidewalks, water, gas, sewer, street car service, etc., there lots will be high priced, provided only that these improvements have been put in where they are needed —where the people congregate and need them to use. Build a new schoolhouse and lots go up in price. Run a paved road through the country and the farms will sell for more money. But good government is not the only thing that increases the price of land in the country or lots in the city. Every child born into the world adds to the value of land.

And he continues to elaborate that thought. I have also a quotation from Henry George dealing with the same subject but as it is somewhat lengthy I shall only mention it. However, I should like to quote a statement made by Dr. Bland, who is well known by most of the western members present. He says:

> But, to ascertain what benefits any man derives from living in a certain community is not impossible. It is not even difficult. He cannot live in such a community except on the land, and the price men are willing to pay for land represents precisely what in the general judgment are the advantages which that community provides for that location. Everything is taken into account in fixing that value—police and fire protection, schools, churches, roads, sidewalks, social and business opportunities. The price a man is willing to pay for any piece of land apart from improvements is his own acknowledgment, without any evasion or falsification, that he thinks it worth that much, at least, to be a landowning member of that community. The community, then, has the right according to its needs, to tax that man precisely in proportion to the value of the real estate he owns. If his real estate is very valuable, he is enjoying great benefits and should pay proportionately. If his holdings are of little value, he should pay little. If he owns no land, he should pay nothing.
>
> It is obvious no man can live in that community except as a landowner unless he obtains permission to live on somebody else's land. To obtain that permission, he will have to pay that landowner at least all the latter thinks the privilege of using that land is worth. This includes all the benefits that the community confers. Consequently, every tenant pays for community benefits in his rent. If a further tax is imposed on him he is being compelled to pay his taxes twice.

I had other quotations, Mr. Speaker, but I cannot cover the subject in any exhaustive way; I simply submit these as samples in

proof of a statement which I think can be made abundantly clear.

Second, this species of taxation cannot be shifted. I have here six quotations from economic authorities dealing with this point. I shall read only one of them, from Professor Thorold Rogers' Political Economy, as follows:

> A tax on commodities is always transferred to the consumer. A tax on rent cannot be transferred.

I have further quotations from Walker's Political Economy; John Stuart Mill's Political Economy, Ricardo's treatise on the same subject; Thomas G. Shearman's Natural Taxation, and E. R. A. Seligman's Incidence of Taxation. The argument, in brief, is as follows: If this tax can be shifted, if we may suppose that a landlord can shift his tax to his tenant, then he can raise the rent, but in that case the tenant will vacate unless other landlords can also raise their rents. To become effective, therefore, rents must be capable of being raised all round. But as everyone knows, the taxation of land values penalizes the holding of land out of use and must result in a tendency toward lower rents; therefore, the initial supposition is proved impossible. I have much additional information on the same point, but I think it need not be given to the House to-night. It can be clearly proven, Mr. Speaker, that this tax cannot be shifted.

Third, it cannot be evaded. Land cannot be hidden. The values are known or easily ascertainable; no tax dodging is possible. I should like to quote from some authorities in that connection, but as the hour is late I shall simply leave it at that.

Fourth, it will tax privilege and not industry; it will break monopoly and get rid of speculators. I have two very short quotations from Professor John R. Commons, of the University of Wisconsin; the first is as follows:

> Tax reform should seek to remove all burdens from capital and labour and impose them on monopolies.

The other quotation is as follows:

> If the size of fortunes is taken into account, it will be found that perhaps 95 per cent of the total values represented by these millionaire fortunes is due to those investments classed as land values and natural monopolies, and to competitive industries aided by such monopolies.

That is from Professor Common's book on the Distribution of Wealth. In that connection I need only refer to the land gambling mania that prevailed in our own northwest during the years 1910-12, with all its horrible and disastrous consequences.

Fifth, this type of taxation would stimulate production by cheapening land, cheapening commodities and forcing social parasites to work. I quote the following from Surgeon General Gorgas, who, you will recollect, supervised the construction of the Panama canal and may therefore be supposed to be a man of some weight and judgment in the United States. He wrote as follows in the Constructive Quarterly in 1916:

> For the first two hundred years of its settlement the United States had no tramp at the edge of starvation. Is it possible for us to reconstruct the economic conditions which existed during those first two hundred years? It seems to me that it is. . . . Fifty-five per cent of the arable lands are at present held out of use. . . .Any system of taxation whereby land values were taxed to such an extent that it would be unprofitable to keep them unused would bring about this desirable condition.

I have also, Mr. Speaker, some quotations from the late President Harding, Senator Ladd of North Dakota, Mr. Cullman of Chicago, president of the Manufacturers' and Merchants' Federal Tax League, and the following advertisement which is, I think, very notable. Members have heard of the place called Muscle Shoals in Alabama. Here is an advertisement that appeared in one of the American papers:

> "Buy lots in Muscle Shoals—'The Chicago of the South'—now! Your lots will be right in the path of the city's development. No matter who develops Muscle Shoals—government or private enterprise—Vast new industries are assured. These industries will mean a great inflow of population to Muscle Shoals, and land prices will advance rapidly.
>
> "Remember the basis of all land value is industry. Industry means population. Population means land values. The greater the population, the greater the land values."

This, of course, is a direct appeal to the cupidity of investors to protect themselves by buying this land and then exploiting those who might need to purchase it in the future. A few years ago I noticed a similar advertisement that appeared in one of the western papers with respect to land in Manitoba, advising investors to "buy now." That was just before the soldiers came back, so that when the soldiers should return, land hungry, the way would be clear to extort high prices from them. That was a compliment to Canadian patriotism!

Sixth, it is adequate to meet the needs. I have several quotations in that connection, but I shall read only one, from the Chairman of the United States Commission on the High Cost of Living. This article appeared in July, 1917. It says:

> The committee estimates that the aggregate unearned profits of land speculators, owners of natural resources and natural monopolies is approximately six and a half billion dollars this year, while the producers of the country have to pay nearly two and a half billion dollars in taxes, because landowners are permitted to retain most of the ground rent.

I may say I personally made some investigations as to the adequacy of the taxation of land values some years ago, and according to my figures—I have forgotten the exact figures at the moment—we could get a very large proportion of the revenue which is now necessary in Canada by a very moderate tax on land values.

Moreover, this type of taxation effectively discriminates between earned and unearned incomes. I mentioned when the resolution of the hon. member for Chambly and Vercheres (Mr. Archambault) was under discussion in this House that I would point out a more logical distinction between earned and unearned incomes than was described in his resolution, and I would like to submit to the House now that here is a logical and precise distinction between earned and unearned income. Theodore Roosevelt wrote as follows in this connection in the Century Magazine of October, 1913:

> We believe in a heavily graded income tax that discriminates sharply in favour of the earned, as compared with the unearned incomes.

William G. McAdoo, who may be a candidate for the United States presidency at the next presidential election, spoke as follows at Newton, Kansas, in 1921:

> The time has arrived when earned incomes should be distinguished from the unearned, and taxed at a lower rate.

I have another quotation from Professor Brown of Missouri University but I shall not read it on the present occasion.

Now, Mr. Speaker, having thus surveyed the field from the standpoint of economic theory, and established certain principles, and outlined the way in which the taxation of land values harmonizes with those principles and with sound maxims of taxation, I would like to submit very briefly to the House an outline of the progress which has been made throughout the world in connection with the movement for the taxation of land values.

First, in Europe: Municipally throughout Europe this system has been applied in connection with many municipal enterprises, not perhaps in the way it has been familar to us in America, but effectively though in a slightly different form. The kingdom of Denmark, a country which has led the world and is still leading the world in very many respects, in the year 1922 adopted for federal purposes a tax on land values, and I have here in this

10 p.m.

magazine a very interesting article outlining the growth of this movement in Denmark, which culminated in the course of some twenty years of education and propaganda in the establishment of this national tax on land values. It is perhaps significant that the movement in Denmark was begun by the organized farmers, and has been maintained by them ever since. Denmark is well known to us as a country of farmers, as a country which has shown the world and particularly the farmers of the world the best methods of organization, a country which stands out probably above all others in many essential respects, and certainly the first country in Europe to adopt what I claim to be this better system of taxation for federal purposes. Some time ago, in fact it was just last year, an international conference was held in England dealing with this question and I have here an address delivered by a Danish woman entitled the "Spiritual, Mental and Economic Background for the Henry George Movement in Denmark." She gives a very interesting account of the growth of this movement in Denmark. That is all the information I have time to submit in this connection as to the European situation.

Now in the Australasian countries this system has been adopted municipally provincially, and federally, for a good many years. I need not give the details as the hour is late, but there more than anywhere else this system has been worked out with considerable advantage. I must admit it has not developed much in recent years, probably due to the very heavy taxation resulting from the war. It may be also that as eternal vigilance is the price of liberty and progress, some friends of the movement there have become weary in well doing. I have a good deal of information here as to taxation in the Dominions of Australia and New Zealand which I shall simply refer to in passing, and not give to the House; I wish time permitted me to do so, but it will not.

Now in Canada I think we are more familiar with the situation, particularly our western members. I desire, therefore, simply to refer in passing to the very considerable degree of application of this system of taxation municipally in the various Canadian provinces, also to the provincial taxes on wild lands, or surtaxes or extra taxes that have been adopted in our western prairie provinces. I note also as significant the exemption of live stock and implements in practically all of the Canadian provinces for municipal taxation, and the additional exemption of buildings throughout all the rural municipalities, I understand, on the prairies. We all know the Drury Act that was passed in Ontario some few years ago, but which was recently repealed by the present government of Ontario, a most unnecessary and unfortunate action, in my judgment.

Federally, I would like to point out that this matter received some consideration in the Canadian parliament in 1919, when a subcommittee of the House of Commons, with Mr. Calder as chairman, reported on suggested forms of taxation as follows:

> With respect to the federal land tax—

That was intended, I believe, to be a federal land value tax, although it is not so stated.

> —this proposal came from many sources and is worthy of consideration. There is no question of jurisdiction. If parliament desires to levy a tax on all land within Canada whether used or not, it may do so.

Sir Thomas White, then Minister of Finance, said he had thought about a tax of this kind. There were some estimates as to what it might yield at that time. The further information I have here in connection with the Canadian situation I shall not submit to the House. I would like to remark, however, that there are a number of Labour organizations which have taken a definite stand on this matter. I have a resolution which was sent to me by one of the local labour organizations, also a resolution passed by the Ontario Independent Labour party in 1920, as follows:

> Therefore be it resolved that this convention favour the following plank in the party platform:
>
> The gradual elimination of import duties on all necessaries of life, such as food, clothing, including boots and shoes, and the tools and machinery used in production, the revenue hitherto derived from this source to be derived from taxation of land values and luxuries.

So far as the United States is concerned, the matter has been before congress for some years. I cannot say just what headway has been made, but Mr. Oscar E. Keller, one of the congressmen from Minnesota, has had several bills before congress for some years past and I have a copy of the Congressional Record, giving his speech delivered in congress on the 18th January last. I will quote a brief statement of his proposals as follows:

> The tax plan which I herewith submit consists of four bills. My first bill repeals a large variety of excise and nuisance taxes, including all corporation income taxes, the total reduction from these sources amounting roundly to $1,075,000,000.
>
> My second bill makes a distinction between earned and unearned incomes, and cuts the present rate on earned incomes in two, making a total reduction of about $230,000,000.
>
> My third bill increases the inheritance tax to the extent of about $110,000,000.
>
> My fourth bill places an excess tax of 1 per cent on the privilege of holding lands and natural resources worth over $10,000, after deducting all capi-

tal and labour values, improvements, standing timber. and fertility. This bill, as I shall show, will yield about $1,100,000,000 a year.

I refer to this to show that the matter is being considered seriously in the United States. It has also been under consideration locally in the United States for some time. In Pittsburg they have had it partially in effect for ten years with very satisfactory results. I shall not now refer to the various arguments presented in congress by Mr. Keller. I have much additional information regarding the situation in the United States, but as the hour is late I shall not submit it to the House.

Some time ago an hon. member in this chamber said we were not looking for precedents to the United States, that we ought rather to turn our eyes to Great Britain, and we have often heard of "the mother of parliaments." Therefore, I submit certain information to the House as to the situation in Great Britain. I quote first from the manifesto of the Labour party now in office:

> The Labour party proposes to restore to the people their lost rights in the land, including minerals, and to that end will work for re-equipping the Land Valuation department, securing to the community the economic rent of land, and facilitating the acquisition of land for public use.
>
> The increased revenue derived from taxation of land values would make it possible to reduce the burden of income tax, abolish not only the food duties, but also the entertainments tax, and the corporation profits tax, as well as provide money for necessary social services.

I might quote also the following from the present Lord Chancellor of the Exchequer, Phillip Snowden:

> We hold the position that the whole economic value of land belongs to the community, and that no individual has the right to appropriate and enjoy what belongs to the community as a whole. Let there be no mistake about it. When the Labour government does sit upon those benches it will not deserve to have a second term of office unless in the most determined manner it tries to secure social wealth for social purposes.

I have also a quotation from Ramsay MacDonald which I shall not read.

However a short time ago a deputation waited upon Mr. Snowden, representing 221 members of the British parliament who were personally pledged to the taxation of land values, and I have here a rather extended report of their interview with Mr. Snowden. I quote the following:

> Mr. Snowden said he agreed that the deputation was entirely unique in this respect that so far from seeking to make a raid on the treasury, it came to him with suggestions which would ultimately result in a large increase of revenue. He was in general accord with the aims of the deputation, and he adhered without qualification to the statement which he made last year that it was desirable to obtain for the public the enormous social economic value of land. He was in agreement as to the theory, the justice and the necessity of the taxation and rating of land values. The deputation had reminded him of promises made by the Prime Minister. He was pledged individually, and the Labour party was pledged as a party to deal with the matter at the first available opportunity.

I will not read the rest, but he goes on to speak about the difficulty under which the Labour party is exercising power at the present time, and the practicability of bringing this into effect in the immediate future. I quote also the remarks of the Right Hon. C. F. G. Masterman in reply as follows:

> The Right Hon. C. F. G. Masterman expressed the thanks of the deputation to Mr. Snowden and repeated the assurances which had been given that he would receive support from all progressive sections of the House of Commons in any proposals for the taxation of land values which he was able to introduce in the forthcoming budget. They would be prepared to spend nights as well as days in assisting him to press the measure forward, and would not care in the slightest to whom the credit was given so long as the object which they desired was achieved.

As hon. members know no such proposal was brought down in the last budget by Mr. Snowden for the very obvious reasons outlined by him in his reply to the deputation.

I mention next the question of the feasibility of the taxation of land values. There seem to have been doubts in some people's minds as to the feasibility of this system, but I submit the feasibility has been demonstrated by the actual carrying out of this idea in a great many countries. It was also considered feasible by a committee of this House a few years ago. I submit also that the taxation of land values is applied in part throughout Canada for local purposes, and during the war there was a provincial tax—not a tax on land values but on real estate—levied by the provincial government of Ontario for war purposes—a tax of one mill on the dollar on real estate.

I should like also to submit to the House that here is a system of taxation by which the federal government can utilize some of the machinery already being utilized for local taxation, at least to a very large extent; and in that way there will be great economies effected. The problem of the equalization of assessment is not an insuperable one, because it has been already tackled and solved to a reasonable degree by our various municipalities. For instance, in Ontario we have equalization as between the various townships for county purposes. We merely require the extension of the same idea in respect of provincial or federal taxes. I submit to the House also that here is a system in which we can collect local provincial and federal taxation with the same machinery. And any modi-

fication of it, such as is in conformity with the principle of "ability to pay," may be carried out through the existing income tax machinery.

We have at the present time a most complicated tax machinery and it is high time that there was some simplification. I should like to know the average cost of collection in Canada of our various taxes. I think it will be found to be very high. The multiplication and overlapping of machinery, is scandalous. In the taxation of land values we have a system that would lend itself easily to a very marked simplification in machinery. I do not, of course contend for reasons already advanced, that taxation of land-values is the only kind of taxation that may be justified. As I said, I think the principle of "ability to pay" has some logical and philosophical basis; but we ought to go very much further in the application of the taxation of land values than we have yet gone. We have not applied it at all as yet for federal purposes, and it is high time that we gave this matter consideration.

Concluding and in reply to the question of the hon. member for South York (Mr. Maclean) as to a commission or committee, I understand that in the Speech from the Throne the appointment of a committee or commission to study methods of taxation is foreshadowed. In fact, the government has, I believe, promised—and the Acting Minister of Finance (Mr. Robb) made reference to this the other day—that a committee would be appointed to study methods of taxation. I heartily endorse that suggestion; I hope it will be promptly and effectively carried out, and whether or not the committee should be made permanent will appear later. But the appointment of a committee immediately to go into this matter carefully, to study principles and methods, and to make some recommendations, is entirely wise, proper and timely. In that connection, too I should also like to repeat what I have said before, that there should be some co-operation between the federal, provincial and municipal authorities in order to abolish the present overlapping and waste.

I realize that I have imposed at great length upon the patience of the House; but as I stated at the outset, I would not have felt justified in speaking at this length, were it not for the fact that this subject, so far as I know, has never before been presented to this House in any but the most cursory fashion. For that reason and because of promised committee of inquiry, I have placed myself on record.

Mr. JOHN CARRUTHERS (East Algoma): Mr. Speaker, as a back bencher, one who is not enamoured with the sound of his own voice, I purpose to be very brief in my remarks on this subject to-night. In the first place, I wish, with former speakers, to express my regret at the absence from his accustomed place of our revered Minister of Finance (Mr. Fielding), and at the same time to congratulate his understudy upon the concise and short way in which he delivered the budget speech on this occasion, a budget speech that, I think, is more far-reaching and momentous than any that has ever been delivered in this House since the days of the so-called National Policy. In connection with that National Policy, I should like to put this question to the House. Will any hon. member stand in his place and state that he is satisfied with the progress that Canada has made in the last forty-five years under a high protective tariff? Canada, a country which comprises more than one-half of the continent of North America, a country that is rich in natural resources, yet in this year of 1924 has a population of only —I was going to say 9,000,000 people, but it is really less than 9,000,000 people.

I do not intend, as I said, to deliver any learned discourse upon this question. We have just heard a very learned symposium on taxation from the hon. member for Brant (Mr. Good), which leaves nothing to be said upon that point. We have also listened to many figures and statistics during the last few weeks in connection with this debate, figures and statistics that very few paid much attention to and, I believe, very few read after they are printed in Hansard. I intend only to give expression to a few wandering thoughts that have come to me in the somewhat idle hours I have spent in this chamber listening to the debate. One thing that has somewhat bewildered me in this debate is the action taken by our friends of the opposition in regard to two questions: One in regard to the Canadian National Railways; the other in regard to the protective tariff. As hon. members all know, the Canadian National Railways was a foundling left upon the doorstep of the Liberal party by our Conservative friends opposite. We had to take it in and do the best that could be done to keep it alive. We have done fairly well and the husky chap is growing very nicely, but unfortunately our friends opposite refuse to grant it the proper nourishment which would come from the branch railway lines that are required in order to keep the growth of that railway intact. The other question is the action taken in regard to the National Policy. I am a young member in this House, but I can well remember

the election campaign of 1878 when the National Policy was propounded by the Conservative party. In our old home county of Haldimand, I think it had no better advocate than the late Nicholas Flood Davin, whom a good many in this House will remember. I can remember perfectly the stand that he took in regard to that policy, namely that it was to be only a temporary policy and that as the industries which were protected grew in strength, the protection was to be gradually removed until it was wiped out altogether. I might also draw the attention of the House to the stand taken by the present leader of the opposition Mr. Meighen) in 1911 in regard to the National Policy. The resolution that he moved in this House on that occasion was as follows:

That in the opinion of this House a substantial reduction in the import duties on agricultural implements is now due the agriculturists of Canada, and is in just accord with the true end of a protective tariff.

That sounds almost like an echo from Brome. He also goes on as follows in the eloquent speech that he made on that occasion. I will quote just a few extracts from it and this is one of them:

It is this, that in their attempts to continue the National Policy which had obtained for years before, they have overlooked, they have neglected one essential feature of that policy, they have quite forgotten its guiding principle, namely, the principle that as our industrial institutions advanced in strength and as they were able with every advance to acquire a hold on the home market, the import duties were to be diminished and adjusted in order to meet the evolving and changing conditions. It is that restraining, guiding principle which I claim this government has entirely overlooked, and as a consequence they have allowed, in the respect which I am discussing this afternoon, protection to run rampant, and they have for reasons that are only too obvious, become the slaves of those who helped them into power and who now maintain them there behind ramparts of gold.

I am afraid the leader of the opposition has capitulated to those gentlemen behind the ramparts of gold. Further on in the same speech he says:

Now, Sir, what are the manufacturers of agricultural implements enabled to do? They are able, under this tariff, to exact a higher price than they could exact if the tariff were lower. I do not say that a reduction will, to any very enormous extent, affect the price; I believe it will materially, and I think it will render some relief to, particularly, the farmers of the West, many of whom, notwithstanding any statements that have been made here, are struggling between success and failure every hour. It will accord some relief to them and I believe it is the bounden duty of the government to so afford it.

Here is another gem:

From 10 to 20 per cent is about the addition which these manufacturers are able to obtain from our farmers, by reason of the increased protection afforded them by this government.

Let me cite another passage from the hon. gentleman's remarks:

—but it has remained for this government to push the line far beyond that, and they have not only given the manufacturers a grip on the whole home market, but practically given them a monopoly of it and they have taxed the consumer in order to push the manufacturers and their industries successfully into the markets of the world.

A further statement he made was this:

But before I go into that, let me give you a few figures to show that the conditions of manufacture at the present time do not warrant a very material duty of any kind. . . . and I think I will convince the House that there is very little, if any difference in the cost of production of these machines on this side of the border and in the United States. . . . They (the manufacturers) are able under this tariff to exact a higher price than they could exact if the tariff were lower. It (the reduction of the tariff) will accord some relief to consumers and I believe it is the bounden duty of government to so afford it.

That was his view in 1911. At the beginning of this year, or in the latter part of last year, at London, speaking at a Conservative meeting, he made the following statement:

The tariff is at the bottom of the commercial stagnation of Canada to-day. The 2½ per cent reduction on farm implements has been followed this year by an increase in the cost of implements of Canadian manufacture and the mounting cost of production.

Now there is the problem. If the 2 1-2 per cent reduction in the duties on implements in 1922 has increased prices, why would a substantial reduction in 1911 have reduced them? It seems a strange conclusion to draw, and I wonder whether the leader of the opposition expects the Canadian people to accept "such a jumble of inconsistencies" as a National Policy for this Dominion. Protection to my mind is an unsound and illogical policy, especially for a young country like Canada which has great natural resources to be developed; for if you followed out protection to its logical conclusion, every country in the world would have a right to resort to it; and with a prohibitive protective duty in force everywhere, where would international trade go to, or what would become of the exportable surplus of the products of any country? Why, international trade would absolutely vanish and the manufacturers of each country would have only the home market as an outlet for their products.

I come from a riding in which all the basic industries are carried on—farming, mining, fishing, lumbering and paper making. It contains an area of about 20,000 square miles and has a population of some 50,000. Yet I can say that ever since my advent to this House I have received no request from any of the manufacturers or any of the other

people of that riding to advocate an increase in the tariff in order to help them in the promotion of their business. I think that high protection has been a bad thing for the country as it has encouraged the establishment of hotbed industries which should never have been started; because the goods they produce can be purchased more cheaply in other countries, and if these industries were not in operation in this country the capital tied up in them would have been invested in industries indigenous to Canada. However, as we have them with us I would not advise that they should be wiped out by a complete removal of protection; but I think there should be an excise duty nearly equal to the protective import duties, so that the manufacturers' profits derived from protection would go into the public coffers instead of into their own pockets. This would reduce taxation and encourage legitimate industry. Another reason for the hard times which the manufacturers complain of, and which high protection has encouraged, is found in the fact that during the war years a great many manufacturers, to avoid the excess profits tax, invested their surplus funds in increasing plants and machinery, with the result that to-day they are heavily over-capitalized, their plants being too large for the business they carry on, so that they find it difficult to pay dividends on that over-capitalization and watered stock. Hence the Macedonian cry for more protection in order that the manufacturers may secure higher profits out of the consumers of Canada.

Still another thing which, in my opinion, is affecting the ordinary staple lines of business is what I might call, for lack of a better name, the "jazz" industries of the country. Canada is automobile poor, it is radio poor, it is moving picture poor, it is golf poor, it is phonograph poor, and last of all it is becoming Mah Jongg poor. Let us take the business in radio equipment alone. Babson's report states that no less than $350,000,000 was expended on this continent on radio equipment last year, which means about $3 for every man, woman and child, or about $15 for every family. Well, if they spend $15 on radio they have to go without a few pairs of socks, a few pairs of shoes, and so on, because, as you know, the purchasing power of every country, every community and every individual is limited. If they spend their money on these jazz products they have not got it to spend on necessaries. For every dollar that is spent on this continent on boots and shoes, 25 cents is spent on radio; for every dollar that is spent on furniture, 33 cents is spent on radio equipment; for every dollar spent on carpets and rugs $2 is spent on radio equipment; for every dollar spent on musical instruments, 75 cents is spent on radio equipment, and so on. In this way, as I say, the business in the natural or ordinary products must be slowed up.

Just a word in regard to the agitation for a permanent tariff commission in order to study the whole trade question continuously for the purpose of advising the cabinet. I think the success of such a commission would depend largely upon its personnel. Such a board has accomplished little or nothing, I am told, in the United States, the government there having continued to act contrary to its recommendations. Such a commission might be tried by us, but it would not remove the question from politics or relieve the government of responsibility. In this connection let me quote from the last issue of the Toronto Saturday Night, which of course no hon. member will think is a very active antagonist of the big interests. This is what it says on the front page:

> Before the appointment of such a commission certain broad principles would have to be adopted by parliament. For instance, in granting protection to an industry no account should be taken of watered stock or any other security that has been given away or sold under circumstances that would not justify dividends on the merits of the sale and the money invested in the enterprise from the result of such sale. Anti-protectionists have a strong card in the argument that they refuse to regard seriously the earning of dividends, through a protective tariff, by industries whose capital as represented by stock certificates is made up one-half of water and the other half of real money. Any fair-minded man must agree to the principle that money is worthy of its hire, but that watered stock is not.
>
> Then again there are industries that may or may not, only close investigation can determine, be worthy of protection, owing to the limited amount of money distributed to workmen as compared with what it might be bought for by the consumer under free trade. For instance, if a firm is making a staple food, necessary to the entire community, and is asking three cents per pound more than it could be purchased for in the open market in other producing countries; and at the same time the distribution to Canadians in wages, salaries and in other quarters would be small in proportion to the sum total of the three cents per pound demanded, then that industry should not be deemed worthy of a protective tariff. Inasmuch as the cost to the country is excessive as compared to the benefits derived.

I now come to what I consider of far more importance to this country to-day than the tariff—I refer to transportation. This is the greatest problem confronting Canada, owing to our topographical and geographical features. The natural and economic route of our trade is north and south; the political and sentimental route is east and west. How are we

to reduce the cost of transportation over this long haul to the minimum and so allow our natural resources to compete on even terms in the markets of the world with countries that have a shorter haul and lower freight rates? Let us look for a moment at the railway situation. In my opinion it is anomalous and cannot continue. The two great transportation systems comprise about thirty-eight thousand miles or more of road, built at a capital expenditure of over two billion dollars, large stretches of both systems running through barren territory which does not contribute any local traffic. In the next twenty years, even allowing for natural growth and development, there will not be traffic enough to pay interest on this immense capitalization. Yet Sir Henry Thornton states that he expects in less than five years to meet all overhead charges on the Canadian National lines, and I think he will be able to do it. If so, it will have to be done at the expense of the Canadian Pacific's business. Let our people be honest with themselves. This is a question of business competition, and as our business men realize more and more that every dollar they pay into the national treasury to meet our railway deficit is that much more added to their freight bills when they ship their goods over the Canadian Pacific Railway, there can be but one result. That is why we hear so much of late about menacing the credit of the Canadian Pacific, and that we must not build branch lines in opposition thereto. "Hands off the C.P.R." is the watchword of certain interests. That is why we hear so much sniping from ambush on both sides of the House against government railway branch lines—and to say the least, Mr. Speaker, it is not a very edifying spectacle. Then we have Mr. Lambert Payne and the "Student of Railway Finance" and other propagandists soft-pedalling in the press and elsewhere in favour of Canadian Pacific interests.

It is self-evident that the people of Canada will never permit the Canadian Pacific to absorb the National lines and thus form a huge monopoly which would own the political soul of this country, so the only alternative is for the government to take over the Canadian Pacific Railway, as it should have done long ago. I have nothing against the Canadian Pacific; I think it has been a splendid institution for this country and I would hate to see anything happen to it, but from the way things are shaping to-day I see nothing but ruin ahead, in time. Contrary to what a great many think, the majority of the stock of the Canadian Pacific Railway Company is not held by Canadians in Canada; in fact, only about 20 per cent of the stock is held in this country, 23 per cent in the United States and the remainder in other countries, chiefly in Great Britain. However, that does not matter. As I say, we do not wish anything to happen to this great institution, and I am therefore strongly of the opinion that the government should take it over in connection with the Canadian National lines. If these two systems were amalgamated they could be operated much more economically and the country would obtain the advantage in the lower freight rates.

I would like to say a few words in connection with the Hudson Bay project, which is very dear, I know, to the hearts of some of our western members. No one in this House is more sympathetic to the western people and their demand for cheaper freight rates than I am. But I listened to the Winnipeg "On-to-the-Bay" delegation a few days ago on behalf of this project, and so far as I can see their only arguments were sentimental and political. Why, they said, do you not know that both the old political parties are committed to it? Even the hon. member for Last Mountain (Mr. Johnston) used this argument in his speech on the budget a few days ago. And now, in the name of common sense, I would ask you, Mr. Speaker, and the members of this House if the people of Canada to-day are to be bound down by the action or the stand taken by the two old political parties of Canada twenty years ago. I for one do not think so. A lot of water has passed under the bridge in the last twenty years. Canada is in a different financial position to-day, and, further, we have learned more about the possibility of navigation in the Hudson strait. It looks to me after a careful study of the question for the past two years like a mid-winter night's dream, and I hope the government will throw no more good money away on this project until they are absolutely assured by thorough investigation that it will be of some benefit in the way of lowering the cost of transportation. I am convinced that the annual deficit in operation alone would be enormous. By the way, I have some pictures here showing the "lovely" summer weather they had up there in July and August, 1914. To show that the West is not entirely unanimous in this matter I would like to quote, if the House will pardon me, two or three extracts from western opinion. Here is one from the editorial columns of the Edmonton Journal:

The representative of Prince Albert in the House of Commons, Mr. Andrew Knox, has been having a discussion with the Ottawa Citizen with regard to the Hudson Bay Railway. He concluded a letter to that newspaper as follows:

"Lastly, it might be well to keep in mind that editorials of this character will not deter the West from insisting that this much delayed, though much needed, national enterprise be completed at an early date."

Then the Edmonton Journal goes on:

It has too long been the habit of parliamentarians from this side of the Great Lakes to undertake to speak in the name of "the West," when setting forth their individual wishes, or those of their own particular districts. At least half of "the West" is very little interested in the completion of the line to Hudson Bay and it is doubtful if the people of the other half are as much concerned in having the project put through as its advocates represent. Alberta and the western half of Saskatchewan would be very foolish to lend their influence to it, when all the money that the government can spare is so badly needed for the construction of branch lines and the development of the western route. It is on the latter that the increased prosperity of the area in question must largely depend. There can be no comparison between the benefit which the West will derive from this route and that which can come to it through the Hudson Bay line.

Then, here is a small quotation from the Swift Current Herald.

Mr. KNOX: Might I ask if the hon. gentleman knows who controls the Edmonton Journal?

Mr. CARRUTHERS: No, I admit I do not know, I am just quoting what is given in the papers out there, which shows that they are not in perfect agreement on the subject throughout the western country.

Mr. KNOX: I think the hon. gentleman would find it interesting if he would investigate.

Mr. CARRUTHERS: Well, we will try to investigate. How about the Swift Current Herald? Is it owned by the same people? Here is what the Swift Current Herald says:

Misrepresentation prospereth nothing, and instead of assisting in getting early completion of the Hudson Bay railway by the style of campaign now being waged, the desired end will probably be defeated or postponed indefinitely. It is well known in informed quarters that there are many heavy investments in mines, etc., along the route and that these investors are anxious to get quick financial action through completion of the railway to the bay. They believe that by filling the minds of the farmers of the prairies with fairy tales about "transportation savings" there will be sufficient pressure brought to bear at Ottawa to hasten completion of the steel to Port Nelson.

That is from Saskatchewan.

Mr. KNOX: Is that not proof that there are some possibilities along the line of railway?

[Mr. Carruthers.]

Mr. CARRUTHERS: I am talking about it as a navigation project. In Ontario, where they found minerals in the north country, the provincial government built the Temiskaming and Northern Ontario road in order to permit the development of the mines.

Just one word more in connection with the Hudson Bay project. I wish to draw the attention of the Minister of Railways (Mr. Graham) to a press despatch in the Toronto Globe of April 30 which reads as follows:

Sir Henry Thornton to-day told a deputation from the "On-to-the-Bay Association" that he intended this summer to secure first-hand information on the Hudson Bay railroad through a personal trip of inspection which would take him to the end of steel and to the bay itself.

Then comes this, to which I wish the minister to pay particular attention:

Sir Henry Thornton said that if the government would vote the money for completing the road he was quite willing to go through with it.

Now I would like to ask the minister if this is what Sir Henry Thornton is paid $50,000 a year for, to pass the buck along from himself to the government and to parliament? I do not wish anyone to think that I have not a great deal of confidence in Sir Henry Thornton, because I have. I think he is a big man, and that he is handling a big job in first-class style. I do not think he gets a cent more than he is worth, and I am very doubtful if he is properly reported here, because that is not his duty at all. We are not paying him for passing the buck, if he did so, on to the government and this parliament. He is the man who must decide upon these questions from a business standpoint. He must give them his consideration, and then give us his advice as to whether the Hudson Bay route will be a paying proposition. If he thinks otherwise, he should not advise this government or parliament to spend any money upon it; that is my idea, at any rate.

Now, Mr. Speaker, I would like to say a few words about water transportation. We have in this country the greatest inland system of water transportation on the globe, but we are not utilizing it to the extent we should as a cheap method of transportation. The reason is, there is no government regulation of freight and passenger rates. The rates in my part of the country between Owen Sound and the Soo have almost tripled in the last twenty years and I suppose this applies to all the lake traffic. The steamboat companies are a law unto themselves, and we all know what happened when the government tried to regulate the rates on grain between Port Arthur and Fort William and the lower lake ports last season, but I can assure the

members of this House that the action of those large American steamship companies last year did more than anything else to crystallize public ownership sentiment in this country, at any rate in the province of Ontario, and we hope that during the coming year the government will utilize the merchant marine and other vessels to keep down the rates in the transportation of grain and other commodities from the western country. Another thing that should be done to cheapen transportation as soon as the finances of the country will permit is the construction of the Georgian Bay canal, which is about 300 miles nearer the seaboard from the head of the lakes than any other route.

Transportation experts claim that under normal conditions, even if the St. Lawrence waterway were deepened, grain could be carried by the Georgian Bay route anywhere from 3½ to 5 cents a bushel cheaper than by the St. Lawrence route, so that I am surprised to hear anyone have the hardihood to advocate the latter as far as navigation is concerned. Of course, we know that the development of electric power is really at the bottom of all this agitation for the deepening of the St. Lawrence waterway, but on the Georgian Bay canal we can develop nearly as much horse power and at about one-half the cost, and it will also help out, as I have said, in the cheapening of rail and steamboat transportation.

The Georgian Bay route will be free from international entanglements. It will give depth as well as length to our country. It will assist in developing the immense mining regions of the northern country. It will permit Nova Scotia coal to compete successfully with the foreign American bituminous coal, and thus the boats will carry grain from the west, and return to the head of the lakes with coal from the east, and as everybody knows return cargoes is the only method by which freight rates can be lowered. I may say that about 350,000 tons of American coal will be shipped through my own home port of Little Current this year for the industries of the north, at a value of about $2,000,000. It seems too bad that that money should be spent outside of Canada when by the construction of this Georgian Bay canal it could all be spent in our own country.

Here is another opinion upon the Hudson Bay route. It is from a retired transportation man who is now living in the West and is published in the last issue of Toronto Saturday Night. He says:

> This is not the time to force the government or the people of Canada to be stampeded blindly into what may well be a colossal blunder, so let us get down to facts, at least, instead of proceeding on sentiment and theory—ascertaining what the practical expectation will be if this route is completed and provided with facilities.
>
> To start with, let us obtain a report from one or more thoroughly competent steamship officials, with managing and traffic experience in the North Atlantic trade, who can furnish the details of all costs which will have to be met, in addition, if any, to those applying in the St. Lawrence trade, in order that some reasonable estimate can be made of the probable freights which will have to be exacted from the bay. This will have to include extra costs of every kind in the ocean transportation, contrasted with costs from competing ports.
>
> Another essential report should be one from the outstanding grain exporters, as to the value of grain available for export through the bay route, as against other North Atlantic routes in the world's grain traffic. From the same source, the extra charges for carrying grain over in storage at the bay, or in the interior, can be readily procured.
>
> Surely we should be sensible enough to look to experts for such knowledge, on which the government might act with the full approval of the public which must eventually pay the bill, rather than the incitement to action by Grain Growers, Women's Clubs and others seriously lacking in expert knowledge of the business conditions and operations of the export trade. Regardless of political pledges covering the last thirty years, why not start out for the first time in a business-like manner?

Is not that good sound common sense? I will leave it to the judgment of the House. He continues:

> We are struggling as best we can to reconstruct our lives and business under a smothering load of taxation and excessive cost of living. Let us not complete our ruin by rushing blindly into enormous, and probably useless expenditures on sentiment, theory or specious, if not opportunist, political pledges of the past.

I should like, in conclusion, to read a few extracts from the Sessional Papers of 1909 in regard to the Georgian Bay route. As all know, a thorough survey was made of that route, and the following is taken from the engineer's report in the Sessional Papers of this House of 1909:

> Moreover, when this waterway can show from the head of the Great Lakes to the nearest ocean port, a through route shorter by nearly 300 miles than any other existing or possible route, thus assuring faster trips, quicker and larger returns, and lower through rates, it is bound in my opinion, not only to attract attention but to secure trade.

And again:

> The Ottawa river route, which is the most direct and quickest possible waterway from the northwest to a sea port. Only that route, in my opinion, can ever successfully compete with the routes which the United States authorities are trying to develop, and keep the transport of our trade wihin Canadian territory.

And again the report says:

> The Georgian Bay ship canal if built will occupy a privileged geographical situation over all other arter-

ies of commerce leading to an ocean port. The reduction in time of transit will allow vessels to make more trips during the season, which will have a tendency to reduce the rates from Fort William to Montreal. Its northern position will give great advantage for the transport of perishable goods. Its course is far from international boundary lines and no international waters are involved.

And the last quotation is in regard to the importation of Nova Scotia coal to northern Ontario. The report says:

The advantages of the Georgian Bay ship waterway are apparent, as the Canadian coal shipped via the St. Lawrence comes directly in competition with United States coal, the route being along the international boundary. The proposed waterway, however, would carry it through the heart of the province rich in minerals, the highest development of which depends upon coal.

Delivery can be made as advantageously to interior points in Ontario, from the line of the Ottawa route, as from St. Lawrence, lake Ontario or lake Erie ports.

The average lake rate on coal from lake Erie to lake Huron and Georgian bay ports is 35 cents per ton. The average rate to upper lake ports is 40 cents per ton. The average rail rate from the mines to, say, Cleveland is about 78 cents per ton, making a through rate of $1.13 to $1.18 respectively.

The average rail haul from the mines to the lake front is 140 miles. From Cleveland to Fort William about 800 miles—total 940 miles. Vessels engaged in this trade usually secure return cargo.

The distance Sydney to Montreal is 815 miles, Montreal to Fort William 882 miles, total 1,697 miles. Taking the lake rate Cleveland to Fort William as a basis, the rate Sydney to Fort William would be about 85 cents per ton as against a rate of $1.18 from the United States mines, with the advantage of non-transhipment. It will be noted that there is a difference of 33 cents per ton in the rate of freight to Fort William in favour of Canadian coal. To this add the duty of 53 cents per ton, making 86 cents per ton in all in favour of the home product.

Now, Mr. Speaker, I have summarized my suggestions as to transportation and they are as follows:

1. Amalgamate the Canadian Pacific Railway and the Canadian National lines.
2. Place the regulation of lake freight and passenger rates in the hands of the Railway Commission.
3. Abandon the Hudson Bay route.
4. Utilize the Canadian Merchant Marine in regulating lake freight rates.
5. Encourage further development of the western transportation route both at Vancouver and Prince Rupert.
6. Build the Georgian Bay canal.
7. Government insurance of transatlantic traffic and regulation of rates by utilizing the merchant marine.

I think this is the most important question in Canada to-day and the only possible way for us to get the full benefit from it is to have complete government control of rates from the prairies of the West to the place where the grain of the West must be marketed, in the Old Land, and the government must control it throughout, as hon. members can see from the experience we have had in the last year or two. They have cut down the rates on lake freight, but the other companies will say "Well, the traffic will stand a little more" and they will put up the ocean rates, and in that way the farmers of the West get no benefit.

I hope that the members of this House and the people of this country will get away from this narrow provincialism, get a wider outlook, and stop whining and whimpering about trade and commerce. Everything is going along all right in this country if we only think so.

The Minister of Agriculture (Mr. Motherwell) yesterday read the Massey-Harris statement, just to show our Conservative friends that we are not going to the demnition bow-wows all at once and entirely—

Mr. STEVENS: Just by piecemeal.

Mr. CARRUTHERS: And that there is an unrest which does not really exist among the manufacturers. Here is a report in last night's Globe, of an interview at Oshawa, with Mr. R. S. McLaughlin. It says that Oshawa will produce 5,000 cars, and so on, and the interview winds up in this way:

So far as the citizens of Oshawa are concerned, we hope that none of them will become unduly excited, as it looks to me as if we are going to have a very nice business, both domestic and export, and as if the horizon all around is gradually clearing a little.

It may interest you to know that the month of April was the greatest we have ever had. We shipped 4,755 cars. I am sure you will also be delighted to learn that our schedule for the month of May exceeds even that of April, as we will produce over 5,000 cars. These facts speak eloquently for themselves.

So that apparently all the manufacturers of this country are not so terribly worried as our friends, the Conservatives opposite, would lead us to believe.

Mr. SIMPSON: There is no reduction on automobiles.

Mr. CARRUTHERS: I am not referring to that. But remarks have been made across the way about feelings of unrest. It was not in regard to agriculture, but in regard to all other industries.

Mr. SIMPSON: Automobiles cost money.

Mr. CARRUTHERS: In conclusion, I think we should get away from all these whispers of death. This country is all right. All we need to do is to work. We have the proper policy laid down by our government, and I am confident it will mean successful business in the country for many years; therefore I would implore my hon. Conservative

friends especially, to keep their eyes away from their shoe tops and lift them up to the mountain tops once in a while, and see the vision there of a united and prosperous Canada.

On motion of Mr. Stevens the debate was adjourned.

On motion of Mr. Graham the House adjourned at 11.12 p.m.

Friday, May 9, 1924

The House met at three o'clock.

REDISTRIBUTION BILL

Hon. E. M. MACDONALD (Pictou, Minister of National Defence) presented the first report of the special committee, to whom was referred Bill No. 2, to readjust the representation in the House of Commons, as follows

Your committee, in accordance with a resolution adopted at their meeting held this day, recommend that it be given leave to have its proceedings printed from day to day for the use of members of the committee and of the House, when deemed advisable, and that rule 74 in relation thereto be suspended; also that it be given leave to sit while the House is in session.

All of which is respectfully submitted.

He said: With the consent of the House I would move the adoption of this report.

Sir HENRY DRAYTON (West York): Mr. Speaker, we are not at all instructed and therefore are in no position to consent. My hon. friend had better let the matter stand until the next sitting, or give notice in the usual way.

Mr. MACDONALD (Pictou): The report simply asks leave for the committee to sit while the House is in session. It was concurred in by all the committee.

Sir HENRY DRAYTON: It also contains a recommendation that the proceedings be printed. I do not know whether everything ought to be printed or not.

Mr. BELAND: Perhaps my hon. friend would be in a better position to form an opinion if the report was read to the House.

Sir HENRY DRAYTON: I heard it read.

Mr. LAPOINTE: You are an obstructionist.

Sir HENRY DRAYTON: Not at all; I am simply insisting upon the observance of proper order and decorum.

UNITED CHURCH OF CANADA

Petitions were presented from certain members of the following congregations, severally praying that the proposed legislation incorporating the United Church of Canada, be not enacted:

Knox Presbyterian Church, Goderich, Ontario,—Mr. King (Huron).

Gordon Presbyterian Church, Edmonds, New Westminister, B.C.,—Mr. Clark.

Presbyterian Church Association, Port Arthur Branch, Ontario,—Mr. Kennedy (Port Arthur and Kenora).

Petitions were presented from certain members of the following congregations and bodies severally praying that the bill now before the House to incorporate the United Church of Canada be passed during the present session:—

Central Methodist Church, Stratford,—Mr. Reed.

Presbyterian Church, St. Peters Bay, P.E.I.; Methodist Church, Gladstone, Man.; Methodist Church Manitou Man.; United Church, Saltcoats and Perley, Sask.; Trinity Methodist Church, Manitou, Man.; United Church, Church at Henford and Pleasant River, N.S.; Presbyterian Church at Dalhousie, N.B.; Riverdale Methodist Church, Toronto, Ontario; F. L. Campbell and 73 others of Ottawa, Ontario,—Mr. King (Huron).

Presbyterian Church, Raymore, Sask.; Knox E. E. Alger and 22 others of Lumley, B.C.; Presbyterian Church, McGreary, Man.; Highlands Methodist Church, Edmonton, Alta.; Presbyterian Church, Manitou, Man.; Carleton Methodist Church, St. John, N.B.; Presbyterian Church, Darlingford, Man.; Union Church, Kennedy, Sask.; Fort Rouge Methodist Church, Winnipeg, Man.; Camille Presbyterian Church, Holland, Manitoba; Methodist Church at Thornhill, Ont.; Union Church, MacGregor, Man.; Presbyterian Churches at Pefferlaw, Sutton West and Egypt, Ontario; Methodist Church at Sutton, Ontario; Union Church at Trout Mills, Ont.; Douglas Methodist Church, Montreal, Que.; Union Church, Hanley, Sask.; Presbyterian Church and Methodist Congregation, Holland, Manitoba.—Mr. Johnston.

Methodist Church, Hamilton, Ontario; United Church at Tatamagouche, N.S.; Presbyterian Church at Selma and Noel Shore; Methodist Churches at Unionville and Milliken, Ontario; Knox Presbyterian Church at Redvers, Sask.; Donald MacLeod and 30 others of Bengough, Sask.; Methodist Church, Constance, Ont.; United Church at Binscarth, Manitoba; Methodist Church at Wal-

laceburg, Ont.; Union Church, Oyama, B.C.; Calvary Congregational Church, Westmount, Quebec; Methodist Church at Arnprior, Ont.; Presbyterian Church, Kansack, Sask.; Methodist Church, Thorold, Ontario; D. A. McLennan, and 33 others of Mather, Manitoba; Methodist Church at Mount Hope; United Churches at Colgate and Ingleford, Sask.; United Church at Silverton, Man.; Methodist Church, Hamilton, Ontario; Presbyterian United Church, Lamont, Alberta,—Mr. Manion.

Westmount Methodist Church at Westmount, Quebec; Central Presbyterian Church at Hamilton, Ont.; Methodist Church, Blenheim, Ontario; Victoria Ave. Methodist Church at Brandon, Manitoba; Presbyterian Church at Bristol; Presbyterian Church at Longford; Ridout Street Methodist Church, London, Ontario; Presbyterian Church at Kenmore and Marvelville, Ontario; Central Methodist Church, Windsor, Ont.; United Church, Newdale, Man.; Methodist Church at Ingersoll, Ont.; Presbyterian Church, Oakburn, Man.; Central Methodist Church at Moncton, N.B.; Chalmers Presbyterian Church,, Quebec, Que.; Union Church at Weyburn, Sask.; United Presbyterian and Methodist Churches at Rouleau, Sask.; Methodist Church, Vancouver, B.C.; Presbyterian Church at Bar River, Maclennan and Desbarats,—Mr. Black (Yukon).

Presbyterian Church, Yarmouth, N.S.; L. M. Hayden and 7 others of Montreal, Quebec; Methodist Church at Stanstead, Que.; United Church at Metz and Dracon; Methodist Church at Canton, Ont.; Chalmers Presbyterian Church, Lansdowne, Ontario; Wanstead Ave. Union Church, Toronto, Ont.; Methodist Church at Tintern, Ont.; Union Congregations at Hearst and Hazel, Ontario; Methodist Church, Shetland; Congregational Church, Rock Island, Quebec; Methodist Church, Coaticook, Ontario; Methodist Church, Elora, Ont.; Union Church, Cardale, —Mr. Sexsmith.

First Methodist Church, Brandon, Man.; Union Church, Angusville; Union Church, Earlton; Methodist Church, Bruce County, Ont.; Methodist Church, Bethesda, Ont.; Union Church, Winnipegosis, Man.; Methodist Church, Arkona, Ont.; Union Church, Morris, Man.; Union Church, Manor, Sask.; Windermere Ave. Methodist Church, Toronto, Ont.; Presbyterian Church, Bethune, Sask.; Methodist Church, Southwold, Ont.; Minto Presbyterian Church, Moose Jaw, Sask.; Methodist Church, Shedden, Ont.; Methodist Church, St. Lambert, Que.; United Presbyterian and Methodist Congregations, Minesing; Methodist Church, Baptiste, Ont.; Cooks Presbyterian Church, Kingston, Ont.—Mr. Ladner.

Presbyterian Church of Upper North River; Presbyterian Church, Elizabeth Bay, Ont.; Methodist Church, Eburne, B.C.; United Church, Capreol, Ont.; Methodist Church, Oakland; Presbyterian Church at Victoria Mines, Ont.; Methodist Church, Lake Saskatoon, Alta.; United Church, Shepard, Alta.; United Presbyterian and Methodist Churches, Port Hood, N.S.; Mrs. J. W. Thring and 16 others of Wiste, Alta.—Mr. Warner.

Methodist and Presbyterian Churches, Aylmer, Ont.; Centenary Methodist Church, Montreal, Que.; United Presbyterian and Methodist Churches, Vars, Ont.; Methodist Churches, Vasey, Hobart and Hillsdale, Ont.; St. Andrew's Presbyterian Church, Westmount, Que.; of D. Cryderman and 55 others of Norham, Ont.; Methodist Churches, Niagara-on-the-Lake and Virgil, Ont.; Davenport Presbyterian Church, Toronto.—Mr. Morrison.

Presbyterian Church, Alton, Ont.; Union Churches, Carnarvon, Bethany and Blairhampton; Methodist Church, Ripley, Ont.—Mr. Black (Yukon).

Methodist Churches in Hay Bay, Gretna, Anderson, Oshawa District, Ont.; Emmanual Congregational Churches, Montreal, Que.; Presbyterian Church, Merivale, Ont,; Wellourn, Ont.; First Methodist Church, Hamilton, Ont.; Methodist Church, Picton District, Ont.; Methodist Church, Inverary, Ont.; St. John's Presbyterian Church, Belwood, Ont.—Mr. Hopkins.

Methodist Church, Hudson, Que.; Methodist Church, Kentville, N.S.; Methodist Church, Richibucto, N.B.; R. S. Boyle and 91 others of Cobden, Ont.; Methodist Church Rocanville, Sask.; St. Andrew's Presbyterian Church, Wingham, Ont.; Sydenham Street Methodist Church, Brantford, Ont.; Union Church, Wilcox, Sask.; C. W. McDonald and 47 others of Bengough, Sask.—Mr. Clark.

Methodist Church, Bolton, Ont.; Methodist Church, Yarmouth Centre, N.S.; of J. Stoodley and 12 others, of Ganges, B.C.; Kensington Church, Montreal; Methodist Church, Port Lambton, Ont.; Presbyterian Church, Steveston, B.C.; Methodist Church, Staffa, Ontario; Presbyterian Church, Lulu Island, B.C.; Methodist Church, Fort Frances, Ont.; Presbyterian Church, Kelfield, Sask..; United Church, Viscount, Sask.; St. Andrew's Presbyterian Church, Tugaske, Sask.; Broadway Methodist Church, Winnipeg, Man.; St. Paul's Methodist Church, Morden, Man.; Ruther Glen Presbyterian Church, McAuley, Man.;

Nokomis Union Church, Nokomis, Sask.; Methodist Church, Culloden, Ont.; St. James Square Presbyterian Church, Toronto,—Mr. Spence.

Presbyterian Church, Kenton, Manitoba; Methodist Church, Escott, Ont.; United Church at Chipman, Alberta; Methodist Church, Madoc, Ont.; First Presbyterian Church, Hanna, Alberta; Presbyterian Church, Ogden, Ont.; Methodist Church, New Ontario; United Church, Taber; Knox Presbyterian Church, Lynn Valley, B.C.; Centennial Methodist Church, London, Ont.; Presbyterian Church, Antelope; Carseland, Alberta; Methodist Church, New Castle, N.B.; Ukrainian Presbyterian Church, Winnipeg, Man.; Methodist Church, Port Perry, Ont.; Presbyterian United Church, Rainy River, Ont.; Methodist Church, Fordwick, Ont.; St. Paul's Presbyterian Church, Agricola, Alberta; Central Methodist Church, Woodstock, Ont.; United Presbyterian and Methodist Church, Sunnyside, Alberta.—Mr. Baxter.

