DOMINION OF CANADA

OFFICIAL REPORT

OF

DEBATES

HOUSE OF COMMONS

THIRD SESSION—FOURTEENTH PARLIAMENT

14-15 GEORGE V, 1924

IN SIX VOLUMES

Volume I: Pages 1-1020	**Volume II: Pages 1021-2012**
Volume III: Pages 2013-3040	**Volume IV: Pages 3041-4035**
Volume V: Pages 4037-4877	**Volume VI: Index**

VOLUME CLXI

COMPRISING THE PERIOD FROM THE FOURTH DAY OF APRIL TO THE TWELFTH DAY OF MAY, 1924, INCLUSIVE

OTTAWA
F. A. ACLAND
PRINTER TO THE KING'S MOST EXCELLENT MAJESTY
1924

CANADA

House of Commons Debates

OFFICIAL REPORT

Friday, April 4, 1924

The House met at three o'clock.

UNITED CHURCH OF CANADA

Mr. HERBERT MARLER (St. Lawrence-St. George): I beg to present the petition of the Presbyterian Church Association branch for the synod of Montreal and Ottawa protesting against the passing of an act for church union.

SELECT STANDING COMMITEES

MINES, FORESTS AND WATERS—INDUSTRIAL AND INTERNATIONAL RELATIONS

Right Hon. W. L. MACKENZIE KING (Prime Minister) presented the report of the special committee appointed to prepare and report, with all convenient speed, lists of members to compose the select standing committees on mines, forests and waters, and on industrial and international relations, as constituted by the House on Thursday, March 27, as follows:

No. 10

ON MINES, FORESTS AND WATERS

Messieurs:

Arthurs,
Bird,
Black (Yukon),
Boucher,
Carroll,
Carruthers,
Church,
d'Anjou,
Davies,
Dechene,
Desaulniers,
Dickie,
Forrester,
Garland (Bow River),
Gendron,
Hanson,
Hunt,
Kelly,
Kennedy (Kenora),
Knox,
Lanctot,
Lapierre,
Logan,
Macphail,
Manion,
McBride,
Michaud,
Munro,
Pelletier,
Power,
Roberge,
Ross (Kingston),
Spence,
Stewart (Argenteuil),
Stork,
Ward, and
Warner.—37.

And that the quorum of the said committee do consist of 10 members.

No. 11

ON INDUSTRIAL AND INTERNATIONAL RELATIONS

Messieurs:

Black (Halifax),
Cahill,
Caldwell,
Cannon,
Carroll,
Denis (Joliette),
Deslauriers,
Drummond,
Finn,
Gervais,
Graham,
Grimmer,
Guthrie,
Healy,
Hoey,
Johnston,
Kennedy (Edmonton),
Ladner,
Lapointe,
Macdonald,
Malcolm,
Marcil (Bonaventure),
Marler,
McDonald,
McKillop,
McTaggart,
Morin,
Murdock,
Prevost,
Rinfret,
Stewart (Hamilton),
Tolmie, and
White.—33.

And that the quorum of the said committee do consist of 10 members.

Mr. MACKENZIE KING moved that the report be concurred in.

Motion agreed to.

THE BUDGET

On the Orders of the Day:

Sir HENRY DRAYTON (West York): I wonder whether the Acting Minister of Finance (Mr. Robb) is able to tell us to-day when the budget will be delivered. Will it be next week or the week after?

Hon. J. A. ROBB (Acting Minister of Finance): I hope to deliver it not later than the Tuesday immediately preceding the Easter adjournment, although I should like to bring it down a little earlier than that. However, I will let my hon. friend know on Monday.

Sir HENRY DRAYTON: There are so many people interested in the budget disclosures that it is generally considered necessary to give from five days' to a week's notice. It is only fair that those who are interested should know fairly well in advance, and I would ask whether the budget is likely to be brought down next week.

Mr. ROBB: I will give my hon. friend a definite reply on Monday. It is possible that it may be next week.

PENSIONS UNDER CALDER ACT

On the Orders of the Day:

Mr. C. A. GAUVREAU (Temiscouata): Will the Prime Minister (Mr. Mackenzie King) say whether there is any foundation for the despatch sent from Ottawa to La Patrie, Montreal, to the effect that after March 31 no civil servant will be granted a pension under the Calder Act unless he has resigned before that date?

Right Hon. W. L. MACKENZIE KING (Prime Minister): This is the first intimation I have had of the despatch in question and I know of no foundation for it. I should not like, however, to reply to my hon. friend without having an opportunity to look into the matter. I will let him know on Monday.

REDISTRIBUTION

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): What progress has been made in the establishment of the committee on redistribution? Considerable time has gone by now and we have a mountain to climb in this direction which we should now be scaling.

Right Hon. W. L. MACKENZIE KING (Prime Minister): There has been some conference between the whips as to the size of the committee, and there has been a little difficulty in securing a general agreement on the matter. I understand that a committee of the same size, and probably of the same personnel, as that of last year may now be named. I hope on Monday to be able to give to the House the names.

SUPPLY

DEPARTMENT OF THE INTERIOR

The House in Committee of Supply, Mr. Gordon in the chair.

Department of the Interior—
Expenses connected with the Dominion Observatory at Ottawa, $50,000.

Mr. MEIGHEN: I did not expect that the estimates of the Department of the Interior would be taken up to-day. The Interior estimates have not been called on Monday, Tuesday or Wednesday as yet. Heretofore I have always agreed, but we are not in a position to do so now. I did not know until to-day that the government had mentioned Interior estimates. Certainly they have no right to go into them to-day.

Mr. STEWART (Argenteuil): The announcement was made on three occasions, but the right hon. member is perfectly correct: The Interior estimates have not yet been in committee.

The CHAIRMAN: The Interior estimates will not be proceeded with on account of the objection.

Item stands.

DEPARTMENT OF AGRICULTURE

Agriculture—Entomology, $25,000.

Mr. GOULD: I notice there is a reduction of $5,000. In this department there is a wonderful field for knowledge; much can be done in the way of entomological research work to educate the people along proper lines, and I have wondered why the minister would cut this down by the amount mentioned in the estimate.

Hon. W. R. MOTHERWELL (Minister of Agriculture): This does not mean that the activities of the branch will be lessened. This appropriation is merely for the Ottawa staff and equipment. The staff will be found over the Birks building on Sparks street. It is hoped a slight reduction may be obtained without any curtailment of the activities which come under the next item, which has to do with what, I think, my hon. friend is interested in. It has been thought that possibly we can reduce this appropriation by not extending the number of specimens as actively as we have done and not putting out so much literature. There is a good deal of criticism about the quantity of bulletins issued, much of which it is said is not read. Something may be said in that regard, but, I hope that class of work will continue, although it may not be as pronounced as in the past.

Sir HENRY DRAYTON: In view of the ruling of the Chair the other day that when we move to strike out any portion of a vote, we cannot show what the object of the motion is, I am inclined to think we shall have to ask that the resolutions be printed differently, so that we may know exactly what we are doing. In the meantime, short of that, short of having proper information, and in view of that ruling, I now ask the minister to let us know, first, what is the object of this vote, who gets the money and what it is for; and second, how much was spent last year.

Mr. MOTHERWELL: Since I have to some extent answered the question, if I confine myself to the memorandum I have, that will be more concise. These are the specific purposes:

Printing bulletins, circulars, leaflets and reports.
Stationery, printing and bookbinding.
Apparatus, scientific supplies and field equipment.
Under this heading is included an amount to purchase further insect cases, drawers and steel cabinets for the national collection and divisional working collections of insects.
Maintenance of library, periodicals and books, general supplies, chemicals, etc.

A slight reduction in the amount of each one of these items, we think, will bring about the reduction in the whole appropriation. A considerable amount of this is spent in what we call trays or drawers in which the entomological specimens are mounted. A good deal of care is required in collecting and having them properly mounted and established in these cases, and then they are

put away in casings for the purpose of reference and identification. The principal saving, however, will be in the bulletins, and there will be a little slackening of the work wherever that can be accomplished without neglect of the outside service which is dealt with in the next item. This item has nothing to do with salaries; it has to do simply with the maintenance of the office in connection with these specimens, bulletins and the various other items to which I have referred.

Sir HENRY DRAYTON: If I followed the minister correctly, this is to enlarge our collection of bug species.

Mr. MOTHERWELL: No.

Sir HENRY DRAYTON: To put them in the trays. If it is not, perhaps he will tell us what it is.

Mr. MOTHERWELL: Not to enlarge the collection. It is for the purpose which I have indicated. If there are any particular specimens of insect life that are infesting our crops or orchards, of course they will be added to our collection. But we hope to curtail the activities in whatever particular branch of this appropriation we can without affecting the field work which is taken care of in the next item. I do not know why this item was inserted in this way. It was here when I took office and I have often wondered why it could not be merged with the next appropriation, because it is confined entirely to the office and its equipment and supplies in the city. I suppose this was done to separate the Ottawa activities from the outside.

Sir HENRY DRAYTON: Then no more bugs will be put into the collection unless the minister finds fresh bugs?

Mr. MOTHERWELL: Practically so, not necessarily.

Sir HENRY DRAYTON: What else is to be added?

Mr. MOTHERWELL: There might be some of the old of which we have not sufficient specimens on hand, or some of the old ones might escape, or something of that kind, —or some other contingency might occur.

Sir HENRY DRAYTON: Some of the old ones might escape, or something of that kind. But how many does the minister think make a full hand in any line of insects? What is he trying to get?

Mr. MOTHERWELL: My hon. friend shows a laudable desire for information, so I will tell him. We have been patrolling the frontier in the southern part of Quebec for the past number of years to ward off an attack of what we call gypsy moth. In the event of any of those being discovered on the Canadian side—I presume we have some specimens of them—we will immediately proceed to institute quarantine proceedings that will restrict the infested area, and we will endeavour to exterminate the pest. Of course we shall have to have mounted specimens for that. It is the business of the department to run any new infection to ground, to death, if we can, and naturally we want specimens for identification and scientific purposes.

Mr. FORKE: This seems a large amount of money to spend for cases in which to store away our dead bugs.

Sir HENRY DRAYTON: Dead?

Mr. FORKE: Yes, dead. They will not do any more damage. They are quite safe. I did not rise for the purpose of criticizing this appropriation, but it seems to be a large amount to spend for cases. The minister issued about two circulars that were really good in connection with this branch of the public service.

Sir HENRY DRAYTON: Out of how many?

Mr. FORKE: Out of a hundred probably. Those two were really good and of service to our farmers.

Mr. MOTHERWELL: I omitted to give the amounts of these items. The vote is allocated as follows: $11,000 for the first item, circulars, leaflets, etc.; $2,700 for stationery, printing, etc.; $5,880 for apparatus; $1,100, maintenance of library; $900, general supplies. I thank my hon. friend for what he says about the bulletins. I do not know what particular ones he refers to, but we try to make them as useful as possible.

Sir HENRY DRAYTON: The minister is to be congratulated in being right in two at most out of his one hundred circulars, and I have no doubt he is quite right also in thanking the leader of the Progressive party for that tribute to his efficiency. What are the details of the item of $5,000 for apparatus?

Mr. MOTHERWELL: If my hon. friend will pay attention this time, I will read them again. Scientific supplies and field equipment: under that head is included an amount for the purchase of further insect cases. The specimens are kept in little shallow drawers three or four inches deep, and they are pinned down so that they cannot get away even after they are dead. There is provision also for

drawers and steel cabinets for the national collection and divisional work in the collection of insects. If my hon. friend knows of any better way of disposing of these little creatures I shall be glad to have his suggestions.

Sir HENRY DRAYTON: How much is to be spent on the purchase of these receptacles for new insects?

Mr. MOTHERWELL: That will depend on the invasions to which we are subjected during the year.

Sir HENRY DRAYTON: That is all very well, but I understand that this vote is for the purposes of inside work. How much of this vote is for receptacles?

Mr. MOTHERWELL: It is very hard to divide the amount any more minutely than I have done, except to say that a certain amount of microscopic work is to be carried out.

Sir HENRY DRAYTON: My hon. friend seems determined to give me no information at all. I am asking how this $5,000 is made up. So far he has indicated that there are two items, first, the purchase of trays in which the insects are put, and, secondly, microscopical plant or instruments. If he cannot tell us how much he intends to spend on receptacles, will he tell us how much he intends to spend on microscopes?

Mr. MOTHERWELL: This work is fluctuating in its character and we have to be prepared for contingencies. We cannot tell anything more about the insect invasions than we can about the crop. A warm, early spring usually brings about an invasion of grasshoppers, for instance, especially if there is no frost to destroy the eggs or the young midgets. So I cannot say exactly how much we will spend, though I can give a rough estimate if that is desired.

Mr. MEIGHEN: I just want to say a word or two on the general policy. I have always, in office and out of office, sought to reduce to the minimum scientific work of this character inside—what one might call more or less ornamental work. I have no objection to outside work at all, and I also acknowledge that a certain amount of inside work is essential, but I do think it is overdone—and the redundancy is not confined to the Department of Agriculture; there is some in other departments as well. But I have always thought that the enthusiasm of officials, the desire to extend the sphere of their own work, results in the creating of elaborate scientific departments here, there and everywhere, and great collections of dead bugs instead of killing the live ones. Besides, we cannot in this country hope to rival the other big scientific institutions in this matter. We will get on far faster by availing ourselves of the scientific results achieved by great laboratories to the south of us than by seeking to plant in our own country pale, weak imitations of them. It seems to me that if we take advantage of the scientific results achieved in the big state institutions of the United States —and we get it all; it cannot possibly be kept from us—we can save a lot of money here at home and at the same time seek to get practical results in our own field. It is better to spend the money that way than in too much employment of scientific men in small laboratories in Canada.

Mr. GOULD: I was not so much interested in the $5,000 item which provided coffins for the dead bugs, although they would seem to be rather expensive. I wish to make one comment, however, with regard to the $11,000 item in connection with distribution of literature. I myself have been in receipt of many pamphlets from the Entomological department which did not particularly apply to the district in which I live. For instance, it was not particularly interesting, nor did I have time to study up, what might be the matter with the peach crop in Niagara peninsula. If the department is advised to send out pamphlets dealing only with matters indigenous to the parts of the country to which they go, I think we could save a lot of money. Is that item of $11,000 a smaller amount than was used for the same purpose last year?

Mr. MOTHERWELL: Yes, and the same applies to the next vote. Replying to my right hon. friend's (Mr. Meighen) criticism regarding the tendency of the departments to extend, I may say that that is why we are trying to reduce these appropriations—to counteract that tendency. He further suggests that instead of taking care of the dead bugs we should be killing the live ones. Well, they have to be alive first; we have to kill the live ones to get the dead ones. These specimens are caught alive, killed and mounted. Here is the subdivision of the item of $5,880 that my hon. friend (Sir Henry Drayton) asked for: Cameras, $300; microscopes, $700 to $800; laboratory supplies, $1,000; steel cases, about $3,500. That is as close as we can get to the details. As I said before, the use to which this money is put in each subdivision will depend wholly on the nature of the conditions next summer, and those we cannot anticipate.

Mr. GARLAND (Bow River): May I ask if the minister has not got at the present time sufficient microscopes in the department. If I understood him correctly, he has an item of from $500 to $700 for microscopes. That seems an extraordinary sum of money for that purpose.

Mr. MOTHERWELL: I have never bought any of this equipment myself, but I understand that amount will buy two or three instruments. This equipment is not for Ottawa alone, but for a number of laboratories all over the Dominion, some twenty in all.

Mr. GARLAND (Bow River): If the minister is reducing the work of the department surely they will require, if anything, less microscopes than formerly: Is there a need for new microscopes particularly, or is this sum required for repairs?

Mr. MOTHERWELL: I am afraid the hon. member did not listen very carefully. We are not intending to reduce the outside activities with respect to the curtailment of insect ravages. We are endeavouring to maintain and operate the office in Ottawa a little more cheaply, to the extent of $3,000.

Mr. TOLMIE: Would the minister tell us what action he has taken in respect of the importation of plants from the Old Country by mail? I understand there are some negotiations on whereby it will be possible to handle these through the post office.

Mr. MOTHERWELL: Just a few days ago we got through Council new regulations permitting plants to be sent through the post office. Formerly that was not permitted.

Mr. TOLMIE: Under what conditions will the inspection be made in the Old Country, and what will the fee be for the inspection?

Mr. MOTHERWELL: All inspections are made on this side, usually at the port of entry. The parcel will designate what it contains, of course. I think in the past all inspections have been made on this side. Not all post offices, but any large post office will be a medium through which the shipments can be made by mail.

Mr. FORKE: I understand there was an item of $822 for cases last year. To an ordinary man it seems almost out of the question that so much money should be spent annually on cases for preserving the new specimens collected during the year.

Mr. MOTHERWELL: If I had not seen this collection myself and the innumerable drawers and cases, I would have thought just as my hon. friend does. It would take hours to go through them all. It is a national collection.

Mr. FORKE: Is this simply for new specimens collected during the year?

Mr. MOTHERWELL: I understood from Mr. Gibson when I was there, that they are making a national collection for reference purposes. They are collecting not only new specimens, but are preserving all the insects that have been doing damage in Canada dating back for perhaps a quarter of a century. The collection is constantly being added to. Very frequently the specimens that were mounted formerly were not just as well preserved as they might be. It is a very delicate operation to catch these insects alive. They have to be carefully killed, and then they are mounted and preserved so that they appear in a natural condition. It takes quite a lot of money.

Mr. FORKE: I do not want the minister to misunderstand me. I realize that insects and different forms of fungus are perhaps the most dangerous menace we have, but the expenditure seems very large.

Mr. MOTHERWELL: It is expensive. The cases are of steel. I was reading up this question by an entomologist. I forget his name for the moment, and he made the prediction that the next great war would be against insect life and fungus growth. I do not know whether he will prove to be right or not, but I do know that as a community gets older, and particularly if you restrict yourself to the growing of one particular crop, providing food for one particular variety of insect, the insects will increase in number every year. We are fortunately exempt from many of the insects that infest the southern states, attacking almost every species of plant life in the farm and garden. We in this northern latitude are saved from a great many of those pests. Nevertheless, if we have a series of warm years, with an early spring, it is marvellous how new insects will pour into our country. The European corn borer, for instance, was quite unknown in Canada about five years ago, but I suppose there must be thirty counties in Ontario affected by the corn borer to-day.

Mr. RYCKMAN: What amount of the vote was expended last year?

Mr. MOTHERWELL: About ninety-five per cent.

Mr. MILNE: It seems to me that this development may not be exactly along the right line. I think that at this particular time we should get away from fads and fancies. We have insects and bugs that are of economic importance to agriculture, and I think it is to those that our entomologists should direct their attention. I think that in a good many instances the entomologists are inclined to fads and making a tremendous collection of bugs and insects that are of no economic value so far as agriculture is concerned. These steel cases are an indication of the line along which they travel. I notice from the Auditor General's report of two years ago that a sum of $2,000 was spent for cases, some steel, and some mahogany coffins for these bugs to lie in. This year we intend to spend $3,500 along the same line. I am not prepared to say exactly what the nature of the work that is being done is, but I am inclined to think that the entomologists are not directing enough energy upon insects that are of economic importance and are spending too much time on what might be called fads, such as that of getting collections together.

Mr. TOLMIE: Reverting to the importation of plants through the post office, I understand there were certain abuses with regard to inspection on the other side. Do I understand there is no more inspection in Great Britain?

Mr. MOTHERWELL: That is right.

Mr. TOLMIE: Through what ports on the Pacific will these plants be admitted?

Mr. MOTHERWELL: Victoria and Vancouver. We have just recently constructed a laboratory in Vancouver for that purpose.

Mr. TOLMIE: What progress is the department making with the corn borer? Is it gaining at all? Is it scattering into new territory, or is it still pinned down to those counties in Ontario where it existed a few years ago?

Mr. MOTHERWELL: Yes I notice it has appeared as far east as Kemptville. It is spreading into new territory, although in the older territory, for instance down in Essex county, I understand, restrictive measures have been employed with success, in co-operation with the farmers, and by cutting the ensilage corn at a different period, a great many insects have been destroyed going into the silo. Employing cultural methods, such as late fall plowing and deep plowing, are also considered to be quite helpful.

Mr. WHITE: What success has the department had in combating the corn borer by introducing parasites?

[Mr. Motherwell.]

Mr. MOTHERWELL: Nature can sometimes be helped out a little by supplying parasites for particular kinds of pests. For instance, the grasshopper has a parasite that I think is somewhat helpful in destroying it; the corn borer has a parasite; and we are helping to combat pests by the introduction of these parasites. In this particular case the experiment is so recent that we are not, as yet, able to tell the result. It is hoped, however, that the parasite employed will multiply itself rapidly and assist us in exterminating the pest.

Mr. FORKE: I want at this point to put in a good word for the birds, although it may seem a trifling thing to speak about the preservation of the birds out in the country districts. Also, I want to say a word for the elimination of the cat as far as we possibly can accomplish it.

Mr. HOCKEN: The pussy cat?

Mr. FORKE: Yes, the pussy cat. I repeat, it may seem a rather trifling thing to mention the little birds we find on our prairies, but they are the greatest insect destroyers and the greatest friends that the farmer has anywhere. I want to urge all the farmer members of this House to do all they can to preserve the bird life around their farms and their homes.

Mr. MOTHERWELL: Hear, hear.

Mr. SUTHERLAND: Would my hon. friend make any distinction between the species of birds? I understand an effort is being made at the present time in the United States to exterminate the crows.

Mr. FORKE: Well, I do not know whether the crow is to be regarded as a useful bird or not.

Mr. HOCKEN: What about the rats if we exterminate the pussy cats?

Mr. FORKE: It is rather a wide field of discussion to enter upon at the present time, but I assure my hon. friend that I would attach more importance to poison in getting rid of rats than I would to cats. Of course, the birds to which I refer are the insect eating birds. They are the species that I am anxious to preserve. Anyone who has studied this question and learns the number of insects that one insect eating bird will destroy even in a day realizes the importance of preserving the bird life of the country. Man is altering the balance of nature by destroying certain species of life. When you

destroy bird life of this character you give insect life a tremendous advantage and an opportunity to propagate. As has been already said, unless some check on the growth of insects is maintained, very soon all animal life would be destroyed. It is a very strong statement to make but it is true. And it is only by these checks of which I have spoken that insect life is kept within bounds. Bird life is one of the best checks on dangerous insects that we have and that is why I want to see it maintained. I do not desire to take up time unduly and will simply close with this statement: Anyone who lives in the country and takes an interest in bird life, in their habits and methods of living, will derive a knowledge that will make his life richer and happier.

Mr. TOLMIE: Can the minister give any information as to what measures have been taken to combat fire blight on the Pacific coast, or rather, west of the Rocky mountains?

Mr. MOTHERWELL: That is a matter that will be dealt with in the next vote.

Mr. LEADER: I do not know whether this is the proper place to bring up the subject of bee keeping or not. If not, I should like to know under what item the matter can be brought up. I have received a communication from my city to-day asking me to use my influence with the Department of Agriculture to prevent the importation of foul brood in bees. I want to bring that matter to the attention of the minister. The communication referred to is from the Portage la Prairie Bee Keepers' Association and it reads as follows:

> I have been instructed by the Portage Bee Keepers' Association to ask you to use your influence in having laws passed that will prevent the importation and spread of foul brood and other diseases among bees.

Has that matter been settled?

Mr. MOTHERWELL: That has been settled.

Mr. MEIGHEN: Does the minister mean that the importation of bees is prohibited now?

Mr. MOTHERWELL: Yes, We found that the very infectious and dangerous disease called foul brood was spreading very rapidly, especially in Ontario. I think the committee will recall that we voted $5,000 last year on condition that the Ontario government would also give a similar grant for the extermination of this bacterial disease. In order to bring about that desirable result we find it necessary, as a result of such requests as my hon. friend has just read, to prohibit importations of bees for the present until we can get this disease rounded up in our own country. I do not know how long the embargo will be maintained, but it will be kept in force so long as there is danger of infection from the American side, or from any quarter, because this is not confined to the United States, it is an European disease. I understand this embargo was put into effect a few years ago against Great Britain.

Mr. MILNE: I wonder could the minister give us any idea how much was spent in cases of this kind last year?

Mr. MOTHERWELL: While that information is being looked up we can discuss some other subject. Does my hon. friend mean the steel cases the insects are put in?

Mr. MILNE: Some of them are mahogany and some are steel.

Mr. MOTHERWELL: They have to be very carefully made and very close fitting, else these dead insects will be attacked by different species of life that succeed in getting through the crevices. For these reasons the making of these cases is very costly. However I will give my hon. friend all the information I possibly can.

Mr. TOLMIE: What work is being carried on in British Columbia in connection with the eradication of mosquitoes, particularly in the valley of the Fraser river.

Mr. MOTHERWELL: I understand we have one officer in the Fraser valley who is studying this problem, which is a very old problem as the hon. gentleman knows, and a good deal of the contagion is supposed to be attributable to that source.

Mr. EULER: Why this discrimination in favour of British Columbia?

Mr. CARROLL: Is the minister serious in stating that he is trying to exterminate the mosquitoes of British Columbia?

Mr. POWER: I protest that this ought to be combined with the Flying staff.

Mr. GARDINER: I have the Auditor General's Report ending March, 1923, and I would like to ask in regard to this expenditure. What is the reason for buying three sleeping robes? Is it to keep the bugs warm? There is an item for eiderdowns, three silk tents and two silk tents, and so forth. Why is it necessary to make expenditures of that description?

Mr. MOTHERWELL: I understand this comes under the next vote. In the meantime we will have the item looked up.

Mr. GARLAND (Bow River): I desire to have the information before the item carries. It is in the vote on entomology. The next item is "Administration of the Destructive Insect and Pest Act." I would like information as to the cost of building these mahogany cases. It appears that two years ago $2,000 was expended under this item. This year $3,500 is to be spent. Last year the item was unknown, but apparently the minister is going into it now. I think he will find that about $7,500 was spent the last three years for the casings for additions made annually to the collection of these bugs. I would like a little further explanation why these casings cost so much. Would it not be better to do it a little cheaper? Can we not do away with the mahogany and replace with soft wood, and do away with the steel?

Mr. MOTHERWELL: I understand these are very expensively constructed casings, because they have to be very tight and close-fitting. The hon. member asks why mahogany or why steel? Well, there are certain qualities in wood that in their very nature are repelling to insect life. That is one of the reasons, of course. My hon. friend has heard of cedar being repelling. I do not know as much about mahogany as I do about cedar, but I presume it is the same thing.

Mr. SPENCER: Which is the most expensive, mahogany or steel? Do you sometimes use one and sometimes the other?

4 p.m.

Mr. MOTHERWELL: Steel cases are more expensive.

Mr. GARDINER: What was spent last year on these cases?

Mr. MOTHERWELL: I understand, $2,014 was spent. We have no purpose in stacking up a lot of useless cases. A lot of this work is of such a character that unless it is done carefully it need not be done.

Mr. GARDINER: I find in this report there were 302 of these insect cases procured in 1923. That seems to be a tremendous number of cases for this particular purpose.

Mr. MOTHERWELL: We are adding a certain amount to it every year, in order to complete it.

Mr. MILNE: Can the minister give us any idea of what proportion of the money spent for entomology is spent on insects that are of economic importance?

Mr. MOTHERWELL: I understand about 95 per cent.

Item agreed to.

Administration of the Destructive Insect and Pest Act, $310,000.

Mr. HANSON: About how much was spent last year, and what was the nature of the work carried on in the province of New Brunswick? I understand the department has a small laboratory at Fredericton. Dr. Tothill is in charge of that. I should like to know the nature of the work done last year. Dr. Tothill is a very excellent official, and there is a very grave danger of losing his services to our friends to the south, unless he is properly remunerated.

Mr. MOTHERWELL: I understand the work of that federal laboratory was largely connected with the spruce bud-worm and brown-tail moth. There is a small provincial laboratory, just a little shack, where I think they were pursuing an investigation in connection with a fungus disease of the cactus apple-blossom. I do not know whether they thought we were not prosecuting the work sufficiently rapidly. I scarcely know why the provincial government took it up, but apparently the ravages of that little fungus were so great that they thought it necessary to do this additional work. I think the work could be merged. I understand the laboratory was located somewhere down town in Fredericton, and it was suggested it should be moved to the experimental farm. That is what they had in mind, I think. Well, it is like a good many other activities; we have not the necessary money to build a laboratory and move it to the experimental farm, where I think its usefulness would be almost double.

Mr. HANSON: About how much of a staff have you there, and what is the annual expenditure? And, now that the brown-tail moth and the bud-worm are no longer with us, to what are they directing their attention?

Mr. MOTHERWELL: The brown-tail moth attacks the apples.

Mr. HANSON: The hon. gentleman did not pay attention to what I said. Now that the brown-tail moth is no longer with us, and the spruce bud-worm has worked out his usefulness or its uselessness, what functions does the laboratory perform? Along what line of endeavour are they working. How large is the staff, and how much money has been spent?

Mr. MOTHERWELL: We are never at a loss to find some kind of insect life about us. I am sure after the brown-tail moth is done with, it will be the red-tail moth or something else.

Mr. HANSON: That may be an answer.

Mr. CAMPBELL: I notice the amount spent under this head in 1922 was only $182,000. Last year it was $214,000. Could the minister give us some information as to this.

Mr. MOTHERWELL: Because of the increase in insect ravages, all over the Dominion practically. There was a series of very dry years in the West—that is in the southern part of the West—which stimulated interest in these invasions over many parts of Canada. What with the bud worm, the brown-tail moth and the grasshopper there was a demand for increased activities, just as there is to-day for more extensive research work in connection with rust and other fungus diseases; and it is in response to that request that a greater expenditure is necessary to-day than formerly. I do not know that the vote should not have been increased this year, but we have kept it at the same figure in the hope that we may be able to carry on with the expenditure proposed.

Mr. MILLAR: Does the appropriation for the fighting of rust come under this head?

Mr. MOTHERWELL: This item has two sub-divisions, one with reference to fungus diseases, and the other, insect diseases. The insect diseases come under Mr. Gibson while the fungus diseases are looked after by Dr. Gussow, and that includes the rust. The principal activity under Dr. Gussow is the certification of seed potatoes. There are a large number of inspectors looking after that work, which has become of much importance especially in the Maritime provinces. Two inspections are necessary during the growing period, one after the potatoes are dug, and another before they are certified. After the potatoes are certified they are worth about half again as much as commercial potatoes. The work in which my hon. friend (Mr. Millar) is more concerned is the investigation of rust. The federal department under Dr. Gussow has been working with the provincial agricultural college authorities at both Winnipeg and Saskatoon. We supply the staff and the provincial authorities provide the ground in which to carry on experiments and to sow the grain, in addition to the greenhouses in which to conduct indoor investigational work. We have been making progress, and as the leader of the opposition has suggested, we are working to some extent in co-operation with the United States authorities in the matter of rust investigation. The people of the United States are just as much interested as we are in this matter, and perhaps more so. Similarly we are co-operating with the provincial authorities. I do not know that this is entirely the best way of dealing with the matter because sometimes our activities are somewhat circumscribed by the requirements of the provinces. But taking everything into consideration I think we have possibly secured more information during the last ten years with respect to this rust question than has been available in any part of the world previously. All the results achieved by research work in years gone by have not been equal in importance to the discoveries that have been made in this direction in the last eight or ten years. I am of the opinion, however, that if we in this generation are to reap any benefit from this work it will have to be speeded up, for there is a great deal still to be learned. The authorities in Dakota have made a valuable discovery at the experimental farm there in connection with Kota wheat; but inasmuch as that species does not resist all the different varieties of rust, and as it is not definitely known yet whether it possesses the necessary qualities from the standpoint of milling that make our wheat acceptable in the British market, there is a great deal of work ahead of us still before we can secure a variety of wheat containing all the characteristics of the best grain. Kota is not a product of cross-breeding; it is a Russian wheat produced by hand selection. There is not much known about it; but, the rust having become so bad in Dakota, a great many farmers are taking the risk of growing Kota, seeing that in any case they must run some risk with other varieties. When the votes under the Public Works department come up, the question will arise as to possible extensions of laboratory space for the purpose of expediting this class of investigational work. A suggestion has been made that possibly this work might be better done if it were taken in hand by the Research Council of which Dr. Tory is president, and one advantage in handing the work over to him would be that he would be free to choose his staff, which is an important thing.

Mr. MILLAR: This is a matter of vital importance to many grain growers, because in my opinion rust has caused more damage than all other pests put together. From the research work that has been done, does it appear that the only success so far achieved has consisted in the breeding of types of grain

that are rust-resistant? Or has success been met with in other directions?

Mr. MOTHERWELL: The invasions of the rust disease originate as a rule near the gulf and work north at about the same rate as the season, and there is no possible way of protecting the wheat from these spore attacks. These spores travel in the atmosphere four or five miles an hour against prevailing air currents, and the only way to offset their effects is to breed a plant that will sufficiently resist them. As there are all sorts of germ diseases against which the human body is immune only through the development of resistance, so in plant life we have to breed a type that will resist these attacks.

Mr. MILLAR: The minister said just now that more had been discovered in the last ten years or so in this matter than had ever been known previously. Can he give in concise form some of the discoveries that have been made recently, with particular reference to the cause of rust?

Mr. MOTHERWELL: I presume the hon member refers as well to the progress that has been made in combating this menace. We know that Kota wheat resists about ninety per cent of the forty different varieties of rust; in other words, we have a wheat that will resist thirty-six different varieties of this disease. Now, if we can develop the characteristics that are essential to good wheat, such as early maturity, quality, and prolific growth, together with a sufficiently sturdy straw, we shall have a splendid variety of wheat in this particular species. But this has not been demonstrated; it may take ten or fifteen years, and no man can venture to predict anything in this connection because there are so many sides to the question. For example, it is only within recent years that the discovery has been made that there are different species of rust, and since then to some extent experimenters have had to double back and start over again with that knowledge in view. Once you know your enemy and are familiar with his characteristics and his peculiarities you have made one great step in the direction of getting the better of him. And as I say, it is only within recent times that we have known of the existence of rust in different forms; formerly it was thought that there was only one variety of rust.

Mr. CALDWELL: Do the inspection and the certifying of seed potatoes come under this vote?

Mr. MOTHERWELL: Yes.

[Mr. Millar.]

Mr. CALDWELL: Has there been any complaint in regard to the physical grading of certified seed potatoes from the Maritime provinces?

Mr. MOTHERWELL: As regards classification, size and so forth?

Mr. CALDWELL: I am referring to size, shape and that sort of thing.

Mr. MOTHERWELL: Yes. While in the Maritime provinces last summer I had a conference with the potato growers' organization and there was some criticism of the fact that potatoes that were too large and those under two inches were excluded.

Mr. CALDWELL: That is not the complaint I am referring to. Let me give a concrete illustration of my meaning. A man in my riding, who lives quite near me, had somewhere in the neighbourhood of forty acres of potatoes, and he secured over four thousand barrels off this forty-acre field. They were inspected in the field, found practically free from disease and they were so certified. They were also certified as being all of one variety. That is told by the blossom on the potatoes while they are growing, or, at least, that is one of the indications. It is much harder to detect a difference of variety in the bin than it is in the field. There is a much better chance to check up any other varieties in a field of growing potatoes; there is not so good an opportunity in the bin. When however, this man came to market his potatoes—and it is one of the requirements in order to get a certification of the potatoes that they shall be graded under the supervision of one of the officials of the department—he was somewhat surprised, after having been grading for nearly a whole afternoon, with his own crew of four or five men and the inspector supervising the work, to find that only a few barrels of seed had been passed as certified. Although they were all of one variety and free from disease, if there was any little difference of shape, they were taken out. They had to be all of exactly one shape, and anyone who grows potatoes knows that such grading is an impossibility. This man said that he would not have had more than two or three carloads out of four thousand barrels, and he objected to having them graded under this inspection. He, therefore, had to forfeit his certificate of freedom from disease or that the potatoes were all of one variety. I do not know whether the minister has had any complaint of this kind or not, because this is only a recent occurrence.

Mr. MOTHERWELL: No.

Mr. CALDWELL: Within the last six months there has been formed what is now known as the New Brunswick Certified Seed-Potato Growers' Association, and this man of whom I have spoken is president of that association. It is made up of men who are large growers, who have had extensive experience in growing and marketing seed. I might say further that this man marketed this crop without the certification of the official of the department, and he got a good return for it. The man to whom he sold it did not demand that it be graded according to the inspector's ruling at all. He had seen the potatoes growing in the field during the summer; he knew that they were all of one variety and also that they were free from disease because he had looked over the field himself. He has told the officials of the Seed Growers' Association that he will not require this kind of grading. He took out the bruised potatoes and any ill-shaped ones, as anyone would do, but he did not demand that the potatoes be all of one size or of exactly one shape.

The method of inspection adopted is going to hamper our seed growers, especially in view of the fact that we hope to get a reduction in the freight on certified seed potatoes. I hope and I believe that we will get that. If, however, the potato growers do not comply with this grading, they do not get the certificate and, therefore, they will not get the reduced freight rate. While I am aware that we cannot settle this matter here to-day, I should like the minister to consider it, and to have representatives of the Seed Growers' Association meet officials of the minister's department who have charge of this work, so that they may go into this matter, because I know the Department of Agriculture does not want to impose any regulations or restrictions that will do an injury to any industry of that character.

Further, I think certified seed growing, is the only future of that industry in the Maritimes. Owing to the Fordney tariff we are shut out of the United States market for table potatoes, because the price we can get for that stock will not pay the duty and transportation charges and leave the farmer anything. On certified seed, however, the case is different. I think the minister was well within the mark when he said that certified stock was worth half as much again as table stock. I think he would have been safe in saying that it was worth twice as much. We can get a good price for that class of potatoes. The duty is not an ad valorem duty, but so much a hundred, and we can pay the duty and ship the seed to the United States. We have a permanent market in the southern states for all the seed we can supply; in fact, we have never been able to supply the demand. There are several reasons for that which I will not take up the time of the committee at present to state. But I would like the minister to consider my suggestion and arrange to have officials of his department meet some of the certified seed growers of the Maritime provinces and go into this matter of final inspection and grading. We are well satisfied with all the other features of the inspection.

Mr. MOTHERWELL: We have no record of the complaint which my hon. friend has spoken of, but I might draw his attention to the fact that there are three inspections, no two of which are in themselves sufficient. There are certain diseases determinable only when the potato is graded. My hon. friend knows a number: for instance, blackleg, rot and blight. The very fact that there is a third inspection called for when the potatoes are in the bin shows that there is a possibility of the potatoes not passing the bin inspection when they have passed the growing inspection. The scab is a variable disease. Sometimes it is very pronounced, and sometimes it is loose scab, which is really not scab, but which at the same time a buyer thinks is scab. Then there is dry rot.

Mr. CALDWELL: Possibly the reason why the minister has not received any of these complaints is that the regulations were put into force only last year. I have had mine inspected for a number of years until last year, and the inspection was a bin inspection. The inspector came to your bin, looked the bin over, handled the potatoes, and decided whether they were all right or not. Last year there was a physical grading. When you were bagging them to load, the inspector superintended the grading and you had to grade them according to his regulations. That is what the potato growers object to. They do not object to the bin inspection, nor to the field inspection, which they consider all right.

There is one other point which I would like to draw to the notice of the minister, and which I think I pointed out last year. We have in New Brunswick certain dealers, shippers, who are not growers of potatoes, who will buy good-looking potatoes, put them into their bins and select them. This is what they call select seeds. They grade these and they get their own certificate printed marked, "Certified Seed Potatoes", although they are not certified by anybody. This was done a good deal, and I believe it

is being done again this year. We would like to have this matter looked after very sharply. Our buyers who are buying high-priced certified seed, getting it inspected and certified, and who have worked up a good trade for this in the southern states, where we have a permanent market, do not want potatoes sold as seed that are not certified and that may possibly have disease. There are certain diseases, the minister says, you must find when the potato is growing, you cannot find them in the bin. You can find some diseases in the bin, but very few. Potatoes of this class are shipped to the people to whom we are selling, and the man who buys them is led to believe that the stock is government certified stock when it is not. The certificate reads, "Canadian Certified Seed Potatoes" but it does not say who certified them. The people plant these potatoes and they may grow a diseased crop. In that case they will say that the Canadian certification is no good. This will discredit the whole thing from start to finish; it will nullify the work of the department in every particular. This is something that we who are really getting our potatoes certified want to put a stop to. It is ruining our seed trade. We have a steady market there, but this kind of thing will very readily undermine it and give us a very bad reputation.

Mr. HANSON: The hon. gentleman (Mr. Caldwell) has made a very serious charge against the potato dealers of New Brunswick. He has said either too much or too little. I am not sure which. I never heard of any such charges or of any such modus operandi on the part of dealers—and they are practically all in his own county—during the past two seasons when certified seed potatoes have been grown in New Brunswick. I want to call attention to this fact so that it will be heard down in New Brunswick by some of the hon. gentleman's own friends in the seed potato business and in the potato business generally.

Mr. CALDWELL: Does my hon. friend deny that this thing has been going on?

Mr. HANSON: I never heard of it before.

Mr. CALDWELL: I can prove it.

Mr. HANSON: You may be called upon to prove it by some of your own friends down in that community.

Mr. CALDWELL: I am perfectly ready and willing to do so.

Mr. HANSON: All right. I am making these remarks so that the matter may be emphasized and attention called to it in the community that is interested. What I really rose for was to ask the minister this: In view of the fact that the potato business is such an important business in New Brunswick, why is it that the position of plant pathologist at Fredericton has been vacant for a year or more, at all events ever since the resignation of Mr. Cunningham? The work is being done by a young man who is a graduate of the University of New Brunswick, and although he is qualified for the position I understand that the department has refused to accept his services.

Mr. MOTHERWELL: My hon. friend has raised a very important question. The salaries of these technical men are much too low; in fact they are so small that when the positions are advertised desirable persons are not attracted to them. Engineers and a great many other services are classified very much higher than technical men of this description. The result is that you get applications for the higher salaried positions and you do not get them for the lower ones. That did not start recently; it started away back when these men were taking their college courses and it was a factor in inducing them to choose some more remunerative vocation. To-day we have a number of positions such as my hon. friend has described and we have practically no applications for them. The person to whom my hon. friend particularly refers was not eligible for the position.

Mr. HANSON: I cannot agree with that, because I know the circumtances. When the position became vacant by the resignation of Mr. Cunningham and was advertised by the Civil Service Commission I received a circular in connection with it and I immediately sent it to the young man in question. He is the man who has been doing the work. He acted first as assistant to Mr. Cunningham for a number of years; he has grown up in the business, and if there is any merit in the principle of promotion in the Civil Service, here is a case where that principle should be invoked. I am informed that he applied for the position but that the department refused to accept him, although he has continued to do the work. He is a New Brunswick boy—it is not necessary to send a man in from Ontario or from the United States. A man was sent in from the United States; he looked the situation over and apparently did not like the climate or the society, because he did not stay. I do not know who brought him there. I do suggest to the minister that he give that position to the young man now doing the work, who knows the ground, who is thoroughly qualified professionally and technically and who, I believe, would make a first-class official.

Mr. MOTHERWELL: This young man naturally wants promotion, but he has not the post-graduate work, as I understand it, and the result is that he is not eligible for the higher position. We are making the best use we can of his services; I suppose it is better to have him there than to have no one. It just shows how far short these examinations are; he may be a better man than someone who would qualify by examination.

Mr. HANSON: Is it necessary that he should have a post-graduate standing, after taking the university degree in science and having nearly ten years' practical experience in the work? That is the fact, and I think he has every qualification except that of post-graduate work. I do not recall any reference in the circular to the requirement of post-graduate work, but I am subject to correction on that point. I may add that there is not an iota of politics in this matter; I do not know how the young man votes, and I do not care, but I would like to see justice done to him, because the principle of promotion in the service is at stake. From what I have heard he is doing the work in a reasonably satisfactory way; beyond that I would not like to go. The matter is worthy of the minister's consideration.

Mr. MARTELL: Who determines these qualifications? I quite agree with the hon. member for York-Sunbury (Mr. Hanson) that sometimes qualifications are prescribed which are absolutely non-essential. We are getting too far into this academic business. The minister suggested this afternoon that when men found they could not get very much pay in certain lines of activity they took up other professions or occupations. There are members of other professions—engineers, lawyers and doctors—who are not half as well paid as some of the so-called agricultural experts with which the minister and previous ministers, backed up by the Civil Service Commission, have been filling the country. We have too many people who are faddists and we have too many fads. I have no reason whatever to set myself up as an expert in agricultural matters, because I am not; I know very little about it. But I can get any number of practical farmers in the county of Hants who will teach him and a whole lot of his experts a good many things, in spite of their academic qualifications.

Mr. HANSON: I would not like to agree that it is not necessary to have a plant pathologist in New Brunswick, especially in view of the magnitude of the potato business and the number of enemies that the potato plant has. All I am asking the minister is to look into one particular case, and I believe that if he gives it his personal attention and also if the deputy minister will be good enough to look into it, they will feel like doing justice to the young man to whom I refer.

Mr. MOTHERWELL: The qualifications called for in appointments of this nature are agreed upon between the Civil Service Commission and the head of the branch concerned. They have thought—wise or otherwise—that the qualification of post-graduate work should be possessed by applicants for this position, and I am free to admit that a man who has had five or ten years' practical experience might be an infinitely better man, but you cannot change these qualifications every time you advertise.

Mr. HANSON: They are not like the laws of the Medes and Persians, or like an act of parliament; they can be changed as occasion requires, by order in council.

Mr. MOTHERWELL: So far as this gentleman's political complexion is concerned, we have enough trouble finding out his qualifications and looking after other matters without going into that. I do not know his politics from Adam's.

Mr. HANSON: I only mentioned that because I did not like to have it thought that I advocated justice to this young man simply because he was a supporter of mine. I have not any idea what his political professions are.

Mr. SUTHERLAND: How is it that these officials are appointed by the Civil Service Commission? Are they temporary appointees? How is it that they do not appear under the head of Civil Government?

Mr. MOTHERWELL: The civil government note takes in only the staff in the city of Ottawa.

Mr. SUTHERLAND: Would the minister inform the committee how many are engaged in the work provided for in this item? I notice that in 1920-21 the item was $140,000 less than the vote the minister is now asking the committee to pass. That is quite a considerable increase, considering the work that is being carried on. In so far as my observation goes, I have seen little evidence of the activities of those engaged in this work. When the minister was speaking of

what was being done to control the corn borer he said that once you get it in a silo it is all right. But people can put their corn in a silo without paying government officials. Would the minister tell us how many officials will be paid out of this item?

Mr. MOTHERWELL: I understand there are about forty.

Mr. SUTHERLAND: If there are forty officials engaged on the administration of the act, what uses up the balance of the item? I think this information might be given in detail. It would facilitate the passing of the item and eliminate a good deal of the discussion.

Mr. MOTHERWELL: Outside of the vote for live stock, the great bulk of the estimates for agriculture is for educational purposes, disseminating information throughout the country; for instance, under this item, information with respect to insect and fungus pests. There is only one medium through which we can do that work, apart from bulletins, and that is through men and women, and therefore a large amount is set aside for salaries. It is through this medium that the information is disseminated throughout the country. We have altogether something like forty or fifty inspectional services. You cannot disseminate this information by radio or long distance telephone; it has to be done through appointments, and, of course, through bulletins. If there is any other way of doing it, I do not know what it is.

Mr. GOULD: Reverting again to the question of rust, I was very much interested in the information the minister gave to the committee, and in his remarks as to the manner in which the spores may be carried against a current of wind. As the minister was speaking, I recollected reading a pamphlet issued by the state of South Dakota dealing with rust in wheat. In that pamphlet is described an experiment that was carried on by the state, in one township which was suggested. The barberry bush I believe is held to be the main source if not the genesis of the rust spore. The first step in this experiment was to destroy all the barberry bushes in the segregated area. Then it was sown with wheat. One particular township where the barberry bush was known to exist was also sown with wheat without destroying the barberry bush. The result showed a return of $12,000 more in that segregated area where the barberry bush had been destroyed. I do not know whether the barberry bush is, scientifically speaking, indigenous to our western country, and I wondered if the department has found out whether our rust comes from this bush, or whether it is carried through the air by wind from the southern states where the bush is found.

Mr. MOTHERWELL: The barberry bush is not thought to be the real source of rust, although there is no doubt whatever that you would have more rust in the immediate vicinity of barberry bushes. It acts as host between the two periods of the rust, and as a result you may have more rust in an area where there are barberry bushes than elsewhere. This discovery about the barberry bush was made over a hundred years ago in Europe; they have been aware of it in France and other parts of Europe for a very long time. They just knew it happened that way, but they had not worked out the real philosophy of the thing. Consequently, they started to destroy the barberry bushes believing that somehow or other they had something to do with rust. While that theory has been confirmed in later years, the barberry bush is now thought to be a source of contagion only to a very limited extent. I know that in the western provinces, in Manitoba, as well as in Ontario, they have issued instructions from the agricultural college to have these bushes exterminated because conditions have got so bad. While they did not think it was the chief source of contagion, they thought they would take no chances, and so they ordered the destruction of the barberry bush. Most authorities do not now consider it to be the chief source of contagion. I can recall as a youth that we had rust in Ontario, when winter wheat used to be a more general crop than it is now. All we knew then was that we had a sort of weather called rusty weather, with intermittent sunshine and showers, murky, calm weather, which seemed to develop rust. We know now that there are forty different varieties of rust, and when you have beaten out thirty-nine varieties, you have still one left to conquer. That is what makes this problem so difficult. It requires a good deal of patient attention because it may take several years to evolve a solution.

Mr. WARNER: Has the department any definite information, or any opinion even, as to whether rust would be carried over from one year to another in the seed, or whether it can live over in the land? Would it help any to put some other crop in the land after rust had been on the ground?

Mr. MOTHERWELL: Rust is not carried by the seed nor in the land. It may be carried over by some grasses. If a disease

like that has not the natural host plant available, it will fasten on something else. Some western grasses are thought to act as intermediary hosts—rye grass, for instance, although that has not been proved. Rust will not carry over in the seed or in the land; if it were you could treat it.

Mr. CALDWELL: In view of the fact that the hon. member for York-Sunbury seems to doubt that shippers have been putting tags on potatoes that were not justified by the act, I would ask the minister if his department ever had any complaint of this kind. Has the minister ever seen any of the tags?

Mr. MOTHERWELL: I understand that we had sufficient evidence of it last year that we inserted a proviso in the regulations making it an offence.

Mr. CALDWELL: Has the minister ever seen any of the tags?

Mr. MOTHERWELL: No, but I understand my deputy has.

Mr. SPENCER: I was interested to hear what the minister had to say with regard to the destruction of the barberry bush. Is it not a fact that there are barberry bushes at the Experimental Farm at Ottawa?

Mr. MOTHERWELL: Yes.

Mr. SPENCER: Why have they not been destroyed?

Mr. MOTHERWELL: We are not bothered with rust. We do not grow very much wheat around here. We do some experimenting with wheat but it is not the big crop, and besides we are not affected by rust.

Mr. BLACK (Huron): Does the minister not find that rust in oats in Ontario is as bad as rust in wheat in the West?

Mr. MOTHERWELL: There is a lot of rust all over the country. The rust in oats my hon. friend speaks of is a different rust.

Mr. CALDWELL: With regard to rust or blight in potatoes does not the plant pathologist find that the near proximity of the old-fashioned rose bush affects potato fields? Has there been anything of an educational character carried on along this line among the potato growers? I have understood from our plant pathologist in New Brunswick that this was considered both by United States and by Canadian authorities to be one of the places where the blight or rust that attacks potatoes lurks.

Mr. MOTHERWELL: I think it is a common belief when you know a thing exists that it is due to some influence close at hand, just as the invasion of rust has been attributed in the past to these barberry bushes. With regard to rust or blight in potatoes, it is not known in even a small degree that the rose bush is the medium.

Mr. CALDWELL: Is the minister sure of that?

Mr. MOTHERWELL: I am not sure.

Mr. CALDWELL: I think if the minister will consult Dr. Gussow's branch he will find a record there of the research work that has been carried on. Our own plant pathologist in New Brunswick believes this, and the belief is entertained as a result of research work carried on in the United States. We have meetings of the pathologists of the United States, including pathologists from the state of Maine which is near us, with our own plant pathologist in the province of New Brunswick, and that seems to be their opinion. I may say that Mr. Cunningham, who recently resigned the position of plant pathologist in New Brunswick, is a very excellent scientist. I was very sorry indeed when he resigned from the position. He did more, possibly, to assist the farmers and potato growers of New Brunswick in connection with growing certified seed potatoes than any other man, and I sincerely trust that the minister will be able to get as good a man to replace him. I hope the government will not appoint to the vacant position a man who is not competent. In saying that I do not wish to make any observation derogatory to any of the applicants for the vacancy, but it is most desirable that we should have the best man possible for such a position. I urge the minister not to be satisfied until he has laid his hands upon the very best man qualified for the position, because to us in New Brunswick the growing of potatoes is just as important as is the raising of wheat to our friends in the West.

Mr. MacLEAN (Prince): Some of the questions that have arisen in this discussion are of very special interest to Prince Edward Island. As a matter of historical interest I wish to say that the very first enactment bearing on this question, legislation designed to curb the inroads of the Colorado beetle, was passed by the legislature of Prince Edward Island in 1883. The point raised by the hon. member (Mr. Caldwell) regarding seed potatoes is very important to us as well as the matter of inspection. We have not had the complaints to which he has referred, although a number of growers have made shipments apart from the association. All potatoes that are shipped through the associa-

tion are certified and carefully inspected. There are two field inspections; there is a careful bin inspection, and then another inspection before the bags are sewed and tagged. The growing of seed potatoes is really a new industry with us, it is just in its infancy; and we would like to have any assistance that could possibly be given. There is only a very limited time between the digging and marketing of the potatoes, and our difficulties have to do with transportation and inspection. I understand the department is now looking into the matter of a further reduction of freight rates on certified seed potatoes. This is moving in the right direction and we would like to have further assurances that this concession will go through. I would ask if it is the intention of the department to fix a fee for the inspection work in connection with seed potatoes which will take care of the cost? Is it intended to introduce regulations under which a charge will be made to the associations for inspectors, or is this work to be carried on by the officials of the department?

Mr. MOTHERWELL: That is a question. We have been considering for the last year whether this inspection service should be carried at the expense of the men who get the service or not. In the inspection of our wheat out in the West every car carries, I think, a charge of ninety cents. It used to be sixty-five cents but the cars are larger now and it really amounts to about the same. That charge largely carries the expense of inspection. Now whether or not that system should be carried out all along the line I have some doubt. In regard to the popular work that means so much to the people, especially at a time like this when every charge places a little bit more on the producer's shoulders, we hesitate to do this. I do not know that it can be claimed that it is not a just charge. When you receive a service why should you not pay for it? However, the work is largely educational and as the hon member for Hants (Mr. Martell) indicated, when there are still some doubting Thomases throughout the country as to the value of such services, we feel that we cannot impose such a charge. The same question has been raised in regard to the inspection and grading of cheese and butter, which is assuming large proportions and involving large expense to the country. When I fail to get a sufficient vote to carry on this class of educational work, we shall have nothing else left but to give up the work or else impose a charge on every one that receives a service. In older countries than Canada, I understand, that is the practice, each service carries itself; but imagine trying to impose a fee at this time in respect of the grading of hogs or the grading of eggs? The work has not yet become sufficiently established to warrant us in irritating the people further by passing new regulations for the imposition of a fee. In reply to the question of my hon. friend from Prince Edward Island (Mr. MacLean) I may say,—not for the present.

Mr. MICHAUD: On the 25th March last I put a question on the order paper as follows:

1. At whose request or demand does the Canadian Horticultural Council propose to change the grading of potatoes in the province of New Brunswick?
2. Is the government aware of any complaints made about the present grading of potatoes in said province?
3. If so, who made said complaints?

I received the following answer:

1. The Canadian Horticultural Council has no jurisdiction over the matter or changing potato grades.
2. No.
3. Answered by No. 2.

We in the province of New Brunswick are very anxious to find out how far the Canadian Horticultural Council can go in the matter of grading potatoes in that province.

Mr. MOTHERWELL: I think, Mr. Chairman, the answer is there although it might be elaborated. This is a very important body of men who have to do with horticulture. Their work also extends to vegetables, including potatoes, and I understand they did make certain recommendations with respect to this matter.

Mr. CALDWELL: Do I understand that potatoes come under the heading of "horticulture?"

Mr. MOTHERWELL: They are usually considered as coming under that head, not because of the bloom, but fruit and vegetables are usually grouped together, and fruit comes under the horticulture class. But this body, I may say, like any other body, I think, have considered themselves of sufficient importance and with sufficient knowledge of the business to make a recommendation, just as my hon. friend might make a recommendation, suggesting a change. But as we get recommendations from all over the country, from organizations and from individuals, I presume this recommendation may have come in from them. But the reason this impression has gone abroad, I think, is that one of the officers of the Horticultural Council is also an officer of the Fruit branch, and because of that fact possibly it was thought the recommendation came from them.

Mr. MICHAUD: I appreciate the information my hon. friend the minister has given us. If I were to give the government a little advice, I would say that I think we have been doing too much grading lately in too many lines. People are becoming afraid to go into the business of production or into any other lines in the farming business. It is about time we gave them a chance to produce, and we could deal with the matter of grading later on. I think there has been too much grading in many lines of farm products.

Mr. MOTHERWELL: My hon. friend across the chamber does not think so.

Mr. SUTHERLAND: I am glad to hear my hon. friend on the other side of the House make the statement he has just made. I think if we have a public nuisance in this country at the present time, it is the horde of officials who have been appointed by the government to hamper the farmer in his operations. The cost is simply enormous. I notice by a return brought down in the House of Commons last year that over $2,500,000 was paid to officials of this department alone, and at the present time my attention is continually being called to the annoyance created by the interference of government officials who are not rendering any public service. This is a serious matter. We know that agriculture is in a depressed condition, and that serious complaints are being made in regard to the condition of agriculture. At the same time we have the minister continually introducing new legislation and appointing a whole army of officials to put those different acts into effect. The minister has just referred to the regulations with regard to cheese, butter, hogs and eggs. It would be interesting to know how many officials have been appointed as a result of those acts which have been put into effect. As far as the egg regulations are concerned, I take it that there are people out now enforcing the act, that penalties are being imposed, and people are being fined. But there is a way for them to evade the act by simply marking the goods that are "selects" as "seconds." They can get around it in that way, and I would venture to say that there is not one person in five hundred who understands how the grading of eggs should be carried on—I mean among those who are engaged in that business. If there is a petty annoying thing in this country at this time it is the meddlesome interference of the minister and his officials in this regard. I put some questions on the order paper the other day with regard to the army of officials in the packing houses of the country, as to the "selects" among the hogs that were being taken in, and I learned that less than fifteen per cent of the animals that have been graded this year passed as "selects." When I asked the minister what quantity of meat that came through the packing house was sold as "select," no information was available, and yet there is an army of officials in the pay of the government in the packing houses, and the minister has no information from them; but he takes good care that the farmer is discriminated against when he brings his animals in. The minister has just raised the maximum weight of select hogs by ten pounds, which indicates that he made a mistake last year.

Mr. MOTHERWELL: Not at all.

Mr. SUTHERLAND: Does the hon. minister say, no?

Mr. MOTHERWELL: Oh yes, I made the regulations, but I did not make a mistake.

Mr. SUTHERLAND: As a result of that a great deal of money has been lost to the farmers. The cheese has been graded out and paid for according to grade, and I understand that when it is shipped out of the country it loses its identity, that the grade is not fixed upon it and it is not sold according to grade, but it is bought according to grade.

Mr. SALES: On a point of order, does the hon. member regard the graders as insect pests?

Mr. SUTHERLAND: The hon. member might better have called the minister to order when he was dealing with this matter.

The CHAIRMAN: On the point of order, I think the hon. member is comparing those administering other acts with those administering this act. I do not think he is out of order, as far as he has gone.

Mr. SUTHERLAND: I did not intend to violate the rules of the House; I was referring to matters which the minister touched upon. I asked a question as to the number of employees in connection with this item which is now before the House. I must have misunderstood the minister, but I thought he said about forty. I have the public accounts here; I have run over them, and I think there are about a hundred and forty.

Mr. MOTHERWELL: No. There are about forty permanent and forty temporary.

Mr. SUTHERLAND: I make it somewhere in the neighbourhood of 140. The in-

crease in this item of $70,000 two years ago and $70,000 last year makes $140,000 of a total increase, and the minister's explanation in regard to rust must have been surely amusing to those who have some knowledge as to the operation of rust in this country, how it could be controlled, and how it will blow over a great distance. It is no unusual thing to see a big crop on one side of the fence affected with rust, and a crop on the other side of the fence not affected at all. It would be interesting to know the results obtained in Ontario. The minister has a great deal of information as to what is being done in western Canada, but in regard to the corn borer, which is undoubtedly something that should be controlled, I think more effective methods should be adopted than the methods at present in use, and that someone with better knowledge of conditions than those engaged in the work should be employed. It is not a matter that can be controlled. The minister says, it is a matter of education. All these things are of an educational nature.

Referring to the question of eggs, I think the minister will soon be insisting upon having an X-ray examination of all the eggs laid in this country. This matter is becoming unbearable. It is discouraging the farmers of the country more than anything I know of. I refer, by way of illustration, to what is being done in the grading of hogs. Why do the packers not grade those animals themselves, as they do in the case of the beef animals? The minister is not appointing men to act in such a capacity in the case of beef animals but the matter is arranged to suit the convenience of people, in order to take advantage of the people producing the animals. The minister says "We are going to educate them." Yes, but you are discouraging them and driving them out of the business. This item is along the lines to which I have referred in connection with the other matters.

The grading of cheese has created a condition which is just as pronounced as the condition in regard to the grading of eggs.

Mr. MOTHERWELL: That will be the next item.

Mr. SUTHERLAND: And I am mentioning this to show that it is not just one item but a great number of items of a similar nature that are not at all promoting the agricultural industry, but are hampering it and costing the country enormous sums of money. I think economy should be practised in the Department of Agriculture, just as it ought to be practised everywhere else.

Mr. MOTHERWELL: I always like to listen to my hon. friend when he speaks, because I can hear him. In that respect I am unfortunate with regard to some of the members of this House. Maybe it would be as well if I did not hear some of his remarks. May I remind my hon. friend that one of the first times I had the honour of having him call upon me at my office, he called for the purpose of having a change in the Feeding Stuffs Act, and I did not do it the first year or the next year, but finally I did it. My hon. friend is one of those who have wanted these acts amended. When it suits the purposes of his particular territory he asks for an amendment and that necessarily involves work for the officials. That is only one of the many acts that have been changed and I myself believe that it was time to change it. Now, which one of these services would my hon. friend suggest giving up? I may inform the committee, by the way, that I shall have one small amendment this year to submit to the House in connection with the Feeding Stuffs Act, because last year we went too far in attempting to please my hon. friend. I am sure he will give me credit for having tried to meet his wishes. His position agreed entirely with my own but the Justice department has decided that we went further than probably either he or I intended. Apart from that, however, I have not in view at present any legislation to bring down. It is considered that the public are about surfeited with regulations and restrictive legislation, but we must bear in mind nevertheless that in these matters we are not entirely free agents. We are competing with the world in a common market in Great Britain, and when other nations display their goods there in certain conditions that appeal to the people we must follow suit or we shall find that our goods will not be accepted. As a result of the grading of eggs it is gratifying to know that we stand first in Great Britain in storage eggs, and that is some consolation. I realise exactly what my hon. friend says, that all these restrictions are irritating at the beginning; and there is a whole lot of joshing and fun made in connection with them. I too am ready to take my part in the fun, and if I were in my hon. friend's place across the floor—because such strange things do happen sometimes—I might quite possibly be doing exactly the same thing and indulging a propensity for joke-making in reference to bugs and insects and one thing and other. I am accustomed to all that sort of thing,

and there is really no harm in it. But when it is all over I am sure the agriculturists both in this country and elsewhere would be very much worse off if there were no restrictions to control the spread of insect and fungus diseases. Apart from that, and a few other things, I have no criticism to make of my hon. friend's remarks. If there is any question that I have failed to clear up, I am afraid I have lost sight of it in trying to straighten the hon. gentleman out. All other matters are out of order and we shall come to them if my hon. friend will have some patience.

Mr. SUTHERLAND: I wish to compliment the minister before he gets away from this subject.

Mr. LAPOINTE: Compliment, did you say?

Mr. SUTHERLAND: Yes, surely. I criticised some of his actions and he thought that I should have given him credit instead. Well, I am going to give him all the credit to which he is entitled when we reach the item concerned, and I would point out to the minister that it is an altogether different matter from this. The adulteration of mill feeds is something entirely different from the regulations to which I have been referring.

Mr. MOTHERWELL: Quite true, but it involves a restriction nevertheless, and that is what the people object to.

Mr. SUTHERLAND: It was not purely restrictive, for it ensured purity.

Mr. MOTHERWELL: So it did, but that is a restrictive regulation.

Mr. SUTHERLAND: I have given the minister credit on many occasions for what he has done, but I simply wanted to point out to him that the mill feeds adulteration was altogether different from this.

Mr. MOTHERWELL: Thank you.

Mr. SINCLAIR (Queens, P.E.I.): I might say a word in reference to the inspectors referred to by my hon. friend (Mr. Sutherland) and some other hon. members who have spoken this afternoon. I believe that the money expended on inspection under the Department of Agriculture is one of the most successful uses to which the public money can be put in this country. In eastern Canada especially, we have in the production of seed potatoes a splendid service, and the inspection gives a certification for our crop which we are able to sell in the United States where we have developed a market by introducing our potatoes and have had them tried out by the experimental stations in that country. This is the only bright outlook in Maritime agriculture at the present time, apart from the ordinary line of dairy farming; and when hon. gentlemen suggest reductions by cutting out the inspection of potatoes it seems to me that they are proposing something that is altogether detrimental to the interests of the country. I was rather encouraged to hear my hon. friend from South Oxford say that some of the inspectors were not as highly qualified as they should be, because the hon. gentleman's colleague (Mr. Hanson) a few moments ago was urging that the qualifications were too high and should be reduced to a lower standard. I cannot agree with the hon. member for York-Sunbury in that regard, because I think it is of the utmost importance to keep up the qualifications of these inspectors. It is admitted by those who have studied the production of seed potatoes that the territory that lies east and south of the St. Lawrence river, east of the town of Levis in Quebec, in the Maritime provinces, and in part of the state of Maine, is the natural ground for the production of seed potatoes on the North American continent, and if properly safeguarded to keep out disease which is so prevalent in large potato growing areas we may hope in the future to develop the production of valuable seed potatoes. That would encourage the farmers in that locality to produce a crop that is indigenous to their country. But if we do not pay strict attention to the qualifications of our inspectors and see to it that a rigid inspection is maintained in order that disease may be kept down to the minimum, we shall not benefit to the extent that we should, in that part of the country. Let me give an illustration of what it means to us to keep down disease in our potato crop. During the past season in Prince Edward Island we have produced about three hundred carloads of seed potatoes, 93 per cent. of which, upon inspection, were certified. In New Brunswick the farmers have been growing potatoes on a larger scale for some years than in Prince Edward Island and consequently they have a little more disease in their fields and among their potato stock than we have. So that of the acreage that was entered for inspection in New Brunswick last year only 67 per cent. obtained certification. That will demonstrate the necessity for a rigid control of disease in potato crops, especially in connection with seed potatoes. Last year in Prince Edward Island there were six inspectors to handle the crop. Two or three of them were men who are employed the year round, the rest being engaged for a few months. This

year we have increased by about 50 per cent. the acreage that will be inspected and it will be necessary to have more inspectors. I believe that this is pre-eminently a work in which the government should take a leading part. It means a great deal to the farmers of the Maritime provinces and part of the province of Quebec to safeguard the seed potato industry. We can go over a tariff wall, which amounts to 35 cents per bushel, into the United States market and sell our product and make the American grower pay the duty. And potatoes are about the only thing that we can grow in eastern Canada on which we can make the Americans pay their own duty. For that reason the seed potato industry is valuable from the national standpoint as well as to those who are engaged in the industry, and hon. members who advocate cutting down the work of inspection are advocating something which is decidedly not in the best interests of agriculture in this country and especially in the Maritime provinces.

Mr. CALDWELL: I do not want to disagree with my hon. friend (Mr. Sinclair) in regard to the percentage of potatoes entered for inspection in New Brunswick as compared with the quantity inspected in Prince Edward Island. There was, however, another reason besides the one he gave. Last year potatoes that were 5 per cent diseased were passed as certified seed. The regulations were changed last year, and this year potatoes would pass with only 2 per cent of disease. They had to be 98 per cent pure, whereas last year they passed if they were 95 per cent pure. Before the potato growers of New Brunswick realized that the regulations had been changed, a large number of them had purchased their seed. In fact, there was no way of knowing whether the potatoes that were certified were 5, 4, 3 or 2 per cent diseased, because they were certified if they were 95 per cent pure. I got caught myself in that way. Last year I bought some seed, and I learned afterwards that it was a little more than 4 per cent diseased. Had I known that this regulation had been passed—I did not know until it was too late—I would not have purchased that seed. In the same way large numbers of farmers last year planted potatoes that were 3 or 4 per cent diseased. I know the hon. member for Queen's (Mr. Sinclair) would not want to leave the impression that we have more disease amongst our potatoes, so I would like to correct him. The reason why a smaller part of our crop passed inspection last year was on account of the change in the regulations which the farmers were not aware of when they planted their seed, and they planted seed that, had they known of the change in the regulations, they would not have planted.

[Mr. Sinclair.]

Mr. SINCLAIR (Queen's P.E.I.): I did not intend making that reference in any way to reflect upon the percentage of disease prevalent in New Brunswick. As regards the percentage of disease in certified potatoes, the important matter is what kind of disease it is. If there are certain diseases like mosaic found in the growing crop, we cannot get it certified. If the disease is wilt or blackleg or rhizoctonia, we allow 3 per cent. There are other diseases which I need not enumerate, but it all depends on what kind of disease is found, what percentage is allowed for certification. If the disease is powdery scab, we do not allow any of those potatoes to be certified. I can assure the hon. gentleman that I was not making any reflection on the province of New Brunswick. I was showing the committee the necessity of having rigid inspection in order to keep disease in check and not to allow it to spread any more in the eastern provinces. I was citing New Brunswick on account of the longer time people there have been engaged in growing potatoes on a large scale. When the American duty was taken off potatoes a few years ago, the development in potato growing was very great, especially amongst those who were near the line and who grew table stock for shipment to the New England market. During the time when inspection was not so rigid for table stock, the disease spread rapidly, in fact, more rapidly than we hoped to allow it to spread, through other parts of the Maritime provinces.

Mr. FANSHER: This discussion has dealt with pests in western Canada, and pests in eastern Canada. As, however, has been mentioned by the hon. member for South Oxford (Mr. Sutherland), there is a pest that has invaded Ontario lately, namely, the European corn borer. I should like to know of the minister how many have been employed during the last year in combating this pest, with what success their efforts have been rewarded, and what was the cost during the last year of fighting this pest.

Mr. MOTHERWELL: I think ten inspectors are engaged in this work. The infection is spreading from the west of Ontario to the eastern part of Ontario. Just from memory, I think there are thirty or possibly thirty-two counties affected. The remedies that have been applied in the Welland and Essex counties, where the infection started principally, because those are the

corn counties, are showing their results in the invasions becoming more or less circumscribed. This is being done to a large extent by the activities of the farmers themselves. The hon. member for South Oxford made light of the fact that by putting the corn into the silo early, many of these bugs were silent, they were canned with the corn, but if you left that over until too late, they would not be. That is an important fact. In addition to that, the farmers by their own observations have found that tillage at a certain time and to a certain depth will bury those insect pests, just as we do many of our insect pests on the prairies by fall ploughing, thus getting rid of them for the time being.

And the Speaker having resumed the chair.

THE ROYAL ASSENT

SUSPENSION OF SITTING

Mr. SPEAKER: I have the honour to inform the House that I have received the following letter:

Ottawa, April 4, 1924.

Sir,

I have the honour to inform you that the Right Hon. Sir Louis Davies, K.C.M.G., acting as Deputy of His Excellency the Governor General, will proceed to the Senate chamber this afternoon at five-thirty o'clock for the purpose of giving the royal assent to the Interim Supply Bill.

JAMES F. CROWDY,
Deputy of the Governor General's Secretary.

A message was delivered by Colonel Ernest J. Chambers, Gentleman Usher of the Black Rod, as follows:

Mr. Speaker, His Honour, the Deputy of His Excellency the Governor General, desires the immediate attendance of this honourable House in the chamber of the honourable the Senate.

Accordingly, the House went up to the Senate.

And having returned,

Mr. SPEAKER informed the House that the Deputy of His Excellency the Governor General had been pleased to give in His Majesty's name the royal assent to the following bill:

An Act for granting to His Majesty certain sums of money for the public service for the fiscal year ending the 31st March, 1925.

SUPPLY

DEPARTMENT OF AGRICULTURE

The House resumed in Committee of Supply.

Administration and enforcement of Destructive Insect and Pest Act, $230,000.

Mr. GARLAND (Bow River): I would like to ask the minister to give a brief but, if possible, a comprehensive survey of the work of the department in the administration of the Destructive Insect and Pest Act. The discussion so far has been away from the item under consideration, and the question asked by the hon. member (Mr. Fansher) is the only one that really touches the subject. We are anxious to know what work has been done during the past year, where it has been done and what it has cost in each province.

Mr. MOTHERWELL: I was in the act of answering that when the committee had to rise for something equally important. I was reciting some of the activities that were being engaged in with the idea of restricting or, if possible, eliminating altogether the European corn borer in Ontario. I have mentioned the quarantining of these districts, and I may point out that the quarantined areas are not permitted to sell corn on the cob for seed purposes outside of their districts, because the disease is transmissible by that medium. In answer to the hon. member for East Lambton (Mr. Fansher) I may say that the cost of the activities of this branch is divided up as follows: scout work: one foreman inspector of insect pests, three months at $85 per month, $255. It is very difficult to give the exact figures, because this corn borer season does not last the year round. We have permanent inspectors and in addition to that we have temporary inspectors at the peak season. Then, five scout inspectors of insect pests, two months at $75, $750; two scout inspectors of insect pests, six months at $75, $900; two foreman inspectors of insect pests, two months at $85, $340; travelling expenses, $2,430; total, $4,675. I do not know to what extent that answers the question of my hon. friend from Bow River.

Mr. GARLAND (Bow River): If that is the only work done in connection with the administration of the Destructive Insect and Pest Act it answers my question, but if other work has been done in other provinces I should like to know it.

Mr. MOTHERWELL: We have always given a certain amount of assistance in the way of co-operation with the western provinces, in the extermination of grasshoppers, for instance, although that has been done largely by the provinces and the municipalities working in conjunction with our officers. We have about eighteen or twenty laboratories doing this class of work all over the Dominion, generally in conjunction with the experimental farms. The laboratory is not

always located on the farm. In the case of Fredericton, for instance, it is down in the city; at Agassiz it is located on the farm. The work is not confined to any one province, but is done all over the Dominion, wherever you find insect pests.

Mr. GARLAND (Bow River): What was the nature of the work done in connection with the Universtity of Saskatchewan? I think about $17,000 was spent there.

Mr. MOTHERWELL: That was in connection with fungus diseases. At the University of Saskatchewan it was the rust proposition.

Mr. GARLAND (Bow River): How much was spent in each province last year on the administration of this act?

Mr. MOTHERWELL: I have not the figures on the basis of provinces, but on the basis of the work done by the laboratories, which are made the centre of the operations.

Mr. GARLAND (Bow River): Then let the minister give the total amount spent in each laboratory in the different sections of the country, so we can discover whether the act has been administered properly, and whether this amount is necessary.

Mr. MOTHERWELL: I have not the totals here, but I will try and get them for my hon. friend during the dinner hour.

Mr. MacKELVIE: Can the minister tell us what has been done in the direction of eradicating the codling moth in British Columbia?

Mr. MOTHERWELL: That is a rather persistent disease. It affects our apple orchards, and it requires eternal vigilance to prevent the spread of the infection. A good deal can be done by the fumigation of empty cars that have brought up American fruit from the south, and every precaution is taken in that direction, as well as certain treatments in the orchards. But it is a very persistent pest, like some of our weed pests. I do not know whether we will ever get rid of it, but by keeping close watch on it we can curtail its ravages. The thing is to localize it; to exterminate it, is not an easy matter. I have here a memorandum on the codling moth, as follows:

Originally a native of southeastern Europe, the codling moth has now become nearly cosmopolitan. Early records in Ontario indicate that this insect was present in destructive numbers in 1868, so it must have been in the province many years before that time. At present it is particularly destructive in eastern Canada, with limited infested areas in British Columbia. It is recorded as causing an annual loss in Ontario of about $2,000,000. The adult moth lays its eggs on the leaves and the caterpillars on hatching enter the young apples usually at the calyx end. The remedy is to spray the trees with an arsenical mixture such as lead arsenate at definite periods, the first application to be made when 75 per cent of the petals have fallen.

That is, just after the blossoming period. I do not know what would happen if we did not keep after this pest.

Mr. MacKELVIE: Has there been any decrease in the infected area during the past year?

Mr. MOTHERWELL: I fear not; it is holding its own. If we want to eliminate it more rapidly we would have to increase our staff, I presume, and we have limitations in that respect.

Mr. FANSHER: Does the minister consider the European corn borer a very destructive pest, and if so, how destructive?

Mr. MOTHERWELL: It is destructive in this way; it honeycombs the stalks to such an extent that they fall over in the wind, and that makes it very difficult for the binder to cut them. I have not been down here long enough to say just how much it interferes with the crop, but the stalks I have examined would be perforated all the way up with little holes about the size of a darning needle, and would blow over in the wind, making it very difficult for the binder to cut them. The hon. member for Welland, as well as others informed me during the first of the session that the farmers in Essex county are beginning to handle this pest in such a way that they are ceasing to be alarmed about it; they can control it, and it is not nearly such a terror to them as it was when it first visited the country. They are doing that by local methods.

Mr. FANSHER: How destructive is the corn borer in the country from which it comes?

Mr. MOTHERWELL: I understand that in the country of its origin it has a parasitic enemy which limits the extent of its depredation. Without that enemy its ravages become pretty extensive and pretty rapid.

Mr. FANSHER: Why is the parasite not brought here?

Mr. MOTHERWELL: We are introducing it artificially just as we are doing with the parasites of other pests, and as we are doing in connection with the spruce budworm.

Mr. MacLEAN (Prince): I understand that under regulations that came into force in

September 1923 seed potatoes from an infected district are prohibited from being sold in other districts. Does the same provision apply to potatoes imported from sections that are known to be affected by the potato wart disease? That disease is practically not known in Canada as yet.

Mr. MOTHERWELL: No. I presume if the infection ever got a start and it was thought to be serious we should have to adopt a quarantine.

Mr. JOHNSTON: Have any experiments been carried on with a view to the destruction of the wheat stem sawfly which attacks wheat in western Canada?

Mr. MOTHERWELL: That has been left largely to the provinces. That also is controlled to a very large extent by deep fall ploughing. The little maggot larva after cutting around the wheat straw and letting it fall over, goes down the straw to within two inches of the ground and winters there. But if the stubble is ploughed in the fall, or burnt, or in any way destroyed, it substantially controls future depredations. It will not control the operations of this pest altogether but it helps very substantially. This is such a very ingenious insect that it taxes the ingenuity of man to get the better of it. In spite of different devices adopted for its control, it is still there and getting worse.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. SPENCE: When the committee adjourned at six o'clock we were discussing the item for the administration of the Destructive Insect and Pest Act. There is also an item under the head of entomology. Both of these items should be discussed together. Very few of us know very much about entomology and I think the hon. minister knows just about as much as the rest of us. I know very little, and I think hon. members of the House know just as little.

Mr. FORKE: Speak for yourself.

Mr. MOTHERWELL: Each hon. member should make his own confession.

Mr. SPENCE: The hon. minister would have no reason to understand entomology very well because this branch has been established in the last few years in connection with the Agriculture department and very few of us know very much about it.

You are to be congratulated, Mr. Chairman, on the display of such a great amount of patience this afternoon, listening to members discussing everything, and travelling all over the lot. Whoever heard of the grading of eggs or butter or cheese? Someone suggested an embargo on beans, and someone suggested the appointment of a pathologist in connection with entomology. I never heard of such a thing in my life. There is no doubt the department has been more or less extravagant but why should hon. members waste so much time discussing a matter of this kind? The hon. member for Victoria and Carleton (Mr. Caldwell) made a strong charge this afternoon against the potato dealers of New Brunswick, and I am sorry he had to make that charge, because I hate to hear of men in that walk of life resorting to such trickery in regard to the grading of potatoes, particularly the grading of seed potatoes, whether it is government certificated seed or just ordinary seed potatoes. I think the Minister of Agriculture and his department should investigate a charge of that kind. I have probably at the present time a thousand bags of seed potatoes which I paid for. I think I got just what I paid for, and I have always got a good decent deal from the dealers in New Brunswick, but this would not apply to the cases cited by the hon. member. I know something about the duties of the Entomological branch, being an importer of nursery stock, shrubbery, rose bushes and such things as that, but I must confess I know very little about entomology. However, I am a thorough believer in the inspection of foreign importations, or any importations, because it is absolutely necessary to keep away pests and plagues of one kind and another. I am not a believer in so much money being spent in embalming bugs and things of that kind, packing them away in mahogany cases, and having a whole department looking after them, in order to prevent them walking away at some future time. I contend, Mr. Chairman, that there are too many men in this country who imagine that they are inventing something new, but who in reality are preparing jobs for themselves and probably at the same time advocating the establishment of new departments, and services. We have to depend on somebody in regard to entomology. None of us knows what this item may cost, and I would ask the hon. minister to study a little economy in connection with it because somebody has to be depended on to give us a square deal in the matter. I hope in

the future, when the Minister of Agriculture is asked a question by any member of this House, he will be in a position to give a decided answer in regard to expenditure. I had trouble in that regard the other day. Hon. members to my left asked several questions and in each case he did not refuse to answer but quibbled around in order to avoid answering. He would never give a decided answer as to the cost of a particular department. I do not wish to criticize him too much, but he deserves a little criticism in that line. I do not think he deserves criticism along the lines of entomology because he has no knowledge of that subject. He could not be expected to have any knowledge, but in future I hope the minister will give a decided answer when he is asked a pointed question and be candid with the House because that is something he is lacking in.

Some hon. MEMBERS: Order, order.

Mr. SPENCE: If I am out of order I will apologize, but three days ago, I tried to get information regarding the cost of the central farm at Ottawa, and up to the present time I have not been able to get an answer. I think the item should either be abandoned or put through.

Mr. MOTHERWELL: I have to admit, Mr. Chairman, that I certainly do not know all about entomology but I think I can tell my hon. friend that pathologists have been appointed in connection with that subject. I suppose he never heard of such a thing as a plant pathologist.

Mr. SPENCE: Oh, yes.

Mr. MOTHERWELL: So that I have the satisfaction of knowing there is one hon. member who knows less than I do.

Mr. SPENCE: I wish to say—

Mr. MOTHERWELL: The hon. gentleman will not feel sore about it. I was not saying very much, you know.

The hon. gentleman from Bow River (Mr. Garland) asked a question in regard to the entomological end of the vote, by provinces, and two members of my staff have prepared a statement. I will give the figures by provinces leaving out the odd figures. They are as follows:

New Brunswick	$21,000
Nova Scotia	24,000
Quebec	14,000
Ontario	42,000
Manitoba	7,000
Saskatchewan	11,000
Alberta	11,000
British Columbia	19,000

[Mr. Spence.]

These are the sums spent for the respective provinces in connection with the entomological end.

Mr. TOLMIE: I am very much interested in what has been said this afternoon concerning the importance of the seed potato trade. This is a business that not only interests the Maritime provinces, but also the province on the Pacific coast. I would very much regret it if there is to be any laxity in the regulations governing seed potatoes. We are building up a good market, and it must be maintained at all costs, and strict grading and strict inspection of potatoes kept up, so that the certificate from the government which accompanies them will have some value and be a guarantee of their quality. As regards the co-operation of the Dominion and the provincial departments, the minister might inform the committee what precautions are taken to obviate overlapping, and what line of demarcation exists between provincial operations and those of the federal department. In view of the great importance of this seed potato trade, it would be interesting to know what increase has taken place in recent years. Regarding inspection and grading generally, if we are to compete in the export markets of the world with countries where a careful system of grading and inspection is observed, such for instance as New Zealand, Denmark and other places on the European continent, Canada will have to be as strict with the goods she exports as these countries are. As regards the question of contagious diseases not only of animals but of plants as well, and the work of entomology generally, it simply means that we cannot afford to let go. No matter how much we may talk in this House, no matter what politics we may play in the country, the bacteria will be as active as ever; and it is imperative for us to meet the situation. I am quite sure that if there is any laxity in carrying out the regulations we shall not retain the high record which we have to-day for the health of Canadian cattle and the quality of Canadian products.

Item agreed to.

Dairying, $230,000.

Mr. CAMPBELL: The amount of money spent under this head in 1922 was $147,000 and in 1923 $158,000. What is the explanation for the increase?

Mr. MOTHERWELL: There is no increase over the vote of last year.

Mr. CAMPBELL: I am referring to the actual amount spent last year which, accord-

ing to the Auditor General's report, was only $158,000.

Mr. MOTHERWELL: We had certain research work provided for last year but we were unable to obtain a man to do it, with the result that that work had to be abandoned. There were certain other works that we were able to have done without the expenditure that we had anticipated, but the principal reason for our not having used the whole vote was our inability to carry out the work we had planned by reason of not having secured the necessary officer. We had contemplated research work in bacteriology especially in connection with bacteria in cheese. We have since secured the services of a bacteriologist for that work and we shall therefore require to meet the expenses in connection therewith. There is also a certain amount of work to be undertaken in the way of cow testing, not for tuberculosis but for quantity and quality of milk. Some of the provinces are doing that work; the western provinces, particularly Saskatchewan and a part of Manitoba, and Nova Scotia as well, have gone in for it.

Mr. CALDWELL: Does the work of cow testing come under this vote?

Mr. MOTHERWELL: It did at that time but we are transferring it to the Live Stock branch.

Mr. HANSON: What is the department doing to secure better export markets for our dairy products?

Mr. MOTHERWELL: There is a vote further on with reference to that subject.

Mr. HANSON: I should like to know what steps the department is taking in this very important matter at a time when the farmers are suffering from restricted markets.

Mr. MOTHERWELL: We have a special representative in the Old Country looking after Canada's interests in the placing on the markets over there not only her dairy products, bacon and eggs, but all other exports as well. So far only a start has been made but good results are anticipated. In addition, we have a number of cargo inspectors here whose duty it is to see that our goods are placed on board the boats in proper condition and are not shunted around unduly, although in spite of all precautions a great many of our containers such for instance as cheese boxes, are pretty badly racked before they reach their destination. We have cargo inspectors on the other side also to look after warehousing and the handling of goods after they have reached the Old Country. These men make sure that perishable goods particularly, such as butter, shall not remain on the wharves too long nor be exposed to temperatures and otherwise be subject to deterioration, before the persons to whom they are shipped can put them in cold storage. These are some of the things that are being done, but there is still a tremendous work to accomplish if we are to keep pace with our principal competitors.

Mr. HANSON: What is the name of the official to whom the minister refers?

Mr. MOTHERWELL: Mr. W. A. Wilson.

Mr. HANSON: Was he formerly manager of the Saskatchewan Creamery?

Mr. MOTHERWELL: Yes.

Mr. HANSON: Did he make a success of that business?

Mr. MOTHERWELL: He did when I was there.

Mr. HANSON: He did when the minister was there; that is a qualification. But after the minister left how did he succeed?

Mr. MOTHERWELL: I can speak only from personal knowledge. I cannot be expected to look after the business up there and administer the department here. At the same time I understand that there has been some complaint about the administration since then.

Mr. HANSON: Is it not a fact that he was a huge failure in the position he occupied in Saskatchewan, and that the minister shunted him to Great Britain? If so, how can he hope to be successful over there?

Mr. MOTHERWELL: You will have to ask the Civil Service Commission.

Mr. HANSON: Did the minister not have anything to do with his appointment? Did he not recommend him?

Mr. MOTHERWELL: I did.

Mr. HANSON: Of course you did.

Mr. MOTHERWELL: And a good many others recommended him too, and the Civil Service Commission can be congratulated on the best appointment they have made since I have been here.

Mr. HANSON: What results has he obtained since going over there? Let us have something tangible for the salaries we pay.

Mr. MOTHERWELL: He has been there only since last September, but he has made a number of recommendations with regard to the cheese and butter business particularly. As I intimated this afternoon, the amount of restrictive legislation passed by this House within the last few years has been complained of to such an extent that I do not feel that it is advisable at this time, no matter how pressing the requirements may be, to bring down any further legislation of that nature. But strong recommendations have come from Mr. Wilson to standardize the cheese and butter boxes. They are not standardized now, and the change would necessitate making a different sized hoop. That of course would cost money, but I think it will have to be done some time in order to have the cheeses fit the boxes properly. At present the cheese is sometimes about an inch smaller in diameter than the box with the result that in the handling of loosely packed boxes of this kind the cases often fall to pieces. We could bring down legislation this year as we have enough information from him to justify that with regard to both cheese boxes and butter boxes; but at the conference held recently at Ottawa before the session opened, it was thought better to get further information before we made that change and necessitated that expenditure in our cheese factories. That is some of the work in which he has been engaged. We have enough information from him to warrant a number of changes being made to meet present market conditions, but we feel that the time is not ripe to make those changes. The people, as I have intimated this afternoon, have had sufficient restrictive legislation for the time being. There is a timely time to do things and that is not quite just now.

Mr. HANSON: The answer made by the minister is not an answer to my question. What results have been obtained and what benefits have come to the country as a result of the trip of the dairy commissioner to New Zealand and Australia last year?

Mr. MOTHERWELL: It was Mr. Ruddick, the present dairy commissioner, who established, you might say, the present dairy industry in New Zealand when he was there as dairy commissioner something over twenty years ago. His work is being followed up there by a Mr. Singleton. From experience, we find that the New Zealanders are setting the pace for Canada, in fact, for almost every other country, except Denmark as regards putting goods on the British market in an exceptionally good condition. Since I have had the honour of coming to Ottawa, we have had New Zealanders visit Canada. It is quite the thing for a prominent dairyman in every dairying country to visit countries that are their chief rivals in order to hear the last word in dairying. If there is anything that can be secured and applied to their respective countries, they take it home and apply it. Mr. Ruddick wanted to see just how the people of New Zealand were excelling Canada in the matter of butter-making and cheese-making too. He found out many of their more recent methods, some of which are not applicable to conditions in Canada because of our small cheese factories. For instance, as regards the question of pasteurization, although it is generally understood that the appetite or taste in Great Britain is pretty well fixed for a certain type of cheese or butter, nevertheless all those in authority there are of one accord that the appetite for both butter and cheese in the Old Country is changing. The people there want the milder cheese, one that is made from pasteurized milk, and we find that practically all the milk in New Zealand is pasteurized before it is made into cheese. The same thing applies to cream and butter. That is something which we are drawing to the attention of farmers in Canada, also; but unfortunately in this country where the factories are so small, they cannot afford to put in a pasteurizing plant for the small quantity of business done in one factory. Consequently, we are starting on a policy of encouraging the people, as they start new factories, to build combined ones, butter and cheese, and larger ones, so that the output will warrant employment of first class men and putting in pasteurizing plants to meet the taste of the British market with milder cheese which can be made only with pasteurized milk. These are some of the results of his visit. I might tell the committee some of the others.

Mr. HANSON: I am sure the committee will be pleased to hear of other results of the visit of this gentleman to New Zealand. What was the nature of the difficulty into which this gentleman got in New Zealand, and how does the matter now stand?

Mr. MOTHERWELL: I do not understand the question, and my deputy does not understand it.

Mr. HANSON: Perhaps it was in connection with the other gentleman.

Mr. MOTHERWELL: Mr. Wilson. He accompanied Mr. Ruddick.

Mr. HANSON: What was the nature of the trouble that he got into over there?

Mr. MOTHERWELL: I have not heard of any trouble that he got into. He may have been seasick on the way over, for anything I know.

Mr. HANSON: Perhaps the minister will hear of it later.

Mr. MOTHERWELL: Possibly my hon. friend can enlighten me.

Mr. HANSON: What was the nature of the trouble into which Mr. Wilson got in Saskatchewan that caused him to make that foreign trip?

Mr. MOTHERWELL: My hon. friend is on the wrong scent altogether. Mr. Wilson went into the dairy business under the auspices of the Dominion government over twenty years ago. He went to Saskatchewan in 1905 and he got along well as dairy commissioner for twelve years. He was in the Department of Agriculture there, and he was recognized as the first authority, in both theoretical and practical dairying. I presume my hon. friend has been following the evidence which has been appearing in the Regina papers. As a lawyer, he should be sufficiently open-minded to appreciate the fact that many of the statements there were not fair in the absence of Mr. Wilson or anybody to represent him. As regards many of the statements that were made, he made a strong defence that has not yet been made public.

Mr. HANSON: What was the charge laid against him?

Mr. MOTHERWELL: No charges were laid against him except the charge of not being able to get along with his staff. That is the only charge I have heard.

Mr. MEIGHEN: Was he not charged with alleging that he was a cousin of the hon. gentleman himself?

Mr. MOTHERWELL: That is a new one on me. I never heard that before. There are many things my right hon. friend does not know yet. I remember the other night he did not know there was an embargo on American cattle. To-night he has charged that Mr. Wilson is a cousin of mine. If you go back to Adam, I have no doubt he is.

Mr. MEIGHEN: The minister is the first one I ever knew to claim that he was not. He may be the last. I have some difficulty in keeping up with the sinuosities of the Minister of Agriculture. I do not think anybody knows what is happening while he is there. Did the minister, for instance, as regards the cattle embargo, make any announcement to the public that it was on?

Mr. MOTHERWELL: Yes.

Mr. MEIGHEN: How did he make it?

Mr. MOTHERWELL: Through the press in the usual way.

Mr. MEIGHEN: In what press?

Mr. MOTHERWELL: All the press, Associated Press.

Mr. MEIGHEN: I did not see it, but I saw some telegrams from the minister disputing the relationship of Mr. Wilson. He seems to have forgotten that.

Mr. MOTHERWELL: It was not with Wilson at all. I think the leader of the opposition will have to try again and give me something harder.

Mr. ROSS (Simcoe): I do not doubt the right hon. gentleman did not see the article in the press, but I happened to see it and I think many of us saw it. The article was in the press.

Mr. MOTHERWELL: Yes. If you ask half of the pages here, they will tell you about it.

Mr. ROSS (Simcoe): In Ontario, the dairy industry, particularly the manufacture of butter and cheese, is an important factor in farming operations. According to the reports, we have a number of inspectors. I think we have eight dairy inspectors, twelve inspectors of cargoes, seven or eight produce graders. We have reports. This is a little report that does not appeal to me very favourably. It is issued in the Canadian Grocer, and commenting on Canadian butter, it states:

> In the Old Country it is selling from ten to thirty shillings per hundred less than butter from some of the other producing countries.

Then it goes on to say:

> This is due to its not being uniform in quality or to the poor keeping character of a great deal of it.

I was just wondering what the duties are, and how they are performed, of our inspectors, those that are inspecting the cargoes going, those that are inspecting the butter manufactured in the different provinces, and our graders, how they work, where they work, whether they inspect cream as it comes in, whether they inspect the factory itself as to sanitary conditions, cleanliness and such things; whether they inspect the finished product in the factory before it goes out—these are matters on which I would like to have a little light.

Mr. MOTHERWELL: The supervision of the manufacture of butter and cheese, broadly speaking, devolves upon the provinces. It is true that we do certain educational work in the way of drawing attention to the advisability of the grading of cream and milk, but we have nothing to do with the supervision of creameries or cheese factories. Our duties bear upon the grading of the article after it is manufactured and the marketing of it, and that is usually done at the warehouses. We did exercise some control under the Agricultural Instruction Act, the grants being made under the condition that a portion of them should be expended in the inspection and grading of cream and milk at factories. Since then we have exercised no control; we have acted only in a consultative capacity or in an educational way. In a word, the grading is federal and the manufacturing provincial.

Mr. LUCAS: As the quality of butter exported reflects on the Dominion as a whole, does the minister not think it would be a good idea if the Dominion would call a conference of the provinces for the purpose of bringing about a uniform system of grading throughout the whole Dominion?

Mr. MOTHERWELL: We have had one or two conferences of that nature, but it is not an easy matter to get some provinces to accept a grading system at all. The three prairie provinces accepted a grading system years ago, Alberta in particular, with the result that the butter made in the prairie provinces has the highest position in the British market of any butter that goes from Canada, excelling even the product of the famous Eastern Townships. It is not because they are better dairymen, but they have adopted the right principle of grading and of paying for milk and cream on a basis of quality, and it is only by paying on a basis of quality under a system of grading that you can possibly get quality in the output of butter. In the older provinces they sell nearly all their make at home, consequently they do not have to go on a foreign market and compete with the world. Their make of butter is suitable to the people in Ontario and Quebec, particularly the salting of it, and as I say, although a small quantity is exported the bulk of it is used in the home market. On the other hand, in the West we had to compete in an outside market and gratify the tastes of those who bought our butter on that market, with the result that our make rapidly assumed the quality demanded. The amount of butter exported from the East is so small that there is not the urge for a system of grading that there has been in the West. At the last conference we had, both Quebec and Ontario—they have already started it in the Maritime provinces—indicated their intention of embarking upon a provincial policy of the grading of cream and butter. Primarily, therefore, the quality of these goods is dependent on the provincial activities, supplemented by such educational services as we can render.

Mr. ROSS (Simcoe): Are we to admit that the report I have just read regarding butter over there is true?

Mr. MOTHERWELL: Yes.

Mr. ROSS (Simcoe): Has the minister any comment to make on that or any suggestions as to how we can overcome it We cannot afford to lose that market for our butter.

Mr. MOTHERWELL: I am sorry to have to admit it is true, but it is only by knowing the truth that we can remedy the difficulty, and that is what we are endeavouring to do. I believe we will have to introduce gradually a system of dual factories that will make butter in the winter and cheese in the summer and have a sufficient volume of business to take care of the cream and the milk in proper, up to date fashion by pasteurization. During the last two or three years an act was passed in Toronto providing for the consolidation of any cheese factories that wanted to get together in this way, and I recall that the Hon. Manning Doherty, who was responsible for the act, imitated almost exactly the system that is in effect in Saskatchewan, although he provided for the advance of a larger amount of capital to the consolidated creamery. I think that one or two of these institutions are being organized, although I do not know of any that have actually been organized as yet. Only by doing that can we hope to compete with Australia.

Mr. ROSS (Simcoe): Is it compulsory that our export butter be graded and stamped as to grade before it is exported?

Mr. MOTHERWELL: Yes.

Mr. ROSS (Simcoe): By federal regulation?

Mr. MOTHERWELL: Yes.

Mr. MEIGHEN: What was Mr. Wilson doing when the minister secured his appointment to this travelling task of making markets for our butter?

Mr. MOTHERWELL: I thought I had covered that fairly well in answer to the hon. member for York-Sunbury (Mr. Hanson).

We are constantly having reports as to his activities.

Mr. MEIGHEN: The minister finds fault with me for not reading the papers, but he does not listen to me when I ask a question. I asked what he was doing when the minister appointed him.

Mr. MOTHERWELL: My hon. friend knows that I have not the very best of hearing. I have one ear that is no good.

Mr. MEIGHEN: I am sorry; I did not know that.

Mr. MOTHERWELL: But I often hear more of what the right hon. gentleman says than is good for me or good for anyone else. At the same time, I do not hear everything he says. What was he doing before he went overseas? He went over to Australia with Mr. Ruddick to find out what he had to compete against when he went to the Old Country. Then before that he was general superintendent and manager of the Co-operative Creameries in Regina.

Mr. MEIGHEN: I will try again; this is the third time now; and I will speak loudly enough this time.

Mr. MOTHERWELL: Thank you.

Mr. MEIGHEN: The minister evidently has never heard me aright, otherwise he would not have the erroneous opinions he has now.

Mr. MOTHERWELL: Oh, I heard all about the embargo proposition.

Mr. MEIGHEN: We will put an embargo on the minister's humbug and try to get down to facts. What was Wilson doing when the minister secured his appointment to this new task in the employ of the Dominion government?

Mr. MOTHERWELL: He had just got back from New Zealand when the position was established. My hon. friend knows the rigmarole that you have to go through to get an appointment made. First, you have to establish the position, then you have to go to the Civil Service Commission to classify it, then you have to get it confirmed by the cabinet, then after a while you advertise it. I do not know what he was doing during the four or five weeks that it took to make the necessary arrangements. I do not know what he was doing then; I presume he was waiting to see what the result would be. He was on his way back from New Zealand, and arrived in time to apply for the position, and I may say that he got the appointment in competition with seventy-five others.

Mr. MEIGHEN: The minister's influence was important then, but I think after his whole record is known to the commission, they will not pay so much attention to his recommendations again. I did not ask what he was doing while the minister was getting the office created. I asked what he was doing before. So that the minister cannot possibly misunderstand me, I will put it this way: Was he not manager of what was known as the Co-operative Creameries in Saskatchewan?

Mr. MOTHERWELL: My hon. friend's hearing must be worse than mine, for I have said that two or three times already. I said that he went to New Zealand before he got this appointment, and that previous to that he was manager or superintendent of the Saskatchewan Co-operative Creameries.

Mr. MEIGHEN: What kind of success did he make of that?

Mr. MOTHERWELL: As long as I was there he made a good success of it; I do not know about afterwards. There has been an investigation recently in the Saskatchewan legislature, through the Agricultural committee, in Mr. Wilson's absence and without anyone there to represent him, and it was claimed there that he did not make a good success of it. I cannot speak as to that. I know he defended himself by sending a letter to the Agricultural committee, but for reasons I do not know the letter was not made public.

Mr. MEIGHEN: Was the company in a successful position when he left it? It was a public company.

Mr. MOTHERWELL: No, I do not think it was, according to my information, but there is nothing in the report of the Agricultural committee to indicate that he was in any way responsible for that. I do not know whether my right hon. friend saw the report of that committee. There was evidence given by a number of witnesses throwing some blame on Mr. Wilson for a lack of business management. I have not the report of the committee here, but at the rate we are passing these items I think I shall be able to have it for the next sitting. I can say that in the report of that committee sitting in Regina there is absolutely no reference to any dereliction of duty on the part of Mr. Wilson, and that report is all I have to go by.

Mr. MEIGHEN: He was manager when the thing was wrecked. Was the wreck caused by the absence from the province of the minister or the presence there of Mr. Wilson?

Mr. MOTHERWELL: All I can go by is the report of the Agricultural committee. The committee took the ground that the Saskatchewan Co-operative Creameries, like a great many other institutions, was found unprepared for the tremendous deflation that took place in 1920 after the war. They had a certain amount of butter on hand that went down seriously in value, and on which they sustained a considerable loss. They had a number of co-operative cold storage plants that were running full blast during the war, and the first of which got the subsidy that was given by the government of that day; that was given to only one cold storage plant, the one at Saskatoon. However, they went on building because of the tremendous demand for cold storage space, and then when the war was over the demand suddenly ceased, and these institutions ceased to be profitable. It was only one of the hundreds of thousands of institutions and firms that were caught in exactly a similar position. I have that report here now. It is headed "Committee of legislature makes report." It is too long to read, but if my hon. friend would like to see the report of this committee—

Mr. MEIGHEN: They would all be Liberals.

Mr. MOTHERWELL: Oh no. There are one or two Tories out there yet.

Mr. MEIGHEN: I only hope that he makes some better success of what he is at than of what he undertook in the past, for he could not possibly make a worse success. If there are any more wrecks the minister may get them positions in his department.

Mr. MOTHERWELL: I cannot be responsible for what happened after I left. I accept the report of this committee, on which were Conservatives, Progressives and Liberals.

Mr. MILLAR: I would like to say a word on this. I do not mind the scrap which is taking place between the leader of the opposition and the Minister of Agriculture; they can fight that out, but knowing Mr. Wilson I feel it my duty to make some remarks in view of the reflections that have been cast upon him to-night. I know something of his work during the last ten or fifteen years in connection with the Saskatchewan government, and I think it is the general opinion in Saskatchewan that he is a very capable official. I might point out that even though the Co-operative Creameries is in financial difficulties at the present time, and if Mr. Wilson was formerly manager of that company, there are many other business concerns in financial difficulties at the present time, and this is no indication that they were not properly managed. When a capable official, than whom I think the minister could not get a better, is in the employ of this government and doing excellent service, which I believe he is, I cannot sit here and hear reflections cast upon him without raising my voice in protest.

[Mr. Meighen.]

Mr. MEIGHEN: I am not at all surprised, if he is a political friend of the minister's that he would be of the member for Qu'Appelle too.

Mr. MOTHERWELL: Here is the report of the Agricultural committee, and probably this will be better evidence that my hon. friend's yarn about my being Mr. Wilson's cousin.

Mr. MEIGHEN: I would rather have the evidence than the report.

Mr. MOTHERWELL: Evidence that was given in the absence of the man charged and when he had no counsel there representing him! Surely my hon. friend as a lawyer has a better sporting instinct than that.

Mr. MEIGHEN: They gave a verdict in his absence.

Mr. CAMPBELL: It seems to me that this butter question is well worthy of a little more consideration. Somebody has said that this is very important to the farmers of Ontario, but it is equally important to the farmers of the prairie provinces. We are almost as much interested in butter in Saskatchewan as we are in wheat. In 1921 we produced about 7,000,000 pounds of creamery butter in Saskatchewan, and last year nearly 11,000,000 pounds. The output is increasing by leaps and bounds, and what is bothering us to-day is, where is the future market coming from? While the average wholesale price of creamery butter in 1920 was 56 cents, last year it averaged only 34 cents. The extra production and the contraction of our market is being reflected in the price, and it seems to me there is something we can do here. I think the minister could explore this question a little further. I am not quite sure that I know how it should be gone about, but I believe there should be some very rigid export grading system. If the producers in Ontario and Quebec object to the cream grading system that we have in Saskatchewan and Manitoba, the diffi-

culty might be overcome by imposing rigid export regulations. I am not sure exactly what we have in Canada to-day, but evidently our regulations are not as rigid as those of Australia and New Zealand. I have an article here which was written by Cora Hind, who was sent to England to study the butter situation in 1922, and in part this is what she said about the butter market:

> These Liverpool merchants had nothing very cheerful to say about Canadian butter. They paid too high last year and also state they had great difficulty in disposing of the butter. The texture was good, the packing excellent, but it was reported to have a "back flavour" which was unsatisfactory and made it very difficult to move. Wall and Company had handled some thousands of boxes and their butter expert told me they had lost heavily; he stated that Canada should endeavour, as closely as possible, to approximate the flavour of New Zealand butter, and this advice was also endorsed by Mr. Perry.

I have also a clipping from the market report of James Gillanders, of London, which says:

> There have been one or two lots of Canadian butter arrived on the market recently, and the quality generally has proved very satisfactory. The system of grading has no doubt a lot to do with this, and although the prejudice on Canadian butter owing to trouble in previous years prevents buyers speculating on this class of butter, yet on inspection they are willing to pay comparatively good values.

The clipping gives some prices for Canadian, which are considerably below the New Zealand figures. I have another quotation from the Grocer, of London which says:

> The present season has witnessed an unusually heavy import of Canadian butter. In a general way the butter from the provinces of Manitoba, Saskatchewan and Alberta proved superior to the article produced in the eastern provinces, and commanded a higher price. This goes to show the value of united effort as exemplified by co-operation between the creameries and the provincial governments of Manitoba, Saskatchewan and Alberta, and these provinces have very efficient systems of government grading. Canadian cheese maintains its high position on this market, and it appears to be the aim and object of the Canadians to place their bacon and butter on the same plane.

Now, Sir, this extract from the London paper is perhaps well worthy of consideration. At the present time we are told that our customers overseas are not able to buy our products. I find on reference to the trade and navigation returns of the United Kingdom for the year ending 1923 that the imports of Canadian butter—shown in hundredweights of 112 pounds—for that year amounted to 39,834, whereas for the previous year the figures were 154,532, a very serious drop. In the face of this Denmark shows a pretty heavy increase. There is also a considerable increase from the Netherlands, from the Argentine and a very heavy increase from New Zealand. It seems to me, therefore, that something should be done to cope with this situation. I notice that New Zealand recently passed regulations under which no butter can be exported without a license. That is the exporter must have a license, and in order to secure that license and to retain it after it has been secured there are regulations with which the butter man must comply. I think we shall have to establish something along that line if we are to maintain the standard of our butter on the British market. The total imports of butter into the United Kingdom for the last three years show a steady increase. In spite of that we are losing this market for our butter year by year, our export in pounds for 1922 amounting to about 17,000,000 whereas last year it only amounted to 4,000,000. Perhaps the minister could tell us something about the regulations that are in force at the present time, and if it would not be possible to establish some export regulations that would not interfere with the butter sold locally in the provinces of Ontario and Quebec.

Mr. MOTHERWELL: My hon. friend has touched upon a point of considerable interest. That is the ready disposition of New Zealanders and Australians to not only impose severe regulations but to comply with them in order to put New Zealand and Australia on the map in the matter of butter and dairy products generally. The reports of both Mr. Wilson and Mr. Ruddick indicate that Australian and New Zealand dairymen are ready to submit to anything in reason that the government imposes upon them if it is going to help them to make a better product. My hon. friend is quite right. The butter men of those countries have to have licensed stamped grades and to comply with the strictest regulations. They do so because they know it helps them to put their butter on the market in better shape. In Australia they have the handicap that we have except in this respect, that they have a number of state governments but they have not a federal government overseeing them. In some respects it is an advantage because there is no overlapping, there is a continuous regulation by the respective governments. New Zealand, not having the federal system and having only one government can control the situation and enforce the regulations better than can be done in both Australia and Canada. Now, in this country—we have noticed it only this afternoon during the discussion—people feel as irksome the restrictions that are imposed upon them in connection with the different activities we are discussing. If we imposed upon Canadians the kind of restrictions they

have in Australia and New Zealand the people here simply would not stand for it, and particularly from the federal government that has no jurisdiction in the matter. Without eulogizing the western provinces too much, let me point out that it was because those provinces took up grading, just as my hon. friend suggests—in conjunction with the federal grades and in co-operation with them—took it up so well that they are able to hold their own and to beat all Canada in the British market. If all the export butter of Canada were as good as the western butter we would not have to make the humiliating confession referred to in the publication which has been quoted from. There are no two men that have done more to bring about that happy situation as far as the West is concerned than the dairy commissioners of Alberta and Saskatchewan. In the older provinces everybody knows how hard it is to introduce anything new. Out in the West we were using grading in connection with everything which was grown in the earlier years. Everything was sold on grade practically. Therefore we took naturally to grading dairy products but down here it comes very hard, and the people yield to it very slowly. It means that they have to unlearn the past and that is a harder thing to do than starting anew. Notwithstanding that, in Ontario and Quebec they have already started grading. In Nova Scotia they have a home market in the Maritime provinces for every pound of butter they produce; they are not so much concerned about grading because the market is right there, they do not have to export to other countries and compete with other producers there. In Ontario and Quebec they have an average but not sufficient to stimulate them into realizing that they are getting behind. Yet at the last conference which was held in this city, only three months ago both the representatives of these provinces gave assurances that they were prepared now to start out on a grading system in the case of both cream and milk. I should like my hon. friend from Mackenzie (Mr. Campbell) to tell me how we can go at this matter and with better results. I am a stranger down here to most of the workers in the dairy industry and for a western man to be too chesty is something I suppose they would not submit to very kndly. But I will say this, and the eastern dairymen admit it, that the western make of butter surpasses that of the east and brings from five to six shillings a hundredweight more on the market. Mr. Stonehouse, who is president of the National Dairy Council, admits that they know that down here. Now that is not because the western dairymen are better dairymen but simply because they have done what my hon. friend from Mackenzie and other hon. gentlemen have been advocating. They did it many years ago. They adopted the grading system. They bought their raw material on the basis of equality and sold their product on the same basis and until they do the same down here they will not get the same results. As long as prices are pooled and the sour cream brings as much as the sweet you are not going to get very much of an improvement. If my hon. friend has any suggestions to make I shall be very glad to give them my best consideration, because there is a tremendous problem right there.

Mr. CAMPBELL: I quite agree with the minister that a problem exists but it is not an insurmountable one. I think there should be no division of authority between the provinces and the Dominion government in regard to exports. If I understand it, the Dominion government can control the matter of export. I will say nothing about the sale of butter within the province. Surely the Dominion government is able to pass export regulations that will force the butter for export up to a certain standard that will be at least equal to that of New Zealand. As a Canadian I am not ready to admit that the New Zealanders can do anything we cannot do. I know it is usually said New Zealand has a perpetual summer. Their cattle graze in the open all year, and they have a great many advantages we have not.

Mr. MOTHERWELL: Does the hon. member suggest we should refuse the export of butter unless it is of a certain grade?

Mr. CAMPBELL: That is my suggestion. That is the system in vogue in New Zealand to-day, and I see no reason why it cannot be put into effect here, because it is very important. It means almost the salvation of the prairie provinces at the present time. Every hon. member who is familiar with the West knows very well that for the last two or three years the farmers of the prairies have been producing wheat at a loss. The only thing that has kept the farmers going, particularly in the northern part of the prairie provinces, is the dairying, and if we are going to lose the little market that we have, I see nothing but ruin facing us. The market is there. We have a market in the old country, and it is only a matter of developing it; but we must keep up to the standard in order to get that market. Of course there are other factors entering into it. There is the matter of freight rates and

transportation, but that is a different question, and we can discuss it at another time. I believe that at the present time some regulations could be put into effect that would standardize our butter up to the same grade at which the New Zealand butter is standardized at the present time. I quite agree with the minister that people object to these regulations. They always do. They object to any laws. If you have the Ontario Temperance Act in force a great many people object to it. If we were to repeal that act and establish liquor stores, many people would consider it a hardship on them. Whatever laws may be in effect, some people will always object. When the cream grading regulations went into effect in Saskatchewan, almost every farmer who patronized the creameries made very bitter objections to them and if I had desired to make a little political capital against the Saskatchewan government, I had ample opportunity for so doing.

Mr. MOTHERWELL: You would not do that.

Mr. CAMPBELL: But I was firmly behind that policy, and I think any fair-minded public man would be behind it. To-day I am glad to say that the farmers of Saskatchewan have largely got over that, and they are coming to a point where they are appreciating those regulations. But if the government had viewed this thing from an entirely political standpoint at the first, these regulations would never be in effect to-day. I think it is incumbent on the government to take a very firm stand. Never mind the objections. We have to face objections. It means the salvation of the dairy industry and of the country. I am not prepared to see New Zealand take the whole market of the United Kingdom from us without making a fight for it. I think we have just as good farmers, just as shrewd businessmen and as able legislators in this country as they have in New Zealand, and we have in the western provinces, particularly in the northern part of the country, land that is very suitable for mixed farming and for dairying. We have splendid grass, abundance of water also very rich land, and can produce unlimited quantities of dairy produce, if we have the opportunity, but we must have the market. The figures for the last two years are not only dissappointing but very alarming.

Mr. MOTHERWELL: I want to congratulate my hon. friend for his criticism. I do not know whether he read Mr. Ruddick's report after his trip or not. That gentleman emphatically stated that until the dairymen of Canada were prepared to submit to a great many more regulations than were now in force they could never hope to compete with New Zealand. We discussed the question of forbidding the export of anything lower than No. 1. That would be more arbitrary than any regulations that have been passed in this House during the last two years. Let us see how that would work out. There is a market in Great Britain for any kind of edible butter, and quite frequently No. 2 comes within a shaving of No. 1 because of the peculiar position of the market. Then take it the other way. Suppose my hon. friend—as I have no doubt is the case—is growing grain; he knows that we grow various grades of grain. Suppose the laws of Canada prohibited us from exporting to the United Kingdom, or to any other market, any grain lower than No. 3, and that all the commercial grades, Nos. 4, 5, and 6, were banned from export. There is frequently a bigger demand for these grades than for the others, not in the British market, but in the European markets, because the discoloration due to frost or other causes is not so objectionable in those markets. But apart from that, consider the effect it would have upon such a regulation. The very fact that there is a market for any kind of edible wheat is evidence that the government should not prohibit its export. Some people say that as soon as we create for our butter a reputation in British and European markets such as we have for our wheat, we can afford to ship our third and fourth grade butter just as we ship our lower grades of wheat. There is therefore a big principle involved in the question as to whether we should prohibit the exportation of No. 2 butter. I think I see myself coming down to this House with a proposition of that kind! Yet I must confess to my hon. friend that I have thought seriously about it. But, the public being so fed up with restrictions, I am not just prepared yet to enunciate such a proposition. I have to thank my hon. friend, because I know now I have one supporter for that proposition; but I really do not think the public are ready for it. I think the people would rebel. They will have to be seized more than ever of the fact that they must have marketable quality, or else they are off the British market with their fourth or fifth grade, as far as the butter is concerned.

Mr. CAMPBELL: Possibly I was wrong in saying that we should prohibit the export, but we might make stringent regulations for the different grades, and compel the exporter by law to live up to these grades. Possibly

we could even prevent the use of the word "Canada" on the lower grades of butter. Surely something could be done along that line.

Mr. MOTHERWELL: My hon. friend is on the right track but you cannot compel a man to live up to a grade. All you can do is to grade the butter.

Mr. CAMPBELL: You could refuse to give an export license.

Mr. MOTHERWELL: You could refuse to grade anything below No. 1.

Mr. CAMPBELL: Is that not possible?

Mr. MOTHERWELL: It is possible.

Mr. CAMPBELL: Or you could refuse to permit the use of the word "Canada". Let us have a high standard, and let it be understood that wherever the name "Canada" is used the article is of a high grade. It seems to me that we could build up a trade by doing something in that line.

Mr. WARNER: I have hesitated to speak at this time, as I felt that this was not the item under which to discuss marketing but now that the discussion has drifted into that channel I would like to say a few words. I feel that the hon. member for Mackenzie (Mr. Campbell) has struck a chord that we should consider. We do know that Canadian butter is not taking the place it should in the Old Country and we know we are not competing successfully with the grade Canadian with New Zealand but it is not because we cannot do it.

Mr. MOTHERWELL: Hear, hear.

Mr. WARNER: We can do it. We have done it in the West. In Alberta we have endeavoured to place on the market in the Old Country an article known as Alberta butter, rather than Canadian butter. I am in accord with the statements of the hon. member for Mackenzie regarding the grading. It is not a fair proposition for the Alberta butter to take the name of Canadian butter. I do not speak for Saskatchewan and Manitoba. Perhaps they have as good grades there, although I do not know. I do know however that a considerable quantity of Alberta butter has been sold in the Old Country as such and it is considered better than what is known as Canadian butter. I know too that it has competed successfully with New Zealand butter. There are no doubt a number of difficulties in the way but we have overcome many of them. I think it is quite unfair to us that butter made in the older provinces should go over to the Old Country under the label of Alberta butter. We have tried to establish a grade of butter over No. 1 and we have partly succeeded. I think the Dominion authorities should see to it that no butter goes over to the Old Country that is not properly graded. If the people in England want to buy either No. 1, No. 2 or No. 3 butter we can of course have no objection; but I suggest that we should have a grade as high as the best butter that we make in Canada, which is superior to what is called Canadian butter in the Old Country at the present time. We in Alberta have made a quality of butter superior to "Canadian butter"; and while I do not know all the facts, I can say, speaking generally, that butter made in New Zealand has not found as much favour either in the United States or in Canada as that butter we produce. The New Zealand butter is so slightly salted that it must be used quickly or it becomes rancid. I do not know whether we are going to be able to dispose of our butter profitably in the Old Country by means of Dominion grading, but we are successfully competing on the coast with New Zealand butter. There are only, comparatively speaking a few people who demand the very slightly salted butter, and there is no doubt in my mind that we could develop a very good market for our Alberta butter. I would advise the minister to spend a little money and devote some attention towards establishing and advertising a better grade than the present Canadian butter that is recognized in the Old Country. If the people in a part of the Dominion are making a quality of butter that is better than "Canadian butter," I think their interests should be protected and they should be put in a position to have that quality recognized through the means of a distinctive grading. In my opinion the government should see to it that these people are protected. Perhaps it is not worth while going into detail as to the way in which this butter is made, but there are firms making it out in the West, and the people in the Old Country want that butter and are willing to take it along with the New Zealand butter and to pay as much for it. I am interested in the dairy business and I know that we have been shipping to the Old Country a high quality product which we have not experienced any difficulty in disposing of. But the brand known as Canadian butter makes it difficult for us to sell our superior quality, so that we have to hunt up customers for our product. The government, in my opinion, should undoubtedly do something in this matter so that good butter such as we produce shall not, by reason of a mis-

understanding on the part of consumers abroad, be placed on a level with a lower grade. Rather, I think that the people throughout the country should be induced to make better butter to come up to the standard of the product produced in the West.

Mr. BROWN: We have been talking a good deal about the place where they make good butter and I would suggest to the committee again a line of action that would encourage a greater production of this commodity where it is now being made. When we were discussing the experimental farms I referred to the supply of dairy cattle for the province of Manitoba. I have here a letter which I received from a stock raiser in Quebec, and I might briefly refer to the circumstances under which I came to get into communication with this gentleman. A number of farmers in my own district were anxious to get a carload of heifers for certain purposes they had in view and they instructed me to get in contact with the breeders in Quebec to see at what prices they could procure such animals as they wanted, namely, heifers of from one to two years old. The letter I have here throws a little light on the statement that has been made, that there is an abundant supply of dairy cattle in eastern Canada. This letter, two or three points in which are very significant, is as follows:

Canadian Ayrshire Breeders' Association,
Ayers Cliff, Quebec,
April 2, 1924.

Mr. J. L. Brown, M.P.,
Ottawa.
Dear Sir,

Beg to acknowledge receipt of your favour of the 31st ult. in reference to securing a carload of Ayrshire heifers for shipment to Manitoba.

In reply beg to state that any surplus supply of Ayrshire females is very limited not only in this district but all over this province. American buyers have been coming in here frequently during the past year and buying at prices that prove tempting to our breeders. This applies more to mature stock. As to "in calf" two-year old heifers, the supply will not meet the demand from the government for these heifers to form the heifer clubs being formed throughout this province and the Maritime provinces. We recently had a buyer from Truro, N.S., offering from $150 to even $200 for good two-year old heifers well along in calf for these heifer clubs, but he was unable to secure a carload either in this district or eastern Ontario, so did not buy.

It is our intention, just as soon as roads are suitable to travel, to endeavour to purchase for ourselves about 25 or 30 head of Ayrshire heifers of good dairy type between the ages of one and two years, breed them at about the age of 2 years and be prepared to meet this demand for "in calf" heifers a year from now. We anticipate having to pay fairly good prices for suitable stock but we feel assured that we can sell them at a fair profit over and above their keep next year.

With this in view, we believe that we could supply you a carload of select heifers between the ages of one year and two years of age, of good dairy type, well developed and suitable for the purpose you mention for an average of about $100 each loaded on car, all of course to be tested for T.B. by a federal veterinary. It is possible that the average price might be slightly less, but we doubt if very much less owing to the excessive demand at the present time for good breeding stock.

If you desire we can inform you a little more definitely as to this about the latter part of this month.

Respectfully yours,

The foregoing letter clearly disposes of the contention that there is a supply in the East of the kind of cattle which the people in the West require, and it is an additional argument why we should have access to that source of supply which I brought to the attention of the committee a few nights ago, the state of Wisconsin. If I were making a speech on the desirability of closer trade relations with the United States I might very properly point out that it would be to the advantage of every one if the Americans in the New England states were permitted to do freely what this writer says that they are actually doing now, namely, coming in and buying stock, and if we on the other hand had access to the source of supply that is nearest to us. I would impress this matter upon the minister and the government as well as upon the gentlemen who compose the official opposition.

Mr. MOTHERWELL: No hope.

Mr. BROWN: I will not say it is hopeless; perhaps the minister is more pessimistic than I am. I should like to impress upon the official opposition that this is a demand from the West. The dairy industry is of importance and increasing importance, and the people there are very anxious to get, not a few years after this, but immediately, a big supply of dairy cows. I have testimony here that these are not to be secured in eastern Canada at prices that will enable us to purchase them, and other evidence can be furnished. I know it is true that a government official was sent into the state of Wisconsin to make inquiries regarding dairy cattle. It is possible to find the things you want to find if you want to find them, and it is possible not to find them if you go with the intention, in the first place, of keeping your eyes shut. How far that was the case I am not prepared to say, but I call these facts to the attention of the committee. It is a matter of immediate and urgent necessity that the farmers of Manitoba should have a supply of dairy cattle.

Mr. SPENCE: My hon. friend stated that the Americans were buying cattle in Quebec and taking them to the New England states.

Mr. BROWN: That is the statement in this letter.

Mr. SPENCE: Are they taking them into the United States free of duty, as you want to bring them in free of duty?

Mr. BROWN: I am not concerned about that point.

Mr. SPENCE: We are.

Mr. BROWN: If I want to buy good stock, I want to buy it. I do not propose to act, according to common parlance, to cut off my nose to spite my face. If the Americans see fit to put up a Fordney tariff against their own people, against purchasing these cattle in Quebec, that is their business. We want to buy these cattle, and there is no reason why we should act in the spirit that I have mentioned by refusing to avail ourselves of a source of supply.

Mr. WARNER: When I was speaking before, I omitted saying something that I feel I would like to say. In regard to the New Zealand government being able to control the grade of their butter much more easily, I will admit what the minister has said, that the New Zealand butter is all handled under one government, while ours is made and handled under provincial laws. I pointed out that I thought the Dominion government could help out by requiring a certain grade for export butter. I realize that it is easier for New Zealand than for Canada to get the regular grade, but I think the Dominion government can, and I would like to see them take the position that they would, control the grade of export butter. That is important. That is one way in which we could equal the New Zealand government regulations. If the Dominion government can have control over the butter which is going out, the question of what is used at home will not be quite so serious. I want to point out further that what is needed in the Old Country is not the same quality that is needed in most parts of this country, neither is it the same quality as is needed in the United States. We have to make a butter that meets that market in order to get the market at all. Therefore, it would be well for the government to have regulations that would require a certain butter going to the Old Country and to see that only those grades went there, in order to hold the Canadian butter as high as possible in that market.

Mr. CALDWELL: I have a request to make of the minister. My deskmate, "the man from Glengarry" (Mr. Kennedy), I know, wants to make some remarks on this subject. I would ask the minister if he would let this item stand over for further discussion. I do not want to curtail the discussion at the present time, and that is why I did not speak sooner.

Mr. MOTHERWELL: The hon. member for Glengarry and Stormont wants to discuss this question. He had some conversation regarding some of these points, especially with respect to grading, and I may say that I shall be pleased to accede to the request.

Mr. WARNER: Has the minister any idea whether it would be possible to carry out the request as regards the Dominion government having a fixed grade?

Mr. MOTHERWELL: We have a fixed grade. That is not the trouble. It is the butter that is wrong, not the grade. The butter has to be improved. The grade, I think, is all right.

Replying to the hon. member for Lisgar (Mr. Brown) with respect to the Wisconsin cattle, I expressed my personal views regarding the matter, but I pointed out that duties on cattle or anything else had not the habit of falling off between sessions of this parliament, and they do not fall off any too easily when the House is in session. We shall have, however, to leave that matter until a little later on. Further, I did not figure the Ontario or Quebec cattle as an alternative to the Wisconsin cattle when I was speaking about them before. I was speaking about the young stock purchased by western farmers, especially at the large stock markets at Moose Jaw, Calgary, Prince Albert, young dairy-type heifers, to be bred up suitably and along the lines that most authorities consider to be the best way for a poor man to start. My hon. friend shakes his head. I gave my authorities. He may be right for immediate results this summer, but we cannot be living so much in the immediate present and disregarding entirely the future. Manitoba is in the humour of going into dairying, and I should like to be able to let her buy wherever she likes. At the same time, I recognize that there is another side to the question. I do not want to put up the protectionist side, but I am not going to say that there is not something to be said in connection with that side. Some day we shall be negotiating with the United States on the question of reciprocity as regards cattle and other domestic animals. If one of my hon. friends opposite was arguing the matter, they would tell us not to give away our case in advance.

Mr. HOEY: Why not negotiate now with respect to cattle?

Mr. MOTHERWELL: I thank my hon. friend for drawing that to my attention. I

may say that we did. On the occasion last fall when the matter was up, I took it up with the Acting Minister of Finance (Mr. Robb), not in council but personally, and he immediately communicated with Washington on the question of reciprocal arrangements in connection with this class of cattle, and, I think, of sheep as well. I have not had an opportunity of discussing the matter with him lately, but prior to a few weeks ago he had not had an acknowledgement of his communication. My hon. friend knows pretty well what shape congress is in at the present time. They are not very free to to do what they like. There is what is called a farm bloc there, and both sides are apparently wanting to please that bloc with the idea of avoiding a third presidential candidate. They do not propose to antagonize them by doing anything in connection with letting dairy cattle enter Canada free. I may say that I do not look for very much in the near future, although the Acting Minister of Finance communicated with them in the hope that possibly there might be some change of heart.

Mr. WARNER: I have not quite finished yet. I should like to point out to the minister that the people who are making the best grade of butter in this country are getting tired of having their butter pulled down to the lower grade, instead of something being done to make the other fellow come up to the higher grade. That is the condition now, and we would like to see some arrangement made which will pull the other fellow up instead of his pulling us down. We are trying to get away from that by turning out a grade above that of the Canadian butter, but I believe that the Canadian grade should stand for the very highest quality.

Mr. MOTHERWELL: One way of doing that would be to prohibit the export of the low grade butter. In addition to the government grade that is put on at the various centres in Canada, any province is permitted to put on its own private mark, and that applies to almost any product that the farmer exports. My hon. friend has intimated that the Alberta brand is put on the butter exported from that province in addition to the regular federal brand. There is nothing to prevent that, therefore he is getting the benefit of the reputation that has been built up through that system. As yet the Alberta brand is better known than the federal brand. The provinces have built up a reputation by their own private brands in the past, and it is only in recent months that there has been a recognition of the value of the federal brand. It will be a year or two before it is fully accepted the same as our wheat grades are, and in the meantime any province may put on its own private brand and get the benefit of the reputation it has built up in the past.

Mr. JOHNSTON: If that is so; if the provinces can brand their own butter, thus building up a reputation for grade better than that carrying the Canadian brand, why not provide for grades one, two and three and let it sell on its merits?

Mr. MOTHERWELL: We do.

Mr. WARNER: I am not quite satisfied yet. I do not like to feel that a province must do something that the Dominion is not doing in order to get a good market for its butter. That is what we are doing; we are forced to take a place over that of the Canadian butter, and I do not believe that is right. I believe that "Canadian" ought to stand for the very best, if it is possible to get it; if not, then, as the hon. member (Mr. Johnston) suggests, we should provide for grades one, two and three. But let us make the grade high enough to correspond with the best butter made in Canada. Let the other fellow take the smaller price if he wants to, but let him not come under our wing, sell with us and oblige us to take a lower price in order that he may dispose of his butter in the same market.

Mr. CAMPBELL: If I understood the minister rightly, he is afraid there will be some objections in the eastern provinces to these export regulations. I have gone over the trade figures and I am convinced that practically no butter is exported from Ontario and Quebec. If that is so, even admitting that there would be objections in the eastern provinces—which I am not ready to accept —then very little Ontario or Quebec butter would come under those regulations. I assure the minister that it means almost the existence of the agricultural industry in the prairie provinces to-day, because with the present price of wheat it is almost impossible for the farmers to continue unless there is a market for their butter in the United Kingdom. In spite of the economic conditions there, the figures show that the purchase of butter in that market is expanding year by year, and we are not even holding our own; we have almost entirely lost the market. We shipped a few cases of butter to New York last summer, but that is only a very small amount. It costs from the town of

Yorkton in the eastern part of Saskatchewan about $1,300 to ship a carload of butter to New York; you can see what it amounts to when you pay the duty as well. So it is much easier to deliver it in England than in New York. I am not entirely satisfied that this situation cannot be coped with in some way.