ST. LAWRENCE RIVER WATERWAY

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, I beg to lay on the Table further correspondence between Canada and the United States with reference to the St. Lawrence waterway project; also copies of orders in council respecting the appointment and personnel of the Canadian National Advisory Committee, the Canadian members of the Joint Engineering Board, and the Canadian technical officers who are to confer with the technical officers of the United States respecting matters to be submitted to the Joint Engineering Board.

PRIVATE BILLS

FIRST READINGS

Bill No. 88 (from the Senate), for the relief of Jessie Ruth Haverson.—Mr. Sheard.

Bill No. 89 (from the Senate), for the relief of Arthur Foord.—Mr. Arthurs.

Bill No. 90 (from the Senate), for the relief of Harold Gordon Hendry.—Mr. Sheard.

Bill No. 91 (from the Senate), for the relief of Karl Peter Hansen.—Mr. Ladner.

Bill No. 92 (from the Senate), for the relief of Ethel Hadden.—Mr. Sheard.

Bill No. 93 (from the Senate), for the relief of William James McLaughlan.—Mr. Ross (Kingston).

Bill No. 94 (from the Senate), for the relief of Alyce Wilson.—Mr. Boys.

Bill No. 95 (from the Senate), for the relief of Lemuel Burkett.—Mr. LeSueur.

Bill No. 96 (from the Senate), for the relief of William Ewart Gladstone Pettinger.—Mr. Harris.

Bill No. 97 (from the Senate), for the relief of Anna McGeachey.—Mr. Sheard.

BONUS TO DISABLED VETERANS

On the Orders of the Day:

Mr. GEORGE BLACK (Yukon): Before the Orders of the Day are called, I would like to direct the attention of the government to a report in this morning's Ottawa Journal, as follows:

> There never was a trace of downheartedness among the members of the Amputations' Association assembled in convention here this week, but if Canada's maimed war veterans required a cheering message, it was forthcoming last night, when Hon. Dr. H. S. Béland, Minister of Soldiers' Civil Re-establishment and Public Health, speaking at the dinner given at the Chateau Laurier, assured them that legislation would be introduced at this session of parliament making permanent the cost of living pension bonus to permanently disabled. Dr. Béland's announcement was received with thunderous applause and deafening cheers. It was the government's reply to the demand of the members of the Amputations' Association of the Great War for a definite decision of the bonus matter.

I would like to ask the government whether that is a correct statement of the government's policy in this regard?

Right Hon. W. L. MACKENZIE KING (Prime Minister): I am sorry that the hon. Minister of Soldiers' Civil Re-establishment (Mr. Beland) is not in his seat at the moment to reply on behalf of the government to my hon. friend. My understanding is that at the banquet last night the minister spoke, after the leader of the opposition (Mr. Meighen) and the leader of the Progressive party (Mr. Forke) had spoken, with reference to the matter to which this report relates. He intimated that he felt quite sure that all parties in this House would be ready to agree in the matter of making permanent the bonus of the disabled men. In speaking in that way he spoke with the full concurrence of the government.

Mr. BLACK (Yukon): I take it, then, that that is the government's policy?

Mr. MACKENZIE KING: I think that what I have said would indicate that it is,—yes.

Sir HENRY DRAYTON: Everybody else has spoken. We are all helping you.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed from Thursday, May 8, the debate on the motion of Hon. J. A.

Robb (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into committee of Ways and Means, and the proposed amendment thereto of Mr. Woodsworth.

Hon. H. H. STEVENS (Vancouver Centre): Mr. Speaker, as a basis for the contribution which I propose to make to this debate I desire first of all to recite some obvious facts and then to outline certain problems and perplexities facing the people of this country, whereupon I shall offer to the House what I believe will most effectively assist in dealing with and solving these problems and perplexities. In the first two divisions of my remarks I hope to carry with me the united approval and concurrence of the House; in the others I know I shall enter upon controversial ground, because there is room for difference of opinion. In respect to these I shall merely attempt to present what I believe to be in the best interests of the country under the circumstances.

In the first place, let me direct the attention of the House to something which perhaps it is wholly unnecessary to state, but which I refer to merely for the purpose of laying a basis for what I shall say later. Canada is vast in area, but it is divided into two general sections by a great V-shaped plateau stretching from the shores of Labrador southwesterly into Ontario, taking in the northern part of Quebec and Ontario, then proceeding westerly, taking in the northern half or more of Manitoba and the northern section of Saskatchewan and touching the northern half of Alberta. This great plateau, a vast area of forest and lake wilderness, has formed what has sometimes been described as the despair of the statesmen of Canada. It contains, however, great mineral wealth.

In natural resources Canada is peculiarly placed, in regard to forest and fisheries, mines, arable land and water-power—the latter particularly I shall bring to the attention of the House. In fact, Sir, we have every prerequisite necessary for a great nation, industrial, agricultural, and scientific. In addition to this, Canada has peculiar advantages in markets and transportation. We have the Great Lakes transportation facility, unexcelled in so far as inland waters are concerned, by any country in the world. We have systems of railway transportation which are unequalled, considering the nature of the country. Consequently we may say that our transportation facilities are of the highest type. So far as markets are concerned, on the east we have reasonably ready access to Europe and its great markets, and on the west coast we have access to the great new and growing markets of the Orient. In spite of these advantages—geographical, marketing, climatic, transportation and natural resources—we find a condition of depression and anxiety pervading this country; industry is languishing and agriculture is complaining; taxes are high, and emigration, to the United States in particular, is becoming alarming. The question I want to put to the House is this: What is the trouble; what is wrong with the country? I hold that it is the duty of members of this House to solve, or attempt at least to solve, this problem.

Let me, as the second point, state what I believe to be the problem. I think the House will agree that the problem facing Canada today is, first, lack of true national co-operation. The country is divided occupationally as well as geographically. I have pointed out the geographical division of the country by that vast area north of lake Superior in northern Ontario which constitutes a hiatus between the East and the West, and, as I say, there is an occupational division as well as a geographical one. Second, there is a financial stringency; there is a peculiar difficulty in getting credit, at least on the part of certain sections of the community. Third, capital is becoming timid and is not investing in Canadian enterprise and development as we would like. Fourth, although transportation facilities are unexcelled in their magnitude and in their distribution over the country, nevertheless there is a grave shortage of tonnage for the transportation facilities that we enjoy. I think the House will agree that that is a fair statement of fact.

Now I come to the third part of my remarks, which will almost certainly be controversial. The function of parliament, as I understand it, is to determine what general policy or political principle shall be applied to the solution of this problem. It is the peculiar function—indeed, Sir, the duty—of parliament to search out some general policy that will meet to the fullest possible extent, and solve, the problems and perplexities that confront the people of Canada.

From time to time in debates and discussions in this House there are those who are, perhaps I might say, allied to the new political school of thought. My hon. friends to my left call it the Progressive party; it is designated in different ways; some call themselves Independents, and so forth, but those who belong to that school of thought sometimes reproach us who still hold allegiance to the old parties with being more or less reactionary, and also with being really Conservative or Liberal, as the case may be.

by birth, rather than by reason and by choice. Now, in case that that charge may be levelled against me, and in order that I may offer what argument I have to offer, with, shall I say, a brand of independence attached to it—let me say to those who offer this criticism, that my recollections of politics dated back to my early days when I went down through the streets of old Bristol to a polling booth and waited while my father polled his vote for the late William Ewart Gladstone. He, grand old man, very naturally you would expect me to say, was a strong supporter of Mr. Gladstone, and a Liberal all his life to the day of his death in 1894. Now, as to the background of my political persuasion from the standpoint of reading. I early took an interest in political economy and political works. I remember very early in my life, long before I exercised the franchise, reading with a good deal of interest Progress and Poverty, by Henry George, Wealth of Nations, by Adam Smith, and the utterances of John Stuart Mill and others; I merely cite this to show that the background of my political faith and my early persuasion as far as I was concerned personally, were Liberal and not Conservative. But when the ballot was placed in my hands in this country, when I became of age, I addressed myself as well as I could to the decision that I was bound to make as to my political alliance and I came to a decision at that time based upon arguments which I thought were sound then, and which I think are sound to-day, and which I purpose bringing before the House this afternoon, that the great National Policy of Sir John A. Macdonald, as preached and taught and practised by the Conservative party was the best political doctrine for the development of the Dominion of Canada. I merely cite that by the way, and I hope that I may be acquitted at least of the charge that I am following this course simply because I was born to it, when, as a matter of fact, I was not.

My hon. friend from East Calgary (Mr. Irvine) the other day in a public speech he made, referred in a manner of ridicule, I think, to those who reasoned, as he said, from the past down to the present; in other words, he intimated that those of us at least who hold the Conservative faith, were far behind the times. Indeed he took us back to the time of Bacon, and said that ever since that time that form of reasoning had been abandoned and that it was altogether out of date. I was interested in reading his speech and I turned up a quotation that had occurred to me some time ago from Bacon, which I will quote to him and to those interested in that particular school of thought as worthy of their consideration. Bacon has this to say in his Advancement of Learning:

> Antiquity deserveth that reverence, that a man should make a stand thereupon and discover what is the best way; but when discovery is well taken, then to make progression.

In other words, translated into what might be called the parlance suitable to the discussion before us, these words mean that we should bring from the rich storehouse of experience and history all the knowledge we have, to bear on the problems before us for consideration, determine what is the best course to pursue, and then make progress. And, that, sir, is the true modern Tory doctrine; that is what the Conservative party believes in. We believe in holding to such institutions and such things and policies as time and experience have proven to be sound and true, but not to hold to them as they applied one or two or three hundred years ago, but having searched out from amongst them that which is still applicable to modern problems, to take our stand there and make progress along the line of sound and reasonable development.

There is another school of thought which might be called the school of experimenting with parliamentary and governmental affairs. That school includes those who are restive—shall I say?—under some of the old institutions. My hon. friend from West Calgary (Mr. Shaw), the colleague of my hon. friend from East Calgary, gave us a very eloquent address the other day, but one of the things above all others that ran through his address was a repudiation of things that have been in the past, and an impatience with such: and this school of thought desires to enter into experiment with untried and unknown practices in regard to government.

With this extreme school there is allied what might be called the opportunist group, and with that group I classify my hon. friends opposite, particularly as exemplified in this budget—opportunists who, counting noses in the House of Commons, and finding they are a little short, ask: "What shall we do? Why, across the way,"—'angularly opposite,' as it were—"is a large group which may be tickled into supporting our proposals and our government if we can concede something. What shall we concede? What is the minimum?" And so certain tampering, certain meddling with the fixed and proven-sound policy of the country is indulged in for the sake of getting a little support. So

I am justified in saying to the Prime Minister (Mr. Mackenzie King) that he and his party can properly be classified as belonging to the opportunist school of political thought.

Now, Mr. Speaker, I take my next step. I want to examine as to what principles and policies can best be applied to the development of Canada's natural resources, the illimitable resources of this vast estate which is committed to our care to develop and administer. We are, as it were the directors, the trustees, of this great estate. Now then, what policies shall be applied to this estate so as to bring forth a maximum of reward to Canada as a whole? Last year the province of British Columbia produced 22 varieties of mineral products; I am merely citing this as an illustration I have the list under my hand, with the tonnage and all the rest of it. Now, a large proportion of the 22 varieties of the mineral products that were mined in British Columbia went out of Canada in an undeveloped, raw condition. What advantage is it to Canada to dig out of the ground a ton of copper ore, which is nothing more than ordinary rock until the processes of science are applied to it, if all that Canada gets out of it is the labour cost of extracting it from the ground? And then we take that ton, and thousands and millions of tons as we are doing every year, and send it across the border, for what purpose? That it might there be brought to a high degree of manufactured perfection; that is what we are doing and have been doing in greater or less degree in Canada. I know it may be thrown back at me: Oh, but you have had a protective system in Canada to a degree. But as a matter of fact, Mr. Speaker, the protective system in Canada has been very near the margin of a free trade tariff during recent years. There has been a process of attrition going on for many years in connection with the Canadian tariff.

Now, what policy shall be applied? The more highly manufactured the article the greater the man-earning value to the country that produces it; that I think is a sound principle in economics, and one, I think, as to which no one will differ with me. It is told of Michael Angelo that on one occasion he was showing one of his masterpieces to a friend, and he showed how by a touch here and a touch there he had brought out the full perfection of this marvellous work of art. The friend said, "Oh but these things are mere trifles." Michael Angelo replied, "True, they are trifles, but trifles make perfection, and perfection is no trifle." Now that same principle can be applied to industry. It may seem a trifling thing to take off or lower the duty on an industry comparatively small like the one I have under my hand that makes rods, and bolts and nuts; it may seem a trifling thing, Mr. Speaker, by reducing the tariff to put a little industry like that out of business. But I remind you, Sir, and the House, that these trifling industries, so described, lead to the perfection of national industry, and perfection in national development is no trifle. Canada must preserve to its industries the home market and, what is of greater importance, secure entry for its merchants and manufacturers under favourable terms to the markets of other countries. This must be secured through a fiscal policy of consistent and adequate protection. There are those in the House who will at once repudiate that argument, but I am not seeking to argue the point with the mind that is closed. Still I do invite consideration and attention to this suggestion.

Now, Mr. Speaker, the tariff has three peculiar functions to perform, a fact, I think, which very often is overlooked. We hear a great deal about the protective function of the tariff. That is only one, and to my mind, a minor function of the tariff; it has two other functions to perform, and very vital and important functions: One is to preserve the home market, to which I shall make further reference in a moment. There is the further function, which to my mind is the most important of all—the tariff constitutes a bargaining power in the hands of a government. Now let me examine these three functions.

First, the function to preserve the nome market. Mass production is the chief competitor of Canada; it is the chief competitor of any manufacturing industry whether it is in Canada or elsewhere. This great problem of mass production is, we know, one of a wholly technical character. May I in passing suggest this—and I wish not to dwell upon this more than a moment because I know it is unnecessary for me to do so; hon. members are just as close students of these subjects as I am: Does not the great British Empire, spread as it is all over the world, having dependencies in every corner of the world and existing under every climatic condition—does not this great Empire offer itself in a peculiarly advantageous manner for the development of the mass production of commodities indigenous to the countries which form its various parts? I should like to suggest that the policy of Canada should be not only to preserve the home market

for the sake of home industries, but to erect a protective policy for Canadian industries so that those industries might co-operate with the industries of Great Britain, Australia, South Africa, and other parts of the Empire, and enter upon a scheme of mass production enabling them to compete with the great manufacturing countries of Germany and the United States, our chief competitors.

Now, let me give an illustration of what mass production can do. I have in my hand a detailed statement, which I purpose dealing with when we come to consider the schedule, covering logging and saw-mill machinery. It will be recalled, Sir, that in this budget the government have reduced very materially the duty on manufactured articles of this class. I am simply going to make a statement of facts at this time; later I shall argue the point in detail. The present reduction in the duty on logging machinery will affect thirty-seven firms in British Columbia who are now producing this class of machinery at a cost no higher than is the production cost and the sale price in the state of Washington, and taking no advantage of the duty. The duty simply gives to the Canadian firms all of the Canadian market or practically so. These firms employ 1,555 men at good rates of wages, with an annual pay roll of $1,817,489. Now, the question naturally comes up: If these establishments can compete with the Washington firms and do not take advantage of the duty then they do not need the duty. That is the argument. What is the answer? It is a very simple and very pertinent one; it is this. The duty in this case preserves the home market to the Canadian firms, and there are a number of them—I have the names of four or five firms under my hand that manufacture this equipment; they constitute a kind of competition among themselves. The standard logging equipment will cost about $13,000, and it is sold in British Columbia, as I have intimated, at the same rate as the same equipment was sold for in the state of Washington, and in many cases a little less. But take off the tariff, or reduce the tariff to a very low rate—which practically means that it might as well be removed entirely—and what is the result? The duty into the United States for our manufacturing concerns is 40 per cent. If the duty into Canada is removed, or almost all removed, the Washington manufacturer has his own market still intact, and he has a share in the Canadian market, whereas the Canadian manufacturer is unable to get into the Washington territory at all and his home market is divided. Let me give an illustration—a typical case. I will take a firm with a capital of $100,000. It should be allowed as part of its overhead charges 7 per cent interest on its capital, that is $7,000 per annum. The cost of its sales management and staff, oversight of the staff, and so forth, will be $18,000; of insurance, taxes, advertising, and incidentals, $15,000; making the total overhead charges on its operation $40,000. Its output amounts to $500,000, or about that, and it turns out fifty units at $10,000 apiece. Now, if the Washington concern can take half its market, reducing its unit output to twenty-five, what is the result? The overhead charges against that unit in the first instance was $800, but the minute you cut its output in two you simply double the unit cost of the overhead charges and raise it to $1,600. In other words, by the sharing of that market, without any interference other than that, you increase the cost of this article to the British Columbia firm by the sum of $800. That is an illustration of what is done when you deprive a manufacturer of the home market.

4 p.m.

Now let me take the next step and that is the protection. I say the tariff should protect, it should protect industry against a lower standard of living. I notice that one or two hon. gentlemen in this debate rather ridiculed that. Well, I hold in my hand a statement by the Department of Labour, an official statement, showing the Minimum Wage legislation of Canada. Five provinces in Canada have a minimum wage, and I want my hon. friends to the left to mark this, that in every instance, in every minimum wage law in Canada, the agricultural industry is exempted. I am not saying this with any desire to reflect on that industry, I am merely stating a fact, that in Canada, as in other countries, the agricultural industry has always been exempted from this—what shall I say? Arbitrary law. But other industries, particularly the manufacturing industries, are not only saddled with this obligatory law but they are subject to another law, which is a good law, and that is the workmen's compensation act. But, Mr. Speaker, Canada cannot enforce this class of legislation compelling the manufacturers and operators to maintain a certain minimum standard of wages and then ask them to compete in an open market with countries where no such conditions maintain. I pointed this out in figures in regard to the woollen industry: In Canada the minimum wage is double what it is in Great Britain. Now, these are stubborn facts, and so I say

one of the functions of a tariff, and one of the duties of a government, is to see that Canadian industry is protected in regard to the minimum wage.

Also, it is the function of a tariff to protect industry against competition with countries with depreciated currencies. This is, perhaps, one of the most dangerous rivalries that we have to-day in regard to modern competition. I hold in my hand at the moment a prospectus or circular of a certain American company, George Borgfeldt & Co.. of New York. This concern has been appointed, so he declares, by D. & W. Gibbs, of London, as the sole distributors of a long list of German goods for the United States and Canada. These goods are sold to the public as English goods. I have under my hand, for instance, their own circular, and on one of the articles I find a very handsome comb marked the "King Edward" comb. Supposing a very ultra loyal Britisher, like, let us say, the leader of the Progressive party (Mr. Forke), steps into a drug store and picks up a comb—like myself he does not need one very badly—and he sees this comb stamped "King Edward" He does not have to ask, so he would think, whether this was made in Germany or Canada or Great Britain; it seems to speak for itself That is the competition which we are up against, plus the advantage given to the German exporter in regard to the depreciated currency credits of his country Let me give the House briefly two items in regard to this. Last year, 1923, we imported from Germany $4,959,000 worth of goods upon which the total duty paid, including the dumping duty and every other charge of that character, was $1,030,000, or about 20 per cent. How can Canadian industry be expected to compete with German industry on that basis? I am quite aware of this, as some hon. gentlemen will in a moment point out, that some of these goods were admitted free. That is true enough and the duty on the dutiable portion would be higher; but what I am giving to this House is this stubborn fact, that Canadian industry is competing to-day with German industry with a protection of 20 per cent which is not enough, and I do not think such competition is possible once the facilities of Germany for export and import are increased as they undoubtedly will be if this condition is continued.

Mr. EVANS: How much did we sell to Germany?

Mr. STEVENS: I have the figures here for every country in Europe, but I did not wish to go into too much detail. I will give the figures to my hon. friend—my object to-day is not to go into analytical detail, but rather to touch upon certain general points. We sold to Germany more than $14,000,000 worth.

Mr. EVANS: And we bought only $4,500,-000 worth?

Mr. STEVENS: That is true, but that does not alter the fact in the slightest degree. My hon. friend is drawing this red herring across the trail about paying for exports with imports. I will deal with that in a moment. It does not alter the fact that we imported $4,959,000 worth upon which duty amounting to $1,030,000 was paid, which duty as a matter of fact, amounts to about 20 per cent.

Mr. BRISTOL: What is the rate of wages in Germany as compared with the rate in Canada?

Mr. STEVENS: There is no comparison at all. I have not those details at hand, but they do not detract one iota from the point I am making. The policy of the government as regards dumping is of a kaleidoscopic character. Apparently just before the budget was introduced and there was evidenced a necessity for something to be done, the Minister of Customs and Excise (Mr. Bureau), conceived the idea that there should be a suspension of the 5 per cent advantage under the dumping clause, and he promptly suspended it. It was very useful because it rather solaced some of the manufacturers, at least whose goods were being affected. But then there was a caucus, we are told, of my hon friends to my left, at which caucus a great deal of indignation was expressed when it was discovered, after two or three weeks, that this suspension had occurred, and the sensitive faculties of the Prime Minister (Mr. Mackenzie King) received from this corner of the House sensations of alarm. The radio, as it were, conveyed to him the fact that there was some possibility even of a desertion in this corner.

Mr. MACKENZIE KING: I may say to my hon. friend, since he has spoken of a caucus in this connection, that no such subject was mentioned.

Mr. STEVENS: I do not suppose the right hon. gentleman would be at a caucus of the Progressive party.

Mr. MACKENZIE KING: I mean the caucus to which my hon. friend refers. He said that the Liberal party had a caucus, I understand.

Mr. STEVENS: I mean the caucus of the Progressive wing of the Liberal party, not my right hon. friend's caucus. The facts are, however, that the suspension of the 5 per cent allowance in the dumping clause was itself promptly suspended. The next move, we are told, is this: Some ambiguous piece of legislation, the contents of which are not revealed—are carefully concealed, as a matter of fact, until this budget is passed—is going to be brought down. We do not know what the terms of this legislation are, but the Minister of Customs and Excise indicated, in his manner if not in his words, that there would be a restoration of the first suspension, if I might so term it.

Mr. MACKENZIE KING: I do not think his words carried that interpretation.

Mr. STEVENS: I admit his words did not, I said his manner; I am making a guess and I leave it at that. When this legislation comes down, I expect to have the privilege of reminding the Prime Minister that I had guessed fairly correctly.

The third function of the tariff is that of a bargaining power. The tariff gives to the government something with which it can trade with the government of another country. This I conceive to be of great importance. All hon. gentlemen will, I think, admit that it is desirable for a country to gain favourable access to the markets of another country. In these discussions we must not be carried away by glittering and spectacular theories; we are dealing with stubborn facts in the form of governments of foreign countries, enactments of foreign parliaments. There they are before us not only as they are to-day, but as they have been decade after decade. That is what is one of the difficulties of the Mother Country to-day, recognized by it; it cannot make any bargain with the countries of Europe because its own markets are open. The axiom is often given expression to in this House, that exports must be paid for with imports; and this I admit is a perfectly sound argument. But it is within the right of a people to determine, first, what products shall be exchanged and, secondly, upon what terms such exchange shall be made. That is the right not only of this country but of every other country besides; the principle is recognized the world over. I repeat, it is the right of this country, nay, it is its duty, to determine what products shall be exchanged and upon what terms, provided that it protects the interests of its own people by imposing a substantial tariff upon the countries into whose markets we have no favourable entry. In other words, there are goods from countries which hold a very high prohibitive tariff against us; and against the imports of such countries I believe that Canada should maintain a substantial tariff. On the other hand, having given that protection to our people, we owe it to our friends who give us a favourable entry to their markets to accord them a reciprocal advantage. And that is one of the functions of the tariff; you cannot have that bargaining power unless you have a substantial general tariff.

Mr. FORKE: Is my hon. friend willing to give Great Britain the same advantages that Canada enjoys to-day?

Mr. STEVENS: We enjoy no advantages in the British market.

Mr. FORKE: Our goods do not enter the British market on the same terms as their goods come into Canada.

Mr. STEVENS: Great Britain gives us no preference at all; let us get that fact clearly. There was a slight preference which was in force for about a year as a result of the Geddes resolution, but we get no advantage in the British market to-day for it has been repealed by the present government in Great Britain.

Mr. FORKE: How can you say that you get no advantage when you get all that is going?

Mr. STEVENS: I say we get no advantage in the British market.

Mr. FORKE: But you have free trade.

Mr. STEVENS: It is not we who have free trade; they have.

Mr. FORKE: You reap the benefits of free trade in the British markets.

Mr. STEVENS: It is impossible to get through that barrage. However, I must refute that assertion; we have no preference in the British market. On the other hand, we give to Great Britain 50 per cent, and in many cases a great deal more than 50 per cent, of an advantage in our market. The thing is all on one side. I have no objection to giving a preference to Great Britain; indeed, I want to extend that preference to South Africa, to Australia, to New Zealand, to India and to other parts of the Empire. But having said that, let me add that I want a preference in their markets too. I do not say that we should get a preference equal in every detail to that which we give them, but it should be commensurately so at least. And it is the function of the government to do its best to bring that about.

Mr. FORKE: That is the doctrine which Joseph Chamberlain tried to put over thirty years ago.

Mr. STEVENS: Quite right; and my hon. friend interjects that remark at exactly the right point; for my next observation is this: Canada simply must have a tariff if she is to expand and develop. Conditions here are not similar to those that prevailed in England at the time of the repeal of the Corn Laws. The assumption, in the interruption of my hon. friend, is that conditions in Canada are the same as those that obtain in England and that we ought to fail in our advocacy of this policy because Joseph Chamberlain failed in Great Britain. But what are the facts? We have an abundance of raw material whereas England then imported most of hers. In the second place, we have food to export in very large quantities whereas England imported her food. And while our industries are new and undeveloped, the industries of Great Britain at that time were transcendent. Again, our population is sparse and scattered over a vast area; England's is large and compact. These facts cannot be escaped; they constitute an absolute difference in conditions as between Canada and Great Britain. And, Sir, these are the things that persuaded me years ago that the policy for Canada was the so-called National Policy of Sir John A. Macdonald. I am glad my hon. friend the leader of the Progressive party (Mr. Forke) interjected the remark he did, because I have under my hand a quotataion from John Bright which is apropos.

Mr. FORKE: We have heard it before.

Mr. STEVENS: My hon. friend is murmuring away; if he has some observation to make I shall be willing, as I always am, to yield him the floor. On February 2, 1839, speaking at Rochdale, at a great open air mass meeting John Bright moved the following resolution of which I would ask hon. members, and particularly my hon. friend, to take cognizance:

> That the Corn Laws have had the effect of crippling the commerce and the manufactures of the country, have raised up rival manufactories in foreign countries, have been most injurious and oppressive in their operation with the great bulk of our population, and working classes have been grievously injured by this monopoly of the landed proprietors.

The Corn Laws were an agricultural protection; they protected two elements in England, the landed proprietors and their tenants. And you may discern all through the works on Bright and Cobden, all through their speeches and their biographies, from one end to the other, a prevailing dirge of condemnation of these two elements, the proprietors and their tenants. Indeed, one of the things complained of at this very time was the fact that the tenants of the landed proprietors were getting wealthy at the expense of the manufacturers. Trevelyan, the biographer of Bright has this to say, following immediately on the resolution I have quoted, and it is interesting; it elucidates the resolution:

> The tariff that organized the ruin of the British manufacturer did not even pretend to give him protection . . . only a very small part of the tariff was directed to excluding foreign goods of the kinds which they were producing. . . . In 1840 out of more than twenty million pounds of revenue raised by customs, the amount levied on plea of protection of British manufacturers scarcely exceeded a million sterling.

The quarrel, then, was with the unreasonable Corn Laws; and I myself think they were unreasonable. The country had grown, the population had increased, and Great Britain needed foreign corn. But she had persisted in the retention of these laws. And all through the discussion of the introduction of free trade into England, the Manchester Exchange, the Liverpool Exchange, the Birmingham Exchange, John Bright, Cobden and the whole movement from beginning to end defended the manufacturers as against the landed proprietors,—a condition that does not exist in this country at all. Now, I have outlined in comparison the natural conditions of the two countries; and similarly the social and economic conditions in Canada are exactly the reverse of what they were in England at the time of the repeal of the Corn Laws.

I know there are those who say that we should reduce the tariff, do away with these onerous taxes, and levy an income tax. Let me examine that proposition briefly. Cobden and Bright, the great exponents and apostles of free trade, both opposed the income tax and opposed it vigorously, indeed bitterly. Bright opposed it in 1842 urging instead a property tax on all land and buildings. Why did he urge that tax? Because the land and buildings belonged largely to the landed proprietors and not to the manufacturers. And furthermore, he advocated that the manufacturing industries should be exempt from the income tax. That, however, is by the way. Let me now turn to the income tax. If you introduce free trade you will have no industries, you will lower the earnings of the people, and you will reduce the source from which income tax to-day is very largely derived. That is an obvious fact, and my right hon. friend (Mr. Mackenzie King) ought to recognize it. Undoubtedly every move that is made to interfere with the prosperity of our industries, tends to diminish the source of supply of our income tax. On the other

hand, encourage industrial development stimulate manufacturing, give an opportunity for reward for private enterprise, and you will undoubtedly increase your income tax. I do not think there can be any question of this. And I say to my hon. friends to my left, by all means keep an eye upon the income earnings of the industrial magnates of this country. I do not suggest for a moment that they should be excluded from payment of income tax. But at least give them a chance to prosper so they can pay such a tax.

I believe also that the tariff should be generally applicable to all classes of industry. I am absolutely opposed to the principle of this budget in reducing the tariff on certain industries instead of dealing with industries as a whole. Canada is a large, sparsely settled country with industrial interests that perhaps are not exactly similar everywhere; but in the fullest sense of the term the tariff should apply equitably to all classes of industry. Furthermore, the tariff should be stable in its character, not subject to constant change and variation. Nothing is so harassing to a business or a financial man as to be constantly faced with the apprehension that overnight the tariff may be changed and large quantities of goods on hand or on order, seriously affected by such tariff changes. Nowadays a firm dare not issue a catalogue, for it does not know from hour to hour what tariff changes may be made. Tariff stability, voiced so eloquently by the Minister of Finance (Mr. Fielding)—whom we miss so much from this debate—is what we require to-day.

Now, Sir, I turn to a brief consideration of financial stringency. It is obvious, I think, to all of us that the troubles of Canada are not caused exclusively by tariff tampering. Those engaged in agriculture in Canada as in all other countries, are suffering severely, particularly the fruit growers and the wheat growers. The one-crop farmer always suffers more than the general farmer. In certain sections of California the grape grower is and has been suffering very severely. So, too, with the wheat grower of North Dakota and other states. The wheat growing section of Canada is suffering more than other sections, as is also the fruit growing industry of the Okanagan. The prairie farmers, for instance, complain, and I think their complaints are well founded, that they are heavily in debt and time loans are very hard to get and very dear. One difficulty that is constantly referred to by my hon. friends from the prairie provinces is that the farmer there is heavily in debt and finds it very difficult indeed to get money.

Let me draw a brief parallel between the financial stringency in Canada and the international financial problem. We have two viewpoints internationally of this problem: One is exemplified in Great Britain, the other in Germany. Germany refused to acknowledge her war debt, she complained of the burden. and she indulged in repudiation so far as her internal debt was concerned, she also sought a moratorium, and she has been constantly asking to be relieved of her obligations. The longer she persists in that policy so much the more deeply is she becoming involved so far as her indebtedness is concerned. Great Britain took another view; she acknowledged her debts in full, she cheerfully agreed to pay them, and she attacked the problem by imposing very heavy taxation. As a result she inspired confidence in the financial world and funded her great debt in the United States.

Now, what is wanted in Canada in connection with this financial stringency to which I have referred is some sound policy which will enable the farmer of the West particularly to fund his current indebtedness. My hon. friends, I think, will all agree with me that that is one of the most crying needs of the West to-day. It does not profit us nor will it get us anywhere to say to those debtors that they needlessly went into debt in some cases, or that it was through over optimism in other cases; the fact is they are heavily in debt, this indebtedness is drawing large rates of interest, and the farmers cannot fund it. What is required to meet the situation is an opportunity of funding their current debts by term loans at reasonable rates.

Naturally the question arises: Where is this credit to come from? During the past eight years there has been withdrawn from investment in mortgages and stocks and bonds about two billion dollars of Canadian capital, which has been re-invested in Victory bonds. That represents about the Canadian holding of our war debt. Let us pause to consider what the effect of that is. If you withdraw from mortgage investment the capital of insurance and loan companies and private individuals and tie it up in Victory bonds to the amount of two billion dollars, the money is virtually frozen credit. This is a serious thing. If time permitted I would be prepared to discuss this subject at length. Suffice it to say that one of the functions of parliament to-day is to take that great problem into consideration and find out if there

is not some way of liquifying this frozen credit and releasing it for re-investment in the funding of the western debt the encouragement of eastern industry, and so forth. Give to the farmer of the West a chance to fund his accumulated debts, and spread repayment over a long period of years, and you will go a long way towards bridging the gulf which now exists between his cost of production and the low market value of his products.

Now, Mr. Speaker, I turn to another problem, the solution of which is really another aid to relieve depressed agricultural conditions as well as industrial stagnation, and that is transportation. I have already intimated that Canada has unparalleled railway facilities. What we do require very urgently is increased tonnage for our railways and a more equitable adjustment of freight rates. Tonnage may be increased very materially and very rapidly by the encouragement of industrial development in the Dominion. It has been demonstrated that for every ton of freight which goes out of a factory from three to twenty tons enter. In other words, every industry not only gives to the railway the tonnage of its output, but it gives the tonnage of its inward freight amounting to from three to twenty times as much.

I have under my hand an illustration of this, the facts in regard to a factory in western Ontario that has shut down because of the tariff readjustment proposed in the present budget. The company in question has been paying $12,000 a year to the government in income tax, sales tax, and so on, and it has been paying freight to the extent of $80,000 a year. You are shutting that factory down; you are lowering the revenue of the National Railways and of the Canadian Pacific by $80,000; you are depriving the treasury of $12,000 in taxes, and you are destroying 29,000 tons of freight per annum. That is the case of a small factory making bolts and rods. It is one of the "trifles" of which we hear in connection with the tariff question, but, which, taken with innumerable other factories of a similar character similarly affected, has a mighty influence upon the industrial prosperity of the country.

Give the producer of Alberta and Saskatchewan an equitable freight rate to the Pacific comparable with its rates eastward and you will contribute much toward the solution of this problem. I am not going to enter into any argument as to that, but what I do want to point out is this: We have the problem of the tariff and the effect which interference with it may have upon traffic. We have the problem of financial stringency and we have the problem of transportation. It is the duty of this government, it is the duty of this parliament to examine into all these and to see whether something cannot be evolved that will constitute a remedy. I hold, Sir, that the difficulties and perplexities of the people may best be solved by erecting a substantial protective tariff for the industrial life of Canada, thus giving an impetus not only to industry but also to other branches of commercial activity.

I have spoken too long, but will the House listen to me just for a moment while I give three word pictures of incidents that came under my own observation within the last two or three weeks? I was out to my home on the coast a week or two ago, and was returning on the Canadian National. As you proceed over the mountains eastward, the great Yellowhead pass opens up and on either hand you have the towering, snow-capped peaks of the Rockies, a sight, Mr. Speaker, which stirs the innermost aspirations of the soul. As we came out through the pass the sun was setting; gradually it dropped behind the mountain tops farther west. As its rays receded the valleys and the gorges on either hand turned to a deep purple and then assumed an appearance of gloomy density, having the effect of sending a chill through the observer. But as I glanced up at the mountain peaks I saw that they were still lighted by the rays of the setting sun which had been withdrawn from the valley and it struck me that those great peaks were as beacons of light to encourage one to greater and better efforts. Then we came on eastward, and the second day we were passing through that forbidding territory in northern Ontario. That section is always a puzzle to me; it is baffling, and in some respects it is almost, I was going to say, repulsive. There we have the problem of northern Ontario with its lakes and its burnt-over forest lands. As we came along I saw a little cabin in a clearing of about five acres, and at the door stood a woman, cheery of countenance, and around her four little children clinging to her skirts and waving to the train as it went by. Out in the little patch of cleared land was the husband preparing the soil for his spring crop, and the thought came to me that this man with his wife and children was solving the problem of northern Ontario which has so long been baffling the statesmen of this country. Then there was another scene, set in a town of Ontario which I visited a few weeks ago.

I went into the home of a man who for fifty years had worked in the same factory. This type of artisan is the despair of socialist agitators and economic faddists; they do not understand him; they cannot classify him. But there he was, a splendid Canadian citizen, over seventy years of age and still working in the factory where he had toiled for fifty years. I sat and chatted with him and with his wife. He took a great interest in parliament, looking upon it as an institution of great influence and power. I felt that I was in the presence of one who merited my homage, because his life was based upon very simple principles, and in following out those principles he was accomplishing a great deal. His life was that he honoured and revered his God, honoured his king and dealt honestly and faithfully with his fellow men.

These three incidents seem to me, Mr. Speaker, to be a fair picture of Canada. The glories of the Rockies and the beauty of our lakes and our rivers, the fertility of our soil and our great resources—these constitute the body of Canada. But the soul of the country is to be found in the lives and characters of those humble individuals who day by day are solving these problems while we very often sit and waste our time. I felt, Mr. Speaker, and I feel it now, that it ought to be a sufficient reward to any of us to be permitted to share in some measure in the shaping of the destinies of this great country, and in doing so to aim at making it worthy of the sacrifices and of the courage of those pioneers who in the prairies, in the woodlands and in the mountains, are devoting their lives to the development of Canada.

Mr. W. D. EULER (North Waterloo): Mr. Speaker, when the Speech from the Throne was under discussion some weeks ago I took occasion to give my views fairly fully on the principles involved in the budget now before the House. For that reason I propose to make my observations at this time as brief as possible.

If, Sir, there were no such thing as party politics, and if men were therefore able to judge of the annual financial statement and the proposals made by the Minister of Finance strictly on their merits, then I presume no budget ever framed by the most capable Minister of Finance would receive either unqualified approval or disapproval. I do not count myself an extreme partisan, and for that reason perhaps, I find in the present budget much that commends itself to me as well as proposals of which I do not entirely approve.

May I say at the outset that I sincerely congratulate the government on the surplus which they have declared for the year just closed. I know—and I see that the right hon. leader of the opposition (Mr. Meighen) is shaking his head,—that objection has been raised as to the bona fide character of the surplus. The hon. member for St. Lawrence-St. George (Mr. Marler) and the hon. member for West Lambton (Mr. LeSueur), whom I desire to compliment on a most excellent speech, temperately delivered and well reasoned, threw some doubt upon the character of the surplus. While they did not declare themselves explicity on that point or state definitely their reason for believing there was no surplus, yet I did gather from their remarks that in some mysterious way the expenditures made for the railways on capital account had some bearing upon the surplus. Now, Sir, I have made some little study of accounting and I think I have possibly some reason for saying I can form a business judgment with regard to matters of this kind, and I say that if the sum of $50,000,000 expended by the National Railways in the way of betterments has been entirely expended or partially expended in that way, it has no effect upon the surplus at all.

Mr. MEIGHEN: May I ask a question? The hon. member knows I appreciate his intellect. We take a mortgage for the advance, do we not?

Mr. EULER: Yes.

Mr. MEIGHEN: Does the hon. member consider that mortgage an active or a non-active asset?

Mr. EULER: I say that if the expenditures have been made out of these moneys for the purpose of adding to the assets, in the way of equipment and betterments to the railways, a purpose which will enter directly into the earning power of these roads—if they have been made for that purpose they do not affect the surplus in any way.

Mr. MEIGHEN: That is not an answer to the question.

Mr. EULER: Then I misunderstood the question.

Mr. MEIGHEN: The hon. member knows we take a mortgage for the advance, whether the advance is for betterments, or for any capital purpose or any other. Does the hon. member consider that mortgage an active or a non-active asset of Canada?

Mr. EULER: Here is the very point I want to comment upon. It is apparent to me that the leader of the opposition and those who have spoken already are, as I have already said, confusing the issue; I am not trying to attribute to the hon. leader of the opposition any lack of understanding of financial questions or a lack of understanding of any other kind, but I do say that there seems to be a confusion between an asset and a surplus. If a liability is contracted, whether it be for the National Railways or for any other active purpose, if it is contracted for the purpose of establishing or forming a corresponding asset, I say that liability has no connection with the surplus for the year.

Mr. MEIGHEN: But the hon. member will admit there is no interest paid on the mortgage, will he not?

Mr. EULER: I do not know that.

Mr. MEIGHEN: If what the hon. member says is right, there are at least $350,000,000 of similar securities in the treasury for capital investment which should be deducted from the present national debt.

Mr. EULER: The $350,000,000 of capital invested, I should judge, consists not entirely of moneys expended on assets for the National Railways, but expended in many ways to wipe out deficits of former years—which are losses, of course.

Mr. MEIGHEN: No, but capital investments exactly similar to this the hon. member says do not affect the debt. If that is correct, all these non-active assets so invested should now be deducted from the national debt, indeed, should never have been added to it.

Mr. EULER: I am not contending that the debt has not increased, but I am contending that an increase on the debt if you have a corresponding asset, an asset in this case that will directly influence the earning power of the National Railways, cannot be considered as affecting the surplus one way or the other.

Mr. MEIGHEN: Whether it pays interest or not? Does the hon. member say all the other mortgages taken from the National Railways which do not bear interest should now be deducted from the national debt, seeing they were added before?

Mr. EULER: I am not going to be misled into saying something I did not start out to say. What I say is this: If the moneys expended for the purpose of betterments on the Canadian National railways, and those having a direct effect upon their earning power, were spent for that purpose, then the surplus for the year is not affected thereby. I take it a surplus means, in the ordinary acceptation of the term in business, the excess of revenues, in this case taxation and perhaps other sources of revenue, over ordinary expenditures for the year; in other words, it is known as a profit in business; we perhaps do not speak of it in that way in connection with the national finances. That is my contention, that the creation of a debt, if a corresponding asset is thereby established, does not affect the surplus for the year.

Mr. MEIGHEN: There is some use talking with the hon. member, and therefore I embrace the opportunity. If we build a post office it enables the Post Office department the better to earn their revenue, probably to earn more. It is an asset that we possess, does the hon. member argue that the cost of that should not be part of our national debt?

Mr. EULER: The hon. member misunderstood me entirely. I am not arguing about the debt. There is no question that the debt has been increased, but I say the government has a right to make a statement at the end of the year of the moneys which have been expended for services and which will never come back, and set against that the amount received by way of taxes or from other similar sources; and if there is an excess of receipts over expenditures there is a real surplus by the amount of which the debt can be reduced, and if the excess is the other way there is a deficit. That is my understanding of accountancy. I shall be very glad to argue the point with my hon. friend on another occasion.

So, Mr. Speaker, I sincerely congratulate the government on its surplus. Possibly the leader of the opposition will contest that when he speaks next week. I congratulate the government on the improved financial position of the country, and not least on the improved condition of the National railways.

But when I say that, Mr. Speaker, I want also to add that in my view the budget has certain serious defects, certain errors of omission, and of commission as well. I regret, in the first place, that the Acting Minister of Finance (Mr. Robb) has not seen fit to abolish those taxes that are sometimes, and so appropriately, called the nuisance taxes. From the outset of their imposition under the former government I have opposed the stamp taxes upon commercial paper, and more latterly upon receipts as well. I have never been able to see that a tax so irritating in its nature, and one that is not based upon any logical principle, should have been imposed upon the people of Canada. Further, when the

taxes for the ensuing year were being reduced by the removal of the sales tax in certain instances, I should have been glad if the government had at the same time considered the reduction of postage from three to two cents, believing it would not only be in the national interest, but that it would not have reduced the revenues in any degree whatever. I regret also we have had no pronouncement, except perhaps with regard to one small item, with regard to the income tax. I should like to see some modification and some simplification of the income tax. I was more disappointed with regard to one thing perhaps than with regard to anything else, and that is that we have had no announcement from the government with regard to the creation of what is sometimes known as a tariff commission, and without the knowledge that only such a commission can give we have had some haphazard reductions in the tariff.

I regret further that we have had no legislation proposed for the relief of Canadian industry because of the depreciated currency of foreign countries with which we are in competition. It may be the government foresees the day at no distant date when these foreign countries, England and possibly continental nations, as a result of the Dawes' report, may go upon the gold standard basis and in that way the matter may correct itself; but we still have the condition under which industry in Canada is labouring because of the lower wage situation in countries which are now in strong competition with Canada. The other evening the hon. member for Brome (Mr. McMaster) made some comment with regard to the Canadian manufacturer of boots and shoes. That hon. gentleman is very fair in debate, and I am quite sure he did not intend to be unfair in this case. During my remarks in the debate on the motion for the adoption of the Address in reply to the Speech from the Throne, I had made some statement with regard to the difficulties experienced by the Canadian shoe manufacturer on account of the importation of British boots and shoes. The tariff on British boots and shoes by reason of the preferential arrangement is not 30 per cent but is now $16\frac{2}{3}$ per cent. That, coupled with the depreciated rate of exchange, and the lower labour costs in England, constitute the strongest competition that the Canadian shoe manufacturer has to contend with. But my hon. friend referred almost entirely to competition in that line with the United States manufacturer and stated—I do not desire to quote him incorrectly—that the tariff on American boots and shoes ought to be sufficient, and further hinted, or stated very broadly, that he thought the difficulties of the Canadian shoe manufacturer were largely the result of inefficiency in his factories, and also arose from the fact that those factories had to carry a very large amount of watered stock.

Mr. GARLAND (Bow River): Hear, hear.

Mr. EULER: I desire to contradict that statement. There may be a few shoe factories in Canada where the matter of watered stock probably led to their going into liquidation. But in the riding from which I come there are ten or twelve shoe industries, and I want to say for the benefit of the hon. member for Bow River (Mr. Garland) that in those concerns there is no watered stock, nor are they inefficiently conducted. It might interest the House to know that some four years ago the shoe industries of Canada exported to twenty-eight foreign countries in the year goods valued at approximately $5,500,000. Since that time tariffs have been raised in these foreign countries, exchange has depreciated, labour costs have gone down, so that last year—or rather the year ending in February last—the exports of boots and shoes from Canada to foreign countries had sunk to less than $300,000.

With regard to the preferential tariff I should like to say, as I said on a previous occasion, that we ought to give consideration to Canada first; and that under present conditions of exchange and cheap labour the preference ought to be withdrawn or materially reduced. The present situation, as the hon. member for Vancouver Centre (Mr. Stevens) said, is a one-sided arrangement. If we acted entirely on a business basis with regard to the tariff no one could say that our friends in Britain could find any fault with that attitude because they are pursuing that course themselves. I think I mentioned on a previous occasion that that was very well proven by their attitude with regard to the embargo on Canadian cattle which was a protective measure purely and simply, although another reason was given. Then we had later a rejection by the British people of the proposed Imperial preference arrangement that was enunciated by right hon. Mr. Baldwin at the last Imperial conference in London when the Prime Minister of Canada was present. And within less than two weeks we have had another instance of the attitude of the British government, in that they have removed the preference that Canada enjoyed in the British market as compared with the United States. So it seems to me the government might very fairly and very logically consider some sort of modification of the preference.

I do not intend to speak at any great length and I wish to devote myself more particularly, from this point on, to the subject that seems to be of paramount interest in connection with the budget, and that is the matter of the tariff changes. Let me say that in the remarks I have to make I have no desire to attribute to any member, or to the government, any improper motive, political or otherwise, with regard to the changes that have been made: the responsibility is theirs, I have no doubt they are acting in what they consider the best interests of Canada, but I must claim the same responsibility and the same privilege. I would also say that I have never been able to see that the determining principle as to the party with which a man should ally himself depends upon his views on the tariff. I know that is the impression of some people. I know that is the impression of some hon. gentlemen on this side; I suppose it is also the impression of some hon. members opposite. But the tariff is not the only thing with which parliament and governments have to deal. It is perhaps not even the most important thing. At any rate if my views on the tariff disentitle me to call myself a Liberal, then my life-
5 p.m. long conception of Liberalism has been incorrect.

Now, let me treat as fairly as I can the issues arising out of the budget with regard to the tariff. There are those, some of them in this House, who will not swerve from the theory of free trade but insist on carrying that principle into practice no matter what the conditions may be. They believe it is wrong to erect any tariff barrier for the purpose of giving the Canadian workman an advantage or a preference in his own country over his foreign competitor—they believe it is morally wrong and unjust to the consumer. I think that is, perhaps, a fair description of the attitude of some members of this House. Then there are some who concede that while free trade is good in theory we should have a tariff for revenue. I believe, Mr. Speaker, there is a good deal of wrong thinking, and perhaps honest self-deception, with regard to the theory of a tariff for revenue. My contention always has been, and I still believe, that a tariff for revenue is a protective tariff. It may not be a tariff that adequately protects, as my hon. friends "angularly opposite" would say, but to the exact degree to which there is a tariff, just to that extent will the industries of Canada, or of any country, be protected. All tariffs are protective more or less.

Mr. JOHNSTON: Would my hon. friend admit that very high tariffs cease to be revenue producing?

[Mr. Euler.]

Mr. EULER: If tariffs are high they undoubtedly are protective. If the tariff is low the element of protection exists although in very much smaller degree.

Mr. JOHNSTON: If the tariff is too high we get no revenue.

Mr. EULER: All those who are absolutely in theory and in practice, free traders, will say that they favour a tariff for revenue only; but if they will give the subject a moment's honest thought I think they will also say that to collect a revenue by a tariff is about as wasteful a system as can be devised and costs the country a great deal more than is commensurate with the amount that goes into the national treasury. Then there are others, like myself, who believe that it is in the national interest that we should have diversified industries. I am willing to place agriculture first and to give a prominent place to all the industries that deal with the development of our natural resources; but I will also say that manufacturing must take a very prominent part in the essential industries of Canada if we want to build up a nation with an all-round development such as we ought to have. Such men believe that a tariff may be used to maintain and to encourage industry, even though sometimes it may be, apparently, at some slight sacrifice. They believe that if Canadian workmen are to be paid good wages, that will enable them to live decently and comfortably, in many lines of industry they cannot compete on an even basis with the underpaid workmen of foreign countries.

Mr. FORKE: I should like the hon. member to make that clear before he goes any further. Would he mind stating plainly if he would wish the tariff to be so high that it would produce no revenue,—actually prohibit the importation of goods,—or would he define what one might call an adequate tariff that produces so much revenue and is also a protective tariff?

Mr. EULER: If the hon. member will bear with me for a moment, he will have his question answered, but I may say now that I am emphatically not in favour of a prohibitive tariff.

M. FORKE: I should be glad to know where the hon. member would begin and where he would end.

Mr. EULER: Does my hon. friend desire me to go over the whole list of articles manufactured in this and every other country and say that the duty should be 15 per cent here, 20 per cent there and 30 per cent elsewhere? I am not able to do that, and I am going t

give the remedy for the sort of thing which, I think, we are suffering from if hon. members will bear with me for a moment.

There are those of us who believe that we cannot compete on an even basis with those European countries which have lower costs of labour, whose people have a lower standard of living, whose currency is depreciated. More than that, I will include the United States with its mass production which has already been spoken of in this House to-day and its overproduction and the resulting attempts at dumping in Canada which are sometimes made. There are men—and I am one of them—who believe in a moderate tariff that will maintain Canadian industry. I believe in that as a wise policy. If that makes me a protectionist then I shall have to accept the designation. But I will also say that I do not particularly like the word "protection". In its original meaning it is beneficent and benevolent in its significance, but it has been so abused that it has acquired something of a sinister meaning. It too often connotes such a high tariff as robs the consumer, and it implies too often such a degree of protection, if you like, that it covers inefficiency in manufacture. That has been attributed to it. I am not saying that that is true,—it is probably true in some instances—but for that reason I say that I do not particularly like the word "protection." I would just as soon speak of a tariff that maintains industry, not a prohibitive tariff.

Mr. FORKE: An adequate tariff.

Mr. EULER: I do not usually permit words to be put into my mouth, but I am quite willing to accept the correction or the suggestion of the leader of the Progressive party. I do not favour a prohibitive tariff, but I believe in a tariff that will enable legitimate industries to live if they are efficiently conducted. I believe in that sort of a tariff also for another reason, namely, that it will give employment to our people.

Mr. FANSHER: Will the hon. member define "legitimate industry"?

Mr. EULER: Probably the hon. member has just as easy access to a dictionary as I have and I will leave him to find out for himself. I will draw attention, as so often has been done, to the fact that the rest of the world has erected practically prohibitive tariff walls against Canada, and unless and until that situation changes, fairplay and some degree of national self-respect as well as the desire of self-preservation dictate that we should have such a tariff as will at least give some portion of the Canadian market to our own people. Despite text-book theories and, perhaps, I might even say text-book theorists who go back hundreds of years for their authority, that seems to me to be absolutely a reasonable position for a Canadian to take. I believe that the Laurier-Fielding tariff in its day was a reasonable tariff. Call it what you like; call it "tariff for revenue," if you wish; it was protective in its effects and under it this country was more prosperous than it had ever been before or has ever been since. I might make a reference to the election of 1921, in connection with the tariff. The tariff was not an issue in that election in Ontario, and I think I may say in Quebec, unless it was in the constituency of the hon. member for Brome (Mr. McMaster) who, I am sorry, is not in his seat to-day.

Mr. SPENCER: What was the issue?

Mr. EULER: The issue was the Union government. There were two reasons why the tariff was not an issue in Ontario and Quebec. I have given one. The chief reason was that the people of this country, rightly or wrongly, and I think rightly, had decided that they were going to dispense with the government that was then in power. That was, I believe, the compelling reason throughout Canada. The second reason why the tariff was not an issue in Ontario, at least, was this, that the people of that province had confidence that the hon. gentleman, who is now Minister of Finance (Mr. Fielding) and who had been Minister of Finance under Sir Wilfrid Laurier during a period of prosperity covering fifteen years, would again become Minister of Finance, and they had no particular fear that industry would be interfered with under his administration any more than it had been under his previous administration. But I did discuss the tariff in the constituency which I have the honour to represent, and I declared myself in favour of a tariff such as I have described. The hon. member for South Winnipeg (Mr. Hudson) who is my deskmate, the other day gave some figures with regard to the election, and he stated that the Conservative party polled about a million votes and that the combined Liberal and Progressive parties polled something like two million votes. I think that is approximately correct. From that he inferred that there was a tremendous majority in favour of tariff reduction. I must take issue with my hon. friend on that. The vote of 1921, at least as regards Ontario and Quebec, was not a vote on the tariff at all, and I am quite sure that there were literally

thousands and tens of thousands of voters who believed in the kind of a tariff that I believe in, who voted for either Liberal or Progressive candidates. In fact, I am almost inclined to say that if it had not been for the fact that the people of Ontario and Quebec had confidence that no industry would be injured by a possible Liberal government, the government which is now in office would not be now occupying the seats of office.

Mr. SPENCER: What about the platform of 1919?

Mr. EULER: I will come to that in a moment.

Mr. LAPOINTE: There will be no injury.

Mr. EULER: I hope the hon. gentleman is correct. Some reference has been made to the statement of the Minister of Finance last year that we should have tariff stability in Canada. I agreed with that at the time. I also agree with what the Prime Minister said some days ago, that that did not imply tariff stagnation. Assuredly there is room for improvement in the tariff. It is now perhaps ten years or more since the tariff was revised, and I think it is high time that we should have an intelligent revision of the tariff; but I say this, that when the Minister of Finance made that statement regarding stability, he did not contemplate that we should have frequent radical changes that would keep the business world disturbed for any length of time.

My hope has been that the government through the Acting Minister of Finance (Mr. Robb) in its budget proposals would make an announcement that we should have a tariff board or commission in this country. Such a tariff board ought to be permanent. I see my hon. friend opposite smiling; but I do not think I am stealing the thunder of my colleague the hon. member for South Waterloo (Mr. Elliot), because it will be remembered that I made this suggestion in my address on the Speech from the Throne. A tariff board of this kind should consist, if possible, of representatives of all classes of the people, including workingmen, farmers and manufacturers, if you like; but the dominant factor in the selection of its members should in my opinion be their entire fitness for the work they would undertake. They should be men of integrity who would have a strong sense of responsibility and with a real desire to render public service. And I would give to that board real power; I do not believe in a tariff board, or even a committee of the cabinet, who would go about the country trying to get information regarding industry and succeed very often only in getting the kind of information they desired to obtain. I say, I would give that board power to make the most exhaustive investigations into the conditions and circumstances of industry.

Sir HENRY DRAYTON: Was my hon. friend satisfied with the tariff board for the appointment of which provision was made by this House in 1912 and rejected by the Senate?

Mr. EULER: I am not very familiar with the work of that board, but I venture to say that it was not the kind of body that could do work of the description I have suggested.

Sir HENRY DRAYTON: It was exactly the same, an advisory board.

Mr. EULER: I doubt very much whether the board of which my hon. friend speaks would have done what I have in mind. I would give to the board power to go into industry, find out costs and profits, ascertain whether there was watered stock upon which dividends were being paid—

Sir HENRY DRAYTON: That was all provided for.

Mr. COOTE: And would they squeeze the water out?

Mr. EULER: Well, we should have to judge that by the results. The board would find out also whether there were any combines, and generally investigate into matters of that kind. If anything of the kind were discovered then I would use the tariff as a weapon to make the industry concerned give to the consumers of the country a square deal.

Mr. MEIGHEN: Perhaps it is well at this stage to have the fact recorded that the bill to which my hon. friend (Sir Henry Drayton) has referred, and which was defeated by the party of the hon. gentleman who is now speaking, contained all these provisions that he has enumerated.

Mr. EULER: Does the right hon. gentleman say that the bill was defeated in the Senate?

Mr. MEIGHEN: Yes. It was bitterly resisted for weeks in this House by the Liberal party and finally defeated by the Liberal majority in the Senate.

Mr. EULER: I have no knowledge of that, but I am willing to accept the state-

ment of the leader of the opposition. In any event, I have only this to say, that I do not accept responsibility for what anybody did in 1912, and much less any responsibility for what the Senate of Canada does.

Mr. CALDWELL: Does my hon. friend think that the tariff commission that toured this country in 1920 had the powers he speaks of?

Mr. EULER: If they had such powers they did not exercise them, I am sure of that. In fact, that commission never reported at all, and so far as that is concerned the ex-Minister of Finance (Sir Henry Drayton) will be able to inform the House for he was the head of it. In my opinion no Minister of Finance, no committee of the cabinet, can physically obtain the information that I have spoken of, because in too many cases they are dependent almost entirely upon the officials of their departments. And I may say, with all respect to the officials of the departments, whom I have no wish to criticise generally, that I should like to be delivered in many instances from the advice that is given by some of them; I have somewhat of a dread of the official mind. A board such as I have suggested might make tariff reductions possible; I believe that is quite within the bounds of probability. I would not hesitate either, if it were shown to be advisable, to increase the tariff if I considered it in the interests of the country. I believe there are some industries here to-day that can stand a tariff reduction, but I would not make these reductions without the accurate knowledge which only such a tariff board could give. To some extent, the tariff might thus be taken out of politics, though the board would necessarily be an advisory one, and the government would always retain full responsibility.

Unfortunately, selfishness is still the most compelling motive in human life. I made that statement once before and at that time, as also on this occasion, the leader of the Progressive party (Mr. Forke) shook his head. I hope he is right, but I am afraid he is not. There are selfish men in all walks of life, and some manufacturers are no exception. Indeed, there are some who desire to have a tariff as high as Haman's gallows, to use a hackneyed expression. But such men are their own worst enemies because invariably the extremists invite extreme action in the other direction. As I said before however I believe there could be reductions in some instances without injury to industry itself and with a good deal of benefit to the consumer.

I have given a good deal of careful thought to this budget and I appreciate many of its provisions. I believe the people of Canada approve of the reductions made in the cost of living by way of the removal or the partial removal of the sales tax and I think my hon. friends directly opposite me will believe me when I say that I should like to see anything done that could possibly and legitimately be done to assist the farming industry. I think it was a year ago that we gave them the benefit of at least a portion of the Crowsnest agreement, and I understand that all the commodities under that agreement are to be placed on the list this year. I hope that is the case. If anything can be done to provide lower freight rates I hope it may be possible. So far as the farmers of Ontario are concerned, and particularly in my own constituency, I am quite assured of this, that their interests are the interests of the people of the cities and of the industrial towns. That at any rate is true of my own constituency.

We hear a good deal about the home market, and the westerner does not attach very much importance to that market. Perhaps he is right inasmuch as his product is very largely exported. The same may be true in the Maritime provinces also. But the home market in Ontario for the farmer is a real thing and a thing of great value. The westerners' difficulties after all, I believe it will be conceded, have no relation to the tariff; they go much deeper. The high cost of production, high freight rates, the high tariff of the country to the south, are some of the factors that enter into the problem of the western farmer. And then there is the lack of markets in which before the war the farmers of the West sold their products. If some sort of assistance could be evolved for my Progressive friends in their farming operations I should like to examine them and afford all the assistance possible; and indeed I think I could even be prevailed upon to vote for a tariff upon oleomargarine.

We have heard a good deal about the Massey-Harris Company in connection with the reduction of the tariff on implements. Let me remind the House that there are dozens of smaller concerns in Ontario and Quebec that also manufacture agricultural implements. Now, I do not believe that under the amended budget proposals the manufacturers of implements are going to be seriously injured; I think not. In fact the hon. member for West Toronto (Mr. Hocken) yesterday stated that the implement manufacturers would make more

money under this budget than they did before. But let me say a word for the smaller concerns manufacturing agricultural implements. In my riding we have a concern manufacturing threshers. Last year there was imported threshing machinery to the value of $3,366,000, and there was manufactured and sold in this country only $1,850,000 worth. So that the importations were nearly twice as great as the home-manufactured product. I do not think anyone can reasonably argue that threshing machinery enjoys a prohibitive tariff.

I am sorry the Acting Minister of Finance is not in his seat, for I wish to point out an anomaly in connection with the removal of the sales tax on threshing machinery, to show the necessity of considering very carefully any proposed changes. A threshing outfit consists of the thresher proper, the traction engine, the wind stacker, the feeder and the drive belt. On the thresher proper the sales tax has been entirely removed; but the farmer has to pay 5 per cent on the other items that go to make up the unit. It seems to me that such an inconsistency might very well be removed.

Now, Mr. Speaker, to sum up. I would say that I cannot approve of the more or less haphazard changes that have been made in the tariff. I agree with the member for Vancouver Centre (Mr. Stevens) and the member for Brantford (Mr. Raymond) when they say that they do not believe in tariff discrimination. The agricultural implement industry is not, I believe, injured by the tariff proposals contained in the budget. But we are told that with the free entry of its raw materials some other of our industries will be injured. The hon. member for West Hamilton (Mr. Stewart) read a good many letters pointing that way. I hope he is wrong. But no doubt it is true that some of our manufacturing industries will be injured by the proposals contained in the budget. I do not believe that for any purpose whatever it is just to discriminate against certain industries, especially those which already have lower tariff protection than almost any others that might be named.

My chief objections to the budget are these: changes are being made without an accurate knowledge of what they may involve. We are discriminating against certain industries. I do not approve of the condition of uncertainty which the country is in for the moment. I can see no very definite principle underlying the tariff reductions, unless perhaps this is the first step in the implementing of the 1919 Liberal platform. If that is the case, I say to the government: I believe the people should know whether the tariff platform of 1919 is to be gone on with in the sessions to come. Some hon. gentlemen on the other side a little while ago made reference to the platform of 1919. Let me say to possible critics of my attitude on the tariff when considered in conjunction with the tariff platform of 1919, that I did not support that platform, I never endorsed it, and I have on two occasions repudiated it in this House. I do so again now. Nor did the right hon. Minister of Finance (Mr. Fielding) approve of that platform, as he stated on the floor of this House last session. May I give a piece of information which will probably be of interest to hon. members; in fact it is perhaps not even known to some members on this side of the House. On the resolutions committee which framed the tariff planks in the platform of 1919 there was not one Liberal member of parliament from the great industrial province of Ontario. And yet Liberal members from Ontario, whose interests were so vitally affected, are expected to defend a platform in the making of which they had no part!

I would say again, as I have already said, that I feel no particular alarm as to the immediate disastrous effects of the budget proposals. I believe there may be some injury done, but I cannot agree with those who say that industry in going to be annihilated, that the country industrially is going to come to a standstill. I do not believe it. I think some of these statements are propaganda, uttered for the sake perphaps of making political capital and therefore to be discounted. I do not believe the injury will be so great as some have prophesied.

Mr. MEIGHEN: Will the hon. gentleman tell us who said that industry would be annihilated?

Mr. EULER: Some newspapers.

Mr. MEIGHEN: That may be so.

Mr. EULER: I am not referring particularly to members on the other side of the House But I do not credit the predictions of industrial ruin that have been circulated so freely throughout Canada since the introduction of the budget.

Mr. MEIGHEN: Our objections have been too moderate.

Mr. GRAHAM: You will never be charged with that.

Mr. EULER: Possibly so. But, Mr. Speaker, whatever the result may be, I have given very careful consideration as to whether the tariff proposals violate the principles in

which I believe. Frankly, I believe they do, and especially when they are considered in conjunction with some of the pronouncements that have been made in this debate by members of the government. If the Acting Minister of Finance had given any sort of assurance that no further changes would be made without the most careful investigation by, say, a tariff board, and, following that, the most careful consideration by the government, I might not be forced to that conclusion. But under the circumstances I cannot regard this budget as an isolated or final act. My friends angularly opposite do not receive it that way; that, of course, is to be expected. My friends of the Progressive party do not receive it that way; they are very grateful for what they have received—

Mr. HOEY: For small mercies.

Mr. EULER:—and I think they have a very lively appreciation of favours to come.

Mr. CALDWELL: Not favours; justice.

Mr. EULER: Indeed, the hon. member for Strathona (Mr. Warner) spoke of the promise that has been given to make further tariff reductions in future sessions; and some members on this side have spoken in a similar vein. But, Sir, the most disquieting statement of all to me, is the statement of a responsible member of the government in the person of the Minister of the Interior (Mr. Stewart) when he said that he hoped this budget would sound the death knell of protection. If his words voice the policy of the government—and I hope the right hon. Prime Minister will tell us whether they do or not—I am afraid they may also sound the death knell of a good many Canadian industries.

Some hon. MEMBERS: No.

Mr. EULER: I believe that.

Mr. MACKENZIE KING: I might answer my hon. friend at once. He has said that he regards a tariff for revenue as giving protection. The policy of the Liberal party has always been that of a tariff for revenue, and will continue to be so.

Mr. MEIGHEN: That is not the death knell of protection.

Mr. STEWART (Argenteuil): A tariff for revenue is certainly not a protective tariff.

Mr. EULER: I would respectfully suggest—

Mr. MEIGHEN: I leave it to the Prime Minister and the Minister of the Interior to reconcile themselves.

Mr. SUTHERLAND: And the Minister of Agriculture.

Mr. EULER: Have I the floor, Mr. Speaker? I say, Sir, that that is a policy which I cannot support. If the words of the Minister of the Interior reflect the considered policy of the government, it is a policy against which I must protest in the interests of my constituents and because of the beliefs which I hold. I cannot make that protest either consistently or effectively by speaking one way and voting the other, and for that reason I propose to vote against the budget.

Mr. B. W. FANSHER (East Lambton): Mr. Speaker, it becomes my duty, after listening to a well-reasoned and temperate address by the hon. member for North Waterloo (Mr. Euler) to express views a good deal different from those which he holds. But I assure, you, Sir, and hon. members of the House that my convictions are just as strongly held as those of the hon. member for North Waterloo.

A good deal of the discussion on the budget has consisted of declarations of hon. members either against or in favour of the protective principle. With regard to that matter I do not intend to speak at any great length; it is not my purpose to enter into an extended discussion of the theories of free trade or of protection. Having lived a good many years not far from the international boundary I have some practical knowledge of what protection has done for this country and I have had some experience in connection with the prices of goods on the respective sides of the line. However, I believe the principle of protection to be unsound, not only economically, but also from the point of view of its effect upon the morale of the people of this country. It is evident that if we have a protective system somebody is protected and somebody else must do the protecting. If somebody benefits, somebody else has got to provide that benefit. If it is done by monetary means, as is done in the case of the tariff, something must be taken from those who do the benefiting and the reward goes to those who benefit. The effect upon those who receive the protection was emphasized only yesterday by the hon. member for West Toronto (Mr. Hocken) who said:

> The threat of the "death knell of protection" has put all our manufacturers, and many of our business men who are not manufacturers, in such a position that they are afraid to make any investments, afraid to make any expansion.

"Afraid to make investments" and afraid of expansion: that is the natural consequence of protection in this or in any other country.

A strong, virile manhood or womanhood is never developed by depending on someone else, neither is a strong, virile industry developed which depends on some other industry for assistance or for part of its revenue. When any interference which that assistance is contemplated, those who are assisted become apprehensive; fear enters their souls, as was acknowledged in the speech of the hon. member for West Toronto yesterday. While I agree with the premises taken by that hon. gentleman, with his appeal to patriotism and his desire to build up Canada, I do not agree that only by means of a protective tariff can we hope to build up a strong, well-rounded Dominion. If I quote further from his speech I think I could show that the very policy which has been in vogue in this country for the last forty years has not made a well-rounded Dominion, but has advanced prosperity and population in perhaps half a dozen or more centres throughout the country. Asked the question yesterday as to what protection had done for this country, the hon. member replied that twenty years ago Montreal and Toronto had only a small population and that to-day they have a large population. That is a fact; Toronto has doubled its population every fifteen years since its incorporation, but if we turn to rural Ontario, which is supposed to have the benefit of the home market which protectionists say is the result of the protective system, in the last twenty years rural Ontario has lost over 20,000 of its population. Only 41 townships in rural Ontario have increased in population in the last twenty years, and in those cases it was on account of the overflow from large towns or cities. Three hundred and seventy-five townships lost in population. So that if we examine the protective system we find that it does not make for a well-rounded Dominion but rather for some well-rounded centres of population throughout the country. A country cannot prosper if one industry advances much faster than others. I believe that the great basic industry of Canada, if it were left free from the necessity of helping every other industry under the sun, would again lay the foundations of and build up this country as it did in the days of the pioneers.

Coming more directly to the budget, I believe that it is a very skilful one. It is a tax reduction budget, and because it is a tax reduction budget I am pleased with it. Everybody is pleased with a budget that reduces taxation rather than increases it, but there are various methods of reducing taxation, and from the speeches of many hon. members in this House one would be led to believe that a good deal, if not most, of the reduction made in this budget was due to reductions in the customs tariff. However, a close examination of it will not give that impression.

In the first place we have a reduction from six to five per cent in the sales tax. Now last year there was over $101,000,000 collected from the sales tax. A reduction from six to five per cent means a reduction of about $17,000,000 in sales tax alone. Besides that, we have other reductions. We have the removal of the sales tax on agricultural implements and implements connected with the farming industry, binder twine included; second, we have exemptions of the sales tax from all articles and materials to be used in the manufacture of agricultural implements; the removal of the sales tax from sulphate spraying materials, poultry feed, cream separators, and so forth. I could go on and mention about fifteen or sixteen different classes of articles from which the sales tax is either removed or on which it is materially reduced. The closest estimate that I can make of the reduction in revenue by these special reductions and exemptions in the sales tax over and above the reduction from six to five per cent would be about $5,000,000. That brings the reduction in sales tax up to about $22,000,000.

Now we notice that the total loss in revenue anticipated by a reduction in sales tax and in the tariff proposals, as given in the budget speech, is about $24,000,000, which leaves practically only $2,000,000 of a reduction in the customs tariff. With that part of the budget I am not entirely pleased. If the reduction had been in inverse ratio, or somewhere thereabouts, it would have suited me a great deal better, and I believe also the majority of the members of this House and the rank and file throughout the country. The Liberal platform of 1919 does not mention anything about a reduction in the sales tax. It speaks of a substantial reduction of the burdens of customs taxation. It is true there was a sales tax, but I do not believe there was a sales tax to amount to anything at that time. There was a sales tax, however, when this government came into power and this government increased it in the two former budgets; it has now taken away a portion of the sales tax in this budget, so we might say: The King government has given and the King government has taken away. But I do not know that we can altogether add: Blessed be the name of the King government.

The two great sources of revenue are the customs tariff and the sales tax. The customs tariff provided a revenue of about $135,000,000 last year and the sales tax $101,000,000. We have a reduction, we are told, this year of $24,000,000, which is nearly all accounted for by a reduction in the sales tax. That $24,000,000 reduction represents a relief to the taxpayer, but there is very little relief in excess of that amount, because the sales taxes are pretty direct taxes. On the other hand, if that reduction of $24,000,000 in revenue came entirely through the customs tariff it would give a relief to the taxpayer of this country of an amount in the neighbourhood of $100,000,000, because, as everyone realizes, while about $1 goes into the treasury through the system of customs tariff collection, about $3 or $4 goes into the pockets of those who are protected. I just want to quote a few figures to illustrate that statement. In the year 1921 the amount of revenue collected from the automobile industry in this country and the amount of protection afforded to that industry was in the ratio of 1 to 7; while $1 went into the treasury, $7 was afforded in protection to the manufacturers of automobiles in this country. I do not say that the whole of that $7 was taken advantage of by the manufacturers, but according to the trade returns for that year that ratio of protection was afforded. In the agricultural implement industry the ratio was $1 of revenue to $4.50 of protection. Here are some rather startling figures in connection with the boot and shoe industry. The ratio of revenue to protection afforded in the boot and shoe industry in this country in the year 1921, according to the trade returns for that year, was $1 of revenue to $28 of protection. In the rubber goods industry, including rubber footwear, the ratio was $1 to $13. Those are the figures you get when you take the percentages and apply them to the actual amount imported and the actual amount made and sold in Canada, and if that ratio is not observed and made use of by the manufacturing industries there is surely no ground for their claim that protection should not be lower.

I wish to speak further about the automobile industry of Canada. In other budget debates a great deal has been said concerning that industry, but in the present debate there has been little or no comment. Even the budget makes no mention of the automobile industry. Now, in the part of Ontario which I have the honour to represent, it is a well known fact that the automobile industry is able to outbid every other industry in the labour market, and the belief is current—rightly or wrongly, but I think rightly—that in a large measure its ability to do that is assisted and strengthened by the measure of protection which it enjoys under the tariff.

Mr. HEALEY: Is my hon. friend against paying high wages?

Mr. FANSHER: I am not against any industry paying high wages, but I stand for equality in rewards for labour as between one industry and another. If a producer in one industry has to work two days to purchase a commodity which the producer in another industry turns out in one day that is altogether unfair. In the case we are considering other manufacturers are placed in a position where they cannot compete in the labour market with manufacturers of automobiles.

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

PRIVATE BILLS

THE T. EATON GENERAL INSURANCE COMPANY

The House in committee on Bill No. 9 respecting the T. Eaton General Insurance Company—Mr. Sheard,—Mr. Gordon in the chair.

Mr. GRAHAM: Does anybody here know anything about this bill?

The CHAIRMAN: This committee considered this bill and progress was reported on it.

Bill reported, read the third time and passed.

COMMERCIAL TRAVELLERS' MUTUAL INSURANCE SOCIETY

The House in committee on Bill No. 23, respecting the Commercial Travellers' Mutual Insurance Society—Mr. Ryckman,—Mr. Gordon in the chair.

On section 1—Incorporation.

Mr. CALDWELL: The last time this bill was under consideration, we asked that it stand over for some more information.

The CHAIRMAN: It did stand over and it has come up in the regular course.

Mr. CALDWELL: I understand that, but I should like to have some information.

Section agreed to.

Bill reported, read the third time and passed.

MONTREAL, OTTAWA AND GEORGIAN BAY CANAL COMPANY

The House in committee on Bill No. 17, respecting the Montreal, Ottawa and Georgian Bay Canal Company—Mr. Clark—Mr. Gordon in the chair.

On section 4—Rights of government to take over works preserved.

Mr. GRAHAM: I was in the committee when certain immaterial amendments were made to the bill, and I rise now simply to say on behalf of the government that although no objection is being taken to the extension of time in this case, it must be distinctly understood that this bill will not interfere in any way with any encouragement the government may give, or any work it may intend to do, in connection with the development of power on the Ottawa river. I say this because of course the Georgian Bay canal project includes the Ottawa river, and the powers embraced in this bill were given years ago when the government was making extended surveys and investigations in relation to the Georgian bay undertaking. This company's charter has been extended from year to year and I have no desire to prevent the retention of the powers they have; but there must be a distinct understanding that the extension of time granted by this bill does not preclude the government, if it so desires, from taking any steps which it may see fit towards the development of powers on the Ottawa river.

Mr. WHITE: Will the statement of the minister have any effect if the purport of it is not incorporated in the bill?

Mr. GRAHAM: I have written to Sir Robert Perks expressing the same views I have anncunced to-night, so that the company know perfectly well that the extension of this charter does not confer any powers which they had not before, and will give them no exclusive rights on the Ottawa river.

Mr. WHITE: Is the minister over-riding the bill?

Mr. GRAHAM: It is not a question of over-riding the bill. This company has been in existence for years and a lease was given in 1921 for the development of power on the Ottawa river. But because a company is given the right to do certain things it does not follow that no one else shall have rights in a similar degree. The question of water power in Canada is a very important one at the present time. It will be seen by the press, either of yesterday or to-day, that the provincial government of Ontario has stated that the Hydro Electric Commission proposes trying to secure some power leases on the Ottawa river. I submit therefore that it ought to be made clear that the renewal of this charter shall not interfere with anything which this government, or any other government that has jurisdiction in the matter, may wish to undertake in connection with development on the Ottawa river.

Mr. FORKE: The minister's statement is simply an explanation; it does not alter anything?

Mr. GRAHAM: Matters stand just as they did before.

Mr. CALDWELL: How much development has taken place under this bill?

Mr. GRAHAM: So far as I know, there has been just the preparation of plans.

Mr. RYCKMAN: What rights are maintained or contended for by the government?

Mr. GRAHAM: No rights which the federal government has ever had are being interfered with by the extension of the charter. If my hon. friend wants me to go into a discussion of the question as between federal and provincial rights I am afraid I shall have a considerable task.

Section agreed to.

Bill reported, read the third time and passed.

THE NORTHERN LIFE ASSURANCE COMPANY OF CANADA

The House in committee on Bill No. 36, respecting the Northern Life Assurance Company of Canada—Mr. McKay,—Mr. Gordon in the chair.

On section 2—Paid-up capital stock may be reduced to $250,000.

Mr. GRAHAM: What is the amendment?

The CHAIRMAN: The amendment provides that after the word "paid" in paragraph (a) of section 2 the following words shall be inserted:

—less the amount of the deficit, if any, in the non-participating fund of the company; provided that the amount so retained in respect of the said deficit shall be treated as a surplus in the shareholders' account and may be repaid from time to time to the said shareholders from the amount of the combined surplus in the shareholders' account and the non-participating fund of the company as ascertained by the Superintendent of Insurance.

Mr. GRAHAM: That was put in by the chairman of the Banking and Commerce committee?

The CHAIRMAN: Yes, and with the consent of the Superintendent of Insurance.

Amendment agreed to.

Section as amended agreed to.

Bill reported, read the third time and passed.

IMPERIAL INSURANCE OFFICE

The House in committee on Bill No. 37 to change the name of Imperial Underwriters Corporation of Canada to Imperial Insurance Office—Mr. Chew,—Mr. Gordon in the chair.

On section 1—Name changed.

Mr. GRAHAM: Mr. Chairman, was any objection taken to this change of name before the Banking and Commerce committee? I have had a good deal of experience with insurance companies—there is a well-known company called the Imperial Assurance Company—and I know they are very jealous of their names. I should like to know what happened.

Mr. STEVENS: Objection was taken before the Banking and Commerce committee by representatives of the Imperial Life Assurance Company of Canada and the Imperial Guarantee and Accident Insurance Company of Canada. The objection was considered, and the committee decided to grant this name for certain reasons, which I may state briefly as follows: This company has had the name "Imperial" ever since its inception, and preceding that in a provincial form under a provincial charter secured in British Columbia. It was pointed out that taking the three names as a whole, the Imperial Life Assurance Company, the Imperial Guarantee Accident Insurance Company and the Imperial Insurance Office, there would be no difficulty or conflict so far as any legal transactions were concerned; and it was also pointed out that in practice the tendency is to abbreviate and that the abbreviation for the first company was the Imperial Life, and for the second company the Imperial Guarantee and that this company's abbreviated title will be the Imperial Office. Consequently both from the standpoint of legal transactions and of usage and practice it was decided that there could be no objection to the granting of this name.

Mr. BROWN: I do not know anything about this particular matter, but while the explanation of the hon. member may be very satisfactory both from the standpoint of law and of those who are accustomed to deal with these companies, I think we should regard it from the aspect of the people generally. The very fact that the word "Imperial" is used in connection with these three companies will inevitably tend to confusion in the minds of the public. As an illustration of this, I may say that a few weeks ago an insurance company in Winnipeg whose title contained the word "West" became involved and there was a great deal of confusion in the minds of the people whether it was the Great West Insurance Company or the Northwest Insurance Company. Even this slight similarity led to confusion. Therefore I think in allowing any company to use a name which is already well known there should be the greatest possible care to see that not only those accustomed to deal with them in a legal capacity but the public generally shall be able to distinguish without any possibility of confusion between the new company and those already established and well known.

Mr. BAXTER: I might add that it was further pointed out in committee that the only clash in business would come if this company should undertake life insurance, when it might conflict with the Imperial Life; but it was pointed out that the company could not enter into that department of insurance without coming to the Treasury Board for permission, when the question of name could be raised. The committee appeared to be unanimous in its decision.

Section agreed to.

Mr. GRAHAM: Mr. Chairman, before you leave the chair, I would call the attention of the committee to how much more satisfactory it has been to be able to get an explanation of this bill from the member for Vancouver Centre (Mr. Stevens). Those who are responsible in a measure for all these bills would like to have some person in the House to explain them. We have passed bills night after night which only those who are on the committee of Banking and Commerce know anything about. As the leader of the opposition (Mr. Meighen) pointed out the other night, we may be passing something which the majority of the House would not approve of if they had full information. I am not saying that that is the case with any of these bills to-night. I would not want to be very harsh, but if on two or three occasions we held up bills when their sponsors or the chairman of the

committee were not present to answer any questions, perhaps they would make a point to be on hand when the bills came before the House. I can understand that a member who is not quite accustomed to the rules of the House may not know on what occasions private bills are taken up, so I just throw out this hint for the second time: I think it will be wise for hon. gentleman in whose names bills stand to be present when those bills are coming up so that the House may get whatever information it desires; otherwise we are passing those bills blindly.

Bill reported, read the third time and passed.

CONSIDERED IN COMMITTEE—THIRD READINGS

Bill No. 19, respecting the Canadian Pacific Railway.—Mr. Jelliff.

Bill No. 22, to amend an Act to incorporate the Burrard Inlet Tunnel and Bridge Company.—Mr. Clark.

SECOND READINGS

Bill No. 79, for the relief of Douglas Lewin.—Mr. Boys.

Bill No. 80, for the relief of Mary Quinn.—Mr. Wallace.

Bill No. 81, for the relief of Marie Darling Irving.—Mr. Wallace.

Bill No. 82, for the relief of Margaret DeMello.—Mr. Wallace.

Bill No. 83, for the relief of Mary Caroline Dooley.—Mr. Stewart (Leeds).

Bill No. 84, for the relief of Barbara Gibb Duncan.—Mr. Martell.

Bill No. 85, for the relief of Nellie Sinkins.—Mr. Martell.

Bill No. 86, for the relief of Catherine Jean Livingstone.—Mr. Sheard.

Bill No. 87, for the relief of Alice Maud Knowles.—Mr. Sheard.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

Mr. FANSHER: Mr. Speaker, when the House rose at six o'clock I was dealing with the protection afforded the automobile industry in this country, and I had endeavoured to show that the protection it enjoyed had enabled it to outbid other industries in the labour market, and thereby worked a hardship to industries that were more indigenous to Canada than itself.

It is a well-known fact that in southwestern Ontario labour has been drawn from the farms to the city of Windsor and adjacent towns by the influence of the high wages being paid in the industries centered there, particularly the automobile industry. It is also a well-known fact that immigrants brought to this country to engage as farm labourers, and who have been employed to assist the farmers throughout the summer season, have very often been induced by the high wages prevailing in the border cities to relinquish their contracts with the farmers and proceed to where those higher wages can be procured. To my mind, to assist one industry by means of a protective tariff which works hardship to another industry, by making it unable to retain its labour, is not in the best interests of the state as a whole.

Then too, as we have heard from the hon. member for North Waterloo (Mr. Euler) and others, it is inconceivable how one industry can be content with low protection, while another industry which uses the same raw materials receives a great deal higher protection, and in that connection I would cite the manufacturers of agricultural implements in comparison with the manufacturers of automobiles. They both use the same material, iron and steel and wood; both employ skilled workmen who are trained in the working of iron and steel and wood; and yet one industry is assisted very considerably more than the other, the automobile industry to the extent of about 35 per cent, and the other to approximately 10 per cent. It is a well-known fact that many manufacturers complain, perhaps not openly, about the unequal opportunities afforded by an unequal tariff such as is exhibited in the comparison between these two industries. I am certain that a policy such as this, which causes a discrepancy between one industry and another in their chances to procure labour, is not in the best interests of the country as a whole, and being convinced that that is the case I would like to see a policy inaugurated by this government, which is pledged by its platform to a reduction of tariffs, and which has made a start this session to implement that pledge—I would like to see inaugurated a policy which in the course of a few years, by bringing down a few budgets, would remove about one-third of the 35 per cent protection which is afforded the automobile industry and impose an excise tax on about one-half of the protection which was left. That would still leave them a protection of about 12 per cent, a protection which is twice the average rate of interest on bonds, twice the rate of interest on most investments.

I believe there is another reason why the automobile industry should not be protected

to the extent it is. It has an influence in keeping up costs in other lines of manufacture. Automobiles are a thing that will be bought by people in these days; they will go without some of the things which are more essential in order to get an automobile. We see in this city and other places people riding around in the left hand corner of a limousine costing $5,000 or more—more than the price the farmer and the industrial workers of this country pay for their homes, and yet we protect the automobile industry to over one-third the purchase price of its product.

Mr. Speaker, in the last few days in our discussion of the tariff and of its protective principle we have almost lost sight of the amendment which is before us. The amendment, to my mind, is good in itself, but in view of the fact that the government is proceeding in a direction which hitherto they have been very reluctant to take, or in the words of the Speech from the Throne, being persuaded that a tariff reduction is now all that is required to bring about better conditions, I think the mover of the amendment is rather like the boy and the filbert. He wishes to have all at once, and through desiring too much may not succeed in getting any. At least, that is what might appear on a first examination of the amendment, but to my mind it is a substitute for what is already proposed, because its express wording is that all the words after "that," which is the first word in the motion for the House to go into committee of Ways and Means, be struck out and the amendment substituted therefor. For my part I believe that a bird in the hand is better than a bird in the bush.

Mr. RYCKMAN: Or two?

Mr. FANSHER: I would not say there were two birds in the amendment. I do not believe in grasping at the shadow and dropping the substance which is in sight.

Reverting to that phrase in the Speech from the Throne which represents the government as being persuaded that taxation reduction is now essential, I am afraid the government has not been persuaded exactly along the right line; the persuasion has been too much along the line of sales tax reduction and not enough in the direction of a reduction in the customs tariff. I must express my belief at this time, also, that the sales tax, which is a more direct means of raising revenue, should not be lowered to any appreciable extent in the future. The line to be followed in granting relief to the taxpayers of this country should lead to the reduction of the customs tariff. As I said earlier in my address I believe that the loss of one dollar of revenue through reduction of the customs tariff will represent a gain of at least three times as much in relief to the taxpayer.

Before I conclude I wish to allude to the remark in the speech delivered yesterday by the member for West Toronto (Mr. Hocken) when referring to hon. gentlemen in this section of the chamber, he said:

> I said before, Mr. Speaker, and I repeat now, that if our friends in western Canada have sufficient patriotism and are willing to assist in making Canada the great country it is capable of being made, they should accept a moderate protective tariff.

I wish to appeal to my hon. friend's patriotism in this regard and to say to him that if he will join wtih the captains of industry—whose cause he champions—and will engage in the work of building up this great nation on a more even doubletree than is now the case we shall get better results and I shall have more regard for his patriotism. The patriotism that requests of one industry only that it should pull this country out of the position it is in at the present; a patriotism which permits of interests on one side of the doubletree using only a minimum of effort whilst the industries which lie at the very foundation of the prosperity of the state are given the short end of the haul is not to be commended. But the patriotism which will tackle in a right spirit the work that lies before us of making of Canada a truly great country, the patriotism which declares it will assume an even share of the work, the patriotism which will enter on a task in that manner and in that spirit, is a patriotism to be commended.

Now, for a brief allusion to the closing remarks of the hon. member for Vancouver Centre (Mr. Stevens). The hon. gentleman described his journey of a few weeks ago from the Pacific coast to the province of Ontario. He depicted the glories of the setting sun as he travelled through the pass in the Rocky mountains, but he did not mention the glories of the prairies. He spoke of seeing from the observation car of the train a settler at work in the fields of northern Ontario close to his home, whilst his companion stood in the door of the cottage with the children clustered round her My hon. friend said he could not help but admire these people and the work they were performing in nation building. Then he turned to the industrial worker in one of the large cities or towns of Ontario who had been identified with a particular industry for fifty years, and expressed his admiration for that worker also.

I wish to say to the hon. gentleman that if he too wishes to identify himself with the work of making this nation what it ought to

be he will haul on an even doubletree and permit the citizens and industrial workers to whom he alluded to do the same; and if he and the industrial concerns of Canada are actuated by that spirit they too will give evidence of a greater and more magnificent patriotism than was exhibited, for example, when the hon. gentleman tried to uphold a policy that makes for collecting toll from these same individuals.

In conclusion I must say that we as a nation have a great heritage and the development of that heritage is the task that lies before us. Our forefathers handed down to us as grand a heritage as ever was transferred from one generation to another. But while we may believe that the future this country is destined to achieve may be attained by different fiscal policies or different fiscal reforms I am certain the members of this House are all true, and loyal, and sincere in their desire and endeavours to make of this Canada of ours one of the grandest and best countries under the sun.

Mr. H. E. SPENCER (Battle River): Mr. Speaker, in rising to address the House I congratulate the Acting Minister of Finance (Mr. Robb) on the able way he has presented his budget proposals. I also congratulate the government on at last recognizing the wisdom and necessity of starting to carry out their 1919 programme. I appreciate this more because I fully realize that it is in recognition of the presence of the third group in the House, but for whose appearance this sort of budget would never have been presented.

9 p.m. The statement that will give the country the greatest hope, however, was when the Acting Minister of Finance said:

> We have certain basic industries, upon the success of which depend the growth of all other industries, and the greater development of our trade.
>
> Of these basic industries I would place agriculture in all its varied branches first. Next to agriculture I would place our forests, our minerals and our fisheries. The real National Policy is a policy that will encourage growth and development of these basic industries.

If Ministers of Finance would follow the lead of the present Acting Minister of Finance (Mr. Robb) and recognize that those are our basic industries, the country would derive new hope and have a stimulus to greater effort. If the Ministers of Finance for the last forty years had recognized which were the basic industries of this country, Canada to-day would be a far greater country than it is.

I should like to deal with a few of the orthodox suggestions that are put forward by various members in this House during the annual budget debates. One of the favourite ideas of those hon. gentlemen who do not happen to make their living off the land, is that those who are on the land should go into mixed farming. Particularly is this advice given to those hon. members who come from the West. I should like to point out that that is going to have a very dire effect in the future upon the agriculturists of eastern Canada, and the day will come, and not many years hence, when, through the farmers of western Canada going into mixed farming, they will be found to be the greatest competitors of eastern Canadian farmers, both at home and abroad. I am pleased to see that the farmer members from eastern Canada do not hand out that advice; it comes from hon. members who are not interested in farming or who are not farmers themselves. Farmers in eastern Canada realize that western farmers will be real competitors and make things much worse for the eastern men as soon as they go into mixed farming.

A further suggestion relates to immigration which is held up as another of the cure-alls. Immigration of the right sort is what we want; volunteer immigration is all right; but immigration that is forced, as has been the case for some years past, and as was particularly the case last year, is forced at a great cost to this country. A good deal of criticism was offered from this side of the House during the immigration debate last year, because we realized that the government would be spending a great deal of money and probably throwing most of it away. What do we find is the result to-day? We find that although the government spent some $3,500,000, every single settler that was brought into Canada plus 45,000 more have gone to the United States!

Another suggestion often given out at this time is that everybody should practise rigid economy. While to practise economy individually is all right, it is a terrible weapon, if carried out on a wholesale scale, as it would then cripple commerce in every way.

Another statement often made is that labour costs are too high, and labour comes in for a good deal of condemnation. I should like to put on record a few figures with regard to labour costs, in order to show that, when all is said and done, labour costs are not always the greatest costs with which we have to contend. I should like to give an example to show how labour costs are often small, comparatively speaking, in comparison with other charges. In a statement given by Sir Adam Beck, in referring to the Hydro-Electric Commission, he gave these figures:

> Estimated revenue from power plant for 1924, $9,500.000.

This would be distributed as follows:

Interest..	$ 6,200,000	
Sinking fund..	1,217,000	
Depreciation..	410,000	
Operation..	1,280,000	$9,107,000
Surplus for the year..		$ 393,000

Or a surplus for the year of nearly $400,000.

While listening to the debates in this House, it has often occurred to me how contradictory certain statements are. For instance, hon. members who sit to my right have for two years been continually criticising the government for not carrying out their pledges. This year because the government are attempting to carry out their pledges—and we should give them credit for that—we find they are receiving just as harsh criticism from the Conservatives for trying to do so.

Another contradiction which I might point out is this. Regarding the group to which I have the honour to belong, representing, as it mainly does, the agricultural constituencies of western and eastern Canada, the farmers have often been criticised for not getting down to business and organising. Now that they have organized and sent some sixty odd members to this House, their action seems to be criticised and not at all well received.

We have heard a good deal lately during this debate of the way in which the people are leaving the country because of this low tariff budget. That argument, from my Conservative friends at my right might hold water if it were not for the fact that for some years past while we had what might be called a reasonably high tariff we lost very large numbers.

Further advice given to the farmers is such as this: They are told to work harder, to produce more and to be thrifty. As one who knows the life of the farmer very intimately, I should like to know how farmers can be expected to work much harder. As regards producing more, I think they have done their share in that respect, and as regards being thrifty, it is hard to tell how the majority of the farmers could be more thrifty than they are. It is rather amusing when you consider the criticisms that are brought against the orientals who are coming into this country and the reasons given why certain people do not want them to be kept in Canada. The reasons given, are that they work too hard, they produce too much and they are too thrifty.

For some years past, indeed, I may say for many years, through what you might call class legislation, the basic industries of this country have had very little attention paid to them, with the result that they have suffered very much, and to-day are at a particularly low ebb, so low that you find that the agricultural people are able to pay a very small percentage, according to their numbers, as their part of the income tax bill of this country. Then the criticism is made of these people. "Why don't they pay income tax"?

We also hear a good deal in regard to the present standard of living in Canada, which it is said, should be higher. At the same time we find large sums of money being spent on immigration literature in central Europe with the idea of bringing a lot of those people out here, officials must be perfectly well aware that if any large numbers of these people are introduced into the country the standard of living is apt to be lowered. For some years past it has always been the aim of the Minister of Immigration with his staff to encourage people coming to this coutry to take up farming, and for a while no one was encouraged to come unless he settled on the land. I believe the doors are thrown open a little wider to-day, but one point which the Minister of Immigration should realize quite fully is this, that you cannot force people to farm, irrespective of conditions. If economic conditions are unjust, uneven, unequal, or unfair, you cannot force people to farm, and if you succeed in getting them to go on the land they will not settle down under these conditions. We are making great efforts to curtail unemployment, but at the same time by this system of immigration, whereby we have induced people to come to the country out of proportion to the demands of industry, we naturally swell the ranks of the unemployed annually.

From the year 1911 onwards hon. gentlemen to my right—Conservatives—have done their level best to frustrate any chances we may have had of securing reciprocity with the United States, so that through their action we lost the best stock market we could have had. And now that we have lost that market we are told by these same gentlemen that we should go in for mixed farming. We have heard a good deal about the supposed agreement between the party representing the government and those gentlemen amongst whom I happen to sit. Criticisms have been made of a close alliance which it is alleged exists between these two groups. Well, Mr. Speaker, it is interesting, on consulting Hansard, to find that in the year 1923, of 21 votes that were taken, in 12 the Liberals and Conservatives voted together against the Progressives, on four occasions the Liberals and

Progressives voted against the Conservatives, while four other votes represented a combination of Progressives and Conservatives against Liberals; the other one being a mixed vote. I think therefore that we might infer from these figures that the true morganatic alliance is between the two historic parties.

The criticism has been made by an hon. member to my right during this debate, that the government has been false to the business interests, to whom it broke its promises. I want to point out that the governments of this country during the last forty years have been false to the best interests of our basic industries. I desire to put on record a few figures with regard to the inequality in ability to pay income tax as between the farmer and other interests. These figures are important when we consider that the agricultural population represents about 50 per cent of the whole, and that there is twice as much capital invested in farming as in manufacturing and nearly twice as many people engaged in the industry. I am recording these figures because there has been so much criticism in this House of late to the effect that the farmers have not been paying their share of income tax. I have the figures for the years 1920, 1921, 1922 and 1923. In the year 1920 the farmers paid $525,836, and in that same year the professional classes paid $1,093,401, while the three groups representing employees, merchants and manufacturers paid $11,788,398. In 1921 the farmers paid $611,736; the professionals paid $2,642,585, and the three other groups paid $27,209,056. In the year 1922 the farmers paid $1,299,104; the professionals paid $2,526,544, or about twice as much as the farmers were able to pay; while the employees, merchants and manufacturers together paid $26,736,032. Now we come to the year 1923, when there was a tremendous drop in the amount which the farmers were able to contribute, for in that year they were able to pay an income tax only of $472,049, while the professionals increased their contribution to $2,663,900; the three groups comprising employees, merchants and manufacturers having paid $21,874,466. This I think is very conclusive proof that the farmers are not making a great deal of profit in their industry today.

The subject of the tariff has been covered so well by hon. gentlemen in all corners of the House that I hesitate to add to the information in Hansard, however, I want to quote from a pamphlet issued by the National City Bank of New York. This information will be particularly interesting to my Conservative friends in the House. The pamphlet says:

> Besides, we are not sure that lower duties would increase our imports, since reading the following paragraph from Dr. Leaf's address to the stockholders of the Westminster Bank, London, England, a few weeks ago. He said:
>
> "It happens that we have before us at this moment an excellent illustration of the way in which international payments are made in goods. It will be within the memory of all of you that, some two years ago, the United States passed what is known as the Fordney Tariff—a very high tariff designed with the especial intent of excluding foreign goods, and in the belief that other countries could not dispense with the products of the United States. Now, how has the Fordney Tariff worked? I have before me the figures of trade between the United States and Great Britain for the first nine months of 1923. I compare them with the first nine months of 1922. You will suppose—or at least the authors of the tariff certainly supposed—that there will be a great falling off in the exports from Great Britain to the United States, while the exports from the United States to Great Britain will be maintained. Well, what are the facts? The exports from the United States to Great Britain have declined by more than £16,000,000, while the exports from Great Britain to the United States have increased by over £10,000,000. The balance of trade in those months has moved nearly £27,000,000 in favour of this country. Surely this must give Mr. Fordney serious matter for consideration."

The protectionist interests are perhaps beginning to learn that they cannot successfully preach increased tariffs and reduced wages at one and the same time. The tariff has failed to protect Canadian industry; it has failed to maintain purchasing power in the home market for Canadian goods. It has apparently been of very little benefit to Canadian manufacturers. The tariff has certainly been no protection to Canadian workers against unemployment. I agree with J. M. Keynes, the noted economist that protection cannot cure unemployment. Protection is an attempt to limit the volume of trade; it must mean charging the foreigner more at the expense of doing less trade with him. A sound principle is that there can be no disadvantage in receiving useful objects from abroad. If we have to pay at once, we can only pay with the export of goods and services, and the exchange would not take place unless there was an advantage in it. Every export which is not paid for by an import represents a decrease in the capital available within the country. Thus an artifical interference with imports must either interfere with exports, or involve an artificial stimulation to capital to leave the country. Now, if we are to interfere at all with the natural course of trade, surely it should be with the object of keeping capital at home, not driving it abroad. Our imports are our income. To put obstacles in their way is to be as crazy as a business man would be who tried to prevent his customers and his debtors from paying their bills.

One of our greatest problems is to enable the people to get purchasing power to buy what is produced. Science has so speeded up industry that this is practically impossible under our present system, with the result that we run into periodical world slumps in trade, unless we get a war to retrieve the situation by destroying quantities of material, and thereby giving a big impetus to trade.

As an example of this speeding up of industry, they have in the United States a labour-saving machine which takes the place of the old fashioned sock machine in Europe of thirty years ago, which employed one operator on six machines, producing 432 socks per day. They now employ full automatics, one operator now attends to twenty-five machines and produces 3,600 socks per day. The purchasing power of the people is ultimately determined by the pay-roll of the people. When pay-rolls are dispensed with by cutting down labour costs, the world will be a place of bliss and bondholders.

It is very satisfactory to know that more people are realizing that the problem is not one of production but of consumption or purchasing power; although it is unfortunate that very few hon members in this House are prepared to go that far. In a New York journal entitled Commerce and Finance I read the following:

> It is now evident that in the production of some basic and fabricated commodities our capacity exceeds the powers of domestic consumption. Were we to produce up to the maximum capacity in these commodities the conditions of the eighties would be repeated and competition be highly destructive.
>
> In considering the production and marketing of goods, it is clear that our tendency is to lay too much emphasis upon their origin, the production rather than the consumption of goods, for it is the consumer that makes business and not the producer. . . .
>
> During the coming year we must avoid piling commodities upon merchants beyond their powers to dispose of them. We must watch eagerly over distribution, we must study the powers of the people to consume goods, remembering that the important thing in merchandise is the power of the people to consume and not the power of production.

Following this statement, it is worth while considering the remarks of Mr. Hoover of the United States, made some three years ago, in referring to Europe, which should be one of our best markets. He said he considered that one hundred million people on that continent were not really self-supporting. They either lived with the aid of credit and charity, or half-lived or did not live at all.

If Canadian business is going to come back to normalcy we have got to see that Europe has a purchasing power. I should like to know what the government's plans are so far as Canada is concerned in bringing this about.

We have heard a good deal in this House in regard to the amendment moved by the hon. member for Centre Winnipeg (Mr. Woodsworth). That amendment is very similar to the platform on which I was elected,—the platform which I have stood by since I entered Canadian public life, the platform that I believed in last year—and to the amendment I supported last year. Therefore I cannot see anything in it which will prevent me voting for it this year also.

We have heard from various parts of the House about the serious condition that Canada is in, not only in the West but also in the East. We have heard that manufacturing business is bad; but I believe that the agricultural interest is in a far worse condition. The people are crying out for relief. That relief must come, and come quickly, or we as legislators will be held responsible.

On motion of Mr. Copp the debate was adjourned.

Mr. MACKENZIE KING: It is understood, Mr. Speaker, that we are to go on with Supply—Agriculture.

SUPPLY

DEPARTMENT OF AGRICULTURE

The House in Committee of Supply, Mr. Gordon in the chair.

Hon. W. R. MOTHERWELL (Minister of Agriculture): Mr. Chairman, I have been requested by one or two hon. gentlemen to let vote 46 stand for the present. We will proceed with vote 47.

Agriculture publications, $33,500.

Mr. MOTHERWELL: The extra amount is for publicity and bulletins for distribution during the Empire Exhibition this summer.

Item agreed to.

International Institute of Agriculture, $15,000.

Mr. MEIGHEN: Of what value is this?

Mr. MOTHERWELL: We decided not to send delegates to Rome in connection with the institute this year, the idea being to economize as much as possible. We are keeping up our dues in the usual way and maintaining the staff here.

Mr. LUCAS: Will the minister explain what benefit Canada gets from that?

Mr. MOTHERWELL: Agricultural statistics of the world are compiled by a body located at Rome, representing some 62 countries. The information is assembled there from month to month and redistributed to the various countries concerned. Farmers and others interested are thus made familiar with the amount of grain and other products

produced in the various countries, and if, for instance, there is a surplus in any particular line, those interested in growing that product may regulate their sowing accordingly. I do not think the average farmer pays very much attention to that side of it. It is largely a matter of the securing of information of a statistical nature for governments, individuals and the press. For instance, last year we discovered through the medium of this body that Canada had become the largest grower of export wheat in the world. Of course we might have found that out a few months afterwards in any case. I do not suppose anything serious would happen if we did not have this institute. But we are working in co-operation with about 60 other countries, and sometimes you have to keep up your part when you are in an institute of this nature, even though you may not be able to point to any very outstanding results from it. I do not think we would care to retire from our connection with the institute.

Mr. MEIGHEN: What is the basis of contribution? Do we pay as much as the United States, say, or is it on a per capita basis?

Mr. MOTHERWELL: The countries are classified into groups. The United States this year are sending over something like 23 representatives; they are making a feature of it. There is a contribution to the expenses of Sir Thomas Elliott, located at Rome, who is delegate for Canada and Great Britain on the permanent committee. The countries are grouped according to importance and a levy is made for the maintenance of the office in Rome and the distribution of the information as it comes in. The home offices are maintained by the respective governments.

Mr. MEIGHEN: I got some information, but it was not what I asked. What I asked was: How do we tell what we ought to contribute? Is it per capita?

Mr. MOTHERWELL: The respective countries have the option of belonging to whatever group they like. Canada elected to belong to group 2, and that involves a certain contribution, amounting to almost $7,000 for the office in Rome. The balance goes to maintain the office here in the West Block.

Mr. MEIGHEN: What does the office in the West Block do? How does it co-operate with Rome?

[Mr. Motherwell.]

Mr. MOTHERWELL: They compile the statistics at this end and transmit them to the headquarters at Rome, and then in turn they receive them back when the totals are realized there and redistributed. Mr. Doherty, who is in charge of the office here, has been engaged in that work for a number of years. They have a very substantial library. The staff numbers about five.

Mr. MEIGHEN: The whole thing is a mystery to me. It may be all right, but I cannot understand it. The purpose is to get statistics of agricultural production. Well, why there needs to be an institute at Rome or anywhere else to do that, I do not know to begin with. We have our system of statistics, so has every country; you can find out agricultural production any time you telephone our statistical office, and every other country has a corresponding system. There is no doubt in the world that every agricultural department or any government can get from the other governments and does get regularly the statistics of agricultural production, just as we get the statistics of manufacturing production and of railways.

Mr. MOTHERWELL: It is a clearing house.