Mr. MacLEAN (Prince, P.E.I.): I fully agree with what the hon. member for Mackenzie (Mr. Campbell) has just said. I know from correspondence with Dr. Ruddick that no man has been working harder on this question of bringing up the grade of Canadian dairy products than he has. The difficulty is that you cannot legislate too far ahead of the ideas or the wishes of the people. However, I see a great deal in the contention of the hon. gentleman from Strathcona (Mr. Warner) who says that they are able to put on the market a better grade of butter than the Canadian butter in general. There is one fact that I think it would be well to bring out, and that is whether the Alberta butter really is a better article than what is known as the Canadian special. Our factories at present are all, I think, under registration. We have the inspection beginning at the factory; from each factory the registration number goes on the package, whether it is butter or cheese, and that identifies the product of that factory when it arrives in Montreal. What happens after it arrives there or what further grading takes place I am not in a position to say, but it does seem that if one province is able to put on the market a better article than the Canadian product as a whole, some consideration should be given to that province in order that they may receive the benefit of the better product they are putting up. I would like to ask the minister if a pasteurizing plant has been established in any of the factories for experimental purposes for this year, and if so where the plant is situated?

Mr. LEADER: I understood the minister to say that the government had approached the officials at Washington in regard to reciprocity in dairy cattle. If that is the case I would like to point out that while the dairy industry is very important, and the live stock industry in general is very important also, that phase of it which deals with beef cattle should be taken into consideration as well. When the government approach Washington in regard to reciprocity in cattle, let them not forget the beef cattle industry of the West and let them have the duty removed from feed cattle and fat cattle entering the United States. One of the greatest blows the western farmer ever received was when the United States government put the high duty on our feed cattle entering that country, and if that barrier could be removed I believe that great prosperity would be brought to the cattle raisers of the West. I would urge upon the minister, therefore, that when the opportunity arises he give due consideration to the beef cattle interests of western Canada.

Mr. MOTHERWELL: With reference to the question asked by my hon. friend (Mr. MacLean, Prince) with regard to the establishment of an experimental plant for the pasteurization of cream or milk, I may say that one was established in this province by the Hon. Martin Burrell. At the time it was established I do not think they did any pasteurization of raw material, but down at Finch there is a dual factory where both butter and cheese are manufactured, and during the past two or three years we have added to it a pasteurization plant to deal with cream and milk in the manufacture of butter and cheese. I have to give my predecessor every credit for establishing this institution. I think it is exactly what is required, to demonstrate right before our eyes the advantages of an institution of that nature, sufficiently large to warrant getting first-class men and paying good salaries, and large enough also to install pasteurizing machinery. I think I may be pardoned for following that good example. It is my hope to establish a similar institution in some of the other provinces; I have not decided just where; if the provincial governments will give some monetary assistance to help that out, because the farmers themselves are not in a position to put in the necessary capital and consolidate these factories, I think we shall be making a good start to even up with Australia and New Zealand.

The hon. member for Portage la Prairie (Mr. Leader) has made some suggestions that he can elaborate a little on the live stock vote, if he wishes.

With regard to the suggestion of my hon. friend from Victoria and Carleton (Mr. Caldwell) that this item stand so that the hon. member for Glengarry and Stormont may have an opportunity of discussing it, and the suggestion of the Chairman that we let this vote go through, and further in regard to the appointment of Mr. Wilson or a representative in the Old County whose primary duty it will be to look after the dairy industry there, I can assure my hon. friend that the hon. member for Glengarry and Stormont will be given the opportunity for the fullest discussion of any matters he wishes to bring

up, even to the extent of my cousinship with Mr. Wilson; the discussion can be as wide as possible.

Mr. TOLMIE: In the matter of the importation of dairy cattle I would ask the minister if it would not be possible for him to give some clear cut figure, taking Manitoba as a centre, and showing us the cost of cattle in Ontario and Quebec, the cost of freight to Manitoba points, the cost of cattle in Wisconsin, freight and duty to the same points in Manitoba, and also what it would cost the farmers in actual dollars and cents to supply themselves in their own province.

Mr. MOTHERWELL: I shall be pleased to give that information.

Mr. ROSS (Simcoe): I do not rise for the purpose of opposing this vote or delaying the discussion, but as I shall be away for a few days and may not be here when this question comes up again, I should like to ask one or two questions of the minister for information. There is a subdivision of the Dairy branch engaged in cow testing, with six dairy promoters. What are their duties? Do they test the milk, and how is this work performed?

Mr. MOTHERWELL: I presume my hon. friend refers to the ordinary cow testing, not what we call the record of performance of pure-bred cattle.

Mr. ROSS: (Simcoe): Yes.

Mr. MOTHERWELL: That is being transferred from this vote to the live stock vote, but I will discuss it now. Some provinces are engaging in this work on the ground that they are nearer the base of operations and can do the work more cheaply than we can. It is only in such provinces as will not take this work up that we have been doing cow testing. It is done through a representative of ours who goes round and organizes a cow testing club, the members of which send in their samples of cream to the respective cheese factories or creameries. For instance, if my two hon. friends sitting in front of me were partrons of a cheese factory or creamery and belonged to one of these little clubs, they would send in their samples three times a month to the operator of the creamery. He would test them for butter fat and send the results back to them. A charge of ten cents per test is paid by the respective patrons to the operator of the creamery. That has been the procedure in those provinces where we are carrying on this work. There are three provinces doing this work themselves. Wherever this work is looked upon as important and we are received favourably, we do the work. In some provinces the work of cow testing is not done either by the provinces or by us.

Mr. CALDWELL: Is any testing being done in New Brunswick, and if so, at what points?

Mr. MOTHERWELL: In a number of provinces we have a sort of co-operative system, working with the provincial authorities. We do that in Manitoba and New Brunswick. The New Brunswick provincial authorities organize the clubs and we pay the cost of the tests to the creamery men.

Mr. CALDWELL: How many clubs are there in New Brunswick?

Mr. MOTHERWELL: I have not got that here.

Mr. ROSS (Simcoe): Is any work of this kind being done by the government in Simcoe county? A number of us there were interested in this cow testing and we had no opportunity of having it done, with the result that a few of us got together, bought our own outfit, and do our own testing of the milk for butter fat. I should like to know if anything is being done along this line in Ontario by either provincial or federal authorities, or have we to do it for ourselves?

Mr. MARTELL: Would the minister also give us the figures for Nova Scotia, which is sometimes said to be the province that was passed by, and we always feel that. I would like to know what the arrangement is in Nova Scotia.

Mr. MOTHERWELL: Nova Scotia is making very substantial progress not only along this line, but along the line of grading cream and milk, with the result that she is pulling up the quality of her goods proportionately. I will give the figures for some of the provinces. Saskatchewan has a system of her own, and is not included in this list:

Province.	Number of herds tested.	Total number of cows tested.	Total number of cows tested. 8 months or longer.	Total tests made.	Average number of tests per cow.	Percentage of total cows tested, 8 months or longer.
Ontario.. .. .	783	10,347	1,229	41,582	4	11.8
Nova Scotia..	360	2,520	860	13,497	5.3	34.1
New Brunswick.. .. .	137	1,061	256	4,879	4.6	24.1

Manitoba is a little less. Alberta is more. British Columbia is less still. Prince Edward Island is fairly large for the size of that province. There were 164 herds tested.

Mr. MARTELL: May I ask the minister if he has any bulletin or any statistics in the

department in regard to these tests, showing where the test took place, who owned the cattle, and so forth, which can be supplied to our farmers in Nova Scotia?

Mr. MOTHERWELL: We have no special bulletin.

Mr. MARTELL: But information can be secured?

Mr. MOTHERWELL: It is outlined in some of the reports.

Mr. MARTELL: Can it not be tabulated for particular counties and supplied in that form?

Mr. MOTHERWELL: I think so.

Mr. ROSS (Simcoe): I should like the minister to give us some information about the pre-cooling plant down at Waterville in Nova Scotia.

Mr. MARTELL: That is a very pertinent question.

Mr. ROSS (Simcoe): I would like the minister to give just an outline.

Mr. MOTHERWELL: I will give it in connection with the next vote for cold storage.

Mr. ROSS (Simcoe): It is under the heading of dairying I think. However, I am willing to wait. I wish to ask another question in connection with supplies that were sent down. I see there were 450 bales of shavings bought from Edwards and Company of Ottawa at 20 cents a bale, costing altogether $90, and the freight for shipping it from Ottawa amounted to $201.

Mr. MOTHERWELL: They got a pretty big shaving out of it.

Mr. ROSS (Simcoe): I wonder why the purchase was not made locally thus saving the expense of shipping from Ottawa at a cost of $201?

Sir HENRY DRAYTON: Yes, and that in a wood country.

Mr. MOTHERWELL: These articles are bought by tender. Consequently Edwards and Company notwithstanding the freight must have been able to underbid their competitors

Mr. LEADER: I should like an explanation as to the legal payments made in connection with the dairying industry. There seems to have been no less than thirty-two lawyers who have been paid fees in connection with this industry judging from the Auditor General's report for 1922-23. It is true the fees of these lawyers are very moderate, but it is their very moderation that excites my curiosity. I should like the minister to explain why it was necessary to hire this legal talent?

Mr. MOTHERWELL: There were a good many infractions of the law under the Dairy Industry Act. Since the new law was enacted last year there has been a considerable improvement in that respect but under the old law there were numerous violations. There is the question of the percentage of water for example. One of the arts of dairying is to assume that there must be more than 16 per cent of water. We have got to keep track of that. Then the oleo offenders used to infringe the law a little bit and we had to keep track of them. These lawyers had to be employed. I do not know the amount of charge that is indicated but we have tried to keep it as low as possible. The lawyers in question had to be hired on account of these prosecutions.

Mr. MARTELL: May I say to my hon. friends opposite that if qualified lawyers were employed there would not be half the expense. The trouble is we have too many so-called lawyers who have never been admitted to the bar.

Mr. SPENCE: What the minister says is an absolute fact. Notwithstanding what some hon. members to my left contend, it would be an impossibility to have a regulation calling for the export of only one grade of butter to the United Kingdom. Over there they buy butter on one, two and three grades, the same as other products; there is no reason why the British people should not be able to buy in Canada just what they want. May I also say to hon. gentlemen to my left that I am glad they are taking an interest in the development of the dairy industry in the western provinces. I am especially glad of that because it has been repeatedly stated that there is no prospect for any industry in the West except raising wheat. To-day my hon. friends admit that the dairy industry is well established there and that it is going to pay. Not only that, but western exporters are willing to compete with commodities from countries like Denmark, the Netherlands, and Australasia. I am happy to know that my hon. friends from the West are getting into another branch of industry, besides that of growing wheat, and I hope they will prosper and make a thorough success of it. Dairying is one of the best industries in the country, and I hope it succeeds in the West.

Mr. CAMPBELL: I am not aware that anyone in this section of the House ever suggested that the exports of butter to the Old Country should be confined to one grade. I understand the suggestion was that there should be a grading and export system regardless of the number of grades. Neither am I aware that any hon. member in this group ever suggested that we could do nothing else in the western provinces but raise wheat. As a matter of fact, we shall not be able to do anything else unless something is done for the dairy industry. At present there is practically no export market for our dairy products, and yet we have been expanding in this direction by leaps and bounds in the West. It is surely time that remedial measures were adopted.

Mr. SPENCE: If products of the right quality are exported to the British market they will realize a good price. Over there they will pay for quality no matter where the product comes from.

Mr. McQUARRIE: Could the minister inform me what the importations of dairy products from the United States were last year, allocating the amounts to the various provinces?

Mr. MOTHERWELL: I have not got that information here but the importations did not amount to very much. What my hon. friend desires is the amount of importations of butter from the United States to the nine provinces respectively. The amount is very small, but I have not got the exact figures. We shall be in committee again and I shall get the information for my hon. friend. We have been shipping quite a good deal of butter back there. Last year the amount was very considerable.

Mr. McQUARRIE: What amount of butter was shipped?

Mr. MOTHERWELL: I understand that 12,000,000 pounds—comprising milk, butter and butter fat—were shipped to the United States.

Mr. McQUARRIE: From which provinces?

Mr. MOTHERWELL: Chiefly from Ontario and Quebec. Manitoba also shipped a very substantial amount.

Mr. McQUARRIE: British Columbia and the other western provinces, import a good deal of butter from the United States, do they?

Mr. MOTHERWELL: Our information is that there is very little importation there. However, I will get that data for my hon. friend. British Columbia has been getting her butter in recent years principally from Alberta and some from Saskatchewan. I have no doubt there are times in the winter, say in January and February, when she gets some New Zealand butter, which even finds its way as far east as Montreal. There was not much this year, but some of it went right through to Montreal.

Mr. McQUARRIE: Will the minister inform the committee of the amount of exports to the United States from British Columbia?

Mr. MOTHERWELL: No we have not got that information. We have here the total exports from Canada to all countries of butter fat in its various forms, whether it is butter or cheese or cream or powdered milk, or whatever it is. It is a very elaborate statement of figures and I do not know that the committee would be interested in it at this time of night.

Mr. McQUARRIE: It does not matter what time of night it is; it seems to me we should have more information before the item passes.

Mr. MOTHERWELL: I could give my hon. friend the total exports. The export of butter fat in the various forms of cream, milk, butter, cheese, powdered, condensed and evaporated milk was 75,674,606 pounds; in round numbers nearly 76,000,000. The amount of cheese would be 116,202,900 pounds. The milk and cream are in separate figures. I think to make it intelligible the whole page would be required to be placed before my hon. friend. I might give the total. If there is any particular item he wants I could give it.

Mr. TOLMIE: I would like to get the number of pounds of fresh butter exported from Canada last year.

Mr. MOTHERWELL: The figures are 13,173,711 pounds.

Mr. TOLMIE: How many pounds went to France?

Mr. MOTHERWELL: We have not got that. That is the total export.

Mr. TOLMIE: I notice that in the states of Washington and Oregon they are building up quite an export trade with China and Japan, and are shipping condensed milk, powdered milk, cheese and butter. Is the

minister's department making any effort to get a share of this business?

Mr. MOTHERWELL: Yes, I understand that some of our products are going to Japan. A very considerable number of cattle are being shipped there.

Mr. TOLMIE: Does the minister know what the export of butter to Japan was last year?

Mr. MOTHERWELL: No.

Mr. WHITE: Can the minister say what the importation of butter was last year?

Mr. MOTHERWELL: It was very, very small. We have not got the record of it. We have no report at all of those shipments. It was largely consumed in the British market. The export of Alberta butter increased last year by nearly 3,000,000 pounds. The proximity of Alberta to British Columbia permits it to compete with New Zealand butter.

Mr. COOTE: For the information of the hon. member for Wentworth (Mr. Wilson), could the minister tell us what the production of butter in the prairie provinces was for the last year?

Mr. MOTHERWELL: Of creamery butter, Alberta produced 18,000,000 pounds, Saskatchewan 10,000,000 and Manitoba 10,000,000.

Mr. MARTELL: Can the minister tell us the position of the different creameries with regard to aid given to them? Are they all under the same equation as to aid given by the government?

Mr. MOTHERWELL: No. The only aid given has been to the experimental station at Finch. No assistance was given to the cheese or milk factories. That is a matter of provincial jurisdiction, excepting the experimental station at Finch.

Mr. MARTELL: What province is that in?

Mr. MOTHERWELL: Ontario.

Mr. MARTELL: Why not give the same aid to experimental stations in other provinces?

Mr. MOTHERWELL: I do not know what my predecessor had in mind, but I think he wanted the station near Ottawa where he could administer it conveniently and with the least possible expense. I suppose the idea was to try one out first. Then if that was successful and was an indication of the type of factory that was considered suitable in other parts of the country, it was thought possible that these people would take their cue from that and establish similar factories wherever it was practicable. But these are hard times for making capital investment, and the result is that people are slow to take advantage of the examples that have been set. We have in mind the establishment of another station. If my hon. friend has any thought that it would be acceptable in Nova Scotia, I am prepared to entertain it.

Mr. MARTELL: Perhaps you could make a success of it in Hants.

Mr. TOLMIE: Have you the figures for the importation of butter?

Mr. MOTHERWELL: I have the figures for the amount of butter brought in from New Zealand and Australia. The quantity from New Zealand was 1,893,312 pounds and from Australia 13,758 pounds. One of the reasons for the difference is that New Zealand gets the benefit of the British preference, while we have no preferential arrangement with Australia.

Mr. WHITE: Are the figures for 1922 available?

Mr. MOTHERWELL: We have them dating back to 1907. In 1922 the amount was from New Zealand, 2,268,760 pounds and, from Australia, 297,132 pounds. Nearly twice as much was brought in from New Zealand in 1922 as in 1923. We can go back further if my hon. friend desires it.

Mr. DOUCET: Do we require a certain grading when we buy foreign butter?

Mr. MOTHERWELL: We do just as other countries do with respect to our butter; we buy butter on the grade of the country from which it comes; and we hope that when they get familiar with our grades they will buy the same way, but as yet they are not sufficiently familiar with it to accept our grade at the face value, as they probably will later on.

Mr. DOUCET: The minister said there was a preferential tariff on New Zealand butter coming in and that accounted for a larger importation from New Zealand than from Australia. Would it not be to the advantage of this country if the preference to New Zealand were wiped out in order to protect our own industry?

Mr. MOTHERWELL: The regular duty on butter is 4 cents per pound and under the

preference with New Zealand it is 3 cents. My hon. friend's query raises a budget question which I am sure he does not want to enter into now. Of course if one believes unreservedly in protection to an old industry like dairying one can easily find an argument for raising the duty from 4 cents to 8 cents to correspond with the duty against us going into the United States. The suggestion has its attractions but not to the consumer in Canada.

Mr. DOUCET: I realize that the question does raise the subject of protection and I do not expect the minister to give a definite opinion this evening. But he might influence his colleagues into making a revision of the tariff when the proper time comes.

Mr. MARTELL: Does the hon. gentleman want the fishermen who are not farmers in his county to pay a duty on butter?

Mr. DOUCET: We are not discussing fish now; the subject is butter. It is as important to this industry to have protection as it is to make provision for dead insects as we have been doing all afternoon. In connection with this industry, will the minister tell the committee what his department has been doing in the matter of contagious abortion?

Mr. MOTHERWELL: That comes under the Health of Animals branch. I was reading an interesting bulletin on the subject during the dinner recess, but I do not think we could very well discuss it at the present stage.

Mr. DOUCET: I thought it could very well be discussed under this head because it has everything to do with the conduct of an important industry in this country.

Mr. MOTHERWELL: The disease is certainly contagious and it is incomprehensible except to the initiated. However, it comes under another vote.

Mr. McQUARRIE: We have been told to-night that the trouble in connection with the dairy industry is the inadequacy of the market for butter and cheese and other dairy products produced in western Canada. A good deal of Alberta butter and cheese go into British Columbia and I presume that if there were a greater market in that province for these articles the province of Alberta would profit. At present, I understand, a considerable quantity of butter and cheese, and other dairy products as well, are imported into British Columbia from the United States, and if that importation could be stopped it would give the Alberta and British Columbia people a better market. The present situation is a most unfair one as the minister must realize. He said that if any one wished to preach the doctrine of protection this was a good argument. Well, obviously there is a good argument in the inequality of tariff as between Canada and the United States on dairy and other products.

Mr. MOTHERWELL: We all recognize that.

Mr. McQUARRIE: It would seem to me that the proper thing for Canada to do would be to raise its tariff. We could do that even if we were not able to negotiate with the United States, which does not seem to be possible on the minister's statement. Indeed, it might not perhaps be deemed advisable in some quarters. But if it is not possible to negotiate a reciprocity agreement with the United States surely we can increase our own tariff and so place this country on an equality with the people south of us.

Mr. MARTELL: Is my hon. and personal friend in favour of reciprocity with the United States?

Mr. McQUARRIE: The matter has been discussed many times in our province and I take it that the attitude of the people of British Columbia would be of more interest to hon. gentlemen than the personal opinion of any member of this House.

Mr. MARTELL: I have every respect for my hon. friend, though.

Mr. McQUARRIE: I am glad to hear that; the hon. member for Hants is always very kind. I have no objection to giving my own personal opinion on the subject if it will interest the committee. I do not think that there should be any general reciprocity with the United States, but we should have a better tariff arrangement which would place us on an equality with that country, and if that can be arranged by negotiation, well and good. I would favour such an arrangement with regard to certain products such as butter and other dairy products and also eggs. The subject of eggs is a very serious one just now owing to the fact that the market in British Columbia is in very poor condition; in fact it is so bad that a great many of those who have gone into the poultry business are giving it up altogether. If my hon. friend (Mr. Martell) has been keeping in touch with the western newspapers, as I have no doubt he has, see-

ing that he is interested in the West, he will know as well as I do what disastrous results have attended the present unsatisfactory condition in relation to the tariff on eggs. I am not going to get into a discussion of that subject, because we are talking about the dairy industry. I suggest seriously to the minister, however, that the present position is most unfair. I can tell him, as he no doubt is already aware, that British Columbia is suffering to a considerable degree, as probably Alberta is also, from the present tariff arrangement, and it seems to me that the solution of that particular matter is very easy. We can raise our own tariff so as to shut out American products from our market and thus give our own people a fair chance. I have asked some questions in regard to the importation of dairy products from the United States to British Columbia, and I had a reason for wanting the information. I am not at all satisfied with the attitude which the minister has taken in reference to those questions. He tries to push me to one side and he says: "The hour is late," and because of the lateness of the hour, he does not think he should be asked to answer those questions.

Mr. MOTHERWELL: We will make a note of them for the next day.

Mr. McQUARRIE: We are on this subject now. The minister thinks I am unreasonable.

Mr. MOTHERWELL: No.

Mr. McQUARRIE: But a few days ago I tried to discuss another subject, the question of the failure of the government to continue the grant under the Agricultural Instruction Act. The minister said: "No, you are not in the right place; you should get down to the end of the list," and I am afraid even at that he was trying to sidetrack me.

Mr. MOTHERWELL: No, we shall be prepared to discuss the question fully then.

Mr. McQUARRIE: I know the suggestion was made that it would be taken up when we got to "Appropriations not required for 1924-25." What I am afraid of is that when we get down that far, then we have passed all the items in the agricultural estimates, and the point might very well be taken: "Everything is passed; you are still out of order." That is the reason why I want to get answers to the questions I am asking in their proper place. I am afraid the minister will tell me later on: "You are out of order now, so I cannot give you this information."

I would insist on this information being given when we are on the proper item. I am not satisfied, and I think that information is absolutely essential.

Mr. BALDWIN: Does the hon. member think there is any necessity for an import duty on butter, cheese, milk or cream coming from the United States into Canada?

Mr. McQUARRIE: Yes, I think so.

Mr. BALDWIN: For what reason?

Mr. McQUARRIE: The reason, it seems to me, is fairly obvious. We want to save our farmers from the unfair competition that they are meeting with at the present time.

Mr. BALDWIN: What quantity of our products was imported from the United States into Canada during the last ten years?

Mr. McQUARRIE: Here is another hon. gentleman who wants this information. He is asking me because he thinks he cannot get any information from the minister.

Mr. BALDWIN: The answer, I believe, is that these products are not coming in because in the United States butter is selling at from eight to ten cents a pound higher and cheese from four to six cents a pound higher than in Canada, and enormous quantities of milk and cream are being shipped from Canada to the United States, but to my knowledge none is coming this way.

Mr. McQUARRIE: I think we should have that information, because the hon. gentleman has one opinion and I have another. I happen to know that in British Columbia, big truck loads of dairy produce are coming through the Fraser valley into the Vancouver market every day. I am asking the minister to give the information which the hon. gentleman also wants to have, and I do not see how this committee can intelligently deal with these estimates unless we have reasonable information of that kind. I am not trying to obstruct, or anything of that character. I do not think the minister can complain that I have ever done that in connection with his estimates. That is not my idea, but I would like to get the information and get it now on this particular item. If I cannot get it, I shall have to take up something else.

Mr. MOTHERWELL: I have not got it.

Mr. BALDWIN: I should like to ask the minister how much milk, cream, cheese and butter have been imported into Canada from the United States in the past year, or for the past ten years. That must be a local condi-

tion only where they cannot get these products from the Canadian side.

Mr. MOTHERWELL: I have been discussing this matter with my hon. friend, the hon. member for Fraser Valley (Mr. Munro), and he tells me that he has never seen any American butter in his constituency in British Columbia for several years. The quantity is so negligible that it will not amount to enough to affect the market. It cannot be coming into Canada in very large quantities, and we shipped large quantities to the United States last year. There might be a locality in which the movement is in the opposite direction, but the quantity is not large. With regard to the question my hon. friend asked me with regard to duties, I admitted a little while ago that there were arguments in favour of his contention for putting up the duty; but what will the consumer of Canada say about that? I am far more interested just now in getting duties down than in putting them up. Later on we may attend to that, but we cannot look both ways at once.

Mr. McQUARRIE: The information which the minister has received may be reliable as regards the constituency of the hon. member who gave the information, because he may not have seen any of this American butter. Perhaps he has not, where he is residing, in a dairying community in the Chilliwack country. They would not be likely to see it.

Mr. MUNRO: What particular brand of dairy produce has the hon. member seen? What is the trade-mark on the American butter coming to the Canadian side?

Mr. McQUARRIE: I am asking for information.

Mr. MUNRO: The hon. member stated that it was coming in.

Mr. McQUARRIE: I said that dairy products are coming every day in truck loads from the American side into the Vancouver market. I am not saying that they are coming into the Chilliwack country.

Mr. MUNRO: What names are they coming in under? Is there no brand, no trade-mark, on them like New Zealand or Saskatchewan or Alberta butter?

Mr. McQUARRIE: The only brands I can give are American dairy and creamery butter. There are various brands, the brands of the people who raise these products in the state of Washington. The hon. member for Fraser Valley knows as well as I do that for the farmers and dairymen of the northern part of the state of Washington, the New Westminster and Vancouver markets are their closest and best markets, and they send their produce there instead of sending it to Seattle, for instance, which is much farther removed. The hon. member must know that a serious situation exists at present in regard to, not only dairy products, but eggs, and editorials are being written, not only in Conservative, but in Liberal papers, dealing with the subject and pointing out the unfairness of the present tariff arrangements.

Mr. MUNRO: Does the hon. member not know that the price of butter fat on the American side is higher at the present time and has been higher for a long time than it is on our side?

Mr. McQUARRIE: The hon. gentleman has asked me a question that I am not prepared to answer, because I have not studied the prices.

Mr. MUNRO: I know it is right.

Mr. McQUARRIE: The statement I have made is that American butter is coming into New Westminster and Vancouver and that other dairy products and products of the farm are being received. Considerable quantities of milk are coming in all the time, particularly in the winter when milk is scarce.

Mr. BALDWIN: If neither the minister nor my hon. friend can tell how much is imported, does he think that this butter is smuggled into Canada?

Mr. McQUARRIE: No, it is brought in right over the road. A paved highway, just like Sparks street, runs from Vancouver to the border and all the way down to the southern boundary of the state of California. This highway passes through the farming districts of the state of Washington, and over it come every day the products of the farm in large truckloads. That is the competition we are up against. I am not in a position to say what the exact volume of that business is, but there must be statistics covering it because everything has to go through the customs. That information must be available and I want to get it.

Mr. McBRIDE: In connection with the question of stock and butter coming in from the American side, I do not speak here as a lawyer but I speak as ex-president of the executive of the Stockmen's Association of British Columbia. In any meeting I have been in I never heard it brought up once be-

fore any stockmen's association that we were not prepared to meet any competition the United States stockmen could give. In fact, we can put it over on the Americans every time so far as raising stock is concerned; we can raise better stock and raise it cheaper. Before I left British Columbia to come here, a man came up from the States, bought something over twelve hundred head of cattle, took them to the States and paid the duty on them. Under these conditions I do not see that we should be afraid of them shipping in a little butter.

Mr. McQUARRIE: What about eggs?

Mr. McBRIDE: I am not a hen; I do not know.

Mr. McQUARRIE: My hon. friend has given us some very valuable information, of which his last statement is, I presume, the most valuable. He declines to answer any questions about eggs. I challenge him to deny that there is a strong agitation in British Columbia at the present time with reference to the importation of eggs from the United States, and that editorials have been published in practically all the papers out there regarding that subject. I still maintain what I said previously in regard to the importation of dairy products: it is taking place on quite an extensive scale. If the minister cannot give any information and wants to put the item through to-night, then I would like to deal with some other questions.

Mr. MOTHERWELL: I will bring down the information regarding the importation of dairy products into British Columbia on the vote under which the other matters referred to will be brought up, that with respect to the representative in Great Britain. That will bring all these things up.

Mr. McQUARRIE: I would like to get the imports into British Columbia, and the exports, and the same in regard to the other provinces.

Mr. MOTHERWELL: All right.

Mr. ROSS (Kingston): Is there any co-operation between the departments of dairying in the provinces and the federal government department, and is there any overlapping? For example, is there any co-operation as to the results obtained in the dairying schools, the one at Kingston, for instance and the one in western Ontario? Have they any connection with what the federal people are doing?

[Mr. McBride.]

Mr. MOTHERWELL: There is substantially no overlapping, because the duties of the respective governments are well defined. I have already explained that the provinces deal more particularly with the matter of manufacturing, the control of the quality of cream, the sanitary conditions of the factories, and so on, while the Dominion deals more particularly with grading and marketing. In addition to that, representatives from the provinces attend our conferences and on those occasions there is an exchange of views.

Mr. ROSS (Kingston): Is there any co-operation between the federal government and the provincial governments in regard to the quality? Is there any co-operation in the matter of these dairy schools, or is it just a matter of straight cleavage between the departments carrying on these different activities?

Mr. MOTHERWELL: There is as much co-operation as is possible where there are two separate and distinct spheres of activity.

Mr. ROSS (Kingston): That is exactly what I would like to get at. It looks as if we were wasting a lot of money. We are putting millions out here and millions are being spent in the provinces, the idea being to attain one object, namely, the improvement of the quality of the article we produce. Is there no parallel in these dairying matters?

Some hon. MEMBERS: Carried.

Mr. ROSS (Kingston): Is there no information? Is it just a case of what we have heard all the afternoon that there are two separate lines of work?

Mr. TOLMIE: If the minister is going to produce those figures, would he be kind enough to include the shipments of fresh butter to France? In addition to that, what has been the result of the shipments of butter to the Old Country by way of the Pacific coast and the Panama canal?

Mr. MOTHERWELL: I shall be glad to produce that.

Mr. McQUARRIE: What has been done, if anything, to take the place of the assistance which was given to dairying under the Agricultural Instruction Act? I notice that the estimate for dairying this year is the same as last year. So no addition has been made by reason of the fact that assistance under the Agricultural Instruction Act has been stopped.

I note in a report on the Agricultural Instruction Act for 1921-22, issued by the department, that for the fiscal year ending March 31, 1922, specific reference is made to amounts paid by the Dominion government under the act to assist dairying in some of the provinces. I understood from the minister that it was not so much the grading of butter which was material at present, in order to get us a better market, as the improvement of the quality of the butter, and I presume that the assistance given under the Agricultural Instruction Act was to assist in getting a better quality of butter. I notice that for the year mentioned there is an item for British Columbia, dairying, educational work in cheese and butter, $5,000; Manitoba, dairying, $6,000; New Brunswick, dairying, $4,100; Saskatchewan, dairying, $6,000; Nova Scotia, dairying, $6,000; British Columbia, dairying and cow testing, $9,000; that is all for that one year. I have not ascertained what amount was granted to Ontario, but there no doubt was some assistance given to dairying in that province. The items I have read make a total, I think, of $36,100 which the Dominion contributed that year towards assisting dairying and educating the farmer in dairying, and what I ask the minister is, what has been substituted for that assistance? Or has the Dominion decided to discontinue altogether the assistance which was covered by items such as I have mentioned?

Mr. McBRIDE: Mr. Chairman, there are only six Conservatives members in the House. Is that sufficient to carry on business?

Mr. MOTHERWELL: I have the assistance allocated to the respective provinces here, and the figures agree with what my hon. friend has read. I understood him to ask what are we substituting for that. From the estimates that have already been brought down in the western provinces I gather that they are taking up this work. I notice that the Saskatchewan legislature voted something like $54,000 for this work the other day, whereas formerly they got something like $80,000, so I presume they have dropped some of what might be called the secondary activities in which they were being assisted by the Dominion government under the Agricultural Instruction Act, and the more important features of the work they are carrying on to the extent of something like $50,000, speaking from memory. I happened to see the estimate in the western press the other day, so it would seem that the tendency of the provinces is to take up this burden and carry on the more important features of the work.

Mr. McQUARRIE: Is the minister referring to dairying?

Mr. MOTHERWELL: Not to dairying alone.

Mr. McQUARRIE: I was dealing only with dairying. I purposely left out the general questions pertaining to the discontinuance of this grant because I expect to take them up later, and I gave only the items under the head of dairying. As I understood it, this was a matter in which the Dominion was assuming exclusive control. Now what is the Dominion doing?

Mr. MOTHERWELL: Of course, we could not withdraw the grant and give it at the same time. If we withdraw it, we withdraw it, and the provinces I think will assume the more important features of the work with respect to dairying and everything else. There was a lot of good work done under that act, and the provinces will find the money, no doubt, to carry on the more important part of the work.

Mr. McQUARRIE: That is just guesswork. Has there been any arrangement effected with the provinces in regard to dairying? If there has, I think the committee should know about it.

Mr. MOTHERWELL: No arrangement since the grants lapsed.

Mr. McQUARRIE: So the Dominion government is not taking precautions to see that this work is carried on.

Mr. MOTHERWELL: How could we?

Mr. McQUARRIE: It seems to me that you are assuming the responsibility in connection with dairying, and you appear to be doing it. You are interested in improving the quality of Canadian butter. Surely the government should be responsible for continuing the assistance which was previously given in this connection. Am I to understand that no arrangement has been made with the provinces at all?

Mr. MOTHERWELL: That is right.

Item agreed to.

Progress reported.

On motion of Mr. Motherwell the House adjourned at 10.50 p.m.

Monday, April 7, 1924

The House met at three o'clock.

PRIVATE BILLS

FIRST READINGS

Bill No. 36, respecting the Northern Life Assurance Company of Canada.—Mr. McKay.

Bill No. 37, to change the name of Imperial Underwriters Corporation of Canada to "Imperial Insurance Office."—Mr. Chew.

Bill No. 38, respecting the Esquimalt and Nanaimo Railway Company.—Mr. Humphrey.

THE UNITED CHURCH OF CANADA

Mr. ARTHUR DENIS (Saint Denis): Mr. Speaker, I desire to present petitions on behalf of the Rev. Mr. Hamilton, rector of the Shaw Memorial Methodist Church of Montreal, in support of the bill for proposed incorporation of the United Church of Canada.

Mr. MURRAY MacLAREN (St. John City and Counties of St. John and Albert): I desire to present petitions from members and adherents of St. David's church, St. John, N. B., St. James Presbyterian church, Andover, N. B., Rothesay Presbyterian church, Rothesay, N. B., and Knox Presbyterian Church, Shediac, N. B., opposing the United Church of Canada Bill.

REDISTRIBUTION

APPOINTMENT OF SPECIAL COMMITTEE

Right Hon. W. L. MACKENZIE KING (Prime Minister): I beg to move, seconded by Dr. Béland:

That the special committee appointed on Tuesday, March 25, to which was referred Bill No. 2, intituled, "An act to readjust the representation in the House of Commons," with instructions to prepare schedules to contain and describe the several electoral divisions entitled to return members to this House, be composed of the following members, Messrs. Béland, Boivin, Hanson, Humphrey, Johnston, Low, Kennedy (Glengarry and Stormont), King (Huron), Macdonald (Pictou), Morrissy, McQuarrie, Motherwell, McMurray, Rankin, Speakman, Stewart (Argenteuil), Stewart (Leeds), Stork and Sutherland, and that rule 11 be suspended in relation thereto.

Mr. WILLIAM IRVINE (East Calgary): Mr. Speaker, I would suggest to the Prime Minister that he consider putting a representative of the Labour party and of the Independent party on the committee. Though we are a small group in this House Labour in the various cities constitutes a considerable portion of the electorate, and it is my opinion that it would be advisable to have a Labour representative and an Independent representative on the committee.

Mr. MACKENZIE KING: Mr. Speaker, the committee to all intents and purposes is the same committee that dealt with this matter last session. It was left to the whips on the two sides of the House to endeavour to arrange a committee that would be satisfactory to all concerned. If there is any desire on the part of gentlemen opposite to change the personnel in any way, the government will be prepared to consider changes.

Mr. IRVINE: I am one of the whips on this side of the House. I was not consulted about the personnel of the committee.

Motion agreed to.

QUESTIONS

(Questions answered orally are indicated by an asterisk).

CIVIL SERVICE—AVERAGE MONTHLY SALARY

Mr. McQUARRIE:

1. What was the average monthly salary paid to full time civil servants in Canada in (a) the Customs department, and (b) the Department of Agriculture, for the month ending February 28, 1914?
2. What was the average monthly salary, without the cost of living bonus, paid to full time civil servants in Canada in (a) the Department of Customs, (b) the Department of Agriculture, for the month ending February 29, 1924?
3. What were the percentages of increase?
4. By what percentage are the cost of living figures for the month of February, 1924, as compiled by the Dominion Department of Labour, greater than those for the month of February, 1914?
5. Is it not true that the salaries fixed in the reclassifications were based on normal living costs?

Hon. Mr. COPP:

Department of Customs and Excise.

1. (a) $86.01.
2. (a) $126.97.
3. 47.62 per cent.
1. (b)
2. (b) (Do not refer to this department).
4 and 5.

Department of Agriculture.

1. $107.29.
2. $138.94.
3. 29.5 per cent.
4 and 5. Nil.

Department of Labour.

1, 2 and 3. No information.
4. Fifty-two per cent.
5. No information.

D.S.C.R.—STAFF

Mr. MacLAREN:

1. What is the number of medical and nursing staff in the Department of Soldiers' Civil Re-establishment?
2. What is the number of other employees in the said department?

Hon. Mr. BELAND:

1. 475; consisting of,—247 medical officers, and 228 nurses.

2. 2,447; consisting of dentists, hospital orderlies, mental attendants, ward aides, technical and service staff in hospitals and sanatoria, as well as administrative and clerical services.

D.S.C.R.—PENSIONERS

Mr. CHURCH:

1. How many pensioners of the Canadian Epeditionary Forces have removed to the United States or other foreign countries during the years 1921, 1922, and 1923?
2. Will such pensioners have to suffer deductions from their pension cheques by reason of the discount on Canadian money there or have Canadian banks in the United States made arrangements with American banks by which such cheques shall be cashed at par?

Hon. Mr. BELAND:

1. The following statement shows the number of Canadian Expeditionary Force pensioners resident outside of the Dominion of Canada:

Date Year ending	No. resident in U.S.A.	No. resident in other countries, including Great Britain
31-3-22	3,620	7,868
31-3-23	4,103	7,870
29-2-24	5,054	8,009

2. Pensions are payable in Canadian funds. The government has not made arrangements with Canadian banks to relieve pensioners resident in the United States of America of the loss they may sustain by reason of the discount on Canadian funds in that country.

Mr. E. RAYNER

Mr. BANCROFT:

1. How much money was paid to E. Rayner of Selkirk by the Public Works Department during the fiscal years 1921-22, 1922-23, 1923-24?
2. Were contracts called for in every case?
3. Were contracts called for in any case?
4. How many tenders were submitted in each case?

Hon. Mr. KING (Kootenay):

1. 1921-1922	Nil
1922-1923	$1,335.10
1922-1923	1,303.50
	$2,638.60
1923-1924	56.84
	$2,695.44

2. No.

3. Yes. In two cases.

4. First case, two tenders submitted; second case, four tenders submitted; third case, no tenders requested; emergency purchase of seven piles for the Selkirk wharf from Mr. Rayner, who was the only one to have them on hand.

KINGSTON PENITENTIARY—CATHOLIC MISSION

Mr. DOUCET:

1. Was there a Catholic mission given for the Catholic prisoners in Kingston penitentiary similar to the Protestant mission for Protestant prisoners, during the past year?
2. If so, is it reported in the superintendent's report for that year?
3. If not, why?

Hon. Mr. LAPOINTE:

1. Yes.

2. On page 11 of the Superintendent's report is the following: "Religious missions have been held at all of the penitentiaries during the year."

3. Missions were held in all of the penitentiaries in both the Roman Catholic and Protestant churches, twelve in all—six Protestant and six Roman Catholic. One Roman Catholic report, that of the mission held in the Roman Catholic chapel of the penitentiary at Prince Albert, Saskatchewan, and one Protestant report, that of the mission held in the Protestant chapel of the penitentiary at Kingston, Ontario, were published. On account of urgent demands by the government for reduction in volume of annual reports, it has not been customary to publish all twelve reports. Five Protestant and five Roman Catholic were not published.

BRITISH COLUMBIA—POULTRY INDUSTRY

Hon. Mr. STEVENS:

1. Is the government aware of the serious condition of the poultry industry in the province of British Columbia at the present time as a result of the unfair competition of the importation of eggs from the United States?
2. Is the government aware that eggs known as "culls" or "small" eggs from the state of Washington are being dumped on the British Columbia market by American producers?
3. Is the government aware that the duty on eggs into Canada is three cents per dozen whilst duty on eggs into the United States is eight cents per dozen?
4. Will the government undertake to remedy this unfair competition?

Hon. W. R. MOTHERWELL:

1. The comparatively low prices of eggs in British Columbia during the past winter may be attributed to one of several different

causes. The past three years or so have been a period of rapid transition in the poultry business in British Columbia. A few years ago British Columbia was the largest importing province in Canada, from the standpoint of eggs, not only from United States but from the prairies and, earlier, from eastern Canada as well. Latterly, however, production in British Columbia has increased to the point where they not only supply their own requirements but during the winter months practically the total fresh egg requirements of the prairie provinces as well. Further, in addition to shipping to prairie points, British Columbia placed upwards of twenty-five cars of eggs last year in Canada at points east of the Great Lakes.

2. There is reason to believe that previous to the date imported eggs were included under the egg regulations, (October, 1922) a quantity of small or cull eggs from the states of Washington and Oregon did find their way onto the British Columbia market but since the regulations covering imports became effective, it has been required that the containers of such eggs must be marked with the name of the class and grade when lower than the grade "firsts." The fact that these eggs were marked "seconds" has done a great deal to discourage their import both in British Columbia and in the east.

3. Yes.

4. Not by a retaliatory tariff. Some remedy however is now being supplied by more stringent inspection regulations.

EGG GRADING AND MARKETING

Hon. Mr. STEVENS:

1. Has the government received a request from the Agricultural department of British Columbia for permission, under the regulations respecting the grading and marketing of eggs, to take legal action against those who are ignoring or breaking the said regulations?

2. If so, has such permission been granted?

3. Is the government aware that the regulations are being violated in British Columbia by exposing for sale eggs that are of a mixed grade?

4. Is the government aware that the poultry men, the producers of eggs, are properly grading under the regulations?

Hon. W. R. MOTHERWELL:

1. No.

2. Answered by No. 1.

3. For the most part the regulations respecting the marketing and sale of eggs for domestic consumption have been well observed in British Columbia, the principle and objective of the regulations having received strong support from the Retail Merchants Association in that province, and just recently the department has been complimented by representatives of this association on the thoroughness and efficiency with which the departmental inspectors in British Columbia have carried on their work. Within the last week or two, however, one or two individuals have shown an inclination to question the authority of the department with respect to these regulations and a request has been received for authority to prosecute one offender who has continued to disregard the regulations, after having been duly warned. Steps to this end are being taken.

4. The latest advice from British Columbia is to the effect that the producers who come under these regulations are complying with them satisfactorily. There was some difficulty last fall through one producers' organization marketing storage eggs as fresh and the question of prosecuting the offender was under consideration. No action was taken, however, when the parties in question changed their methods and gave assurance that they would abide by the regulations.

INCOME TAX

Mr. WOODSWORTH:

1. What is the amount of income tax computable from returns actually made, that is overdue and unpaid for the years 1917, 1918, 1919, 1920, 1921, 1922, 1923, respectively?

2. What proportion of income tax unpaid in each of the above years was derived from incomes of between: $1,000 and $5,000; $5,000 and $10,000; $10,000 and $25,000; $25,000 and $50,000; $50,000 and $100,000?

3. What means are used by the department for checking the accuracy of income tax returns?

4. Are the bank accounts of taxable persons open to the inspection of income tax officials?

5. Do the chartered banks make any returns to the government of the amounts on deposit to the credit of those liable for income tax?

6. Is the income tax levied at the same rate on earned income as on income derived from investments? If not, what is the difference?

Hon. Mr. ROBB: May I ask my hon. friend if he would withdraw this question? Some of the information asked for might be given, but there is a part of it which cannot be given under the act. I understand that if my hon. friend will go down to the office of the Commissioner of Taxation he can obtain some of the information referred to here.

Mr. WOODSWORTH: I would like to know what part of this question cannot be answered under the act. It seems to me a pre-eminently reasonable request that we should know what amounts are due in this

respect. Statements are being freely circulated that some of the large firms are being carried along while smaller firms or individuals are being forced to pay up their income tax. It would seem to be in the public interest that the House should know just where we stand in this regard.

Question stands.

GEORGE H. ALEXANDER

Mr. ELLIOTT (Waterloo):

1. Is George H. Alexander of Galt, Ontario, recognized as an immigration agent by the government?

2. What is his relation to the Department of Immigration in the matter of Armenian immigration?

3. Is the Department of Immigration aware of the activities of George H. Alexander in this matter?

Hon. Mr. ROBB:

1. No.

2. None.

3. Yes, to some extent.

COUNTRY OF ORIGIN—MARKING OF IMPORTS

Mr. McKILLOP:

1. Is the government aware that a shipment of 50,000 pairs of children's shoes have been received in Montreal from Germany, not marked with the name of the country of origin?

2. Does not the government insist upon the application of the act regarding the stamping of the country of origin upon imported goods, to lead pencils?

3. If so, on what grounds does the government extend the provisions of the act regarding the stamping the name of the country of origin on imported goods to lead pencils and not to shoes?

Hon. Mr. BUREAU:

1. There is nothing that requires shoes to be marked with the name of the country of origin.

2. Yes.

3. By virtue of an order in council, which speaks for itself, and in which shoes are not included.

IMPORTS—BOOTS AND SHOES

Mr. RINFRET:

1. What was the amount of the total imports to Canada, of boots and shoes, from Great Britain, during the last ten months, from May 1, 1923 to March 1, 1924?

2. What was the amount of the total imports of boots and shoes from the said country during the ten corresponding months of the previous year?

Hon. Mr. ROBB (for the Minister of Trade and Commerce):

1. The amount of boots and shoes imported into Canada (entered for consumption) from the United Kingdom from May 1, 1923 to March 1, 1924, was as follows:

Footwear of leather—	Pairs	Dollars
Boots and shoes, pegged or wire fastened, with unstitched soles, close edged	2,245	3,982
Boots, shoes and slippers with leather uppers, n.o.p., men's (sizes 5½ and up)	132,408	419,890
Boots, shoes and slippers with leather uppers, n.o.p., women's (sizes 2½ and up)	54,862	109,715
Boots, shoes and slippers with leather uppers, n.o.p, children's (all other sizes)	24,835	19,802
Footwear of rubber—		
Boots and shoes, rubber	76,389	42,928
Footwear other than rubber and leather—		
Boots and shoes with canvas uppers	7,861	10,185
Boots, shoes and slippers with felt uppers	124,710	82,350
Boots, shoes and slippers of all kinds, except canvas, felt, rubber and leather		39,070
Total footwear		727,922

2. The amount of boots and shoes imported into Canada (entered for consumption) from the United Kingdom from May 1, 1922 to March, 1, 1923, was as follows:

Footwear of leather—	Pairs	Dollars
Boots and shoes, pegged or wire fastened, with unstitched soles, close edged.	2,018	3,451
Boots, shoes and slippers, with leather uppers, n.o.p., men's (sizes 5½ and up)	58,862	226,278
Boots, shoes and slippers, with leather uppers, n.o.p., women's (sizes 2½ and up)	17,541	64,168
Boots, shoes and slippers, with leather uppers, n.o.p., children's (all other sizes)	15,003	16,623
Footwear of rubber—		
Boots and shoes, rubber	1,457	697
Footwear other than rubber and leather—		
Boots and shoes with canvas uppers	3,355	3,769
Boots, shoes and slippers with felt uppers	56,211	36,618
Boots, shoes and slippers of all kinds, except canvas, felt, rubber and leather.		27,209
Total footwear		378,813

DEPARTMENT OF LABOUR—EMPLOYEES

Mr. ARTHURS:

1. What was the total number of employees in the Department of Labour at Ottawa during the fiscal years 1920, 1921, 1922 and 1923: (a) permanent, (b) temporary?

2. What were the total wages or salaries of such employees for above years, including bonus: (a) permanent, (b) temporary?

Hon. Mr. MURDOCK:

1. March 31	(a)	(b)	Total
1919-20 . .	51	123	174
1920-21 . .	59	89	148
1921-22 . .	105	37	142
*1922-23 . .	115	7	122
1923-24 . .	90	5	95
2. 1919-20 . .	$ 84,878.65	$161,936.33	$246,814.98
1920-21 . .	109,612.40	123,396.18	233,008.58
1921-22 . .	186,996.78	49,838.30	236,835.08
1922-23 . .	205,624.38	13,064.64	218,689.02
1923-24 . .	173,761.69	7,611.80	181,373.49

*Including Annuities branch, twelve employees transferred from the Post Office department to the Labour department in May 1922, with annual salaries of $21,680.

ARMENIAN IMMIGRANTS

Mr. ELLIOTT (Waterloo):

1. Is there any special regulation or examination governing Armenian immigrants, that do not apply to those of other nationality?

2. How many Armenians came to Canada during the years 1921, 1922, 1923 respectively?

Hon. Mr. ROBB:

1. Yes, the regulation requiring an Asiatic to be in possession of $250 at the time of landing. This, however, is not applicable to the wife or child under 18 years of age of any person legally in Canada.

2. 1921, 44; 1922, 43; 1923, 404.

MR. THOMAS MULVEY

Mr. HOCKEN:

1. Does Thomas Mulvey, Under Secretary of State, draw any salary or remuneration from the government other than his salary as deputy minister?

2. If so, how much and upon what authority?

3. How much money has Mr. Mulvey been paid to date in the way of salary or special remuneration other than his salary as deputy minister since 1921?

4. How much has he drawn in expense account in the years 1921 to 1923 inclusive?

Hon. Mr. COPP:

1. Mr. Mulvey draws no salary or other remuneration from the government other than his salary as deputy. Certain payments are, however, made to him by the Custodian of Enemy Property, under the following circumstances:

The question of payment to Mr. Mulvey as Deputy Custodian of Enemy Property, was referred by the Right Honourable A. L. Sifton, then Secretary of State, to Messrs. O. M. Biggar and Christopher C. Robinson, the legal members of the Enemy Debts Committee. The following is an extract from their report, dated 17th September, 1920:

Mr. Mulvey's work has extended over a period of about four and a half years, and in our opinion an extra allowance at the rate of $1,500 a year, or a total of $6,750, would be a small recompense for the special services rendered.

Payment of $4,000 was made to Mr. Mulvey by direction of an order in council dated 17th December, 1921, P.C. 4,631. Subsequently the balance of the amount, at the rate aforesaid, was paid to Mr. Mulvey by the Custodian.

2. Payment has been made at the rate of $125 a month out of commissions earned by the Custodian's Office, upon the direction of the Custodian. The authority to make this payment was under consideration by the Department of Justice, and the following is taken from an opinion of that department, dated 30th January, 1924:

The expense of getting in, liquidating, and otherwise dealing with property, rights and interests, seeing that the government is only required to account for the "net proceeds" of such property, rights and interests, may be defrayed, on the order of the Custodian, out of any profits which may be earned in dealing with the same.

3. Mr. Mulvey has been paid the balance accruing up to the 1st January, 1922, $4,500 and $125 per month since that time, out of commissions earned by the Custodian's office.

4. Expense account 1921, including travelling expenses to London, Paris, Brussels and Berlin, and the reception of His Excellency the Governor General, amounted to $2,052.30, paid out of appropriation "Demobilization" and contingencies.

Expense account 1922, including travelling expenses to London, Brussels, Amsterdam, Hamburg, Berlin, Prague, Vienna, Budapest, Paris, Metz, Strasbourg and Zurich, amounted to $3,249.38 paid out of appropriation "Adjustment of War Claims." Less $250 paid out of contingencies.

Expense account 1923, including travelling expenses to London, Paris, Brussels and Washington, amounted to $1,914, paid out of commissions earned by Custodian's office.

INSURANCE DEPARTMENT

Mr. HOCKEN:

What is the policy of the government as to the maintenance of the Insurance department, having regard to the recent decision of the Privy Council that insurance is not subject to regulation by the Dominion parliament?

Hon. Mr. ROBB: In the opinion of the government neither the validity of the Insurance Act nor the necessity for the continuance of

the Department of Insurance is affected by the recent decision of the Privy Council.

POSTAL SERVICE—SALARIES

Mr. WOODSWORTH:

1. Has the government definitely instructed the subcommittee of the cabinet and the Civil Service Commission that it is desirable that the postal service be given an immediate upward increase in their salaries as per salary schedule submitted by postal service organizations?

2. If not, what alternative does the government propose taking to avoid a strike in the postal service?

Hon. Mr. STEWART: See statement of the Prime Minister, page 836, Revised Hansard of March 31, 1924, and also copy of Order in Council P.C. 530, dated the 29th March, 1924, re civil service salary revision, tabled in the House on 1st April, 1924.

RIVERPORT, N.S., DREDGING

Mr. HANSON:

1. What amount, if any, was spent for dredging at Riverport, Nova Scotia, in the years 1922 and 1923?

2. How was the work done and by whom?

3. Were tenders asked for the said work, who tendered, and what was the amount of each tender?

4. Where was the material excavated by said dredging deposited?

5. Was it necessary to build a retaining wall to prevent the said material from going back into the LaHave river?

6. Who built the said retaining wall and what was the amount of the contract price?

7. What material was used in the construction of this retaining wall?

8. Is said retaining wall useful for the above purpose?

Hon. Mr. KING (Kootenay):

1. 1922, $54,750.70.
1923, $40,105.80 approximately.

2. Work done by Dredge No. 5 (Northumberland) operated by Department of Public Works.

3. Answered by No. 2.

4. In Parks Island Cove, between Parks island and the Mainland.

5. Yes.

6. It was built by the Department of Public Works by day's labour at an expenditure of $29,097.48.

7. Two rows of piles filled with brush between piles.

8. Yes.

D.S.C.R.—EMPLOYEES

Mr. McBRIDE:

1. What was the number of medical and nursing staff in the Department of Soldiers' Civil Re-establishment on (a) 31st December, 1921; and (b) the 31st March, 1924?

2. What was the number of other employees in the said department on (a) the 31st December, 1921; and (b) on the 31st March, 1924?

Hon. Mr. BELAND:

1. Medical and Nursing Staff: (a) 31st December, 1921, 651, consisting of 335 medical officers, 316 nurses; (b) 31st March, 1924, 475, consisting of 247 medical officers, 228 nurses.

2. Number of other employees: (a) 31st December, 1921; 4,235: consisting of dentists, hospital orderlies, mental attendants, ward aides, technical and service staff in hospitals and sanatoria, as well as administrative and clerical services; (b) 31st March, 1924, 2,447.

D.S.C.R—HALIFAX

Mr. BLACK (Halifax):

1. Who is now unit dental officer at Halifax, Nova Scotia?

2. What is his military service, overseas and otherwise?

3. What officer or officers did he replace and when?

4. What was their military service?

Hon. Mr. BELAND:

1. Dr. H. E. Mann who combines the duties of unit dental officer with those of dental operator at Nova Scotia Sanatorium and Camp Hill hospital.

2. Dr. Mann served in the Canadian Army Dental Corps in Canada from 10th January, 1916, until the 30th March, 1920, retiring with the rank of major.

3. (a) Dr. B. L. Neiley, 1st August, 1923; (b) Dr. Havelock Clay, 30th September, 1923; (c) these retirements reduced salary costs $7,200 per annum.

4. (a) Dr. B. L. Neiley was appointed to commissioned rank in the C.A.M.C. on the 12th August, 1914. He served in Canada, England, and France with the C.A.M.C., and the C.A.D.C., was struck off strength on the 7th September, 1919; rank, lieut.-colonel; (b) Dr. Clay served in the C.A.D.C. in Canada, England, and France from February 19th, 1916, to May 16th, 1919, when he was struck off strength, retiring with rank of captain.

Mr. BLACK (Halifax):

1. Who is now chief storekeeper and purchasing agent for the Department of Soldiers' Civil Re-establishment at Halifax, Nova Scotia?

2. Did he replace a returned man?

3. If so, who was the returned man and what was his disability?

Hon. Mr. BELAND:

1. Mr. H. B. Shore who served in France for more than one year.

2. The former unit purchasing agent is a returned man. During 1923, the positions of unit storekeeper and unit purchasing agent were combined, Mr. Shore, formerly unit

storekeeper, assuming the duties of both positions.

3. Mr. J. E. Delaney; disability,—amputation right leg. Mr. Delaney is still employed having been transferred to another position formerly occupied by a non-disabled man.

PENSIONS UNDER CALDER ACT

Right Hon. Mr. MACKENZIE KING: Before you leave Questions, Mr. Speaker, I may say that the hon. member for Temiscouata (Mr. Gauvreau) asked me a question on Friday which I said I would reply to further to-day. It was in reference to a report which appeared in a despatch published in La Patrie, of Montreal, to the effect that after March 31st no civil servant would be granted pension under the Calder Act unless he had resigned before that date. I am unable to find any authority for that report.

QUESTIONS PASSED AS ORDERS FOR RETURNS

STE. ANNE DE BELLEVUE MILITARY HOSPITAL

Mr. JONES:

1. Did the government employ resident and visiting physicians at the Ste. Anne de Bellevue Military Hospital during the years 1921, 1922 and 1923, and if so, what are their names?

2. What remuneration did each one receive?

3. Who are the resident and visiting physicians for the year 1924?

4. Do they receive an annual salary or a fee for each visit, and how much?

CUSTOMS—SEIZURE OF AUTOMOBILES

Mr. ARCHAMBAULT:

1. How many automobiles are now under seizure by the Department of Customs?

2. How many automobiles smuggled on the Canadian border have been seized by the Department of Customs and are now in possession of said department?

3. How many of these automobiles have been claimed by insurance companies on the ground that they have been stolen before they cross the border?

4. Why is the department refusing to deliver such automobiles to the owners after positive proofs of ownership have been made?

5. Is there any arrangement between the Canadian and American governments regarding the recovery of said automobiles?

6. If so, what is such arrangement and when was it made?

NARCOTIC DRUGS

Mr. BROWN:

1. What are the relative numbers of convictions for offences against the Opium and Narcotic Drugs Act in the various provinces of Canada in the years 1913-1914, 1917-1918, 1922-1923?

2. What numbers of convictions for violations of the Opium and Narcotic Drugs Act are reported in the years 1920, 1921 and 1922 from the following cities: Halifax, Montreal, Toronto, Winnipeg, Victoria and Vancouver?

[Mr. Béland.]

3. What number of inmates in the penitentiaries, if any, of Canada have been classed as drug addicts, during each of the years from 1914 to 1923, inclusive?

4. What are the official figures as to the quantities of opium, cocaine and morphine imported into Canada for each of the years from 1917 to 1923, inclusive?

UNOPPOSED MOTIONS FOR PAPERS

CARILLON WATER-POWER

On the motion of Mr. DESLAURIERS:

For a copy of all letters, telegrams, correspondence and other documents in the possession of the government or any department of the government, regarding the development of the water-power at Carillon and permission to sell such power to the United States.

Right Hon. Mr. MACKENZIE KING: I suggest that this motion be allowed to stand until the minister in charge of the department concerned has had an opportunity of seeing it, and until the mover also is here.

Motion stands.

PULPWOOD COMMISSION

On the motion of Hon. Mr. STEVENS:

For a copy of all evidence or statements made before the Royal Pulpwood Commission by Mr. Piché and other witnesses, members or officers of the government of Quebec.

Hon. J. A. ROBB: I would like to direct the attention of my hon. friend to the fact that the Pulpwood Commission have not yet reported, and I think he will appreciate that this should not be brought down until the commission has reported. I am told that Mr. Piché is in the employ of the government of Quebec, and that certain part of his evidence was given to the commission in confidence. I would rather consult with the commission before allowing this motion to pass, if my hon. friend would allow it to stand.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): In that connection, I am informed that the commission upon request has given copies of evidence already adduced before the commission, and as to any of it, I do not say that the commission would be bound to until it reports, but I believe it is. As to the minister's suggestion, that some of the evidence is confidential, I would ask him if the commission had power under the order in council appointing it to take evidence of a confidential character?

Mr. ROBB: I think the question of my right hon. friend is quite fair, and that is why I am asking that this motion be allowed to stand until I have had an opportunity of

consulting the commission, because I have had information similar to that given by my right hon. friend.

Motion stands.

CANADIAN NATIONAL RAILWAYS—FREIGHT

On the motion of Mr. MacLAREN:

For a return showing (a) the number of tons of freight handled by the Canadian National Railways in and out of Portland during 1922 and also 1923; (b) the number of tons of freight handled by the same railway company during the same years in and out of St. John, New Brunswick, and in and out of Halifax; (c) the number of tons of freight handled by the Canadian Pacific Railway during the same years in and out of St. John, New Brunswick.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I think this might perhaps be allowed to stand until the Minister of Railways is here to say a word in reference to it.

Motion stands.

CANADIAN NATIONAL RAILWAYS—PURCHASE OF PROPERTIES

On the motion of Mr. CHAPLIN:

For a copy of all letters, papers, reports and other documents relating to the purchase of railway ties by the Canadian National Railways or any of its officials, including correspondence with the firm or firms from which the said ties were purchased, reports on the price or prices of same, and also returns and vouchers showing the cost of all creosoting plants either under construction or completed by the Canadian National Railways, during the year 1923.

Right Hon. W. L. MACKENZIE KING (Prime Minister) I would ask that this motion and the following one, be permitted to stand until the Minister of Railways is again in the House.

Motions stands.

CANADIAN NATIONAL RAILWAYS—SALE OF PROPERTIES

On the motion of Sir HENRY DRAYTON:

For a return showing all properties sold by the Canadian National System or any company incorporated therein or operated thereby during the years 1922 and 1923, and showing the dates of such sales, the names and addresses of purchasers and the consideration paid in each case.

Sir HENRY DRAYTON: Would there be any possible objection to this motion standing in my name, and referred to by the Prime Minister, passing? It is within the declared policy of the Minister of Railways in the House, and is just simply finding out what is going on.

Mr. MACKENZIE KING: I do not think the Minister of Railways is likely to object at all to giving the information, but unfortunately he has been confined to his home for the last two or three days and has not seen the motion.

Motion stands.

CANADIAN NATIONAL RAILWAYS—OFFICIALS

On the motion of Mr. DOUCET:

For a return showing the names of all officials of the Canadian National Railway System, inclusive of superintendents and officials or special employees drawing salaries higher than superintendents, together with the salary of each.

Mr. MACKENZIE KING: I would ask that this motion stand for the same reason.

Motion stands.

VALUE OF FARM PRODUCTS

Mr. STANSELL:

For a return showing: (a) the value of the production in Canada for the latest year for which returns are available of wheat, meat, butter, eggs, milk, hay, cheese, fruit, maple syrup, oats, barley, potatoes and other vegetables; (b) the estimated value of these products consumed at home during the same year, and (c) the value of these products exported during the same year.

MILITIA DEPARTMENT—PURCHASE OF PROPERTY

Mr. THURSTON:

For a return showing a list of the properties purchased by or for the Militia Department during the years 1914 to 1921 inclusive, showing in each case from whom purchased, location, price, and for what purpose; also a list of any of these properties which have been sold, showing the price received for same. Also showing revenue received from any of the above properties, the amount in each case and from whom received.

CANADIAN CUSTOMS OFFICE AT NEW YORK

Hon. Mr. STEVENS:

For a copy of order in council providing for the appointment of a Canadian Customs Officer at New York for supervision of Canadian goods shipped from Canada via New York to Canadian points on the Pacific; also, copy of all correspondence, telegrams and other documents, in reference to the matter since the passing of the said order in council.

GOVERNMENT PUBLICATIONS

Mr. CHARTERS:

For a return showing a list of all publications, blue books, reports, etc., issued in 1923 by each department of the government or otherwise, at the expense of the country, stating in respect of each publication (a) title; (b) whether single issue or issued weekly, monthly or at what other periods; (c) approximate circulation; (d) the subject or subjects covered, unless same clearly indicated by title; (e) approximate annual cost of printing and paper.

INCOME TAX

Mr. WILSON:

For a return showing (a) the total amount of income tax collected in each province during each year since the tax has been collected, and (b) the total amount of income tax paid by farmers in each of the provinces during these years.

BUSINESS PROFITS TAX

Mr. WILSON:

For a return showing the total amount collected under the Business Profits tax in the various provinces during each of the years since the tax was introduced.

CANADIAN NATIONAL RAILWAYS—HOTELS

Mr. WILSON:

For a return showing a statement of the financial operations of the various hotels operated by the Canadian National Railways during 1923.

DOMINION CANNERS, LIMITED

Mr. WALLACE:

For a copy of all contracts made or entered into between the government of Canada or any department thereof or any person or persons acting for or on behalf of the government or any department thereof and the Dominion Canners, Limited, of Hamilton and Simcoe, Ontario, at any time since the 1st of August, 1914, and the 1st of August, 1919, and of all reports, letters, correspondence and other documents in the possession or under the control of the government, relating to or having any bearing upon any dealings, negotiations, contracts or business transactions of any kind whatsoever between the government and the Dominion Canners, Limited, or any person or persons acting on behalf of said company, and especially, copies of reports made to the government or any department thereof, by the Milton Hersey Company, Limited, Montreal, R. R. McCall, Esq., government inspector, Simcoe, Ontario, and H. H. Holland, government supervising inspector, in reference to, or having any bearing upon contracts, dealings and transactions between the government and the Dominion Canners, Limited, during the period hereinbefore mentioned, and also of all reports made to the government as aforesaid by any commission or commissions or any person or persons whatsoever appointed or authorized by the government to inquire into and report upon the dealings, transactions, and contracts between the government and the Dominion Canners, Limited, or any person or persons acting on their behalf during the period from the 1st of August, 1914, and the 1st of August, 1919.

NORTHWEST TERRITORIES BRANCH OFFICIALS

Mr. BLACK (Yukon):

For a return showing (a) the number of officials employed at Ottawa in the government of Northwest Territories Branch of the Department of the Interior; (b) the official classification of each of such officials; (c) the aggregate salaries paid said officials; (d) the same information as to officials employed at Ottawa in the Mining Lands and Yukon Branch of the Department of the Interior.

CANADIAN BANK NOTE COMPANY, LIMITED

Mr. IRVINE:

For a copy of all contracts and agreements entered into by the Canadian government or any department thereof with the American Bank Note Company, Limited, now the Canadian Bank Note Company, Limited, carrying on business in the city of Ottawa.

PICTOU—MAGDALEN ISLANDS SERVICE

Hon. Mr. STEVENS:

For a copy of all subsidy contracts between the government and any or all contractors for steamship service between Pictou, Souris, Prince Edward Island and Magdalen Island, during the years 1910 to 1921.

[Mr. Wilson.]

Hon. Mr. STEVENS:

For a copy of all correspondence, telegrams, letters and other documents, since the 1st of January, 1922, passing between the Honourable Minister of Trade and Commerce, or any other minister of the government, or any official of the Department of Trade and Commerce, and the Magdalen Island Transport Limited, William Fraser of Pictou, the Lovat Steamship Company, Limited, the Eastern Securities Company, Limited, of Halifax; Messrs. Bow, McLaughlin and Company, Limited, of Paisley, Scotland, having reference to a steamship service subsidy between Pictou, Souris, Prince Edward Island and Magdalen Islands; also copy of alleged contract between said William Fraser and the government covering a subsidy of $50,000 payable annually for ten years.

ST. MALO WORKSHOPS INVESTIGATION

Mr. PARENT:

For a copy of the evidence taken by Mr. Henry at the inquiry held during the year 1923, regarding the management of the workshops of St. Malo, in the city of Quebec; also for a copy of the report made and presented by the commissioner in charge of the inquiry.

SALES OF SHIPS BY GOVERNMENT

Mr. MARTELL:

For a return showing the names or numbers of all ships or boats of every class and description, whether naval or merchant or fishing craft, which were sold by the government of Canada or any department thereof, or by any commission acting in behalf of the government, or under the authority of the parliament of Canada since the signing of the Armistice, showing: (a) The prices paid for said ships, vessels or boats on their purchase by the Canadian Authorities, and also the price received for each when sold; (b) the number of ships, vessels or boats on hand which the government of Canada or any department thereof, or any commission acting under the authority of the government or parliament of Canada, have for sale, with their names and numbers and showing where they are at present; (c) the contract price to be paid to the government of Canada, or any department thereof, as the purchase price of any ship, vessel or boat sold as hereinbefore referred to, and how the said payments were made, and also the outstanding sums due on payment, if any, and from whom, the said return to show all purchasers of any and all of the hereinbefore mentioned ships, vessels and boats, and their addresses; (d) all other details in anywise relating or appertaining to the foregoing.

CIVIL SERVICE SUPERANNUATION

Hon. J. A. ROBB (Acting Minister of Finance) moved that the House go into committee at the next sitting to consider the following proposed resolution:

Resolved, That it is expedient to bring in a measure to provide for the superannuation of civil servants, to provide for contributions by civil servants to the Consolidated Revenue Fund, to provide for payment out of the Consolidated Revenue Fund to civil servants and to the widows and children of deceased civil servants of superannuation allowances or gratuities, and to provide for the making of regulations by the Governor in Council to give effect to the terms of the said measure.

He said: His Excellency the Governor General, having been made acquainted with

the subject matter of this resolution, recommends it to the favourable consideration of the House.

Motion agreed to.

BUDGET ON THURSDAY

On the Orders of the Day.

Sir HENRY DRAYTON: May I ask the acting Minister of Finance if he can yet state on what day the budget is to be brought down?

Mr. ROBB: I am now able to say to my genial friend that I hope on Thursday of this week to deliver the budget.

AUDIT BOARD AND CIVIL SERVICE COMMISSION

On the Orders of the Day:

Mr. JOS T. SHAW (West Calgary): I should like to ask the Prime Minister if there is any truth in the report appearing in the newspapers that the Audit Board is failing to co-operate with the Civil Service Commission and the deputy ministers in the matter of salary revision of the civil service, and if such is the case what is the reason?

Mr. MACKENZIE KING: I am not aware of any foundation for the rumour to which my hon. friend has referred.

INDUSTRIAL AND INTERNATIONAL RELATIONS

On the Orders of the Day:

Mr. J. S. WOODSWORTH (Centre Winnipeg): I notice that on Friday last the personnel of the newly appointed committee on industrial and international relations was announced. It seems to me rather strange that our little group in this corner of the chamber, that is quite interested in industrial affairs, should have been entirely overlooked when that committee was chosen, especially in view of the fact that the Prime Minister was good enough to accept a resolution which I put forward and to enlarge the scope of its work so as to include not only industrial relations but international affairs. In view of our particular interest in these matters it would seem to be only fair that we in this corner of the chamber should have some representation at least on that particular committee.

Mr. MACKENZIE KING: I must confess that I am somewhat surprised to learn, and for the first time, that my hon. friend's name is not on the list. I certainly think it should be, and I will take immediate steps to see that the hon. gentleman's name is added to the committee or substituted for that of some other hon. member on the list. The omission of my hon. friend's name would appear to have been an oversight.

SUPPLY

DEPARTMENT OF THE INTERIOR

The House in Committee of Supply, Mr. Gordon in the chair.

Department of the Interior—Scientific institutions—Expenses connected with the Dominion Observatory Ottawa, $50,000.

Expenses connected with the Dominion Astrophysical Observatory at Victoria, B.C., $18,500.

Mr. SPENCER: Would the minister explain the particulars of these votes?

Hon. CHARLES STEWART (Minister of the Interior): The scientific institutions referred to are the observatories both in Ottawa and in Victoria. They carry on astrophysical and astronomical research work. That is about the extent of the explanation that I can give, except to present a list of the names of the men who are engaged in the work, compiling data for scientific purposes, as well as adjusting the time, taken from observations of the sun, which is now practically the universal time throughout Canada. I confess that as a layman I find it rather difficult to enter into any detailed description of the work carried on at these two institutions.

Mr. SPENCER: I notice there is a decrease in the vote for the Ottawa Observatory, but none in the case of the institution at Victoria.

Mr. STEWART (Argenteuil): That is explained by the nature of the work under way in British Columbia. It was felt that to get the full benefit of the investigations which Dr. Plaskett is carrying on at Victoria some further outlay for an addition to the building and the provision of supplies was necessary.

Mr. McQUARRIE: Can we get some details as to this expenditure at Victoria?

Mr. STEWART (Argenteuil): The service under this head for which money is to be expended is as follows:

Astronomical and research work	$11,200
Salaries	31,755
General Expenses	7,045
	$50,000

The details of each item are as follows:

Position Astronomy (Meridian Circle)—	
Repairs and supplies	$ 200
Astrophysics—	
Material, optical parts, etc. for instruments	500
Repairs and supplies	300

Geographic Positions—	
Materials for piers, line connections, instrument repairs, etc..	600
Latitude and longitude determinations..	1,000
Gravity Survey—	
Materials for piers, repairs and supplies.. ..	500
Field work and expenses..	1,800
Magnetic Survey—	
Materials, instruments, repairs and supplies..	500
Field expenses, guides, etc..	2,000
Seismology—	
Photographic sheets, repairs and supplies for Ottawa, Halifax, Saskatoon and Chebucto.	600
Solar Physics—	
Materials, repairs and supplies..	600
Stellar Photometry—	
Materials, repairs and supplies..	300
Time service—	
Apparatus and supplies, repairs and maintenance..	600
Wireless Equipment—	
Apparatus, repairs and supplies..	800
Library—	
Books, subscriptions to publications, binding, etc..	900
Total..	$11,200

Then we have the salaries of Messrs. Hodgson, Henroteau, McClenahan, Henderson, Dier, Madill, Sprayson, Walker, O'Connor, Shore, Williams, Dolan, Dickson, Hamel, Hackett, Belanger, Assistant Astronomer, seasonal work, Engineering clerk, Editorial assistant and Assistant astronomer.

Mr. McQUARRIE: There is a difference of $8,420, reduction apparently on the first item. The last item is the same. How is that?

Mr. STEWART (Argenteuil): The observatory of British Columbia is exactly the same, and we were able to make a slight cut here.

Mr. McQUARRIE: What has been dispensed with? Where is the cut?

Mr. STEWART (Argenteuil): Largely on supplies. Our staff is the same. We do not require the same amount of supplies as we did formerly.

Mr. McQUARRIE: Can we have the details of that?

Mr. STEWART (Argenteuil): I cannot give my hon. friend the cut. It is taken off the supplies. We allow the same amount as last year for Victoria, but in the case of Ottawa it is a cut all along the line of small amounts out of supplies, not off the salary.

Mr. McQUARRIE: Is it the general supplies?

Mr. STEWART (Argenteuil): Yes.

Mr. McQUARRIE: Then there is this difference between the amount of supplies purchased last year and the amount proposed to be purchased this year. Was there an unusual supply purchased last year, or just the ordinary amount?

Mr. STEWART (Argenteuil): I cannot say what the difference would be between last year and the year before.

Mr. MEIGHEN: This vote used to run about $30,000 a year, but I observe that in 1922 it took a sudden increase, and the increase continued, and last year was the highest $58,000. Is the sudden increase for 1922 estimate due to the installation of the observatory at Victoria? If not, why can the amount not be brought back to the original average of about $30,000?

Mr. STEWART (Argenteuil): I cannot answer that question, I fear. I do not know if there was any increase. My hon. friend has asked why we should not go back to the original vote now that the observatory is established at Victoria. There was no appreciable drop, because the work at Victoria—

Mr. MEIGHEN: My hon. friend missed my point. When was the Victoria observatory established? When was the first increase in the vote due to the establishment of that observatory?

Mr. STEWART (Argenteuil): In 1918.

Mr. MEIGHEN: Then, long after 1918, for example in 1921, the estimate was $31,000, and then there was an estimate of, I think, $40,000 odd for the following year, or perhaps $50,000, and last year $58,000. What I do not understand is why we cannot get back to the estimate that we had even after the Victoria observatory was built?

Mr. STEWART (Argenteuil): I was not aware that there was any increase. I have not looked into the estimates of 1921.

Mr. MEIGHEN: I have them here.

Mr. CARROLL: Why was this observatory instituted at Victoria, instead of some other part of Canada? What function did it perform there?

Mr. STEWART (Argenteuil): I cannot answer my hon. friend in regard to that. That was established before my time.

Mr. MEIGHEN: You can see better from Victoria, I believe, than from any other part of Canada for observatory purposes. I believe for every other purpose you can see pretty well there.

Mr. McQUARRIE: Will the minister explain how they can run the observatory at Victoria for $18,500 when it takes some $50,000 to run the observatory at Ottawa?

Mr. STEWART (Argenteuil): I think that would be very easily answered. It is because they do not attempt anything like the amount of work at Victoria that is being done at Ottawa.

Mr. McQUARRIE: Can the minister explain it any more in detail, I would like to find out the difference. As I understand it, in Victoria they have one of the largest telescopes in the world. They are doing better work and getting more satisfactory results than are obtained almost anywhere on this continent. If the object of the observatory is to look at the stars, and you have the largest telescope in Victoria, why are the results there not to be compared with the results here, and why should the observatory at Ottawa cost so much money?

Mr. STEWART (Argenteuil): The hon. member is probably quite correct. the best telescope is undoubtedly in the coast, and perhaps the atmospheric conditions lend themselves more acceptably to observation out there. My hon. friend must remember that telescopic observation is not the only work that is being carried on at Ottawa. That is being carried on as well, true not with as strong an instrument, but they are carrying on a great many other scientific observations at Ottawa.

Mr. McQUARRIE: That is what I was asking.

Mr. STEWART (Argenteuil): Namely photographing sun spots with very intricate instruments.

Mr. McQUARRIE: That is done with a telescope.

Mr. STEWART (Argenteuil): No.

Mr. McQUARRIE: How is it done?

Mr. STEWART (Argenteuil): Scientifically I cannot explain it. It is done with a telescope, but not the kind of telescope in use at Victoria or Vancouver.

Mr. McQUARRIE: They are making photographs out there?

Mr. STEWART (Argenteuil): Yes.

Mr. McQUARRIE: Playing with the sun spots all the time.

Mr. STEWART (Argenteuil): If you want all the scientific information, I am afraid you will hardly get it from me. I do not pretend to be a scientist, but I know they are carrying on a great deal more scientific work, at the parent institution at Ottawa than at Victoria. They are only making a start at Victoria, and undoubtedly, if further work is to be undertaken, a great deal more money will require to be spent there. There is no question about the value of the work Dr. Plaskett is carrying on. Dr. Klotz established in Ottawa instruments for measuring earthquakes. The locality of these earthquakes can be measured almost within a few miles. They have numberless instruments for various scientific purposes, and men competent to handle them. Naturally you will have a greater expense at Ottawa than at Victoria.

Mr. McQUARRIE: There is a seismograph at Victoria?

Mr. STEWART (Argenteuil): There is a small one. We have a very accurate one in Ottawa. Indeed, I think we had the most accurate information registered at Ottawa in regard to the earthquakes in Japan.

Mr. McQUARRIE: That would not make up this extra amount.

Mr. STEWART (Argenteuil): I do not make that claim for a moment. I did not make that assertion.

Mr. McQUARRIE: The information we have from the minister is certainly very general and he must have some further details. So far, we have the photographing of sun spots and the measuring of earthquakes. Those two operating will not make up this difference.

Mr. STEWART (Argenteuil): I would not say that they would.

Mr. McQUARRIE: I think we are entitled to some further information.

Mr. MEIGHEN: The minister may not know very much about the scientific phase of this matter, but I want to impress upon him the financial phase. In 1918-19, the estimate for this item was $25,000; in 1919-20; $31,000; in 1920-21, $36,000; in 1921-22, $50,715; then the minister's estimate for last year was $58,000, and his estimate for this year is $55,000. The increase, it will be seen, took place some considerable time after the Victoria Observatory was established. I know good work is being done, that is if you describe good work as excellent work from the scientific standpoint. I do not know any other branch of the Interior de-

4 p.m.

partment which contains more highly technical men and men more devoted to their task than does the observatory. Some of the best mathematicians of our country are there. At least when Dr. Klotz was head, the enthusiasm of the branch knew no bounds; it certainly would have known no financial bound if he had had his way. What I want to impress upon the minister is this, that, while we must, I think, maintain observatories and do certain work that is supposed to be one of the functions of nationhood, and, while I do not think it would do for Canada to be without such an institution, nevertheless, the highest scientific phases are really for our universities and they would better be done there. I would be sorry to see an extension of the government's functions into all these scientific fields, building them up to an elaborate degree. The minister's face should be turned the other way, and we ought to try to get back to a $30,000 estimate in this matter. We cannot do that in one year, but I do not think the minister should ask parliament for any more than what he asked for the year before last. Let him take off last year's increase and go back to the $50,000 estimate. That would be a good start. It is not that I decry the work, I would like to encourage it if I could; but if we take the line of economy, undoubtedly we ought to keep to that line in this case.

Mr. McQUARRIE: Is it proposed to reduce the staff at all?

Mr. STEWART (Argenteuil): We are pressing very hard for reductions all round. As regards scientific institutions of this character, the work of which is undoubtedly very valuable, it is hard to tell just how far we should cut this service. A layman, who may be more familiar with other services, can form a better judgment as to the real necessities of the country in connection with them. While we are all agreed as to the real necessity of this for the country, it is doubtful how far the work should go; but the government is willing, in this and every other expenditure, to cut them as far as it is possible to do so without seriously interfering with the services.

Mr. HOCKEN: There is no reduction in the staff.

Mr. STEWART (Argenteuil): Not that I am aware of.

Mr. HOCKEN: Would it not be possible to reduce the staff?

[Mr. Meighen.]

Mr. STEWART (Argenteuil): There are a number who are due for retirement. Dr. Klotz died just recently.

Mr. HOCKEN: Has anybody been put in his place?

Mr. STEWART (Argenteuil): Not yet.

Mr. HOCKEN: Is it intended to do so?

Mr. STEWART (Argenteuil): Yes. There must be a director.

Mr. HOCKEN: Could someone not be promoted?

Mr. STEWART (Argenteuil): Yes. It is not the intention to increase any staff where we can get along without doing so. Where deaths or superannuations occur, vacancies will be filled from positions below them, if at all possible.

Mr. HOCKEN: And then some person appointed below to fill that vacancy?

Mr. STEWART (Argenteuil): Yes.

Mr. HOCKEN: Then, is that not a position that should not be filled, if it is intended to reduce the staff wherever possible?

Mr. STEWART (Argenteuil): There would be a reduction of one. There must be a director to take the place of Dr. Klotz, but that would be a promotion.

Sir HENRY DRAYTON: I observe that in 1921 there was a vote of $10,200 for the Victoria office. In 1921, supplies were as high, if not higher in some instances, than they are now, and the cost of living was much about the same, so that salaries should be about the same. We have had an increase of a little over eighty per cent in running that one institution in that comparatively short time. The cost has increased from $10,200 in the last three years to $18,500. Is that an increase in number of men on the staff, new machinery, new instruments—or what?

Mr. STEWART (Argenteuil): There have been two additional appointments—an assistant astronomer to Dr. Plaskett at $1,800, and an instrument maker foreman, at $1,860. Those men are also granted house allowances as the observatory is not yet completed.

Sir HENRY DRAYTON: Do I understand that the appointment of those two men means an additional $8,300?

Mr. STEWART (Argenteuil): No.

Sir HENRY DRAYTON: How is the increase accounted for? I have only two extra men so far.

Mr. STEWART (Argenteuil): I cannot tell my hon. friend what the increased expenses would be. But I do not think the expenses are high. They include instruments, $1,800; photographic supplies, $500; machine and instrument work, $600; hardware and chemicals, $400: automobile maintenance, $500; postage, freight and telephone, $600; contingencies, $400. I understand that these men have to live in Victoria, and have to travel some considerable distance between the observatory and the city.

Sir HENRY DRAYTON: Does the minister mean the two recent appointees?

Mr. STEWART (Argenteuil): No, the whole staff—I am wrong. Dr. Plaskett lives there.

Mr. McTAGGART: To what extent do unfavourable climatic conditions interfere with the work of the observatory at Victoria?

Mr. STEWART (Argenteuil): I cannot say that unfavourable climatic conditions prevail at Victoria for work of this character.

Mr. TOLMIE: Mr. Chairman, I might say that after a very careful examination of all suggested points in Canada, this site, about eight miles out from Victoria, was selected on account of the clearness of the atmosphere and for other reasons favourable to this particular kind of work.

Mr. McTAGGART: I spent a couple of winter months in Victoria three years ago, and during that period I am quite certain there was no time when observations could be carried out. It is my impression that throughout the winter months it would be very difficult to carry on observatory work there.

Mr. TOLMIE: The weather has been ideal ever since.

Mr. MacLAREN: As vacancies occur in the natural order of things does the minister propose to diminish the staff by not making further appointments?

Mr. STEWART (Argenteuil): Yes, wherever possible there will not be additions made; rather reductions.

Sir HENRY DRAYTON: What was the amount spent last year?

Mr. STEWART (Argenteuil): When I first took charge of the department I reduced the vote because I had not a complete return, and I found myself short at the end of the year. If we have a few hundred dollars over it will not be spent. We are doing our best to carry on with the minimum expenditure. I think if any expansion is required anywhere it should be at Victoria where this new observatory has been started. I am not proposing any expansion, but I am suggesting that we need the $18,000 to carry on this year.

Sir HENRY DRAYTON: Victoria is some distance away and perhaps my hon. friend's figures in relation to the observatory there are not quite complete. But they must be complete as to Ottawa, as we now close our books sharply on the 31st of March. What were the expenses at Ottawa last year?

Mr. STEWART (Argenteuil): We have not these up to date. As my hon. friend knows, it takes considerable time to close the books of the department. As my hon. friend with his wide experience well knows, large amounts come in just prior to the closing of the fiscal year, and it is rather difficult to make comparisons when you have not the full year's work before you.

Sir HENRY DRAYTON: But I think my hon. friend will recollect that either last session or the session before we changed the law in connection with the closing of the books. We had had an open period which allowed for adjustments and the like, and it was found that our officials took advantage of this leeway before their books were made up. Therefore the House decided that the books should be closed as of the 31st March. I should think we ought to know what we paid in Ottawa up to the end of the fiscal year.

Mr. STEWART (Argenteuil): I think my hon. friend is quite correct. As to various changes, transfers and so on, the books are not officially closed during the first thirty days of the new fiscal year, but they are closed as to the issuing of cheques.

Mr. GARDINER: Does this vote include all the salaries of the observatory at Ottawa?

Mr. STEWART (Argenteuil): Yes.

Mr. GARDINER: At page 76 of the Estimates there are two votes, one for a director at the Astronomical observatory, $5,100, and another for a director at the Astrophysical observatory, $4,800. Is there any relation between the two?

Mr. STEWART (Argenteuil): There are a number of officials—I gave the list—who are paid out of this vote of $31,000; but there are several in the Civil Government vote as well. I am trying to get the exact number.

Mr. GARDINER: Would it not be comparatively easy to put all these under one vote, so we would know exactly what these activities are costing us?

Sir HENRY DRAYTON: Hear, hear.

Mr. STEWART (Argenteuil): My hon. friend raised that question last year. I agreed with him then, and I still agree with him. But the Department of the Interior is an old department. I cannot discover that there was very much increase required for war activities, but there has been a considerable increase since 1910 and 1911. I have been endeavouring to reorganize the service. I have not added the names of officers who are known to be permanent to the civil list in the hope that I may be able to reduce them by the passing of a Superannuation Act and an amalgamation of the services. When that is done, I agree, all these names should be entered in the civil list under one heading.

Mr. MEIGHEN: Perhaps the minister might recite the record of his reorganization up to date.

Mr. STEWART (Argenteuil): I would prefer to deal with that as we go along. There has been an endeavour to make some change in the Topographical surveys, but we have been working most toward reorganization in the Western Lands branch, and I will deal with that as we come to it.

Item agreed to.

Scientific Institutions—Topographical and general surveys, traverse of northern rivers and lakes, classification of lands for the settlement and development of Canada, plotting and printing of plans, etc., $470,000.

Sir HENRY DRAYTON: Will the minister tell us how near the North Pole we are getting now in connection with these surveys? How many surveyed areas have we without the slightest occupation? How many have we which would give room for a population of a little more than double that which we now have?

Mr. STEWART (Argenteuil): About 180,000,000 acres, all told, have been subdivided.

Sir HENRY DRAYTON: How much of that is occupied now?

Mr. STEWART (Argenteuil): About 5,000,000 acres in Saskatchewan, the same amount in Alberta, and about 3,000,000 acres in Manitoba. The work is now base line and boundary work; we are not carrying on subdivision. My hon. friend wants to know if we are getting to the North Pole?

Sir HENRY DRAYTON: How near the North Pole are we getting? It will be necessary to run right up there some day if this vote is to be kept up.

Mr. STEWART (Argenteuil): There has been a very considerable reduction in survey work. My hon. friend attacked this vote very vigorously two years ago and suggested that an amalgamation of the branches take place, the whole of these services being placed under one head. When I came into office an attempt was being made at amalgamation. Topographical survey work is being carried on in the departments of Defence, Mines and Interior, and we have a surveyor in the Department of Indian Affairs. I am thoroughly in accord with the idea of amalgamation. I was not able to bring about complete amalgamation, but we did succeed in getting a board to sit annually on the proposed survey work in order that there should be no overlapping. Geological work has to be preceded by topographical surveys, and geological parties are using topographical information obtained by the Department of the Interior as well as by parties from their own branches and the results of work done in the various provinces. In 1919 a blanketing-in order was made which brought into the Civil Service all surveyors who had formerly been on day's pay. There have been reductions in the staff from time to time. The classification of land for settlement is a fairly important part of the work, and in each of the land offices the prospective settler may obtain fairly accurate information with regard to the kind of land in the quarter sections which are open for homestead. We will confine that work to our Crown lands and will not extend it to privately owned lands, because the latter may very well be undertaken by some other organization than the Topographical Surveys branch. As to settlement in the north, to which my hon. friend refers, I may say that the development in that section demands that at least one or two lines be run into the north country to which you can subsequently tie on. A case in point is that of Fort Smith, and there is the fact of the discovery of iron on Great Slave lake. It is not necessary in such cases to have subdivision, but it is necessary to have lines to which you can tie on when subdivision is necessary.

Sir HENRY DRAYTON: As my hon. friend says, two years ago we tried to get co-ordination, tried to do something in the way of economy, but to-day we are just exactly where we were then.

Mr. STEWART (Argenteuil): No my hon. friend will pardon me; there has been a very considerable reduction.

Sir HENRY DRAYTON: Oh, there is a slight reduction, but the general principle is the same. This is the place not for a pruning knife, but for an axe. Apparently the country is always spreading.

Mr. STEWART (Argenteuil): Of course it is.

Sir HENRY DRAYTON: There always seems to be some new reason for making changes in connection with lines. Will the minister tell us exactly what has been done this last year? How many new lines were run? How far north have our lines been placed? Let us get some idea of when this thing is going to stop.

Mr. STEWART (Argenteuil): We are down to Fort McPherson, so far as the traversing of the river is concerned. That is within the Arctic circle.

Mr. MEIGHEN: Will the minister tell us what head this vote came under prior to his regime?

Mr. STEWART (Argenteuil): Under Lands and Parks, I am told.

Mr. MEIGHEN: It is under Lands and Parks yet. There is no way of comparing them. I find in the estimates for 1921-1922 no vote under Topographical Surveys at all, but for 1922-1923, the minister asked for $570,000; the next year, $520,000, and this year $470,000. Now, the only vote I can see to which it could be comparable at all prior to that is the Geological Survey vote.

Mr. STEWART (Argenteuil): If I give the amounts yearly it will probably be a guide for my hon. friend. I am told that this vote was under Lands and Parks previously, but the vote itself is in a lump sum annually. For 1913-1914 the vote was $1,051,685.78.

Mr. MEIGHEN: That is for the whole of Lands and Parks?

Mr. STEWART (Argenteuil): No; surveys.

Mr. MEIGHEN: What surveys are included in that?

Mr. STEWART (Argenteuil): Topographical alone. The figures are as follows:

Year	
1919-20..	$558,080 31
1920-21..	685,026 45
1921-22..	591,353 90
1922-23..	562,785 51

Mr. MEIGHEN: The minister must be giving us the money spent. He is not giving us the estimate.

Mr. STEWART (Argenteuil): No, that was the net expenditure.

Mr. MEIGHEN: The Dominion Lands and Parks vote is in one large item, but these figures the minister gives do not appear in it at all, nor any figures corresponding to the estimates.

Mr. STEWART (Argenteuil): My hon. friend must be mistaken. These figures have been kept intact; they are in one item. The change was made one year ago.

Mr. MEIGHEN: Two years ago. The minister made the change himself.

Mr. STEWART (Argenteuil): I am sure the items are the same for each year, that is, those we are discussing at the moment.

Mr. MILLAR: We have in this item a reduction, and in others increases. What is the general plan in making up an estimate? Does the staff suggest a reduction, or where does the suggestion for a reduction originate?

Mr. MEIGHEN: It originates here.

Mr. STEWART (Argenteuil): I am prepared to agree with the staff that this is very valuable work, but nevertheless I think a great portion of it could be delayed. I have always had that opinion, and I have tried to cut down annually on this vote. I think we can reduce this vote very much more next year. A number of these men will go; some of them have been transferred; we have tried to cut this vote down as fast as we could. We could turn all these men out, I suppose—use the axe, as was suggested by my hon. friend—and do nothing. But hon. gentlemen must realize that some of these surveys must be continued. My judgment is that we shall have to continue fifteen or twenty parties throughout the Dominion, at least, as long as we have the natural resources of the three prairie provinces. I do not think it is unreasonable to expect that we shall have to do that work. I have an estimate for the international boundary work. There was a great deal of fuss about it, and I have placed the estimate at what I think will be required annually to carry on that work. Probably I have cut it too low, because there is still some work to be done in that connection. My hon. friend from West York (Sir Henry Drayton) smiles, but I may tell him that these gentlemen were appointed under an international agreement. This huge stretch of territory along the international boundary from the Atlantic to the Pacific will require work to be done upon it annually. I do not mean that we will need a party of surveyors to do that work, but certainly some expenditure will be required. You will need expenditure on topographical surveys every year, but I think with from fifteen to

twenty parties we can do the necessary topographical work this year. They will not necessarily do the work to keep ahead of the geological work, which I consider very important, and I shall have something to say about the geological surveys when we reach that item. I am speaking now of the topographical surveys.

Sir HENRY DRAYTON: The Geodetic survey does practically the same thing, does it not?

Mr. STEWART (Argenteuil): It is different work, and very important work, as my hon. friend well knows. Simply because the country is surveyed and laid out in blocks, it does not follow that the work is completely done. There is a constant demand upon us for this sort of work. I should like my hon. friend to see the many requests from the provinces and other sources asking for this sort of work to be carried on that we turn down. There are problems arising now in western Canada, where owing to the drought, lake and slough levels have receded and troubles have arisen with respect to ownership. Surveys will have to be made in that connection. You will always have to have in Canada a reasonable number of parties in the field doing this work. But I frankly admit that the time has come when we can reduce, and we are reducing. I have reduced the vote this year by $50,000 as compared with last year, and I do not say that that is the limit of reduction. I think I can make a very great reduction next year.

My hon. friend has suggested that it is an easy matter to organize all these surveys under one head. I have not found it so easy, but I hope that we shall work to that end, and that we shall have this topographical work all under the control of one management. I am able to assure the committee that we have no over-lapping, and that we are not undertaking work except to a very limited degree that could be discontinued at the present moment.

Mr. MILLAR: The minister has not exactly answered my question. For the most part I was not joking at all. Do the men who are actually doing this work in the field, the surveyors, suggest economies? Have suggestions come from those in the outside service as to where economies could be practised? I suppose the suggestions sometimes come from the deputy minister, or do they always originate with the minister?

[Mr. C. A. Stewart.]

Mr. STEWART (Argenteuil): I think hon. members will agree that for anyone to suggest that this work is unnecessary would be hardly fair to this staff. There is no unnecessary work being done at the moment, not a particle. Perhaps we are too far ahead, and we can wait a while. But to suggest that there is work being done, or that work has been done, that is unnecessary is beside the mark altogether. There is nothing of the kind.

Mr. MILLAR: Applying my question to other votes, are there not times when there is unnecessary work being done?

Mr. STEWART (Argenteuil): In what way would my hon. friend suggest that any of this work was unnecessary? Surveying is not unnecessary work, it is very necessary work.

Mr. MILLAR: I say, applying it to other votes.

Mr. STEWART (Argenteuil): I am not going to discuss other votes. I am discussing the question of topographical surveys. I will discuss these other votes fully when we come to them, and be prepared to give my hon. friend information.

Mr. HOEY: Could the minister state how far these surveys have extended beyond the actual geological surveys in the prairie provinces, say in northern Manitoba? Does not the minister think this work, if it is going on at all should be confined to areas in which there are mineral resources? To make surveys of land for land settlement in the northern districts when we have hundreds of thousands of acres unsettled around the cities in the prairie territory seems to me to be almost absurd.

Mr. STEWART (Argenteuil): My hon. friend is quite correct, but I have just told the committee we are not doing that class of work, except in certain cases where surveys have to be re-run on account of a dispute of some sort arising with respect to definite boundaries. That is the only work of such a character needing to be done, and that only to a very limited degree. So far as regards the subdivision of agricultural land is concerned it has practically ceased. In the northern stretches of the territory we have to have some surveys, for example where oil discoveries and things of that kind are made.

Mr. HOEY: Is the Geological survey keeping up with this?

Mr. STEWART (Argenteuil): Not by any means.

Mr. HOEY: Why not reduce this until the Geological survey catches up?

Mr. STEWART (Argenteuil): That is what I have been endeavouring to do. It will be observed there has been a reduction of $50,000 in the vote for this year. It may be that we should only do such topographical work as is required to precede geological parties, but we are not confining the reduction to that. My object is to get the number of parties down to between fifteen and twenty. We now have twenty-four parties on this work and I assure the committee the work done in each case will be very useful.

Mr. McQUARRIE: Will the minister state in what provinces the work has to be done?

Mr. BROWN: How much of this vote is intended to take surveys into entirely new territory? How far do the meridian lines run, and the several base lines?

Mr. FAFARD: Last session, Mr. Chairman, a great deal of unmerited criticism was indulged in at the expense of the surveys branch. Of this criticism the most unmerited was directed at the topographical work carried on by that branch of the Dominion Lands department. In my humble opinion, no survey work carried on by any governmental body has a higher economic value than well executed topographical surveys. The amount of misinformation about our country and its resources is directly in proportion to our lack of topographical maps. We have had surveys at a greater cost per head of the population than in almost any other country, this being due to the division of authority between the Dominion and the provinces, and the lack of a properly coordinated scheme of surveys and map making based on scientific principles. At present the geological survey produces magnificent maps as a basis for geological and mineral investigations. Unfortunately their operations are too restricted to be at all adequate. The Department of National Defence is also making increasingly splendid maps which are even more valuable to the civil than to military authorities. The Topographical Surveys branch of the Interior department has been making maps of what was originally Dominion lands. But Dominion responsibility goes beyond Dominion lands, it extends to all the provinces, and Dominion aid towards mapping should be granted adequately to all of the provinces. The Dominion government has spent nearly thirty millions of dollars in the western provinces since 1900, part of this money being spent not on Dominion lands but on private property. I claim that other provinces have the right to their share of that expenditure. The western provinces have been treated fairly. There have been expended on geodetic surveys $871,581, on topographical surveys $15,717,524, and on base lines, meridian lines, township outlines, and section outlines $11,554,277. As far as I am concerned I see no reason why the money voted for topographical surveys should not be divided in proportion to the area of each province. At present I understand that the topographical surveys branch contemplates extending its work to Quebec and the Maritime provinces. That work is undoubtedly needed, and I would suggest to the minister that it should be undertaken after consulting with the provinces concerned. I would also suggest to the minister that the amount voted for geodetic surveys is not sufficient for provincial requirements. Splendid work is being done for the provinces at the present time, but money now spent in the extension of operation will save millions of dollars to the provinces in the years to come by providing the permanent framework for mapping, without which much other survey work would have to be repeated over and over again.

May I add for the information of the minister that the functions for each branch should be more definitely specified, and that a well qualified engineer or land surveyor should be attached to the deputy minister's office in a consulting capacity. This man would see that duplication and overlapping would not occur. I should be sorry if my remarks were considered as an attack upon the land surveyors of the Dominion. They have done their work fairly, and they are entitled to the congratulations of this House for what they have accomplished for the country. I am very sorry to see a decrease in these estimates when the government desires to carry out the development of our natural resources. I also wish to advise the minister that it would be a great mistake to dismiss any of these officials who are trained in practical work, and whose capacity and energy are not surpassed in any other country in the world.

Mr. McQUARRIE: I should like to receive an answer to the question I asked a few minutes ago.

Mr. STEWART (Argenteuil): We have seven parties on miscellaneous surveys in Manitoba, Saskatchewan, Alberta and British Columbia, the work being fairly evenly divided between the provinces. On the interprovincial boundary we have one party at

work. In the three prairie provinces we have four parties at work on levelling. On topographical surveys we have eight parties. The expenditure for this work is divided as follows: Manitoba, $6,000; Saskatchewan, $9,000; Alberta, $6,000; Quebec, $9,000; and in the Maritime provinces, $18,000. On photo topographical surveys we have one party; classification of lands, four parties. In British Columbia the whole of the topographical surveys are carried on. Four parties are carrying on surveys on lands in Manitoba, Saskatchewan and Alberta, and in the control or exploratory traverse we have four parties working in Saskatchewan and Alberta, the Northwest territories and the Maritime provinces. Supervision and inspection costs us $2,000 in Manitoba, $2,000 in Saskatchewan and $3,000 in Alberta, and "unprovided for" we have appropriations for each province of a small amount. That means 29 parties all told.

In reply to my hon. friend from Lisgar (Mr. Brown), we have ceased projecting surveys. There is no work being done on the meridian and base line.

Mr. SHAW: The subject of surveys is undoubtedly a very important matter, but, as far as I can observe, in the estimates it has not been overlooked from a financial point of view. I notice in vote No. 97 there is provision for $35,000 for topographic surveys under National Defence department, which represents a reduction from last year of some $10,000. Just what the value of a survey of that character, as distinguished from a topographic survey is, I am sure I am at a loss to understand. Then we have vote No. 251, the one under consideration, $470,000; and we have the Geodetic survey, vote No. 252, which represents $275,000. Then I find Geological survey, item 268, representing an amount of $320,000. Then we have another variety of survey shown at page 56 of the estimates under Dominion lands and parks, as follows:

> For surveys and investigations of water and power resources, including the Dominion Hydrometric survey for the reclamation of lands by irrigation and drainage and for the administration of the Acts in connection therewith, and so forth, $547,000.

Now these surveys I take it, Mr. Chairman, are all necessarily inter-related, so that one is more or less dependent upon the other, and I certainly think that the minister should make a representation to his department to have this work in some way or other put under one head, who would be responsible for it, thereby I am sure lessening expense. I would suggest also that he should in addition impress upon his colleague of the National Defence department the necessity for eliminating that survey for militia purposes altogether. In my judgment, so far as I can observe, it is more or less a useless expenditure. It ought to be, it seems to me, a comparatively easy task to, shall I use the word, co-ordinate, this work? Surely it is not beyond the capacity of the officials of the Interior department to get together and prepare that work and relate it, so that a great deal of this expense, considerably over a million dollars, might be saved. If the officials of the Interior department and the officials of the other department are not able to do that, I would suggest that they should call in the services of the Civil Service Commission—and I am sure the minister would have no objection to that—and ask them to undertake the work of trying to make these various organizations work together, and eliminate, I am sure, a very large proportion of the expense involved in these services. It seems to me that it is in this direction that savings can be made. Economy does not consist in simply eliminating a certain percentage of employees here or there, it must be carried on in a scientific and proper manner. I certainly am disappointed that the vote this year for these various services represents such a substantial amount. It seems to me it should be substantially reduced. We can if necessary eliminate much survey work during the next two or three years at least, because after all what we all desire, and what the people of Canada demand, is the strictest possible economy.

Mr. STEWART (Argenteuil): I thought that I had made it quite clear to the committee that what my hon. friend was complaining about was exactly what we were doing; but what I did not make clear was that while we were not able to amalgamate the service under one department, yet we had a board representative of them all, and the work they undertake is discussed fully, and is allocated to the various departments. I will not argue that that is the best way of handling it. I would much rather have the topographical work under one general head, whether it be for the militia, whether it be in advance of geological work, or for whatever purpose it may be. But we have succeeded in co-ordinating the work to the extent that I can come to the House and say that there is no overlapping. For example, the work being done by the Defence department, which is largely, as I understand it, along the boundary line of Quebec, is being utilized by the Geological Survey; so that wherever geological work is done, and wherever topographical work is done,

care is being exercised not to have it overlap. I quite agree with the suggestion that we can reduce it, and we are making an honest effort to reduce it.

Mr. McTAGGART: Would the minister say whether the classification of lands suggested in this vote would extend to those Dominion lands for which entry has already been made; and, if not, whether any provision will be made for the reclassification of those abandoned lands?

Mr. STEWART (Argenteuil): I think my hon. friend has in mind that it would be better to survey some of the lands now occupied and classified, in order to, in many cases, move people off them; but we are not doing that class of work under this vote. We are rather doing the classification of the Crown lands in order that there may be full information in the Land Titles office or in the Dominion Lands office for the benefit of prospective settlers.

Mr. MEIGHEN: If the western lands were turned over to the provinces, of course there would be a great deal less survey work, eliminating many hundreds of thousands of dollars of expense each year.

Mr. STEWART (Argenteuil): I would not say so.

Mr. MEIGHEN: Subdivision work entirely. Of course we would do the survey work of these lands—that are under Dominion jurisdiction.

Mr. STEWART (Argenteuil): We are not doing the subdivisions.

Mr. MEIGHEN: But as to the rest of the work, we did not do much of that work in Ontario and in the provinces where the resources belong to those provinces. We would have to do militia work, if that were done at all. I was never much impressed with the wisdom of that militia work; but recalling how close we were two years ago to having the whole question solved,—the minister will remember when the edict of the Prime Minister went forth, even from the housetops, that a key had been found to the whole situation, verily the key of equality and justice; I wonder now, after two years, whatever has been opened with that key. Has the key been lost? Are we no further on?

Mr. STEWART (Argenteuil): I am very dense no doubt, but I do not follow the right hon. leader of the opposition.

Mr. MEIGHEN: I hope all that manifesto was not mere air. Can the minister give us a report of progress?

Mr. McBRIDE: The present government has cut this estimate almost in half in the last two years. Out our way a large number of people ask to have this work carried on. I think that under the terms of confederation, the Dominion has to carry on a certain amount of this work in the different provinces. Am I not correct?

Mr. STEWART (Argenteuil): Quite correct.

Mr. McBRIDE: I think this estimate is none too large.

Sir HENRY DRAYTON: During the last two years this matter has been challenged time and again. Surely the minister can show us what surveys have been made this last year for the sum of $520,000. How much better off are we now than we were before? What have we for the money? That, after all, is the best way of seeing whether there is any value in this work or not.

Mr. MICHAUD: I understand a survey was made last year on the Quebec side of the Baie des Chaleurs and, I presume, also on the New Brunswick side. That survey was made by an officer of the department, Mr. Pierce. At what particular place was the survey made?

Mr. STEWART (Argenteuil): I think that must be the geodetic survey. I should be glad if my hon. friend would ask that question when we come to the geodetic survey. There were surveyed last year townsites at Jasper and Waterton lake, Banff cemetery, coal lands at Luscar, timber berths in British Columbia, hay lands at Big Hay lake, reclamation lands at Waterhen lake and Sumas lake, agricultural lands withdrawn because of the Beaver Hills forest reserve, lots in the Northwest Territories at Resolution and McPherson.

Sir HENRY DRAYTON: My hon. friend quite understands that that list of names means nothing to him. We do not know what we have or what this is. He speaks of a townsite at Jasper. What is the acreage? How many lots are there? What is the demand for lots there? What is the cost?

Mr. STEWART (Argenteuil): I can speak offhand with respect to Jasper because I know the situation. There is a very considerable demand for lots on account of railway building there. The townsite was laid out.

Sir HENRY DRAYTON: What is the acreage and what is the number of lots?

Mr. STEWART (Argenteuil): I cannot give that. I think my hon. friend will realize that the services of the survey party were required to do that work. Waterton lake is in the same category. These are widely removed. Does my hon. friend expect me to come here with the number of lots surveyed and the number sold in a townsite, and to be able to give details of that character? Surely, my hon. friend is not so particular as that.

Sir HENRY DRAYTON: I think my hon. friend has been out in the West long enough to know that one of the curses of the whole of the West has been the subdividing of townships and the laying out of vacant lots for sale, real estate speculation instead of land occupation and use. I do not know why anyone should argue in favour of subdividing townsites at the present time.

Mr. STEWART (Argenteuil): Does my hon. friend believe that the townsite of Jasper in Jasper park is a subdivision in the sense that a townsite along a railway, on the prairie or otherwise, would be sub-
5 p.m. divided for the purpose of making gain? In the case of Jasper townsite, the prices of the lots are fixed by the government, and no lot is offered unless an individual is anxious to have it and to live on it. Would he suggest the same thing in connection with the Waterton lake townsite, which is in the same category? We are not surveying townsites for gain.

Sir HENRY DRAYTON: It is our property and we are subdividing it. I suppose we are subdividing it in order to sell it. It may be that that is a very reasonable little thing, done simply for the purpose of looking after a few sales—and they would be very few—that will be legitimately made.

Mr. STEWART (Argenteuil): No. My hon. friend will remember that the divisional point is fixed at Jasper, and that a considerable number of employees have moved there.

Sir HENRY DRAYTON: That may be. What is it costing to have the subdivision of Jasper?

Mr. STEWART (Argenteuil): It is costing the services of a survey party, probably five or six or seven thousand dollars. That is the average cost of a party for a season.

Sir HENRY DRAYTON: Shall we put down $5,000 as the cost of the survey of Jasper?

[Mr. C. A. Stewart.]

Mr. STEWART (Argenteuil): I do not know. The party would not be detailed all summer at Jasper.

Sir HENRY DRAYTON: I take it that my hon. friend cannot give any real information as to that. Topographical and general surveys,—that represents a class of work by itself. How much of this $470,000 is for topographical and general surveys?

Mr. STEWART (Argenteuil): General and miscellaneous, $23,450; topographical, $48,000; photo-topographical, $4,500.

Sir HENRY DRAYTON: What is the allowance for traverse of northern rivers and lakes?

Mr. STEWART (Argenteuil): $34,000.

Sir HENRY DRAYTON: How much for classification of lands for the settlement and development of Canada?

Mr. STEWART (Argenteuil): $20,000.

Sir HENRY DRAYTON: How much for plotting and printing of plans?

Mr. STEWART (Argenteuil): $13,600 for printing and stationery, and lithographing, $12,500.

Sir HENRY DRAYTON: If I have got my hon. friend down right he has accounted for $148,000 out of the vote of $470,000. That is right?

Mr. STEWART (Argenteuil): Yes.

Sir HENRY DRAYTON: Then the whole of the balance is behind the "etc."

Mr. STEWART (Argenteuil): There is nothing strange about it.

Sir HENRY DRAYTON: What is it, though?

Mr. STEWART (Argenteuil): We spent in Manitoba, $24,450; in Saskatchewan—

Sir HENRY DRAYTON: What for?

Mr. STEWART (Argenteuil): I beg my hon. friend's pardon. The salaries for the permanent staff amount to $170,260; office employees at Ottawa, $68,340; interprovincial boundary, $3,000; western levelling, $9,590; soils, $3,100; warehouse, $1,060—making a total of $255,350. Now, if my hon. friend will take the balance: head office printing and stationery, $13,600; purchase and repair of instruments, $7,000; lithographing, etc., $12,500; equipment, $8,000; western soils, $300; western warehouse, $300—he will get a total of $41,700.

Sir HENRY DRAYTON: Why does the minister ask for more than the total on his own showing?

Mr. STEWART (Argenteuil): Perhaps my hon. friend will check his first list. Here are details of that expenditure: Manitoba, $24,450; Saskatchewan, $40,500; Alberta, $44,500; British Columbia, $8,500; Quebec, $9,000; Maritime provinces, $26,000; Yukon territory, $3,000; Northwest territories, $10,000; Alberta and British Columbia boundary $7,000—making a total of $172,950.

Sir HENRY DRAYTON: That is a different calculation altogether; they cannot both be right.

Mr. STEWART (Argenteuil): I am giving my hon. friend the details. I answered the question in his first item.

Sir HENRY DRAYTON: Yes; then I asked for everything that "etc" covered. The hon. minister gave me that and said it made a total of $41,700. Now he has some other particulars.

Mr. STEWART (Argenteuil): No, I have given my hon. friend the exact figures making up that amount. Those figures which I have given to my hon. friend total $470,000.

Sir HENRY DRAYTON: I am afraid I cannot check the figures, nor do I think any member of this committee has been able to check them. However that may be, does the minister really think that any harm would follow if all the work for the traversing of northern rivers and lakes stopped this year?

Mr. STEWART (Argenteuil): Yes.

Sir HENRY DRAYTON: What?

Mr. STEWART (Argenteuil): Navigation has become a very important factor there.

Sir HENRY DRAYTON: Where?

Mr. STEWART (Argenteuil): On the Mackenzie river. My hon. friend knows that three transportation companies are doing business on that river.

Sir HENRY DRAYTON: What work is proposed to be done there now?

Mr. STEWART (Argenteuil): Simply traversing the river and doing the necessary work to make it reasonably safe.

Mr. HOEY: Does this apply to one river?

Mr. STEWART (Argenteuil): Part of the work is on the Great Slave lake, but it is all in contiguous territory. I am wrong. There is some work to be done at Le Pas, northern Manitoba, in the mining district.

Mr. MILLAR: Reference has been made to the disparity between the expenditures in the various provinces. In the case of Saskatchewan, can the minister tell us what part of the expenditure has been on lands forming part of the natural resources which have not been turned over to the province?

Mr. STEWART (Argenteuil): I think the only amount would be $5,500 for the re-establishment of monuments in the areas where they have been obliterated. The balance is all in the areas that are purely and simply Crown lands of the federal government.

Mr. MILLAR: Are we to understand that if the natural resources had been turned over to the province, the expenditure under this item would be only $5,000?

Mr. STEWART (Argenteuil): It would be $5,500.

Mr. GARLAND (Bow River): Mr. Chairman, the vote provides for classification of lands for settlement. I have seen some of the work and I think it is excellent. The information gained by this classification will be very useful if it ever gets to the right quarter; but it will be of very little value if buried in the archives of the department. What efforts are being made by the department to have the information printed on maps in the languages of the various countries from which the minister is soliciting settlers? For example, a Pole goes into an immigration office at Dantzig; he is told a great deal about this country; he wants to know from the agent just where he should settle; the agent paints a glowing picture, assisted by Canadian Pacific propaganda and other colonization propaganda, of the great opportunities for farming in Canada; but the man is not quite sure that things are as rosy as the agent paints them; thereupon the agent takes him over to the classification map and directs his attention to the nice colouring. But the Pole cannot be sure that everything is as pictured by the immigration agent, and we know that the latter is not always above suspicion. I suggest the language of the countries from which we expect immigrants be used on maps of this kind, when sent abroad.

I fully support the statements of the hon. member for West Calgary (Mr. Shaw). I think the expenditures on surveys in all the various departments is very close to a Teapot Dome scandal. Let me add a few more of these surveys that we have discovered in running through the estimates: Department of National Defence, topographical surveys, $35,000; then item 251—the one we are now considering—topographical surveys of the Depart-

ment of the Interior, $470,000; geodetic survey of Canada, item 252, $275,000; geological survey, item 268, $320,000; for surveys and investigations of water and power resources, page 56, $547,000; these sums total about $1,647,000. But in the moment that elapsed between questions and some explanations by the minister we found, on page 53, that Indians are taken care of in the way of surveys—$8,000 for Manitoba, Saskatchewan and Alberta, $52,250 for British Columbia and $3,000 for general, or a grand total spent by this government on surveys in Canada of $1,710,250. The intentions of the minister regarding co-ordination and economy may be excellent, but the lower regions, we are told are paved with good intentions.

Mr. STEWART (Argenteuil): It is very kind of my hon. friend to say that the lower regions are paved with good intentions, but so are some of the upper regions.

Mr. GARLAND (Bow River): May I conclude before the minister replies to my question? I submit that the minister might take into more serious consideration the recommendations made last year, the year before, and this year with respect to co-ordination of all those surveys. The public expects that there should be quick action, not next year or the year after, but at once.

Mr. STEWART (Argenteuil): Is my hon. friend through? I may tell him that the minister has no intention of reducing the geological survey by one party or one dollar. In view of the fact that we are gaining rapidly in mineral production I think this is the most important piece of survey work that can be done in Canada. My hon. friend smiles; let him look at the records and discover how much the mineral production of Canada has increased in the last few years.

Mr. GARLAND (Bow River): The minister will surely forgive me; I was not smiling at the suggestion that this vote was important, but rather at the implication that I suggested for a moment he should reduce this particular item. I have pointed out that $1,710,000 odd is to be spent on various surveys, and I submit that the adoption of the recommendation of the hon. member for West Calgary (Mr. Shaw) that there be amalgamation or co-ordination—anything you like to call it—of the various survey departments, would indubitably lead to economies that would be effective in reducing the total expenditure under this head.

Mr. STEWART (Argenteuil): Yes, and the expenditure is reduced this year by $100,000; my hon. friend has missed that small item in his calculations. I repeat what I said a few moments ago, that there is co-ordinated effort. I have said that it was my desire to see the topographical work all under one head; I have repeated that half a dozen times. Now my hon. friend has mentioned that we have surveys in the Indian department. We have one surveyor in that department. We are trying to complete, with the province of British Columbia, the work in connection with what has been a vexed question ever since confederation, namely, the allocation of Indian reserves. Considerable additions to the reserves have been granted to British Columbia for this purpose, largely the outcome of the work of a commission appointed to deal with the matter. Hon. gentlemen who have been in office will remember that this was a very serious question, and it is not yet settled. When these reserves are properly set apart they will have to be surveyed, and the item appears on these estimates for that particular purpose. So my hon. friend has not discovered any mare's nest or any Teapot Dome. There is not a cent in any of these items the expenditure of which is not justified in the interests of Canada. While we could do without some of the work—quite properly so—I have pointed out that there has been a reduction of $100,000, which I regard as a respectable reduction under this head, and everything we are asking for is required, particularly the items in connection with the work to precede the geological survey. My hon. friend knows that you cannot send a geological survey party out to make a reconnaissance without having the topographical work precede it, and a very large proportion of this item is for work of this character. As to overlapping, I have said repeatedly that there is none. I have been very frank with the committee; I have nothing to hide. But it naturally incenses one when mention is made of Teapot Dome or any other kind of dome in connection with a vote of this character, and I propose to defend the vote somewhat heatedly.

Mr. FORKE: The hon. minister seemed to be a little heated over the Teapot Dome allusion, but I do not think he need take that very seriously; I think it just came in as an afterthought on the part of the hon. member who was making the suggestions. But in listening to the discussions in regard to the estimates I am struck with the hopelessness of any attempt to get anything lower than just what stands on the books here. I will guarantee that at this stage of the proceedings every minister who comes before the

House will defend every item in his estimates as absolutely necessary and will contend that nothing can be done a dollar cheaper. All over this country to-day there is a cry for economy; there is the suggestion that it is costing too much to run the country and that expenditures must be reduced. But it seems almost hopeless for a private member to get up and say anything about the estimates. I cannot see anything else for it but to keep pegging away.

Mr. STEWART (Argenteuil): I have no objection to any questions or any suggestions that may be made, but I do object to references of the character indulged in by the hon. member for Bow River (Mr. Garland) concerning the men who are in this department or concerning my administration.

Mr. GARLAND (Bow River): Will the minister answer my question about what is intended regarding the classification of land and the maps that are sent out based thereon?

Mr. STEWART (Argenteuil): Yes, with pleasure. There are no maps sent abroad of the character he mentions. The information is in our land offices at Prince Albert, Edmonton. Calgary or wherever the work is being carried on, and it is available to the prospective settler. Only a comparatively small area has been covered as yet, but so far as the work has gone I think the results speak for themselves and that they are appreciated by the people. As for sending maps abroad, I had some experience in the Immigration department. My hon. friend has criticized the propaganda sent out to various countries to encourage settlement in Canada. Perhaps those statements are too glowing; I am prepared to agree with my hon. friend. I think also that other organizations outside the control of the government do paint very glowing pictures, at least if one is to judge by the statements made by settlers who have come to Canada. But so far as I am concerned I have warned every officer with whom I came in contact to tell the whole truth; that the truth was good enough; that the facts could be stated with respect to lands and opportunities in Canada and the people concerned could then make up their own minds about it. I am not going to suggest that I would like information of that sort to go abroad. I think it is well to have it in the land offices, available for anyone who goes there—and they must go there in order to secure maps and diagrams of the localities in which they propose to settle. These prospective settlers, no matter what country they come from, are usually accompanied by a friend who can speak the language and who knows the kind of information that is given out.

Sir HENRY DRAYTON: The hon. member for Brandon (Mr. Forke) tells us that no matter what is said or done by any private member the amounts brought down by the minister will go through, and we have a cry of despair from the hon. gentleman because of the impossibility, as he says, of doing anything about it. But I would tell him that it is not at all impossible if members are really serious in their cries for economy, and if they have not only the courage to talk but also the courage to vote accordingly. It is not at all impossible to do, and usefully do, a good deal. We have had votes on the question of economy. We have had votes, for example, on the question of $50,000 for ornamental lighting and the like. We have had loud declamations against extravagance. We have had them here. The hon. gentleman says it is no use. Well, if he has the courage of his convictions—

Mr. FORKE: I have had the courage of my convictions.

Sir HENRY DRAYTON: Then I will give the hon. gentleman an opportunity now by moving a reduction in this vote of $65,450, and I point out the grounds on which that motion is absolutely in order, having regard to the statement of the minister himself. I take the first line "Topographical and general surveys." The alleged justification for this work at the present time is in connection with the all important geological surveys, and we have had the admission this afternoon that this work was well ahead of the geological work and was not necessary for that purpose. I therefore move to reduce the vote by these two items together, one of $46,000, and the other of $23,450, making $69,450.

Mr. STEWART (Argentueil): Do I understand that my hon. friend is proposing to reduce the vote for topographical surveys to $60,000?

Sir HENRY DRAYTON: No. I purposely made it a very, very reasonable reduction, following the minister's explanation. I moved to reduce it by the sum of $69,450.

Mr. STEWART (Argenteuil): I do not understand how my hon. friend arrives at his deductions. I may say that we have a large number of requests from various sources for topographical survey work, and I think in fairness to myself and to the committee I should say that these amounts have been cut,

and very heavily cut, from the appropriations first presented to me. I had felt that I was making a very substantial reduction. After going at the thing, not with the idea of giving all the service that I thought was desired, but rather cutting it as far as I could, almost to the minimum, I have made a cut in the two services of $100,000, which I think is a fairly respectable cut, having in mind the service to be rendered. I am prepared to say that next year I can come with a further substantial reduction. I have reduced every year since I have been minister. I have tried to meet the conditions that I think exist in the country; I have tried to be economical in my department, but my hon. friend is never satisfied, nor would he be satisfied if I cut the vote by $100,000 more. If I cut it down by that amount he would still take the ground he is taking now, that it ought to be cut some more. There has never been a year in which my hon. friend has not treated this vote in the very same way. I have no quarrel with reduction. I am trying to reduce. My hon, friend should bear in mind that this service was not inaugurated as a war service. It was part of the general service of the government of which my hon. friend was a member. He thought in his day as minister that it was advisable to carry on this work, but now when another government is in office, and another minister in charge, no matter how big a reduction is made, he wants a still further cut. To be candid with the committee, I felt that I was doing a pretty fair amount of cutting this year. I told the committee last year I would cut, and I have come back this year and kept my promise. I tell the committee again this year that I intend to make a further cut next year. I have told the committee frankly what I think we should get down to in topographical survey work in Canada, and all the other items of survey work.

Let me say one word more with respect to the surveys of the Indian reserves in British Columbia. The matter is not settled at the moment, but we hope that it will be. It has been a very vexatious question, and I think we ought to settle it if it is humanly possible to do so, and have the surveys made, in order that the natives who have spent a great deal of money agitating over this question may settle down upon the reserves allocated to them.

I hope the committee will sustain me in this vote. I think I am safe in saying that I have made a cut in every item in the estimates of the Interior department, and I do not say that I have yet reached the end. I have closed up this year at Saskatoon an office with all the staff. I have made heavy reductions throughout the department, in order to meet the situation as I see it in Canada at the present time and save some money. I am not administering a department that grew out of war activities.

Mr. HOEY: Will the minister tell us from what sources demands are coming for topographical survey work at this time?

Mr. STEWART (Argenteuil): These requests come from practically all the governments except Ontario. Requests for surveys come frequently to our office. We will not be able to give British Columbia anything like what she wishes for this year, and what I think perhaps she is entitled to. So far as the prairie provinces are concerned, I am bound to admit that some division work is away beyond the necessities of the case. As to the other work, that of land classification, in some of the older settled parts, we have to establish lines that have been obliterated. I may say that thousands of requests have been turned down because I felt that we did not have money enough to go on with this work.

Sir HENRY DRAYTON: I want to thank the minister for the lecture he has been good enough to read me on my rashness in endeavouring to save a little of the country's money at the present time.

An hon. MEMBER: Too late.

Sir HENRY DRAYTON: Of course, that is the cry—too late. This government is so confident of this House that it is too late to challenge a vote when it comes to the House if the government has seen fit to put its imprimatur on it. However, this is absolutely correct. My hon. friend said I was against this vote two years ago. I was. I have always been against it. I think our expenses to-day are ridiculous; they were before, and to the extent that they were higher before they were more ridiculous; but with this difference, unless you are going to go over the lines again you have to come to an end even of surveys. Just imagine anyone seriously objecting to the House trying to bring into effect a little economy at the present time, and yet the minister in charge of this department is running lines up into the arctic circle on the one hand—

Mr. STEWART (Argenteuil): My hon. friend will correct his last statement about running lines to the arctic circle. We are not running lines into the arctic circle but only along the Mackenzie river.

Sir HENRY DRAYTON: That is the line I am referring to, and it is the one that

has been spoken of this afternoon. And then we have the survey of unnecessary divisions and subdivisions in the prairie provinces. If ever there was an admitted case for economy it is here; if there ever was a situation where the government could exercise economy it is in the present instance.

Mr. STEWART (Argenteuil): I may tell my hon. friend that no subdivision work in the prairies is provided for in this vote, not to the extent of one acre.

Mr. FORKE: While compliments are being exchanged across the floor of the House I also wish to thank the hon. member (Sir Henry Drayton) for the lecture he gave me. I think, perhaps, that in doing what he did the hon. member was of opinion he was giving me a "dare." Let me tell my hon. friend that I am not to be influenced in any position I take by any such suggestion. No "dare" of that kind is likely to make any change in the way I shall vote. I can sympathize with the minister in his efforts to get these estimates through.

Some hon. MEMBERS: Hear, hear.

Mr. FORKE: Hon. gentlemen to my right say "Hear, hear." They are always looking for trouble.

Mr. HOCKEN: We are trying to help the minister.

Mr. FORKE: That is a good spirit to display, I hope my hon. friends will continue it. In estimating for expenditures it is sometimes a good idea to fix a certain sum and make the provision for your necessities come within that figure. If we simply look at the necessities to be met we shall never accomplish any real economy in public expenditures at the present time. This vote is a pretty large one and, notwithstanding what the minister says, I know it is not absolutely required. I can understand that there are conditions which may seem to make the expenditure necessary, but the country will still go on and do very well if a reduction in the sum asked for is made. I am in favour of a reduction not because any "dare" has been extended to me, but because I believe it would be in the public interest.

An hon. MEMBER: Think of your conscience.

Mr. FORKE: The hon. gentleman need not remind me of my conscience, it is quite clear.

Mr. CAMPBELL: Did I understand the minister to say that the classification of land for settlement was all done on lands belonging to the Crown?

Mr. STEWART (Argenteuil): No, some of it is not done. We could render splendid service to many communities but we cannot afford it. There have been a number of new comers arriving in Canada, and the object of this classification work has been with a view to getting information for such persons who must depend upon that information in the selection of their land. I cannot promise that expenditure could be made for carrying out surveys of lands already settled. I think for the time being our efforts will have to be confined to the class of work indicated.

Mr. GARDINER: Will the minister state how far these Crown lands are from railway communication?

Mr. STEWART (Argenteuil): I might mention one instance where the classification has taken place in a district my hon. friend is well acquainted with, west of Wetaskiwin and where at the moment the settlers are a considerable distance away from railway communication on the Canadian Pacific. But a line is being run from Lacombe into the territory west of Wetaskiwin. A considerable amount of classification has been done in that territory in which many settlers have located. We find settlers squatted all over; a newcomer who has taken up homestead land does not pay very much attention at first to the railway facilities that exist. I am told that practically all our classification has been confined as far as possible to within fifteen miles of an existing railway.

Mr. GARDINER: May I suggest to the minister that it would be advisable not only to keep classification to districts very close to the railroad, but also to have lands made available for settlement within reasonable distance of the railway lines. If we allow settlers to spread all over the territory we will be called upon to provide transportation facilities for them, facilities that at present we cannot afford.

Mr. STEWART (Argenteuil): I think I can agree thoroughly with my hon. friend because that is a policy I have always advocated. Unfortunately it is a very difficult policy to carry out. For example people went into the Peace river district, hundreds of miles from railway facilities, and it cost the country a very considerable amount to extend the railway communication into that country. It must not be understood that I

am objecting in any way to the Peace river country itself, it is one of the finest territories that I know of. I simply cited that as a case of a territory into which people were determined to enter and settle. You are not able to prevent settlers from entering certain districts when they conceive a particular fancy for settling there.

Mr. GARDINER: I would suggest to the minister the possibility of withdrawing such lands from settlement, because so long as they are made available for that purpose it is natural for people to go there who feel so disposed. I think the time has come when the policy of the government should be to make lands available that are close to transportation facilities, or are in districts that are going to be provided with such facilities in the near future.

Mr. STEWART (Argenteuil): Then we have this other difficulty: Take Fort Vermilion, or the area down at Fort McKay; squatters have settled there and application has been made to have the land surveyed, but we have not granted it. Still, people go in and squat on the land. In this way you have a very difficult proposition to meet and provide for. Knowing the western situation nobody would be happier than I to prevent the indiscriminate spreading of settlement if it were possible, because I am aware of the difficulties that follow.

Mr. GARDINER: I will make another suggestion to the minister and to the government. Possibly the best way to get over this unfortunate situation is for the Dominion to transfer these natural resources to the provinces which can handle them more easily than we can.

Mr. STEWART (Argenteuil): I am perfectly willing—

Mr. CALDWELL: "Barkis is willin'".

Mr. STEWART (Argenteuil): —and always have been.

Mr. KENNEDY (Edmonton): What has been done with regard to the classification of land in the Peace river country?

Mr. STEWART (Argenteuil): I am informed that that work was done two years ago for the Soldier Settlement Board, although it was not all our survey work. We do not want to claim all the credit for everything that has been done in this connection. Because as my hon. friend knows, under the Soldiers' Settlement grant, surveys were made which are probably just as accurate and reliable as those of our engineers. However, there is undoubtedly a very large unsettled area up there as to which accurate information has been filed.