Mr. MEIGHEN: What in the world do we need a clearing house for? There may be need of it, but it is not apparent to me. You might have a clearing house for every class of production on earth. I am always suspicious of these international bodies. The world is getting top-heavy with machinery.

Mr. MOTHERWELL: My hon. friend does not think it is something that I have sprung on the country, does he?

Mr. MEIGHEN: No, I do not think the hon. gentleman sprang it on the country, but I would like to get some explanation of it that is intelligible, and I have not got it yet. I will now come to the office here. Why should there be a sort of Canadian radio centre to get this from Rome? What is our statistics office for? They will get this information just as easily. Why a receiving station here with five or six of a staff? I am not particularly criticizing the minister, except I do not think he has gone into it very much. I do not doubt if the former minister were here he would have some defence of it.

Mr. MOTHERWELL: If the hon. gentleman will sit down I will tell him something of it.

Mr. MEIGHEN: I hope so. I waited patiently through his last three or four efforts, but without much glimmering of the purpose of this office.

Mr. MOTHERWELL: I took it for granted you knew a little bit about it to begin with.

Mr. MEIGHEN: I do not think the minister would if he had not his deputy beside him.

Mr. MOTHERWELL: I cannot recall the exact date, but I remember a gentleman by the name of David Lubin getting the notion into his head of organizing a world institute of this nature for the purpose of consolidating the statistics of the world, particularly those relating to agriculture. I was at Regina at that time, and I know the Hon. Sydney Fisher, who was then Minister of Agriculture, was one of the first delegates who went over from Canada. David Lubin is the gentleman responsible for having this notion. I cannot give my hon. friend his history, but I am sure he must have heard of him. I think a good many in the committee will recall that about that time there was a mania for collecting statistics. You heard talk of statistics everywhere, and this gentleman seemed to get the idea of wanting to go everybody else one better by getting world statistics from the various countries. Some thirty-two countries fell in line with his proposition, and the scheme crystallized in Rome where a permanent office has been established. I do not know exactly how large a staff they have, but we contribute about $7,000 towards its maintenance. Thirty countries gather their statistics at home and transmit them to Rome, and there they are consolidated and distributed all over the world. That is briefly the story of this organization. Whether it is worth this amount of money I cannot say. I have never attended one of the meetings, but some of the ministers in the past have taken the opportunity of going over and seeing for themselves. I do not expect I shall, but if I had taken the opportunity I would be in a position to give my hon. friend first-hand information on the details. I must say that I never was very much struck with the work when it was first inaugurated, but it was here when this government came into power. Our delegates who went over two years ago made a special report to me, and they seemed to think they would not by any means care to recommend that this work be dropped; they thought the institute was doing a useful work. If we were hard enough up we could do without it, but nevertheless we joined with these other countries in establishing this institute, and other countries instead of relaxing their interest seem to be taking a deeper interest in it. The United States, for instance, instead of sending over two or three delegates is sending twenty-three this year. We are not sending any delegates this year.

Mr. SALES: Who is this supposed to benefit?

Mr. MOTHERWELL: I indicated that possibly when my hon. friend was out—the farmers and people generally who are interested in these returns.

Mr. SALES: Does the minister himself think that the farmers derive one dollar's worth of benefit from the money that is spent on this work?

Mr. MOTHERWELL: I do not think the farmers govern their actions one particle by these statistics. If there is a surplus of any particular product the farmers are supposed to be made acquainted with it and govern themselves accordingly in their sowing operations, but there is not one farmer in ten thousand who actually governs himself by this information. But that was one of the dreams of the originator. As a matter of furnishing actual information however, it is possibly worth while. We are a wheat-growing country, and the largest exporter of wheat in the world, and as I pointed out a few moments ago we were given information on the wheat situation through this medium, and that is only one illustration of the useful information that has come to us through this medium. We got along before this institute was organized, but then, of course, we got along without many other things too prior to that, and for my part I would not like to see us drop out of it without consultation with the various countries with whom we co-operated in the first instance.

Mr. BRETHEN: Through what channels does this information reach the people it is supposed to benefit?

Mr. MOTHERWELL: Through press despatches, the agricultural press particularly, and through bulletins. I am sure my hon. friend must have seen Mr. Doherty's articles from time to time.

Mr. BROWN: They issue a very elaborate report. It has been coming to me for some years, but I cannot say just how often it comes because I do not read it very carefully. They send this report around to some people; I do not know to whom.

Mr. BRETHEN: Is Canada committed in any way with the other nations to keep up this establishment in Rome?

Mr. MOTHERWELL: The contract just coninues from year to year. The United States got into correspondence with us and their delegates offered to convene with ours here and go over together, but we were obliged to tell them we were not sending delegates this year. They went ahead with their own plans and are sending twenty-three delegates this year, so as far as this continent is concerned the United States figured that we would remain in the institute at least until we gave notification to the contrary. There is no contract signed to stay in with it for any length of time, but it just goes on from year to year. At the same time it is supposed to be a progressive movement so far as statistics are concerned, and when other countries are going into it so strong as the United States, for instance, it would not look a very good time for us to do anything else than remain in it.

Mr. LEADER: The minister said a moment ago that if we were hard enough up we could get along without this. I wonder if we are not at that stage right now. The minister says the United States can afford to send twenty-three delegates over, but the United States can afford to be extravagant; I do not think Canada can. Now the minister tells us that we can get out of this by notifying the other countries that we are not going to take part in it, and I would suggest that he take that step. I grant that he is not responsible for this organization; it has been bequeathed to him, but why not take another step in the right direction and on the grounds of economy notify the other contracting parties to this agreement that as far as Canada is concerned we intend to withdraw for this year at least.

Mr. MOTHERWELL: Do I understand my hon. friend to suggest that this year we should carry along with the organization, and in the meantime notify the other countries that we contemplate withdrawing before another year?

Mr. LEADER: If we cannot withdraw at once, if we are bound to give a year's notice, we must observe that obligation with the understanding that we reserve the right to withdraw next year. But I understood we could withdraw at once.

Mr. MOTHERWELL: It is the central body at Rome that we are committed to, but various ccuntries are co-partners in the enterprise. The institute was established with the understanding, of course, that the expense would be borne by the various countries that are getting the service which it supplies. I think in ordinary common decency we should give notice of reasonable time in advance before we withdrew from the arrangement. I may say that two years ago when we were sending a representative over to a conference at Rome I asked for a candid report as to the value of this work to Canada. The report I received was not very pronounced either one way or the other but the general tone of it was that we had better continue the arrangement. Personally I think we could dispense with it to-day and we would not know to-morrow that we had lost anything very substantial. At the same time I have never been at a world conference of this nature and am only able to speak from second-hand information. Consequently I do not know what my judgment would be if I saw the conference in operation. Apparently it is just one of those things that grew out of the prosperity of former days, and ran along, and a great many people think it is all right. I have never heard any other country discuss it. I was the only adverse critic—at least the only "doubting Thomas"—that I knew of in Canada two or three years ago. I made inquiry and was told it was a fine institution and I had to put, and did put, my opinion to one side. I think in many respects it is of no practical value to the farmer in guiding his farming operation on the land.

Mr. LEADER: In view of the strong statement the minister has just made I would ask him if he would take into consideration the withdrawal of this item for next year at least?

Mr. MOTHERWELL: I will recommend it to my colleagues. We have international relationships with other countries in this matter, and we would have to look into it very carefully—I am not supposed to knock the matter out right off my own bat. However, I will tell my hon. friend this: I will recommend to my colleagues that I think we can dispense with it. I may say that I have already done that, as a matter of fact.

Mr. BOYS: What is the total cost of keeping this office up? Do the various countries—twenty-eight I think the minister said—bear the expense equally?

Mr. MOTHERWELL: What is the total cost of all the countries?

Mr. BOYS: Yes, the cost of maintaining this office in Rome?

Mr. MOTHERWELL: Well, it will be more than thirty times seven.

Mr. BOYS: I just multiplied $15,000, which is the item, by twenty-eight—I thought from what the minister said there were twenty-eight countries concerned—and I see it comes to $428,000. I was wondering what sort of office it would be to cost that much money. It would have to be a very extensive one certainly. Now, do the countries concerned all bear an equal share, or how is the expense provided for?

Mr. MOTHERWELL: I am just figuring out how much it will be. I went over that once and I am sorry my hon. friend was not in when I gave an explanation previously. The cost is about $210,000 assuming they all pay about the same as Canada, but I imagine a lot of them would pay quite a bit more. We are in number two group, number one group would be more expensive.

Mr. BOYS: I was asking the minister on what basis we contribute? I suppose we do not "go it blind." There is some basis on which Canada is asked to contribute a certain amount of money, and I presume there is something to show why we are asked to put up $15,000?

Mr. MOTHERWELL: I have gone over that already. The countries are divided into three groups—one, two and three. An estimate is made of the amount for the total requirements and it is allocated to the various countries in these three groups. It is an arbitrary amount to suit the sum that has to be allocated. We had the option of choosing what group we would go into and we went into group number two.

Mr. DOUCET: The whole of the vote does not go to the central office in Rome. According to the details of expenditure for 1922-23 out of practically $15,000 expended, only $2,754 was contributed to the central institute in Rome. Now, would the minister be good enough to tell us how much of last year's vote was really expended in the year 1923-24?

Mr. MOTHERWELL: I have not been able, perhaps, to catch the entire significance of my hon. friend's question but if my conception of what he has asked is correct I will give my explanation if he will be seated just for a moment. The amount that we send over every year is not always the same. Sometimes we are behind with our contribution. If we are a little short in the vote sometimes we get a year behind, and the next year we require that much more.

Some hon. MEMBERS: Oh, oh.

Mr. MOTHERWELL: Hon. gentlemen opposite seem to be amused, it is all right.

Mr. DOUCET: I will make my question sufficiently intelligible to the minister this time. During the year 1922-23 the International Institute of Agriculture cost this country $14,269. Of that amount $2,754 was the contribution to the institute at Rome for 1922, I presume—I think I am right—that the contribution for 1923 will be something on a par with the contribution for 1922.

Mr. MOTHERWELL: No.

Mr. DOUCET: Hence I say that out of that vote of practically $15,000 two years ago, something like $2,750 was expended for the central institute in Rome. The balance went for stationery, advertising, printing, publication and the expenses of the delegates representing this Dominion at Rome?

Mr. STEVENS: Cigars and cigarettes.

Mr. DOUCET: I feel a good deal like an hon. gentleman who sits to my left, who said we could easily dispense with this item. The minister himself said that he had been "a doubting Thomas" and he has not as yet confessed that he is confirmed in his belief that this is a necessity. He has admitted to us that no one interested in the farming industry of this country has reaped or will reap one cent's worth from this expenditure. I take into consideration the fact that in the interest of economy the federal vote to the different provinces in connection with agricultural instruction has been curtailed, and I think we might as well curtail this item also.

Mr. MEIGHEN: I am not sure the hon. gentleman is entirely right; I think the minister has distributed his opinions very fairly. He said this vote could be dispensed with and that nobody ever benefits from it at all, that there is no value in it. He also said that it is a fine institute. He further said that he is ready to propose to his colleagues to have nothing more to do with it. I do not think we could ask for a finer variety of opinions than that. May I ask last of all if Mr. Marshall had a trip over there to this institute? Has he been one of the delegates yet?

Mr. MOTHERWELL: No. My hon. friend has a great faculty of presenting a thing so as to make it appear exactly what it is not. I said that so far as it was an advantage to the farmer, its advantage was not appreciable; and that, as a matter of

fact, I did not think it was of any value as regards determining his course of conduct in sowing his fields to fit in with the reports of the institute. I did not think it had any effect in that regard at all. That was one of the dreams and theories of David Lubin; that was one of the advantages which he preached in order to get the various countries to take this up. But from an international standpoint, surely sixty countries that are engaged in this work are not all so foolish as to throw money away just to give a few people a trip to Rome. We have joined with these countries; we have committed ourselves to support the central office at Rome, and if we desire to retire from it, I think we should notify the central office a year in advance. It is quite correct that it will not cause me very much grief to notify them, but in the meantime I would not want to retire from this institute until we had given the ordinary business intimation that we were going to do so and had observed the ordinary proprieties between countries.

Mr. SUTHERLAND: I am sorry to find the minister retiring from the position which he assumed two years ago and a year ago. When he came into office, an amount of $10,000 was voted for this object. The International Institute of Agriculture at Rome was a new venture at that time, when he saw fit to increase the expenditure by $5,000 and the following year by another $5,000, really doubling the expenditure from the time he came into office. To-day he tells us that he is a "doubting Thomas," and he doubts whether we are receiving any benefit from this expenditure or not. If we are not receiving any benefit, I do not think we have any money to throw away. He says that all we have ascertained is that Canada is the greatest wheat exporting country in the world. I think we can find that out without going to Rome.

Mr. MOTHERWELL: I admit that.

Mr. SUTHERLAND: Although the minister was quite optimistic about increasing the expenditure for that purpose during the last two years, he is prepared to-day to admit that it is a failure and to wipe out the whole thing. I notice that he has been referring to a Mr. David Lubin who has figured prominently in connection with this matter. I notice Mr. W. A. Wilson from Regina has received a considerable amount out of this item, and probably the minister will tell the committee what Mr. Wilson has been doing in connection with this work.

Mr. MOTHERWELL: He was one of the delegates that went over with Dr. Charron, who was in England at the time. We secured his services there and we paid for his services from there to Rome. He was joined by Mr. Wilson and they were the two representatives who made a special report. I got a report from them especially for the purpose of finding out from someone whom I knew just what value this institute was to us. The reason for the increase the first year was that when we came into power, I found that the contribution towards the central office was behind and we had to add that amount in order to bring our contribution up to date.

Mr. SUTHERLAND: What about the increase the second year?

Mr. MOTHERWELL: Because the cost of an institution like that, as in everything else, is always increasing. Office work is growing; it is getting larger. You cannot send twenty-three extra delegates from the United States this year, and possibly delegates from other countries to some extent in the same proportion, without increasing the expenses of the institute. The reason that this appropriation is less is because we are not sending delegates this year.

Mr. SUTHERLAND: Has the minister's special representative, Mr. Wilson, reported against continuing this work?

Mr. MOTHERWELL: No, neither of them reported against it. Mr. Wilson's report, as I remember it, was that it just depended on how hard up we were and how much we needed that $15,000 for something else. That is looking at the matter from a narrow standpoint. But on the other hand he took the ground that we were in this institute in co-operation with some sixty other countries, and we had an obligation to them which he thought we should fulfil. I do not recall all the details of his report, but I remember the sum of it was that he thought we should continue the grant for the present at all events, until some intimation was made of our intention to retire from it. Otherwise, had the report been against it, the chances are that I would have pressed more strongly for its elimination and possibly given the various countries, especially Rome, intimation of our intention to retire. Dr. Charron, who was engaged at the instance of the Quebec government in the Old Country at the time, reported quite strongly in favour of it.

Mr. SUTHERLAND: Had Mr. Wilson any special qualifications for this work that he was sent over to look after it?

Mr. MOTHERWELL: No, except that I knew that what he would report, I could rely upon.

Mr. STEVENS: A good friend?

Mr. MOTHERWELL: No.

Mr. SUTHERLAND: And his report has evidently convinced the minister that this is money thrown away?

Mr. MOTHERWELL: No. I knew that before.

Mr. SUTHERLAND: That there was no use in continuing this expenditure. The minister was a "doubting Thomas" at the beginning and he is more so to-day.

Mr. MOTHERWELL: I told my hon. friend that when the scheme was launched away back in 1908, I did not see any practical value in it for the farmer, so I did not have to wait until now, or for Mr. Wilson's report, in order to find that out. But I found out from Dr. Charron and him that we had an obligation, that we had contracted jointly with those other countries that we should continue until we should give formal notice. This is not the only case that we have had to deal with in connection with international events, and unless you keep up your obligations, you are looked upon as a tail-ender and a quitter. You have either to be with it or not with it.

Mr. SUTHERLAND: I wonder if that rule would apply to the minister's administration of the whole department, that he is to be considered a tail-ender unless he doubles the expenditure for all purposes. The amount was only $10,000 when the minister took office. The following year he increased the amount by $5,000 and the next year by another $5,000, thus doubling it. Now he admits that it is an absolute failure and he does not see any advantage to this country by continuing it. In that case, I think it is folly for us to be voting money for something that is not going to bring any benefit to the country. We need to control our expenditures as much as is possible in every respect, and I think the sooner we come to that understanding, the better it will be for all concerned, instead of voting money for something from which we do not expect to receive any return. The minister has admitted to-night that he does not see any advantage to be gained by continuing this vote for this purpose, although he has seen fit to double the grant since assuming office. I hope he will carry out the policy all along the line of seeing that all these extravagant estimates are reduced in that respect. I commend him for his frankness in to-day acknowledging that he does not see any advantage in continuing this grant.

Mr. MOTHERWELL: The vote is reduced by $5,000 this year. That much should be apparent on the surface. I think I have already explained to my hon. friend once, if not twice that the reason we increased the amount two years ago was because, when we came into power we found that we were $5,000 behind in our contributions to the central institute and we had to pay up that amount. Then the next year we had to send two delegates and the expenses in connection therewith had to be charged up. The general cost of the office, as a result of an advance in salaries and costs of administration, accounts for the rest of the increase. This year as a result of not sending any delegates as we should have done if we had carried out the practice of the past ten or twelve years, of sending two delegates every other year, we are able to bring down an estimate of $5,000 less than that of last year.

Mr. BOYS: I understand the minister to say that the only reason he continues this vote is the fact that there exists a contractual obligation. He has made it manifest that so far as he is concerned he thinks the thing is useless, but he defends it on the ground of that contractual obligation.

Mr. MOTHERWELL: There is an obligation to the central body.

Mr. BOYS: It has not been made very plain just how that obligation has arisen. Were we parties to the establishment of the central office in the first instance?

Mr. MOTHERWELL: Yes.

Mr. BOYS: Was it as a result of agreement between the nations?

Mr. MOTHERWELL: Yes.

Mr. BOYS: We are not committed to this vote for all time?

Mr. MOTHERWELL: No.

Mr. BOYS: I take it there is no written contract, but unquestionably there is correspondence. Is there anything in that correspondence which makes it impossible for us to be relieved of this expenditure without a certain period of notice? Are we supposed to give a year's notice or any definite intimation of our intention to withdraw from the institute? If there is provision for such notice I suppose we can at any time give that notice

and simply discontinue our contributions without in any way committing a breach of obligation. If the minister is of the opinion, as it seems has been since 1908, that this is a useless expenditure, we might as well discontinue it now.

Mr. MOTHERWELL: When we got into arrears before we were billed for the amount that was allocated to us.

Mr. BOYS: Are we behind now?

Mr. MOTHERWELL: No, but we have been in recent years and we paid up. They are not going to discontinue sending us the information and the bulletins that we get simply because we have not paid up; they will assume that we will settle in time. I feel that it would be an international impropriety—because there is no question of breach of contract, seeing that no contract exists—if we withheld our contribution without adequate notice.

Mr. MacKELVIE: Are Mr. Doherty and his staff engaged all the time compiling these statistics in the West Block?

Mr. MOTHERWELL. There is a very substantial library the publications in which are circulated, but I do not know just what arrangement is in force for getting the books and the publications back. These publications are distributed throughout Canada and I know that they return regularly. I am not familiar with the system, but I take it that no new publications would be sent out until those that were out were returned. Sometimes it requires correspondence to get them back.

Mr. MacKELVIE: If this vote were dispensed with we could do without the services of this staff.

Mr. MOTHERWELL: Well, for that matter we could get along without the Department of Agriculture, as Australia does. But the question is, could we afford to take such a position? I think this branch was instituted under the Laurier government in 1908 and it has existed throughout the administrations respectively of Sir Robert Borden, the Union government, the government that succeeded that one, and now the present government. So that all parties, including my hon. friends opposite, have endorsed it. Either last year or the year before I remember making the very same statement I have made tonight, that as regards the usefulness of the institution as applied to the farmers I thought it was a dream. But I showed then, as I say now, that having committed ourselves to the

matter with the 60 other countries concerned we could not very well withdraw from the obligation we have assumed unless we gave sufficient notice of our intention to do so.

Mr. DOUCET: It does not take $15,000 to pay our subscription. Our share of the expenses of the British delegates to Rome amounted to something like $800; and $3,500 was the total representing our participation in the activities of the central institute. So that practically $9,000 has been expended in periodicals, printing and stationery. The staff is not included in this vote, nor was it included two years ago. And the minister claims that these periodicals are not a particle of use to the farming population.

Mr. MOTHERWELL: I did not say the bulletins were no good; I said the reports and the statistics that came out as a result of the compilations. But there are various bulletins besides those publications.

Mr. DOUCET: I quite agree with the minister, and in my statement I did not include the various bulletins printed and distributed by the Department of Agriculture. But I submit that the bulletins emanating from the statistical department and gathered in Rome are of no practical value to our farming population. If they are not, then $12,000 of this vote is uncalled for, and at the present time I believe the money could be spent to better advantage on other phases of agriculture.

Mr. MOTHERWELL: My hon. friend misquotes me. I did not say the bulletins contained no practical information. I said the statistics outlining the crops of the various countries, including our own, were not a determining factor in assisting farmers in their operations.

Mr. DOUCET: But if the statistics received from the International Institute are of no benefit to our farmers, how can the bulletins prepared from those statistics be of any value?

Mr. MOTHERWELL: Although we have received letters from Rome urging us very strongly to send our usual delegates, we have decided not to do so, and in consequence we have been keeping up our other obligations and securing information in the usual way for $5,000 less.

Mr. DOUCET: But in 1922-23 we sent two delegates, and the total expenditure was $14,259. As the minister has informed the committee that he does not propose to send delegates this year, I submit that $2,700

should be our contribution to the International Institute and $800 our portion of the expenses of the British delegates representing us at Rome. Those two items total $3,500. I submit that the balance of the vote is of no practical benefit to our agriculturists, as the minister himself has admitted.

Mr. MOTHERWELL: I am sure some members of the committee must recall the fact that I expressed the opinion that this institute was of very little practical value the very first year I was in this House. I am sure the leader of the Progressive party (Mr. Forke) and the hon. member for Saltcoats (Mr. Sales) must remember what I then said.

Mr. FORKE: Yes.

Mr. MOTHERWELL: There was not much response from the committee then. My opinion was the result of long years of keeping track of the work before I came here and of my ordinary horse sense—a sense with which most of us are endowed more or less and so know what is and what is not of value to the everyday practical farmer in the field. I admitted, however, when the other side of the case was presented that there was a larger international aspect which we must stand up for until we retire. Now the committee, I gather, would desire me to take this up with my colleagues and, if agreeable, notify Rome that this will be the last year that we will engage in this work. I will undertake to do so. That would be vindicating the opinion which I expressed when I came down here first.

Mr. SUTHERLAND: I am sorry the minister throws the responsibility for this vote upon the committee because they had confidence in what he terms his horse sense, which influenced him to recommend for this vote an increase of $5,000 two years ago, and another increase of $5,000 the following session. He surely was in a better position than any member of the committee to know the value of the work. Now he turns around and throws the responsibility on the committee for having passed the estimates which he submitted. The committee evidently had more confidence in the minister then, for they are disappointed to-night to hear him admit that he is a "doubting Thomas" and never had much faith in the practical value to be derived from this expenditure. I am surprised at a responsible minister making such an admission after having defended his estimates. I do not think there is anything further to be said in the matter.

Mr. MOTHERWELL: My hon. friend has recited it wrongly again.

Mr. SUTHERLAND: In what respect?

Mr. MOTHERWELL: In this respect. I pointed out that during the years of the war Canada got behind in its annual contribution to the institute. To pick that up we had to provide $5,000. We sent delegates to Rome two years ago; this year we are not sending them. In the meantime we are constantly being informed that the cost of operating the office has increased during the last three or four years, which accounts for the addition of last year. This year we have dropped back $5,000, because I have taken the ground that we are not going to send delegates. We are simply maintaining our obligations with Rome, and that is all. When my hon. friend says that I admit the expenditure is of no use, I would remind him that I said it only in a qualified way as applied to practical farming, which I have always distinguished from the international obligations that we have incurred.

Mr. DOUCET: I agree with the minister that we have to look at the international side of this question. The expenditure being of no practical use to our farmers, I move that vote 48 be reduced to $5,000. I submit this would provide for a contribution to the International Institute of Agriculture in Rome and our portion of the expense of the British delegates.

Mr. MOTHERWELL: We cannot pay our way with $5,000, that is all.

Mr. BOYS: It seems to me that the position taken by the minister is somewhat anomalous. He asks that this item be passed, and then he says he has no use for the work of the institute himself and never had. Surely if he has any faith in the item he ought to stand behind it, and ask the House to pass it. He can hardly expect the House to pass it when he says that it is practically money thrown away.

Mr. MOTHERWELL: I do not think that is fair. I have corrected the member for South Oxford at least three times; surely my hon. friend is not going to require me to repeat the correction three times more for his benefit. I never made an unqualified statement that it was of no use. I specified that it was of no use as a guide to individual farmers in their spring operations as to how much to sow to meet a possible shortage or to avoid increasing a surplus, and I believe that. Then I went on to show that there was

another side to it, the international side, to which we had committed ourselves. Surely my hon. friend has no desire to misrepresent me. I have been candid enough to tell the committee my own view, and that view has not changed since I came here from what it was ten years ago. I have had a larger view of the international side and its importance through our representation by the delegates we sent there; and naturally from the reports I have from my staff I can see that there is another side to it. We cannot drop out from international organizations in this and everything else; we have got to keep up our end of the stick or else retire honourably, and we cannot retire honourably without giving notice. I am willing to retire after this year if my colleagues are satisfied that that is the wise course to take, but not in this abrupt and irregular fashion. The very fact that the vote is $5,000 less than last year is an indication that we are doing what we can to reduce it and still keep faith with the institute.

Mr. GOULD: I think the minister would advise the committee that apart from the expenses of two delegates the expenditure is uncontrollable; it is assessed upon Canada by the institute at Rome.

Mr. MOTHERWELL: Absolutely.

Mr. GOULD: If that is the case I submit that we should in all honour notify the institute at Rome of what our intention is for next year. While I approve of reductions in expenditure, even to the point where it hurts, I do not think we wish to put ourselves in what might be termed a ridiculous position. I think we should express ourselves along the line of what has been said here and that the minister and his colleagues should see to it that due notification be given of the action we intend to take for next year.

Mr. MOTHERWELL: The hon. gentleman is quite right. The only controllable part of it was the $5,000, and we cut that out.

Mr. BOYS: I have not the slightest desire to misstate the minister's position; far from it. But he certainly did leave the impression on me that he himself had no use for the item.

Mr. MOTHERWELL: I object to that, Mr. Chairman.

Mr. BOYS: I am just saying I understood that, that is all; I am accepting what the minister says. I understand from what the minister says now that he is in favour of this item and wants to put it through.

Mr. MOTHERWELL: I do; otherwise it would not be here.

[Mr. Motherwell.]

Mr. BOYS: I shall not repeat what I understood the minister to say earlier in his remarks, but he certainly did leave that impression, I think, on the committee, and a good many members have made reference to it. If publications are being sent that we have not paid for, I certainly would not want to see this country refuse to pay for them, but I understand that we are paid up in full, and if that be so it seems to me that we can retire gracefully and honourably at this time.

Mr. MILLAR: I feel very much like the hon. member (Mr. Gould): it does seem that we cannot do less than pay our dues for the coming year, but after that I think we might withdraw. May I ask the minister whether the delegates who attend the conferences of the institute are men in the front rank in agricultural matters in the various countries? Are they capable of correlating their investigations and giving the various countries the benefit in that respect, or do they confine their operations almost entirely to statistics?

Mr. MOTHERWELL: We usually send a delegate over who can talk both French and English, because the business is conducted in both languages. Here are some of the activities of the institute:

The institute is an international agricultural intelligence bureau for the collection, elaboration and publication of technical, practical, economic and statistical information of interest to agriculturists, special prominence being given to crop reports, prices, visible supply, imports and exports, methods of cultivation, agricultural chemistry and botany, plant breeding, plant diseases, meteorology, forestry, live stock, agricultural industries, co-operation, insurance, credit, agricultural organization and administration.

The matter of co-operative activities was the primary thing that David Lubin had in mind, because he was a strong advocate of co-operation.

The institute publishes three regular bulletins:

(a) International Review of the Science and Practice of Agriculture, which might be called a review of reviews of agriculture, its material being abstracted from some 2,600 periodicals from all countries and in many languages.

(b) International Review of Agricultural Economics, which deals with co-operation, credit, farm management, and other economic questions relating to agriculture.

(c) International Crop Report and Agricultural Statistics, which contains official reports of crop conditions and estimates of the area and production of all important crops, as well as statistics of international trade, prices of agricultural products, numbers of live stock, etc. Yearly statements of the production of and trade in fertilizers and concentrated feeding stuffs are published. In the English edition the data for area and production are given in acres and centals, and in the case of wheat the production is shortly to be given in bushels of 60 pounds.

The institute also publishes every year the International Year Book of Agricultural Legislation con-

taining references to or summaries of the laws and regulations relating to agriculture, passed in the various countries. The International Year Book of Agricultural Statistics, hitherto published every two years, will now be published yearly. It is recognized to be the most complete work on the subject published. The last issue covers 1921-1922. The preceding one covered the years 1909-1921.

Besides these periodical works, there have been published a great many publications such as Monographs on Agricultural Co-operation in Various Countries; An Outline of the European Co-operative Credit System; The Utilization of Waste Materials; Oil Products and Vegetable Oils; The Landschaften and Their Mortgage Credit Operation in Germany; Rural Credits in Canada; Co-operation for the Marketing of Agricultural Products and the Supply of Farm Requisites in Canada, etc., in all about 30.

The Canadian office. The purpose of the Canadian office is to reproduce the essential features of the institute's work at Rome so as to adapt it to Canadian needs and ensure that it shall exert a direct influence on Canadian agriculture.

That is the phase of it in respect to which I have always expressed myself as a "doubting Thomas," that is, the matter of its direct influence on Canadian agriculture. When the hon. member for Saltcoats asked me a straight question as to what my opinion was, what could I do but tell him? And I told him. But that was only regarding agriculture; as to all these other different phases of the work I did not express that opinion. From the international point of view I believe that we have been justified up to the present in continuing our connection with the institute, but not as directly affecting agriculture in Canada—and by that I mean the guiding of the farmers in conducting their spring operations and fitting the acreage into the reports of the institute.

Mr. SALES: Will the minister allow another question?

Mr. MOTHERWELL: Well, that one got me into so much trouble that I do not know whether I should.

Mr. SALES: I will see if I can get the minister into some more. If it does not benefit the farmer, whom does it benefit? Does it benefit anybody else?

Mr. MOTHERWELL: I think a whole lot of this information does benefit the farmers. A great many of these things we have been discussing interminably right here in this House, and probably we will work some of them out to fruition. On the question of co-operation the Sir Horace Plunkett foundation is to-day asking men from all over the world to assemble in Great Britain to consider co-operation as applied to agricultural products. My hon. friend is, of course, aware that Sir Horace Plunkett is one of the foremost men in the world on the question of co-operation among farmers in Ireland and throughout Great Britain. That is not a dead question by any means. It is one of the questions referred to here, and it is a very live question. So, after all, there are a great many sides to agriculture besides simply getting the information that is supposed to be necessary in order to determine the extent of our activities in any one particular year, based on statistical reports. So far as that particular feature is concerned, I do not think it is worth anything. I hope I have not left the impression on the House that I think no phases of this work are any good. There are disadvantages in being candid.

Mr. FORKE: I think the minister went a little too far in making that statement. The information might be of service if it showed there was going to be a tremendous acreage of wheat put in all over the world.

Mr. MOTHERWELL: It sounds fine in theory, but like so many other things that are good in theory it does not work out in practice. I am sure when my hon. friend was home at Easter he was not doing any figuring based on this report.

Mr. FORKE: I told them not to put in so much wheat, but to put in more oats and barley.

Mr. MOTHERWELL: But that was because of the rust. There is another page and a half here describing further activities; I do not know whether the committee wishes me to read them.

Mr. MILLAR: Have any of the experts that Canada has been sending over in past years been in the forefront in any branch of agriculture?

Mr. MOTHERWELL: I think we will have to admit that the very first one that went over, the Hon. Sydney Fisher, left his mark on agriculture in Canada. The late Doctor Rutherford, at one time Veterinary Director General, and later a member of the Railway Commission, was an outstanding man in the agricultural world.

Mr. FORKE: Was Doctor James Robertson over there?

Mr. MOTHERWELL: No, it was Doctor Rutherford that went over. I have not the pleasure of the acquaintance of Doctor Charron, but I understand he is quite a prominent man. Then there was Mr. Wilson; I am sure my hon. friends from Saskatchewan know the part he has played in developing the dairy industry in that province.

Amendment negatived.

Item agreed to.

Live stock, $1,280,000.

Mr. STEVENS: This is a large and very important item. I think many members had no knowledge that these estimates were coming up to-night and I would suggest that this item stand.

Mr. GRAHAM: It is not our fault.

Mr. STEVENS: It is not our fault.

Mr. MOTHERWELL: I think my hon. friend was not present at the time, but before we started at all I went over to the right hon. leader of the opposition and asked him if the hon. member for Victoria (Mr. Tolmie) was in the House, and he said no, and I passed over the vote for the Health of Animals branch without being requested to do so. I thought I was doing very nicely.

Mr. STEVENS: Then let us have an understanding that on the item for the Health of Animals we can discuss anything, if some other item is to be taken up.

Mr. MOTHERWELL: We are leaving that item over.

Mr. FORKE: In regard to going on with estimates to-night, I would point out that two members in this part of the House spoke one after the other, so it was not the fault of this part of the House that the budget debate was not proceeded with.

Mr. MOTHERWELL: I am surprised at my hon. friend drawing attention to the fact that they are petering out on the budget debate and then asking us to adjourn.

Mr. STEVENS: I made no such statement. I made a courteous suggestion that this item is a very large one, and that a great many members did not understand that these estimates were coming on to-night. I made no reflections regarding the budget debate not being continued.

Mr. MOTHERWELL: I think we might meet my hon. friend, in view of the hour.

Mr. STEVENS: Personally I have no objection to discussing other items, but this is a very large and important item.

Mr. BOYS: I just want to say one word in connection with the debate. I want to give the government and my hon. friend the minister credit for going on with the estimates to-night, but at the same time I do not want for one moment to have the impression left that it has been due entirely to the group of which I form one. It is only fair to say, and I think we all understand it, that the work of the committee dealing with church union has more or less upset things, and Friday is always a bad day. There has not been a speaker on the government side to-day supporting the budget; we have had some speakers. As a matter of fact, the Progressives only had one before six o'clock. It is true that one came on later, and for that I want to give them credit too. There was to some extent a collapse all round, if it comes to the fine thing. We want to be fair about it. It is due to unusual circumstances, not to this group or any one group. There has been perhaps more interest taken in church union this week than in the budget. The whole proposition is about fifty-fifty, and I as Whip of this party want to give credit to the government for the way they have met the situation. but I do not think we should be blamed in that connection at all.

Mr. LEADER: Seeing that the budget debate has petered out, I would suggest that we take a vote on the budget now.

Mr. BOYS: We are not dealing with the budget now.

Mr. MOTHERWELL: Out of deference to the hon. member for Victoria (Mr. Tolmie) who is absent, and who is interested in this vote also, I move that the committee rise and report progress.

Item stands.

Progress reported.

On motion of Mr. Graham the House adjourned at 10.54 p.m.

Monday, May 12, 1924

The House met at three o'clock.

BUDGET AMENDMENTS

CUSTOMS TARIFF AND SPECIAL WAR REVENUE —RESOLUTIONS

Hon. J. A. ROBB (Acting Minister of Finance): I beg to submit, Mr. Speaker, certain resolutions affecting the customs duties and the War Revenue Act.

The resolutions presented by Mr. Robb are as follows:

CUSTOMS TARIFF

1. That Resolutions No. 1 of April 30th, 1924, relating to amendments to Schedule A to The Customs Tariff, 1907, be amended by adding thereto the following provision:

That the said resolution be amended by striking out tariff items 456a and 502c, the several enumerations of goods respectively and the several rates of duties of customs, set opposite each of said items, if any, and by substituting therefor the following items, enumerations and rates of duty:

Tariff Item	—	British Preferential Tariff	Intermediate Tariff	General Tariff
453d	Steel dies, of a class or kind not made in Canada, valued at not less than one thousand dollars each, for use exclusively in stamping metal sheets or metal plates. Provided that such dies shall be exported from Canada under Customs supervision within three months from the date of import duty.....	Free	Free	Free
456a	Ingot moulds for use in the production of steel.....	Free	Free	Free
502c	Wood handles or stems for handles, not further manufactured than turned, when imported by manufacturers of goods enumerated in tariff items 448, 449 and 450 for use exclusively in the manufacture of goods enumerated in said items..	Free	Free	Free

2. That Resolution No. 3 of April 30th, 1924, relating to amendments to Schedule B to The Customs Tariffs, 1907, be amended by providing that the following item, enumerations and rate of drawback of Customs duties be inserted in said Schedule B:

Tariff Item	Goods	When Subject to Drawback	Portion of Duty (not including Special Duty of Dumping Duty) Payable as Drawback
1044	Fire brick.....	When imported by manufacturers of iron or steel for use exclusively in the construction or repair of a blast furnace, open hearth furnace or rolling mill furnace.....	99 p.c.

SPECIAL WAR REVENUE

Resolved, That it is expedient to introduce a measure to amend The Special War Revenue Act and amending acts and to provide:

1. That a refund of the consumption or sales tax may be granted on imported goods which are free of customs duty and which are found not to be according to order, provided such goods are exported under customs supervision within three months from the date of the customs entry.

2. That resolution number two of the 30th April, 1924, respecting additions to the list of excepted articles not liable to the consumption or sales tax, be amended by adding after the item "printed text books authorized by the Department of Education of any Province in Canada" the following words:

"and materials used exclusively in the manufacture or production thereof;"

and that customs tariff item 453d be added to the said list of excepted goods.

3. That any enactment founded on paragraph one of this resolution shall come into force on the 1st day of July, 1924.

REDISTRIBUTION BILL

Hon. E. M. MACDONALD (Minister of National Defence): I move that the first report of the special committee to which was referred Bill No. 2, to readjust the representation in the House of Commons, be concurred in.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): This report, as I recall it, merely provides for printing, does it not? Or does it provide as well that the committee shall sit when the House is in session?

Mr. MACDONALD (Pictou): It gives power to the committee to print, when the committee may deem it advisable, certain portions of its deliberations. We have been asked to hear representations from the provinces of New Brunswick and Nova Scotia regarding the possible reduction of their representation, and the committee felt that it would be desirable to have available a report of whatever their case might be. It is not intended to print continuously every bit of the deliberations of the committee in meeting, but of course we shall want to have power ultimately to have the proceedings printed when we come to deal with the report. In the second place, we are asking that leave be given the committee to sit while the House is in session. The report was concurred in unanimously by all members of the committee and I have no doubt that the House feels, as did the committee, that every facility should be provided for proceeding

with a speedy consideration of the bill and the report thereon.

Motion agreed to.

CANADIAN NATIONAL RAILWAYS—MELFORT NORTHEASTERLY

Hon. GEORGE P. GRAHAM (Minister of Railways): With the unanimous consent of the House, Mr. Speaker, I move that the order:

House in committee on Bill No. 40, respecting the construction of a Canadian National railway line to mile 41 of the Melfort branch near Nipawin in the province of Saskatchewan.

—be discharged and that the bill be referred back to the select standing committee on Railways, Canals and Telegraph Lines for further consideration. There seems to be some misunderstanding as to the amendment made in committee to this bill, and I think the easiest way of dealing with it is to refer it back.

Mr. DEPUTY SPEAKER: Is it the unanimous pleasure of the House to adopt the motion?

Some hon. MEMBERS: Carried.

Motion agreed to.

SOLDIERS' CIVIL RE-ESTABLISHMENT

Hon. H. S. BELAND (Minister of Soldiers' Civil Re-Establishment) presented the second interim report, Part II., of the investigations of the Royal Commission on Pensions and Civil Re-establishment. He moved:

That 700 copies in the English language and 300 copies in the French language of the said report be printed forthwith and that rule 74 in relation thereto be suspended.

Motion agreed to.

UNITED CHURCH OF CANADA

Petitions were presented from certain members of the following congregations, severally praying that the proposed legislation incorporating the United Church of Canada be not enacted.

Of M. R. Matheson and others, of Granum, Alberta, Members and Adherents of Jumbo Valley Presbyterian Church,—Mr. Stewart (Argenteuil).

St. Aandrew's Presbyterian Church; St. Aidan's Presbyterian Church; St. Stephen's Presbyterian Church, all of New Westminster, B.C.—Mr. McQuarrie.

Petitions were presented from certain members of the following congregations and bodies severally praying that the bill now before the House to incorporate the United Church of Canada be passed during the present session:—

McLeod Street Methodist Church, Ottawa, Ont.; United Presbyterian and Methodist Churches, Minden, Ont.; Gertrude M. Date and 45 others, of Montreal, Quebec; Central Methodist Church, Stratford, Ontario; Margaret Kerfoot and 135 others, of Prescott, Ontario; Community Church, Montreal East, Quebec; St. Andrews United Church, Wolfville, N.S.; Methodist Church, Bowmanville, Ont.; Methodist Church, Kincardine, Ont.—Mr. McTaggart.

Calvin Presbyterian Church, Rathwell, Manitoba; Presbyterian Church, Arcola; Methodist Church, Victoria, B.C.; Presbyterian Church, Stoney Mountain, Manitoba; Union Church, Trout Creek; Methodist Church, Esquimalt, B.C.; Presbyterian Church, Mission City, B.C.; Metropolitan Methodist Church, Victoria, B.C.; United Church, Comfort, Alberta; Union Congregation, Aneroid, and other places Sask.—Mr. Lewis.

Congregational Church, Calgary, Alberta; Methodist Churches, Manotick, Kars and Osgoode, Ont.; Union Churches, Sheho and Tuffrell, Sask.; Methodist Church, Carman, Man.; Union Church, Strongfield; Methodist Church, Rosetown, Sask.; Union Church, Lemberg; Methodist Church, Richmond, Ont; United Church, Craigmyle, Alta; United Church, Milestone, Sask.; Methodist Church, Quebec; Kensington Church, Montreal; Union Church, Rivers, Man.; Methodist Church, Gagetown, N.B.; Methodist Church, Raleigh, Township; United Presbyterian and Methodist Church, Leland, Perth Road and Opinicion, Ont.; Empress Avenue Methodist Church, London, Ont.; Methodist Churches, Union and Port Stanley, Ont.; Methodist Church, Exeter.—Mr. Pritchard.

PRIVATE BILLS

FIRST READINGS

Bill No. 98 (from the Senate), for the relief of Antonio Pietranglo."—Mr. Sheard.

Bill No. 99 (from the Senate) for the relief of Ella Vear.—Mr. McQuarrie.

Bill No. 100 (from the Senate) for the relief of Anna Welton.—Mr. Sheard.

Bill No. 101 (from the Senate) for the relief of Marjorie Mahaffy Cox.—Mr. Kay.

Bill No. 102 (from the Senate) for the relief of Mary Elizabeth Milne.—Sir Henry Drayton.

Bill No. 103 (from the Senate) for the relief of Georgina Myrtle Potts.—Mr. Mewburn.

Bill No. 104 (from the Senate) for the relief of Guy Barrington Hutchings.—Mr. Spence.

QUESTIONS

(Questions answered orally are indicated by an asterisk)

ROOFING MATERIAL—FIRE PREVENTION

Mr. PARENT:

1. Was a technical inquiry held under the supervision of the Government Insurance Branch as to the protection different grades of roofing material offer against fire?
2. If so, on what date and in which province?
3. By whom, and what witnesses were heard?
4. At what conclusions did said inquiry arrive?

Hon. Mr. ROBB:

1. A technical investigation is being made into the merits of the various forms of roofing materials from the standpoint of fire prevention
2. The investigation was commenced several months ago and is proceeding.
3. The committee is composed of Professors H M. Mackay, R. DeL. French and F. M. G. Johnson, of McGill University, and the inquiry will consist mainly of experimental test rather than evidence of witnesses.
4. No conclusions have been reached as the investigation is not complete.

NATIONAL STEEL CAR COMPANY

Mr. DOUCET:

1. Is the National Steel Car Company a Canadian concern and where is it located?
2. Is the Eastern Car Company a Canadian concern, and where is it located?
3. Is the Pressed Steel Car Company a Canadian concern, and where is it located?

Hon. Mr. COPP:

1. National Steel Car Corporation, Limited, is a Canadian concern; Head office at Hamilton, Ont.
2. Yes, Head office at New Glasgow, N.S.
3. Imperial Steel & Wire Company, Limited, formerly The Pressed Steel Car & Wheel Company, Limited, is a Canadian concern incorporated by the provincial government of Ontario, Head office at Perth, Ontario.

FERRY BOAT HIAWATHA

* Mr. JONES:

1. How many passengers were carried by the ferry boat Hiawatha during the past year between Abercrombie and Pictou, in the county of Pictou, Nova Scotia?
2. How much freight was carried during the same period by the same boat?
3. What were the passenger receipts for the same period by the same boat?
4. What were the freight receipts for the same period by the same boat?

Right Hon. Mr. MACKENZIE KING: Mr. Speaker, this question, I think, has been asked under a misapprehension. The government is not subsidizing the steamship company referred to, and therefore has no information to furnish.

DORCHESTER PENITENTIARY—WARDEN

Mr. DOUCET:

1. Has an appointment been made to the position of warden at Dorchester penitentiary, New Brunswick?
2. If so, what is his name?
3. If not, who is acting?
4. How long has the acting warden been in the service and is he qualified for position of warden?
5. When did the position become vacant?
6. When does the government propose making an appointment?

Hon. Mr. LAPOINTE:

1. No.
2. Answered by No. 1.
3. Geo. T. Goad.
4. In the service for almost four years; the decision as to his qualifications is committed to the Civil Service Commission.
5. 1 January, 1924.
6. The appointment rests with the Civil Service Commission.

THE TRANSCONTINENTAL, AND CANADIAN OCEAN PORTS

Mr. MacLAREN:

What steps have been taken to carry out the provisions contained in the National Transcontinental Act 1903, chapter 71, paragraph 45, regarding the arranging for and providing shipping connections for inward and outward traffic at Canadian ocean ports?

Hon. Mr. GRAHAM:

The company named in the section of the National Transcontinental Act referred to was the Grand Trunk Pacific Railway Company. Under said paragraph 45, it agreed to operate steamships out of Canadian Atlantic and Pacific ports in connection with the company's railway projects. However, the company failed to carry out its agreement to lease the Transcontinental and afterwards ceased to operate the Grand Trunk Pacific, now in receivership. As the operation of these roads has had to be assumed by the government, in default, the provisions of the clause have no longer any element of contract. While not a matter of contract, the development of

Canadian ports is, nevertheless, the basic policy of both the Canadian National Railway management and the Canadian government.

CANADA COLONIZATION ASSOCIATION

Mr. COOTE:

1. What was the number of families brought to Canada during the year 1923-24 by the Canada Colonization Association?
2. What amount was paid to the Canada Colonization Association during the said fiscal year, by the government?
3. What amounts were paid to the said association by other parties during the said fiscal year?

Hon. Mr. ROBB:

1. Thirty-five settlers; no record as to actual number of families.
2. $100,000.
3. $100,000, borne equally by the Canadian National and the Canadian Pacific railways. No information as to other grants.

CANADIAN GOVERNMENT MERCHANT MARINE —WAGES

Hon. Mr. STEVENS:

What monthly rate of wages has been paid to firemen and sailors on the Canadian Government Merchant Marine ships on the Pacific during years 1921-22-23?

Hon. Mr. GRAHAM:

Coastal Service—1921, first two months of operation August to October $60 per month; October to December $67.50 per month. 1922, $67.50 per month. 1923, $67.50 per month.

Australian and Oriental service—1921, January to July, $75 per month; July to December, $60 per month; 1922, $60 per month; 1923, $60 per month.

Vancouver—U. K. Service—1921, commenced operation November, 1923, $60 per month.

CANADIAN APPLES—AUSTRALIAN EMBARGO

Mr. MacKELVIE:

In connection with negotiations between this government and that of Australia regarding trade arrangements, has this government made any request that Australia remove its embargo on Canadian apples?

Hon. Mr. ROBB: Yes.

HEBRIDEAN IMMIGRANTS

Mr. SPENCER:

1. How many Hebrideans entered Canada in 1923 and 1924?
2. How many of these were placed on farms?
3. How many are now on farms?
4. For what number of these immigrants did the government advance passage money?
5. What was the total amount advanced?
6. How many of these immigrants have repaid passage money advanced to them, and what is the total amount?
7. How many are in arrears for repayment of passage money?
8. How many Hebrideans, who came to Canada in 1923 and 1924, have emigrated to the United States?
9. Were any of these still in debt to the government for money advanced for their passage? If so, how many, and what is the aggregate amount outstanding?

Hon. Mr. ROBB:

1. 580—(exclusive of two parties of Hebrideans who were brought out under the auspices of the Ontario government).
2. All placed on farms except four families, two of whom are now arranging to go on the land.
3. All who were originally placed.
4. All of the party brought in 1923, namely 291. The complete report of the 1924 party numbering 289 persons, has not yet been received.
5. The amount advanced for the 1923 party was $26,098.39, of which $16,311.49 was refunded by the British government, leaving $9,786.90 as the federal government's share of the loans.
6. None.
7. Answered by No. 6.
8. None of the Hebrideans who came under Dominion government direction in 1923 and 1924.
9. Answered by No. 8.

MR. THOMAS SHANKS

Mr. GRIMMER:

1. Is Mr. Thomas Shanks an employee of the Department of the Interior, and if so, what position does he occupy?
2. Was he promoted from the position of Assistant Surveyor General of Dominion Lands, to the position of Assistant Director General of Surveys in said department? If so, when and by what authority?
3. What is the salary range attached to such positions respectively?
4. Has the said Mr. Thomas Shanks discharged the duties of Assistant Director General of Surveys since his promotion to said position? If not, who is discharging same?
5. Is the said Thomas Shanks in receipt of the salary attached to the position of Assistant Director General of Surveys, and if so, from what date has he received same?

Hon. Mr. STEWART:

1. Yes; Assistant Director General of Surveys.
2. Yes; October 1, 1923, promotional certificate from the Civil Service Commission.
3. The position of Assistant Surveyor General has been abolished; the salary range of Assistant Director General of Surveys is $3,900-$4,800.
4. Yes.
5. Yes; October 1, 1923.

CANADIAN NATIONAL RAILWAYS—TORONTO AND NAPANEE

Sir HENRY DRAYTON:

What, if any, duplication of tracks and railway services have the Canadian National Railway system been able to remove between Toronto and Napanee?

Hon. Mr. GRAHAM: The former Canadian Northern tracks between Brighton and Cobourg have been taken up. A saving since June, 1920, of 42,627 passenger train miles per annum has been effected and offices of the two lines at the following places have been consolidated: Toronto, Oshawa, Port Hope, Cobourg, Grafton, Colborne, Brighton, Trenton, Belleville, Napanee.

CANADIAN NATIONAL RAILWAYS—SCRIBE HOTEL

*Sir HENRY DRAYTON:

1. Has the government investigated the accuracy of the statement that the Scribe Hotel was offered for sale to the Canadian Pacific Railway Company at a price less than $1,400,000 but refused by that company?
2. If the said statement has been found to be inaccurate, was the Canadian Pacific Railway Company asked to consider the purchase of the said hotel, and at what price?

Hon. Mr. GRAHAM: Mr. Speaker, the government has no information concerning the rumour contained in this question.

INTERNATIONAL JOINT COMMISSION

Mr. CASGRAIN:

1. What has been the total expenditure of the Joint International Commission from its inception to the 31st of March, 1924?
2. What are the names of the three first commissioners nominated by the Laurier government?
3. Why were three other commissioners appointed by the Imperial government?
4. What are the names of the three commissioners who were first appointed by the Imperial government?
5. Is the government aware that since the resignation from the said commission of Judge P. B. Mignault, now judge of the supreme court, that the province of Quebec has had no representation on this commission?
6. Is it the intention of the government to give the Province of Quebec representation on this commission?
7. If so, when?

Right Hon. Mr. MACKENZIE KING:

1. $582,818.97.
2. Sir George Gibbons; Alexander P. Barnhill; Aimé Geoffrion.
3. Nominees named in answer to question 2 above had not been appointed by the Imperial government when the Laurier government went out of office in 1911, and different names were submitted to the Imperial government for appointment by the incoming Borden government.
4. Hon. T. Chase Casgrain; Charles A. Magrath; Henry A. Powell, K.C.
5. The present Canadian membership of the International Joint Commission is as follows: Charles A. Magrath, Chairman; Henry A. Powell, K.C.; Sir William Hearst, K.C.M.G.

Hon. T. Chase Casgrain resigned from the commision on his appointment as a minister of the Crown and was succeeded by Hon. Mr. Justice Mignault. The latter resigned from the commission on appointment to the Supreme Court of Canada. His place on the Commission was subsequently filled by the appointment of Sir William Hearst, K.C.M.G.

6. The matter is under consideration.
7. Answered by the answer to No. 6.

QUESTIONS PASSED AS ORDERS FOR RETURNS

WIRELESS STATIONS—DAWSON AND MAYO

Mr. BLACK (Yukon):

1. What was the total cost of installing each of the government wireless stations at Dawson and at Mayo, Yukon Territory, in 1923?
2. What has been the cost of operating and maintaining each of said stations since its installation?
3. How many employees are engaged at each of said stations and in what capacities?
4. What has the revenue been from each of said stations since its installation?

COMMISSIONS OF INQUIRY

Mr. LEADER:

1. How many commissions of inquiry were appointed by the Laurier government?
2. What was the total cost of these commissions?
3. What were the names of the counsel employed by the government?
4. What was the total remuneration paid to each?

Mr. LEADER:

1. How many commissions of inquiry were appointed by the Borden government?
2. What was the total cost of these commissions?
3. What were the names of the counsel employed by the government?
4. What was the total remuneration paid to each?

Mr. LEADER:

1. How many commissions of inquiry were appointed by the Meighen government?
2. What was the total cost of these commissions?
3. What were the names of the counsel employed by the government?
4. What was the total remuneration paid to each?

Mr. LEADER:

1. How many commissions of inquiry were appointed by the present government?
2. What was the total cost of these commissions?
3. What are the names of the counsel employed by the government?
4. What was the total remuneration paid to each?

DOMINION PUBLIC BUILDING, ARNPRIOR

Hon. Mr. STEVENS:

1. Was the Dominion public building at Arnprior repaired during the year 1923?
2. If so, by whom was the work performed: (a) repairs to foundations; (b) painting, plastering, decorating, etc.?

3. If tenders were called for, was it by public advertisement and if so, in what papers did the advertisements appear?

4. What tenders were received and from whom, and to whom was the contract granted?

5. Was the said building rewired and did the contractor give a subcontract for this work?

6. Was there the usual inspector appointed by the Public Works department in connection with this work and if so, whom?

HECTOR CELEBRATION, PICTOU

Mr. BLACK (Halifax):

1. What amount was appropriated by the government for the Hector celebration at Pictou, Nova Scotia, during the summer of 1923?

2. What extra amount, if any, was appropriated for this celebration by the Department of National Defence?

3. Has the government received a statement of the expenditure of this money?

4. If so, for what was the money used?

DEPARTMENT OF AGRICULTURE—EMPLOYEES

Mr. SUTHERLAND:

1. What were the total number of employees, and the total salaries paid such employees on Janunary 1st, 1922, and also January 1st, 1924, in the following branches of the Department of Agriculture, giving the total number employees and salaries for each branch, respectively, a) Civil Government both Permanent and Temporary; (b) Agricultural Instruction; (c) Entomology; (d) Dairy General; (e) Cow Testing; (f) Finch Creamery; (g) Extension of Markets; (h) Destructive Insect and Pest; (i) Production and Sale of Tobacco; (j) Fruit Industry; (k) Contagious Diseases; (l) Meat and Canned Food Division; (m) Live Stock Industry; (n) Seed Control?

2. Has there been one or more new branches added to Department of Agriculture since January 1st, 1922.

3. If so, what are names of same, and what number of employees in each branch or branches so established in detail same as Question No. 1?

Hon. Mr. MOTHERWELL: Pass as an order for return.

Mr. SUTHERLAND: Mr. Speaker, this is a very simple question and should not entail more than a few hours' work on the part of the department. I put the question on the order paper because of my inability to get the information from the department.

Hon. Mr. MOTHERWELL: My officers tell me that it will take ten days or two weeks to get this information.

PENSION BOARD MEDICAL ADVISERS

Mr. ROSS (Kingston):

1. Who are the Medical Advisers of the Pension Board?

2. What is the War Record of each?

3. Who are the Medical Advisers of the Federal Appeal Board?

4. What is the War Record of each?

5. What has been the Special Training of the Neurologists of the Boards?

[Mr. Stevens.]

UNOPPOSED MOTIONS FOR PAPERS

HECTOR CELEBRATION, PICTOU

Mr. DOUCET:

For return showing the detailed expenditure of the money voted by parliament of Canada at the last session for the Hector celebration at Pictou, Nova Scotia.

STAFFORD R. RUDD AND COMPANY

Hon. Mr. STEVENS:

For a copy of all correspondence, telegrams, and other documents, exchanged between the Minister of Public Works, or any official of his department, and Stafford R. Rudd and Company, and the chairman of the Liberal committee of Arnprior and others.

MOUNTED POLICE—SMITH INVESTIGATION

Mr. STEVENS:

For a copy of all letters, telegrams and other documents passing between the Minister of Justice and Attorney General of British Columbia, or any member of the government of British Columbia, and any member or official of the Dominion government, having reference to certain charges made against the officers of the Royal Canadian Mounted Police and investigated by Commissioner Smith, and also a copy of the report of the said commissioner.

BRITISH COLUMBIA FISHERIES OFFICE

Mr. STEVENS:

For a copy of all letters, telegrams and other documents, passing between the Minister of Marine and Fisheries, or any official of the Department of Marine and Fisheries, including Inspector Halliday of New Westminster and the member for Chilliwack and member for Skeena, or any other member of the Dominion House, relating to the removal of the fisheries office from Vancouver, or the position of the Chief Inspector of Fisheries in British Columbia.

NARCOTIC DRUGS—BRITISH COLUMBIA

Mr. STEVENS:

For a copy of all letters, telegrams and other documents, passing between the Minister of Justice, Deputy Minister of Justice or any official of the Department of Justice, or Prime Minister or any official in the office of the Prime Minister, and M. A. Macdonald, K.C., W. W. B. McInnes, regarding the appointment of a commissioner to inquire into alleged improper handling of drugs by the Royal Canadian Mounted Police in British Columbia

Mr. STEVENS:

For a copy of petition forwarded to the Minister of Justice on behalf of one, C. W. Monk, convicted in January, 1923, for illicit dealing in narcotic drugs.

Mr. STEVENS:

For a return showing a statement of amount of cocaine or other narcotic drugs seized in British Columbia under the authority of the Royal Canadian Mounted Police and the disposition of the same, during the years 1920 to 1924, inclusive.

MOUNTED POLICE—VICTORIA

Mr. STEVENS:

For a return showing the names of the members of the Royal Canadian Mounted Police, Victoria detachment, who have (a) left the service; (b) been removed; (c) been dismissed; showing the reasons for termination of services.

QUEBEC POST OFFICE

Mr. PARENT:

For a copy of all letters and other documents in possession of the Department of Public Works relating to the claims of the contractor for payments of the cost of work necessitated by the building of the post office in the city of Quebec.

CANADIAN NATIONAL RAILWAYS—INCOME STATEMENT

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition) moved:

For a return giving copy of official income statement, December, 1923, and March, 1924, of the Canadian National Railways which statements include data from the commencement of 1923 and 1924, respectively.

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals): I had hoped to embellish my few remarks on the year's business of the Canadian National Railways by the production of this information. Perhaps my right hon. friend will allow me to do that.

Mr. MEIGHEN: I never observed that the hon. minister's remarks needed embellishment in any way; frequently they are lacking in information. I do not like to rob him in advance of his material. I presume it would be possible for me to get it myself. I have no desire to make public his speech, though, before the great day.

Mr. GRAHAM: I will get my right hon. friend a copy.

Mr. DEPUTY SPEAKER: Motion dropped.

OPIUM AND NARCOTIC DRUG ACT—MOIETIES PAID

Hon. H. H. STEVENS (Vancouver Centre) moved:

For a return showing particulars of all moieties paid through the office of the Royal Canadian Mounted Police in Vancouver and Victoria, in connection with the administration of the Opium and Narcotic Drug Act, setting forth to whom paid and date of payment.

Hon. ERNEST LAPOINTE (Minister of Justice): I am compelled to oppose this resolution. The administration of the Opium and Narcotic Drugs Act is already a very difficult task. The persons engaged in that traffic are shrewd, powerful and unscrupulous, and if the information asked for by this resolution is given it will make the work of the police more arduous and subject those who give the information to acts of revenge. The passing of the motion is objectionable also on many other grounds. I may say that I object also to the passing of notices of motion No. 9 and No. 10, standing in the name of the hon. member for Vancouver Centre (Mr. Stevens). Perhaps it would be better to let these stand.

Mr. DEPUTY SPEAKER: Stand in the absence of Mr. Stevens.

JETTIES AT VANCOUVER

On the Orders of the Day:

Mr. L. J. LADNER (Vancouver South): I have a very urgent telegram from grain men of the West with regard to the completion of Nos. 1 and 2 jetties at Vancouver, the construction of which has been under way. The message states that unless the necessary moneys to complete these jetties are not forthcoming immediately, these facilities will not be available for the coming crop in October, and that that would greatly minimize the working capacity of elevator No. 1 and would make No. 2 of little use except for storage. I would like to inquire whether the completion of these jetties is being delayed.

Hon. P. J. A. CARDIN (Minister of Marine and Fisheries): This is the first time the matter has been brought to my personal attention. I will make inquiries of officers of the department and give my hon. friend all the information I can.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed from Friday, May 9, the debate on the motion of Hon. J. A. Robb (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into committee on Ways and Means, and the proposed amendment thereto of Mr. Woodsworth.

Hon. A. B. COPP (Secretary of State): Mr. Speaker, the debate on the budget has proceeded for something over four weeks and is to continue, I understand, for some days, but I feel that the question is one of such great importance not only to Canada as a whole but also to each of the respective provinces that as a representative of one of the provinces in the Maritime group I should take up a little time this afternoon in making a few observations in reference to the situation as it appeals to the people in my part of the country.

Before doing so, may I be permitted to associate myself with those on both sides of the House who have offered their hearty congratulations to my hon. friend and col-

league the Acting Minister of Finance (Mr. Robb) who delivered the budget speech on the 10th of April last. I am sure that irrespective of our agreement or otherwise with the contents of the budget we have all been impressed by the splendid example given by the acting minister in the bevity and conciseness of the annual financial statement he presented, a statement which, I am very glad to know, has been well received by the country from the Atlantic to the Pacific.

I cannot refrain, Sir, from also joining with my friends in expressing the deep regret we all feel at the absence from parliament this session, both from the councils of the government and from the work of the House generally, of the right hon. Minister of Finance (Mr. Fielding) and the former Minister of Justice (Sir Lomer Gouin). I am sure the Minister of Finance would have been delighted had he been able to be with us and present this budget, and be able at the same time to announce to the people of Canada, as he was in the very fortunate position of being able to do many times in the past, a surplus in the finances of this country—this being the first surplus since the year 1914. He would have also been very glad, in addition to announcing that surplus to be able to announce that we had reduced the public debt of this country, marking a return to the old-time Fielding surpluses of days gone by.

One cannot discuss the fiscal policy of this country without taking into consideration the very many difficulties that present themselves in governing a country such as Canada. All countries have their difficulties, and we have had our share undoubtedly during the past few years, since the armistice that concluded the Great War and during the period of re-establishment. Canada, as we all know, is a very extensive country, extending from the Atlantic to the Pacific, a territory long in range and narrow in extent, sparsely populated, and falling into what might be called four natural divisions. We have in the Maritime provinces, one of the old parts of confederation, a country small in area and composed principally of agriculturists, lumbermen, fishermen and miners, a little mining being done in Nova Scotia but not much in comparison with its other industries. Then we come to the old provinces of Quebec and Ontario, and while they are also interested in agriculture and forestry, they are much more interested in manufacturing than are the Maritime provinces. Then we go to the middle West and we find practically the whole population interested in agriculture. Further west, in British Columbia, we find the people engaged in agriculture, forestry and mining. When we consider the chief interests of the different portions of Canada, and how they vary with the different sections of this country from sea to sea, we can realize how difficult it is to arrange a fiscal policy that will suit all portions of the Dominion. We must examine into the requirements of the different parts of Canada, and then endeavour, so far as we are able to meet the conditions in the different sections of the country, having in mind always the interests of the country as a whole

The responsibility of propounding and carrying into effect fiscal policies that are best applicable to a country such as Canada is one that is fraught with many difficulties. My hon. friends opposite have learned that to their sorrow. During the war period we all know that our whole time and attention were taken up in doing our part towards winning the war, and after the armistice and the conclusion of the war the duty rested upon my hon. friends opposite to take up the work of government and of re-establishment. I have no doubt that they grappled with those questions the best they could, but apparently, judging by the election returns of 1921, the people of this country were not satisfied with the way in which they had carried out their task. We realize that this responsibility has been handed over to us for the time being, and we have been giving these questions particular attention and very careful study during the past two years, and we have thought fit to bring before parliament at the present time some changes in the tariff and the fiscal policy of this country, for the consideration of parliament. The fiscal policy is a question that is always fraught with a very great deal of difficulty and differences of opinion. However, after giving this matter very careful study, we have taken the responsibility of placing before parliament the budget proposals which we are now asking it to accept. A great deal of opposition has risen in a certain quarter of this chamber in regard to these proposals, and I was delighted as I listened on Friday evening to the very excellent speech delivered by my hon. friend from Vancouver Centre (Mr. Stevens). He made mention of three different matters that I want to refer to briefly. In referring to the present government as opportunists—

An hon. MEMBER: Hear, hear.

Mr. COPP: I thought I heard someone say, "hear, hear." I am sure that when you

consider the meaning of the word "opportunist" and of the word "opportunity" you will admit they are rather elastic terms. My hon. friend used the word opportunist because he thought it was a slur against the administration of this government, but I want to say to him and this House that if an opportunist means meeting the wishes and views of the great majority of the people of this Dominion as we see them, and a party representing a great majority of that public opinion from the Atlantic to the Pacific, then I am prepared to take the odium of being called an opportunist.

Next, my hon. friend from Vancouver Centre felt like coming to the relief of the agriculturists of this country, and he came to their relief in the same way that all our friends opposite come to the relief of that great body. What does he say in regard to that? May I be permitted to quote just a sentence or two from his remarks?

> Now, what is wanted in Canada in connection with this financial stringency to which I have referred is some sound policy which will enable the farmer of the West particularly to fund his current indebtedness. My hon. friends, I think, will all agree with me that that is one of the most crying needs of the West to-day. It does not profit us nor will it get us anywhere to say to those debtors that they needlessly went into debt in some cases, or that it was through over-optimism in other cases; the fact is they are heavily in debt, this indebtedness is drawing large rates of interest, and the farmers cannot fund it. What is required to meet the situation is an opportunity of funding their current debts by term loans at reasonable rates.

That sounds a reasonable proposition. My hon. friends opposite, realizing at last the financial position which the farmers of the West, represented by the Progressive group in this House, are in now say: We want the government or some other institution to come to their rescue and give them an opportunity of funding their debts, and going on losing money in the future as they have in the past. Mr. Speaker, that is not the panacea that the government of the day hands out to the agriculturists in all parts of this Dominion. We hope to place before the farmers of this country an opportunity of not only funding their debts, but of being able to live and make a profit on their operations, and of being able to pay their debts instead of funding them.

My hon. friend also makes another very splendid reference in that very eloquent speech of his. Let me read just a line or two more. He was describing the beautiful trip he had had from his home town to Ottawa:

> As we came along I saw a little cabin in a clearing of about five acres, and at the door stood a woman, cherry of countenance, and around her four little children clinging to her skirts and waving to the train as it went by. Out in the little patch of cleared land was the husband preparing the soil for his spring crop, and the thought came to me that this man with his wife and children was solving the problem of northern Ontario which has so long been baffling the statesmen of this country.

Yet that is the very idea of my hon. friends opposite. Here was a man out trying to clear a little space in the forest to make a home for himself and his family, and earn, not a decent living, but a mere existence, as we know is the case with many in the pioneering days. If my hon. friend had continued his trip he would have found in the Maritime provinces, or in the middle West, many more of those same pioneers. And he proposes to let them carry on by borrowing money from the government, funding their debts, and to go on losing money in the future. I say, Mr. Speaker, that is not a proper solution of the difficulty. The only fair and proper way to meet it is for the government and parliament to seriously consider the question and to initiate a policy that will enure to the benefit of these people who are pioneers, who have gone out into the wilderness and waste places of Canada and are now attempting to build up and populate that part of the country in which they are settled.

Naturally a discussion on the tariff and taxation leads us to consider two great classes. On the one hand there are the manufacturers who have for the past fifty years been more or less aided by the policy of protection. On the other hand there are the agriculturists and the consumers who are looking seriously into the fiscal question and trying to find some relief from their burdens. Personally I have nothing unkind to say of the manufacturers; we are very proud of the industries that have been built up in different parts of this country. However, as I said previously, the majority of them are located in the two provinces of Quebec and Ontario. In order to place before parliament what I consider to be a fairly good reason why practically all the manufacturers in Ontario are opposing any interference with the present fiscal policy let me quote a few statistics from the Canada Year Book for 1922-23. The tabulated statement I have here shows the value of the output of the four basic industries of agriculture, forestry, fishing and mining, contrasted with that of manufacturing for each province for the year in question. It is as follows:

Province	Output Four Basic Industries Per cent	Manufacturing Per cent	Others Industries Per cent
Prince Edward Island..	92.4	4.8	2.8
Nova Scotia..	66.9	23.3	9.8
New Brunswick..	82	13.3	4.7
Quebec..	54.6	37.6	7.8
Ontario..	43.6	48	8.4
Manitoba..	64.6	26.7	6.7
Saskatchewan..	89.2	6.6	4.2
Alberta..	86.6	9.3	4.1
British Columbia..	82.7	4.5	12.8

From the foregoing table one can readily see why there is such strong opposition on the part of hon. members representing the province of Ontario to any reduction in the tariff on implements of production entering Canada. There are three or four reasons for this opposition. First, there are a certain number of men who vote Liberal or Conservative because they have been born into that political environment and their political views have been largely tinctured by their environment throughout their lives. Conservatives of this class are not favourable to tariff reductions. In the second place a number of hon. gentlemen opposite are interested in manufacturing concerns, and we would naturally expect them to be opposed to tariff reduction. In the third place, other hon. members represent constituencies that are largely identified with manufacturing, and it is only natural to expect that they also would be opposed to a lower tariff. Taking these reasons into consideration, as well as the significant facts brought out by the table already given, it is easy to understand why there is such strong opposition in the province of Ontario to changes in our fiscal policy such as the budget provides for.

The question of free trade has also been interjected into the controversy. My hon. friend from Fort William and Rainy River (Mr. Manion) made a very excellent speech a few days ago and quoted or referred to Macaulay, Abraham Lincoln, and other celebrities in order to show that protection was the proper policy for this country to pursue. Well, I have only to say to my hon. friend that in my opinion what Macaulay wrote in the corn law days is not applicable to conditions in this country at the present time. Nor can we accept Abraham Lincoln, splendid figure though he was, as our guide in overcoming the financial and other difficulties which confront us at the present time. We have to deal, Mr. Speaker, with the living present and not with the past. The time has arrived when we have to deal with conditions as they exist, irrespective of what the people of the antediluvian ages may have thought. We might as well refer to what John Knox or John Wesley thought in regard to church union. We, the representatives of the people of Canada, must deal with these questions and settle them and must not consider what people thought a hundred or two hundred or two hundred and fifty years ago. I wish to view the situation in that light, and that is the light in which the government is going to deal with conditions at the present time. The hon. member sought to draw the red herring of free trade over the trail. No man in the Dominion of Canada is seriously suggesting at the present time that we should adopt free trade.

We have submitted proposals to this House for the reduction of some of the tariff duties and of some of the taxes which bear heavily upon the people of the country. The manufacturers, through their representatives and mouthpieces in this country, are making threats, talking about the terrible conditions and telling us what will happen in this country if the budget proposals are adopted. They did the same thing in the past. I think you, Mr. Speaker, were a member of this House at the time when Mr. Fielding brought in his budget proposals in 1897. On that occasion, almost before the ink was dry on the paper on which these proposals were printed, the leader of the opposition, Sir Charles Tupper, pointed out what was going to happen in this country if we should adopt the budget proposals suggested by the finance minister of that day. You, Mr. Speaker, will remember his eloquent words when he said, "I see the windows of the manufacturing concerns boarded up; I hear the sorrowful wail of men who will be put out of business tomorrow". But did that happen? Instead of stagnation in industry resulting, we had a fairly good development and expansion of our industries in Canada, in spite of the fact that the opposition of that day protested that it would ruin the manufacturing industries. They cried, "Wolf, wolf", but everything went on peacefully and quietly. They said, "The factories will be closed down, our men will be out of employment, and will have to go to the United States". They were afraid of their shadow in those days. We have heard of the men who, crossing the Atlantic, became frightened because they thought they were at Sable island and who when a breeze sprang up, jumped overboard because they were afraid they were going to be drowned. That is the condition at the present time. Hon. gentlemen opposite are all ready to jump overboard before any storm arises, and before there is any difficulty.

I do not intend to discuss details of the budget, as the subject has been discussed for something over four weeks. The people of my province very strongly support the proposals brought down by the government in regard to the business and financial situation of Canada. I was indeed surprised, almost astounded, when my hon. friend from Kent (Mr. Doucet) the other day moved an amendment to increase the protection in this country. Why, Sir, if there is a constituency in the whole of Canada which would suffer by high protection, it is his constituency. According to the statement he made, and according to the amendment he proposed in this House, every article used in the fishing industry in this country is now on the free list. If there are any industries in which he is interested it is fishing and lumbering, and if the hon. gentleman were to say to the thinking people of Kent that he desired protection put on these articles, what would the fishermen of his county say? I am not here to speak for the county of Kent, but I wish to speak of the counties I know something about. I think I have some knowledge of Kent, and I say that the fishermen, the lumbermen and practically all the people of the province of New Brunswick are behind the government in their proposals.

We realize that difficulties exist. How are we going to meet them? There is only one reasonable and proper way to meet the difficulties, and that is for the manufacturers of this country to realize that there are others living in Canada to whom consideration must be shown. It is only right that those of us who are not so deeply interested in manufacturing industries should give consideration to the troubles of others who are interested, and by giving consideration to each other's troubles, we will forget a good many of our own. If we sit down at a common table, consider the position and realize the difficulties under which one section of the country labours in connection with a neighbouring section, I believe we can arrive at some reasonable solution. The budget is a step in the right direction, and will enable us to meet more on common ground and consider each other's difficulties and troubles. If that is done, instead of Canada going backward and downward, as an hon. gentleman stated the other day in Montreal, as Germany and other foreign countries where the currency is being depreciated have done, we will be able to go forward, and I believe in a short time Canada will be placed on a solid foundation and will be in an equal or better condition than she was a few years ago or even prior to the war.

4 p.m.

A great deal of propaganda has been carried on by my opposition friends during the past year. We have heard the "Whisper of death." The Montreal Star is nothing if not sensational, and it is well to draw the attention of the House for a moment to the statements of that journal and to its inconsistency during the time it was publishing the "Whisper of death." I have before me a statement culled from the Montreal Star during that time. Let us see what it thought of business conditions. I will only read the headlines and will not impose upon the House by reading the long articles which follow. The headlines are as follows:

Retailers Benefit by Tourist Trade.
Prospect of Improvement in Steel Industry.
Prodigals Return from United States.
Unemployment is Fast Decreasing.
Liners Crowded with Harvesters.
Busy Week-end.
Great Influx into Quebec and Montreal.
Alberta Grain Crop Best Since 1915.
Bank Finds Factories Mostly on Full Time.
Retail Trade Good Says Bradstreets.
More Business and Higher Net Profits for Ontario Steel.
Artisans Coming in Large Numbers.
Labour Badly Needed in All North Ontario.
C.P.R. Ships Busy.
Lake Shore's Record; More Dividends Soon.
Plants to Sell French Market Canadian Paper.
Liner Doric Carried Biggest List to Port.
Quebec will Ship All Ocean Cattle.
Doctors, Ministers, Professional Men and Skilled Artisans Arrive.
McIntyre Porcupine Excellent Showing.
Lake Steamers Busy.
Montreal Clearings up over 9 Per Cent.
West Preparing for Fall Rush of Record Crop.
Improvement Shown in Wholesale Trade.
Over 4,000 Prospective Settlers Arrive Within Week.
Estimate Value of Quebec Crop $200,000,000.
Stations Seethe With Harvesters.
Trade Better. Shoe Man Finds Outlook Greatly Improved.
$140,000,000. Rise in Total Trading Within four Months.
Gold Mining Record Broken in July.
United States Dairy Products from Canada Increase.
Increase in Canadian Silver Ore Exports.
Nickel Mines at Sudbury Better War-Time Output.
Canadian Wheat Exports Show Big Increase.
More Farm Help is Ontario's Need.
Record Year for Lumber Expected.
Montreal's Remarkable Progress.
Lumber, Mines and Railways Using Thousands of Workers.
Newsprint Gain is $12,500,000 Over Year Ago.
C.N.R. Net Revenue $1,177,445 for June.

These are headlines taken from the Montreal Star; and as an evidence of the healthy conditions in the trade and commerce of the Dominion they are, I think, a sufficient refutation of the allegations and the suggested

"Whisper of death" which appeared on the front pages of the same journal. In the light of the conditions as revealed by this newspaper itself, I say unhesitatingly that we have nothing to fear. But these suggestions about approaching death, and all the rest of it, have not at all been well received in the country, and this fact having been realized the propaganda in this direction ceased.

But we had another type of propaganda; a gentleman named Grattan O'Leary came into the limelight and undertook to tell the people of Canada what should be done and what should not be done. It is not my intention to take issue with Mr. Grattan O'Leary inasmuch as one of his own friends and the organizer of the party to which he belongs, in the person of my hon. friend from Victoria City (Mr. Tolmie), answered him fully when he referred to the articles that were published in MacLean's magazine a few weeks ago. It is obvious that they are making an effort to hoodwink the people into the belief that something is radically wrong in the management, by this government, of the affairs of the country; but I have not the slightest doubt that the people of Canada can see through this scheme. And in any case, no situation that ever existed could be improved by such a method. I have no objection whatever to my hon. friends opposite taking what action they may consider proper in the interests of their own party and with a view to realizing their great hope of some day coming back into power, but I do say that it is certainly injurious to the best interests of the country that propaganda of this kind should be engaged in by responsible men.

I want to refer as briefly as possible to the railway situation, which is among the most important matters that are exercising the minds of the people, particularly in the Maritime provinces, at the present time. It is inevitable in the circumstances that I should refer to facts that are necessarily more or less local, and I trust that I shall be pardoned if occasionally I do not speak in general terms. The railway situation is to-day the product of an evolution in this country; year after year, so long as I can remember anything political, we have had discussions in regard to the building and operation of railways in Canada. And those of us who come from the Maritime provinces know how important a part the railway problem has played in our affairs down there; for the railway undertaking of the Dominion of Canada to the people of the Maritime provinces at the time of confederation was a considerable inducement to those people to enter the Dominion. Hon. gentlemen will remember—speaking for the moment of the railway situation in a general way—that about the year 1903 the Liberal government undertook the construction of the Transcontinental railway and the Grand Trunk Pacific to provide competition with the great Canadian Pacific Railway. That railway was about completed when my hon. friends came into office and I understand that they effected some alterations in connection with gradients, curves, and other matters of that kind; and, as every one knows, an agreement was made with the Grand Trunk Railway whereby that road was to be taken over and operated on a certain percentage basis. That was never done; I am not going to take up the time of the House discussing the question, but it is sufficient to state that nothing was done in that direction. Shortly after the Borden government came into power steps were taken for the operation of the Transcontinental railway by the government; and not very long after that the government of that day made arrangements for the taking over of the Canadian Northern and its subsidiairies. Whether or not that was a wise procedure is a question which I think we need not discuss to-day, although I recall that at the time there was opposition to it. However, the government took over these roads. Within a short time thereafter they passed an act providing for the amalgamation of the various railways in Canada—the Canadian Northern, the Grand Trunk, the Grand Trunk Pacific, the Transcontinental and the Intercolonial. Let me pause here for a moment to consider the Intercolonial Railway, and to point out the dissatisfaction and the unrest which the Maritime provinces have felt in this connection. The Intercolonial railway was built by the Dominion government at the time of confederation and was the fulfilment on the part of Canada of the pledge she owed to the Maritime provinces in the confederation pact. As I say, it was built and operated by the government under the control of the Minister of Railways. Now, I am not here to try to becloud any issue or to make any statement that cannot be borne out by the facts. But we all agree, I think, that for many years during the operation of that railway, under both governments, political influences were brought to bear upon the management to a greater or less extent. While, however, politics played its part in this matter, I do not see that it made very much difference whether either Liberals or Tories were appointed to work on the railway so long as they were reasonably fitted for their positions. But I

want to dwell on this subject for a moment in order to refute the untruthful propaganda which we have witnessed in this country in regard to the Intercolonial railway. And I would point out here that it was not the Liberal party but my hon. friends opposite who were responsible for placing that railway under the Canadian National system.

Mr. SUTHERLAND: Does my hon. friend suggest that it should be again made a political railway?

Mr. COPP: I have said nothing of the kind; I am not considering that question at all. Let me tell my hon. friend just what the situation is. When this government came into power it discovered the foundling on its doorstep, and after due consideration we decided that the best thing to do was to hand it over to the board of directors that had been duly appointed and have them manage the whole thing without political interference in any way.

Mr. SUTHERLAND: I hope the minister does not misunderstand me. He was referring to the Intercolonial railway, which in the past, he stated, had been a political railway, and he found fault with the present system. That is the reason why I asked the question. There is no use discussing the National Transcontinental: it is the Intercolonial to which the minister was referring.

Mr. COPP: As my hon. friend knows, there is only one railway. We took it as he and his friends left it, and we are carrying it on by a board of directors to whom we have handed over the system for operation, and we are not interfering with the board in any way at all. But my hon. friend from the city of St. John (Mr. MacLaren) and my hon. friends from other parts of New Brunswick and Nova Scotia are condemning me because I have not interfered, or helped to interfere, with the railway management in regard to the Intercolonial railway. I am putting the responsibility absolutely where it belongs. It belongs to the Tory party in this House.

Mr. MacLAREN: Does the minister assert that what was formerly the Intercolonial railway is now an integral part of the Canadian National system?

Mr. COPP: Yes.

Mr. MacLAREN: Then how does he reconcile that statement with the attitude taken by the Board of Railway Commissioners that the board has no jurisdiction over that portion of the national system formerly called the Intercolonial railway?

Mr. COPP: The statement I made is absolutely correct; my hon. friend well knows, that the Intercolonial railway to-day is a part of the Canadian National system under an act passed in 1919 when his friends were in power.

Mr. MacLAREN: Would the Secretary of State object to answering my question? Will he explain the attitude of the Board of Railway Commissioners, which, I understand, is quite the opposite to what the minister states.

Mr. COPP: If my hon. friend wants to get information regarding the jurisdiction of the Board of Railway Commissioners, I have no doubt that if he will see the chairman of the board he will be fully satisfied.

Sir HENRY DRAYTON: Will my hon. friend tell the House when the act of 1919 was put into full effect?

Mr. COPP: I have not that information directly before me. What I have stated in regard to the Intercolonial railway is absolutely correct. It was taken over and made part of the Canadian National system in 1919, and this government has not in any way interfered in regard to the management. Let me refer to a statement made throughout my province that I was negligent in my duty when Sir Henry Thornton took charge and he and his board divided the system into regional districts. I hold no brief for Sir Henry Thornton, but I believe in being absolutely fair and giving credit to whom credit is due. I am not a railway expert and never expect to be. As a Maritime province man, I tell the House frankly that I would be very glad indeed had Sir Henry Thornton and his co-directors seen fit to extend the Atlantic region to Montreal or even further west. They did not see fit to do so; no doubt they had very good reasons for their action. But whether the Atlantic region might be made larger has no bearing whatever on the future success of the whole system. It is purely a local matter in which we in the Maritime provinces are very much interested,—and, I am bound to say, very much disturbed. But I do not believe that any action taken by the board of directors is, like the laws of the Medes and Persians, unchangeable. I hope that the Canadian National Board will yet recognize that it will be just as advantageous to the whole system to enlarge the Atlantic regional district, and I shall always be willing to do anything I can to assist to that end—always bearing in mind that the system has been handed over to the board of directors to do the best they can with. I am bound to state that their management during the past

year has proven a wonderful success, and I hope it will continue so.

But, Mr. Speaker, what is the best way to impress upon Sir Henry Thornton and his colleagues the desirability of giving more sympathetic consideration to the requirements of the Maritime provinces? Do hon. members from the Maritime provinces endorse the language used by the senior member for St. John (Mr. Baxter) in an address which he delivered in New Brunswick a few weeks ago, from the newspaper report of which I may be permitted to quote the following lines:

> Dr. Baxter referred to the deportation of the Acadians nearly 200 years ago and drew a present-day parable. Developing his theme Dr. Baxter trained the darts of his satire on the head of the new president of the C.N.R., Sir Henry Thornton, whom he dubbed "that imported miracle of Mackenzie King, who was born in the United States, moved to Britain, was knighted for some pretended service, thrown out of a job in England and then brought here, Sir Henry Thornton, who is responsible for the second deportation of the Acadians."

Does my hon. friend expect to receive the sympathetic consideration and support of Sir Henry Thornton in respect to the requirements of the Maritimes by using such language? My hon. friend the Minister of Railways (Mr. Graham) referred to some other statements made in the province of Quebec by other hon. gentlemen who were members of the former Conservative government containing similar insinuations against Sir Henry Thornton. These attacks have been so frequent in the past few months that even the Ottawa Journal—a newspaper not friendly to this government—has at last felt it necessary to take editorial notice of them. In its issue of March 25th last the Ottawa Journal printed the following editorial:

> The real enemies of the system owned by the people of Canada and those who are doing most to discredit it are the men who, pretending to be friends, are using every means at their disposal to bring its management into contempt. Sir Henry Thornton stands to-day as one of the most successful railway men in the world and every traveller on the Canadian National Railways, and every man, company or firm that has business with it, will freely admit that there has been a vast improvement in service. As one of the leading members of the Conservative party in the House remarked the other day, "there has been such a change for the better in the service that one would not recognize it as the same system." Wolves in sheep's clothing in this matter spend most of their spare time in spreading propaganda of all kinds and degrees against the National system. The president, one of the hardest working men on the Continent, has not only struggled with the solution of the grave problems that confront him but is compelled to endure the attacks of the most unfair and virulent kind of propaganda. It appears in the press in spots and the whisperers are just as busy endeavouring to undermine the Canadian National Railawys through attacks on the president and the management, as they are in attempting to instil in the minds of Canadian people and the people of other nations as well, that Canada is on the verge of ruin. The greater the success of the system, the more virulent the attacks and the more insidious the innuendo against those in charge of it.

That is the statement of the Ottawa Journal, and it is an answer to what the hon. member for St. John and Albert said and to the assertions made in the province of Quebec, referred to by the hon. Minister of Railways (Mr. Graham) a few weeks ago. We find the Tory Ottawa Journal coming to the rescue of Sir Henry Thornton, saying not merely that he is a successful railway operator but that he is the most successful in the world. We were able to obtain his services and place him in charge of the Canadian National system, and I think we should be entitled to some credit for going outside and bringing in a man of that calibre and that strength and that reputation.

If there is some restlessness and, I must say, some degree of dissatisfaction in the Maritime provinces in regard to the Intercolonial Railway, the responsibility rests upon my hon. friends opposite. During the past two years I have received many complaints from citizens of my own province as well as of the other provinces in the Maritime group, on the ground that we have not used political influence in connection with the operation of that railway. I am not wedded to the idea that because a man is connected with political matters his opinion should not at any time be sought in regard to public ventures. But owing to the criticism levelled at the Liberal party in years gone by because of attempted political interference, I join freely and willingly with my colleagues, in spite of the fact that some small degree of dissatisfaction might exist in regard to unemployment in my own constituency and in other parts of the province, in saying to the people of the country: This railway is in the future a business railway and is to be operated in the interests of Canada as a whole, not of a few individuals, be their politics Liberal or Conservative, in the Maritime provinces or elsewhere. I may suffer because of taking that stand, nevertheless that is the stand I take, and I am prepared to assume the responsibility for it.

Mr. MARTELL: Will my hon. friend permit a question? Is he prepared to admit or to state as a fact that the Maritime provinces are not entitled to extra consideration on account of the Intercolonial Railway, and does he want to tie the Liberal party down to the government ownership of railways? If he does, many Liberals are against him.

Mr. COPP: I cannot make it any stronger than I have. The Intercolonial Railway is now a part of the great Canadian National system; it has been handed over to the board of directors headed by Sir Henry Thornton, and it should be operated entirely as a business proposition in the interests of all the people. If indirectly any sympathetic consideration should be given to the Maritime provinces on account of their peculiar situation, I feel sure that Sir Henry Thornton and his board of directors will give that phase of it the best possible attention.

Mr. MARTELL: If my hon. friend will pardon me again, is he prepared to say that we are entitled only to sympathetic consideration? Does he not regard our rights in respect to the Intercolonial Railway as a condition precedent to confederation? Have we not a right not merely to sympathetic consideration but to equitable and legal consideration?

Mr. COPP: That is a matter that is entirely in the hands of the board of directors.

Mr. MARTELL: It is not entirely in the hands of the board of directors.

Mr. COPP: The operation of this road is entirely in the hands of the board of directors. I am prepared to meet my friends in the matter of getting anything done for the Maritime provinces that can equitably and reasonably be done. I am simply saying that I have joined with my colleagues in taking the attitude that we are not going to resort to political considerations in that connection.

I should like to just refer to the attitude I took in 1919 when this matter was before parliament, on which occasion my views were placed on Hansard and before the public. When the bill amalgamating the different sections of the Canadian National Railway system was brought down, I opposed it. I believed that the Intercolonial Railway should have been retained as a separate entity as it was at the time of confederation, and I so emphatically expressed myself at that time. For many days the bill was before parliament, and after it went through the committee of the House and came up for third reading I moved an amendment that the bill should not then pass but should be referred back and be amended so that the Intercolonial Railway should not form part of the Canadian National Railway system, but should remain as a separate entity. These were my remarks:

> I register my protest against the Intercolonial being linked up to the Canadian Northern Railway system and the supplanting of the Intercolonial railway employees who have spent half a lifetime on this road, know the operations and are just as capable of occupying prominent railway positions in this country and fulfilling the duties appertaining to them as any person brought in from the outside. The employees of the old Intercolonial railway throughout the Maritime provinces are being supplanted by other employees who are not any more capable, but are, if anything, less capable, than the men who have occupied prominent positions on that road. I have no word to say against those who will manage the Canadian National Railways system or the Canadian Northern Railway. I do not know what their success may be. I trust it will be of the very best. I have nothing to say against the government for passing this measure and operating the Canadian Northern Railway, as it has been forced upon them. But I do protest against the amalgamation of the Intercolonial Railway with that system. It never was the intention at the time of Confederation that we should be linked up with that system and operated as a company road.

I placed myself clearly on record on that occasion, but my amendment was not accepted by the government of the day and as a result the Intercolonial Railway became a part of the Canadian National Railway system and so remains at the present time.

Mr. BAXTER: May I ask a question? If these are the minister's views, why does he not take the railway out, now that he is in power, and put it back where it was?

Mr. MARTELL: That is what I say.

Mr. COPP: The Intercolonial was made part of the Canadian National Railway system by our opponents; it was placed there and left there and is now in charge of the Canadian National Railway Board. When this matter was under consideration the Liberal party opposed the taking over of some of the systems, but I believe a large number of the people to-day, if not the majority of them, are in favour of publicly owned and operated railways and the Canadian National Railway system as at present operated. At the first session of parliament after the Liberal party came into power we told the people that we were going to give the Canadian National Railways and public ownership a fair chance —and we are doing so—by not interfering in any way with the board of directors appointed to carry on the work.

Mr. BAXTER: May I ask another question? Has the hon. minister changed his mind and come to the conclusion that the policy of the old one was the correct one?

Mr. COPP: I would ask my hon. friend if he has changed his mind in regard to the operation of this railway.

Mr. BAXTER: Yes.

Mr. COPP: My hon. friend, while he was not then a member of this House, was a member of the Conservative party at the time they passed the act taking over the Grand Trunk; in fact he has been a very influential member of the Conservative party ever since I have known him. My hon. friend now condemns the taking over of the Grand Trunk railway because of the fact that it is being operated, as he thinks, against the port of St. John, in favour of Portland, Maine. Well, my hon. friend supported his party at that time, and he was a candidate in the general election of 1921, and I would ask him if during his election campaign in 1921 he condemned the Conservative government for passing the legislation taking over the Grand Trunk. I submit that my hon. friend did not take that stand at that time. What did he say? I have here the remarks which he made on this subject during the session of 1922, when he found himself in opposition. It is all very well, Mr. Speaker, for hon. gentlemen to go around this country making speeches that will appeal to popular sentiment in their constituencies, but here we have on record what my hon. friend said in this parliament, namely, that his party when in power took over the Grand Trunk against the bitter opposition of the Liberal party at that time, because we found export freight going to Portland that we hoped would be carried to the maritime ports of St. John and Halifax. My hon. friend says that we should get clear of the Grand Trunk after we have acquired it. But what should we do with it?

Mr. BAXTER: I did not say that.

Mr. COPP: Let me read what my hon. friend said in the session of 1922. I am quoting from Hansard of that year, page 104:

> In dealing with the railways I want to deal with something that is of peculiar interest to part of the Maritime provinces. I believe that in what I am about to say I shall have the wholehearted sympathy and, I trust, the support of my hon. friend the Secretary of State (Mr. Copp) and also of every other member from New Brunswick who sits on your right, Mr. Speaker. During the campaign a very strenuous attack was made upon the then government party for its alleged actions with regard to the harbour of Portland, Maine. I felt, in fact I knew, that the newspaper allegations were not based upon facts. I want to say to my hon. friends that the problem now is theirs, a problem which otherwise the preceding government must have faced. From the standpoint of the city of St. John, where millions of the money of the taxpayers of that city had been expended, as well as many other millions of the money of the Dominion of Canada, for the provisions of wharves and railway facilities, I say that the time has come to do our business through Canadian ports; and if we are to have the obligation upon us of a vast railway system, we should at all events get for Canadian ports, and for no other than Canadian ports, every pound of freight and every passenger that that system of railways can carry. When the hon. Minister of Railways does deal with this subject in the House, I trust we shall have an assurance that this government will practically cut off the connection between Montreal and Portland, Maine, and will divert the traffic to our two great winter ports—ports that are fairly well equipped but will stand better equipping yet—the ports of Halifax and St. John. I would not like the government to think that there is any rivalry between our Atlantic seaboard ports in regard to this question. Our true position is to insist here with all the power at the command of every one of us from the Maritime provinces that Canadian trade, as was said by the late Sir Wilfrid Laurier, shall flow through Canadian channels; and to ensure this we must develop not only the ports of Halifax and St. John, but, in time, other ports in these provinces, to take care of the immense trade which this country will produce. But when this system of railways is co-ordinated we must not continue to utilize an outlet in the country to the south of us to the detriment of our own ports.

We must cut off this connection, my hon. friend says. Now where would he cut it off? The Conservative party took over the Grand Trunk, and took it over not with the consent of the Liberal party, but against the absolute opposition of the Liberal party of that day, and this is another matter that we have on record. We had a very long debate over the acquisition of the Grand Trunk railway in which I took part, and perhaps I may be pardoned for placing again on Hansard what I said with regard to it:

> May I be permitted for just a moment to refer to the effect that this proposition will have upon the ocean ports of the Maritime provinces? I may be accused of being sectional, but I am not prepared to accept that responsibility. We of the Maritime provinces are possibly somewhat jealous of the few little favours that we have received from the government during the fifty years of Confederation. We have in the Maritime provinces two great natural ports in particular of which we are very proud, and which we hope to maintain and develop as we believe they ought to be maintained and developed. A few evenings ago the Minister of Railways (Mr. J. D. Reid) referred to this matter, and the hon. member for Guysborough (Mr. Sinclair) asked him a question in regard to the operation of this road and as to the effect it would have. The answer made by the Minister of Railways was that in the operation of this system we must get the very best railway operating men possible, it does not matter where they come from, and this railway must be operated along business lines without political or other interference. That being so, if this system is to be operated in a business way by business men, by railway operators of wide knowledge and experience, what conclusion must we arrive at? If I may be allowed to repeat the illustration again, if it is going to cost more to take freight originating in any portion of the western country and coming down to Montreal, to Halifax for shipment from that port than to Portland, what must the business railway operating men say? They will say: We cannot take it to Halifax, we will take it to Portland because that is a shorter haul and the cost will be less. That being so, the ocean ports of the Maritime provinces must necessarily lose a large volume of the business, and the money expended by the government in the development of those ports to date must be to a large extent rendered unnecessary as

they will not be used, and those ports will suffer as a consequence. I realize that the operation of this road through American territory must of necessity draw trade away from the ports of the Maritime provinces, and we shall find our products and our ocean traffic going through foreign country channels by the operation of this road, according to the statement of my hon. friend.

That is the stand I took upon that occasion in regard to taking over the Grand Trunk. If the Grand Trunk had not been taken over, this question of the port through which the export freight of the West would go would not have been raised; but to-day it is a serious question for the people of the Maritime provinces and for the ports of St. John and Halifax, on which a large amount of money has been expended for development. The freight going over the Canadian National railways to the port of St. John to-day is practically nil. I hope that before very long this matter can be taken up and remedied. My hon. friend says that we must get clear of this outlet to Portland. Well, we have the road and it must be operated, but I have hope and very great confidence that after this matter has been given some study some reasonable arrangement can be made whereby a portion of the export freight from the western prairies will be brought down to maritime province ports. We had the very great pleasure a few weeks ago of having a number of the Progressive members, whom I see before me now, visit the Maritime provinces. They spent some time at Halifax and St. John looking over these ports, and I am sure they realize the splendid facilities we have there for the shipment of grain. Now, a question has arisen between the people of the Maritime provinces and the Board of Management of the Canadian National Railway system. Some people in the Maritime provinces say, and they think they are right, that the Canadian National Railways have a right to route grain just as they like. On the other hand, the argument is made that it is the right entirely of the shipper to say how his grain shall be routed, whether it is for export or for some local destination. But we shall never get anywhere by sitting down and grouching about this thing, that and the other.

The thing for the people of the Maritime provinces, for whom I have every sympathy and consideration, to do to-day, is to look into this question from a business standpoint. I think it would be wise on their part to choose a business committee who would do for the Maritime provinces what the Chamber of Commerce and Board of Trade of Portland, Maine, did for that city last year. I have every confidence that if such a committee were appointed and went to the West and explained the situation of the Maritime provinces to the people there, that a thorough understanding could be reached of the problems confronting both East and West, and the difficulties under which the respective communities labour. By a full understanding of the situation on the part of each, a solution of the existing difficulties could be worked out which would be beneficial to both the East and the West, and to the country as a whole. To represent Sir Henry Thornton as absolutely unsympathetic to the Maritime provinces is unjust; I have not found him to be so, and I hope it is not the case. I cannot for one moment believe that a man of his great reputation and experience would consider operating the National Railway system in any other manner than in the best interests of the country as a whole. For many years certain railways that compose that system were a burden to the people; but judging from the financial results of the last year or two there is reason to hope that that era will soon be over, and that in the near future the greatest benefit to the Dominion will flow from the operations of the National Railway system. The railway question is a big question and considerable time might be occupied in discussing it.

I have already talked too long or I would deal to some extent with the question of freight rates which has aroused considerable attention in the public mind. It costs considerable money to operate the National Railway system of Canada. It is a magnificent system, and ultimately may prove to be a big asset to the country, but it is costing the taxpayers of Canada a great deal of money We would all like to see a lowering of the freight rates. It is sometimes argued that if the rates are lowered the volume of traffic would be larger and the receipts would be considerably augmented. That is a question that remains to be settled but I can say from my own experience that the people from any section of Canada will be courteously and fairly treated in any representations they may make to Sir Henry Thornton, and their views will receive the most businesslike consideration. Any suggestions I make in this matter are not advanced in any spirit of criticism: I simply desire to say that if the people of any section of the Dominion have grievances, either real or fancied, it is their duty to place those grievances before the board of management and to endeavour to have their difficulties adjusted.

Let us try and realize that we are people of a common country with a great future before it. Let the people of the East try to understand the people of the West, and let those in the West try to get the viewpoint of eastern people. By doing that we shall be pursuing a course that is likely to yield a solution of our difficulties. One way to understand the western situation is to visit the West and talk to the people there. I paid a visit myself to the West and that formed the subject of some misrepresentation on the part of the leader of the opposition which, I may say, is his strong suit. It was represented that I journeyed to the West in a private car. I did not, I went in the ordinary way and had a good time. I met the people of the West and by personal observation realized what they were struggling against. The western people should also endeavour to familiarize themselves with the conditions in the East. If both sections of the country better understood each other's problems they would be better able to co-operate in developing this country in the future than they have been in the past.

In conclusion, I sincerely trust that the people of the Maritime provinces will abandon the policy of abusing each other, or abusing Sir Henry Thornton. I trust they will come to the conclusion, so far as the latter gentleman is concerned, that he is engaged in doing what he can, not only in the interests of the National Railways but for the benefit of the country as a whole. I believe that Sir Henry Thornton is just as friendly and sympathetic towards the Maritime provinces as he is towards any other part of the Dominion. Finally let me say that if we discuss our problems in the spirit which I have indicated there can be no doubt but that we shall arrive at conclusions which will be not only beneficial to the Maritime provinces but will be fraught with the greatest good to Canada as a whole.

Mr. L. J. LADNER (Vancouver South): If the arguments of the Secretary of State were as powerful as his voice, and were as vigorous as his manner in presenting them, we might expect to find nothing but whispers from any other portion of the chamber in any attempt at reply. I am especially impressed with the —shall I say—philosophical reference of the hon. gentleman to a consideration of national problems retrospectively, leading us to believe that he did not care very much what people thought in days gone by or how they solved their problems. The hon. gentleman closed with the statement that we must deal in the living present and not in the past. I commend to the hon. gentleman greater consideration for the experience of those who have gone before him. If he studies that experience he will perhaps find it easier to arrive at the solution of the problems of to-day. That observation has never been more applicable than it is to the question of the tariff which, after all, is the chief issue before the parliament and people of Canada to-day. For that reason I propose to occupy a few minutes to impress upon the House what I consider to be the wishes of 90 per cent of my constituents in a riding having a population of about 55,000 people.

The tariff has long been a subject of political dissertation. The other day I was reading an account of the origin of the word "tariff." It seems that the Moors about the 13th century had control of a little town named Tarifa about twenty-one miles from Gibraltar. Tarifa being in a very strategical position the Moors were able to collect tribute from ships that passed through the straits. Although other nations of Europe have not behind them the British Empire advantage of the bulwark of the great fortress of Gibraltar, yet they have copied from the Moors the idea of protecting their commerce and industry by a tariff, and to-day you find in every great commercial country a protective tariff very much higher than the one we have in Canada. Even the key industries of Britain, a country supposed to have free trade, are under a large revenue collecting tariff. The revenue collected by Great Britain from customs duties is five times more per capita than the amount collected by the United States. According to the Statesman's Year Book, the leading authority on statistics of Britain, the United Kingdom collected customs duties in 1920 to the amount of about $700,000,000, while the United States collected in the same year, $322,000,000, or in the case of the former, five times that of the United States on a per capita basis.

Before considering the question of a protective tariff, I would like to give the House what I believe to be a very good definition of it, one which was given by the late President William McKinley in his speech in congress, when he was an ordinary member, in 1888. He said:

> Our kind of tariff makes the competing foreign article carry the burden, draw the load, supply the revenue and in performing this essential office it encourages at the same time our own industries and protects our own people in their chosen employment. That is the mission and purpose of a protective tariff.

The outstanding message of the budget with its new fiscal policy which the government presented to the people of Canada is, to use the words of the hon. Minister of the Interior (Mr. Stewart, Argenteuil), "The death knell of the protective system." It also means

the embalming of the Laurier-Fielding tariff, properly known as the National Policy of Sir John Macdonald. It means the purchase of the political support of the Progressive party by acceptance of the Progressive platform, as set out in the memorandum of the Council of Agriculture to Prime Minister King and his cabinet on the 2nd April, 1924. It contains a message in utter disregard of the industrial and manufacturing interests of Canada. The people of Canada are again faced with the old issue of lower tariffs and free trade versus protection.

I ask, Mr. Speaker, what is the new policy which the government have adopted? They had their own platform of 1919, and it appears this is the first step in implementing by legislation a part of that platform. The fact is that the new policy which the government has adopted is identically the policy set out in the memorandum of the Council of Agriculture, delivered to the government, the Prime Minister and his cabinet on the 2nd April, 1924. This is a matter of such great importance to the commercial and industrial life of Canada that I desire for a moment to refer to some of the tenets contained in that memorandum which the government was asked to accept and which they did accept as set out in the budget. This memorandum of the 2nd April, 1924 says among other things:

> In the opinion of this delegation the most important question at present before parliament and before the people of this country is that of the tariff. From our point of view, the point of view of the agricultural industry, the system of protection is an unmitigated evil. The Canadian farmer sells his products in the markets of the world in competition with farmers in every quarter of the globe, and with some small exceptions he must accept world prices even for that portion of his produce which is consumed at home. The Canadian customs tariff cannot therefore be of any advantage to the farmer in protecting him from foreign competition and enabling him to secure better prices for his goods.
>
> On the other hand, when he goes to buy the things which he must have in order to live and to produce—his implements, his building materials, his food, clothing, furniture and the other necessaries of life, he must buy in a protected market and pay artificially enhanced prices.

Further down the same page I find the following:

> For many long years the farmer has been exploited and plundered by those who enjoy special privileges under the protection of the law.
>
> We sincerely trust the promise here contained will be implemented to the full, but we desire to say that so far as the agricultural industry is concerned a reduction in the duties on agricultural implements alone will not be sufficient to satisfy the demands of justice.

And in conclusion, the final basis of this new policy of the Liberal party, which is joined in holy matrimony with the Progressive party, reads as follows:

> We look forward to a time when possibly the tariff may be altogether abolished, and in the meantime we urge that so long as the tariff is retained it should be on a revenue basis.

There, Mr. Speaker, is the actual issue before the country. They look forward to the time when the tariff will be absolutely abolished.

An hon. MEMBER: Hear, hear.