Mr. CAMPBELL: I think the surveys extending out into the Peace river country offer a very good example of the system of locating settlers in advance of transportation facilities, and I maintain that if the government surveys the land and throws it open for settlement they are under an obligation to provide railway facilities for the settlers that come in. Two years ago I pointed out to the minister the danger of surveying land for settlement a long distance from railway facilities. In a short time we shall have settlements grow up in such districts and a demand will be made for branch lines of railway. Then we shall have the same old problem over again that we are now facing of making provision for building these railways. The branch lines that are demanded in the West to-day originated, to a large extent, on account of the oversurvey that was carried out by the government. We have a very small population occupying a tremendous tract of territory, and it seems to me that the time has come to stop this reaching out and occupying land beyond transportation facilities. I was rather surprised to see that the minister intended confining the surveys entirely to crown lands, because from what I know of western Canada there is very little crown land that will be accepted for settlement, unless more railways are built in the West. I live in one of the choicest homestead districts perhaps in western Canada, and yet there is hardly a homestead available there that would be taken up by any settler. Sometimes a man will, in a moment of optimism, and perhaps primed up with colonization literature, file on one of the homesteads, but after a year or two, or possibly in a few months, that man will abandon the homestead pull up stakes and leave, after having done a good deal of hard work and spent considerable money. I think the time has come to stop this practice. We should try and induce settlement near the railways where we have transportation facilities, roads, schools, churches, elevators and all the necessary trade facilities. Let us try and use these. One of the troubles in western Canada is that we are over built. We have too many facilities. Let us try and use what we have before we reach out and demand more.

Mr. STEWART (Argenteuil): I am sorry my hon. friend misunderstood me. It was not the survey work; it was the classification work.

Mr. CAMPBELL: I understood the hon. minister to say the classification for settlement was entirely confined to crown lands.

Mr. STEWART (Argenteuil): No, it has not been in the past; but I made the statement that for the future we are cutting down, and we will have to cut down even more than we are doing now. We cannot promise that we will make surveys of areas in which settlement has already taken place, unless there be crown lands for settlement in that area. Then in every case we would be quite willing to do so; but for the federal government to make a survey of all the lands in the hands of private people would be a pretty large undertaking.

Mr. WOODSWORTH: Has the minister considered any claim for forcing the lands now being held by private individuals into use? Throughout the entire western country there are millions of acres of lands adjacent to the railway that are held out of use. The maintenance of railway facilities, the necessity for general development, municipal administration, schools and so on entails a tremendously heavy burden on the settlers who are there. It seems to me the time has come when the government should devise some means of insisting that lands that were intended for bona fide settlers should in some way be restored to the people and made available for use.

Mr. CAHILL: Will the hon. member make a suggestion as to how that could be accomplished?

Mr. WOODSWORTH: Yes, very easily, by a system of taxation of land values.

Mr. CAHILL: Which system?

Mr. WOODSWORTH: Any system which would take the economic rent of the land. That would mean that lands of that kind should be taxed when they are held out of use. It is the well known principle of the so-called single tax. I do not mean to carry out the full principle of the single tax, but if lands are held out of use, I say they should be more heavily taxed. If lands which are particularly valuable along the lines of railway, are held for speculative purposes, they should be more heavily taxed. The actual bona fide settler is carrying the load, enhancing the value of these lands, and thus putting money into the pockets of the people who are doing no work on the land.

Mr. POWER: Would we require a special survey branch to find out what lands are in use and what are not in use? And if we carry out the principle the hon. member suggests, would we not require this amount to be voted for the service?

Mr. WOODSWORTH: Any real estate office will give the information required; or it could be obtained in the municipal offices.

An hon. MEMBER: Or from the Canada Colonization Company.

Mr. WOODSWORTH: Yes. What we need is a new policy.

Mr. CAHILL: Would the hon. member suggest that the Dominion government should tax the lands in Canada or that the municipal government should do it?

Mr. WOODSWORTH: Under present circumstances, the Dominion might well tax them, since they were originally Dominion lands intended for homestead purposes. But the original idea has been frustrated, and in a great many instances these lands that ought to belong to the homesteaders have been appropriated by private interests and are not now available for the real settlers, who have been induced to come here, and if possible to buy lands which ought to be granted freely to the people and which will need to be granted freely to the people if they are going to make a living on them.

Mr. STEWART (Argenteuil): I think in fairness to myself I should inform my hon. friend that in Alberta we placed a 25 per cent taxation upon unimproved lands, over and above the tax on improved lands in the hope of accomplishing just what the hon. gentleman is proposing.

Mr. HOCKEN: Did you accomplish the purpose?

Mr. STEWART (Argenteuil): No, not so far; but I do not know anybody up there who is particularly anxious to hold on to land which he is not using.

Mr. CAMPBELL: We have a system of taxation called the Wild Land tax, under which any land suitable for agriculture or growing purposes has to bear a special tax, and the results have been excellent. The speculator would either have to rent his land or sell it at a reduced price. Conditions are such in the western provinces that the tax

will compel many people to abandon the lands. If a person wants cheap land all he has to do is to go to the municipal clerk, and he can generally buy a very reasonably priced piece of land in a municipality for the taxes.

Mr. LOVETT: Has a survey of this kind been made in the province of Nova Scotia, and if so in what part of the province?

Mr. STEWART (Argenteuil): Yes, in the New Glasgow district.

Amendment (Sir Henry Drayton), negatived: Yeas, 45; Nays, 53.

Item agreed to.

Mr. COOTE: Did I understand the minister to say that the Soldier Settlement Board had made land surveys on their own account?

Mr. STEWART (Argenteuil): Yes, land classification on their own account.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Geodetic Survey of Canada—investigations, reconnaissance, triangulation, precise levelling, geodetic astronomy, etc., $275,000.

Mr. McQUARRIE: Will the minister explain this item and the saving which has been effected?

Mr. STEWART (Argenteuil): This item has been cut down by $50,000, the same as the other. The geodetic survey is a survey which establishes in a permanent manner a series of points of reference at convenient distant points whose geographical position, latitude and longitude, have been obtained by nets of triangulation and astronomical observation. It also determines accurate points from which other surveys can be made in the principal towns and cities by lines of precise levelling. It thereby forms the basis of survey and mapping work carried on by other departments of the Dominion government, by provincial governments and by municipalities, corporations and private persons. We are asking for:

Triangulation	$105,450
Base lines	7,000
Geodetic astronomy	4,000
Precise levelling	20,000
City mapping	8,000
Instruments	2,005
Books, charts, etc.	475
General expenses	11,300
Salaries	116,770

Mr. McQUARRIE: Would it not be possible to discontinue some of the work for the present?

[Mr. Campbell.]

Mr. STEWART (Argenteuil): We have cut down the work to the extent of $50,000 for this year. This is largely a matter of men. We have laid aside a ship that has been in use by the department along the coast in the gulf of St. Lawrence, and we have made a very considerable cut in the general operations. My hon. friend will observe that this is the basis for all other surveys. There are located on elevations the precise spot from which topographical survey work is carried on as well as work along the streams and lakes for the purpose of assisting navigation.

Mr. McQUARRIE: This work, I understand, has been going on for many years. Is it something that will continue for a good many years yet in Canada?

Mr. ROBINSON: Is the same number of parties being sent out this year as last year?

Mr. STEWART (Argenteuil): There is a reduction of five parties from last year.

Mr. ROBINSON: Can the minister indicate where those five are to be cut out?

Mr. STEWART (Argenteuil): As the bulk of this work is carried on in the East, most of them will be cut off in eastern localities.

Mr. ROBINSON: Can the minister indicate where?

Mr. STEWART (Argenteuil): I can give an indication where it is proposed to do the work. I cannot tell just where these parties will be cut out.

Mr. McQUARRIE: Where is the work to be done?

Mr. STEWART (Argenteuil): Direction measurement is a continuation of the 1923 operations to extend the triangulation from Cape Breton island to Newfoundland, to serve as a basis for similar work in that country and to co-ordinate the charting of Newfoundland waters with that now being done in Canadian waters and that formerly done by the British Admiralty in the same district. One sub-party will complete this work and then move to the Baie des Chaleurs where it will join the other sub-party to continue the St. Lawrence river triangulation along the Baie des Chaleurs and the east coast of New Brunswick.

A tower building party will prepare stations along the east coast of New Brunswick at points which have been already selected.

A secondary triangulation party will operate in the Fredericton, N. B. vicinity, establishing control points for the topographical survey mappers.

Another party is to control charting of that part of the gulf of St. Lawrence at present being charted by the Hydrographic Survey, to serve as a basis for provincial surveys north from the north shore of the gulf. That is the work that is being done in the Maritime provinces for this year.

Another survey is a continuation of the secondary triangulation which in 1922-23 was carried along the Upper Saguenay river, lake St. John and southward towards Three Rivers. The 1924 operations will continue this work southward to connect with the primary triangulation near Three Rivers.

The statement which I have proceeds:

Ottawa river. This work is a continuation of the triangulation up the Ottawa river to serve as a basis for geographical work by the National Defence department and the Ontario and Quebec governments.

49th Parallel—Party No. 5 .. .. $21,500

Continuation of primary triangulation along the international boundary from the 103rd meridian (near Estevan, Sask.) eastward to Lake of the Woods. The section from the 109th meridian to Lake of the Woods is the Canadian share of a co-operative scheme with the United States Coast and Geodetic Survey. The western half of the Canadian section has been completed. This net will form the basis of all future triangulation in western Canada.

British Columbia—Alberta Boundary—Party No. 6.. .. .. $14,400

The operations in this section are secondary triangulation to control the geographic position and accuracy of the boundary surveys from Yellowhead pass northwest to the intersection of the continental watershed with the 120th meridian.

In 1922 and 1923 the reconnaissance for the selection of stations was completed and almost one quarter of the angle measurement was finished. In 1924 four parties will be able to conclude the angle measurements and measure the base line at the north end of the section, thus completing the work.

British Columbia—Party No. 7.. .. .. $18,130

To furnish control for the hydrographic survey of the Department of Marine and Fisheries, the provincial government of British Columia, and to serve as a basis for surveys of all kinds.

Base Lines—Party No. 8.. .. .. $7,000

These base lines are measured at intervals in triangulation nets to check the scale of the triangulation so that the effect of the accumulation of angular measurements can be checked and corrected.

Four base lines are required during 1924, one in the northern British Columbia coast net, two on the 49th parallel net and one on the Ottawa river triangulation.

Geodetic Astronomy—Party No. 9.. .. .. $4,000

Geodetic astronomy consists of the establishing of Laplace points for the determination of astronomic longitudes and azimuths at triangulation stations of the geodetic survey to improve the accuracy of the work by eliminating the bend or twist that otherwise tends to develop in the triangulation.

The establishing of Laplace points is one of the most important phases of field astronomic work and is one of the most essential parts of the field work of the Geodetic Survey of Canada.

Six Laplace stations are required in 1924, two along the B.C.—Alberta boundary, three along the 49th parallel and one on the Ottawa river.

Precise Levelling—Parties No. 10 to 12.. .. .. .. $20,000

This work is for the purpose of determining the elevations above mean sea level of points to serve as bases for surveys of all kinds.

Three parties will be sent out, two in Quebec and one in British Columbia.

That covers the work of the parties.

Mr. CALDWELL: Is part of this vote to be used for building towers? If so, are the towers to be permanent structures?

Mr. STEWART (Argenteuil): These towers are for the purpose of taking very long observations.

Mr. CALDWELL: But are they permanent structures?

Mr. STEWART (Argenteuil): They are built of wood and will last the ordinary lifetime of wood.

Mr. CALDWELL: I ask the question because about seven years ago one of these towers was built on a high hill within four miles of where I live. It was constructed of fir and spruce, the least durable of woods, and fell down a few years later. It must have cost a considerable sum of money as quite a large party was engaged in its construction, which occupied some time. To construct towers of such material is in my opinion simply a waste of money and labour, for they will last at best only three or four years. There is plenty of cedar in that country, and it would be more economical to use it in these towers.

Mr. FAFARD: Cedar is very scarce on hilltops.

Mr. CALDWELL: But at the foot of hills there is cedar.

Mr. STEWART (Argenteuil): I am informed that these towers are now constructed in conjunction with the Forestry branch of the New Brunswick government and are of a much more permanent character.

Mr. CALDWELL: The tower of which I am speaking was not built for forestry work, the district being devoted entirely to farming. I understand that to-day the government in New Brunswick is building look-out towers in

forest areas for fire protection service. My point is that it is a waste of energy and money to build towers of material so entirely lacking in durability.

Mr. CHAPLIN: Is it not a fact that once the geodetic survey is completed these towers are of no further use and may be taken down?

Mr. STEWART (Argenteuil): That is correct, except that now in most of the provinces wherever there are forest areas these towers are afterwards utilized for fire protection work, and therefore a little more care is being exercised in their construction. I think the tower in question was in use only two or three months.

Mr. CHAPLIN: It appears to me that we can save money on this geodetic survey. I notice that in 1918-19 according to the Estimates $112,000 was spent; in 1919-20, $149,000; in 1920-21, $290,000.

Mr. STEWART (Argenteuil): I am informed that when the boundary survey was nearly completed a number of the men came into this department, which, with the returned soldier problem, accounts for the $290,000 voted in 1920-21. In 1922-23 the same condition prevailed. The work has expanded; there is no doubt about that. This year we are trying to get back to the old condition of affairs, and to that end we have cut off $50,000.

Mr. CHAPLIN: In 1921-22 there was an item in the estimates of $37,000 for international boundaries, and in 1922-23 an amount of $35,000. They were in separate items, and they did not appear under the geodetic survey. In 1921-22 there was $325,000 for the geodetic survey and in 1922-23 a similar amount. In 1918-19 the amount was $112,000 and in 1919-20, $149,000. I think it is time we got back to the level,—back to the ground.

Mr. STEWART (Argenteuil): The reclassification of these services added a considerable amount to the expenditure. My hon. friend is referring to years when the service was perhaps at its lowest, following the period of the war. When a man moves out his position is not filled, and we are cutting down services as fast as we can without creating too great hardship. Not that I am asking that the government carry a group of men who are not rendering service; that is not my point at all. If these men had been continued on the day rate basis I do not think they would have had serious complaint to offer had their work been discontinued, but I think it is only fair to those men who were blanketed in in 1919 that we should proceed as we are doing. Throughout the whole of the Interior department we are reducing the services as fast as we can, and I expect to reduce in the same way next year until we get back to where we were in 1916-17.

Mr. CHAPLIN: Last year there was no reduction at all. We asked for a reduction and the minister told us pretty much what he is telling us now. After three or four years of high pressure he now takes off $50.000 That is no reduction at all; we are still double what we were in 1918-19 and 1919-20.

Mr. LEADER: I notice in the Auditor General's report that some men engaged in this work get a living allowance of so much per day and at the same time charge so much for board and lodging. I wonder if they can do that.

Mr. STEWART (Argenteuil): I think I have in mind the case my hon. friend mentions. This man was brought here in 1921—

Mr. LEADER: I did not have that particular case in mind, but as the minister has mentioned it I may be allowed to refer to it. In 1921 the Field Superintendent of Irrigation was brought from Calgary to Ottawa to perform special duties here. An order in council was passed on, I think, the 23rd of July, granting him a living allowance of $6 per day. In January, 1922, an order in council was passed granting him $1,086.50 to bring his family from Calgary to Ottawa. It is now over three years since he was moved from Calgary to Ottawa. He is permanently situated here, drawing his regular salary, and at the same time he is drawing this $6 living allowance. I would like to ask the minister if they can do that.

Mr. STEWART (Argenteuil): Yes, I will have to admit they can do that. The regulations provide that when you move a man from his headquarters you pay his removal expenses if he receives no increase in pay. We had a great many of these last year because we have been closing offices, moving men about and trying to cut down the staff with a view to economy. If there is an increase in pay the removal expenses are not paid. In this case, as I understand it—this happened before I came into the office—Mr. Peters was brought from Calgary in connection with the reorganization of the survey staffs. I am not denying that there have been difficulties in that connection and that things have not been as smooth as we would like in the reorganization work. Subsequent to his arrival here, after a very considerable delay a competition was arranged by the

Civil Service Commission and Mr. Shanks was given the position. As soon as this was brought to my attention the living allowance to Mr. Peters was stopped; that was some time about the middle of last summer. Mr. Peters is here, but he has drawn no living allowance since then. Mr. Shanks is confirmed in the position by the Civil Service Commission. Mr. Peters was up to the time of his removal here a permanent official of the Surveys branch, attached to the Irrigation branch at Calgary. I did not follow my hon. friend's question about living expenses.

Mr. LEADER: On page K-179 of the Auditor General's report it is shown that Mr. Rannie is allowed $5 per diem for living expenses while at the same time he charges for lodging and board.

Mr. STEWART (Argenteuil): That is quite correct. There is provision for $5 a day when they are away from Ottawa on their inspection work.

Mr. LEADER: The minister knows that Mr. Peters was drawing his regular salary and in addition to that drew a living allowance of $6 a day for over two years. Is that in the interests of economy? I think any man in the public service should be satisfied with one salary. One is sufficient, it seems to me, and I am sure the people would think so too. If the custom is otherwise, the quicker we stop it the better.

Mr. STEWART (Argenteuil): I agree thoroughly with my hon. friend. There have been a good many cases in which delay has occurred, particularly with respect to removals and adjustments of this kind. I know of no case so long as that mentioned by my hon. friend, but I may cite one case of an agent being removed from Moose Jaw to Lethbridge. In that case it was over four months before he was confirmed in his position, and under the regulations we paid during that period a living allowance, just as we do to Mr. Rannie when he leaves his headquarters and goes out on inspectional work. We also pay the moving expenses if there is no increase in salary.

Mr. LEADER: I would like to read the last sentence of a letter from Mr. W. W. Cory, the deputy minister, in regard to this question:

> In the meantime, however, until this is settled, I don't think he should be called upon to make any refund, on the contrary we should continue to pay the living allowance authorized by Council.

Mr. STEWART: (Argenteuil): I stopped that living allowance at once.

Mr. STEVENS: If I caught the minister correctly he said a moment ago that the living allowance of this gentleman, Mr. Peters, was cut off the middle of last year.

Mr. STEWART (Argenteuil): I have not the exact date, but it was some time last year. It was at the date that Mr. Shanks was confirmed in the position.

Mr. STEVENS: I am not referring to that incident, but I am under the impression that in the Auditor General's report there is a letter from the Auditor General to the Treasury Board dated about the end of January of this year in which he objects to the continuance of this allowance being paid to Mr. Peters, but he waived further objection on the distinct understanding that Mr. Peters was immediately to go back to Calgary. It was something to that effect.

Mr. STEWART (Argenteuil): I think I am right about that.

Mr. STEVENS: The minister may be right. I have not the Auditor General's report under my hand or I could read the letter. In any case a protest was made by the Auditor General on two or three occasions and finally he appealed to the Treasury Board, and the question which I think it is proper to ask the minister to explain is why the department persisted in continuing this man's living allowance in Ottawa when his services were certainly not required here for many, many months, and when it is doubtful if he should have been allowed to stay here for perhaps the last year under the circumstances. I do not wish to embarrass the minister too much. I know he has a lot to look after, the Post Office Department on top of his own, and perhaps it is unfair to expect him to know too much about his own department. It might be well to have a new Postmaster General to help him out in his labours. But I think it is wholly unfair to the country, and absolutely unwise from an administration standpoint to keep expensive officials comparatively idle, and when I say that I think I am speaking very, very kindly about this gentleman, and continuing to pay him a living allowance in addition to a very handsome salary over a period of—I have forgotten just how long but it was quite a long period, a year and a half or thereabouts. Furthermore, I think that when the Auditor General merely drew the minister's attention to the fact it should have been remedied at once, and the Auditor General should not have been forced to go to the Treasury Board and get a further ruling on the matter; and then only at the last

moment under a strict stipulation that the man should go at once out of the city and back to his former haunts was the payment authorized.

Mr. STEWART (Argenteuil): I am sure no living allowance has been paid him since October.

Mr. STEVENS: The minister is quite sure of that?

Mr. STEWART (Argenteuil): I am taking the word of my official.

Mr. STEVENS: I do not question the minister's sincerity, but I am a little doubtful of his accuracy.

Mr. STEWART (Argenteuil): My recollection of the circumstances is quite clear. When Mr. Shanks was confirmed in the position I at once gave instructions that the living allowance for this man was to be discontinued. As a matter of fact, I am not at all in sympathy with that sort of thing.

Mr. CHAPLIN: Do I understand the minister to mean that he is continuing this service for the purpose of keeping certain men employed?

Mr. STEWART (Argenteuil): No.

Mr. CHAPLIN: I took that certainly from what the minister said a few moments ago.

Mr. STEWART (Argenteuil): After the period of the war a large addition was made to the staff. I am not for one moment suggesting that this is not a valuable service, because I think it is, for all other survey work must commence from the work done by the geodetic survey. Neither am I making the excuse that we could not get along with perhaps less men, but I do ask the indulgence of the committee to allow me to cut down reasonably in this case as I did in the other. I have cut off $50,000 from this vote this year. I can say to my hon. friend that this is not work that deteriorates in value or is lost; it is very valuable work .

It is pointed out to me that a great many requests come to me for this work, and that is true. We are not able to satisfy perhaps 75 per cent of the requests we get for precise levelling and surveys along the shores for the purposes of navigation and charting. I can only plead with the committee to take a reasonable view of this matter. I am cutting this service just as fast as I think we should be warranted in doing, having in mind the service that has to be performed and the difficulties we have in cutting down the staff. This is not a service that has been inaugurated since the war. Many of the men in this service enlisted, and when they returned from the war they expected to get their jobs back, and all credit to the old government that gave them their jobs back. Now we have the responsibility of cutting down this staff, which includes many returned soldiers, and turning them adrift when there is little to do; but it will have to be done.

Mr. LEADER: This is really a very important matter. A principle is involved. I do not doubt the minister's word for a moment, but it is possible that he is not as conversant with the details of his department as he might be. I think it would be well for me to read the letter of protest from the Acting Auditor General, dated December 13, 1923. He says:

> Sir,—On July 23rd, 1921, an Order in Council (P.C. 83/2614) was passed granting to Mr. F. H. Peters, Field Superintendent of Irrigation at Calgary, who was called to Ottawa to be temporarily assigned to special duties in the Department of the Interior, a living allowance from March 1st, 1921, of $6.00 a day while on special duty in Ottawa.
>
> On January 31st, 1922 an Order in Council (P.C. 41/200) was passed authorizing the payment to Mr. Peters of the sum of $1,084.50 being the amount of his removal expenses from Calgary to Ottawa. From the accounts rendered in support of this claim Mr. Peters appears to have removed his family from Calgary to Ottawa in the early part of October, 1921.
>
> Although Mr. Peters was paid his removal expenses nearly two years ago the Department of the Interior has continued to pay, and is still paying, the per diem allowance of $6.00 to Mr. Peters, on the grounds that he has not yet been permanently assigned to duties in Ottawa, but that he still holds the position of Field Superintendent of Irrigation with headquarters (nominally) at Calgary.
>
> As the payment of this living allowance has been continued for such an extended period I should like to be informed if it was the intention of the Treasury Board that it should be paid so long as Mr. Peters was retained in Ottawa, notwithstanding the fact that his removal expenses were also paid some two years ago. The last official intimation that I have as to the payments to Mr. Peters makes the total amount of $5,850 paid him on account of living allowance up to October 31st, last, in addition to the $1,084.50 paid as removal expenses.

There is another letter here dated January 10, 1924 from Mr. J. C. Saunders, secretary of Treasury Board, which reads as follows:

> Dear Sir,—I beg to acknowledge receipt of your communication of the 13th, ultimo, concerning continuation of per diem living allowance to Mr. F. H. Peters of the Department of Interior.
>
> The Treasury Board, after full consideration of the special circumstances connected with this case, and in view of Mr. Peters' return to Calgary at an early date, are of the opinion that payment of his living allowance may be continued until his departure from Ottawa.

That is over three years ago and he is still drawing his $6 per diem according to this correspondence. I am sure the minister is not cognizant of the real situation.

Mr. STEWART (Argenteuil): I know that I issued instructions to discontinue this. That is the statement I have to make in respect to this matter.

Mr. LEADER: When did you issue instructions to have this per diem allowance of $6 stopped?

Mr. STEWART (Argenteuil): I would not like to state.

Mr. LEADER: The last letter I quoted was dated January 10, 1924.

Mr. STEWART (Argenteuil): Yes.

Mr. STEVENS: There is a letter dated as far back as June, 1923, drawing attention to this very same matter. I agree with the hon. member who has just spoken, there is a principle involved in this. At least those responsible for the payment of this allowance ought to be taken to task.

Mr. STEWART (Argenteuil): If my hon. friend will let the matter stand we can take it up later. In the meantime I will endeavour to be certain of my information. This matter has nothing to do with the particular item under consideration, but I would like to be sure of my facts before discussing it.

Mr. CHAPLIN: Did I understand the minister to say a few moments ago that as men die or are retired no new appointments are made in this department?

Mr. STEWART (Argenteuil): We have been discontinuing as many appointments as we could, and making transfers to other points.

Mr. CHAPLIN: Could the minister state how many new people have been taken on in the last two years?

Mr. STEWART (Argenteuil): I was speaking of last year.

Mr. CHAPLIN: Well, give the information for last year.

Mr. STEWART (Argenteuil): There were none last year.

Mr. STEVENS: How much was spent in this department last year?

Mr. STEWART (Argenteuil): The accounts may not all be in for last year. There was $343,000 the year before last and $315,000 so far for last year.

Mr. HANSON: How much salary did this field secretary draw in addition to the handsome bonus of $6 a day?

Mr. STEWART (Argenteuil): The sum of $4,500.

Mr. CALDWELL: Does the minister say we will be able to discuss the case of this Mr. Peters?

Mr. STEWART (Argenteuil): Yes.

Mr. CALDWELL: I gathered from what the minister said that one of the reasons why he was not reducing this vote further this year was because a great many of these men were returned soldiers and he felt the country owed it to them to continue their employment.

Mr. STEWART (Argenteuil): No. I would not like to put it that way.

Mr. CALDWELL: How many of the men in this department are returned men?

Mr. STEWART (Argenteuil): About 75 per cent of the field engineers.

Mr. CALDWELL: What percentage of the whole force would these field engineers be?

Mr. STEWART (Argenteuil): Almost 75 per cent.

Mr. CALDWELL: The more I think it over the less I like this vote, largely owing to the fact that I think it is not one of the essentials. That may be due to my ignorance of the character of the work that is carried on, or at least some of it. But in view of the fact that we have a big cut of $250,000 in connection with the Health of Animals Act, and another reduction of $50,000 in the estimates for the Health department, a very important one too having reference to combating venereal disease, and numerous others, it looks to me as if we are proposing here to spend too much money in non-essentials. That is my candid opinion as a member of the House. Then it must also be remembered that the grant for agricultural instruction to the provinces has been discontinued. In view of these facts I think the country at large will view expenditure of this kind with a great deal of disfavour. As members of parliament our object should be to cut out all the unnecessary frills at the present time.

Mr. STEWART (Argenteuil): In reply to my hon. friend I would just say that this is a basis for all survey work. It is the charting of our shore line. Most of this work, as hon. gentlemen know, is done in the East, but I am not offering that as any special reason why it should be continued. I agree with my hon. friend that unnecessary expenditure should be cut to the bone; but all survey work of every character, whether it is

of a municipal or provincial character starts and hinges on these accurate points, and the very best engineers in the service are employed on this work. And indeed it is a most important one. If I had not inherited this work I could probably say to my hon. friend "Yes we can slash right and left." I think that in comparison with the cuts in the other votes I have not been backward. I have tried to cut the estimates of my department from one end to the other, sometimes in a very arbitrary way.

Mr. CALDWELL: Does the minister contend that there is a large part of our coast line in the Maritime provinces that is not yet charted? If so what benefit to the charting of a coast line would the construction of these towers made of fir poles be? These towers are erected on the top of bald hills from which you can see twenty miles in any direction. The erection of such towers is rather a joke to our people.

Mr. STEWART (Argenteuil): My hon. friend does not, perhaps, realize the full significance of the work done by these men. I confess that when I came into contact with it at first I did not know of its great value to the country. I am bound to say that I believe the work to be of a very considerable value. It results in the establishment of fixed and definite points from which you can hitch on all other surveys. If that is so, surely it is of very material benefit to the districts concerned, and surely the coast line work is of very considerable importance.

Mr. CALDWELL: Is there much of our eastern coast line that is not charted?

Mr. STEWART (Argenteuil): Yes, I am told fully 75 per cent of it is not charted fully and properly.

Mr. CALDWELL: That is a surprise to me.

Mr. STEWART (Argenteuil): I have to take the word of the engineer for this. In my opinion this is more important work perhaps than the money expended even on your agricultural education, valuable and all as it is. I have had some experience in my younger days in Ontario with difficulties over surveys and the cost entailed in lawsuits and litigation because definite and accurate points were not and could not be established. I am not going to argue that it should be carried on at this cost for all time to come. Perhaps it should and perhaps it should not but I am endeavouring to cut it down as fast as I can throughout the department. I have made a very large cut in all the surveys of the Department of the Interior, with the single exception of that of forest protection, and there is an increase there which I think I can justify.

Mr. CALDWELL: I think so, too.

Mr. THURSTON: For how many years has this survey been carried on?

Mr. STEWART (Argenteuil): It commenced in 1909.

Mr. MEIGHEN: The minister said that in the past in this branch whenever there had been a vacancy by death, resignation or removal it had not been filled.

Mr. STEWART (Argenteuil): In the past year.

Mr. MEIGHEN: He said he was cutting down in that way. Then he gave the figures showing that he spent all the money voted, which was the highest ever voted for this branch. How does he reconcile the two positions, unless there were no resignations, no deaths, and no removals?

Mr. STEWART (Argenteuil): The answer is that work was carried on for a greater length of time with the same body of men than had ever been done before. There was a longer season of work, but there was no increase in staff.

Mr. MEIGHEN: I did not allege there was, but there was no diminution because there could not have been a diminution when all the money was spent.

Mr. STEWART (Argenteuil): I can point to an anomaly in the case of the Interior department under the heading of civil government. To my astonishment, although we have cut off a very considerable amount, and in spite of the fact that we have some 25 less employees, we are going to ask for more money than ever this year. The statutory increases in a fairly large service amount to a very considerable sum. There was a reduction of sixteen at all events and yet I was faced with a larger expenditure.

Mr. MEIGHEN: And still the minister is a party to the order in council instructing the Civil Service Commission to revise salaries all upwards again.

Mr. STEWART (Argenteuil): No, if the hon. gentleman will look at the order in council closely, the instruction is not to revise them upwards or to revise them downwards.

Mr. MEIGHEN: What kind of revision is wanted?

Mr. STEWART (Argenteuil): The instruction of the order in council is to discontinue the bonus and to take into consideration the condition in which these civil servants now are and to revise the salaries accordingly. The bonus applies to those receiving up to $2,400 and not beyond.

Mr. MEIGHEN: The minister cannot escape in that way at all. That is not the way the order in council reads. The government take off a certain part of the bonus. Then, in response to the demand of the civil servants, they pass an order in council saying to the commission, "It is true we took the bonus off, but now you go to work and revise the salaries." They have to be revised either downwards or upwards. I do not know what a level revision would be, I am sure.

Mr. STEWART (Argenteuil): I do not suggest that.

Mr. MEIGHEN: Is the revision upwards? The minister complains he is helpless in his department because of the statutory increases. Then how does he explain being a party to the order in council?

Mr. STEWART (Argenteuil): I simply maintain that the order in council does not direct the Civil Service Commis-
9 p.m. sion to increase the salaries or decrease them. It is left to their judgment in the matter. There is no direction to the Civil Service Commission, but the request of the government is to discontinue the bonus.

Mr. MEIGHEN: The government does that. The Civil Service Commission has nothing to do with it. The government have discontinued the bonus, and they say to the Civil Service Commission, "Here, we throw the whole of the salaries right to you, and we tell you we have discontinued the bonus, and now we want you on that account to revise the salaries." Does the minister want to intimate to the committee that that is not a request to revise upwards?

Mr. STEWART (Argeneuil): No.

Mr. MEIGHEN: Why would the government base the request upon the withdrawal of the bonus if it were not to revise upwards? I am objecting to the minister saying "Here we are doing everything on earth to reduce expenses, but there are those statutory increases which we are not responsible for. We find them there and we have to abide by them. They are coming down on our heads like hammers." Then he proceeds and sends the statutory increases and the whole schedule to the Civil Service Commission, with implied instructions undoubtedly to revise upwards.

Mr. STEWART (Argenteuil): My hon. friend is stating a case which does not exist. There are no implied instructions. The order speaks for itself. It is before the House. The directions of the sub-committee are attached to it. They speak for themselves.

Mr. MEIGHEN: I have read them.

Mr. STEWART (Argenteuil): My right hon. friend will admit that there is no instruction given to the Civil Service Commission as to what they should do. I merely made a statement as to the condition of affairs as I found it. I am not saying who is responsible for it, but I say that is the case.

Mr. MEIGHEN: Why did the minister and his colleagues consider another revision now necessary. What is the reason?

Mr. STEWART (Argenteuil): The only reason is to get rid of the bonus which is a very vexatious thing.

Mr. MEIGHEN: The minister cannot put it in that way. The government can get rid of the bonus, they do not need to go to the Civil Service Commission for that, and they have done it as far as they intend to do it. Why was the matter of the revision put up to the Civil Service Commission? If the minister can give me any explanation that does not require an upward revision I would like to hear it.

Mr. STEWART (Argenteuil): My right hon. friend knows very well that the Civil Service Commission is the body who fix the remuneration as well as the classification. They are the ultimate body who make the recommendation.

Mr. MEIGHEN: No, no.

Mr. STEWART (Argenteuil): They recommend to the government and the government accepts the recommendation but they are the adjusting body.

Mr. MEIGHEN: The working body.

Mr. STEWART (Argenteuil): Whom else would it be referred to?

Mr. MEIGHEN: I am not saying it is not the right body, but I want to know why it was referred to anybody unless it was with the implied instructions to revise up. Can the minister give me any other object it could possibly have had, seeing it was based on the fact that the government had withdrawn a part of the bonus?

Mr. STEWART (Argenteuil): My right hon. friend is making the deduction.

Mr. MEIGHEN: What deduction?

Mr. STEWART (Argenteuil): The deduction that because the matter is referred to the Civil Service Commission, it means an upward revision. I do not agree to that at all.

Mr. MEIGHEN: What was the purpose?

Mr. STEWART (Argenteuil): The right hon. member may make that assertion if he likes.

Mr. MEIGHEN: What was the purpose?

Mr. STEWART (Argenteuil): The purpose was simply to make an adjustment.

Mr. MEIGHEN: Why was it necessary?

Mr. STEWART (Argenteuil): Having in mind the discontinuance of the bonus.

Mr. MEIGHEN: Hear, hear.

Mr. STEWART (Argenteuil): That is all, and there may be cases where the salaries will be revised downwards.

Mr. MEIGHEN: On account of the bonus being taken off.

Mr. STEWART (Argenteuil): I am not speaking of the bonus being taken off. That might happen. That is for the Civil Service Commission.

Mr. MEIGHEN: On account of the bonus being taken off, the government thought it would refer the matter to the Civil Service Commission, to see what revision downwards would take place.

Mr. BUREAU: Does my right hon. friend object to the revision of salaries?

Mr. MEIGHEN: I object to the ministers, including the one who is moving these estimates, complaining of the statute which compels an upward revision year by year.

Mr. BUREAU: That does not answer my question. I did not ask for a speech. I asked the right hon. gentleman: Does he object to the revision of salaries?

Mr. MEIGHEN: I want to know first what the revision is to be, up or down. The minister does not seem to know.

Mr. BUREAU: I am not going to define "revision" to my right hon. friend, but it is submitted to the commission.

Mr. MEIGHEN: The revision as understood by the minister, to which I object, is neither up nor down. It has no purpose.

[Mr. Meighen.]

Mr. BUREAU: It has a purpose.

Mr. MEIGHEN: What is it?

Mr. BUREAU: What does one revise the statutes for? What does one revise anything for? If my knowledge of the English language is not deficient, revision is in order to adjust. If there is anything wrong, you are going to make it right, if you can. That is my understanding of it.

Mr. MEIGHEN: What did the government think was wrong?

Mr. BUREAU: We do not say that we thought anything was wrong.

Mr. MEIGHEN: Oh, oh.

Mr. BUREAU: My right hon. friend need not sidestep. He wants to know why the revision. Is that what it was?

Mr. MEIGHEN: Why it was ordered.

Mr. BUREAU: Because the time had come to readjust those salaries. The salaries were not adjusted because during the war certain increases were granted and rightly so. I am not disputing them. Things are now getting normal. The civil servants are dissatisfied and they want revision. We want efficiency, and in order to get efficiency you must show those people that you are human; that you understand their wants. The proper tribunal to do that work was the Civil Service Commission and we referred it to that commission. Whether it will be necessary to raise or to decrease salaries, I do not know; that will be for the Civil Service Commission to say, but my right hon. friend can place any implication he likes on it. That however, has nothing to do with the fact that the matter was referred back to the Civil Service Commission.

Mr. MEIGHEN: I have been considerably assisted by the Minister of Customs and Excise (Mr. Bureau), and I am deeply grateful to him.

Mr. BUREAU: That is the first time my right hon. friend has been. I appreciate that.

Mr. MEIGHEN: The civil servants were dissatisfied, and the government being human and desiring to meet their wants, gave a revision. I will take that, with the statement of the Minister of the Interior, as sufficient warrant for the implication that the revision is a revision upwards.

Mr. STEWART (Argenteuil): I do not want the right hon. gentleman to put me in the position of saying that it is a revision upwards.

Mr. STEVENS: Inasmuch as, according to the minister's statement of a moment or two ago, the revision is limited to salaries under $2,000, then the minister and the government are limiting their revision up or revision down to the lower-paid services. An examination of salaries paid in this department, as shown in the estimates, indicates, for instance, that for 125 clerks, the total increase is only $2,000. These are the classes whose salaries are to be scrutinised, and scrutinised with care. On the other hand we have a long list of highly paid officials, with salaries running from $8,000 to about $3,000, all of whom are receiving annually an increase approximating very closely to the total increases of thirty or forty of the lower-paid classes. That is the criticism we have of these expenditures. That is why we are criticizing the minister's statement of a moment ago that he finds by reducing his staff by sixteen—and I have the figures here and I am merely using this because the minister introduced it into the discussion—an increase of a considerable sum. But these increases are in the higher-paid grades, and that is the point which we are criticizing. If there is to be a revision, or even a review of civil service salaries, why pick on the postman at $960 or less? I will give my hon. friend some at $937. Forty-four clerks between them get an increase of $600 and they are all low paid officials. They are the ones who are going to be subjected to a review or revision.

Mr. BUREAU: No, there is no limit.

Mr. STEVENS: I am just basing my argument on the statement made by the Minister of the Interior (Mr. Stewart) that this order in council is limited to salaries up to $2,000.

Mr. BUREAU: There is no limit.

Mr. STEWART (Argenteuil): My hon. friend will remember very well that when the bonuses were first instituted, they applied, I think, to salaries as high as $4,500. There is no one in the Civil Service who will be refused recognition before the commission, nor does the order in council say that the revision is confined to salaries which are now drawing a bonus, being those amounting to $2,400 and under.

Mr. STEVENS: Will the order in council take care of the legitimate excuse advanced by the minister a moment ago that the extra cost, in spite of curtailment, was due to statutory increases? Does the order in council empower the Civil Service Commission to correct that in any way or even to make recommendations that will correct it?

Mr. STEWART (Argenteuil): Speaking personally, I should be very glad if some suggestions were made for amendments to the Civil Service Act; but that act, as my hon. friend well knows, provides for regular and statutory increases up to certain maximums in certain classes. No portion of the Civil Service coming under the supervision of the Civil Service Commission will be denied the right to a hearing and scrutiny by the Civil Service Commission in regard to their class.

Mr. STEVENS: That right to a hearing would apply only to a revision upwards,—not to a revision downwards. I do not suppose the Civil Service Commission will be deluged with demands for reductions. That is scarcely, to use the minister's term of a moment ago, human; we would not expect that. All the courtesy extended by the government to the Civil Service is more or less of a joke. It really is not a serious matter at all.

Mr. BUREAU: The revision?

Mr. STEVENS: No, the courtesy extended to the Civil Service to apply to the commission for revision down.

Mr. LEADER: I have no objection to sufficient salaries being drawn; in fact, I wish we could all draw sufficient to keep us in luxury; but I object to anyone drawing two salaries and to men being overpaid. I should like to draw the minister's attention to a complaint made by the Auditor General in connection with the geodetic and astronomic surveys. This letter reads:

Audit Office, Ottawa, June 12, 1923.

Sir,—In February last, when a number of your officials employed in the Geodetic Survey and the Astronomical branches of your department had the date of their permanency dated back by the Civil Service Commission from April 1, 1921, to April 1, 1919, a paylist was submitted to this office for the adjustment of the arrears. In that paylist the following officials were shown to be still overpaid to the extent of the amount set after their names:

A. J. Brabazon, overpaid..	$27 50
W. M. Dennis, overpaid..	114 50
E. G. Gerard, overpaid..	7 35
T. C. Dennis, overpaid..	93 00
A. J. Rainboth, overpaid..	58 10
J. F. Dolan, overpaid..	33 07
Thos. Hackett, overpaid..	13 75

As these overpayments or any part of them do not appear as yet to have been recovered, I have to ask what action your department has taken or proposes to take with regard to the same.

I am, Sir, your obedient servant,

WM KEARNS, Asst. A.G.

What action has been taken in collecting these overpayments? Might I suggest that if

this should be more convenient for the minister, we might let this rest until he brings us the information regarding F. H. Peters. I repeat, Mr. Chairman, if it is more convenient we might wait for this information.

Mr. STEWART (Argenteuil): I will bring down the full information. This is the first time the matter has come to my notice.

Mr. MARTELL: Will the minister also bring down information regarding the number of increases that have taken place since December 6, 1921?

Mr. MEIGHEN: Increases?

Mr. MARTELL: Yes.

Mr. MEIGHEN: Without being statutory increases? Inasmuch as some hon. members may not understand the nature of the statutory increases, I would ask the minister to confirm my statement to the committee that the statutory increases are wholly within his discretion; that is to say, he can withhold them.

Mr. MARTELL: Have they ever been denied at any time?

Mr. MEIGHEN: Yes.

Mr. BUREAU: Without cause?

Mr. MEIGHEN: They are wholly within the discretion of the minister.

Mr. BUREAU: Not without cause.

Mr. MEIGHEN: Certainly not; they never are, under a good minister.

Mr. BUREAU: It is all right to say that this is wholly within the discretion of the minister, but he follows a certain well established policy. My right hon. friend does not mean to say that indiscriminately any statutory increase is refused without cause?

Mr. MEIGHEN: No, I do not say it has been. I say that if the minister or the government felt that owing to different conditions obtaining, either in the treasury or throughout the country—a reduction in the cost of living, for instance—he or they would have that power and would be justified—

Mr. BUREAU: I do not know.

Mr. MEIGHEN:—in denying any statutory increases.

Mr. BUREAU: He would have the power, but that he would be justified in exercising it

[Mr. Leader.]

I am not ready to admit, because the refusal of a statutory increase, as my right hon. friend well knows, is a kind of punishment imposed upon a man.

Mr. MEIGHEN: That has been the practice.

Mr. BUREAU: That is the policy which has always been followed. If we were to depart from it, my right hon. friend does not mean to say that we could invoke, for instance stringent times and say to a civil servant, "You shall not have your statutory increase." That was never understood by the civil servant when he came into the service, nor has it been the policy of the departments under any government. Surely if a civil servant knew that his statutory increase would depend on the whim of a minister he would hesitate to enter the service.

Mr. MEIGHEN: The minister's statement of the practice is perfectly correct. The practice has been to let the statutory increases go as a matter of course, unless there were individual reasons for any being withheld. It must also be said that in the past it has never been believed that any general cause existed that would justify the general withdrawal of statutory increases. I would not say that any such general cause exists to-day. I do not think it does; but I say that if the government felt it did, on either of the two grounds I mentioned—

Mr. BUREAU: "If".

Mr. MEIGHEN: —the government has ample power, and I know of no reason why it should not exercise such power.

Mr. BUREAU: If the sea were boiling the fish would be cooked.

Mr. McQUARRIE: Would the minister explain the compensation to John Hedin?

Mr. STEWART (Argenteuil): This man was injured on the Temiskaming and Northern Ontario railway.

John Hedin was a section man in the employ of the T. and N.O. Railway and was injured on October 17, 1921, in a collision between our precise levelling party's motor car and a section motor car on which Hedin was riding. It has not been brought out that the accident was either party's fault—it was apparently an unavoidable occurrence.

The railway referred the case to the Workmen's Compensation Board of Ontario in the regular manner and they awarded Hedin the sum of $994.40 for medical and hospital services and loss of time, together with a pension of $20 per month for life for permanent partial disability.

The Department of Justice ruled on July 6, 1923, that our department was not liable under the terms of the agreement with the T. and N. O. Railway covering the operation of motor cars for precise levelling purposes.

Mr. Lee, the chairman of the T. and N. O. Railway Commission, urged however, that this department should reimburse the commission for the full amount of the award on the grounds of moral responsibility, since the accident would not have happened but for the presence of our party on the line. He also intimated that no further geodetic operations along the railway would be permitted until an adjustment of the matter, satisfactory to them, has been made. In view of the moral responsibility which undoubtedly exists and of the hindrance which would be caused to geodetic operations by the railway's refusal to allow same on their property, it has been considered proper that payment of the claim be arranged on other than legal grounds.

So we are paying in all $1,564.40 as compensation.

Item agreed to.

International boundaries—Expenses connected with the survey and demarcation of international boundaries, $20,000.

Mr. LEWIS: Is this the minimum requirement for international boundaries? For the past two sessions the minister has stated that the item voted would be the last required except a small amount annually for repairs.

Mr. STEWART (Argenteuil) My hon. friend is quite correct in his statement, which I based on the information then before me. I am now informed that, in accordance with the treaty under which this work is carried on with the United States, our annual expenditure for keeping up the monuments will be in the neighbourhood of $20,000 a year. I have not investigated further on the point.

Mr. McQUARRIE: What are the details of this item?

Mr. LEWIS: Does the United States pay the same amount annually?

Mr. STEWART (Argenteuil): Yes.

Mr. CAMPBELL: Will this be a permanent expenditure?

Mr. STEWART (Argenteuil): Yes, approximating $20,000. The details of the item are as follows:

J. A. Pounder, Geodetic engineer	$2,520 00
G. T. Prinsep, Geodetic engineer	2,520 00
T. P. Reilly, Jr., Geodetic engineer	2,040 00
D. F. Chisholm, Jr. Geodetic engineer	2,040 00
J. N. Ingersoll, Jr., Geodetic engineer	2,040 00
Florence Swallow, Clerk typist	1,140 00
J. M. Dwyer, Clerk messenger	900 00

Those salaries total $13,200. Then we have:

Engraving and printing of maps and printing of reports, $5,000.

To provide for repairing and renewing monuments and reference marks on the Quebec-Maine and New Brunswick-Maine boundary lines, $800.

Mr. McQUARRIE: Why are maps necessary?

Mr. STEWART (Argenteuil): The maps are necessary to show the markings along the boundary line. Mr. McArthur, who is in charge of this work, has informed me that we have cut his appropriation to such an extent that he fears he will be unable to meet the expenditure required by the American members of the commission. But I have been told quite frequently that this was about the necessary amount, and I have placed it at that.

Mr. McQUARRIE: How much was spent last year?

Mr. STEWART (Argenteuil): $42,940.

Item agreed to.

Government of the Yukon Territory—

Salaries and expenses connected with the administration of the Territory	$ 65,000
Grant to Local Council	45,000
Grant for maintenance and construction of roads	70,000
	$180,000

Mr. BLACK (Yukon): Why is it that the third item in this vote has been reduced from $80,000 to $70,000? It is an appropriation that is absolutely necessary to the development of the country, yet it is reduced while the others are maintained at the same figure.

Mr. STEWART (Argenteuil): We made a very substantial increase in the road appropriations a year ago, I think, and my information was that that increase largely covered the necessities. Having in mind the Mayo camp and the necessity for maintenance of transportation facilities in that connection I did not feel like cutting the amount more seriously. If I remember correctly, prior to last year the appropriation was $50,000 and it was increased last year for the very purpose of giving access to this mining territory, which is not served by a railway. It is felt that $70,000 will provide the needed improvements and maintenance.

Mr. CALDWELL: Will the minister explain the second item, grant to local council?

Mr. STEWART (Argenteuil): That is to pay the running of the local legislature in the Yukon.

Mr. SPEAKMAN: What is the present population of the Yukon?

Mr. STEWART (Argenteuil): Between three and four thousand whites, with a considerable Indian population.

Mr. SHAW: What are the salaries included in the item of $65,000?

Mr. STEWART (Argenteuil): The details are as follows:

Amount required for salaries	$19,400
Amount required for living allowances	15,900
Insane patients: Expenses connected with transportation to and maintenance in the Insane Hospital, and Provincial Mental Hospital at New Westminster, B.C., also for maintenance in R.C.M.P. barracks at Dawson and Whitehorse	15,000
Travelling expenses of outside officials to and from Dawson and in the Territory	3,000
Printing and stationery	2,500
Expenses connected with the collection of export tax by Royal Canadian Mounted Police officers. They receive 50c per day while on that special duty	500
To pay commission of 10 per cent to the Royal Canadian Mounted Police officials on sums collected by them as mining recorders, mining inspectors, and Crown timber and land agents	750
Miscellaneous: freight and express charges, telegrams, telephones, postage and unforeseen expenses	7,950
Total	$65,000

Mr. SPEAKMAN: How many local councillors are there in the Yukon?

Mr. STEWART (Argenteuil): Three.

Mr. SPEAKMAN: Are the whole expenses of this council paid by the federal government?

Mr. BLACK (Yukon): The grant to the local council is for the expenditure made by the council. The local councillors are paid an indemnity of $400 each, and out of the grant they maintain hospitals, schools and the other necessary institutions of the country. Part of the $45,000 granted this year—and the same applies to other years—goes into road construction.

Mr. MEIGHEN: There used to be a council of twelve, but under an efficient administration it was reduced to three.

Mr. SPEAKMAN: And a diminishing population.

Mr. MEIGHEN: There were twelve councillors while the population was what it is now.

Mr. McQUARRIE: Is there any truth in the report which has lately been published in the press that this government has been making overtures to the government of British Columbia to take over the administration of the Yukon Territory?

[Mr. Speakman.]

Mr. STEWART (Argenteuil): I never heard of it.

Mr. BLACK (Yukon): I have noticed some reports in the press to that effect. The idea is not tenable at all. The Yukon is a federal territory and in no way would it be appropriate for its administration to be undertaken by the government of British Columbia. Whoever advocated the idea did so, I suppose, because the territory happens to be situated nearest to British Columbia, but it would be just as well administered by the government of Ontario or of Quebec as by the government of British Columbia. The idea is not a practical one and is not put forward by anyone who has practical ideas on the subject. In fact, the suggestion is only an evidence of the fact that the person making it knew nothing whatever of the subject.

Mr. SPEAKMAN: I asked my questions not because I have any objection to a population receiving necessary service simply because it is a sparse population scattered over a large country, but viewing all the other items that have been passed, the salaries and expenses in connection with it, the expenses of the council—and I am glad to have heard the explanation of how the expenditure is made up—the grant for roads, salaries for judicial administration, federal board, and all the other expenses that go with it, I was thinking that if this population continues to dwindle it is going to be expensive for us to maintain. But I am not opposing any such vote simply because the population is scanty. They are entitled to all the services that are necessary.

Mr. BLACK (Yukon): I would like to make it quite clear to the hon. member that my remarks were not directed towards his question, but towards the idea that the administration of the Yukon Territory should be undertaken by the government of British Columbia.

Item agreed to.

Government of the Northwest Territories—salaries and expenses in connection with the administration of the Territories, including the erection of buildings and investigation work, etc. Establishing and operating wireless stations, including buildings, etc. Administration N.W. Game Act, etc. Explorations—salaries and contingencies, alterations and repairs to ships, etc., including $1,000.00 to J. D. Craig as officer in charge of Arctic Expeditions 1924-1925. Compassionate allowance to the widow of the late Wilfrid Caron, who was drowned off "S.S. Arctic". Compassionate allowance to the mother of the late Desmond O'Connell, who was drowned off "S.S. Arctic", $378,000.

Mr. LEADER: I wish to call the attention of the committee to an item which appears in the Auditor General's report in

connection with this vote. I am sorry that we find items of this nature to criticize, but I believe it is my duty as a humble representative to bring this fact to the attention not only of the House but of the people of Canada, and I want to register my protest against it. It seems to me an illegal expenditure of public money. The item in the Auditor General's report is as follows:

1,000 Players cigarettes..	$17 35
500 7-20-4 cigars..	40 00
500 Benson and Hedges cigars..	75 00
	$132 35

Mr. STEWART (Argenteuil): These supplies were placed on the S. S. Arctic. We leave policemen up in the north country throughout the whole of a very long winter, during which they see no white men till the Arctic returns and relieves them with two other men. We have three posts up there on the eastern coast of Canada. As my hon. friend knows there are exploring parties in there continuously. Indeed, we found a professor representing the Danish government up there who had spent three years on the southern end of Melville island. It might be said that perhaps this territory is not worth holding, but so far we have discovered very valuable deposits of coal up there, there may also be minerals and we thought it well to spend some money to maintain our sovereignty over that particular area. I thought I had a map here showing the posts. At all events, we have three posts up there, one at Pond's Inlet and two others, and we hope to establish two more on the eastern coast of Canada to look after the preservation of the game and enforce law and order among the native tribes to be found up there. These men, two in a company, remain up there during the whole winter season, and can only be visited during a very short time in the midsummer months. A ship will have to be sent there annually for that purpose. Last year, when this vote was under consideration, a judicial party had gone up in that country as far as Cumberland gulf to try a murderer. We had also to send a judicial party to the mouth of the Mackenzie river, to Aklavik, for the very same purpose, and we will have to send another party there this year. This may seem a considerable expenditure, but these are the outposts of civilization, they are expensive to reach, and can be reached only during a very limited time.

Mr LEADER: I presume the judicial party are drawing their salaries to maintain them?

Mr. STEWART (Argenteuil): Yes.

Mr. LEADER: Then why furnish them with these cigars and cigarettes? Let them buy their own. It is the already overburdened taxpayers of Canada who have to foot the bill. This is a small item, but there is a principle involved, and it runs all the way through. I think we cannot condemn it too strongly.

Mr. STEWART (Argenteuil): My hon. friend will remember that we are sending up there an official party representing the government of Canada. They meet other parties, representatives of foreign countries, and I do not think in view of the circumstances we have been over-extravagant in putting a few packages of cigarettes and some tobacco on board the ship for that purpose, but if we have I will see that it does not go this year.

Mr. GOULD: Why not send men there who do not smoke?

Mr. STEWART (Argenteuil): The smokers buy their own tobacco.

Mr. LEADER: Will the minister say that this is a justifiable expenditure?

Mr. STEWART (Argenteuil): Frankly, I have never heard of it before. I did not know they took these things, but I would not object to a reasonable amount of tobacco going with a party of that kind, officially representing the Canadian government as they do.

Mr. LEADER: The minister thinks that is in the interests of economy?

Mr. PARENT: If the cigarettes are good.

Mr. LEWIS: Is there any hope of any people ever living up there, or is there any possibility of ever digging out the coal or any mineral wealth that may be up there? I would not deny these men the pleasure of having a few cigars and cigarettes if they are meeting people in a friendly way, but is this expenditure to be continued year in and year out?

Mr. STEWART (Argenteuil): I think it is wise for us to exercise some oversight over the Canadian tribes, because as my hon. friend knows, if you do not protect them, the traders, who are not particularly anxious about the welfare of the native Eskimo, get in amongst them and debauch them, carry in liquor and exercise an evil influence among the tribes, and then the responsibility is ours. The Eskimo problem is beginning to be a rather serious one for us to handle, and we are establishing police posts at various points along the coast to protect the Eskimo and preserve their game.

Mr. LEWIS: My observation is that instead of protecting the Eskimo we seem to be protecting the traders, or those who go in there. We try to enforce law and order among the Eskimos, who have never been trained along that line, and when they come into contact with the law they pay the extreme penalty whereas with their grey matter and mental development they are perhaps not able to appreciate justice in the same way that we do.

Mr. STEWART (Argenteuil): I had the pleasure of chatting with a trader who all last winter had been at Aklavik, where a police post has been established for some time, and he told me that they carried on pretty much as people do on the outside, although it was dark all the time. They have gramophones, and some of the natives who have come in contact with civilization have their own fishing boats and they generally, according to his report, have a rather jolly time. I believe, and I think it is freely admitted, that the Eskimo lends himself much more rapidly to civilizing influences than do the tribes of Indians to be found north of the Great Slave lake and along the Mackenzie river.

Mr. LEWIS: This work will be continued year in and year out?

Mr. STEWART (Argenteuil): Yes. That is to say the ship will have to visit these coasts. But we have been building houses, carrying in supplies and getting established. That work will not need to be done again.

Mr. LUCAS: The second item for establishing and operating wireless stations, including the erection of buildings and investigation work, and so forth, shows an increase of $55,000.

Mr. STEWART (Argenteuil): Last year we established two wireless stations, one at Dawson and the other at Mayo in the Yukon. This brought about I think, a very considerable saving, particularly in the upkeep of lines and poles. This year we are establishing other wireless stations in the territories. We shall put in a central distributing station—I think that is decided now—to be located at Edmonton. We shall put in a station at Fort Vermilion, another at Fort Smith, and thus have a means of wireless commuiciation down the McPherson, eventually establishing a complete chain of communication with the far northern posts—with the posts along the Mackenzie river and with Mayo and Dawson, the chief distributing centre being Edmonton. So that throughout the whole of the north country, during the whole period of nine months in which it is shut up by the rigorous winter, the people will have some communication with the outside world.

[Mr. C. A. Stewart.]

Mr. LEWIS: Will this item include all the stations in the Northwest?

Mr. STEWART (Argenteuil): This includes Edmonton.

Mr. LEWIS: Does it include the whole of the stations?

Mr. STEWART (Argenteuil): Yes.

Mr. STEVENS: There is an item in this vote for pensions?

Mr. STEWART (Argenteuil): I know to what my hon. friend refers. When the Arctic was descending the St. Lawrence, after she left Quebec, she ran into a severe storm, and two of the seamen were drowned. There is a vote to provide an allowance for the widow and the relatives of the two men who were drowned on that occasion.

Mr. McQUARRIE: Will the minister explain what is the situation with respect to Wrangel island?

Mr. STEWART (Argenteuil): There is not very much to explain. We have had a great deal of discussion with Mr. Stefansson with respect to Wrangel island. I cannot recollect just at what period this government informed him that they were not interested in Wrangel island as it lay off the coast of Siberia. But we had received information in a roundabout way that the British Admiralty might be interested in Wrangel island as a flying base. The reports were that British aviators might fly across the northern portion of Canada and on to the Orient. Stefansson went to England and interviewed the authorities there, but apparently the English government is not willing to set up any particular claim to Wrangel island, at least I have not heard that such is their intention. I do not know officially what they propose doing, but so far as Canada is concerned we do not intend to set up any claim to the island.

Mr. McQUARRIE: Has the government made any investigation with respect to the death of the men who were left on the island?

Mr. STEWART (Argenteuil): No, we were not responsible for the expedition in any way.

Mr. STEVENS: This item makes provision for exploration does it not? Does that include the steamer Arctic?

Mr. STEWART (Argenteuil): Yes.

Mr. STEVENS: Would the minister state just what the Arctic cost last year and what work was performed?

Mr. STEWART (Argenteuil): She went on an expedition from Quebec into the Arctic circle taking a judicial party with her for the purpose of trying an Eskimo at Cumberland gulf, I think, and then on up to try to establish a post at Etah which would be the most northerly post that we have, or just opposite Etah on Melville island. However, the ice conditions did not permit her to land the material for this post and she was forced to return to the post established a year ago on the south of the island. She relieved the post there, visited the post at Pond's Inlet, then returned and picked up the judicial party and came back to Quebec.

Mr. STEVENS: Would the minister give me the total figures with respect to the Arctic?

Mr. STEWART (Argenteuil): Sixty thousand dollars.

Mr. STEVENS: That is the total cost of the Arctic last year? Does that include all these items for repairs? I see a long list.

Mr. STEWART (Argenteuil): Yes it includes the whole of the expenditure in connection with the Arctic. My hon. friend will remember that last year we purchased a ship from the British Admiralty but it was single plating and it has to be double plating.

Mr. STEVENS: It has to have a double bottom?

Mr. STEWART (Argenteuil): Yes a double bottom. The Arctic is an old ship, a very slow sailer, and very expensive to send into that territory. But she will carry more supplies that the newer and faster vessel that we intend to put on this service, and we will have her in commission next year when we hope to cheapen the cost of fitting out these northern posts very materially.

Mr. FORKE: I should like to ask the minister if Stefansson was in the employ of the Canadian government last year in any way?

Mr. STEWART (Argenteuil): No. He was granted a small amount to pay his expenses to England. That is all the connection we had with Stefansson.

Mr. LEWIS: Would the minister tell us at what time this expedition started from Quebec, and the probable date when it reached or tried to reach Melville island? I wanted to know what the ice conditions were so that I could understand the nature of the navigation in Hudson straits.

Mr. STEWART (Argenteuil): I think I mentioned previously that she called at a port in Greenland.

Mr. LEWIS: At about what time?

Mr. STEWART (Argenteuil): If I remember rightly about the middle of July, I think about the 15th, of that month. She returned —I am not exactly sure of the date—about the last week in September.

Mr. LEWIS: During that period she was not able to reach the island on account of ice conditions?

Mr. STEWART (Argenteuil): I have a very clear map here. If my hon. friend is interested in it we will be able to show what happened. She attempted to reach the most northerly point we contemplated for a post but she was shut out by the ice. I hope my hon. friend is not thinking about the entrance to Hudson bay because that is many hundreds of miles south.

Mr. SHAW: I should like to ask the minister if any other government, besides the Canadian government, have established posts on any of these northern island contiguous to Canada?

Mr. STEWART (Argenteuil): Yes.

Mr. SHAW: And if they are making a claim to sovereignty of any of these islands?

Mr. STEWART (Argenteuil): Of course my hon. friend is aware that international law, in a vague sort of way, creates ownership of unclaimed lands within one hundred miles of any coast, even if possession has not been taken. At least there is a sort of unwritten law in that respect. Of course possession is a very large part of international law as well as any other law. But in this particular vicinity, at about the most northerly post we have established at the moment, in north of these islands, a Danish professor has been located for the past three years making investigations—not in any way, I imagine, attempting to establish sovereignty over these particular lands, or anything of that sort, but purely for scientific purposes. and that is the vicinity in which we found coal. In former days coal has been placed upon ships from that district, and it is not uncommon for whalers to be found there every year. That water is filled by ships from many parts of the world on whaling expeditions and trading expeditions as well; so that it is somewhat important that we should be established there.

Mr. LEADER: In the Auditor General's report, page K-240 I find the following letter:

Sir,—On August 22, 1922, cheque No. 3593 was issued against your appropriation for Northwest Territories, Explorations, in favour of V. Stefansson for the amount of $3,000. This cheque was issued under the authority of an order in council of August 21st, 1922 (P.C. 1735) which authorizes "that the sum of $3,000 be advanced to Vilhjalmur Stefansson to assist in providing for the relief of the four men who were left on Wrangel island".

As this payment was made as an advance to Mr. Stefansson, I infer that it was the intention of Council that he should render a statement of his expenditure of the same. No accounts covering this advance have, however, been received in this office, and I understand that no accounts have been received in your department. Kindly take steps to obtain a statement from Mr. Stefansson showing how this money was expended.

That is signed by the Assistant Auditor General, and I would like the minister to explain the details in regard to this advance.

Mr. LEWIS: While the deputy is looking up that information, perhaps the minister would answer me a question. He mentioned the fact that whaling vessels entered into that vicinity where we have outposts. How long were they in that vicinity in the summer time? Has the minister any record at all?

Mr. STEWART (Argenteuil): Nothing but Captain Bernier's reports in which he states that he does not like to stay in these northern waters longer than thirty days at the most.

I may say for the information of my hon. friend from Portage la Prairie (Mr. Leader), that in 1922 there was an advance of $3,000 to Mr. Stefansson of the Exploration Company and we now have the certified vouchers returned, but they are not in the Auditor General's report which is to hand.

Mr. LEADER: Everything is in order?

Mr. STEWART (Argenteuil): So I am informed.

Mr. McQUARRIE: Would the minister correct the answer in which he stated the government was not interested in the Stefansson expedition at all?

Mr. STEWART (Argenteuil): This was before I had anything to do with Mr. Stefansson personally. I did not know this had been done in 1922. I do know of the advance last year.

Mr. McQUARRIE: How much was paid last year?

Mr. STEWART (Argenteuil): Seven hundred dollars.

[Mr. C. A. Stewart.]

Mr. McQUARRIE: The other matter was without the minister's knowledge, as I understand?

Mr. STEWART (Argenteuil): It so happened that I was not discussing Stefansson in those days. Later on I did have all to do with him, but not at that particular time. I just happened not to know of this. I may have been present at the council meeting—I would not say I was not—but the matter had entirely slipped my mind.

Mr. McQUARRIE: Why should the government pay any money if it was not interested in any way in the expedition?

Mr. STEWART (Argenteuil): I will have to get that information. I know that Stefansson makes no claim on Canada, because he was here the other day endeavouring to interest the Canadian government in this matter. I spent an hour with him. This expedition was on his own account, organized by his own company.

Mr. McQUARRIE: I cannot understand why we should pay any money at all. It seems to me a strange thing.

Mr. STEWART (Argenteuil): I will be very glad to get the whole explanation but I imagine what happened was that he came here and pleaded very earnestly for assistance to man a relief expedition in 1922. I would not like to say I was not present, but if I was present, I have no recollection of this particular meeting. But I knew all about what happened last summer because it was felt last year that the Admiralty might be interested in this matter. We did not know, but we were willing to contribute something for him to go and place the matter before the Admiralty.

Mr. McQUARRIE: Did the minister not take any part in the controversy between Mr. Stefansson and members of his party about which we saw so much in the press?

Mr. STEWART (Argenteuil): No.

Mr. McQUARRIE: Can the minister give us any information as to the venture which was made by Mr. Stefansson in connection with reindeer? I think a lease was granted by the government to Mr. Stefansson, or to a company formed by him, and Mr. Stefansson proposed to raise reindeer in the north.

The CHAIRMAN. That matter hardly comes under this vote at the present time.

Mr. STEWART (Argenteuil): I know that we heard of reindeer down at Gaspé.

Mr. McQUARRIE: No, this is a different matter.

Mr. STEWART (Argenteuil): I have no recollection of it.

Mr. McQUARRIE: Does the minister say he does not know anything about it?

Mr. STEWART (Argenteuil): I have no recollection of it.

Mr. STEVENS: Did not his Superintendent of Parks, and some other officials of the government, together with Mr. Stefansson, form a commission on which about $30,000 was spent, if I recall it correctly, to investigate the value of cariboo and reindeer raising and breeding in the Northwest territories?

Mr. STEWART (Argenteuil): I do not know anything about this. I did know of a herd down in Gaspé.

Mr. McQUARRIE: No, this is up in the north.

Mr. STEWART (Argenteuil): That is the only one I know of.

Mr. MEIGHEN: The hon. gentleman is right, except for the amount of money. It was an investigating commission that was very economical. It was appointed while I was Minister of the Interior, and was composed of Dr. Rutherford, Mr. J. S. McLean, Mr. Harkin and Mr. Stefansson, who I think retired, or at least took more part as a witness than as a member of the commission. Dr. Rutherford wrote the report. It was an investigation into the value of northern lands and the practicability of reindeer and muskox raising there; and if the mention of the subject has no better purpose than to induce some members to read that report, I am sure no one will read it without freely acknowledging that the report is worth more than the money spent. It is one of the finest tributes to Dr. Rutherford's ability that I think now exists.

Mr. LEWIS: Will the minister tell us why the discrimination or the difference in the compassionate allowance to the mother and to the widow? There may have been children. I never did like this word "compassionate." I never found a government admit any liability where there is any death. I have reference to a death which occurred on the Swift Current agricultural farm. When anything was given out, it was a "compassionate" allowance. If anything happens under anybody else's jurisdiction, it is not a "compassionate" allowance; the verdict is rendered by justice, or justice is satisfied. I should like to know why the difference between these two and why we use the word "compassionate" in this case.

Mr. STEWART (Argenteuil): In one case there was a young widow and family of small children. The other was the case of a young man who was only partially contributing to the support of his mother.

Mr. LEWIS: If $3,500 is the value the minister places on a man's life as a compassionate allowance for the widow of an arctic explorer, that is a very small sum. I should not like it if my wife was left with only $3,500 to live on. There is such a thing as economy, but there is also such a thing as justice.

Mr. McQUARRIE: Can the minister give us any further information as to the lease which was granted to Mr. Stefansson and his associates of the southern part of Baffin's land, I think it was?

Mr. STEWART (Argenteuil): There is a lease of the southern end of Baffin's land. I am informed that Stefansson is not particularly interested in it now, and that he has turned it over to the Hudson's Bay Company. They are carrying on, I do not know with what particular success.

Mr. MEIGHEN: Is the government not getting the rent? That was one of the results that flowed from the investigation. A company undertook to utilise the south half of Baffin's land; the lease went through to Mr. Stefansson, but it was transferred by him to the Hudson's Bay Company who introduced a large number of deer into that area. Quite a substantial rental was provided for, which was to come to the Interior department. I hope the minister has not forgotten all about that. There is no reason that I know of why the Hudson's Bay Company should not pay its debts.

Mr. STEWART (Argenteuil): I am informed that the rental was not to begin in the earlier years of the experiment, and during the first winter 700 deer were placed in that area and one-half of them perished.

Mr. MEIGHEN: I believe they did not get experienced men to take care of them, but as I understand the matter, they have overcome that difficulty. I know the rental was on an ascending basis, and I am inclined to think it started earlier in the period of the

lease. I would not like to think all these good things that we started are being forgotten now.

Mr. STEWART (Argenteuil): I will make inquiries. I confess I had not heard of the lease. I knew of the reindeer in that vicinity; I had heard reports of them from time to time, but I did not know that our friend Stefansson had so many ventures in hand in connection with reindeer.

Mr. MEIGHEN: He just turned it over to the Hudson's Bay Company.

Mr. STEWART (Argenteuil): I will make inquiries and get a report on it.

Mr. BLACK (Yukon): How much of this first item of $114,000 will be expended in Ottawa?

Mr. STEWART (Argenteuil): Printing and stationery, $5,500 and salaries, $16,965.

Mr. CALDWELL: What buildings is it proposed to erect and where are they to be erected?

Mr. STEWART (Argenteuil): We have to establish buildings at Fort Smith and Fort Norman. That is where we propose making headquarters at the moment.

Mr. CALDWELL: That is for administration purposes.

Mr. STEWART (Argenteuil): Yes.

Mr. CALDWELL: Then the next item:

Establishing and operating wireless stations, including buildings.

What are those?

Mr. STEWART (Argenteuil): I explained that. That is to establish stations down the Mackenzie with a chief distributing station at Edmonton. The increase of $55,000 is due to the establishment and operating of a station, including buildings, at Herschel island, and for capital cost for a station at Fort Smith for operation in 1925. The cost of operating wireless stations at Dawson, Mayo, McMurray and Simpson is estimated at $74,000. It covers the two stations in the Yukon and the construction of one at Herschel and one at Fort Smith, with a complete establishment.

Mr. BLACK (Yukon): What are the offices to which the salaries of $16,965 are paid in Ottawa and what are the amounts paid to each?

[Mr. Meighen.]

Mr. STEWART (Argenteuil): They are as follows:

1 Assistant engineer	$2,100
1 Sr. engineering clerk	1,680
2 Senior clerks	2,760
1 Account clerk	1,260
1 Engrosser	1,080
3 Clerk stenographers, at $960	2,880
1 Messenger clerk	1,200
1 Office boy	405

Then we have the salaries of the inspectors in the North:

C. C. Ross, Senior mining inspection	$3,240 00
Vacant, Petroleum engineer	2,880 00
R. J. Lee, Mining inspector	2,400 00
F. M. Steel, Mining engineer	2,280 00
C. W. Dingman, Petroleum and natural gas inspector	2,250 00
Miss E. G. Kay, Clerk stenographer	1,125 00
Total	$14,175 00

Mr. Finnie is in charge of all this work, and for that reason the Calgary office comes under this particular vote.

Item agreed to .

Dominion Lands and Parks, $3,814,634.55.

The CHAIRMAN: Is it the pleasure of the Committee that this vote be taken item by item?

Some hon. MEMBERS: Yes.

Salaries of the Dominion Lands, outside service, $506,380.

Mr. McQUARRIE: How is the decrease of $55,000 made up?

Mr. STEWART (Argenteuil): It comes about very largely by the reorganization of the western land service. We closed the offices in Saskatoon, Battleford and Swift Current, concentrating the work at Moose Jaw and Prince Albert. We have not entirely closed the first three offices; we have left a clerk in charge of each. We have also very considerably reduced the staff in the Winnipeg office. The reorganization is not yet completed in the head office here. We are trying to combine all the work of the Land department under one head. The removal of the immigration staff from the Norlite building will enable us to concentrate all our land activities there, which will effect a considerable saving. We have reduced the staff in the western service by forty-eight.

Mr. STEVENS: Is this a real reduction, or are those forty-eight merely transferred to some other department?

Mr. STEWART (Argenteuil): No, we have actually decreased the staff to that extent.

Mr. LEWIS: I did not know that this item was coming up to-night. I observe that the Swift Current office is among those closed. I have not the figures with me, but I understand that the revenue which would naturally come to Swift Current was even greater than the Moose Jaw revenue. It does seem to me that in administering Dominion lands it is of primary importance to give service to the farmers and other people in the vicinity of the office. It is very inconvenient for the people around Swift Current to have to travel to Moose Jaw to transact their business, especially as the revenue from the Swift Current office was equal to, if not greater than, the revenue accruing to the Moose Jaw office, which would indicate that a large number of people in the neighbourhood of Swift Current will be put to extra expense. It seems to me to be neither economical nor opportune to close the Swift Current office.

Mr. STEWART (Argenteuil): My hon. friend will remember that when a similar item was under discussion last session strong exception was taken, particularly to the homestead inspectors. One hon. member from Saskatchewan suggested that two and a half inspectors could do all the work.

Mr. BUREAU: Especially the half.

Mr. STEWART (Argenteuil): On that basis I have been trying to economize as much as possible, but I have discovered that two inspectors cannot do the work. It is not our intention to completely close the three offices referred to; that is, any individual desirous of doing business will not have to travel any greater distance except in cases of leasing, as practically all the other work will be continued in those offices. Of course, complete records will be kept only at Moose Jaw and Prince Albert, so that transfers will have to be made at those centres. We will try to make the change operate as little as possible to the inconvenience of people living in the neighbourhood of Swift Current, Saskatoon and Battleford.

Mr. SPENCER: Are many homesteads being taken up now? Would it not be possible to drop this line of work and encourage the settlement of lands near the railways?

Mr. STEWART (Argenteuil): I fear that would be an impossibility. As long as free land is available, if you do not allow settlers to homestead they will squat on the land, and then you have difficulty in getting matters adjusted. In one little district just west of Wetaskiwin, Alberta, 190 homesteads were filed the year before last.

Mr. LEWIS: Has the minister figures showing the revenue and expenditure for Swift Current and the other offices?

Mr. STEWART (Argenteuil): Not in detail.

Item agreed to.

Dominion Lands Contingencies etc., $210,000.

Mr. McQUARRIE: Will the minister furnish details?

Mr. LEWIS: Perhaps the minister will explain this item.

Mr. STEWART (Argenteuil): These are the details:

Expenses of 26 homestead appraisers, including purchase, renewals and repairs of travelling outfits, etc..	$58,000
Expenses of 13 timber inspectors, including as in the above item, purchase, renewals and repairs of travelling outfits, etc..	17,000
Expenses of 3 inspectors of ranches..	6,000
Expenses of 13 Dominion land and Crown timber agencies and of the offices of the inspectors of Dominion lands and Crown timber agencies. These expenses consist in the payment of telegrams, telephones, commission and postage to sub-agents, clerical assistance of a temporary nature only, janitor service, etc..	37,000
Travelling expenses of outside officials when away on government business, including superintendent of western land agencies, assistant land agency inspectors, travelling auditor, etc..	24,000
Printing and stationery. This item is to cover the cost of printed forms used in transacting public business, the purchase and repairs of typewriters and for all stationery required in the Dominion land offices and sub-land offices..	48,000
Advertising re sale of timber berths; also to cover accounts in connection with lands open for entry, etc..	9,000
Miscellaneous:—freight and express charges, telegrams, etc., paid at Ottawa, and for unforeseen expenses during 1924-1925..	11,000
	$210,000

Mr. McTAGGART: What does the department intend to do with those lands which have been withdrawn from entry, those in what is known as the blacklisted area in southern Saskatchewan and Alberta?

Mr. STEWART (Argenteuil): There has been some difficulty in that connection; there is great difference of opinion on the subject. I have had no less than three inspections made in certain localities and I find that opinion is divided on the question whether an entrant could make a livelihood on those lands. We have largely discouraged homesteading on them, believing that it would be in the best interests of settlers to engage in ranching rather than in intensive agriculture. However, in certain parts of the dry or arid area settlers

have been successful in agricultural pursuits. The whole matter is pending a definite decision as to just what portion, if any, of those lands may be recommended for settlement.

Mr. LEWIS: Did anyone take advantage of the provision made last year whereby the settler might remove to other lands?

Mr. STEWART (Argenteuil): Yes, there has been some considerable movement. That has been under the control of the Saskatchewan government, we contributing in some cases part of the cost of removal.

Mr. LEWIS: Do the lands thus vacated revert back to the Crown?

Mr. STEWART (Argenteuil): It is a little difficult to say. In some cases they are under mortgage; in that event they would not revert back to the Crown, and the best disposition is made of the land to clear up the indebtedness. In case where homesteads have not been patented the lands revert to the Crown.

Mr. LEWIS: The fact that a man has a mortgage on his place does not prevent him from taking advantage of the offer?

Mr. STEWART (Argenteuil): No.

Mr. STEVENS: Is any part of this $210,000 spent in connection with the Ottawa staff?

Mr. STEWART (Argenteuil): No.

Mr. STEVENS: What was the revenue received last year from the disposition of these lands?

Mr. STEWART (Argenteuil): The total Dominion lands receipts in 1922-23, were $2,347,715.43, and in 1923-24, April 1 to February 29, $2,103,119.16. There are some returns still to come in.

Mr. McQUARRIE: How much was spent last year?

Mr. STEWART (Argenteuil): Salaries, outside service, and contingencies, some $559,000.

Mr. STEVENS: That is not the vote we are talking about. As I understand it, we are dealing with each item as we go along. The Chairman called the first item, $506,000; that was passed, and some time ago he called the $210,000. How much was spent under that same item last year?

Mr. STEWART (Argenteuil): It will be approximately $210,000.

[Mr. C. A. Stewart.]

Mr. McQUARRIE: I understood the minister to say that there was to be an amalgamation of the Dominion lands and Crown timber agencies all over the Dominion.

Mr. STEWART (Argenteuil): In some cases, yes. For example, at New Westminster we will have an amalgamation of the two offices. It has not yet been completed there.

Mr. McQUARRIE: What is contemplated there? How is the staff to be dealt with?

Mr. STEWART (Argenteuil): There are two men there, Walmsley and Cowell. One of them will have to be removed. It is not the intention to keep two men there.

Mr. McQUARRIE: Who will be moved?

Mr. STEWART (Argenteuil): That has not been decided definitely.

Mr. McQUARRIE: I am not asking for any secrets to be divulged. In reference to the former crown timber agent, E. W. Beckett, does the minister know how he came to be removed?

Mr. STEWART (Argenteuil): Is he at Kamloops?

Mr. McQUARRIE: No, he was at New Westminster before Walmsley. The reason that has been given to me was because he was a good Conservative.

Mr. STEWART (Argenteuil): I do not happen to know about that.

Mr. McQUARRIE: Is there any other reason why Mr. Beckett should be summarily discharged?

Mr. STEWART (Argenteuil): When was he discharged?

Mr. McQUARRIE: Since this government came into office, just before Walmsley was appointed; it was in the last couple of years.

Mr. STEWART (Argenteuil): Mr. Beckett appears to have been retired under the Calder Act, on April 1, 1922.

Mr. McQUARRIE: You have not got the details?

Mr. STEWART (Argenteuil): He was given $400 and an annuity of $393.

Mr. McQUARRIE: When the amalgamation takes place in New Westminster, what will be the arrangement of the staff? I am not asking as to the personnel, but how many will be retained in the office and how will the office be conducted?

Mr. STEWART (Argenteuil): I cannot say at the moment. There will be one chief in charge of the office, and only the necessary staff to carry on the work.

Mr. McQUARRIE: The minister cannot say how many others besides one of these chiefs will be dismissed?

Mr. STEWART (Argenteuil): No, nor do I say either one of them will be dismissed. They are both very valuable men, so far as I know.

Mr. McQUARRIE: Has there not been a very marked increase in the business done in those offices, particularly in the timber office?

Mr. STEWART (Argenteuil): I think that is correct. There has been a flurry in timber within the last six months.

Mr. McQUARRIE: There has been a very remarkable growth in the timber business. Could the minister tell us the amount of revenue received from the timber office and the land office in New Westminster during the last two years, giving the figures for each year separately?

Mr. McTAGGART: What is the intention of the department in regard to arrears of payment on pre-emptions in purchasing homesteads? I believe the amount outstanding stands now at approximately $12,000,000. Does the department intend to enforce collection or is it considering the advisability of cancelling these obligations?

Mr. STEWART (Argenteuil): The department has not considered the advisability of cancelling these obligations, but the department will certainly not press people unduly for payment. There are hundreds of people who have paid up in full, and my hon. friend will readily see that it would be most unfair to them to give special consideration to those who have not paid. This work entails very considerable amount of correspondence, notices are sent out and records kept of all this business, whether we get a considerable revenue or not. I can say, however, that there is no intention on the part of the department to unduly press anyone for payment of his obligation.

Mr. McTAGGART: There is a considerable difference between the pre-emption which has been paid for, and the one where the obligation remains undischarged at the present time. In the main the pre-emption which has been paid for was the better class of land. There are many types of land in that area, and it is in the poorer area where these pre-emptions are not paid for. I would ask the minister to give serious consideration to the suggestion that the obligations on these lands be cancelled. The lands which are paid for are in the main the better class of land, and I am satisfied that many of the settlers on the poorer class of land will be unable to pay for them unless we have a pronounced period of prosperity, which does not seem likely in the near future. I would therefore urge upon the minister the advisability of cancelling at least the interest charges on these pre-emptions remaining unpaid at the present time.

Mr. GARDINER: I would call the minister's attention to the fact that in those areas where pre-emptions still remain unpaid for, you can buy land patented for much less money than what the department is charging for these pre-emptions, and it seems ridiculous to expect these people who have taken these pre-emptions to pay for their homesteads when they can buy land already under improvement for less money than the department is charging. I submit that the least the minister can do is to wipe out the interest charges against these lands and start afresh again, and I hope he will give that suggestion his serious consideration. Otherwise he will have on his hands much land that he will be able to rent for only two cents an acre for grazing purposes, and that will not bring in the revenue you could get otherwise.

Mr. STEWART (Argenteuil): Answering the hon. member for New Westminster: For the fiscal year 1922-1923 the revenue collected at New Westminster was $34,041.16; Revelstoke, $47,140.07; Kamloops, $43,128.83.

Mr. McQUARRIE: That is for both timber and land offices?

Mr. STEWART (Argenteuil): We do not appear to have the complete figures. We have a report on Revelstoke and Kamloops, but not on New Westminster. I will be very glad to get a full report giving the information which my hon. friend desires and the exact amount.

Mr. McQUARRIE: That is for the last two years, giving each year separately. I should like to get the expenses of these two officers in New Westminster, the land and the timber office, for these same years.

Mr. STEWART (Argenteuil): I will be very glad to bring the information down at the next sitting

Mr. KNOX: There are in the West large blocks of land that have been set aside as forest reserves. This setting aside was done some years ago and since that time—in some cases owing to fire, and in other cases mainly through the action of the lumbermen—the areas contained in these reserves have been largely cleared of timber and are very suitable at the present time for agriculture. Many of these areas are situated close to the railway line and a number of requests are coming through—I have received a great many such requests at one time or another—from people who want to enter homesteads on these areas, but owing to the fact that they have been set aside as forest reserves these persons are not allowed to make entry. Only a short time ago I received a petition to be forwarded to the Minister of the Interior, signed by over two hundred men who wanted to enter homesteads on the forest reserves. I have forwarded this petition to the minister, and I should like to ask him now if any action is being taken to have these reserves opened up for homesteaders?

Mr. STEWART (Argenteuil): Let me first say to my hon. friends, lest I forget it, that I can assure them of a very sympathetic consideration, but I think they will appreciate the difficulty the department is faced with in dealing with this problem. It may later on result in having a revaluation made, or some consideration being given to interest charges, before we clear this matter up, but I should like it to be borne in mind that we have the same difficulty to-day that we have in connection with the Soldier Settlement Board. Although some men have paid others have not paid. True, some of them are on inferior land and that fact perhaps might be given consideration. However, I can promise my hon. friends that I am prepared to give those men who have pre-emption and have heavy payments accrued against them very generous consideration.

With respect to the matter of returning to settlement lands set aside for forest reserve, here again you have a somewhat difficult question. If you allow settlement to get close to the vicinity of forest areas, where it is hoped to propagate and continue forest growth, you at once establish a somewhat dangerous menace to the forest itself. However, I am convinced that there is any quantity of inferior lands upon which timber can be grown and propagated without retaining any very considerable area of good agricultural land within the forest reserve. Wherever cases of this kind come up we conduct an investigation. Here again we find there are men who differ so widely in their reports that it sometimes takes a considerable time before we can decide to open up an area of such a character. However I can promise my hon. friend the most careful consideration of this request. I have before me now an investigation which is being made.

Mr. KNOX: I should like to point out that in some cases the lands are located along railway tracks, and there should not be any more danger from fire in connection with a homesteader than arises from the operation of trains. The very fact that these lands are near a railway, I think, should entitle this request to receive special consideration because an awkward situation arises when homesteaders take up land in outlying districts where no railway communication exists.

Mr. McTAGGART: Would the minister explain what arrangement exists with respect to transferring grazing leases from the Dominion government to the western provinces? I understand an arrangement has been arrived at between these provinces and the Domininon for the transfer of grazing leases now under the control of the latter to the former.

Mr. STEWART (Argenteuil): An arrangement was made that we would turn over to the provincial government areas of grazing lands that had formerly been under lease for the purpose of their organizing a community grazing association—that was the object they had in view. So far we have only turned over one ranch, I think in Saskatchewan. I do not know what success the scheme is meeting with. All I know is that the provinces which were at first to pay the same rental we were charging, finally came back and asked that the land be turned over to them free of rental, they in turn agreeing to collect from the community association a charge of two cents per acre.

Mr. BIRD: I wonder if the minister would give me the exact figure in regard to the money paid on these pre-emptions or purchased homesteads?

Mr. STEWART (Argenteuil): I will be very glad to give that information at the next sitting.

Mr. BIRD: Also what amount is yet to be paid?

Mr. SPENCER: I should like to ask the minister a question with regard to pre-emp-

tions. I understand that if a purchaser has paid for the pre-emption but has not paid up his taxes he is not given a free title to the land. Is that so?

Mr. STEWART (Argenteuil): I do not think the matter would be held up in our office particularly, but when the purchaser went to register in the provincial registration office he would run into trouble there. We, of course, are not interested in the payment of the taxes.

Mr. SPENCER: The pre-emption of land would come under the supervision of the federal department would it not?

Mr. STEWART (Argenteuil): Not when he has paid up. He is a freeholder then.

Mr. SPENCER: Would he be allowed to get his patent if he had not paid up his local taxes?

Mr. STEWART (Argenteuil): Yes, I do not think we would hold it up. I do not think we are interested in the payment of the local taxes but I am not quite sure. Perhaps some of my legal friends who are doing business with the Land Title offices could supply accurate information. If I recollect properly you have to clear up the provincial encumbrances before your title is registered in the local register.

Mr. SPENCER: Then your department does not do anything in that respect? The case I have in mind is where several pre-emptions were taken up some thirteen years ago. Unfortunately the school taxes have not been paid, and it is going to involve a heavy burden on the other taxpayers in the district. The question was brought to my notice, and I said I would see what could be done. If the minister declares his department has nothing to do with the matter I shall have to take it up with the local authorities.

Mr. STEWART (Argenteuil): I am answering my hon. friend offhand. I do not see where we would be interested because there are no taxes due the federal government from these lands. They are taxes that are due to the local school districts and the municipalities in the particular province in which the land is located. I think when the man went to the local land office to register he might have trouble then; he might find the non-payment of these taxes an obstacle but I do not know positively.

Mr. CARMICHAEL: I should like to get a little information from the minister in regard to the purchase of homesteads and pre-emptions held by men who had been on active service and which were converted into soldier grants. I understand in some cases these men paid considerable money on the purchase of homesteads and on pre-emptions, and that when these lands were converted into soldier grants they were entitled to a refund. I should like to know what the ruling of the department is on the matter?

Mr. STEWART (Argenteuil): We have been treating each case on its own merits. It is really an adjustment that has to be made between the soldier interested, and the Soldier Settlement Board, and the Department of the Interior. I cannot inform my hon. friend that there is any definite policy in respect to the matter except to this extent—we try to protect the soldier as far as lies within our power.

Mr. CARMICHAEL: Is there any definite ruling we can follow to ascertain whether they are entitled to relief or not? I have several of these cases myself to handle. I have one at the present time which I desire to take up.

Mr. STEWART (Argenteuil): In some cases where differences of opinion arise between the Soldier Settlement Board and the settlers we are interested; but in most cases we turn the lands over to the Soldier Settlement Board, and they make their adjustments, whatever they may be. The difficulty of the pre-emption is rather a serious one. If my hon. friend has cases of this kind, I should be very glad if he would bring them to the department, and we would be prepared to give them the very best consideration possible.

Mr. McQUARRIE: Will the minister inform the committee as to the places where the Dominion lands and crown timber offices will be amalgamated? You have one at New Westminster. What are the other places where similar amalgamation will take place?

Mr. STEWART (Argenteuil): So far we have only one organization in British Columbia and Saskatchewan. Alberta and Manitoba are still in process of amalgamation.

Mr. McQUARRIE: It is proposed to amalgamate at all points?

Mr. STEWART (Argenteuil): Yes.

Mr. McQUARRIE: That is to be done immediately?

Mr. STEWART (Argenteuil): Yes.

Mr. HUMPHREY: What steps has the minister taken to amalgamate the offices in British Columbia?

Mr. STEWART (Argenteuil): It is not an easy matter to get all the records under control of one official. It takes some little time. This is being done as speedily as we can do it, but it is all in order to save expense, and yet give the necessary service to the people.

Mr. HUMPHREY: What was the object of the department in moving the land office from Revelstoke to Kamloops?

Mr. STEWART (Argenteuil): In the case of every place from which we move an office there is an objection. We felt, from the report submitted to the department by departmental officials, that this would give the necessary service that was required to carry on the business of the government at this point. These points were chosen because they were deemed to be the most central points for the purposes of the service.

Mr. HUMPHREY: Is it not a fact that the revenue at Revelstoke has exceeded any other office in British Columbia?

Mr. STEWART (Argenteuil): I cannot tell my hon. friend that.

Mr. HUMPHREY: I believe I am correct in stating that the figures of the Revelstoke office exceed any of the other two points. The figures at Revelstoke have increased each year since the office was opened in 1914. The revenue has greatly exceeded the expenditure at the Revelstoke office. It would look to me, if you are going to work it out on a question of economy, that you would have the office maintained at Revelstoke, which is the largest revenue paying office in the province. It is also at a point where there are more timber limits particularly adjacent to most of the business that is being done.

Mr. STEWART (Argenteuil): My hon. friend will notice that the revenues are almost upon an equality at Kamloops and Revelstoke; but the report we received here was that the one office would be quite sufficient to serve that particular locality, giving such service as might be necessary to the old points at which these offices were established. But one of the difficulties, of course, in trying to save money on administration is that no matter where you go with an office, or where you take away a service, it can easily be proven that it was very valuable to that community and that all the offices are needed.

Mr. HUMPHREY: In that connection, if this particular office had not been a very good revenue producing office, there would have been occasion to have it moved or amalgamated as a matter of economy; but this office is right in the heart of the timber belt. All the timber and land business practically is controlled and has been controlled from Revelstoke. By moving that office from Revelstoke to Kamloops, you put the people of that particular district at a double inconvenience and you disorganize work that has been established for some few years and established on a very good basis. If it could be shown by checking the reports that this office had not been paying, I do not believe there would have been quite as much objection raised to its removal. But decided objection has been raised, and that objection has been raised in the entire district, east and west, in that northern portion of the country.

Mr. STEWART (Argenteuil): I can only say that all I was interested in was to effect the greatest amount of economy in the administration of these offices, and I would be very sorry if we inflicted any hardship at any particular locality. I hope it will not turn out that way. I know there was considerable agitation when the report went out that we were to move this particular office, but that applies to any office we attempt to close. Kamloops has always been more or less of a centre for business of this character. I have no particular interest in Kamloops but I notice from the returns my hon. friend is referring to that they are just about on an equality, both sending in about the same amount of money.

Mr. HUMPHREY: Would you care to look into the case further, check up the returns of the entire business for each year and make a thorough comparison with the business at other points?

Mr. STEWART (Argenteuil): I would be glad to do that.

Mr. HUMPHREY: Taking into consideration all the objections that have been raised and the hardships the people of that district have been put to together with any other conditions that might arise?

Mr. STEWART (Argenteuil): I would be glad to do that.

Mr. McQUARRIE: Would the minister bring down that information with the other information?

Mr. STEWART (Argenteuil): Yes.

Mr. BIRD: Do I understand the minister has the figures at hand to answer my question?

Mr. STEWART (Argenteuil): No, I will bring them down at the next sitting. We have a very large number of items here, and as soon as we go into committee again I will have all these figures.

Mr. BIRD: Perhaps it is immaterial, so far as my point is concerned. I did not want to ask the minister any unfair question, but he will know his predecessors in office have always taken a certain stand in regard to the proceeds from those pre-emptions.

Mr. STEWART (Argenteuil): Yes.

Mr. BIRD: I just want to elicit from the minister whether he is taking the same stand. I will not press the question; but I would like to remind the House at this juncture that the amendments to the Dominion Lands Act which created these pre-emptions and purchased homesteads were enacted by this House with the express purpose of supplying a fund for the construction of the Hudson Bay railway. Perhaps I shall be in order in just briefly reviewing what took place some years ago. The Dominion Lands Act of 1882, as I think is well known, made provision for building the Hudson Bay railroad. It provided a grant of 6,400 acres per mile for that part of the railroad reaching to the Saskatchewan river, and one grant of 12,800 acres per mile for that part reaching from the Saskatchewan river to the bay. Part of that grant was subsequently earned by a private company, that part relating to the road up to the Saskatchewan river. The other part of the grant was left in abeyance until 1906. At that time, due to the influx of immigrants into Saskatchewan and Alberta, the question of the Hudson Bay road became vital once more, and both political parties then acknowledged the rights of the West with regard to the construction of that railroad. It became a plank in the platforms of both political parties, and the Liberal government at that time, coming to a fresh lease of power, acknowledged that right to the furthest extent.

Mr. CHAIRMAN: I feel the hon. member is hardly in order at this particular time.

Mr. BIRD: When I came into the House a short while ago, these pre-emptions and homesteads were being discussed, and I am dealing with the proceeds of the sales of those pre-emptions and homesteads.

The CHAIRMAN: I thought the hon. member was dealing more particularly with the Hudson Bay railway than with pre-emptions and homesteads, if I am not mistaken.

Mr. BIRD: I am leading up to a question. I am afraid that the minister will not be able to give a very intelligent answer to my question unless I outline the situation. I was about to say that the Liberal government at that time, through the hon. gentleman's predecessor, thought fit to amend the Dominion Lands Act in this regard. The alleged reason for the amendment was twofold: to bring the act up to date and also to incorporate in it the principle which the Liberal party had adopted, that of "no land grants to railways." When Mr. Oliver proceeded to do that, he found himself in a dilemma. To do away with land grants to railways looked like going back on the West with respect to the Hudson Bay railway. His ingenuity was exercised considerably in order to get over that, and the pre-emption clause with which we are dealing to-night was the result. Mr. Oliver brought forth that amendment providing for the purchase of homesteads and pre-emptions in order to get over that difficulty, and he got over the difficulty to some extent. If it did away with grants to railways, thus carrying out the Liberal principle of "no land grants to railways," at the same time it made ample provision for the Hudson Bay railroad. That is the point I want to draw to the attention of the minister, the government and this House to-night, namely that the proceeds realized and to be realized from those purchased homesteads and pre-emptions with which we are dealing to-night, are, morally speaking, the property of the West in respect of the building of the Hudson Bay railroad. That is the situation that has always been acknowledged in this House. When Mr. Oliver was bringing this legislation before the House, he iterated and reiterated this fact: that the sole object in bringing in this legislation was to provide for building the Hudson Bay railroad; that there was no other object. He went so far as to say that if the provision alone was not sufficient to complete the road, he would make it sufficient; he would contribute land in order that sufficient money might be realized for the purpose of com-

pleting the railway to the bay. I thought I would take advantage of this opportunity to bring that before the House and the government in order to revive in the minds of the people at the present time the fact that the West has in this respect a right that has always been acknowledged, that never at any time has been questioned and that is written large upon the pages of Hansard, both at that time and since. Without pressing the minister to declare his attitude in the matter, I shall be content with placing that fact before the House.

Mr. MILLAR: I should like to make a plea to the minister for leniency in regard to those who have leased grazing lands at a very high price. To-night we have learned that some grazing lands have been leased for two cents an acre, and in some cases, the price has been 20 cents an acre and more. Grazing land leased at 20 cents an acre a few years ago when times were good, was all right, but the price of stock having gone down, it is quite apparent that 20 cents an acre is an exorbitant price. I have a case in mind at the present time of a party who has spent a considerable amount of money on grazing land in building fences and who is now in arrears. I might point to a case which came up either last session or the session before, where in the sale of a pulpwood berth in the northern part of Manitoba, I believe, a concession was given by the minister to those who had made the purchase on the ground that the price had been too high. I cannot remember all the details, but that is what took place. Will the minister follow the same course and deal leniently with those who have purchased or leased grazing lands at the high price of 20 cents and even, I believe, 30 cents an acre?

Mr. STEWART (Argenteuil): Were those Indian lands?

Mr. MILLAR: Yes.

Mr. STEWART (Argenteuil): Of course they are in an altogether different category from Crown lands, and unfortunately during the period of the war some very high figures were paid for grazing lands, in some cases in Alberta as high as 30 cents an acre. The hon. member for West Calgary (Mr. Shaw) will, I think, bear me out in the fact that this has broken two of the ranchers there. The matter is a very difficult one to adjust. One cannot very well sit down and say that you are going to forgive them altogether the payment of those rentals, but I have been doing the best I can to make an adjustment of rentals.

[Mr. Bird.]

Mr. GOULD: I wish to repeat a request which I made to the minister last year. I quite anticipate that I shall receive the same reply, but the request is on behalf of individuals who have been given the privilege of taking land in forest reserves. The hon. member for Prince Albert (Mr. Knox) cited a similar case in his constituency. These men after settling there, persuaded themselves that they required a school district. Many of those lands have returned to the Crown, and the school districts in question are very hard pressed because of assessments and taxation which they are obliged to make in order to maintain their schools. I believe they have repeatedly requested the department, and I have received many requests to present their case on the floor of the House, to ask the Dominion government to assume the taxation on those lands that have reverted to the Crown. It seems to me logical to ask that in order to assist school districts which were constituted largely as a result of settlers going in there.

Mr. STEWART (Argenteuil): I am afraid my hon. friend is putting up a very difficult proposition to the department, for it would open the door very wide for innumerable claims, particularly on lands under the control of the Soldier Settlement Board throughout the whole of western Canada, and in the East too I presume. I am entirely in sympathy with his plea, but if the Crown undertook to pay taxes in such cases I do not know where it could stop.

Mr. GOULD: I wish—

The CHAIRMAN: What the hon. gentleman is discussing should come under the fifth item—Protection of timber, tree culture, protection and management of forest reserves, surveys of forest resources and research in forestry and forest products and so forth.

Mr. GOULD: I thought contingencies might relate to the point as well. But I would direct the minister's attention to vote 141, the third item, "Halifax, Bellevue building—local improvement taxes, $1,777.77." I wonder if there is a differentiation between urban and rural taxes. Again I would remind the minister that the natural resources of Saskatchewan are retained by the federal government. Consequently it seems to me that our argument is stronger than the reference made to the eastern provinces, which own their natural resources.

Mr. SPENCER: I would direct the minister's attention to Indian and school lands

which were sold during the war at prohibitive prices. I understand that the interest rate in many cases was raised to 7 per cent when the purchasers did not keep up their payments. This has been a great hardship, especially as the value of products from the farm, has gone down considerably, thus placing these men at a great disadvantage in keeping up their payments. Has the minister considered reducing the rate to, say, 6 per cent, to make it a little easier for them to meet their interest obligations?

Mr. STEWART (Argenteuil): The increase was made some four or five years ago at the request of the provincial governments. I believe I was one of the delegates who appeared before the right hon. leader of the opposition (Mr. Meighen), then Minister of the Interior. Saskatchewan was perhaps most insistent at the time in making this request. We were asking that the school lands be turned over to us for administration purposes. It was pointed out to us that the function of the department was that of trustee for the provinces, and by special arrangement the interest rate was increased. If we have not already done so we intend to write to the provincial governments asking them to revert to the old rate of interest in order to relieve the situation somewhat. It is a matter in regard to which we must receive the consent of the provincial governments before we take action.

Mr. SPENCER: Would that include school as well as Indian lands?

Mr. STEWART (Argenteuil): School lands only.

Item agreed to.

Mr. STEVENS: The whole vote is not passed, Mr. Chairman.

The CHAIRMAN: The whole vote is not passed, only the second item.

DEPARTMENT OF CUSTOMS.

Civil government—Customs and Excise—salaries. $585,755
Contingencies.. 48,000

Mr. CALDWELL: Explain.

Hon. JACQUES BUREAU: (Minister of Customs and Excise): The details are on page 83.

Mr. STEVENS: Mr. Chairman, I do not wish to be obstructive, but has notice been given of the estimates for this department coming up?

Mr. MACKENZIE KING: It is not the intention of the government to proceed with this vote to-night, but, as my hon. friend knows, a technical rule of the House would prevent us from going into Committee of Supply on the estimates of any department on Thursday or Friday unless previously some item of those estimates had been called. The purpose therefore of calling this item to-night is simply, that on Thursday or Friday we may take up the estimates of the Customs department.

Mr. BUREAU: This item is hardly correct In order that when we come to discuss the vote hon. members will be aware exactly how it should stand, I would ask that an amending motion be made by my hon. friend from Quebec South (Mr. Power).

Mr. POWER: I move that item 13 be amended by inserting after the word "salaries" the words "including W. Ide, superintendent of staff, at $4,200." These words appeared in the estimates as prepared, but were inadvertently omitted from the printed estimates. The amount of the vote is not affected, this item being already provided for.

Mr. BUREAU: Mr. Ide's name was in the estimates as submitted to be printed, but through some error it was omitted. Reference to page 83 will show that the amount is set out in the twelfth line, "superintendent, staff $4,200." It does not increase the estimate at all. I have taken this procedure because last year the same thing happened when the estimates of the Post Office Department were before the committee. The name of Mr. Anderson had been omitted, and a similar motion was made to rectify the mistake, I was the mover of the motion when my friend the present Minister of Railways (Mr. Graham) was acting for the Postmaster General.

Mr. STEVENS: I do not object at all to my hon. friend moving the motion, but I would direct attention to an incident that occurred the other day when we were discussing certain items. A motion was made by an hon. member on this side of the House directing where the vote should go. It was ruled out of order on the ground that it was not competent far a private member to move such a motion, that it ought to come from a minister of the Crown. If the rule then was applicable to a private member on this side of the House, it would be equally applicable now to the hon. member for Quebec South.

Mr. POWER: I will ask the Prime Minister to give me the acting position with salary.

The CHAIRMAN: The ruling to which the hon. member for Vancouver Centre (Mr. Stevens) refers was that a private member could not change the destination of a vote.

Mr. STEVENS: Exactly.

The CHAIRMAN: I assume that this motion is simply descriptive as to whom the salary is payable.

Mr. POWER: It is to correct a clerical error.

The CHAIRMAN: Or omission. With the information which the minister has given, it seems to me that this is not a motion to change the destination of the vote.

Mr. STEVENS: I merely want it distinctly understood that if a similar motion is later on presented by a private member from this side of the House, the present procedure will establish a precedent which will then be in order.

Mr. BUREAU: To prevent any error, may I ask that, with the consent of the House, the name of the mover be changed to that of the Minister of Labour (Mr. Murdock)?

Mr. POWER: With the consent of the House I will withdraw the motion.

Mr. BUREAU: I do not want to break any precedent established by the House. I was not here when the ruling referred to by the hon. member for Vancouver Centre (Mr. Stevens) was given.

Item stands.

Progress reported.

PROHIBITION IN UNITED STATES

CONVENTION BETWEEN HIS MAJESTY AND THE PRESIDENT

Mr. DEPUTY SPEAKER: A message has been received from the Senate informing this House:

That the Senate doth unite with the House of Commons in the approval of the convention between His Majesty and the President of the United States of America, signed at Washington on the twenty-third day of January, one thousand nine hundred and twenty-four, for the purpose of avoiding any difficulties which might arise between them in connection with the laws in force in the United States on the subject of alcoholic beverages, a copy of which has been laid before parliament, by inserting in the said resolution in the blank space therein the words "Senate and".

On motion of Mr. Mackenzie King the House adjourned at 11.25 p.m.

Tuesday, April 8, 1924

The House met at three o'clock.

UNITED CHURCH OF CANADA

Mr. J. W. KENNEDY (Glengarry and Stormont): Mr. Speaker, I desire to present petitions from members of St. Andrew's church, Lancaster, and Knox church, Lancaster, opposing the enactment of legislation to incorporate the United Church of Canada.

REARRANGEMENTS AND TRANSFERS OF DUTIES IN THE PUBLIC SERVICE

Hon. ERNEST LAPOINTE (Minister of Justice) moved for leave to introduce Bill No. 39, to amend the Act to authorize rearrangements and transfers of duties in the public service.

He said: The purpose of this bill is to add a section to the statute passed in 1918, an act to authorize rearrangements and transfers of duties in the public service. The section provides that the powers, duties and functions assigned to the minister and officers of the branch from which the transfer is made shall automatically be vested in the minister and the officers of the department to which the transfer is made. A similar provision exists in statutes with respect to particular departments, and it is the suggestion of the commissioners having to do with the revision of the statutes that this section should be made general to secure clearness and uniformity.

Mr. HOCKEN: Does this mean a reduction in the number of departments and of cabinet ministers?

Mr. LAPOINTE: No.

Motion agreed to and bill read the first time.

POST OFFICE ACT AMENDMENT

REGISTERED MAIL

Hon. CHARLES STEWART (Argenteuil) (Acting Postmaster General) moved that the House go into committee at the next sitting to consider the following proposed resolution:

Resolved, that it is expedient to amend the Post Office Act by providing that the Postmaster General may prescribe and enforce such regulations as to letters directed to be registered, as to him seem necessary, in respect to the registration of letters and other matter passing by mail, and to the charge to be made for the same, and to compensation for loss not to exceed one hundred dollars in any one case.

He said: His Excellency the Governor General, having been made acquainted with the

subject matter of this resolution, recommends it to the favourable consideration of the House.

Motion agreed to.

IMMIGRATION—QUEBEC RESTAURANT

On the Orders of the Day:

Mr. HENRI E. LAVIGUEUR (Quebec County): Mr. Speaker, I rise to a question of privilege. I notice in the Ottawa Citizen of this morning that the Minister of Immigration (Mr. Robb) is reported as stating that the canteen and restaurants in connection with the immigration buildings at the port of Quebec will be taken over by the government. The article quotes the minister as saying:

> Canada will welcome immigrants at her gates with good food at prices based on the actual cost of the service. . . A feature of the service will be lunch boxes which can be bought over the counter and which contain supplies especially selected for use on the trains.

And so forth. The article goes on to say that Mr. P. W. Dugal has been engaged by the department to take over this work. I should like to know from the minister whether this report is correct.

Hon. J. A. ROBB (Minister of Immigration): I have not read the article in the press referred to by my hon. friend, but for his information and for the information of the House I may say that the department have engaged Mr. Dugal, who had charge of the restaurant of the Quebec legislative assembly for a number of years. We have engaged him to take charge of the restaurant which will be available to immigrants at the port of Quebec.

Mr. LAVIGUEUR: May I ask the minister if the contract has been signed, and when Mr. Dugal is to take over the work?

Mr. SPEAKER: Order. The hon. member will have to put a question on the order paper. This is not a question of privilege.

LAUSANNE TREATY

On the Orders of the Day:

Mr. J. S. WOODSWORTH (Centre Winnipeg): According to despatches from London it would seem that there is considerable misunderstanding over the Lausanne treaty and Canada's obligations thereunder. There are one or two points, it seems to me that ought to be definitely cleared up by the government at this time. According to the statement made the other day by the Prime Minister in Hansard, page 946:

> We deemed it of the utmost importance that there should be no misunderstanding as to our position with respect to Canada's obligations in this and kindred matters and we stated that in our opinion parliament would desire, as respected the treaty with Turkey and any other instrument arising out of the Lausanne Conference, to reserve to itself the right to decide, on the merits of the case, what action on the part of the people of Canada was right and proper.

If I understand that clause aright, the statement there given, according to the Prime Minister's own wording, was that this parliament should decide what action should be taken. The Prime Minister the other day emphasized the importance of procedure, that Canada was not invited to be present at the making of the Lausanne treaty, but I take it there is something more in it than that, and that is our present attitude and our present relationship under that treaty.

Mr. SPEAKER: Order. The hon. gentleman knows the rule. No argument can take place at the present moment. Only a question can be put to the government.

Mr. WOODSWORTH: I am sorry to have had to preface my question with this statement, but it seemed almost necessary. I feel that in the first place we ought to have the attitude of the government more definitely brought before us and the matter cleared up.

Mr. SPEAKER: Order.

Mr. WOODSWORTH: We should know distinctly what is the attitude of the government in this regard.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I think I made clear when speaking the other day what the attitude of the government is. My remarks are on Hansard, and were I to repeat what I said at that time I would simply be answering my hon. friend's question at the moment. I might say to him, however, that I think the British Prime Minister, the Right Hon. Mr. Ramsay MacDonald, has under consideration bringing down the despatches that have passed between the British government and the self-governing dominions. We have expressed the hope that he will do so. I feel sure if that request is met it will answer any doubts of my hon. friend.

Mr. JOS. T. SHAW (West Calgary): That brings to my mind a question that I would like to ask the Prime Minister. According to this morning's press the Prime Minister of Great Britain is reported as stating that he was prepared to bring down the correspondence, but that he was awaiting reply to an inquiry which he had made of the Dominions for permission to lay it on the Table, and he suggests that no response has been

made to his request. I would ask the Prime Minister if that has any reference to Canada or only to some other parts of the Empire?

Mr. MACKENZIE KING: I do not think the statement my hon. friend has quoted can possibly refer to Canada, inasmuch as when I received from Mr. MacDonald a communication asking as to whether we would be agreeable to having the correspondence brought down, I answered within an hour that we would be very pleased to have this done. Probably the other Dominions have not replied.

INQUIRY CONCERNING RETURN

On the Orders of the Day:

Mr. ALEXANDRE J. DOUCET (Kent, N.B.): May I call the attention of the Minister of Railways to Paper No. 130 in answer to question No. 37? The letter, dated 11th April, 1922, refers to a letter of 1st April from Major G. A. Bell, which letter is not included in the file. Furthermore, a letter dated 10th April, 1923, is signed "J. D. Reid, President." My purpose in rising is to call attention to this omission, and also to ask whether J. D. Reid was president of the Canadian National Railway Board on the tenth of April, 1923.

Hon. GEORGE P. GRAHAM (Minister of Railways): I hardly understand my hon. friend's question. J. D. Reid was never president of the Canadian National Railway; he was Minister of Railways. I will call the attention of the department to the matter.

TREATY WITH TURKEY—LAUSANNE CONFERENCE

On the Orders of the Day:

Mr. WILLIAM IRVINE (East Calgary): I would ask the Prime Minister when he intends to allow parliament to deal with the treaty with Turkey and with the Lausanne Conference matters?

Right Hon. W. L. MACKENZIE KING (Prime Minister): Parliament may have that privilege just as soon as the budget has been brought down and we resume after the budget discussion of general matters.

BUSINESS OF THE HOUSE

VOTES AND PROCEEDINGS—CUSTOMS ESTIMATES IN COMMITTEE OF SUPPLY

On the Orders of the Day:

Hon. JACQUES BUREAU (Minister of Customs): Mr. Speaker, I find on reading the Votes and Proceedings of yesterday that after reporting certain resolutions of the Minister of the Interior it winds up by saying "Report to be received and Committee of Supply to sit again at the next sitting of the House." Now, after the resolutions of the Minister of the Interior were taken up, Customs estimates were taken up and a resolution was called, but there is nothing in the Votes and Proceedings to show that any Customs resolution was called. There also was a motion made which was carried, which does not appear in the Votes and Proceedings. I do not know whether Hansard is to be the record of the votes and proceedings of the House, or whether the Votes and Proceedings, signed by yourself, Mr. Speaker, or in your absence by your deputy, is to be the record. If the Votes and Proceedings is to be the record, I would ask that it be amended, and that what took place after the consideration of the various resolutions of the Department of the Interior be inserted therein as part thereof.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): Mr. Speaker, I cannot very well agree to the rule operating one way only. Frequently I have called attention to insertions in the Votes and Proceedings, on two occasions at least, of items of which there was no record in Hansard at all; but I was answered, "The Votes and Proceedings are the record of parliament." If they are, they must remain the record, and they cannot be added to by a subsequent reference to Hansard.

Mr. BUREAU: Now is the time to have the evidence when the witnesses are here. My hon. friend the member for Vancouver Centre (Mr. Stevens) was leading the opposition last night in the absence of my right hon. friend (Mr. Meighen), and I would ask him or the members of the Progressive party if what I state is not a fact. There was a motion made to correct an error in the Customs resolution that was called by the Chairman.

Mr. SPEAKER: I was not in the House yesterday when this incident took place, but I am guided by the scroll of the Clerk of the House, and the Votes and Proceedings are based upon that scroll.

Mr. BUREAU: May I remark that the evidence of all the members of the House who were present when this took place ought to supersede the scroll, whatever it is. The Deputy Speaker is here, my hon. friend from Vancouver Centre (Mr. Stevens) is here, the Minister of Labour (Mr. Murdock) is here, and they were here last night when the

motion was made and declared carried by the Deputy Speaker. To confirm the explanation given by my right hon. friend the Prime Minister, I afterwards asked that the item stand, and that the committee rise. Now there is nothing to indicate this in the Votes and Proceedings. But suppose I want to go into supply on Thursday, where is the evidence that my estimates have been taken up before? Is the scroll part and parcel of the Votes and Proceedings?

Right Hon. W. L. MACKENZIE KING (Prime Minister): You have just said, Mr. Speaker, that in these matters you are guided by the scroll. I happen to have the scroll in my hand, and it is in accord with what the Minister of Customs has just stated.

Mr. BUREAU: Does it say my motion was carried?

Mr. MACKENZIE KING: Yes.

Mr. BUREAU: Let us clear this thing up. Mr. Speaker, can the House know what the scroll is, where it is to be found when we want it as evidence of our proceedings, and by whom it is certified.

Mr. SPEAKER: I will ask the Assistant Clerk of the House to read the scroll in order to satisfy the hon. gentleman.

Mr. Beauchesne thereupon read the scroll as follows:

April 7.

House in Committee of the Whole on Supply.—Mr. Gordon in the chair.

Resolution 250. Carried.

Resolution 251. Moved by Sir Henry Drayton that this resolution be reduced by $69,450.

Lost on vote of 45 to 53.

Resolution carried.

252 Carried

253 Carried

289 Carried

288 Carried

290 Committee decides to take up each item separately.

Item $506,380 Carried

Item $210,000 Carried

364 Stand (not read by chairman).

13 Amendment moved by Mr. Murdock that this vote include salary of Mr. Ide, Superintendent of staff. Progress. Resolutions passed to be reported.

A. BEAUCHESNE,
Clerk of Committee of Supply.

Mr. BUREAU: The question I should like to have answered is, how members can get at this scroll to find out what has taken place the night before?

Mr. SPEAKER: The scroll is kept in the Clerk's office. It is under the care of the Clerk of the House.

Mr. MEIGHEN: I simply want to put myself clearly on record in this matter. The House should decide whether it wishes the Votes and Proceedings to be regarded as the official record or not and should abide by that decision. I never heard before of the scroll being regarded as an official record. On a previous occasion when the Votes and Proceedings contained something that did not appear in Hansard we were told "Hansard is not the official record. That is your misfortune; you will have to abide by it". Now we have this situation that although the Votes and Proceedings is regarded as the official record it does not agree with Hansard; the latter has something which the former fails to record. Let us have a decision in this matter. Let us observe one rule or the other.

Mr. SPEAKER: The Votes and Proceedings, as I stated a moment ago, are based on the scroll. The latter records what took place in the House and such of the committee's proceedings as are reported to the Speaker by the Chairman. The Votes and Proceedings are the evidence of what has taken place in the House and are based on the scroll.

Mr. BUREAU: The point I have in mind is this: Suppose I desire to go into committee of supply on Thursday, and the leader of the opposition says that before I can do so I must observe a certain rule. I claim that I have obeyed that rule. Now, where is the source to which I can go to establish my claim? I ought to be able to do that by quoting from a public document which is in the possession of hon. members. I do not see why I should be compelled to refer to some document in the exclusive possession of the Clerk as to what happened in the House the day before.

Mr. SPEAKER: Is the statement in question in Hansard?

Mr. BUREAU: It is in Hansard, but Hansard is not the official record.

Mr. LAPOINTE: The Votes and Proceedings record all that takes place in the House, but not all that happens in committee. That has always been the custom.

Mr. McMASTER: This discussion merely shows how wise and proper are the calls from more distant parts of the chamber for an audible discussion by those sitting on the treasury benches, or who lead other parties in the House.

CANADIAN NATIONAL RAILWAYS

BILLS PROPOSED TO AUTHORIZE THE CONSTRUCTION OF BRANCH LINES

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals) moved that the House go into committee to consider the following proposed resolution:

MELFORT NORTHEASTERLY

Resolved, That it is expedient to bring in a measure to provide for the construction of a Canadian National Railway line from the end of steel at Mile 24 on the Melfort Northeasterly line of the Canadian Northern Saskatchewan Railway to Mile 41 near Nipawin, in the province of Saskatchewan; mileage already graded, 6 miles; estimated mileage including existing grading, 17 miles; estimated cost, $360,000.

Motion agreed to and the House went into committee, Mr. Gordon in the chair.

Sir HENRY DRAYTON: I suppose the Minister of Railways proposes to take advantage of this opportunity to read the necessary parts from a letter of the president of the National Railway System.

Mr. GRAHAM: I would not think that would be necessary as the construction of this line was supported by my hon. friend. We are just adding a little to it. My hon. friend must have had all of that information last year.

Sir HENRY DRAYTON: I should think my hon .friend would like to have a proper record.

Mr. GRAHAM: I should be delighted to give the information but it will not be from a letter of the president. The information I have on the subject is as follows:

Melfort N.E., Mile 24-41	Cost
Grade now ahead of track, 6 miles	
Proposed in 1924, 11 miles grade;	
17 miles track..	..$360,000

It is proposed in 1924 to add 11 miles of grading to the existing 6 miles ahead of the track and lay the steel on this 17 miles, taking the line to near the town of Nipawin, at an estimated cost of $360,000. When this work is completed, it is proposed to leave the track there for some years.

The first work done on this line in 1919, when the grading was started, 30 miles of which was completed by the end of the season 1920, the track being laid on 23.7 miles in 1921, and 1922 the ballasting, etc., being finished that far.

The line runs through a particularly good agricultural area, admirably suited for grain growing and the proposed extension would take the branch into the heart of a large settlement very well developed. The grain off this line is its justification, it being figured that 612,000 bushels annually might be expected, besides which 140 cars of freight inbound and outbond, consisting of live stock, coal lumber, merchandise and wood, would be furnished the line. Practically all of these commodities, and particularly the grain and live stock, give a long haul to the railway, thus supplying other lines of the system with considerable business.

It is estimated that the average saving in distance for road haul to the farmers for their grain would be 12 miles, and if this is taken to be worth ¾ cents per bushel per mile hauled, on the estimated quantity of 612,000 bushels this would make a saving annually to the farmers of $55,080 on the grain alone.

This is one of the lines in which the grading was done on the branch line arrangement, I think, of 1919.

Sir HENRY DRAYTON: I take it this year's programme will complete the railway to Nipawin.

Mr. GRAHAM: That is about it—near the town of Nipawin.

Sir HENRY DRAYTON: In this particular case I think a large amount of money has already been spent on the line. This line if built, when built, will be a very great advantage to a very good agricultural part of the country, and it seems to me the system is absolutely committed to its construction. Further than that I believe the construction is a good one. It is one which of itself ought to go on.

Mr. MACLEAN (York): I would like to refer in a general way to the question of these Canadian National branch lines, and, to bring the matter within the purview of the House, and in order to let the House know where I stand in this matter, I propose to read from the annual report of the Canadian Pacific Railway for 1923, presented to the shareholders in March last in the city of Montreal. This report is signed by the president of the Company, E. W. Beatty, and the president takes his stand in regard to railway expansion for his system. I am in favour of the National railway being also given every fair facility to expand where the requirements of the country call for it, and I intend to keep to a like position for the expansion of the Canadian National. I was one of those who favoured the acquirement of the Canadian National Railways and I advocated it in days gone by. Now that we have the Canadian National railways, this House is bound, in every fair way, if the proper extension is a proper one, to vote the money for it, and I think if the extensions are reasonable they should be made. In order to show the position of the Canadian Pacific Railway on this question, I will read from the annual report of the Canadian Pacific Railway for the fiscal year ending 31st December, 1923, dated Montreal, March, 1924. Section 5 reads:

Owing to the magnitude of your system, continuous expenditures on capital account will always be necessary, if it is to keep pace with the growing transportation requirements of the country but your directors have adhered to the policy of restricting the issuance of securities to the lowest amount, consistent with the maintenance of the property. During the year under review the fixed charges were increased only by the modest sum of $121,747, and dividends payable on preference stock by the sum of $447,732.

Then he goes on to name the roads which he is in favour of, and he names those which are practical for immediate construction, or construction as soon as possible. He mentions the following:

Leader southerly branch, mileage 50 to 75.

Lomond northwesterly extension of the Suffield southwesterly branch, mileage 30 to 40.

An extension of the Archive-Wymark branch to Coderre, 12 miles.

An extension of the Moose Jaw southwesterly branch from Consul easterly, mileage 60 to mileage 97.

Amulet-Dunkirk branch 25 miles.

The requisite applications to parliament are being made for the necessary statutory authority to construct such of the above lines, the charter authorities for which have expired or are expiring.

Arrangements have been made for the construction of an extension of the Tuffnell-Prince Albert branch of the Manitoba and North Western Railway from mileage 50 to mileage 129. The Manitoba and North Western Railway Company has statutory authority to issue bonds not exceeding $40,000 per mile in respect of this branch, which bonds will in the usual course be acquired by this company with the proceeds of the sale of consolidated debenture stock to be issued for the purpose.

That means that the Canadian Pacific Railway at its directors' meeting announced that they intended to continue their policy of extension of their lines, and the great magnitude of the system was their justification. Does that argument not also apply to the Canadian National Railways? I say that when the Canadian Pacific Railway is embarking on these various propositions the Canadian National Railways should not be held back. Here we have the Canadian Pacific Railway proposing this policy of extension; the announcement is made at the annual meeting of the directors, and the shareholders approved of it. This same argument applies still more to the Canadian National system, which is a larger road, a consolidation of a great many other roads, and is now coming to be the great National Railway of Canada.

Since this discussion opened we have heard rather queer things in connection with the Canadian National Railways. I am going to refer to the speech made in this House by the hon. member for St. Lawrence-St. George (Mr. Marler). Less than twelve days ago he made a speech in which he dealt with this question of the extension of the Canadian National, and he told us a rather doleful tale. First of all, he made a calculation, and placed it before the House, as to what the commitments of Canada in connection with all our National Railways were, and at page 896 of Hansard hon. members will find a summary of those commitments as he gives them, amounting to two billion dollars. He said they would be even more than that. Now if the amount of the commitments of Canada on account of the Canadian Nationals is to be quoted in this House, it is high time this House settled in some way what the commitments are and what would be a fair interest on them. So, I am going to make a suggestion. The prime minister of England made a suggestion of this kind not so long ago which was accepted. Let us admit that the statement of the hon. member is correct, and that we have this debt of two billion dollars on account of the National Railways; let us fix the amount of interest, and then we will know what the annual charge is to be. It would not be a bad calculation for us to call it a billion and a half for these commitments, and allow three per cent on that. That means that the Canadian National will have to make sixty million dollars a year above its working expenses in order to pay its way. Let us put the amount at a million dollars a week. Let us therefore take this amount for a starting point in this House and the country—that we are committed to at least a million dollars a week out of the earnings of the National Railway to pay the commitments after the overhead has been paid. I think this would be a very fair proposal, because all that money did not actually go into the building on the various roads—the old Intercolonial, the old Canadian Northern, the Grand Trunk Pacific, and a dozen other roads that have disappeared into the consolidation. These roads are all in this consolidation and all are in this estimate of the member for St. Lawrence-St. George. It is an absurd estimate to place the figure at two billion dollars, though the hon. member said it was more than that. Let us put it at a billion and a half, and count that practically a million dollars a week should be set aside out of the earning expenses to pay the interest on this investment. When we have that, we have something to go on, and I challenge the hon. member for St. Lawrence-St. George and the Minister of Railways, to

come to an understanding in this House, in order to settle once and for all the amount to be recognized as the interest charges of the National Railways, as against its earnings, after the cost of running the road has been paid.

The hon. member (Mr. Marler) at page 898 of Hansard, made this remarkable statement:

> In conclusion as regards the remarks which I have been making I want to say this—and it has reference to a fact which, I think, is not fully understood or fully grasped—we have in this country at present two great railway systems, the Canadian National and the Canadian Pacific.

I grant that.

> I think every member in this House, I think everybody in this country, should wish well for both these lines, they are both great national undertakings.

I dispute that. The Canadian National Railway system is the only national undertaking in this country. It is owned by the Canadian people, the Canadian Pacific is owned by a private company under a charter granted by parliament a good many years ago, it is capitalized at over a billion dollars, and has a great earning capacity. Nobody knows who may be the next owners of the Canadian Pacific. I have some reasons for suspecting that certain American railways have tried to acquire the Canadian Pacific—perhaps they could acquire it to-morrow. Either the Pennsylvania Railway or the New York Central Railway might acquire the Canadian Pacific to-morrow, and the ownership would pass out of the hands of—I was going to say Canadians, but there are other stockholders in Europe. On the other hand, the Canadian people own the Canadian National Railways and intend to keep them forever. Therefore, I dispute the hon. member's statement that the Canadian Pacific is a national railway on a parity with the Canadian National. It is not. The only hold that we have to-day on the Canadian Pacific is through a most peculiar clause in the charter creating the Company, a clause which I do not think was ever incorporated in any other railway legislation. This clause is to the effect that the Canadian Pacific Railway Company is to maintain the railway in the interests of the people of Canada for ever. That is why the American roads to-day have not secured the Canadian Pacific railway. They do not like to undertake the responsibility of maintaining the road in the interests of the Canadian people for ever.

The hon. member also made this surprising statement:

> Now to have competition between these two lines is senseless in the extreme. If traffic arrangements can be made with one line to help out another line, I think those arrangements should be made. To build lines unnecessarily when there is not enough traffic to satisfy both these systems is not putting this House, is not putting this country, in a position to get lower freight rates in the very slightest degree.

The hon. member proposes co-operation between the Canadian Pacific and the Canadian National with respect to branch lines. Does it not follow that some day the two systems will be consolidated? I know many people in the West say it is a good thing for the country that we have railway competition. Perhaps it is, but it may entail very heavy and needless expense. Therefore, I believe that when the people realize what their commitments are for these two great systems, they will come to see that there is something in the argument advanced by the hon. member and that through the elimination of competition great economies may be effected. I think this is the first time that anyone has heard—shall I say?—a "cry from Macedonia," —a suggestion from Montreal, in favour of co-operation between the Canadian National and the Canadian Pacific. Perhaps somebody is getting frightened about the future. Undoubtedly, the progress of the Canadian National is the surprise of the world to-day, and its position is a credit to the Conservative party that consolidated its component roads into one great system.

As one who has done something in that direction, I am going to support any reasonable proposal for branch line development of the Canadian National Railways after this declaration by the president of the Canadian Pacific Railway, Mr. Beatty, endorsed by his shareholders, in favour of a similar development of their system to look after the transportation needs of the Dominion. I agree with the leader of the opposition that there should be a careful scrutiny of the proposals that come before this House for building branch lines as feeders for our great national railway system, but I would sooner retire from this House than acquiesce in the proposal that the Canadian Pacific shall be allowed to expand but that the Canadian National must expand no further. We have a right to proceed with a programme of expansion, even if we have to go in debt to finance it, for there is no doubt that the position of the road is absolutely sound.

I have always had complete confidence in Sir Henry Thornton. That confidence does not extend to his co-directors,—but he did not appoint them. I am still a believer in the management of our National system by a board of directors such as was authorized and established by the Conservative party.

This House has always maintained control of the National system in its review of any proposals which may come from the management. Therefore, until I hear some real objection to these branch lines I am going to give reasonable support to the proposals and that we at least keep faith with our people by extending the system wherever extension may be needed. I would give especial preference to the West in this respect. I think all these branch lines will eventually pay their way.

But here is the great difference between the Canadian Pacific and the Canadian National system. The Canadian Pacific is a privately owned line, committed to the payment of dividends to its stockholders. I hope that the ambition of the men who administer the Canadian National Railways is to give service at the lowest possible rates irrespective of dividends. That is a rather rabid doctrine, perhaps it may be termed Red or Bolshevik, but it seems to me that the people desire a national system of railways so operated as to render a service at minimum rates instead of piling up big dividends for shareholders. Therefore, I repeat that I disagree with the statement of the hon. member for St. Lawrence St. George that the two roads are of the same "breed of dog." They are absolutely different. One is the people's road; the other is owned and controlled outside of Canada—by whom, we do not know. The Canadian Pacific Railway could be acquired in New York or in London to-morrow, and that is a significant fact which the Canadian people have to consider. Therefore, to ask me to refrain from endorsing any reasonable proposal for the expansion of the Canadian National Railways while the Canadian Pacific is allowed to go on is something to which I cannot agree. So I say that if the Canadian Pacific Railway is going ahead we should keep pace mile for mile, if that can be justified, as I hope it will.

There is another public owner of railways in this Dominion and that is my own province of Ontario. That province has built a splendid road in the Temiskaming and Northern Ontario Railway, which is opening up new mining country. That road has been paid for, by the people of Ontario, and it is believed pretty generally that the Canadian National Railways to-morrow would take it over, assuming all the liabilities in connection with it and giving all the extensions which the people require in northern Ontario. Doing that, of course, they would also no doubt afford similar extensions in the province of Quebec.

The railways in Canada are operated at present on a most primitive basis; their locomotion depends upon the generation of steam in individual engines. This is not the most satisfactory way of operating railways. So far as I can gather, the best railway experts to-day are to be found in England, and it is their opinion that as the railways in that country cannot be driven by hydro energy, then the electrical power can be generated by great batteries in connection with boilers situated right at the mouth of the coal pit. Electricity generated in that way could drive all the railways in England at a lower cost than they can be operated to-day; and I have no doubt that this is what will be done with the five systems of railways in England. In England the best engineers are working out the problem of the electrification of the railways upon the bases of high tension and long distance transmission. Electrical energy can be transmitted almost a thousand miles now without any great waste. In this country we could electrify our railways and provide energy for all our industries, and I think that steps ought to be taken to bring this about. We have in Canada, from British Columbia, right through the western provinces, through Ontario and Quebec, a number of rivers which could provide electrical energy to drive every mile of railway in the Dominion, and drive it at a much lower cost than the railways are being driven at the present time. Already, I believe, the two great systems in Canada have given some consideration to this question; but no private concern could undertake a work of this character in the way that a nation could. In any event, it would be well if the two railways could get together and co-operate in this direction; and for the first time we have heard some suggestion from Montreal which would seem to indicate that the Canadian Pacific Railway is not averse to action of this kind. This of course is only what some people might call a "gesture"; but at any rate it seems to me to convey some significance. At least I should like to see some co-operation between the province of Ontario and the Canadian National Railways, because there is no reason why the construction of rival lines should continue. In my opinion there ought to be some consolidation of railway service in the mining districts in Quebec and Ontario. The Temiskaming and Northern Ontario Railway and the Canadian National Railways, from North Bay, through Sudbury and in that direction, might with advantage be consolidated. If the Canadian Pacific Railway were willing to co-operate, so much the better; but at any rate it would be well, I think, to have such a consolidation of the roads in the prov-

ince of Ontario as I have indicated. There is a great demand for economy to-day, and I am glad to have heard from my hon. friend (Mr. Marler) that he is prepared to support a policy of co-operation.

As to the future of the Canadian National Railways, let me say that the principle of public ownership has been adopted in this country as a permanent institution. The people of Canada own the National Railways now and are determined to make them a success. To do this they are going to patronize the national roads before any other railway. In Ontario, apart from the public ownership of railways, we have a publicly owned hydro electric system which has been exceedingly successful. It has paid all its commitments and is meeting its interest charges in the way of amortization and so forth. Some years ago, I might remark here, a company was organized to build a railway and power service in Brazil. Millions of dollars were put into that concern and stock was sold in Canada, although there was never any very great return from it. Three gentlemen in Ontario have now undertaken the revival of this Brazilian road and the first step they have taken in the matter, is, to me, the greatest compliment, on the part of a private concern, to public ownership. Mr. Couzens, who was formerly general manager of the Toronto Transportation Company, a publicly-owned street railway, and who was also general manager of the Hydro-Electric System of Ontario, was offered and accepted a position with these parties who are now developing the Brazilian road. Mr. Couzens was bred to public ownership in England, and in this country he was a strong advocate of the principle. He is the ablest technical man in railways in America to-day, and these people offered him a considerable inducement in the way of salary to join them. I do not blame him for going; he is a man who is getting up in years and pro-

4 p.m. bably in five years' time he will be in easy circumstances. I do not know whether the city of Toronto had the opportunity of retaining Mr. Couzens, but I believe that they would give three times what they are now paying out to have kept him. It was rather significant that so soon as he went out of office—and no one knew that he was going until his resignation was submitted—the city of Toronto secured two young men, trained in the University of Toronto, our own boys, to take charge of the public transportation system and of the power distribution system as well. We are bringing up these men by the score in our universities and they are all ardent advocates of public ownership. They would rather see the public utilities improved than that these things should be operated for the purpose of creating earnings for shareholders of over-capitalized corporations. We have a good start in public ownership in Ontario and are making considerable headway with the Toronto transportation system. Hon. gentlemen have only to consider the success that has attended the Hydro system, and to look at the success which the Canadian National Railways are meeting, to be convinced of the benefits of public ownership. The success of the Canadian National Railways is a surprise to the world. Is it not reasonable, then, to suppose that the United States, in view of this fact, and seeing what a revolution has swept over not only this country but England and other places as well, will follow suit? Let us hold what we have, I say, and keep pace with the Canadian Pacific Railway.

My hon. friend (Mr. Marler) made a doleful but very able speech; I read it in a sick bed some days ago, and I was pleased to read it. I give my hon. friend credit for it, but it was a brief for the Canadian Pacific Railway. Apparently the brief was cut in two, because the hon. member for Joliette (Mr. Denis) afterwards got up and endorsed every word that the hon. member for St. Lawrence-St. George said. Then he went on. "I wish further to say," and apparently read the completed portion of the brief. So we had in his discussion eight days ago what was the hand of Esau if it was not the voice of Jacob. Anyway, who is Esau? Ask the member for St. Lawrence-St. George. Or ask the member for Joliette; perhaps he knows. So, that after all the struggles of the past, after all the stones that have been thrown at the government for consolidating these roads, we have them now and we are at least going to keep step with the Canadian Pacific. I do not know whether the minister has had an opportunity of reading the annual report of the Canadian Pacific Railway Company, but there is his justification.

Mr. GRAHAM: I have a copy of it.

Mr. MACLEAN (York): I suggest that hon. members get their copy of this annual report and read it. It may be said that we have not the money to do these things, but if the Canadian Pacific can afford it the people of Canada can afford it; that is my answer to that argument. The Canadian Pacific is a great railway. It has enormous resources, it has good management and a splendid board of directors. But the Canadian National as it is to-day has seventy per cent of the strategical advantage of the transcontinental railways of this country.

They have it at Montreal, acquired by the Grand Trunk, sixty or seventy years ago. They have it in the St. Lawrence district, at Toronto, in the Niagara river district. Their advantage in those sections is so great that the New York Central had to duplicate their lines right through. The Grand Trunk crossed the Detroit river and carried that strategical advantage right to Chicago, and the greatest earning railway in Canada to-day is the old Grand Trunk between Chicago and the St. Lawrence and New England ports. We also have a lot of the strategical advantage of the West. We have it in the mining country of northern Ontario, in the ownership of either the Dominion or the province. We have the advantage also in the Rocky mountains. Our pass is the best pass through the Rockies, and we would share it on terms with the Canadian Pacific if they should feel like approaching us. We hear a lot of talk about the harbour of Vancouver, but there is another harbour called Prince Rupert, and it is going to be one of the great ports of the Pacific, so we have the strategical advantage there too. It is true we have to cross the Canadian Pacific tracks to get to Vancouver, but some day that may be adjusted. The National Railways are surprising the world to-day by their success and by the excellence of their administration. I would like to point out also that it might be conceived that if the Canadian Pacific Board became dissatisfied with this country they might undertake to sell their road on the New York or London market. Of course they say it is the last thing they would do, that they are actuated by national reasons in maintaining the line as it is. But the temptation is always there to take the money for it, to cash in and distribute the proceeds among the shareholders. They would make that distribution to-morrow but for the wise provision made by Sir John A. Macdonald. Nobody knows why he did it, but for all time the condition is imposed on the Canadian Pacific Railway Company to maintain that road for the service of the people of Canada. Whether or not in a court of law they could be made to deliver the goods I do not know, but it certainly is the one thing that keeps the Americans from buying out the Canadian Pacific.

I say to the Minister of Railways, go on with your extensions wherever they can be justified, wherever the president can give a substantial reason for the expansion of the system. I believe that the Canadian people, including a great many Conservatives, will support him in a policy of that kind.

Mr. KNOX: I want to compliment the hon. member for South York (Mr. Maclean) upon the manner in which he has faithfully and, if I may say so, tenaciously, stuck to his belief in public ownership. If any man in this House deserves the title of father of public ownership of railways, I think it is the hon. member for South York.

The district through which this branch line goes, forms part of the constituency which I have the honour to represent, and cannot I feel sure, be surpassed in productiveness in any part of the West. The people went in there some fifteen or twenty years ago and settled forty-five miles, or even further than that, from the nearest railway. They did so, of course, in the belief that the railway would ultimately go through, but during all these years they have been hauling their grain long distances. In 1921 this twenty-four miles of line was built from Melfort to Ridgedale. Even before the steel was laid, elevators were going up, but no sooner did the steel get through than elevators sprang up at the three stations on that piece of line, almost over night—sprang up like mushrooms. I am sure that they have been a paying proposition ever since. It is now intended to extend this line out to Nipawin, a distance of another seventeen miles, six of which are already graded. I know the district very well, and have no hesitation in saying that this extension will be a paying proposition. There is just one thing that occurs to me: There is a district out further east which is likely to be left without transportation service. A delegation came down here last year to make representations in the matter and I had hopes that some provision would be made for service there. This line going up to Nipawin will still be a considerable distance from the district further east to which I refer. We do not want our railway lines to parallel each other. The Canadian Pacific has a charter through this country and I think we should keep in mind that the lines should be as far apart as possible so that some one of them will give a service to the people to the east. That country to the east is very thickly settled and very productive, but a great many of the people still have to haul their grain a considerable distance. I shall not speak at any further length except to say that there can be no doubt whatever as to the advisability of getting a line through this district.

Resolution reported, read the second time and concurred in. Mr. Graham thereupon moved for leave to introduce Bill No. 40,

respecting the construction of a Canadian National Railway line to Mile 41 of the Melfort Branch near Nipawin, in the province of Saskatchewan.

Motion agreed to and bill read the first time.

PEEBLES, NORTHERN SASKATCHEWAN

Hon. GEORGE P. GRAHAM (Minister of Railways) moved that the House go into committee to consider the following proposed resolution:

Resolved, that it is expedient to bring in a measure to provide for the construction of a Canadian National Railway line from Peebles on the Canadian Northern Saskatchewan Railway, southerly to a point in or near township 10, range 8, west of the 2nd meridian, in the province of Saskatchewan; mileage already graded, 20 miles; estimated mileage including existing grading, 22 miles; estimated cost $300,000.

Motion agreed to, and the House went into committee, Mr. Gordon in the chair.

Mr. GRAHAM: I will put on Hansard the memorandum in connection with this line:

	Cost
Peebles South, Mile 0—22.	
Grade now ahead of track—20 miles.	
Proposed in 1924—2 miles grade; 22 miles track.	$300,000

It is proposed during the year 1924 to add two miles to the existing 20 miles of grade and to lay the track on this 22 miles and ballast and otherwise complete the line, at an estimated cost of $300,000. When this is done, it would not be the intention to extend this line any further for at least some years.

The grade on this line started in 1919 and was completed by the end of the season of 1920, and during that year the greater portion of the track material was delivered. Since 1920 no work has been done on this line.

This branch runs through a good agricultural area mostly grain growing, but at the south end has some mixed farming. This territory produces good crops when rainfall is sufficient, but is subject to dry seasons which make short crops. The land is practically all taken and mostly settled except south of Mile 20.0 where there is some unoccupied land. The crop in 1923 in this district was very good.

The justification for building this line is that approximately $216,000 has already been spent towards its completion, which is now earning nothing, and it is estimated that when the line is completed as far as proposed there will be an annual business of 660,000 bushels of grain furnished to it, a great deal of which now goes to our competitor, and in addition to the grain there would be about 150 cars of in and out bound freight, consisting of live stock, coal, lumber and merchandise. It is computed that the farmers would save an average of about 16 miles haul on the 660,000 bushels of grain referred to per year, and if this is taken as worth ¾ cents per bushel per mile hauled, it would mean an annual saving to them of $79,200. The freight from this line would be all of a long haul character, thus feeding other lines of the system.

Mr. MACLEAN (York): Who signs that?

Mr. GRAHAM: It is a memorandum given to me by the Canadian National Company, for which Sir Henry Thornton is responsible.

[Mr. Knox.]

Mr. MACLEAN (York): I am glad that fact has been given out. I had not heard it before.

Mr. GOULD: I think this is the fifth session in which I have pleaded for the construction of this road, and I am very pleased to see the matter in the state of progress it is in at the present time. The statement given by the minister is absolutely correct. If there is any error in it, it is that the memorandum is a trifle too conservative. I have been well acquainted with this particular district for twenty-three or twenty-four years, so I should know whereof I speak. I am rather regretful that the government or the management of the railways did not consider it advisable to continue this road to its objective, that is to the coal fields to the south. True, as the minister has said, I believe that all the benefits he enumerated will accrue to the people in that district, and more perhaps, but there is still quite a large area further south which, as the memorandum states, is not completely settled. This area would be better settled if the road was continued. Settlement has taken place in that country largely because of the prospect of a railroad going in there. It is the child of a former administration, and at one time we had the ties and steel sufficient to lay eleven miles of the grade along that railway. But that was removed for some cause or another, although a promise had been distinctly made to us that the material would not be removed. The people in that part of the country were keenly disappointed likewise the hon. member for Qu'Appelle (Mr. Millar), the hon. member for Weyburn (Mr. Morrison) and myself, that this material was removed. To-day we have a vote of $300,000 to supply the material that was taken from us; so really this is a revote. I shall ask the minister, when we get into committee on the bill, what the prospects are for the continuance of this road southerly to the coal fields. I also wish to point out that while it is true that considerable revenue will accrue to this road if constructed only to the point at present indicated, the latter part of the road—there is only six or seven miles of it in my district—will be the greatest revenue producing part of the line, and if the road were continued farther south, it would produce revenue proportionately. I do not expect there will be any criticism of this resolution. If criticism develops later on we shall have to meet it when the bill itself is brought down. I would recommend to the consideration of the minister and of the House the extension of this road to the coalfields.

Mr. MILLAR: Although this branch line is in the constituency I have the honour to

represent—with the exception of a very few miles that extend into the riding of my hon. friend who has just spoken—I should not make any remarks on the proposal at the present time were it not for the fact that the unexpected happened last year when the branch line bill met with sudden death in the Senate. For that reason I think it desirable to supplement the explanation of the minister and of the member for Assiniboia (Mr. Gould) by a few statements of my own.

Let me state first of all that I know this district quite well. As the minister has stated it is well settled. It lies in the territory between two Canadian Pacific branch lines, which are about forty miles apart and run almost parallel east and west. The intention is to cut that territory north and south by this proposed Canadian National branch line. Hon. gentlemen can readily see that if that territory now lies between two branch lines of the Canadian Pacific, practically all the freight goes to that company. This may not be of great importance and yet it is a traffic that is well worth having if we wish to build up our government railways. For the information of hon. members I should like to place on Hansard extracts from two or three letters received from residents of the district. The first is from a communication sent to me on behalf of the People's Committee, and it reads as follows:

> We have had 14 miles of grade since 1919. This has been made ready for track laying twice, even to the extent of staking. The steel and ties have been lying at Peebles since February, 1921.
>
> Regarding the returns—

You will see now that the minister's statement is quite conservative.

> —with this 14 miles completed a committee got together and made the following estimate. Grain alone, even in these poor years, amounts to 500 cars of 1,000 bushels and years like '15 up to 900 cars, saying nothing of coal and cattle, besides other cars that would come in. The returns on the grain and cattle would not be for the 14 miles alone but would be figured freight to Port Arthur, as all this is now shipped by C.P.R., by Arcola, Stoughton and Reston-Wolseley lines.

Now another paragraph:

> The people are so in earnest regarding this work, that, failing to get a favourable decision from the railway authorities, they are going to ask they be allowed to do this work themselves, the railway to furnish only a work-train and supervisor and to overcome the difficulty of funds will ask for an arrangement to have the expense charged up against freight from this line. This is just the outline of the plan at present.

That shows the anxiety of the people to have this branch line built. I am not saying that their plan is at all feasible, but it shows the anxiety they feel in the matter. Let me now read an extract from a letter written by Mr. Fred Baldwin:

> I would ask you to put before the minister the fact that on an ordinary year there is at least 500 cars of grain that find their way to other railways, to say nothing of thousands of heads of stock that are raised in the Moose mountains and adjoining districts and all other trade that naturally comes in its trail. Also an item worth mentioning, the line would tap a district where there seems to be a splendid supply of good gravel, which is also a great asset for ballast and should not be lost sight of.

I shall now give a short extract from another letter received from Mr. Arthur J. Boyer, of Montmartre, Sask. which says:

> The construction of the Lampman-Peebles branch is very necessary as it will serve a large district, practically all under cultivation and from which the Canadian Pacific Railway Company now draw all revenue from outgoing grain and incoming freights of coal, lumber and other merchandise.

Now, Mr. Chairman, it might not seem necessary to spend much time on these branch lines if it were not for the remarkable arguments that have been presented by the hon. member for St. Lawrence-St. George (Mr. Marler), the hon. member for Joliette (Mr. Denis), and the hon. member for North Toronto (Mr. Church). I imagine that if these hon. members had an opportunity of spending even one week in the middle of winter among the farmers of that district they would alter their opinions as to the necessity for this branch line. If they saw those farmers hauling their grain for a distance of sixteen, seventeen and eighteen miles in cold weather, making a total journey altogether of thirty-two, thirty-three, or thirty-five miles, I have a high enough opinion of the hon. members in question to believe that they would change their attitude very quickly. It is very easy for a person who lives within a few minutes' walk of a railway station, and who is not compelled to undergo such hardships as do the farmers I have referred to, to say "We cannot afford money for this purpose. Times are too hard, money is too scarce. We will support only those branch lines that are absolutely necessary". "Absolutely necessary" is such an indefinite term that I imagine it can be twisted into a reason for opposing any of these branch lines.

Now, just a word in reply to the hon. member for Joliette. I deplore the frequency with which comparisons are made between the East and the West, between one province and another. The tendency is to cause friction between such provinces, between the East and the West. But sometimes we are compelled to take notice of some statements that are made. For example the hon. member

read a statement going to show a greater mileage of railways in the western provinces than in eastern Canada in proportion to population. I think that may be taken for granted. You cannot have the same mileage in a sparsely settled country just being opened up for settlement as in older and more densely populated sections containing populous cities like Montreal and Toronto. It would be like expecting to find on the head of a child as many gray hairs as there are on the head of an old man. Now, as to the amount of money that is spent in the West let me give an explanation which is not intended for the benefit of the majority of members but for the information of a few who seem to have a wrong impression. On March 27, I asked these questions:

What is the amount of money exepended for rural mail delivery in the three prairie provinces?
What amount of money is expended in the postal districts of the province of Ontario?

For the benefit of the member for Joliette who is not in his place, let me say that the amount that is expended in Ontario for this purpose, was given as $1,602,595, whereas the expenditure in the three prairie provinces was $190,000.

Mr. SUTHERLAND: Has my hon. friend got the postal revenue derived in those provinces?

Mr. MILLAR: I have not all those figures but I will give certain other figures. Some reference was made to the amount of freight. Let me tell hon. gentlemen that in the busy season, in the fall of the year, a train containing forty carloads of wheat passes through Winnipeg eastward every thirty minutes, or a little better than that, night and day. I think that statement should be an answer to what hon. gentlemen opposite have said in regard to the question of freight. And I think it will answer the statement of my hon. friend from South Oxford (Mr. Sutherland), and prove that all the freight in the country does not originate in an acre of stone quarry.

Mr. MARLER I do not know I am sure what urged the hon. member who has just spoken to direct certain remarks against me. I am not opposed to all the branch lines. If he had taken the trouble to read the few remarks I made the other day he would have seen that I stated then, as I state now, that each branch line should be looked into on its merits. My hon. friend need not get palpitation of the heart thinking that I am going to oppose this particular line. It will probably relieve him very much now when I say that I believe this branch line is one of those that are necessary, and I have taken the trouble, as far as my capabilities will permit, to look into this particular line, and I am quite ready to approve of it, either on this resolution or on the bill itself. But the statement which I made quite clearly in this House the other day, and which I make quite clearly again, is that I will oppose any branch line that does not appear as meritorious as this one. Why should the hon. member take exception to my remarks on that account? I have not sat still, as most of the members of the group directly opposite have done, and refrained from raising my voice against particular lines. Those hon. members opposite have been exceedingly quiet, and they have not raised their voices against any branch lines in the programme brought down. They have not opposed anything. They have swallowed holus bolus every single line up to the present time. And why? Because they were afraid if they did not keep quiet they would not get their own branch lines. That is the attitude they have taken and it is all very well for the hon. leader of the Progressives (Mr. Forke) to point to me, as he did the other day. Hon. gentlemen opposite have been very careful to talk about economy, but they are not quite so careful to preach economy when considering lines that are not necessary, and which, I believe they know are not necessary, in other parts of the country. The only reason is that they are afraid if the first resolutions do not go through, those in the middle of the programme will not go through, and they want to get their own branch lines.

I have explained my attitude clearly and distinctly, and that is my answer to the statements of the Progressives in this House. I will oppose every branch line that I think is not necessary or economical. I believe that this branch line is a meritorious one.

Sir HENRY DRAYTON: Notwithstanding some of the arguments that have been advanced in favour of this resolution, I am still of my original opinion, which is the same as it was last year, that this is a meritorious line and ought to be built, and the only pity is that it was not considered on its merits last year and put through.

Resolution reported, read the second time and concurred in. Mr. Graham thereupon moved for leave to introduce Bill No. 41, respecting the construction of a Canadian National Railway line from Peebles southerly in the province of Saskatchewan.

Motion agreed to, and bill read the first time.

GRAVELBOURG—NEIDPATH EXTENSION

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals) moved that the House go into committee to consider the following proposed resolution:

Resolved, that it is expedient to bring in a measure to provide for the construction of a Canadian National Railway line from the end of steel at Mile 109 on the Gravelbourg Extension of the Canadian Northern Railway to Mile 120 at Neidpath, in the province of Saskatchewan; mileage already graded, 11 miles; estimated mileage including existing grading, 11 miles; estimated cost, $144,000.

Motion agreed to, and the House went into committee, Mr. Gordon in the chair.

Mr. GRAHAM: The memorandum I have with reference to this line reads as follows:

	Cost
Gravelbourg Extension, Mile 109—120.	
Grade now ahead of track—11 miles.	
Proposed in 1924—11 miles track..	$144,000

It is proposed in 1924 to lay the track on the 11 miles of grade now completed ahead of the end of steel, thus completing the line to the town of Neidpath, and there to leave it for the time being, at least.

In 1920, the grading was finished as far as Neidpath, (Mile 120.0), but the track was only laid as far as Mile 109.6. In 1922 the line was practically finished, including the buildings, fencing, etc., as far as Mile 109.0, with the exception of about 30,000 yards of ballasting, which remains to be done to this point.

This branch runs through an undulating country well suited for grain growing, and a large portion of the land is under cultivation, giving a good production of wheat and other grain.

The justification for building this line to Neidpath is that already one-third of the money necessary to complete it has been expended and is now earning nothing. Besides this it is estimated that when complete this line will ship 480,000 bushels of grain each year, in addition to about 70 cars of in and outbound freight, composed of live stock, coal, lumber and merchandise. About 8 miles on the average will be saved in road haul to the farmers for this 480,000 bushels of grain, which if computed as worth three-quarters of a cent per bushel per mile hauled, would make an annual saving to the farmers of $28,800 for grain alone. The portion of this line already built has always been a large and consistent shipper of grain, which is of a long haul character, and thus would add materially to the business of other lines of the system.

Mr. LEWIS: I do not rise with the intention of opposing this line at all. It runs through the district I represent, and I would like to say, before going any further, in answer to a question that was addressed to this part of the House, that I at least did raise my voice in regard to one branch line that went through this committtee. It was a line of which I made a fairly complete study, and I think I placed my views on Hansard. It is almost impossible for a person to make an intensive study of every branch line that comes up for discussion in this House, and for that reason it is up to other members to do a little work and to reveal a little of the conditions that they think are detrimental to the welfare of the country. In regard to this individual line, possibly hon. members will recall that this line has been proposed for a number of years. It is running through a rich, arable country. I do not like to eulogize the country, as some of our hon. friends from Nova Scotia have done when they have likened their country to the garden of Eden.

Referring to the garden of Eden, I remember it had no branch lines; the only part of the story that was interesting to me was that telling of the people that were in it, and I would not like to tell the members of this parliament that we have people of that description, because someone might want to bring in a bill banning that territory. I say it is a good country, and it grows a splendid amount of grain. But I want to show the members of this House what has been said in regard to this branch line, and for that reason I would like to place on Hansard what was said in 1921 by the then representative of Swift Current. Mr. Argue said:

I understand that in 1918 this line was promised to the people of the district, and they were told that it would be completed by 1920; that is to say, it would ultimately reach Swift Current; but on account of the war and for various other reasons construction has been delayed.

Not only did Mr. Reid and Mr. Hanna sanction this line, but also the late Mr. Kennedy. When I spoke to him about the matter —and I think his statement will be found in Hansard—he said that the line would be completed as far as Swift Current. I might quote further from Hansard of May 6, 1921:

Mr. Argue: I would like to have a more definite statement from the minister with reference to the branch line in Saskatchewan to run from Gravelbourg to Swift Current, on the Canadian Northern. In 1918 we were promised by the president of the company that the railway would be in Swift Current in 1920, and we have been very patient so far in waiting for the road to be built. Now the grade is up to Neidpath—

—which the minister mentioned a moment ago.

—and steel is laid to within ten miles of that point. The farmers of that district have made arrangements, and laid all their plans, to build an elevator at Neidpath, but they were advised that it would be better to wait until they could get some more definite assurance with regard to laying the rails on that branch. What I would like to know is whether the rails would be laid on the branch in time for these people to get out their wheat this fall. There is something like 40,000 acres of grain which will be marketed in Neidpath providing the elevator can be built so as to store the grain until it can be got out. I would like the minister to give me that assurance so that the farmers can go ahead with the arrangements for building the elevator with the certainty of being able to take out the grain this fall.

Mr. Reid: In speaking to Mr. Hanna about the matter he mentioned that they would lay this ten miles this year for the reason that an elevator would

be built, and it was for that purpose the rails would be laid. I am quite satisfied that it is the intention of the Canadian National Railway management to lay the ten miles in question and I feel satisfied from the way Mr. Hanna mentioned it to me that there is no doubt it will be done. Unless something unforeseen should happen it is the intention anyway to lay the rails before that time. The 50,000 tons of new rails which were purchased are now being rolled and sent on to the main line. The rails thus released will go on to the branch lines and the branch in question is one of those that will be taken up first.

So hon. members will see that the people had been promised this line for several years. Now there is a prospect of its being completed. When introducing this resolution the Minister of Railways stated that this line would be completed this year, but that the branch line programme is to extend over three years. I would ask him, does this preclude the possibility of any further extension of the line for the next three years?

Mr. GRAHAM: Of course, every session parliament can do as it pleases. It depends on the programme approved by parliament and on the recommendation made by the Canadian National Railway Board as to the necessity of the line.

Mr. LEWIS: That, of course, is the crux of the whole question. The minister spoke of the psychological effect that a three year programme would have upon people in the vicinity of the projected line when they became aware that railway construction would proceed for the next three years. I wonder what the psychological effect will be when the people find that the line may not be completed during the next three years. I would urge upon the minister the necessity of proceeding with the construction as rapidly as possible. I shall submit various reasons in support of my request, and I hope the Minister of Agriculture (Mr. Motherwell) will back me up.

In the first place, if to-day the people affected wish to bring in coal or fruit from the West they must haul it 265 miles. That is to say, it must be hauled from Swift Current to Moose Jaw, then round by Gravelbourg and up to Neidpath, a distance of 265 miles; whereas if this gap were constructed, the haul would be only twenty-four miles. This is not good business, and undoubtedly great economy would be effected if the gap were spanned. It is very difficult for us to get fruit on the prairies. On the Gravelbourg extension line we have a tri-weekly service, and by the time perishable goods have been hauled the 265 miles they are in such bad condition that the people are discouraged and do not attempt to ship in fruit which they require. I honestly believe that if this line were completed it would pay for itself in one year by reason of the increased freight business that would necessarily follow. At the present time we are advocating the shipment of grain via Vancouver. The country tributary to this line grows, as the hon. minister has already stated, 480,000 bushels of wheat every year. Under present conditions if we wish to send our grain to Vancouver we would have to pay freight rate on an extra 265 miles. I believe the time is coming when the people in the district will send their grain westward to Vancouver, and there is no reason why they should not have the opportunity of doing so by the spanning of this gap. Furthermore, this territory is naturally tributary to Swift Current. Swift Current is the logical distributing centre, but owing to the non-completion of this branch line the farmers in the neighbourhood have to rely on Moose Jaw, which means a longer haul of 265 miles. I might cite many other reasons in support of my request, but I do not wish to weary the committee. I think the minister knows that the gap should be bridged at as early a date as possible, and I hope that in the very near future he will see to it that the necessary construction is proceeded with. I hope also that the Minister of Agriculture, who knows the district well and has often had delegations wait upon him about the completion of this line, will also back me up in this request.

Mr. MOTHERWELL: Mr. Chairman, the recital by the hon. member for Swift Current (Mr. Lewis) of the necessity for the completion of this branch line is, I think, substantially correct. It was a bitter disappointment a year ago to the people along the prospective route to find that, notwithstanding that a construction crew with full equipment and material was already on the ground, the whole thing had to be called off. The result was that the people had to wait a year longer, and I am sure that it is generally hoped that there will not be a recurrence of what one might regard as almost a catastrophe to people who have been waiting so many years for a much needed railway service. As regards the suggested extension to Swift Current, that gap of course should be bridged as soon as possible. But as the board could not exceed the mileage of last year the question with them, as I presume it must be with all of us, was, how best to expend the money, primarily to the advantage of the farmers themselves. I do not like to make any comparisons as between the various interests of the farmers and the cities, but I

think hon. gentlemen will agree that the primary object in the building of many of the branch lines was to place the farmers sufficiently near their markets to make it possible for them to grow grain at a profit and without spending all their earnings in wagon and sleigh haulage. I am afraid, notwithstanding the claims made in regard to this extension, that there are some outstanding rural districts that have even stronger claims. I may refer to one or two in Saskatchewan west of Shell Brook. The hon. member for Prince Albert is not in his seat, but some other hon. gentlemen who are present know what a vast extent of territory lies west of Shell Brook, into the Mistawasis district, past Shell river and into Norquay, a distance of some 50 miles. The whole of this district has been settled and there is not a railway within 40 or 50 miles of these people. There is another line west of Turtleford that requires to be extended; there should be an extension through the Paradise Hill country in the province of Alberta, and something should be done in that case at an early date. The question is, which of these various claims is the most urgent? It is important, I think, that the gap between Neidpath and the city of Swift Current should be bridged, because it would save a tremendous haul for grain, coal and lumber coming from the West; and the people of Swift Current would themselves appreciate the speedy building of this road, for it would mean a very great deal to them. As to what next year will bring forth, that of course is something that must depend upon the results of this year's work and the speed with which the present programme is carried out.

Sir HENRY DRAYTON: The attitude we take towards this line is precisely the attitude we took in connection with some of the other branch lines: it is one that should have been built last year, and could have been built if the government had taken the matter up as a question of business. The delay is to be attributed in part to the Minister of Agriculture (Mr. Motherwell) as a member of the cabinet, and all the pretence and sham about the three-year period is extremely obvious in this case. We have no objection to this proposal.

Mr. McTAGGART: This line does not run through my constituency but I am familiar with the territory which it is intended to serve. I understand that the line was projected originally to extend as far west as Swift Current. The line has been completed with the exception of a gap of 24 miles, and, as has been explained by the hon. member for Swift Current, this gap necessitates a tremendous haul, of from 200 to 250 miles, of coal and lumber coming from British Columbia. My impression is that until the gap is bridged the line of railway as it stands at present will not pay. Has the board made any recommendation that the line not so far built be completed at an early date?

Mr. GRAHAM: All recommendations made will be found in the branch lines programme.

Resolution reported, read the second time and concurred in. Mr. Graham thereupon moved for leave to introduce Bill No. 42, respecting the construction of a Canadian National Railway line extending the Gravelbourg branch to Neidpath, in the province of Saskatchewan.

Motion agreed to and bill read the first time.

STE. ROSE DU LAC—RORKETON

Hon. GEORGE P. GRAHAM (Minister of Railways) moved that the House go into committee to consider the following proposed resolution:

Resolved, that it is expedient to bring in a measure to provide for the construction of a Canadian National Railway line from the end of steel at Mile 15 on the Ste. Rose du Lac Extension of the Canadian Northern Railway to Mile 37 at Rorketon, in the province of Manitoba; mileage already graded 22 miles; estimated mileage including existing grading, 22 miles; estimated cost, $378,000.

Motion agreed to and the House went into committee, Mr. Gordon in the chair.

Mr. GRAHAM: I shall put on record in Hansard the memorandum in connection with this line. I will not say anything in reply to the remarks of my hon. friend (Sir Henry Drayton) because I am much more anxious to get the resolutions through than to start a debate. But here is one line that seems to have been stopped in 1920 and which might have been constructed. The memorandum follows:

	Cost
St. Rose du Lac. Mile 15—37.	
Grade now ahead of track—22 miles.	
Proposed in 1924—22 miles track..	$378,000
Proposed in 1925—nil..	
Proposed in 1926—nil..	
	$378,000

It is proposed during 1924 to lay 22 miles of track on the grading already done on this line, at an estimated cost of $378,000, it then being intended to allow the track to remain at this point for a few years before further extending this line.

Prior to 1919 the line was in operation to the station of Ste. Rose du Lac, Mile 11.3 with the track laid further to Mile 14.9, and the grade to Mile 18.1. In 1919, a grading contract for 18.9 miles was let. This contract was completed in the year 1920, the grade then reaching Mile 37.0. This left 22 miles of grade on which no track has been laid. A location survey has been made for about 22 miles beyond the end of grade, with the eventual idea of tying the line into the town of Winnipegosis.

This branch runs generally north through a scrub timber country which has plenty of precipitation each year. There is considerable grain grown in this district but it is best suited for mixed farming. The land is practically all taken up and has very considerable settlement on it.

The justification for building this line is that about $110,000 has already been invested in the grading now done, which is earning no money, and it is estimated that 396,000 bushels of grain per year will be hauled off the line when completed. An average of about 16 miles road haul on grain will be saved to the farmers adjacent to this line, and this, computed as worth ¾ cents per bushel per mile hauled, would effect an annual saving to the farmers of $47,520 on grain alone. Besides the grain business it is estimated that 190 cars of in and out-bound freight would be handled each year, consisting of live stock, lumber, wood and merchandise. The freight obtained from this line will be practically all of a long haul character, thus furnishing the rest of the system with considerable traffic.

Wagon road construction in this district is difficult and expensive on account of the sections of low wet ground. The railway would supply the main artery for this district, permitting the expenditures to be confined to lateral roads, and the provincial government has been appropriating money and building these lateral roads to the proposed sidings.

Sir HENRY DRAYTON: I did not quite get the point of what my hon. friend said in opening; I did not know there was anything to debate. Is there any issue at all on the question as to what happened to these branch line proposals last year? The only reason I raised the matter was because the hon. minister of Agriculture (Mr. Motherwell) brought it up and sought to take an unfair and improper advantage of it. If my hon. friend wants to debate the question there is just one thing for him to debate and that is the truth of what was brought out last year and the force of the objection then raised, namely, that the three-year period applied to work to be done within one year. If my hon. friend wants to debate what would have to be ridiculous, I am content to debate it with him, because I shall have to say very little. In connection with this line we say exactly the same thing that we say in connection with the rest of them. It is a line that ought to be built: It is a line that ought to have been built last year.

Mr. GRAHAM: And the year before.

Sir HENRY DRAYTON: Yes, the year before, if that had been possible. It was not built last year because the proposal could not get a fair consideration on its merits. We have no objection to this line.

[Mr. Graham.]

Resolution reported, read the second time and concurred in. Mr. Graham thereupon moved for leave to introduce Bill No. 43, respecting the construction of a Canadian National Railway line extending the Ste. Rose du Lac branch to Rorketon in the province of Manitoba.

Motion agreed to and bill read the first time.

HANNA—WARDEN

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals) moved that the House go into committee to consider the following proposed resolution:

Resolved, That it is expedient to bring in a measure to provide for the construction of a Canadian National Railway line from Hanna to Warden in the province of Alberta; estimated mileage including existing grading, 57 miles; estimated cost, $1,445,000.

Motion agreed to and the House went into committee, Mr. Gordon in the chair.

Mr. GRAHAM: The following is the statement with respect to this branch line:

In 1924 it is proposed to grade 57 miles of this at a cost of $504,500, and in 1925 to lay track on this 57 miles of grade, and ballast 30 miles at a cost of $792,000. In 1926 it is proposed to ballast 27 miles at a cost of $148,500 thus completing the branch.

Construction of this line will serve a double purpose, as it will open up the agricultural district through which it will run and will also make a shorter route for railway and other coal to Hanna and points east, as well as shortening the route from points on the Goose Lake line to points northwest.

The country through which this line runs is a good agricultural area, principally grain raising, and there is considerable settlement and development throughout.

The justification for the construction of this line is that about $42,000 per year will be saved in routing coal, and that there will be 1,710,000 bushels of grain marketed on this line, besides 370 cars of in and out bound freight consisting of live stock, coal, lumber and merchandise. It is figured that on the average, 12 miles of road haul will be saved to the farmers, and this applied to the 1,710,000 bushels of grain and taken as being worth ¾ cents per bushel per mile hauled, will mean an annual saving to the farmers of $153,900 in road haul on grain alone. The class of freight produced from this line, being all of a long haul character, will contribute business to other lines of the system.

Mr. SPEAKMAN: I am not rising to oppose this line, part of it lying through the country I happen to represent, but I do wish to present one or two facts in connection with it to the committee, and for the consideration of the minister.

As far as cheapening of operating costs in transporting coal is concerned, I am not competent to discuss it from that point of view. I know, however, that the saving will be considerable. A large part of the coal loaded at the Brazeau collieries will be routed that way, I think. When you consider that about 16,000 cars were loaded at Brazeau in 1923

you can see the possibilities in that direction. The comments which I wish to make, however, are in regard to the location of the line as it affects the farming territory to be served, and while I am not in any way attempting to set my opinion against the opinion of the engineers who laid out this line I would suggest from my knowledge of the country there that they take into consideration these facts.

The line proposed runs from Hanna to Warden. If the line proposed ran from Hanna to Big Valley, about 16 miles south of Warden, and be taken in connection with the proposed line in the next resolution, from Loverna westward, which will ultimately connect up with the Hanna-Warden or Hanna-Big Valley branch, the distance would be shortened and I believe the country served would be a more fertile country and would produce a larger amount of freight. In connection with that may I make one suggestion? I have, of course, as have all other hon. members, received a great many requests for branch lines, and I have always asked the farmers when they made such a request that they accompany it with a map showing all the farms located within a ten-mile radius on either side of the line, together with the amount of produce of various kinds available for shipment that they have produced in the last two or three years.

Mr. MARLER: The hon. member speaks of combining this line with the other line. Would it take the same distance, 107 miles, if they were combined, or would it shorten the distance?

Mr. SPEAKMAN: As far as the distance is concerned, if the two lines were combined, the distance would be shorter in every case if the terminus of the present branch were at Big Valley instead of Warden.

Mr. MARLER: And serve as good a country?

Mr. SPEAKMAN: And serve a more fertile and a more thickly settled country, as the part of the country chosen for the proposed route is more or less of a lake country, and is partly used for cattle grazing. I am speaking now of the point with which I am acquainted, that is the farming country to be served and the farm produce to be expected as freight. I am not referring to the shorter routing of coal, which, of course, is an argument on the other side, and if there is a distinct advantage to be derived by the railways in that respect and from other sources it would, of course, overweigh the service rendered to the farmer. But I am speaking from the point of view of the farmers to be served, in order that these facts may be given consideration in arriving at a conclusion. I am not prepared at the moment, the map being a very extensive one, to give definite data of the amount of produce to be expected. The data is not complete, and I have not a full map showing that. I am merely throwing out as a suggestion that this procedure might well be adopted when any lines are projected, that a township map be prepared showing the farmers resident on each quarter section within that ten-mile radius, and the amount of produce raised and shipped over the railway in the past two or three years. It would involve very little expense to the railway company or to the government. I have found in my own experience that farmers in the vicinity are only too willing to co-operate and give this information at their own expense if necessary. It would help the committee to form an intelligent conclusion as to the class of territory to be served and the amount of traffic which the road might expect to receive.

There is another point that I think is well worthy of consideration. I am not aware as to how far this projected development will alter the present terminal point. I do not know whether that point will come into consideration at all, but if it does I would like to point out this fact: Big Valley is at present the terminal point; it was constructed as the terminal point. The National Railways have there about a $300,000 development in terminal equipment. The town itself being built largely to house Canadian National Railway employees has provided facilities, educational and otherwise, for those employees. The employees themselves have property which they have purchased, their own homes, amounting to pretty close to $200,000. All of these things I think must be taken into consideration if it is proposed by this short routing to eliminate the divisional point. I have no objection to make if it is in the best interests of the railway that the terminal point should be moved, because I am not here to speak for the interests of one town as opposed to the interests of the system. But again I say, if it is proposed to move the terminal point, to abandon the one already in existence in favour of another, these facts must be taken into consideration—the amount of loss involved in salvaging the existing equipment, and the amount of compensation which must rightly be paid to the employees if they are removed from their present situation. I think all of these things should be taken cognizance of by the minister, and I hope to have his assurance that these points

have been well considered. If they have been well considered, and if it is found that it is more profitable for the railway, because of the shorter routing, to build the line as now projected, I for one have no objections to make. Warden is in my own constituency, just as is Big Valley, so it is nothing to me personally which point is chosen, but I do wish to see the greatest amount of service rendered to the country through which this line will run, and the greatest amount of benefit derived by the line running through that territory.

May I be permitted, in conclusion, to say that there are three things that must be taken into consideration in building branch lines. The first one, in which we will all agree, is that through bettering, cheapening, shortening existing routes for freight a saving would be made which will pay the interest and sinking fund upon the amount invested by that shortening, cheapening and bettering of existing routes. Second, is the immediate increase of tonnage to be expected from new construction? We are all agreed on that, of course. Then there is the possible increase in tonnage in the future, and when I speak of increased tonnage I do not mean only as applied to branch lines. I have heard many men speak of branch lines as though they should be self-supporting, as though a branch line should be able to show a profit throughout its short length; but to my mind that is not the important point at all. We have to consider every additional ton which can come over a short line and be transferred to the trunk line. We have to consider what that will mean not to the short line, but in its contribution to the trunk lines east and west. To my mind that is a very important point, and a point which some members and some people in the country overlook when they suggest that branch lines should be able to show a profit on their own operation.

Mr. MANION: Does not most of the traffic get on to the main line anyway?

Mr. SPEAKMAN: I have already stated that the justification would be the immediate increase of tonnage, or the increase of tonnage in the future by the development of the country. I am speaking of increase of tonnage which will find its way to the main line, not to a diversion of tonnage from one branch line to another.

There is another point that must be taken into consideration by this parliament, and that is where this railway differs from the Canadian Pacific or any other privately owned railway. We must take into consideration not only the indirect benefit to be derived by the railways but the direct benefit to be derived by the country by the retention of population and an increase in our national prosperity, brought about to some extent at least by more adequate transportation. A privately owned line does not need to take that into consideration, but I believe it is well for us in voting the money of the taxpayers to keep all these points in view. I believe this line will be a profitable line, for I know the country fairly well and the amount of freight that can be expected, but it is for the minister to consider, after taking all these facts into consideration, whether the treminus suggested is the best terminus under all the circumstances.

Mr. GRAHAM: My hon. friend has touched on two or three points that are of interest. The people in the vicinity of Big Valley made strong representations along the line that my hon. friend presents. I discussed it at some length with the chairman and with the engineer of construction, Mr. Czowski, and they adhered firmly to this as the best route from the railway standpoint, largely on account of the short hauling of coal. I have no information concerning the suggestion of moving the terminal. That would be a matter for the Canadian National Railway Board, and has not yet been discussed with me. If it has not been repealed, an act was passed by parliament some years ago providing for protection, in a measure, of those railway employees who might be moved from one terminal to another from loss of their property, and so forth. I imagine that law is on the statute book yet, I have had no occasion recently to look it up. However, I think the question of terminals was not discussed by the president of the board with me.

Mr. MARLER: Has the minister had the cost of this line confirmed? It seems very low to me.

Mr. GRAHAM: It is the cost given by the Canadian National Railway Board, and it is based on the report of their engineers.

Sir HENRY DRAYTON: Perhaps my hon. friend will give us a rough analysis of this proposition. It is an entirely new proposition. We should know how much is to be spent for right of way, how much for bridges, how much for fills, and how much for rails? If the matter has been at all properly gone into that information has reached the minister's hands.

Mr. GRAHAM: That detailed information has not been given to me, nor have I

attempted to give it to the House in the case of any of these bills. I have never in my life heard it given in detail in relation to any railway construction bill in this House, nor have I ever read of it being given in any other legislative body.

Sir HENRY DRAYTON: If such has not been the practice, it is time we started to get down to business.

Mr. GRAHAM: The memorandum I have here says:

> In 1924 it is proposed to grade 57 miles of this at a cost of $504,500 and in 1925 to lay track on this 57 miles of grade, and ballast 30 miles at a cost of $792,000. In 1926 it is proposed to ballast 27 miles at a cost of $148,500 thus completing the branch.

Mr. SPEAKMAN: In reply to the hon. gentleman (Mr. Marler) as to cost of construction being low, I can give information on that point. I know the territory well and the ground is very level and very solid. Construction can therefore be carried on at a comparatively low cost.

Mr. MEIGHEN: There is this feature of this line that makes it not quite so imperative as the four lines that have preceded: There is nothing at all done yet, this is an entirely new project. I am convinced from what inquiry I have made—I have not been over the territory, but I have been to within a very few miles of it and learned something about it—that the line should be built, and that it will bring sufficient revenue to justify its construction from the purely railway standpoint. However, I do not think it is as urgent as the four roads covered by the resolutions which have just passed the committee. I have also been urged very strongly with reference to the change in the route from that which I understand was originally contemplated. The reasons have been presented by the hon. member for Red Deer (Mr. Speakman), and I do not intend to rehearse them. If, however, there is to be a change involving the transfer of a terminal point or a reduction in the number of divisional points, it is going to be a matter of considerable cost to make good the losses of those who have invested their money in Big Valley, and I see no provision for that in the estimates before the House. It seems to me that it is not something that has to be rushed, and very careful review should be made again as to the wisdom of this change, also on the whole question of the extension. While I am convinced that ordinarily this line should be built and built immediately, these are extraordinary times and if there is one road in the list that could stand I think this is the one. I urge that consideration upon the minister, but certainly I am convinced the road is a good one and should be built.

Mr. GARLAND (Bow River): The last speaker, perhaps, is as conversant as we are with the fact that in this district there is a large settlement of returned men. Probably throughout that portion of my constituency there have been more returned men placed on the land than in any other single block. These men are having a tremendously hard time to make things go.

Mr. MEIGHEN: Where are they located?

Mr. GARLAND (Bow River): East of Rowley. If they cannot get reasonable railway facilities within the district within a short time it is questionable whether any one of them can stay. I have in my possession at this time answers to a large number of questionnaires and they indicate that one of the most serious causes of the present state of these men is the lack of railway transportation. I join with the last speaker in his very mild criticism of the transfer of the terminal point from Big Valley to Warden. Frankly I would urge that reconsideration be given to that decision. I do not want to place my judgment above that of the engineers in this matter, but I am under the impression that the Canadian National Railway management are guided in this matter by the desire to have a point to which they can have the shortest possible coal haul, leaving aside the possible economies that may be effected by allowing the terminal to remain where it is at Big Valley and where it is giving the best service.

Now, for a moment, allow me to consider the question of the situation of the people of Big Valley themselves. Injustice will unquestionably be done to them by the transference of the terminal point, and therefore the divisional point, from Big Valley to Warden. Last year I asked the minister some questions on this matter but he disclaimed responsibility for it. He pointed out that this was a question of railway policy he did not care to interfere with and he indicated just what the railway company was going to do. I had a discussion subsequently with some of the members of the board of management and they informed me that there was no intention at present to do anything with the divisional point at Big Valley. However, when I got back to Big Valley not much more than a month later, I found the place practically deserted, whilst a feeling of gloom had descended upon everybody there. About 148

Canadian National Railway employees own their homes and lots in the town, and the total assessment on these lands and improvements amounted to $182,100. A number of Canadian National Railway employees who came there in 1922, instead of purchasing lots and building residences lived in box cars, rented rooms, and did other things which were not in the interest of Big Valley on the strength of a rumour that the divisional point was to be removed. So serious a situation arose in consequence, that the town authorities wrote to Mr. A. E. Warren, General Manager, Canadian National Railways, Winnipeg and asked him if this rumour was true. They pointed out that it was essential to meet the liabilities of the school district, which at that time amounted to $31,700, that these men should take up residence in the town and become taxpayers. Mr. Warren replied under date of September 19, 1922, as follows:

Mr. FRED C. STOKES,
Big Valley, Alta.

Dear Sir,

Referring to your letter of August 21, addressed to the Canadian Northern Town Properties Company, Limited, Winnipeg, which was referred to me by Mr. Field, Land Commissioner, there is no intention of moving the terminal away from Big Valley, so that the rumour referred to cannot be used as a pretext for the employees not buying lots.

As a result of that letter a number of these men then purchased lands and proceeded to erect homes thereon. Not much more than two years later we find they are compelled to abandon their homes and take up jobs somewhere else. That is a serious injustice, and as an hon. gentleman said, no provision has been made to meet that unquestionable liability upon this government. I would ask the minister to take this question into consideration and to see to it that as close a scrutiny be made of this line and its terminal as is possible before the work is proceeded with. I think it is essential in the interests of the country that the work should be proceeded with and the line built. It is needed, but I think the terminal should be Big Valley and not Warden.

Sir HENRY DRAYTON: I suppose the minister's idea in regard to coal at this point was the coal from Brazeau. If I am wrong in that I would like to be put right. Surely it cannot be the Drumheller coal. It cannot be anything else but the Brazeau coal. Is that right?

Mr. GRAHAM: I am taking no exception to the statement.

Sir HENRY DRAYTON: I am asking as to the coal which is said to be one of the reasons, if not the main reason, for the building of the line. Is it the Brazeau coal?

[Mr. E. J. Garland.]

Mr. GRAHAM: I think there is no doubt about it.

Sir HENRY DRAYTON: What tonnage of that Brazeau coal moves to that point in the eastern direction?

Mr. STEWART (Argenteuil): The Brazeau collieries supply all the requirements of the Canadian National as far east as the first division.

Sir HENRY DRAYTON: I think it is a large tonnage and I want to find out what it is.

Mr. GRAHAM: I have not the figures, but I think I can get them.

Sir HENRY DRAYTON: One of the big questions in the handling of the western railway problem is that as to the distance from existing lines that new lines shall be built. I am not referring now to lines of different systems but to our own lines. I do not know that there is any real reason why the same consideration should not apply to other lines. What policy is being laid down by the directors as to the minimum distance for the construction of new lines for the purpose of giving the farmers service?

Mr. GRAHAM: In every memorandum I have read to-day in regard to stations the saving that would be made by the construction of the line in mile haulage has been given. In some cases it is twelve miles, in some cases less and in some cases considerably more. The conditions of the locality would have something to do surely with the length of haulage that would be considered a proper haulage, which would not deprive the producer of all profit that the property could make on account of the expense in hauling. I could not give my hon. friend the absolute data as to what ought to be the mileage because I do not know. In some districts where there were good roads the mileage could be longer and still be more profitable than in sections where the roads were bad, where there was a shorter haulage. I pointed out that in all the statements made to-day where grain growing and the question of haulage was being dealt with, the mileage from the producer to the railway was given, and the saving that would be effected by the building of the line under consideration.

Sir HENRY DRAYTON: I do not think the hon. minister is quite right in that statement. I do not know what is meant by the figures he gives. They just show the haul to the station—

Mr. GRAHAM: The statement shows the saving.

Sir HENRY DRAYTON: No. In one sense it does, and in another it does not. It shows the distance at the present time and the distance if the new line were built. But I was asking a different question. I was asking him what, in the opinion of the board, was the minimum distance for the construction of new lines for the purpose of giving the farmers service. We have to get down to some basic principle in this matter unless we are going to have political lines built here and there without any idea of anything except political profit. I would like to know the economic minimum distance in an agricultural district that railways can afford to be placed the one from the other. This is a matter which is absolutely at the foundation of any proper construction of prairie lines. Surely my hon. friend will have some idea on that question of policy.

Mr. GRAHAM: I will reiterate to a large extent what I have said. What would be a proper haulage with an idea of profit in one section would be altogether wrong in another section. For example, I might refer to some of the trails over which I have travelled in the West, and which were absolutely good roads. Fifty miles from there a man might have a 12 or 15 mile haul over a bad road. My judgment is based on inherent knowledge, the same as my hon. friend's judgment. Perhaps fifty miles from that same locality, where the roads are almost impassable, the haulage will have to be shortened, to be comparable with the haulage in the other districts. I do not pretend to be an expert on this, but I should say when a farmer has to haul his grain more than 10 miles to the railway he is at a disadvantage.

Sir HENRY DRAYTON: He is always at a disadvantage unless he is located very close to the line. Does the hon. minister think that Sir Henry Thornton and his board can possibly arrange their scheme of prairie branch lines on the basis of a ten mile haul that would give anything like fair play to the country as a whole? Does he know how many branch lines that would mean at the present time? We know these lines are urgently needed in places where people have to haul twenty and thirty miles.

Mr. GRAHAM: I think it would take very many years for us to complete railway accommodation that would reduce the haul to ten or twelve miles.

Sir HENRY DRAYTON: The minister spoke of ten miles a moment ago.

Mr. GRAHAM: Call it ten. My hon. friend can call it whatever he likes.

Sir HENRY DRAYTON: The minister said ten.

Mr. GRAHAM: I said ten miles and I will adhere to that. Unless construction is begun to reduce the distance of haulage the producers will never reach what is even approximately a fair haul. If we said we were not prepared to do anything because we could not give everybody a ten mile haul and left them all with a fifty mile haul, it would not be good for the country or the railways. We never can make the Canadian National Railways a success, leaving the producers out of consideration altogether, unless we are prepared to build branch lines as rapidly as we can, in order to converge the traffic to the main line of the Canadian National or to some of its lines. It cannot be all done at once. The present state of our development was not reached in a few years. It is many years ago since the Grand Trunk was built; it had its difficulties, and continued to have them. Then the Canadian Pacific Railway was constructed, but at that time there was not much discussion as to the length of haulage and the amount of traffic. Now we all know that its construction was one of the saviours of Canada. My idea is that while ideals are worth striving for, yet if we are to be pinned down to details as to what the ideal situation should be we will never make a start because such ideals never can be attained. It will take many years and a much more numerous population than we have to-day to bring about a state of affairs where the haul from the producer to the railway track will approximate the mileage that I have named. However, in many parts of the Dominion that desirable state of affairs does already exist, and I suppose that in the older part of Ontario the haul is not over ten or twelve miles. I feel that we ought to be generous, if we are to benefit by the experience of our forefathers. They worked hard in order that we might reach our present state of development. We have fairly good railway facilities in this province, and until the whole Dominion is equally well served, not only will there be few settlers—for they will not come unless we encourage them—but many of those already here will be likely to move out.

Sir HENRY DRAYTON: I have been very much interested and amused but not enlightened by my hon. friend's argument. In effect, he says that if we make ten miles the standard we will do nothing at all. I would think that looking back at our railway history —which must be extremely familiar to my hon. friend—the railway mess made in Ontario

under his government would convince him that it was worth while before undertaking further railway construction, to determine what the economic distance between line and line ought to be. It is true that we have many miles of lines in Ontario—lines that we will be paying for for many years to come—where we do not need them, and where, at the present time, the Canadian National Railway Board is taking up rails and disposing of right of way which cost this country millions of dollars. And why? Just because that simple little question, what is the economic necessity, was not first considered. But apparently a bad habit is very hard to eradicate.

Now, I have found when discussing this question with farmers throughout the West—and if my hon. friend does not know anything about it I am going to tell him my own experience—that they recognise—whether my hon. friend does or does not—that it is practically impossible to lay out railways on the basis of a maximum ten mile haul; and, further, that if it were done, in the great majority of cases you would have the whole country gridironed with railways, none of which could possibly pay. I found the farmer of the Northwest possessed quite enough sense to appreciate what would be the probable result. I have also found in most places—and when I was on the railway board I took evidence time and again as to these costs—in an endeavour to co-operate with the local people, because after all the cost ultimately falls on the farmer, I found pretty general agreement with the view that if we could arrange to build our branch railways so that the maximum haul would not exceed fifteen miles it would be all right. Many farmers have told me that mileage has to be considered having regard to each particular district, but that after all what really counted was whether you could draw your produce to the railway and get back again the same day; this they found they could always do if the haul did not exceed fifteen miles.

If my hon. friend really is sincere in wanting these branches constructed, why does he not furnish us with real business information? Why should there be any difficulty whatever if the board in dealing with it as a matter of business said: "There are just so many land sections between railways built at a given distance apart. In our view the closest distance is so-and-so, and we ought to try and give the people the best service possible, bearing in mind that limitation." Is that an unreasonable suggestion? Is it not something which in the first instance goes directly to the consideration of the whole subject? I would think so.

I would point out to my hon. friend that the next line proposed opens up the same territory. I think the committee ought to have information as to what is to be done with these two lines. There is an extension within a few townships into this section. Is the Loverna line to be carried through to the main line? If so, to what point on the main line? And if it is carried through, what justification is there for the construction of the other line?

Mr. CAHILL: Carried.

Sir HENRY DRAYTON: The hon. member for Pontiac says "carried." On what ground does he suggest that it is carried? Perhaps he would like to assist the committee. The minister himself has suggested that we call it six o'clock and that the committee rise, because he has not the information at present. Perhaps the hon. member for Pontiac has that information and is aching to unburden himself.

Mr. CAHILL: My hon. friend has himself already given all the information which any hon. gentleman might want.

At six o'clock the Speaker resumed the chair and the House took recess.

After Recess

The House resumed at eight o'clock.

PRIVATE BILLS

SECOND READINGS

Bill No. 36, respecting The Northern Life Assurance Company of Canada.—Mr. McKay.

Bill No. 37, to change the name of Imperial Underwriters Corporation of Canada to "Imperial Insurance Office."—Mr. Chew.

CANADIAN NATIONAL RAILWAYS

BILLS PROPOSED TO AUTHORIZE THE CONSTRUCTION OF BRANCH LINES

The House again in committee on the following proposed resolution, Mr. Gordon in the chair.

HANNA—WARDEN

Resolved, that it is expedient to bring in a measure to provide for the construction of a Canadian National Railway line from Hanna to Warden in the province of Alberta; estimated mileage including existing grading, 57 miles; estimated cost, $1,445,000.

Sir HENRY DRAYTON: We were trying to find out whether any general plan had been adopted as to the economical point at which further railways could be constructed, to see whether the board had considered economies at all in connection with their

proposals. If they did look at the matter from that point of view, what do they regard as duplication, what as paralleling, and what the reverse?

Mr. GRAHAM: I think when my hon. friend was chairman of the Board of Railway Commissioners he stated that as a matter of general policy there should be fifteen miles between railway lines.

Sir HENRY DRAYTON: Thirty miles—a fifteen mile haul.

Mr. GRAHAM: Well, I think my hon. friend is wrong about that, speaking offhand, but we can discuss that on any railway bill. With the lines thirty miles apart, to have a fifteen mile haul would mean that there would be a station opposite every farm, otherwise the farmer would have to haul east or west several miles in addition to his haul towards the railway line. If the lines were fifteen miles apart the average haul, I should think, would be ten or twelve miles. I am inclined to think my hon. friend did not put it at thirty miles, because that might mean more than a thirty mile haul, according to the territory.

Sir HENRY DRAYTON: My hon. friend is quite right. You can always find places where it will be a little more or a little less. It is not very hard to get stations—

Mr. GARLAND (Bow River): Try the Railway Commission and see if it is easy.

Sir HENRY DRAYTON: Of course, it costs a great deal more to look after stations and railways than it did. I am speaking of a time when conditions were perhaps somewhat different to those at present prevailing. I do not know exactly what it is like now, but I do know that the general underlying idea was—and of course stations had to be taken into account in that idea—if you have two lines only ten miles apart and no station within ten miles of either side somebody has to haul grain fifteen miles. When you talk about a maximum fifteen mile haul you are not talking about facts. Apart from refinements, and it is not necessary to do very much refining when apparently nothing is done at all, I wonder if any hon. gentleman in this chamber really thinks it is safe to go on building right and left without the slightest idea of what you are going to do with the line when it is built. Do not hon. members think that there should be some determining policy? You have to have stations here and there, but do you not think there should be some determining principle which would say that lines are not going to be built any more in Canada just for the fun of building them? We expect now that lines shall be built in such a way that they will return a revenue. The prairie country is pretty similar as a rule; the prairie country is pretty extensive, and it needs branch line accommodation more than any part of Canada that I know of. It lends itself more to railway construction than any other part of Canada I know of at the present time, but when you say all that, you have not said an awful lot. You are just recognizing the fact, and you have your limitations. You have your first limitation as to moneys available for railroads; your second limitation as to returns from railroads. I do not suppose anybody in this House wants lines built in the Northwest to-day that are not going to pay. If there are any there ought not to be. I do not suppose there is any gentleman in this House who wants one set of settlers to have lines within ten miles of each other, costing a tremendous lot of money, when other settlers, unless conditions have changed very much since I was on the Railway Commission, because I have been over the ground, are not fifteen miles but thirty or forty miles from the railway. Surely what ought to be done is to try and do justice to everybody to the full extent possible and in order to do that we have to arrive at some reasonable policy.

Mr. GRAHAM: I agree largely.

Resolution reported, read the second time and concurred in. Mr. Graham thereupon moved for leave to introduce Bill No. 44, respecting the construction of a Canadian National Railway line between Hanna and Warden, in the province of Alberta.

Motion agreed to and bill read the first time.

LOVERNA EXTENSION

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals) moved that the House go into committee to consider the following proposed resolution:

Resolved, That it is expedient to bring in a measure to provide for the construction of a Canadian National Railway line from Loverna, in a generally westerly direction, to a point in township 32 or 33, range 9, west of the 4th meridian, in the province of Alberta; estimated mileage including existing grading, 50 miles; estimated cost, $1,192,000.

Motion agreed to and the House went into committee, Mr. Gordon in the chair.

Sir HENRY DRAYTON: What is the memorandum on that?

Mr. GRAHAM: It is as follows:

Loverna Extension, Mile 0—50	Cost
Proposed in 1924—20 miles grade..	$ 146,800
Proposed in 1925—30 miles grade; 50 miles track; 30 miles ballast..	935,200
Proposed in 1926—20 miles ballast..	110,000
	$1,192,000

In 1924 it is proposed to grade 20 miles at a cost of $146,800, and in 1925 to add 30 more miles of grade and to lay track on 50 miles, and ballast 30 miles at a cost of $935,200 for that year. And, in 1926, to finish the line by ballasting 20 miles at a cost of $110,000.

The line runs through a good district susceptible of wheat raising and mixed farming, and there is already considerable settlement and development in this area.

The justification for the construction of this line is that it is estimated that 1,500,000 bushels of grain will be produced off it annually, besides 305 cars of in and outbound freight, consisting of live stock, coal, lumber and merchandise. On the average, 16 miles road haul will be saved to the farmers, and this taken at ¾ cents per bushel per mile hauled, on the 1,500,000 bushels estimated to be produced, would be a saving to them of $180,000 per year on grain haul alone.

Sir HENRY DRAYTON: How do you get at that saving on the farmers' haul of sixteen miles? I would be very interested to learn how that conclusion is arrived at.

Mr. GRAHAM: That is the statement given me by the engineers of the road. They figure it at ¾ cents per bushel. I imagine in some cases it would be much more than that.

Sir HENRY DRAYTON: Do the engineers always take the maximum distance and apply that as the average?

Mr. STEWART (Argenteuil): That would not apply in this case because this line runs directly between the Canadian Pacific railway and the Goose Lake line of the Canadian National. It is an extension of the Grand Trunk Pacific line from Biggar, which ends at Loverna on the boundary line between Alberta and Saskatchewan. This is a projection between the two lines approximately twenty miles from either.

Sir HENRY DRAYTON: Is the minister sure it is twenty miles from both?

Mr. STEWART (Argenteuil): Approximately. I know the settlement very well.

Sir HENRY DRAYTON: I would have thought it would have been a good deal nearer than that. At any rate I think the minister is right, that what they have done is to take the maximum in arriving at their average, and he defends that course because the line is put down the centre. That may be right. It may be a good reason. It may be based on good engineering but it is certainly a novel one. It is proper to ask how many more transactions of the same kind have happened? I will ask another question. We have had the amount of grain to be hauled. I want to know how much of that is new grain, and how much is grain already produced and handled on the line?

Mr. STEWART (Argenteuil): They have been growing grain in that locality for the past fifteen years.

Sir HENRY DRAYTON: I know it.

Mr. STEWART (Argenteuil): It is not a nice piece of country to haul over because it is cut up by creeks. Many farmers have left the locality notwithstanding the fact that they have raised very large crops. The estimate of three-quarters of a cent per bushel for haulage is a very low estimate.

Sir HENRY DRAYTON: The minister has not answered the question I asked.

Mr. STEWART (Argenteuil): What was the question?

Sir HENRY DRAYTON: I thought it was pretty plain. Is the quantity of grain under consideration here the quantity that is now produced or does it merely cover the amount that will be produced? That is all I asked.

Mr. STEWART (Argenteuil): Undoubtedly, when the railway goes in the amount of grain produced will be doubled. I may tell my hon. friend that the district has been settled for the past fifteen years. Furthermore, settlement went into the locality because of the stakes that were there, as it has gone into many other localities, and the people have patiently waited all these years for railway construction.

Sir HENRY DRAYTON: I have not got an answer to the question yet.

Mr. STEWART (Argenteuil): Grain is grown there. It has been grown for more than fifteen years. Is that the information my hon. friend wanted?

Sir HENRY DRAYTON: No. We have had an amount of grain stated. Is that the amount which will be produced?

Mr. STEWART (Argenteuil): One million bushels? I should say four or five million bushels. Let me say to my hon. friend that one station in a territory where grain is being grown will produce one million bushels itself.

Sir HENRY DRAYTON: Then that statement is entirely incorrect.

Mr. STEWART (Argenteuil): I think it is very conservative.

Mr. GARLAND (Bow River): May I say to the minister that I believe the estimate with regard to the number of bushels that will be produced in this territory is entirely too low. I know the remarks of the Minister of the Interior are prompted by a knowledge of the conditions out there, a knowledge which I think the ex-Minister of Finance lacks. For example in my constituency one place, the town of Gleichen, shipped this year a million bushels. The town of Vulcan shipped two million bushels, and there are many points, especially in this portion of the province from which that amount was shipped. That production could undoubtedly be doubled if conditions were created that would keep the farmers in that part of the country. The want of population is largely attributable to lack of transportation facilities. That want will continue until the lack is supplied. The resolution provides for the construction of a line running from Loverna in a generally westerly direction. Would the minister have any objection to informing the committee just where the destination of the line is to be?

Mr. STEWART (Argenteuil): The original destination of this line, as my hon. friend knows, was Calgary and the original idea was that it should be a Grand Trunk Pacific branch line. Since the amalgamation of these roads, Hanna would be the terminus of this project.

Mr. GARLAND (Bow River): That is what I was afraid of. I register as powerful a protest as I am capable of against Hanna being used as the terminus for this branch line. There is an enormous territory north of Hanna which is suffering for want of transportation, I mean the country round Dowling lake, Long lake and so on. It is well settled, the land is excellent for agricultural purposes. The settlement went in there under the promise and expectation that this line would be built, and built long before now. If this line runs down to Hanna, and you have the other side of the triangle running from Hanna to Warden, you will have an enormous triangular area south of the Canadian Pacific the centre part of which will be 25 miles or more from the railway itself. That can be entirely eliminated by continuing the line westerly and meeting the Hanna and Warden line, at a point 20 miles south of Warden, or if the engineers considered it advisable running into Big Valley. I am sorry there is no map on an adequate scale in the chamber so that I could point out the situation to members of the committee. However if they look at one carefully they will realize the practicability of the scheme as I am outlining it. I understood last year from the management of the Canadian National Railways that it was their intention to run this line from Loverna to a point about 20 miles southeast of Warden. That is all right. If it is decided to go to Warden that is the logical end of the line. But to run the line to Hanna would be perfectly absurd. It would leave the greater part of that territory still unsupplied with transportation facilities, and I protest against any such action.

Mr. MEIGHEN: As far as this line goes I think it ought to be built. I must say that I base my conclusion more on facts within my own knowledge than on any facts supplied by the minister from the directorate. Indeed I am convinced from the whole material presented by the minister from the directorate that the latter know very little about any of these lines, and I think hon. members who are supporting them are doing so more on the basis of their own knowledge than on any information supplied them in this way. It is said that 1,500,000 bushels of grain will be produced and delivered to this line. Well, it is obvious that there ought to be three or four times that amount —five times possibly and four times anyway —produced. I have not the least doubt there would be. But 1,500,000 bushels is the amount given us in this information. Then the statement goes on to say that the hauling of this grain, estimated at three-quarters of a cent per bushel, would save on the average of sixteen miles of road haul, therefore saving the farmers $180,000. You really could not have greater humbug than that. As to the haulage the average man would save, sixteen miles would be the maximum saving for anyone. A few might save a little more but it is obvious, by looking at the map, that there would be ten per cent save sixteen miles, and the other ninety per cent would save anywhere from sixteen miles down to one mile. How anyone can suggest that the average farmer would save a sixteen mile haul and state it seriously, is something I cannot understand. As represented to me, not by one but by many, because of the far greater amount of grain that will be produced than is stated here, the average saving in the hauling applied to all that grain, say of eight or nine miles, would represent the amount stated here. I

only call attention to this matter to show how utterly unreliable this data is. This has been supplied, I suppose, by some engineer, certainly not by any practical man.

Some hon. MEMBERS: Oh, oh.

Mr. MEIGHEN: Certainly not a practical man for deciding how much grain is going to be delivered to a railway, and how much is going to be saved in delivering it. If the National Railway is dependent on this kind of data to decide what to do I think parliament will have to apply its own intelligence and apply it very closely. My judgment is that this whole programme is not really based on the opinion of the National Railway directors at all. It is based on representations that have been made to the government from the district, and I venture to say mostly representations by members of parliament. They have taken it up with the directors, and after the whole thing is through the directors have come to a compromise with them, and so it goes. Consequently, we are really called upon, in respect of every single line, to bring to bear our own information and local knowledge, and without that we would be pretty much in the dark. I hope that later on some means can be taken to lay more directly before each and every member who has not the advantage of local knowledge some statement of the situation, because as we stand to-day it really is not fair to hon. members to call upon them to support this proposition. The facts are not before them.

Mr. GRAHAM: I do not want to raise any controversy at the present time over the general practice in regard to information given by the government when asking for a grant of money to build branch lines. I submit this statement, however, with unqualified confidence: that a greater amount of information has been given on each one of these lines than was given in regard to the branch lines project in 1920.

Mr. MEIGHEN: The minister was not in the House.

Mr. GRAHAM: This is one of the times when, fortunately, Hansard talks, but I do not want to raise the question now because I want to get the resolutions through and build these lines.

Mr. MEIGHEN: My point is that the information given is not dependable.

Mr. GRAHAM: Then my hon. friend would say that no information at all would be better.

[Mr. Meighen.]

Mr. MEIGHEN: Yes, rather than this information.

Mr. GRAHAM: That would be the only defence they could have for the procedure in 1920 because they gave no information whatever.

Mr. MEIGHEN: They gave all that was asked.

Mr. GRAHAM: I will show it to my hon. friend. Here is the branch line programme. It was in the estimates but not so stated. I mean that the lines were not in the general estimates, if my information is correct. There was a great deal of discussion. I was not present, but at page 4232 of Hansard of June 25th, 1920, there is considerable discussion about the branch lines. One hon. member says he is only going to discuss the Hudson Bay railway, and another hon. member wants some information as to the Humboldt-Melfort branch, and the reply of the minister, Mr. Reid, was:

> I can give a list of the lines I have here. The Humboldt-Melfort has a grade of 5.4 and a 32 track.

Then Mr. Campbell asks:

> Will that complete the line between Humboldt and Melfort entirely?

And the minister replies:

> I understand it will.

Then the hon. member for Pontiac (Mr. Cahill) asks this question:

> I think that if the minister would give us the details of the whole of these lines it would be more instructive to hon. members. The statement could appear on Hansard.

Then follows the information with a list of the lines:

Line	Work to be done 1920	
Line now under construction	Grade	Track

Then we find a statement of the different lines and the grade and track. There may be some information somewhere else. I have not been able to find it. The statement of the minister here gives the amount of grading to be done and the amount of track. As far as I can find out, it does not give the terminus or the starting point, but that will be in some particular some place else. The cost of some of these lines is not in this list at all. This list just gives the mileage and there is absolutely no information in it.

Mr. MEIGHEN: The practice was to lay on the Table detailed data which did not appear in Hansard, because it was laid on the Table, but it was available for every member. Information was never denied. It will be re-

called also that in those cases the money was voted separately in the estimates, and debates took place as well.

Mr. GRAHAM: This is when the estimates were up.

Mr. MEIGHEN: Yes.

Mr. GRAHAM: No resolution, because they were in the estimates.

Mr. CLARK: A great many of us who are in the House to-day were not here in 1920, and if the opposition of that day did not see fit to get the proper information they simply were not doing their duty by the country.

Mr. GRAHAM: Was the government doing their duty by not furnishing the information?

Mr. CLARK: I am relying on the statement of my right hon. friend (Mr. Meighen) who says the data was laid on the Table. Apparently it was not inspected by the opposition of that day. The opposition did not deem it necessary in the country's interest to make a study of the data, and consequently the Branch Lines Bills, I suppose, went through without any particular study by the then opposition. But to-day we have a different opposition, and so far as this particular member of the opposition is concerned, I propose at least to oppose these branch lines until we get data which is reliable and accurate. All any hon. member has to do is to go to the Table and look at the map and he will see that an absolute misrepresentation has been made by the engineer. I do not connect the minister with it, because he is simply reading the report of the engineer; but any engineer who cannot make measurements on a map to scale should not be in the employ of the Canadian National. As far as I can see, you cannot find any point along the line of that railway, if the railway is fifty miles long, where the distance would be fifteen miles from the railway, and yet the engineer says that the average distance that any farmer will save in haul will be sixteen miles. The thing is absolutely ridiculous, and I am astonished that an engineer should think he could put it over in that way.

Mr. JACOBS: That may mean eight miles coming and eight miles going.

Mr. CLARK: Even taking it in that way, coming and going it would be impossible.

Mr. STEWART (Argenteuil): I do not think the engineer had anything of that kind in his head, but undoubtedly he had in mind what is a fact, that the people to-day are hauling more than fifteen, sixteen and eighteen miles.

Mr. CLARK: On an average?

Mr. STEWART (Argenteuil): Yes. Across the locality where the line is projected. He is not speaking of what will happen if the line is built.

Mr. MEIGHEN: Yes, he says so. He does not say they are hauling that distance; he has no doubt they are hauling more, but he says on an average sixteen miles road haul will be saved.

Mr. STEWART (Argenteuil): Yes, of course. Why would not sixteen miles be saved if they are hauling eighteen and twenty miles now? Of course, it will be saved.

Mr. MEIGHEN: On an average?

Mr. STEWART (Argenteuil): Yes. I know the locality very well.

Mr. MEIGHEN: Is the road going to everybody's doorstep?

Mr. STEWART (Argenteuil): No, that is not the intention at all. It is not the intention to go near anybody's doorstep. It is going along the projected line that was surveyed years ago. I see no change in the map. I informed the House that a great many settlers went in there under the promise that that line would be built the next year. Now to the south of that is a creek, and a very mean crossing to go to the Goose lake line of the Canadian National, and as a matter of fact the farmers for ten or twelve years have been hauling twenty miles to the Canadian Pacific railway to the north.

Mr. MEIGHEN: More than that.

Mr. STEWART (Argenteuil): I want to be well within the mark.

Mr. MEIGHEN: What would be the average haul if the road were built?

Mr. STEWART (Argenteuil): Probably not more than eight miles.

Mr. MEIGHEN: So that the average haul before that must have been twenty-four miles.

Mr. STEWART (Argenteuil): Yes, in some cases.

Mr. MEIGHEN: But was the average twenty-four miles before?

Mr. STEWART (Argenteuil): No.

Mr. MEIGHEN: I should say not. How could the difference be sixteen on an average?

Mr. STEWART (Argenteuil): My hon. friend is very picayune about averages.

Mr. MEIGHEN: No.

Mr. STEWART (Argenteuil): I assert that what the engineer stated is an absolute fact.

Mr. MEIGHEN: It cannot be.

Mr. STEWART (Argenteuil): Of course it is. My hon. friend talks about averages—I say that for fifteen years men have been hauling their grain anywhere from fifteen to twenty miles to the Canadian Pacific line.

Mr. BRISTOL: When was the road first promised, and by what government?

Mr. STEWART (Argenteuil): When the road was projected from Biggar to Loverna.

Mr. BRISTOL: By our old friend Sir Wilfrid Laurier?

Mr. STEWART (Argenteuil): There were a lot of promises made but not by Sir Wilfrid Laurier. He was followed by Sir Robert Borden, who made many promises from the tail-end of a railway train.

Mr. BRISTOL: That is a very unnecessary statement. I simply asked by whom the road was promised.

Mr. STEWART (Argenteuil): My hon. friend invited the answer; he has got it.

Mr. BRISTOL: No, I asked by whom was this road promised.

Mr. STEWART (Argenteuil): It has been promised for fifteen years.

Mr. CLARK: Mr. Chairman, may I finish my remarks?

Mr. McCONICA: Mr. Chairman, I am quite familiar—

Mr. CLARK: I rise to a point of order, Mr. Chairman.

The CHAIRMAN: Order.

Mr. CLARK: I was speaking when the Minister of the Interior interrupted me with a question, and I have not had a chance since to conclude my remarks.

The CHAIRMAN: The hon. member gave way to the Minister of the Interior.

Mr. CLARK: To allow him to make a remark.

The CHAIRMAN: That is not a point of order. The hon. member for Battleford (Mr. McConica) has the floor.

Mr. McCONICA: Mr. Chairman, I am quite familiar with the country through which this railroad would be constructed. There seems to be some controversy as to how far men are hauling their wheat there to-day.

A glance at the map will show that we do not have stations at every crossroads in that country. After a man strikes the railroad he has to go down five miles to the nearest station to unload his wheat. His haul is from his home to the nearest elevator, and as the elevators are ten miles apart his haul cannot be estimated by figuring it from a certain point to the nearest railroad. I know that people went into that country fifteen years ago expecting this railroad to be built. It is an excellent farming country, and not only will this road be called upon to haul out wheat but to bring in coal from the Drumheller district to supply the country from Loverna to Biggar. That coal now comes by a roundabout route. This line will put us eventually in direct connection with the coal fields, and the freight will be an exceedingly important source of income. Certainly, the road should be built. It seems to me that it is good sensible economy to build it now, because otherwise the people cannot stay there much longer. Many have already gone out, but they will come back if railway facilities are provided. The country is capable of producing far more wheat than is shown by the estimate, and will furnish an abundance of traffic. I think the road should be built, and built now.

Mr. MEIGHEN: I want to try to make clear to the minister—I really think it is clear to everybody else—what I was arguing before. He allowed his anger to get the better of him, and his arithmetic retrogressed as his anger increased. First of all, I would explain that I am not opposing the road.

Mr. GAUVREAU: That is better.

Mr. MEIGHEN: What does the hon. member say?

Mr. GAUVREAU: That is better. It is not what we understood when he started.

Mr. MEIGHEN: I am sorry. I know the hon. member understands English very well, and I have said that three times before.

Mr. GAUVREAU: The hon. gentleman has such a peculiar way of surrounding everything he says that we do not know on what foot he stands.

Mr. MEIGHEN: I do not catch my hon. friend's remark, but he evidently would like to escape this question of addition. What the engineer says, and bases his whole calculation on, is that the average road haul will, after this road is built, be sixteen miles less than it was before. Now, I stated that patently that was nonsense. The minister does not seem to see that the saving in the

average road haul must be the difference between the average road haul before and what it will be after the railway is built. He put the latter road haul at eight miles. I do not think he is very far out, but if anything, he is low. So the average road haul before must have been twenty-four miles. But admittedly twenty-four miles is the maximum. Therefore, his figures are simply foolish; that is all. I do not say that the estimates will not be borne out, but that is merely because he made as big an error one way in being too low as he made the other way in being too high. The other error is that the estimate of the grain to be grown is far too low. I venture to say there is more grain grown now. I hope I have made clear to the minister that whoever this engineer is he has disclosed such errors that we cannot depend on his calculations at all. He may have meant something different from what he said; but if he did mean what he said, he did not know what he was talking about.

Mr. STEWART (Argenteuil): I am not going to quarrel with my hon. friend about averages.

Mr. GARLAND (Bow River): Mr. Chairman, continuing the protest I made to the minister—to which he has paid no attention whatever—may I read to him from the memorandum of an association that was organized in the winter of 1921 throughout all the municipalities east of Big Valley, a territory which is entirely ignored, according to the Minister of the Interior, in the completion of this line? The association so organized became active in 1922 for the following purposes:

To draw the attention of the government to the fact:

1. That the settlers within this area have waited over twelve years since the first survey was made.

2. That the area described is well and extremely productive as shown by the last census returns.

3. That this extension would assist in the development of two coal fields of exceptional promise.

The association advised the farmers to assist the government in building the road, and I simply wish to quote their figures to indicate to the House their deadly earnestness. They made the suggestion, and bound themselves by agreement, to offer to the Grand Trunk Railway Company, if the company would only permit them to build the road, a bonus on a sliding scale as follows:

Each man who lived from one to two miles distant from the railroad would pay $60 per quarter section; from two to three miles distant, $50 per quarter section; from three to four miles distant, $40 per quarter section; from four to five miles distant, $30 per quarter section; from five to six miles distant, $20 per quarter section, and from six to seven miles distant, $10 per quarter section.

This shows how far these men were willing to go in helping to build the line and how anxious they were to see it undertaken. That offer was rejected; why, I do not understand. But may I say to hon. members that the financial ability of those men to-day to renew that promise is gone, but the spirit which then animated them is still there. But they will not and cannot stay in that territory if the line to Big Valley is not put through. Therefore, I should like an assurance from the minister that he will take up the matter earnestly with the management and have the line completed.

Mr. GRAHAM: I apologise to the hon. member for neglecting him, but only one speaker can have the floor at a time, and I have not had a chance, this question of averages having got away beyond me. I am glad to get back to the railway. I understand that the point at which the line suggested is to join the other line has not yet been determined, which allows full opportunity for representations to be made to the board. Formerly, these were competing lines. To-day, the management is trying to co-ordinate and use all the lines to the fullest advantage and so secure as direct a route as possible. I will certainly bring to the attention of the board what my hon. friend has said, and I think I may safely tell him that up to date it has not been decided at what point on that line the connection will be made.

Mr. GARLAND (Bow River): I was simply going on the suggestion of the Minister of Interior (Mr. Stewart, Argenteuil) that he thought that Hanna was to be the terminal point.

Mr. STEWART (Argenteuil): That assertion is based on the fact that the line is following identically the old survey. I know the situation as outlined by my hon. friend and undoubtedly the settlement of Dowling Lake is important.

Mr. GARLAND (Bow River): The Minister of the Interior knows enough about the situation to be able to endorse everything that I have said. I see he nods his head, and I am glad to have his approval. It is quite true that the original survey did run to Hanna but since that time there have been three other surveys, one north of Drumheller between Rowley and Morrin, another running into Big Valley, and now, as I understand, a fourth running into Warden. It is clear therefore that there are contemplated a number of surveys, and I sincerely trust that Hanna will not be the one that will be followed.

Mr. GARDINER: I can support all that has been said by my hon. friend (Mr. Garland, Bow River). I think the Minister of the Interior will remember that when he was Premier of the province of Alberta I headed a deputation requesting his government to allow the people to tax themselves for the purpose of assisting this particular branch line when it was under the jurisdiction of the Grand Trunk Railway. The area to be served is very well populated and has been considerably developed. I took a trip through the district last fall and I am sorry to say that I discovered that many of the settlers had left because they had no railway communication at hand. In discussing this matter with the people in that particular district I was informed by many of them that during the fall they had to make trips to the Canadian Pacific Railway on the north at a cost of from $8 to $16 a trip to carry a load of grain.

Mr. GRAHAM: How many bushels?

Mr. GARDINER: About 120. You can understand that under these circumstances it is impossible for these people to remain in that locality very much longer unless they get this branch line, and get it at the earliest opportunity. These people have been very patient and have made many pilgrimages to Winnipeg to induce the officials to build this branch line; and knowing the district as I do I am satisfied that this particular piece of railway will be a very profitable one. There is available annually a quantity from four to six million bushels of wheat throughout this territory, and naturally there would also be other freight in addition to grain. As regards the terminus of this particular branch, I suggest very respectfully to the minister that in discussing the matter with the board he decide not to run into Hanna. In my opinion the line should be kept further north in order to afford the people in that part of the country the accommodation which they so badly require.

Mr. CLARK: When does the minister expect to have the detailed information regarding this line and others as well?

Mr. GRAHAM: I think I can safely say that the information which I have been giving to the House in connection with these resolutions is somewhat more detailed than I can recollect having been given to parliament before. Of course, I need not say that I want to give to hon. members all the information that is available; there is nothing to hide but rather everything to gain in so doing. I might suggest that the information I am giving is rather modest in that the grain that will be available in these districts, it is suggested, is about three times as much as the railways have estimated.

Mr. CLARK: I think it has been clearly indicated that the information which the minister has given us is so inaccurate as not to be accepted.

Mr. GRAHAM: Not at all; on what point is it inaccurate?

Mr. CLARK: On the question of average distances.

Mr. GRAHAM: Let me answer that point.

Mr. CLARK: If I may resume afterwards.

Mr. GRAHAM: Certainly. Some hon. members who have not listened carefully to the statements that I have made have jumped at the conclusion that the engineers reported that the saving in the distance would be so many miles. That is not what the engineers have said, nor is it what I have read. If one is figuring a rate, say, on coal from Alberta some provision must be made for getting the empty cars back. So that the rates are based not altogether on what it takes to move a certain quantity from one point to another; if that were all, then the provisions for traffic would run out in a short time. The vehicles have to be brought back to the point of shipment and therefore allowance must be made therefor. Some hon. gentlemen laughed when one hon. member said that the men with the teams had to drive back eight miles; and what I am pointing out to the committee is that if there were nothing for the farmer to take back the cost of the haulage of his grain must include the trip going as well as coming.

Sir HENRY DRAYTON: In some of the other cases it certainly was not figured on any such basis. Will the minister tell the committee that in some of the other cases we have dealt with the engineers were taking into account the haul both going and coming? I am not referring to cost; my hon. friend's reference to that question is entirely beside the mark and he knows it. What I am referring to is the length of the road haul upon which the engineer is basing his calculations; and I want the minister to state on his responsibility what is meant in the reports when the road haul is mentioned. Is it to the station and back, or simply to the station?

Mr. GRAHAM: I cannot say what was in the engineer's mind.

Sir HENRY DRAYTON: I know you cannot.

Mr. GRAHAM: If I were figuring the cost of hauling I would figure both ways, including the empty conveyance going as well as the full load. And any sane man would do the same.

Mr. CLARK: Does the estimate of three quarters of a cent per bushel per mile apply to the 8 miles or the 16 miles? In other words, is it going or coming, or both?

Mr. GRAHAM: I have stated the case as clearly as I can. The ex-Minister of Finance (Sir Henry Drayton) said that it had nothing to do with the question of cost, while my hon. friend (Mr. Clark) says that it has.

9. p.m.

Mr. CLARK: I am not saying anything.

Mr. GRAHAM: I stated a moment ago exactly what the case was, no matter what the engineers may have had in mind; and that is, that the cost of haulage would include going as well as coming.

Sir HENRY DRAYTON: We might as well try to be fair with each other in this matter. There is a question of cost which is based on length of haul. There is cost coming and going, there is no dispute about that, and when you come to count your cost coming and going you would have a right to some allowance at both ends, unless, as the Minister of Interior, I think, said, you are getting something back in a return haul. But that has to do only with distance. It may be that the hon. gentleman is quite right if he wants to double costs for the haul. But I want to see whether as a matter of fact we can rely upon anything in connection with these estimates. When it is said that the haul to the railway is a given number of miles, does that mean distance or does it mean return journey? Which way are we to read these reports? Surely my hon. friend understands that. Surely that is something we ought to know. The ordinary acceptance of the term is that distance is distance and does not cover return mileage. Unless we know how to read these reports we cannot give any intelligent consideration to the matter. Are we to have a different reading for every single report, according to the exigencies of the case?

Mr. CLARK: I want to read the statement the minister made with regard to the road haul. Whether there has been an attempt to do it or not, I think the members are confused as to just what the saving will be. I have examined the map which is on the table and so far as I can judge the maximum haul would be about seventeen miles, and the average would be very much less—not more, I should think, than six or seven miles. Now, this is what the statement says that the minister read to the committee:

> On the average, sixteen miles road haul will be saved to the farmers,—

That might be taken the way the minister interprets it, if it stopped there; it might be both ways, eight miles going and eight miles coming. But taken with what follows I say his interpretation is an impossible one. What follows is this:

> —and this taken at ¾c per bushel per mile hauled—

So that it reads as follows:

> On the average, sixteen miles road haul will be saved to the farmers, and this taken at ¾c per bushel per mile hauled—

That means the number of miles you haul the number of bushels you have on your wagon; it cannot mean anything else. Any other interpretation, I contend, is simply ridiculous.

Mr. KELLNER: Do you think you do not have to haul the wagon back?

Mr. CLARK: Absolutely, but you do not haul the grain both ways, and that is what this statement says. The reference is to the bushels that are being hauled, not to the return of the empty wagon. It is as clear as the English language can make it. If the committee is to be properly informed about these branch lines we must have before us those who know something about the matter. I would like to know whether the minister has seen the profiles or the plans for these railways.

Mr. GRAHAM: Why should he see them? I do not build railways. I am not a railway builder.

Mr. CLARK: There you are. I would like to see the plans and profiles. I would like to see what the grades are like, for instance. If I could see the profiles and had a report on the surrounding country I would have some idea, ignorant though I am on railway building, whether it was feasible to put a railway into this country. It is true that it is easy to build railways in the prairie country, but we have other country besides prairie country. I know of areas on the prairie into which I think even hon. gentlemen on my left would not be enthusiastic about building a railway. We have all seen country on the prairies where none of us would want to put a railway if it were not for the fact that we have to go through it.

Mr. KELLNER: Will the hon. member explain what is meant in railroading by "ton car mile"?

Mr. CLARK: I cannot hear my hon. friend, but from what I make of his question I do not think it has anything to do with what I am discussing. If my hon. friend wants a discussion on that perhaps he can get some of his fellow members to go outside and talk about it. I am trying to stick to the question now before the committee, which has reference to these particular branch lines. As I say, I think the only feasible and sensible thing to do is to bring down the plans and profiles and have these engineers appear before a committee—these engineers who so obviously, to my mind, make incorrect statements, as shown by the map the minister has placed on the Table. If we could get into committee with the plans and profiles before us, with decent maps, with witnesses who know the country and who can tell us whether these things are necessary, it might be plain sailing, and perhaps we could support all these proposals. As it stands now I cannot see how I can support any of them unless I happen to know personally the country that the particular line goes through, and I think if members are honest with themselves they must come to the same conclusion. I do not see how they can support a proposal to expend millions of dollars for a line of railway they know nothing about.

Mr. STEWART (Argenteuil): It is rather amusing to hear the hon. gentleman talking the way he does, after our sitting with our hands folded the other evening and listening to the statements made from that side about the wonderful country through which the proposed railway lines were to run in British Columbia. We took the word of hon. gentlemen opposite—

Mr. CLARK: Mr. Chairman, may I—

Some hon. MEMBERS: Order.

Mr. STEWART (Argenteuil): I intend to keep the floor.

Mr. CLARK: If my hon. friend will permit me—

Some hon. MEMBERS: Order.

Mr. STEWART (Argenteuil): We took the word of hon. gentlemen opposite on that occasion—

Mr. CLARK: I would like to say—

Mr. STEWART (Argenteuil): And for the benefit of my hon. friend I will say that I am prepared to take his word again about his own country.

Mr. CLARK: I did not speak on that occasion, if you will remember.

Mr. STEWART (Argenteuil): I noticed that you did not speak; that was very evident. There was not very much information asked for, so far as I observed. I have known this locality for about twenty years; I had the honour of representing it for four or five years. The residents in this locality went to the local government and pleaded that they be permitted to build the line themselves in order to prevent the people from leaving that country. Surely if my hon. friend is looking for evidence he has it at first hand from responsible representatives of the locality which the railroad passes through.

Mr. CLARK: They generally tell us what is politically expedient.

Mr. STEWART (Argenteuil): That may fit in the other direction just as aptly as it fits here. We have been in the habit of accepting the word of hon. gentlemen in this House in respect to matters affecting their own localities, and I think we may continue to do so. My hon. friend is seeking to make a mountain out of a mole-hill. He has had the assurance that this is a good locality from half a dozen members who know it intimately. There are areas in every part of the country where the land is inferior in quality, but this land is not of that type. It has been settled during all that period and I know of my own knowledge of at least six who left that territory and abandoned a section five years ago because they were unable to make a livelihood on account of the long haul which they had to make of their produce to market. To quibble over whether there is an average haul of so many miles or whether this line is warranted—well, I think we have long passed that stage with reference to this particular line.

Mr. CLARK: I am astonished at the statement made by the Minister of the Interior. I did not say that the country through which this line runs was not a good country. It may be the best in the world. What I am objecting to, and what I still maintain just as strongly as I maintained it before, is that the information put before this House not only with respect to this particular line but with respect to them all is inaccurate, and

incomplete. As for the insinuation that I have cast a reflection or a doubt upon the word of any member of this House, that is beneath the hon. minister. He does not believe it, and I am surprised to hear him make such a statement. I cast no doubt on the word of any hon. member.

Mr. STEWART (Argenteuil): I made no such insinuation. If my hon. friend will allow me—

Mr. CLARK: I permitted the minister to interrupt me once before, but he did not reciprocate when I wanted to interrupt him.

Sir HENRY DRAYTON: Ruled out of order.

The CHAIRMAN: No one was ruled out of order. There was no point of order raised.

Mr. CLARK: I think I have stated what I wished to say to the minister and to this House. I cast no reflection on the word of any hon. member. The hon. member for Battleford (Mr. McConica) to my mind gave me more information than both the ministers opposite, despite the fact that these gentlemen are supposed to come to this House armed with all the facts and are supposed to give to hon. members representing the constituencies through which these lines will run, as well as to the rest of the committee, all the information that is required. But we find the ministers know nothing about it; they give us information which is wrong, as is shown by the map, and they have to be corrected by members over here; then they ask us to accept the explanation given by the members for the constituencies concerned. I say that is most unsatisfactory. The only way we can get down to business and get the facts is by bringing the engineers, and if necessary the president of the road, and his directors if they know anything about it, which I doubt very much, before the committee so that we can find out whether the information the minister is giving us is correct or whether the information given by the members representing the constituencies through which these lines run is correct.

Mr. GARLAND (Bow River): Possibly I can assist my hon. friend (Mr. Clark) with regard to this rate per bushel business. The custom in that country when a man is hired to haul grain is not to ask him how much he will haul it for per mile, but to ask him how much he wants to haul the grain say seven miles, and the man who is undertaking to haul the grain always takes into consideration the two-way haul, not simply the one-way haul. I am afraid my hon. friend has not lived in that part of the country long enough to understand either the conditions there or the practice in connection with contracts for grain hauling.

Sir HENRY DRAYTON: I think perhaps we have asked for all the information that is worth while asking for. We have certainly not got the information we have asked for. I suppose in closing it is due the House that we should thank the hon. Minister of the Interior for his quiet, kindly and temperate remarks, and for that great grip of the business side of railroads that he has displayed. I am quite sure that everybody who is at all interested in the question of returns from the National roads will feel a tremendous relief when he learns that simply because the hon. member for Burrard is charged with making a speech in one part of the country which he did not make, this line is a perfectly good line to build.

Resolution reported, read the second time and concurred in. Mr. Graham thereupon moved for leave to introduce Bill No. 45, respecting the construction of a Canadian National Railway line from Loverna westerly in the province of Alberta.

Motion agreed to and bill read the first time.

LLOYDMINSTER EXTENSION

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals) moved that the House go into committee to consider the following proposed resolution:

Resolved, that it is expedient to bring in a measure to provide for the construction of a Canadian National Railway line from Lloydminster in the province of Saskatchewan, in a generally northwesterly direction, to a point in or near Township 53 or 54, Range 6, west of 4th Meridian, in the province of Alberta; estimated mileage including existing grading, 45 miles; estimated cost, $1,170,000.

Motion agreed to and the House went into committee, Mr. Gordon in the chair.

Mr. GRAHAM: If my memory serves me this is the line in respect to which certain suggestions have been made by the Canadian Pacific Railway Company's solicitor for an agreement with respect to joint operation or running rights. I may say that the matter was discussed with myself by a solictor, a representative of the Canadian Pacific Railway Company. I think it is now being discussed between the two lines. I think if an agreement were reached there would be no difficulty in amending this proposed legislation

when it comes before the House in bill form. I want to make it clear that by passing this resolution I am not at all trying to slam the door in the face of any negotiations that may take place.

Mr. MACLEAN (York): Have there been other instances of similar negotiations and joint agreements between competitive companies?

Mr. GRAHAM: Yes. In one case I think the Canadian Pacific had a bill and a clause was inserted—as the result of an agreement or action by the committee or by the House—providing for joint operation, if I remember correctly, between the two companies.

Mr. HANSON: That was with respect to this particular line was it not?

Mr. GRAHAM: I think so. Now here is what is proposed:

Lloydminster Mile 0-45—	Cost
Proposed in 1924—20 miles grade..	$262,500
Proposed in 1925—25 miles grade; 20 miles track..	385,000
Proposed in 1926—25 miles track; 45 miles ballast..	522,500
	$1,170,000

It is proposed in 1924 to grade 20 miles at a cost estimated to be $262,500. In 1925, to add 25 more miles of grade and lay 20 miles of track, at an estimated cost of $385,000, and in 1926, finish the line to Mile 45.0 by laying the remaining 25 miles of track and 45 miles of ballasting, at a cost of $522,500.

The aim will be to eventually reach Bruederheim. The distance between Lloydminster and Bruederheim is about 140 miles. The line runs through a good agricultural country suitable for mixed farming and grain growing, and there is considerable settlement throughout.

The justification for this line is that with the very considerable development now being made in this country, the haul to railway markets is quite excessive. It is estimated that the portion of the line contemplated, when completed, will produce 1,350,000 bushels of grain annually, and that the saving to the farmers in road haul would average 20 miles. This, figured at ¾c per bushel per mile, would save the farmers $202,500 per year on grain haul alone. Besides grain it is estimated that 460 cars of in and outbound freight would be hauled, consisting of live stock, coal, lumber and merchandise. As all the freight from this line would be of a long haul character, it would contribute largely to the business of other lines of the system.

Sir HENRY DRAYTON: The minister can certainly give us now the estimated profits as the result of the building of this line. He has stated the amount of grain to be carried, but what will the rate on that grain be?

Mr. GRAHAM: The difficulty is that the Board of Railway Commissioners do not control the railway rates wholly. However the rate will be one which is approved by the railway board.

[Mr. Graham.]

Sir HENRY DRAYTON: The minister can not be quite serious. He must know that the railway rates have been taken out of the control of the Board of Railway Commissioners for the whole of that territory, and that there are statutory rates. Surely he can tell us what these statutory rates are. He knows the Board of Railway Commissioners had nothing to do with the matter, it has been taken out of their control by the government.

Mr. GRAHAM: I am not going to enter into any argument on the matter. This government did not take anything from the Board of Railway Commissioners.

Mr. SPENCER: I wish to support what the minister has said as to the country through which the suggested line will pass. It is an exceedingly good farming country but very badly in need of railway transportation. It is one of those districts where you can go for ninety miles north of Lloydminster and find settlement without any railway facilities. This is a railway that will help that country considerably. The people located there have been very patient for many years, waiting for transportation to be provided. I sincerely hope that not only will they get this line, but railway facilities south of the present Canadian National railway as well. There is quite a large area of country, on each side of the present line running from Lloydminster westward, and it is most essential that these districts be given transportation facilities; otherwise we are faced with the prospect of losing quite a percentage of the settlers, and when we lose the old settlers it is useless to put new men in their places. I simply wanted to make the statement that I know the country very well, and I hope there will be no delay at all in connection with the building of this railway.

Sir HENRY DRAYTON: Now, perhaps, I can get an answer to my question as to what the estimated revenue from this line is. We have got the estimated volume of freight but what is the estimated revenue? Cannot my hon. friend give me that?

Mr. GRAHAM: If I could hunt up the rate, and had the assurance that it would never be changed, I could give an estimate. But my hon. friend's long experience ought to teach him how difficult it is to estimate what the freight will be in the respective areas affected, including the local rate, the long haul, and everything else. My hon. friend could not state that himself and he has been chairman of the Board of Railway Commissioners. The general statement is more than has ever been made to the House

under like circumstances. We have to consider not only the local traffic carried, but the traffic to be handed to the main line to swell the return on the long haul, and that is where the profit is made in transportation.

Sir HENRY DRAYTON: The profit to be made, as my hon. friend knows, is a matter of estimating. Let us forget all about politics and take this as an ordinary matter of business.

An hon. MEMBER: Who is introducing politics?

Sir HENRY DRAYTON: If my hon. friend is interested in delaying the business of the House he can be accommodated, I have no doubt, without very much difficulty. I have suggested that we should forget politics. If that is objectionable all right. I very well recall the remark that came from hon. gentlemen opposite when, on another resolution, we were discussing the possibilities of the Okanagan district. I very well recollect the sneering remark from hon. gentlemen opposite that that was a good Conservative constituency. I did not hear any sneers when we were consenting to the building of lines on the prairies last year, nor did I hear any sneers when we were consenting to building the Huberdeau branch line out of Montreal. Suppose we get down to business and treat this proposition as a business matter. We are invited to spend a given number of millions. Is it unreasonable to have from your executive which recommends you to spend a great number of millions of dollars an estimate of what they think that expenditure will return?

Mr. CAHILL: Could the hon. gentleman give an instance in his whole experience of any railroad company, private or public, the Canadian Pacific Railway or any other giving a similar estimate?

Sir HENRY DRAYTON: I am quite confident that not a single line of Canadian Pacific track has ever been built without that information.

Mr. CAHILL: If my hon. friend can show that information, I will tell him that the Minister of Railways will give him all the information there is in the department. I will make that undertaking on behalf of the hon. minister. The hon. member knows that the Canadian Pacific Railway never did anything of the kind.

Sir HENRY DRAYTON: The hon. gentleman is a splendid speaker, but there is only room for one at a time. I am going to tell my hon. friend that if in the past we had exercised a little more care, and had had more information brought down, this country would not be in the position it is in to-day in regard to the railway systems. The simple fact that we have been crazy in the past is no reason why we should be insane in the future.

Mr. MARTELL: From 1911 to 1921.

Sir HENRY DRAYTON: The county of Hants is heard from, and I do not know but what the member from the county of Hants wants to speak.

Mr. MARTELL: No, you can go on.

Sir HENRY DRAYTON: I appreciate that my hon. friend has not got this information. I do not want to hold him up, but I think he should produce that information for consideration by the House at a future period.

Mr. STEVENS: I want to ask the minister for some information to which the committee is entitled, and which I am sure he will give, if it is in his possession. I remember when this line was built five years ago, and I have the statute under my hand. There was considerable discussion between the two railway companies. At that time there was an application by the Canadian Northern before the Railway committee, and it was contested by the Canadian Pacific Railway; both companies were represented before the Railway committee, and there was a battle royal which I recall very well. In the statute of 1919, Chapter 79, 9-10 George V, the Canadian Pacific Railway Act, 1919, authority is given to the Canadian Pacific to build over this territory. The result of the discussion before the Railway committee was the insertion of the proviso in subsection (g) of section 2, which reads:

Provided that for the purpose of avoiding duplication—

I want to direct the minister's attention to the wording of this statute:

Provided that for the purpose of avoiding duplication of construction of that portion of the line west of Lloydminster, the approval of the route map may be made subject to joint construction or operation with the Canadian Northern Railway Company, on terms to be agreed upon by the companies or settled by the Board of Railway Commissioners for Canada.

I think the minister made a slight reference to that in his opening remarks, if I caught him correctly. Will the minister be good enough to explain to the committee how much of this Canadian Pacific line has been constructed as authorized by this statute, between Edmonton and Lloydmin-

ster? I agree with the hon. member for Battleford (Mr. McConica) that the territory through which this line is projected is certainly good producing territory; and furthermore I would judge, both from a study of the map before me and also from my recollection of the discussion in the Railway committee room five years ago, that it is a very desirable thing that that territory should be served, but I want to point out that it is wholly undesirable that there shall be a duplication of roads through that district.

Now a moment's reflection will bring to the attention of the House that there is a paralleling of lines from Saskatoon west. There is perhaps a couple of hundred miles at least where two and sometimes three lines are running almost within sight of one another—a most deplorable situation. There is no reason in the world why, under the present conditions of stringency and desire for economy, the Canadian National Railways should enter into an undertaking which may result in serious duplication, or should undertake the construction of a road through a territory which is being served partially, and perhaps as time proceeds, more rapidly by the other system than the government can serve it by the system which they propose to put in. I know the usual answer to an argument of this kind is that the member is looking after the interests of the Canadian Pacific Railway. That is not the case.

An hon. MEMBER: Hear, hear.

Mr. STEVENS: My hon. friend says "hear, hear." He may take what pleasure he likes out of it; but we are brought down to this point, that hon. members might take seriously the fact that the time has passed when we in Canada can go on duplicating the Canadian Pacific Railway or any other railway; and it is not going to deter me one iota in making these assertions or pointing out the facts, if some hon. member says "hear, hear," to the suggestion that an hon. member is speaking for the Canadian Pacific Railway when he is uttering these sentiments. Certainly it is in the interests of the Canadian Pacific Railway, if you like, that the other railway shall not be allowed to duplicate it, but it is infinitely more in the interests of the country, that we shall not duplicate these lines any longer. Furthermore, any proposition that has in contemplation the construction of a line through a territory occupied by another railway is improvident and unwise at this time. I desire to say to the minister in connection practically with all the lines at this time—it has been in my mind to say it during all these discussions—that the minister comes before parliament with twenty-six railway bills. We are told that the railways are divorced from politics, and that the desire of the minister and the government is that the National Railways shall be kept as distinct and apart from political interference as possible. Let us give the minister full credit for that statement, and for the best intentions in that regard. Then why cannot this corporate body, the National Railway Company—for it is a corporate body—come before parliament and the committee, just the same as any corporate body does? Is there any objection to that?

Mr. GRAHAM: The hon. member might permit me to answer that question now because I might forget it. The other companies to which he refers supply their own money. Parliament has to supply the money in this case; consequently at this stage parliament has to be approached directly. As a matter of fact we have yet to go through the bill stage with every one of these lines.

Sir HENRY DRAYTON: The minister will then send it to committee.

Mr. GRAHAM: I have not said it but I do say it will be impossible to send the resolutions to committee. I say it is impossible; but, of course, parliament can do anything. Practically, it would be absolutely impossible to send parliamentary resolutions to the committee. Of course when bills are introduced it is a different thing; we can send them to committee. The suggestion is worthy of consideration. However under our parliamentary practice we could not send the resolutions to committee, and we require to have resolutions to provide for money before the provision can be embodied in a bill.

Mr. STEVENS: The hon. minister has not made a very satisfactory case. He argues in one breath that this National Railway must come to parliament for its money, and, therefore, it should come before parliament for its bill. In the next breath he tells us it is quite possible he will send these bills direct to the Railway committee.

Mr. GRAHAM: I did not quite say that.

Mr. STEVENS: Not quite but very near. Will the minister give us his assurance that they will be sent to committee?

Mr. CAHILL: What would they be sent to committee for?

Mr. STEVENS: Will the hon. member for Pontiac (Mr. Cahill) excuse me? I know the hon. member was very near being Minister of Railways, but not quite.

Mr. CAHILL: What would they be sent there for? Will you answer that?

Mr. STEVENS: Will the minister state that he will send them to the Railway committee—

Mr. GRAHAM: My hon. friend is insatiable.

Mr. STEVENS: He may find me a little less satiable than I have been if his answers are not satisfactory.

Mr. GRAHAM: We will not get excited. I said the time to consider this would be when we got into the bill stage. I think my hon. friend is crowding me hard in asking me to pledge parliament and the Canadian National Railway Board that these bills will be sent to the Railway committee. It is a matter for consideration.

Mr. STEVENS: I cannot see any difficulty. If it is a matter of policy to put these bills through this committee and not through the Railway committee, surely it is not difficult for the minister to say so. It is a question whether the minister would allow it, not a question to be conned over by the House. I am very glad the minister answered as he did, for it lays bare the danger of the whole business. The minister says that parliament is the only place to which this railway can come for money. But we are training the directorate to think that they can dip into the treasury whenever they like. Taking at 100 per cent what the minister and the government have been protesting for the past two and a half years, that they want to divorce the National Railway system from politics, I say to them, let the Canadian National Railway Board be treated just the same as the Canadian Pacific Railway Board are treated—let them come before the Railway committee with their bills, and before the Board of Railway Commissioners with their plans and profiles and make their applications. Then there may be some opportunity of checking these things properly. We can judge the policy of the government by the utterances of the ministers. What did the Minister of the Interior (Mr. Stewart) say a moment ago? Let me bring it to his attention. When we were discussing the other bill, the minister upbraided my colleague from Burrard (Mr. Clark) because he refused to take the word of certain hon. members. "Oh," he said, "should not we take—"

Mr. GARLAND (Bow River): Oh, oh.

Mr. STEVENS: My hon. friend from Bow River finds a lot of amusement very easily. The minister said, "Oh, should we not take the word of hon. gentlemen opposite about this? We had the evidence"—this is his expression—"of three or four hon. gentlemen regarding this territory." Now I ask the government, is that the attitude they are going to take? I am expressing nothing derogatory of my hon. friends to the left if I say that it is surely not going to be the policy of this House to accept as evidence of need of railway facilities merely the request of the member of parliament representing the constituency affected. Is that to be the basis upon which this House is going to grant millions of dollars for expenditure on branch lines? Have we no right to ask for explanations from the government? Are such expenditures not to be subject to scrutiny?

Mr. STEWART (Argenteuil): I did not say so.

Mr. STEVENS: But my hon. friend implied it.

Mr. STEWART (Argenteuil): No, I beg my hon. friend's pardon.

Mr. STEVENS: He upbraided my hon. friend from Burrard.

Mr. STEWART (Argenteuil): I beg my hon. friend's pardon. I never implied any such thing.

Mr. STEVENS: My hon. friend certainly made the statement that the evidence of hon. gentlemen in this House ought to be sufficient.

Mr. STEWART (Argenteuil): Mr. Chairman, I object again. I did not make any such statement.

Mr. STEVENS: Hansard will show what the minister said.

Mr. STEWART (Argenteuil): I said that statements by hon. gentlemen who knew the situation ought to carry considerable weight.

Mr. STEVENS: Certainly. That is tantamount to the same thing.

Mr. STEWART (Argenteuil): I do not propose to allow my hon. friend to put words of that kind into my mouth.

Mr. STEVENS: Where are we drifting to? Hon. gentlemen come to the House and say that there is need for a certain railway; and the directors of the National system sit back—many of them political appointees, as I will show in a moment—and say, "We want a railway in Antigonish, we

want a railway in Guysborough, we want a railway in New Brunswick, we want a railway here, we want a railway there."

An. hon. MEMBER: And in New Brunswick.

Mr. STEVENS: Yes, and in New Brunswick. And all this committee can do in functioning at all is to utter a pious "Amen" to these demands, provided certain members stand in their places and say, "Everything is all right." That is the situation with which we are faced to-day. I protest that the National Railway management should get into the habit of simply relying on the treasury to supply funds for any project that comes into their minds, unless we have an opportunity of scrutinizing their proposals with the care which we in this quarter of the House exercise with the meagre information at our disposal, and also have an opportunity of examining the officials before the Railway committee.

Let me draw attention to the difference in procedure. The minister apparently is not favourable to going before the Railway committee. Now, if we had, for instance, Mr. Ruel—one of the most able railway lawyers in Canada and thoroughly acquainted with all this business, one of the best railway representatives that I have seen before the Railway committee in the last ten or twelve years—if we had him before the committee and the engineers we would be able to find out from them by examination the real merits of these lines, and in case of threatened duplication we could have before us representatives of the Canadian Pacific to find out from them to what extent duplication would be precipitated. We cannot do that to-night. There is no possibility of getting this information. In my estimation every one of these bills ought to go before the Railway committee to be scrutinized. Furthermore, if the minister is going to insist on this system of financing the National Railways, that is, by bringing bills before parliament year after year in this fashion, then the National Railway system ought to be made subject to the Board of Railway Commissioners in so far as duplication and similar matters are concerned, just the same as any other railway is subject to their authority. If this railway system is to be divorced from politics, if it is to be free from the interference and influence of members of parliament, then let it be treated in the same way as the other great railway system, and there will be more confidence on the part of the people in voting money for this purpose.

[Mr. Stevens.]

I am tempted to make a brief review of the Board of Directors of the National Railways in order that we may test the value of the reports that have been brought before the House. I question, and advisedly so, whether Sir Henry Thornton—a gentleman who has won a very high position in the estimation of the public in the short time during which he has been head of the system—I question very much if he to-day would give his approval of many of these branch lines. I am quite certain that he is not nearly so well acquainted with them as perhaps most hon. members imagine him to be.

It is just as well for us shareholders to look our directors over now and again. The minister has described this House as a shareholders' meeting. Well, let me contrast the present directorate with the directorate which was deposed. I am not going to say anything regarding Sir Henry Thornton as compared with Mr. D. B. Hanna. The change has been made, and we are desirous of giving Sir Henry Thornton every conceivable support and assistance in his efforts to make a success of these roads. Mr. Mitchell was removed and Mr. Ruel put in his place. I have no complaints respecting Mr. Ruel. He is one of the best railway lawyers in Canada. That is what he is, a technical, legal adviser; so we can eliminate him from consideration. And Major Graham Bell is a representative of the minister, an old civil servant of standing. But what does Major Bell know about these railways? He was over in France most of the year trying to straighten out the Scribe hotel tangle, and therefore he does not enter into consideration. Mr. Robert Hobson of Hamilton, who is a gentleman of very high standing, was replaced by Mr. Gough of Home Bank fame, of the city of Toronto. Mr. Gough sat on the board of directors for perhaps a year or more and he has passed out. I do not suppose it will be a happy recollection for the minister that he ever appointed Mr. Gough to the position. However, he has replaced that gentleman with Mr. Macdougall of Brockville.

Mr. GRAHAM: No, Toronto.

Mr. STEVENS: A stockbroker, of Toronto.

Mr. GRAHAM: A very able man.

Mr. STEVENS: A very able man? Well, let us say rather a very loyal partisan; for if he has any public virtue it consists in his loyalty.

Mr. MARLER: He is a very able man indeed.

Mr. STEVENS: Well, no doubt the God-bless-you of the hon. member for St. Law-

rence-St. George is of some value. Then Mr. E. R. Wood, one of the ablest financiers in Canada, was removed, but I do not know who replaced him. I do not suppose his successor has been appointed. I might observe in passing that Mr. Wood, who was always a Liberal, was appointed by the previous government; and Mr. R. T. Riley, an equally strong Liberal, was also an appointee of that administration. Mr. Riley was removed and in his stead we have Mr. Dawson, of Prince Rupert.

Mr. MARTELL: Was Mr. Riley appointed prior to 1917 or not?

Mr. STEVENS: Now that the hon. member for Hants (Mr. Martell) has projected himself into the debate, I suggest that perhaps we might have a new directorate comprising, among others, the hon. gentleman, the hon. member for Rimouski (Mr. d'Anjou), the hon. member for North Essex (Mr. Healy), the hon. member for Muskoka (Mr. Hammell), with a few others sprinkled in. With such a directorate, including Mr. Duncan Marshall and Mr. W. T. R. Preston, we should have a splendid political organization. But, to continue, we have, as I say, Mr. Dawson of Prince Rupert, and it is no wonder that the minister turns his back to me when I mention that gentleman's name, because there is absolutely nothing in Mr. Dawson's private or public record to warrant his appointment as a director of the railways. I say this in a spirit of the utmost kindness towards Mr. Dawson. We have also Mr. Talbot of Quebec, a noted partisan; certainly he is noted for nothing else but his partisanship. And then there is our dear old colleague of many years' standing Mr. Sinclair of Guysborough, the mention of whose name brings to our recollection the pitiful wails which we heard for years with reference to the famous Guysborough railway. So soon as Mr. Sinclair has left the House and got upon the railway board, however, we have a political railway—a political football for twenty years—advocated by this gentleman who for so many years had so much to say in regard to matters of this kind.

Mr. MARTELL: You cannot say anything against him.

Mr. STEVENS: He is a charming gentleman but so far as his fitness for a position on the directorate of the railways goes, no one who knows him thoroughly would for a moment suggest that he was qualified to offer advice on any question appertaining to railway construction. Now here we have a very excellent political board; and as an equally excellent corollary to that we have the right of the board at discretion to dip into the treasury and take whatever money they want for the construction of any line. And further than that, we have the opinion of the minister that we should not send these bills to the Railway committee because, forsooth, the money supplied for the railways comes out of the treasury and is not furnished by private parties. If the government is in any sense sincere in its desire to divorce these railways, to which we are giving consideration, from politics, let these bills be sent to the Railway committee and let them stand or fall on their merits before that committee. Personally I have been wholly in favour of many of these lines and I am prepared to support them either in any bill or before the committee. But there are other lines, and this is one of them, that cannot be supported by logic, by reason, in equity, or upon any principles of economy.

Mr. CAHILL: My hon. friend seems to have a short memory. It was either in 1918 or 1919 that the government of which he was a distinguished member, in the dying days of its career, passed through this House a bill which deprived the Railway committee of all discretion in the matter of branch lines in connection with the Canadian National Railways. That government, if I remember rightly, passed through the House by closure a bill covering 44 branch lines, and the leader of the opposition (Mr. Meighen) will no doubt recall the circumstance. When we on this side of the House were then sitting opposite we insisted on having the branch lines go before the Railway committee to decide whether they should be granted extensions of time if necessary, and to decide other related questions. My hon. friend points out that the Canadian Pacific Railway asked for a branch line similar to the one now under consideration. I remember that too; but the hon. gentleman must also remember that at that time the Liberal opposition were fighting in this House to have the branch lines submitted to the Railway committee, and the government of that day opposed the proposal. My hon. friend was then sitting about where I am now, and he among others opposed the submission of the branch lines bills to the Railway committee.

10 p.m.

Mr. STEVENS: This branch line was before the Railway committee at the same time as the Canadian Pacific Railway branch line.

Mr. CAHILL: Every branch line included in this undertaking was before the

Railway committee. But instead of sending them back for renewal from year to year, or every second year, my hon. friend's party of that date, then in power, objected, and his leader (Mr. Meighen) who is now sitting in front of him, no doubt remembers the situation. Making a speech, my hon. friend used exactly the same argument as the Minister of Railways (Mr. Graham) is using to-night, that the money had to come from parliament and that therefore these questions would be reviewed in parliament, so that there was no necessity for sending them to the Railway committee.

Mr. MEIGHEN: The hon. member had better have reference to Hansard. I did not have charge of the Branch Lines Bill, and I have no recollection of the debate in question.

Mr. CAHILL: My hon. friend was general utilities man at the time; he had charge of Canadian Northern affairs.

Mr. MEIGHEN: I did not have charge of the Branch Lines Bill and had practically nothing to do with it directly.

Mr. CAHILL: If the hon. gentleman will refer to Hansard of that day he will find that he came to the rescue of the Minister of Railways, Dr. Reid, on almost every occasion. When Dr. Reid was asked for information, the stock answer was, not in the public interest; and when we asked for further information my hon. friend usually came to his colleague's assistance. I must say of course that he did so in a very able manner, but he was one of the men who used the argument that it was not necessary to send the matter to the Railway committee. Well, it does not appear to be necessary to send it to the committee at this stage. The purpose of the Railway committee is to grant charters to companies to extend lines into certain territories, and once charters are granted there is nothing further to come before the Railway committee unless you want to do what the opposition of that day advocated, and what the leader of the opposition to-day will not advocate, namely, bring the officials of the railway before members of parliament and question them on all these matters. My hon. friend objected to this course at that time and he has objected to it in this debate in the last few days. But that is the only means of obtaining information at first hand, if that is what we want. The Minister of Railways has furnished the committee with the information that he has obtained from the department. If hon. gentlemen want further information and if the leader of the opposition will move for it, I am satisfied that the government will be glad to grant it, because that is the thing we advocated in opposition and the very thing my hon. friends opposite opposed most strongly. Here is a sample of what the then Minister of Railways gave us when he was building branch lines in 1920. I put this question:

I think that if the minister would give us the details of the whole of these lines it would be more instructive to hon. members. The statement could appear on Hansard.

The minister said, "Perhaps I can give the list"; then he goes on; "Alsask, S.E. 16 miles," and so on down the list, covering 312 miles of railway. Not one detail was given as regards expenditure on each of the proposed branch lines. The whole sum was lumped, $48,000,000, and that was all the information the House had at that time. Later on a question was asked of the minister as follows:

What work has been done on the Kamloops line up to date?

And here is the answer:

I will try and get that information before we go on with the supplementary estimates.

That was the kind of information we got at that time. With regard to the particular line under discussion at the moment, I remember that the Canadian Pacific asked for running rights or for co-operation in the construction of the line that the hon. member for Centre Vancouver (Mr. Stevens) was speaking about. The Canadian Pacific to this day have not asked that their plans be approved. They have not spent a dollar on the line. The people in that country are looking for the construction now just as they were five years ago, and unless the Canadian National build it they will still be in the hopeless position of being unable to get the railway facilities that they need. The provision is there in the Statutes of 1919 for co-operation or running rights, and that applies as well to-day as it did then. But are these people to be asked to wait forever for the Canadian Pacific to build, or are they to get the accommodation which will justify their deciding to remain in the country? That is the question that is before this committee. When my hon. friend says he is not speaking for or against the Canadian Pacific Railway I want to say I do not believe there is a member in this House who does not fully realize that the success of the Canadian Pacific is just as essential for the welfare of Canada as the success of the Canadian National. The failure of the Canadian Pacific would mean more to us than the failure of the

Canadian National. We have already grappled with that question, and we know that the failure of the Canadian Pacific would be a calamity to this country. There is no hon. member who wants that to happen. There is no hon. member who wants to stand in the way of the Canadian Pacific Railway getting every branch line which it is able to build within what might reasonably be called its own territory, any more than there are hon. members who do not want to see the Canadian National build branch lines in what is regarded as Canadian National territory. My hon. friend talks about keeping the Canadian Pacific out. Before he opposes this branch line he should go to the people in that district who have been labouring under the hardship of hauling their grain long distances during the years that they have been waiting for railway accommodation.

Mr. SPENCER: I am very glad to know that the hon. member for Centre Vancouver (Mr. Stevens) realizes the necessity of railway transportation in this part of the country. He is anxious that we shall have no duplication; I am just as anxious. The Canadian Pacific Railway Company, as the last speaker mentioned, have not built any of the railway through country covered by this resolution. The line does not touch Lloydminster but is twenty miles south of that town. I mentioned a few moments ago that there is a large country that needs these facilities, not only north of the present Canadian National line, running northwest from Lloydminster, but also a large territory to the south of that line. I understand it is the present intention of the Canadian Pacifiic Railway Company to go north to Lloydminster, then in a northwesterly direction to Whitford lake, then south to Vegreville. If we do not want to have any duplication we can easily serve the whole of that country with railway transportation by leaving to the Canadian National the territory from Llodyminster through to Whitford lake and letting the other railway, the Canadian Pacific, go west instead of north from where they are. It would serve a country badly in need of railway facilities, at present not served by the Canadian National, and the Canadian Pacific line would go to its terminus at Vegreville. Both railways would thus have a territory to themselves; there would be no duplication, and the people who are so badly in need of railway facilities would get the necessary service. If these two lines were operated, there is not the slightest doubt in my mind that that country would develop by leaps and bounds and that thousands of people who are at present undecided what to do would make up their minds to stay in that country. There is quite a good country between Vermilion and Wainwright which this southern line would go through, should the Canadian Pacific see fit to go westward instead of northward to Llodyminster.

The hon. member for Centre Vancouver said he did not believe that Sir Henry Thornton himself was in favour of some of the branch lines dealt with in the resolutions which the minister is bringing down. I can only say that the hon. member must have been out of the House the other day when the Minister of Railways read a long letter written by Sir Henry Thornton and addressed to himself, advocating very strongly every railway proposal that was being put forward in these resolutions.

Mr. McCONICA: I am somewhat interested in this line, as it goes out of my constituency at Llodyminster. As to the controversy between the government and the Canadian Pacific Railway Company, I want to say this: The Canadian Pacific are building from the east westward. Up to last year their line stopped at Cut Knife. Two years ago they got an extension of their charter to build from Cut Knife to Lloydminster, and it is suggested that they go on west by a joint arrangement with the national road. They built under that extension forty miles last year from Cut Knife to the Battle river south of Lloydminster, a little more than forty miles, and they advise me that they are now at work extending their line on into Lloydminster, which they expect to reach this summer. Then they propose to go on to the northwest, under the joint arrangement with the national road. An agreement in this connection is incorporated in the statute. It is suggested by the hon. member (Mr. Spencer) that they go south and miss Lloydminster. Now, that would disappoint my people very much. The people at Lloydminster are exceedingly anxious to have these railway facilities, of which they stand very much in need. I was there last season with the Minister of Trade and Commerce. They have five elevators draining a territory thirty miles in diameter and at that time every elevator was full. The men came in there from the northwest country, some from points thirty-five miles distant, and in some cases their wagons were standing along the street—they could not unload. It is a very fertile country, and they are very much in need of this railway.

As to the extension south from the Battle river through to Wainwright or Vermilion, they will not make it, and that is all there is to it. The Canadian Pacific will not build

through that country, because it is not a very good country. The north country is a very good country, and they are ready to go ahead in co-operation with the National line and make an arrangement for running rights over the road. It seems to me under the circumstances that that is the proper thing to do. I am not here as the advocate of the Canadian Pacific interests, but I am here in favour of fair play. This arrangement was made and embodied in a statute, and under that arrangement they have gone on and built their line from Cut Knife to Battle river and they are still building, and they insist that they should have the right to go over the road they originally laid out, and which was sanctioned by parliament. They will not build on the south as suggested by the hon. member for Battle River. They are ready to build through Lloydminster, and Lloydminster wants the Canadian Pacific very badly.

Mr. MANION: I have been listening to this discussion for some time, though I was not here during the early part of it. One of the curses in this country, it seems to me, has been the duplication of railways. I was looking at a map of this proposed branch line, and also at a map of the proposed Canadian Pacific line, and if both were built it would be an absolute duplication throughout. I am very much in sympathy with the remarks of the last speaker (Mr. McConica), because the duplication of lines is an economic waste. I believe the principle which should be upheld by the government and by the people of Canada in connection with our National Railway, and by the Canadian Pacific as well, is that where it is possible to give running rights to the other road over a section where duplication could be avoided in that way that should be done. It would result in a large monetary saving to the country. Take, for example, my own section of the country. From the head of the lakes down through that north country, where traffic is light, there are three railways, the Canadian Northern, the Canadian Pacific and the Grand Trunk Pacific. Certainly two of these would have been amply sufficient, and possibly only one, if it was double-tracked, could handle all the traffic if running rights had been given to the other road. I believe such a policy should be upheld by this government, by the Canadian National and by the Canadian Pacific. In fact, I think it should be forced on the two railways so far as possible where there is a thinly populated section; one should be permitted to build, or even be forced to build, and the other should be given running rights over that piece of road. I think that would result in a great economic saving to the country.

With regard to these railways being before the committee, I was on the Railway committee when the two railways were before us and arguments were made for the building of this very line, and as read by the hon. member for Vancouver Centre, and as I remember myself, the Canadian Pacific was compelled when being given the right to build to give running rights to the Canadian National. If that was a compulsory rule put upon them it seems to me that if now the Canadian National is being given the right to build here, the same rule should be reversed and the Canadian Pacific be given running rights over the Canadian National line if built.

Mr. CAHILL: Is it not reciprocal?

Mr. MANION: I do not understand that it is. I understood from the remarks of some hon. members that it was not. I would ask the minister if it is reciprocal.

Mr. GRAHAM: I think the question which my hon. friend is discussing is set out in the Canadian Pacific Railway Company's bill. I pointed out before my hon. friend came in that the Canadian Pacific was now asking that a similar clause be inserted in the bill being granted to the Canadian National, and I further pointed out that it would be perfectly in order to have full consideration of that proposition when we get into committee on the bill, but that it could not very well be done on the resolution.

Mr. MANION: I am not attempting to delay the minister in getting into the bill stage, but these thoughts have come to my mind and I thought I would present them now because I might not be here when we are in committee on the bill. I think it is exactly as the hon. minister has explained it, and as was read by the hon. member for Vancouver Centre, and confirmed by the remarks of other speakers, that a clause was put into the Canadian Pacific Railway Company's bill compelling them to give running rights to the Canadian National. I think the arrangement should be reciprocal. Now that the Canadian National are being given rights, and if, as the hon. member for Battleford says, the Canadian Pacific have built in the past year some forty miles of this line, I think there is justice coming to the Canadian Pacific and that they should be given the same privilege.

Mr. SPENCER: The Canadian Pacific have not built forty miles from Lloydminster west, but are now twenty miles south of that town.

Mr. MANION: But the hon. member for Battleford said that the intention was to build to Lloydminster and that the people of Lloydminster wanted the Canadian Pacific very badly. Under these circumstances I think it should be the policy of this government and of parliament to make running rights reciprocal wherever possible, in order to save the economic waste which is so rampant in this country through the duplication of lines all over Canada. We have running from here to Montreal three different lines; from Montreal to Toronto three different lines; through my section of the country three different lines. You can look out of the car window and see another line of railway only about a hundred yards away almost wherever you go. We have this unnecessary duplication all over the country, and I just wish to put myself on record as saying that if the Canadian Pacific are being forced in their bill to give running rights, the Canadian National should also be forced to give reciprocal rights to the Canadian Pacific.

Mr. WARNER: I feel that I am well acquainted with that part of the country. I know it better than I do the city of Ottawa. I have been all through it from Bruederheim to Lloydminster. There are some features of this case that have not been pointed out to the committee properly; perhaps they have been overlooked. That district is as good as any that can be found in Alberta, and that means as good as any in Canada in my opinion. It looks perhaps as if it was not too far between the Canadian National and the St. Paul branch, but the country is a little different from the ordinary. These people who are most anxious to get this road are living south of the Saskatchewan river, which is in a deep valley and it is very hard to cross the river with a heavy load. They could not cross that river economically and get to the railroad on the north, so consequently they have to go south to the Canadian National, which is from thirty to forty miles, and, I think in some cases, more. It is an easy place to build a railway. I have been out over the grade and I know that forty-five miles of the road have been graded. There is, as I say, no better country in Canada, but we want these people to be prosperous. It is not a question of a seven or eight mile haul; it is a question of whether we are going to do what is necessary to allow these people to make a living and make their own homes in that part of the country and become prosperous, and that is what we want to do. On account of the river being on the north, and there being such a deep canyon, they have to go south, and that makes it farther for them to reach the railroad than it would ordinarily be if the country was level all the way between the two railways. I do not care to take up the time of the House in discussing this, but I wanted to point this out because I know this country well.

There are no branch lines of railways being built in my constituency, and I am sorry because of that fact. There are districts where they are needed but perhaps branch lines will be built later. However, I wanted to give my evidence as to the need of this particular railway, and to express my belief that its construction will be amply justified. I know that the settlers throughout the district are a good class of people, and if you are going to build branch railways you could not put one in a better place. As conditions now are the people there cannot go to the north to get to the other line. Consequently they have to go much farther than they would if the contour of the country were of a different character. For the reasons stated I wished to advocate the construction of this line.