Mr. LADNER: An hon. gentleman on my left says, "hear, hear." I have no doubt he was one of those hon. members supporting the amendment of the hon. member for Centre Winnipeg (Mr. Woodsworth). I submit, in opposition to the argument of the hon. Secretary of State (Mr. Copp) that we should look at the historical facts. If we look at the United States in its prosperity, we must know that there are reasons for that prosperity and for the advancement which the United States has made. The northern and southern halves of the North American continent are somewhat similar, in geographical area, in natural resources, in physical configuration, and in nearly every way. The two countries were discovered about the same time. The settlement of the United States took place perhaps a little earlier than that of Canada, but what do we find? The United States is a great, powerful and prosperous nation, with 110,000,000 population, while Canada contains only 9,000,000 people, not prosperous; and there are not so many people coming into Canada as are leaving it. While the United States are putting up barriers and trying to devise ways and means to prevent people coming into that country, Canada is spending her thousands of dollars in Europe endeavouring to induce people to come here. I ask why does that state of things exist? Why are people rushing to the United States, and why can they not be induced to come to Canada? My contention is that it is because the United States some 60 or 70 years ago adopted a protective tariff, and although her prices may be theoretically high—yet in fact they are not and I will prove that. The standard of living and the wages people are able to earn there are sufficiently high to cause people in other countries, where the standard is lower, to go to the States to seek the comforts and the benefits of that new country. There was no other cause or reason why the people of Italy, France, Germany, Britain, and all other countries in Europe should leave their homes, their shores, their race, their traditions and their country to go to the United States.

5 p.m.

We find that the United States adopted protection as early as 1789. At that time the protection was about eight per cent. In 1816 it was raised to about 25 per cent. In 1828 their protection averaged about 41 per cent. Then they adopted a lower tariff and the country suffered from depression, but in 1861 the principle of protection was reasserted, and the protection was increased again in 1864. In 1890 the McKinley tariff brought the average protection up to 48 per cent. In the late Fordney tariff we find a new assertion of the idea of the protective tariff. If hon. members study economic development of Canada and the United States they will find that protection, prosperity and good wages always march together, and that low tariff, depression and low wages have likewise gone together. That is an historical, economic fact.

In Canada we have pursued a different course. The protective system was not adopted in any real way until 1858, and it is interesting to note that between 1874 and 1878, whan the tariff was considerably lower, the country suffered as we all know, one of the worst depressions. In 1862 the Hon. Alexander T. Galt, Minister of Finance, made his speech introducing the budget, and reading that speech one would think he was listening to the words of the present Acting Minister of Finance (Mr. Robb) when delivering his speech the other day. Contrary again to the view of the Secretary of State, as expressed in his speech this afternoon I say we must look at the historical development and the progress which was made in the past, and see how it has worked out. The protective principle in Canada was established as such in 1858, for the first time. In 1862 the duties were being reduced somewhat, and Mr. Galt made certain predictions which I think are interesting. He, as the then Minister of Finance, in making his budget speech said:

> We now have an opportunity of reinvigorating our trade by reducing the duty on foreign goods. I propose making a reduction of the 20 per cent list to 15 per cent, and of the 10 per cent list to 7½ per cent. (Hear, hear). . . . I think the time has come when it will be found advantageous to our revenue to aim directly at one object in the alterations we propose—we must seek to get the utmost we can, coupled with unrestrained and unembarrassed trade. If on the one hand we get increased trade by a low tariff of customs, it is equally clear on the other that every article made in the country will be decreased in value to the consumer by the reduced amount of duty imposed upon that particular article at the custom-house.
>
> We cannot avoid seeing that one of the causes which will operate against the United States,—

And I commend this prediction to hon. gentlemen.

> —both in retaining their present inhabitants and in attracting additional population, is found in the very high duties they have been compelled to impose. If our duties are less than theirs, we may reasonably hope that a large amount of immigration may be attracted to our shores. I think, also, it will be found that a very considerable increase in our trade will be the result of the mode I propose to adopt in the imposition of duties.

The fact is that, contrary to the prediction of Sir Alexander Galt, far from high duties causing the people of the United States to leave that country and come to Canada, and injuriously affecting American prosperity, the protective policy has done the very reverse; for the American people did not come into Canada as was anticipated by the then Minister of Finance.

I have received a return from the Dominion Bureau of Statistics data giving the ad valorem rates of customs duty on dutiable goods imported into Canada and the United States respectively for the fiscal years 1870, 1880, 1890, 1901, 1911, 1923 and 1924. The figures are as follows:

Customs duties on dutiable imports—	Canada Per cent	United States Per cent
1870..	20.9	47.08
1880..	26.1	43.48
1890..	31	41.41
1901..	27.5	49.64
1911..	25.9	41.22
1923..	24.9	36.07
1924..	22.7	about the same

In other words, the duties of the United States during the last 55 years have been from 50 per cent to 235 per cent higher than those in Canada; and I submit that this is what has produced a higher standard of living and higher wages in the United States as compared with Canada, this is what has attracted immigrants from foreign countries to build up that country to its present status. These are arguments based on historical experience which it is hard to contradict. But perhaps some hon. gentleman might say: it is true that the duties have on an average been higher in the United States than in Canada, but what about the cost of living? Well, I have had a return made by the Bureau of Statistics regarding this point also, and I find, according to the schedules which I have here, that since the year 1890 the cost of living in the United States has been as low as it has been in Canada, or lower; it has never been higher. If you take both wholesale and retail prices and compare the two countries you will find that the cost of living has been lower in the United States. As regards population, the figures which I have secured are instructive. I shall give them in round numbers. In 1870 the United States had a population of 38,557,371 as compared with Canada's 3,689,257; in 1880 the popula-

tion in the United States was 50,000,000 and in Canada 4,300,000; in 1890, the United States, had 63,000,000 and Canada 4,800,000. And at the end of each of the three years 1900, 1910 and 1920 the population of the United States stood respectively at 75,000,000; 91,000,000 and 106,000,000 with Canada at 5,300,000; 7,200,000 and 8,788,000. The increase in the United States has been enormous, and it has not been all a natural increase, much having been due to immigration. These are staggering facts of an authoritative nature which one can well consider as a sufficient warranty for the future policy of this country being in keeping with the course which has been pursued in the United States. I submit that the trouble in Canada has been that we have had, not too high a tariff but one that has not been high enough; because if your tariff is high the standard of living is bound to go up, you increase the production in the country for the home markets, and you have increased competition. And it is increased competition that keeps down prices. My hon. friends to my left smile at this, but I can assure them that I am able to submit authorities and data to convince them on the question.

Let me consider for a moment what has happened to our own population. We find that in 1920 the emigrants from British North America—Canada and Newfoundland —to the United States numbered 90,000; in 1921, 72,000; in 1922, 46,000 and in 1923 117,000. On the other hand we find that the immigrants arriving in Canada from all countries have been as at the end of March, in 1921, 148,000; in 1922, 89,000; in 1923, 72,000, and in 1924, 148,000. It is obvious therefore that our population has been steadily drifting to the United States, and the reason, I submit again, is that the standard of living in the protected country is higher, and the competition which exists brings prices down to make the cost of living low. Organized labour, too, has been able to maintain the rates of labour at a good level. The fact is that those countries that have maintained a high tariff, and which by means of mass production have been able to export to a very much greater degree than weaker countries like Canada, are able to offer inducements to immigrants which are not afforded under a low tariff.

There is another extremely important thing which we cannot ignore and which faces Canada as insistently to-day as any situation has ever confronted a nation. Beyond the Pacific, in China and Japan, there are teeming millions of orientals who provide what practically amounts to slave labour; they work for from 5 to 10 cents a day. So that the industrial development of those countries is advancing rapidly. I would ask my hon. friends to my left, therefore, to consider what the situation would be in Canada if China and Japan made any considerable industrial progress during the next ten years, as it is highly probable they will, with cheap labour at from 5 to 10 cents a day, and if they were able to bring their products into this country. What would become of the industrial and social life of Canada? We should be obliged to lower our standard to those of the Japanese and the Chinese if we wished to survive industrially. There is no question about that. Consider the situation in Europe at the present time.

Every country in Europe is highly industrialized and has the advantage of very cheap labour. At the present time we are importing goods from Germany and other continental countries to the displacement of our own. We lower our tariff while the United States raise theirs. Our neighbours by their tariff policy foster their manufacturing interests and protect their workmen; they hold their own home market and export their surplus production. On the other hand, we allow the whole world to invade our home market, and we do nothing by tariff legislation to encourage mass production. Why is it that people from all parts of the world are so eager to get into the United States that the government has to put up barriers to restrict their ingress, while we in Canada are spending hundreds of thousands of dollars every year to attract immigration? It is simply because we have not followed the policy of our neighbours to the south, the policy of reasonable protection that will protect our industries.

Let me be specific and take the actual experience of Canada by showing the results of the application of the National Policy during the three years from 1879 to 1882. At the time of the introduction of the National Policy conditions in the Dominion were similar to those obtaining at the present time—people were leaving the country, there was financial stringency, accompanied by depressed trade conditions. I would commend to the notice of hon. gentlemen the speech of Sir Leonard Tilley, then Miniser of Finance, delivered in 1882, in which he made an able and exhaustive analysis of the application of the National Policy during the three years from 1879 to 1882. He showed from data secured as the result of exhaustive inquiries that the number of factory employees during

those three years had increased 17 per cent; 100,000 more people were employed, factories were working full time; wages increased between 5 per cent and 35 per cent and 10,000,000 bushels of grain were consumed in the first two years of protection more than in the last two years of free trade and low tariffs. To show with what care the data was secured, Sir Leonard Tilley informed the House that he had instructed his investigators to "get data that could not be shaken by any statement of fact that could be produced in the House." Farming conditions were much improved and the farmers' home market was greatly increased. A prominent Liberal manufacturer named Green was asked the question:

> If wages were high how could the price of commodities be low?

This was the manufacturer's reply:

> Now we have doubled our production we have orders ahead, our expenses of management have not increased, and we can sell at lower prices than we could before.

Looking at the improved conditions from the standpoint of the farmer, the labourer and the mechanic, we find—and these are actual authoritative figures which can be verified at any time—all agricultural implements were from 5 to 20 per cent cheaper; for instance, ploughs were 15 per cent less; carriages which in 1871 cost $110 and in 1881 were $105 had dropped to $100; furniture of common quality was obtainable at low prices; stove castings and hardware were a little higher; wagons which sold at $64 in 1871 and $62 in 1878 had been reduced in price to $60 by 1881; boots and shoes were less, with the factory wages higher; tea was 5 or 6 cents a pound cheaper; sewing machines were $10 cheaper; the average price of woollen goods was lower than it had been for ten years prior to 1878; flannels and blankets were at as low a price as at any time within the past ten years, although the average duty on woollens had increased from 7½ to 9 per cent; farmers' products had a better home market, higher prices being obtainable for vegetables, fruit, poultry, lamb, butter, cheese, oats and corn. In short, to use the words of Sir Leonard Tilley:

> The labourer was getting higher wages, the manufacturer was making more profits, the farmer had a demand at good prices for all his products, the merchant had doubled his business, and the government's finances were in a very satisfactory condition.

Those were the results of three years' operation of the National Policy. And it is a well-known fact that in 1874 the United States raised their tariff. The mistake we have always made is that instead of keeping pace with the United States tariff duties we have allowed ours to remain as low somtimes as half those of the United States.

This budget is the result of the importunate demand of our grain-growing farmers. In this connection it is interesting to notice how this section of our agriculturists stand in regard to the total agricultural production and wealth of the Dominion. I have collected some data from the Monthly Bulletin of Agricultural Statistics for March, issued by the Department of Agriculture. No doubt most hon. members have received their copies. There can be no doubt that the readiness of the government to lower the tariff is actuated by pure political expediency in order to retain the support of their Progressive friends. That, of course, is their own business, but so far as the real interests of Canada are concerned, I submit the government has delivered a staggering blow to our economic life, and I shall endeavour to prove this from the data I will refer to. The gross agricultural production in Canada in 1923 was $1,342,000,000. Of this amount the three prairie provinces Alberta, Saskatchewan, and Manitoba produced approximately $575,000,000 in general agricultural produce. The rest of Canada produced about $767,000,000. Therefore the agricultural production of the three prairie provinces constituted 36 per cent in value of the total agricultural production of the Dominion. So in effect the demand for lower tariffs comes from those responsible for 36 per cent of our total gross agricultural production only. Let us consider for a moment the total gross agricultural wealth of Canada. It is estimated in 1923 at $7,365,000,000, of which the three grain-growing provinces, Alberta, Saskatchewan and Manitoba, own $2,337,000,000, or 31 per cent. These three provinces have 22 per cent of our total population. But I submit that it is not all our agricultural producers who would insist upon lower tariffs. Many of them produce commodities which require a home market. This budget is the result of the political insistence of the grain-growing and grain exporting element of our farming population. But we must remember that a considerable amount of our agricultural production is exported. The export of wheat and wheat flour from Canada for 1922-23 amounted to 280,000,000 bushels, which, according to the prices contained in this statistical pamphlet, were valued at $185,000,000. This export wheat and wheat flour amounted to 14 per cent of the total gross agricultural production, which means that the producers of that 14 per cent of the gross agricultural production of the country are dictating to the government a fiscal policy for Canada. In its

last analysis that is exactly what this proposition comes down to.

I would like for a few minutes to refer to the application of the budget to my own province of British Columbia. The outlook of the Pacific province is one of commercial, industrial, agricultural and mercantile development. We are a diversified province. We do not make our living entirely by growing wheat or by producing lumber or by following any one particular industry. The natural resources of British Columbia make that province eminently fitted for manufacturing and for commercial and mercantile life, and it is from that aspect that I propose to point out to the government the extent of the injury which is being inflicted by the present budget on the future prosperity of the people of that province.

In order to judge the situation rightly we must find out what the production is in these different natural resources. In 1923 British Columbia produced in agriculture $55,000,000 worth; fisheries, $20,000,000; minerals—second only to Ontario—$44,000,000; forest products, $82,000,000. It is interesting to note that British Columbia has 50 per cent of the commercial standing timber of Canada. Last year the export of lumber from British Columbia increased by 91 per cent over that of the previous year; the log scale increased 33 per cent. A very large and extensive shipping business is carried on. With respect to sea-going and coastal vessels entering and clearing from Vancouver in 1923 as compared with Montreal, the figures are as follows:

	No. of vessels	Total tonnage
Montreal..	13,906	14,692,000
Vancouver..	26,480	14,184,000

In other words the shipping business of Vancouver is about equal to that of Montreal. British Columbia is third in the Dominion in manufacturing as regards number of plants, capital invested, production, and variety of articles produced. The figures I am about to give are taken from statistics compiled by the Department of Industries, being a department of the provincial government at Victoria. The number of articles manufactured last year was 482; number of plants, 2,718, nearly one-half being in Vancouver; number of employees, 41,000, with a pay roll of $86,000,000 and a capital investment of $225,000,000; gross value of production, from manufacturing businesses, $258,000,000. The budget lately brought down, as worked out by the experts in the Vancouver Board of Trade and by business interests in the city—the Vancouver Board of Trade is a very large institution, comprising some two thousand members—the budget as it relates to the industries of British Columbia, both directly and indirectly in an important way, affects 120 industries with a payroll of $43,000,000 a year, having 15,300 employees, or one-third of the wage earners of British Columbia. That is what the fiscal policy of this government means to our province; it is a stab at its industrial and commercial future, and it affects directly one-third of the pay-roll and one-third of the wage earners of that province. That is how serious it is.

In order that I may not be accused of speaking in generalities I will refer the government to a memorandum, a copy of which I believe they received, regarding the tariff changes affecting machinery and equipment manufactured in British Columbia, issued by the Metal Trades Employers' section of the Canadian Manufacturers' Association, British Columbia division. There are 37 firms concerned, some being very large and important establishments, and the absurdity of the tariff reductions made by the government as affecting British Columbia is so cogently and so emphatically set forth in this memorandum that I hope that the members of the government, and especially the Acting Minister of Finance, will read it again and again. They point out that Washington and Portland, which are the western competitors in certain lines of machinery, have been obliged under the old tariff to sell their machinery in British Columbia at a higher price than the local product. Some may ask, then why object to the reductions in duty? The objection is this: You are again faced with the principle of mass production. In Washington they have a larger market to supply; they have a larger production, and if you reduce the duty a little bit it means increasing their production a great deal and by that surplus or mass production they can put their product on the British Columbia market and force the industries of that province to cease. That is exactly what is going to happen under the arrangement made in connection with the present budget. I understand that certain loggers' associations and other people interested in getting out the natural resources affected by this budget formally requested the government—and I believe they had their inspiration from some sources here—to make the reduction on these implements.

Mr. STEWART (Argenteuil): Was there no inspiration in the other case?

Mr. LADNER: Well, the other case is the signed statement of business concerns which are hit by the budget, 37 of them. These are responsible people.

Mr. STEWART (Argenteuil): Are the loggers not responsible?

Mr. LADNER: I made no suggestion that they were not; I simply say that those signing this document are responsible persons. There may be two sets of responsible persons. But the data accurately worked out here shows that the small amount which would be saved the logger on certain machines would be merely a drop in the bucket so far as his financial activities and his investments are concerned. On one large machine involving some thousands of dollars the reduction in duties enables the logger to save perhaps, $200 or $300, but his investment in the business to make it successful is so large that the saving of this two or three hundred dollars will make him neither wealthy nor prosperous, but will in the end put out of business the people who are manufacturing these particular articles. The absurdity of such a policy as that must be apparent to hon. gentlemen opposite. Suppose a man built a sawmill requiring a planer. He may spend perhaps $100,000 in constructing that sawmill.

Mr. STEWART (Argenteuil): Has not the manufacturer of the articles my hon. friend is mentioning still the benefit of 20 per cent protection?

Mr. LADNER: Protection in what?

Mr. STEWART (Argenteuil): Does he not get 20 per cent on those machines?

Mr. LADNER: Twenty per cent, certainly, but I am endeavouring to show—

Mr. MOTHERWELL: That is twice too high now.

Mr. LADNER: The Minister of Agriculture says it is twice too high now. He is trying to do what will meet with the approval of the grain exporter; he is not so much concerned about the industries of our country as he is about getting the maximum price for his grain and in producing it as cheaply as possible. That is reasonable; nobody objects to that, but I say we must take a national view of this question, not a local or parochial view, such as was taken by the Minister of Agriculture throughout his speech the other day. We must take a broader view of it, and my contention on machinery is this: While you may save two or three hundred dollars on your planer, that is a mere drop in the bucket compared with a capital investment of $100,000 in your sawmill, and it will neither make the enterprise successful nor materially interrupt or interfere with the dividends; but by reducing the duties you put out of employment the men in British Columbia who are making the machinery. What good is there in that? These firms who are making the machinery employ people who make their homes there, and must buy lumber to build their homes, and in that way they help build up the cities and towns and make the country grow. The United States has endeavoured to keep her workmen and her business men at home by creating the economic barrier of a tariff around the country, so that Chinese and oriental labour and the cheap labour of Europe cannot flow in and compete with their own workmen. But the policy of this government is to drive from this country not only the industries, but the many thousands of people who work in them, and this budget, as I said before, affects one-third of the industries of our province.

Now I would like to read one or two extracts from this memorandum issued by the Metal Trades Employers' Section of the Canadian Manufacturers' Association and sent to the government:

> It might not be out of place to point out that no change is provided for in the budget in the protection afforded the Canadian manufacturers of other types of rolling stock. Evidently, Canadian railways are able to buy satisfactory equipment from Canadian car manufacturing plants, and are satisfied with the prices charged by those plants in comparison with the prices obtaining on box, flat, gondola and other cars in general use in the United States.
>
> We therefore fail to see the justice of singling out one class of manufacturer turning out a type of equipment peculiar to the requirements of British Columbia, as has been done by the government in reducing the duty on logging cars from 30 per cent to 20 per cent.

I ask hon. gentlemen opposite, and particularly the Minister of Public Works (Mr. King, Kootenay), who comes from British Columbia, what possible answer there can be to the statements contained here. Why have they killed or are killing this industry which makes a type of rolling stock peculiar to the requirements of British Columbia while at the same time they leave the great industries of this country which make cars for the railways free from tariff reductions. Where is the justice in that? It seems to be the very consummation of iniquity. This memorandum concludes with this very significant statement, and one of the members of the cabinet will be interested in this assertion contained in this memorandum, which is signed on behalf of these thirty-seven firms in Vancouver and other parts of the province:

> One of the federal cabinet ministers in reply to representations made to him in this connection states that the government believes that the tariff reductions will stimulate industry in British Columbia and create a larger market for the product of the British Columbia machinery manufacturers. We are not prepared to admit that these tariff reductions will stimulate the logging, lumbering or mining industries in British Columbia to the slightest degree.

And that is the fact. It goes on:

As a matter of fact, American capital has in the past two years been flowing steadily into British Columbia for investment in logging, lumbering and mining enterprises. Any hesitancy we have heard expressed—

And these are business men talking, not theorists sitting in government positions.

—on the part of American investors in connection with the lumbering business has been the uncertainty of policy on the part of the provincial government in connection with strictly provincial legislation, and having nothing whatever to do with the tariff, and as stated, we do not believe that the changes which have been made on lumbering and logging equipment will have the slightest effect in stimulating the lumbering industry.

Sir HENRY DRAYTON: Who is the cabinet minister referred to?

Mr. KING (Kootenay): Just to relieve my hon. friend's mind, I might say that I, as one of the ministers, have advised them of that opinion.

Mr. LADNER: Is it then the Minister of Public Works who is referred to in this memorandum?

Mr. KING (Kootenay): I think so.

Mr. LADNER: Let us see how the memorandum concludes:

It is true that the tariff reductions doubtless will stimulate the importation of American equipment for the normal number of new installations which would take place even if no change had been made in the tariff, as well as for the replacements and repairs, but that stimulation can only be at the expense and not to the benefit of British Columbia metal trades employers. The lower tariff which the government have submitted to parliament will, we believe, jeopardize the position of the numerous British Columbia plants built up under the old tariff, will disrupt their organizations, lessen or eliminate their pay-roll entirely and ultimately react on the forcing interests who have inspired the government in bringing about this change in the tariff.

In other words not only will these industries which have been created to supply special demands in the logging and mining industries be put out of business, but logging and mining will also suffer as a result, and certainly will not benefit, as stated in this memorandum, to the slightest extent.

Mr. PRITCHARD: Does the hon. member consider that the Canadian tariff has been high enough during the last twelve or fourteen years to satisfy the manufacturers of this country?

Mr. LADNER: I have been endeavouring to show, and the point I wish to make is, that our customs duties have not been high enough, that the United States have maintained a customs tariff for the last fifty-five years that is from fifty to two hundred and fifty per cent higher than ours.

Mr. PRITCHARD: Why did not the hon. member's government make the tariff higher when they had the privilege of doing so?

Mr. LADNER: The United States has maintained a higher tariff with the result that it has been able to build up its industries and keep its workmen at home, and we are gradually struggling to get back to this country our workmen who have left.

Mr. PRITCHARD: Why did not your government make the tariff high enough in the ten years they were in power?

Mr. LADNER: No doubt because they encountered such a vociferous and strenuous campaign, political and otherwise, from the provinces and other portions, from the members of the present government, for instance, against any raising of the tariff. But I am not speaking for the previous government. I am simply giving my own ideas based upon some study of the historical development and upon some examination of the statistical facts to-day, and I say that if we, the northern half of this continent, had maintained the tariff of the United States we would have approximated them in population and prosperity.

Mr. PRITCHARD: If the hon. member had had the tariff high enough to suit his purpose, does he think that would have prevented the emigration that has been going on from this country? Would we have been able to assimilate all our immigrants?

Mr. LADNER: How does the hon. gentleman explain that the United States have assimilated their immigration? We are not different from the United States, except that we have a greater area, a larger acreage in wheat, greater mineral and lumber resources; in fact, we excel her in all our natural resources.

Mr. PRITCHARD: Provided you had accomplished your aim, where would you have got a market for your stuff?

Mr. LADNER: We would have got a market primarily at home, because we would have had the people to consume the produce, and in addition a situation which would have attracted capital in here. That would have enabled us to expand our industries and engage in mass production like they do in the United States, and we would have to search the world for a market for our surplus production, just as the United States is doing to-day. Instead of that, we are to-day the objects of the surplus production of the United States, and our own workmen are being driven from this country because cheap goods from China and Japan, where the

workmen work for five and ten cents a day, and from Germany and Great Britain, with their highly industrialized system, are coming into this country, and all we are doing, in the words of President McKinley, is carrying the burden and drawing the load instead of the other fellow.

Mr. PRITCHARD: Does the hon. gentleman think that the Americans have succeeded in creating a satisfactory market for the farmers of the United States when so many states of the Union have practically become bankrupt in the last few years?

Mr. LADNER: The great trouble with hon. gentlemen to my left, and I have the most kindly feelings for them, is that they make this great mistake—they look almost entirely to the interest of the farmers and grain growers rather than to the interest of the people of Canada as a whole. If the United States had adopted that policy, I mean the policy of aiding only the agricultural interest, it would not have been the country it is to-day. But it adopted a national policy and built up the United States as a self-sustaining, unifying economic entity. It now occupies such a strong position that in recent years it was able to combat the disturbing economic forces of the rest of the world, and to gain for itself the prosperity it now enjoys.

Mr. PRITCHARD: I do not wish the hon. gentleman to misunderstand me. I am just as anxious to develop Canada as he is and if we can do that by building up industries by all means do it. But I cannot understand how we are going to absorb the hundreds of thousands of people who are coming to our shores in the manufacturing industry. We do not want them on the land because there we are already producing a surplus for which we cannot find a market.

Mr. LADNER: With a real national policy we should absorb them as the United States did. Then we should have a home market. We have a certain industrial development to-day and what is the result of the application of this budget and of the low tariff that we have had for a number of years past? People have been leaving the country. It does not require many people in a community to create commercial activity; but if you take away a certain proportion of the number then there are so many less people to consume what other people produce. The policy pursued by the United States, and the figures I read a few minutes ago demonstrated the fact, has built up that country and established a home market.

Mr. MILLAR: Will my hon. friend explain why the American farmer is worse off than the Canadian farmer at the present time even though the United States has such a home market and has a population twelve times greater than we have.

Mr. LADNER: Yes, I think I can. There has been a surplus production on the other side of the line. In past years a great amount of land has been brought under cultivation and they have gone on increasing their production with the result that the supply has been greater than the demand. The depression which has prevailed has been world-wide and you cannot frame a policy to meet a temporary condition. In devising a policy we have to be guided by the experience of the past, and by the course pursued by other nations. We must try, as far as possible, to make our country self-dependent and self-sustaining. Of course, if hon. gentlemen do not believe in becoming a national entity, in building up Canada as a great self-sustaining country like the United States, I suppose they will carry on their activities on a free trade basis.

Mr. MILLAR: What is the object of going on producing if the home market is not any good?

Mr. LADNER: The people at home must live, you cannot leave them to starve. They will consume what they require, and if more is produced than is required you have a surplus and you have low prices. But that is only a temporary condition which in time will adjust itself in accordance with the economic law of supply and demand. In the course of time people who find it unprofitable to produce at these cheap prices will find that higher prices will prevail because there will be fewer farmers producing. Having supplied the home market the producers will then be able to ship whatever surplus they have to the markets of the world.

Mr. PRITCHARD: The hon. gentleman advocates protection on imports from the United States in order to create a home market in Canada. He says that is what has been done in the United States. But apparently the results achieved there have not been what were expected; the farmer has not got his home market.

Mr. LADNER: Where do they get their food? Do we send it to them?

Mr. PRITCHARD. Does not the hon. gentleman know that the prices of food products are regulated by the markets of the world?

Mr. LADNER: That is not the point. The farmers of the United States are substantially supplying the home market. My hon. friend will find there is not a great volume of agricultural products going into that country from the outside.

Mr. MOTHERWELL: This is a dialogue.

Mr. LADNER: I would not mind if the Minister of Agriculture participated in it too. He did not say very much in his recent speech and he has the opportunity to make up for it now.

Mr. MACLEAN (York): Come on in, the water is fine.

Mr. LADNER: I do not think anything is lost by a little exchange of ideas. We get up here with prepared speeches and sometimes advocate theories that are not very wise. So it does not do a bit of harm, even in the case of members of the cabinet, for hon. gentlemen opposite to exchange views with hon. gentlemen on this side.

I have departed somewhat from my notes. However, I have covered my subject in its entirety with the exception of one question and that has to do with the boot and shoe industry in British Columbia. I have a communication from the manager of a leading concern which has been in business there for a number of years. It deals with the effect of the British preference and this is what the writer says:

> Shoe workers in Great Britain only receive about half the wages that the same operators get in this country and in addition they are manufacturing their shoes from German leather and using other materials which are obtained from Germany. It is impossible for us to compete with this. We have not made any money in our manufacturing department for several years and unless things take a change for the better soon we will have to give up the manufacturing business. We are operating with about thirty-five to forty less hands than formerly and to these we can only give work four or five days a week. If the government think they are going to build up a country by cutting off the protection they are greatly mistaken. Our employees and their families and others like them will continue to drift to the States where they can get work.

There you have a business man, connected with a large manufacturing industry, writing to a member of parliament and urging him to bring before the country the conditions of that industry. A large sum of money has been invested in that industry, several scores of people are employed by it, and these men have their homes, and form a large body of consumers. The question is simply this: Is it in the interest of Canada that ten, twenty-five, forty or fifty cents be saved on a pair of shoes and an industry of this character destroyed? Is it to the interest of this country —as it has been held to be for many years past—to protect our industries or is it better instead of allowing for a period of temporary depression, to eliminate these industries and force the people employed in them to move to other countries? Should we not protect our industries so that we may have them here when times are bad as well as when times are good?

Mr. MacLEAN (Prince): Is the hon. member in favour of the British preference or would he prefer to see it abolished?

Mr. LADNER: I am in favour of protecting our industries, and if the British preference works against that principle then I say it should be modified accordingly, to keep it as it is would not be in the interests of this country. I do not think it is in the interests of this country. When we placed the proposal before the British people of a preference we were told it was not sound economically and they did not want it. I do not see why on a business principle we cannot regard this matter in the same light, and I believe we should. I stand for a reasonable protection and not for an arbitrary protection. I believe, Mr. Speaker, we should protect those industries which exist here; give them protection in order to retain them in this country and to encourage others to come here. We should protect the industries which are indigenous to the country, those which manufacture products from the natural resources of Canada; and, contrary to the views of the Secretary of State (Mr. Copp) if we follow a policy similar to that pursued in the United States since 1828 we will find that Canada will become a prosperous and happier nation; and our children will be able to live under the British flag.

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

Mr. R. E. FINN (Halifax): In rising to offer some remarks on the budget that was presented to parliament on April 10, I desire first of all to tender my sincere felicitations to the Acting Minister of Finance (Mr. Robb) on the able presentation he made to the House of the conditions of the country and the fiscal changes that are to be made to bring about, as I hope and believe, beneficial results to agriculture and the other

pursuits akin thereto, as well as to the great industrial activities throughout Canada. The Acting Minister of Finance is to be congratulated on the lucidity of that presentation, and to be commended on the fact that so short a space of time sufficed him in which to make so important an announcement to this House; for within the four corners of his comprehensive budget there is spelt the future prosperity of this Dominion, or at all events, undoubtedly, the prosperity of the country in the coming year. I am sure that hon. gentlemen will congratulate the minister most heartily not only from this side of the House but from the ranks of those who represent the people of western Canada, the Progressives; and I am inclined to think that in the hearts even of hon. gentlemen of the official opposition there is a feeling of admiration for the acting minister. But because of party considerations those gentlemen are prevented from either congratulating the Acting Minister of Finance, or giving credit to the government led by the Prime Minister (Mr. Mackenzie King).

I regret very much the absence of the Minister of Finance (Mr. Fielding) who, had he been able to be with us this year, would have delivered his eighteenth budget speech. I am sure that every hon. gentleman in this House, irrespective of party affiliations, will join me, as a fellow Nova Scotian with the Minister of Finance, when I say that there is no outstanding figure in Canada comparable with him to-day; nor is there any hon. gentleman in this House or outside of it, who excels him in sterling integrity and nobleness of character, and in those other fine attributes that make him the princely man that he is—the little gray man from the East. When I look back on the record of the Minister of Finance it is with a degree of pride and pleasure that I call him the son of Nova Scotia. Perhaps the first political thoughts I had I gathered from him as a young man in the city of Halifax; the political ideals I possess to-day I gleaned from him in my early life when he was the Premier of Nova Scotia. And later on in the parliament of Canada he and the late lamented chieftain of the Liberal party, the Right Hon. Sir Wilfrid Laurier, inspired me with political principles which I hope, with God's grace, to carry with me to the grave. I hope therefore that the day is not far distant when the Minister of Finance will again meet with us in this House, if not immediately to assume the onerous duties inseparable from the administration of his department, at least to take an active interest in the government of the country. I trust that, so far as his health will permit, he will be able to give his wise counsels to the government, to this House and to a country which he helped to make grand and great. The fiscal policy known as the Laurier-Fielding tariff, of which he was primarily the author, was instrumental in bringing about that golden era of fifteen years; and Canada's position under the influence of that policy is a sufficient answer to the carping criticisms of hon. gentlemen opposite who would have the people believe that the administration of their affairs by the Liberal party seeks to cripple industry and to undermine the foundations of our national life. During the eighteen years that the Minister of Finance has been in office his administration of the Department of Finance has been such that no criticism of the kind we have been hearing can stand. But such criticisms, I am free to confess, I do not believe are shared by all those who happen to disagree with us; they come more from some hon. gentlemen whose views are well known to this House.

Now, Sir, it is very reassuring to the country that within three years of the government succeeding to power and after a period of acute financial depression and of pronounced industrial inactivity, due to post-war conditions, the Acting Minister of Finance is able to announce a surplus of $30,000,000. Leaders in the financial and commercial world were of opinion that if we could balance our budget this year the government would be doing its full duty to the people. In a word, the budget is an indication that Canada is getting on her feet again and coming back into her stride of 1896 to 1911—a stride that would have been quickened and sustained had the Right Hon. Sir Wilfrid Laurier been returned to power to put into force the reciprocity pact, which would have given to all parts of the Dominion, but particularly to its extremities, that prosperity for which we have been waiting since 1911, that prosperity which the junior member for Halifax (Mr. Black) has promised the constituency that I have the honor to represent.

When the Liberal party came into power in 1896 the total revenue of the country was only $37,000,000 and there was a deficit of $300,000. Contrast that condition with what we find to-day, an estimated revenue of $396,000,000, and an estimated expenditure—after the pruning knife has been used by the Acting Minister of Finance on the estimates and the supplementaries to be brought down—of $328,000,000. When the real significance of this is brought home to the people they

will appreciate the wisdom of the Prime Minister and his associates in bringing down the budget, which I believe spells success for the whole nation.

We have been told by our opponents that we have not kept our promises, particularly our fiscal promises. The Prime Minister has on many occasions in this House made it clear that the platform of the Liberal party of 1919—and I had the honor of being at that convention—was a chart to guide the government in taking such a course as would best meet the diversified interest of this country, commercial, agrarian and industrial. When our friends opposite charge us with lack of faith, I retort that the government has shown true statesmanship in making such fiscal adjustments as appear in the budget, without disturbing those underlying principles which govern the prosperity of all sections of the country. I remember in 1911 in the great city of Toronto—where the prayer for protection is accompanied by the prayer that they shall have nothing but eternal prohibition—I remember in 1911 when the Liberal party was appealing to the country on reciprocity the leaders of finance and industry in Toronto, who were against it, said that the keystone of the arch of reciprocity in this country was wheat. Well, Sir, if that was so, why in the budget brought down in 1919 by the then Minister of Finance, Sir Thomas White, did he put wheat and grain products, including flour, on the free list, leaving the market open to our friends to the south of us? I assert that the Conservative party were not returned to power on the policy of reducing the tariff on wheat, to the point of making it negligible. But Sir Thomas White as Minister of Finance saw the necessity of taking that course at the time, just as the Acting Minister of Finance realizes to-day the conditions which he must meet with his budget. The budget may not be four-square with every utterance of our public men on the side of Liberalism, but it is four-square with the principle that the government must do what is right. And if in the past they made the mistake of promising too much, for the future they may not make so many promises but rather do what they believe to be right at the time and therefore in the interests of the country.

Now, Sir, in 1896, when that veteran of Conservatism, the late Sir Charles Tupper, was in his prime, he spoke of the awful wail that was going forth from our industries that were being crushed and annihilated by the budget of the Liberal government, and he drew a picture of gloom and ruin that staggered the imagination of the people. But not a scintilla of evidence has been produced up to the present time to bear him out. His gloomy predictions have been repeated from time to time by the various leaders of the Conservative party who have succeeded him. But the history of this country from 1896 to 1911 completely contradicted those forebodings, and we can say confidently that the sage of the Conservative party was wrong, and with equal confidence we can say that his successors are wrong to-day.

The basic industries of this country are its very life blood. If we disregard agriculture, lumbering, mining and fishing, our economic foundation must surely fall. I do not say that these basic industries alone should be the infants, the children, the youth or the men of any government, but we must admit that they and particularly agriculture, are the foundation and stepping-stones of our national success. As the great West develops and is filled with people of the type of hon. gentlemen opposite, those people will give aid to the East and the East will in its turn by its industrial development help the West, and with East and West flourishing we will have a condition to remind us of that era of prosperity to which I referred a few minutes ago.

Coming from an industrial as well as an agricultural county, from a province which follows both these activities as well as lumbering and fishing, I would be recreant in my duty, I would be untrue to my trust, did I not say here and now that the industries of this country must receive that measure of protection which is due them in order that they may survive, in order that they may grow and prosper. But they have passed the infant stage; they are old enough now to sit up and take notice and vote when occasion requires, and much as I desire to stand behind industry, I must say to them that as one of the younger men in the public life of this country it is my duty to do them justice and nothing but justice. If manufacturers availed themselves of protection in order to retain markets and to sell their goods at reasonable prices, then protection would be all right as a barrier, but the moment they take advantage of 85, 90 or 95 per cent of that protection and add it to the selling price of their goods, they stultify themselves, they wrong the working classes, whether on the farm, in the machine shop or in the fisheries. All men have a right to live, and if we approach the fiscal problems of Canada in that spirit, if we deal with those

problems in an open and aboveboard way, we shall go far to heal the breach between the different elements in this country and arrive at a solution of our difficulties that will bring us in the future that prosperity which I am sure every hon. member of this House desires, irrespective of party.

After all, Mr. Speaker, when you look at the budget brought down by the Acting Finance Minister and at various other budgets brought down previously, you find that during Conservative rule, under the Right Hon. Robert Laird Borden, under the present right hon. leader of the opposition (Mr. Meighen), as well as in the budgets brought down by the Minister of Finance (Mr. Fielding), under the present Prime Minister practically no change was made in fiscal policy, except in 1919. It is estimated that the reductions in the tariff under the present budget will be in the vicinity of $1,000,000, the major part of the total reduction, or about $23,000,000, coming from the reduction in sales tax. What was the reduction announced by Sir Thomas White when he brought his budget down in 1919? It was about $17,000,000, and he stressed the point that in the interests of agriculture as a basic industry the cost of the implements of production should be brought down through tariff reduction, but that it was not fair to do that unless there was reduction of the tariff all round; that when you reduced the duty on the implements of production you should reduce also the duties on the raw materials entering therein. It was in 1919, then, that he said the time was not ripe. This is 1924, five years later; if the time is not ripe now it never can be, unless it is rotten; therefore this is the opportune time to bring down the reductions in tariff which will help to ameliorate the condition of the agriculturist of the West, the fisherman on the sea, the miner in the pit and the lumberman in the woods, besides doing a little for industry as well. That is the happy position of this happy governmental family and its children who play behind them on this side of the House, and if hon. gentlemen on the other side will only emulate us in our desire to carry out these fiscal reforms they may be over on this side sooner than they think.

Next in importance to tariff as affecting industrial activities in this country is the question of transportation, whether by rail, on the ocean or on our lakes and rivers. It is necessary that transport rates shall be such as to permit the free access into the markets of our goods at fair and equitable rates. The industries of this country are interprovincial in their character. Canada's geographical position is such that unless we are able to establish reasonable rates over our great transcontinental system we cannot hope to build strongly and well this Dominion and to keep it intact, the East with the West and the centre with us both. Let me speak more particularly for my own province of Nova Scotia—and I do so not in any selfish or sectional way, but from the point of view and in the light of facts that unless some things are done for the Maritime provinces we will begin to die more quickly than we think, but not as quickly, I hope, as some hon. gentlemen on the other side would seem to imagine.

I would like to be reminiscent for a few moments and to carry hon. gentlemen back to the early days when we in the little province of Nova Scotia were enjoying a great measure of prosperity. It was before my day and the day of many hon. members of this House, but it was a day when the hum of industry and the din of traffic were heard from one end of our peninsula to the other. But, Sir, those days seem to have passed, and in the light of what has happened we sometimes wonder whether those who opposed the entry of our province into confederation were right, in the final analysis, or were wrong. I hold in my hand an extract from the speech delivered by Sir Charles Tupper away back in the year 1860. There is no one but must admit that the Right Hon. Sir Charles Tupper, besides possessing the retrospective view, could also look into the vista of the future, and he had a vocabulary which permitted him to express in golden words, sometimes perhaps not as measured as other men's might be, that which was going to happen in the future; and in the light of experience we wonder perhaps how he had the vision. He says:

> Independently of the great Red river and Saskatchewan country lying between Canada and the Rocky mountains, between those mountains and the Pacific—an immense country now fast rising into importance—we find these five British North American provinces, with a population larger than the "old colonies" had at the time that "the ignorance and injustice of the British government lost them,—the brightest gem of the Crown of England."

We hear, Mr. Speaker, of Imperialists; we hear of patriotism; we hear of standing by that great national unification even at the expense of our future, industrial and commercial, yet Sir Charles Tupper never lost the opportunity to hit where the hitting was good; nor did Sir John A. Macdonald refuse to do so when he brought down his National Policy, and when in reply to a question how it would affect the Motherland he said, "So much the worse for the Motherland." They stood for Canada, but when we on this side of the House attempt to make an utterance

that we should stand behind our country first and foremost, we are branded as disloyal, we are held up to ignóminy, and we are criticized to such an extent that even some of our own followers begin to believe it after a while. But our first duty is to Canada. The tie that binds us to the Motherland to-day is a tie of sentiment, a tie of love because of her looking towards us, and because of her protection during those many years. We have been the brightest gem in her diadem, and if that is so, then it must be that we to-day must consider first the future of Canada, and afterwards that of the Motherland and all parts of the British Empire, because she as the mother of nations is well able to look after herself, and we as one of her children are growing into nationhood, and that nationhood cannot be kept back from us; it can only make us stronger and greater, to be a bulwark behind her in the future, as she has been behind us in the past.

What, in 1860, did Sir Charles Tupper say in reference to the reciprocity pact incorporated in the treaty of 1854. He said:

> The Reciprocity treaty has undoubtedly largely benefited both the provinces and our American neighbours. The proposal to abrogate that treaty, although mooted in the States is not very likely to be seriously entertained by a country whose trade with the British North American colonies, has, under its influence more than trebled within four years, having risen from sixteen millions in 1850 to sixty millions in 1856; employing a tonnage of over three and a half millions of tons upon the lakes and the Atlantic coast, half of which belong to the States. The evidence that these colonies are destitute of all influence with the Imperial government lies around us in thick profusion. Never were the interests and feelings of subjects more trifled with than have been ours in a question of the most vital importance.

Away back in 1860, seven years before confederation was realized, did Sir Charles Tupper work, did he argue, did he plead for the building of the Intercolonial railway in order that interprovincial traffic might move between Upper and Lower Canada and the Maritime provinces, perhaps in a union less than the confederation we have to-day, and that is the reason why we in the Maritime provinces still hold to the principle that later under the terms of confederation, under section 145 of the British North America Act, guarantees were given us that the Intercolonial railway would be built from the city of Halifax to a point on the St. Lawrence river, in order to open up avenues for transportation, and to give us in lieu of our coast trade relations with the United States, where our traffic was water-borne, the markets of central Canada, and of western Canada also as that country grew and developed. I submit that that section in the British North America Act carried with it an inference that the rates over the Intercolonial would be such as to permit us to get into the competitive markets of Canada, both in central Canada and in the West as that country grew and developed. That, Sir, was the keynote of our entry into confederation, and I intend a little later to deal with the question as to how far the feeling in connection with this particular subject has been met with sympathy by the governments of this country.

Sir Charles Tupper goes on to say:

> The night of darkness that now enshrouds the prospects of these provinces in connection with their railway operations will be but the harbinger of a bright and glorious morning of advancement and prosperity and in a brief period we shall possess a continuous line extending from Halifax to Windsor, opposite Detroit.
>
> Our climate is more healthy than that of England; the fertility of the soil is unsurpassed by her; our geographical position, relative to the new world is the same as she occupies to the old; our equally magnificent harbours presenting the same facilities for commerce; while the iron, coal and limestone—the possession of which has rendered her the great manufacturing mart of Europe—here abound to any extent in close proximity and of the most excellent quality.
>
> Who can doubt that under these circumstances, with such a confederation as these five provinces, to which at a future day the great Red river and Saskatchewan country, now in possession of the Hudson's Bay Company, and British Columbia, will be added—as would give us the political position due to our extensive area, our resources and our intelligent population, stretching from the Atlantic to the Pacific, would in a few years exhibit to the world a great and powerful organization, with British institutions, British sympathies and British feelings.

When the day came for the actual bringing about of confederation, there was in our little province of Nova Scotia a champion of a cause other than that of confederation, and he was a champion worthy of his adversary's steel. It was the Hon. Joseph Howe who was being carried away from the paths that led to confederation. And when we of this new school look back at those days in the light of what has happened we wonder whether or not Mr. Howe was right in regard to certain matters. If he was, then we were wrongly forced into confederation—as was said by my hon. colleague the junior member for Halifax (Mr. Black)—at a time in 1867 when the people were not permitted to vote upon the issue. That is the testimony borne to this fact by my hon. friend, and he does not belong to my school of thought or to the party to which I owe allegiance. To continue my quotation from Sir Charles Tupper:

> He made much capital—

That is Mr. Howe—

> —out of my failure to submit the issue to a vote of the people, claiming that they had been dragooned into

union, and ascribing a large share of the responsibility to the Imperial government. These arguments made a deep impression upon the masses to whom the people of the upper provinces were utter strangers. Howe in a public speech made this threat—"The sooner it is known the better; the people of Nova Scotia are determined to defeat this idea of erecting a new dominion in British America; they are determined that not a pound of their capital shall go to paying the debt of Canada, that not an acre of their province shall come under Canadian rule, that not a man of their militia shall be liable to be marched up to the backwoods of Canada to fight the battles of faction or to prevent Canada from burning down parliament buildings or pelting governors through the streets."

Sir Charles Tupper in his book Reminiscences of Forty Years says that Howe's appeal distorted the issue and touched a sore point when he said that Nova Scotia would not be taxridden to support Upper Canada. He went on to say:

Early in 1868 Howe and a number of other delegates bearing numerous petitions asking for the relief of Nova Scotia from the union were despatched to England. The Imperial government refused the appeal. The House of Commons of England by a vote of 181 to 87 refused to appoint a royal commission.

After the first session of parliament in 1867 Sir John Macdonald asked Tupper to go to London to oppose Howe's move. Tupper said:

On reaching London the first man I called on was Howe. He was not in, but I left my card. Howe returned the call and on greeting me he said: "I cannot say I am glad to see you, but we have to make the best of it."

Tupper replied:

I will not insult you by suggesting that you should undertake the mission that brought you here. The government and the Imperial parliament are overwhelmingly against you. He replied "I have 800 men in each county in Nova Scotia who will take oath they will never pay a cent of taxes to the Dominion and I defy the government to force confederation."

Tupper replied:

"Howe, you have a majority at your back, and if you will enter the cabinet and assist in carrying out the work of confederation you will control all the provincial patronage, and you will find me as strong a supporter as I have been an opponent."

These are Sir Charles Tupper's own words as written in his own book—that he held out to the Hon. Joseph Howe the patronage of Nova Scotia if he would give up his fight against confederation. Tupper said that Howe was completely staggered, and two hours of free and frank discussion followed:

I told him that between us we could rally to his support three-quarters of the wealth, education and influence of the province. That very night I wrote Sir John A. Macdonald that I had no doubt Howe would become a member of his cabinet.

I was told a few days later by John Bright that he had accepted Howe's invitation to move a resolution in favour of a commission of inquiry.

He goes on to say:

[Mr. Finn.]

I then warned him that the disruption of confederation meant absorption of the various provinces by the United States. Howe replied "I cannot help thinking, Tupper, that it would be a grand thing to see one government rule from the Equator to the North Pole." He then asked me if there was any danger of a revolt in Nova Scotia. I replied that the worst revolt I had expected was to see Howe become a member of Sir John Macdonald's cabinet within six months, requesting him to regard the communication as confidential. Mr. Howe became a member of Sir John's administration six months later, accepting the presidency of the council.

In the session of 1870 the opposition made a most determined onslaught on the government, whose fate was trembling in the balance. Sir John Macdonald came to me and insisted that I must enter his government. Mr. Howe's health was anything but satisfactory, and he was never heard at his best. In the election of 1872 Mr. Howe's health gradually became worse. I knew his ambition was to become a Lieutenant Governor of his native province and Mr. Howe was nominated for that high honour on my recommendation. Before leaving Ottawa, Mr. Howe gave a farewell champagne luncheon. His parting admonition being "Boys, I want you to stand by Tupper as he stood by me." Poor Howe returned to Nova Scotia and had only been an occupant of Government House for three weeks when he died. and the curtain came down on the first act of the drama with the action of bringing about confederation in this country.

Well, Sir, right on this very spot Howe and Tupper both sat in parliament and in the first session after confederation in 1867, Sir Charles Tupper spoke—there was a movement on foot to bring about the repeal of the union—of Canada's future and our place in confederation. He said, and I quote from Hansard:

The old province of Canada, notwithstanding its immense territory and great natural resources, could never attain an important position while for five months in the year it was cut off in access to the ocean and compelled to communicate with the parent state through a foreign country. The Maritime provinces below, comparative small and insignificant, could never hope to occupy a position of influence and importance, except in connection with their larger sister—Canada. No man could look at the geographical position of Nova Scotia without feeling that Providence intended that we form a great highway of communication between not only the sister colonies behind us, but also a large portion of the European world. Yet my hon. friend knows—

Meaning Howe—

—that after he had laboured with great ability for a quarter of a century to accomplish the construction of the Intercolonial railway the effort had failed as it had become perfectly apparent that the great work could never be accomplished by the union of two Canadas and Nova Scotia and New Brunswick under one government. Not only has this great boon been secured for our province but it is impossible to glimpse the geological characteristics of Nova Scotia without seeing that Providence has given us all the elements of a great manufacturing industry. Our province, is rich with vast deposits of iron, coal and lime stone, the minerals which have made England the emporium of the manufacturers for the world. Yet with all the mineral wealth it was obvious that without a union which would throw down the barriers of our manu-

facturing industry and open our commercial interests with our fellow colonists, we must be content largely to forego the great material advantages which nature had bestowed. Union has now given us a population of four millions instead of four hundred thousand.

As regards the extension of our commerce it is well known that the ablest politicians expended their best efforts in a vain effort to extend commercial intercourse between the different provinces. They failed because free trade involved the principle of union under one government which alone could secure a common tariff. If we wish to estimate what free trade with each other will do for us, we have only to look at its effect in other countries.

Sir Charles Tupper speaking in 1867, said:

I admit frankly that the Union party have been thoroughly and handsomely beaten at the recent general election in Nova Scotia, but I am happy to be able to relieve this House from the apprehension that an overwhelming majority of the people of that province are determined to obstruct and break down the union which has been formed.

My hon. friend, Mr. Howe, at a large meeting at the Masonic Hall, Halifax, previous to the election said—"Let us hope that the Canadians will act justly, if they do we should aid them to work the new system fairly." Howe said that what they wished for Nova Scotia was that she might be the frontage of a mighty colony upon which, it may be truly said, the sun never sets. No man can look upon Halifax and its environs, its harbor, its citadel, and say it was made for this province alone.

The Hudson bay territory includes two hundred and fifty miles, throwing aside the more bleak and inhospitable regions. We have a magnificent country between Canada and the Pacific, out of which five or six provinces can be formed, larger than any we have and pressing to the end of industry and to the eye of speculation for variety of soil, climate and resources. With such a territory as this to over-run, organize and improve, think you that we shall stop even at the western points of Canada or even on the shores of the Pacific? Vancouver island with its vast coal measures lies beyond the beautiful islands of the Pacific and the growing commerce with the ocean are beyond populous China and the rich East are beyond. The sails of our children's children will reflect as familiarly the sunbeams of the South as they now brave the angry tempests of the North.

The Maritime provinces which I now address are but the Atlantic frontage of this boundless and prolific region—the wharves upon which its business will be transacted and beside which its rich argosies are to lie. Nova Scotia is one of these. Will you then put your hands unitedly with order, intelligence and energy to this great work?—Refuse and you are recreant to every principle which lies at the base of your country's prosperity and advancement; refuse and the Deity in writing on land and sea is to you unintelligible language; refuse and Nova Scotia instead of occupying the foreground as she now does should have been thrown back, at least behind the Rocky mountains. God has planted your country in the front of this boundless region, see that you comprehend its destiny and resources; see that you discharge with energy and elevation of soul the duties which devolve upon you in virtue of your position."

That, Mr. Speaker and hon. members, was the glowing word picture drawn by Sir Charles Tupper, in order to placate the hearts and minds of the people of Nova Scotia and New Brunswick that they were doing the right thing in coming into confederation. I am convinced that Sir Charles Tupper in his heart believed in confederation, and he felt that as the great West and the rich mineral province of British Columbia developed, we in the East, with the port of Halifax unequalled or unsurpassed by any ports in the world, would also develop, and that the great agricultural products from the West and the production of industry in Ontario and Quebec would flow down to the Maritime provinces over our Intercolonial railway and pass out of our port—the eastern gateway—to the markets in all parts of the Empire and to foreign lands. But I regret to say to-night that our hopes in that respect have not been realized.

We in Nova Scotia are feeling to-day the pinch of hard times; but these hard times are not due to the government or to the inaction of the government of this country. Conditions exist over which the government to-day have no direct control, but I believe, Sir, now that we have co-ordinated these great transcontinental systems of the country, with that great personality, combining high character and technical ability, Sir Henry Thornton, placed at the head of them, we are going to see a different state of affairs in the Maritime provinces. I speak more particularly for the province of Nova Scotia. Sir Henry Thornton's handiwork is already shown in our province, amongst our working classes, and I propose to place before this House and the country to-night at a little later stage some facts which will back up the statement I have made in reference to him. We were told by hon. gentlemen opposite, when in power, when they undertook to purchase the railway systems of Canada and to co-ordinate and organize them into one great system, that the politician should take his hand off the road, and that the government should have no direct relations with the board of management of that great National Railway system. That was the attitude of the late president of that system, Mr. Hanna, and his assistants. When we had our difficulties in the East and approached him in reference to them he stated in the city of Montreal that all his troubles were east of Montreal. It was felt that he did everything he could for central Canada, particularly that portion radiating from the city of Toronto, and that he cared very little at all for the future interests of the Maritime provinces. I do not say that unkindly of Mr. Hanna, but I think his vision was somewhat circumscribed by the environment in which he had lived so long, together with the late Sir William Mackenzie, Mr. Z. A. Lash and Sir Donald Mann. But, Sir, that now is by the way. I believe that Sir Henry

9 p.m.

Thornton will do his duty by the people of Canada. I look upon him as one of the biggest assets which this country possesses. If he never directed that technical mind of his to the administration of this railway, but devoted himself to the interests of the people of Canada generally, and applied himself—possessed as he is with a wonderful personality—to the future development of this country, we would not be paying him too much when we paid him $50,000 a year. But having taken hold of the railway system and, within a little over a year, established an esprit de corps in every part of the system, he has made the men feel that the road belongs to them and to the people, and that it is their child to look after, to nurture, to develop and to work for. Under these circumstances the road cannot fail; no more can Sir Henry Thornton fail.

I therefore say, Mr. Speaker, in reference to the Canadian National Railway system and its operation, that the cutting down of and final obliteration of the deficit within a few years will be largely the work of that wonderful mind, of that great railway magnate, who has associated with him capable men as his assistants, to gather in the business for the railroad and to give to the people a first-class service with up-to-date equipment, modern trains and quick despatch.

These are the outstanding points in Sir Henry Thornton's management, and I think it is only fair that expressions of this kind should come from hon. members in this House; for I believe that Sir Henry Thornton's heart is in this country and with its people, and the one thing that will encourage him will be the success not only of the Canadian National system but of the people who make up our population of eight millions to-day.

I desire now to put on record a comparison of the exports from Halifax, Nova Scotia, and St. John, New Brunswick, for the years, ending March 31, 1920-24 inclusive, as to both quantity and value of wheat, flour, apples and general merchandise shipped from these ports. I am not going to read the details of the statement, but I will submit it for publication, because it is food for thought not only for hon. gentlemen in this House but also for the people of the country who have at heart the future welfare of the port of Halifax. The figures I am about to give are interesting as showing the relationship of Halifax to its sister port of St. John, and the relationship of both these ports to the rest of Canada. And I hope that especially the two hon. gentlemen who occupy seats in this House representing St. John, as well as other hon. gentlemen from New Brunswick and Nova Scotia, will take the facts into consideration. I find that during the five years referred to the total quantity of wheat exported from St. John was 48,792,175 bushels and from the port of Halifax 2,861,612, leaving a balance in favour of St. John of 45,930,563. The value of general merchandise exported from St. John during the period 1920-24 inclusive was $229,082,492, while the value of the general merchandise exported from the port of Halifax during the same period was $116,883,558. This, it will be seen, leaves a balance in trade value in favour of St. John of $112,198,934. Now, the total value of exports from St. John during these years was $354,214,082, and the total value of exports from Halifax amounted to $173,255,633; or a trade balance in favour of St. John to the extent of $180,958,449.

I come now to the export of wheat for the four years prior to 1920, that is to say, for the period 1915-19. I have not given this period in conjunction with the figures I have just quoted, because I have not the value of the products for these years. I find however that in 1915 we exported 588,657 bushels of wheat from Halifax whereas there was exported from St. John 5,966,542. Lesser amounts for Halifax in the four succeeding years total 5,161,818 bushels as against a total from St. John of 40,749,860. In other words, there was a balance during those four years in favour of St. John of 35,588,042 bushels.

COMPARISON of Exports from Halifax, N.S. and St. John, N.B., for the Years ended March 31, 1920 to 1924 Inclusive

There is a statement which shows the relationship of the ports of Halifax and St. John to our export trade with the Old Country not only through Canadian ports but through United States ports. When I read these figures and realize these conditions I am sad at heart. But I am determined, Sir, in so far as my humble ability will permit by assiduous efforts to bring a greater measure of success to the port of Halifax. Last week the hon. member for Brantford (Mr. Raymond) said in the course of his address that we should be 100 per cent Canadian. I would not have the people of my native province misunderstand me. Of course, our grain growers and grain brokers have the right to route their shipments through American ports, but with our great transcontinental system of transportation and with the dock facilities which we have at Halifax and St. John, there is no justification for one pound of Canadian freight being exported through an American port. We desire that our grain growers and grain brokers should be 100 per cent Canadian. Nova Scotia having made great sacrifices—and yet to-day we have only one railway, the Intercolonial—and we together with the rest of Canada having spent $1,138,600,430 and pledged the credit of the country in order to give the Canadian West transportation facilities to ship the products of their labour to the markets of the world, surely it is up to the grain growers and the grain brokers of the West, to see that their wheat is exported in summer through the ports of Montreal and Quebec, and in winter through the ports of Halifax and St. John. Surely, Sir, that is not asking too much of them. With the freight rates the same to all the Atlantic ports, it is the duty of our shippers to build up the ports of their own country by exporting their products through them. If the trade returns show that that is not being done, then we in the East will demand from the government, whether it be Liberal or Conservative, that an export duty be placed on products exported through American ports. In this way we would hope to help our people to be patriotic and use those avenues which God and nature intended we should use—when we became a confederation—if we in the East are ever to enjoy the same prosperity that we have contributed in building up in our growing West. We are not envious of the advancement of the West, but the people there must remember that the pioneers of this country, were the men of the East—the men who blazed the trail and made possible this great confederation, and carved out the western provinces. The people of the West must

remember too the financial sacrifices we have made in order to build up a strong and great nation, and so remembering I feel confident they will act in a spirit which will unite East and West, and, developing along these lines, I am confident we shall become a mighty nation in that great Empire to which we are all so proud to belong.

Those are the sentiments that are burning within my heart to-night, and I feel that this well-considered and deliberate statement is due my province and my city, it is due that wonderful port of Halifax which showed its worth to the Empire during those trying days from 1914 until 1918, when as many as 209 ships were at anchor in Halifax harbour and Bedford basin, ranging from 3,000 to 45,000 tons, and yet in that magnificent harbour you could hardly see them. There they lay secure from submarine attack, to the chagrin of Germany. Having been in time of need one of the greatest naval and marine ports—which helped to save the Empire and civilization—surely now in time of peace we are entitled to take our place and bear a part in bringing about that abundant prosperity which is about to bless the Dominion. This all relates to the question, not more particularly to export trade than to interprovincial transportation and freight rates; because it is desirable that the commodities we raise may go into the central and western provinces and that the things we need shall come back to us from those industrial and agrarian centres.

Two years ago, before I had the honour of occupying a seat in this House, the very vexed question came up of the Crowsnest pass agreement. That was an agreement entered into some years ago by the government with the Canadian Pacific Railway Company whereby through the construction of the Crowsnest pass railway and a subsidy of $3,500,000 a specific reduction was to be made in rates upon classes of merchandise such as grain and grain products, certain classes of fruit, coal oil, cordage, agricultural implements, iron, including bars; all kinds of wire, window glass, paper for building, roofing, paints of all kinds, live stock, wooden ware, household furniture, and the reductions in the rates were from 33 1/3 down to 10 per cent. At that time the Canadian Pacific, for and in consideration of this $3,500,000, entered into that agreement in connection with grain and grain products and the other articles that I have enumerated. Under the War Measures Act the Crowsnest pass agreement was held in abeyance and the rates that should have been charged under it were not permitted to be charged, the general freight rates as affecting all railways in Canada on the mileage basis being put into effect. These rates continued during the war, and when the percentage increases came, first of 15 per cent, then the 25 per cent under the McAdoo award, the increases applied to the Crowsnest pass agreement, except the 15 per cent, the first percentage increase, which was merged in the 25 per cent increase so far as the West was concerned in relation to the Crowsnest pass rates, and we in the East and in central Canada had to pay the 25 and the 15 per cent, a total of 40 per cent. The time came when our western friends felt that the Crowsnest pass agreement should again be put into effect. As hon. gentlemen know, the government of the day handed the investigation of this vexed question over to a special railway committee. I had the honour at that time of representing the government of Nova Scotia, of which I was a member, before that committee, and on behalf of Prince Edward Island and New Brunswick also I presented the case of the Maritime provinces. It had been stated by the Railway Commission that if the Crowsnest pass agreement was brought into effect they would not be able to give a general decrease in the rates on the necessaries of life which they would give if the agreement was further suspended, and it was intimated that the decreases in rates on the necessaries of life throughout Canada would be 20 per cent. But after thorough investigation the special committee of which my late colleague, now Hon. Mr. Justice Maclean, was chairman, made a report to parliament, and that report was adopted. The report stated that the Crowsnest pass rates on grain and grain products should be put into effect on the sixth day of July of that year, and that there should be a further suspension in reference to the commodities I have mentioned for a period of one year and a further suspension for another year if the Governor in Council saw fit.

A further recommendation was made to the House and approved, it is the one in which I am particularly interested, and I know that hon. gentlemen from New Brunswick and Prince Edward Island are also interested in it. While this recommendation had not the force of law, it had moral force behind it. I urged before the special committee that the Maritime provinces situation was one of special character because of the conditions under which the Intercolonial railway was constructed as a result of the confederation agreement. I contended that there was an implied obligation necessarily attaching to those terms which guaranteed to them special consideration in regard to railway freight rates

on account of distance from the central and western markets. The rate increases interfered greatly with interprovincial trade and were contrary to the obligations of the government of Canada accepted at confederation. The railway management was therefore asked in the report to take cognizance of the situation and endeavour to arrange such a reduction of rates, having regard to the actual cost of operation of these railways, so as to remove as far as possible the difficulties complained of, and that the Board of Railway Commissioners should for the same reason and in so far as their jurisdiction extended restore the differential rate formerly applicable to the traffic to and from the Maritime provinces. The recommendation made by the committee and accepted by parliament was as follows:

> We recommended that the Minister of Railways and Board of Management take steps to meet the situation in these provinces by a substantial reduction in rates. The claim of the Maritime provinces with regard to local rates is a matter for the consideration of the Minister of Railways and the management of the Intercolonial railway. The committee recommended the suspension of the Crowsnest pass agreement except in respect of grain and flour for one year from July 6th, 1922, with power to the Governor in Council to suspend for a further period of one year. The recommendation of the committee for the further suspension of the Crowsnest agreement is made in view of the great necessity of a general reduction in freight rates on basic commodities as a whole and in what is considered to be the general public interest. Basic commodities which may be afforded reductions should have the earliest possible consideration by the Board of Railway Commissioners.

I should like to refer to the situation which was created by the legislation known as the Railway Act of Canada. That was the act providing for the consolidation and co-ordination of the great Transcontinental systems. The Grand Trunk and the Intercolonial were absorbed into the National system and the Intercolonial passed from that management to the management of the Canadian National Railway Board, in charge of all the railways grouped under the Canadian National Railway system. The Grand Trunk for some time after it was taken over was under an independent chairman and board headed by Sir Joseph Flavelle, and on the final co-ordination of these railways Sir Joseph Flavelle and his associates retired, and later Mr. Hanna and his associates. I would point out to the House that the Railway Commission addressed themselves to the problem of delivering a judgment in reference to the case that had been before them for something over a year and a half, that was the case of the restoration of the arbitraries from the Maritime provinces over Montreal to Port Arthur and Fort William, and west of Port Arthur and Fort William to the Pacific coast. The Railway Commission—which had been holding back from adjustments in connection with freight rates until parliament had determined what should be their course in reference to the further suspension or the bringing into force of the Crowsnest pass agreement—in so far as grain and grain products were concerned—made a general reduction of only 7 per cent, which was scarcely felt by industry in the transportation of manufactured articles east and west in this country. I say that that was another evidence of our willingness to help our Canadian West, in asking parliament to live up to the agreement that was entered into in good faith. The result was that we did not receive in the Maritime provinces any reduction in our arbitraries, and we have been labouring under that great disadvantage since the Crowsnest pass agreement was put into effect some two years ago.

The War Measures Act was used as an instrument to accomplish something that the parliament would not have done, and I lay it at the door of some hon. gentlemen opposite who sat in the government of Sir Robert Borden, and those who succeeded Sir Robert Borden with the right hon. leader of the opposition at their head. The first thing they did to basic industry in the provinces of Nova Scotia and New Brunswick, in the city of St. John and Halifax was this: The McAdoo award of August 6, 1918, came into effect under order in council passed under the War Measures Act. Sugar in the United States was not in the commodity class, but in the fifth class, and under the War Measures Act the government applied the McAdoo award to the refineries in the Maritime provinces, and the result was that the rate on refined sugar, which hitherto had been a commodity rate, was changed from commodity to fifth class, and 25 per cent added, the Chicago award came later with an increase of 40 per cent, and the new rate applied to these two great industries in the Maritime provinces, the one in my own constituency, the Acadia Sugar having over 500 employees with an average of three to a family, or 1,500 people, just outside the limits of the town of Dartmouth. The same rate applied to the Atlantic refinery in the city of St. John. The rate for forty years from 1878 had remained constant until the knife was put into those rates under the War Measures Act and due to an American award, with the result that the rate was increased from 19 cents to 52½ cents, and as high as 60 cents finally, as against 19 cents in 1917 and 22½ cents in the early part of 1918. Could any industry in the Maritime provinces live under such a rate? Millions of dollars have been

put into this industry in our province by British and Scotch investors and by good Nova Scotians, and the result is that two splendid industries have been built up in the Maritime provinces that to-day are having the fight of their lives to keep their heads above water financially, and to give employment to the people who have made their homes round and about these two great refineries.

When we speak of the confederation pact in relation to the Intercolonial railway being built for the purpose of bridging the distance between the Atlantic provinces and central Canada and the West, we are told that we are talking ancient history. We are no more talking ancient history than were hon. gentlemen of the Progressive group in this House when they spoke of the Crowsnest pass agreement. That was an agreement entered into in good faith; it was an obligation, moral, legal and equitable. We may not have the legal right within the four corners of the British North America Act, but we have the moral and equitable right to demand from this parliament, from this government, and from the Canadian National Railway Board, that these arbitraries and commodity rates be restored, and that these industries in Nova Scotia and New Brunswick be put back on the solid foundation, so far as rate structure is concerned, as they were on for forty years, and that they be given a chance for their lives. The wealthy industries in the same line in the city of Montreal have at their very door a million people for their customers, and we have hardly that number in the whole of the Maritime provinces. There is the great centre of Montreal, and the great centre of Wallaceburg, in the province of Ontario. The rate on raw sugar to-day from the British West Indies, from San Domingo and from Cuba to Montreal is the same as to the ports of Halifax and St. John. The rate on raw sugar from Halifax and St. John to Montreal, is only 25½ cents per one hundred pounds, while the rate on refined sugar, which does not vary in value one per cent is 52½ cents per hundred pounds. How can we bridge that difference. That rate was increased over a hundred per cent and we have 25½ cents to-day on raw sugar from Halifax and St. John to Montreal and 52½ cents—was 60 cents before the decrease of April 14, last, on refined sugar enforced by the traffic department of the Canadian National Railway system and Canadian Pacific. I ask you how would it be possible for the industries in these two provinces to absorb the difference between twenty-five and a half and fifty-two cents and a half, and then compete in the central markets of Canada with the refiners situate in the city of Montreal? Then, Mr. Speaker, when I tell you that in summer time, when the St. Lawrence is open to navigation the water rate to Montreal is the same as it is to Halifax and St. John so that for six months in the year the Montreal refiners have the advantage of the whole 52½ cents per hundred pounds—because they have their raw sugar landed at the port of Montreal at the same rate as raw sugar is landed at the ports of Halifax and St. John—the nature of the competition which faces us in summer just as in winter, will be realized. Is that competition we can stand up against? No, Sir, it is not. So two years ago our industries were driven to acting on the principle that preservation was the first law of nature with them industrially. Accordingly they asked the steamship companies to quote them a rate on refined sugar from the ports of Halifax and St. John to Montreal. The rate quoted them was 30 cents per hundred pounds. They chartered vessels and moved sugar from these refineries to Montreal. Immediately that water rate of 30 cents became effective the Canadian National Railway system and the Canadian Pacific Railway Company brought their rates down to 30 cents, but as soon as Providence closed the St. Lawrence with ice up went the rate again to 52½ cents. Stability in rates? No such thing. No industry—let alone an industry in the Maritime provinces that has to fight for a place in the central and western markets of Canada —ought to be exposed to such rate conditions.

These are some of the conditions, some of the worriments, some of the anxieties that have been the lot of hon. members who support a government that in the final analysis is not to blame. I say that this government is not to blame because these railway rates were brought in under the War Measures Act—during the administration of Sir Robert Borden and the present leader of the opposition—which was put upon the statute books of Canada and used for a purpose for which it was never intended it should be used. But if these railway rates were made to serve that purpose during the war then immediately the war was over pre-war rates with moderate increases should again have been brought into effect and the old arbitraries restored under which we might enjoy our proper place in the industrial sun. Well, Sir, that is a specific instance of the handicaps we suffer from in the Maritime provinces. I could go on and give you other instances showing how our industrial efforts are crippled and our industrial future threatened.

When you consider that over $1,138,000,000 have been spent on the railway systems of Canada by the government and that we have

but little to show for that expenditure in the Maritime provinces it may help you to realize our position. All we have to show is the Intercolonial, and the Halifax and Southwestern railway from Halifax to Yarmouth. The province of Nova Scotia put into that road $6,400 a mile and we never got a dollar of it back when the road was handed over and made a part of the Canadian National system. The same with the railway in Inverness county towards the construction of which contributions were made by the municipalities concerned. The same with the line running down through Richmond county to St. Peters. When, as a Maritime province member for Nova Scotia, I attend the Railway committee and look at the railway map of Canada and see roads that are projected for the future in our Canadian West—almost paralleling in some cases lines already built, so that they will run within a few miles of each other—and when we are willing, in order to promote the development of that country and its future and the prosperity of its people, to share according to population the cost of that railway extension, surely we are not asking too much that any small measure of deficit that may possibly come through the reduction of rates in order to give us what we are entitled and enable us to take our place in the industrial sun of this country should be met, surely we are not asking too much but only that which is our right in all justice, and it must be conceded that we have complained less in a substantial way than any other part of Canada with respect to the vexed question of railway rates.

Now, Sir, the Crowsnest pass agreement went into effect and the result was that the arbitraries in the West are, 25 cents-new and 20 cents-old. That is west of Port Arthur. The fifth class is 12, and the old rate was 10. I want to be fair to the Railway Commission, to the government and to parliament, and to say that the rates west of Port Arthur, and the arbitraries that bore no relation to the local rate, are fair and equitable. They were adjusted and we have no complaint to make on that score. It is only with reference to the arbitraries over Montreal and west and east of Port Arthur and Fort William that we complain. Under the Crownest pass agreement it was estimated by the Railway Commission that the reduction in railway rates was equal to 30 per cent. Under that agreement these rates only apply to traffic moving from west to east because when the agreement was entered into there was no Panama canal, there was no movement of eastern grain—that is from the eastern boundary of Alberta—westward to Vancouver and down through the Panama canal to the markets of the world. But immediately that route was opened up the western farmer, the grain grower, the boards of trade, and the provincial governments made representations to the federal government and to the Railway Commission and as a result in July, 1922, the rate on western bound traffic that did not come under the Crowsnest pass agreement as to grain and grain products was decreased 20 per cent. An appeal was taken to the Governor in Council. That appeal was sent back to the Railway Commission, and on the 10th October, 1923, a further reduction on western bound traffic was made of 10 per cent. To-day traffic moving west of Fort William and Port Arthur to the port of Vancouver over the Canadian Pacific Railway, and bound through the Panama canal enjoys a reduction of 30 per cent while we in the East had to be satisfied with over 100 per cent increase in the arbitrary, and had to be satisfied, until the other day when the National Railways brought down a new schedule of rates, which came into effect on the 14th day of April. There are shown below the 1st and 5th class rates as in effect before and since the recent reduction made effective with respect to rates between Ontario points and the Maritime provinces on April 14th last:

		Classes in cents per 100 lbs

The following are the distances between Winnipeg and tidewater via the Canadian National and Canadian Pacific Railways.

Canadian National Railways

Winnipeg-Halifax.. .. .. 1993 miles
Winnipeg-St. John.. .. .. 1830 miles
Winnipeg-Quebec.. .. .. 1352 miles

The above mileages are figured via the shortest route which is over the Transcontinental line.

Canadian National Railways

Winnipeg-Portland via Nakina, Longue lac North Bay, Ottawa and St. Henri.. .. .. .. 1651 miles.

Canadian Pacific Railways

Winnipeg-St. John.. .. .. 1884 miles

I submit that this is not a perceptible reduction, because it was held throughout Canada that the 7 per cent reduction that was made by the Railway Commission after the Crowsnest pass agreement was put into

effect was not appreciable; and if 7 per cent was not appreciable, I think that the rates I have quoted here to-night are far from being appreciable, and the only redress we have, so far as the traffic department of the Canadian National system is concerned, now that these rates are filed, is to go to the Railway Commission. It will be the duty of the governments of Nova Scotia, New Brunswick and Prince Edward Island to do the same as the province of British Columbia did, namely to apply for a hearing before the Railway Commission and obtain redress from them. If we fail to obtain that redress then we will have to appeal to the Governor in Council to see that justice is done Maritime industries. We will expect the same treatment from the government for the industries of the Maritime provinces as was extended to agriculture in the West during these past two years. I believe, Mr. Speaker, that the government will hearken to the fair demands of the provinces by the sea, and, that the Railway Commission will also listen to these demands, and perhaps it will not necessitate an appeal, in the final analysis, to the Governor in Council.

In the Maritime provinces we have been waiting a long while. Over a year ago I suggested to the governments of Nova Scotia, New Brunswick and Prince Edward Island that these three provinces should get together and should pay, if necessary, $10,000 to $15,000 a year, during the years in which it will be necessary, to get a first-class railway expert to come to Ottawa, to confer with the Maritime province members, irrespective of party affiliations, and to intelligently advise in order to establish the inequalities existing in the rates from the Maritime provinces to Montreal and to the West and the western rates. In summer this expert should be at Moncton, which is a central point to the three Maritime provinces. In that way I think we could have united and intelligent action, in order to secure the removal of these inequalities. If proper representations were made on the advice of the technical officer, I think the result would be satisfactory. That has not yet been done, Sir, but I would urge that it be done immediately, because there never was a time when united action on the part of the Maritime provinces was more necessary than the present. We are now given the opportunity, by the filing of these rates, to take the matter up, under the Railway Act of Canada, with the Board of Railway Commissioners, and finally with the government if it becomes necessary so to do.

Mr. BAXTER: Do I understand the Board of Railway Commissioners has any jurisdiction over Canadian National rates?

Mr. FINN: Yes, Mr. Speaker, the Board of Railway Commissioners has jurisdiction over the Canadian National Railway rates. But it has no jurisdiction—and perhaps the hon. member for St. John (Mr. Baxter) was thinking of this—over the question of the building of branch lines and their location. That power is withheld from it and vested directly in the board of management of the Canadian National Railways. The point raised by my hon. friend comes to me more clearly, because it was raised by myself some time ago, and by the hon. Minister of National Defence (Mr. Macdonald), when we were arguing before the Railway Commission two or three years ago that the Intercolonial was not subject to the jurisdiction of the Railway Commission, because it was not under the Railway Act of Canada. The point was that the board of management of the Canadian National system was the board of management of the Intercolonial railway; but the moment the Intercolonial was put within the National Railway system by order in council, then the Railway Act applied, and that railway became subject as to rates, to the Railway Commission either on application or of their own motion. These rates have been filed by the board of management of the Canadian National Railways under the Railway Act with the Railway Commission, and are there to-day.

Mr. BAXTER: They have been filed?

Mr. FINN: Yes, and the railway is subject to the Railway Commission of Canada. Now, Mr. Speaker, a question was asked in this House, either on the order paper or verbally, by the hon. ex-Minister of Finance (Sir Henry Drayton), in connection with the cost of operation of the Atlantic region of the Canadian National Railway system, and the central region of that system, and if my memory serves me aright the relationship was 82 to 1.23. The Intercolonial, with its branch lines, as you might call them, in the Maritime provinces up to Rivière du Loup is what is called the Atlantic region, and it was estimated by the technical officers in that branch of the service that it cost $1.23 to earn $1.00, and that it only cost 82 cents in the central region to earn $1.00.

10 p.m.

I do not think that the ex-Minister of Finance (Sir Henry Drayton) wanted to be unfair, but it seems to me that his comparison was unfortunate. If he does not know I will tell him that the railway from Rivière du

Loup to Montreal is the best paying section of the Intercolonial, and has the easiest grades, as well as a large traffic. Its receipts go to swell the central region fund, thus helping to reduce the cost of operations of that region. The traffic originating in the Maritime provinces for Montreal and which should be credited to the Atlantic region arising as it does either from industry in those provinces or from imports through the port of Halifax and St. John, goes instead to the credit of the central region; it is not credited to the Intercolonial. Moreover, freight accumulating at Montreal for the Maritime provinces, either purchased by our people or directed to be sent to our ports, is undoubtedly traffic which in all equity should be credited to the Intercolonial railway in the Atlantic region. But this is not done. Indeed, I find that the traffic over the Central Vermont down to Portland and New London is also credited to the central region; and the traffic on the Grand Trunk form Chicago to Portland through Montreal and, as well, down to New London, is likewise credited to the central region. So that the earnings of one of the best paying pieces of railway in Canada and the United States, the Grand Trunk from Chicago east in American territory, which has a considerable earning capacity and a great surplus, are all credited to the central region which has its headquarters in Toronto and radiates east and west, north and south. Yet the ex-Minister of Finance, coming from the province of Ontario, tries and I say this advisedly, to throw cold water upon any attempt that is made to secure a reduction in rates for the Maritime provinces, endeavouring to make out that it costs $1.23 to earn $1.00 in the Atlantic region as compared with a cost of 83 cents in the central region, notwithstanding that the central region takes to its credit all the earnings of the best paying pieces of the Atlantic roads, including all the traffic that originates in the city of Montreal and that which goes from the Maritime provinces west. This I say is absolutely unfair. At least, the Intercolonial railway should be credited with the earnings in connection with freight that originates in and destined for the Atlantic region.

I had not the pleasure of hearing the junior member for Halifax (Mr. Black) deliver his maiden speech in this House when he spoke on the Address in reply to the Speech from the Throne. I was unfortunately compelled to go south owing to ill health; I went early in January, returning in March and therefore missed practically the whole of the hon. gentleman's speech. However, I have since had the pleasure of reading it. My hon. friend in his opening remarks expressed his felicitations with reference to the announcements of His Excellency; extended his sympathy to the Minister of Finance (Mr. Fielding) and the late Minister of Justice (Sir Lomer Gouin); and also complimented the Acting Minister of Finance (Mr. Robb). After that introduction he entered upon a discussion of the position of Nova Scotia, dealing with her present conditions and her future prospects. With a great many of the statements of the hon. gentleman I am heartily in accord; but there are some things that he said which I think might better have been left unsaid. I do not think it came with very good grace from the hon. gentleman on his debut in parliament to try to convey the impression to the people that all the patriotism and all the national spirit was embodied in members of his own party, while hon. members on this side of the House were if anything devoid of all national sentiment. Perhaps before I conclude I may be able to convince my hon. friend that when it comes to practical loyalty and real national spirit we on this side have our full share, whereas some hon. gentlemen opposite, including my hon. friend himself, may be considered as being rather deficient in this respect. The hon. gentleman says:

> It is true that for many years past, I have given allegiance to the Conservative party.

From which we may gather that he has ceased to give that allegiance. If he has, he should not be where he is; if he has not, he should not have said what he did say.

> I believed in the principles of that party; I believed in confederation; I believed in the wisdom of uniting the British communities of North America in one Dominion. I believed in the National Policy, and I believed that never was national decision more wisely made than when at the outbreak of the Great War, Canada's government of the day placed itself and the country unreservedly on the side of those who sought to repel German aggression.

The government led by the right hon. leader of the opposition followed the Union government, and its brief tenure of office reminds me of the young Irishman who when about to be sentenced to be hanged was asked if he had anything to say. He replied, "Yes, I am only eighteen years of age and about to die. So soon I am done for, I wonder what I was begun for." When my right hon. friend the leader of the opposition soliloquizes on his short term of office he may well say, "So soon I was done for, I wonder what I was begun for." I do not wish to do the hon. member for Halifax an injustice, but it seems to me he desires to revive the controversy which divided the people during the war. There were differences of opinion at that time

on the question at issue. To me those differences are now a closed book. The future of our country lies with us who are marching together, forgetting the past, taking care of the present, and looking to the future. My hon. friend goes on to speak of the platform of 1919, and he used language that on reflection I do not think he would now repeat in this House. At any other time it might be excused, but not when the right hon. Minister of Finance is ill here in Ottawa after having given fourteen years of his life to the province of Nova Scotia, twelve as premier, and eighteen years to the Dominion as Minister of Finance, fifteen years under Sir Wilfrid Laurier and three years under our present leader. In view of his splendid record and his outstanding personality, I feel certain that my hon. friend would think a second time before he again uttered these words.

I ask were the commitments made in solemn convention in Ottawa in 1919 adhered to? Indeed, it is notorious that they were not. They have been more honoured in the breach than in the observance, and the breach has been repeatedly and cynically condoned by the Prime Minister himself and by the hon. Minister of Finance who, laughing in his sleeve at what he thinks is the guillibility of the electorate, advances his unworthy view that platforms are only useful to attain power. Now, Mr. Speaker, that is a too low and debasing plane on which to conduct public business; it is unacceptable and repugnant to our people; it will not wash.

I could have understood my hon. friend uttering such words in the heat of political debate; but I find that he had his speech written. Therefore he knew what he wrote, if he did not then he did not write it. Next he speaks of the by-election down in Cape Breton and pays some attention to the hon. Minister of National Defence (Mr. Macdonald). The hon. minister does not need any person to fight for him, he scarcely needs anybody to electioneer for him, for he is a whole political team in himself; he is a factor in this parliament and in this government; he is factor not only in Nova Scotia but in Canada, and is an outstanding public man whose word is listened to and believed. My hon. friend says that during the campaign in North Cape Breton in July last the press reported the same minister appealing to the electors of that riding at North Sydney on July 28th as follows:

A revision of freight rates on the Canadian National railways has been prepared and is now awaiting the return of Sir Henry Thornton from the West to put them into effect. It provides for a general reduction in rates affecting local traffic between Ontario and the Maritime provinces.

My hon. friend adds:

Polling day passed, and again the electors trusted the government.

The government had nothing to do with the revision of these rates. They were being put in effect by Mr. Dalrymple, vice-president and traffic manager of the Canadian National system, independent of the government and of parliament, and subject only to the provisions of the Railway Act. The hon. gentleman continues:

Have any of the members of this House seen the revision of freight rates? Seven months have passed and no one in Nova Scotia is conscious of any reduction. They continue to labour under rates which Hon. E. H. Armstrong, the Liberal premier of Nova Scotia, describes as "excessive freight rates choking our industrial life."

What the hon. Premier of Nova Scotia said was right. The fact that reductions in the rates to Montreal and west of Montreal to Port Arthur and Fort William were filed on the 14th of April is an answer to my hon. friend and a vindication of the statement made by the Minister of National Defence that these rates would be put into effect on the return of Sir Henry Thornton. So my hon. friend the junior member from Halifax was a little too previous in criticizing the Minister of National Defence. A little further on in his speech he said:

In order to get a proper setting for the picture of to-day one must recall those prosperous and self-contained conditions hinted at by the minister in those days. Ten banks were then operated and controlled in the province. To-day not one so remains. Fortunes were then being made by many different importers, exporters and shipping men, their varied activities affording generous employment to all who wished to work.

My hon. friend is right when he says ten; I cannot recall every one of the ten, but I can recall quite a few of them. First, there was the Union Bank of Halifax, which had been doing a very good business. Who was the president of that bank? Who was the dominating influence in that bank? The late John F. Stairs, who was a Tory representative in this parliament with T. E. Kenney, who was president of the Royal Bank of Canada. One handed it over to the Royal Bank and the other Tory, Mr. Kenney, took it. I ask my hon. friend, can he blame any gentleman on this side for that transfer of a local bank to the Royal Bank of Canada?

Now we come to the Merchants Bank of Halifax, which name was changed when it got its new charter to the Royal Bank of Canada. The late T. E. Kenney was president of that bank and later Wiley Smith, who never was in parliament but who was president of the Liberal Association—

An hon. MEMBER: Liberal-Conservative.

Mr. FINN: Liberal-Conservative Association, yes, of the city of Halifax—he would turn over in his grave if I called him a Liberal.

So the Merchants' Bank became the Royal. They absorbed the Union Bank. the Bank of Windsor having first been absorbed by the Union through the efforts of Mr. John F. Stairs and also of Max Aitken, now Lord Beaverbrook, who made the trips up to Windsor, brought back the certificates and gave them to Mr. Stairs. My hon. friend is a local director of the Royal Bank of Canada, but all he has to do, I understand, is to deal with the question whether notes that are very small can be discounted and not sent to the head office, which is in the city of Toronto.

Now we come to another bank that carried on business in Halifax, the Halifax Banking Company. That bank was absorbed by the Bank of Commerce. Who was the president for years? You could not pull him out with a block and tackle, the Hon. Robie Uniacke, also one of the leading Conservatives of the city of Halifax. So my hon. friend cannot complain that any gentleman on this side from Nova Scotia or from Halifax had anything to do directly or indirectly with the transfer of that bank to the Bank of Commerce. Then there was the Peoples' Bank of Halifax, which was absorbed by the Bank of Montreal. The president of the Peoples' Bank was Patrick O'Mullin, once a Tory candidate for the legislature of Nova Scotia, where the hon. junior member for Halifax sat for three years and then got tired, left it and stayed out until he came up here. Then came along the Bank of British North America, which was absorbed by the Bank of Montreal, and that bank has not very many of our political friends upon its board; if they are there I do not know them.

These were our great banking institutions in the province. The hon. gentleman speaks of ten: he must include the Bank of Yarmouth, which failed, and then we had in the early days, before I can recall it, the Bank of Liverpool which also failed. So we had two failures of banks in Nova Scotia, and the others were absorbed and their head offices taken from Halifax to Montreal or Toronto. By the way, the Bank of Nova Scotia, bearing the name of our native province, also had its head office in the city of Toronto, and if anyone of Liberal persuasion ever got a seat on the directorate it was only because the door must have been forced open by some providential means, not by any act on the part of the gentlemen who are the directors of that bank—Mr. George S. Campbell, who was the president, Mr. Hector McInnes, who sat in the provincial legislature of Nova Scotia and ran for a seat in this parliament but was defeated; the later Senator McKeen, who resigned his seat in favour of Sir Charles Tupper; the present Lieutenant Governor of Nova Scotia, Governor Grant, and last but not least a former Prime Minister of Canada, the Right Hon. Sir Robert Laird Borden. It seemed to Liberals in Halifax that a sign should have been put up on the door of the Bank of Nova Scotia, "No Liberal need apply." These are the facts, Sir, in connection with our great banking institutions in the province of Nova Scotia. I only mention this matter because it would seem that my hon. friend had no other argument than that of trying to blame the administration or the Liberal party for the sorry condition existing in connection with those banking institutions in our province.

My hon. friend goes on to deal with Quebec statesmen and Ontario statesmen. He says:

> Mr. Speaker, these things ought not so to be. These were not the prospects that were held out to Nova Scotians at the time that Ontario and Quebec statesmen were proposing that the Maritime provinces should enter a union to safeguard the defence position of the country and create a nation. When these statesmen toured the lower provinces after the Charlottetown conference, they naturally dilated on the benefits that would follow the adoption of a plan of confederation. The politicians who attended the conferences were in favour of the adoption of their scheme, of course, but it was received coldly by the public of the province. Indeed, it has never at any time been approved by the voters.

The hon. gentleman does not even intimate, let alone press home the fact, that when these gentlemen did come down to the Maritime provinces to attend that conference in Prince Edward Island their bodyguard before and after, on both sides and in the middle, was no less a person than the late Right Hon. Sir Charles Tupper. My hon. friend merely mentions the statesmen that came down from Upper Canada and ignores absolutely the statesman from Nova Scotia, Sir Charles Tupper, who was the back and front of the whole movement in connection with the entry of Nova Scotia into the confederation. But that is by the way; it shows the broadness and fairness of my hon. friend in dealing with great public questions that are discussed in this House. The hon. gentleman says further:

> The irony of the situation to-day is that the Canadian government, through its ownership of the Grand Trunk, with its chief railway terminus at Portland, is the chief instrument through which United States ports continue to be enriched by trade from the provinces situated west of New Brunswick. The present government has gained some friends by providing lower duties under the preferential tariff when goods enter through a Canadian port, although like much of their legislation the step is faltering and incomplete.

The hon gentleman has been for years or was for years a member of the firm of Pickford and Black. Since the death of Mr.

Pickford he has become the head of that firm. He has been an outsanding steamship man in Halifax all his life and no one knows better than he does that for years Portland was the winter port of Canada under the Tory government. It was the winter port, and not by virtue of ships flying the British flag calling at a Canadian port as they do now and then going to Portland of their own accord, on their own business and in their own way—and it is no one's else business if they do. My hon. friend knows that right up till 1896 the then government gave a subsidy running into hundreds of thousands of dollars to the Allan line to make Portland an eastern terminus and to call at Halifax, put off the mails and go about their business. It was not until after we came into power that that subsidy was withdrawn by Mr. Fielding from the Allans and they ceased to go to Portland, and later a subsidy was given to the Canadian Pacific because they went to a Canadian port, St. John. If my hon. friend casts aspersions on the Liberals on the ground that they made Portland the terminus he is absolutely making a statement that is faulty. I say again that all the steamships that leave the other side and come to Halifax or St. John can turn round the next day and go to Portland, and no one can stop them. Furthermore, the government of this country, Sir Henry Thornton and all his traffic officers, cannot prevent the man in Chicago or any person along the route of the Grand Trunk from shipping his goods through Portland or elsewhere as he sees fit. My hon. friend must know that if there was interference with the transit of goods on American railways through American territory by the government of Canada or by the management of the National Railways, the United States Interstate Commerce Board would immediately interfere and make it so hot for the Canadian National management that they would not know whether to take the goods off or leave them on. So my hon. friend in trying to impress the people of his native province, and particularly the people of the city of Halifax, who are naturally disappointed at the condition should not accentuate a situation that we all understand, and that we would try to ameliorate if it was possible for us to do.

My hon. friend also speaks in reference to the preferential tariff, and thinks it faulty and incomplete, but in line with the way we do things on this side of the House and the way Mr. Fielding does it. I disagree with him. Mr. Fielding brought down his budget last year and he gave a further reduction of 10 per cent in the present preference, 10 per cent of 33-1/3, or 3 1/3, and he said that that 3 1/3 would apply only to goods brought into Canada through Canadian ports. My hon. friend is a shipping man, and he knows that if the budget had provided that the whole British preference should apply only to goods coming through Canadian ports, with no direct line of steamers to Halifax, and with no connecting link with the Canadian National Railway system, it might so dislocate trade and interfere with the transport of goods into the markets of central and western Canada that we would have stagnation, and at once from the centre of our Canadian universe, Toronto, we would have heard a sorrowful wail that Mr. Fielding had interfered with traffic and had put a great embargo on the transport of goods into Canada. My hon. friend, as a shipping man, must know that it would not be wise to bring in such a measure as that all at once, but I agree the day is fast coming when the whole British preference should apply only to goods brought in through Canadian ports because the tendency across the line is to so treat us. They have brought in a measure whereby their Shipping Board are going to give a differential rate on goods transported over the railways of the United States to American ports to be put in American bottoms; and that is going to boycott all ships flying the Union Jack or the Canadian flag. It is a matter in which the British government will be interested, and no doubt if it comes into effect it will be time for us to act in conjunction with the British authorities in an investigation. My hon. friend goes further and says:

> "Canada," as it was called before confederation, finds a good market in Nova Scotia for its products manufactured and sold under a 10 per cent to 35 per cent tariff at correspondingly high prices, and takes payment, not in trade. as Cartier foretold, but in cash, which Nova Scotians raise by selling their fish, potatoes, fruit, lumber and other natural products in the highly competitive markets of the world.

I wish my hon. friend the ex-Minister of Finance (Sir Henry Drayton) were here to hear what I have quoted. The hon. member for Halifax should vote with us on the budget as brought down because he speaks of a high tariff which only gives protection and puts the money into the pockets of the manufacturers because they will not take what we raise in trade; they want the cash earned by our hardy fishermen and other workers in the province of Nova Scotia. My hon. friend (Mr. Black) goes on to say, and this is another crack at his own party:

> Located on the circumference of a circle, Nova Scotia cannot become a factor in the Canadian industrial system because she cannot overcome the costly carrying charges to reach the centre and the other

side of the circle in competition with the mass producers situated at the centre of the circle in Hamilton, Kitchener, Toronto, Montreal, and other cities. And her banking control, with its collateral benefits, has gone to the latter mentioned cities, absorbed, not by commerce, as Cartier prophesied, but as the result of legislative enactments imposed quite naturally by those sections who command a majority in the councils of the nation, who also naturally make the fiscal policy suited, not to the needs of the smaller provinces, but to their own.

Will the ex-Minister of Finance put that in his pipe and smoke it?

Mr. STANSELL: Would the hon. member inform us whether he is talking in support of the budget proposals or of the amendment?

Mr. FINN: Which amendment does my hon. friend refer to, the amendment that was moved by the hon. member for Kent (Mr. Doucet) and was discarded, or the amendment moved by the hon. member for Centre Winnipeg (Mr. Woodsworth)?

Mr. DOUCET: I rise to a point of order, Mr. Speaker. The hon. gentleman has been quoting for the last half hour from a speech delivered in a debate this session that has already been disposed of.

Mr. DEPUTY SPEAKER: I think the point of order is well taken. The hon. member suggests that the hon. gentleman who has the floor is quoting from a debate, I believe the Address, which has already been disposed of. It would be improper, of course, for the hon. gentleman to refer to that debate by way of citation or quotation during the present debate.

Mr. FINN: I bow to your ruling, Mr. Speaker, and I regret that I have transgressed the rule, but the effect is as I have stated.

There is the further question of loyalty, and of building up our own ports and working out our own destiny. I would like to point out that down in the port of Halifax there is a steamship line running from Halifax to Jamaica and to San Diego in Cuba. That line of steamers, while it is not subsidized by the government of Canada, and should not be, flies, not the British or the Canadian flag, but the Swedish flag. These two ships are chartered by the firm of Pickford and Black in the city of Halifax, and are engaged in transporting goods to and from the West Indies. My hon. friend from Halifax (Mr. Black), who is the senior member or the president of that company, is a great believer in keeping our young people within the province of Nova Scotia, in having our fishermen return to their native soil, and having our hardy sons, who make the best sailors in the world, put on Canadian ships running from our own ports.

[Mr. Finn.]

My hon. friend speaks of our lack of loyalty and the failure of our province to measure up to its future success. I am going to ask how it is at all possible for us to grow and develop as a Maritime people when we see these ships running from Halifax flying the Swedish flag, ships that are chartered from Sweden—the only thing bought by the charterer being the coal—the profits made going to Sweden and into the pockets of the firm or company of Pickford and Black Limited. Actions speak louder than words.

Mr. BLACK (Halifax): May I say to you, Mr. Speaker, that what the hon. gentleman is stating is absolutely incorrect. If the ships are chartered they are manned by those who are willing to go to sea in them. Their supplies are bought in Halifax and they are run just as any other ships going from that port are run.

Mr. FINN: I am glad to hear my hon. friend—including his desk mate the hon. member for Kent (Mr. Doucet)—applaud the Swedish flag. I must say, however, that the explanation of the junior member for Halifax does not satisfy me. If I were a Nova Scotian sailor I would, before I would serve under a Swedish flag with a captain sailing out of a British port down to the West Indies, go and eat salt and die of thirst.

Now my hon. friend (Mr. Black) discussed the fisheries of New Brunswick and gave out a report which, I think, does not augur well for the future of that industry. He said that according to British reports lobsters were canned in the swamps of New Brunswick, in an old barn, and were covered with swamp water. He attributed such conditions to the present Minister of Justice. When he made such a statement it was not the Minister of Justice who was swamped, but my hon. friend himself—both swamped and canned. My hon. friend the junior member for Halifax further said that in the evening of his life, he had at great sacrifice to himself, come to the Parliament of Canada to administer a shocking blow to the government and to be the instrument by which that government would be either knocked senseless or brought to a realization of what the people of the Maritime provinces and the city of Halifax expected. He said that if he did not have at heart the interest of the people he could have remained at his own fireside, where he would have enjoyed the wealth that he has accumulated and the comforts that he has surrounded himself with. I desire to say as a young man, and I am some distance yet from fifty, that I have—and I have never boasted of the fact—given eighteen of the best years of my

life to the service of the people of my native province, to the service of the people of the city and county of Halifax, and now for the last year or so to the service of the people of Canada. In that work I have sacrificed my profession and to-day, were I not in public life, I would have to start all over again. At present I have not the time to practise my profession because it takes all my time to look after the interests of the people I have undertaken to represent. For seventeen years I have represented them successfully and continuously in the province of Nova Scotia, and I never received from any government, directly or indirectly, one dollar for any services of mine except what I was entitled to receive by statute. I do want to say to my hon. friend, however, that during those seventeen years during which I have been working in the interest of the people he has been paying attention to his own business. I do not blame him for that, but when he wants to hold himself out as a martyr on a political cross in this country I want to tell him that he is not entitled to wear any medal. I want to say that while I am entitled to wear medals for public service he has a portion or "what jingles in the pocket" because the firm of Pickford and Black, of which he is a member, received money from the government of this country during a period of thirty years. The subsidies paid to Pickford and Black by the respective governments of Canada since 1893 are as follows:

Canada, West Indies, South America.. .. .	$1,577,602
St. John and Demarara..	536,083
Halifax and Jamaica..	90,000
Halifax and Bermuda..	30,000
Halifax and Cuba..	41,666

Mr. DOUCET: Any service given?

Mr. FINN I will come to that. My hon friend had better not be too particular about the service. I have travelled on some of these boats myself.

Mr. BAXTER: Did it hurt them?

Mr. FINN: I will come to that. My hon. me. The total of the subsidies I have given is $2,275,352. As to the steamers my hon. friend from Kent refers to, I went down some years ago to Bermuda in the old Alpha, I think she was about thirty years old then. The next time I saw her she was in British Columbia; she was sold in Victoria. Then there was the Beta. She had to be reconditioned and was built up like Noah's Ark. The government of Canada decided she had not the proper accommodation and that a change would have to be made.

Mr. BAXTER: I should like to know when my hon. friend was in Noah's Ark, what particulars he has of his experience?

Mr. FINN: My knowledge of Noah's Ark is what I have read in the Bible. If my hon. friend has not read that Book lately, or has forgotten what he has read I would ask him to again read that portion of the Scriptures dealing with the Ark along with the lamentations of Jeremiah to which my hon. friend's remarks bear a resemblance.

Mr. BAXTER: I know the Ark was pitched within and without. I do not know how long it took to do the work but I should like my hon. friend to tell us how to do it efficiently.

Mr. FINN: It might have been pitched within and without but the only thing my hon. friend needs to look after is that at the next election he is not pitched out.

Mr. BAXTER: There is no danger.

Mr. BLACK: I should like to ask my hon. friend if he is aware that the subsidies to which he refers were paid to joint stock companies composed of patriotic citizens of Halifax who subscribed capital for the purchase of these boats and who included some of his Liberal friends. The money was received by these joint stock companies and not by Pickford and Black.

Mr. FINN: I am satisfied with the statement of my hon. friend. I do not want to do him any injustice but I must say this: He participated in these profits and he could not possibly have what he has around him to-day in the way of luxuries in the city of Halifax if he had been in business for patriotic reasons or for his health. When the subsidies were withdrawn from the Pickford and Black steamships, the Royal Mail Packet Steamship Company was subsidized to run its boats to the West Indies, the subsidies were paid to Pickford and Black Limited as attorneys and agents of the Royal Mail Packet Steamship Company. Pickford and Black did the business for these steamers and looked after their freight. Pickford and Black stevedores were employed. The Royal Mail Packet Steamship Company received for services, through Pickford and Black, the sum of $3,175,601.77, making in all a complete subsidy of $5,450,954.49.

I would not have mentioned these things, Mr. Speaker, had I not carefully read the speech of the hon. junior member for Halifax and, which I do not think he could have read himself before delivering. I would not have made these remarks, but I think his personal allusion to that splendid financier, the

Right Hon. W. S. Fielding, Minister of Finance, justifies me in laying bare all facts that I believe the people of Nova Scotia should know with regard to the hon. gentleman who has the honour to have a seat in this House. Now my hon. friend wants to know also what the two members for Halifax were doing in this parliament for the last two years—that they never let a yap out of them.

Mr. DOUCET: We are hearing the yaps now.

Mr. FINN: Yes, quite a few yaps. I would like to say to my hon. friend that before I had the honour of a seat in this House, when I was in provincial politics and moved into a larger field, where I would be expected to assist in advancing the interests of the port of Halifax. I, as a member of the government of Nova Scotia, interested myself in and studied the freight rate question. As a result of my work—and I do not say this as a compliment to myself, but in vindication of my position which was assailed by the junior member for Halifax—I was asked by a representative delegation of forty gentlemen from the provinces of New Brunswick, Prince Edward Island and Nova Scotia, to accompany them and be their spokesman in the presentation of their case to the late government of which the right hon. leader of the opposition was prime minister. That delegation arrived in Ottawa, and at twelve noon on June first, 1921, we met the Prime Minister of Canada, and every member of his government I think but one. A meeting was then arranged by the then Minister of Public Works, the Hon. F. B. McCurdy, and I presented to the government the situation in reference to the Maritime provinces, both the grievance and the remedy. I may say that prior to doing that, in the legislature of Nova Scotia in the session of 1921, I moved a resolution which was seconded by the leader of the opposition then, Mr. Laurie Hall, K.C. I went up to Fredericton, and discussed with the government the advisability of securing a resolution of the same character from the legislature of New Brunswick. That resolution was drafted by myself, discussed with them and no change was made. It was moved by the Premier of the province of New Brunswick and seconded by the leader of the opposition, Mr. Baxter, who now has the honour of a seat in this House. That resolution read as follows:

> Now be it hereby declared to be the sense of this House of Assembly of the province of Nova Scotia that the faithful observance of the terms and conditions of the compact of confederation and a generous national spirit require that the convenience, accommodation and welfare of the people and of the industrial interests of the Maritime provinces be steadily kept in view as the primary purpose to be achieved in the administration of the Intercolonial railway:
>
> And that such railway having been constructed to serve a special purpose should be administered upon principles adapted to affect such purpose and as a separate system, giving such advantages in freight and other rates to the people of the Maritime provinces as will afford them access to the markets of other provinces of the Dominion upon such terms as will admit them to a fair competition.
>
> And that adherence to the spirit of confederation requires that such change in the administration be made at once as will remove the conditions disadvantageous to the Maritime provinces which at present exist.

That resolution was passed unanimously, as also was the resolution by the legislature of the province of Nova Scotia, in the year 1921, some three years ago. Two years before that I appeared before the Railway Commission of Canada presenting the views of the province of Nova Scotia, I was associated with the hon. Minister of National Defence (Mr. Macdonald) in representing the interests of the Maritime provinces, and I think he represented the province of New Brunswick at that time. There are just two paragraphs of my submissions to the government that I am going to read.

> These, Sir, are some of the reasons that move the people and governments of the Maritime provinces to come to you to-day and ask you to preserve our rights to allow us to participate in the great industrial development of Canada by enabling us to secure markets in central and western Canada.

And I closed by saying:

> These are some of the reasons that I submit for your consideration. The matter is one which is in the heart and mind of the people of the Maritime provinces. We are a unit in this thing. We are not representing any party or any creed or any race, but are asking that the terms of confederation, which were guaranteed to us in 1867, be carried out. Thus shall we go on and work out our destiny, which I believe to be great; and I am sure the people of the Maritime provinces will appreciate any effort on your part, Mr. Premier, and the part of your government, to give to us in the Maritime provinces that which we deserve, that which is our right, and that which we intend to hold fast and tenaciously.