Mr. STEWART (Argenteuil): I simply want to say that very frequently when a member of the government addresses the committee and gives his viewpoint on a particular subject it is looked upon as imparting to the question a political aspect. We have had a lecture addressed to us to-night on the political aspect of the make up of the Canadian National Railway Board.

Sir HENRY DRAYTON: Hear, hear.

Mr. STEWART (Argenteuil): I am glad that my hon. friend has awakened to a realization of the situation.

Sir HENRY DRAYTON: I think everybody knows it.

Mr. STEWART (Argenteuil): I do not intend to defend the board, but I think in fairness to hon. members who represent various constituencies their statements should have some value when they are given in all honour and all candour to this House. Personally, I have always been prepared to accept such statements at their proper value, and I think most hon. members have the same idea. There can be no political aspect to a question such as this. We want to make the Canadian National Railways a success. It is regrettable in the extreme that the question of politics has been introduced at all. The question involved here is whether or not the particular lines under discussion are required, and many hon. gentlemen have declared that they know these lines are necessary. So far as this particular line is concerned, it has been under

consideration for years. Part of the line was built from the village of Bruederheim many years ago. It circles to the north following the contour of the Saskatchewan river. The intention at first was to build the road to join the parent line at Vermilion. Since that time it has been extended to Lloydminster. Let me say that I agree heartily with what my hon. friends have said about the desirability of preventing duplication, of which we have had entirely too much in the past. I think in fairness to the National line, and that has been stated on many occasions, it would be well if an arrangement could be made between the two companies,—that is to say between the Canadian National and the Canadian Pacific,—by which each should confine its activities to its own territory. We all know that the Canadian Pacific are desirous of reaching the city of Edmonton, and that is a laudable desire on their part. But the territory over which, my hon. friend (Mr. Stevens) points out, they secured a charter to build, is Canadian National territory, there can be no denying that fact, and if running rights are to be given the logical thing to do would be to give the preference in construction to the Canadian National line and grant the running rights to the Canadian Pacific. I think that would be a thoroughly sensible solution of the matter. My hon. friend will realize at once that the Canadian National then would have a priority right in the picking up of local freight. Let me say too that from my knowledge of the locality and of the line it is not for the branch line they require running rights but for the existing line. There would be a greater mileage by diverting the contour of this line than is the case under the line proposed to be built. I most heartily support the idea of preventing duplication and, where necessary, running rights should be had over either one of these systems by any company desirous of reaching the city of Edmonton, and that city is the objective of the Canadian Pacific. I merely rose to make this statement. I would most heartily support the Canadian Pacific in getting running rights to Edmonton which, I think, is their objective.

Mr. STEVENS: Suppose we pass this legislation without any great objection or scrutiny. The Canadian National Railway then go ahead with this line, but the Canadian Pacific are already constructing in that district.

Mr. STEWART (Argenteuil): No, not in that district.

Mr. STEVENS: Their line through Cut Knife and Lloydminster to Edmonton is contained in their charter.

[Mr. C. A. Stewart.]

Mr. STEWART (Argenteuil): They have not built one foot of line in the province of Alberta up to date as far as my knowledge goes.

Mr. STEVENS: What I am pointing out is this: The Canadian Pacific and the Canadian National fought this out before the Railway committee in 1919. At that time the Canadian Pacific secured the right to construct north-westward from Cut Knife, through Lloydminster, north of the existing Canadian National line, between that and the Saskatchewan river to Edmonton. I remember very well that contour maps and other data were brought before the committee and it was demonstrated, just as was said a while ago, that the canyon of the Saskatchewan river made traffic northward and southward impossible, so the settlers along the south bank of that river had to drive farther to the south and could not get directly across to the railway which was on the north side, or some distance away to the north. The Canadian Pacific Railway Company have that charter, and they are now constructing that road northward from where the river has to be crossed. Suppose we go ahead and calmly grant this right to the Canadian National Railway. Then there is nothing to prevent the two of them from constructing other roads through that territory.

Mr. STEWART (Argenteuil): I think it should be prevented.

Mr. STEVENS: Certainly it should. Furthermore, in 1919 the decision reached by the committee was that the company to go into that country first and construct should be the one that should go through, and running rights should be given to the other.

Mr. STEWART (Argenteuil): My hon. friend will recollect that 45 miles of Canadian National line have been constructed from Bruederheim.

Mr. STEVENS: The minister refers to that short distance from Edmonton north-eastward?

Mr. STEWART (Argenteuil): From Bruederheim on the Canadian National railway running in a north easterly direction, taking in a loop of the river, the idea at first being to join the main line again at Vermilion. But since that time the line has been extended in order to reach Lloydminster and give the settlers who are thirty miles from the main line a service.

Mr. STEVENS: That is at the Edmonton end?

Mr. STEWART (Argenteuil): Yes.

Mr. STEVENS: But we are speaking of the construction northwestward from Lloydminster.

Mr. STEWART (Argenteuil): I doubt if the line spoken of by my hon. friend is within thirty miles of Lloydminster at the moment. It will have to be built to Lloydminster and then construction must be commenced in Alberta where this line we are now considering is to commence and of which 45 miles have been built.

Mr. STEVENS: What we are asked to do is to authorize the construction of this line. I am looking at the resolution before the committee. It does not refer to the south end of it at all.

Mr. STEWART (Argenteuil): It refers to 45 miles.

Mr. STEVENS: It refers to a "Canadian National Railway line from Lloydminster to the province of Saskatchewan in a generally northwesterly direction to a point in or near Torwship 53 or 54, Range 6, west of 4th, Meridian, in the province of Alberta." Now that is simply a short distance from Lloydminster, northwest of it, and has nothing to do with the other end of the line at all. What I am getting at is this: We ought to be mighty sure that the Canadian Pacific Railway are not actually going in there this year before we recklessly grant what is proposed here. Suppose the Canadian Pacific Railway are actually constructing from where they left off on the Battle river crossing, what they call the Cut Knife to Melfort branch.

Mr. STEWART (Argenteuil): It would be westward from Cut Knife.

Mr. STEVENS: If they are actually constructing and intending to continue this year—

Mr. STEWART (Argenteuil): They are.

Mr. STEVENS :— then there is no need for the National Railways to step into the same territory and start construction. Let me again point out that in 1919, when we discussed this question for several days before the committee, the general decision of the committee was that we would safeguard in the Canadian Pacific Railway bill the rights of the Canadian National Railways which we did, and it is in the statute which I read this evening, but that the railway that would get in and construct a line first and give the service to the settlers, should have the right to construct. That is the decision we arrived at. I remember the discussion quite distinctly. I say if the Canadian Pacific Railway are actually going to do it—and we ought to know that for a certainty—they should be permitted to go ahead and construct this line, and this resolution should not be passed.

Mr. STEWART (Argenteuil): In reply to my hon. friend, I say that in 1919 this forty-five miles of railway was completed up to Bruederheim. I have lived in that country for the last fifteen years, and I never heard of any other location for that line than from Bruederheim around, taking the circle, and coming back to the main line at Vermilion. Afterwards that was changed, as I pointed out, and it was arranged to run further east and join the main line at Lloydminster. I desire to repeat now that I think it would be well to confine these roads to their own territory. At the moment the National Railway is pulling every pound of freight out of that territory, because the National Railway is north of the Saskatchewan river. Every pound of freight that originates in that territory is freight belonging to the National Railways, and I cannot very well understand why a committee of parliament as late as 1919 should have been willing to hand over that territory to the Canadian Pacific Railway. Frankly, I do not understand it. I would be glad to support a proposition to give running rights to the Canadian Pacific Railway into the city of Edmonton, either over the main line track, or if preferable over the branch line; but I think that the Canadian National line is entitled to that freight, and to the ownership of that line; and, by the ownership of it, entitled to the freight that is gathered from station to station along the line. I would not in the slighest degree put anything in the way of the Canadian Pacific Railway getting into Edmonton, which is the objective point, and would be quite willing to insist on the National Railways giving them running rights, in order to carry on their business. They are entitled to that; and in that case there would be no duplication. I know the country very well and I say I am more than friendly to the Canadian Pacific Railway. I think they are a great institution, and I think they are entitled to get a fair show in every territory in which it is logical and right for them to be operating, and which is contiguous to their main line; but I do think that, in all fairness, this territory rightfully belongs to the National Railways. I hope I have made myself clear.

Mr. STEVENS: The minister is giving utterance to some positive statements. If the government will say, "No, so far as our control is concerned, the Canadian Pacific Railway shall not go into that territory," then the Canadian Pacific will understand what they mean. But, in spite of the fact that the minister does not understand why it was done I tell him that in 1919 it was done by an act of this parliament, after mature consideration.

Mr. STEWART (Argenteuil): The committee must have known that there was an agreement in existence.

Mr. STEVENS: Certainly, they had all the information before the committee. The matter was thereshed out in detail after hearing both sides. But the point was—and I remember distinctly—that the Canadian National Railways were not in a position to declare that they would construct that line, and that was the difficulty. I remember very clearly that we declared that the settlers of that district were entitled to service. It was clearly pointed out to the committee that the peculiar conformation of the country, caused by the Saskatchewan river valley, made it not only desirable but absolutely necessary that the settlers should have service, and that was the reason the committee decided to admit of a competition, if you like, as to who should get in first.

In reply to what the minister has said, let me come back to the point again: If it is shown that the Canadian Pacific are prepared to build in there now, I say they ought to be permitted to build for two reasons, first, in order that we may keep faith with the Canadian Pacific Railway in relation to the arrangement discussed in 1919; and, secondly that this government and country do not require to look for places to spend money. If we can possibly avoid expenditures we ought to do so. As to the ownership of territory, I do not think it is applicable to this case, because it was threshed out and decided five years ago.

Mr. STEWART (Argenteuil): I do not feel like giving way to my hon. friend's argument, except in so far as it is applicable. If the Canadian National Railways as he stated—and I want to quote him correctly—were not prepared to build, then I can understand why the committee were induced to grant that charter but my hon. friend said on one or two occasions that there was a dispute about it and that the first man on the ground was going to get the right to build. If that is the case, I can hardly understand the attitude of the Canadian National Railways with respect to that matter, and I hardly understand why on the other end of the loop, the forty-five miles upon which money has been spent, should be abandoned.

Mr. STEVENS: Pardon me, they are not abandoning it. They switch off there at—I cannot see the name on the map.

An hon. MEMBER: Bruederheim.

Mr. STEVENS: Yes, that is the point my hon. friend refers to.

Mr. STEWART (Argenteuil): That was the starting point.

Mr. STEVENS: It runs from Edmonton to Bruederheim, and swings down to Lloydminster. There is no loose end there. It does not matter one iota what they started out to do; they may have started out to make a larger map; I have no doubt they did, but there is no loose end there, or turning southward to Lloydminster. So that there is no need for the Canadian National, so far as that is concerned.

Mr. WARNER: I might say that the Canadian Pacific railway is not built from Edmonton to Bruederheim, nor does this old Canadian Northern grade start from Edmonton. It begins at Bruederheim running east from there towards Lloydminster. The Canadian Pacific proposed road is coming in from the east by Whitford lake, then, I presume, crosses the Canadian National line near Bruederheim running into Edmonton on the south side of the river where the Canadian National main line crosses the Saskatchewan river at Fork Saskatchewan.

Mr. MANION: The Minister of the Interior made a remark which might be misinterpreted. I was on the committee he refers to. He said he did not understand why the committee should have given the rights to the Canadian Pacific Railway at that time, because it was really Canadian National Railway territory. I remember some of the discussion before the committee, and my recollection of it is that the Canadian Pacific came forward and asked for rights to build into that territory. They were opposed by the Canadian Northern Railway. For some reason we had all these questions before the committee. Mr. Hanna was here on behalf of the Canadian Northern and Mr. Coleman appeared for the Canadian Pacific Railway. Mr. Ruel the counsel was here; the Canadian Pacific solicitors were also present and they fought it out. If I recollect correctly, it was stated that the Canadian Northern Railway

was not ready financially to go ahead with the proposition, and the Canadian Pacific was. I do not know whether the Canadian Northern had their charter then or not.

Mr. STEWART (Argenteuil): That was the time they got it.

Mr. MANION: However that was the ground that was taken. It was a very hard fight because the Canadian Pacific Railway and the Canadian Northern Railway fought the matter very hard. It was the opinion of the committee and of parliament that the Canadian Pacific Railway had the right to build. Parliament gave the Canadian Pacific Railway a charter to build. They have not done so except in the southern part. But in the charter we inserted a clause compelling the Canadian Pacific Railway to give running rights to the Canadian Northern, which at that time, I think, was a perfectly fair and legitimate proposition to both railways. I do not remember, but I doubt very much if the Canadian Pacific was agreeable to the insertion of this clause. To-day, if we are going to take away from the Canadian Pacific the right of building in that country,—certainly one railway is quite sufficient there—and permit the Canadian National to build, it is only right that a reciprocal arrangement should be provided for and the Canadian Pacific treated in the same way as the old Canadian Northern was formerly treated. The minister nods his head, and I assume he agrees with me. I think a whole lot of time might be saved if he would accept the suggestion which has come from practically all over the House, that before this bill comes down he will ascertain the attitude of the two railways and see if running rights cannot be arranged which will be satisfactory for this particular line and will also probably be satisfactory throughout the whole district. Lloydminster would be satisfied according to what my hon. friend from Battleford (Mr. McConica) says. It seems to me that would be a fair proposition.

Mr. STEWART (Argenteuil): I have only this to say. It would be absolutely useless to give running rights over this line to the Canadian National railways. Why should they have to make a detour for all their through business and haul it over a greater mileage than on their main line? The case is absolutely the reverse with the Canadian Pacific. If the latter go in there they take territory which is now all Canadian National and they would control that territory and gather the freight. Running rights would merely be for through traffic from one end of the line to the other which would be of no value to the Canadian National whatever because they would not be permitted to do logical business if the Canadian Pacific built the line. I am not arguing against the Canadian Pacific for a moment I am simply pointing out what is obvious to anyone who is familiar with the territory.

Mr. MANION: Does the minister say it would be no use to give running rights to the Canadian Pacific.?

Mr. STEWART (Argenteuil): No; it would be no use to give running rights to the Canadian National.

Mr. MANION: I am saying the proposition is to give the Canadian National the right to build the road and to give the Canadian Pacific running rights over it.

Mr. STEWART (Argenteuil): That is different.

Mr. GRAHAM: I have already asked the heads of the two railways to get together on this matter. The time for consideration of this will be when the legislation is in bill form.

Mr. MANION: You should have told us that an hour ago.

Mr. GRAHAM: Yes an hour and a half ago.

Mr. SUTHERLAND: Mr. Chairman, I am somewhat surprised at the lack of information supplied regarding many of these lines. It is a slow process to obtain information. I could not help admiring the earnestness with which the Minister of the Interior tried to impress upon the committee the fact that when a member declared that a road in his constituency was desirable, the declaration in itself should be pretty near sufficient to justify construction. I am confident that every member could find strong arguments to justify railway construction in his constituency. The Canadian National system is owned by the people and any expenditure must be met by them. The great difficulty seems to be to arrive at a clear understanding as to whether a line is justifiable or not. In the old days there was keen competition between the railways for traffic, although there was no competition as to rates. To-day it is very important that we safeguard ourselves against undue railway duplication. I think there are many lines in operation to-day that might be properly closed and the traffic carried over one road. It does not matter whether it is a privately-owned or a government-owned railway, we must have lower railway rates or we cannot prosper. But we cannot have lower

rates if we build unnecessary railway mileage. This country is not in a position to build roads that are not absolutely essential. When I hear hon. members from the West arguing that because they are eight or ten miles from a railway it is desirable that there should be a further construction undertaken, I can assure the committee that there are many sections in the old provinces where the people have not as good railway facilities as those enjoyed in the West.

I protest against this lack of information. It is evident that if we are to make a success of the Canadian National Railways some different method must be adopted in regard to the building of branch lines than that which is now being followed. There is no closing our eyes to the fact that the board of directors have been largely appointed for political reasons rather than for any especial qualifications or railway knowledge. That being the case, there is suspicion among the people that something of a political nature is attached to these proposals. It is well known that there were negotiations between representative men of western Canada and the government before parliament assembled; in fact, it has been said that a bargain was made between them. Well, I think we have good evidence of it in the docile manner in which hon. members to my left stultify themselves and vote contrary to what they openly profess in this House. They have done that repeatedly during this session. Their actions would indicate that they are very anxious to secure more branch lines in western Canada. One hon. member even had the hardihood to compare expenditure in rural mail delivery in some of the old provinces with that in western Canada, but he did not take the precaution, or was not fair enough, to give the revenues in these old provinces compared with similar revenues in western Canada. In some sections of northern Ontario which have been recently opened up, and where rich mineral deposits have been uncovered, there is possibly more need of railway facilities than in those districts to which reference has been made. Yet we are absolutely handicapped and cannot proceed because the province of Ontario has undertaken to build development roads, and therefore is not in a position to give the railway facilities which the people there are entitled to. This simply means that the province will have to dispose of the Temiskaming and Northern Ontario railway to the federal government in order to have feeders built, because that great section tributary to the railway must have railway facilities if it is to go ahead.

[Mr. Sutherland.]

Mr. STEWART (Argenteuil): Is it not a fact that through lines have been built right across Ontario, both by the Canadian Pacific and by the government of Canada? The Canadian National, the old Canadian Northern and the Grand Trunk Pacific were built directly across northern Ontario.

Mr. MEIGHEN: But there are no branch lines.

Mr. STEWART (Argenteuil): Have branch lines ever been asked for?

Mr. CLARK: Is that all you have to do?

Some hon. MEMBERS. Oh, oh.

Mr. STEWART (Argenteuil): I do not think there is any joke about it. If there was necessity for branch lines, surely some representations would have been made to the company. I merely asked the question.

Mr. SUTHERLAND: If there is a political representative on the board that may account for it.

Mr. STEWART: (Argenteuil): I do not know that any member of the board particularly asked for any of these lines. But let me ask my hon. friend: What is the political affiliation of Mr. James Stewart of Winnipeg? I have never heard.

Mr. STEVENS: He very seldom attends the board.

Mr. STEWART (Argenteuil): I do not know whether he attends the board or not, but my hon. friend has been active in denouncing the political affiliations of members of the board and perhaps he can tell me to which side this gentleman leans.

Mr. STEVENS: He is a gentleman who unfortunately seldom attends the board. If these men were more regular in their attendance we should be able to get the advantage of their knowledge and skill; but the trouble is that the board is in the hands of half a dozen pseudo politicians.

Mr. STEWART (Argenteuil): My hon. friend has answered his own question, I think. He has practically said that the members do not attend the board and he is content with Sir Henry Thornton.

Mr. SUTHERLAND: The minister admits that there are no branch lines in northern Ontario and from his remarks I would infer that there is no necessity for them.

Mr. STEWART (Argenteuil): I did not say so, sir. I do not know the situation.

Mr. SUTHERLAND: I have been endeavouring to emphasize the fact that there

are points in that mineral belt that are very much in need of railway accommodation which they are not receiving. There is not one mile of railway to be built in Ontario so far as can be seen at present.

Mr. STEWART (Argenteuil): I have simply been asking for information. My hon. friend remarked that nothing had been done for Ontario and I pointed out that certain lines crossed northern Ontario. Although there may be no branch lines, surely my hon. friend will admit that a line circling the Lake of the Woods to the south is serving a large area of country. And that line belongs to the Canadian National Railways. Surely he will agree that the Grand Trunk Pacific, crossing right through the heart of the north country, is of some value to the people up there.

Mr. SUTHERLAND: The territory to which I am referring is the mineral belt between Cochrane and Englehart to which the Canadian National is not tributary, and that is the section of the country that is now so much in need of railway facilities. It is true that a branch line of the Canadian National Railways could be built down into that locality, but a better service would be rendered if a line were built from the road that is now owned and which was built by the province of Ontario. For that reason I state that if this policy is to continue there is nothing to be done but for the government to assume that road that has been constructed by the province. The Canadian National Railways have running rights over that road and the interests of that country demand that something be done to enable development to proceed. The wealth of the country there would indicate that such development is possible if railway facilities are provided.

Mr. MEIGHEN: The hon. member for Pontiac (Mr. Cahill) is not here, but the Minister of Railways will no doubt be able to answer the question which I am about to ask and which I intended to direct to the hon. member. What year was it that the bill was introduced to provide for branch lines construction which the hon. member for Pontiac stated that the government then in power refused to refer to the Railway committee?

Mr. GRAHAM: I suggest that my hon. friend wait until the hon. member for Pontiac returns. I did not refer to any bill that was introduced for the construction of branch lines. Certain branch lines were to be taken over under the Appropriation Act of 1920 for which $48,000,000 was appropriated, and my contention was that no information was given to the House, as far as I could recollect, concerning these branch lines as to cost and territory, to the extent that I am affording the committee now.

Mr. MEIGHEN: Did the minister say, in 1920?

Mr. GRAHAM: I think it was in 1920; I had Hansard a moment ago. But my argument was not directed to anything that had happened in the committee, nor did it refer to the question whether any bill should be sent to the committee or not. I was simply contending that we were giving loads of information now that had not been given heretofore.

Mr. MEIGHEN: I see the hon. member for Pontiac is back now, and perhaps he will answer the question I asked a moment ago. What year was it that the bill was introduced by the late government to provide for the construction of branch lines, which bill was refused to be submitted to the Railway committee?

Mr. CAHILL: I think it was in 1919, in either the first or the second session.

Mr. MEIGHEN: There was no such bill introduced at all; the hon. member was talking without the book.

Mr. CANNON: In the Grand Trunk bill there was a section providing for the construction of 44 branch lines.

Mr. MEIGHEN: What Grand Trunk bill?

Mr. CANNON: The Grand Trunk bill; there was provision for the purchase of 44 branch lines in the West. We asked that these 44 lines be considered in detail, and that request was not only refused but the section was passed under closure.

Mr. GRAHAM: That is my recollection.

Mr. MEIGHEN: My hon. friend says that his recollection is that in the Grand Trunk bill there was power to acquire 44 branch lines in western Canada. The suggestion is so absurd that I would insult the House if I denied it. In 1920 there was provision in the estimates for branch lines, and we plead with this government to do what we did then. All that the government need do is follow our example and we shall be satisfied.

Mr. GRAHAM: Will you take the information that you then gave?

Mr. MEIGHEN: Yes, I shall be content with such information.

Mr. GRAHAM: Which was nothing.

Mr. MEIGHEN: The hon. member must have had a bad dream. I do not know what hon. gentlemen behind the minister have in their heads at all, but there was no such clause in the Grand Trunk acquisition legislation. That legislation was merely to provide for the acquirement of the Grand Trunk Railway. There was a previous bill for the acquirement of branch lines, but that was long before 1920, and it was for the acquirement of certain lines, that were constructed, which of course is a different thing. Now, as respects the minister's allegation that no information was given, and the specific allegation just now that no information was given as to estimated cost and as to territory, I will undertake to provide the minister with that information and to show that it was given. I know that no such information was refused; I know that it was given at some stage of the bill, although I cannot say at what precise juncture. I stand here to say that hon. members will have difficulty—indeed I do not think they will find it possible—to produce an instance in which specific information asked for was not given in respect of the legislation referred to by the minister. I can well recall these occasions, because I know how active the member for Pontiac was; and I have read some of his speeches. I would ask the House to go back over these days and read the debates; do not let hon. gentlemen refer to one little stage of the bill.

11 p.m

Mr. STEVENS: This is the bill.

Mr. MEIGHEN: That is the wrong bill.

Mr. CARROLL: The hon. member has got wrong information this time.

Mr. MEIGHEN: I get wrong information from hon. gentlemen opposite.

Mr. CAHILL: No, from gentlemen behind you.

Mr. MEIGHEN: Not at all; I get right information there, but this is not the bill mentioned by the hon. member for Dorchester (Mr. Cannon). The Canadian National Railways Act of 1919 is not the act for the acquirement of the Grand Trunk. There is a schedule the purport of which I do not know at the moment, but it may be that to which the hon. gentleman refers. There could be no such legislation in the Grand Trunk Acquisition Act. I will look over the schedule to the Canadian National Railway Act and speak to it a minute later; of course I cannot do it while I am on my feet.

[Mr. Meighen.]

Mr. LUCAS: I understand that a good deal of the opposition to this branch line is due to the fact that the Canadian Pacific has a charter in this connection, secured in 1919. The member for Fort William and Rainy River (Mr. Manion) suggested that the charter was granted to the Canadian Pacific at that time on account of the Canadian National being unprepared to proceed with the construction. The fact that the Canadian Pacific have not done anything with that road shows that they were not any more prepared to start with the construction than were the Canadian National. I think the time has come when any railway company applying for a charter should be prepared to put up a guarantee or bond that they are going to start construction, and that should be done before any charter is granted by this House. I would like to confirm what the Minister of the Interior said in regard to this territory belonging to the Canadian National. The present Canadian National line parallels the Saskatchewan river and all the territory north of that line runs to the river, which has very deep banks. All the business coming from that territory comes now to the Canadian National, and if the Canadian Pacific secured a charter through there it would simply spoil the whole business for the Canadian National. The Canadian Pacific built last year from Cut Knife, I believe, a distance of about thirty miles, and they are still a considerable distance from Lloydminster. I presume this year's construction will take them into Lloydminster and then they will be able to secure running rights over the Canadian National from there to Edmonton, so they will not be inconvenienced. I am glad the construction of this branch line is proposed this year, because the settlers of that district have been looking for it since 1909. Farmers there have told me that they were prepared to go out and give their labour free if they could only get this road started. I am glad, I say, that the board have seen fit to recommend the starting of construction on this line during the present season, and I hope it will be pushed to an early completion.

Mr. CANNON: Referring to the statutes of Canada, 1919, Chapter 13, the clause I was alluding to is clause 20, which reads as follows:

> The times for the commencement and completion of the construction of the lines of railway specified in the second schedule to this act, which certain of the companies comprised in the Canadian Northern system were authorized to construct, are hereby extended for two years and five years respectively after the passing of this act.

If my right hon. friend will read the second schedule he will see that a full list of the railways is there given. When we asked for information, and asked an opportunity to study each or any special branch line in particular, by a committee or otherwise, we were refused, and the clause was passed under closure.

Mr. MEIGHEN: Well, I am delighted that the hon. member has found the clause. This Canadian National Railway Act was not the act, first of all, by which the Grand Trunk was acquired; that was done under the Grand Trunk Acquisition Act. However, that is merely a matter of name. The Canadian National Railway Act was the act by which we consolidated all the roads at that time owned by the state—that is, roads that were acquired by stock interest. They were all made into one system, and provision was made for the appointment of a directorate and their operation as one. Consequently such roads as the various constituent companies had, already the property of the state, became consolidated in the possession of one company of which the state held the ownership. Then the clause to which my hon. friend refers provided that the times for the commencement and completion of lines already authorized and specified in the second schedule—

—which certain of the companies comprised in the Canadian Northern system were authorized to construct, are hereby extended for two years and five years respectively after the passing of this act.

The various companies, when private companies, had the right to construct those roads mentioned in the schedule. The private companies are now owned by the state, and the state when consolidating these companies, extends the time within which that construction may go on. The state does not come to parliament and ask for a dollar to go on, or bind itself to go on, or express any intention of going on.

Mr. CANNON: I never contended that either.

Mr. MEIGHEN: It merely extends for its own benefit the right to construct which the original companies obtained. What in the world would be the sense in such a case of going to a committee? Now the hon. member has revealed just about the character of the obstruction we were subjected to. The House was kept day and night over a clause that merely reserved to the state the right to go on if parliament authorized it to do so and voted the money to do so later on. This was merely a keeping alive of charter rights that had already been accorded to a private company. That is what they forced closure on in this House. Could anything better illustrate the character of the opposition we had? We would have had to come back to parliament to get the money before we could build a line, and in every case we came in the constitutional way and had the money voted in estimates. Now, I wonder what is to be thought of an opposition that held parliament by the throat, talked against time all day and all night, forcing closure in order that a clause of that sort might be got through?

Mr. GRAHAM: If these had remained private companies, had they not been taken over by the government and had they wished to have their time extended as was done under this act, would they not have been compelled to come before the Railway committee?

Mr. MEIGHEN: Very good. But we would have had to come to parliament later for the money anyway, but a private company would not have had to come to parliament for the money. The private company would vote the money itself and go on; that is exactly the point. What on earth was the common sense of sending that clause to a committee, a clause that merely reserved the right to go on, merely kept the charters alive for the benefit of the state, when as a matter of fact if we should decide later to go on with even a single branch we would have had to come back to parliament for every cent of the money?

Mr. CANNON: I am not discussing the question whether it should have been referred to a committee. But the right hon. gentleman asked that one instance be pointed out where his government refused information,, and I have quoted one. We asked for information and we were refused it; that is the point.

Mr. MEIGHEN: What was the information asked for there?

Mr. CANNON: As to the revival of forty charters. I think parliament was entitled to some information as to where the railways were to be built, and so on.

Mr. MEIGHEN: What was the information asked for?

Mr. CANNON: The information asked was as to where the railways were to be built, the merits of each of the charters, the expenditures that we might be called upon to make in the future, and so on. With respect to every one of the questions put by the opposition at that time the government refused to give any enlightenment. That is the point before the committee.

Mr. MEIGHEN: This is getting better all the time. I rose first to answer the statement that we had refused to allow bills similar to these, providing for new construction, to go to a committee. This was given as the instance. I do not need now to review the argument; hon. gentlemen opposite are simply exposed. Now the hon. member says, "Oh, you refused to give information then, refused to tell us where the lines were going, what was to be the cost, and so on." Well, I have no recollection of the refusal, but we will assume it was done, if that will help the argument any. What on earth would that information have to do with the wisdom of maintaining the charters alive, when we owned the charters? That is the character of information that was asked. That was the character of information in respect of which parliament was held up, the time of the people wasted, the time of members wasted, whole nights consumed—just in order to make a demonstration, to try to create the impression that information was not given. That character of information had not the slightest thing on earth to do with the wisdom of passing the clause. The clause was manifestly wise in the first place. Nobody could get any benefit from it except the state. If it was providing money with which to go ahead as this bill is, certainly we should have given that information. When we asked for money and expressed any intention of going on at all we came on later and gave the information.

Mr. CANNON: It is only fair that before buying charters we should know what we are taking over. When my right hon. friend was Prime Minister he was buying all kinds of things without knowing what he was purchasing, but we want to know what we are buying when we are paying out public money.

Mr. MEIGHEN: We were not giving anything for the charters. We already owned them, and were merely by legislation keeping them alive. They are all set out here and everything about them is given. I am prepared to leave the matter with the committee.

Resolution reported, read the second time and concurred in. Mr. Graham thereupon moved for leave to introduce Bill No. 46, respecting the construction of a Canadian National Railway line from Lloydminister, in the province of Saskatchewan, northwesterly forty-five miles.

Motion agreed to and bill read the first time.

On motion of Mr. Mackenzie King the House adjourned at 11.15 p.m.

[Mr. Cannon.]

Wednesday, April 9, 1924

The House met at three o'clock.

UNITED CHURCH OF CANADA

Mr. MATTHEW R. DUNCAN (North Grey): Mr. Speaker, I desire to present the petition of the Owen Sound Presbytery opposing the United Church of Canada bill.

Mr. L. J. LOVETT (Digby-Annapolis): Mr. Speaker, I desire to present petitions from Digby Methodist Church, Bay View Presbyterian and Methodist Churches, Smith's Cove Methodist Church, Middleton Presbyterian Church, Middleton Methodist Church, Annapolis Royal Methodist Church, Annapolis Royal Presbyterian Church, Clementsport Methodist Church, Granville Ferry Methodist Church, Port Wade Methodist Church, Parkens Cove Methodist Church, Goat Island Methodist Church, Bear River Methodist Church, and Lawrencetown Methodist Church, in favour of the enactment of legislation to incorporate the United Church of Canada.

QUESTIONS

(Questions answered orally are indicated by an asterisk).

MR. A. ARONOVICI

Mr. SHEARD:

1. Has Mr. Aronovici referred to by the Minister of Railways in the session of 1923 as the Canadian National Railways' representative in France, been discharged or otherwise severed from the service of the said railways?

2. If so, why?

3. How much money altogether was paid said Aronovici in the service of the railways and for what length of time?

Hon. Mr. GRAHAM:

1. Resigned from service.

2. The re-organization of the traffic, colonization and development departments of the Canadian National Railways on the continent of Europe.

3. Salary from April 15, 1923, to December 31, 1923, at $1,250 per month	$10,625 00
Compensation for special services, December 1, 1922 to April 15, 1923	5,625 00
Travelling expenses	9,291 46
	$25,541 46

Also 150,000 francs, or approximately $7,500, in lieu of notice.

Mr. STEWART (Leeds):

1. When did A. Aronovici receive appointment as General Agent (or otherwise) of the Canadian National Railways?
2. What were his duties and his salary?
3. For what reasons did the Canadian National Railways management or the Department of Railways and Canals through Major Graham Bell or otherwise, press for Aronovici's resignation?
4. What moneys were paid Aronovici over and above his salary in connection with such resignation, or otherwise?

Hon. Mr. GRAHAM:

1. April 15, 1923.
2. General charge of traffic, colonization and development departments on continent of Europe; salary $15,000 per annum.
3. The re-organization of the traffic, colonization and development departments of the Canadian National Railways on the Continent of Europe.
4. 150,000 francs or approximately $7,500.

SOLDIERS' CIVIL RE-ESTABLISHMENT EMPLOYEES

Mr. McBRIDE:

1. What was the total number of employees of all classes in the Soldiers' Civil Re-establishment department at Ottawa—
(a) on the 31st December, 1921;
(b) on the 31st March, 1924?
2. What was the total salary paid to such employees—
(a) on the 31st December, 1921;
(b) on the 31st March, 1924?

Hon. Mr. BELAND:

1. (a) Total number of employees of all classes at Ottawa, December 31st, 1921, 1,178.
(b) Total number of employees of all classes on March 31st, 1924, 741.
2. (a) Total salaries paid to such employees December 31st, 1921, $1,348,664.
(b) Total salaries paid to such employees 31st March, 1924, $911,693.

Mr. MANION:

1. What is the total number of employees of all classes in the Soldiers' Civil Re-establishment department in Ottawa?
2. What is the total salary paid to such employees?

Hon. Mr. BELAND:

1. 741; consists of head office staff, and staff employed at the headquarters of the eastern Ontario unit.
2. $911,931.

MR. DUNCAN MARSHALL

Mr. SUTHERLAND:

1. Out of what vote of parliament have the payments been made which have been received by Mr. Duncan Marshall as salary and expenses, which payments total according to the government's return $19,937.98?
2. Under what clause of the Appropriation Act, or if not paid under the authority of the Appropriation Act, under what clause of any other act had the government authority to pay Mr. Marshall?

Hon. Mr. COPP:

Department of Agriculture.

1. Votes Nos. 51 and 14—1921-22.
Votes Nos. 52 and 14—1922-23.
Votes Nos. 50 and 14—1923-24.

2. Appropriation Act No. 1—1921—Section No. 2.
Appropriation Act No. 2—1921—Section No. 2.
Appropriation Act No. 1—1922—Section No. 2.
Appropriation Act No. 2—1922—Section No. 2.
Appropriation Act No. 1—1923—Section No. 2.
Appropriation Act No. 2—1923—Section No. 2.
Appropriation Act No. 3—1923—Section No. 3.

Department of Immigration and Colonization.

1. $300 paid by this department; was from vote for exhibitions, salaries and contingencies.
2. Appropriation Act, Vote 56, Department of Immigration and Colonization 1922-23.

CANADIAN NATIONAL RAILWAYS—COLONEL BALFOUR

Mr. STEWART (Leeds):

1. Was Colonel Balfour employed as head of the Immigration and Colonization department of the Canadian National Railways, or in any other capacity, and if so, at what salary and for what period?
2. Was he provided with a staff, and if so, what were the names and salaries of that staff?
3. What was the total amount of salaries and expenses of said Colonel Balfour and staff, up to the time he was sent back to England?
4. Is Colonel Balfour still retained on the payroll of the Canadian National Railways, and if so, at what salary and in what capacity?

Hon. Mr. GRAHAM:

1. Colonel Balfour was engaged to make investigation in connection with prospects for emigration of certain continental Europeans for colonization in Canada. He was engaged from January 1st, to May 31st, 1923, at a salary of £125 per month for four months, and $625 per month for one month. Upon completion of this work his engagement terminated.
2. No.
3. See answers Nos. 1 and 2.

Salary, Colonel Balfour..	$3,058.33
Expenses, Colonel Balfour.. ..	570.16
Total..	$3,628.49

4. No.

HUDSON BAY

Mr. DESLAURIERS:

1. At what distance are the ships used in provisioning the post of Port Nelson, in the Hudson bay, obliged to anchor to allow the transhipment of their cargo?
2. What is the rate, per hour, of the current at that point?
3. What is the speed, per hour, of the lighter?
4. What is the draught of the Nascopie?
5. What is the mean depth of the Hudson bay according to the latest soundings, and what is the length and width of said bay?
6. What was the cost of the dredge sent to said bay during the war, how long was it in service, how many men were employed on same, and how long did they remain there after work ceased?

Hon. Mr. GRAHAM:

1. Seven and one-half miles, if draft 21 feet and over.

2. About four miles per hour.

3. Six to seven miles per hour.

4. About 21 feet.

5. The mean depth over the outer bar 19 miles from the Nelson wharves at high water of neap tides is 33 feet. Hudson bay is 530 miles long and 450 miles wide.

6. The suction dredge, Port Nelson, with pontoons cost $371,881.26. It was in service during the working seasons of 1915, 1916 and 1917. The double shift crew, including pontoon tenders, consisted of 29. The crew was discharged as soon as the dredge was placed in winter quarters at the end of each season's work.

EXAMINER OF PATENTS

Mr. HARRIS:

1. Why has the Commissioner of Patents abolished the position and dispensed with the services of the examiner who has had charge of this work?
2. Who is to examine such applications for patents, and what are his qualifications for such work?
3. Was not the examiner competent to do the work?
4. What are the reasons for his dismissal?
5. What representations have been made on this matter by the chemical and metallurgical industries and professions?

Hon. Mr. STEWART:

1. Assuming that the position referred to is that of the patent examiner who is charged with the examination of chemical, electro chemical and metallurgical patent applications, the Minister of Trade and Commerce abolished it for the reason that he was of the opinion that the duties of the position could be performed by remaining members of the examining staff in addition to the other duties assigned to them.

2. Remaining members of the examining staff as follows:

[Mr. Graham.]

Chemicals.—M. A. Belanger, a pharmaceutical chemist, a graduate, 1890, of the Ontario College of Pharmacy affiliated to Toronto University. Service in pharmacy thirteen years; examiner of patents twenty-three years. had charge of chemical applications 1908, 1909, 1910.

Electro Chemistry.—J. H. Young, a graduate of Queen's University, 1910 with a degree of Bachelor of Science in electrical engineering. Patent examiner eleven years. Had charge of electro chemical applications in 1914.

Metallurgy.—J. T. Mitchell, a Bachelor of Science in engineering of Glasgow University, Scotland 1909, taking the usual course in chemistry prescribed for engineering students. Assistant draughtsman, The Steel Company of Scotland, Hallside Works, Newton, (furnace work). Engaged in metalliferous mining in Rhodesia, South Africa (mill work, amalgamating, retorting and assaying gold). From June 1913 to September 1920, employed by a prominent firm of Canadian patent attorneys in preparing and prosecuting patent applications before the Canadian and United States Patent Offices. Entered the Patent Office in 1920.

L. C. Prittie, B.Sc. of Queen's University in mining with metallurgical option acts as assistant to Mr. Mitchell.

3. All examiners whose positions have been abolished were considered competent for their work. The examiner in question has not shown the capacity of other members of the staff.

4. The holder of the position referred to was not dismissed. This position was one of three abolished for the reason given in No. 1, and as a consequence the services of the holder were dispensed with.

5. Evidently unaware of the qualifications of the remaining members of the staff, fifteen in number in addition to the senior examiner and five assistants, certain chemical and metallurgical industries and professions have represented that the abolition of the position in question would injuriously affect such industries.

C. G. S. GULNARE

Mr. BLACK (Halifax):

1. Has the Canadian government steamer Gulnare been laid up?
2. If so, on what date was the steamer laid up and for what reasons?
3. Who was placed in charge of this steamer?
4. What salary was paid to the person in charge?
5. Who is now in charge of the steamer Gulnare and what is his salary?

Hon. Mr. STEWART (for Mr. Cardin):

1. Yes.

2. The Gulnare was laid up on October 25, 1923, as the survey work on the gulf of St. Lawrence was completed for the season. On account of the reduction in the Geodetic Survey estimates it was decided to keep the Gulnare laid up for the fiscal year 1924-25.

3. The steamer was placed in charge of Captain O. J. Morin, who has been in continuous charge since April, 1920, and has given very efficient service. He is thoroughly acquainted with the gulf and lower St. Lawrence area and it is of vital importance to our Geodetic Survey that he be retained for the completion of this work. In addition to guarding the boat, Captain Morin will be kept busy effecting needed repairs.

4. During the fiscal year 1923-24 Captain Morin was paid a salary of $160 per month.

5. Captain O. J. Morin, at a salary of $160 per month.

COLONEL JOHN McCOMBE

Mr. HANSON:

1. What position does Colonel John McCombe hold with the Department of Soldiers' Civil Re-establishment?

2. What is his salary?

3. On whose recommendation was he appointed?

4. Is he carrying on at any other government work at the present time?

5. If so, what work?

6. What are his duties in connection with the Department of Soldiers' Civil Re-establishment, and how many days' time has he given to these duties during the past year?

7. How much money has he drawn in salary for the past fiscal year?

Hon. Mr. BELAND:

1. Part time Inspector of Medical Services.

2. $3,300 per annum.

3. Director of Medical Services, Department of Soldiers' Civil Re-establishment.

4 and 5. No.

6. (a) As directed, to inspect hospitals, sanatoria, clinics and all District Medical staff of the department, to report thereon; to suggest reductions in personnel that may be effected without impairing the efficiency of the service. (b) 175 days.

7. $3,300.

APPEALS UNDER PENSION ACT

Mr. CLARK:

1. On what grounds were all appeals refused under Section 12 (2) of the Pension Act as amended in 1923?

2. Can the Federal Appeal Board and the Pension Board legally award pensions on compassionate grounds under said section as amended?

3. If so, what classes are covered by the amendment?

Hon. Mr. BELAND:

1. The interpretation placed by the joint Federal Appeal Board and Board of Pension Commissioners on section 12 of the Pension Act (as amended 1923) is that a compassionate pension or allowance can only be made where pension has been refused because the death or disability of the member of the forces was due to improper conduct. Even under this interpretation no action towards the award of a compassionate pension or allowance is possible by the joint board on account of the words used in the enactment, viz: "because such case did not form part of any class of case." In the first part of section 12 provision is made for cases arising out of improper conduct consequently they do not form part of a class of case for which no provision has been made. Furthermore, the words "because such case did not form part of any class of case" exclude the interpretation that the discretion vested in the Pension Board is to be exercised by the members of the Pension board and of the Appeal board sitting jointly.

2 and 3. Answered by No. 1.

REPATRIATION OF FORMER BRITISH SUBJECTS

Mr. CLARK:

1. Is the government aware that citizens of the United States who were born in Canada, or who were formerly British subjects, are required to reside in His Majesty's dominions for a period of not less than five years, before they can be repatriated?

2. Does the government propose to introduce legislation during the present session by way of amendment to the Naturalization Act whereby such citizens may become repatriated in a shorter period of residence than that now required by the act in its present form?

Hon. Mr. COPP:

1. Yes. The interdepartmental committee appointed by the Right Honourable M. W. Ridley, Secretary of State for the Home Department, on the 9th of February, 1899, reported on the 24th July, 1901, and dealt with the question of re-admission of denaturalized British-born subjects as follows:

Sec. 35. "We do not think it is necessary to maintain the distinction made in the act of 1870, section 8, between "re-admission" and "naturalization." A person who has become an alien under the provisions of the act must before he or she is qualified for re-admission fulfil the same conditions as are required for

naturalization. We see no sufficient reason for distinguishing between a statutory and any other alien, and consider that it would tend to the simplification of the law if the provisions of section 8 were repealed and not re-enacted." This section was, no doubt, considered at the Imperial Conferences which resulted in the approval of The Naturalization Act, 1914.

2. The provisions of the Naturalization Act were settled after discussion at the Imperial Conferences of 1907 and 1911. This legislation is uniform throughout the British Empire, and amendments could be dealt with only after consideration at an Imperial Conference.

CANADA HIGHWAYS COMMISSION

Mr. KELLNER:

1. What are the duties of the Canada Highways Commission?

2. When was the commission created?

3. Does the commission disburse or administer the grants to the provinces under The Canada Highways Act?

Hon. Mr. GRAHAM:

1. The duties of a Commissioner of Highways, according to the classification of the Civil Service Commission, as approved by Order in Council (P. C. 1184) June 1st, 1920, are as follows:

Under the direction of the Deputy Minister, Department of Railways and Canals, to administer the Canada Highways Act and control the distribution of Dominion grants to provinces for highways; to confer with and give information to provincial legislatures and highway engineers relative to highway matters; to promulgate rules and regulations affecting the construction of highways coming under the act; to supervise the inspection of highways and pavements to ensure conformity with terms of the grant; and to perform other related work as required.

2. May 15th, 1919.

3. The commission recommends payments to the provinces, as provided by the act, on report of its inspecting engineers and auditors.

CANADIAN NATIONAL RAILWAYS—EQUIPMENT

Sir HENRY DRAYTON:

1. What orders have been placed for cars, engines and other equipment by the Canadian National Railways or any company incorporated therein or any other company the majority stock of which is held by the government of Canada, in the years 1922 and 1923?

2. With what companies and at what prices and terms were such orders placed, and when?

3. Were any of such orders given on a "cost plus" basis, and if so, to what companies and for what quantities?

4. Were such orders on such terms approved of by the government?

[Mr. Copp.]

Hon. Mr. GRAHAM:

1. and 2. During the year 1922 equipment was ordered as follows:—250 Refrigerator cars for Chicago, New York & Boston Co. built by American Car and Foundry Company at a price of $3,132.11 each. 1 Gasoline motor car from the National Steel Car Corporation at $27,500.00 plus Sales Tax.

During the year 1923 equipment was ordered as follows:—

Locomotives.	Price.	Total including Sales Tax.
16 Mountain Type, Canadian Locomotive Co.	$74,500 00	$1,245,640 00
16 Consolidation type, American Locomotive Co.	47,165 00	754,640 00
5 Pacific type, American Locomotive Co.	56,000 00	230,000 00
35 Mikado type, Montreal Locomotive Co.	66,500 00	2,431,453 75
10 Mikado type, American Locomotive Co.	56,795 00	567,950 00
8 Mikado type, American Locomotive Co.	56,625 00	451,208 00
10 Mikado type, Canadian Locomotive Co.	66,500 00	694,925 00
10 Switchers, Canadian Locomotive Co.	41,000 00	430,749 00
8 Switchers, American Locomotive Co.	37,570 00	300,560 00
5 Switchers, Lima Locomotive Co. ..	51,700 00	258,500 00
5 Switchers, American Locomotive Co.	38,092 00	190,460 00
3 Switchers, Lima Locomotive Co. ..	40,000 00	120,000 00
7 Transfer switchers, Canadian Locomotive Co.	52,500 00	384,037 00
Passenger equipment.		
x-35 1st class coaches, Canadian Car & Foundry	35,443 81	1,296,357 35
x-6 Comb. 1st & 2nd coaches, Canadian Car & Foundry ...	35,443 81	222,232 19
50 Express refrig. National Steel Car .	10,550 00	551,237 50
x-20 Baggage cars, Canadian Car & Foundry	24,750 00	517,275 00
x-10 Baggage cars, National Steel Car	24,750 00	258,637 50

Passenger equipment.—*Con.*	Price.	Total including Sales Tax.
x-30 Sleeping cars, Canadian Car & Foundry	49,400 00	1,548,690 00
x-10 Mail cars, Canadian Car & Foundry	29,650 00	309,842 50
Freight equipment.		
250 Refrig. cars, American Car & Foundry	3,132 11	783,027 50
1000 40-ton box cars, Canadian Car & Foundry	2,550 00	2,669,750 00
1000 40-ton box cars, National Steel Car	2,555 84	2,670,852 80
500 40-ton box cars, Eastern Car Company	2,555 20	1,277,600 00
750 60-ton Box cars, Canadian Car & Foundry	3,200 00	2,508,000 00
250 60-ton Box cars, National Steel Car	3,200 00	834,000 00
1000 40-ton Auto cars, Pressed Steel Car Co.	2,275 00	2,275,000 00
600 40-ton Auto cars, Canadian Car & Foundry	2,625 00	1,645,875 00
400 40-ton Auto cars, National Steel Car	2,625 00	1,097,250 00
100 General service cars, Eastern Car Company	2,950 00	295,000 00
100 General service cars, Pressed Steel Car Co.	2,300 00	230,000 00
100 Hopper cars, Eastern Car Company	2,750 00	287,375 00
100 Hart Ballast cars, Canadian Car & Foundry	3,264 50	341,140 00
12 Depressed centre flats, Canadian Car & Foundry	5,930 00	74,362 25
8 All Steel snow plows, Eastern Car Company	10,500 00	87,780 00
32 Ore cars, Nichols Chemical Co.	650 00	20,800 00
6 Battery cars, International Equipment Company	44,500 00	267,000 00

This equipment was all ordered on competitive bids.

The locomotives and cars which were ordered in the United States were for service in the United States.

3. Orders indicated by an "x" were purchased on a "cost plus" basis. Tenders were called for, but the management did not consider them low enough to warrant placing orders at prices quoted; therefore the management fixed an upset price, somewhat lower than the lowest quotation, and arranged with the companies on that basis, the maximum not to exceed the upset price arranged. By this arrangement the management were assured that the equipment would not exceed a maximum cost, with the added advantage that if the car companies made any saving over and above the upset price the management would be entitled to it. As a result, in most cases, the management have received credit notes from the equipment builders on the cars so built.

4. No orders placed on authority of the president.

CANADIAN NATIONAL RAILWAY—TIES

Mr. WILSON:

In the accounts of the Canadian National Railways is the cost of creosoted ties, replacing ordinary ties, charged to capital?

Hon. Mr. GRAHAM: No.

CANADIAN NATIONAL RAILWAYS—HOME BANK

Sir HENRY DRAYTON:

1. When the million dollar cheque was drawn on the bank used by the Canadian National Railways for deposit in the Home Bank, what was the remaining balance to the system's credit in the bank on which such cheque was drawn?

2. What was the total amount of other cheques drawn on said bank then outstanding, including payroll cheques?

3. What was the total amount of further cheques drawn on the said bank down to the end of the then current month including payroll cheques?

Hon. Mr. GRAHAM:

1. $3,146,180.50.
2. $759,453.75.
3. $14,524,690.90.

CANADIAN NATIONAL RAILWAYS—FIXED CHARGES

Mr. ARTHURS:

The answer to question No. 11, given on March 31, stated that the fixed charges of the Canadian National Railways as of date December 31st, 1922, were $59,400,476, but the report of the Department of Railways and Canals, 1923, gives $62,454,627, as the amount of those charges at that date.

Which figure is correct?

Hon. Mr. GRAHAM: The fixed charges as published last year included interest on inter-company securities and advances. In the interval the various companies have been

co-ordinated and combined into one system and this year's statement of fixed charges is exclusive of inter-company holdings. To make the 1923 figures properly comparable the fixed charges of 1922 had to be re-stated. In addition the first figure mentioned in the question does not include the fixed charges of the Central Vermont; the figure from the annual report of the department does.

ST. MALO WORKSHOPS—EMPLOYEES

Mr. DECHENE:

1. Has a Mr. Young been recently appointed assistant foreman in the workshops at St. Malo to replace a Mr. Langis?
2. If so, has Mr. Young a sufficient knowledge of the French language to give orders to the employees who work under him?

Hon. Mr. GRAHAM:

1. Yes.
2. Yes.

Mr. DECHENE:

1. Were two persons, named Hughes and Jackson, employees of the National Railway, at the workshops at St. Malo, in the city of Quebec, accused of larceny?
2. If so, on what date?
3. Have the accused been admitted to bail?
4. Did a trial take place?
5. If not, why?

Hon. Mr. GRAHAM:

1. Hughes, no. Jackson, yes.
2. September 10, 1923.
3. No.
4. No.
5. Charge withdrawn.

MR. M. P. FENNELL

Hon. Mr. BAXTER:

1. Was M. P. Fennell appointed to be Trade Commissioner in Europe?
2. By whom was he appointed?
3. Was the Civil Service Commission consulted and what was their action?
4. At what salary was the appointment made?
5. What was the reason for the appointment?

Hon. Mr. STEWART (Argenteuil): The answer to this question is no.

SOLDIER SETTLEMENT BOARD—OFFICE RENTS

Mr. COOTE:

1. What amount was paid for rent of offices by the Soldier Settlement Board for the fiscal year 1922-23 at (a) Edmonton, and (b) Calgary?
2. How many feet of floor space are covered by the rentals in each case?

Hon. Mr. KING (Kootenay):

1. (a) Edmonton, $15,276.67; (b) Calgary, $8,400.00.

2. Floor space Edmonton, 10,325 square feet from April 1, 1922 to February 28, 1923, (11 months), and 5,423 square feet for March, 1923. Floor space Calgary, 6,000 square feet.

[Mr. Graham.]

LATE CAPTAIN PERCY R. WHITE

Mr. BLACK (Yukon):

1. Did the government issue a policy or policies of soldiers' insurance on the life of the late Percy R. White, Captain, 39th Battalion, Canadian Expeditionary Forces?
2. If so, what was the amount of each such policy?
3. Who were the beneficiaries under each policy?
4. On what plan of insurance were such policies issued?
5. (a) What was the rate, and (b) amount of premiums collected for such insurance?
6. Did the government pay any amounts under any of such policies?
7. If so, what was the date and amount of each such payment under each policy?
8. To whom and for whom was each of said payments made?
9. If such payments were made to an official administrator for the infant son of the insured, what were the dates and amounts of each such payment and to what official administrator were such paid?
10. Were any deductions made from any of such payments?
11. If so, what are the particulars of such deductions?

Hon. Mr. BELAND:

1. One policy was issued.
2. $2,000.
3. Florence G. White, wife, and Charles R. White, son.
4. Twenty-pay life.
5. (a) Rate $4.88 monthly; (b) Total premium collected $53.68.
6. Yes.
7. (a) To Mrs. Florence G. White on her own account: November 25, 1922, $200.00; December 6, 1922, $179.70; July 27, 1922, $179.70.

(b) To Mr. F. W. Harcourt, official guardian, province of Ontario on account of Charles R. White: January 31, 1923, $379.70; August 14, 1923, $179.70.

8 and 9. Answered by No. 7.

10. No amount was deducted from the insurance payments, but pursuant to Section 10, of the Returned Soldiers' Insurance Act, the amount paid in excess of $500 was deducted from the pension subsequently awarded to the widow and child.

11. Answered by No. 10.

Mr. BLACK (Yukon):

1. What was the rate of pension issued to Mrs. Florence G. White, widow of the late Percy R. White, Captain, 39th Battalion, Canadian Expeditionary Forces, on account of the death of the said Captain White?
2. From what date did such pension accrue?
3. What was the date and amount of each payment made to said Florence G. White on account of said pension and how was the amount of each such payment arrived at?
4. What was the date and particulars of the amount of each payment made to Charles R. White, infant son of the said late Captain White, or to the official administrator for said infant?
5. What deductions, if any, were made from pension payments to the said Florence G. White, giving particulars of all such deductions?

6. What deductions, if any, were made from pension payments due to said infant, showing particulars of such deductions?

Hon. Mr. BELAND:

1. $66.67 per month.

2. July 25, 1921.

3. (a) On 18th March 1924, a payment in the amount of $1,691.41 representing:

(i) Pension to Mrs. White from July 25, 1921 to February 29, 1924, at $66.67 per month.. ..	$2,081 82
(ii)*Pension to Charles White from July 25, 1921 to October 31, 1922, at $15 per month..	228 39
Total..	$2,310 21
Less insurance payments in excess of $500	618 80
	$1,691 41

(b) On March 31, 1924, $66.27 being pension for the month of March.

4. Pension payments were not issued to Charles R. White nor to the official administrator on his behalf.

5. Answered by No. 3.

6. Answered by No. 3 and 4.

*As Charles R. White attained the age of 16 years on 31st October 1922, pension is not payable on his account subsequent to that date.

PENSIONS AND COST OF LIVING BONUS

Hon. H. S. BELAND (Minister of Soldiers' Civil Re-establishment and Health): On April 2, as will be found by reference to page 944 of Hansard, Hon. Mr. Manion asked the following question:

What is the total amount of money involved in the cost of living bonus added to the ordinary pensions of the soldiers and their dependents.

This question I answered as follows:

(a) To disability pensioners $4,184,375; (b) To dependents as pensioners, $3,679,200; Total, $7,863,575.

I am now advised by the department that there was an error in the computation of these figures and I therefore wish to correct them. The answer should have been:

(a) To disability pensioners $4,099,334; (b) To dependents as pensioners, $2,227,021; Total, $6,326,355.

I am sorry to have involuntarily made a statement somewhat inaccurate.

Mr. MANION: Might I ask the minister as to what classes are not given a bonus as the bonus amounts to fifty per cent and therefore should, if all were affected, amount to over $10,000,000 as the total pensions are about $33,000,000. Those above the rank of captain are not given the bonus I understand. What other classes are missed?

Mr. BELAND: It will occur to my hon. friend that, for instance, the pension for children under the age of 15 and 16 is fixed by statute at $15, $12 and $10.

Mr. MANION: They do not come under the bonus?

Mr. BELAND: No, they do not come under it. There is a class of pensioners under the denomination of dependent parents, sisters or brothers whose pension is awarded and assessed at the discretion of the board. The pension is commensurate with the need and also the degree of the dependency. This class does not come under the bonus provision, and there are other cases.

QUESTIONS PASSED AS ORDERS FOR RETURNS

RIFLE SIGHTS

Mr. ARTHURS:

1. Has the government through the Department of National Defence given a contract for the supply of rifle sights or bases to McKay & Fraser Limited of New Glasgow, Nova Scotia?

2. If so, how many rifle sights or bases and at what price?

3. Were tenders asked before contract was awarded?

4. Does the department contemplate further orders for rifle sights or bases or does this order cover the present requirements of the department?

5. Are these rifle sights or bases adapted for use in target practice or for active military service?

6. What officer of the Department of National Defence recommended the purchase of said rifle sights and bases?

VICTORIA BRIDGE—MONTREAL

Mr. ARCHAMBAULT:

1. What was the total amount of tolls collected in 1923, on the Victoria bridge between Montreal and St. Lambert?

2. What was the total expenditure on said bridge, in 1923, for (a) maintenance, (b) salaries, (c) repairs?

3. What were the tolls collected on said bridge accruing from (a) railways, (b) electric tramways, (c) motor cars, (d) all other vehicles, (e) pedestrians?

4. How many motor cars crossed the bridge during said year?

5. How many motor cars crossed the bridge during the months of June, July, August, September and October, 1923, respectively?

UNOPPOSED MOTIONS FOR PAPERS

EGG GRADING AND MARKING

Hon. Mr. STEVENS:

For a copy of all correspondence, telegrams, and other documents exchanged between the Minister of Agriculture of the Dominion, or any officer in his department, and the Minister of Agriculture of British Columbia, or any officer in his department, regarding the regulations respecting the grading and marking of eggs.

SINGAPORE NAVAL BASE

Right Hon. Mr. MEIGHEN:

For a copy of all correspondence, telegrams, writings, or other documents, passing between the Department of External Affairs and the British government with respect to the naval base at Singapore.

CARILLON POWER DEVELOPMENT

Mr. DESLAURIERS:

For a copy of all letters, telegrams, correspondence and other documents in the possession of the government or any department of the government, regarding the development of the water-power at Carillon and permission to sell such power to the United States.

CANADIAN NATIONAL RAILWAYS—MARITIME FREIGHT

Mr. MacLAREN:

For a return showing (a) the number of tons of freight handled by the Canadian National Railways in and out of Portland during 1922 and also 1923; (b) the number of tons of freight handled by the same railway company during the same years in and out of St. John, New Brunswick, and in and out of Halifax; (c) the number of tons of freight handled by the Canadian Pacific Railway during the same years in and out of St. John, New Brunswick.

PULPWOOD COMMISSION

Hon. Mr. STEVENS:

For a copy of all evidence or statements made before the Royal Pulpwood Commission by Mr. Piché and other witnesses, members or officers of the government of Quebec.

Hon. Mr. GRAHAM: In the absence of the Acting Minister of Finance (Mr. Robb) I would ask my hon. friend to allow the motion to stand until the minister is in his seat.

Motion stands.

CANADIAN NATIONAL RAILWAYS—TIES

Mr. CHAPLIN:

For a copy of all letters, papers, reports and other documents relating to the purchase of railway ties by the Canadian National Railways or any of its officials, including correspondence with the firm or firms from which the said ties were purchased, reports on the price or prices of same, and also returns and vouchers showing the cost of all creosoting plants either under construction or completed by the Canadian National Railways, during the year 1923.

Hon. Mr. GRAHAM: I should like my hon. friend to let this motion stand and he and I will have a conversation about it. As a matter of fact there are between two hundred and three hundred under tie contracts and it will be easily seen what an amount of correspondence is involved in these transactions. If there is any particular contract, or any particular dozen of contracts, we will be glad to let my hon. friend have the information. I want to point this out though, as coming from the board; they would prefer that their private business—this is private in a way—should not be made public in parliament any more than is necessary. It is not considered good business for a company of that size and dimensions to have all its transactions disclosed publicly, particularly as some of them are running at the present time. If my hon. friend will let the motion stand he and I will have a little chat about the matter and see if we can come to an understanding.

[Mr. Stevens.]

Mr. MEIGHEN: May I inquire if the minister would consider the information asked for in this motion as in any sense confidential?

Mr. GRAHAM: I have not had an opportunity to discuss the matter with the management. Some of these contracts may be only partly carried out; there may be something in them that is confidential, or not so much that as the fact that objection is taken to spreading information before the public as to entire contracts. I do not think any private company would like that to be done on such a scale.

Mr. CHAPLIN: I am quite willing to let the matter rest for a few days until I have talked the matter over with the minister. I might remind him, however, that formerly questions of this kind were asked and I do not think we, when on that side of the House, ever refused to give the information as to a year that had gone by. I realize that the business of the railway company should not be disclosed to its competitors. I do not want to ask for information as to current matters, but as to matters that are closed there ought not to be any difficulty. However, I will be glad to talk the matter over with the minister.

Motion stands.

CANADIAN NATIONAL RAILWAYS—SALES OF PROPERTIES

Sir HENRY DRAYTON moved:

For a return showing all properties sold by the Canadian National system or any company incorporated therein or operated thereby during the years 1922 and 1923, and showing the dates of such sales, the names and addresses of purchasers and the consideration paid in each case.

Hon. Mr. GRAHAM: The House will remember that on motion of the right hon. leader of the opposition (Mr. Meighen) a

return similar to the one requested in this motion was brought down last year. That return I think dated down as recently as June, 1923. It would save a lot of trouble if the hon. member (Sir Henry Drayton) would consider it an answer to this motion provided we completed the record from the date of the last return down to the present.

Mr. MEIGHEN: If all the information that would come under the general scope of this return is furnished up to that date inclusive, then certainly all that should be brought down now would be the continuation.

Motion agreed to.

CANADIAN NATIONAL RAILWAYS—OFFICIALS

Mr. DOUCET moved:

For a return showing the names of all officials of the Canadian National Railway system, inclusive of superintendents and officials or special employees drawing salaries higher than superintendents, together with the salary of each.

Hon. Mr. GRAHAM: An order very similar to this was passed the other day, and the reply by the Canadian National Railway Board did not include salaries. The railway is run by a board by virtue of the statute, and the response to this return would have to be the response of the Canadian National Railway Board.

Mr. MEIGHEN: In that connection. I say to the minister first, that nothing of that character could possibly be considered as confidential when it refers to officials; and secondly, in the United States this material is published by the commission which has charge of such railway matters, and is a matter of public information. It would seem to be unnecessary to conceal it in Canada; but it would be utterly inexplicable coming from this government after its attitude some years ago.

Mr. GRAHAM: That applies to all railways in the United States.

Mr. MEIGHEN: Yes.

Motion agreed to.

Mr. MEIGHEN: I understand that this motion, No. 6, is carried. Is that correct?

Mr. GRAHAM: Yes, carried with the explanation.

Mr. MEIGHEN: You cannot carry an explanation.

SAVINGS BANK DEPOSITS

PROPOSAL FOR PROTECTION OF SPECIAL SAVINGS ACCOUNTS

Mr. L. J. LADNER (Vancouver South) moved the following resolution:

That, in the opinion of this House, a special committee of the House be appointed to inquire into and report to the House on the question of amending the Bank Act in order to provide for the establishment in the chartered banks of Canada of a special savings account or other class of accounts for savings deposits in addition to those now existing, whereby all holders of deposits in such special savings account in any one bank, or branch thereof, shall be protected or guaranteed against loss up to the sum of $3,000 according to a similar principle as that now provided for in sections 62 to 69 inclusive of the Bank Act relating to the protection of bank notes by the establishment of a fund known as the Bank Circulation Redemption Fund, or that such special savings account be established in accordance with some other principle of insurance, the premium of which will be paid by the depositors or the chartered banks of Canada, or both or in such other manner as the committee may consider capable of giving reasonable protection to depositors of money in savings accounts in such sums as the committee may determine.

Mr. MANION: In reading the resolution to the House, his Honour the Speaker mentioned my name as seconder. In seconding the motion I may say I am doing it pro forma. I have nothing whatever to do with it, but as the Speaker mentioned my name, I thought I would let it go in that way.

Mr. SPEAKER: If the mover wishes to associate himself with some other seconder, he is at liberty to do so. As I found no other name coupled with the motion, I saw the hon. gentleman sitting near by and I mentioned his name as seconder. Of course if there is no objection to it, no harm will be done.

Mr. LADNER: The mover of this resolution hopes that before his remarks are concluded the pro forma seconder will be the real seconder. Some days ago we had rather an extended discussion in the House on the subject matter of the Home Bank. The speeches on that occasion were largely delivered in a critical tone, and quite properly so. The purpose of this resolution is to bring to the attention of hon. members of this House some suggestion in the nature of a practical scheme in order that future depositors may be protected better than the depositors have been protected in the past. The purposes of the resolution are as follows:

To provide a definite and practical remedy for the immediate protection of the savings deposits of the great masses of our thrifty citizens.

To re-establish the confidence of the people generally in all our banking institutions.

To make possible the continuance of our smaller banks in the field of competition with the larger ones, and thus provide better service to the people of Canada.

To stop the flow of the people's savings into government bonds, government savings banks and long term investments, and to encourage the placing of the people's savings in our chartered banks, where they properly belong, and in this way to assist industry, agriculture, commerce and business in the development of our country.

The whole situation and the general interest of the public with respect to banking conditions in Canada have arisen largely from the merger of certain banks since the parliamentary committee made their report last year, and that interest has been still more increased by the failure of the Home Bank. It is not my intention to deal extensively, if at all, with that subject, but I would ask hon. members of the House to take the position of the ordinary citizen, and, putting it in a concrete form, I will ask hon. members to journey with me to Fernie, British Columbia, and to go out where the coal company is operating at Coal Creek. Let us take the position of the workingman, the small business man, the thrifty person who wishes to deposit his money in a bank and to have protection. At Coal Creek there was a little building which constituted the office of the company. At one end of the counter in the building was the pay office of the coal company and at the other end was the teller of the Home Bank. There was no other bank or means by which these men could deposit their money unless they went several miles. I will take, not a theoretical, but an actual case of a man who had occupied a prominent position and who had saved $7,200, in order that his daughters, the oldest of whom was sixteen years of age, might be taken from this place which was far in the country to some city where he could give them an education and establish them in the world as any father would like to establish his daughters. He decided, no doubt, to conduct his saving in a thrifty manner. What does the average man do? What, perhaps, did this man do? He sees a sign which tells him something about this particular bank. In glaring headlines he finds that this bank is authorized under the Bank Act to carry on business; that no institution can receive deposits unless it is carrying on business under the Bank Act. He finds that this bank has a capital authorized of $5,000,000, a capital paid up of $1,960,000 and a rest account of $550,000. Being a careful man, he wants to make further investigations.

[Mr. Ladner.]

How can he do so? He does not understand the returns which are given to parliament and very few men do. He picks off the counter where he is giving his deposits to the bank, the eighteenth annual report of the 31st May, 1923, of the Home Bank of Canada. Let us see what convinces him in this report. He finds first a splendid array of directors and officers. Then there are set out the branches, seventy-eight in number, throughout Canada, this indicating a very large and important institution. Further along he observes that dividends have been paid regularly; that the deposits of the people of Canada have been placed in this institution up to the large sum of $22,000,000, and that is a very great assurance in itself. He finds that the total assets are given at $28,000,000. Still further he looks for the auditor's report, and he finds that this is given pursuant to the Bank Act and the regulations of parliament under law. A portion of this report reads:

> The foregoing balance sheet has been examined with the books and vouchers at the head office, and with the certified returns from the branches, and is in accordance therewith. . . . .The cash has been checked and the securities of the bank verified, at its chief office, both on the 31st of May, 1923, and also at another time during the year. The cash and securities of one of the branches have also been checked, and in each case they have agreed with the entries in the books of the bank with regard thereto.

Then he turns to the report of the directors and he finds it stated that:

> The net profit for the year, after providing for bad and doubtful debts, rebate of interest of unmatured bills under discount, payment of municipal taxes, cost of management, etc., amount to $232,539.17.

The president gives this information. The auditor of this company is Mr. Jones, so the president tells the shareholders that:

> Mr. Jones' name will be submitted at this meeting for reappointment as auditor for the ensuing year... It is hoped that the changes enacted will accomplish the objects intended.

He finds that the general manager makes this comment on the solvency and strength of this institution:

> But have carried out measures of retrenchment that will inspire additional reassurance for the future.

Finally, the irony of the whole situation is embodied in this resolution of two innocent shareholders:

> That the thanks of the shareholders be tendered to the general manager, the assistant general manager and the other officers of the bank for the efficient manner in which they have respectively discharged their duties during the past year.

My purpose in reviewing that report is this: What has parliament done under the law as it stands to-day, to safeguard an ordinary citizen who takes ordinary precautions to protect

his savings? There is not the protection under the law to-day, and protection can be given if parliament is disposed to investigate the matter sufficiently and to provide that protection. In this particular case, what was the situation on the 31st May, 1923? The $550,000 of reserve was wiped out; the $2,000,000 of capital has disappeared; the whole thing can be stated in this way, that the report was a sham, a farce and a crime upon the people of Canada. In my opinion, this should not be allowed to be repeated because we cannot have a second Home Bank failure in Canada. If the government stands aside and appoints royal commissions and waits for something to turn up, we are going to have further complications in our banking institutions and we are going to have public confidence shaken still more than it is to-day. We are going to find the savings of the people drifting across into the United States, taken from our banks and put into government bonds and long-term investments, thereby imperilling and restricting the development of the industry and commerce of this country.

Some days ago when the hon. member for East Calgary (Mr. Irvine) moved this resolution, the hon. member for Pontiac (Mr. Cahill) moved an amendment, what one might call a "chloroform" amendment. The intention, according to the Journal, was to thwart and eliminate any investigation or any remedies which might and should be provided. Nevertheless, the amendment was passed.

I wish, at this stage, to repeat one or two observations that I made a few days ago with regard to the centralization of the banking business of Canada. I would ask the government seriously to consider the situation as the facts stare them in the face if they make the most cursory examination of reports which have been given to parliament by the banks themselves. We need not be under any confusion about this. We have the past before us and the present is merely a connecting link between the past and the future. The signs of the times point most decidedly to the elimination of all our smaller banking institutions and the centralization of the banking business in four or five of the largest banks of this country. What are these signs? You need take only the official returns given by the banks each month under the Bank Act and examine those in four or five respects. I have made this examination during the past thirty years. The number of our banks carrying on business under competition in Canada in 1867 was 22; in 1890, 40; in 1900, 36; in 1910, 28; and in 1924, 14. But we must, in fairness to the banking system of this country —and it is a good banking system as such— admit that banking facilities have been extended by the branches of the banks. In 1890, the banks had 402 branches; in 1900, 663; in 1910, 2,368, and at the end of 1923, they had over 4,400 branches carrying on business and giving service to the people of this country. The capital invested in all the banking business in Canada is as follows:

1890	$60,000,000
1900	67,000,000
1910	100,000,000
1923	123,000,000

But while the capital has increased approximately the small extent of 84 per cent from 1900, the volume of business handled by the banks has increased by over 1,100 per cent. In 1900 we had $1,500,000,000 according to the returns and in 1923 this had increased to $17,000,000,000. I would call the attention of the House to another significant fact, that while the capital has apparently increased, such a large amount of money has been placed in bank premises and real estate by the banking institutions that the liquid capital in 1923 was only $47,000,000 as against $60,000,000 in 1900 and $74,000,000 in 1910. All these facts are obvious to anyone who will study the situation. Perhaps the most astounding feature of my analysis, which is as accurate as possible, having been checked two or three times, is that out of a total of some $2,000,000,000 of deposits in the banks of Canada not less than 70 per cent are in the hands of the four largest institutions, leaving 30 per cent of deposits to the ten smaller banks that are struggling to exist in the field of competition. That in my opinion is the most amazing, the most important and the most significant feature of all the signs that point towards centralization.

Let us see what the situation has been in the past thirty years. In 1890, 30 per cent of the deposits were in these four largest banks, while 70 per cent were in the other banks. In 1900, 40 per cent were in the four large banks and 60 per cent in the others; in 1910 the proportion stood at 45 per cent in the four and 55 per cent in the others; and in 1923 the percentages were respectively 70 per cent in the four largest banks and 30 per cent in the rest of our banking institutions.

Mr. MARCIL (Bonaventure): I do not like interrupting the hon. gentleman, but I think, Mr. Speaker, that the present discussion is out of order. It is a well-known fact that when any subject has been referred for consideration to a committee of the House, no resolution dealing with the same questions

involved shall be debated. I find that on March 27, a resolution was adopted in this House by which the whole question of banking and the protection of the interests of depositors generally was referred to a standing committee for consideration. The proposition advanced by my hon. friend (Mr. Ladner) would be quite properly debatable at the present time had that committee, to which this subject was referred on March 27, already submitted its report. I question very much whether the hon. member is in order in discussing this matter to-day in the absence of that report. I may quote May on this point:

> Until the report and evidence have been laid upon the Table it is irregular to refer to them in debate, or to put questions in reference to the proceedings of the committee. If a committee, at the conclusion of their inquiry, make a final report to the House, the sittings of the committee are assumed to have been closed; and if further proceedings were desired, it would be necessary to revive the committee.

Mr. McMASTER: No doubt the hon. member is addressing the House, because we can see his lips moving; but it is impossible for us to hear a word he says.

Mr. MARCIL (Bonaventure): I am citing May in support of the objection I have raised to the discussion of the motion before the House. I stated that I had grave doubts as to whether the hon. member was in order in proceeding, in view of the fact that on March 27, the House adopted a resolution referring the Bank Act and everything connected therewith, as well as the Home Bank situation and the question generally of protecting the interests of depositors, to a standing committee for consideration and report. That committee is the select standing committee on Banking and Commerce, whose report upon the questions referred to it is not yet before the House, and the hon. member (Mr. Ladner) is now moving for the appointment of a special committee to deal with some of these questions. I am submitting that until the report of the other committee is before the House the present discussion is out of order.

Mr. LADNER: The motion of the hon. member for East Calgary (Mr. Irvine), to which my hon. friend is referring, was stated in very general terms. That resolution may or may not relate to the specific proposal which I am now asking the House to consider. It may simply investigate a general principle; and although I have not by me the authority on the question, I submit that under the rules, where the House is asked to consider a specific and concrete proposal and refer the same to a special committee, such a motion is entirely distinct from any general question which a select committee of the House may be considering.

Mr. BAXTER: May I suggest, Mr. Speaker, that the distinction has been very well drawn.

Some hon. MEMBERS: Louder.

Mr. BAXTER: Oh, wait until I get up steam. A distinction may very well be drawn between debating a matter that has been referred to a select committee of the House and the appointment of a committee which will withdraw from any other committee, a specific question which does not seem to be clear under the circumstances. If this resolution sought to express an opinion as to what should be done in regard to something that has been referred to a committee it would be encroaching upon the subject matter so referred. But this is a concrete proposal, to place a specific part of the subject in the keeping up a special committee to be appointed for the purpose of considering it, and I submit that it is entirely different from the case cited by my hon. friend.

Mr. SPEAKER: Does any other hon. member desire to speak to the point of order?

Mr. MACLEAN (York): A motion similar to this, I understand, has already passed the House.

Mr. SPEAKER: The hon. member will find that motion in the Votes and Proceedings of Thursday, March 27, 1924.

Mr. MARCIL (Bonaventure): The original motion of the hon. member for East Calgary was amended and the following resolution was finally adopted by the House:

> In the opinion of this House, in view of the failure of the Home Bank and of the fact that official prosecutions and inquiries have been instituted, including the royal commission which has been appointed to investigate the facts alleged in the petition represented by the depositors of the Home Bank and the affairs of the bank generally; and considering that the evidence received and to be taken before the several tribunals will be available for consideration, the select standing committee on Banking and Commerce should be instructed to consider the provisions of the Bank Act with a view to recommending such amendments to the act as will better protect the interests of depositors generally and will prevent similar occurrences in the future; and also to consider the report of the royal commission in its bearing upon these matters and with respect to the possibility of saving the Home Bank depositors from loss.

The whole question therefore has been referred to a standing committee of the House and until the report of that committee has been received I submit that the present discussion is out of order.

Mr. LADNER: Does the hon. member say that the whole question has been referred to the committee?

Mr. MARCIL (Bonaventure): Yes, everything connected with the banks and the Home Bank, as well as the protection of depositors generally.

Mr. RYCKMAN: The resolution, as it appears on page 730 of Revised Hansard has reference to the Home Bank, and when it refers to the depositors of the bank, and the affairs of the bank generally, the reference, I submit, is to the depositors of the Home Bank. The concluding sentences of the motion of the hon. member for East Calgary (Mr. Irvine) show that the hon. gentleman had reference to the Home Bank situation. I am not speaking as one entirely in sympathy with the resolution now before the House, but I think it must be apparent that the present motion deals with the larger field of savings accounts generally and is certainly distinguished from the object of the resolution of the hon. member for East Calgary. In a word, no one can read the resolution as it finally passed the House without coming to the conclusion that the depositors concerned are those of the Home Bank, and that where the reference is to depositors generally it is to depositors of the Home Bank by reason of the context, the preceding clause and the succeeding clause both referring to Home Bank depositors and Home Bank affairs.

Mr. SPEAKER: Does any other hon. member desire to address the Chair?

The question before the House is whether or not this is the revival of a previous debate. Is it in order to move a resolution to refer to a special committee the question of protecting the depositors of any bank by the creation of a redemption fund when another debate bearing on this point took place a few days ago? As the senior member for St. John and Albert (Mr. Baxter) stated a moment ago, this is a concrete case. True, on the 27th March the House decided to refer to the committee on Banking and Commerce the question of whether depositors generally should not be protected by an amendment to the Bank Act. This might be said to include the subject matter of the present resolution, but I see a distinction in the fact that in one the reference is vague and general, while in the other there is a specific plan proposed to protect depositors. It aims at creating a new machinery by which the savings of depositors will be guaranteed.

The rule is well known, and will be found in May's Parliamentary Practice at page 267:

> It is a rule, in both Houses, which is essential to the due performance of their duties, that no question or bill shall be offered that is substantially the same as one on which their judgment has already been expressed in the current session.

And at page 289 the rule is commented on as follows:

> It is a wholesome restraint upon members, to prevent them from reviving a debate already concluded; and there would be little use in preventing the same question or bill from being offered twice in the same session, if, without being offered, its merits might be discussed again and again.

At first sight I might be of the opinion that this resolution is a revival of the earlier debate, but I do not find that substantially, to use the language of May, the same question is involved which was then at issue. A concrete plan, a redemption fund, is now proposed to protect depositors of money in savings accounts in the chartered banks of the country. Under these circumstances I am inclined to permit that the debate be continued, but I would suggest to the hon. member that later on he amend his motion and refer the question with instruction to the committee on Banking and Commerce and not to a special committee.

Mr. LADNER: Mr. Speaker, I think your suggestion is the best method of handling the matter and I am quite willing to adopt it.

The proposal which I am submitting to the House is that savings accounts up to a limit of $3,000—because I do not think it is practical to guarantee deposits in excess of this amount—should be protected under a principle of insurance somewhat similar to that relating to the protection of bank notes. There was a time when the holders of bank notes were ordinary creditors, but the chartered banks, alive to their interests, and out of consideration for the public interest too, because it was in the public interest—

Mr. IRVINE: If I may interrupt the hon. member—supposing I had $12,000 to deposit, could I not make four deposits in so many banks, and be protected to the extent of $3,000 in each case?

Mr. LADNER: I do not see that there would be any objection to dividing the money into four deposits as suggested. On the contrary, I think it would be an advantage because it would distribute the deposits among several banks, and their services would be extended accordingly.

In 1879 the Bankers' Association came to parliament with the request that legislation be passed to give priority to the holders of bank notes against the estate of a defunct bank.

That priority extended not only ahead of all other creditors, but to my knowledge it is the only instance in which debts due to the Crown take second place. I do not think I can better explain to the House what then took place than by quoting from a little pamphlet, Canadian Banking, written by the late Sir Edmund Walker. It seems to me that in the death of Sir Edmund Walker Canada has lost one of her big men. He was not only a philanthropist, but a patron of art and literature, and he also took a keen interest in education. In a word, he was the type of man that helps to build any country in a real and material way. At page 22 I find the following:

4 p.m.

> Since 1880 note issues have been a prior lien upon the estate of a bank, prior even to a debt due to the Crown. This legislation was prompted by the failure of a small bank in 1879, which did not pay its notes in full. The bankers had urged such legislation in 1869, and if they had succeeded in obtaining it then, we should be able to say to-day that, without further security than this prior lien on all assets, note issues had always been paid in full, no matter how bad the failure of the issuing bank.

Then on the following page this will be found:

> And, while it might be confidently asserted that all bank issues secured by being a first lien on the estate of the banks would eventually be paid in full, it was nevertheless true that, because of doubt and delay, the notes of a suspended bank might fall to a discount for the time being. To meet these two defects, the bankers at this time proposed the following new features which were adopted by the government:
>
> 1. To avoid discount at the moment of suspension of a bank, either because of delay in the payment of the note issue by the liquidator, or of doubt as to ultimate payment, each bank is obliged to keep in the hands of the government a deposit equal to five per cent on its average circulation, the average being taken from the maximum circulation of each bank in each month of the year. This is called the Bank Circulation Redemption Fund, and should any liquidator fail to redeem the notes of a failed bank, recourse may be had to the entire fund if necessary. As a matter of fact, liquidators are almost invariably able to redeem the note issues as they are presented, but, in order that all solvent banks may accept without loss the notes of an insolvent bank, these notes bear five per cent interest from the date of suspension to the date of the liquidator's announcement that he is ready to redeem.

Sir Edmund Walker refers to the experiences in the United States, and says:

> Both of these reforms were suggested by the writer but, like many other features in our act, they were prompted by the experiences of the United States in the period preceding the national banking system.

Mr. SHAW: Is it not a fact that the bankers opposed the institution of the very reform the hon. member has mentioned, and that parliament took action regardless of the views of the bankers?

Mr. LADNER: On the note issue?

[Mr. Ladner.]

Mr. SHAW: In connection with the protection of the note issue.

Mr. LADNER: It was Sir Edmund Walker, one of the leading bankers, who made this proposal, and the bankers fought for it for a number of years before they were able to get it through.

Mr. MACLEAN (York): Now it is there, does the bank sidestep it and make the redemption of the notes the first charge on depositors' money in the bank?

Mr. LADNER: If the hon. gentleman had followed the previous lines I have just read, he would have heard that the priority is created by statute, by the law of 1880, which gives a prior lien on the estate of a defunct bank ahead of all other creditors whatsoever, including the Crown. I should like to finish the quotation from Sir Edmund Walker's pamphlet:

> That our bank notes are abundantly secured, so far as the public is concerned, seems evident from the fact that a note circulation at 31st December, 1922, of $176,201,351 was in effect secured by a prior lien on total assets of $2,618,638,104, to which must be added the double liability of the shareholders on the capital stock of the banks, making a total of $2,743,930,038. That the banks are not likely ever to lose a dollar by the system of guaranteeing each other's notes seems quite clear. Daily redemption and other features in the act make it difficult to create a forced circulation and, although we have had several fraudulent bank failures, there has never been a case where the assets on which we had the first claim did not easily protect us.

Now my proposal is this: If the bank notes which at any given moment during the period of non-business hours are held chiefly by the banks of the country are so amply and exceedingly well protected, surely parliament in the face of the experiences of the past, and especially in the face of recent experiences, has a duty and a responsibility to protect the man on the street who knows nothing about these matters. Some will say that this proposal is not practicable, that you cannot work out a guarantee system. In fact, I have here a little booklet issued by the Bankers' Association called The Bank Act—Its Audit Provisions and the Suggested Guarantee of Deposits, and the whole substance of the contention in this booklet is a general guarantee of deposits.

I have explained how it was worked out in the United States, where a guarantee of all the deposits was undertaken by each bank guaranteeing the deposits of the others. My proposal is entirely different from that. My proposal is that we build up an insurance fund on a system of premiums by which the citizen who wants mainly protection, who puts

his money into the bank so that he may find it there when he wants to draw it out a week or a month or a year from now, will pay a portion of the premium, and the banks also, having increased deposits by reason of this arrangement, will pay a portion of the premium. How does this work out? We have the authority of one of the foremost men perhaps in the world on this particular question, of which he has made a study. In the report of the Comptroller of Currency for the United States, in 1921, at page 20, it is explained:

Full Guaranty of Bank Deposits for $25 per Million of Deposits

During the past six years of stress and strain the losses to national bank depositors from failure have been reduced to such unprecedentedly low figures that an annual charge on all deposits of 2½ ten-thousandths of 1 per cent of deposits would have been more than sufficient to cover all such losses accruing to the depositors of our national banks for this period. It is believed that it would be preferable at the outset, as heretofore recommended, to begin with a guarantee of deposit balance of $5,000 or less, and the guarantee plan can then be developed in accordance with the lessons of actual experience.

If the excellent record made by the national banks in the past six years in the matter of immunity from failure should be maintained the government could meet all such losses arising from the guarantee of national bank deposits from 1 per cent of the annual profits which it will receive as a franchise tax from the operation of the Federal reserve banks, if we assume that these reserve banks in the future should only make one-half of the net earnings which they have made in the past 12 months.

No better way can be suggested for bringing into life and getting back into circulation the enormous amount of money which is now hidden and stored away and kept out of banks by timid and nervous owners.

That is exactly the situation in Canada. He continues:

The guarantee of all deposits of national banks of $5,000 and less would give complete security for their money to more than 19,000,000 depositors whose deposits in the national banks at this time are estimated at about six thousand million dollars. The remaining individual deposits in national banks, about eight billion dollars, stand to the credit of depositors whose balances exceed $5,000 and those larger depositors aggregate in number, according to the latest estimates, considerably less than 5 per cent of the total number of depositors.

In Canada the deposits on demand, which are saving deposits, amounted on September 30, 1923, approximately to $1,100,000,000, or a little over one billion dollars, so if the same rate were applied in Canada, where according to the best authorities we have fewer failures, the rate of insurance would really be less than it is in the United States, and it would still further be less when you consider that this proposal asks for a guarantee of deposits only up to $3,000, and not for the full amount of the deposits, upon which basis the Comptroller of Currency works out his report.

To summarize, my proposal in short is this: To leave the business of banking with all its intricacies, as it has been built up on experience, exactly as it is. Let the banker's skill and judgment and his responsibility go together. Parliament should not unnecessarily meddle in the complicated business of banking. But in addition to the existing accounts, current and savings, my suggestion is that we create this special class of account so that the man who walks off the street into one of these great pillared institutions and sees the figures across the window showing the bank's capital, but knows nothing about its balance or its solvency, will know that his money will be there when he wants to draw it out a week or a month or a year from now. It is not only the man who does not know much about banking that will take advantage of that class of account. Though that class of account will pay only 2.9 per cent on the money deposited, the depositors' money will be protected, and many people who wish to make deposits will deposit their money in this guarantee account. Others may prefer to put their money in the ordinary bank which they think is safe, and where they will draw three per cent. In this way not only will the depositors have protection, but there will be increased confidence in the banks. The confidence of the people in many of our banks has been shaken, and if we are going to have the smaller institutions remain in business we have to do something, and do it in the near future, in order to retain deposits in these smaller banks, and stop them wandering across into the United States or into our larger banking institutions, or into the Ontario savings office and other institutions throughout the country.

It is perhaps unnecessary for me to point out to the House that under the Bank Act our chartered banks have very great and very important privileges. They have the exclusive monopoly of the business of banking. They have the privilege of note issue, on which they earn large sums of money without, you might say, paying anything for it. They have the right of rediscount facilities under the Finance Act, whereby if they are short of capital they may take their securities to the government and say: "Here, we have these securities but we are short of money; you lend us the money on these securities," and the government at once issues notes in accordance with the Finance Act.

Mr. MACLEAN (York): Where do these notes go?

Mr. LADNER: To the bank in exchange for securities.

Mr. MACLEAN: (York): No, to the Central Gold Reserve in Montreal, where they are burnt and bank notes substituted therefor.

Mr. LADNER: The national notes are in addition to the notes the banks have issued. That is a different proposition. I suggest that a proposal of this kind should be placed under the Department of Finance.

Now I do not doubt that hon. members who oppose my motion will show that these facilities are provided by the post office savings bank; that if people want protection for their money they do not need to go to the chartered banks at all. I submit that such is not the case and for these reasons. In the conduct of the post office savings bank business you must appear personally at the post office wicket. There are no checking privileges, you cannot write cheques on the bank, you have got to go there and draw out your money. In British Columbia, for example, you have to file your application and wait until the application goes down to Ottawa, where the money has been deposited, and the funds come back. In other words between the time of your asking for your money and the time of receiving it a period of approximately fourteen days elapses. Furthermore, in the case of the post office savings bank you are only allowed to deposit $1,500 a year and the whole business and machinery connected with the institution is very slow. But there is a much more serious objection to that proceeding than any of those I have mentioned. I contend that it is unsound in principle and is not in the best interest of the country that governments, either federal or provincial, should open savings banks at all. If we had sufficient protection in our chartered banks you would not need to have the provincial and Dominion governments establishing banks from one end of Canada to the other, increasing the rate of interest in order to induce people to put their money into those banks, thereby attracting money from the chartered banks and paralyzing industrial and agricultural activities—because that money in the chartered banks is loaned in the interest of the industrial expansion of the country. The whole principle of these government savings banks is unsound; and for my part I should like to see the post office savings banks, the Ontario savings offices and the Manitoba savings banks offices, entirely wiped out, because that would be in the best interests of the very people that these institutions are intended to serve. Let us suppose, for example that we carried this principle even further than it has been carried. Let us suppose that every province has its savings banks as well as the Dominion, and that everybody is invited from motives of self-interest as well as for reasons of loyalty, upon every ground of sentiment and profit, to put his money into these banks, what would be the consequence? It must be clear as it is possible to demonstrate that to draw the savings from the chartered banks and the banking institutions would leave no money to develop the business and industry of the country. Therefore I submit, Mr. Speaker, that this deposit feature should not be encouraged by this government or by parliament.

Mr. WOODSWORTH: Where do these deposits go that are put into the provincial savings offices?

Mr. MACLEAN (York): They are growing every day.

Mr. LADNER: They are growing every day as my hon. friend (Mr. Maclean) says, because of the fright which the people have received. Now, in answer to the question of the hon. member (Mr. Woodsworth), these deposits presumably are to be kept on hand by the provincial government and repaid on demand. To that extent the provincial government is in the banking business. But that government will have no use for the money unless it is able to employ it for some purpose of its own. It naturally uses it in public works and the general conduct of government business with this result: That while the government presumably will repay this money on demand, the actual fact is that it has locked it up in permanent improvements. The government is therefore using for that purpose the savings of the people instead of going on the markets of the world and securing money at the cheapest price.

Mr. WOODSWORTH: Another question if the hon. member will permit it. If the government did not use this money for improvements and for the carrying on of its business would it not otherwise have to draw supplies from the regular chartered banks?

Mr. LADNER: No. My hon. friend must distinguish between the two classes of money. One is short term money which the banks loan at sixty, ninety or one hundred and twenty days and which they are free to draw on demand, or rather on fifteen days' notice. By experience the banks are able to estimate for how long a period people needing money will require it and they loan it for a specified time. That is short term money. The whole banking system of Can-

ada, however, as may be ascertained by reference to the charter of the Bank of Montreal, was designed to develop the commercial and agricultural business of the country. What the government wants, as I explained before, is investment money. It wants money that it can use to build roads and other improvements, and the taxpayers will have to provide for this on a sinking fund basis extending over a period of years. The government should go, when it needs money, on to the markets of the world and borrow at the very cheapest price it can. Bonds are issued for the purpose and at maturity these bonds are liquidated.

Mr. SHAW: Is it not a fact that the Post Office Act requires that the money deposited in the Post Office Savings Bank and in the provincial government savings office should be deposited in a chartered bank?

Mr. LADNER: That is not my understanding. I do not see how the Ontario government is going to pay four per cent on deposits, and then re-deposit that money in a chartered bank and only receive three per cent for it.

Mr. SHAW: I am referring to the Post Office Savings Banks and the provincial government savings offices.

Mr. LADNER: Well, the money in the Post Office Savings Banks goes to the Receiver General. Presumably it is there on demand, but the fact is that the government does not keep that money there, paying interest on it, receiving nothing for it and waiting for people to ask for it. I am of the opinion, on information received from an authoritative source, that the government uses that money in the course of its business. The point of my contention is that the government takes that money from the banks which should be used for the business and industry of the country. Now that is not a sound principle, nor is it in the interest of the country at large.

Mr. MACLEAN (York): Is it not possible to modernize the government savings banks? My hon. friend referred to the Receiver General's offices which formerly received deposits in Canada. I want to ask him how these offices have disappeared. For some reason these offices have surreptitiously disappeared from practically every province but two—the Maritime provinces and British Columbia. These offices have been closed in Toronto and Quebec. Why?

Mr. LADNER: I am sorry the Receiver General is not here to answer the question as to the surreptitious closing of these offices. I am not in possession of the facts that would explain it. I am endeavouring to advocate the principle which I claim to be sound in finance and sound in economics. That is that the government must not take the savings of the people from our chartered banks and sink them in public works when that money is needed in connection with the business of the country, and there is no man who has studied the proposal for a moment but will admit my contention.

I do not know that there is very much more for me to say on this question. I see that I have exhausted my notes but undoubtedly there is a great deal that can be urged for the proposal. My desire is to have parliament consider some constructive proposal that may be the basis upon which a more practicable scheme may be worked out. Parliament especially in view of the experience of the last few months should come to the aid of the citizen who avails himself of the banking privileges of the country and give him the protection to which he is entitled, even to the limited extent that I advocate. I cannot see how any hon. member can deny the justice, the merit, or the reason of such a proposal, and if any arguments exist against the working out of a scheme of this kind I should like to hear them. I have spoken to many people and have discussed the question with leading financiers of Canada and men who understand the subject far better than I do.

Before I sit down I must formally ask, with the leave of the House, that instead of the resolution being referred to a select committee, it be referred to the committee on Banking and Commerce. The Speaker made the suggestion and I had it in my mind. I move to strike out the words "a special" insert the words "the Banking and Commerce", and strike out the words "be appointed" and substitute therefor the words "be directed".

I think the formalities of parliament require the consent of the House to this motion.

The ACTING SPEAKER (Mr. Marcil, Bonaventure): The hon. member must obtain the unanimous consent of the House to amend his motion. Will this consent be given?

Some hon. MEMBERS: Carried.

The ACTING SPEAKER (Mr. Marcil, Bonaventure): Then the motion will be that this resolution, instead of being referred to a special committee will, if adopted, be referred to the Banking and Commerce committee.

Mr. H. E. SPENCER (Battle River): I wish to congratulate the hon. member for Vancouver South (Mr. Ladner) on bringing this all-important subject before the House. I cannot agree with his entire argument, but with part of it I am in complete accord. I intended to quote from a leading article in the Toronto Saturday Night in regard to insuring of deposits. I notice the hon. member who preceded me covered the points to a certain extent, and I will try to omit any repetition of his statements. The article in the Toronto Saturday Night reads:

> The main arguments in favour of such a system—

That is the system of insuring deposits—

> —according to the United States controller are, that it would bring from hiding places many millions of dollars of hoarded money, a contingency which we now genuinely face; that it would largely prevent runs on the banks, and that such a law would contribute largely to the unification and solidarity of the banking system.

Then it goes on to quote the very small percentage that it would cost to insure such deposits; this figure was given to us by the hon. member who moved the resolution. The article proceeds:

> It might be well if the members of the Canadian Bankers' Association discussed seriously the adoption of some such system, for as Mr. Cherry points out in his communication, stable and normal conditions are a prime necessity at this time.

I have been led to understand that banks have been bolstered up by the government for some years, and that hardly a year goes by in which some bank does not request the government to lodge deposits with them to help them through a crisis. I wish to place on record some figures that have been very carefully compiled as to the relation of the Dominion government to chartered banks in regard to deposits, and advances under the Finance Act. These figures relate to 1923 and the statement reads as follows:

> A statement of deposits made by the Dominion government in the various chartered banks shows that as deposits were reduced by the withdrawal of deposits by the public from a number of chartered banks in Canada last fall, (particularly the month of October 1923) deposits in these particular banks by the Dominion government were increased.
>
> While this policy was followed in regard to the Dominion, Union, Standard and Sterling Banks, the reverse policy was followed in the case of the Home Bank. To what extent did this policy of the government assist the four banks named, and to what extent did the reverse policy in the case of the Home Bank contribute to the failure of that bank?

In January 1923, taking the Dominion Bank, we find they had in current accounts and savings accounts $88,400,000 in that bank. I will not bother the House with April and July, but I can give the figures if required.

[Mr. C. Marcil.]

In October this amount had dropped to $77,600,000. Now let us look at the amount the government of Canada had on deposit in the Dominion Bank in these months. In January it had $1,800,000, and in October it had increased to $6,016,853, and there was due to the Dominion under the Finance Act $2,800,000.

In the case of the Union Bank we find that in the month of January the public had deposits to the extent of $92,900,000. In October that had dropped to $82,200,000. Turning again to the amount the government had on deposit, we find that in January it only had $268,000, while in October it had increased to $1,588,000, and under the Finance Act it had $12,500,000 in addition. In the case of the Standard Bank the same line was followed. In January they had $60,600,000 in public deposits. In October the amount dropped down to $48,100,000. On the other side we find the Dominion government had on deposit only $329,000 in January, but in October they increased the deposit to $8,600,000, while the bank owed under the Finance Act no less than $3,000,000.

Turning to the Home Bank for a moment, in January that bank had of the public's money $18,100,000. In the month of June that had increased to $19,200,000, but as far as the government deposits went, the deposits were decreased instead of increased as in the other cases. In January the government had in the Home Bank $243,000, but when the bank went smash on the 17th August the government had withdrawn these moneys, leaving only $9,000 there. Hon. gentlemen will notice from the aforesaid that when deposits were withdrawn by the public from the Dominion Bank, the Union Bank and the Standard Bank, the Dominion government increased its deposits with them, but in the case of the Home Bank the reverse took place. The public, having confidence in the Home Bank, increased their deposits in January from $18,100,000 to $19,200,000 in June, and when the bank went smash, although the Dominion government had the sum of $243,000 in the Home Bank in January, it had only $9,000 in that bank on the 17th August. The question arises, did the action of the government materially hasten the bank into liquidation?

In the discussion which took place in this House a few nights ago the ex-Minister of Finance (Sir Henry Drayton) stated that in his opinion this bank should not have been allowed to go to the wall. It looks very much as if they had intentionally saved the other banks. The question arises: Why were the depositors of the Home Bank not helped in the same way as the depositors of the other

banks and that bank kept alive? It is interesting to see what such a conservative paper as the Toronto Saturday Night has to say in an editorial with regard to the present situation of our banks:

The mere fact that a financial institution, manned by several men of eminence in the community, had been enabled to carry on business for years, sell shares and accept deposits, while literally bankrupt and so regarded by the inner circle of financiers, has robbed the community at large of that sense of security which the Canadian banking system was supposed to symbolize. Let it be remembered that last winter when the Bank Act was up for revision, the public received solemn assurances from eminent men that the Canadian system was the best ever devised for the protection of the public; and a few months later were confronted with the spectacle of the rankest failure that has been known in Ontario since confederation. What wonder if the psychological effect has been general distrust?

There was also this aggravating circumstance: The erroneous impression had been abroad that it was now the policy of the Bankers' Association, as a body, to take care of depositors in case one of its members fell by the wayside. This was the general impression gained from replies to critics when the whole question was before the parliamentary committee on banking at Ottawa last session. When this impression proved false, there arose a deep-rooted feeling among vast masses of people that the whole financial community was engaged in a conspiracy against them.

Now it is clear that the Bankers' Association and the Finance department of Canada must get together and do something to restore the public morale... It would perhaps surprise eminent members of the banking profession to learn how many thousands of people to-day believe that the reason they have resisted government inspection is that they have something sinister to conceal.

I have never been able to understand why no encouragement was given to the public at large, to place their savings in post office savings banks. The only reason I can see why more encouragement was not given is because of the intense propaganda put forward in all parts of this country that the present commercial banks were absolutely safe and could take care of or practically guarantee the deposits of the people. I do not understand why—I think it was in 1897—the interest on savings in the post office savings banks was cut down from four to three per cent, unless it was to prevent competition against commercial banks. I cannot understand why the people have not been encouraged to place more money in post office savings banks, particularly when the government has been borrowing continually for its needs. If we had increased the interest from three to four per cent or even to four and one-half per cent when the government was wanting money so badly; it would have been, not only a good thing for the public, but a great saving in the matter of interest to the government itself. Further, I do not understand why a restriction is placed on people using the post office savings banks, why there should be a limit to the amount of $1,500 per annum, and why, when anyone gets an amount of $5,000 placed in that department he should be refused any more interest. This looks very much as if all the regulations with regard to post office saving banks had been made to fit in with the particular wishes of the commercial financial institutions.

Mr. MACLEAN (York): Banks.

Mr. SPENCER: I do not intend to take up the time of the House in going over the unhappy history of what has taken place during this past year. I might, however, refer to these disasters as an orgy of failures. This came as an utter surprise to the people of Canada, particularly after the intense efforts that were made to remedy various deficiencies in the Bank Act last year, many of those efforts being unfortunately without effect. I should like to draw the attention of the House to the fact that the condition that we have gone through in the last eight or nine months was prophesied by a Canadian who had taken a very great interest in the financial life of this country during the past twenty years. I wish to point out the work of a Mr. W. L. Baker, once with the Standard Bank of Canada, who in 1921 issued a book entitled Money Monopoly vs. the Community Dollar in which he drew the attention of the Canadian people to the very serious condition of the banking institutions of Canada and the lack of all guarantees to the savings of the people. Some time before the Home Bank failure took place, the following rather extraordinary editorial came out in the Financial Post on February 23, under the title of Banking and Banking.

Canadian Banks are chartered by the Dominion government, and are operated under strict regulations as regards their trusts of money deposited by the public, and even in the event of failure there would be no loss to the depositors.

I wish the House to note that.

Shareholders might be expected to face a loss, but not those, who in good faith had placed their money in the keeping of the bank. Statutory provision provides against any such an eventuality.

Mr. W. L. Baker at once replied in the public press, in part saying:

There are no strict regulations, no statutory provisions which make loss to depositors impossible in the event of failure of a bank, and yet this is exactly what the Post says obtains in our Canadian system. There is no legislation which compels the bank to be any more careful in investing the savings of the people than restrictive or protective legislation regarding any phase of banking or banking funds.

The statements, coming out during this session, I am sure, will not only enlighten the people of Canada to the position they are

in, and the inability of the present financial institutions under the present Bank Act to guarantee the savings of the people, but create a demand for some system whereby the thrifty of this country can know that they can be guaranteed that their savings will be looked after. At a later date, again before these financial calamities came upon Canada, Mr. Baker, in writing to the Busy East magazine, made the following statement;

Canada is approaching a serious crisis in her banking business.

I desire to put that on record because no credit has been given those who have predicted the present situation and tried to guard the people against the tremendous losses which have been incurred during the last twelve months. I again express appreciation of the efforts of the hon. member for Vancouver South (Mr. Ladner), or any other hon. member of this House who may bring forward resolutions with the object of trying to improve the financial institutions of the country. I am entirely in sympathy with his amendment to have this matter go to the committee on Banking and Commerce, and I hope we shall be far more successful than we were a year ago. At any rate, I believe the matter will receive more sympathetic consideration.

Mr. W. F. MACLEAN (South York): While I do not altogether agree with the motion, I think it is proper that the matter under consideration should go to the Banking committee. I would point out this important consideration, that when a question comes up in parliament in which the depositors of the country are so much interested it is unfortunate that the Prime Minister (Mr. Mackenzie King), the Acting Minister of Finance (Mr. Robb) and, on this side of the House, the ex-Minister of Finance (Sir Henry Drayton) and other leaders should all be absent, so that it devolves upon private members to discuss the most momentous subject before the people to-day.

In regard to the post office savings bank, the hon. member whose motion is now before the House (Mr. Ladner) expresses the opinion that this institution is no good. Why is it no good? Simply because we have not made it so. Why do we not modernize this savings bank so as to provide that cheques shall be marked at the office of deposit and be acceptable in any other institution in the country, going through all the clearing houses? There seems to be an organized effort throughout the country, largely on the part of the banks themselves, to stifle the post office savings bank. During the last twelve or fifteen years I know that the government of the country was taking savings on deposit from the people all over Canada at the Assistant Receiver General's office in each of the various provincial capitals. I remember that the Deputy Receiver General's office in Toronto received deposits payable on demand from the public, and paid interest; and that practice prevailed throughout the country. I have been trying to ascertain just what has happened in the last fifteen or twenty years, and it seems that some one closed the Deputy Receiver General's office in Toronto against the receiving of deposits, while, for some reason or other, these offices have been kept open in the Maritime provinces and in British Columbia, as I am informed, so that deposits are still made and money withdrawn. Now, I should like to have the Acting Minister of Finance here to-day to inform the House how that change came about.

Mr. BUREAU: That will be a proper subject for investigation before the Banking committee.

Mr. MACLEAN (York): Yes, and this House, too, is a good place in which to investigate it, for we will have the Minister of Finance with us.

Mr. BUREAU: The Banking committee is a body delegated by the House to consider such subjects.

Mr. MACLEAN (York): But I submit that the responsible minister, who I hope is here to take care of the public interests, should be present to answer questions in reference to these matters.

Mr. BUREAU: Put your question on the order paper.

Mr. MACLEAN (York): I will bring it up at the proper time when I have the opportunity. What I am pointing out is that while this system of receiving deposits at the various offices of the Receiver General in Canada has been discontinued throughout Canada, it still obtains in the Maritime provinces and in British Columbia. The finest note we have in this country is the national note of Canada in one and two dollar bills. These notes circulate everywhere, and in the western provinces within the last few months national notes of five and ten dollars denominations have been used in the purchase, I believe, of grain and in other ways as well. We have the right to issue those, or larger, notes, but some one put a stop to it and the banks have sub-

stituted their notes for them. If the one and two dollar notes are good, why should not the fives, the tens, the fifties and one hundreds be issued in Canadian national notes instead of having bank notes? The bank notes have to be redeemed; and they are not redeemed, as the late president of the Canadian Bank of Commerce stated, by the banks themselves; they are actually redeemed by the money belonging to depositors in these banks. And when a depositor thinks he is going to get his money which he has placed in the bank he finds that a lot of it has been grabbed to take care of notes issued by the bank. That is something that should not continue. In the United States there is only one currency, the national currency; and the best currency in the world to-day consists in the national notes of the United States. The greenback to-day is the greatest note in the world, and next to that is our Canadian national note. We have these notes in circulation in Canada, principally ones and twos, and I see no reason why fives and tens should not be in use as well. That is a question which I should like to have the Banking committee investigate. I may say that we have issued notes of five thousand and ten thousand dollars, but the banks get them by way of discount with the government. Do they put those notes into circulation? Not at all; they deposit them in the Central Gold Reserve in Montreal. This of course is a sound institution, but it is eminently a bankers' institution; and the result of this is that the national notes disappear. They are all burned; and replaced by bank notes which go all over the country. So far these notes have been protected not by the government but by the money placed by depositors in the banks.

Now, I am aware that I am speaking to a very small House, but my voice will carry very much further than the precincts of this chamber, for there are people all over the country who are closely following this question. Let me say therefore that in my opinion the time has come when, first of all, we must modernise the post office savings bank so that the people may have their cheques marked, which cheques, when so marked, shall be legal tender in clearing house transactions. These cheques ought to go through the clearing house, and that I think, should be done on the day the cheque is taken to the bank. As things are at present it takes five days for the cheque to go from Toronto to Ottawa and return, while the period of this delay is ten days in the case of cheques coming from the western provinces. That is an absurd state of affairs. The present Postmaster General (Mr. Murphy), I am told, has in mind a scheme—in fact, I believe he has it in concrete form on his table—for the modernization of the post office savings bank. But we cannot hear anything in reference to this matter. Perhaps we might ask the Acting Postmaster General (Mr. Stewart, Argenteuil) whether he knows anything about it, but he too is out of the House and apparently there is no one available to answer this important question.

There is something else I want to tell the public. While we have stopped taking deposits at the various offices of the Receiver General in this country, the United States to-day is taking deposits, of amounts of up to five hundred or a thousand dollars, payable one year after date with interest at 4 per cent payable half-yearly. So that any man in the United States who does not consider the ordinary banks secure can go to the agency of the national reserve bank system, deposit anything up to five hundred or a thousand dollars, and get a certificate which is practically a bankers' receipt. That receipt is good for the amount deposited, at 4 per cent, payable half yearly, the whole payable within a year. Why have we not something like that here? They have a national reserve bank system in the United States. Why should we not have it? They have something like it in the Old Country in the Bank of England. But somebody does not allow these progressive measures to become law here. Although the Bank Act was revised last session any progressive amendments were denied. I may be only a weak voice in this country but I intend to raise these questions before the committee on Banking, namely, as to national notes taking the place of bank notes; as to the establishment of a national reserve bank system similar to that in the United States; and as to public deposits being received by the government. I give the Drury government credit for establishing provincial savings banks in Ontario. Already over $20,000,000 has been deposited by the people in these banks. They have no use for the old-fashioned savings bank account which has been enveloped in so much red tape. Even the Receiver General's offices in Toronto and other cities, which were once doing business and accepting deposits, have been tied up. Who is responsible for this action I do not know. I have raised the question in this House, but without obtaining any satisfactory information. When we get before the committee on Banking we will have it looked into. But there is chloroform all over the country, it is even in this House,

and neither the present Minister of Finance nor his predecessor is here when the question of our banking system comes up for discussion.

An hon. MEMBER: The Minister of Agriculture is in his seat.

Mr. MACLEAN (York): Perhaps he would be prepared to follow the example set by the province of Ontario. A national reserve bank system must come in this country and this parliament must face the question. There must be no other failures similar to that of the Home Bank; better provision must be made for the repayment of deposits. The public are entitled to protection similar to that proposed in this resolution. Anyway, something has to be done, and parliament and the government must take action to afford relief to the public. There is a national currency in nearly all other countries, but for some reason or other in this progressive Dominion we cannot have even a modernized system of post office savings banks.

And yet I have not any great fault to find with our chartered banks. They are giving great service to the public and they are making money in doing so. But they have great privileges, and some of these privileges must be regulated. Undoubtedly there must be security afforded the public by instituting a proper system of bank auditing.

5 p.m. You cannot take a bank statement to-day as being correct; in fact it is often misleading. They have an audit of banks in the United States; we have not. In the national reserve bank membership every bank is a check on its fellow-members, and in that way there is a constant checking up of all the member-banks. There are just as many bank failures in the United States as in Canada.

Mr. HUGHES: There are many more in the United States.

Mr. MACLEAN (York): But we can have a better banking system if parliament says so. Why is not the Prime Minister here to-day to answer this question in connection with our banking system? I grant that the Acting Minister of Finance (Mr. Robb) is busy to-day with the budget which he is to present to the House to-morrow. But where is the Prime Minister?

Mr. MARTELL: Here he is.

Mr. MACLEAN (York): "Oh, Willie we have missed you." He has come in since I started.

Mr. BUREAU: Does the absence of ministers dampen my hon. friend's inspiration?

[Mr. W. F. Maclean.]

Mr. MACLEAN (York): No, but now I will address myself to the Prime Minister.

Mr. BUREAU: I thought you addressed yourself to the country.

Mr. MACLEAN (York): I point out to the Prime Minister that when this question comes up in connection with our banking laws he does not happen to be in his seat, and his Minister of Finance is also absent. Of course, the Prime Minister is only responsible for what occurs during his term of office—and he did not draft the Bank Act. But I should like to know from him why we have not got a national currency; why the Receiver General's offices in Toronto and other cities, which some years ago received deposits from the people and paid them out on demand,—why these offices have been closed in Ontario and Quebec while they have been continued in the Maritime provinces and British Columbia.

After listening to the arguments presented by the two previous speakers, I say it is high time that this House approached the question of banking reform. We had it up last session, but the Bank Act was passed with very few improvements in it. Fortunately the question is coming up again this session, and I hope the government will take the lead in some measure of reform. But that reform must be in the direction I have stated. For instance, we must have a national currency in the place of bank note currency which, when a bank fails now, is redeemed by the deposits of the people. When a depositor goes to withdraw his money he is told, "Your deposit is weakened by our having to cash in for bank notes that the defunct bank issued." That should not be allowed to continue. There should be an absolute reliable national currency as good as gold, just as there is in the States.

Mr. BUREAU: Does my hon. friend mean to say that only silver and gold certificates are in circulation in the United States?

Mr. MACLEAN (York): No, national notes are in circulation all over the country.

Mr. BUREAU: Does he mean to say that there is no other currency save the federal currency?

Mr. MACLEAN (York): There is no bank currency there; there was for a time, but it has disappeared, and the only currency in the United States to-day is the national note and the national coinage. They have a national note there; we got it only in part. What is good enough for Uncle Sam is good enough for Jack Canuck. We want the same law in re-

gard to the post office savings banks. I hope now I have had the opportunity of presenting these ideas to the Prime Minister that we shall get some assurance from him that this question will go to the Banking committee, and that the Banking committee will take up the question of banking reform, including the substitution of national currency for bank currency, the opening of the Receiver General's office as a place for deposits, and the modernizing of the post office savings bank making it just as convenient for the ordinary depositor as the ordinary savings bank. All the modernization it needs is that the depositor can go to a post office savings bank and get his cheque marked and stamped; and when stamped that will go through the clearing house of all the banks at par.

Right Hon. W. L. MACKENZIE KING (Prime Minister): With respect to the suggestion of my hon. friend from South York (Mr. Maclean) that this be referred to the committee, the committee, of course, has powers to take whatever attitude it wishes in this matter, and I have no doubt that it will take into account the representations my hon. friend has made.

Mr. MACLEAN (York): Hear, hear.

Mr. W. C. GOOD (Brant): Mr. Speaker, with much of what the hon. member for Vancouver South (Mr. Ladner) has said I am in agreement, but I would not like to endorse everything that he has said in connection with his motion. I believe, however, that the subject matter is of very great importance, and that it ought to receive the careful consideration of the Banking and Commerce committee. It is very significant indeed that when the act was under consideration last year in the committee and in the House, Mr. Baker, who has been referred to by the hon. member for Battle River (Mr. Spencer) published a letter in the Ottawa Citizen, which has been already alluded to. I would like to quote one or two paragraphs from that letter in addition to the one quoted by the hon. member for Battle River. His letter contains an enumeration of the lack of safeguards then existing in our banking legislation. Mr. Baker says:

> There is no law restricting the amount which may be loaned to directors or to firms or companies controlled by directors.

That, I believe, was somewhat modified last year. Continuing:

> There is no maximum amount fixed by legislation which may be loaned to any one customer.
>
> There is no law stipulating that the bank shall hold any security for loans or that any percentage of its loans shall be secured.
>
> There is no distinction made between shareholders' funds, commercial deposits and the savings of the thrifty. The banks enjoy unusual privileges in the handling of deposits as "savings banks."

I may comment upon that, that these difficulties or defects in the pre-existing legislation are those which the suggestion of the hon. member for Vancouver South is designed to meet. There is no doubt at all that the matter is worthy of the most serious consideration. Continuing from Mr. Baker's letter:

> There is no legal requirement regarding the amount of cash reserves a bank shall carry, and possibly no sound reason why there should be, but other countries have such laws, and the fact that we do not, is mentioned merely to show the absurdity of the Post's claim that we have statutes which would provide for such an eventuality as a bank being able to lose for its depositors.
>
> There is no law to prevent any bank from wrecking itself by over-expansion, injudicious banking and permitting the bank's funds to be used in the speculations of a favoured clique, and no limits placed that would make shareholders alone the sufferers.

How we have seen these warnings fulfilled since the 1st of July last! Continuing:

> There is no law providing for either government or external inspection. We have shareholders' audit—the sop given to quiet public clamour for government audit, and anyone who studies the act providing for this delusion must recognize what a farce can be made of it.

Mr. Baker goes on to say:

> It is high time that the independent press of Canada should give the public real information on a subject of such vital importance and see to it that mutual admiration societies are not left entirely free to spread propaganda for the continuance of a system and policy which may lead to ruin.

I will not read the rest. I quote this to show that men who had an intimate knowledge of the banking situation gave timely warnings last year to have effective safeguards put in our act, but those who attended the committee know how impossible it was even to get adequate discussion of these matters, much less get any necessary amendment put through. The situation, however, is somewhat different this year, and I take it that he will be a brave man who will prevent the calling of witnesses or prevent discussion of these matters this year.

I have here a little pamphlet which I presume has been sent to all the members, written by a certain W. R. Morson, of Toronto. I do not know the gentleman, but I presume he is a man with some banking experience. The pamphlet is entitled A Better Banking System for Canada, and here is a very significant statement on page 2:

As an instance of the inefficiency of the present system, take the glaring cases of the Merchants Bank and the Home Bank. The circumstances that finally brought the Home Bank into insolvency were known to many people, myself included, five years ago.

I would like the Minister of Finance to note that. Here is a man who states that he knew the situation five years ago, but our Department of Finance that is supposed to keep track of these things apparently did not know it; or if they did they took no steps to protect the depositors. Continuing:

It is not conceivable that those irregularities could have continued so long under an independent audit and an independent scrutineer.

Further on under a section devoted to the guarantee of deposits he says:

With a proper inspection and power to correct abuses, it would be a perfectly safe undertaking to guarantee deposits. The Controller of the Currency at Washington has shown that the percentage of losses compared to deposits amounted to 1-2400th of 1 per cent per annum for six years previous to 1920, during which period the Federal Reserve was in operation.

I will not read the rest because this is probably not the time and place to enter into a detailed discussion of this matter. In conclusion, Mr. Speaker, I simply want to repeat my conviction that this question did not receive sufficient consideration last year; that if we are going to prevent this country from going through very, very serious times in the future, more serious I think than we can now imagine, we have got to grapple with some of the real problems that face us in this connection. I have very great pleasure indeed in supporting the amended resolution to refer this particular proposal to the select standing committee on Banking and Commerce.

Mr. HERBERT MARLER (St. Lawrence-St. George): I honestly think that the very question we are discussing to-day is comprised in the resolution which we passed on 27th March last. However, since that point which was brought up by the hon. member for Bonaventure (Mr. Marcil) was ruled out of order by the Speaker I see no reason why we should not discuss this very important subject to-day even though, perhaps, it may be to some extent an academic discussion. I congratulate my hon. friend (Mr. Ladner) on the manner in which he has presented this resolution. The motion is an important one. It calls for the appointment of a committee to consider measures for the purpose of guaranteeing certain classes of deposits. It involves the important principle, as the mover of the resolution will admit, of the guarantee of deposits. Now I think what we have to consider to-day in discussing this resolution, even though, perhaps, we may be having an academic discussion, is whether or not the proposal my hon. friend brings up is a feasible one or not. Is it practicable?

Mr. LADNER: When the hon. gentleman uses the term "guarantee," does he mean a guarantee by the government or by insurance, because the insurance principle is not a guarantee?

Mr. MARLER: If my hon. friend allows me to proceed with my argument he may be in a position to ask me some questions later on. There is no doubt whatsoever, Mr. Speaker, that the resolution deals directly or indirectly, by way of an assurance fund or otherwise, with the guarantee of deposits up to a certain amount, segregating a certain class of accounts in a particular manner up to the sum of $3,000.

Mr. BUREAU: The language of the resolution is "protected or guaranteed."

Mr. MARLER: I thought either the word "protected" or "guaranteed" was used. Now had this matter not been referred already to a committee, as I think it was so referred by the resolution of the 27th March, I do not know that I would be prepared to support the resolution, not because I am opposed to any principle which will assist depositors but because I am more or less opposed to a principle which will involve banking to a very serious extent indeed. The principle of guarantee of deposits, no matter how it may be taken—whether it may be taken by way of a guarantee fund, or whether the guarantee only extends up to a certain amount—cannot stop at the mere question of guarantee. It involves not only the question of guarantee itself, that one item in banking, but it must go down the line into the various banking transactions and more or less involve the principle of banking which we have in this country to-day. I think as my argument develops to some extent hon. members will see that. As a matter of fact the system of guarantee—in any form in which we discuss it or desire to place it before ourselves or a committee—is nothing more or less than a contract or surety issued. It means that someone else becomes the guarantor of or surety for the principal debtor, the principal debtor in this case being the bank whose deposits are guaranteed.

This sort of guarantee of deposits, I must admit is very attractive looking. It has, particularly at this time, an appearance that merits the most careful consideration. I do not deny that at all, but I do not think we should be led away by a matter of looks or

the name which we bestow on any proposal during this discussion. Perhaps we have on other occasions been led away by a system which we think may carry out, or is even certain to carry out, what we expect it to do under the terms of a resolution which has been adopted by the House. But if we look further and if we try and put that system into operation we will discover there are a great many difficulties which occur in connection with the actual law as put into force. Therefore I say I think we should discuss this matter in a dispassionate manner. I think we should not entirely fix our minds on the word "guarantee" alone and think that by reason of that guarantee being effected it is going to accomplish, or will accomplish, the object which is intended. That I may say, Mr. Speaker, is simply a preliminary remark I have to make, and I make it merely because I am trying to discuss this matter purely with an open mind, not with a view to opposition and at the same time to lay stress on what I state, that the question of a guarantee of deposits does not end with the guarantee of deposits alone but goes a good deal further.

Now, in most matters of banking, in most matters of law, in a great many other commercial affairs in life, we attempt in so far as we can to find various precedents to which we can look for experience. We are not altogether bound by precedents. We are not bound to say that a precedent which happened in this country or in that country is what might happen in this country if it were applied here, we are not bound to accept what actually did occur in other places; nevertheless in law, or in commerce, or in other walks of life, the question of what has happened under similar circumstances, is of importance because we are bound to learn from what did occur in other countries something that will be of assistance to us. We have got no precedent in this country as regards the guarantee of deposits direct or indirect. We have no such principle as to the guarantee of deposits direct or indirect by an insurance fund, or otherwise, in any of the great countries of Europe. We have no such precedents so far as I know—and I think I am right in making this statement—in Great Britain on whose system our banking system is based. We have no precedents to which we can look—if I mistake not, and I think I am quite right in making this assertion—in any of the great eastern states. We have, however, precedents in certain of the other states to which we can look and from which we can ascertain whether the system of guarantees turned out successfully in those states or not. I am not one of those who look to the United States for precedents, I must quite admit. I very much prefer to look for precedents to Great Britain.

An hon. MEMBER: To Turkey?

Mr. MARLER: Yes, Turkey has some good precedents too.

Mr. MACLEAN (York): National currency.

Mr. MARLER: Germany has a good national currency too, we might guarantee the deposits from Germany. As I was saying, there are no precedents in Great Britain to which we can look in a matter of this description, but there are certain precedents in the States. Now those precedents are such that they do teach us certain lessons. They deal with the question of guarantees both from a joint and several viewpoint and from a voluntary and involuntary viewpoint. They deal with the question whether guarantees had to be made by other banks providing the money was placed in one bank. We have those precedents in the United States which are of some value as showing the experience in that country. I am aware that hon. gentlemen have had placed before them a booklet published by the Canadian Bankers' Association. I think that booklet deals to some extent with the guarantee of deposits and deals briefly with certain of the incidents which I am about to relate to the House this afternoon. Those incidents in the booklet whereof I speak are more or less short in character, and I have taken the opportunity, in view of this important resolution, presented in such an able manner by my hon. friend (Mr. Ladner), to look into the various banking journals of the United States and also certain of the books dealing with banking there, in order to ascertain more in detail these questions which have been put before hon. members by the small booklet of the Canadian Bankers' Association.

Mr. LADNER: By way of information, has the member found any precedent where deposits were guaranteed on an insurance basis to a limited extent? The United States guarantees to which he refers were not limited and were effective in all the banks.

Mr. MARLER: My hon. friend is not quite right in his statement. The guarantees which took place in the United States were not all limited. Some were limited, some were voluntary and some were involuntary. As regards the insurance principle for the

guarantee of deposits which my hon. friend brings up, I will explain to him in a few moments that I have not forgotten what he stated in regard to the insurance principle, but I want to make my point absolutely clear in discussing the guarantee of deposits, and I am perhaps going more or less ahead of the argument I intended to make, but I want to make abundantly clear—and I might as well do it now—that if there is to be any guarantee at all it must be such a guarantee that there need be no explanation behind it, that anybody going to any bank and placing deposits there will know definitely and absolutely that if that bank fails these deposits will be paid. That is the only kind of guarantee that is worth anything. I do not care what is behind that guarantee, I do not care what is in front of it, and I do not care what conditions surround that guarantee. What I say is this —and I repeat it because it is a most important point in connection with this guarantee—that if any guarantee of bank deposits exists at all, it must be such that the poor man, the rich man, or whoever the man may be, and no matter in what bank he places his money, will know that if that bank fails that money is to be paid without any legal argument or without any conditions surrounding it, and that he will receive his money in a short time, without any legal entanglement.

Mr. MARTELL: Does the hon. gentleman believe that the government of the country should be the fairy godmother of the people in the way of giving a guarantee for everything that happens? We get too much government ownership and too much government guarantee.

Mr. MARLER: The only way I could answer my hon. friend would be to say that I agree with him that we have too much government ownership and too much government guarantee but I must disagree with him if he suggests that the government should be the fairy godmother of the people. I think that this time to-morrow he will find that the government is not the fairy godmother of everything in the country, but that remains to be seen. I was proceeding to deal with the question of guarantees, and was saying that the guarantee must be absolute.

Mr. COOTE: Would the hon. gentleman state that the bank notes which we have today have that absolute guarantee which he states must be extended to deposits if it is to have any value?

[Mr. Marler.]

Mr. MARLER: Bank notes at present have that guarantee because in the light of our experience I think I am right in saying that they have been paid in full from the time of confederation.

Mr. COOTE: Even if the statement that they have always been paid in full is correct, will the hon. gentleman say that they will always be paid in full under the system which we now have and which is set forth in the Bank Act?

Mr. MARLER: I cannot prophesy that they will always be paid in full. All I can say is that the system in force at the present time is a fair and reasonable one. I am giving my opinion now on the subject of guarantees and I say that if there is a guarantee at all it must be a good one, not a half or a quarter guarantee. It must be known that the guarantee is actually a guarantee which is worth something. I was going on to speak of certain instances which have happened in the United States and certain precedents which have been established there. There is the case of the state of Oklahoma one of the newer states I admit, but one of the first states to adopt a system of guarantee. It came about somewhat in this way. In 1907, hon. gentlemen will remember, the United States was going through more or less of a period of financial panic. A number of banks had failed. It was the year after the national election. Happily or unhappily in that election Mr. William Jennings Bryan, who was a candidate for president, placed in his platform as a principal plank the promise that there should be a guarantee of all deposits in the banks. I think that was a pretty good card politically. If Bryan had been elected president and the government had guaranteed the deposits in all the banks, it would have been a fine thing. At least, it was an admirable thing for him to say before the election that he was going to try and do it. What he would have done if he had been elected of course, is quite another story .

Mr. GARLAND (Bow River): Hear, hear.

Mr. MARLER: Do I hear my hon. friend from Bow River say "hear, hear?"

Mr. GARLAND (Bow River): It usually is another story.

Mr. MARLER: But in any event, after that happened, the Oklahoma territory and what was Indian territory were made into the state of Oklahoma, and a month or two afterwards, the state of Oklahoma

brought in a system of joint and several and absolute guarantees. I see that my hon. friend from Vancouver South (Mr. Ladner) is looking at me.

Mr. LADNER: Hear, hear, I am looking for the point.

Mr. MARLER: The point is a long way off yet I am only developing the subject. I know that this question of joint and several guarantee is not what my hon. friend (Mr. Ladner) believes it is.

Mr. LADNER: No relationship.

Mr. MARLER: No relationship to it at all. He believes in a guarantee, or some insurance fund, some more or less mystic form of guarantee. He did not tell us what the guarantee would be, but be believes in a guarantee.

Mr. LADNER: I wish to correct my hon. friend. I did say what it would be. I said it would be built up on the insurance principle, on an actuarial basis founded on experience, exactly in the way insurance companies build up their business. There is no distinction and it is a limited amount. If my hon. friend wishes to argue against the point I have raised, he should direct his very able mind to this point. I am afraid he is departing from it.

Mr. MARLER: I quite understand that my honourable friend wants to get at a guarantee system more or less along the lines of insurance, on an actuarial basis or something of that description. It sounds supremely simple, so simple that one might almost imagine that you could sit down at one of these desks and work it out. But I want to revert again to the question which I brought up with my hon. friend, namely, that if he has a system of bank guarantee of deposits, it cannot stop at a guarantee, it will go down into all the intricacies of banking. If he will have a little patience, I shall get into the subject much more quickly. I will not go on detailing all these cases which took place in the United States, although they are of interest. I must admit that the precedents which they show under the experiences which they had at the time were of considerable interest. I was, however, speaking about Oklahoma, under which state this law of joint and several guarantees was adopted. When that guarantee law was passed in the state of Oklahoma, it applied to state banks, not to national banks. It looked at first blush like a very good arrangement for the guarantee of deposits. It also looked like a very good card for attracting deposits to banks. Hence, because of the apparent power of this system to attract deposits, many banks which were national banks, to which the guarantee law did not apply, turned themselves into state banks. A few of the state banks in the larger cities, being afraid of the guarantee law, turned themselves into national banks. Consequently, it was interesting to ascertain what happened owing to this transition from state banks into national banks. What happened was this. You will remember that the law was passed in 1907. Out of one thousand state banks, in July, 1923, 450 were still in existence; 255 had withdrawn from the guarantee banks turning themselves into national banks; 125 had consolidated with others; 125 had failed, and 50 had been liquidated. That is what happened to the banks that turned themselves from national banks into state banks in order to come under the law of the joint and several guarantee. In 1922, the state of Oklahoma repealed this law, because sound bankers went to the legislature and stated that if the law was to be kept in force, they would have to go out of the banking business entirely or turn themselves into national banks. That repeal of the law which took place at that time at the request of prominent bankers took place because there was knowledge that a million dollars was outstanding and unpaid by reason of this particular guarantee fund.

I am going too quickly because I want to explain briefly what happened during the time this guarantee was in effect. As regards depositors, the effect of the guarantee was this: The law went into effect in February, 1908. At first blush the effect of this law was good. A great mass of deposits flowed into the banks of Oklahoma. As a matter of fact, deposits came not only from this new state of Oklahoma which was a few months old, but from neighbouring states, so much so that the neighbouring states had themselves to make laws guaranteeing deposits, but those neighbouring states did not make their laws in such wise that the guarantee was a several and joint guarantee but they made their laws on the fundamental principle of the law of suretyship. What was this test of the law of guarantee in the state of Oklahoma? The test came along very quickly. The law went into effect in February, 1908, and in May, 1908, three months later, came the first test of this law. The test was only a little one; it did not amount to very much. A little bit of a bank called the International Bank of Coalgate closed its doors. It may have closed its doors in order to put to a test this law of guarantee which the state of Oklahoma had passed. As soon as it closed its doors, state

officials walked into the bank, counted the cash, said that there was so much cash there, put the cash aside, put their hands into the till of the guarantee fund and took out of that fund sufficient money to pay all the depositors. That sounds like a very simple procedure; it may sound to hon. gentlemen like a very proper procedure; but it was a most improper procedure under a most vicious principle. The law of suretyship of which this is a part—and it does not matter how it is argued by way of a guarantee fund—is that a contract of suretyship means simply that the principal debtor, that is to say the man or person or corporation owing the money, has first to have his assets and liabilities discussed, his assets sold, the money from those assets brought together, and as regards any deficiency there may be, the surety or guarantee fund, as the case may be, is liable for the difference. That is the ordinary law of suretyship.

Mr. LADNER: The hon. gentleman is of a legal mind.

Mr. MARLER: I do not know that I am.

Mr. LADNER: Surely the contract of surety is expressed in the terms of the document. You make it as you want it. You make it fit the situation. You do not adopt some general principle like that, a general scheme under which there is an unlimited call on banks.

Mr. MARLER: My hon. friend, to some extent, is quite correct. I am glad that he has brought that question up. No, the general law of suretyship, as I have explained it, is the customary law of suretyship.

Mr. LADNER: That is not this case.

Mr. MARLER: My hon. friend is quite right in what he states that these benefits or advantages which the suretyship may ask for can be limited or not. You can make the contract of suretyship pretty much as you want it, so that the principal debtor may not or will not have to be discussed. That is quite true; but the point which I make is this, that people who have guarantees of deposits do not want to discuss the question of the law at all. I reiterate and repeat that if a bank has written up on its windows "Deposits in this bank are guaranteed," when that bank fails, the people want to know that their deposits are assured, quite irrespective of any intricacies of the law of suretyship or anything else.

Mr. WOODSWORTH: Might I ask without anticipating my hon. friend's development of his subject, whether he has any definite proposal by which they can have an absolute assurance of that kind?

Mr. MARLER: I must admit that, although I have studied this question to quite an extent, I have great difficulties in mind in seeing how a guarantee fund could be brought about so that it would actually guarantee deposits. Perhaps if the hon. member for Centre Winnipeg (Mr. Woodsworth) will allow me to progress a little more, I will try to get through immediately. Some questions may develop which will be of use in discussing this subject before the Banking and Commerce committee, because without a doubt it will be discussed before that committee under the resolution of the 27th of March, and I must say to my hon. friend that I feel a good deal of hesitation in detaining this House in discussing this matter at all, unless what I say is of some particular interest.

Following on the question of what happened in the Oklahoma situation, I will come very quickly to the conclusion. In October 1909, or two years after the law was passed, another large bank failed, the Columbia Bank and Trust Company. That bank had procured very large deposits owing to the fact that this guarantee fund existed. The directors and officers, having secured these various funds, went into rash speculations and the bank failed, with the result that in 1914—to make a resumé of the situation—there had been paid out of the guarantee fund $4,000,000, while there were outstanding unpaid warrants for $1,000,000 more. In 1921 the banks began to fail rapidly and many of those who were in this particular guarantee fund withdrew from it. In November of that year, on the closing of one of the banks, the guarantee fund was bankrupted. In July 1922, there was $3,000,000 out against the guarantee fund, and the fund became bankrupt.

Now, I do not think that this is entirely the question which my hon. friend wants to have settled, but it is a question of a joint and several guarantee fund which I claim the banks would have to enter into in this country in order to make an absolutely positive guarantee.

Mr. LADNER: Does my hon. friend think that any member of this House would

seriously propose that, with the system of banking we have in this country, the very large amount of deposits in Canada should be entirely guaranteed? I think his arguments are wide of the mark.

Mr. MARLER: That is precisely what the hon. member wants.

Mr. McMASTER: No. If I understand the proposal of the hon. member for Vancouver South (Mr. Ladner), it is that there should be a certain limited class of guaranteed deposits. I do not understand him to propose that all deposits should be guaranteed.

Mr. MARLER: I am glad my hon. friend interjects an explanation. Will the hon. member for Brome (Mr. McMaster) tell us how he will guarantee deposits limited, say, to $3,000? Will he not create a preferred class of depositors? Would a man not divide up his deposits, in any case, so that they would all come within the guarantee? Surely my hon. friend does not imagine for a moment that a man who had $10,000 or $20,000 would be foolish enough not to see to it that the whole amount was guaranteed, and not the first $3,000. In the goodness of my hon. friend's heart, and knowing human nature as he does, I think he would admit that people would separate their accounts, put them in different banks, in trust accounts, and under various names, all for the purpose of coming within the $3,000 guarantee. I think that this is almost a frivolous point to raise.

Mr. LADNER: As the hon. member puts the matter in that way, I trust he will give me the privilege of making one observation. Apparently he is as far from appreciating the points of my remarks as he is, in his argument, from answering this point I have raised. I do not say that there should be a total guarantee. The deterrent against putting moneys into special accounts would be the fact that they would receive not the regular 3 per cent rate but less than that. In other words, any one who resorted to the means which my hon. friend suggests would have a special reason for doing so, whereas many people would take advantage of the larger interest offered the other way.

Mr. DEPUTY SPEAKER: Order.

Mr. LADNER: I simply wanted to make myself clear, Mr. Speaker.

Mr. DEPUTY SPEAKER: The hon. member must not make a second address.

Mr. MARLER: I still regret that I cannot agree with the hon. member. He cannot by the widest stretch of the imagination convince me or any banker, or any person in this House who has not an inhuman character, that if a man has $15,000 and wants to have the whole of it guaranteed he will not be able to do so by separating his accounts and segregating his deposits in different banks, even though, instead of securing 3 per cent. on his deposits, he might get only 2¾ or 2½ per cent. So that it is utterly impossible to fix any guarantee up to a certain amount. But in any event, I say that if a guarantee is to exist it should be a full guarantee, so that every one will be treated alike. Let us say, for the sake of the argument, that only those accounts up to $3,000 will be guaranteed. Does my hon. friend realise what percentage of deposits in the banks comprises accounts of $3,000 and under? No doubt he knows what the figure is.

Mr. LADNER: Not exactly.

Mr. MARLER: Let me tell him: 85 per cent of the deposits in the banks consists of accounts of $3,000 and under.

Mr. LADNER: Has the hon. member any authority for that statement? I have authority for the statement that it is only 55 per cent.

Mr. MARLER: On inquiry of very prominent bankers I have received the information which I have given. It may be right or wrong but I leave the matter to the judgment of my hon. friend. I am inclined to think, however, that it is right.

Mr. LADNER: It is not a matter of guessing.

Mr. MARLER: No, it is not; and I think the figure I have given is more or less right.

Mr. VIEN: At any rate, it is a safer guess than the hon. gentleman's.

Mr. MARLER: I do not see how my hon. friend (Mr. Ladner) could possibly work out the proposal in regard to a guarantee to the extent of $3,000, and I have indicated one of the difficulties which would supervene in the matter.

Mr. MARTELL: Will the hon. member tell us why a man who had $100,000 in the bank should not be as fully protected as the man with $3,000, simply because they were in different walks of life?

Mr. MARLER: Is the question addressed to me?

Mr. MARTELL: It is addressed to hon. members generally.

Mr. MARLER: The answer is simple. There is no doubt that the man who had $100,000 would see to it that he was guaranteed, and he would be foolish if he did not. I agree with the implication conveyed in my hon. friend's question; I always agree with the hon. member for Hants. Now, as the hour is drawing to a close I think I shall bring my remarks to a conclusion. What I wanted to bring to the attention of the House, as regards these instances in the United States, was the fact that there was a joint and several guarantee of the banks—both an individual guarantee and a partial guarantee—all of which have proved unsuccessful. I do not say for a moment that in this country they might prove unsuccessful also, but we have the evidence of what occurred in the United States. Without a doubt they have not been successful in any single state of the union where these guarantees have existed. Furthermore, not only have they been most unsuccessful from a banking point of view, but they have been equally unsuccessful from the point of view of depositors and of business men generally. There is not a single shred of evidence to show that any of these guarantees which took place in the United States were of any value whatever.

Mr. GARLAND (Bow River): Now that the hon. member has dealt with the states that had guarantees which failed to satisfy the requirements of the guarantee law, will he not tell the House about the guarantee law of the state of Kansas?

Mr. MARLER: Certainly, I will be very glad to tell the House of the guarantee law of the state of Kansas. It was a voluntary system. Certain banks agreed to enter into the guarantee fund. They created what was called a "guarantee fund account." When a bank failed in Kansas under that guarantee law the depositors were not paid out of the guarantee fund as they were in the Oklahoma case which I cited, but they were given certificates of deposit. It meant that the assets of the bank which had failed had first to be sold. Then the depositors came forward with their certificates of deposit and called upon the guarantee fund for the money that was there to pay those particular deposits. This is what actually happened in the state of Kansas. Certificates of deposit had been issued to the extent of over $5,500,000—this is the last report which I could find—and there was in the guarantee fund about $850,000 in cash, and bonds at par of $1,140,000, making a total of $2,000,000, against the payment of guarantee certificates outstanding of $5,500,000.

At six o'clock the House adjourned, without question being put, pursuant to rule.

Thursday, April 10, 1924

The House met at three o'clock.

UNITED CHURCH OF CANADA

REPORT OF COMMITTEE ON STANDING ORDERS—FIRST READING OF BILL

Mr. GEORGE PARENT (Quebec West) presented the first report of the Select Standing Committee on Standing Orders as follows:

In accordance with the order of reference of Your Honourable House of the 27th of March, 1924, your Committee have had under consideration a petition signed,—

On behalf of the Presbyterian Church in Canada, by Alfred Gandier, Moderator of the General Assembly of the Presbyterian Church in Canada;

On behalf of the Methodist Church by S. D. Chown, General Superintendent, The Methodist Church;

On behalf of the Congregational Union of Canada, by J. Lambert Alexander, Chairman, The Congregational Union of Canada;

praying for the passing of an act to incorporate them under the name of The United Church of Canada; also the fourth report of the Examiner of Petitions in reference thereto.

Your committee, after hearing counsel for both sides, were able to satisfactorily determine that the notices were published in twenty-seven newspapers in the various provinces of Canada, as well as in the church papers of the three denominations affected; and as evidence was submitted to the effect that copies of the proposed bill have been distributed to every Presbyterian minister and elder in Canada, your committee are of the opinion that the requirements of the rules of the House have been complied with, and find that the notices as published have been sufficient.

Your committee have also considered the petitions contesting the authority of the Moderator of the Presbyterian Church to bind the said Presbyterian Church in Canada, and have come to the conclusion that the questions involved in said petitions should be taken up and considered by any committee to which the bill may be referred in due course.

All which is respectfully submitted.

Chairman.

Mr. PARENT moved that the report be concurred in.

Motion agreed to.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): I beg to present a

petition from the Cardinal Presbyterian Church against Church union.

Mr. ROBERT FORKE (Brandon) moved for leave to introduce Bill No. 47, incorporating The United Church of Canada.

Motion agreed to and bill read the first time.

QUESTIONS

(Questions answered orally are indicated by an asterisk).

CANADIAN NATIONAL RAILWAYS—HOTEL SCRIBE

*Sir HENRY DRAYTON:

1. What was the total amount paid by or on account of the Canadian National Railways for and in connection with the Hotel Scribe, Paris?
2. Was the said amount paid out of the cash receipts of the National Railways? If not, how was the purchase financed and at what rate of interest?
3. What is the name of the company now nominally owning the Hotel Scribe and who are the directors?
4. What is the total amount of taxes paid or payable in respect of the said hotel for the year 1923?

Hon. Mr. GRAHAM: I have asked a good many times that this question stand. The difficulty is in getting from Paris the information which has been asked for. It has been cabled for.

Question stands.

OCEAN FACILITIES AT HALIFAX

*Mr. BLACK (Halifax):

1. Is it the intention of the Government to provide additional facilities at Halifax for the greatly increased immigration business at that port?
2. Does the government intend to complete the ocean terminals at Halifax as originally planned or otherwise without further delay?

Hon. Mr. COPP (for the Minister of Immigration): In reference to Question No. 1 I may say that the government will endeavour as far as possible to provide the facilities found necessary to take care of the immigration business at the port of Halifax. Respecting Question No. 2, the matter is under the consideration of the government at the present time.

CANADIAN NATIONAL RAILWAYS—DIVISIONS

Mr. KENNEDY (Edmonton):

1. What are the limits of the Atlantic, Central and Western divisions of the Canadian National Railways?
2. What were the revenues and expenditures on each of these divisions for the year 1923 and the months of January and February, 1924?
3. What were the revenues and expenditures of the Grand Trunk Railway for the year 1923 and the months of January and February, 1924?

Hon. Mr. GRAHAM:

LIMITS

1. Atlantic Region: East of Riviere du Loup and Monk, Que. (including Riviere du Loup Terminal) but not including Monk Terminal.)

Central Region: Comprising all lines and facilities between Riviere du Loup and Monk, Que., on the east, and Detroit, Port Huron, Current and Armstrong on the west (including Monk, Que., Terminal, and line to Portland, Me.)

Western Region: Comprising all lines and facilities west of Current and Armstrong (including Duluth, Winnipeg and Pacific Railway Company.)

2. Railway Operating Revenues and Expenses year ended December 31, 1923.

	Atlantic Region	Central Region	Western Region
Railway Operating Revenues.	$22,480,035 13	$127,900,113 91	$72,074,784 26
Railway Operating Expenses.	27,702,180 78	109,212,503 69	74,095,493 78

Month of January, 1924

	Atlantic Region	Central Region	Western Region
Railway Operating Revenues	$1,555,833 85	$8,565,820 51	$5,865,070 64
Railway Operating Expenses.	1,958,199 20	7,971,687 52	6,024,863 91

Month of February, 1924

	Atlantic Region	Central Region	Western Region
Railway Operating Revenues	$1,490,361 90	$9,141,719 90	$4,586,797 20
Railway Operating Expenses.	1,960,170 62	8,404,441 76	5,572,642 86

3. Grand Trunk Canadian Lines:

Railway Operating Revenues and Expenses for the year ended December 31st, 1923:

Railway Operating Revenues.. $83,978,730.57
Railway Operating Expenses.. 67,112,470.32

Note.—The Railway Operating Revenues and Expenses of the Grand Trunk Canadian Lines, for the months of January and February 1924 are not yet available.

CRUDE OIL BOUNTIES

Mr. FANSHER:

1. What was the amount of bounty paid to producers of crude oil in Canada for the fiscal year ending March 31, 1924?
2. What was the amount of bounty paid to producers of crude oil in each of the provinces for the year ending March 31, 1924?
3. What are the names of the producers whose wells are located in the constituency of East Lambton, and what amount of bounty did each producer receive for the year ending March 31, 1924?

Hon. Mr. LOW:

1. $79,809.54.

2. Ontario	$76,120.95
New Brunswick	3,648.24
Alberta	40.35
Total	$79,809.54

3. See statement attached, which covers the period from April 1st, 1923, to February 29th, 1924. Statistics for March are not available yet. The attached statement covers the constituency of East Lambton only.

East Lambton Producers of Crude Petroleum and Bounty Paid thereon for period from April 1st, 1923, to February 29th, 1924:

TORONTO VIADUCT

*Mr. CHURCH:

1. Have any reports or recommendations or letters been received from the President of the Canadian National Railways in reference to the Toronto viaduct which the Canadian National Railways are obligated to help build as per viaduct agreement, 1913?

2. In view of the priority of this National Railway Contract (1913), what is the policy of the government in the matter and the reason why the contract is not being carried out, and when will a decision be come to in the matter, and what action will be taken?

3. Will the share of the National Railways for this work be recommended by the government to parliament during the present session?

Hon. Mr. GRAHAM: In answer to Question No. 1, yes. In reply to Questions 2 and 3, the matter is under consideration.

BRITISH EMPIRE LUMBER COMPANY

Hon. Mr. BAXTER:

1. Did the Montreal Harbour Commissioners purchase lumber from the British Empire Lumber Company?

2. If so, how much have they purchased since January 1, 1922?

3. What kind of lumber was purchased and at what prices?

4. Who are the officers and the directors of the British Empire Lumber Company?

5. Is not a brother of Dr. W. L. McDougall, president of the Montreal Harbour Board, a member of this company?

Hon. Mr. CARDIN:

1. The Harbour Commissioners of Montreal advise the department that they have purchased no lumber from the British Empire Lumber Company.

2. Answered by No. 1.

3. Answered by No. 1.

4. The department has no information.

5. The department has no information.

JASPER LODGE MANAGEMENT

Mr. STEWART (Leeds):

1. Who was the manager of Jasper Lodge in 1923, and on whose recommendation and by whom was he appointed?

2. What previous hotel experience had he and where?

3. What salary was he paid and what expenses were allowed him in addition to living quarters?

4. What were the earnings of the said Lodge and the expenses of operation thereof during the year 1923?

Hon. Mr. GRAHAM:

1. Capt. T. G. Forshaw. He had previously been known to the president and on consultation with the Manager of hotels was appointed by him to supervise hotel and building operations generally at Jasper Park.

2. He had no specific hotel experience, but was generally familiar with the duties to which he was assigned.

3. $1,000 for the season of 1923 until the Lodge closed; then $400 per month until March 1st, when he resigned from the service. During latter period he was in charge of various alterations and construction work in connection with additions and improvements preparatory to opening of 1924 season. Total salary thus received $3,000. He received in all $241.20 for travelling expenses.

4. Operating revenue, $76,761.85; operating expenses, $77,371.29.

CHICOUTIMI AND SAGUENAY

MR. SAVARD:

1. What is the population of the northern coast of the St. Lawrence river, between Tadoussac and Labrador?

2. What are the means of communication of that part of the county of Chicoutimi and Saguenay with the other parts of the country from 1st November to 1st May?

3. What distance is Tadoussac from the railway?

Hon. Mr. COPP:

1. 13,060 according to the Census of 1921.

2. There is at present a subsidized gasoline boat service between Tadoussac and St. Catherines Bay, from December 6th, 1923, to May 15th, 1924. Two round trips a day, except Sundays, are made, carrying mails, passengers and freight. The contractor is Mr. E. O. Bouliane of Tadoussac, P.Q.

3. The nearest railway to Tadoussac is the Canadian National on the south shore of the St. Lawrence, about 20 miles distant.

WILLIAM ARENBURG

Mr. HANSON:

1. When was William Arenburg appointed as fishery overseer or fishery inspector in the province of Nova Scotia and what is his salary?

2. What are the duties of said William Arenburg?

3. Is the government aware that he was sixty-five years of age or over when appointed to this position?

4. Were there any returned soldiers applicants for the said position and why was not preference given to them?

Hon. Mr. CARDIN:

1. He was employed as a temporary or seasonal inspector of fish curing and packing, from June 12th, 1922 to November 30th, 1922, and again from July 30th, 1923, to November 30th, 1923, at a salary rate of $1,260 per annum.

2. To enforce the provisions of the Fish Inspection Act.

3. His age was given as sixty-three.

4. The Civil Service Commission authorized local selection. Due regard was given to the appointment of a returned soldier, but Arenburg's experience was considered as most fitting for the position.

CANADIAN NATIONAL RAILWAYS—OPERATIONS AFFILIATED COMPANIES

Sir HENRY DRAYTON:

What were the results of the operations of the Canadian National System and affiliated companies in 1923 in (a) Atlantic Region; (b) Central Region; (c) Grand Trunk Western Lines (in United States); and (d) Western Region?

Hon. Mr. GRAHAM:

—	Atlantic Region	Central Region inc. G. T. New England Lines	Grand Trunk Western Lines	Western Region inc. Duluth Winnipeg and Pacific	Total
	$ cts.	$ cts.	$ cts.	$ cts.	$ cts.
Railway Operating Revenues	22,480,035 13	127,900,113 91	32,471,522 74	72,074,784 26	254,926,456 04
Railway Operating Expenses	27,702,180 78	109,212,503 69	23,679,714 70	74,095,493 78	234,689,892 95
Net Revenue or (Loss) from Railway Operations (Def.)	5,222,145 65	18,687,610 22	8,791,808 04	(Def). 2,020,709 52	20,236,563 09

EDMONTON GRAIN ELEVATOR

Hon. Mr. MANION:

1. Have tenders been received for the new grain elevator at Edmonton?

2. If so, what parties tendered and what was the total of each tender?

3. To whom is the contract being awarded?

Hon. Mr. LOW:

1. Yes.

2. Carter-Halls-Aldinger Co. Ltd., Winnipeg, Man., $1,297,729; Northern Construction Co., Montreal, $1,349,000; Barnett-McQueen Co. Ltd., Fort William, Ont., $1,398,000; Macdonald Engineering Co., Toronto, $1,411,000; E. G. M. Cape Co. Ltd., Montreal, $1,419,000; Poole Construction Co., Regina, Sask., $1,443,000; Fegles Construction Co., Fort William, $1,456,000.

3. Carter-Halls-Aldinger Company, Limited, Winnipeg, Man.

PORT JOLI-SABLE ROAD

Mr. BLACK (Halifax):

1. What is the total expenditure to date on the Port Joli-Sable Road, Nova Scotia, reported to the Dominion government by the government of Nova Scotia?

2. What is the total amount of expenditure in respect to which the Dominion government paid forty per cent as federal aid?

3. What is the total amount of federal aid to date paid to the Nova Scotia government on account of said road?

4. Is the Nova Scotia government claiming any additional payment? If so, what amount?

5. Is it the intention of the Dominion government to make any additional payment? If so, what amount?

6. Is the matter a closed transaction as far as the Dominion government is concerned?

[Mr. Cardin.]

7. For what reasons did the Dominion government refuse to pay the government of Nova Scotia forty per cent of the total expenditure made on said road by the government of Nova Scotia?

Hon. Mr. GRAHAM:

1. $185,942.96 as stated by province.

2. $123,759.28.

3. $49,503.71.

4. No information.

5. Final payment certificate has been issued by engineer.

6. Yes.

7. Payment of federal subsidy restricted to provisions of Canada Highways Act and regulations.

ST MARGARET'S BAY ROAD

Mr. BLACK (Halifax):

1. What is the total expenditure to date on the St. Margaret's Bay Road, Nova Scotia, reported to the Dominion government by the government of Nova Scotia?

2. What is the total amount of expenditure in respect to which the Dominion government paid forty per cent as federal aid?

3. What is the total amount of federal aid to date paid to the Nova Scotia government on account of said road?

4. Is the Nova Scotia government claiming any additional payment? If so, what amount?

5. Is it the intention of the Dominion government to make any additional payment? If so, what amount?

6. Is the matter a closed transaction as far as the Dominion government is concerned?

7. For what reasons did the Dominion government refuse to pay the government of Nova Scotia forty per cent of the total expenditure made on said road by the government of Nova Scotia?

Hon. Mr. GRAHAM:

1. $484,853.89 as stated by province.

2. $340,228.72.
3. $136,091.49.
4. No information.
5. No.
6. Yes.
7. Payment of federal subsidy restricted to provisions of Canada Highways Act and regulations.

GOVERNMENT AUTOMOBILES

Mr. MAYBEE:

1. How many passenger automobiles have been purchased by the government in each of the years 1922, 1923, 1924?
2. What make of car was purchased and the cost in each case?
3. How many are kept in the city of Ottawa?
4. What was the cost of upkeep in 1923 of such cars in the city of Ottawa?
5. What was the cost of upkeep in 1923 of such cars outside the city of Ottawa?

Mr. CHAPLIN:

1. How many motor cars have been purchased by the government for the use of ministers since January 1, 1922?
2. What are their makes and models, and what was the cost of each car?
3. Who enjoys the sole use of each of these cars?
4. From whom were these cars purchased?
5. How many cars bought prior to January 1, 1922, are still in use, and by whom in each case?
6. If new cars were purchased within the period mentioned, what disposal was made of old cars, and what did they bring in each case when sold?

Mr. BENOIT:

1. What amount did the government spend in the purchase of automobiles for use of the different departments, at Ottawa, for the years 1915, 1916, 1917, 1918, 1919, 1920, 1921 respectively?
2. To what departments were these automobiles assigned during said years?
3. What was the cost to Canada during the said respective years for (a) the wages of chauffeurs for said departmental automobiles; (b) the uniforms and gloves of chauffeurs; (c) the upkeep and repairs of said automobiles; (d) the purchase of gasoline, oil, tires, etc.?
4. Did the automobile service give satisfaction to those using them?

Right Hon. Mr. MACKENZIE KING: The foregoing questions, deal with the same subject. I should like to suggest that the three questions be combined and stand as an order for a return.

Mr. CHAPLIN: In reference to the question, standing in my name, the Minister of Railways and I have arranged that it shall stand in the meantime.

Mr. MACKENZIE KING: The question my hon. friend refers to relates to contracts for railway ties. This is a different subject altogether.

QUESTIONS PASSED AS ORDERS FOR RETURNS

GOVERNMENT AUTOMOBILES

Mr. MAYBEE:

1. How many passenger automobiles have been purchased by the government in each of the years 1922, 1923, 1924?
2. What make of car was purchased and the cost in each sase?
3. How many are kept in the city of Ottawa?
4. What was the cost of upkeep in 1923 of such cars in the city of Ottawa?
5. What was the cost of upkeep in 1923 of such cars outside the city of Ottawa?

Mr. CHAPLIN:

1. How many motor cars have been purchased by the government for the use of ministers since January 1, 1922?
2. What are their makes and models, and what was the cost of each car?
3. Who enjoys the sole use of each of these cars?
4. From whom were these cars purchased?
5. How many cars bought prior to January 1, 1922, are still in use, and by whom in each case?
6. If new cars were purchased within the period mentioned, what disposal was made of old cars, and what did they bring in each case when sold?

Mr. BENOIT:

1. What amount did the government spend in the purchase of automobiles for use of the different departments, at Ottawa, for the years 1915, 1916, 1917, 1918, 1919, 1920, 1921 respectively?
2. To what departments were these automobiles assigned during said years?
3. What was the cost to Canada during the said respective years for (a) the wages of chauffeurs for said departmental automobiles; (b) the uniforms and gloves of chauffeurs; (c) the upkeep and repairs of said automobiles; (d) the purchase of gasoline, oil, tires, etc.?
4. Did the automobile service give satisfaction to those using them?

GRANTS TO EXHIBITIONS

Mr. CHURCH:

1. What are the total revenues of the government from the city of Toronto, including the Canadian National Railways, for the past three years, from (a) Post Office; (b) Customs and Excise; (c) Income Tax; (d) Sales Tax; (e) other federal revenues than the above; (f) the revenues of Canadian National Railways (Toronto)?
2. What have been the grants to the Canadian National Exhibition and the Royal Agricultural Winter Fair for the past four years?
3. What sums have been spent within and without Canada on Fall Fairs and Exhibitions for the past four years, and for this year?

MIGRANTS FROM CANADA TO UNITED STATES

On the Orders of the day.

Mr. W. D. EULER (North Waterloo): I desire to bring to the attention of the government a news item which appeared in the Manitoba Free Press some days ago which reads:

Washington, March 27.—The new Immigration bill was reported to the Senate this afternoon, and will be given the right-of-way next week. The chief item of interest to Canada is the restriction upon immigrants from Canada not born in the Dominion. No quota barrier is erected against native-born Canadians, but other immigrants from Canada will be treated as though coming from the land of their birth. Thus, a Canadian citizen born in England would be refused admission if the British quota were exhausted.

Senator Colt, Republican, Rhode Island, chairman of the senate immigration committee, interviewed by the Free Press this evening, said: "The underlying principle in the bill is restriction of immigration from all countries except our sister nations on this continent. We find, however, that European immigrants evade the quota provision of the Immigration Act by colonizing in contiguous countries, notably Cuba, and then come into the United States as citizens of such country. To stop this we provided all immigrants shall be treated as coming from their native land. We had no complaint about Canada, but the provision is general, and, of course, applies to Canadian citizens not born on this continent."

I desire to ask the government if they have any information which they can give to the House as to whether this discrimination against naturalized citizens is to be carried on.

Hon. J. A. ROBB (Minister of Immigration and Colonization): Until my hon. friend (Mr. Euler) brought this matter to our attention, I had not had any notice of it. I shall look into the matter to which it refers, and make a reply in a day or two.

REDISTRIBUTION

On the Orders of the day.

Mr. McQUARRIE: Might I be permitted to ask whether it is the intention of the government to have a meeting of the Redistribution committee before the Easter adjournment? As a member of that committee I must protest against the unnecessary delay in getting down to business.

Hon. E. M. MACDONALD (Minister of National Defence): For the information of my hon. friend, I desire to say that a meeting of the committee will be called for the first of the week.

RURAL CREDITS

On the Orders of the Day:

Mr. E. J. GARLAND (Bow River): A little more than three weeks ago a question was asked of the government by a member of this part of the House to ascertain when the government would place on the Table of the House the report of the commission on Rural Credits. Up to this date there has been no intimation as to whether the government had that report or when it would lay it on the Table. As this matter is one of vital importance to western Canada, and a solution must be reached this year, I would ask the government when we may expect that report and when the House will have it before them.

Hon. Mr. ROBB: Professor Tory, who is entrusted with investigating this matter, has not yet reported. As soon as he reports to the government we will be in a position to answer the question.

THE BUDGET

ANNUAL FINANCIAL STATEMENT OF HON. J. A. ROBB, ACTING MINISTER OF FINANCE

Hon. J. A. ROBB (Acting Minister of Finance) moved:

That Mr. Speaker do now leave the chair for the House to go into committee of Ways and Means.

Mr. SPEAKER: I do not wish to be critical, but, according to Rule 17C, on Thursdays and Fridays when the Order of the Day is called for the House to go into committee of supply or of ways and means, Mr. Speaker shall leave the chair without putting any question. I suppose if I were to take the letter of the law, I would have to leave the chair, and the budget speech would be delivered in the committee of the whole House. I think I am living up to the traditions of the House by putting the question and proceeding as we have always proceeded before this rule came into force.

Hon. J. A. ROBB (Acting Minister of Finance): Mr. Speaker, in presenting the annual financial statement to parliament, I cannot refrain from expressing what I know to be the unanimous feeling of this House, our profound regret that the Minister of Finance (Mr. Fielding) is unable to be present to-day to deliver it himself. Last year that right hon. gentleman delivered his seventeenth budget speech, a record, I believe, unequalled by any other Minister of Finance within the Empire. When, upon the assumption of office by the present administration, the right hon. gentleman returned to his former post as Minister of Finance, it was at a critical period in the history of Canada. I am sure that the House will agree with me when I say that since then the Right Hon. W. S. Fielding has discharged his important and onerous duties with that ability, integrity and courage always characteristic of him during his long and distinguished career. Hon. gentlemen of all

parties in this House will, I know, join with me in wishing him a speedy recovery from his present illness and an early return to his public duties.

Fiscal Year 1922-23—Revenue

The Public Accounts for 1922-23 were submitted to parliament during this present session. The consolidated revenues or ordinary receipts obtained during that year were $394,614,900, an increase of $12,662,513.01 over the previous year.

Other receipts, amounting to $8,479,310.30, which included $8,199,333.31 received from the Imperial government to cover exchange on repayments in London to the Dominion of Canada from July, 1920, to August 2, 1921, brought the gross revenue to $403,094,210.30.

Expenditure 1922-23

The expenditure side shows $332,293,732.09 for ordinary expenses. Capital, demobliza-tion and other charges amounted to $18,314,814.63, thus making the total disbursements for that year $350,608,546.72.

The surplus of revenue over total disbursements left $52,485,663.58 available for railways, Canadian Government Merchant Marine and other obligations amounting to $84,126,730.59. Of this amount $77,862,348.23 was required for railways and $5,979,856.08 for the Canadian Government Merchant Marine. The outcome of the year resulted in an increase of $31,641,067.01 to the public debt.

Fiscal Year 1923-24

Coming now to the year 1923-24 which has just closed, I might say that some time will elapse before all the returns for that year will come to hand and allow of definite results being determined. We can, however, make a fairly close estimate which should not differ materially from the actual figures when the books are closed.

Estimated Revenue 1923-24

By adding to the actual revenue received by the Department of Finance, up to and including 31st March last, the estimated amount of revenue yet to come, the accounts for that year, when finally closed, will show a total revenue of about $396,000,000, being an increase of $1,500,000 over the revenue of 1922-23.

The estimated revenue from customs duties will be $121,800,000, an increase of $3,700,000 over the previous year. From excise duties we expect $38,200,000, an increase of about $2,500,000. The estimated revenue from excise taxes will be $121,000,000, an increase of about $14,500,000. From income taxes we estimate $53,750,000, a decrease of about $6,000,000 as compared with the previous year. From delayed business profits taxes we will receive some $4,650,000, a decrease of $8,381,000. We estimate a revenue from interest on investments of $11,700,000, being a decrease of about $4,700,000, which is accounted for by the reduction in 1922 of some $56,000,000 in the indebtedness of the Imperial government to Canada.

Estimated Expenditure 1923-24

Turning now to expenditures, it is estimated that when all accounts are closed, the expenditure for the year on ordinary account will be $328,250,000, a decrease as compared with the previous year of $4,000,000.

Estimated Surplus of Ordinary Revenue over Ordinary Expenditure, 1923-24

Taking the estimated revenue for the year ended March 31, 1924, as $396,000,000, and the estimated expenditure chargeable to Consolidated Fund as $328,250,000, there will be a surplus of revenue over the ordinary expenditure of $67,750,000, available for capital, special and other obligations.

Capital Expenditures, 1923-24

Capital expenditure for public works, including Marine department, will amount to $3,865,000, and capital expenditure for Railways and Canals, $8,305,000, making a total capital expenditure of $12,170,000, an increase of $2,362,000 over the previous year.

Special Expenditures, 1923-24

Special expenditures will amount to $8,390,000, of which $740,000 will be required for demobilization accounts, and $7,650,000 for discount and cost of loan flotations.

Railway Loans

Parliament at its last session authorised $74,550,000 for loans to the Canadian National Railway Company, to be made by way of cash, or by way of guarantee, or partly one way and partly the other. These alternative provisions for meeting railway obligations as

voted by parliament were first authorised during the session of 1921.

In July, 1921, $25,000,000 was raised by way of guarantee for Canadian Northern railway purposes; and in September, 1921, a further amount of $25,000,000 was raised by way of guarantee for purposes of the Grand Trunk Railway Company, making in all $50,000,000 by way of guarantee chargeable against the loan vote for 1921-22. During the fiscal year 1922-23, the government was in a position to meet the railway requirements by way of loans in cash. During the fiscal year just ended, $24,550,000 was paid to the railways by way of cash. We received $768,336 as a refund against the amount advanced in 1921-22 for purchase of rails.

The vote for the fiscal year was charged with $24,550,000, and the balance of $50,000,000 was raised in February last by way of guarantee and held by the Minister of Finance in a trust account, payments being made from time to time as necessity arose.

I may say that when loans are made by way of cash, under the arrangements made by the former Minister of Finance, they are treated as non-active assets and are, therefore, not taken into account when determining the net public debt. Moneys raised by way of guarantee, which places the government in the position of an endorser, do not presently affect the public debt in any way, as they are indirect obligations.

The action taken by the former Minister of Finance in treating cash loans to the Canadian National Railways as non-active assets is, I think, a very proper procedure, especially when such loans are for the purpose of meeting deficits whenever incurred, and interest charges.

Where moneys are required for construction purposes to better equip the railways for increased earning powers, there is no question that such obligations might be considered as proper capital charges, and, if necessary, be met by way of guaranteeing the issue of railway securities.

The railway issue of February last, guaranteed by the Minister of Finance, was to meet capital charges. A substantial balance is still held in trust by the minister and will be available for the railways for such purposes during the year 1924-25.

Since 1920 the following railway bond issues have been guaranteed by the Minister of Finance under special statutory authority, quite apart from the amounts provided in the annual votes of parliament for railway purposes:

October, 1920—Grand Trunk Railway Company	$25,000,000
December, 1920—Canadian Northern Railway Company	25,000,000
March, 1922—Canadian Northern Railway Company	11,000,000
August, 1923—Canadian National Railway Company—Serial Equipment Issue	22,500,000

The $22,500,000 issue of 1923 is the first equipment issue carrying the government's guarantee. The bonds are secured on the equipment purchased and, in addition, guaranteed under the Guarantee Act of 1923. This was done so as to make the security more attractive to investors and secure the highest price. Previous equipment issues were obligations of the company, specifically secured by the equipment, but without any government guarantee.

Public Debt

Turning now to the public debt. On March 31, 1923, our net public debt stood at $2,453,776,868.74. Our estimated ordinary revenue for the year just closed is $396,000,000. Our estimated ordinary expenditures of $328,250,000, and capital expenditures $12,170,000; special expenditures $8,390,000; railway loans $23,781,664; Canadian Government Merchant Marine loans $1,500,000, and loans to Quebec Harbour Commission, which are treated as a non-active asset, $500,000, together with an amount of $621,987 carried on the books of the department for Victoria Shipowners, Limited, which it is proposed to treat as a non-active asset in the place of an active asset as heretofore make the total charges $375,213,651. Our surplus of ordinary revenue over these expenditures will therefore be $20,786,349 to be applied towards the reduction of the national debt as it stood on March 31, 1923. To this must be added $1,317,000, being the amount of sundry outstanding indebtedness cancelled during the past year, and a further amount of $8,305,760.37 received in settlement of an adjustment of acknowledged book debts between the Imperial and the Dominion governments. These two amounts, totalling $9,622,760.37, together with the $20,786,349 surplus of revenue over total expenditures, reduce our net public debt as of March 31, 1923, by the amount of $30,409,109.37.

On March 28 last an adjustment of acknowledged book debts between the Imperial and the Dominion governments was effected. The Imperial government as shown by the books of the Department of Finance, were indebted to us in the amount of $66,779,597.42. On the other hand, the Imperial gov-

ernment held our bonds to an amount of $67,207,351.17, of which $2,000,000 were 3½ per cent bonds maturing 1925-28, and $65,207,351.17 were 4½ per cent bonds maturing 1925-45, the bonds being part of an issue made by Canada to the Imperial government in 1916. Negotiations were undertaken and settlement made by offsetting bonds issued to the Imperial government against their indebtedness to Canada. The unmatured bond issues were taken at the rate of 92.91 for the 3½ per cent issue and 87.48 for the 4½ per cent issue. A settlement was effected on a 5½ per cent basis, being the rate of interest Canada is paying on her outstanding Victory loans from which the moneys were obtained for advances to the Imperial government. The value of the bonds at these rates was $58,901,590.80, being $8,305,760.37 under their face value.

Refunding Loan

On November 1, 1923, the 5½ per cent five-year bonds of the 1918 Victory loan issue amounting to $172,459,650 matured. In September last tenders were asked for an issue of a five per cent refunding loan. The highest bid, from a Canadian syndicate, was accepted, namely, $53,000,000 five-year bonds at 96.75 and accrued interest and $147,000,000 twenty-year bonds at 96 and accrued interest. Arrangements were made with the syndicate to give to holders of the maturing bonds the privilege of converting their holdings into bonds of the refunding issue. The price to the public was 99 for the five-year bonds and 98.25 for the twenty-year bonds. The maturity date of the refunding loan is October 15, 1928, for the five-year bonds, and October 15, 1943, for the twenty-year bonds. It was stipulated that the syndicate should associate with themselves the recognized bond dealers in Canada. All commissions to banks and brokers, advertising expenses and all other charges usually included in flotation expenses, were borne by the syndicate. Holders of the matured bonds took advantage of the offer to the extent of $59,388,200, leaving a balance of $113,071,450 to be redeemed in cash.

Fiscal Year 1924-25

I come now to the fiscal year 1924-25. Estimates of revenue for the year upon which we have just entered cannot be made with any degree of accuracy. The revenue we would receive on the present basis of taxation would be materially affected by reductions in taxes which, in view of the most satisfactory outcome of the year just closed, it is proposed to submit to parliament. It is hoped, however, to offset any considerable reduction in the revenue by a most rigid economy in expenditures. The estimates now before the House show a very substantial reduction as compared with the estimates of last year. We shall no doubt have supplementaries, but rigid economy will be exercised in their preparation; and in this the government hopes for and expects co-operation from all sections of Canada.

Canadian Trade—Merchandise Only

I desire, Mr. Speaker, to place on record tabulated statements illustrating the development of Canadian trade. For comparison I have taken the year immediately preceding the war, then the years 1922 and 1923, and eleven months ended February, 1924. With the permission of the House I will place these statements on Hansard.

Trade with the United Kingdom

Fiscal Year ended 31st March	Imports for Consumption	Total Exports	Excess of Exports over Imports
1914..	$132,070,406	$222,322,292	$ 90,251,886
1922..	117,135,343	300,363,193	183,227,850
1923..	141,330,143	379,918,526	238,588,383

Eleven Months ended Feb., 1924 (unrevised).. ..	627,794,090	556,223,251	71,570,839

Total trade with all Countries

Fiscal Year ended 31st March	Imports for Consumption	Total Exports	Excess of Imports over Exports
1914..	$619,193,998	$455,437,224	$163,756,774
			Excess of Exports over Imports
1922..	747,804,332	753,927,009	6,122,677
1923..	802,579,244	945,295,837	142,716,593
Eleven Months ended Feb., 1924 (unrevised).. ..	806,413,288	964,937,995	158,524,707

It will be observed that these statements show:

1. Canadian trade with the United Kingdom;

2. Canadian trade with the British Empire, including the United Kingdom;

3. Canadian trade with the United States;

4. Canadian trade with all foreign countries; and

5. A summary of total Canadian trade with all countries.

This brief statement showing the steady growth of Canadian trade with the nations of the world must be gratifying to Canadians.

During the fiscal year ended March 31, 1914—four months before the outbreak of the Great War—Canada had a total foreign trade of $1,074,631,222, with an excess of imports over exports of $163,756,774. To that extent the balance of trade was against Canada. The fiscal year ended March, 1922, shows a total foreign trade of $1,501,731,341. The difference between exports and imports was only $6,122,677, but the balance was favourable to Canada. In the fiscal year ended March, 1923, we had a total foreign trade of $1,747,875,081, with a favourable balance of $142,716,593 over imports. In other words, Canadian foreign trade had increased 60 per cent over that of 1914, an unfavourable trade balance of $163,756,774 had been converted into a favourable balance of $142,716,593.

Returns for the eleven months ended February, 1924, indicate continued healthy growth of Canadian foreign trade. Already both imports and exports exceed those of 1923, and the balance of trade favourable to Canada on eleven months' business is $158,524,707. Statistics indicate that each succeeding year Canadians are increasing the percentage of products marketed in the finished or semi-finished condition, thus providing more labour for our own people and higher class freight for Canadian railways.

We now come to the resolutions which I am about to submit to the House proposing Customs tariff changes, and reductions under the Special War Revenue Act. These resolutions will show a substantial reduction in taxation. For purposes of brevity and clearness I shall place the proposed changes in groups according to the classes affected.

Customs Tariff and Consumption or Sales Tax Reductions

Items	Farming Industry Preferential Tariff Old rate	Farming Industry Preferential Tariff Proposed rate	General Tariff Old rate	General Tariff Proposed rate
Mowing machines, harvesters, binders, reapers..	7½	free	10	6
Cultivators, harrows, horse-rakes, seed drills manure spreaders, and weeders..	10	free	12½	7½
Ploughs, threshing machines and complete parts thereof..	10	5	15	10
Farm or field rollers, post hole diggers, hay loaders, stumping machines, grain crushers, potato-diggers, hay tedders and other agricultural implements	10	5	15	10
Farm wagons..	10	5	17½	10
Fertilizers..	5	free	10	free
Axes, scythes, sickles or reaping hooks, hay or straw knives, edging knives, hoes, rakes and pronged forks..	15	10	22½	20
Shovels and spades. ..	20	10	32½	20

It is proposed to remove the sales tax from all the foregoing items grouped under the heading of Farming Industry and also from binder twine. Fertilizers are already exempt.

Materials for Agricultural Implements

It is proposed to give to manufacturers of agricultural implements "free entry" on pig iron, bar iron and bar steel when used in the manufacture of mowers, binders and reapers, in lieu of a drawback of 99 per cent. The "free entry" is also extended to these raw materials when used in the manufacture of cultivators, harrows, horse-rakes, seed-drills, manure spreaders and weeders. Materials which enter into the cost of the aforementioned items and other implements on which the duty is to be reduced will be entitled to entry at 7½ per cent under all tariffs.

It is proposed to grant a drawback of 99 per cent on materials and parts of implements on hand imported prior to this date which will have entered into the cost of all agricultural implements on which the duty is to be reduced. It is also proposed to exempt from the sales tax all the articles and materials to be used in the manufacture of these

agricultural implements, as well as goods consumed in the process of manufacture.

Fruit Growing Industry

Items	Preferential Tariff Old rate	Preferential Tariff Proposed rate	General Tariff Old rate	General Tariff Proposed rate
Spraying machines, fruit or vegetable grading machines, pruning hooks, pruning shears.	10	5	15	10

It is proposed to remove the sales tax from the foregoing items and also from nicotine sulphate and spraying preparations.

Poultry Industry

Items	Preferential Tariff Old rate	Preferential Tariff Proposed rate	General Tariff Old rate	General Tariff Proposed rate
Incubators for hatching eggs, brooders for rearing young fowl..	10	5	15	10

We propose removing the sales tax from these items as well as from poultry feed.

Dairying Industry

Items	Preferential Tariff Old rate	Preferential Tariff Proposed rate	General Tariff Old rate	General Tariff Proposed rate
Milking machines, centrifugal machines for testing butter fat, milk or cream.. ..	10	5	15	10

The sales tax is to be removed from the foregoing items and also from cream separators and parts thereof, and extract of rennet.

Mining and Quarrying Industry

Items	Preferential Tariff Old rate	Preferential Tariff Proposed rate	General Tariff Old rate	General Tariff Proposed rate
Rock drills, percussion coal cutters, coal augers, stamp mills, ore and rock crushers, and rotary and coal drills..	15	10	27½	20
Coal-washing machinery, coke-making machinery, and machinery and apparatus for use exclusively in the distillation or recovery of products from coal tar or gas..	20	7½	30 and from	12½
	15	7½	27½	12½

It is proposed to remove the sales tax from the foregoing items grouped under the heading of mining and quarrying. In addition the sales tax is to be removed from mining cars and other similar appliances used for mining or quarrying, and from explosives.

Lumbering Industry

Items	Preferential Tariff Old rate	Preferential Tariff Proposed rate	General Tariff Old rate	General Tariff Proposed rate
Saw-mill machinery.. ..	15	10	25	20
Logging machinery which includes logging cars, blocks and tackle, yarders and praticially all machinery used exclusively for logging operations..	15 and 20	10	30 and 27½	20
Logging wagons..	17½	5	25	10

The sales tax is also to be removed from the foregoing items pertaining to the lumbering industry.

Fishing Industry

All marline for the fisheries is to be made free of customs duty; heretofore only barked marline has been free.

We propose that the sales tax on rubber boots shall be reduced from 6 per cent to 2½ per cent. Rubber boots, as hon. gentlemen know, are used extensively in the fishing industry.

Barked marline for the fisheries is already exempt from sales tax, and, as a result of the change we are proposing, all marline for the fisheries will become exempt from the sales tax.

Breadstuffs and Provisions

It is proposed to remove the sales tax from the following articles:

Cereal foods, macaroni and vermicelli, sago and rice.
Meats, salted or smoked.

The sales tax is being reduced from 6 per cent to 2½ per cent on biscuits, canned vegetables, canned fruits, jams and preserves.

Boots and Shoes, including rubber footwear

We propose to reduce the sales tax from 6 per cent to 2½ per cent.

The sales tax will be removed from milk foods.

Materials Consumed in Process

Woollen, and many other manufacturing establishments will benefit by a proposed clause which will provide that materials, consumed in process of manufacture or production, which enter directly into the cost of goods subject to the consumption or sales tax, will be exempt from the sales tax.

Well-drilling machinery and apparatus

The sales tax is to be removed.

Crutches are being made free of both customs and sales tax.

Traction ditching machines: The value for "free entry" purposes is being increased from $3,000 to $3,500. Under existing conditions traction ditching machines are admitted free up to a valuation of $3,000 each. When that valuation was fixed, that apparently was the value of the machine, but since then it has increased, and the government propose to increase the value for free entry from $3,000 to $3,500.

Consumption or Sales Tax

In addition to the reductions already mentioned, the sales tax is to be reduced from 6 per cent to 5 per cent. In the case of every item that comes under that tax, the maximum charge will be 5 per cent.

For the better protection of the revenue the sections referring to manufacturers doing business under $10,000 per year will be repealed. The removal of the $10,000 limit in connection with small manufacturing concerns will do away with difficulties in administering the act.

The list of exemptions from the sales tax is to be enlarged. The following are some of the principal articles affected:

Well-drilling machinery and apparatus:
Books for the blind;
Scientific and text books;
Printed text books authorized by the Department of Education of any province in Canada;
Milk foods and prepared cereal foods;
Nicotine sulphate;
Disinfecting, dipping, and spraying preparations;
Church bells;
Chain;
Agricultural implements (of which details are given elsewhere);
Saw-mill and logging machinery (details given elsewhere);
Surgical instruments and appliances for hospitals;
Carbolic oil for creosoting lumber;
Insulin;
Cream separators;
Philosophical apparatus for use in schools and colleges.
Binder twine.

In connection with the discount on importations under the British preferential tariff into Canadian ports enacted at the last session of parliament, it is proposed that in computing the ad valorem rate of duty on tea purchased in bond in the United Kingdom, the value for duty shall not include the amount of the customs duty payable on tea for consumption in the United Kingdom. When the British duty was added it brought the value up so high that the computed rate did not exceed fifteen per cent and therefore was not entitled to the discount.

As a result of these proposed changes it is estimated that there will be a reduction in customs and sales tax revenue of $24,000,000.

[Mr. Robb.]

Whatever division of opinion Canadians may have, surely we share a united confidence in the future of our country. We have great natural resources. We have certain basic industries, upon the success of which depend the growth of all other industries, and the greater development of our trade. Of these basic industries, I would place agriculture, in all its varied branches, first. Next to agriculture, I would place our forests, our minerals and our fisheries. A real national policy is a policy that will encourage the growth and development of these basic industries. The more of the products of the farm, the fisheries, the mines and the forest we have going to market, the greater will be the earnings of our transportation companies—the greater the purchasing power of the nation and as a consequence we shall have factories running full time and tradesmen working overtime to supply the needs of those who will have money to buy. In that belief, Sir, we submit to-day proposals to lighten the burden of taxation on these primary, basic industries. Our budget shows a reduction in debt of $30,000,000 last year, and a reduction in taxation of $24,000,000 this year. It is confidently expected that this reduction will give such impetus to trade that it will result in greater development and prosperity to all the provinces of Canada.

RESOLUTIONS

I beg to give notice that upon the House resolving itself into committee I shall move the following resolutions:

Customs Tariff

1. Resolved, That the Customs Tariff, 1907, be amended by adding after paragraph (d) of section four the following as paragraphs (e) and (f) of section four:

(e) Extend the benefit of the British Preferential Tariff to any territory administered under a mandate of the League of Nations by any British country, to which British country the benefit of the British Preferential Tariff has been extended; and from and after the publication of such Order in Council in The Canada Gazette the British Preferential Tariff shall apply to goods the produce or manufacture of such territory, subject to the provisions of this Act.

(f) Withdraw the benefit of the British Preferential Tariff from any territory administered under a mandate of the League of Nations which has received said benefit; and from and after the publication of such order in The Canada Gazette, the General Tariff or the Intermediate Tariff, as mentioned in the said order, shall apply to goods the produce or manufacture of such territory subject to the provisions of this Act.

2. Resolved, That it is expedient to amend The Customs Tariff, 1907, by adding at the end of section five thereof as enacted by Chapter forty-two of the statutes of 1923 the following proviso:

Provided that in computing the ad valorem rate of duty on tea purchased in bond in the United Kingdom, the value for duty shall not include the amount

of the customs duty payable on tea for consumption in the United Kingdom.

3. Resolved, That Schedule A to The Customs Tariff, 1907, as amended by Chapter twenty-six of the Statutes of 1914, Chapter nineteen of the Statutes of 1922 and Chapter forty-two of the Statutes of 1923, be further amended by striking thereout tariff items:—275, 445, 445a, 446, 446a, 446b, 447a, 447b, 448, 448a, 448c, 449, 450, 453b, 591, 663, 682, the several enumerations of goods respectively, and the several rates of duties of Customs, if any, set opposite each of said items, and to provide that the following items, enumerations and rates of duty be inserted in Schedule A:—

Tariff Items	—	British Preferential Tariff	Intermediate Tariff	General Tariff
12a	Sausage skins or casings, cleaned	Free	15 p.c.	17½ p.c.
68a	Peanut shells or peanut hull meal for use in the manufacture of explosives	Free	Free	Free
157b	Rum, when imported by the Department of Customs and Excise or by a person licensed by the Minister of Customs and Excise, to be denatured for use in the arts and industries, to be entered at ports prescribed by regulation of the Minister of Customs and Excise, subject to the Inland Revenue Act and to the Regulations of the Department of Customs and Excise, per proof gallon	Free	60 cts.	60 cts.
180b	Artists' proof etchings unbound, such as are printed by hand from plates or blocks etched or engraved with hand tools and not such as are printed from plates or blocks etched or engraved by photo-chemical or other mechanical processes	Free	Free	Free
275	Oil when imported by miners or mining companies or concerns, to be used in the concentration of ores of metal in their own concentrating establishments, under regulations prescribed by the Minister of Customs and Excise	Free	Free	Free
348c	Brass or copper tubing, not more than one-half of an inch in diameter, in lengths not less than six feet, coated with metal, and not polished, bent, or otherwise manufactured	5 p.c.	10 p.c.	10 p.c.
445	Mowing machines, harvesters, self-binding or without binders, binding attachments, reapers and complete parts thereof	Free	6 p.c.	6 p.c.
445a	Articles which enter into the cost of the manufacture of goods enumerated in tariff items 445, 446, 446b, 447b, 448 and 591, when imported by manufacturers of such goods for use in the manufacture of goods enumerated in tariff items 445, 446, 446b, 447b, 448 and 591, provided that goods which are entitled to free entry or a lower rate of duty than is mentioned in this item shall not be entered at the rate specified in this item	7½ p.c.	7½ p.c.	7½ p.c.
445b	Rolled iron or steel in bars, coils or rods and pig iron, when imported by manufacturers for use exclusively in their own factories in the manufacture of goods enumerated in tariff items 445 and 446	Free	Free	Free
446	Cultivators, harrows, horse-rakes, seed-drills, manure spreaders and weeders and complete parts thereof	Free	7½ p.c.	7½ p.c.
446a	Traction ditching machines (not being ploughs) adapted for tile drainage on farms, valued by retail at not more than three thousand five hundred dollars each, and complete parts thereof for repairs	Free	Free	Free
446b	Ploughs and complete parts thereof	5 p.c.	10 p.c.	10 p.c.
447a	Gas or gasoline traction engines for farm purposes, valued at not more than fourteen hundred dollars each, and complete parts thereof; traction attachments designed and imported to be combined with automobiles in Canada for use as traction engines for farm purposes and parts thereof for repairs	Free	Free	Free
447b	Wind-stackers, and threshing machine separators, including baggers, weighers and self-feeders therefor, and complete parts thereof	5 p.c.	10 p.c.	10 p.c.

Tariff Items	—	British Preferential Tariff	Intermediate Tariff	General Tariff
448	Spraying machines, fruit or vegetable grading machines, incubators for hatching eggs, brooders for rearing young fowl, pruning hooks, pruning shears, hay loaders, potato-diggers, fodder or feed cutters, grain crushers, fanning mills, hay tedders, farm or field rollers, post hole diggers, snaths, milking machines, milking machine attachments; centrifugal machines for testing butter fat, milk or cream; stumping machines, and other agricultural implements, n.o.p., and complete parts of articles specified in this tariff item	5 p.c.	10 p.c.	10 p.c.
449	Axes, scythes, sickles or reaping hooks, hay or straw knives, edging knives, hoes, rakes, n.o.p., and pronged forks	10 p.c.	15 p.c.	20 p.c.
450	Shovels and spades of iron or steel, n.o.p.; shovel and spade blanks, and iron or steel cut to shape for the same	10 p.c.	15 p.c.	20 p.c.
450a	Lawn mowers	20 p.c.	30 p.c.	32½ p.c.
453b	Machinery for sawing lumber, up to but not including the point of planing, and complete parts thereof, not to include motive power; machinery, logging cars, blocks and tackle, and complete parts thereof, for logging purposes exclusively	10 p.c.	15 p.c.	20 p.c.
453c	Ore crushers, rock crushers, stamp mills, rock drills, percussion coal cutters, coal augers, rotary coal drills, and complete parts of all articles mentioned in this item, when for use exclusively in mining operations	10 p.c.	15 p.c.	20 p.c.
460b	Machinery and apparatus for use exclusively in washing coal; machinery and apparatus for use exclusively in producing coke and gas; machinery and apparatus for use exclusively in the distillation or recovery of products from coal tar or gas; and integral parts of all machinery or apparatus enumerated in this item not to include motive power nor tanks for gas	7½ p.c.	10 p.c.	12½ p.c.
476a	Steel of number twenty gauge and thinner, but not thinner than number thirty gauge, for the manufacture of phonograph motor springs when imported by manufacturers of phonograph motor springs for use exclusively in the manufacture of such articles in their own factories	Free	Free	Free
502b	Bicycle rim strips of maple not further manufactured than bent to shape and jointed	10 p.c.	12½ p.c.	15 p.c.
506a	Crutches or specially constructed staffs for a cripple	Free	Free	Free
533b	Linters of short fibres of cotton, bleached, when imported by manufacturers of blotting paper to be used in their own factories for the manufacture of blotting paper	7½ p.c.	10 p.c.	12½ p.c.
591	Farm wagons, logging wagons, and complete parts thereof	5 p.c.	10 p.c.	10 p.c.
663	Fertilizers, compounded or manufactured, n.o.p.	Free.	Free	Free
663b	Articles which enter into the cost of the manufacture of fertilizers, when imported for use exclusively in the manufacture of fertilizers	Free	Free	Free
682	Fish hooks, for deep-sea or lake fishing, not smaller in size than number 2·0; bank, cod, pollock and mackerel fish lines; and mackerel, herring, salmon seal, seine, mullet, net and trawl twine in hanks or coil, barked or not,—in variety of sizes and threads—including gilling thread in balls, and head ropes for fishing nets; marline, and net norsels of cotton, hemp, or flax; and fishing nets or seines, and manila rope, not exceeding one and one-half inches in circumference, when used exclusively for the fisheries, not to include hooks, lines, nets or ropes commonly used for sportsmen's purposes	Free	Free	Free

4. Resolved, That Schedule B to The Customs Tariff, 1907, as amended by chapter nineteen of the Statutes of 1922 and chapter forty-two of the Statutes of 1923, be further amended by striking thereout items 1002, 1026, 1027, 1031, 1036, the enumeration of goods, and the rate of drawback to the said items, and to provide that the following items, enumerations and rates of drawback of Customs duties be inserted in said Schedule B:

Tariff Items	Goods	When Subject to Drawback	Portion of Duty (Not including Special Duty or Dumping Duty) Payable as Drawback
1026	Materials, including all parts, imported prior to eleventh day of April, 1924.....	When enteringinto the cost of goods enumerated in tariff items 445, 446, 446b, 447b, 448 and 591, before the first day of July, 1927	99 p.c.
1027	Materials.....	When used by manufacturers of malleable iron castings or steel shafting for use exclusively in the manufacture of such articles for use in the manufacture of goods enumerated in tariff items 445, 446, 446b, 447b, 448 and 591.....	80 p.c.
1031	Artificial silk tops and waste or artificial fibre silk, artificial silk yarns or filaments, enumerated in tariff items 583a and 583aa.	When further manufactured before the first day of January, 1925....	60 p.c.
1036	Bar iron or steel, rolled, whether in coils or bars, one and one-eighth of an inch in diameter and over.	When used in the manufacture of goods enumerated in tariff item 410.....	99 p.c.
1038	Materials, including all parts.....	When used in the manufacture of goods enumerated in tariff item 544a.....	99 p.c.
1039	Materials, including all parts not finished.	When used in the manufacture of goods enumerated in tariff items 447 and 448b.....	30 p.c.
1040	Bags, boxes and barrels.....	When imported by producers of salt, for use in covering salt produced in Canada.....	60 p.c.
1041	Materials.....	When used in the manufacture of bags, boxes and barrels, when such bags, boxes and barrels are used in covering salt produced in Canada.....	60 p.c.

5. Resolved, That any enactment founded on the foregoing resolutions shall be deemed to have come into force on the eleventh day of April, one thousand nine hundred and twenty-four, and to have applied to all goods mentioned in the foregoing resolutions imported or taken out of warehouse for consumption on and after that day, and to have applied to goods previously imported for which no entry for consumption was made before that day.

Special War Revenue Act

1. Resolved, that it is expedient to introduce a measure to amend The Special War Revenue Act, 1915, and amending acts, by providing that the rate of the consumption or sales tax imposed by section nineteen BBB of the said act shall be reduced from six per cent to five per cent.

2. Resolved, That it is expedient to introduce a measure to amend The Special War Revenue Act, 1915, and amending acts, by providing that the following goods shall be exempt from the consumption or sales tax imposed by section nineteen BBB of the said act, that is to say:—books enumerated in Customs Tariff items 173 and 175; printed text-books authorized by the Department of Education of any province in Canada; goods enumerated in Customs Tariff items 45, 46, 209b, 219a, 352a, 410, 410a, 445, 445a, 445b, 446, 446b, 447b, 448, 449, 450, 453b, 453c, 460, 460a, 460b, 461, 461a, 466, 466a, 469 including goods enumerated in this item of a class or kind made in Canada, 506a, 544, 591, 591a, 663b, 666, 667, 696; insulin; extract of rennet; poultry feed; ice cream; sago; rice, cleaned; macaroni and vermicelli; meats, salted or smoked; carbolic or heavy oil, to be used only in creosoting timber; cream separators and parts thereof; cars and other similar appliances for use exclusively at a mine or a quarry for mining or quarrying; articles and materials to be used exclusively in the manufacture of goods enumerated in Customs Tariff items 219a, 410, 410a, 445, 445a, 445b, 446, 446b, 447b, 448, 449, 450, 453b, 453c, 460, 460a, 460b, 461, 461a, 466, 466a, 469 including goods enumerated in this item of a class or kind made in Canada, 506a, 591, 591a, 663, 666, 667, 696; articles and materials to be used exclusively in the manufacture of cars and other similar appliances for use exclusively at a mine or a quarry for mining or quarrying; articles and materials to be used exclusively in the manufacture of cream separators and parts thereof; materials, not to include plant equipment, consumed in process of manufacture or production, which enter directly into the cost of goods subject to the consumption or sales tax, manufactured or produced by a licensed manufacturer or producer; materials, not to include plant equipment, consumed in process of manufacture or production, which enter directly into the cost of goods enumerated in Customs Tariff items 410, 410a, 445, 445a, 445b, 446, 446b, 447b, 448, 449, 450, 453b, 453c, 460, 460a, 460b, 461, 461a, 466, 466a, 469 including goods enumerated in this item of a class or kind made in Canada, 506a, 544, 591, 591a, 663,

663b, 666, 667, 696; and by providing that on the following goods there shall be imposed, levied and collected only fifty per cent of the said consumption or sales tax, that is to say:—boots and shoes, including rubber footwear; biscuits of all kinds; goods enumerated in Customs Tariff items 86, 105, and 106.

3. Resolved, That it is expedient to amend The Special War Revenue Act, 1915, and amending Acts, as follows, that is to say:—

(a) By repealing subsection three of section nineteen BBB of the said Act and substituting therefor a new subsection three providing that if at any time it appears to the Minister of Customs and Excise that payment of the consumption or sales tax is being evaded by a licensed manufacturer or producer or licensed wholesaler or jobber the Minister may require that the consumption or sales tax shall be imposed, levied and collected on any material specified by the Minister, sold to any licensed manufacturer or producer or licensed wholesaler or jobber or to any class of licensed manufacturers or producers or licensed wholesalers or jobbers specified by the Minister, at the time of sale of such material when produced or manufactured in Canada, or at the time of entry for consumption by such licensed manufacturer or producer or licensed wholesaler or jobber when such material is imported, subject to deduction thereafter on submission by the licensed manufacturer or producer or licensed wholesaler or jobber of proof that such material has been used in the manufacture of an article which is subject to the consumption or sales tax and on which the said tax has been paid.

(b) By repealing subsection five of said section nineteen BBB.

(c) By striking out subsection six of said section nineteen BBB and substituting therefor the following:—

"(6) Subject to the provisions of subsection three of this section, every manufacturer or producer shall take out an annual license for the purpose aforesaid, and the Minister may prescribe a fee therefor, not exceeding two dollars, and the penalty for neglect shall be a sum not exceeding one thousand dollars. Provided that the Minister may direct that any class of small manufacturer or producer selling his product exclusively by retail shall be exempt from payment of consumption or sales tax on goods manufactured or produced by him and persons so exempted shall not be given a license. Such exemption may be withdrawn by the Minister."

4. Resolved, That any enactment founded on the foregoing resolutions numbers one and two shall be deemed to have come into force on the eleventh day of April, one thousand nine hundred and twenty-four, and to have applied to all goods mentioned in the foregoing resolutions imported or taken out of warehouse for consumption on and after that day, and to have applied to goods previously imported for which no entry for consumption was made before that day; and that any enactment founded on the foregoing resolution number three shall come into force on the first day of July, one thousand nine hundred and twenty-four.

Sir HENRY DRAYTON (West York): I rise, Mr. Speaker to move the adjournment of the debate, but before doing so I desire to make one or two observations. In the first place I want to congratulate the Acting Minister of Finance (Mr. Robb) on the very pleasing and friendly way in which he has discharged the duties which devolved upon him. He has been frank and I think he has made the best of an impossible job.

[Mr. Robb.]

Mr. BUREAU: The job and the man are all right.

Sir HENRY DRAYTON : I say that my hon. friend the Acting Minister of Finance has been frank. He has pointed out to us that in connection with a good many of the better showings that can be made, the activities of past years must be taken into consideration; he has been frank in showing that out of a debt reduction of $30,000,000 no less than $10,000,000 is due to the previous administration. He is frank also in pointing out that the surplus claimed is obtained by the elimination of obligations which we are now entering into, but absolutely real in view of the value of the investment and I call upon the Minister of Railways (Mr. Graham) for a corroboration of this—railway obligations to the extent of $72,500,000, which we will finally pay.

While my hon. friend has been brief in his statement, he has given us a lot of material which I think should be carefully considered. and I propose to move the adjournment of the debate. to which I think there is no objection, until Monday next, there being comparatively few members in attendance as a rule on Friday. Before submitting the motion I wish to point out one or two things that we on this side conceive should be looked into in connection with these budget propositions. The first thing that we look upon as essential in a budget at the present time is something which will enure to the benefit of Canada as a country rather than to the advantage of other nations; something which every patriotic Canadian will look upon as extremely necessary; something which would go far to stop the exodus of Canadian workingmen to the United States; something which will tend to change the present policy which however conceived will have for its inevitable result the expansion of the United States rather than the building up of Canada. That is one of the matters we shall give special attention to when studying these questions.

We also regard as essential the restoration of the purchasing power of the Canadian people as a whole. That is something which is of importance not only to the farming community but to every industry in the Dominion. We are wondering what is being done by this budget to check the exodus, and the admitted exodus, of 181,000 capable and educated Canadians, who paid their head tax and entered the United States. This startling disclosure is made by official returns. These men left Canada for the purpose of finding that work which was denied them in their own

country, that work which was denied them in the land of their birth. Now, we should like to find a policy adopted which would restore these 181,000 good Canadians to their native land and enable it to benefit from the resumption of their activities in the Dominion. Many of these men left Canada as a result of the closing down of our woollen factories. Many of them earned a livelihood of $29 a week; in mere labouring work others earned $23 a week. Reducing the amount lost to the low average earnings per capita of $1,000 a year one can see at a glance the great loss in the purchasing power of the Canadian home market on which at any rate the majority of our farmers depend. We have removed from that market a purchasing power of no less than $181,000,000, and we would expect something to be done in connection with the present budget to remedy that serious loss. We would further expect something to be done to help the Canadian farmer who to-day is shut out by an absolute barrier from his natural market to the south. Certainly the least we might expect is that something would be done to help him in his own market. Thus we would expect that the producer of cheese in Canada would have something done for him when we remember that the sales of American cheese in this Dominion have increased 86 per cent, while his own market has been cut in two. We would expect that something would be done for the great basic industry of agriculture, and especially for mixed farming the development of which my hon. friend the Minister of Agriculture (Mr. Motherwell) preaches so sedulously. We would expect something which would change the situation which permits American eggs to the amount of $2,416,000 to be sold in Canada, whereas the sale of Canadian eggs in the adjoining republic amounted to the small sum of only $49,000. We would also expect something to be done to help the vegetable grower of Canada whose market is encroached upon to a serious extent by products from the United States.

I do not know that we should expect impossibilities to be done by this budget. That would be to restore to the industrial worker everywhere the confidence which he placed in the professions of faith of hon. gentlemen opposite in the Fielding-Laurier tariff which he desired. And at the same time the faith of the grain growers of the West that the Liberal platform of 1919 was seriously meant. Hon. gentlemen opposite have before them the task of reconciling these rival claims. We are going to consider the whole fiscal policy having regard to the doctrine preached by the Finance Minister (Mr. Fielding) last year that there should be stability in tariff but stability looking to the expansion of all matters Canadian.

We have not the budget before us yet, but I want to make just one statement to the minister which is perhaps an answer to much that he has said in connection with traffic over our railways and the like, and that is simply this. There was a time when our railways in western territory were good assets, but we have got a return to-day by the Minister of Railways and Canals (Mr. Graham) showing how the earnings of the National system are made up. The hon. Acting Minister of Finance (Mr. Robb) talks about the great increase of industrial and agricultural activity that his measure will produce. Why, we have never had a bigger or better year, so far as volume is concerned, than the present year; and yet the whole earnings of all the western territories, the prairie provinces and British Columbia, for the last year amount to $72,000,000 and the operating expenses amount to $74,000,000; so that as a result, with the movement of the greatest crops we have ever had, we still have a railway deficit in actual operation in western Canada this year of $2,020,000. On the other hand, in Ontario and Quebec, in the central region of industry, the National Railways earn $127,900.000, with operating expenses of $109,212,000, a credit of $18,687,-000. I hope a study of these resolutions that have been brought down will not result is this: That defenceless industrial Canada is further shackled, and that a complete Americanization of many lines of industry is made certain; that the exodus this year of 181,000 good working Canadians is to be indefinitely and permanently increased. We hope a study of these resolutions will not disclose these results. We fear it will, but we hope not. I beg to move the adjournment of the debate till next Monday.

Right Hon. W. L. MACKENZIE KING (Prime Minister): In reference to the motion my hon. friend has just made, as I intimated last night, it was the hope and expectation of the government that the debate would proceed this afternoon and continue until concluded. If, however, my hon. friend wishes a little longer time to prepare his speech, there will be no objection to the adjournment; I should have thought, however, that an adjournment until tomorrow would have been sufficient. My hon. friend has expressed a desire to have the debate adjourned until Monday, and if that is his wish of course we will accede to it. I would like to have an understanding with my hon. friend's leader as to what we may be per-

mitted to take up on Friday. If we accommodate my hon. friend's party, I hope he will extend a like accommodation to us. We would like to take up the Labour estimates on Friday, among other things, but there is a technical rule which would prevent us going into supply on Friday on the Labour estimates without the consent of the House. If the House is agreeable and will give us consent, we are quite agreeable to the adjournment.

Sir HENRY DRAYTON: I think my right hon. friend is mistaken as to the object of the adjournment. It is not to prepare a speech; that is an easy matter and could be done at once. It is to find out, in view of the resolutions, whether in fact they are as bad as they appear, or whether some of them can be supported.

Mr. MACKENZIE KING: I am glad my hon. friend has given the reason which he has mentioned, just now; when he asked for the adjournment it was because so few members would be present on Friday. I do not think that is a very good reason, and the one he has just urged is equally bad. However, we are prepared to go on with the railway resolutions, and continue them, but we would like to take up Labour estimates to-morrow.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): Hitherto, with all budget speeches, the desire of the opposition to have the debate adjourned until the following week, if the budget speech was delivered either on the last or the second last day of the week, has been acceded to without conditions. I am surprised that an attempt has been made to imply conditions now. I, for one, will submit to no conditions. If the government refuse the adjournment till Monday they will take the responsibility.

Mr. MACKENZIE KING: My right hon. friend has taken his characteristic attitude. I made the request, owing to a difficulty which arises in respect to a technical rule, in the hope that the right hon. leader of the opposition might help to expedite the business of the House by permitting us to take up the Labour estimates to-morrow. However, I have no desire to imitate the pettiness of my right hon. friend, and am ready to accede to the hon. member's request.

Motion agreed to and debate adjourned.

CANADIAN NATIONAL RAILWAYS

BILLS PROPOSED TO AUTHORIZE THE CONSTRUCTION OF BRANCH LINES

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals) moved that the House go into committee to consider the following proposed resolutions:

TURTLEFORD—HAFFORD

Resolved, that it is expedient to bring in a measure to provide for the construction of a Canadian National Railway line from Turtleford, in a generally southeasterly direction, to a point at or near Hafford, in the province of Saskatchewan; mileage already graded, 23 miles; estimated mileage including existing grading, 102 miles; estimated cost, $2,313,000.

He said: The other day an hon. gentleman on the other side of the House asked me if it was the intention of the government to submit these bills to the Railway committee. I think the answer given was that it was not the intention to do so. Several hon. members have suggested that we would be expediting matters by placing the Canadian National Railways to a certain extent at least in the same position as a private company, in the matter of appearing before the Railway committee.

I have considered the matter carefully, but I am not sure what will be gained by it. Government measures are not usually submitted to a committee; but if this would expedite business at all, I would have no objection provided that, first, I would be allowed to take up those bills that have had a first reading, give them a second reading and submit them to the Railway committee. This much would have to be understood, in fairness to the opposition, of course, that opportunity would have to be given on the second reading of some of these bills to discuss the principle involved as to the three-year programme. I imagine the Railway committee might not want to deal with that entirely, although they would discuss it. Therefore, if this is agreeable to the House, I might be permitted to move these other bills a second reading and then move that they be referred to the Railway committee. I will do so as the first order of business and let the Railway committee deal with them.

Sir HENRY DRAYTON: I appreciate the fact that they cannot be referred to the Railway committee until they have received second reading; but if the hon. gentleman says that they will go to the Railway committee, that will save a great deal of time in this House. We would have liked to help him in that regard last year. We have already consented to some of them, and if my hon. friend will make a note of them on his agenda, perhaps I can help him this afternoon.

Order No. 12 is a resolution covering a proposed branch line from near Kelvington at mile 114 on the Canadian Northern railway, in a westerly direction, to a point in township 37, range 13, west of the second meridian,

in the province of Saskatchewan. That is a line with which I am familiar and which ought to be built. I think it should have been built last year. We are quite ready to facilitate my hon. friend in every way in getting that on to the Senate.

The next resolution, Order No. 13, covers a proposed branch line from Prince Albert to near Paddockwood in the province of Saskatchewan. The same remarks apply to that. We were always in favour of that line.

The next one, Order No. 14, covers a proposed line from Eyre in the province of Saskatchewan to Acadia Valley in the province of Alberta. The same remarks apply to that.

The next one, Order No. 15, covers a proposed line from Eston in a southeasterly direction to White Bear in the province of Saskatchewan. The same remarks apply to that. Then resolution, Order No. 17, covers a proposed line from St. Paul, in a southeasterly direction to a point in or near township 57, range 6, west of the fourth meridian in the province of Alberta. We have no objection to that. That is as much as I can give my hon. friend in the meantime, but it will give him a bit of work.

Mr. GRAHAM: These are resolutions; we will get them through and give the bills their first readings.

Resolution read the second time and concurred in. Mr. Graham thereupon moved for leave to introduce Bill No. 48, respecting the construction of a Canadian National railway line from Turtleford to near Hafford in the province of Saskatchewan.

Motion agreed to and bill read the first time.

Mr. GRAHAM moved that resolutions, Orders Nos 12, 13, 14, 15 and 17 be taken up concurrently.

Mr. STEWART (Humboldt): I would ask the minister to leave resolution, Order No. 12, out of those which he has enumerated.

Mr. SPEAKER: It is understood that Order No. 12 is left out.

Motion agreed to.

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals) moved that the House go into committee to consider the following proposed resolutions:

DUNBLANE TO MAWER

Resolved, that it is expedient to bring in a measure to provide for the construction of a Canadian National Railway line from Dunblane on the Canadian Northern railway, in a generally southeasterly direction, to Mawer on the Grand Trunk Pacific railway in the province of Saskatchewan; estimated mileage including existing grading, 42 miles; estimated cost, $2,767,000.

KELVINGTON WESTERLY

Resolved, that it is expedient to bring in a measure to provide for the construction of a Canadian National Railway line from the end of steel near Kelvington at Mile 114 on the Canadian Northern railway, in a westerly direction, to a point in township 37, range 13, west of the 2nd meridian, in the province of Saskatchewan; mileage already graded, 4 miles; estimated mileage including existing grading, 13 miles; estimated cost, $290,000

PRINCE ALBERT—PADDOCKWOOD

Resolved, that it is expedient to bring in a measure to provide for the construction of a Canadian National Railway line from Prince Albert, in a northeasterly direction, to near Paddockwood, in the province of Saskatchewan; mileage already graded, 17 miles; estimated mileage including existing grading, 23 miles; estimated cost, $406,000.

EYRE—ACADIA VALLEY

Resolved, that it is expedient to bring in a measure to provide for the construction of a Canadian National Railway line from Eyre, in the province of Saskatchewan, in a generally southwesterly direction, to Acadia Valley, in the province of Alberta; mileage already graded, 42 miles; estimated mileage including existing grading, 25 miles; estimated cost, $463,000.

ESTON—WHITE BEAR

Resolved, that it is expedient to bring in a measure to provide for the construction of a Canadian National Railway line from Eston, in a southeasterly direction, to White Bear in the province of Saskatchewan; mileage already graded, 35 miles; estimated mileage including existing grading, 35 miles; estimated cost, $649,000.

RADVILLE—FIFE LAKE

Resolved, that it is expedient to bring in a measure to provide for the construction of a Canadian National Railway line from Radville, in a southerly and then westerly direction, to Fife Lake in the province of Saskatchewan; estimated mileage including existing grading, 115 miles; estimated cost, $3,706,000.

St. PAUL SOUTHEASTERLY

Resolved, that it is expedient to bring in a measure to provide for the construction of a Canadian National Railway line from St. Paul, in a southeasterly direction to a point in or near township 57, range 6, west of the 4th meridian in the province of Alberta; estimated mileage including existing grading, 21 miles; estimated cost, $525,000.

Motion agreed to and the House went into committee, Mr. Gordon in the chair.

Sir HENRY DRAYTON: I think my hon. friend ought to read what the directors say about each one and let it go, so that we may have a prima facie case on it.

Mr. GRAHAM: The memorandum in regard to the line from Dunblane to Mawer is as follows:

Dunblane—Mawer, Mile 0-42—	Cost
Grade now ahead of track—nil.	
Proposed in 1924—42 miles grade; 28 miles track..	$ 928,000
Proposed in 1925—14 miles track..	1,839,000
	$2,767,000

It is proposed in 1924 to do all the grading on the 42 miles between Dunblane and Mawer and lay the track to the South Saskatchewan river; also complete in that year, if possible, the substructure for the bridge across the river. In 1925 it is proposed to complete the trackwork and the superstructure of the bridge.

The main purpose of this line is to join the system of existing lines west of Dunblane to the G.T.P. Riverhurst branch at Mawer, in order to bring that area into more direct communication with the Moose Jaw-Regina district. The work will involve a large bridge across the South Saskatchewan river near Elbow, but it is justified by the improved routings to Moose Jaw and Regina from the west. It is estimated to make a saving of $131,000 per year on train miles saved. It is also estimated that this line should produce considerable grain and some other in and outbound freight, consisting of live stock, coal, lumber and merchandise. A certain amount of road haul will be saved to the farmers on their grain. The local business off this line, being mainly grain will all have a long haul and thus tend to feed the main lines of the system. The real justification of this line is the short routing of traffic.

Note.—Includes bridge over South Saskatchewan river, purpose is to link up lines.

Mr. JOHNSTON: I do not rise to oppose the resolution but I just want to bring certain facts to the attention of the minister. There is a survey running from the Elbow at the crossing of the Saskatchewan river to a point at or near Chamberlin on the Canadian National line, and it has always been understood by the people in the district traversed by this survey that when the line crossed the river from Dunblane it would follow the survey I have mentioned. These people are situated in a peculiar country lying between two valleys. Their towns are located on the Canadian Pacific line, between Moose Jaw and Outlook, on the one hand, and on the Canadian National line on the other. Going west to the Canadian Pacific line they have to cross the Qu'Appelle valley, and to the east, going to the Canadian National line, they are obliged to cross the Squaw valley; and the nature of these valleys is such that these people must use four horses in order to market a two-horse load of grain. I have received many letters and telegrams with respect to this matter protesting against this line going from Dunblane crossing the river at Elbow and then going to Mawer if the intention is to reduce the chances of the inhabitants of this district of getting a line which will serve their requirements. I bring this matter to the attention of the minister so that he may place it before the railway board, because these people in their present circumstances are justly entitled to a railway through that district. If a railway went through the district it would provide considerable business for the Canadian National Railways which they are not enjoying to-day; and by reason of the character of that part of the country which I have mentioned it is of sufficient importance that the minister take a note of what I am saying and submit these representations to the board.

Mr. GRAHAM: I shall be glad to do that. I may point out however that when these bills go before the committee some members of the board will be present.

Mr. LEWIS: Does the minister know whether a crossing has been found on the Saskatchewan south of the Elbow suitable for a bridge? I understand that 42 miles of grading has already been built this year, and if the engineers have not found a crossing near the Elbow it seems to me a waste of time going on with the grading until this difficulty has been definitely disposed of. Before coming to Ottawa I understood that certain engineers had been on the river but that no definite information was available at that time. It will be remembered that some years ago the Canadian Pacific Railway endeavoured to find a crossing at the Elbow, but without success. Before I proceed I should like the minister to tell us whether this matter has been definitely settled.

Mr. GRAHAM: One of the objects I have in mind in agreeing to send these bills to the Railway committee is that we may have the engineers present to answer all these questions which are so technical and the details of which I have no possibility of knowing. With the engineers in attendance on the committee hon. members will be able to learn at first hand from them, as well as from the officers of the board, whatever they may wish to know. My object in sending the bills to the committee, which is not really necessary, is to give hon. members an opportunity to ask questions and to obtain desired information.

Mr. LEWIS: If the matter is to go before the Railway committee, and if the engineers will be present to answer questions, then I would rather defer anything I may have to say until that time; and if there is anything further that I wish to point out afterwards I can say it on the floor of the House.

Mr. GRAHAM: I thought that the motion did not apply to the resolution in regard to the line from Kelvington West. But I understand that the hon. member for Humboldt (Mr. Stewart) wishes to discuss it.

Mr. STEWART (Humboldt): The objection I have to this line is that it does not wholly serve the purposes for which our Canadian National branch lines are supposed to be built. The minister himself agrees with me in this statement and I have observed also that the leader of the opposition (Mr. Meighen) takes the same view in statements he has made previously in this regard. In the building of these lines and in their location there should be taken into consideration not only the interests of the railways themselves but the desirability of serving the people who are already in the districts where railways are to be built. In order that I may state my objection clearly to this branch line as projected I shall explain the conditions that exist in that particular district. In 1904 or thereabouts the Canadian Northern built its main line from Winnipeg to Edmonton, cutting through the province of Saskatchewan, and about a year later there was built from that line a branch from Dauphin to the city of Prince Albert which, after swinging northward from Dauphin for about a hundred miles, then paralleled the existing line half way across the province of Saskatchewan. There was already at that time a line from Saskatoon to Prince Albert which later was acquired by the Canadian Northern Railway, thus enclosing a sort of rectangle. In this rectangle there was enclosed an area, roughly speaking, of 150 miles by 60 or 70 in width. That of course, it will be admitted, is too large a territory to be served by two lines, one on the south and the other on the north. Later on the Canadian Northern started to build a line cutting through that territory, but as this area was at that time sparsely settled, and as that company already encircled the territory with their own lines, very slow progress was made, and they did not reach Kelvington until about two years ago. For many years previous to that much of this territory had been settled very thickly. It is a good district. At the time the original railway was built, about 1904 or 1905, it was considerably wooded; but owing to the inroads of fires and the use of the wood by settlers the forest districts have been greatly reduced and much good land has been brought under cultivation; in fact the whole territory may be said to be fairly well settled to-day. The other line which was started by the Canadian Northern, and eventually became the Canadian National line from Swan River to Kelvington—or what was always known as the Thunder Hill extension—did not break this territory into two by any means. It ran practically parallel to the Winnipeg-Edmonton line of the Canadian National Railway, and about twenty miles from it, leaving a territory north of that line to the Dauphin-Prince Albert line averaging from sixty to seventy miles in width. As I have already stated, this territory has become settled and cultivated, and a vast amount of grain is taken out annually. At the same time the country to the northward has become a heavy producing area, and there are millions of bushels of grain to be drawn out of there every year. This line in its original form, as presented last year, was shown as a cut-off from the Swan River-Prince Albert line across to Kelvington. It would have served the territory and would have been very advantageous to the settlers who went in there many years ago anticipating railroad accommodation.

When the Soldier Settlement Board was re-establishing the soldiers who were placed under its care, this very choice land no doubt appealed to its officials as being admirably suited for such settlement, and a very large soldier settlement was located in the area around Kelvington and immediately north—Perigord, Nobleville, Pre Ste. Marie, Bjorkdale and Speddington. The soldiers took up their land with the definite understanding that a branch of the Canadian National Railways, which had been projected before that time, would be built to serve them. They have broken up perhaps more than half of their land. I was in there last fall and was surprised at the way in which they had advanced themselves, being so distant from railway facilities. They have good land and have made themselves homes there. Now this resolution would carry the branch in a westerly direction to connect with a branch of the Canadian Pacific, and would not serve those settlers.

The fact is that last year the Canadian Pacific Railway Company, realizing that they had an advantage when the Canadian National board was not allowed to build, constructed their line from a point south running generally northerly through this district, but without serving the areas that I have mentioned where the soldier settlers are located. The Canadian Pacific had a definite objective to the north, and naturally they wanted to reach it by the shortest route. To do so they built through very rough territory —scrub land and forest area—about fifteen miles away from the soldier settlement. In order to reach the Canadian Pacific line these soldier settlers will have to build fifteen or twenty miles of road.

I maintain, Mr. Chairman, that it is not good policy in this case to build thirteen miles of railway to reach a Canadian Pacific

branch line and then secure running rights over it, as I understand the intention to be. I submit it would be far better to build this branch through the soldier settlement, for in doing so it would not be necessary to closely parallel the Canadian Pacific. The resolution itself shows that the route is thirteen miles away from the Canadian Pacific, and it would not be necessary to build closer to the competing line to reach the northern branch toward which this line was projected last year. By turning north from Kelvington rather than westerly, as the resolution calls for, I am quite certain that a route could be found through the territory in which the soldiers are settled. Not only would it then serve these settlers, but it would also serve the purpose intended last year—at least, one of the arguments offered in support of the line at that time was that it would make the necessary cut-off for the Prince Albert and Melfort country. There is an enormous quantity of grain being produced in that country to-day, and the Dauphin-Prince Albert line is not capable of carrying the freight trains necessary to take that grain out. One of the engineers told me last year that in his estimation it would cost as much to put that road into shape for such traffic as it would to build this cut-off, for heavier steel would would have to be laid and the whole road practically re-constructed, with the exception of the grade.

I know the argument will be advanced that by connecting with the Canadian Pacific branch, as the Canadian Pacific intend eventually to cross the Prince Albert branch, running rights can be secured over it and accommodation afforded in that way. But I submit that this is not good policy, and that where settlement is in dire need of railway service, and where eventually the Canadian National will have to build their line to afford adequate service, it is false economy at this time to build thirteen miles to reach the Canadian Pacific, when that mileage would be one-fifth of the whole construction required to reach their own line to the northward, and would in itself be that much closer to the soldier settlement when built.

The freight from this territory is not merely prospective; it is there to offer at the present time. Two years ago when the Thunder Hill branch of the Canadian National, of which this project is an extension, reached Kelvington, about 750,000 bushels of grain was carried out the first fall after steel was laid down. Kelvington is only twenty-five miles south of these soldier settlements, and there will be immense quantities of grain to be taken out if this line is carried through.

[Mr. C. W. Stewart.]

Let me show the other side of the argument as it affects those people. I am quite safe in saying that on an average they are fifteen miles away from the Canadian Pacific which is projected but not yet built, and they will have to build through the very worst kind of country, intersected by lakes and creeks, and the Barrier river and the Red Deer river will have to be bridged. It will make it almost prohibitive for these new municipalities to undertake such expensive road construction.

I know that the privileges that a private member has in amending a resolution such as this are somewhat limited, and it is much against my will that I would move to amend it at all. The building of thirteen miles into this territory would be of very little help, but I want to point out—and this statement was made by a Canadian National engineer who went over the territory during the last four or five months—that along the line of the route I have intimated it should follow, and the one that it was originally intended to follow, there are 666 farmers established. If this line is extended westwardly in the direction that this resolution proposes it should go, a good number of those 666 farmers will not be there this time next year. They will give up all hope of getting railway facilities if they are to have no railroad any closer to them than the Canadian Pacific branch, which is under construction but not yet completed, and which, as I have pointed out, is almost inaccessible to them. If this 13 miles of line is built in a northerly direction it will at least have the effect of holding these people to their land and their homes; they will go on, I have no doubt, working as they have done for years past in the expectation that they will eventually get relief so far as railway facilities are concerned. With these considerations in mind, therefore, I beg to move, seconded by the member for Mackenzie (Mr. Campbell), that resolution No. 12 be amended by striking out the words "in a westerly direction, to a point in township 37, range 13, west of the 2nd meridian," and substituting therefor the words "in a northerly direction, east of Nut Lake."

Mr. GRAHAM: My hon. friend will understand that that might increase the expenditure, because it changes the route.

Mr. STEWART (Humboldt): Is the minister prepared to say that it would increase the expenditure?

Mr. GRAHAM: No, I am not an engineer. These are matters to discuss in committee with the engineers. If it is decided by the committee, after hearing all the evidence, that

this resolution is not correct, a new one could be introduced later. It would be useless to pass a motion, even if it were in order, saying where this road should go, because parliament will not take action with respect to the building of roads unless the Canadian National board approves of them, unless it announces distinctly that a certain proposed road is for the benefit of the community. I think my hon friend would be well advised not to press his motion, but to appear before the committee, if he is not a member of it, and discuss the matter.

Mr. MOTHERWELL: I admit that my hon. friend (Mr. Stewart, Humboldt) is perhaps more familiar with the circumstances there than anyone else in the committee. However, his proposal, I think, would involve two things: first, the abandonment of the four miles already graded west of Kelvington, and, second, the fact that there would not be any connection, with the Canadian Pacific at all. It will simply be a case of paralleling the Canadian Pacific for a distance of 13 miles. The objective of the board of directors is to connect this line at Kelvington with the Canadian Pacific running north to Tisdale, following the same route that the Canadian National proposed to follow last year.

Mr. STEWART (Humboldt): I do not think it would be necessary to abandon the four miles of grade. Those four miles run in a general direction northerly from Kelvington, not westerly.

Mr. MOTHERWELL: Is it more westerly than northerly?

Mr. STEWART (Humboldt): No, I think it is more northerly. It would not be necessary under the amendment to parallel the Canadian Pacific for 13 miles as the Minister of Agriculture suggests. I have left the matter wide open for investigation by Canadian National engineers, who may find a route, if they can, more than that distance from the Canadian Pacific. They would still be serving these settlements if the line were 20 or 25 miles from the Canadian Pacific. I would be wholly favourable to getting as far from the Canadian Pacific as possible, keeping in view the serving of the districts I have mentioned.

Mr. KNOX: I know the territory to which the hon. member for Humboldt (Mr. Stewart) has been referring and I know the need for service there. I have been through that district and I know that the people are looking forward to some railway connection. This proposal looked to them as the only possible way that they could get the necessary railway facilities, and when it became known that it was intended to link up with the Canadian Pacific, their hopes certainly received a great setback. Not only would that 13 miles be further north, but it would be the beginning of a line that would extend up through the districts of Bjorkdale and Speddington.

It would connect with the line from Winnipeg to Prince Albert, and if it were continued on it would enter a very thickly settled district to the north of that line. I mentioned that district a few days ago when speaking on the extension from Ridgedale. It is a district that seems to have been overlooked, and I am sorry that that should be so. Whether the amendment is allowed to stand or not, I think it is only right that we should put ourselves on record as knowing the conditions there and knowing the location.

Mr. CAMPBELL: I wish to associate myself with what has been said by the hon. member for Humboldt (Mr. Stewart regarding the necessity for railway facilities for the settlers in this district. If anything were necessary to prove the productiveness of that section it is proved by the fact that almost immediately after the defeat of the Branch Lines Bill in the Senate last year the Canadian Pacific built through almost the same territory that the bill had intended to cover. The hon. member for St. Lawrence-St. George (Mr. Marler) complained about the building of railways through sparsely settled districts, and I agree with him. But when settlers are already in a certain district, placed there, as they were in most cases, by agents of the Dominion government, the Soldier Settlement Board, there is a distinct obligation on the part of the government to provide them with the necessary facilities. A few evenings ago we had a discussion in this House regarding a vote of $600,000 for the completion of the tower on this building. It seems to me that an attempt was made on that occasion to put those who were opposing that vote in a false position by raising the question of the memorial chamber which is to be provided in the tower. I submit that the best memorial we could erect to our dead soldiers would be to look after the living. These men who have gone in there, who were located there by the Soldier Settlement Board, are in such a position that they must lose everything. they must give up and leave, if they are not provided with proper transportation facilities.

Regarding the whole question of branch lines and the adverse comments we have heard in this House, it seems to me that

5 p.m.

many hon. members who have spoken on the subject have not been fair to western Canada. A few years ago when a railway company came before parliament and asked for a charter to build a branch line or an extension of a main line it was considered a distinct favour to them to grant them a charter. Now, Sir, we have hon. members complaining that railway construction is being authorized, it looks as if some hon. members were viewing railway construction from a different angle altogether. Some hon. members from eastern Canada, particularly the hon. member for Joliette (Mr. Denis) and one of the Toronto members, tried to make it appear that the construction of these branch lines was a direct bonus to western Canada. Sir, I can hardly permit their statements to go unchallenged and I would therefore take the liberty of quoting a few figures to show how unfounded they are. The hon. member for Joliette, who I regret is not in his seat, made this rather significant statement:

> These lines by the very nature of things must come out of the moneys of the country and must increase the deficits, and the province of Quebec is paying for them.

I submit that is not a very fair statement to make. About $225,000,000 of the public money of this country has been spent on the canal system the use of which is granted free of charge to vessels traversing those waters. Then, many millions of dollars have been spent on our rivers and harbours. This expenditure also is a direct bonus to the people who use these facilities. They are of very little benefit to the people of western Canada. Again, in reference to the railways I maintain that we in the West have been paying an unfair proportion of the railway charges in the past. The hon. members to whom I have referred seem to argue that the greatest amount of the railway deficits has accrued in western Canada. The actual facts demonstrate that in good crop years, when we have a bountiful harvest in western Canada, the earnings of the railways show a remarkable increase and a corresponding decrease in deficits. By referring to the decision of the Board of Railway Commissioners in the western rates case we find an admission on the part of the commissioners that discrimination existed in freight rates against western Canada. They admitted frankly that western Canada was being charged a higher freight rate than eastern Canada and they justified it on the grounds that in eastern Canada there was competition of American roads and the water competition on the lakes. I should like to quote a few figures in substantiation of this statement; they are taken from statements placed before the Railway Commission by the Canadian Pacific Railway Company. Dealing with the five-year period from 1907 to 1911 the Canadian Pacific show an operating ratio—that is the amount spent that was necessary to earn a dollar—in eastern Canada, that is east of Fort William, of 72 cents, on the prairie section of 56 cents, and on the western section, that is British Columbia, 60 cents. The net earnings for this period were: In the western section—that is the prairies and British Columbia, $91,500,000, and in the eastern section, $43,500,000. That is, after deducting all operating expenses, the western roads showed $48,000,000 more profit than the eastern section. For the five-year period from 1912 to 1916 the eastern section shows an operating revenue of $226,500,000, and the western section $356,500,000. The operating ratio for this period in the eastern section was 73.3, for the prairie section 54.5, and for the western section 57 cents. The net earnings for the same period were—in the eastern section $60,000,000, and in the western section $152,500,000. Then we have the period from 1916 to 1920. During that period the operating ratio in the eastern section was 80.95, and in the western section 67.30. For the year 1921 the operating revenue on the eastern section was $85,500,000, and on the western section $101,900,000, The operating ratio for that year in the eastern section was 77.21, and in the western section 70.54. The net earnings on the eastern section amounted to $11,000,000, and on the western section to $30,000,000.

Now, Sir, if we summarize the figures for this whole period we find that in the fifteen years from 1907 to 1921 the net earnings in the western section of the Canadian Pacific Railway were $405,000,000, and in the eastern section $177,000,000. These figures almost prove the contention sometimes made "that the western section has paid for the Canadian Pacific but the country does not own it." I may say that in these quotations the western figures include also the British Columbia section. This is unfair to the prairie provinces because the cost of operating is much higher in the British Columbia section than it is in the prairies.

The charge has frequently been made that grain was carried at a much lower rate than other commodities, and the attempt has even been made to prove that a bonus was granted to the western farmers in the matter of the handling of grain. Now, Sir, if we analyse the earnings for the different months we find that the railways have always made the great-

est profit during the months in which the grain was being handled. For instance, we find that in the year 1920 the operating ratio on the Canadian Pacific Railway during the month of August was 80.23, that is it cost 80.23 to earn a dollar. In the month of October when the heavy movement of grain was on it cost them only 56.46 to earn a dollar; and in the month of November of the same year the operating ratio was only 66.32. In the year 1921 the operating ratio in the month of October was only 55.02 cents. In the month of November, 1921, the net revenue on the eastern section was only $4,403, and the operating ratio 99.23. Now, Sir, in the same month the net revenue on the western section was $5,048,000. In the month of December, 1921, the eastern section showed a net revenue of $566,000, and the western section a net revenue of $3,170,000. The year 1920 showed an operating ratio of 84.70 on the Canadian Pacific Railway, but in 1921 it had dropped to 82.28, and in 1922 it had fallen to 80.55.

Now, Sir, when the Crowsnest pass rate agreement was being considered by the special Railway committee of this House the president of the Canadian Pacific Railway Company made the prediction that if the Crowsnest rates were permitted to go into effect his company would be unable to pay its fixed charges and dividends. And yet after the Canadian Pacific had handled the most of that crop at the beginning of the new year we find the president of the company sending a message to his men in which he said:

> The new year opens under auspices more favourable than any since the conclusion of the war.

This was in strange contrast with the pessimistic prediction in which he indulged when the rate question was being considered by the Railway committee. I should like hon. members to note that in the year 1922, the year in which the Crowsnest rates came into effect, the operating ratio of the Canadian Pacific dropped from 82.28 to 80.55. Analysing the amounts of grain handled in previous years we find that a low operating ratio was coincident with large crops. The Canadian Pacific Railway Company handled 4,349,000 tons of grain in 1920 and in that year their operating ratio was 84.70. In 1921, they handled 4,812,000 tons and the operating ratio was 82.28. In the year 1922 they handled 6,888,000 tons of grain and the operating ratio dropped to 80.55.

The CHAIRMAN: I should like to draw attention to the fact that I think the discussion is too general in its character and that it does not deal with the amendment before the House on resolution No. 12.

Mr. CAMPBELL: I was merely answering criticisms made previously under the same heading. However, if that is the ruling of the chair I will bow to it.

The CHAIRMAN: It is my impression the hon. member is getting away from the resolution.

Mr. CAMPBELL: I will be through in a few minutes if the chairman will permit me to finish my remarks. The Canadian National Railways had an operating deficit of about $36,000,000 in 1920 but it has been improving steadily ever since. If we analyse the figures for the amount of grain handled, it seems to me this improvement is coincident with the increase in the amount of grain handled by the road. In 1920 the figure was 7,653,000 tons. In 1921 it was 10,233,000 and in 1922 it was 11,229,000 tons. While the figures are not available in tons for 1923 the cars handled show an increase of almost 25 per cent over those of 1922.

The CHAIRMAN: It strikes me the amendment is out of order. I will give my reasons for this view if any hon. gentleman desires to speak as to that point.

Mr. EVANS: I wish to say a word in support of the amendment. I know something of the country and the way the railway is going. It has already run pretty well into the survey of the Canadian Pacific Railway going in that direction, and I would say, even for the sake of service and for the sake of revenue as well, it would be reasonable to run the line in a northerly direction from the point where it is graded at present. I would say, in the interests of revenue and service for those who have to settle in that part of the country, which is so much in need of a railway—

The CHAIRMAN: With regard to the amendment, the practice is altogether against moving an amendment to preliminary resolutions preceding money bills. These resolutions have the recommendation of the Crown, and the recommendation of the Crown is signified. They are preliminary to the bill being introduced and referred to the committee, where any hon. member may move amendments which do not increase the impost or amount to be expended. In view of these resolutions and the variation proposed involving the construction of the new branch line which this amendment would really authorize, I think the amendment is out of order. Rule No. 77 reads:

> If any motion be made in the House for any public aid or charge upon the people, the consideration and debate thereof may not be presently entered upon,

but shall be adjourned till such further day as the House thinks fit to appoint; and then it shall be referred to a committee of the whole House before any resolution or vote of the House do pass thereupon.

Then I refer to May, page 457:

In like manner, after the question has been proposed on an amendment, and it has appeared that the amendment would vary the incidence of taxation, or increase the charge upon the consolidated fund, the Speaker has declined to put the question.

I feel that I should follow that rule. The ground is that an amendment to a resolution is varying the incidence of taxation and may increase the amount of expenditure. The hon. member is not prevented from moving during various stages of the bill, or when the bill goes into committee, any amendments he desires, with those limitations. I feel that this amendment at this time is out of order.

Sir HENRY DRAYTON: In regard to the line from Prince Albert to Paddockwood, I think we should have the explanatory note.

Mr. GRAHAM: The memorandum reads as follows:

Prince Albert N.E., Mile 0-23.	Cost.
Grade now ahead of track—17 miles.	
Proposed in 1924—6 miles grade; 23 miles track..	$406,000

It is proposed in 1924 to add 6 miles to the grading already done and lay the track on this 23 miles, taking the line to near the town of Paddockwood, and there leaving it for a time.

The first work done on this branch was in the year 1920, when a grading contract was let and by the end of the season 1921 about 17 miles of this work was completed, and since that time no other work has been done on this branch.

The line runs through a mixed farming district with considerable timber and small poplar with a small percentage of jack-pine. For the first four or five miles out of Prince Albert the soil is light and not suitable for agricultural development. There is considerable settlement on the line beyond this point and in the neighbourhood of Paddockwood and beyond there is a settlement of returned soldiers.

The justification for building this line is to make good the $169,000 already spent and earning nothing, and the fact that it is estimated that 420,000 bushels of grain per year will be taken off this line, besides 230 cars in and out of live stock, lumber, wood and merchandise.

It is estimated that an average haul of 16 miles would be saved to the farmers by building this line, and computing this saving as being worth three-quarters of a cent per bushel per mile hauled, on the 420,000 bushels of grain referred to it would make an annual saving to the farmers of $50,400 for hauling grain alone.

The railway business obtained from this line will be all of a long haul character and therefore furnish considerable business to other lines of the system.

Mr. KNOX: I wish to say a word with regard to this line. It has been looked forward to for a great many years by the people who went in there and it is on behalf of the returned men that I wish to speak because they went in there on the distinct understanding that this line was as good as built. An arrangement was made whereby the lands that were open for homesteading at that time could not be taken up by civilians. They were reserved for returned soldiers, and they looked upon it as just the same as if the railway were in existence. The returned men went in very largely on the understanding that they would get immediate railway service. That has been withheld, and it has been a very sad disappointment to these returned men, and very discouraging to them. In fact, Sir, I am sorry to say some saw fit to pull out because they did not get the railway last year. However, I think they see a ray of hope at the present time and their courage is returning accordingly. I wish to say that there is every justification for the building of this line, even without this argument, which I think is a very strong one. Last year when it was understood before they got the set back that the branch lines were to be built, arrangements were made for the building of elevators on this line, and I feel sure that it will eventually be a heavy producing country.

Sir HENRY DRAYTON: The hon. gentleman missed a great opportunity last year of having it built. He wanted to consider it, not on its merits, but with a whole lot of junk, and he got the usual result. We have always been in favour of it and are in favour of it now.

Mr. MOTHERWELL: If the hon. member wants it built this year there should be no difficulty.

Sir HENRY DRAYTON: That is what I say.

Mr. GRAHAM: In regard to the line from Eyre to Acadia Valley, the memorandum I have reads as follows:

	Cost
Acadia Valley, Mile 0—42	
Grade now ahead of track—42 miles	
Proposed in 1926—25 miles track..	$463,000

It is proposed in 1926 to lay 25 miles of track on the existing grade, at a cost of $463,000, thus completing the line to Acadia Valley, 25 miles out of Eyre, and there leaving the track for some years. The grading on this line was started in 1919, and was not completed until 1921.

The line starts in the province of Saskatchewan off the Alsask southeast branch at Eyre, and after running approximately 12 miles westerly, passes into the province of Alberta.

This branch runs through a good grain growing district a greater part of its length, and most of the land is taken up and was settled. This area, however, is subject to dry seasons and the effect of hot winds in the summer, but in seasons of sufficient precipitation during the growing season gives big yields per acre.

The justification for this line is that $434,000 ($305,000 up to Mile 25.0) has already been expended on the grading, which is earning nothing, and that it is estimated that 600,000 bushels of grain on the average each year will be shipped off this line, besides 140 cars of freight in and out, consisting of live stock, coal, lumber and merchandise. About eight miles on the average would be saved farmers in road haul, and if computed to be worth three-quarters of a cent per bushel, per mile hauled, on the 600,000 bushels, would mean an annual saving to the farmers or $36,000. All the business off this line would be of a long-haul character, thus furnishing other lines with considerable business.

Mr. CARMICHAEL: This line is in my constituency as well as the line represented in the next resolution. I understand the desire of the minister is to get these resolutions in bill form or, at least, to get them before the Railway committee as soon as possible, where they may be discussed in every detail. I am not on the Railway committee, and I have an idea that the representative of the district where the railway is to be built has information that it is important to place before that committee. I have received petitions from ratepayers, municipal councils and grain growers' associations in connection with these two proposed lines.

The CHAIRMAN: On application to the committee for leave to be heard, the hon. member or any other member representing a constituency or area through which it is proposed that these lines shall run, may be heard. The committee will be open for any person or member to appear before it in order to make his representations.

Mr. CARMICHAEL: If we could have the assurance from the minister that a representative interested in this proposed line will be advised when the committee meets and that evidence will be taken from him, I would be prepared to remain silent at this time and give my evidence before the committee. I would not, however, wish these resolutions to slip through the Railway committee before I had an opportunity of giving the committee the facts which I have.

Mr. GRAHAM: Notices of meetings of the Railway committee and other committees are always in the Votes and Proceedings, so that every member has notice every day as to the committees. Bourinot, of course, makes it very clear that every member of the House has a right to appear before any of the committees, and I can assure my hon. friend that the chairman of the committee, the hon. member for Pontiac (Mr. Cahill), will be glad to give him an opportunity to be heard when this bill is before the committee.

Mr. BOYS: I cannot quite agree with what the minister says, although I wish it were so. I had an experience in a committee where I wanted to be heard. The chairman of that committee took the matter up and he, I think, correctly decided that a member of the House had not a right to appear before that committee without making application and receiving permission of the committee to be heard. At the same time, there is no doubt that any member who wants to be heard can make a request, and he will be heard, but he does not have that as a matter of right.

Mr. GRAHAM: I have been on the Railway committee for many years and any person who wanted to be heard, so far as I can remember, was always heard. The Assistant Clerk has pointed out at page 27 of Beauchesne, this rule:

> Members of the Commons may be present during the proceedings of their committees, and the committee has no power of itself to exclude any member at any stage of its proceedings, but may obtain special power from the House for that purpose.

I suppose, strictly speaking, a member who is not a member of the committee may be ruled out as not having a right to address it without permission, but that permission is always given.

Mr. BOYS: I do not say that he could not be present in the committee. The Minister of Agriculture (Mr. Motherwell) will recall the incident to which I have reference. In the agricultural committee two years ago when this point came up, the chairman looked into the matter and I had to admit, when I looked into it, that he was perfectly right. Anybody may be present in the room, but he cannot address the committee without permission, and of course, he cannot vote.

Mr. GRAHAM. I think it has been generally the practice that any member is allowed to make his representations, and I think I can assure my hon. friend that that will be the case.

The memorandum I have on the proposed line from Eston to White Bear is as follows:

Eston S.E., Mile 0—35. Cost
Grade now ahead of track—36 miles
Proposed in 1926—35 miles track.. .. .. ..$649,000

It is proposed in 1926 to lay the track on the 35 miles of grading which was started in 1919 and completed in 1921, at an estimated cost of $649,000, and there to leave the line for at least a year or two.

This branch runs through a good agricultural district with a considerable percentage of the land cultivated. Like other areas in this district, it is subject to short crops in dry seasons, but in seasons of sufficient precipitation will produce a heavy yield of wheat per acre.

The justification for completing this line is that about $274,500, or more than one-quarter of the money

necessary to complete it, has already been expended and is earning nothing; also that it is estimated, when completed, this line should ship on the average 1,000,000 bushels of grain per year, besides 175 cars of in and out-bound freight of live stock, coal, lumber and merchandise. With this line completed the farmers would save on the average 10 miles road haul, and computing this as worth to them three-quarters of a cent per bushel, per mile hauled, on the 1,000,000 bushels estimated to come off this branch, there would be saved to the farmers each year $75,000 on grain alone. The freight business off this line being all of a long-haul character, will furnish other lines of the system with considerable business.

The memorandum which I have on the proposed line from St. Paul in the province of Alberta southeasterly is as follows:

St. Paul E., Mile 0—21.	Cost
Proposed in 1924—nil	
Proposed in 1925—21 miles grade..	$180,000
Proposed in 1926—21 miles track; 21 miles ballast..	345,000
	$525,000

Nothing is proposed to be done in the year 1924, but in 1925, it would be the intention to grade 21 miles at an estimated cost of $180,000 and in 1926 to finish this 21 miles with track and ballast at an estimated cost of $345,000.

There is considerable settlement development east of the present end of the line, now at St. Paul, and for the distance proposed there is a good country susceptible of considerable grain growing and mixed farming.

The justification for construction of this line lies in the fact that it is estimated that when the 21 miles as proposed is built, it would produce annually 630,000 bushels of grain besides giving in and outbound 185 cars of freight, consisting of live stock, coal, lumber and merchandise, all of which being of particularly long-haul character, would contribute considerably to other lines of the system.

It is figured that on an average 14 miles road haul would be saved to the farmers by this line, and applied to the 630,000 bushels of grain, expected and taken at three-quarters of a cent per bushel, per mile hauled, would mean an annual saving to the farmers of $66,150 for grain hauled alone.

Sir HENRY DRAYTON: I do not know that the resolution covering the proposed line from Radville to Fife Lake is in quite the same position as the others. This is an old, old line, I think, that has been under discussion for a long time. I think the real discussion is amongst the settlers themselves in that district. There were three parties and it is very difficult to find out what is the right location for it. Perhaps it could be carried down to Bengough without very much difficulty, and you would have to go there anyway. It is a very expensive country, however, when you get past Bengough, and I do not think that you would be pleasing everybody.

Mr. GRAHAM: Perhaps we had better let the matter stand.

Sir HENRY DRAYTON: I think the resolution is one that should be left over.

[Mr. Graham.]

Mr. GRAHAM: Perhaps hon. members may want to discuss it.

Mr. MORRISON: I think it is important that the resolution should be discussed. While there has been some question as to the eastern terminus of the branch, it is of considerable importance in a way in that it affects the Canadian National Railways in a respect in which many of the other branch lines do not. It is estimated that this branch will cost $3,700,000 for 115 miles. To-day there are millions of bushels of grain being hauled across the international boundary line and marketed at United States points, and that entire business is lost to Canada. We hear much talk to-day about patronising home industries, but here is a place where the business of thousands of our people, who to all intents and purposes are American citizens, is lost to Canada. They have produced in that country between three million and four million bushels of grain this year and the bulk of it is going via an American route. It is not as though it were taking trade away from some other Canadian road if we build this branch such as the Canadian Pacific Railway. It is taking it from an American road, and I say that it is sound national economy to build this line immediately. That country has been settled for about fifteen years, many of the inhabitants having gone in there on the strength of the promise, implied at least, that a road would be built soon. They are a very fine class of settlers and their great want to-day is a railway. At the present time there are many farmers who are not working their land over 25 per cent capacity and they cannot afford to develop a greater area than they have under cultivation, while they have to haul grain distances ranging between 25 and 45 miles. The people are simply stalling, waiting for a railroad; indeed, many of them are not working the land at all, but are just letting it lie idle. They are so far from any railway that, of course, there is not much encumbrance against them, for the reason that they could not borrow money. But they are an industrious class of people and if they were assured that a line would be built soon they would immediately get busy and would produce wealth whereby the country would be richer. The Dominion of Canada would be enriched, not by the net amount, but by the gross wealth produced by these people. While I do not want to differ from the engineers in regard to the route, no doubt we should be largely guided by them as to where it should go. The latest proposal is that it

should run 20 miles south of Radville and then westerly about 10 to 15 miles north of the boundary. I am anxious to see this work undertaken at the earliest possible moment in the interests not only of the settlers themselves but of the country at large.

Mr. MOTHERWELL: We might as well deal with this matter now if the minister (Mr. Graham) is agreeable. I have had some correspondence and telegrams on this subject and I had an invitation to go and examine the country last fall. I did so and I think that my hon. friend (Mr. Morrison) has described the situation pretty much as it is. I have here a telegram with respect to the route from the Hon. C. M. Hamilton, Minister of Agriculture for Saskatchewan, and an ex-director of the Canadian National Railways. Mr. Hamilton is familiar with the whole question and he knows the territory concerned quite well. His telegram, addressed to myself, reads:

> Construction during present year at least one hundred and twenty-five miles Radville-Fife lake proposed branch Canadian National Railways urgent. Absolutely impossible haul wheat and other farm produce thirty-five to fifty miles. Settlers almost discouraged; numbers have left territory, others holding on hoping for relief. Proposed extension from Bengough-Fife lake serves only small portion of territory and leaves district so divided it cannot possibly have adequate railway accommodation for many years.

Unless one is fairly familiar with the territory he will not appreciate the significance of the statement I have just quoted. The road from Bengough to Fife Lake does not serve the entire territory; whereas the proposed line serves about twice the area, and fully 80 per cent of the particular district that would have been served by the other line. The proposed route is very much preferable because it serves the entire country parallel to the international boundary for a distance of 115 miles and not only takes care of the freight and the tonnage generally of the settlers along that line but prevents their transference across the boundary into the United States. This emigration has been going on in that part of the country for some eight or ten years and conditions have become so bad in some districts that the settlers have largely left. The territory is a splendid one, and while it is true that a small portion of it for about 15 miles east and west is rough and undulating, and therefore adapted mainly to grazing, the country on the whole, particularly in the west, is one of the finest plains that one could wish to look upon. If this line is gone on with it does not deprive the people west of Bengough of the hope that some day the Bengough line will be extended to Willow Bunch. That may not be done to-morrow, but there is no reason why at some subsequent time, when railway bills are being again introduced into the House, steps may not be taken to have that line built. In the meantime, I would point out that the Radville line passes through a territory in which many of the settlers have been tried as by fire and are still carrying on despite the discouragement which they have experienced. Many of them are growing from five thousand to ten thousand bushels of wheat in addition to flax and coarse grains, besides raising cattle and other produce. This line is urgently required and my only regret is that some of it will not be constructed this year. The Premier of Saskatchewan is anxious to see the road built, as is everyone else who is familiar with the circumstances; and as all persons will be reasonably well supplied it is important that the work should be proceeded with. If this is done, then later on, when settlement and tonnage both increase, the road from Bengough to Willow Bunch might be undertaken. Meanwhile the people have got together and discussed the whole situation. Provincial members and local councils have formed what is known as a railway committee and they have threshed the question out from every possible angle. I have a communication from Mr. George Spence, one of the representatives of the south country, in which he gives me a summary of the conclusions arrived at, which is in the direction I have indicated, the important point being that the line from Radville to Fife Lake should be constructed as the best solution for the trouble that has existed for so many years. I was not through that country in the early years but I was there last year and I am familiar with the entire district. I was familiar with the work that was undertaken under the provincial guarantees and as I was in the Saskatchewan government at that time I know of the deadlock that occurred. I am glad to inform the House that that deadlock seems now to be capable of solution by means of this particular line, and as nearly as is humanly possible this line will meet the most urgent requirements of the people, whereas the other one would not. I have no hesitation, from my own personal knowledge of the situation and from the representations that I have received from public men and municipal councils, in saying that the line in question will serve a very large proportion of territory which has been in dire need of railway accommodation for many years, so much so, that sick at heart, many of them have already left. I

have correspondence from many who went to the United States telling me that they are ready to come back just as soon as this line is constructed.

Mr. HOPKINS: Mr. Chairman, on account of certain natural barriers no one road would be capable of serving the whole area between the present Canadian Pacific line and the international boundary, a distance of about forty miles. Therefore for some years there has been a dispute amongst the settlers as to the location of a branch line. An understanding has been reached between the Canadian National authorities and the Canadian Pacific under which this area is treated as Canadian National territory. Last year a line was proposed from Bengough to Fife Lake, but the bill was killed in the Senate, as we know. I was never in that country until last fall. Leaving the railway I drove forty miles to the international border. In the course of the afternoon I met over two hundred teams loaded with grain, on their way to the railroad. I spoke to some of the drivers and found they had come all the way up to fifty miles, and that it took them from two to four days to make the round trip. They told me the country was splendid and that their crops ran from twenty-five to forty bushels to the acre. As I got nearer to the boundary line I found the people were too far away from our railways to ship their grain and had to take it over to the American railway lines. I understand that a million and a half bushels of Canadian wheat from this section goes over the Amercian railways in the average year, making a profit for this line and adding to the trade and commerce of the neighbouring republic.

I was surprised at the state of development. I expected to see all the characteristics of a pioneer country, but I found every evidence of well-established settlement. We judge a country by the condition of the farms and buildings. I saw well cultivated farms, well constructed buildings and, above all, fine schools. I went into three or four of the schools along the border and spoke to the teachers and pupils, and I found they were up to date in their educational methods. I talked to boys and girls ranging from ten to fourteen years of age, and they told me they had never seen a store nor a town of any kind, the parents not being able to give them a trip of eighty or ninety miles to the nearest urban centre. I sent a message by the children to the parents that I only hoped the children would live long enough to get some of the railroad advantages which their fathers and mothers had been deprived of all these years.

[Mr. Motherwell.]

Now, this railway is in a different position from the other branches which we have been discussing. Hon. members have said, "We must scrutinize every dollar of expenditure at this particular time in the history of Canada." And rightly so. It is the duty of parliament to scrutinize every expenditure. But I am going to give the committee an agreeable surprise—this money does not have to be expended by the federal parliament; it has been already provided. That is one of the particular reasons why I got on my feet; the other is to give you the best authority for the building of this branch that we have in the province of Saskatchewan. I will show hon. members where the money is coming from. I am about to quote from the Regina Standard of a recent date, and I may say that the bill referred to has since become law. This is the quotation:

> Authority for the provincial treasury to release certain money for the construction of Canadian National branch lines is sought in an Act which was given second reading in the legislature last night.
>
> Premier Dunning intimated to the house that subject to agreement being reached with the Canadian National authorities the government had a preference for the money being used towards the construction of a portion at least of the Bengough extension in the south—

That is the territory we are speaking of.

> —and the Turtleford-Hafford branch in the north of the province.
>
> "We regard those two as being the most needed in the province at present," he said, "but it may not be possible to work out an agreement with the railway company and my remarks on this matter must not be taken as definite promise that these lines will be built."
>
> Premier Dunning explained that years ago when the province guaranteed the bonds of the railway companies the system in operation was that the railway companies had authority to sell bonds guaranteed by the province, but they had no authority to use the proceeds which were deposited in a bank to the credit of the provincial treasurer. Then as the railways were constructed the money was to be released by the provincial treasurer at rates per mile set out in the original Act.
>
> The Grand Trunk Pacific and the Canadian Northern ceased operating as separate entities some time ago and during his experience as provincial treasurer for the last eight years it had been impossible to release the money. A sum of $1,202,825.24 had been standing to the credit of the treasury in connection with this fund for a number of years. Repeated efforts had been made by the companies to obtain release of the money but the treasury had been unable to satisfy itself that the railways had been built. The province had not lost anything as the bank interest on the money had been paid to the railway company and it had paid the interest on the bonds.

There is no question that a large part of the money for the building of this road can be secured from the provincial government.

I have just one further word to say on behalf of the people in that south country. I have no axe to grind because there is not one

chance in a thousand that I will ever represent those people again—the Redistribution Bill will look after that. They are a loyal energetic and resourceful people; if they were not they would not have endured so many disadvantages and hardships all these years. But "hope deferred maketh the heart sick," and if the people of Canada want to retain in their midst some of the best settlers they have to-day, something must be done very quickly to secure them the railroad accommodation which they are entitled to, for their patience has almost ceased to be a virtue.

Sir HENRY DRAYTON: Mr. Chairman, in view of the moving statement by my hon. friend from Moose Jaw (Mr. Hopkins) perhaps the resolution can go through, subject to this understanding, that some facts be furnished about the branch line. There is no question that some railways ought to be built in this section, and I am not opposing proper railway construction there. In fact I have already agreed to a great deal. I hope the next time we agree to these things we shall not be told that we are dealing with a Conservative constituency and that that is the reason for the agreement. Of course it does not make any difference anyway; we know the source from which it comes and we appreciate it accordingly. But we should have a business statement in connection with this railway. The route should be very carefully chosen. It is a long line, and from the information we have it is apparent that it cannot be built at the price set down, $3,000,000 odd. A very careful survey of costs should therefore be made. As the whole matter will subsquently be gone into and these phases of it can be considered again, I have no objection to the resolutions being reported.

Resolutions reported, read the second time and concurred in. Mr. Graham thereupon moved for leave to introduce Bill No. 49, respecting the construction of a Canadian National Railway line between Dunblane and Mawer in the province of Saskatchewan.

Motion agreed to, bill read the first and second times and referred to the select standing committee on Railways, Canals and Telegraph Lines.

Mr. Graham moved for leave to introduce Bill No. 50, respecting the construction of a Canadian National Railway line from near Kelvington, in the province of Saskatchewan, westerly 13 miles.

Motion agreed to, bill read the first and second times and referred to the select standing committee on Railways, Canals and Telegraph Lines.

Mr. Graham moved for leave to introduce Bill No. 51, respecting the construction of a Canadian National Railway line from Prince Albert to near Paddockwood in the province of Saskatchewan.

Motion agreed to, bill read the first and second times and referred to the select standing committee on Railways, Canals and Telegraph Lines.

Mr. Graham moved for leave to introduce Bill No. 52, respecting the construction of a Canadian National Railway line between Eyre, in the province of Saskatchewan, and Acadia Valley, in the province of Alberta.

Motion agreed to, bill read the first and second times and referred to the select standing committee on Railways, Canals and Telegraph Lines.

Mr. Graham moved for leave to introduce Bill No. 53, respecting the construction of a Canadian National Railway line between Eston and White Bear in the province of Saskatchewan.

Motion agreed to, bill read the first and second times and referred to the select standing committee on Railways, Canals and Telegraph Lines.

Mr. Graham moved for leave to introduce Bill No. 54, respecting the construction of a Canadian National Railway line between Radville and Fife Lake in the province of Saskatchewan.

Motion agreed to, bill read the first and second times and referred to the select standing committee on Railways, Canals and Telegraph Lines.

Mr. Graham moved for leave to introduce Bill No. 55, respecting the construction of a Canadian National Railway line from St. Paul, in the province of Alberta, southeasterly 21 miles.

Motion agreed to, bill read the first and second times and referred to the select standing committee on Railways, Canals and Telegraph Lines.

SECOND READINGS AND REFERENCE TO RAILWAY COMMITTEE

On the motion of Mr. Graham the following bills for the construction of branch line railways were read a second time and referred to the select standing committee on Railways and Canals and Telegraph Lines.

Bill No. 26, respecting the construction of a Canadian National Railway line between Kingsclear and the St. Croix River, in the province of New Brunswick.

Bill No. 30, respecting the construction of a Canadian National Railway line between

Rousseau and Laurent, in the province of Quebec.

Bill No. 31, respecting the construction of a Canadian National Railway line between Grande Fresniere and Rinfret Junction, in the province of Quebec.

Bill No. 32, respecting the construction of a Canadian National Railway line between Sunnybrae and Guysborough, in the province of Nova Scotia.

Bill No. 33, respecting the construction of Canadian National Railway lines, Kamloops-Kelowna Division, province of British Columbia.

Bill No. 34, respecting the construction of a Canadian National Railway line to Cowichan Bay, on Vancouver Island.

Bill No. 35, respecting the construction of a Canadian National Railway line to Mile 100 on Vancouver Island.

Bill No. 40, respecting the construction of a Canadian National Railway line to Mile 41 of the Melfort Branch near Nipawin in the province of Saskatchewan.

Bill No. 41, respecting the construction of a Canadian National Railway line from Peebles southerly in the province of Saskatchewan.

Bill No. 42, respecting the construction of a Canadian National Railway line extending the Gravelbourg Branch to Neidpath, in the province of Saskatchewan.

Bill No. 43, respecting the construction of a Canadian National Railway line extending the Ste. Rose du Lac Branch to Rorketon in the province of Manitoba.

Bill No. 44, respecting the construction of a Canadian National Railway line between Hanna and Warden, in the province of Alberta.

Bill No. 45, respecting the construction of a Canadian National Railway line from Loverna westerly in the province of Alberta.

Bill No. 46, respecting the construction of a Canadian National Railway line from Lloydminster, in the province of Saskatchewan, northwesterly 45 miles.

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

SUPPLY

DEPARTMENT OF THE INTERIOR

The House in Committee of Supply, Mr. Gordon in the chair.

Dominion Lands and Parks—Amount required to pay the fees of the Board of Examiners for D.L.S. of the secretary and of the sub-examiners and for travelling expenses, stationery, printing, rent of rooms and furniture, etc. (the fees of Messrs. E. Deville, Harry B. Parry and W. M. Tobey, members of the board, and J. A. Côté, secretary, are to be paid out of this sum), $2,000.

Mr. STEVENS: Will the minister give us a little information regarding this item?

Hon. CHARLES A. STEWART (Minister of the Interior): The Board of Examiners for Dominion land surveyors is organised under the provision of section 9 of the Dominion Land Surveys Act. It consists of the Surveyor General and of two Dominion topographical surveyors. The present members are Dr. Deville, Harry B. Parry, and W. M. Tobey. Dr. Klotz was a member of the board, but he is deceased and there has been an appointment since.

The regular annual meeting of the board is in February. Another meeting is usually held in May for the convenience of students in engineering who have just graduated at the university. There are four different examinations, viz:— the examination for admission as an articled pupil, the full and the limited examination for admission as land surveyor and the examination for certificate as Dominion topographical surveyor. The questions for each examination are prepared by the members of the board and the answers of the candidates are read and marked by these three members. The questions being mostly mathematical and scientific, all the possible solutions of each problem have to be worked out by the examiners. The preparation and reading of the papers involve a large amount of work. The surveyor general, Dr. Klotz and W. M. Tobey had no time to spare during office hours, so that most of the work for the board had to be done at night.

The fee for the members of the board and of their substitutes is fixed by the Dominion Land Surveys Act at $7.50 per day. The fee of the secretary and of the sub-examiners is fixed at $5 per day.

The amount asked is to cover the fees of the members of the board or their substitutes, the fees of the sub-examiners and secretary, the printing of the questions, blank forms, etc., stationery, rent of rooms and furniture for holding examinations, and the travelling expenses of the examiners who are not permanent officials of the inside service.

Item agreed to.

Protection of timber, tree culture, inspection and management of forest reserves, surveys of forest resources and research in forestry and forest products, etc., $1,150,000:

Mr. STEVENS: Under this item, I presume the very important question of reforestation and conservation of our forests generally

would properly come. I personally do not purpose discussing the question at length, but I should like the minister to give to the committee some idea of what has been done within the knowledge of and actually by the officials of this department towards proper conservation. I feel a little alarmed at the very rapid depletion of our forests. In many districts these forests are being cut and manufactured into timber, without any effort whatever being made at reforestation; nor, so far as I am able to see, is very much being done in the way of intelligent conservation of the forests that we have. Losses by fire and so on are really appalling. It is true that our forest wealth is extensive; that we are inclined to look on the supply as illimitable; but, as a matter of fact, I think most students of the subject agree that exhaustion of our forest wealth is really well within sight. Whether the government is doing anything at all in the matter would be of interest to the committee, and if the minister could give us some information along that line, it would be of value.

Mr. STEWART (Argenteuil): I should be glad to devote a few minutes to this question of forestry, and the time of the committee might be well spent in discussing it. It is one of the most important questions with which we have to deal in the Department of the Interior. Perhaps I can bring the matter home to members of the committee much better by a statement in round figures of the quantity of timber that is manufactured in Canada annually. All the cordwood, the piles, the ties, and all other timber, including pulpwood, manufactured and unmanufactured, amount annually in Canada to almost twelve billion feet. And the next startling statement I have to make is this, that we destroy about one billion feet more annually than we manufacture. I make that statement in order to bring as forcibly as possible to the attention of the committee the terrific waste which is going on in connection with the forest wealth of Canada.

Mr. MACLEAN (York): Who owns all this timber?

Mr. STEWART (Argenteuil): Some of it is privately owned and the rest is owned by the Dominion and the provinces.

Mr. MACLEAN (York): Do the private owners contribute anything to protection?

Mr. STEWART (Argenteuil): Yes, the leaseholders contribute to forest protection, a part of the tax imposed upon their leases being used for this purpose. I simply want to state in round figures the loss that we suffer annually in our forests so that, as I hope, the committee as well as the people of Canada will realize the seriousness of this menace to one of the most important resources which the Canadian people own today.

Mr. ARTHURS: How much of this timber is under the control of the Dominion and how much belongs to each of the various provinces?

Mr. STEWART (Argenteuil): I am afraid I cannot give that information. This matter has some reference to the subject of conservation and I shall have something to say about it later on.

Mr. LUCAS: The minister has referred to certain forest losses. Are these losses all due to fires?

Mr. STEWART (Argenteuil): They are attributable to various causes, but there is a tremendous fire waste annually. Indeed, I think I am within the mark when I say that in the province of Quebec, on partly burnt-over areas and in timber that had not been previously burnt over, we had in one year a loss of nearly two million acres by fire ravages alone. Then the ravages of the budworm in the spruce timber of the Maritime provinces account for a very considerable destruction. I do not think there would be time to discuss these questions in detail tonight, but I would impress upon the committee the fact that the forest wealth of Canada, which is of such vast importance, is being destroyed annually to such an alarming extent, that I felt it necessary for the government to get the figures before the people in a startling way in order that they might fully appreciate just what is taking place.