I am going to state what the Prime Minister, now the hon. leader of the opposition, said in reply to our presentation. He said 11 p.m. that it opened up a new avenue to him of thought. There were some things that he had not known in the presentation which were food for thought. He said unfortunately that he had to leave immediately for England to attend the Imperial Conference, and that the thing that worried him was "to find the right and do it".

I will be fair to the leader of the opposition and will admit that he did not retain the office of Prime Minister for any length of time, so that perhaps he had not an opportunity of

carrying out what he had undertaken to do in the statement he made. But the thing is to ascertain what is right and to proceed to have it done. That is all we ask in the Maritime provinces, and such a request is not, I think, unreasonable. My hon. friend from Halifax (Mr. Black) rather left the impression in this House, in Nova Scotia and in my own constituency that I had sat idly by and had not pressed the claims of the city and county of Halifax. Let me say that, contrary to my doctor's instructions after a very serious operation last May, I came into the House of Commons on the night of June 29 last on crutches and at four o'clock in the morning got on my feet and raised my voice in behalf of Halifax, urging that an appropriation be voted for the elevator to which my hon. friend has referred. And who, if I may put it that way, gave me the run for my money? No less a person than the ex-Minister of Finance (Sir Henry Drayton). When the estimate was brought down for the construction of a grain elevator at Halifax amounting to $200,000—I am sorry that my hon. friend from Halifax is not now in his seat— the following debate occurred:

Mr. Meighen: The information I have is that there was an elevator there that had a little grain in it some years, and for some years none. I fancy it was burned down. Any way it is not there now. I had a return on this the other day. I think it was used substantially just once. I believe it was partly built by the railway and partly by the city. At any rate there were joint contributions. Can the hon. member tell us just what special event the government has in mind that caused it to deem it the part of wisdom to build a large elevator there?

Mr. Maclean (Halifax): I have been personally advised by two or three of the largest shipping companies using that port during the past winter, that a modern elevator of a million bushels capacity would be of great service to the port and of some use to shipping. At the present time a great deal of shipping might go to Halifax were it not for the reason that they are unable to secure grain cargoes for a portion of their carrying capacity.

Sir Henry Drayton: Could the hon. gentleman not think of something that might be useful to Halifax and at the same time would cost a little less money?

Mr. Maclean (Halifax): I am told by shipping men, business men of Halifax that this expenditure would be extremely useful to the port of Halifax. I believe that is a fact. The quantity of shipping which enters or leaves any Canadian port is largely determined by whether or not they can obtain a partial loading of grain. That is necessary as regards the port of Halifax.

Sir Henry Drayton: My hon. friend knows perfectly well that Halifax has not handled grain for years, except during the war. When there was the grain to handle, the elevator handled it all right. But the business there is absolutely negligible and must be so as long as we have a charge for hauling grain on the railway and railway costs are heavy.

Mr. Macdonald (Pictou): My hon. friend overlooked one thing, namely that the quantity of grain moved depends upon whether ships will be available to carry it. Contracts to carry grain are not made by the railway people themselves, and the grain broker who wants to ship to Liverpool will ship via Halifax if there are facilities and ships there to carry the grain. During the past few years merchants have not been regularly shipping to Halifax because there has not been space. Indications are that this space will be obtained and work will come for the elevator. My hon. friend ought surely to encourage the idea that we should have facilities in our ports in winter for shipments of grain instead of sending the ships to American ports. If he wants to oppose the idea that we should have within our own boundaries and harbours facilities by which Canadian produce can be carried abroad and imports can be brought to our ports, that is a very curious policy. If he wishes to have the ships in winter going to Boston and other American ports instead of to Canadian ports, that will be the policy of my hon. friend.

Sir Henry Drayton: My hon. friend always conveniently forgets everything he likes to forget. There is another winter port, that is neither Portland nor any other American port, and that is St. John. He also forgets that usually grain travels by the cheapest railway route.

I may say to my hon. friend the junior member for Halifax, to the leader of the opposition, and to the ex-Minister of Finance, that the elevator is absolutely necessary and is going to be built; and I hope to see it in operation when navigation closes on the St. Lawrence. It has not been so far started owing to the fact that the plans drawn by the engineers of the Canadian National Railway system and the technical engineers who were called in were beyond the requirements of the port not as to capacity—because that remains fixed—but from the point of view of machinery needed. The requirements in this respect are such that a considerable reduction can be made, and the Minister of Trade and Commerce in the interests of economy has ordered a revised specification. The matter has been in the hands of the Railway department and the report of the engineers will be dealt with by the minister, tenders will be called for and the elevator will be built. My hon. friend wanted to know about the promised Dartmouth pier. I can inform him that the Dartmouth pier is already under construction, having been begun over two and a half months ago, giving employment to a good many men who were out of work. The necessary pine is being brought from the southern states and will arrive either tomorrow or the next day. When it comes construction will be started immediately and the pier will be completed to connect up Dartmouth with the Canadian National system to Windsor junction. On the completion of this work I hope that the relation that Carleton bears to St. John, Dartmouth will bear to Halifax, and that Dartmouth will share in the business of the port. I am looking forward to beneficial results to the town in which I was born. I have one more quotation and then

I am through with this phase. Speaking at four o'clock in the morning, I said:

It seems to me that the hon. member for West York (Sir Henry Drayton) takes a very pessimistic and gloomy view of the development of an eastern national port, namely the port of Halifax. It is equally as pessimistic a view as my hon. friend took when, as chairman of the Railway Commission, he laid down that very explicit doctrine that geographical disadvantages should not be taken into consideration in the fixing of rates. We are a part of this great confederation; and the great leaders who have passed to the beyond held out to us in Nova Scotia and to the citizens of Halifax the promise that if the province remained in confederation Nova Scotia and Halifax would become the Atlantic frontage of the Dominion. And if my hon. friend will only go and look at the motto above the entrance to this magnificent structure, raised and reared by his government, he will see there written these words:

> The wholesome sea is at her gates,
> Her gates both East and West.

We may have the wholesome sea but we have not the gates. But it was in the wisdom of the late Liberal Chieftain, Sir Wilfrid Laurier, to foresee the future and build the Transcontinental, taking the road to Moncton as a common centre for the shipment of grain and other products of the West in winter, from Halifax and St. John. When the short line is completed from a point above Port Arthur on the Canadian National up to the Transcontinental, with easier grades and shorter mileage, the people of Halifax feel that it will be the duty of the Canadian National system to see that grain and other products of the West not routed through any other ports shall be carried to the ports of Halifax and St. John in winter.

If these things are not done then perhaps some of the things spoken of by a gentleman in the legislature of Nova Scotia and referred to in the press of the Maritime provinces may come to be more than mere words and cold type. I regret that the state of my health to-night forbids my entering as largely into this subject as I should like. But it is vital to the interests of Nova Scotia, it is vital to the city of Halifax, that proper attention be given this matter. I say it is vital to the city of Halifax, which Sir Charles Tupper declared would be, as a result of the national policy, a forest of masts if that province remained true to confederation. We are spending to-day millions of money for the development of the port of Portland, and this is the result of an act of administration on the part of the leader of the opposition (Mr. Meighen) in the taking over of the Grand Trunk and the terminals at Portland. This was a legacy bequeathed to the present government, who have in turn handed it over to Sir Henry Thornton and his board of management. I believe that Sir Henry Thornton is willing to do the right thing by the Maritime provinces, and my hon. friend must know that he has recommended that an elevator should be built at Halifax with a capacity of at least 750,000 tons, if not a million. It is his intention to divert to Halifax, as he has a right to do, that proportion of the grain and other products from the West that can and ought to be carried through that port. The rate to Halifax will then be the same as to St. John or Portland or New York. Montreal carries one cent less and when the differential referred to by my hon. colleague (Mr. Maclean) is removed as between St. John and Halifax, then New York, Portland, St. John and Halifax will be on a parity. There is no sound reason why Halifax should not share as a national port in the shipment of products of the West and of central Canada to the Old Country and the Mediterranean in future. These are my hopes; and I regret that my hon. friend should take the gloomy, pessimistic view he has displayed in reference to the future of Halifax as a port. I do not share that view and I am sure that if we both live a few years longer and Halifax is gixen an opportunity he will have reason to revise his opinion and will be quite willing to help to make it what it was always intended to be, the eastern gateway, one of the national ports of Canada, in the carrying of Canadian products from the West and Central Canada to the markets of the world.

I would not have referred to this matter had not my hon. colleague from Halifax undertaken to say that I had been recreant in my duty and had failed to present the fair claims and demands of the port of Halifax and the province of Nova Scotia while a member of this House. I have pointed out that my energies, so long as I have been cognizant of the facts, have been directed to bring about an improvement of conditions and so restore prosperity at the port.

Now, a word or two in respect to the fishing industry in Nova Scotia. We have been told—not by the hon. member for Halifax—that we have lost our West Indian market. I am informed by competent authorities that:

Nova Scotia exporters to-day have a better hold on all markets than ever before in the history of the trade. American exporters have never had any profitable large export trade on dry fish, although for a period of some five or six years, say from 1913 to 1919, a large Gloucester fish concern—the Gorton-Pew Fisheries, Inc.—made a determined effort to enter the foreign dry fish markets, and during that period they were fairly large exporters. Their efforts in this respect were largely the cause of the very disastrous failure in 1919. This concern was in the hands of receivers for some three or four years, and last year was reorganized on a new basis. The writer was informed by both the receivers that had the business in hand, and by those interested in the reorganization, that it was to be their well-defined policy to steer clear of all export business except what was incidental to their other operations. Gloucester will always have a considerable quantity of fish that cannot be used for the domestic trade that has to be dried and exported. The total volume of American cured fish that is exported to foreign markets is so small that exporters in other countries hardly know that anything is going on. As a matter of fact the only place in which it is an menace is Porto Rico, which market is what is known as a consigning market, taking a large proportion of inferior qualities of fish that is shipped from Newfoundland and Canada and has to be sold on its merits, being fish culled out from shipments made to other markets. Lunenburg however, does continue to ship the regular Lunenburg cure of codfish to Porto Rico, and is, therefore, more or less up against Gloucester competition—the Gloucester exporters having the advantage of the Fordney tariff.

It was not American competition that during the past few years made the dry fish export trade of Canada unprofitable, but the upset world conditions, chief among which was the ruinously low rate of Brazilian exchange—Brazil being one of the largest, if not the largest, market for dry fish in the world. This spring for the first time in four years the accumulation of old stocks of fish produced in Norway, Iceland, Great Britain, Newfoundland and

Canada have been cleaned up—I do not mention the United States as they are such a small factor that they can be overlooked—so that to-day practically all markets are in excellent shape with prices 25 per cent above those ruling a year ago.

It must be admitted that the demoralization of the fish trade during the past three years has had a most serious affect in the Maritime provinces, as owing to the price obtainable by the fisherman it did not provide him with sufficient to pay his bills and a large number of fishermen migrated to the United States. In the province of Quebec, where we are largely interested, the fishermen sought other occupations in Canada. Twenty-five per cent advance in price means that this year every available boat on the Gaspé coast will be put into operation. It is estimated that the number of men fishing will be again back to normal. The improved position also means that the Lunenburg fleet, instead of being only 40 to 50 vessels as predicted last autumn, will probably be between 60 and 70 vessels.

There is one unfortunate situation in regard to fishing operations which particularly pertains to the province of Nova Scotia, in that while the price of dry fish has materially advanced, the price of pickle cured codfish as produced for the boneless fish trade in the United States has gone down in value about 50 per cent per 100 pounds. This class of fish has in recent years been sold at high prices in the United States; in fact at prices that gave returns at least one-third more than if the fish had been dried. Owing to Gloucester and other operators in boneless fish having written Nova Scotia producers that they will have to lower their price this year, many Nova Scotia fishermen have become discouraged and it looks very much as if there would be a further exodus to the United States. We have recently had advice from Cape island, which was the centre of the production of pickle cured codfish, that very few boats will be fishing this year. The cause of the decrease in the value of this cure of fish is apparently due to the American public turning away from the use of salt codfish as a regular food article. We are in a position to size up the situation as we have been carrying on large operations in Portland, Maine, during the past six years, operating chiefly in boneless fish. Our output last year was very disappointing—only a little over half of our expectations. On a recent visit to Gloucester the head of the Gorton-Pew Company and other heads of Gloucester houses, informed me that their experience had been the same. The result is heavy over-supplies of this quality of fish at the present time. While this business seriously affects the south shore of Nova Scotia where 75 per cent of the fish caught during the past few years has been pickle cured for the boneless fish trade, the interests involved are not nearly so important as those concerned in the dry fish export trade, so that on the whole it would appear to me that conditions generally pertaining to the fish trade are in much better shape than at any time during the last four years. During the past year the great difficulty was not in marketing dry fish with a profit, but the fact that supplies in Canada and Newfoundland were very short. This owing to decrease in the number of men fishing, estimated at 25 per cent in Newfoundland and 30 per cent to 40 per cent in the Maritime provinces and the Gaspé peninsula.

We can assure you that the dry fish exporting houses are doing their utmost to encourage the fishermen and small dealers throughout eastern Canada to as much as possible get back to ordinary fishing operations, which have always meant so much for the prosperity of the Atlantic coast. There is no doubt whatever that the production of both dry codfish and pickle cured herring, mackerel and alewives has seriously declined during the last twenty-five years. We would say to the extent of about 25 per cent as regards dry fish and 50 per cent as regards pickled fish. We can pretty well judge of this by our own operations. Whereas in the five years previous to 1914 we handled an average of 200,000 quintals of dry fish per year, our average for the last three years has only been 150,000 quintals. While competition from the United States is negligible, there is no doubt whatever that our export fish trade is up against very severe competition from European countries, particularly Norway and Iceland. It would appear that production costs are less than with us. In regard, however, to at least part of the Canadian production, we have the advantage of producing a superior article which out-sells the Norwegian cure in Brazil and Mediterranean ports.

A movement has recently been made to start a campaign of education in connection with the various branches of the fisheries, such as the best methods of handling fresh fish, smoking fish, canning of various fish products and the introduction of the very best possible methods among the fishermen in the various fishing districts. This educational campaign is to be carried on under the direction of the Biological Board of Canada. Steps are now in progress to establish a station at Halifax, which, although it is being directed by the Biological Board, will be distinctly along educational lines. In addition to the proposals as set forth above, steps will be taken to adequately investigate the movements of fish and the putting before our fishermen the results obtained, as well as up-to-date information of the very best methods that are being used in European countries.

Mr. Speaker, we have every reason to believe that conditions will improve and that as a result our fishermen will return from the United States, and we hope ultimately to have such a development of the industry as will equal if not exceed its past greatness.

There is just one other matter that I want to place before the House. I refer to the efforts of Sir Henry Thornton in behalf of the port of Halifax. The results obtained by him are due to three causes. The steamship business at Halifax has greatly increased That has been due, first, to the fact that the 10 per cent reduction in the differential applying only through Canadian ports has brought freight from the Old Country and from foreign countries to Halifax for transportation throughout Canada; second, the differential having been removed, putting Halifax on the same basis as St. John and all other Atlantic ports, is bringing a greater tonnage of freight to Halifax; and, third, Sir Henry Thornton on taking over the presidency of the Canadian National Railway system saw to it at once that his traffic officers went to the Old Land and there went amongst those who intended to come out and settle in our country, saw that they were transported across the ocean by steamship lines that were working in conjunction with the Canadian National Railways, namely, the Cunard and White Star, and that that traffic which went to American ports in other years was brought into Halifax. During the year

1922 ships sailing into the port of Halifax numbered 491 as against 768 in 1923.

I have the returns with respect to the port of Halifax for the years 1922, 1923 and 1924 since Sir Henry Thornton took charge of the Canadian National Railway system, and they are a matter of pride and satisfaction. The port of Halifax so far as passenger traffic and improved freight position are concerned is coming into its own. The following will show the increase in business at the port for the season 1923-24 compared with 1922-23. The time given is during the closing of the St. Lawrence which is from November 22nd to April 22nd:

	1922-23		1923-24	
	No. of ships	Tonnage	No. of ships	Tonnage
November 22 to 30	16	69,550	23	120,924
December	73	389,421	83	464,938
January	72	373,722	91	534,689
February	67	331,422	81	535,138
March	67	380,981	67	485,748
April to 22nd	51	324,115	65	462,854
	346	1,869,211	410	2,604,287

The number of passengers landed in 1922-23 was 11,242 and in 1923-24, 28,588. In other words, nearly 18,000 more immigrants were brought in in 1923-24 than in 1922-23, through the policy of Sir Henry Thornton and his traffic management, as well as the policy of the hon. Minister of Immigration and his department. I understand that the figures for this coming summer will be in excess even of these, because during the summer months—what never has happened in Halifax before—the Cunard line, the White Star line, lines from Mediterranean ports, and also the Holland-American line, have about seven sailings a week in all into Halifax, which means that large numbers of immigrants will be landed at that port and that freight will arrive there destined for various Canadian points, so that the port of Halifax will be busy this summer as never before. The ships that came into Halifax this year were of the type that never came before. The following are some of the names of the larger ships with their tonnages:

	Tons
Belgenland	27,200
Empress of Scotland	25,037
Empress of Canada	21,211
Minnawaska	21,400
Laconia	19,679
Samaria	19,602
Andania	18,950
Lapland	18,565
New Amsterdam	17,149
Tuscania	16,700
Doric	16,600
Cameronia	16,288
Lancastra	16,243
Veedham	15,450

[Mr. Finn.]

These are ships of perhaps the greatest tonnage sailing from New York and from Liverpool and Southampton on the other side, calling at the port of Halifax, landing thousands of immigrants, giving employment to our stevedores, bringing freight that has to be handled leaving at the port thousands of dollars for provisions and supplies. With that outlook for the port of Halifax I do not think we need be very pessimistic for the future, so long as Sir Henry Thornton is permitted, to occupy the presidency of the Canadian National system and gives his best energy and ability to doing the right thing by the port of Halifax and also by the port of St. John in winter and by the Canadian ports on the St. Lawrence in the summer.

There is one other set of figures that I want to place before the House; they are from a return brought down in connection with imports and exports via the Canadian National through the ports of Portland, St. John and Halifax in 1922 and 1923. The figures are as follows:

	1922	
Canadian National—	Imports	Exports
Portland	787,739	121,658
Halifax	594,508	104,786
St. John	392,151	159,433
	1923	
Portland	810,667	121,879
Halifax	602,210	106,765
St. John	381,624	161,123
Canadian Pacific—	1922	
St. John	798,033	373,929
	1923	
St. John	929,882	393,107

It will be seen that as regards imports over the Canadian National, Halifax in 1922 had a balance of trade over St. John to the extent of 200,000 tons and in 1923 of 221,000 tons. So that from these figures, on the whole the port of St. John is on an equality with the port of Halifax—perhaps a little better than Halifax, because through the Canadian Pacific they get both imports and exports and that equalizes the falling off of traffic as between the two ports and gives both an opportunity to develop as they should as sister ports in the Maritime provinces.

In view of the statements I have placed before the House to-night—and I must apologize for having kept the House so long—

Some hon. MEMBERS: Hear, hear.

Mr. FINN: Well, I may say to my hon. friends who say "hear hear", that I have not transgressed any rule, if there is any rule in this House—

Mr. FORKE: There is no rule.

Mr. FINN: Since I have had the honour of occupying a seat in this House I have spoken only once, at four o'clock in the morning, for ten or fifteen minutes, and I have not since that time, except to interject a remark or two, taken up any of the time of the House. I felt here was an opportunity to deal with the situation in the Maritime provinces, and to give hon. gentlemen in the Progressive party who represent our Canadian West in this House an opportunity of hearing some of the things we expect to have done and some of the things that are being done and that we are helping to do. I regret exceedingly that when the representatives of the Progressive group were in the city of Halifax, through a loss in my immediate family I was unable to extend to them a hearty welcome, but I called at the provincial parliament buildings and through Mr. McBride expressed my regrets at being unable to greet them personally. I should have liked to show them in a kindly way some of the advantages of Halifax, which I know was done by the hon. member for Halifax (Mr. Black) during their stay in our city.

In conclusion, I wish to say that there are a few things we desire the government to do at the earliest possible date. Our terminals at Halifax are not completed. There is a difference of opinion as to whether the money that was spent was spent in the right place or not, but the stage for questioning that has passed. With these ships calling at the port of Halifax, and with immigrants pouring in through that port and being carried over the Canadian National railways, it is necessary that the immigration sheds at the south end pier should be completed at as early a date as possible. The landing quay is 2,500 feet in length and will accommodate three ships alongside, each from six to seven hundred feet in length. It will accommodate their passengers and the freight they have. Pier No. 2 is the most up-to-date pier either in the United States or Canada. It was built during the time the Minister of Finance (Mr. Fielding) was Acting Minister of Railways, and I have not the least hesitation in saying that if the plan of the then Minister of Railways had been carried out and the terminals had been built in the inner harbour, we would not have had the condition we have to-day as regards the south end terminal, but as I say, the time for discussing that has gone by. I would like the government to give consideration at the earliest date possible to the finishing of these sheds in order that we may have the facilities to handle the passenger and freight traffic that is coming into our port.

I might say further that when the elevator is built and ocean steamships can get at Halifax the basic cargo of wheat which they all need, it is my hope and belief that these ships that are now going on to Portland will make Halifax their port and get their basic cargo there, and thereby save two days on the round trip. Coming into the port of Halifax is a day shorter for the ships than to go to Portland, and they save a day going back to the Old Land, or two days on the round trip. That is a tremendous saving to these high-powered ships of great tonnage, which are run at great expense. But if the basic cargo of wheat can be provided at Halifax these ships will of necessity make Halifax their home port on this side of the Atlantic, and in that way employment will be given to our stevedores, the ships will buy their supplies in Halifax, and the crews will spend their money in our city and some of the prosperity of the old days will come back. I say that with good hope because it would mean a saving of a whole month during the year to the steamship companies. Each ship would be able to make two trips more in the year. If that is so, with our facilities at the port of Halifax, and with the freight rate to Halifax the same as to Portland there is no reason why we should not come into our own.

I place these matters before the government and I hope they will receive fair consideration and action. I know that the revenues of this country are used almost to the limit. I am not going to ask for impossibilities, but surely if our railroads are going to bring returns and help reduce the deficit, this will be money well spent, and a penny spent wisely is spent well. I thank you, Mr. Speaker, and hon. members for listening to me at this length to-night. My only justification is my interest in the Maritime provinces. I have tried to place before you some of the reasons that have actuated me in the action I have taken, both as a member of the legislature and government of Nova Scotia, and also as a member of the Parliament of Canada, as a trustee not only for the people of Halifax but for the people of Nova Scotia. Let us all look forward with the hope of a united Canada, a hope that will mean much to us on this side and hon. gentlemen opposite.

Mr. WILLIAM ELLIOTT (South Waterloo): Mr. Speaker, after listening for three hours and thirty-five or forty minutes to the address from the hon. member for Halifax (Mr. Finn), I have come to one or two conclusions. The main conclusion which I have arrived at is that the competition has shifted

from Toronto to Halifax. My second conclusion is that it will take much water to wash the linen of New Brunswick and Nova Scotia, although perhaps I should not include New Brunswick in that statement. There is still another thought suggested by his speech, and that is if the hon. member had a real province to talk about, how long would he talk?

Perhaps it is not too late—I do not refer to the time of day—for me at this stage to offer my congratulations to the Acting Minister of Finance (Mr. Robb). He certainly set a wonderful example of brevity in presenting his budget to the House, and by the way the lesson presented by the Acting Minister of Finance has been totally lost on the "minister for Halifax".

Let me likewise express the hope that the Minister of Finance (Mr. Fielding) will speedily be restored to health, and that he will in the immediate future be able to take his place on the government benches in this House.

I wish to say at the outset that in the remarks I have to make, and I am going to be as brief as I can, which will probably be good news, I am going to speak entirely for the constituency which I represent. I am dissociating myself with any party in this House, and that, by the way, is becoming quite a common practice. The hon. member for Springfield (Mr. Hoey) made it quite clear to the House that he was as free as the winds that blew over the western prairies, and much to my surprise the hon. member for East Elgin (Mr. Stansell), I think, arose in the House and proclaimed almost the same sentiments. I shall claim the same liberty in the remarks I am going to make. I feel that some things I am going to say will perhaps not be acceptable to all members of this House, but what I wish to do is to express the opinion of the constituency I represent, and express it just as clearly as I possibly can.

Before, however, beginning on that I wish to say that I am sure this country is pleased to find that we have already reached the stage where the finances of this country are at least balanced. The Acting Minister of Finance in his presentation showed not only a balanced budget, but a surplus. That to my mind is one of the things which this country has been looking for and expecting for many years, and I am sure the country owes a debt of gratitude to the government in that regard.

One or two other matters have occurred to me in connection with this budget. First, I would say that the sales tax reduction on a great many articles, and on the necessities of life, does not go far enough. We have one article which enters into the construction of the homes we live in—that is lumber—from which the sales tax has not yet been eliminated. It seems to me that this is a very important matter. Lumber is a very necessary article. The cost of building our homes has reached a tremendous figure, so much so that we are finding it very difficult year by year to engage in such work, and any reduction which could be brought, through the abolition of the sales tax as it applies to lumber, would be very acceptable, I am sure, to the great mass of the people of Canada. The constituency which I represent contains, perhaps, one of the greatest combinations of agriculture and industry in the Dominion. We have a population that is very dense, although the constituency is very small; its dimensions are only about twelve miles by twenty-four so hon. members will see it is very compact in character. In the county of Waterloo we have two cities, the county is the only one in the Dominion to enjoy that distinction. As well as these two cities there are a great many small towns and villages, all of which are large industrial centres. Coming back to the agricultural situation again we find that those engaged in agriculture there are perhaps in a little better position than they are in most other parts of the Dominion. There is not a spot in the riding from which we cannot, in one hour's ride, reach three or four large cities, as well as a great many small towns. Galt, Kitchener, Guelph, Brantford, Hamilton, and Stratford, all cities with a large population, can be reached from any part of the riding in just about an hour's trip by car. This means that the farmers in that part of Ontario are engaged in what we call diversified farming—the true type of mixed farming. About 80 per cent or four fifths of the products of these farmers are all disposed of in the towns and cities that surround the district. Now, when you go out and tell those farmers that their home market is no good you have got a job on your hands. Speaking of those farmers I want to say that their home market is a real market, and I cannot stress that point too strongly here to-night. Of course that is a special condition. I know that situation does not exist in the West, nor does it exist in a great many other parts of Ontario, nevertheless in the riding for which I am speaking to-night it is a real factor and a factor of which we are particularly proud. So I have come to this conclusion, as I am sure a great many others have, that you cannot injure agriculture, you cannot do anything that will lessen the buying powers of the farmer, without injuring the industries in the towns and cities. On the other hand you cannot do anything to injure industry with-

out injuring the farmers. This is not only true of the constituency which I represent but it is applicable throughout the entire Dominion. If we are going to accomplish anything in the way of getting together and formulating a policy that will be acceptable to us all we simply have got to forget our occupations and resist any desire to legislate simply for industry or for agriculture—we have got to get together and agree upon some plan that will be acceptable to the great mass of the people. Unfortunately this has not been done; and when I listen to the speeches pro and con in this house it does seem to me there is a lot of talking going on that is increasing the breach between agriculture on the one hand and industry on the other, whereas our efforts should be devoted to bringing the two together. To my mind that is one of the important things we have got to do. We must get together on this question and formulate a policy that will be in the interest in the whole Dominion. So much for agriculture.

Up to the present time the budget that has been presented by the Acting Minister of Finance has been one with which I can agree perfectly; it is a budget from which I think great good is going to come. We find that agriculture is going to be relieved of certain expenses which it has had in the past. I do not want you to think that we do not have any difficulties so far as agriculture is concerned in the riding which I represent; we have difficulties just as other places have, not as to what we have to sell but as to what we have to buy. We find, when we come to the markets to buy the necessities of life—for example our boots and shoes, our wearing apparel, our implements and so on—that they cost us too much money, they are too dear; and when we compare the prices we have to pay to what we have to buy we are right up against a problem which is a very difficult problem to solve. I notice that the provincial government in the province of Ontario have a commission going round at the present time in an honest desire, as they say, to try and solve the rural problem. To my mind it is quite a simple thing to find the trouble; the difficulty will be to solve the problem. I believe that marketing and marketing costs are, possibly, at the root of our troubles in Ontario to-day and not so much the tariff. If the tariff were wiped off our implements completely and off the articles of consumption I do not believe that it would make very much difference to us. But we have got to get cheaper transportation ,we have got to get cheaper articles of consumption one way or another, so that the price of what we have to buy will more nearly correspond to the price of what we have to sell. As I said up to the present time the budget is perfectly satisfactory. But I happen to represent a great many industries in the south riding of Waterloo. I am very proud of these industries and in talking over the matter with those engaged in them I find that their objection is not so very much to the budget as brought down as it is to the possible trend in which it is going. When we have the Minister of the Interior (Mr. Stewart) coming forward with the statement that this was a step that sounded the death knell of protection; when we have the Minister of Agriculture coming forward with almost a similar declaration, we are sometimes led to hesitate and wonder where we are going, what direction we are taking. I am perfectly willing that the tariff should be as low as possible, I believe in a low tariff, but I want that tariff to be a fair one. I believe in a fair and square deal not only for agriculture but for industry; and when we find that our manufactures to-day are right up against it in the way of hard times it is only with a good deal of hesitation that I am willing to accept the budget as it is brought down. If it is the intention of the government to go ahead with this process of elimination, if it is their intention to go ahead and gradually reduce the tariff on various articles—perhaps it would be boots and shoes next session or textiles—if it is the intention of the government to go ahead and do that I want to tell them frankly that I cannot follow them.

Mr. SUTHERLAND: Is that not the policy of the government and the party with which my hon. friend is identified? Is that not the doctrine laid down in their platform?

Mr. ELLIOTT (Waterloo): Perhaps my hon. friend is right. I do not wish to argue that point at this time. In talking to manufacturers I found one or two things bothering them very greatly. In the riding I represent we have a great many textile industries; in fact I am told by the woollen textile men themselves that I have more textile industries in the south riding of Waterloo than there are in any other constituency of Canada. If that is true—and I believe it is—I think it is my duty at least to see that these industries get a fair and square deal.

Coming back to the troubles which our industries have had in the past, especially the textile industry, I had reason to believe, as

I thought a great many others had reason to believe, that something would be done in the budget to deal with those countries which have a depreciated currency. This is a question which has been brought to the attention of the government so much and so often that I naturally hesitate to go over it again. I believe that if the government had dealt with those countries as they should have been dealt with, and placed their manufacturers on an equal footing with our own Canadian manufacturers, the woollen and textile men of Canada would be fairly well satisfied. The question of depreciated currency is going to be rather a serious one. Reading from the Yorkshire Post, which by the way is a Conservative paper, I find the following:

> Not only have the British manufacturers felt the competition of the French woollen textile trade because of low prices through the depreciation of the French currency, but the manufacturers of Canada have suffered likewise.

Now, Mr. Speaker, that shows that even the textile manufacturers of Great Britain, who have perhaps one of the greatest organizations in the world to-day in that line of manufacture, are feeling the effects of the depreciated currency of other countries. If those men feel the effects of depreciated currency in England, what must the effect be in Canada? I would like the government to deal with this matter. I think it is a serious question; besides it is something that is not fair. We have the British preference with Great Britain. If we allow Great Britain, for instance, to compete in the markets with our Canadian manufacturers of textiles, with their depreciated currency and with the low wages which they pay in England, and allow those articles to come in here and drive our Canadian workmen and our Canadian manufacturers out of business, I think it is a serious question for Canada, and I know it is a serious matter for the constituency I represent. It is all very well to say that these men ought to be able to compete with the world. But there is this viewpoint—and it is the same in all industries—that these industries are established and, are here already, and it would be a hard proposition to say to these men, "We do not want you, we will drive you out of existence". I do not think the government would take that view; in fact, I know they would not. Therefore, I hope that nothing further will be done in the way of increasing the British preference in regard to our woollen industries, until the whole question is properly investigated and we understand the situation fully.

We have in the constituency which I represent a great many boot and shoe industries. We all know that these men are having a hard time financially. Many of them are in difficulties. I have a letter which I received from one of the manufacturers in South Waterloo, which is perhaps of interest and from which I will read a few extracts. The letter says:

> So intense is competition amongst the 170 or more firms in Canada that no less than 25 shoe manufacturing concerns failed last year, and the casualty list since the war now exceeds 70.

Sometimes we are met with the statement that these men are profiteers, and that they are not operating their factories on an economical and business basis. Well, after we have presented all our arguments in this regard, the fact remains that these men are financially up against it. I do not think it is the intention of the government to say to these men, "We are going to still increase the British preference and make it harder for you to do business". I think that is the view-point we must consider; and in this industry, until we know the facts of the case until this question, as well as other questions, are investigated by a properly constituted commission appointed to inquire into them we should not make any changes in our customs tariff.

Now, Mr. Speaker, I sometimes think that the Canadian Manufacturers' Association are responsible for a lot of the troubles we have in Canada to-day. Some way or other the people of Canada—and I think with some degree of justification—have got it into their heads that the manufacturers have not been dealing fairly with them. I believe they have that idea in their minds, and whenever the Canadian public get an opportunity they are quite ready to swat the first head they come across. When we see the extreme demands of the Canadian Manufacturers' Association, it only alienates support. If they would come before the people and government with a reasonable proposition, something that was in the interests of the whole of Canada, and not merely in their own interests, I know that the people would respond; and it would go a long way towards gaining sympathy for the manufacturers. Unfortunately, however, they have been following a policy that has more or less alienated support, and they are to blame very largely for a little of the unrest, suspicion and distrust in the minds of the Canadian public to-day.

There is another very important feature of this question which I think should not be lost sight of, and that is the investment which

labour has in this country. It is all right perhaps to put an industry out of business. It is all right to go to that industry and say, "We are going to reduce the tariff and going perhaps to make it a little harder for you to carry on." Well, it might be said that affects the industry alone; but wherever industry is established we have a great many workmen, as for instance, in the riding I come from. I represent thousands of workmen who have become good Canadian citizens, men who have a stake in the country, who have, through their toil, built homes for themselves, bought real estate and property, and who own a very large percentage of
12 m. the property in the constituency. That is an investment which is too often lost sight of in dealing with public affairs.

These men are entitled to somewhat fairer treatment than they have received in the past, and if the government and its officials would pay more attention to this phase of the question and accord them a little more consideration when our policies are being framed there would be a good deal more satisfaction. In the riding which I represent a great many of the factories are idle, a great many of the looms are out of commission, and I know that dozens of men, whole families, entire connections—sisters, cousins and aunts—have all gone to the republic to the south, having sold their properties and left the work in which they have been engaged over here, in order to take up new positions in the United States. This is a distinct loss to the community, for these people were good Canadian citizens; and this is of course one of the conditions with which we are faced to-day. I do not say that the government can prevent this because there is a natural drift back and forth between the two countries. Personally, I believe that eventually a good many of these people will come back, but at the same time just at present it is a very considerable loss to Canada for our citizens to emigrate to the United States.

Mr. WHITE: Does the hon. gentleman think that a higher tariff would be of benefit?

Mr. ELLIOTT (Waterloo): I do not wish to enter into an argument on that question to-night.

Mr. SPENCE: You do believe it, though.

Mr. ELLIOTT (Waterloo): I will tell my hon. friend some other time. I come now to the consideration of what I regard as one of the most important matters before the people of Canada to-day. I have no doubt that there is a great difference of opinion in this respect, but it seems to me beyond question that there is a great demand throughout the province of Ontario for a better system than we have had in the past of securing the information which we require in order properly to formulate our tariff policy. There is, I say, an insistent demand all over the province in this regard; and I refer particularly now to the appointment of a permanent tariff commission. I do not say that the appointment of such a body would get rid of all our tariff troubles, but certainly it would afford the people and the government a means of obtaining some facts which I do not believe they possess at the present time. I firmly believe that a tariff commission would be of considerable advantage. In the year 1912 when Sir Robert Borden introduced the bill which at that time embodied a permanent tariff commission, that measure passed the House of Commons but was thrown out by the Senate.

Mr. HARRIS: Did it pass the House of Commons as brought down?

Mr. ELLIOTT (Waterloo): Yes.

Mr. HARRIS: I beg to correct the hon. gentleman; it did not.

Mr. ELLIOTT (Waterloo): I have the bill here before me; it is No. 88 in the bills of the year 1911-12.

Mr. HARRIS: Let the hon. member read the amendments and he will find that this particular bill did not pass as brought down.

Mr. ELLIOTT (Waterloo): I read the debates that took place at the time and I am not aware that very many amendments or any serious changes were introduced. I understand that the bill was passed by the House of Commons as submitted, but I may possibly be wrong in that respect.

Mr. HARRIS: It was passed with amendments.

Mr. ELLIOTT (Waterloo): I may be wrong, but that was my understanding at any rate. However, the bill was thrown out by the Senate largely because there was no public demand for it. It was contended that the people had not asked for it, that nobody wanted it, and that it was merely a subterfuge on the part of the government of the day to evade responsibility in the framing of the tariff policy at that time. It seems to me that there is a good deal of misconception as to the functions of a commission of this kind. The other day in this House a question was asked by one hon. gentleman of another whether he considered the commis-

sion appointed in 1920, of which the ex-Minister of Finance (Sir Henry Drayton) was chairman, and which toured the country from coast to coast, a real tariff commission. Well, personally I do not call that investigating body a tariff commission; I call it a tariff committee. And more than that, the evidence which that commission took was not of such a character as a properly constituted commission, such as I have in mind, would hear. Hon. gentlemen should not confuse the work of a real tariff commission with the investigations of these committees that have been appointed at various times. Both Liberal and Conservative governments in the past have appointed committees that have toured the country for the purpose of ascertaining the feeling of the people with regard to possible tariff changes; and the very fact of such investigations have shown the need of something of the kind. We have had governments appointing commissions that have travelled around the country at much expense, and this very fact is an admission on the part of those governments, both Liberal and Conservative, of the need of an investigating organization of this character. There is no question about that.

Mr. HARRIS: Is it a fact that the leader of the Progressive party in the Upper House vigorously opposed the tariff commission in this House in the session of 1911-12, and still holds the views he expressed then?

Mr. ELLIOTT (Waterloo): I suppose the hon. member is right; but I am not responsible for the views which any other hon. gentleman either in this House or out of it may hold.

Mr. HARRIS: Is the hon. gentleman a member of the party to my left which is led by the hon. member for Brandon (Mr. Forke)?

Mr. ELLIOTT (Waterloo): Mr. Speaker, in my campaign of 1921 I accepted the Progressive platform with certain reservations. On every platform on which I stood up to address the electorate I advocated the appointment of this tariff commission for two or three reasons. And since then on various occasions, whenever I have had an opportunity, I have never failed to stress the importance of the matter. I have taken this ground, that I was opposed not only to an increase but also to a decrease in the customs tariff until the whole question should have been referred to a properly organized commission. And the views I expressed in that regard at that time I hold to-day. I have received great encouragement from the different organizations within my riding in connection with this matter; I have letters from the Chamber of Commerce of the city of Galt, from the Trades and Labour Council of South Waterloo, and from the Town Council of the town of Preston, besides, as far as I know, from every organization within the south riding of Waterloo. They have all endorsed my position on this question. Moreover, I have resolutions from the Brantford Trades and Labour Council as well as from a great many other bodies throughout the province of Ontario endorsing the stand I have taken. I am convinced therefore that there is great need of such a tariff commission as I suggest, and without doubt the people are realizing that need as they have never done before. I hope, then, that the government will take my advice, although I do not suppose that they will; they never do. If they will take my advice they will immediately proceed to form such a commission, and I feel safe in saying that a bill for the purpose would be supported by a large majority in this House. I have been particularly insistent in emphasizing my position for several reasons. One is that my party's platform contains the following clauses:

> That all corporations engaged in the manufacture of products protected by the customs tariff be obliged to publish annually comprehensive and accurate statements of their earnings.

And:

> That every claim for tariff protection by any industry shall be heard publicly before a special committee of parliament.

That calls practically for just what I have been advocating for a great many years. In fact the demand has been coming from all over the Dominion, for the great mass of consumers are realizing the importance of this question. Therefore, I hope the government will deal with it as I have suggested, and I think such action would be received very gratefully throughout the country.

I do not wish to detain the House any longer. I have spoken very hurriedly and have tried to present my views in as few words as possible. I repeat that I have on many occasions voiced my opposition to an increase or a reduction in the tariff until the whole question has been referred to a properly organized commission. I am still of that opinion, and therefore I do not see how I can support the budget as brought down by the government.

Mr. JOHN HUBBS (Prince Edward): Mr. Speaker, I see very little in the budget proposals that will be of much interest or advantage to the people; on the contrary, I think in the main they will be detrimental to the best interests of the nation. It is true

the elimination of the sales tax on farm implements and its reduction on boots and shoes will be of some benefit to the people. But if the exorbitant sales tax has been found detrimental to business—and I do not think this will be denied—why did not the government take it off altogether? The sales tax is a nuisance. It is hard to handle, and is evaded in certain quarters.

Why should the sales tax be taken off farm implements and retained on canning machinery? A canning factory is certainly associated with the activities of farmers. Yet the man who equips such a factory has to pay 35 per cent duty plus 5 per cent sales tax on his machinery. Is it fair that this tax should be taken off farm implements and the duties lowered on those implements, while canning and other machinery are not given similar relief? Is it fair that the sales tax should be taken off mining machinery, and yet left on canned goods, boots and shoes and clothing that the miner has to buy? I might ask the same question with respect to logging machinery. It is purchased by large companies, yet the retail buyer of lumber has to pay the sales tax, and lumber is an absolute necessity in the building of our homes. To my mind a reduction of the duty on farm implements and on mining and logging machinery is where the trouble will arise. It will be remembered that two years ago when the British preference on woollen goods was increased by 2½ per cent no one thought it of much importance. A year ago the British preference was further increased by 10 per cent. It was strenuously opposed from this corner of the House, but no one expected that it would be so disastrous to our woollen industry, yet it has resulted in half of our woollen factories closing their doors or going into liquidation. I am afraid that a lot of our implement manufacturers will be in a similar position within the next two years. Recently I saw a letter addressed by a manufacturing firm in Toronto to their agent in my home town, instructing him to dispose of his samples and return his sample cases because the budget proposals had forced them to close their doors.

Mr. ROBB: Will my hon. friend give me the name of the firm?

Mr. HUBBS: I did not take it down, but I can get it for the minister. Naturally one would have thought the government with its knowledge of the unsatisfactory results following the French treaty, which has reduced our revenue within the last year by nearly two million dollars—practically all on luxuries as pointed out by the hon. member for Lincoln (Mr. Chaplin)—and the disastrous results following the increase of the British preference would have tried to rectify those errors instead of proposing the tariff reductions contained in the budget. The hon. minister tells us that by lowering the tariff and allowing the Americans to flood our markets he will bring prosperity to Canada. Has that been our experience in the past? If reducing the tariff is such a good thing, why not accept the amendment of the hon. member for Centre Winnipeg (Mr. Woodsworth) and make everything free—why not hand Canada over to the United States in a lump instead of piecemeal, and be done with it?

Mr. GRAHAM: Where is that flag?

Mr. HUBBS: We will soon be an adjunct of the United States anyway—at least, a dumping ground for their surplus products.

Mr. MOTHERWELL: It is pretty hard to warm up that old yarn of 1911 over again.

Mr. HUBBS: The hon. Minister of Agriculture says that it is pretty hard to warm up the argument of 1911. Well, Mr. Speaker, I would prefer the Reciprocity agreement of 1911 to this budget, for under reciprocity we would have got something for our money; but the country gets nothing out of the budget. The sole advantage accrues to the government, which gets the votes of hon. members to my left to keep them in power for another couple of years. There is one thing sure, the people are not getting anything out of the budget.

Mr. BEAUBIEN: Did not the party with which the hon. gentleman is associated tell everybody throughout the whole Dominion in 1911 that we were giving Canada away and getting nothing for it in return?

Mr. SPENCE: Reciprocity was wrong then, and lowering the tariff is wrong to-day.

Mr. HUBBS: My hon. friend from Parkdale has answered the question. In the 1911 campaign the slogan of the Liberals was, "Down with the big interests". I would say that they had certainly downed the big interests with this budget, and those who have not been downed will certainly be on the shelf and will not attempt to go ahead and build up the country as the needs of the country demand. Besides, has the United States ever given Canada anything? When the late government got reciprocity in wheat products and potatoes, you know what happened; as soon as it affected the farmers

of the United States, congress stepped in and not only replaced the former duty but made it higher than ever. I admit that the farmers of this country are having hard times; they are having difficulties, but where lies the remedy? Surely it is not in bringing European farmers here to grow more farm produce when we are unable to sell what we are producing at what it costs to produce it? Surely it is not in sending our boys and girls to the United States to get work, in closing down our industries so that our people cannot get work at home and must go somewhere else? Surely not in ruining what few industries we have and our all too-limited home market?

The hon. member for Brome (Mr. McMaster) made the statement the other day that in 1917 the president of the Massey Harris Company said he believed his company could make more money with the duty off farm implements, provided also that the duty was taken off the raw materials that went into the manufacture of same. I would suggest that the hon. gentleman get the president of the Massey Harris Company to repeat that statement now. I admit that the Massey Harris Company made a statement in the papers the other day, but I would consider that that was only good advertising. The Massey Harris Company know they are whipped but they are not going to take it without a struggle. I consider that that piece in the paper was only a bit of very good advertising. Now at the time the Massey Harris president made that statement there is no doubt that the Massey Harris Company was making money and the farmers were making money also. But the trouble with the farmers is that they did not save their money; like many of the rest of us, they spent it as it came, rather fast and rather easily; they put it into automobiles and luxuries as most of us did—we spent our money as we went along, keeping up with the Joneses. That is the trouble we find ourselves in to-day; our money is gone and when hard times come along we are not prepared to meet them. If you will show me a farmer who saved his money through those good times, did not buy automobiles, continued with his horse and rig and paid attention to his business, I will show you a man who is well to do and who is not worried over the troubles of to-day. I would not care if by ruining the manufacturers of this country we would build up Canada, but the experience of the world has been that to be prosperous the farmer, the artisan, the merchant, the professional man, must all work together in order to build up the nation. The unanimous opinion of the International Agricultural Institute at Rome is that one artisan will keep one farmer. That being the case what we want in this country is more artisans, and we cannot have them without more manufacturing; we cannot encourage industry unless we make it possible for them to compete with the highly specialized and highly protected industries to the south of us. Are we to part with our industrial communities in order to employ underpaid workers in Europe when the textile mills and the Canadian industries that have been a great factor in the building up of this country for the last fifty years are compelled to close their doors? It is not because Canadians are buying less goods, it is because the British, French and Germans can undersell us owing to their cheap labour and their depreciated currency. Our great trouble is not too high tariff, it is the lack of money and too high tariffs in other countries which make it impossible for the people of Canada to dispose of their surplus products. We have an over-production of farm products and, as is always the case when you keep a market flooded, the prices have to drop. The market of the farmers of this country is ruined before they get started. You can go right down into the stores of this city to-day and see American berries on sale. The market for berries, cherries, peaches and other things that the farmers of this province produce is killed before our berries and small fruits are ready for sale. During this past year hundreds of cars of eggs, butter, cheese, milk, pork and other produce have continuously been coming into this country. Why should we keep our tariff on these articles at about one-third of the United States tariff? What we need in this country is a good, constructive tariff, one that will protect the farmer as well as the manufacturer. We need more cities and a population in the urban centres to consume our surplus farm produce. What is the sense of bringing more farmers into this country and producing more when we cannot sell what we produce now at what it costs to produce it? And why allow United States farmers to take the cream off our markets for fruit and vegetables just because their season is earlier than ours? If the rich want fresh fruit and vegetables the year round, let them pay for them; place a duty high enough that the government will get the benefit and the general burden of taxes will be lessened. Why allow the United States, or any other country for that matter, to dump goods into Canada that can be produced here, unless they at least

pay a duty equal to the duty charged us in their country? Why continually buy from the United States and pay them a bonus for accepting our money? At present there is a discount on our money of about 3 per cent. Last year, ending in February, we bought from the United States goods valued at approximately $603,000,000. Had that rate applied on the whole amount we would have paid them in bonus $18,090,000, over half enough to build all the branch line railroads contemplated this year by the government, or nearly four times the cost of completing the Hudson Bay railway.

Mr. RYCKMAN: And thirty times what it costs to complete the tower.

Mr. HUBBS: True, Mr. Speaker. We get a certain amount of that back, but I hate to think that our money is not just as good as United States money, and if the people of this country would quit buying stuff from the United States and buy Canadian stuff—

Mr. FORKE: Is it the farmers who are buying American raspberries and that sort of stuff?

Mr. BOYS: Quite a lot, and you know it, too.

Mr. HUBBS: As I said, I hate to think that our money is not equal to theirs, and if our farmers and the people in our cities and towns would quit buying from the United States, and buy Canadian stuff instead, we would soon get the exchange at par. Take our own restaurant in this building. We are eating American canned goods and French peas, "petit pois," when our own factories in Canada produce goods equal in quality, if not better, and yet our government even is setting the example in buying American goods.

Mr. GRAHAM: That is not the government, but a committee of the House.

Mr. BOYS: But the government have the majority on it.

Mr. HUBBS: There was a time when Canada manufactured practically all the binder twine used in this country, when we had twenty-three firms manufacturing this product in different places throughout Canada, but today owing to the removal of the duty we have only three firms manufacturing binder twine in Canada. It is practically the survival of the fittest. These firms are supplying less than two-fifths of the binder twine used in Canada, and the farmers are paying more today for binder twine than they did before the duty was removed. The same applies to the wool industry, the implement industry, and in fact to all industries in this country where the duty is removed. Why not deal with the United States, with France and England, in fact with all nations, in a business way? Surely none of these nations allow sentiment to interfere with their business with us. Self-preservation is the first law of nature, and we should give them the same treatment they give us. How can we barter with these nations when we have no tariff to barter with? Is Canada forever to be the dumping ground of the United States and European nations? I think it is time we took a tumble and practised a little business ability like our neighbours. One lumber man of this city told me the other day that a few years ago he saw a chance to sell some box shooks in the United States. "I succeeded in placing an order for six cars," he said, "and I shipped one car over. Two days after, a United States official called at the plant and wanted to know what these shooks cost me. I told him and then he wanted to know what they were made of. I took him out into the yard and showed him I made them out of the short ends that always accumulate in a lumber yard, and he went away satisfied apparently, but I just managed to get one car more over before I was stopped, and the other four cars had to be cancelled." That is the way they do business.

Mr. STEWART (Leeds): Why was the balance of the order cancelled?

Mr. HUBBS: They raised the duty, because it was interfering with their business in the United States. I might say further that a merchant in my town told me the other day that that week there had been two travellers there with woollen goods and one of them did not have any Canadian samples, and the other only had two or three. He said, "Furthermore, one of our big clothing manufacturers told me he had sent all his patterns to England, and was having his orders for clothing made up there on account of the cheap goods and cheap labour." Now is that good business for Canada? Are we ever going to build up Canada so long as we let down our industries and force our people out of this country? I would like to ask the government, if low tariff is such a good thing, why has not the United States adopted it and other nations of the world? Surely all the brains are not in this government. The United States tariff is in practically every instance three times higher than ours, yet they are enjoying prosperity, while if we are to accept the voice of hon. members to my left Canadians are starving.

If Americans are not prosperous why are our boys and girls going over there at the rate of fifteen to twenty thousand a month? Why not admit the true situation and follow the example of practically every nation in the world to-day and put on a tariff that will mean something, a tariff that will give confidence not only to the people of Canada, but also to other nations so that people will come and settle in this country and help to develop our great natural resources.

We have in Canada to-day legislation and railroads to meet the needs of a population of fifty millions of people, and the eight million people we have are obliged to pay the taxes and carry the load that fifty millions of people should be carrying. If the government would adopt a policy that would give confidence and work to the people of this country, instead of our people going to the United States, the Americans would be coming over here.

At the present time, Mr. Speaker, we are allowing American publishers to flood this country with magazines and periodicals, which are doing nothing more nor less than educating our boys and girls to become citizens of the United States; and not only that, but hundreds of thousands of dollars are going out of this country annually to the United States to buy perfumes and cosmetics advertised in these same journals. Let the government put a prohibitive duty on these magazines and encourage the publication and the reading of Canadian magazines. Educate our people first of all to be Canadians, and you will have less demand for free trade in this country.

There is just one thing I overlooked—I do not want to detain the House as it is getting late. But, instead of the sales tax, and instead of the troublesome income tax that bothers everybody in making up their returns, and which some pay and some do not—keeping a record of everything sold makes an endless amount of work—I would say if the government have got to raise money—and they must do so to pay off the debt of this country—the only fair way to do it is through a land tax. I know it would be hard, I know a lot of people will object to that, but it is a most simple tax to collect, and it is easily collected through the municipalities. The man who has land or property pays the assessment and the poor man who is living in a rented house and is struggling to get along, has no tax to pay. This sales tax hits the man who can least afford to pay; it hits the labouring man, the consumer, on his clothing, on his boots and shoes, on his canned goods, on everything that he has to buy, and he is the man that can least afford to pay the tax. Therefore I say the government should consider some other form of taxation.

Now, Mr. Speaker, I must say that I am entirely opposed to the budget. Let me emphasize again, what we must have in this country if we are going to build up Canada, is a good constructive tariff. If I had the framing of it I would say put on a tariff so high that nobody could fly over it with an aeroplane and so deep in its foundations that a submarine could not dig under it.

On motion of Mr. Preston the debate was adjourned.

On motion of Mr. Graham the House adjourned at 12.45 a.m.