We are seeking to interest the public in this matter because usually the devastation of our forests by fire is due to carelessness. This of course is not always true, for in the province of British Columbia at a recent convention it was brought to our attention that a great number of fires in the central area had been caused by lightning. However, from one cause or another, ravages by fire account for about one half of the total loss. So that for the moment we are devoting our attention to the suppression of fires as far as we possibly can. The six provinces in Canada outside the prairie provinces own this great natural resource and of course are responsible for its maintenance and care. The federal government own and control the forest wealth of the three prairie provinces and what is known as the railway belt in British Columbia, as

well as the Dominion land block in the northern portion of that province; and over that particular area we exercise a special control. We have not been so unfortunate with respect to fire as they have been in some of the provinces in which the various governments control their own timber; but in any case we must take more drastic steps to prevent destruction by fire from any cause. With that end in view I have sought by way of convention to bring together the forestry officials of the various provinces and those of the federal government. We have had some very interesting discussions at our recent convention. Just prior to the opening of parliament we had a gathering at which all the provinces were represented and we discussed these subjects for five or six days, trying to co-ordinate our views and to learn from one another what efforts we have been putting forth for the suppression of fire, for the purpose of adopting more stringent and more effective measures for fire control. At the very outset it would take an army of men adequately to control the fire situation. True, we have fire ranging forces in all the provinces. They are employed by the federal government for a period of six months in the prairies, and they patrol the forests for the purpose of keeping down and preventing fires. We have been fairly successful in that respect and I believe that year by year we are making more headway. We propose to utilize in this service the flying corps of the Department of National Defence. An aeroplane will cover very much more territory than a man in a canoe, and the vision is much more extended, as one may readily understand, than would be the case with a tower or the ordinary patrol through the waterways in the forests. We hope in this way to accomplish much better results than have been obtained in the past. If we can detect a fire in the incipient stages we can put it out with the help of one or two men, whereas, if it has been burning for a week, it requires perhaps two or three hundred. We have adopted more radical measures in all the provinces, and this has been the result of our convention. We have discussed various methods and considered the efficiency of power pumps particularly, and each province will now display renewed interest in fire suppression work. I dwell upon this point because I think it is the most important and the one in regard to which we should make the greatest strides towards securing a proper solution. I was pleased to note the other day that the province of Ontario had purchased ten or twelve aeroplanes which they intend to use in the northern part of the province this year.

[Mr. C. A. Stewart.]

And the province of Quebec, I think, will do the same. Our flying will of course be confined largely to the three prairie provinces and to some extent in British Columbia. In order that we might place the matter before the public with a greater degree of force, if that is possible, this convention suggested the adoption of what will be known as fire prevention week beginning with the 27th day of this month. All the provinces are joining and we are spending $5,000 in propaganda, writing to all the banks and all the newspapers in an endeavour to interest them in the matter, so that we may get the seriousness of the whole thing impressed upon the people in a more vivid way than ever before, and emphasize the necessity for everyone to exercise due care throughout the season in which the fire hazard prevails. I hope that it will cut the destruction by fire in half within at least two years, and that in three or four years the loss will be reduced to the absolute minimum. I do not believe we shall ever be able to remove the fire hazard entirely, for even in our cities and towns there is a very heavy annual loss by fire notwithstanding the very efficient fire-fighting appliances in use. The amazing feature is that the appalling loss both in our forests and our urban centres is very largely the result of carelessness. If we could only educate the people to be careful in this regard we would accomplish a very great deal in preventing fire losses everywhere. We are dependent to a great extent on our educational propaganda. We are asking for an increased amount for inspectional work in the western provinces. There, of course, the forests are strictly the property of the federal government. But I do not lay very much stress on this circumstance because I realize that our forest wealth is of vital importance to the whole Dominion. The number of men employed in labouring work alone in connection with the manufacture of forest products is very large, and the capital invested runs into many millions of dollars. Our aim should be to replenish annually a little more than we cut off our timber lands. That is what I am asking the Forestry branch of the Department of the Interior to attempt, and I think every forestry man in the employ of the provinces is anxious to accomplish the same end.

Mr. MACLEAN: (York): Do you mean depletion both from cutting and from destruction by fire?

Mr. STEWART (Argenteuil): I mean we should aim to reproduce, if you will, the same

amount of timber as is manufactured each year, so that we may have this perpetual source of wealth for the people.

Mr. LEWIS: To what extent is reforestation taking place? The statement has been published that the amount of timber reproduced in this way would last our mills just six days.

Mr. STEWART (Argenteuil): Yes, but I do not pin my faith entirely on tree-planting. What struck our visitors from all the Dominions and Great Britain when they attended our forestry convention was that owing to climatic and soil conditions in Canada reproduction goes on without the necessity of our incurring the expense of tree-planting to any considerable extent. Indeed, I think I am safe in asserting that if we increased our annual cut to more than fifteen billion feet, by the prevention of fire losses there would be reproduced by nature an equivalent amount each year. But I think our forest wealth is so important that we should not stop at eliminating the fire hazard,—every destructive influence should receive our very earnest attention.

Mr. LEWIS: Is there any danger from fire to young trees if all slash and rubbish are removed?

Mr. STEWART (Argenteuil): Of course, one could speak all evening about forestry methods. Therein lies part of our difficulty to-day and the reason why we must have a uniform system of logging regulations. Each of the provinces is in competition in the timber market, and if you place restrictions upon logging in one province that do not apply in the other provinces, there is of course a benefit to the loggers who are free from restrictions. So if we are to have any success in our attempts to reduce the fire hazard to a minimum there must be co-ordination in this direction and the provinces must co-operate with the Dominion.

Mr. MEIGHEN: Has the minister come to any definite arrangements as to uniform slashing and other regulations?

Mr. STEWART (Argenteuil): We have made considerable headway in that direction. There is a difficulty in the province of British Columbia, where licenses have been granted under certain terms. But there is the greatest amount of interest in evidence by the forestry officials themselves to reach a uniform basis with respect to uniform regulations to reduce the fire hazard due from logging operations.

Mr. MEIGHEN: Outside of interest, what actually has been agreed upon?

Mr. STEWART (Argenteuil): My hon. friend well knows that the slash disposal regulations of the Department of the Interior are much more rigorous than those in vogue in the provinces. The provincial authorities have expressed their willingness to adopt our regulations; the only exception is British Columbia. There the Forestry department have doubts as to whether or not slash disposal could be taken care of on account of the very large amount that accumulates as the result of logging operations in the province. They say it would be very expensive to deal with it.

Mr. MEIGHEN: Have any of the provinces actually adopted those regulations? If so, are the regulations applicable to leaseholders now in operation and contracts now under way, or merely to future leaseholders and future contracts?

Mr. STEWART (Argenteuil): That practical difficulty exists with respect to present leaseholders. But the regulations are to be embodied, I think almost without exception, in all new leases.

Mr. MEIGHEN: That will not get us very far.

Mr. STEWART (Argenteuil): My hon. friend will understand that we cannot drive; we can only encourage and coax.

Mr. MEIGHEN: We cannot drive in the provincial domain; but undoubtedly the provinces would have power to make the new regulations apply to existing leases, and unless the minister succeeds in inducing them to do so he will not get very far.

Mr. STEWART (Argenteuil): These changes cannot be made in a day. I confess it is slow work getting the public to understand the value of our forest resources and how rapidly we are depleting them. But a very strong interest is in evidence among all forestry officials who have had to do with the conservation of our forest wealth. If we can arouse our provinces to action, I think they would make proper logging methods retroactive in so far as leaseholders are concerned. At least, that is my hope.

Mr. WARNER: With regard to the disposal of the tops and the refuse after logging in Alberta, I do not know the facts, but I think there is a feeling that the department in asking the loggers to dispose of that material are holding the leaseholders responsible for any fire that may occur. Is there any more responsibility on those holding leases than upon persons who travel through the woods?

Mr. STEWART (Argenteuil): The leaseholders have to pay half the cost if a fire occurs. But what they are complaining about is not that so much as the provisions with respect to the disposal of slash, in comparison with those applicable to operators in any one of the provinces. But if we are somewhat arbitrary in dealing with the people operating on Crown lands, we are setting an example which the other provinces might follow.

Mr. BROWN: What has been the experience as to the practicability of the method the minister has been describing? Has it actually been possible to carry it out?

Mr. STEWART (Argenteuil): Oh yes; you can carry out any regulation, although you may have a little difficulty in doing so. We have to enforce that.

Mr. BROWN: The disposal of that slash is one of the most difficult problems we have.

Mr. STEWART (Argenteuil): Slash, of course, is responsible for a great fire hazard. The forest wealth of Canada is so important —and I think in the future we will realize this—that if we forced them to cut up every top and burn it, even green, it would be worth while. It might be expensive, but it would be in the interests of the preservation of our forest wealth. That is my candid opinion in the matter. I have absolutely no sympathy with any attempt to avoid the regulations with respect to slash disposal.

Mr. MACLEAN (York): Can you not make the leaseholder take that view as well as the government? Could he be made to see that it is in his interests to operate with due regard to the maintenance of the timber wealth?

Mr. ARTHURS: How does the government dispose of the timber on burned over areas which have not been previously under lease?

Mr. STEWART (Argenteuil): If it is in the prairie provinces, where we control, we immediately put the burned area up for sale and the timber is salvaged.

Mr. ARTHURS: Is it not true that in many cases or in all cases the timber on burned over areas is sold at a very small proportion of the price which it would bring if it were green?

Mr. STEWART (Argenteuil): One half the dues under permit is what we have to sell it for.

[Mr. Warner.]

Mr. ARTHURS: The stumpage also is lower?

Mr. STEWART (Argenteuil): Oh, yes.

Mr. ARTHURS: Does the minister not consider that in many cases there is a very strong incentive in that to set out fires?

Mr. STEWART (Argenteuil): We have a suspicion that that happens once in a while, particularly where there is an area of, say two or three sections, a small area that can be conveniently burned. But we have pretty rigid regulations, and although we may not catch every offender it is getting more difficult all the time to do that sort of thing.

Mr. ARTHURS: Has the department any fire marshal or other official who investigates these fires and ascertains the cause?

Mr. STEWART (Argenteuil): Yes, every case is followed up.

Mr. ARTHURS: I suppose if there is a suspicion with regard to a certain party he would not get the benefit of the reduction?

Mr. STEWART (Argenteuil): Well, we try to get conviction if we can catch him, that is all.

Mr. BOYS: Would the minister give us some idea of the terms of the leases? Are they issued for a term of years with conditions which obtain throughout that term, or has the department the right to vary the conditions from year to year? I am not quite as familiar with the West as I am with Ontario. Do these leases merely cover the railway belt, or what part? In British Columbia I suppose they are confined to the railway belt.

Mr. STEWART (Argenteuil): As to the timber over which the Dominion government have control, there is provision for cancellation at the end of each year if it is desired.

Mr. BOYS: That is exactly as it is in Ontario. The regulations, then, are absolutely in the hands of the department?

Mr. STEWART (Argenteuil): Yes, we can make any changes we desire, any
9 p.m. regulations from time to time.

Mr. BOYS: Then what was said to my leader a moment ago would hardly be correct. I understood the minister to say you could not drive, you could not force; as I understand it, these leases are issued with the right to cancellation at the end of any year, so that in issuing new licenses you can impose your own terms.

Mr. STEWART (Argenteuil): What I spoke of in reply to the leader of the opposition was the leases in the provinces, not the timber controlled by the federal government. The federal government have regulations for the disposal of slash which would make it extremely difficult for many of the old leaseholders. As my hon. friend knows, in Ontario, in Quebec, and in British Columbia outside the railway belt, the provincial governments themselves own and control the natural resources and make their own regulations. The difficulty that arises there is that in many cases the provisions of the lease cover the period during which the timber is cut off, and I presume that it would be difficult to change these definite provisions. But in all the new leases rigid control is provided for, and there is provision whereby changes may be made from time to time.

Mr. BOYS: Will the minister tell me something of the terms of leases affecting lands under the control of the department?

Mr. STEWART (Argenteuil): I have just mentioned that.

Mr. BOYS: I thought you were discussing the provincial rules.

Mr. STEWART (Argenteuil): I was at the outset, but I pointed out that we reserved the right to change the regulations at any time as to Dominion lands.

Mr. BAXTER: The stumpage charged by the Dominion may vary, I suppose from year to year? The right is reserved under the lease to charge whatever the current rate of stumpage may be?

Mr. STEWART (Argenteuil): Oh, yes.

Mr. BAXTER: Then in what way is the holder of an old license placed at a disadvantage compared with the man who gets a license to-day? As I understand the system, it is simply that permission is given to cut on a certain area, payment to be made at the current rate of stumpage for whatever is taken off. I do not see where there is any greater burden one way or the other, whether the lease is old or new. I followed with particular attention the evidence taken before the commission on pulpwood in New Brunswick and partly in Nova Scotia. While the pulpwood commission was supposed to have one chief object in view, they deal with many kindred matters and I think a perusal of the evidence would be well worth while so far as suggestions are concerned. I took the opportunity to prepare for the commission and hand to them an abstract of the laws of New Brunswick particularly directed to fire prevention. We have there not only the general law, but in some localities there is power to make more stringent regulations. What the minister says is absolutely correct, that if you have an area with very stringent regulations they will not be enforced because otherwise the producer in that section is put at a very distinct disadvantage when he has to bear the cost of carrying on fire protection as against some other area where the regulations are not so strictly enforced or where they do not exist. The comparison may not only be between provinces, but between sections of the same province. In a few words what I should like to say to the minister is this: That while I have every possible sympathy with him in his idea as to regulation, yet I rather fear that we are, perhaps, scarcely getting at it from the right angle. You can have plentiful regulation, and I feel that is the position we are in in the province of New Brunswick, where our regulations are stiffer than they have been probably for a century, and yet our forests have been more devastated of recent years than they have been for a very long time previously. The trouble is that our regulations remain on the paper where they are printed and it is difficult —and I know it is a tremendous subject—to get the regulations enforced. The minister is going to experience that difficulty and so is everybody else who is engaged in forest protection. The employment of aeroplanes is useful so far as the detection of fires is concerned but it is only a palliative. After the fire has started I grant the aeroplane can discover it, and I am going to discountenance in any way the use of the aeroplane, but the trouble is that that fire has started. In some cases it starts through natural agencies like a stroke of lightning, but ordinarily it starts through human influence. That means campers, or picnickers, or hunters, or careless people engaged in forest operations. Now it is very difficult to get at the campers, the picnickers and the hunters. We have regulations in New Brunswick whereby you can get at the hunter but you cannot possibly track him. You cannot control the operator without the necessity of imposing a tremendous burden on him in carrying out stringent regulations, a burden so heavy that he cannot compete with people who do not have to face those regulations. I have sympathy with the minister in trying to work up what I might call a Dominion standard and trying to get it accepted, but the Dominion standard alone without a punch behind it will not be of very much value. Our

people have to realize that laws must be enforced and that is one of the difficulties at the present time—that laws are considered to be something made to be placarded, to be read, everything except to be obeyed in the spirit as well as in the letter. That is the greatest trouble I believe with our forest protection. It is all very well to talk about reforestation. I agree with the minister we do not need it in most localities, the thing is to save the existing forests. And always bear in mind when we talk about reproduction of the forest that it is being reproduced in areas that are largely outside of the reach of the present generation, at great distances from water communication and from rail communication; the affected portion of the forest we are dealing with is in a comparatively limited area, and the timber is disappearing with tremendous rapidity. Now, the question arises, is the country prepared to save what it has? In order to do it there must be Dominion-wide effort and we must have absolute enforcement of the law. It will increase the price of raw material, but there is such a demand in the country to-day for our wood products that the purchasers can and must afford to pay the price that is necessary in order to preserve the heritage of the people of the Dominion. We are not losing wood alone. Everybody must notice from time to time the reports of devastation caused by wind, storm and rain, and all that kind of thing, which has a direct, immediate effect on forest waste that it will take more than one generation to restore.

Mr. RYCKMAN: Would the minister kindly tell us what portion of last year's vote was expended for the province of Ontario?

Mr. STEWART (Argenteuil): We do not spend any money in Ontario except $20,000 on research work. Each of the provinces assumes the responsibility of caring for its own resource. The main reason we discuss this in the provinces at all is for the purpose of propaganda, in the hope that we will be able to encourage people to take a greater interest in this resource.

Mr. LEWIS: Is this money all spent in the three prairie provinces?

Mr. STEWART (Argenteuil): And British Columbia.

Mr. LEWIS: Have you any figures to illustrate the extent of the devastation from fire that takes place in the three prairie provinces and British Columbia? I understood from an article to which the minister's name was signed that the annual loss was about $15,000,000.

Mr. ARTHURS: What was the approximate amount of timber cut upon crown lands last year?

Mr. McQUARRIE: Would the minister give details of this particular item? I do not think we have had them yet.

Mr. STEWART (Argenteuil): The details asked by my hon. friend are as follows:

Head Office	$45,000
Publicity	5,000
Save-the-forest-week	5,000
Emergency fire fund	25,000
Surveys and research	45,000
Forest Products Laboratories—	
(a) Montreal	103,000
(b) Vancouver	22,500
Tree planting	74,500
Forest reserves and fire ranging—	
Manitoba	170,000
Saskatchewan	220,000
Alberta and British Columbia	435,000
	$1,150,000

Mr. McQUARRIE: Can the minister give the revenue by provinces?

Mr. STEWART (Argenteuil): The forest reserves gave us a revenue last year of $143,000, but that does not take into account the receipts from the timber licenses because that is only from the lands set aside by the federal government as forest reserves. All the timber leases and licenses are in a separate account. I will try and get the figures.

Mr. ARTHURS: Has the hon. minister the number of feet cut upon the forest reserves and the number of licenses?

Mr. STEWART (Argenteuil): The figures are:

Sawn timber board feet measure	20,932,000	
Props estimated at	1,667,300	pieces
Lagging (cords)	795	
Lagging board feet	410,880	
Telephone poles	2,790	

The total amounts to $66,374. That is the amount of dues collected and is confined to forest reserves.

Mr. ARTHURS: Do the licensees pay any sums towards fire protection?

Mr. STEWART (Argenteuil): Timber dues for 1922-23 on license cuts amounted to $825,000.

Mr. CALDWELL: Does that include the stumpage?

Mr. STEWART (Argenteuil): Yes.

Mr. CALDWELL: Total revenue.

Mr. STEWART (Argenteuil): That was the total revenue.

Mr. STEVENS: One piece of timber is sold under auction, and tenders are received. Does that item include what is received under the method of sale of disposition of timber?

Mr. STEWART (Argenteuil): Yes, it is included in the year in which the money is paid over. It is the bonus my hon. friend has reference to paid for the privilege of doing the work.

Mr. STEVENS: That is included in the fees.

Mr. LEWIS: In view of the statement made by the hon. member for St. John and Albert (Mr. Baxter), in regard to the fires and their control, could the minister tell us whether there was any noticeable improvement in the prairie provinces and British Columbia where the lands are under federal legislation?

Mr. STEWART (Argenteuil): Yes, there is a very marked improvement. We had little loss last year. As my hon. friend knows, conditions make some difference. If we have a year of heavy rainfall the hazard is not so great. That being the case, last year naturally it was reduced almost to a minimum, but the average goes to show that we are not allowing the fires to get away. They are small in character, and do not cause the damage they did formerly.

Mr. McQUARRIE: Can the minister allocate the appropriation to the different provinces?

Mr. STEWART (Argenteuil): I do not know that we can do that. That, of course, would apply in British Columbia for example, just to the railway belt.

Mr. MEIGHEN: I am satisfied with the minister's words, is so far as they evidence an interest in the subject and a realization of its imminent importance, indeed a realization of the peril we are under at the present time. I cannot say that I am very much encouraged by the relation of practical achievements, much less by the disclosure of practical plans of improvement. He tells us that they purpose using the aeroplanes of the Defence forces. Well, I do not know that there is very much to be hoped for there. I do not know just the extent of the air service that is being maintained. If it is gradually going out of existence, as is the case with other services, it will not be of very much value to the forests or anything else. I would like to have some idea of the plan by which we are going to effect a radical improvement in the survey and general supervision of our forests; that is to say, what further use is to be made of the aeroplanes, what further use is to be made of the telephone, or what steps are being taken to counteract the bud worm and other pests and diseases? I think the minister's figures as to the loss by fire are low indeed relatively to the loss by nature and while he hopes, without revealing to the House any comprehensive scheme or plan for taking the situation in hand, to reduce our fire loss by half in two years, he is actually confronted with the fact that the loss is increasing every year right under his eyes, and pretty much under the exact policy he is following now.

Mr. STEWART (Argenteuil): Not in the area the federal government controls.

Mr. MEIGHEN: Was the loss last year less than the year before?

Mr. STEWART (Argenteuil): We had few fires there.

Mr. MEIGHEN: Perhaps not in that area, but in the whole of Canada it was greater. Our losses were colossal in eastern Canada.

Mr. STEWART (Argenteuil): Yes.

Mr. MEIGHEN: It may be the minister was fortunate last year, and it may be that the results were a testimony of the efficiency of the system we had. I fear myself it is more a testimony to good luck. What steps is the minister taking to prevent settlement in districts that should not be open to settlement?

Mr. STEWART (Argenteuil): That was settled last year by the Forests Act.

Mr. MEIGHEN: And settlers are not going in?

Mr. STEWART (Argenteuil): No.

Mr. MEIGHEN: Outside of those areas, are steps being taken to discourage, or even to prohibit, settlement in districts where the harm the settler will do will be greater than the benefit to himself or the country? I think that settlement is one of the major causes of our forest devastation. Furthermore, as the minister said, in respect of one or two of the railway ventures we are entering into, the danger from fire by the penetration of those roads is greater than the possible hope of benefit. I have in mind the

Guysborough line for example. It runs through considerable timber, and I fancy from what I have heard it will likely burn down more timber than will be compensated for by all the good it will ever do. I hear someone laughing. I fancy he knows the circumstances. Information about that is coming to hand all the time, but I do not want to drift into a discussion on that subject. But in respect to prairie lines, in mapping out the direction, especially of the northern lines, has the subject been taken into account? We have lost by the penetration of railways, some of them unnecessary, to the extent of hundreds of millions. We have lost timber worth more than the railways of this country are worth or ever will be worth. The way timber has been destroyed by the penetration of more or less useful railways is simply a crime. In all these respects, not only a comprehensive, but a determined, persistent policy must be maintained. I do not think the reproduction is going to take care of our fire losses or our cut by any means unless a tremendous improvement is effected. I was criticised because in a speech this session I said that we were engaged to-day in the depletion of our irreplaceable losses, virtually selling our estate, that is in respect of our timber, and that when it was gone, it would take generations to replace it. An hon. member said that that was an exaggeration. An exaggeration! It is an understatement. I have talked with as good experts as we have in the country. I know that the time required for trees to grow varies, and the exact time for any class at any certain point is not even then very closely determined. The engineers of our larger companies differ in that regard; but I have never heard any of them put at under fifty years, the time for even the most rapidly growing trees to come to any sort of maturity. Some of them very much longer, double the time. Therefore, when one places at a generation the time required to replace the whole that we destroy, he is making a very modest statement of the truth, so that the attention we have given to the subject is altogether too little in proportion to its consequences.

I know the minister's difficulties; they are largely those difficulties that grow out of our federal constitution, and consequently to overcome them, not only co-operation by convention and by word of our provinces must be maintained, but actual results in the way of uniform regulations and uniform schemes of protection must be arrived at and pursued. It is the last few years that have brought this home to us as never before. We have developed all through the last decade or so quite a considerable fire-fighting force in the federal service, but it is in the last three or four years that we have found ourselves face to face with a very critical position. I do not think those who take the gloomiest view of the near approach of our forest destitution are very far out. All the minister can do to bring the facts home to the people of Canada, he ought to do, and any moneys carefully spent to that end, or rather moneys wisely spent to that end, for wisdom is better than even care there, will be amply repaid to the people of the Dominion. We have to bring home not only the inportance of this matter to every person who cares for his country, but the wisdom to the individual of taking care of it to save himself. What I mean is this: I think we need a few very drastic punishments in this country for fire starting. I do not know of any better way to bring the necessity home to some people than that way, or, indeed, any way except that way. We have not had it. We have had a leniency on the part of courts, and we have had a general laxity on the part of public opinion with the consequence that just what an offence in respect of forest destruction really means has never been brought home to the reckless and semi-criminal. That is essential, and I think the minister can help in that regard. He ought sometimes to be represented at trials that we may have in our country to endeavour to impress our courts with what this thing really means and what the people and government of Canada consider to be a matter of importance.

Mr. STEWART (Argenteuil): That is what the forestry officials complain of in all the provinces.

Mr. MEIGHEN: I think the forestry officials have ample ground of complaint; but nevertheless let the minister persevere in seeking to obtain this uniformity of regulations, and not only persevere in this, but hasten it by every means in his power. Then I will vote for any appropriation essential to extend the telephone system, the aeroplane system and aeroplane supervision in such a way that the necessary fire-fighting force can be carried to the scene of an incipient fire in time to get it out of the way before devastation ensues. I do not know that we are going to get very far by providing by aeroplane merely for location. We have to go beyond that and provide by aeroplane for crushing the fire itself. It seems to me that a great deal is to be hoped for by means of this new instrument. I should like to know just what the minister purposes to do with those planes,

how far he is provided with them, if he has any scheme of co-operation with the provinces worked out for the use of those planes, and if so, on what basis, also what he is doing in respect of budworm and other insect destruction.

Mr. STEWART (Argenteuil): We have no budworm in our reserves.

Mr. MEIGHEN: We did not have it; I am glad to hear that we do not have it in our timber; but nevertheless, it is a national problem. We have to take an interest even though the immediate responsibility is in the provinces.

Mr. STEWART (Argenteuil): The budworm is one of the problems that I intend to have the Research Council take hold of very actively. The Department of Agriculture have been lending assistance. We have nothing of that kind to contend with within the forest areas of the federal government. I have nothing to add to what my right hon. friend has stated; I agree with every word he has spoken. Apparently, the judiciary are loath to inflict penalities of any sort upon offenders of this character. I am convinced, if we can stir up public opinion, if we can get public opinion aroused to the terrible devastation that is going on at their doors, we shall have gone a very considerable distance in reducing fire hazards. But there is almost a criminal neglect on the part of the public with respect to this matter. As a matter of fact, in our forest reserves, it is almost necessary to send a fire ranger after any party that goes through for fear fires are neglected and incipient fires start as a result of carelessness on the part of campers. I think that is the experience at every one of the forest departments of provincial governments. Perhaps my right hon. friend is right in saying that the rainfall assisted us very materially last year, but I need only instance the year before last when we had such a tremendous loss in British Columbia. We did not suffer a very severe loss; we had innumerable small fires in the railway belt, but not to the same extent, and we are year by year strengthening up our patrol system. The aeroplane would be of immense value to us in locating fires at the start, particularly when those aeroplanes are equipped with a pump so that a man or two can drop down on a lake and put out a fire when it is at such a stage that one or two men can handle it, whereas in two or three days, perhaps 400 would be required to deal with it. In that way money is being well spent on research.

Mr. McQUARRIE: I do not suppose the minister means to suggest that there is a tendency on the part of the courts to let offenders off. I presume the difficulty is that the necessary proof is not produced on the trials and consequently there is nothing for the courts to do but to discharge the accused. I should like to ask the minister if he is suggesting that the courts are too lenient in cases where prosecutions are had for starting fires and that kind of thing.

Mr. STEWART (Argenteuil): I think the difficulty is that neither the courts nor the public recognize the enormity of an offence of this calibre. It is not looked upon as a very serious thing to have let a fire get out of hand, and although it may do considerable damage, the fact is that there has been more or less laxity in the past in dealing with these cases. We have hardly appreciated yet the distinction between setting fires to clear needed land—which was a very desirable thing in the early days—and the habit of letting fires get away through carelessness, thus causing so much damage.

Mr. McQUARRIE: Does the minister suggest that the courts are allowing these people to go because they do not appreciate the seriousness of the offence?

Mr. STEWART (Argenteuil): No, I do not suggest that.

Mr. McQUARRIE: Then I suppose the minister has reference to the penalties inflicted.

Mr. STEWART (Argenteuil): If an individual is found guilty the court scarcely ever imposes the maximum fine, and that perhaps is the great difficulty. As I say, it is not regarded as a very serious crime to have let a fire get out of hand and destroy valuable timber. However, I suppose it is merely a state of mind.

Mr. McQUARRIE: The minister apparently finds that the courts are imposing inadequate fines. If that is the case the matter may be rather serious. Has the minister taken any of these cases into consideration, or have any representations been made to any of the judges, or those responsible for enforcing the laws, in connection with that particular matter?

Mr. STEWART: (Argenteuil): Of course, it is not our business to interfere with the prerogatives of the provincial courts or with the provincial forestry officers. We can only take action in regard to the areas over which we have control ourselves. I am not com-

plaining of the courts any more than I am complaining of the indifference which has been shown by the public generally. As I say, it is simply a state of mind; the public does not realize the enormity of this particular offence.

Mr. McQUARRIE: The minister might tell us how many convictions were obtained during the last year and how many prosecutions were made. Has he made any investigation in regard to the air machines that are available through the Department of Defence for the work of patrolling the forests? Is it a fact that the air service at the present time is made up pretty much of a lot of junk and antiquated machines which to say the least, are not very satisfactory and probably are very unsafe to those who operate them? I am told that a man who goes out in one of these machines to-day is very lucky if he comes back alive and that the aeroplanes we have, generally speaking, would not be used in any civilized country. It is said that they are away behind the times and that this Dominion has not kept pace with other countries in her air service. Now, if these machines are valuable for forest patrol and protection work as I am firmly convinced they are, I think we should have more and better aeroplanes. We should try to improve the standard of our machines and increase their numbers; because, if we are not to think about machines from the point of view of war service, we must nevertheless realize that they are exceedingly useful in this department of the public service. I think it is a great shame that Canada should compel any man in the air force to use a machine which is not properly equipped. What is the programme for the year? Is it intended to purchase any new machines and to improve those which we already have?

Mr. STEWART (Argenteuil): My hon. friend I presume, is anxious for this information.

Mr. McQUARRIE: Yes.

Mr. STEWART (Argenteuil): There will be seven machines in Manitoba and four in Alberta.

Mr. McQUARRIE: New ones?

Mr. STEWART (Argenteuil): Yes. A short time ago, Major General Sir W. R. Sefton Brancker, the controller of the Air Service of Great Britain, was here in consultation with the Department of National Defence. I cannot, of course, give the details of the matter because it is not in my department. I can, however, say that a thorough discussion was held and a decision was come to as to the kind of machine which is better adapted to this particular service than any that has heretofore been in use. These machines will be in operation this year in these localities.

Mr. McQUARRIE: Four?

Mr. STEWART (Argenteuil): No. Eleven.

Mr. SPEAKMAN: I am glad of this discussion and I believe it is well worth while, because I think with the minister that a developed public opinion is the most effective safeguard against fires, and I am speaking from some personal experience which I have had in a forest reserve in my own district, the Rocky Mountain House Reserve. I have noted there in the last few years a very marked change in public sentiment, so that to-day it is looked upon by the people of the district as rather a heinous crime to let fires go. With the growth of this sentiment I have observed a diminution in fires, and I think that the more the importance of the matter is emphasized the better.

Under this item I want to call the attention of the minister to the situation in that forest reserve. I intended bringing it up last year under the public works votes, but I was ruled out of order. There is, in that reserve about 20 miles within the boundary, a mining town known as Nordegg with a population of 1,500. It is related to the Brazeau collieries, one of the big steam coal collieries, and it lies about 180 miles west of Red Deer. From Red Deer to Holberg, 40 miles east of Nordegg, there is a provincial road, but from Holberg to Nordegg there is no road at all. In other words, there is a stretch of some 40 mlies which is provided with neither road nor telephone, and the only communication the people have with the outside world is by train three times a week. You can realize what an inconvenience this is to a town of 1,500, a great many of whom are married men. There is no possible communication by road unless one goes by pack horse, if one understands how to use it. The difficulty is that 20 miles of the 40 are under provincial jurisdiction, the other 20 being within the province of the Dominion. The province itself certainly would not undertake road construction through a federal reserve and these people have petitioned time and again to have a road built. They have generally petitioned the provincial government, under a misapprehension as to the peculiar situation that exists in connection with this divided jurisdiction. There is opportunity

for a great deal of business to be done; and apart from the inconvenience and the discomfort which necessarily attach to life under these conditions, these people have no means of leaving home except by train. There is a very good mixed farming country not very far east from Nordegg, and the people grow enough fresh vegetables and produce sufficient butter, milk and so forth to supply the needs of the town. They could be taken in and delivered very conveniently by car or truck. A road through there would help the people of Nordegg and the farmers in the surrounding country, and would build up business generally. While I realize that the engineering problem may be difficult and expensive as Nordegg lies in the foothills, at the same time I think it would be advisable for the minister to discuss the matter with his colleagues, because other departments may be involved in such road construction. and to confer with the provincial authorities with a view to arriving at some working arrangement under which this forty-mile stretch of road might be constructed. I believe it can be done; but if not, I would ask him to at least consider the granting of permission to the people there to build a telephone line and so enable them to have telephone connection with the outside world. As I understand the regulations, telephone lines are not allowed in the forest reserves except for the use of the forestry officials, and the railways will not permit telephone wires to be strung on their poles except for official use. The result is that the people of Nordegg. although only forty miles from telephone service, are as absolutely cut off from it as if they were in the South Sea islands. I would ask the minister to take these two matters under consideration to see if some relief cannot be afforded these people.

Mr. BOYS: The minister stated that the courts do not impose the maximum penalties. I suggest that he prescribe a minimum. For instance, with respect to the theft of automobiles, the law was amended and now a judge has no option but to impose a year's imprisonment on offenders. Prescribe a minimum fine, and the court will have no alternative but to impose it. Perhaps my hon. friend would get relief in that way.

Mr. STEWART (Argenteuil): It is worth considering.

Item agreed to.

Grant to Canadian Forestry Association, $4,000.

Mr. COOTE: Would the minister inform us how many trees are supplied from the Indian Head farm branch?

Mr. STEWART (Argenteuil): In reply to my hon. friend from Red Deer (Mr. Speakman), there is no restriction with respect to telephone lines. I am perfectly willing to discuss with the provincial authorities the building of the road referred to.

The CHAIRMAN: Shall the item carry? Carried.

For surveys and investigations of water and power resources, including the Dominion Hydrometric Survey; for the reclamation of lands by irrigation and drainage and for the administration of the Acts in connection therewith, etc., $547,000.

Mr. McQUARRIE: I understood the minister was giving some information with respect to the item of $4,000. The minister was on his feet.

Mr. STEWART (Argenteuil): I will give it if the vote is passed.

The CHAIRMAN: The minister was not on his feet when the item was called "carried". Is the grant to the Canadian Forestry Association declared open?

Mr. STEWART (Argenteuil): No, that comes under another item.

The CHAIRMAN: We are on the item for surveys and investigation of water and power resources.

Mr. McQUARRIE: The minister was on his feet when the item was called "carried". I think he was about to answer an inquiry by the hon. member for Macleod (Mr. Coote).

The CHAIRMAN: It is said that there was an inquiry from the hon. member for Macleod in regard to the grant to the Canadian Forestry Association.

Mr. STEWART (Argenteuil): Yes, I was going to give my hon. friend the information he asked for. From the Indian Head farm there were distributed 2,464,530 trees, and from the Sutherland farm 2,636,150 trees. The $4,000 to the Forestry Association is the ordinary grant given annually. It was somewhat larger last year. We felt that we had to undertake our propaganda work much more vigorously. We have asked for an increased grant to carry on the very same work practically as that maintained by the Lumbermen's Association. We are reaching the schools and all other quarters with our propaganda.

Mr. McQUARRIE: As I see it the item is the same this year as last—$4,000.

Mr. STEWART (Argenteuil): I beg my hon. friend's pardon. The year before it was $8,000; we cut it last year to $4,000.

Mr. KENNEDY (West Edmonton): What research work is being carried on in connection with forest products?

The CHAIRMAN: That is the next item.

Mr. LEWIS: In view of the fact that the Dominion owns the natural resources in the three prairie provinces, and this item applies to the whole Dominion, especially the latter part of it, will the minister inform the committee if the work is restricted to the provinces where we own the natural resources?

Mr. STEWART (Argenteuil): Which vote?

Mr. LEWIS: The $547,000 vote.

The CHAIRMAN: Shall this vote carry, grant to Canadian Forestry Association, $4,000.

Item agreed to.

For surveys and investigations of water and power resources, including the Dominion Hydrometric Survey; for the reclamation of lands by irrigation and drainage and for the administration of the acts in connection therewith, etc., $457,000.

Mr. McQUARRIE: Will the minister give the details?

The CHAIRMAN: The member for Swift Current (Mr. Lewis) was making an inquiry.

Mr. LEWIS: I was asking with regard to the reclamation of land by irrigation and drainage. Does this take place in all the provinces?

Mr. STEWART (Argenteuil): The water power and irrigation and reclamation services have been combined and placed under Mr. J. B. Challies as chief. For 1924-25 it is estimated that for surveys and investigations of water and power resources we shall require $330,000; for irrigation $173,000; for reclamation $52,000, or a total of $550,000. In British Columbia for surveys and investigations of water and power resources and for administration of water powers, for the fiscal year we shall require $47,000, in the Yukon $2,000, in Alberta $50,000, in Saskatchewan $32,000, in Manitoba $34,000, in Ontario $53,000, in Quebec $20,000, in New Brunswick $8,000, in Nova Scotia $11,000, in Prince Edward Island $1,000; and for fuel power investigations $10,000, and for flooded land contouring, $9,000.

Mr. STEWART (Humboldt): What amount was expended in Saskatchewan last year on the Waterhen lake drainage project; what disposal has been made of the land already reclaimed in that connection, and what prospects has the department of disposing of the remainder of the lands?

Mr. STEWART (Argenteuil): It is not our purpose to try to dispose of it at once, because there is a very heavy investment there on account of the drainage. The area is not thoroughly dried and we have it under lease for a few years in order that the sun may get in its work, when we hope we shall recover a much larger amount from the sale of the lands than would be possible at this time.

Mr. STEWART (Humboldt): Have you the terms of the lease there?

Mr. STEWART (Argenteuil): No, but speaking from memory, I think they are on the same terms as those on which the grazing leases are issued.

Mr. BOYS: I notice there is a decrease of $104,000 in this item. Is that due to the completion of certain works, the reclamation of lands and irrigation, and does it mean that expenditure incurred in that connection last year will not be required this year?

Mr. STEWART (Argenteuil): In both services I thought it advisable to cut down very materially. Perhaps I might recite briefly the arrangement with the western provinces with respect to irrigation. When the right hon. leader of the opposition was Minister of the Interior an arrangement was entered into between particularly the province of Alberta and the Department of the Interior whereby the initial surveys should be made to ascertain whether water was available, what was the character of the land, and whether irrigation would be feasible. That was done, and at that point it was agreed that the expenditure on the part of the federal government should cease. The hydrometric surveys, of course, must be continued over a period of years; therefore that work is still going on. There is a large area north of the Red Deer river upon which recent surveys have been made and upon which more may be required, because that project runs into Saskatchewan. But generally speaking, the survey work for irrigation purposes is practically completed so far as the federal government is concerned. Some small amounts will be necessary to finish, but they will be largely in respect to applications for small areas throughout the province where it is supposed that there is a sufficient volume of water to carry on irrigation. That accounts for a very considerable reduction in the expenditure. The reclamation service is much in the same position.

10 p.m.

The Waterhen lake project, spoken of by my hon. friend (Mr. Stewart, Humboldt), was a project entered into by the federal government some years ago to

drain an area in Saskatchewan. In this case the cost has been within the amount originally estimated. In Manitoba surveys were made on the Carrot river with a view to reclaiming lands there, and also in a considerable number of areas in northern Alberta. I think that in western Canada until the first class agricultural lands are settled on there is not much necessity for surveys or for work being commenced on these drainage projects. To my mind that can very well wait until some time in the future when land is required much more than it is at the present day. Of course some of these projects are being carried on by private enterprise, but I am speaking now of the reclamation activities of the Dominion government.

Mr. BOYS: Could the minister place an amount on the reduction to which he has referred?

Mr. STEWART (Argenteuil): On irrigation it is $27,000, and on reclamation $77,000. These are the direct reductions.

Mr. STEWART (Humboldt): When I was speaking about the Waterhen project I asked the minister how much was expended last year, and I should like to know also what the total cost has been to date.

Mr. STEWART (Argenteuil): I have not the exact figures, but it was less than $10,000 last year. It would be about $150,000 all told.

Mr. PARENT: In what parts of the province of Quebec was the $20,000 expended that the minister referred to?

Mr. STEWART (Argenteuil): That was for hydrometric work on various streams in the province of Quebec. That work will be continued for a considerable number of years yet.

Mr. PARENT: Could the minister specify the particular places, and on what particular water powers this expenditure was made?

Mr. STEWART (Argenteuil): I have the list here and the names are all in French. Rather than attempt to read it I will hand it to my hon. friend.

Mr. McQUARRIE: What is the area of the lands which have been reclaimed, the cost of the reclamation, and the estimated value of the reclaimed lands?

Mr. STEWART (Argenteuil): Only one drainage project has been completed, the Waterhen. In the case of the others, the work done is mostly survey work.

Mr. PARENT: I want to give the committee a list of the names that were so hard to pronounce, some of them are practically French. Here they are: Ottawa, Coulonge, Black, North, Rouge, Lievre, Gatineau, St. Maurice, Manouan, St. Francis, Batiscan, Peribonka, Mistassini, Shipshaw, Ashuapmuchuan, Metabetchouan, Saguenay, Escoumains, Assomption, Chicoutimi, Bayonne, Du Loup, Yamachiche, Maskinonge, Portneuf, Sault au Cochon, Sault au Mouton, Ste. Anne de la Perack, Jacques Cartier, Montmorency, Bersimis, Laval, Outardes, Manicouagan, Manitou, St. Jean, Chateauguay, St. Louis, St. Marguerite, Mars, Valin, Gouffre, Malbaie. On all these rivers the amounts spent amounted to less than $20,000. I should like to know what work was performed on these streams in 1923.

The CHAIRMAN (Mr. Vien): Shall the item carry?

Mr. McQUARRIE: No, Mr. Chairman, I am still waiting for an answer to my question. Then I have some other questions to which I should like an answer.

Mr. STEWART (Argenteuil): In reply to my hon. friend from Quebec West (Mr. Parent) I may say that these measurement stations do not cost a great deal of money. Once the measurement apparatus is installed it is largely a case of watching and taking the records. The records in all these rivers will be available. They will have to be kept for a period of ten years or more before they will be of very much value to establish the complete power units that will be available. It seems a small amount of money for a large amount of work but still that work is very valuable.

Mr. PARENT: I also wished to find out whether the men who are making these measurements were nominated by the Civil Service Commission.

Mr. STEWART (Argenteuil): Most likely. Now in reply to my hon. friend from New Westminster (Mr. McQuarrie) I have this information with respect to drainage works constructed on Waterhen lake and marsh:

1. Drainage works constructed—Waterhen lake and marsh, in townships, 44, 45a, and 45, ranges 21 and 22, west of the 2nd meridian.

2. Area of land reclaimed—13,920 acres

3. Expenditure—

1920-21	$ 922 99
1921-22	83,211 06
1922-23	64,036 71
1923-24	15,970 81
Total	$164,141 57

Mr. McQUARRIE: What is the estimated value?

Mr. STEWART (Argenteuil): That will complete it.

Mr. McQUARRIE: I asked the minister what was the estimated value of the land.

Mr. STEWART (Argenteuil): It is a very difficult thing to say. In those somewhat northern latitudes the areas drained will be a little longer in drying out and becoming valuable. They will ultimately become valuable as agricultural lands but at the moment, as my hon. friend will understand, they are not of very much value from the agricultural standpoint. That will take some years, and in the meantime we have leased these lands under the provisions of the ranching leases, hoping that when they do dry out they will be at least of the same value or perhaps more value, than the agricultural lands surrounding them which I should say would be worth $20 and $35 per acre.

Mr. McQUARRIE: Are we getting any rental now?

Mr. STEWART (Argenteuil): Yes, we have been getting a rental of 2 cents an acre.

Mr. McQUARRIE: Would the minister inform the committee as to what information has been obtained, or what results secured, by the surveys which have been made. I have left the reclamations and am now dealing with the surveys which have been made. Has the minister any summary giving the result of these surveys and the value received by the country therefor?

Mr. STEWART (Argenteuil): The following projects have been investigated and completely surveyed by engineers of the Reclamation Service and are in readiness for construction as soon as the time is considered opportune for such development:

Project—Province—Area.	Estimated Cost
Kimiwan lake, Alberta, 10,000 acres..	$ 87,000
Winagami, Alberta, 13,000 acres..	120,000
Sounding lake, Alberta, 7,000 acres..	79,000
Rocky Mountain House, Alberta, 25,000 acres.	160,000
Flat lake, Alberta, 11,000 acres..	101,000
Lanes lake, Alberta, 3,500 acres..	28,000
Majeau lake, Alberta, 5,000 acres..	32,000
Magloire lake, Alberta, 3,000 acres..	10,000
Manawan lake, Alberta, 10,000 acres..	72,800
Cygnet lake, Alberta, 36,00 acres..	30,000
Athabaska district, Alberta, 49,000 acres.. ..	195,000
Ponass lake, Saskatchewan, 42,000 acres.. ..	300,000
Moose range, Saskatchewan, 130,000 acres. ..	315,000

In addition to the above the Carrot river triangle, comprising about 800,000 acres of mostly muskeg, west of The Pas, Manitoba, has been thoroughly investigated and surveyed. The surveys were just completed at the end of the last field season.

[Mr. C. A. Stewart.]

Mr. McQUARRIE: What has been the total cost of the surveys?

The CHAIRMAN (Mr. Vien): Shall the item carry?

Mr. McQUARRIE: No, Mr. Chairman, I am waiting for an answer to my question.

Mr. STEWART (Argenteuil): What information does my hon. friend want?

Mr. McQUARRIE: The total amount expended in making these surveys.

Mr. STEWART (Argenteuil): I do not know that we could give that.

Mr. McQUARRIE: You should have that information.

Mr. STEWART (Argenteuil): No, that is impossible because a survey party may take two or three of these surveys in one season.

Mr. McQUARRIE: I am not confining the request to one year. I want the total amount that has been spent in making these surveys. Surely that can be given.

Mr. STEWART (Argenteuil): Yes, that can be given. Here are the amounts for the past three years:

1920-21..	$ 92,386.92
1921-22..	194,189.80
1922-23..	170,612.52

Mr. McQUARRIE: Is that the total cost in each year?

Mr. STEWART (Argenteuil): Yes.

Mr. McQUARRIE: Now, what is the estimated value of these lands when reclaimed?

Mr. STEWART (Argenteuil): We have no estimate on it.

Mr. McQUARRIE: It seems to me, as a business proposition, that when we are spending all this money making these surveys the minister or the department should have some idea as to what is to be obtained for the country in the way of value. Surely there must be some estimate as to what the lands will be worth after they are reclaimed.

Mr. STEWART (Argenteuil): I may say that if the estimate did not exceed ten or twelve dollars an acre the survey would not be prosecuted. That would be definitely ascertained before surveys would be made. But those lands, when thoroughly drained, may be worth twenty or twenty-five dollars an acre, but in the case of lands under the bed of a lake it would be useless to begin draining. In such a case no work is done.

Mr. McQUARRIE: That is what I am asking. If there is an estimate, then what is it? If there is no estimate, then why not?

Mr. STEWART (Argenteuil): I have just told the hon. member that if the area to be drained is not worth ten dollars an acre the surveys are not prosecuted. So that we have an estimate before the survey; and if it is estimated that it will be worth more than ten dollars an acre, then the land would be worth eventually something more than three million dollars all told.

Mr. McQUARRIE: Then there must be some estimate in each case.

Mr. STEWART (Argenteuil): My hon. friend can take that from what I say that the estimate must be more than ten dollars an acre on these lands.

Mr. McQUARRIE: It might be guesswork. It is either guesswork or we have something to go on. If we are simply spending money here on this work with our eyes shut, it would seem to be a very unbusinesslike proceeding. I do not think this or any other government would be likely to do that. I do not think the minister would authorize that kind of work without knowing something about it. I am suggesting to him that in each case there must have been an estimate obtained before any work was done. If that is so, then where are these estimates, and is it possible to have them brought down?

Mr. STEWART (Argenteuil): No, it is left to the chief of the party to make an investigation of the character of the soil under the proposed area. If the soil is not of a sandy character and the chief of party deems it wise to make a complete investigation and survey, he will first ascertain the character of the soil. If the soil is sandy, of course nothing further will be done, but if it is of a character that will lend itself to agriculture, then the investigation is made and the cost ascertained. I have given my hon. friend what the low minimum value would be, namely, ten dollars an acre, but in all probability, when the land is thoroughly drained and dried, the surrounding land would be worth twenty or twenty-five dollars an acre.

Mr. McQUARRIE: Do you start survey parties out without any previous information?

Mr. STEWART (Argenteuil): Well, we always have a request for the work to be done either by municipalities or by some people in the locality who are interested and who are desirous of knowing whether or not the project is a feasible one, so far as drainage is concerned.

Mr. McQUARRIE: Then those requests I presume would be in writing.

Mr. STEWART (Argenteuil): In some cases, yes.

Mr. McQUARRIE: I suppose they can be brought down.

Mr. STEWART (Argenteuil): Yes.

Mr. McQUARRIE: How much is proposed to spend this year on that kind of work?

Mr. STEWART (Argenteuil): Nothing.

Mr. McQUARRIE: The minister is not spending any money on survey work; so that this item is not properly described, as I understand it.

Mr. STEWART (Argenteuil): Oh, yes.

Mr. McQUARRIE: There is an item of $547,000 for surveys and investigations of water and power resources, including the Dominion hydrometric survey for the reclamation of lands by irrigation and drainage and for the administration of the acts in connection therewith. There are no surveys to be made as I understand it.

Mr. STEWART (Argenteuil): Not of that character.

Mr. McQUARRIE: No surveys of any kind under this item.

Mr. STEWART (Argenteuil): No.

Mr. McQUARRIE: Then what reclamation work is to be done.

Mr. STEWART (Argenteuil): That is what we have been talking about.

Mr. McQUARRIE: What is to be done?

Mr. STEWART (Argenteuil): Nothing of this character is to be done.

Mr. McQUARRIE: We have got away from that now. We have come to the reclamation feature of the work, and I am asking the minister what is to be done in the way of reclamation this year. I think that is a fair question.

Mr. FAFARD: Is it not a fact that the hydrometric surveys on the St. Maurice and Manouan rivers are made by the provincial authorities?

Mr. STEWART (Argenteuil): All the work on the dams and that sort of thing is done by the Quebec government. We are not doing any work in conflict with the Quebec government. We have an agreement with them and work in conjunction with them.

Mr. FAFARD: There are many waterpowers on the St. Maurice river in the province of Quebec.

Mr. STEWART (Argenteuil): Yes. It would be pretty costly work for the federal government to attend to all that.

Mr. BOYS: Have any lands been reclaimed, or is it all in the experimental stage?

Mr. STEWART (Argenteuil): The Waterhen work is the only one the federal government has engaged in and carried to completion.

Mr. BOYS: And do the results warrant the expenditure in that connection?

Mr. STEWART (Argenteuil): That remains to be seen. I do not think at the moment the land could be sold. No one would be willing to purchase the land on account of its character, because it is sour at the present moment. When water has lain for generations on land it leaves the surface in an unsatisfactory state for agriculture, and it will take some years to dry it. I meant to see it last year but I have never been able to see it. My information is that when a few years have passed and the ditches have been kept open and the drainage properly attended to, it will be first-class agricultural land.

Mr. BOYS: The cost of keeping the drains open would be very great, judging from the conditions in the district where I live. I have in my hand the estimates for 1920, and I notice that the amount voted for that year was $224,000. I also have the estimates for 1922, and I observe that the item had increased that year to $367,000. We now have the item in this year at $547,000.

Mr. STEWART (Argenteuil): There are two services joined together. There is the Water Power branch that was created some years ago. As a matter of fact, the Reclamation service, owing to the reason that I gave to my hon. friend, is being amalgamated with the Water Power branch. The main work of this branch now is stream measurement and investigation for power purposes throughout the whole of Canada. That was carried on under Mr. Challies. Mr. Drake was in charge of the Reclamation service; he is out of the service at the moment and the two services are combined under the one chief, Mr. Challies. The reason for the apparent increase is that the two services are amalgamated.

Mr. BOYS: When did the amalgamation take place?

Mr. STEWART (Argenteuil): It began last year.

[Mr. Fafard.]

Mr. BOYS: Take the previous year. I am not in a position to criticize the item. The water-power investigation I deem to be of the greatest importance to the country, and I would commend any reasonable expenditure for carrying on that investigation. But the hon. member for New Westminster (Mr. McQuarrie) has raised a point. We want to find out whether or not the expenditure being incurred is bringing returns and whether the country is warranted in continuing it. That seems to me the vital point as regards drainage work. If it is going to take years for these lands to dry out and to get rid of the sourness so as to become valuable, and if these drains have to be kept open in the meantime, I should be inclined to think that, in the end, they would cost more than they were worth, even though they sold at the same value as surrounding land that had been properly drained in the past.

Mr. STEWART (Argenteuil): I would not like to venture my opinion, but I never was an enthusiast about drainage. When I was in the Alberta legislature, I set my face rigidly against it, except, perhaps, for the purpose of draining a road allowance. We have millions of acres of first class land there still unsettled, and until those lands are all absorbed, I think it is premature to do this work. I thought, however, that we were, in duty bound—I am now speaking of the period when we took office—to finish up the survey work in connection with irrigation. We are spending a little on that this year but the work is practically completed. It is not my intention to spend any money on reclamation projects at all, much less to think of attempting, under the control of the Dominion government, to drain the lands. I give my hon. friend every assurance on that ground, but this department will now develop mainly into a department for investigations into power, which, my hon. friend will agree with me, is most important in Ontario and Quebec, as well as in the other provinces of Canada. Reliable data on that score is most important, because no one can anticipate how rapid the development will be of our power resources. They have developed very rapidly in the past, and I hope that rapid development will continue in the future. We shall be able to furnish very reliable data to investors who propose to go in and develop the water-powers that are found throughout Canada. We are doing not only hydrometric work, but making power measurements as well.

Mr. KNOX: Is the work on Waterhen lake not completed?

Mr. STEWART (Argenteuil): There are some lateral ditches yet to be constructed. Outside of that it is completed.

Mr. KNOX: The reclaimed lands have been rented, I understand.

Mr. STEWART (Argenteuil): Yes.

Mr. KNOX: Are those lands liable for taxation by rural municipalities?

Mr. STEWART (Argenteuil): I would say, offhand, no, except as regards leased lands for school purposes, if I am right. I have forgotten at the moment.

Mr. KNOX: Would parties who leased the lands not be liable for taxation in some way?

Mr. STEWART (Argenteuil): The lease is identical with a grazing lease, so every tax that applies to a grazing lease will be applicable to that lease.

Mr. STEWART (Humboldt). As regards the Moose range reclamation project in Carrot river triangle, has this government given up that project entirely, or was it only partially taken over by the Saskatchewan government?

Mr. STEWART (Argenteuil): Only the investigation was done by the federal government.

Mr. STEWART (Humboldt): The minister has no intention of carrying it any further then?

Mr. STEWART (Argenteuil): No.

Mr. LEADER: I notice in the Auditor General's report before me, F. H. Peters, field superintendent, drawing a salary of $4,500. Is he the gentleman whom we had under review the other night?

Mr. STEWART (Argenteuil): Yes.

Mr. LEADER: Has the minister any more information to give to the committee regarding that?

Mr. STEWART (Argenteuil): The information which I gave my hon. friend the other night was correct. Payments of living allowance ceased to Mr. Peters on the 1st October, 1923. I have investigated that and found it to be correct.

Mr. LEADER: Is it the minister's intention to ask Mr. Peters for a refund of the living allowance from the time his family was moved to Ottawa until the last day he was drawing it?

Mr. STEWART (Argenteuil): I could not do that, because the payments were made quite legitimately under regulations, but I may say for the information of my hon. friend that that system will not be continued in any other case.

Mr. McQUARRIE: As I understand the matter, all the words in this item after the semi-colon should be struck out, because this item does not include any surveys for reclamation or drainage purposes or any reclamation by drainage. Should the words:

> For the reclamation of lands by irrigation and drainage and for the administration of the acts in connection therewith, etc.

not be struck out?

Mr. STEWART (Argenteuil): Not at all. I have given my hon. friend the amount necessary to supervise some of these unfinished projects. We have in our hands some of these projects that it is necessary to complete. We are not undertaking any new surveys of any sort in connection with reclamation, nor are we going to enter upon any further investigation. With regard to irrigation, we have a considerable amount of work yet to complete, that is investigations of small areas, and when that is completed, our staff at Calgary will be cut down. The work is in process of being largely discontinued.

Mr. McQUARRIE: That is what I have been trying to ascertain all the time. What is the minister going to spend this year on that particular feature of this work? The minister might also give us the details of that expenditure.

Mr. STEWART (Argenteuil): The following is a statement of the reclamation service.

Irrigation Division—	
Salaries—	
Permanent office staff, Calgary..	$53,460 (A)
Permanent field staff, Calgary..	36,105 (B)
Permanent office staff, Ottawa..	14,430 (C)
Irrigation Administration (exclusive of salaries)—	
Field inspection and surveys—	
Experimental and demonstration work	33,400 (D)
General Expenses (office and Staff, Calgary)—	
Office expenses, telephone;	
Telegrams, postage, garage:	
Operation of one motor car:	
Repairs to transport:	
Contingencies..	14,900 (E)
Expenses (office, Ottawa)—	
Printing:	
Office supplies:	
Contingencies..	20,705 (F)
	$173,000

Mr. McQUARRIE: That total is for irrigation work that has to be done and not for surveys. The surveys, I take it, have all been completed.

Mr. STEWART (Argenteuil): It is for the administration of the act.

Mr. McQUARRIE: This year you will spend $173,000 on this work and may not get any value for it at all.

Mr. STEWART (Argenteuil): I referred my hon. friend to the arrangement that had been entered into with the federal government with respect to this work and I told him that it was drawing to a close rapidly and that we were endeavouring to have it all completed. As my hon. friend will observe, we have a reduction of $104,000 in this item this year and I hope shortly to wipe it out altogether. But there are a few of these investigations to be carried on in order to complete the work, and naturally of course there is some engineering work to be done before the data is completed.

Mr. McQUARRIE: Is there an arrangement with the provinces?

Mr. STEWART (Argenteuil): There was with Alberta.

Mr. McQUARRIE: What was it, and how much more work has to be done?

Mr. STEWART (Argenteuil): If my hon. friend will consult Hansard he will find that I gave him the details to-night.

Mr. McQUARRIE: Is there an arrangement in writing?

Mr. STEWART (Argenteuil): There was no agreement in writing but an arrangement was made between Alberta and the Department of the Interior.

Mr. McQUARRIE: Under that arrangement how much more shall we have to spend?

Mr. STEWART (Argenteuil): We shall have to spend half as much next year as we are spending this year before the work is completed.

Mr. CALDWELL: Is part of the vote devoted to surveys and investigational work in connection with power on the rivers in those provinces which control their own natural resources?

Mr. STEWART (Argenteuil): Yes.

Mr. CALDWELL: Do the provinces pay the federal government anything for the surveys that are made?

Mr. STEWART (Argenteuil): No.

[Mr. C. A. Stewart.]

Mr. CALDWELL: Has any work of this description been done in New Brunswick?

Mr. STEWART (Argenteuil): We have an arrangement with every province, Quebec being the last with which we have come to an agreement.

Mr. CALDWELL: Has any survey been made at Grand Falls in New Brunswick in the last two years?

Mr. STEWART (Argenteuil): We have been asked to investigate the possibilities of power development by the tide in the bay of Fundy.

Mr. CALDWELL: That would be at the reversible falls in St. John; but I am referring to inland waters two hundred miles from the mouth of the river at a place called Grand Falls. The province of New Brunswick proposes developing that power in the near future and I was wondering whether the department had been asked to inquire into the possibilities at that point and what the results were.

Mr. STEWART (Argenteuil): We have not made any investigation but we are making stream measurements on that river.

Mr. CALDWELL: What method does the department follow? Does it indiscriminately measure certain rivers, or does it do so upon the request of the province?

Mr. STEWART (Argenteuil): We have an arrangement with the power commission of New Brunswick and whatever work is done in the way of measurements is carried on by virtue of that arrangement.

Mr. CALDWELL: Is it done at their request?

Mr. STEWART (Argenteuil): I should think it would not be done unless they requested it.

Mr. CALDWELL: How much work would the province of New Brunswick get done if they wanted it, for example, this coming season and requested to have it done?

Mr. STEWART (Argenteuil): That is rather a difficult question to answer because this work is done co-operatively between the two staffs, and we have no definite allocation of work except in so far as there is an arrangement between the staffs working on these projects.

Mr. CALDWELL: Judging from the work done in those provinces that control their own natural resources, what value has been

placed upon that work by the Dominion from the standpoint of its reliability? Further, has any development taken place, or have any surveys been made independently of those carried on by the provinces themselves?

Mr. STEWART (Argenteuil): I do not see how any development could take place in connection with stream measurement, because, as I have pointed out half a dozen times, it is a matter of considerable years of careful measurements before definite data can be obtained. The following is a letter from Mr. P. J. Veniot, the Premier of New Brunswick, with respect to this matter:

The question of providing funds for carrying on the co-operative stream measurement and water power investigations of the Maritime provinces under the direction of the Water Power branch of your department, is no doubt now under consideration. I am aware that particular attention is being given to the necessity for rigid economy in federal matters this year, but in so far as this province is concerned, I desire to impress upon you the desirability to have this work continued along the same lines and to the same extent as it is at present being carried on. Unless this work is carried on as heretofore, some other arrangement must be made, as it is essential to the hydro electric development, which we are now carrying on in this province and I feel convinced that it will be admitted without question, that in the interests of real economy for the country as a whole, the development of hydro electric energy is a necessity which it is found to be economically possible. It is obvious that stream measurement work and water power investigations can be carried on more economically under the present co-operative arrangement than if our province attempted to set up a separate organization of its own. There is also the advantage that records of information of this nature obtained by your department are co-ordinted as to the accuracy and form with similar records throughout other parts of Canada. Engineers and official people interested in the hydro development are familiar with the methods of your department and they accept your records more readily and quickly than if they were obtained by organizations not so well known to them. This province highly appreciates the efforts made by your department in the past. You are no doubt aware that during the past few years this province has carried on hydro electric development up to the present time to a total investment of $3,500,000. We are now embarking upon the development of what is known as the Grand Falls proposition, which will ensure for this province cheap power and light and cost in the vicinity of $7,000,000. The data connected with the power already developed, as well as with the power now contemplated, would not have been possible without the assistance made available by the co-operative arrangements under discussion. I am sure that, informed as you are, in relation to this whole matter, you will be satisfied that a continuance of the present small expenditure in this province by your department is justified and that you will have no difficulty in persuading your colleagues to the same opinion.

Mr. CALDWELL: Has the department made any surveys on the Musquash development in New Brunswick which is being undertaken by the provincial government?

Mr. STEWART (Argenteuil): Yes, there was co-operation as to data.

Mr. CALDWELL: Does the survey include the amount of horse-power that might be developed at any given point on the river, or is it more in the nature of ascertaining the volume of continuous flow?

Mr. STEWART (Argenteuil): It is more to establish the dependable volume of flow. Then estimates can be made of the probable horse-power to be developed.

Mr. CALDWELL: What was the report on the streams that form the Musquash development? It was questioned whether the volume of water would justify such development.

Mr. STEWART (Argenteuil): I think it would be better if the engineer in charge sent the hon. member a full report of our investigation.

Mr. CALDWELL: It would save time.

Mr. BOYS: What investigation of hydro-power development is going on in Ontario? There is evidence of possible shortage of power there, and therefore it is very important that the provincial authorities should know what developments may be available.

Mr. STEWART (Argenteuil): Measurements are being taken on all the rivers in Ontario which may be capable of developing power.

Mr. BOYS: The minister says that measurements are being taken on "all the rivers." I presume investigations have been completed on many. But I was wondering what new ventures are in sight. For instance, I presume we have full knowledge now as to the total possible development on the Niagara, and in my own locality on the Severn river. But what other work is being carried on in this connection at the present time?

Mr. STEWART (Argenteuil): Measurements have been going on for only five years. As I have said repeatedly, that is not a sufficient time within which to provide definite data on which to base dependable flow, as the records vary very considerably. In ten or twelve years the dependable flow can be pretty well established, and this, after all, is the information which engineers seek in connection with development work.

Mr. BOYS: Apart from storage, I suppose the flow at low water is what is important. But I have not the slightest desire to get into a discussion upon the scientific features. I was merely wondering in what parts of Ontario this work was being carried on at the present time. Are these hydrometric tests being made now in Ontario?

Mr. STEWART (Argenteuil): On every river in Ontario where there is a possibility of power development, but the tests have been carried on for a period of only five years. Ontario and Quebec are developing most rapidly in this connection. We have been working in conjunction with the Ontario government for the past five years. Of course at Niagara, for example, records have been kept for many years; in the northern portion of the province this is not so.

Mr. BOYS: Take the minister's own county —which is also mine—there is only one development, that on the Severn river. I take it for granted that the possible power development there is well known now, and that consequently investigations are at an end. Are the present investigations all being conducted in northern Ontario?

Mr. STEWART (Argenteuil): I will hand my hon. friend the list.

Mr. BOYS: Is it so extensive?

Mr. STEWART (Argenteuil): Yes, it covers about twenty. I will pass it over to my hon. friend.

Mr. MICHAUD : A few years ago the International Waterways Commission was formed and one of its members was appointed from New Brunswick. That commission made a report, one copy of which was sent to the authorities in the state of Maine and the other to the Department of the Interior here. I have on several occasions tried to get this report, but so far I have not succeeded. The Grand Falls waterpower is one of the largest in the Maritime provinces, and I am happy to say that it is about to be developed. In order to obtain authority for this purpose the provincial government must get permission from the Minister of the Interior, and also from the state of Maine.

Mr. STEWART (Argenteuil): Is it an international river?

Mr. MICHAUD: Yes. The falls are about two miles below the state of Maine, but as it is an international river naturally the waters are protected by both countries. I should like to get a copy of the report I have referred to. I may add that encouragement by the Dominion government in the development of this power would be welcomed by the people of New Brunswick.

Mr. CALDWELL: In this connection, do the surveys of the department include the possibility of maintaining the flow of the river by adequate storage dams at the point of development? With respect to the question put by the hon. member for Restigouche and Madawaska (Mr. Michaud), I understand it is necessary to get authority from the state of Maine or from the American government to build storage dams on the St. John river north of Grand Falls in the United States. Will it be the duty of the Dominion government or of the provincial government to secure such authority? In other words, has the provincial government power to negotiate with a neighbouring country for storage rights? We must also secure similar rights from the province of Quebec. The St. John river is the international boundary from a point about two miles north of Grand Falls almost to its source; but where the actual development will take place is entirely within the Dominion.

Mr. STEWART (Argenteuil): If it is international water, an agreement of course, would have to be executed between the two federal governments. So far as provincial storage is concerned there is no reason why the two provinces could not work that out by agreement.

Mr. CALDWELL: I presume, then, that any storage needed in the state of Maine would have to be the subject of negotiation through the federal governments?

Mr. STEWART (Argenteuil): Yes.

Mr. CALDWELL: In that case I would like to urge on the minister the necessity of co-operation. Our provincial government propose, I believe, to go ahead and develop this power. It is one of the hopes of the future of New Brunswick that we should have cheap power to manufacture our pulpwood and our hardwood timber, which cannot be floated down the rivers and which is too heavy to ship by rail in the raw state; indeed, it should not be shipped out of the country in the raw state anyway. We have immense resources of hardwood timber that can and will be manufactured if we can get cheap power. That particular power site is the best in New Brunswick, possibly the second best in Canada, next only to Niagara. But it is an international waterway, and we must get storage rights in Maine as well as in Quebec in order to maintain a flow in the river, because at low water there is not a sufficient flow to permit the continuous production of power. It is a mighty river in freshet time, and there are great lakes available that can be dammed so as to hold immense quantities of water which can be used to feed the river in times of drought. I would urge upon the minister the necessity of co-operating with our government in the matter.

Mr. COPP: The present purpose of the provincial government is to develop a certain amount of power at Grand Falls, and that can be done without any international negotiation at all.

Mr. CALDWELL: That is, in the initial stages.

Mr. COPP: Yes. Speaking from memory, I believe about 40,000 horse power can be developed without any interference with either the state of Maine or the province of Quebec. If it is found desirable to go further by the building of higher dams or the storing of more water for flowage purposes, it will then be necessary to make arrangements with the state of Maine and the province of Quebec. The matter is being investigated by the provincial authorities through the Hydro-
11 p.m. Electric Commission there, and it has been taken up, I understand, with the Minister of the Interior as regards measurements, requirements, and so on. But I feel that no difficulty of the kind suggested can possibly arise in connection with the present development at Grand Falls.

Mr. CALDWELL: I thoroughly agree with my hon. friend, but I feel that it would not be advisable for the provincial government to proceed even in the initial stages of the development without the assurance that they can get these storage rights, because the ultimate aim is to develop much more power than can be developed from the natural run of water and from the storage facilities available in New Brunswick alone. If the initial development takes place without the understanding that we can get this water storage if we need it, there might come a time when, in order to further our project or to prevent its development from being heldup, we would have to make concessions that we would not wish to make. I am sure however that the federal department will co-operate with the province of New Brunswick in any effort along this line.

Mr. STEVENS: Would the minister be good enough to tell the committee briefly the exact position of the application with respect to power development from the Spray lakes in Banff National Park and whether or not he is considering its rejection in the interests of the preservation of the national parks—that is, free from industrial interference, and so on? That I think is the policy in the great national parks of the United States, and I know is the policy approved by a great many people who have given close study to the matter of the preservation of our national parks in their natural state. It is a very important question and one that really should be discussed at length. I merely hint at these things; the minister will recognize at once what I refer to. Without delaying the committee with tiresome details, I would just like to put my question in that way.

Mr. STEWART (Argenteuil): The situation at the moment is that there is before the department an application on behalf of the Calgary Power Company, who get their power from the Kananaskis falls on the Bow river. We have been carrying on hydrometric measurements on the Bow river, though we have somewhat delayed the work; however, that is somewhat apart from my hon. friend's question. There is no doubt that the Calgary Power Company will require additional power; indeed, their supply will have to be more than doubled if they are to meet the demands made upon them by the municipality of Calgary. They have made application for the Spray lakes basin as a storage reservoir. The park superintendent and park authorities are very much opposed to the development of this power within the park. I have a perfectly open mind upon it. I went to the park to see the place for myself and to get first-hand information with regard to the situation. As my hon. friend knows, we have a very large area appropriated for park purposes at Banff. There are several hundred miles of roadway through that area, and all kinds of scenery. The road leading up to Mount Assiniboia, which would pass this development, is not one of the most scenic roads one could find though the valley in the vicinity of Mount Assiniboia is undoubtedly one of the sights of Banff park. I am not prepared to say that this development would mar the appearance of the park to any considerable degree, but I have a great deal of sympathy with the idea that these areas should be preserved as playgrounds for the people, and anything that would impair their beauty or their interest I would feel like opposing. As I say, I do not think the development would interfere very materially with the park as such, in view of the fact that it comprises so many hundreds of thousands of acres and is characterized by such varied scenery. Since the application of the Calgary Power Company was received the province of Alberta has become interested in power development and they also have made a formal application for this storage basin. We have given them the same answer that we gave the power company; that we do not want to enter hastily into an agreement. The effect of the development on the

park, on its scenic beauty, and its effect also in the way of precedent for the future, are things which would have to be given very careful consideration. The Alberta government wish to verify the statement of our engineers and of the engineers of the power company as to the volume to be stored and the value of the storage basin for power purposes, and they intend to make an independent investigation on their own behalf. Of course, if the province wishes to enter into a hydro project, and if it is believed desirable to grant the request of anyone in this regard, the province would be given the preference. But though I cannot say that I think the scenery would be very much disturbed, the question of establishing a precedent is one which requires very careful consideration before a privilege of this kind is granted to anyone.

Mr. STEVENS: I would like to make a request of the minister. I have no particular right to do so, except that I am intensely interested in the general question of the preservation of the national parks. I would ask that nothing be done in this matter within the coming year so that ample opportunity may be given for pondering the question, for its consideration not only by the minister's department but by the public, who, after all, are really more affected than even the government itself. I gather from the minister's remarks that the power company still have some units that they can develop on the Bow river site, so that there is no need for great haste at this time.

Mr. STEWART (Argenteuil): And plenty of coal.

Mr. STEVENS: Exactly. Having these things in mind I think it would be a very fine thing if the government would declare that for a period of a year nothing will be done, and then in the interim let public opinion adjust itself and familiarize itself with all the circumstances. I think we would all be in a better position to judge of the merits of the case at the end of another year. On the other hand, I may say this, that even if there is a desire on the part of the government to come to an ultimate decision on it in the near future, personally I would hesitate before agreeing to this item without the privilege of discussing it at great length and threshing the whole matter out. That I do not wish to do at the moment, and I think if the minister could give the assurance asked it would be the happiest way out of the difficulty at the present time.

[Mr. C. A. Stewart.]

Mr. STEWART (Argenteuil): I think I can give my hon. friend at once that assurance. I am not in any hurry to deal with this particular question because I think it is of such importance.

Mr. BROWN: I should like to support the request of the hon. member for Vancouver Centre (Mr. Stevens). It is a matter in which I feel intensely interested. It is important that these national parks should be preserved for the public. Shortly before coming to Ottawa I was waited upon by some of my constituents who felt very strongly upon this subject. I think a policy should be pursued as would preserve these places of natural beauty as much as possible for the use of the people unimpaired, and I am quite satisfied that the public generally would very strongly resent the idea that these parks should be alienated from public use to serve the purposes of a commercial company.

Mr. EVANS: I should like to inform the minister that the whole Alpine Club of Canada is watching this application with jealous eyes. They believe there should be no interference with the Spray river park such as would detract in any way from the attractive and pleasureable features which make these national parks so desirable as playgrounds for the people. I think the government should formulate a policy respecting the national parks so that no unfortunate precedent would be created for the future.

Mr. SHAW: The granting of water power privileges on Spray lakes is, of course, a very important matter. The minister says that he does not want to establish a precedent. As a matter of fact a precedent has already been established because the Calgary Power Company hold water power privileges within the park area right at this moment. However, I do think this parliament should take definite steps to formulate a policy so far as the parks are concerned and determine finally whether it is the intention to allow industrial development within the park area. I think the matter should be carefully considered and then, in the light of the action that parliament takes, it will be time enough to determine what industrial development should be allowed. There is a further thing in connection with this particular matter. I do not believe that any private company should be given power privileges within the park. I think that whatever rights are going to be granted for industrial purposes should be granted to the provincial government or should be conducted under some system of government

ownership or government control. For after all while it is quite true as the minister has said, that the particular area around the Spray lakes is not now of much scenic value —except perhaps in the case of the lakes themselves and the Spray river falls—still if they were allowed to come under private control there can be no doubt that those interests would be primarily concerned in getting their money out of the project and getting it as rapidly as possible; whereas if the development were under government control the government would also be interested in maintaining the park value of the area involved in which the power privileges exist. I trust that the minister will not be hasty in granting the request of the Calgary Power Company. Under any circumstances I do not think it should be granted, but if the province feels that this is an enterprise which might profitably be undertaken without in any way imperilling that area as a park asset, then on that matter I will have an open mind; but certainly I would not support the application of the Calgary Power Company under any circumstances.

Mr. STEWART (Humboldt): There is one other matter I should like to call to the attention of the minister before we pass this item. He has made a statement this evening in regard to his general attitude or policy on reclamation projects, to the effect that he does not believe it is a good policy at this time to reclaim lands for their intrinsic value for agricultural purposes. In so far as that statement goes I am wholly in accord with the minister, but I want to point out the fact to the minister that there are large districts in western Canada where drainage projects have to be instituted if the land is to be properly settled. In these areas drainage projects have to be instituted and carried out before school districts can be established and roads built. Very often these projects are beyond the scope of the new municipalities within which they must be undertaken. In the province of Saskatchewan I am aware that the provincial government has made arrangements to take over enterprises of this kind, place them on a sound financial basis, and carry them to completion, making the land pay for the work put upon it when it has been reclaimed. However, it is a fact, and it can well be understood why this is the case, that these lands that have to be reclaimed are very largely lands that are still vested in the Crown, or that being in need of drainage have not been taken up by the settlers entering the country. Now, rightly or wrongly the opinion prevails in many of the districts where this drainage has to be carried out that the regulations of the Department of the Interior constitute a hindrance and make it very difficult for these schemes to be carried out by the provincial department of highways which has charge of them. The statement of the minister as to his being wholly against reclamation projects would perhaps lend additional colour to the complaints that are made. Therefore I think it would be only fair for him to state the policy of his department in that regard, and make it plain as to whether his department is endeavouring to do what it can to render easier the carrying out of these projects where they are absolutely necessary, or whether the departmental officials are placing all the hindrances they can in the way of permitting Crown lands to be included in reclamation projects.

Mr. STEWART (Argenteuil): No, the situation is quite the reverse. All these Crown lands that are found within a drainage area in which a province or municipality is desirous of establishing a reclamation scheme are sold at a dollar an acre—preferably to the province, I think altogether to the province because they take them in charge and they are to be sold under the same regulations as the school lands. However, every acre of Crown land that is found within one of these drainage areas can be had for the benefit of the area at a dollar an acre. Then, of course, provincial drainage laws affect the scheme. There can be no opposition on the part of the federal government. What I want to make clear is, that so far as the federal government is concerned I would not venture into the Waterhen project or anything of that character. That is what I want to make clear.

Mr. ROSS (Kingston): May I ask the minister, in regard to these measurements, if the results of the investigations are printed.

Mr. STEWART (Argenteuil): I can furnish my hon. friend with the flowage on each river.

Mr. ROSS (Kingston): The Madawaska and the Sydenham are the only two rivers I am interested in.

Mr. SHAW: In connection with the matter of reducing the staff, so far as dismissals have been necessary, is any priority given to returned soldiers? I understand that sometime ago the hon. Acting Minister of Finance (Mr. Robb) indicated that it would be the attitude of the government, so far as possible,

to see that returned soldiers were retained in employment if dismissals became necessary owing to reduction of staff. Does that same practice apply to the Water Power branch?

Mr. STEWART (Argenteuil): In the staff reduction which is going on, the practice my hon. friend refers to applies to a returned soldier, if he has the minimum qualifications. The returned soldier is given the preference, unless there is some very grave reason why it cannot be done.

Mr. McQUARRIE: Would the minister inform the House as to what the government's programme in British Columbia is for the coming year under this item?

Mr. STEWART (Argenteuil): I will be glad to give my hon. friend this same information in regard to the rivers in British Columbia.

Mr. McQUARRIE: Under this vote?

Mr. STEWART (Argenteuil): Yes.

Mr. McQUARRIE: You are going to measure the rivers set out in this list?

Mr. STEWART (Argenteuil): Yes.

Mr. McQUARRIE: Is there anything else on your programme?

Mr. STEWART (Argenteuil): No. These rivers are provincial.

Mr. McQUARRIE: I am asking what the programme is, and the minister hands me a list with the names of a lot of rivers, and that is the programme. Now that is not the programme, because other expenditures are to be made in British Columbia. I would like to ask the minister what that programme is.

Mr. MacLEAN (Prince): I am glad to see the reduction of $104,000 in this vote. I brought the matter as forcibly as I could to the attention of the House last year, and I stated that it was beyond the understanding of a great many people in the eastern provinces that those large amounts should be spent on irrigation, measurement of streams, geodetic surveys, boundary line surveys and so on. That expenditure is increasing every year. Now some of them, my hon. friend says, are good things. Well, some of them are. I understand from my hon. friends on the other side of the House that irrigation has been very beneficial. What we in the eastern provinces sometimes complain of is the development of water powers by this government or by any federal government. I think it is the province of any company that wishes to take up the matter to develop these water powers. Any company that would go into an enterprise of that kind should make their own surveys, I think. I am glad that we have a reduction of this item, and I am pleased to hear from the minister that in the course of a few years it will be wiped out.

Som hon. MEMBERS: Carried.

Mr. McQUARRIE: I understand the minister is getting information.

Mr. STEWART (Argenteuil): I cannot give my hon. friend any more information than I gave to my hon. friend from Simcoe (Mr. Boys). This work involves the measurement of the rivers to ascertain flowage, in some cases for irrigation purposes, as the hon. member well knows, because the investigation is a varied one. In some cases it may be for drainage, but in most cases for the development of power, to establish definitely what power we can develop on these rivers, and in order that, if development is necessary—and in most cases it is at least projected—you may have definite data. This work is not so many dollars spent on a certain river. I cannot give that detail. But there are $47,000 all told in this vote to be spent, I think, in British Columbia for the purpose of getting data for the power people in your provincial government, the same as in any other province.

Mr. McQUARRIE: That is absolutely not an answer to the question, and this document which the minister sent over does not answer the question; on the contrary it is something altogether different, and it so states. The heading is:

Rivers covering which studies have been made of power possibilities.

That does not answer my question at all.

Mr. STEWART (Argenteuil): May I tell the hon. gentleman again—and I hope this time he will remember—that it does not involve measurements for one year, or two years, or three years, or four years, or five years, or six years, or seven years, or eight years, or nine years, or ten years, or eleven years, or twelve years; but it is a continued study that must be carried on, if you are to have reliable data for the purposes for which the measurement is being made. Have I made it clear to my hon. friend?

Mr. McQUARRIE: I should say not. I am sorry the minister finds it necessary to lose his temper.

Mr. STEWART (Argenteuil): The minister has not lost his temper.

Mr. McQUARRIE: Well he gives a very good imitation of a man who has lost his temper. I do not think that I, or any hon. member in this group, have asked one question that was not a reasonable question, and one to which we were not entitled to an answer. I for one do not propose to allow these estimates to be railroaded through this House.

The CHAIRMAN: Order.

Mr. McQUARRIE: I did not suggest they had been railroaded through. I think my question is a fair one and I am not endeavouring to obstruct. There is no reason why I should obstruct, but I asked what the government programme was in British Columbia for the coming year under this item, and what do I get? I receive a list of names of rivers on which studies have been made. I submit, Mr. Chairman, that is not an answer to the question at all.

The CHAIRMAN: The hon. minister declares he has given certain information, and he is not required to repeat that information.

Mr. McQUARRIE: I do not suggest that the hon. minister is required to repeat the information. I do not want him to repeat it, because he has not answered the question. I am now asking for an answer to the question, and if the minister feels tired and cannot understand a question when it is asked, we can allow this item to stand over till another time.

Mr. STEWART (Argenteuil): Would the statement, that the definition at the top is misleading answer my hon. friend; that it is not merely for past measurements that he has the group of rivers, but for past, present and future measurements, the future covering, at the moment, only this year.

Mr. McQUARRIE: I will try again in another way. How much of this item of $547,000 is to be spent in British Columbia?

Mr. STEWART (Argenteuil): $47,000.

Mr. McQUARRIE: How is that $47,000 going to be spent, with the details?

Mr. PARENT: By handing the money to those who are entitled to it.

Some hon. MEMBERS: Carried.

Mr. STEVENS: I do not think the minister has treated the hon. member for New Westminster (Mr. McQuarrie) quite right. There is a fairness in the request, whatever may be said of any other question asked to-night. The request is for some details, which are usually given immediately, as to what is the intention in the disbursement of this $47,000. Let me point this out to the minister. I had no intention of bringing it to his notice, but I do not think it is fair for hon. members to call "carried" when an hon. member is asking questions, and it is not a way to facilitate the passage of items.

Mr. PARENT: It has been done in the past.

Mr. STEVENS: A statute was passed in 1913, I think, whereby the water-powers in British Columbia or in the railway belt were turned over to the British Columbia government for administration. That creates a situation in British Columbia unique and entirely different from that obtaining in every other province. While the federal government owns or controls the water-powers in the railway belt, it parted with that control under the statute to the province of British Columbia. If I recall correctly, British Columbia maintains a water-power department, or it did a few years ago, doing very much the same work as this department is doing. It is interesting to us to know just what this $47,000 of federal money is to be applied to. Is it duplicating expenditures by the province? Is it a necessary expenditure? Is it possible to dispense with this expenditure by the federal government, and under the statute to allow the provincial government to do this class of work? As a matter of fact, $47,000 may not be very much to some hon. gentlemen who are calling "carried" and such like, but it is a sum worthy of consideration. This is a good time to pause and examine. The request of my hon. friend is for some information how the money is to be expended.

Mr. STEWART (Argenteuil): In the first place, in order to answer my hon. friend as to co-operation, what he has said is perfectly correct. British Columbia, like the other provinces in Canada with which we are working in co-operation, is in control of its water-powers, and as to how far it is developing them, I have not the information.

Mr. STEVENS: That is not what I refer to. I mean the relinquishment of Dominion control of water-powers in the railway belt to the provincial government. That was by a special act.

Mr. STEWART (Argenteuil): I quite understand that; but this work, as my hon. friend well knows, is not confined to the railway belt; it covers the whole of the province. As in the case of the other province, I read a letter from Premier Veniot, perhaps a letter from Hon. T. D. Patullo,

Minister of Lands in British Columbia, would be of interest in order to give further information to my hon. friend. This letter reads:

> The subject of stream measurements is of such far reaching importance in the provinces where hydro-power is capable of being developed or irrigation practised, as both are in this province, that I am constrained to venture some remarks on the national aspects of the question.
>
> No resource of the country—not even agricultural or mineral lands—demands more careful investigation than the streams from which the water is derived for the development of power, for irrigation and for city water supply. While the physical aspects of agricultural and mining lands may be regarded as supremely stable the great water resources show daily, monthly and annual variations that require careful records extending over many years to demonstrate the quantities that may be depended on from any single source.
>
> To secure uniformity of measurement, computation and tabulation and to provide reliability in comparison of streams throughout the Dominion it is equally necessary that the data be collected and published by the central authority.
>
> If it is a matter of national importance—and it cannot be questioned—that agricultural experimental stations be established and other agricultural data be gathered and that geological surveys and investigations be made by the federal government, it is surely of equal national importance that a resource from which three and a quarter million horse-power are already developed and from which hundreds of thousands of acres of land are irrigated receive generous national support.
>
> So far as this province is concerned it may be pointed out that its industrial life depends to a very large extent upon water power, and the agricultural resources of the whole interior of the province are dependent upon irrigation from its streams.
>
> Handicapped to some extent by the lack of hydrometric data, the province, realizing the vital importance of stream measurement and gauge readings, was obliged to initiate the work some years ago. Apart altogether from any consideration of the national aspect of the question already referred to, the fact that many of its great streams and lakes were wholly or partly within the railway belt laid upon the Dominion the specific duty of investigating them. Accordingly it was arranged that the portion of the work which the province of necessity began was handed over to the federal organization, the province making an annual money contribution for the service in lieu of direct expenditure.
>
> In the efforts now being made for the reduction of national expenditures I trust that you will not permit of any change that will allow so necessary a service to be curtailed.

That is the view that the minister who is in charge of this work has of the question. I think in fairness to British Columbia, it has a right to receive the same treatment as the other provinces of Canada are receiving in this respect, and I wish to assure my hon. friend that none of this work is undertaken unless there is a direct arrangement with the provincial authorities so that no overlapping in expenditure is going on. I cannot give more definite data as to where work is being carried on than on the list which I passed over to my hon. friend, that is that we are making measurements on these streams for the very purpose mentioned by the minister, in order that reliable data may be had for development purposes.

Mr. McQUARRIE: According to the list, that work is done.

Mr. STEWART (Argenteuil): Yes, I do not know how many years we have been doing that, but most of this work has been under way for only five years. I do not know exactly how long because the minister intimates that the British Columbia government have been carrying on this work. Perhaps there are some streams on which the data is complete, that is, on which accurate, reliable measurements have been kept for a period of twelve years. In that case there would be little or no need of continuing; but my hon. friend will agree that there is a great deal of work in British Columbia upon which the measurements have not been carried on for that period and upon which we are still continuing that work.

Further, my hon. friend knows that a good deal of controversy has been going on between the federal government, the provincial government and the Indians with respect to allocation of reserves, and measurement work has to be done there, in order that data may be available because, while it is not part of the settlement, because the settlement is largely that of land, work is being carried on there as well, that would be embodied rather fully in the report which I handed to my hon. friend, giving the rivers on which the work is being carried on, because the work is confined to those.

Mr. McQUARRIE: To make my position perfectly clear, I want to assure the minister that I am not objecting to the expenditures in British Columbia or in any other province. I am simply endeavouring to do my duty in trying to get information as to how the money is to be spent. I am accepting the minister's statement to the effect that the work is going to be continued this coming year under an arrangement which has been or will be made with the province.

Mr. STEWART (Argenteuil): This is a continuous arrangement with the province and does not end in any particular year. There is a standing agreement between the province and the federal government for co-operation in this work, but my hon. friend should understand that reliable data of this character cannot be obtained under ten or twelve years. Perhaps there are some streams in regard to which the work is complete, but the great majority of them are probably

only half finished and measurements will have to go on for another period of years before reliable data will be completely secured.

Mr. McQUARRIE: How many years has this work been going on?

Mr. STEWART (Argenteuil): The agreement was executed on August 19, 1913.

Mr. McQUARRIE: That is to say, eleven years. How many years longer has it to run?

Mr. STEWART (Argenteuil): As long as both parties are agreeable to its continuance.

Mr. McQUARRIE: So that there is an arrangement under which the work is to be continued, and it is proposed to continue it this year. An arrangement, in other words, has been made or will be made as to all the work and that work will be confined to the rivers which were set out in the statement that the minister sent over to me. I think it is a commendable thing that the Dominion and the provinces should co-operate in such an important matter and I am not objecting to the arrangement. I hope the minister will not think that I am trying to harass him tonight or to obstruct his estimates.

Progress reported.

On motion of Mr. Mackenzie King the House adjourned at 11.40 p.m.

Friday, April 11, 1924

The House met at three o'clock.

HOME BANK DEPOSITORS

Mr. JOHN MILLAR (Qu'Appelle): I desire to present a petition signed by 225 residents of the town and district of Welwyn, praying that the depositors of the Home Bank be indemnified.

UNITED CHURCH OF CANADA

Mr. STEWART (Hamilton): I beg to present the petition of the St. Paul's Presbyterian Church at Hamilton opposing the United Church of Canada Bill.

Mr. KENNEDY (Edmonton): I beg to present the petition of David G. McQueen and 1324 others, of Edmonton and surrounding district, opposing the United Church of Canada Bill.

CANADIAN NATIONAL RAILWAYS

BILLS PROPOSED TO AUTHORIZE THE CONSTRUCTION OF BRANCH LINES

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals) moved the second reading of Bill No. 48, respecting the construction of a Canadian National railway line from Turtleford to near Hafford in the province of Saskatchewan.

Motion agreed to, bill read the second time, and referred to the Select Standing Committee on Railways, Canals and Telegraph lines.

CAPITAL PUNISHMENT

Mr. WILLIAM IRVINE (East Calgary) moved the second reading of Bill No. 3 to amend the Criminal Code.

He said: It is perhaps unnecessary to point out to the House that there are four crimes for which the death penalty may be imposed in Canada. These are treason, making war against His Majesty, rape and murder. I do not know whether it ever occurs that the death penalty is inflicted for the commission of the first three mentioned crimes. The bill now before the House deals with all of these crimes, and simply asks that capital punishment be abolished and life imprisonment substituted for the death penalty. The effect of the operation of the bill, if enacted, may be much more profound than that, but it is a very simple matter to understand the alterations in the law which this bill calls for.

On numerous occasions this question has been discussed before the parliament of Canada, and I observe from reading these former debates that the ethical and religious arguments which have been put forward have been considered very thoroughly. I am going, therefore, to confine myself largely to the argument against capital punishment from the historical and scientific point of view. First of all, I desire briefly to point out the basis upon which the present criminal code rests, and that basis is not very difficult to define. It goes back to the natural animal instinct of self-preservation and retaliation in order to preserve oneself. In the early days we had to kill or be killed; it was a crude, unintelligent struggle for existence. But as time went on the desire for retribution, for revenge, came into play, and there came into existence what was known as the "avenger of blood;" that is to say, one man of a tribe sought to avenge the death of another member of the tribe who had been killed. There was no thought of punishing the actual individual who had committed the crime, there was no thought of the circumstances; the only thought was revenge for what had been committed. This is known as the ancient lex talionis,—an eye for an eye, a tooth for a tooth. But by and by society took over the position of the avenger of blood, and that is the function which the Dominion of

Canada fulfils to-day by carrying out our present criminal code. Now, I hold, very strongly, Mr. Speaker, that a criminal code that is based on savage impulses and keeps in view savage aims cannot be expected to produce civilized results. We shall try in vain to achieve the ends of civilization through institutions that were devised for barbaric purposes. As to the basis of our present criminal code, history does not leave us any room for doubt whatever. Primitive man had absolutely no thought of deterrence when he imposed this penalty; but as humanity developed intellectually and morally, we found it incumbent upon us to find some rational sanction for the practice of taking the lives of other people, and so we said: We will take life for life on the ground that this will deter other people from committing crimes. I do not think there is in Canada any person who would advocate the death penalty to-day on the ground of revenge, which is the basis of our criminal code. Why then, we may ask, should we continue to keep in force an institution for the purpose of revenge when we seek some other purpose for carrying it out? I believe we can find a better way of gaining our ends.

Let us move to another point in the historic argument. Civilized man, as I have said, seeking a rational sanction for the imposition of the death penalty, decided that it must be considered as a deterrent. He thought it was less inhuman to kill a man when in doing so he reasoned that he was preventing other men from repeating the crime, than it was to kill on the basis of revenge. That is our civilized interpretation of the death penalty. So, when punishment was regarded as a deterrent from crime, in the early stages of that recognition we find that the death penalty was passed on all offenders, and it was carried out publicly and made as horrible as possible. This was the proper and logical thing to do, of course, for in order that the death penalty might be a deterrent, people would have to see the thing and know that it was carried out;—the more horrible it was made to appear, the more of a deterrent it would be, provided, of course, that it had a deterrent effect at all. So we find human ingenuity was exhausted in devising cruelties to impose on those who had committed crimes. But we have to say briefly that this method has proved a failure. Society has been forced to abandon all these cruelties; society has been forced to abandon the death penalty except in the case of homicide. In an article in the American Journal of Politics, in 1893, we are told that under the old Jewish law every crime save one was punishable by death. In England, in the eighteenth century, 160 offences were punishable by death, among those being that of stealing property. A man for stealing five shillings could legally be hanged, and very often in the early history of England people committing such crimes were hanged. Also, if a man held an opinion that was different from that of his church authorities, or different from that of the state authorities, as a heretic he was punishable by death. In the reign of Henry VIII alone, 72,000 people were hanged for crimes and offences of this character. The first relief that came to the people of Great Britain from this kind of punishment came through the colonies. That is to say, a man who had stolen five shillings had the option of going to Canada or some other colony or to be hanged, and sometimes he decided in favour of a new start in the colonies. That was the beginning of relief from this type of punishment in Great Britain.

Mr. McMASTER: Is the hon. member serious in suggesting that convicts were ever sent out to Canada?

Mr. IRVINE: I am merely repeating what is an acknowledged historic fact, that at a certain period of English history, the people of England, who were convicted of petty crimes, were given the option of going to the English colonies.

Mr. LAPOINTE: I think the House is entitled to hear this little conversation with the hon. member for Brome (Mr. McMaster).

Mr. IRVINE: I think it is our turn to have a little conversation in this end of the House. We have been trying to listen to a number that we have not heard throughout the session. The hon. member for Brome (Mr. McMaster) asked me if I was serious in suggesting that Canada ever received any such immigrants. I replied that I did not know whether Canada ever did or not, but I was merely referring to a fact in English history that there was a time when people sentenced for petty crimes were given the option of going to the colonies or of suffering the penalty of death. To-day, however, we find that these tortures and stupid penalties are very largely things of the past. To-day, there is an idea, at least, of seeking to reform criminals rather than simply to kill them; the death penalty has been abolished except for cases of homicide. Therefore the question that I wish to put to the House is this: If tortures and executions failed in the past in deterring criminals from the commission of petty crimes, is it reasonable for us to suppose that, in the major crime of taking the life of another, where this is frequently done

in the heat of passion, the death penalty would be a deterrent? As a matter of fact, society has abandoned the death penalty in all these other crimes; but for some strange reason society holds on to this penalty in the case of the major crime.

I think you will agree with me that the time is sure to come, if it has not come already, when we shall lay aside this method of dealing with criminals, not so much in the interest of the criminals—indeed, I am not going to plead in the interest of the criminal classes at all,—but in our own interest we ought to abolish this thing because it is degrading and demoralizing to humanity; it is an outrage upon the finest sensibilities; and, in addition, it fails to do that thing for which we impose it, it fails to deter people from the commission of any crime. When the death penalty was in full force for all petty crimes, we found that such crimes were much more frequent than they are to-day when the death penalty has been removed. Of course, I am not going to argue that this result is due solely to the fact that we have removed the death penalty for petty crimes; but I think while much of the advance may be due to improvement in economic conditions and to the development of a moral consciousness, yet the fact remains that these crimes were not stamped out by the imposition of the death penalty. If crimes are fewer to-day than they were in the eighteenth century, that is because intellectually, morally and economically the race has outgrown them, they were not stamped out by the imposition of the death penalty. I am reasonably certain that the same thing will be true of the major crime of homicide if similarly treated.

To sum up my first point, I would say that history leaves no foothold for those who claim the necessity of continuing capital punishment. The motive underlying the Criminal Code, was based on revenge, and we cannot secure a civilized end on a basis of revenge. In seeking a rational sanction for the continuance of the death penalty we have assumed that it is a deterrent, whereas history has proved that it does not deter inasmuch as capital punishment has been abandoned as hopelessly ineffective in relation to all the petty crimes for which it was imposed in Great Britain in the eighteenth century. We find that notwithstanding the death penalty crime prospered and cruelty obtained; so that eventually the death penalty had to be abandoned. Capital punishment has been abandoned in regard to all the crimes for which it formerly was imposed, with the exception of homicide, for which we now contend that it should no longer be executed.

I suppose it was natural that the death penalty should be retained for the major crime a little longer than in the other cases, but it is destined to pass just as it has passed in relation to all other offences. In the minds of those who have not given very much thought to the subject capital punishment is still believed to be to some extent a deterrent, and it is on this ground that we tolerate it at all. But keeping in mind the fact I have already pointed out, that history has repudiated it as a preventive of crime in all cases except murder, let us further pursue the argument from the scientific point of view. Let us consult those who have approached the subject from that standpoint. I think we ought in all fairness to call in the criminologists and penologists to help us to formulate our criminal code. I am sure that there are men in Canada who are closely in touch with all our criminal conditions who could give to this parliament some very interesting arguments against capital punishment, and it is a pity that we should not seek the best advice of those who are in contact with criminal life before we draw up any criminal law whatsoever. I believe that if we studied the work of criminologists a little more we should move towards the suppression of crime at its source instead of wreaking revenge upon the poor criminal after he has committed the offence. In order words, what we should be interested in is the prevention of murder and not the killing of some man for having committed murder. Our present method does not step in at all until the murder has been committed, when action is too late. We ought to look for some other way of dealing with the matter before the murder actually takes place, and I do not believe that this is an impossibility. The penal code of Canada, as of all other countries, should reflect knowledge rather than revenge. In this regard let me quote M. Boies, one of the modern criminologists. He says:

> It is manifest that criminal law and codes are sporadic growths of past social circumstances and necessities, without any consistent theory or principle; devoid of order, harmony or system. When any particular crime became prevalent or annoying to society a penalty was offset against it in the hope, which has proved vain, of preventing its commission through fear of penalty. Criminal codes as they exist are in the light of the twentieth century intelligence a conglomeration of penalties of various degrees of atrocity, irrationality, absurdity and inutility. They are the relics of blind social struggle against social evils useful chiefly as antiquities, to be collected with thumbscrews, iron boots, racks, and torture wheels in museums.

The cause of crime should have a direct bearing upon our treatment of criminals. If crime is of the nature of disease, as it is held by many criminologists to be, then it

should surely appear to hon. members an unpardonably stupid thing to punish a man for being diseased. If modern criminologists are correct in their general agreement respecting the causes of crime, then I affirm that it would be just as rational for us to prepare a prospective cancer patient to the graveyard as a means of curing him as it is to point the prospective murderer to the gallows for the purpose of preventing murder. Let us look for a moment into the question as to the causes of crime. According to the best modern authorities, crimes are caused in two ways, through hereditary influences and through environmental influences. The first influence, that of heredity, is like the seed, while the environment is the seed-bed into which that seed is cast. If a man is born with a weakness, mental or moral, and we provide the surroundings that are calculated to develop the inherited tendency, we shall have a criminal. Crime, therefore, is as inevitable a result as any other consequence of natural law, certain conditions being given. Hereditary weakness will lead to crime and the environment that is calculated to develop that weakness will produce the criminal. If that is so, then we have a tremendous responsibility which does not end at the end of the hangman's rope but which goes much deeper and should move in a different direction from that of capital punishment. The general conclusion arrived at by the modern student of this question is the absolute necessity of a comprehensive treatment of the whole body of criminal disease. The opinion is that we should treat criminals as we treat our insane or our diseased. Let me quote in this regard, very briefly, two or three writers upon the subject: Boies says:

> It is a penological law that pernicious heredity must be checked and corrupting environment corrected.

Marro, another eminent penologist, found that 52 per cent of all murders examined into by him were directly traceable to ancestors. Others say that from 50 to 72 per cent of crime is due to pre-natal causes, and the remainder to defective education and deleterious youthful environment. Garofolo says:

> That hereditary transmission of crime is established by unimpeachable evidence. It is a theorem of penology that crime is a diseased condition.

Suppose we assume, for a moment at least, that these gentlemen know something of what they are talking about, do we not see that when we think that we are preventing crime by means of the death penalty we are really in a fool's paradise indeed? There is no connection whatsoever between the crime and the punishment, and there cannot be, because if crime is caused by inherent weakness developed through environmental conditions, then no amount of so-called deterrence of this character will have any effect whatsoever, any more than it would have against physical disease. Let me give some practical examples which will tend to substantiate my claim from the theoretic standpoint. I would refer the House to the most famous investigation that has ever been made into this subject, that carried out in the case of Jonathan Edwards and of Max, the progenitor of the famous, or infamous, Jukes family.

There were examined 1,594 descendants of Jonathan Edwards. Of these 245 were college graduates, 13 presidents of universities, 65 professors and principals of schools, 60 physicians, 100 clergymen, 75 officers of the army, 60 prominent authors, 100 lawyers, 30 judges, 80 held public offices, some being senators, governors and mayors. Now, let us examine the family of Max, the father of the notorious Jukes family. Of the descendants that were examined 1,200 occupied penal and charitable institutions, and not one of them contributed anything to the public welfare. They cost the state about $1,000 each, or in all $1,250,000. There were 310 in poorhouses for an aggregate of 2,300 years; 300 died in childhood, 840 viciously diseased, 400 physically wrecked by their own wicked practices, 50 notorious prostitutes, 7 murderers, 60 habitual thieves and 130 convicted of various crimes.

Now, I do not contend, Mr. Speaker, that this case alone is sufficient to establish my point; but it should indicate to hon. members who may not have gone into the matter at all that this is the method by which our criminologists have arrived at their conclusion that crime is largely a matter of inheritance and of conditions of life. Let me substantiate this further by quoting from the Ottawa Journal of last night. In its report of the double hanging at London, Ontario, yesterday there appears the following:

> The gaol physician gave the two condemned men a glass of whiskey and morphine early this morning —"to make them cool and collected," he said. He added his previous claim that Topping had the mentality of a four-year-old. Mentally, he said, Murrell was normal, but had the morals of a four-year-old.

If there were other people in London or Ottawa who were simply four years old mentally and morally do you suppose that the hanging of those two criminals would have any particular effect upon them? Not the slightest in the world, because it is the mentally and morally deficient who commit crime. I do not suppose hon. members will consider that the hanging of those two men

will be a deterrent to any of us, because of course we assume that we are not going to be criminals; we are hanging those men for the benefit of the other fellows. But the other fellows are mentally and morally incapable of being impressed by this retributive justice. Consequently we are perpetuating an institution which does not accomplish what we expect. The hangman with his rope is just like the medicine man of old times with his incantations. We need physicians and psychologists to handle our criminals, not the hangman; we need eugenics rather than the gallows. As I said at the outset, we ought to try to prevent murder, not to hang murderers; and if we are to prevent murder we must start somewhat earlier with our preventive measures.

It will be seen that the conclusions of criminologists are borne out by the facts of everyday life. If crime springs from heredity and environment, then punishment can have no deterrent effect. History has shown hanging to be ineffectual and our daily experience confirms history. We have seen that when capital punishment was abandoned with respect to other crimes, those crimes did not increase. Now, homicide does not differ as to its cause from any other crime. An execution would have the same deterrent effect on a prospective thief as it would on a prospective murderer; in other words, it would have none at all. I shall endeavour to prove this from other sources, but for the moment I think we might turn our attention to other countries where capital punishment has been abandoned. Take Holland for example, and I select it because its population is not much smaller than ours. Holland abolished capital punishment in 1870, and homicide has been gradually decreasing, until the latest figures I have show a very marked diminution of this crime. In 1894 twelve were convicted, in 1897 nine, and the figures continue to decrease, until in 1902 only three were convicted. I have figures for only a few years with respect to Canada. Our population of course is a little larger than that of Holland. In 1913 there were twenty-three convictions for murder, in 1914 twenty-seven and in 1915 thirty-four. You see, the death penalty does not diminish murder in this country. On the other hand, in Holland homicide is decreasing. I am not arguing that this decrease is due to the abolition of capital punishment, indeed I should spoil my argument if I drew any such conclusion from the figures. I am arguing that hanging has no deterrent effect whatever. At the same time I give these figures to show that it does not follow that with the abolition of capital punishment everybody takes on homicidal tendencies. Holland is getting along very well indeed without the death penalty—better in fact than we are. I am seeking to prove that hanging does not deter the prospective murderer. In support of this I would quote from a volume on capital punishment which gives a very striking instance in favour of my argument

> On the 21st June, 1877, ten men were hanged in Pennsylvania for murderous conspiracies. The New York Herald predicted the wholesome effect of the terrible lesson. "We may be certain," it proclaimed, "that the pitiless severity of the law will deter the most wicked from anything like the imitation of these crimes."
>
> Yet on the night following the execution two of the witnesses at the trial had been murdered, and before the 5th July, five of the prosecutors had met the same fate.

Now, however that may impress hon. members, it is very clear to me that capital punishment did not deter the commission of murder in that case. The people who had criminal instincts went ahead with their programme, regardless of capital punishment.

Let us regard for a moment the latest murderer, if you like, that we have in Canada. I do not know for the moment who he is, but let us consider his motives. Do you suppose that before he committed murder he stopped to think of the gallows? Well, if so, it did not deter him, because he committed the crime. Let us suppose he did not stop to think of the gallows. Well, in that case also capital punishment did not deter him, since he did not think of it, There is a fact that stares us in the face. Here is another singular instance. Rev. T. T. Roberts, an English clergyman, consoled 167 murderers, and 161 of these declared to him that they had witnessed executions. Let me give you a short quotation from another and more modern authority. I quote a short passage from the statement of the warden of Sing Sing prison, who has been engaged in that work for twenty years and who knows criminals and knows their psychology pretty thoroughly. In fact, I would like to refer members of this House to our own Superintendent of Penitentiaries, perhaps one of the ablest men we could have holding that position in Canada. I think you will find that he does not believe in capital punishment; he does not believe in it because he understands criminals and crime. It would have been well, perhaps, had we discussed the matter with him before the debate came on. But let me give you what the warden of Sing Sing says:

> Social necessity is the only justification for capital punishment. Such social necessity does not exist be-

cause the figures show that capital punishment does not cut down the ratio of homicides to population.

Therefore, capital punishment should go because in the few cases in which it is carried out it is a futile and a cruel and a brutal thing to do. That term "few cases" is important so far as the U.S.A. is concerned. Warder Lawes shows that out of every eightly-five men who commit homicide in American states where capital punishment is in effect only one is actually executed. The murderer rarely considers—

Here is another thing for us to notice with regard to the psychology of the criminal:

The murderer rarely considers the penalty of his crime. In those rare cases where the future consequences do enter into his calculations he regards himself as almost certain to be one of the 84 who will escape death.

That is the word of the warden of Sing Sing. These facts all prove that the death penalty does not deter, and science shows us, as I have indicated, why it does not deter—because it does not touch the causes of crime at all. These facts suggest also that we are cruel and unscientific to maintain this method of dealing with criminals.

Some have tried to show that the abolition of capital punishment would decrease crime. They argue, of course, that crime flourishes where it is punished most vigorously, and they prove from comparative statistics that in countries where the death penalty has been abolished crime has decreased. They also mention the power of the suggestion on a weak man of taking life. They also emphasize the fact that even for the state to take the life of another destroys the sacredness of life, and some argue that when a certain type of criminal feels that he is fighting for his life, as he has to do when capital punishment is in vogue, he becomes a sort of hero and rather likes it. This is an interesting field of inquiry, but I am not going to follow it, because I am not interested in proving that capital punishment increases crime. As a matter of fact, I do not think it does; I do not think it has any effect at all. It has no more the effect of increasing crime than of decreasing it, and that is the point I am endeavouring to establish: it does not affect the criminal at all, but it does affect us. That, I think, is self-evident.

I want now, in order to prove this a little more clearly, to refer to statistics which I have here and which I collected from the United States. I wrote to the attorney general of every state in the union and to each of them I submitted certain questions. I will not bother you with going over all this long file, but I will just read the questions to you:

What is the punishment provided by law in your state for murder with malice aforethought?

[Mr. Irvine.]

If the sentence is death, what is the means of execution? If the sentence is death, has this always been the law of your state? If not, when was the change made and do you consider the change made an improvement or otherwise? If the sentence is not death, how long has the present law been in force?

Do you believe that the effect of the present law has been to increase or decrease this crime in your state?

Do you believe that the effect of the present law has been to increase or decrease the probability of conviction in cases where this crime has been committed?

Where the penalty is not death, does the prisoner do sufficient work to earn the cost of his maintenance and detention?

Is any provision made for the compensation of the injured family of the victim?

I want to quote just one or two replies to these questions, to prove my point that the mode of punishment does not affect the amount of crime. The attorney general of Nebraska says that in his opinion the punishment makes no difference whatsoever to crime, and from the state of Oregon also we are told that it has no effect, so far as the opinion of the attorney general goes. I will quote one more, that from the Secretary of State for Maine. He says:

My personal opinion is that the death penalty or life imprisonment has no material effect upon the increase or decrease of crime. I do not think the murderer takes the penalty for his crime into consideration when committing it. He also invariably plans to escape any penalty.

These are the opinions of people from the various states. Some of these states have capital punishment, some leave it to the option of the jury, some have abolished it, and from all of these the opinion has been given that it does not make any difference to the amount of crime whether you have capital punishment, whether it is left to the option of the jury to give life imprisonment, or whether you have life imprisonment. So I think it is reasonable, in view of the evidence at hand, to conclude that from the facts of history, from the scientific point of view and from the testimony of people living in our own age who have dealings with the criminal class, the mode of punishment has no effect on the criminal.

Mr. MARCIL (Bonaventure): May I be allowed to ask my hon. friend two questions? Can he cite the opinion of any attorney general in Canada favourable to the abolition of the death penalty for murder? And will he also give us the statistics of murders committed by foreigners in Canada?

Mr. IRVINE: As to the first question, I have not consulted the attorneys general of Canada in this matter because I did not suppose their opinions would be readily given if they knew I was going to advocate the

abolition of capital punishment. As to the other I have no data with regard to the nationality of the people committing crimes in this country, neither do I think that is relevant to the discussion. It does not matter to me who commits the crime, whether he is a Hottentot, an Englishman or a Canadian; that has nothing to do with the argument. It is true that the hereditary influences to which those from some parts of the world are subject may be such as to make them criminals more readily under certain environments, but I do not see that that has anything to do with our discussion.

Mr. MARCIL (Bonaventure): May I put another question? Would my hon. friend put the hold-up man or the bank robber in the category of those who are suffering from mental disease?

Mr. IRVINE: Most decidedly. The reason we have not robbed banks is that we have not suflered from the disease; if we had the same disease or weaknesses as those fellows who rob banks, we would be there now, I do not know that we deserve any particular credit for not having the disease. I do not suppose these men selected it; they have had it placed upon them both by hereditary influences and by environment, and now they are the victims both of the past and of the present. If we have no better way of dealing with these men than that of simply slinging a rope around their necks, then we are more miserable than they. That is my honest opinion in that matter.

Mr. MARCIL (Bonaventure): May I ask one more question and then I am through? If a man serving a life sentence commits murder in the penitentiary, what would the hon. member do in a case like that? That occurred in Montreal after a lapse of twenty years without a single execution.

Mr. IRVINE: If my hon. friend will permit me to draft the Code the way I want to do it, I will provide for such a case. At the present time he is only a murderer whether in or out of prison when the act is committed and I think perhaps if the proper thing had been done with him in the first place, he would have been in an insane asylum. But when we get the proper way of handling criminals we shall not simply commit them to gaolers, but have them examined by expert physicians and psychologists, and in every case we would provide a proper place where the man could be taken care of. I think that was not done in the case my hon. friend mentions.

I want to bring a friendly challenge to the Minister of Justice (Mr. Lapointe) and to any hon. members who may oppose this argument, and it is this: I think it is due to Canada as well as to this parliament, that if the nation is going to continue to occupy the position of the avenger of blood with regard to criminals, there ought to be no doubt whatsoever about the efficacy of the system in securing the civilized end for which we retain it. I want the Minister of Justice if he opposes this argument to bring the proof—not belief merely, no mere opinion, but I want him to bring the proof—that capital punishment has hindered one single criminal from committing a crime. I want that proof; I am not going to be satisfied with a mere believe in the efficacy of this old barbaric practice. Nothing short of absolute proof can be accepted as an excuse for Canada maintaining the death penalty and placing our nation in the position of an executioner.

Mr. PUTNAM: In arriving at what appears like proof, would the hon. member concede that the wiping out of all punishment would increase murder?

Mr. IRVINE: I do not think it would. I do not think that punishment has anything to do with crime, and I have been trying to establish that. But that does not mean that we ought to allow every criminal to run about loose. We must protect society. My point is that we ought to have a different method of treatment for the criminal. There is no necessity for the idea of punishment entering into the situation at all.

Now, what is it that we all seek to arrive at in our criminal code to-day? To put it briefly, what we are trying to do is to protect society. This is what we are aiming at; this is what our criminal code aims at. Now to kill the murderer certainly protects society so far as the murderer is concerned; he will not repeat his crime, at least not in this world. To that extent the present system is effective, but that is the only respect in which it is effective. We have to ask, then: Is there another method that will be equally effective, and that will not outrage our moral sensibilities as the present method does, and that will at the same time tend to deepen the idea of the sacredness of life? I believe there is another method, and that method is life imprisonment. I believe that life imprisonment will protect society better. It will remove the criminal from society just as effectively, in so far as his opportunity to commit murder

is concerned, as if we hang him; but it will do more than that. It will protect the individual himself from society. As a matter of fact, society exists for the individual. And yet under this present system it is not infrequently the case that the individual becomes the victim of society by being punished though innocent. I have a number of cases received from reliable sources in which the wrong persons have been convicted in Canada, but I shall mention only one, which I hope will prove my point in this regard. I refer to a trial for murder that took place in my own city of Calgary a short time ago. It is not necessary for me to mention the name of the victim, except it be demanded. The homicide was tried, convicted, sentenced to be hanged, and the date of execution was fixed. He was a poor man, and as the hanging day approached people began to worry about it—they always do when they know that at six o'clock tomorrow morning someone is going to be hanged. Any man and any woman with any imagination is bound to worry as the hanging day approaches. People began to worry about this man in Calgary: they were not sure that he had had a fair trial. The returned soldiers made a speedy collection of money to defray the expenses of an appeal. Appeal proceedings were accordingly instituted, a new trial was granted, and the conviction was set aside. Now, if the first conviction was correct, we have a murderer now running wild throughout the province of Alberta, awaiting the opportunity to kill another man. If, however, he was innocent of that crime, he escaped the gallows not by his innocence but by the activity of the returned soldiers of Alberta. That should be sufficient, I think, to prove to us the possibility of mistakes being made. Undoubtedly a mistake was made in one of those trials; I do not care which you say it is. But I want to point out this: It is the abhorrence which juries, judges, and people alike have for the imposing of the death penalty that militates against securing convictions. I think you will agree with me that the public opinion of Canada is not behind this method of punishment, and as a result it is quite possible that men who have committed murder are still at large and that society is not protected. If, on the other hand, we had life imprisonment there would be less difficulty in securing convictions and society would be better protected than under the present system.

I would urge this point. If we had a life imprisonment penalty the individual would be protected to some extent against the mistakes that are possible under any system. As it is now, the wrong man may be hanged, and at the same time the guilty man may go free. Life imprisonment is a better protection for society, because it will increase the number of convictions and the criminals will not be at large.

I want to give just a brief quotation from the Governor of Wisconsin, not the present Governor, by the way. In a letter to John Bright, he said:

> The evil tendency of public executions, the great aversion of many to the taking of life, rendering it almost impossible to obtain jurors from the more intelligent portion of the community, the liability of the innocent to suffer so extreme a penalty, and be placed beyond the reach of pardoning power, and the disposition of courts and jurors not to convict, fearing the innocent might suffer, convinced me that this relic of barbarism should be abolished.

The Governor of Michigan says:

> Before the abolition of the death penalty murders were not infrequent, but convictions were rarely or never obtained. It became the common belief that no jury could be found which would convict. There can be no doubt that public opinion sustains the present law and is against the restoration of the death penalty. Conviction and punishment are now much more certain than before the change was made.

Let me give quotations from John Bright and one from Robespierre. John Bright says:

> Whenever you hang a man in the face of the public under the circumstances to which we are so accustomed in this country, if you do in the slightest degree deter from crime by the shocking nature of the punishment, I will undertake to say that you by so much, nay by much more, weaken that other and greater security which arises from the reverence with which human life is regarded.

Then Robespierre says:

> The legislator who prefers death and atrocious punishment to such softer methods as are in his power, outrages public delicacy, blunts the moral sentiment of the people he governs, like an unskilled teacher who, by the frequent use of cruel chastisement brutalizes and degrades the soul of his pupil, in that he weakens and exhausts the resources of government, by stretching them with too much force.

So that I contend, Mr. Speaker, that life imprisonment should be substituted for the present penalty of capital punishment, and that such action would be much better for the criminal himself, relieving him from any possible suffering at the hands of society, and it would protect society very much better.

Let me mention in passing a number of countries that have abolished capital punishment. I have pointed out that Holland abolished the death penalty in 1870. Belgium has had no executions since 1862; Norway no executions since 1870, and I think they abolished capital punishment in 1902; Sweden has almost ceased the practice; Denmark has had no executions for many years;

Switzerland abolished capital punishment in 1864, Portugal in 1867, Italy in 1899. The state of Michigan abolished the death penalty in 1847, Rhode Island in 1852, Wisconsin in 1853, Maine in 1887 and Kansas in 1907. These countries are just as well protected as we are, and perhaps in some measure better protected, because the abolition of capital punishment is protecting the best sensibilities of the community as well. My point is fully admitted if we say that these countries are as well protected as we are I believe that it is useless and harmful for us to maintain this irrational and inhuman method as a protection when facts prove that society can be equally well protected by a method less harmful to the morality of the nation. I plead then for a repeal of the present law as it stands, and the substitution of the measure that I have presented. Let me repeat: It is in our own interests that I am making this appeal; it is not in the interests of the criminal alone, but in the interests of the general public. With our present public press and with the imagination developed to a high degree, hanging is really more public to-day than it was in the days of John Bright and Robespierre. I think I should have to apologize to the House for presenting a press report of the hanging which took place in Montreal last week. I think perhaps the writer of this is doing a good service in shocking the public into a recognition of the effects of that law which they are silently endorsing, if not openly endorsing. The heading of this article in large letters is:

GOOD-BYE FOREVER

Were last words of Wilfrid St. Onge on scaffold.

Youthful condemned murderer paid death penalty for his crime at 7.49 this morning at Bordeau jail. When black cap was fitted over his head, he said, "I ask pardon from God for any harm I have done."

Then it goes on:

Wilfrid St. Onge, murderer, paid the extreme penalty for his crime at 7.49 o'clock this morning when at Bordeau jail, Hangman Ellis pulled the lever which hurled the condemned man into eternity. And until sunset to-night there hangs limply from the jail tower a black flag, telling the message to the world that justice has been satisfied.

It was one of the most successful executions ever carried out in the province of Quebec. Not a hitch occurred to mar the smooth movements performed so many times by the officials, that there was little chance of failure. There was an air of solemnity; an atmosphere in the white-walled corridors which reminded those present of the majesty of the law.

And in adjoining cells, only a few feet away from the grim scaffold upon which any man condemned walks only once, are three other condemned prisoners, awaiting their summons to that which lies beyond.

And it goes into a description of all of the hanging and then the article proceeds:

Meantime in the rotunda of the prison there formed up the solemn procession. Two court officials in black robes and flat-crowned hats, draped with crape intertwined with red, carrying the staffs of office, led. Then came Sheriff Lemieux in purple, Governor Seguin in uniform, and the men who later were to render a coroner's verdict.

They marched quietly and quickly up the narrow stairway leading to the death cells. There Father Lessard was praying; there Hangman Ellis wearing a morning coat, saw that all was in order. St. Onge was ready. Preceded by two guards he stepped from his cell, and during the very few seconds it took him to go to the scaffold—only eleven steps—he said in French "Good day. Thank you." And as he raised his hand in salute "Good bye forever."

He stepped on the trap, and while the executioner placed the fateful black cap over his head, said in a firm voice: "I ask pardon from God for any harm that I have done."

Beginning the Pater Noster as the noose—of three-quarter-inch white manila rope—was being adjusted and the straps placed about hands and feet, a sudden sound of falling, a deep gasp, and Wilfrid St. Onge had gone to meet his Maker.

And then a note to bring out in relief the main points of the hanging:

Father Lessard claimed the body immediately after the inquest. This means that St. Onge will be buried in the potters' field. The laws of the church forbid his interment in consecrated ground and if the body had not been claimed it would have found its final resting place in the jail yard.

All the prisoners in the jail were locked in their cells preceding the execution. The first two to be let out were those who had been deputed to carry the body to the mortuary.

A new rope is always provided for each hanging. This one was of three-quarter-inch white manila, very strong. It was afterwards cut up and distributed to souvenir hunters.

Hangman Ellis said that with a man of St. Onge's weight a drop of more than seven and one-half feet would have torn the head from the body. He figured that the pressure as the rope became taut was equivalent to 1,200 pounds.

The jury was of the usual number for a coroner's inquiry. The evidence included reading of the Court of King's judgment, the declaration by Governor Seguin that the body was that of St. Onge, and the doctor's report that death has been caused by strangulation. The seven men on the jury were John Phillips, Douglas R. Phillips, John B. Phillips, Emile Benoit, Maurice Gendron, Louis Francoeur and James R. Watson.

Among those present was a man who had previously witnessed twenty executions. The story is told of him that when he went to the first hanging he bought a black tie. He painted a red stripe on it, and has worn it at every similar event since then. This morning, after he returned home he added the twenty-first stripe.

This is from the Montreal Herald of last week. With that kind of publicity, hanging to-day is just about as public, by the aid of our imagination, as it was in the eighteenth century. I am grateful to that scribe for having placed so graphically before the people of Canada that thing we are sanctioning by law by our inactivity, and I trust that those of us who have felt hurt inwardly at the reading of it will to-day take the step which will make it impossible for

any other reporter to repeat that in the history of Canada.

Let me then just refer to the argument in favour of public opinion. I will not detain the House by going through it all, but I will merely refer to numerous resolutions which I have here from labour unions, theosophical societies, from the Society of Friends and women's organizations all of which ask for the abolition of capital punishment. Let me refer to the press also. Such papers as Social Welfare, the Ottawa Citizen, Christian Science Monitor, the New Statesman, and so forth all declare that the time has come for the abolition of capital punishment. Let me just hold before you a petition with thousands of names signed by people throughout Canada asking for the abolition of capital punishment.

In conclusion, let me say that from those who, regardless of a proofless position, still hold that capital punishment is a deterrent, one might anticipate an argument such as was put forward by Lord Ellenborough in 1823 in the House of Lords. They were seeking to abolish hanging for stealing. At that time they could hang a man for stealing five shillings. When the bill same up, Lord Ellenborough spoke against it and said:

> Your Lordships will pause before you assent to a measure pregnant with danger to the security of property. The learned judges are unanimously agreed that the expediency of justice and the public security require that there should not be a remission of capital punishment in this part of the criminal law. My Lords, if we suffer this bill to pass, we shall not know whether we are on our heads or on our feet.

Subsequent history, of course, has proved that the noble lord was then standing on his head. It is to be hoped that no hon. member of this House will stand with him to-day.

May I be permitted to sum up very briefly? History traces the roots of the motive for the death penalty back to the savage instinct of retaliation and revenge; no one will defend the present criminal code on the ground of its undoubted origin; the rational sanction which our humanitarian instincts have compelled us to find as a justification for this barbaric practice of execution, namely, the deterrent theory, we have seen to be, from the evidence of science and from the facts, reductio ad absurdum. We have the proofs that society can be protected better by life imprisonment; that this method would protect as well the public mind from the brutalising influence of taking life, and I have shown that public opinion is prepared for the change proposed in this bill.

Upon these grounds, I rest my argument. The fate of the bill will depend upon whether

[Mr. Irvine.]

the mere momentum of a practice that cannot be defended on historic, scientific, moral or practical grounds, shall carry us, or whether this House reaches a decision through the highly humanized intelligence which it undoubtedly possesses.

Enacted law is the register of nationl progress. What this House decides on this measure will indicate to the world both the moral and intellectual progress of this country. By our vote we are going to say to the civilized world what o'clock it is on the timepiece of our evolutionary process.

Mr. PAUL MERCIER (Westmount-St. Henri): Mr. Speaker, if, for the purpose of judging the merits of the question now before this House, one is transported to the sorrowful scene, on the day when a condemned man pays his debt to society, surely one's emotions are moved and one's judgment is greatly affected. Pity, touched to the supreme degree compels one to say: "The death penalty is indeed terrible to undergo. What a dishonour to a man and his family. Life imprisonment should be sufficient, much to be preferred. Our law makers should strike this penalty from our criminal code." On the other hand, Mr. Speaker, on leaving the confines of the prison immediately afterwards, our mind and our judgment are aroused once more to the great aspect of the nation. One then realizes that the country claims to-day from the legislator more even than ever in the past, the true social securities under which it has always been protected.

I submit respectfully, Mr. Speaker, that the death penalty is one of those securities that the legislator still owes to society, and that it must remain in our criminal statute as the penalty for those crimes to which at present it applies. In passing, let me say, Mr. Speaker, it is interesting to note that in these times, reformers are more numerous than ever before. Everything under the sun is to be made over. Our constitution, to more than one, seems to give little satisfaction on certain points. Our laws are too severe. Sports and popular recreations become unrestrained and must be continually investigated and regulated. Nevertheless, common sense invites us, in these difficult afterwar days through which we are struggling, to take advantage of every parliamentary and popular liberty which Providence has bestowed upon us. The time has not arrived, in my humble opinion, for any futile reforms of the fundamental principles of the Canadian people, and of the laws which are actu-

ally in force and which have survived up to this present year 1924.

Mr. Speaker, we must in our capacity as representatives of the Canadian public, do everything in our power in order that these constitutional principles may remain in their existing form and in their probity. After all, the anxious soul in the land demands the continuation of capital punishment, and for the following reasons: Together with outstanding jurists who have carefully studied this question, this proposition of the right to punish, and of the application of the death penalty, I maintain the death penalty is necessary and legitimate—necessary assuredly in preventing any second offence on the part of the culprit. Does it not strike with terror to the supreme degree anyone who dares to think of it? No other punishment in our criminal code is comparable in this respect.

I understand that proponents of the abolition of capital punishment contend that depraved criminals do not dread mounting the scaffold; that the dishonour of a life continually passed in perpetual imprisonment and hard labour are to them infinitely more terrible. To these claims, Mr. Speaker, I answer: You, partisans of the abolition of capital punishment, go to the first penitentiary which you may find along your way. Propose to the condemned to exchange the fate which they await for any other punishment on the statute. Offer then to these men to exchange for the scaffold any other punishment, whatever it may be. The condemned to death will receive you with open arms, and those condemned to life imprisonment will recoil with terror, and cover you with their maledictions, asserting that you have no right to change their sentence. Moreover, I will add, under the cover of humanity, pity and compassion, attempt to send to the scaffold a prisoner condemned to hard labour for life, and immediately public indignation will raise a great agitation against that irony.

The zeal which is displayed by the proposer of this bill and the adversaries of capital punishment, in now demanding its abolition, shows the actual terror with which it inspires them, and if this terror appears so heartfelt in those who are not affected, surely it is ridiculous to pretend that it will be felt less in the minds of criminals who are directly concerned. Therefore, it is necessary to society. Again, any citizen in these days of plunder now disturbing city and country, would await with fear the abolition of the death penalty, and would strongly disapprove of our adopting this bill in this House. Every member of this House knows that in these times, a man may be murdered for twenty cents; farmers, traders, bank clerks and messengers are robbed, and if they resist, they are murdered without pity. Jealousy and passions unrestrained are the causes of many crimes. The death penalty, ancient and terrible though it may be, is still the strongest check in the hands of the legislator, against serious crimes, to assure to society that protection to which it is entitled. Charles Lucas, a French jurist of the nineteenth century, and an adversary of the death penalty, in his book entitled "Regarding penal system and the repression system in general, and the death penalty in particular" says:

> Every political institution has for its end not to invent, neither to create the right to command, for this right pre-exists in its relative superiority; neither to establish the duty of obedience, for this duty pre-exists in its relative inferiority; but to discover the right where it lies, and to give to it its proper place. It belongs to the highest spirit, to the most lucid mind to understand what are the essential duties for the maintenance of the social order. This being, alone or as a company, it matters not, is called the legislator. The right to command is his and it is his mission.

Is it not true, Mr. Speaker, that the legislator must necessarily protect the society and the individuals who respect his orders, and take proper precaution? The guilty must expect to suffer the consequence of his guilt. It is punishment in perspective. I do not claim, Mr. Speaker, that this punishment should be undergone by the guilty solely for the purpose of reforming him. But, on the other hand, I insist on saying that this punishment is inflicted as an end to maintain public peace, good order and morality, and out of respect to the laws and regulations, which are the corner stones of our social relations. The intervention of the law giver is not only legitimate, but also absolutely necessary. He has the right to command and to exact obedience. He has the right to punish. He punishes to prevent the repetition of misdemeanors like those which have been committed. His acts are beneficial to the country at large and it seems that this is his social mission. After all, a man must expect to expiate his crimes; this is only just and legitimate. However, I admit that the legislator has a right against the delinquent, only in so far as there is a moral fault on his part, and in direct proportion to that fault. Our passage through life, our relations with our equals, go to show that every individual has certain duties to fulfil to God, to his fellow man and to himself. Only his duty to his equals falls under the protection of the penal code. The commission of crimes and misdemeanors logically demands the infliction of appropriate punish-

ment and as a consequence the legislator must consider the penalty, not in the degree of the moral perversity of the crime, but according to the measure necessary to its repression. Murder cannot be recognized with leniency if every right thinking man wishes that the temple of society shall remain standing, and desires that civic and constitutional liberties now enjoyed shall live forever.

Punishment, Mr. Speaker, in my humble opinion, is that the guilty pays with his life, if deliberately and with no extenuating circumstances before the eyes of inviolable justice, he has taken the life of a fellow citizen who lately lived in peace and had the same right to live by the inestimable gift of his Creator. The intervention of the legislator is then absolutely necessary; the death penalty which he imposes is just and legitimate. There had been a moral fault and the guilty must be punished in proportion to the fault.

Nevertheless, it is comforting to see, Mr. Speaker, that in Canada there are fewer murders than elsewhere, Mr. de Quiros, in his book Modern Theories of Criminality, contends that statistics show that criminality of blood leads all other forms in intensity. Then, he refers to a table giving the ratio of homicides of all degrees, for every million inhabitants, to wit:

Mexico	1,000
Chile	340
Argentine Republic (maximum in the state of Tucuman)	230
United States of America	120
Italy	95.1 to 9°
Spain	74.1 to 77
Hungary	74.1 to 7[illegible]
Roumania	38.1 to 47
Portugal	23.1 to 26
Ireland	23.1 to 26
Austria	23.1 to 26
France	14.1 to 17
Belgium	14.1 to 17
Switzerland	14.1 to 17
Russia	14.1 to 17
Denmark	14.1 to 17
Sweden	11.1 to 14
Germany	3.1 to 11
England and Scotland	5.1 to 3
Holland	5.1 to 3
Canada	2.6

Yet, must we attribute the one-third of that ratio to foreigners? In closing, Mr. Speaker, I have the right to say with Lord Beaconsfield:

> The black cap or any other symbol of public execration is absolutely necessary to satisfy public conscience and good morals.

I will vote against the bill.

Mr. HANCE J. LOGAN (Cumberland): I must admit I have changed my opinions in reference to the question of capital punishment. At one time I believed very firmly it was for the benefit of the state and for the protection of society that a man who had committed murder should be hanged. I am bound to say I have come to a different conclusion for many reasons. I am not influenced by the argument of the hon. member for East Calgary (Mr. Irvine) as regards either eugenics or psychology; and I refuse to be influenced by the eloquent remarks of my hon. friend from Westmount-St. Henri (Mr. Mercier). The arguments of the latter would apply to that period of history, not so long ago, when men were hanged for sheep stealing. The hon. gentleman says we are making things over. Why, certainly we are.

Without going into the details of the matter, I may say briefly my main objection to capital punishment is the difficulty of securing convictions for murder in Canada so long as this punishment is imposed. It is almost impossible in many cases to secure a conviction for murder for the reason that the jury has the gallows continually before its eyes. I remember, if I may be pardoned a personal reference, a particular case in which I happened to be engaged myself. A woman was on trial charged with the murder of her child and there was practically no evidence for the defence. It was very plain she was guilty, and I must say my address to the jury consisted, as far as I thought the judge would permit me to go, in visualizing to the jury the horrible gallows. The jury returned, after about five or ten minutes' deliberation, with a verdict of not guilty, and the accused walked out of court a free woman, unpunished. Had capital punishment been abolished I have no doubt they would have found her guilty of murder, and she would have been punished by imprisonment.

A gunman does not fear the rope. When gunmen of the type of those who committed the horrible crime in Montreal last week shoot down their victims, they do so with utter disregard of any punishment that may befall them. Indeed, they may have in the back of their heads a certain sense of security because of the difficulty to-day of obtaining in our courts a conviction against a criminal charged with murder. In my own constituency, there has not been a hanging for sixty or seventy years, although there have been many trials for murder during that period. For some reason or other none of the accused were ever convicted.

Mr. CARROLL: They were defended by a good criminal lawyer.

Mr. LOGAN: Thank you. But there are other objections to hanging. There is that

sloppy sentimentality which surrounds the criminal who is about to be plunged into eternity, which manifests itself in people sending the condemned man bouquets, and weeping in front of the gaol and in the preaching of sermons deploring the pending execution. In a word, the condemned criminal becomes a hero in the eyes of these sentimentalists. His case would not excite such sympathetic interest were he condemned to imprisonment for life with hard labour. I am not in favour of indiscriminate whipping, but there is no doubt that gunmen are cowardly at heart and have a wholesome fear of whipping and of hard labour. In many cases their crimes are in the main due to their desire to evade honest labour. Lacking the means to indulge themselves in laziness and luxury, they resort to desperate expedients.

My hon. friend (Mr. Irvine) has discussed the matter very thoroughly and quoted many statistics. I confess I am not very much impressed by figures. I am simply speaking as one who desires to see criminals punished—not made heroes of because perchance their life is to be ended by the hangman's rope. I desire to secure a law that will prevent crime and not produce maudlin sentiment. For these reasons I shall support the resolution.

Mr. ROBERT FORKE (Brandon): Mr. Speaker, I think the hon. member for East Calgary (Mr. Irvine) has presented a very convincing case, but I do not agree entirely with everything he has so eloquently said. When we come to deal with individual responsibility we enter a very large field of speculation in which it is very difficult to draw any precise line of demarcation. It is perfectly true, as he argued, that people should be punished according to the light which they possess of the right or wrong of their actions. But I am afraid that in this very imperfect world a great many of such cases will have to be left to the final Judge over us all who can do no wrong. In the meantime we must endeavour to mete out justice to the best of our ability.

We sometime hear the phrase, "Sombre as a judge." I ask hon. members, if they were called upon under any circumstances to carry out the death sentence, would they undertake to inflict what they considered to be a just penalty? I have no hesitation in saying that not a member within range of my voice would undertake that duty, no matter how just he might consider the sentence to be. Then why should we depute some other individual to discharge a duty which we ourselves would not perform? Sombre as a judge! I remember a little over a year ago sitting beside one of the judges of the Supreme Court of Manitoba. It was a festive gathering, and he was set down for a speech. He had been presiding at the fall assizes where he had tried several cases of murder. He did not discuss with me whether the sentence imposed was right or wrong, but he remarked that "Sombre as a judge" had a terrible meaning for him because of the tremendous responsibility he had to accept in ushering another mortal into eternity.

Punishment for wrong-doing—where do we begin and where do we stop? That is one of the most difficult questions to answer, for the punishment cannot be confined solely to the murderer. When you have punished him, is the punishment concluded? By no means. His wife and family and his other relations and friends are more or less affected by the same sentence. I think that no one premeditating murder ever thinks that he will be brought to justice. If he does, he has also schemed a means by which he expects to escape the gallows. Consequently the fear of hanging will not deter him from carrying out his desperate design.

I am inclined to agree with the hon. member (Mr. Irvine) that most criminals are more to be pitied than blamed. At the same time I do not believe in any sloppy sentimentality that would crown them with garlands and indulge them with an easy life at the expense of hard-working, law-abiding people. I would certainly want to see them punished for their crimes, but in such a way that the punishment, as I said, will have some relation to the measure of their ability to distinguish that which is right from that which is wrong. All students of criminology and of eugenics tell us that the mentality of individuals varies within a very wide range and, as has already been stated, it is quite possible for an adult to have the mentality of a child of four, six or twelve years of age. These things should always be taken into consideration in judging of the guilt of any human being. At the same time society must be protected. As has already been stated, many a criminal might be found to be more fitted for the lunatic asylum than for the jail if the condition of his mentality were properly understood.

Another thing that is noticeable—and I say this with a good deal of hesitation—is that very few people of wealth have ever been hanged. Look over to the United States and think of some of the cases you know of there: If the criminal has wealth and influence behind him he never pays the supreme penalty. Why should it be that justice is meted out to one class of society in one way and to another class in another?

I have thought seriously upon this question. Last session was the first time it had been brought to my attention. I had no ideas upon the subject; it was one of those things which I would like to have evaded, upon which I would like not to have been required to make a pronouncement either for or against. But I want to say to hon. members that it is rather cowardly to take that attitude on a question so tremendously important as this. It is no joking matter; it is a matter of life and death, and every one of us ought to make up his mind on the question whether capital punishment ought to prevail or not. By all means let every step be taken to protect society in every possible way.

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals): Mr. Speaker, I am not anxious to speak on this question; I do so only because I feel it a duty. During the years that I have been in the House I have never evaded this question when it came up for discussion. I am absolutely opposed to capital punishment. I have yet to learn either from statistics or from argument that it is a deterrent, much less a preventive, of murder. We can only judge by results. If we take the countries in which capital punishment has been abolished and make a comparison in that country between the period when capital punishment was in vogue and a similar period afterwards, it will at least be found that crime has not increased.

Now, I am not a slushy sentimentalist, and I have no pity at all for the murderer. I am not going to discuss the psychology or the eugenics; I am going to take it for granted in my few words that the murderer was fully sane when he committed the deed. I want to ask, what good does it do anybody to kill him? The first answer will be that he is killed to protect society. Could not society be protected just as well by shutting him up? If he be killed in revenge—and I am afraid that is in a great many people's minds—then we absolutely revert from the Christian era and go back to the time of "eye for eye, tooth for tooth;" we assume to assemble ourselves as a court of justice when in reality we are assembling as a court of barbarians. The treatment of criminals in general is undergoing a change. One of the most cruel things, to my mind, in our daily Christian life, if you call it that, is to find that society with all its embellishments, professed Christianity with all its enlightenment, gives comparatively little or no encouragement to the man who has been guilty of crime and is trying to make good. I have the honour to be at the head of an association which has as part of its work the re-establishment so far as possible of men and women who have been convicted of crime. When one sees the shrug of the shoulders and the refusal of really pious men and women to give the unfortunate who has fallen down temporarily a chance to recover himself or herself, it makes one doubt the efficacy of what we call Christianity. If Christianity does not mean taking the erring brother or sister by the hand and endeavouring to show him or her a better way, then it is meaningless, and we have been following something that has no tangibility.

I have been asked this question: "You have such an apparent sympathy with the murderer; what about the murderer's victim?" Now, will any person tell me again what benefit accrues to the murderer's victim or to his family by taking the life of a murderer? What possible benefit accrues to them? Nothing, except it be that "revenge is sweet," and the state has taken to itself the power to execute that vengeance. Is there not a better way? Would it not be better for society, would it not be better for the family of the victim, if the murderer were placed in a penitentiary and made to labour the rest of his life and contribute the benefit of that labour to the family of whose bereavement he is the cause?

Mr. PELLETIER: But if he escapes from the penitentiary?

Mr. GRAHAM: Then our justice again is weak, because it will be our fault if we allow him to escape.

Mr. PELLETIER: He is apt to do the same thing over again.

Mr. GRAHAM: True, there are exceptions, but I think my argument holds, that in the main if benefit is to come to the victim's family it can in no wise come by taking the life of the murderer. But on the other hand some return can be made, some recompense—material it is true—can be offered to the family of the victim if the cause of their bereavement is made to labour in their behalf the rest of his life under state supervision.

I do not want to labour this question. I cannot for the life of me, feeling my responsibility, not as a member of the House but as a member of society, get away from the fact that has burned into my soul, that notwithstanding all the laws man can make I still am responsible in a measure and am my brother's keeper. That being true, if

means can be evolved by which society will be protected—and that is absolutely the only legitimate reason for punishment, the protection of society—if society can be protected as well by life imprisonment as it can by a second killing, then I say let us adopt the life imprisonment.

But there is another thing. Innocent men have been hanged, and they have been hanged in Canada. Now would it not have been better if the innocent man had been imprisoned for life, and was in a position where the state could make restitution so far as possible for the wrong done to him?

Perhaps there is even higher ground than that. Mankind is universally good. There is something good in every one of God's creatures; there is no question about that; and if, society being protected all the time, an opportunity may be given to the criminal to make himself right not only with his Maker but with the rest of humanity, is it not wise and in the interests of the world that that opportunity should be given?

There is another thought that comes to my mind, and it has been very forcibly expressed by the hon. member for Cumberland (Mr. Logan). I have said that innocent men have been hanged. There is no doubt in the world also, that guilty men are abroad in the land to-day. Why? For the reason given by my hon. friend from Cumberland, because jurymen dislike very much to take the responsibility of sending to the gallows a man as to whose guilt there may be the least shadow of a doubt, and they have in consequence erred the other way. I would do it myself if I were on a jury. I say that society is not protected nearly as much by maintaining the death penalty as it would be if the death penalty were abolished. I feel that I am not a sentimentalist at all on this question. It is not a question of sentiment; I am viewing it along the broad lines of endeavouring, first, to protect society to the utmost; that is a duty we owe to society; secondly, to prevent the slightest possibilty of an innocent man being convicted and hanged; and thirdly, to give the man himself, if he has been found guilty, a chance to make himself right in the years that are before him.

Mr. W. D. EULER (North Waterloo): Mr. Speaker, I have for some years taken some interest in this question. Last year I listened with a good deal of interest to what the hon. member for East Calgary (Mr. Irvine) had to say, and again to-day. I cannot say that I can follow him entirely in all of his opinions; for example, when he regards crime as altogther a manifestation of disease, I cannot follow him all the way. At the same time I am in favour of the bill which he presents to-day; I am not in favour of capital punishment.

To my mind there are only three possible reasons that can be advanced for the imposition of capital punishment. The first one, is that of revenge; the second is to prevent a repetition of the crime by the culprit himself; and the third is to deter others from committing murder. That of revenge I think is hardly worthy of consideration in a civilized nation; individuals perhaps may be excused by us for exercising revenge, but surely it is not excusable for a nation or a nation's representatives to take revenge upon one individual.

Then we come to the other reason, to prevent a repetition of the crime by the culprit himself. As has been stated here, repetition can be prevented by other means such as life imprisonment.

Then there is the argument that we should execute the murderer because that will deter others from committing a murder. I am not at all satisfied that that is the case. I have given some attention to statistics; I am not going to review them or present them to-day, but I am fairly well convinced that capital punishment does not deter criminals from committing murder. I do not believe in ninety-nine cases out of a hundred that a murderer when he commits the crime is thinking of the death penalty attached to it at all. The greatest preventive of murder is to inculcate in the people themselves a reverence for human life.

If I should summarize the arguments against the infliction of capital punishment, my summary would perhaps be this: One reason has been urged by the Minister of Railways (Mr. Graham), to give the criminal himself a chance. In a Christian country I suppose that is a perfectly proper sentiment. Personally, although I am not going to place myself outside of the category to which I have just referred, I must admit that consideration for the criminal is about the last thought I have in mind. When I am asking for the abolition of capital punishment I am not thinking of that particularly, but I am willing to give that its fair consideration, because, after all, even the worst of criminals should be given some opportunity of retrieving himself. I am willing to say that. Secondly, there is the possibility of irretrievable error, the possibility that an innocent man may be hanged. Third, there is the disgrace that attaches to the family and relatives of the condemned person, and I think that is worthy of consideration.

But the greatest reason of all to my mind, and the one reason why I oppose capital punishment, is that the whole institution is an affront to the community itself. It is not necessary for me to speak of the horrors attending an execution; that has already been done to-day by the hon. member for East Calgary. To condemn a man to a strangling shocking death, and submit his body to the indignity which hanging imposes is, I think, repellent and repugnant to every person. We have had in my home city of Kitchener two hangings, the last one some two or three years ago, and I know from personal experience that for perhaps a week or less prior to the execution itself there was in the subconscious or perhaps the conscious mind of every person in that community, man, woman, and child, a growing horror of what was going to take place upon a certain day and at a certain hour. That horror increased from day to day until the gruesome tragedy was completed at the time appointed. That feeling was not merely because a man was to die, but it was because of the manner of his death. We may know, as we frequently do, that a certain person in the community must die by reason of some fatal illness; we take that in a philosophical way; perhaps we have regrets; we sympathize with the person and with his people, but there is not the horror we experience in connection with a hanging. But we shrink instinctively, I think, from a practice which outrages in one of our kind the dignity and respect that we have for the human body and for human life.

5 p.m.

That briefly, Mr. Speaker, is my argument against capital punishment. I would like to say this, in conclusion: If we must have capital punishment, we surely ought to change the method of inflicting it. The practice of hanging, to my mind, is about as barbarous a one as can be conceived. We ought to adopt some more humane or less barbarous method. I would like to make another suggestion: If capital punishment be continued, let us not only adopt some more humane way, but let us not have these executions take place in the locality in which the murderer or victim has lived. We would then at least escape this condition I have spoken of, this feeling of horror in the minds of everybody who lives near the place of execution. I would suggest a central place of punishment, perhaps the penitentiary, to which all criminals of this kind may be taken and quietly done away with, if it is necessary to continue this barbarous practice. I am in favour of the bill.

[Mr. Euler.]

Mr. W. C. GOOD (Brant): About thirty years ago I read an essay by the English novelist Thackeray entitled "On going to see a man hanged," and I think from that time until the present I have never had any real doubts as to the barbarity and cruelty of the antiquated system we are still following. I wonder if the House would bear with me if I read a few sentences from that essay which was written in England eighty-four years ago. Listen to this, a bit of the grimmest satire you can find anywhere:

> If a public execution is beneficial—and beneficial it is no doubt, or else the wise laws would not encourage 40,000 people to witness it,—the next useful thing must be a full description of such a ceremony, and all its entourages, and to this end the above pages are offered to the reader. How does an individual man feel under it? In what way does he observe it,—how does he view all the phenomena connected with it,—what induces him, in the first instance, to go and see it,—and how is he moved by it afterwards? The writer has discarded the magazine "we" altogether, and spoken face to face with the reader, recording every one of the impressions felt by him as honestly as he could.

I may say by way of explanation that this is a paragraph towards the end of the essay. Continuing he says:

> I must confess, then, (for "I" is the shortest word, and the best in this case), that the sight has left on my mind an extraordinary feeling of terror and shame. It seems to me that I have been abetting an act of frightful wickedness and violence performed by a set of men against one of their fellows; and I pray God that it may soon be out of the power of any man in England to witness such a hideous and degrading sight. Forty thousand persons (say the Sheriffs), of all ranks and degrees,—mechanics, gentlemen, pickpockets, members of both Houses of parliament, street-walkers, newspapers-writers, gather together before Newgate at a very early hour; the most part of them give up their natural quiet night's rest, in order to partake of this hideous debauchery, which is more exciting than sleep, or than wine, or the last new ballet, or any other amusement they can have. Pickpocket and peer each is tickled by the sight alike, and has that hidden lust after blood which influences our race. Government, a Christian government, gives us a feast every now and then: it agrees—that is to say— a majority in the two Houses agrees—that for certain crimes it is necessary that a man should be hanged by the neck. Government commits the criminal's soul to the mercy of God, stating that here on earth he is to look for no mercy; keeps him for a fortnight to prepare, provides him with a clergyman to settle his religious matters (if there be time enough, but government can't wait); and on a Monday morning, the bell tolling the clergyman reading out the word of God, "I am the resurrection and the life", "The Lord giveth and the Lord taketh away",—on a Monday morning, eight o'clock this man is placed under a beam, with a rope connecting it and him; a plank disappears from under him, and those who have paid for good places may see the hands of the government agent, Jack Ketch, coming up from his black hole, and seizing the prisoner's legs, and pulling them, until he is quite dead—strangled.

I shall also read a few lines at the very end of the essay.

> This is the 20th July and I may be permitted for my part to declare that, for the last fourteen days, so

salutary has the impression of the butchery been upon me, I have had the man's face continually before my eyes; that I can see Mr. Ketch at this moment, with an easy air, taking the rope from his pocket; that I feel myself ashamed and degraded at the brutal curiosity which took me to that brutal sight; and that I pray to Almighty God to cause this disgraceful sin to pass from among us, and to cleanse our land of blood.

Now, Mr. Speaker, I desire to refer to a copy of an address delivered on the 18th of October, 1922, by George W . Kirchwey, a former warden of the Sing Sing penitentiary in the United States, at an American Prison Association meeting at Detroit, Michigan. He opens by stating that there are three general arguments that have been advanced on behalf of capital punishment. As those have been already dealt with to-day, I shall not further refer to them. Continuing he says:

> The argument for the elimination of the murderer as a menace to society is founded on an assumption which everyone who has an intimate knowledge of men convicted of murder knows to be baseless, namely, that murderers are murderers by nature, prone to kill, and that they constitute a professional class like burglars, pickpockets, robbers and the like. Both these types may be represented among those whom the law has branded as murderers, but they constitute an insignificant fraction of the total number. Among the thirty men whom I knew in the death-house at Sing Sing and the 200 or more who were "doing life", I found only a half dozen who seemed to answer that description—one of them a reputed "gunman" from New York city, who became violently insane a few days before his execution, and the other the only person I ever knew who seemed entirely devoid of any sentiment of pity or sympathy and who was diagnosed by the physicians as a psycopathic personality. Doubtless the execution of these two was no loss to the world, but most of the others seemed to me to be of the type described by Sir Basil Thompson, the head of the British Secret Service (Scotland Yard), in his recent work "You have to be in charge of a prison," he says, "in order to realize that the murderer is rarely a criminal by nature at all. But for the grace of God he is just you and I, only more unlucky. Most murders are committed without any deep laid plot... The murderer is repentant, and is planning only how he can earn an honest living after he is discharged."
>
> If this seems a bit too sweeping, let me assure you that it is far nearer the truth than is the popular conception of the murderer. I made it my business to know every man in the death-house while I was at Sing Sing. The only characteristic that they had in common was that they were sick, tortured souls over whom hung the pall of the awful fate that awaited them. Only a few of them were criminals in the ordinary sense of the term and one, whose death sentence had been commuted to imprisonment for life, complained to me of the fact that he was in a situation where he could get so little decent companionship, there were so many crooks. A few of my murderers were obviously feeble-minded, a few apparently insane or psychopathic, but most were of the kind described by Sir Basil Thompson,—men who, but for the accident of fate—some jam in the wheels of life, some uprush of upsetting emotion, some bewilderment of faculties—might have been even as you and I are this day.

Further on he quotes from Governor Davis as follows:

> It is thus easily to be seen that, on the whole, it appears to make little difference in the prevalence or scarcity of homicides whether the punishment is death or life imprisonment. In fact, there would seem to be a slight lessening of homicides where no death penalty exists. At any rate, these figures tend definitely to show that the deterrent of capital punishment is largely mythical and merely an imaginary factor.

Then he proceeds to discuss the question from the point of view expressed in the statement: "Eliminate murder, not the murderer," but I shall quote no further.

I noticed, not many weeks ago, in the Ottawa Citizen, the following letter, which I think, was taken from one of the American papers. It appeared to me to be so pertinent to the question under discussion to-day, which I then thought might come up at some future date, that I clipped it out, and I should like to read to the House one or two paragraphs from it. The letter is entitled "What is prison for?":

> I take it that most of us no longer believe in the theory of punishment. We put people in jail because we believe they are dangerous to the community. Accordingly, we should let them out as soon as we have reason to believe that they are no longer dangerous. It may be quite evident that the man who has killed is never going to do it again and that the shoplifter will continue in his usual pursuit as soon as he is released. In that case it seems to me quite silly to keep the murderer in the jail for life and to let the shoplifter go.
>
> If we had judges and wardens wise enough, there might be just one universal sentence for all criminals. Each would be sentenced to remain in prison until cured.

The subject has been so completely covered to-day that I do not think it is necessary for me to speak any further. I trust that the government will leave this matter to be settled by the House after a full and free discussion, and that this House may take the humane and Christian view which, I think, has been so well expressed to-day by the Minister of Railways and Canals (Mr. Graham). I listened with singular pleasure and satisfaction to his concise and complete statement of the case in favour of the abolition of capital punishment.

Mr. W. K. BALDWIN (Stanstead): Mr. Speaker, I did not intend to speak on this matter, but as the argument is getting into the sentimental line, much can be said for and against capital punishment. Before I would vote in favour of this bill, I would ask that there be more amendments to our criminal code, guaranteeing that every murderer, every man who is premeditating murder, such as those who are now rampant in the country, engaged in robbing banking institutions particularly, to enrich themselves so that they can live in luxury for the balance

of their lives, can be kept in chains or caged and compelled to work twelve or fifteen hours a day, so that he may earn enough to cover the expense that it would take to keep him from ever again becoming a prey upon society. It might be possible to make society perfectly secure in this regard by using chains, shackles or cages, but until that safeguard has been effected, I shall have to vote against the bill.

Mr. WOODSWORTH: Would the hon. gentleman apply that same rule to those who rob banks from the inside as well as to those who rob them from the outside?

Mr. BALDWIN: Certainly. If you find murderers on the inside as well as the outside, I would apply the same rule. I would have them work for the state for at least twelve or fifteen hours in every twenty-four, and have shackles on their feet while they were not working, and possibly even while they were working. But I would have them so that they could never escape and prey upon innocent society again in their lives.

Hon. CHARLES MARCIL (Bonaventure): Mr. Speaker, if my memory serves me well, I have had an opportunity, on at least three occasions, of listening to a debate on this question during the last twenty-five years or so, and of voting once or twice on this question. I, therefore, consider it my duty to give a word of explanation. In a matter like this, I would be guided, not by sentiment, but by eminent men, legal men who have given up their lives to the study of law, and that is the reason why I asked the hon. member for East Calgary (Mr. Irvine) to give me the authority of any attorney general of any province of Canada or any attorney general of Canada who had ever advocated the abolition of the death penalty. We are not turning our eyes to the United States now for precedents in these matters. Great Britain is good enough for us yet, and I hope she will continue to be for a long time. Great Britain has not abolished the death penalty, for good reasons, no doubt.

The constituency which I have the honour to represent and have represented for a quarter of a century, has not seen an execution in fifty years. When I was a young boy, employed in Montreal in newspaper work, I acted for some years as coroner's clerk. One morning, in fulfilment of my duties, I had to go down to witness the first execution that had taken place in Montreal in twenty years. It was an extraordinary thing to see an execution in those days. This man had committed his crime while serving a term in the penitentiary, and while he was comparatively a young man, twenty-five or twenty-six years of age, he had spent some fifteen years of his life in jail or penitentiary. Conditions are no better now than they were then. We must admit that since the Great War, things are not much better than they used to be. There is a looseness of morals the world over, a condition of things which is really discouraging.. What happened in Montreal last week is something that is worth while pondering over? At two o"clock, in broad daylight on Ontario street, one of the most frequented thoroughfares of the city, three or four young men, engaged in the fulfilment of their duties, were held up by half a dozen gunmen and shot at, one, the sole support of his mother, shot like a dog. The other man, Stone, who was shot at the same time, had a penitentiary record of twelve different institutions. He was then unfortunately under bail for a crime which he had committed.

As regards the idea of changing this punishment to life imprisonment, life imprisonment does not always mean what its words contain. The Crown always has the right to revise the sentence passed upon a man serving a sentence of life imprisonment, and I have in mind the case of Morin, of Montmagny, whose name will be familiar to the Minister of Justice. This man was granted a reprieve on the eve of his execution, and he was sentenced to St. Vincent de Paul penitentiary, where, after ten years, on the recommendation of the late Sir John Thompson, he was liberated. Life imprisonment, therefore, may mean a very short term. No man wishes to have capital punishment carried out if that can be avoided. The jury that are called on to try a man charged with murder are told, in effect, in the last words that fall from the judge's mouth: "If you have a reasonable doubt, it is your sworn duty to give the benefit of that doubt to the accused." When the verdict is given by the jury and the judge is called upon to pronounce the sentence, he has to write out a full report of his notes and to transmit the evidence to the Department of Justice, where that is scanned carefully by men who are experts in such matters. The minister himself has to examine into the case and the Privy Council has to do likewise. The great majority of capital sentences, or, I should suppose, at least half of them, are never carried out, but they are cases, not for the sake of revenge, because the state is not looking for revenge, but for the sake of preventing repetition, as a deterrent and for the protection of society—

Mr. SHAW: Is the hon. gentleman prepared to say that the statement of the Minister of Railways and Canals (Mr. Graham)) is wrong, that men who are innocent have been hanged in Canada?

Mr. MARCIL (Bonaventure): No doubt men have been hanged for what we to-day do not regard as offences. I could mention some who were hanged for political crimes and whom nowadays we consider heroes, monuments being erected in memory of them in the public squares of large cities. It depends upon the point of view. But we are proceeding on the old theory that it is better that ninety-nine guilty persons should escape than that one innocent man should be convicted. As the leader of the Progressive party (Mr. Forke) said a moment ago, the great Judge is the judge of all; but I do not think that the Department of Justice in Canada is willing to admit—at least I have not heard that the admission has been made—that any really innocent person has been convicted, or, as it is said in French, that an erreure judiciare has been committed. I do not recollect anything of that kind. But in view of what is happening now in the Mother Country and in Canada, and in view of the complete absence of any recommendation, for a change in the mode of punishment, from any legal authority in this country, from any judicial mind, or from those who are trained to deal with such cases, I think the time is ill-chosen to bring about a change in this respect. I certainly will vote to sustain the institution as it is.

Mr. ANDREW McMASTER (Brome): I want to make a few brief remarks on the subject matter of this bill, though I quite realize that the question has been covered most amply in the very eloquent and learned discourse with which the hon. member for East Calgary (Mr. Irvine) has favoured the House, and also in the very able remarks which have been addressed to us by the Minister of Railways and Canals (Mr. Graham) and the hon. member for North Waterloo (Mr. Euler). There are however a few observations which at this time it may be fitting to make, especially in reply to the hon. gentleman who has just resumed his seat (Mr. Marcil, Bonaventure). The hon. gentleman said that in regard to this matter he would take the views of legal men. Now, I have a high respect for legal men; I feel that there are few classes in the community who deserve so well of their fellow-citizens. But I am sorry to say that in the past legal men, especially when they have mounted the bench, have not been the best authorities for one to accept as regards the advisability of change or reform. Lord Ellenborough was one who spoke against the abolition of the death penalty for petty theft, as was well explained this afternoon by the member for East Calgary. And I regret to say that in a discussion of this question years ago in the Mother Country John Bright was forced to point out that the elimination of the death penalty on many occasions had been brought about in the Old Country in the face of the opposition, if not of all at least of a great number of the judges, who were anxious that it should be retained for the punishment of crimes which are now considered trifling.

I was somewhat interested in hearing the hon. member (Mr. Marcil, Bonaventure) declare that institutions that existed in Great Britain were institutions which we should unhesitatingly and unquestioningly accept. My mind instantly turned to the hereditary House of Lords in England, and I wondered whether the hon .member would be willing to see such an institution created and perpetuated in this country. My hon. friend's views in regard to the institutions of Great Britain are not very consistent. When the hon. member for West Calgary (Mr. Shaw) adduced, as an argument in favour of the divorce bill which he had before the House the other day, the fact that his bill was on all fours with legislation that presently existed in Great Britain, the hon. member for Bonaventure opposed it.

Mr. SHAW: I might be permitted to point out for the benefit of the member for Bonaventure that there is at present before the British House of Commons an application similar to the one under discussion in this House for the abolition of capital punishment.

Mr. McMASTER: That being the case, if such legislation is passed in Great Britain the hon. member for Bonaventure would consistently support a similar measure in this House. The hon. gentleman is not altogether consistent in his admiration for things Britannic. He said that he would sustain the present institution, in view of the things that were happening in the Motherland. I wonder, does he refer to the coming into power in Great Britain of the Labour government? Does that fill his mind with dread? I trust not; because I think the people in all the nations of the British Commonwealth view that circumstance with a good deal of satisfaction and hope for the future of the British race, and wish that government well. As long as seventy years ago one of the best, the wisest and the most characteristically English

of British statesmen, the late Right Hon. John Bright, strongly supported the abolition of the death penalty.

The arguments in favour of the principle are, I think, overwhelming. Surely, all civilized people admit that the only sound argument in support of the retention of the extreme penalty is that it is a deterrent; and surely the burden of proof is upon those who urge its retention. My examination of the question leads me to the belief that capital punishment is not a deterrent. Who would be the best judges as to whether the death penalty was or was not a deterrent? Would it not be those men of education and character whose position at the head of penitentiaries would bring them into contact with murderers? The opinion of a judge sitting on the bench that the death penalty is desirable has not the same weight as the opinion of a man who by reason of his duty comes into close contact with homicidal criminals. And I think it is pretty well the view of a very large number of men who have served as wardens in penitentiaries that capital punishment does not deter men from murder. In fact, I remember some years ago hearing a very celebrated American warden of Sing Sing penitentiary—I think his name was Osborne—declare that, far from the death penalty being a deterrent, it had entirely the opposite effect; for whenever a man went to the electric chair to expiate the crime of murder he became a hero to the underworld. And the same thought has been brought out this afternoon by the hon. member for Cumberland (Mr. Logan), who has pointed out that once a man has been condemned to death he is regarded as a martyr rather than a criminal. If, then, capital punishment is not a deterrent there is no other reason for our maintaining this method of punishing human beings. I would respectfully point out to the Minister of Justice (Mr. Lapointe) that as a matter of fact the imposition of the death penalty is out of date and is not working well at the present time. It is ineffective for reasons which have been placed before the House and which I beg the House's pardon for insisting upon again. To-day in all parts of the country where "twelve good men and true" are called upon to "a true presentment make between the prisoner at the bar and our sovereign lord, the king," they have such disinclination to the death penalty that they will seize hold of any shred of evidence, or the want of evidence, in order to be able conscientiously to bring in a verdict of not guilty. As the feelings of our people become more and more attuned to higher civilization, it will be more and more difficult to find juries who will bring in a verdict of guilty in capital charges.

And not only has it that effect, but in my experience it has influenced those who would otherwise be ready to become judges. I remember in Montreal, during my brief experience as a practising lawyer, it was expected that one of the ablest men of the Montreal bar would be elevated to the Court of Appeal, and it was common rumour among the lawyers that this gentleman, who would have made a most distinguished judge, refused to accept the position because he would have to deal with criminal cases. He could have given distinguished service to his country, but he did not feel that he could sentence a fellow-being to capital punishment.

If there is fair ground for believing that the deterrent nature of the death penalty is not satisfactorily proved, then it would appear to me to be well for Canada to put herself in line with other civilized countries and abolish the death penalty. It is not a deterrent because, as I said a moment ago, more and more will juries fail to convict on capital charges. I do not go all the way with my hon. friend from East Calgary in thinking that punishment has no place as a deterrent against crime. I think it has. But I think he is largely right in his view that criminality is very often more of a disease than an expression of premeditated wrong-doing. I think punishment has its place, but it is not the severity of punishment, it is its certainty which is the real deterrent. And if you make punishment so severe that society draws back and refuses to impose it, so far as its deterrent effect is concerned it would be far better to have punishment which is less severe but more certain.

Hon. ERNEST LAPOINTE (Minister of Justice): Mr. Speaker, last week a delegation interviewed the Home Secretary of Great Britain, the Right Hon. Arthur Henderson, a prominent member of the government of which my hon. friend (Mr. Irvine) has spoken so eloquently. Mr. Henderson is a reformer, he is a progressive in every way. This will be generally admitted. But here is the report of the interview which I find in the Morning Post of the 25th March last:

> The following official report was issued from the Home Office:
>
> The Home Secretary received this morning a deputation of members of a number of societies who placed before him various considerations and statistics in support of the abolition of the death penalty in this country. The societies in question were: The Committee for the Abolition of the Death Penalty,

the Society of Friends, the Women's Co-operative Guild, the Howard League for Penal Reform, the Central Council of Societies Working for the Abolition of Capital Punishment, Manchester Society for Abolition of Capital Punishment, Women's Freedom League, and the British Section of the Women's International League for Peace and Freedom.

Mr. George Lansbury, who introduced the deputation, drew special attention to its representative character as indicating a recent rapid growth of public opinion on the subject.

He was followed by Major Christopher Lowther and Miss Margery Fry, who argued the case in greater detail, and produced various figures.

The Home Secretary, in replying, thanked the deputation for waiting upon him, and for their full statement of their case, and promised that what they had said would be brought before the government in an appropriate form before any decision was reached by the government on the question of abolition. He pointed out, however, that any government must take public opinion into account, and that so far as his long parliamentary experience went there was little evidence of any general public desire for abolition, the subject not having been debated for many years. He also pointed out that before a government could recommend an alteration in that law they would have to consider very carefully what satisfactory alternative punishment they could properly suggest.

As I have stated, Mr. Henderson is the Home Secretary in the British government, and as such he is entrusted with the responsibility of the administration of justice in Great Britain;—perhaps he may have had other views in the past, as I read in a newspaper that the delegates were surprised at his answer, but he has that responsibility. I am in the same position in this country, and I must share the views of Mr. Henderson. As far as my own personal feelings are concerned, by temperament and by instinct I would be inclined to vote for the bill, but from a high sense of duty I feel that I cannot do so, and that for the present we must retain capital punishment. If I were convinced that any other form of punishment would be as effective for the protection of the Canadian people, it would be my duty to recommend its adoption. It is because I do not believe that capital punishment can be replaced by any other form of punishment which would be as effective that I am forced to take this stand.

I have listened with a great deal of interest to the remarks of my hon. friend from East Calgary. He is to be congratulated on the manner in which he has expressed his views. This question has engaged the attention of the students of sociology in all the civilized countries in the world, and there have always been great differences of opinion with regard to it. Arguments of great weight can be adduced on both sides. Statistics can be produced, but statistics in this matter are unsatisfactory and inconclusive. Apart from the form of punishment we must consider the race, the customs of the people, the climate, the environment generally—all these considerations must be had in mind when you deal with statistics produced in favour of or against capital punishment. The countries which are most similar to ours so far as the mentality or the make-up of the people is concerned are Great Britain and the United States. I happened to lay my hand on a very able article in The English Review of September last, written by Major J. B. Paget on the "Death Penalty in Time of War," in which the writer quotes some statistics. Major Paget says that during the war the death penalty was necessary in the army to prevent desertion. He said that the percentage of Australian deserters was about four times that of the English. I quote from the article:

> I tried to find out the reason, and came to the conclusion that it was owing to Australia having no death penalty for desertion. In the New Zealand forces, on the other hand, they having the death penalty, the percentage of deserters was even smaller than the English.

He points out that in the beginning there was no death penalty for desertion from the Canadian army and that a rather large number of desertions took place; then they brought in the death penalty and the percentage sank to the same as the English. He found the same situation in the American army. He says that the greatest deterrent against desertion in the army is the death penalty. He points out also that so far as the civil population is concerned, in time of peace the United States, with the population of 110,000,000, has some 8,000 murders a year. Of those convicted for murder, Major Paget says,—and this has been stated also by my hon. friend who proposes this bill—only a certain proportion are executed. He goes on to say:

> In the British Isles the death penalty has hitherto been inflicted on the great majority of convicted murderers. With a population of some 46,000,000, not more than about 200 murders are committed annually.

And he adds:

> The unwritten law and brainstorms cut little ice with a British jury.

Eight thousand murders in the United States with a population of 110,000,000; two hundred murders in the British Isles with a population of 46,000,000. Here in Canada where we have the death penalty and where it is enforced we have had for the last ten years an average of twenty-five murders per year, which is less than three per million of the population. These figures are a decisive answer, it seems to me, to many of the argu-

ments advanced this afternoon. These are from countries which are similar to ours, and I do not think they can be successfully challenged.

I would not wish anybody to think that capital punishment is carried out in the spirit of retaliation, or revenge, or vengeance. It is not for that purpose, and that is not the consideration which influences me in favouring a continuance of capital punishment. It is as a deterrent; and whatever may be said I am convinced that it is a deterrent. After all, every human being values life more highly than anything else, and even the dumb animals recoil from death. It is a deterrent, and it is a protection of society. If only one innocent human life is saved through capital punishment, I think it is our duty to maintain it on the statutes of this country.

Canada has an immense territory which is sparsely populated and there are places where women and children live miles away from the nearest neighbour. These women and children must be protected. We have immigration which brings to this country people from many parts of the world, and statistics in the Department of Justice show that 49 per cent of the murders committed in Canada in recent years have been committed by foreigners. I think capital punishment is a protection and that we should keep it. I repeat that if I could convince myself that imprisonment for life would be just as good, just as effective a punishment as the death penalty, I would be in favour of changing the law in that regard. But I am not convinced of that.

Mr. IRVINE: Would the minister be good enough to give the House one proof that capital punishment is a deterrent? That is the ground upon which he says he favours it.

Mr. LAPOINTE: I have given statistics and I have stated my firm conviction. My hon. friend has given his opinion and I am giving mine. If I were moved only by sentimental and humanitarian feelings I would vote with my hon. friend, but my best judgment and my conscience tell me that I cannot support the proposal embodied in his bill.

Mr. MARCIL (Bonaventure): Can the minister tell the House that in any case where the death penalty was imposed the victim asked that it be changed to life imprisonment?

Mr. LAPOINTE: They all ask for a change of sentence to imprisonment for life.

At six o'clock the House took recess.

[Mr. Lapointe.]

After Recess

The House resumed at eight o'clock.

PRIVATE BILL

UNITED CHURCH OF CANADA

Mr. ROBERT FORKE moved the second reading of Bill No. 47, incorporating The United Church of Canada.

Mr. WILLIAM DUFF: (Lunenburg): Mr. Speaker, before the disposition of this bill takes place on its second reading, I should like to make a very few remarks. Speaking for myself personally, I do not think it is necessary to make any lengthy remarks upon the bill at this stage. This is a very serious matter and—

Mr. FORKE: Mr. Speaker, the hon. member agreed with me that there would be no discussion at this stage of the bill, on condition that I did not speak. The hon. member came across here and agreed with me that there would be no discussion on the second reading.

Mr. DUFF: I did say that I did not intend to make a speech, but my recollection was that I was to enter a formal protest so that the opponents of this bill would not be put in the position of adopting the principle. We are quite ready that the bill should go to the committee on Miscellaneous Private Bills, and there be discussed clause by clause. The only thing I want to do now, and I thought I had made that clear to the hon. member for Brandon (Mr. Forke) is to enter this formal protest before the bill receives its second reading. I do not think anybody can object to that.

Mr. FORKE: That is all right.

Mr. DUFF: I think that is only fair and proper. I may say that I also am the victim of a misunderstanding with my hon. friend in one particular, because when I went over to see him the day before yesterday and asked him when he intended to introduce this bill he told me, if my memory serves me aright, that it was not going to be introduced until after Easter. So I too have a grievance.

We who are opposed to this bill have no objection to the hon. member for Brandon or anybody else introducing a bill to incorporate the United Church of Canada. So far as I personally am concerned I am quite willing for one or more persons to come before parliament and ask for the incorporation of the United Church of Canada or any other church, but what we do want to do is to protest against the principle of this

bill. We are quite satisfied to let the bill receive its second reading and go to the committee on Miscellaneous Private Bills if we can have a free and full discussion there on every phase of the bill from the preamble to the last clause and there protest against any clauses to which we cannot agree. If in addition there is also opportunity for free and full discussion of the bill in Committee of the Whole and again on its third reading, we are ready to let the bill receive its second reading and go to the committee on Miscellaneous Private Bills.

Mr. MURRAY MacLAREN (St. John City and Counties of St. John and Albert): I have not entered into an arrangement of any kind with the hon. member for Brandon (Mr. Forke), and therefore I feel perfectly free to speak on the second reading of the bill, but perhaps it may be soothing to my hon. friend to tell him that I do not propose to do so. I do wish, however, to make a few general observations, not by way of discussion.

There is a great deal to be said on this bill, but I consider it more suitable to have the discussion at a later stage, and this is the reason I do not propose to discuss it just now, because as this is a private bill the second reading does not concede the principle of the bill.

One point I wish to mention is this: I do not think that there is objection to the incorporation of the United Church, provided that the church is for those who wish to go into it, and provided further that those who do not so desire may remain in their mother churches.

The other point I wish to mention, because it is a general principle, is this: There is objection made, as we know, by Presbyterians that the petitioner for the bill, the Moderator of the General Assembly, has not been authorized by the General Assembly, and even were he so apparently authorized, the General Assembly has no authority to so authorize him. I say this because I wish to draw the attention of the House at once to the fact that this matter is now pending in the Supreme Court of Ontario, and judicial decisions are being sought on the question of the constitutionality of the procedure. The other matter, Mr. Speaker, is that there are many grave complaints made by Presbyterians regarding various other sections of the bill; so much so that I join with the hon. member for Brandon (Mr. Forke) in urging that the motion for the second reading of this bill be passed at once, so that the committee may have an opportunity of hearing a full statement of the complaints as they are made by Presbyterians.

Motion agreed to, bill read the second time and referred to the select standing committee on Miscellaneous Private Bills.

CAPITAL PUNISHMENT

The House resumed consideration of the motion of Mr. Irvine for the second reading of Bill No. 3, to amend the Criminal Code.

Mr. T. W. BIRD (Nelson): The value of this debate I think has been already assured. It has elicited from two ministers of the Crown very significant and very impressive speeches. Although they came to different conclusions, it was possible to recognize behind their expressions of opinion a common feeling, I might say a delicacy of feeling, a refinement of sentiment, which it does one good to see in men occupying the positions which they occupy. After listening to those speeches I felt as others must have felt, that the doom of capital punishment has been already pronounced. The speech of the Minister of Justice (Mr. Lapointe) was as cogent in that direction as the remarks of the Minister of Railways (Mr. Graham). He expressed a refinement of sentiment which some of us believe his whole nature is compact with, and I believe that sooner or later that sentiment, which is by no means monopolized by the minister and his colleagues, will see the finish of capital punishment, and of every other summary means of dealing with problems that are really social and not individual in character. I agree with them that sentiment is largely out of place in a discussion of this kind. Nothing can be settled by sentiment, because sentiment beclouds every issue into which it enters, and there is no necessity for bringing sentiment into this argument either on one side or the other. We may appeal to the sentiment of the public, but unfortunately feeling is balanced by fear, and fear is one of those emotions that is just as easily appealed to as sentiment, and if ever you introduce an argument along sentimental lines, another argument is sure to be introduced appealing to fear which overwhelms us immediately, and we do not get anywhere.

I should like to make a few remarks without going over the ground which has already been covered and I desire to base my approach to this question not upon humanitarian grounds, but rather upon, if I may use the word, societarian grounds. I agree with the Minister of Justice that society needs protection, and that it is our duty to protect society, but I disagree with the argument that is implied in his statement.

What he means by protecting society is protecting certain individuals in society. Strictly speaking it is not society he is thinking of. He is speaking of certain individuals in society and not of society as a whole. He is speaking of protection in exactly the same sense as the party to my right speaks of protection. It is not protection of society at all. Society is not concerned. It is the individual that is concerned. For many, many generations we have been concentrating all our attention in a blind way trying to protect the individual and we jeopardize society. That is what we have been doing and are doing yet. We are trying to save individual souls, and in the process of doing that we have been consigning multitudes to perdition. That is the way we manage to do things in this topsy-turvy world. My hon. friend from Brome (Mr. McMaster) did well to introduce the name of John Bright into this argument. After all the sentiment behind this appeal is liberalism. In order to perpetuate liberalism and to save liberalism, we have to be liberal all round. John Bright was not liberal in parts; he was liberal in every fibre of his being. When he thought about protecting society he was not thinking of certain individuals in it to the exclusion of others. He was thinking of society as a unit in which he himself existed, and of which he was a part, and with which he felt sympathetic.

I think the time has come for all intelligent communities to begin dealing with causes and not with effects. Crime, however you look at it, is a symptom. Crime, wherever it exists, is a token that something is wrong with society, because the criminal arises from society. He does not make himself, and in order to deal with crime you have to get behind the individual and deal with society for its responsibility. There is, Mr. Speaker, a famous saying of a philosopher who belongs to the same race as the Minister of Justice, that if we knew all we would forgive all. When you see the criminal standing at the bar, he is not nearly so guilty as superficially you think he is, and the public against whom he is supposed to have sinned are not so guiltless as you think they are. No, if we knew all, we perhaps, might not forgive all, but we would forgive a great deal. Forgiveness is not a maudlin sentiment. Forgiveness is recognition by men and women that humanity is one. It is a recognition of the solidarity of society. It is a sympathetic understanding of the mesh-work of relationship in which we all exist, and when one sins, all sin, all have sinned. The Great Author of mercy on one occasion gave a dramatic illustration of this. He was present when capital punishment was about to be administered and He said to the judge and jury who were also to be the executioners: "He that is without sin, let him cast the first stone." He did not mean that they were sinners in the sense that the criminal was a sinner, but he meant that they as representing society were responsible. I think we have arrived at that stage in the development of humanity when the most benighted of us have some sense of what it means to have a sympathy as wide as humanity itself, which does not exclude even the criminal, but which looks upon the criminal as our own flesh and blood.

As regards the argument of sentiment, I dislike sentiment, as I said before, when we are dealing with rational matters; but what is sentiment and what is not sentiment? When the time comes for the criminal to approach his death, it is almost invariably the case that the public or a large section of it becomes sentimental, and that sentiment is expressed in many ways. It is the habit to speak lightly of that sentiment, but I do not speak lightly of it. It is not a light thing. What are the facts? On the eve of execution there in that lurid light stands a man, or a woman it may be, of our own flesh and blood belonging to our own race, and in the background you have those terrible realities which the society that has made him what he is has painted to our imagination, rightly or wrongly. I think we all recognize the fact to-day, that is, if we think at all, that this sentiment, which we sometimes deride, is profounder than superficially we may consider it to be. There is the condemned man standing against that background which the teachings of society have impressed upon our imagination and mind, whether it be Catholic or Protestant, whether it be Dante or John Milton. There is that man about to be launched into that terrible condition of things which is at the base of all our convictions. Is that not a time for sentiment? I will guarantee that it is not only the sentimental people who send flowers and notes of condolence to the condemned that feel that sentiment, but other people, more reserved, feel that sentiment as well, who do not express it. I think it is a mark of high development in a man's condition when he feels that sentiment. What kind of a person could be unmoved when, by the volition of society a human soul is cast into conditions like that, which society has, through the ages and generations, instilled into our very convictions and sentiments?

Then there is the sentiment in regard to degradation. We all revolt at the thought of delegating one of our fellow citizens to kill another, and rightly so, although I do not agree that under all conditions hanging is degrading. I know plenty of people whom I would like to hang myself. I would like to be on the end of the rope—I mean the other end.

Mr. PARENT: Is that sentiment?

Mr. BIRD: I think my self respect would be in no wise injured by the deed. It is no use arguing that under all circumstances the violence of society is degrading. I am not one of those who believes that stern measures introduced by society, in the interest, not of individuals, but of society for its own protection, not for the protection of any part of it, are wrong. I believe sometimes they are right. I do not think hanging in the days of Walpole, Pitt and Newcastle degraded them in the sense that it degrades us to-day. At any rate, it ought not to be so. If it degraded them then, if they hanged men for stealing sheep or a 25 cent piece or its equivalent, I can see quite clearly that its reaction upon them would probably be trivial as regards its moral significance; but for us in the twentieth century, this is a different matter. People in those times, when hanging became part of the British constitution, believed in political corruption. I cannot conceive of our believing in political corruption in the twentieth century. We are growing out of those things. All history is a proof of that.

There is the argument as to the deterrent value of hanging, and I want to part company here again in a sense from some of the advocates of this bill, because I believe that punishment, even hanging, is a deterrent. All history is very clear proof of that. Unfortunately, sometimes it has deterred the wrong things. Sometimes it deters right things as well as evil things. Sometimes it deters other kinds of criminals than the homicidal criminal. Sometimes it has deterred people who would obtrude themselves into places where they had no right and claim for themselves powers which they had no right to claim. Hanging has had very salutary influences throughout all history; but as I said before, we are getting on. When hanging became part of the British constitution, as some people seemed to think it did, the medical science of that time believed that phlebotomy was the deterrent for influenza and headache. They believed in bloodletting for trivial ailments of all kinds, we have outlived that age. There was a sense in which it was true that bloodletting cured those ailments; it was a deterrent; but a great deal of water has run under the bridge since those times ,and we have been enlightened in many respects. Surely the time has come when we, civilized people as we are, should be able to adopt better expedients than those. As an expedient I say it has had its day. It has ceased to be effective, and it is a wrong expedient for the age in which we live.

More than that, it is a stultifying expedient. I believe that a condition of society that pins its faith upon curing the criminal by killing him will always have criminals to kill. It is the point of view that is wrong, and so long as you have that crass, unenlightened individualism that blinds you to your social obligations and makes you feel that you stand apart from your fellow men, you will always have a society in which there are criminals. That is the soil out of which criminals spring, the lack of social obligation and the lack of social sympathy, these are the things that create criminals. Unless therefore you get rid of these conditions you will never get anywhere at all. I think it would be well if this country or any other civilized nation would make an experiment in abolishing this outworn expedient, not with the hope that things will be immediately improved.

Unfortunately I cannot entirely share the view of those who are arguing in support of the bill, that the abolition of capital punishment will not involve greater responsibilities on the state than heretofore. The moment capital punishment was abolished there would devolve a tremendous responsibility upon society, and society would be exposed to a new situation. I will go thus far with the opponents of the bill. But what does that signify to a civilized and enlightened community? It would simply steel people up and put them upon their mettle. I argue for the bill therefore because I think it will help the Canadian people to recognize their social responsibilities and would induce us to remove those conditions that create the criminal. I do not believe in tampering with the constitution or in doing away with institutions if there is nothing of a constructive character to substitute in place of what is rejected. The fault of this individualistic age is that the virtuous men go forth shouting, "down with this and down with the other," and are too individualistic to see that when they have cast out one devil seven others are likely to take its place. I believe that in Canada at the present time there is a sufficiently strong social sentiment and sense of oneness, a sufficiently

developed sense of economic justice, for us to be able to dispense with this outworn expedient which is a disgrace to any highly civilized people, and to usher in instead a regime of social improvement and of educative effort that will in time largely eradicate criminal conditions and render criminals just as impossible as the present antiquated method of dealng with them is out of date.

Miss AGNES C. MACPHAIL (Southeast Grey): Just twice in my life have I come closely in contact with capital punishment. The first time was the day that I wrote my entrance to normal examination. I will never forget that day; it was in Stratford, Ontario, and as we passed the jail on the way to the collegiate institute the black flag was at half mast and I knew of course that this meant that capital punishment had been executed, that the extreme penalty of the law had been enforced that morning. I have not forgotten the feeling I had then. I felt that society as a whole had deliberately contemplated and taken the life of this man, who it is true had taken the life of another. The second time I came closely in contact with capital punishment was last week and I am not likely to have forgotten the fact so quickly. I was reading about a week ago that they used to hang people in England at one time for picking pockets. They had public executions and the picking of pockets at these public executions became so prevalent that they had to abandon the public execution of pickpockets. When we are trying to teach children to be truthful do we lie to them? I think not. Or if we want to teach people to be honest, do we steal? If we want to teach the hater to love do we hate him? Well, then, if we want to teach people to respect and revere human life, that which we can take away but cannot give, can we do so by taking human life? It seems to me that if we are going to really reverence human life we must as a society refuse to take it; we must come to the view that punishment should be of a reforming character rather than revengeful. It is true that the taking of life is wrong, but two wrongs do not make a right. To me life is sacred, and because it is such a sacred thing that I personally could not take the life of any one, even though that one had taken the life of another, I support whole heartedly the bill that is before the House.

Mr. H. C. HOCKEN (West Toronto): I am not at all a sanguinary individual; I never had any desire to see the rope around any one's neck. But I do not think there ever was a more inappropriate time than the present for parliament to take up such a question as that which is under consideration to-day. There are men going around this country shooting anybody who gets in their way, sometimes merely for the purpose of taking money from some individual; and for fear that that individual will defeat their attempt to rob some one else they shoot him, as has happened within the last few days.

Mr. LOGAN: And we have capital punishment.

Mr. HOCKEN: Yes.

Mr. IRVINE: Why did it not stop it?

Mr. HOCKEN: You will not stop it by making the penalty less than it is to-day, and any one who argues thus is, in my judgment, talking in a perfectly futile way.

Mr. SHAW: Will the hon. member prove his statement?

Mr. HOCKEN: I am going to let it go with my assertion. There is nothing a man values so much as his own life, whether he be a murderer or not. There is nothing that will deter a man from murdering another so much as the fear of losing his own life. That is the one thing above all others that he desires to protect and preserve, and I cannot agree with those who argue that by removing the penalty of capital punishment we are going to reduce the frequency of murder. Those who argue that capital punishment has not curtailed murder might as well argue that in providing a very excellent home for drunkards and thieves, a place that is very much more a home than a prison, you are creating the very best conditions that can make for the discontinuance of thieving. There is a gaol farm near Thornhill in the province of Ontario where drunkards, thieves and other petty criminals are given every advantage that accrues from living under wholesome conditions and engaging in farm work. They are as well fed as if they were living at the Queen's Hotel; I do not mean to say that the bill of fare is as varied, but it is as wholesome. These men are not overworked, but they are given sufficient exercise to keep them in sound health. But we still have drunkeness and other vices in the province. I would have hon. members understand that I am in favour of dealing with petty criminals in a tender way if there is any hope of reforming them; I would not treat them with unnecessary harshness. But I want to see those who break the laws restrained; they must be restrained. However, those who commit what might be called

petty offences, as compared with murder, are well treated all over this country. But that does not stop their criminal career. Men go out of the gaol farm I am referring to and commit the same offences for which they were first put under restraint. Now, if the application of the golden rule which my hon. friend speaks of were effective, these men should not commit similar offences within a week or two of regaining their freedom.

Mr. WOODSWORTH: Has the hon. gentleman studied any statistics showing the proportion of those who after being given their parole do not offend again?

Mr. HOCKEN: Yes, I believe a great many of these petty criminals do not come back, and on the whole I think the system works out fairly well. I do not mean to say that every criminal on leaving the jail farm resorts immediately to a life of crime. I do not think my hon. friend will argue that every man sent to jail for close confinement goes back to a career of crime immediately on regaining his freedom. Many men have been reformed during the course of their imprisonment. But I am arguing that if, as is claimed by some speakers, gentle treatment is going to reform criminals, such treatment has not so far proved to be a specific in restraining such men from further crime. They have criminal instincts and appear to be incorrigible.

Mr. GOOD: Does the hon. member contend that there is a smaller proportion of real reforms effected under the present so-called lenient system than under the previous system?

Mr. HOCKEN: No, I do not so contend. I do not know, but I hope that a larger number are reformed under the present system. That is the reason why municipalities in my province spend hundreds of thousands of dollars annually to support such institutions. Every effort is being made to reform the criminally inclined, but crime is still committed. It is all very well to talk about the sacredness of the life of a murderer, but I think we should have some regard for the sacredness of the life of his victim. The man who has no more regard for society and for the sacredness of the life of anyone who stands between him and the possession of a few dollars is, in my opinion, getting no more than just punishment when he is called upon to give up his own life for having committed a cold-blooded murder. Those who argue there is anything cruel about such a sentence I think fail to see the real measure of justice that is behind it. Capital punishment is not applied in a spirit of revenge. Who is there to revenge? The family of the victim have no power to revenge the death of their relative. Society must protect itself against the murderer and must, by using certain methods, render it impossible for that man to commit a second murder.

Now, if we are to follow out some of the social programmes of reformers, we shall have to begin with every child and see that it is trained in such a way that it will not become a criminal. That is what I assume our schools and churches are trying to do to-day with the children of all classes—teaching them to be moral, to obey the law, to be good citizens. But in spite of all these beneficent agencies, men and women coming from what might be considered good homes fall into evil ways and commit various crimes leading up to murder. Who is to determine whether this child or that is defective until it has done something which demonstrates that it is sub-normal? I do argue that nothing should be done in a collective way to improve our social life, I am ready to support any agency to that end, but I submit that if you remove all the penalties and punishments for crime you remove every deterrent against wrong-doing, and if you remove capital punishment, my judgment is that you will have many more murders, because if a man is inclined to commit murder—and I am speaking of deliberate cold-blooded murder, not of an act arising out of passion—and he is conscious that he will not have to surrender his life but will be committed to the penitentiary, he knows that inside of a few years by submitting to the prison discipline and building up a record for good behaviour he will regain his freedom, that man I say will not be deterred so much in his actions as if he knows that upon conviction for murder he will forfeit his life. There can be no deterrent equal to the forfeiture of a man's life, and any person who argues differently has, I submit, lost sight of one of the fundamental characteristics of human nature. A man will give everything to preserve his life, and if capital punishment does not deter him his case is hopeless.

Since the war closed we have had a series of the most unprovoked, deliberate, cold-blooded murders that have ever disgraced civilization.

Miss MACPHAIL: Does not the hon. member think that the reason for such murders is that the war itself was simply an utter disregard for human life on a large scale?

Mr. HOCKEN: I think there may be a great deal in what the hon. member says.

We looked upon the taking of human life during the war with a good deal of indifference as compared with our attitude in peace, and it may be that a good many of these bandits were closer up to the fighting line and have carried into civil life the practices of war. But take the cities of this continent, you find men organized in gangs who for a few paltry dollars do not hesitate to shoot down people. Such men are simply man-killing tigers, and it is not safe to allow them to be at large.

Mr. IRVINE: Does the hon. member think that I am proposing that the man-killing tiger shall run loose?

Mr. HOCKEN: No, but I am pointing out that the resolution means that he would ultimately get out.

Mr. IRVINE: What resolution?

Mr. HOCKEN: The resolution before us, I am pointing out that if you do away with capital punishment—

Mr. IRVINE: There is no resolution before the House. There is a bill before the House.

Mr. HOCKEN: Well, call it a bill.

Mr. IRVINE: There is no such proposal.

Mr. HOCKEN: All right; I stand corrected—it is a bill that is before the House—not a resolution; and the bill is to abolish capital punishment and give the murderer a chance to go into the penitentiary for a few years and get out again.

Mr. IRVINE: Who says that? Do you say that?

Mr. HOCKEN: My hon. friend knows very well that while the penalty may be life imprisonment there is hardly a case where a man remains in the penitentiary until his death. The clemency of the Crown is sought by his relatives and by societies such as my hon. friend speaks for, which will get up petitions signed by the yard, asking for clemency for this man and for that. So that after a few years in the penitentiary, with reasonably good conduct—that is, if he does not run amuck and kill somebody else—the convicted man is released. Has the time spent in penitentiary reformed him? Has it made him a good citizen? Is he likely to be a saner and better man when he comes out than when he went in? I do not think so. If he has criminal instincts, inherited, as my hon. friend suggests, and developed by environment, they are certainly not removed by life in the penitentiary, where he is herded entirely with criminals and is not subject to the beneficent influence of decent society around him as he is when he is out of prison.

I think it is a very great mistake for us even to discuss a question of this kind in the House at this time, for if ever in the history of Canada it was necessary to bring before the criminal population of the country the fact that there is a real penalty and that for murder the penalty is forfeiture of life, that time is now. If this thing is a disease, do you not think steps should be taken to discover it before it breaks out in that murderous form? And if every man who is a criminal or betrays criminal instincts is to be treated as a subject for hospital, then we had better get to work and build hospitals in every county. If you are going to house under detention every defective and every feeble-minded person—because you will have to do that if you want to guard against the development of the criminal instinct in those who are defective or feeble-minded—then you must have institutions in practically every county in the Dominion of Canada.

I believe, Sir, in doing everything that can possibly be done to instruct the youth of this country in the penalties for offences as well as in the satisfaction of doing right. I am not altogether satisfied that our universities and our whole educational system are upon the right basis. I think a good deal more might be done in the way of educating the children to-day so that they will grow up not only to know that it is wrong to commit crime, but also to understand that if you want to live a decent, a good, a happy life, they must do right. The thing to do is not to tell boys and girls that they must not do this and must not do that. The thing to do is to teach them what they ought to do because it is right and keep them busy doing right. I am not sure that our schools are doing that as effectively as they might. At all events you will not make any progress in the elimination of murder within this country by removing the one penalty that is best calculated to deter the criminal from that offence.

9 p.m.

Mr. JOS. T. SHAW (West Calgary): Mr. Speaker, I think the hon. member for East Calgary (Mr. Irvine) is to be congratulated on having presented to the House in a very definite and clear-cut way the argument against capital punishment. I think he is further to be congratulated on having eliminated from his consideration the question of sentimentality: he has endeavoured, and, I think, successfully, to present the argument in the light of cold and calculated reason.

I agree with the hon. member for Brandon (Mr. Forke)) that if any member of this House were asked to draw the bolt which might drop some unfortunate individual into eternity, he would hesitate to undertake the task. But we must not forget that as a parliament, we constitute the hangman of the nation. Upon us rests the responsibility; we cannot shelve it off on some mortal whom we may delegate to draw the bolt on a particular individual. The responsibility rests collectively and individually upon this parliament, upon every preceding parliament, and upon every parliament, for continuing in existence this method—I think this barbarous method—of extinguishing life. So I say it is a solemn and a serious matter and one which should engage our very earnest consideration.

It cannot be denied that punishment by the state has, generally speaking, two objects to serve: First, to punish the individual, and, in cases other than those in which the capital sentence is pronounced and carried out, to reform that individual, and, secondly, to deter those under temptation from committing similar offences. Now, in examining this question I think it is well for us to determine on whom the onus lies of establishing whether or not this system should be continued. I venture to say, and I do not believe there is a single member of this House who will contradict me, that the onus rests upon the advocates of capital punishment to establish beyond a doubt that that is the system which will deter the commission of similar offences. Let there be no mistake about that, because I want definitely to charge the Minister of Justice (Mr. Lapointe) and those who think with him that the responsibility is theirs to establish to the satisfaction of this House the necessity for the continuance of this system of punishment.

What are the essentials that must be established? It must be established, first of all, whether or not capital punishment is a deterrent; secondly, whether it is the sole deterrent, and, thirdly, whether it is indispensable. Those are the three factors that must be established before this parliament can be justified in continuing to act as the hangman of the nation. When we commence to discuss the deterrent value of capital punishment—because so far as the person who is executed is concerned that is the only substantial question with which we are concerned —we enter at once into a field of surmise and of conjecture. I venture to say that no one can distinctly state what the deterrent value of capital punishment is. If you take a look at the figures you will find, for example, in the United States, where in some states they have capital punishment and in other life imprisonment, and where they have gone from one variety to the other and back—that there is substantially no difference in the figures. I believe that if the figures prove anything they prove that there is little difference in the result, whether life imprisonment or the supreme penalty of the law is exacted.

Realizing his responsibility in this matter, the Minister of Justice has given us certain figures with which to establish the contention that capital punishment is essential, and, I suppose, to prove that it is a deterrent. Well, now, let us take his figures. He compares the three Anglo-Saxon countries, the United States, England and Canada. He shows that the number of murders committed in the United States is much larger proportionately than those committed in Canada and that in Canada the number is proportionately smaller than it is even in England. We have capital punishment in all these places. Does it prove what the Minister sets out to prove? Not at all. What it does prove is that if we are to believe reports that come to us from time to time from the United States, it is not the severity of punishment that counts as the deterrent factor; it is the certainty of punishment that counts; and so I venture to say that the figures given in that connection by the minister do not in any sense at all establish the object for which I presume he gave them.

Then he gave us certain other figures. He found himself under the necessity of going into the field of war for the purpose of producing some figures. He tells us that the Australian troops were not subject to the death penalty in the case of desertion, that at the outset of the war no such rule prevailed in the Canadian corps, but that among the English troops the death penalty was always exacted for desertion. He produced no figures in that connection but gave the statement of some writer, and we do not know whether that gentleman produced any figures or not. But the situation is altogether different. That was not a society of men organized for purposes of peace. That was a society of men organized for purposes of war—a most unusual and most unlikely situation from which to extract figures to prove that capital punishment was desirable. In the next place I venture to put before the House the situation with regard to a young soldier who has been charged with desertion. Just imagine his situation. Here he is, on the one hand, facing danger and the possibility of death. We know nothing with regard to his physical condition, we know nothing with regard to his mental condition, and under these circumstances, fac-

ing an unknown future and perhaps overcome and losing control of himself, he deserts the army and goes into the back areas. Now surely the minister, if there is anything in his argument at all, could have gathered from some other course some arguments that would have justified him in saying that capital punishment is in deed and in fact a deterrent to the commission of murder by other people. I want in this connection to read just a short statement made by the same gentleman from whom the hon. member for Brant (Mr. Good) quoted this afternoon:

> Here, on the bare plane of justice and expediency we might let our argument rest, in the full confidence that a system which violated those canons of civilized living cannot much longer be endured. But the problem has a deeper aspect. The whole upward struggle of humanity is an effort to realize and consecrate new human values, a nobler range of feeling. It is not enough to "let the ape and tiger die"—the one must be supplanted by the man, "looking before and after;" the other by the finer feelings which are embodied in the humanitarian sentiment to which I have previously referred. What, then, can be said for a system of punishment which keeps reviving in us the sentiments of hatred and cruelty which are our worst inheritance from our animal forbears? We aim to inculcate a respect for human life by ourselves showing our contempt for human life. Some of the most tragic effects of this procedure have been noticed in an earlier part of this paper. But there is no way of estimating the more general and subtle demoralization which it produces. It is probably no exaggeration to say that every execution is accompanied by a distinct lowering of the moral tone of the entire community. Its only redeeming feature is the horror it excites in the more sensitive natures. To the much larger number, to whom it presents itself as an act of vengeance, a gratification of primitive blood-lust, it is an unmixed moral evil.

May I commend this further statement to the hon. member for North Waterloo (Mr. Euler)?

> From this point of view, there is little to choose between the various methods that are "mercifully" employed to inflict the death penalty. The guillotine, the hangman's rope, the electric chair, the lethal chamber—all are equally revolting to humane feeling; all become equally sensational, all are equally cruel. Indeed, the cold blooded, deliberate killing of the criminal by the state, by whatever method,, is the refinement of cruelty, and the victim dies a hundred deaths before he is mercifully relieved by the actual extinction of life and feeling.

Further on he states:

> It is an over-simplified view of a complex social phenomenon that makes it possible for us to believe that a grave menace can be seriously modified by the processes of legal justice. I am sure that many who seem to favour capital punishment will agree that such a phenomenon as the persistence and increase of the murder rate in our civilization has a profounder cause than the inefficiency of our system of criminal justice and that if we are to eradicate or even appreciably modify the evil, we must go to the root of the matter, find the deep-lying causes, and deal with them. It is not the murderer, but murder, that is our enemy. The primitive method of striking blindly, in impotent rage, at the life of the offender has had its day, but it still obscures our vision as to the real nature of our problem.

[Mr. Shaw.]

I say that in this matter we cannot rest our vote upon a matter of mere sentiment. We cannot rest it upon a mere matter of conscientious feeling, however sincere that may be, and so I ask each and every member of the House: Are we to leave this House to-night with this parliament continuing as the hangman of the nation, placing our judgment only upon mere sentiment or upon a mere conscientious conviction, however sincere it may be, when in fact and in reason we should usher in a day when justice shall become humane and when humanitarianism shall become wise.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): This subject has been up almost every session since I have entered the House. It has always been received by hon. members with interest, carefully treated and disposed of. One cannot help taking an interest in it no matter how frequently it is presented, but I stand to confess I would take infinitely more interest if I felt that our present practice of inflicting the death penalty were in any real danger of being abandoned. If I felt that we were at all near any imminent peril in that regard my interest in the subject would be quickened in the extreme. I am opposed, resolutely opposed, to the motion.

One needs to examine first, what is the present law and practice. Under the law of Canada, as of Britain, as of many other countries the most advanced in the world, the death penalty is inflictable for murder, inflictable here also for treason, and as well for the crime of rape. I do not propose to discuss the wisdom of the law in relation to the latter two, because the whole principle at stake is more simply discussed when referred merely to the first.

In practice the death penalty is actually inflicted when murder is first proven to have taken place, and murder under our Code has so narrow and clear a definition that it must be atrocious and cold-blooded to come within the terms of the law.

But after the jury's verdict and the sentence there is vested in the Department of Justice a power of review, and it is only a fair statement of the practice to say that any circumstances that go to show the lack of appreciation, the mental inferiority of the accused, even far removed from actual insanity, or other circumstances of a strongly mitigating character, operate to relieve the victim from the extreme penalty. So that we are left in the position, in the actual practice of our law, that the most atrocious cold-blooded instances alone are followed through to capital punishment.

The question before us is, should this penalty be done away with in such cases? First of all, I will seek to remove, if I can, some of the, what seems to me, mere confusion that has been advanced by way of argument in support of the motion. It is said that after all crime is latent, that it is a social growth. Crime is not, we are told, so much the actual positive, wilful wrong-doing blamable on the perpetrator as it is the outgrowth of bad, social conditions, inborn sin, wrong social relations, or perhaps the result of some blood legacy in the offender, for all of which he personally is not responsible. I am ready to give some weight to these allegations. I am ready to assume, for the sake of argument, if for nothing else, that crime is pretty much the outgrowth of imperfect social relations and conditions. I am ready to admit, for the sake of argument if for no other reason, that the man of criminal instinct is pretty much the victim of heredity. I do not know how far those contentions are true; I believe they are true to some extent. But wherein do these things affect the case? They go to show that we certainly should seek to improve our social conditions, that the first object of legislation should be the amelioration of our social relations. It goes to show as well that we should do what we perhaps are not doing, that we should take more practical steps to improve the conditions of heredity under which the child is born. I am ready to agree that those conclusions follow from the hypothesis laid down by certain hon. members whom I have heard.

But do any other conclusions follow? After we have done our best in these regards, criminals still remain. The problem of the criminal is still with us. The obligation to protect society is still here. What are we going to do? Are we bound to say that because underlying causes are there, perhaps far more powerful than the wilful, responsible inclinations of the accused, on that account we should not follow through the most atrocious crimes to capital punishment? It is just as logical to say that we should do away with the whole system of punishment altogether. It is just as logical to say that no offence against society should be punished at all, that our whole penal code should be swept away. When one states the case in that form, it removes altogether, at least from my mind, what is sought to be erected on this theory of unsound social conditions as an argument against the application of the extreme penalty to the perpetrator of capital crime. Punishment is a practical necessity. The history of all ages shows that we must inflict it. It has to be done, or we cannot hold organized society together.

Let us come therefore to what is the appropriate, or I had better say, the effective, punishment for the true purposes of all punishment, as applicable to that class of crime which I first of all described. What are the true purposes of punishment? One of them was stated by the hon. gentleman who has just spoken to be vengeance against the accused. I disagree with him. I do not think that is any object of legal penalty at all. The real object is, as he says, two-fold. It is first to provide a deterrent against crime, to the perpetrator, and to others; and secondly the object is reformative as regards the accused. Both are sought to be served by the whole philosophy of our penal system. In the minor grades of crime, the second takes a very important place. As the grades of crime become more gross, more abhorrent, more heinous, more atrocious, then the first must become more and more important. The blacker the crime, the more perilous it is to society, the more overwhelming must be the weight given the deterrent effect of the punishment in deciding what the punishment shall be. The blackest of all crimes of course are those for which the capital penalty is allotted. It is undoubtedly therefore true that in those cases the consideration which we must keep mostly before us is the deterrent effect of any punishment we apply. I am free to admit that punishment should be no greater than is sufficient to bring about the maximum of deterrent effect, no matter how heinous the crime. It may be that in earlier centuries for offences of a minor, or what one might call a medium character, punishments unnecessary for deterrent effect, and inappropriate in every respect were imposed. But before I would castigate too freely our ancestors in this respect, I would desire to understand just what were all the circumstances of those times. I fancy if all their conditions were understood we would conclude that they were, perhaps, not in mental stature or in political judgment very far our inferiors. But we are judging now of the times in which we live, and before we conclude to apply, in place of the punishment of death, the punishment of imprisonment, or any other punishment for the offence of him, who, in cold blood and for the motives that virtually always animate a murderer slaughters his fellow-man, we want to know what that punishment is going to prove by way of a deterrent, because if we are not sure of its efficacy to this paramount end, we

shall probably be merely submitting the innocent to a fate from which the guilty have been relieved.

I have heard some figures presented by the Minister of Justice (Mr. Lapointe), for the purpose of establishing that the experience of civilization had shown—and he spoke, of course, of the civilization of to-day—that these crimes of the blackest enormity, were deterred best by capital punishment. He advanced two classes of statistics. First he showed that the death penalty had proven the best deterrent in the case of the crime of desertion. His illustrations, are disputed as to their application by the hon. member for East Calgary (Mr. Irvine). I really could not follow the argument of the hon. member. I know the offence of desertion differs from the offence of murder; but what has that fact to do with the question as to the relative merits of capital and other punishment as deterrents? It has been proven in actual practice that stern necessity compelled the application of one punishment and one alone as effective against the offence of desertion. The deduction from those statistics is plain; it is that that punishment is feared the most, which proves the most effective to prevent—namely the capital penalty.

But the Minister of Justice (Mr. Lapointe) brought figures as well to show that, as applied to the offence of murder, the death penalty had proved there also the most effective. He compared the results in the United States, in Canada and in England, and he showed that in Canada and England murders were much the less frequent, in Canada the least frequent of all. The hon. member to my left, says: "Oh, but in all those countries they have capital punishment, and the only difference is that in the United States the certainty of the penalty is not so great as it is in Canada and in England." But the United States has experimented with other penalties for many years. The United States to-day have some states, I do not know exactly how many—

Mr. LAPOINTE: Eleven.

Mr. MEIGHEN:—eleven states to-day where capital punishment is not applied, and in some others—I could name one or two now—they suspended the application of this punishment and tried other experiments for a time, but the awful results showed that they had to return to the sterner penalty. No, the United States is not in the position that Canada is in. There, they have asylums for murderers, which we do not have, and because they have those asylums, murder there is more rampant than it is here. It is quite true that the certainty of the penalty is even more important than its adequacy; and the conclusion is that, no matter what the penalty, we should not relax our efforts to make its imposition certain, and it is to the glory of this Dominion that we have not so relaxed. To this circumstance we attribute in considerable degree the paucity of capital crime which we enjoy. But we cannot deny that it is due also in very great degree to the fact that rigidly and sternly we have adhered consistently to the death penalty, that we can boast of our comparisons as against the United States.

On other occasions, I have investigated these statistics myself, and I believe many more could be adduced to support the contention of the Minister of Justice, that when one places the death penalty against other punishments and compares them as deterrents, the death penalty has a place all by itself. Life is sweet to everyone, and there is something, I suppose, of the coward in us all. But there is no man who so values his life, and who feels so poignantly the coward's fear of death as the fiend who goes out, for his own gain or to appease some selfish animosity or lust, to slaughter his fellow man. Such a creature fears death himself infinitely more than does his manly brother who holds sacred human life.

But if we did not have statistics, and if we did not have some experience with the criminal, surely our knowledge of human nature in general would teach us that nothing will stay the hand of the man with murder in his soul like the fear of death. One has to put oneself in the position of the intended victim or one close and dear to that victim to know just what the situation is. We are all inclined to have some sympathy for the unfortunate creature who has to face the ghastly tragedy of the hangman's noose, and as time passes from the murderous event, we are likely to become more and more sentimental or sympathetic. But let every hon. member place himself in the position, say, of the father of the home who finds that a fiend in the form of man, to appease his lust or his love of gold, has broken into his home and slaughtered wife or child. Would he feel that any sufficient deterrent would be held out to others if it were the law of Canada, that such a fiend should be kept for the rest of his life at the expense of the state, and the public taxed to reform him? No, the hope of reform, that element or phase of the purpose of punishment does not take any very important place when we come to deal with

those who take the life of their fellows. There, the deterrent element must be held supreme. All other elements amount to little. I for one am profoundly convinced, so profoundly that I am sure nothing, even infinitely stronger in the way of argument than anything I have heard to-day, could move me, that the very security of society, all that we hold dear, depends upon maintaining strong and stern the death penalty against the most vicious of all crimes.

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, I should like to associate myself with the leader of the opposition (Mr. Meighen) in the remarks which he has just made with reference to the bill that is before the House. I think every hon. member of the House feels the great responsibility which rests upon him in even pronouncing an opinion with reference to a matter affecting human life. I am sure all of us are viewing this question from the point of view of the value of human life, and what will make most for the preservation of human life, and, may I add, of innocent human life. If I believed that the bill which the hon. member for East Calgary (Mr. Irvine) has introduced, would make for the preservation of innocent human life, would make in the end for a greater saving of human life, as is his object in proposing to substitute a sentence for life instead of the death penalty, I would vote with him. But I believe to the contrary; I believe that the deterrent effect of the death penalty, having regard to human society as it is constituted and to human character as we know it, is in the end to protect innocent people from the murderous assaults that may be made upon them by some of the individuals who compose our human society.

If I had had occasion to address the House on this subject some years ago, perhaps, I might have spoken a little more in the vein in which my hon. friend from East Calgary has spoken to-day. Since that time, in the short period within which my colleagues and I have been entrusted with the added responsibility of having to advise His Excellency whether or not the law shall take its course in cases of murder, I have had to consider, as my colleagues have also had to consider, and as my right hon. friend opposite and his colleagues when in office had very carefully to consider, in the case of every murder that has come before the cabinet for consideration, whether or not human society would be better protected in the long run by a sentence for life than by enforcement of the death penalty in case of murder. There is no graver, there is no more serious, there is no more trying duty imposed upon a minister of the Crown than that which he has to exercise in being obliged to advise His Excellency, with respect to every capital case, whether or not the law shall take its course.

There is one factor in our country of which I think account should be taken in passing upon this question. Were capital punishment lightly inflicted, were it a matter of lynching where murder has taken place, we might well pause before consenting to such a course being permissible. But under British law every man, and no man more than one accused of crime, is protected by all the safeguards which human ingenuity has been able to devise for the purpose of ensuring a fair trial. The murderer is brought before a court of justice and there he or his counsel has the right to challenge those selected to serve on the jury until he secures to try him, twelve men whom he believes to be fair and impartial, twelve of his fellow men. Judges have no more desire to see human life ended than have other individuals in the community. There is no judge who in a matter affecting life and death addresses a jury lightly; nor are there any twelve men who compose a jury who view lightly the verdict which they give. But that is not all. After a court has had the facts before it, and after the jury have considered every circumstance very carefully, where they find the circumstances justify the imposition of the death penalty upon a man or woman who has committed murder and the penalty is imposed, the case then comes before His Excellency in Council for consideration. There the facts relevant to every case are reviewed by the cabinet as a whole. The Minister of Justice has the grave responsibility of reviewing the entire evidence; in presenting the matter to his colleagues for consideration he invariably takes into account every extenuating circumstance. Mention has been made to-day of possible mental infirmity and other circumstances of a like nature,—

Mr. FORKE: May I point out to the Prime Minister that neither the judge nor the jury has anything to do with the death penalty. Their business is to find out whether the accused is guilty of the crime. This parliament, however, has to do with the penalty.

Mr. MACKENZIE KING: I think I understand the force of what my hon. friend is saying. Certainly the judge and jury do not execute the death penalty; but they realize that the result of their actions may determine whether or not a particular individual may have to suffer the penalty of death. They are the judges of the facts, and if

they find that the act is one of premeditated murder, the taking of a human life, they know that the result of such a verdict will be that the murderer will be hanged.

Mr. FORKE: It would be a miscarriage of justice if they did not render a verdict according to the evidence. The judge has no responsibility in the matter; in imposing the death penalty he simply carries out the law of the country. Consequently the responsibility rests upon the people who make the law.

Mr. MACKENZIE KING: I appreciate that fact. The same kind of responsibility rests upon every member of the government in advising His Excellency whether or not the law must take its course. What I am trying to point out is that it is not a matter of quick judgment, it is not a matter of hasty decision, it is not a matter of chance as to whether an individual under British law will be hanged or not. One charged with the crime of murder is likely to be hanged only after a large number of conscientious men, feeling gravely the responsibility which they are called upon to exercise, sincerely believe that the act which has been committed was a premeditated murder of some innocent human being. If I believed that in the long run, more innocent human lives would be saved by permitting those who are guilty of murder to serve a life sentence than is the case under executions, I would support my hon. friend. I view the whole question from the standpoint of the preservation of human life in our society. What course will most effectively save innocent human lives? I believe that the death penalty does have a deterrent effect, and I feel that more strongly because of the knowledge I have of the number of capital cases that have come before the cabinet in the short time in which this government has been in office, where we have had before us the circumstances of every individual case of murder that has taken place. These cases have revealed clearly the fact that the men who have been found guilty of murder have premeditated the crime for the most part from motives of lust or avarice Were they and others like them to suffer only life imprisonment for their crimes, knowing the psychological effect exercised upon other minds and natures when such crimes are committed, I believe that the number of murders would vastly increase once the death penalty were abolished. For that reason I am opposed to the principle of the bill.

Mr. IRVINE: Has the Prime Minister examined the figures in this regard in relation to other countries that have abolished the death penalty? Upon what ground rests his belief that the abolition of capital punishment would lead to an increase in the number of murders that are being committed?

Mr. MACKENZIE KING: So far as figures are concerned, it has often been said that statistics can be made to prove anything, and I believe that to be largely true. Only last evening I was speaking regarding this very matter with a gentleman who represents a large number of religious organizations. He mentioned to me the fact, which has been cited this evening, that in some of the American states where the death penalty was removed the number of murders considerably increased. In one state where a referendum was held the people themselves because of the increased number of murders that were being committed, repealed the law which had removed the death penalty.

Mr. IRVINE: That is the only one known.

Mr. MACKENZIE KING: No, I would not say it was the only one. However, I judge this matter, as one is obliged to judge everything, in the light of our knowledge of human nature and in the light of all known facts and circumstances. I can assure my hon. friend that if he had the responsibility which I have where a criminal is to be hanged, of being obliged as President of the Council to sign the recommendation to His Excellency to allow the law to take its course, he would doubly feel the solemnity of standing in this House and advising that hanging should be continued as the penalty for murder. Because I have that responsibility I am the more anxious to exercise it in the light only of what I honestly believe will make most for the preservation of human life in this Dominion. I do believe that the retention of the death penalty, surrounded as it is in Canada by all the safeguards which British justice affords, will serve more effectively to afford protection to members of our human society, than any change in the law which would substitute the life sentence for capital punishment.

Mr. FORKE: One word of explanation. The question I asked the Prime Minister had nothing to do with any argument for or against the death penalty. I did not ask the question from that angle. I asked it to point out the fact that neither the judge, nor the jury, nor the minister who afterwards considers the petition for a reprieve is responsible for the death penalty; they are simply carrying out the law as enacted by parliament. That was the idea behind my question.

Mr. MACKENZIE KING: I quite understand my hon. friend. I would add to what he says,—that they are also responsible for the possible consequences of removing the death penalty and substituting some other penalty therefor.

Mr. FORKE: Certainly.

Hon. E. J. McMURRAY (Solicitor General): Mr. Speaker, with a full sense of my responsibility as a member of the government and with a full appreciation of the position taken by my chief (Mr. Mackenzie King) and by the Minister of Justice (Mr. Lapointe), and of the particularly able argument of the right hon. leader of the opposition (Mr. Meighen), I still feel bound to adhere to the opinions which I have formed upon the question of capital punishment after long years of practice in the criminal courts defending men charged with murder.

The question has been ably canvassed to-day, without any sentimentality. I think we need offer no apology for supporting the bill now before us. Some of the ablest men in the world have been in favour of the abolition of the death penalty: statesmen, such as Bright and Gladstone; jurists such as Grotius and Bentham; reformers such as Osborne, and Robespierre immortalized himself and practically overcame the evils of a life time by his eloquent address in opposition to the death penalty. Highly civilized nations both past and present have abolished capital punishment; for instance, the people of Athens, and of Holland,—nations that rank high in the history of the world. So that to-day the abolition of the death penalty is an appropriate subject for debate.

I agree entirely with the right hon. leader of the opposition that there can be only two grounds for inflicting punishment on criminals: first, the protection of society; second, the reformation of the individual. I believe that punishment plays but a very minor part in the prevention of crime. The scientific study of crime is exceedingly interesting. As the Minister of Justice pointed out, crime varies in different localities and among different people, and at different seasons of the year and under differing economic conditions. In our country we find that crime increases during migration and diminishes when people are tied to home and kindred.

In olden times the criminal code of England was as bloody as is the code of Japan to-day, but although the death penalty applied to 147 crimes, such as highway robbery and sheep stealing, and thousands of people were executed every year, still capital punishment did not have the effect intended and crime continued. Making allowance for the advance of civilization which the right hon. gentleman in his closely reasoned argument referred to, it has been shown that capital punishment does not prevent crime. Hon. gentlemen have pointed out that after the war murder and other crimes of violence increased in this country, clearly demonstrating that the death penalty is not a preventive. I believe that those who commit murder are not deterred by any penalty, however severe.

The sources of crime are manifold. Many murders are committed under the influence of drink or of narcotics, and when men become angry and lose control of themselves they act regardless of the consequences. Then again some murderers are mentally incompetent. Take the case of the recent bank robbery in Montreal to which my hon. friend from Bonaventure (Mr. Marcil) referred. Those men probably knew what the penalty would be, but still they did not hesitate to commit murder. So I do not think that hon. members have succeeded in proving that capital punishment prevents crime. There is no doubt that it is a deterrent. But the question is: Is it a greater deterrent than life imprisonment?

In many states of the union, particulary in the state of Michigan, homicide is punished with life imprisonment. The man who assassinated President McKinley could have done so in Detroit, and would have been subject to life imprisonment; but he followed his victim to Buffalo, and suffered the death penalty for his crime. But what appears to me to be the strongest argument against capital punishment is this. The state demands from the murderer an absolute, definite price—his life. Before the state is entitled to demand that penalty it should prove beyond all peradventure that the accused is guilty. Law is not an exact science—criminal law least of all. Take a trial for murder, the chances are that knowing the lawyer for the defence you may be fairly certain what the verdict of the jury will be. There are differences in human nature. An inexperienced lawyer may select his jury carelessly and the chances are that the man he is defending will go to the gallows, whereas if the same prisoner had been defended by a lawyer of wider experience who had a better knowledge of the law and of human nature, with perhaps a different judge presiding, the accused man might have been acquitted. That is exactly the practical working of it.

Mr. MERCIER: There is a judge and jury, but there must also be witnesses.

Mr. McMURRAY: Oh yes, there must be witnesses, and there is one of the great difficulties. Evidence is not always reliable. Circumstantial evidence is not reliable, direct evidence probably less so. We have had a number of cases where men have been wrongfully convicted. I happen to hold in my hand a clipping I took from the Ottawa Journal last year just about the time this question came up; it is typical of what is occurring and has been occurring in various parts of the world. It says, referring to a United States case:

> Innocent man was serving a life sentence. Youth confesses to murder of policeman for which other man sent down. Prisoner always held that he was innocent. When told he would be freed, McKinney said he always believed he would get out.

Had that taken place in a state where capital punishment was provided for, the innocent man would have been hanged; as it was, he had been sentenced to life imprisonment. I have here also, cut out about the same time, a picture of a young Greek who had been convicted and sentenced to a long term of imprisonment in the state of New York. He maintained his innocence, and after a long hunt over the United States, away in distant California they located a man who confessed that it was he who had committed the crime. There was a case like that in England, which every lawyer in this House is no doubt familiar with, the case of Adolf Beck. Adolf Beck was a Swedish engineer, and one night when he went out to buy a newspaper he was accused by a woman of having swindled her. He protested and said, "I will hand you over to the police if you do not leave me alone." He was taken to jail, tried, convicted and sentenced to imprisonment for five or seven years ,all the time protesting his innocence. He applied repeatedly to the Home Secretary for consideration of his case, and finally after serving, I think, four years of his term, was released. Shortly afterwards he was again arrested, charged with practically the same crime, and again sent to prison.

Mr. PELLETIER: It showed that he was not a good boy.

Mr. McMURRAY: As a matter of fact he was a good boy, because it was discovered that he was innocent; a man who was his exact double stood in the Bow Street Police Court of London and confessed to the crime for which this Adolf Beck had twice been convicted. The British government gave Adolf Beck £5,000 and immediately created the Court of Criminal Appeals, an institution which they have in England now and which in my humble opinion, we should have in this country.

Should the state put itself in such a position that a man who is wrongfully convicted of an offence and pays the price cannot be compensated, cannot be saved? That is the position we are in. If life imprisonment is as great a deterrent as the other, then why should it not be adopted? But leaving that out of the question altogether, should we put ourselves in a position under which we may send an innocent man to death? The Minister of Justice (Mr. Lapointe), the Prime Minister (Mr. Mackenzie King), the right hon. leader of the opposition (Mr. Meighen), the hon. member for Bonaventure (Mr. Marcil), have told us about the system of review in these cases. It is very easy to imagine that you are reviewing a case when you read over the dry, matter of fact report as it is placed before you in your office, but you should be in the court to see the witnesses and get the local colour and the local touch. You cannot get that by merely reviewing the matter in your office. Everyone who has taken part in court procedure knows the solemnity and the earnestness with which these trials are conducted; there is a feeling of terrific responsibility when human life is at stake. But, I say, are we to put ourselves in the position under which we may have the innocent suffer? This is not a fancy. Baron Kelly, a name to conjure with in the field of law, as my legal friends here know, made the statement that in forty years in England twenty-two innocent men had been hanged. Sir James McIntosh stated just about the same time that one innocent man a year was executed in the British Isles.

I agree with the hon. member for West Calgary (Mr. Shaw) when he says that the burden of proof that capital punishment is necessary is upon those who are in favour of continuing the system. It is on them to show that capital punishment is a greater deterrent to the committing of murder than life imprisonment.

There is just one further point that I should like to mention in this connection. A man who is convicted of murder goes to his cell. I will not distress the House by attempting to draw a graphic picture, but it is simply this: The convicted man dies a thousand deaths. He is left there for a month or two months and night after night he goes through hell, goes through purgatory. The punishment is too much.

An hon. MEMBER: What about his victim and what about the victim's family?

Mr. McMURRAY: Well, the suffering of the family is nothing to what this man suffers But in any case, why should we bring the state down to the same
10 p m. plane; why should we impose torture upon the man in the cell because the family of the victim suffer? Will it relieve the family of their suffering to know that another man is day by day going through hell waiting for the gallows? In many states of the United States the death penalty has been abolished. In some it has been reinstated; that is a matter of opinion. I do believe that the death penalty was instituted because it seemed to be an appropriate penalty. The idea was not altogether the protection of society; it was more in accordance with the theory of "an eye for an eye and a tooth for a tooth"; that if a man takes life it is appropriate that he should lose his own. The code carrying that provision, however, seems not to go the full distance.

If you are going to execute the murderer, are you going to execute the man who attempts murder? Our code says no. Why not? If the man who attempted murder had the determination to kill, and was prevented from doing it, if it is necessary to protect society why do you not execute the man who attempts murder? No; that is on the statute book; it has dragged down behind the old appeal of retribution and revenge.

I still hold the opinion I held some years ago, that capital punishment is not a deterrent, that it has within it that which might inflict a terrible wrong that could never be repaired. I do not think the state should leave itself in that position where there is a danger of that awful wrong being inflicted. If society is not protected more by capital punishment than by some other system, if we can prevent these odious executions that are taking place in our land and that are not necessary, then I think Canada will be marching forward, and will have struck down one more of the barbaric institutions that have come down to us from the past. I have no hesitation in voting whole-heartedly for the resolution brought in by my hon. friend.

Mr. A. M. CARMICHAEL (Kindersley). I have listened to many hon. members from this quarter of the House advance their views in reference to this bill, and I think without exception they have all followed along the same line of thought. I do not know whether I am of a very perverse nature or not, but I find I am not in agreement with my compatriots in this corner. I do not find my mind running along the same line of thought as theirs.

Listening to the debate I have been wondering where we get our authority for capital punishment. We have had references made by different members to Canadian custom; we have had statistics quoted from American practices; we have had some take us across the water and quote the British traditions and practice; but I have been led to ask myself the question: Are any of these countries really authoritative in their practices? Can we base our custom on what any one of these countries do? And I have been led to run my mind back to the written record we have of the first murder that happened some six thousand years ago. At that time Cain slew Abel—the first murder we have record of. Now the only punishment that was meted out to Cain was a mark placed upon his forehead. I do not think he was given life imprisonment; he was allowed to run at large. Well, Mr. Speaker, I do not think that was a deterrent to crime, because we find that as civilization rolled on century after century for some six thousand or more years, there was a law instituted against murder. That law came to us not through a person that was revengeful, not through a person that was barbaric in nature; that law came to us through that great leader Moses who, the record tells us, was the meekest man in all the earth; and it did not seem to just fit in with my ideas to hear this practice of capital punishment classified as being barbaric and as something that was so hideous when it was handed out to civilization by a man of the character of Moses. And, Mr. Speaker, he did not originate the practice. The capital punishment idea was given to man by the One who created mankind. On Mount Sinai the Divine decree was: Thou shalt not kill. Now if any man or any woman dares to take upon himself or herself the right to violate that Divine decree and go out and kill, it is right that they should be subject to the penalty that was instituted at the time that decree was given.

Mr. McMURRAY: Will the hon. member allow me a question. He has referred to the first murderer, Cain. Does he know why the law put a mark on Cain, as set forth in the Scriptures? I may be questioning the hon. member too closely. If I remember aright, it was that nobody should slay him.

Mr. CARMICHAEL: I am prepared to accept the interpretation of the hon. member.

Mr. McMURRAY: Not the interpretation, the fact.

Mr. CARMICHAEL: I am dealing now some fifteen hundred years this side of that mark. We find that that mark did not deter murders, and that was the reason why a different method was given by the Creator. As I stated, the penalty for taking life was that life should be taken. If a man or a woman took the life of a human being the Creator said that he or she should pay the penalty with his or her life, and that law was given to us by the meek man, Moses. Now, generally speaking, we can say that our Canadian law is based upon Bible law, at least in a great many respects. For instance, in reference to our marriage custom, if we wish to define the relationships in marriage we go back to Bible law and base our practice on what is said there. I am rather sorry to state that in reference to divorce we also go back to the Mosaic law. We jump over the New Testament teaching and the prohibitory legislation enacted in the New Testament, and go back to the Mosaic law in respect to divorce, and we in parliament sanction many cases of divorce that we should not. Now in reference to the taking of life, are we going to leave behind the Mosaic practice and follow the New Testament teaching, which, of course, we know prohibits the taking of life. The New Testament teaching I realize is entirely different from the old Mosaic law. The New Testament teaching is one of loving your enemies, it is one of turning the other cheek, it is one of resisting not evil; but, Mr. Speaker, I wish to state right here that there is no nation that is Christian in the full sense of the word. Christian means Christ-like, and there is no nation that is Christ-like in every detail. Nations are not wholly and completely Christian, while individuals in them may be and are. Therefore if our nations are not Christian or Christ-like we must revert to the Mosaic law to govern ourselves in regard to crime and its punishment.

Now what do we find present conditions to be? We find murders prevailing, bank robberies, forgeries, conspiracies, wars and such like. If we had in our country such conditions as New Testament teaching outlines we would not have these things existing, and there would be no need for capital punishment. But we do not find these conditions prevailing; we find that man will go out and take the life of his fellow man. I recall that the mover of the bill advocates a term of imprisonment as punishment for the crime of taking life. I was led to think, Mr. Speaker, of an instance that happened about a year ago over in England. I remember the case quite well. It was about the time this bill was on our order paper last year, but it did not come up for discussion, so that no argument was advanced pro or con. The particular case I refer to was that of a young married couple in England. The wife was about 25 years of age, and her husband was probably five or six years older. Another man entered upon the scene and had covetous desires towards this particular wife, and he and the wife plotted together to get rid of the legitimate husband. It was a premeditated cold-blooded plan. They arranged that on a particular night, when the husband and wife would be returning from the theatre, this second man should murder the husband. The plan was carried out and the husband was murdered. The wife professed great sorrow for the death of her husband and he was buried. But evidence was adduced to show who the real murderers were. They were brought to the bar of justice. They were given a fair and just trial and were condemned to death. Both were hanged. I was led to ask myself the question if, instead of the capital penalty being imposed, these people had been imprisoned for life, what would have been the effect on society?

In addition to that, I would like to point out the fact that our prison life to-day is something that is not to be dreaded. I listened to a lecture in this city last year by General Hughes, outlining to us the conditions of prison life as it is experienced at Kingston. He told us the size of the cell and stated that they had clean linen there if not every day, every other day. They had running water in their rooms. In fact I was led to think, when he was outlining the conditions of the prisoner in the cell, that the conditions were much more enviable than the conditions of our homesteaders on the prairies. Now, realizing that the conditions were such, if this particular man and the wife, these murderers, were placed under such conditions, would that be sufficient punishment for them? Would that act as a deterrent to others and prevent them from planning and hatching similar crimes. Indeed it would not. These people would remain in prison for perhaps ten years, possibly only five; then public sympathy would be worked up in their favour and they would be given their liberty. The chances are that they would then get married, and their example would be a great incentive to the commission of similar crimes. If I were to look at the case from a sentimental point of view I would feel like abolishing the death penalty; but when I consider it from the viewpoint of my duty towards mankind and towards

society in general, I do not feel that, under present conditions, we would be wise in abolishing the death penalty.

Hon. T. A. CRERAR (Marquette): The subject matter of the motion of my hon. friend from East Calgary (Mr. Irvine) is of very much greater importance than many of the matters that are considered by this House. It is inevitable that sentiment should very largely enter into the consideration of a question of this character. I regret very much, Mr. Speaker, that I have only heard a portion of the addresses given by hon. members on this question. I was not aware that the matter was coming up to-day and was absent for a time from the House. But after listening to the arguments presented so far as I have heard them, I think the only substantial argument advanced against the proposal of the hon. member for East Calgary is that it is a deterrent to the commission of the crime of murder—that by the imposition of the death penalty an influence is exercised upon some to deter them from the perpetration of the crime of murder. I cannot agree with the soundness of that argument. I doubt if there are any people who have committed the heinous crime of murder who have calculated for a second before the act, the consequences of the crime they were about to commit. It is a curious thing how psychological influences operate upon the minds of men. It is a fact, I think acknowledged beyond dispute, that a crime committed, even the crime of murder, may in itself be an incentive to other crimes. We know for instance that we have such things as epidemics of suicide. I recall several instances of that, where the mere fact of a person jumping over a bridge into a river had the effect psychologically of inducing other people to do the same thing. The same holds true in respect to murder, and that is one of the factors that operate, and no sentence of hanging, or the death penalty in any form, will be a deterrent in that case.

Mr. LAPOINTE: The hon. member states that a man who commits murder does not consider the consequence of his act. Does he not think that men sometimes do not commit murder because they calculate what the consequences of their act will be?

Mr. CRERAR: While the argument of my hon. friend might have some weight, I do not think it has a great deal of weight. But my support of my hon. friend from East Calgary rests upon other grounds mainly. I think it is a dreadful thing, Mr. Speaker, to have a miscarriage of justice. My hon. friend the Solicitor General (Mr. McMurray) gave some very illuminating evidence in his address to-night on this question—perhaps the most pertinent evidence that has been presented in the discussion of the whole matter in the House this afternoon. There is not only a possibility of a miscarriage of justice through an innocent man being condemned, but there is also the possibility of a guilty man getting off scot free, because the penalty of death would be imposed if he were convicted. And how does that arise? It arises mainly through appeals to the emotions of the jury, and through appeals to the sensibilities of the public; which also re-act on a jury when the case comes to trial, after the crime is committed, the person charged with it is incarcerated. The case is one of public discussion, and preconceived notions often exist in the minds of juries before they go into the jury box, which notions, notwithstanding their oath when they enter that box, notwithstanding how honest they may be, are bound to influence their judgment when they come to the question of rendering their verdict. I recall an eminent criminal lawyer telling me on one occasion that he had defended more than thirty men charged with murder and that only one of them had been convicted.

An hon. MEMBER: A good lawyer.

Mr. CRERAR: He was a good lawyer in that line. I know of cases where an appropriate place in the court room was selected for the accused"s wife, or his children, or his mother, or his relatives, and an appeal made to the sentiments and emotions of the jurymen under these circumstances, a plea that the accused should not be sent to the gallows. Men sitting in the box, charged with the grave responsibility of deciding whether one of their fellow men should be sent to the gallows or not, give their verdict for acquittal, sometimes when the weight of evidence is strongly against the accused.

That, however, is not the most serious part of the whole matter. There is the possibility that an innocent man may be sent to the gallows. There is the certainty that, in many cases, innocent men have been sent to the gallows. The Solicitor General (Mr. McMurray) to-night cited cases, not one, but several, where innocent men charged with the crime of murder were convicted and paid the supreme penalty of the law, and it was later discovered that they were innocent. We know of many cases where men have maintained their innocence of the crime when standing upon the very trap that was to send them to

eternity. The Prime Minister (Mr. Mackenzie King), the leader of the opposition (Mr. Meighen), and also the hon. member for Kindersley (Mr. Carmichael) have dwelt, I think, in rather an exaggerated way, upon the tremendous suffering, the loss, the feelings of the friends of a person who has been murdered. But there is the reverse side of the picture. I would rather that one hundred men convicted of murder—guilty, if you like—were sent to the penitentiary to expiate their crimes there instead of expiating them on the gallows, than that one innocent man should suffer death through maintenance of the death penalty. That, to my mind, is one of the strongest arguments in favour of a reconsideration of this question. No matter how honestly, how impartially we endeavour to administer justice in respect of, not only this matter, but others, we know that justice sometimes miscarries, and I can imagine nothing that is more to be deplored than this very fact that an innocent man might suffer the supreme penalty of the law for this crime. For those reasons I propose to support the motion of the hon. member for East Calgary.

Mr. C. H. DICKIE (Nanaimo): Mr. Speaker, I wish to say just a few words on this question. I have no expectation but that the motion will be defeated, otherwise I would have prepared myself to speak at greater length than I intend. I am not such a desperate character as the hon. member for Nelson (Mr. Bird), who would take one end of the rope and hang a man on the other end, although I may say that, listening to this discussion, there are times when I would feel almost in favour of widening the scope of hanging. I have heard the argument advanced that hanging has no deterrent effect. Let me explain lucidly to the House where it has a deterrent effect. I knew well a young man who murdered a man in cold blood in British Columbia. He was imprisoned. He escaped from prison and after escaping he murdered another man. He was recaptured and escaped again, but fortunately he was recaptured immediately after. That man deserved to be hanged; he was what we knew as a "killer", and if he had been hanged, he certainly would not have murdered the other man. That would have had a deterrent effect, I am sure.

Some hon. MEMBERS: Oh, oh.

Mr. DICKIE: Hon. gentlemen will say that if the young man had been kept in prison, the second murder would not have occurred. It is quite a common occurrence in the West for men to escape from prison, but I never knew a man to escape after he had been hanged. In the early days of British Columbia, before we had so many theorists abroad in the land, we had a judge named Begbie, a man pretty well known throughout America. He was a man of magnificent physique, wonderful mental qualities and absolutely fearless. In those days we had bad men coming into British Columbia from Arizona, California and Mexico. Judge Begbie would go north by himself, and if he could not find a man to hang a murderer whom he had found guilty, I believe he would have hanged him himself. He may have done so on one occasion. He sentenced a number of people to be hanged, and the name of Judge Begbie was known through the whole of the Northwest. When bad men would come to Victoria, or Vancouver, which was a hamlet in those days, people would say to them: "Watch out or Begbie will get you". His name was known throughout the whole Pacific coast. I cannot say whether Judge Begbie considered that the hangings were a deterrent for murder, but every man in British Columbia would agree with me in saying that they had a deterrent effect. We had law and order throughout British Columbia when we had a turbulent population there, and it was due to the fear of that judge that we had law and order at that time.

Mr. T. H. McCONICA (Battleford): Mr. Speaker, I had not thought to discuss this question, but I have had some experience with condemned criminals. I was, for a part of my early life, one of the managers of a large penitentiary, and I came into contact with a number of men who were under the death penalty. I feel the responsibility that rests upon us as members of this parliament in casting our vote upon this question, our responsibility to the criminal and our responsibility to the men, women and children of Canada. We are told that sometimes innocent men are found guilty. That is very rare in these days, it is so rare that no such thing can be found, or, at least, in no such case is capital punishment inflicted. We are told that some mentally deficient people commit murder. True, but they are not subject to the law which we are discussing.

The question for us to determine to-night is whether we shall permit any criminal, no matter how fully matured he may be, no matter how dastardly may be his crime, no matter how long he may have premeditated it, to offend against society with impunity in the total absence of the death penalty? I

am not prepared to advocate any such thing. It is said that capital punishment is not a deterrent. Well, let a man be convicted of murder and sentenced to execution and immediately he and all his friends bestir themselves to have that sentence commuted to life imprisonment. Why? The penitentiary looks like a paradise to that man. Is capital punishment a deterrent? Ask yourselves the question. Which would you rather take a chance on—the penitentiary or the gallows? That is the question. What criminal finds it difficult to secure an associate? It is the criminal who has the reputation of being a killer. His fellow associates steer clear of him because they know that, if he does kill, his crime will bring down the extreme penalty of the law upon himself and his accomplices. The death penalty is a deterrent because as soon as men are aware that it faces them they begin to do everything in their power to have the sentence commuted. Take the case of a man who with gun in hand enters your house, steals your property and shoots down any man, woman or child that happens to be in his path to thwart him. He has that deliberate, well-formed purpose in his heart, and he goes from your house to another man's, and possibly another's and kills three or four, being finally arrested and convicted. Now, our Minister of Railways (Mr. Graham) says he ought to have a chance to reform. I say, that kind of a man has put himself beyond any state of that kind. He is given an ample opportunity to square himself with his Maker if he wants to improve his time, but generally such men do not do this; they forfeit all claims upon humanity. Such a man is an outcast, an outlaw. Cain it is said was not hanged. Well, Cain did not know what the effect of hitting a man on the head with a club would be because he was the first fellow that tried it; they could not convict a man of premeditated murder in those days when a man did not know anything about murder. But where a man deliberately and premeditatedly goes out to kill he puts himself beyond the pale of human sympathy, and we should exercise ourselves not in sympathy with the criminal but in sympathy with the thousands of men, women and children throughout the country whose lives are in our keeping. Human life is too cheap in Canada to-day. Look at such incidents as have occurred in Montreal. The thing for us to do at this time is to maintain the supreme punishment. It may not deter everybody, because what will deter one man will not deter another, and vice versa; and I think that everything we can do to prevent crime we should do to-day.

Mr. C. G. POWER (Quebec South): I had not intended taking part in the debate, but within the last few minutes an argument in favour of the retention of the death penalty has struck me and I think perhaps hon. members may feel its force as I do. There is in this matter the element of protection to society. We are all aware of that natural instinct of the human heart to resent as strongly and as energetically as possible any injury which has been done to us or to those who are near and dear to us. We know the old biblical law, an eye for an eye and a tooth for a tooth. Every one of us, I think, has that desire, in some degree, to avenge himself on those who have done him a wrong. This feeling, as we can see throughout the pages of history, has been inherent in man from time immemorial. In times before law and order was enforced, when the savage, barbaric instincts held full sway in the heart of man, it was the generally recognized thing, when the member of a family had been killed who himself was guiltless, for those who belonged to him to take the life of the slayer. That, as the Solicitor General (Mr. McMurray) observes, is the avenge of blood. Now, whatever we may say to the contrary, this feeling still animates mankind; and in order to obviate the taking of justice by private individuals into their own hands society has decreed that the law shall avenge crime and see to it that retribution shall overtake the criminal. The surest evidence that this feeling still prevails is to be found in what is happening in the United States. There, as has been pointed out, law enforcement has fallen into disrepute. It has been found that murderers are not punished, so that men are taking the law into their own hands and applying the principles of lynch law while the state has neither the power nor the energy to intervene to protect the rights of private citizens from violators of the law. Unless therefore some measures are taken, cruel though they may appear, barbaric as they may seem to some hon. gentlemen, but necessary for the protection of society, we shall have private citizens, without the sanction of the law, and without giving to the murderer a fair trial, executing vengeance upon those who take life.

My hon. friend from East Calgary stated, with that sincerity and conviction which we all admire, that the onus of proving that the death penalty should be maintained is on those who urge its retention. Let me call his attention to the fact that the verdict of history is in favour of those who wish to retain capital

punishment, and that throughout the ages it has been found to be the only means of deterring people from committing this crime. He is on safer ground when he argues that we cannot produce statistics, for not every man who feels like committing murder goes about telling his neighbours that he does not do so because he is afraid of the hangman's rope. If we could collect statistics of such people who were deterred by reason of their fear of the death penalty, I think the figures would prove overwhelmingly the contention of those who are opposed to the bill.

The hon. member also debated with the Minister of Justice the propriety of his referring to certain statistics respecting the death penalty for desertion during the recent war. He stated that the cases were not similar, that in war men's minds were abnormal. In my view his argument only strengthens the position of the Minister of Justice. After all, the soldier who did not desert because he feared the death penalty had been taught—with all due respect to the hon. member who says we are as guilty as the hangman—to be a killer; that was his job. If he was a well-trained soldier he should have had no respect for human life, yet when he was told he would be shot if he was found deserting in face of the enemy he remained at the post of duty.

The hon. member also stated, with some degree of warmth, that the members of this and preceding parliaments were individually and collectively in the position of the common hangman. The answer it seems to me is very simple. It is true we are responsible for the death penalty, but as yet we have not asked anybody to commit the crime which is punishable by that penalty.

Mr. McMASTER: Neither has the hangman.

Mr. POWER: That is true, but the hangman comes in after, and he has not had an opportunity of warning the gentleman for whom he performs this final office that he will be hanged if he does a certain thing; whereas we have.

Harrowing stories were related by the Solicitor General which to my mind went to show the fallibility of our laws rather than their injustice and cruelty. If our institutions were such that no crime could be committed, then I think his argument would be perfectly sound. But he argues that an innocent man may suffer the death penalty. And the hon. member for Marquette (Mr. Crerar) said he would be prepared to abolish capital punishment rather than see one innocent man hanged. I think the argument works both ways. If, as the hon. Minister of Justice says, the death penalty prevents one single murder, then it has justified its existence. It is true that to take away the life of an innocent man is regrettable, but, after all, as has been well said, he has had ample time to arrange matters with his Maker, he has been surrounded with all the consolations which religion can afford him, he has had all the sympathy which sickly sentimentalists may give him, and in many cases he has had every opportunity of having his case fully placed before the public and even of going to his death in a fashion which, to his mind, deserves glorification. Under the circumstances I cannot help but feel that in the present state of our civilization, until such time as we all become so perfect that there will be no possibility of anyone committing murder, and there is no longer in the heart and mind of the human race any fear of death, we must retain the death penalty.

Mr. T. G. McBRIDE (Cariboo): It seems to me, Mr. Speaker, that law is the mother of liberty, but liberty so guarded that it guarantees the freedom of all. Are we to preserve that liberty in Canada by allowing criminals at large or by dealing lightly with them? I do not think that it is in the best interests of this country that we should do so. A good deal has been said by the supporters of this bill in sympathy with the criminal, but very little sympathy has been extended to their victims. A few evenings ago I read in the paper that a man hired another to kill his wife, and while she was engaged in prayer the assassin took her life, the callous husband standing by. Are men of that type entitled to any consideration? Is the supreme penalty not good enough for them? I do not think anything is too severe for such people.

Now, one hon. member here mentioned the returned soldier, and suggested that as the men had been accustomed when at the front to take life, that had an influence on their conduct in this country. I take that insinuation as an insult to our returned men. It is not the returned soldier who is committing murder, it is rather the slacker who remained at home who is doing it. I do not think that any insinuation of that kind should be made in this House against our returned men.

Mr. D. W. WARNER (Strathcona): Mr. Speaker, I would not like to let this occasion pass without stating my position in the matter.

I have listened to the discussion with a great deal of interest, and we must all admit that there is a great deal of argument on both sides. It is very easy to present a very strong

case when only one side of it is dealt with. I do not wish to go into the matter at length, because it has been dealt with in all its phases by others who have taken part in the debate. But there is no doubt that the responsibility in this matter is upon parliament. As the leader of this group (Mr. Forke) says, the responsibility is not with the jury, it is not with the judge, it is with parliament that makes the laws for Canada. I am willing to take that responsibility, but I must vote what I consider to be the right way in the matter.

We must deal with people as they are, not as we would like them to be, and we must take the necessary action to-day, not at some time in the future. If we pass this bill abolishing capital punishment, we must take the responsibility. I do not say that hon. gentlemen arguing in favour of the bill are not perfectly willing to assume that responsibility, but I want to tell the House that I am not ready to assume it, because I am not convinced that it is a safe proposition. It would seem to me that more sympathy has been evidenced in this discussion for the criminal than has been evidenced for the public. We owe protection to the public, and I am afraid that there would not be as much protection if we abolished capital punishment, and that is my reason for voting against this bill. I want to feel while I live in Canada that I have the very best protection that human effort can give me. I do not say that any law can control all the factors in the situation. I believe that murders have been committed when no thought was taken by the offender as to whether he would be hanged or would go to the penitentiary. Where premeditated murder is committed I contend that it is not fair to show greater sympathy to the offender than is shown to the public. If I thought that imprisonment for life would be as effective as the death penalty in the case of murder I certainly would feel like supporting this bill, but I do not believe that life imprisonment is a sufficient deterrent. I do not believe that the public would get the same protection from the life imprisonment sentence that they would get from the continuance and enforcement of the capital punishment system.

11 p.m.

Of course, in common with every other hon. member of the House, I must follw my judgment in a matter of this kind. I have had my mind made up on the subject for a good many years. There was a time when I rather felt I would like to see capital punishment abolished. That was a good many years ago, and just about that time one of the states in the Union abolished capital punishment. I watched the effects of that change, and I became convinced from the results shown that capital punishment was a greater deterrent, because more murders were committed in that state when capital punishment was abolished. Subsequently the death penalty was restored in that state, and crime then decreased. I do not know about many of the other states, but that was the result in one case which I myself observed. Since then I have watched the matter very closely.

Mr. IRVINE: Will my hon. friend say what state he refers to, what were the years in question, and what were the figures?

Mr. WARNER: I do not know just the years; I have no record of it except in my memory. I am not certain whether it was Massachusetts or Connecticut, but it was one of those two. But I do not think it matters what the particular state was or just what the year was; the matter was impressed on my mind at the time and now I am convinced that the same result will follow in any case where capital punishment is abolished. I would like to feel that it would be safe to abolish capital punishment, and I have always felt like giving any criminal a fair chance. But the public must be protected, and to that end I must lay aside my personal feelings and do what I believe is best for the people generally.

Mr. H. E. SPENCER (Battle River): Mr. Speaker, I did not intend to take part in this debate, but on account of the turn it has taken I feel that I should put myself on record and state the reason for the attitude I intend to take when the question comes to a vote. The hon. member for Strathcona (Mr. Warner) has suggested that those supporting this bill seem to be more anxious to protect the murderer than to protect society. From my close attention to the debate, I have not understood the support to this bill, in that way. I feel that the supporters of this bill are just as anxious to safeguard society as any who have expressed an intention of voting against it. The hon. member for Cariboo (Mr. McBride) said that he was not in favour of criminals going at liberty. I do not think any of us are, but the trouble is that there are too many criminals at large all the time. The probability is that there are far more criminals at liberty than are ever caught, and they are not criminals of the type that usually are caught and who eventually get sent to the gallows.

In my opinion there are many murders brought about indirectly. You find crime

wherever there is great poverty. You find more crime in the larger cities than you do in the country because there is greater poverty there. Wherever there is a large amount of wealth taken from the masses of the people and poverty created thereby, there you are most liable to have crime; but the real murderers in many cases are perpetrators of the schemes by which the people are taxed to the extent of their wealth.

The hon. Minister of Justice (Mr. Lapointe) made mention of the fact that a large percentage of the crimes committed in this country were committed by foreigners. I submit Mr. Speaker, that those foreigners did not come from the northern part of Europe, but probably from the great centres of Europe where the standard of living was very low indeed, and it was because of that standard of living and because of their environment, that after they came to this country a certain percentage of them have been added to our list of criminals. An instance came to my mind the other day of a death that was caused at a large meeting of the depositors of the Home Bank. A woman overcome with despair at the loss of all she had in the failure of that bank died at that meeting. Who will say that the murderer of that woman could not be found among the officials that have been guilty of wrong doing in regard to the Home Bank? I think there has not been sufficient stress laid in regard to those criminals, who are either never caught, or are in such a position that there is very little chance of their ever going to the gallows. Wherever you find poverty, and especially great poverty, you will find crime, and when you do away with poverty you will do away with crime. For that reason I am willing to support the bill before the House because I believe that the great thing for us to do is to pay more attention to our social laws, and try to improve society, so that in the future there will be less and less crime and such laws as we have in the criminal code to-day making it possible to take away life will be unnecessary.

Mr. H. A. FORTIER (Labelle) (Translation): I must at the outset, Sir, state that I am in favour of maintaining capital punishment, and therefore I shall vote against the proposed amendment of the hon. member for East Calgary (Mr. Irvine). Our laws governing the death penalty are similar to those in force in England, France and the United States. We are therefore keeping good company. These laws have borne the test of time, and I think we should preserve them such as they are. If I understand rightly the spirit of the law, our legislation as regards the death penalty, makes a distinction between two classes of murderers. There is, first, the man who is a danger to society, the criminal who is no longer in a position to appreciate human life. Such a person is really a social danger, and, it behoves society to do away with him. It is the duty of those in authority to exercise a guardianship, to protect the life of innocent persons by suppressing this degraded man, this human brute. Our legislators like those of other civilized countries have justly maintained the death penalty.

Besides this degraded murderer there exists another class of assassins which is met with in these distressing days when one of our fellow-creatures' life is treacherously cut short. I am referring to the person in whom murder is an event really accidental. Indeed, among those who have committed homicide, we have often noticed that the murderer was a good and respectable person, well thought of by his fellow-citizens. One day, under the influence of anger and passion he strikes one of his fellow-men. In the life of this man murder is purely an accident. We are at a loss to account for it. The public looks upon such a sad event as a regrettable accident. This murderer is not like the one previously mentioned, a degraded citizen, one who may be termed a brigand, a wild beast. He is rather a citizen of high moral standing, who, on the spur of the moment, committed homicide; he is the victim of passing passion which, for the time being, has deprived him of his senses and judgment. I think there should exist some clemency for this man. Our Canadian legislators have made provision for the case of an accidental murder in the life of a good citizen. Indeed, article 1077 of the Criminal Code states that an appeal can be made to the Governor-in-Council and that the death sentence pronounced against such a murderer may be commuted to a life sentence.

I am, therefore, of the opinion owing to all these reasons, that our laws are equitable, because they aim at punishing as it deserves the degraded murderer, and that on the other hand they give protection to the person who, in a moment of aberration, has caused the death of one of his fellow-citizens. I am, therefore in favour of maintaining our laws and I shall vote against the proposed amendment.

Mr. T. W. CALDWELL (Victoria and Carleton): At this hour I will not detain the House at any great length. However, on account of the fact that I have repeatedly

expressed myself as opposed to the imposing of the death penalty, and on account of the fact that I propose to vote against the passing of the bill, I desire to make a brief explanation. As I said before I have repeatedly expressed the opinion that I was not in sympathy with the imposing of the death penalty. However, Mr. Speaker, considering the fact that there is at the present time a wave of crime sweeping over the country, I think it is a very inopportune time to abolish the death penalty. In the case of those who have so actively engaged in crime, and those who are possibly contemplating the carrying on of crime, it would be like handing them a reprieve in advance. Therefore, Mr. Speaker, I feel that I should make this statement before I vote against the bill.

Mr. IRVINE: It has been a pleasure to me to listen to this debate. I hope that all hon. members who have spoken on this subject, on whatever side they may have argued, will have said what they may wish they had said twenty years from now; and if they have, then I am not afraid of their happiness in the future. Much has been said about feeling, and if I have any criticism to make of those who have opposed the measure, it will be largely because they have been feeling a great deal more than they have been reasoning. Although I have detected, I think, a slight inclination on the part of one or two hon. members in their minds to creep out after their feelings in a search for any real basis upon which to justify themselves in supporting capital punishment as we now have it. I crave the indulgence of the House for a few minutes in order to go over some of the matters that have been advanced as arguments. The hon. gentleman who has just spoken (Mr. Caldwell) has given us a very strong argument for the abolition of capital punishment. He tells us that under capital punishment crime has been increasing so rapidly that he would be afraid to try anything else. That is a strong argument.

Mr. CALDWELL: I rise to a question of privilege. I did not make any such statement. I do not wish the hon. member to put words in my mouth.

Mr. IRVINE: I did not say he made such a statement. I was simply giving his argument. We have capital punishment now, have we not? The hon. member has always been in favour of abolishing it, he says, but crime is so bad under capital punishment that he is afraid to abolish it. Is that not his argument? I do not think I am misrepresenting him at all. Then the hon. member for Strathcona (Mr. Warner) tells us that he is convinced that if capital punishment were abolished crime would increase, because at one time he was in a state—in Kentucky or Massachusetts, one of those two he is not quite sure—and while he was in that state a great wave of crime swept over the state, and he concluded that it was on account of the abolition of capital punishment. Now, unfortunately for the hon. gentleman neither of those two states which he was convinced he was in has abolished capital punishment yet. The states which have abolished capital punishment are, Arizona, Kansas, Maine, Michigan, Minnesota, North Dakota, South Dakota, Rhode Island, Tennessee—

Mr. WARNER: I would like to refute what the hon. gentleman has been saying, but he talks so "easy" I hardly think it is worth while.

Mr. IRVINE: If I thought the hon. member could refute me I would not talk so "easy," in fact I would talk harder if I thought he would find time to refute my statements. I have given him facts. I cannot help it if they have not abolished capital punishment in these states mentioned by him, but these are the actual facts.

Mr. WARNER: If the hon. gentleman talked a little louder I could hear him. I could not hear him, and I could not keep very good track of all he said.

Mr. IRVINE: The next hon. gentleman who attempted to argue against the measure proposed was the hon. member for Quebec West (Mr. Power). I am sorry to see he is not in his seat, but his objection was that if we abolished capital punishment the same thing would happen in Canada as happened in the States, which, according to his argument, was that lynching became very popular. Now my hon. friend said in his opening remarks that he just got that idea while in his seat. I think that if he had got the idea two weeks ago and verified his idea with facts, he would not have made the speech that he made. I must quote facts again with regard to the point he raised. I will quote from a volume which is at the disposal of hon. members of this House in the Parliamentary Library. The quotation is as follows:

> But we are told that if the state will not execute the people will; that lynchings which have discredited us in the eyes of the civilized world, are the direct result of our failure to apply the death penalty with promptitude and celerity. Even so distinguished a publicist as Dr. Andrew D. White, if the newspapers quote him aright, is inclined to this opinion, and under certain conditions

is disposed to regard lynching with favour as an abridgment of the law's delay. If this opinion be correct, as numerous writers aver, we shall of course, find the majority of lynchings in the states that have abolished the death penalty. What are the facts? In the last fifteen years two of these states have had not a single lynching. Of the others one has had two lynchings and the other four, while Georgia, the state that leads all others, with 172 executions, also stands second, with 237 lynchings. Texas follows with 140 executions and 183 lynchings. Alabama almost duplicates the record, with 119 executions and 206 lynchings; while Mississippi, which falls a little behind with 97 executions, leads all the states with 249 lynchings. Of 1,900 executions and 2,240 lynchings in the United States in the last fifteen years, twelve states, with less than one-third of the total population, performed, 1,090 executions and 1,747 of the lynchings. Almost without exception executions and lynchings go hand in hand. This fact that "he who runs may read" should dispose forever of the excuse that the state must execute to prevent the people from taking the law into their own hands.

My hon. friend ran so fast that he evidently did not read at all.

Mr. GARLAND (Bow River): What is the title of the book that the hon. gentleman is reading from?

Mr. IRVINE: It is the Debaters' Handbook on Capital Punishment.

Mr. POWER: Written many years ago.

Mr. IRVINE: My hon. friend also advanced another argument before he took his seat. I think we must give him the credit of putting capital punishment on its proper basis, namely, revenge. He found that there is revenge in all human life; that out of revenge, capital punishment had developed, and by revenge, capital punishment had been sustained. We must give him cedit for being absolutely honest in his utterance; but he said that if we can prove one single case of murder that capital punishment has prevented, that would justify the continuation of capital punishment. I agree with him; but does my hon. friend mean to say that a single case has been proven by any hon. member of this House to-day? Not at all. In fact, I do not recall any hon. member having made an attempt to prove that. Those who have expressed their opinions in opposition to this measure have said with great firmness that they believe capital punishment is a deterrent; that they have a feeling it would restrain criminals; that they are afraid to alter the present law lest crime would increase, or some such statement; but no one has made an attempt to prove the deterring influence of the death penalty.

The next hon. member that I want to comment briefly upon is the hon. member for Battleford (Mr. McConica). He thinks capital punishment is a deterrent. He has no proof except himself. He says—I am paraphrasing his argument now; I am not quoting it—hon. members of this Housce should ask themselves: What stops you from committing murder? Is it not the gallows you see rising up in your imagination? What am I to infer from the argument of my hon. friend? Am I to suppose that the only reason why he does not make an attempt on the life of the Prime Minister is that after he has figured out all the ways in which he might do that, the gallows come right in front of him, cowardly fear turns him aside and he refuses to commit the murder? Is that the argument that he has put forward?

Mr. POWER: I suggest that the victim that he looks for is more likely to be the hon. member for East Calgary (Mr. Irvine).

Mr. IRVINE: In that case I am profoundly glad that there is something that stays the hand of the hon. member for Battleford.

I come to the hon. member for Kindersley (Mr. Carmichael), who had never heard that Moses was a barbarian, and who had discovered that the New Testament taught something much more noble as a standard of living than that of the Old Testament. But he shakes hands, good-bye, to the New Testament, and he says that we must go back to Moses, back to the "eye for an eye and a tooth for a tooth," back to the law of the jungle. We must despair of anything like Christianity becoming a practicability in this world. But what that has to do with the abolition of capital punishment, I am afraid I did not catch.

I come to the argument of the Minister of Justice (Mr. Lapointe). If I recall aright, he opened his argument by putting himself and the Right Hon. Arthur Henderson in the same position, and he said that the Right Hon. Arthur Henderson was considering this matter very carefully. I hope that when the Right Hon. Arthur Henderson has concluded his consideration and given the result of his deliberations to the world, he will give us more reasons for maintaining capital punishment than the Minister of Justice has done. I say that will all respect to the undoubted ability of the Minister of Justice. I think the House will agree with me; if they do not now, I would ask them again to read his arguments to-morrow, and I think they will agree with me that he did not give us a real argument. He spoke of a high sense of duty, which no doubt he has. He gave us his convictions. I believe he was sincere, and as such, I respect his sincerity and I hope he will mine. But that is not an argument. I cannot accept the sincerity, or conviction, or

mere belief of the Minister of Justice. I have assumed that we are living in a reasoning age, and also that this parliament is a place of reason, although the hon. member for Strathcona (Mr. Warner) says that he made up his mind a number of years ago, so that all the arguments to-day have been wasted as regards himself. I have, however, assumed that this is a place where we listen to reason, and I look for reasons. I tried to base my arguments on reason; I carefully avoided making an appeal to passion. I or any other hon. member could stand up in this House and make an appeal on the basis of emotion that would make you cry for the sake of the prisoner. You could also make a man cry in thinking of the victim, as the leader of the opposition (Mr. Meighen) attempted to make us do. So I avoided studiously making this argument on the basis of emotion and mere superstitious belief; I placed it on the basis of reason, brought up the facts of science as put forward by modern criminologists and penologists, and I have challenged the Minister of Justice or anyone else to give us a single instance, a single proof in favour of the argument that capital punishment deters crime, but instead of argument we are given belief. No mere belief is sufficient. This is far too important a question for us to settle upon a mere single belief of any man, I do not care how sincerely he holds that belief. So I looked to the Minister of Justice in the hope that he would be able to convince me if I were wrong, because I want to change if I am wrong. I hoped that he would show me the errors in my reasoning if there were any but he did not do so. He said that he did not wish us to think that revenge was the basis; but revenge is the basis whether we think it is or not. There is the fact. Then he insists that capital punishment is a deterrent; but the amount of energy that a man puts into his fist when he insists that it is a deterrent, does not make it a deterrent. The sound of his voice does not make it a deterrent. Even an emphatic rap on the desk does not make it a deterrent. Only facts make a deterrent, and those facts have not been given to the House.

Even the hon. member for West Toronto (Mr. Hocken) follows the line of reasoning of the Minister of Justice, and he wishes us to accept his ipse dixit without any further argument. He is assured that capital punishment deters. That assurance is not enough.

I come to the leader of the opposition (Mr. Meighen). It was left for him to make the boldest attempt of all and he told us that if he had the slightest notion that we were in danger of losing the protection of the gallows, he would have come to this argument with more fire, with more enthusiasm and better —I do not know whether I should say, informed—at least with better arguments; but inasmuch as he felt that the gallows were perfectly safe and that this method of meting out punishment would last for a long time yet, he did not put forth his largest guns. Then he proceeded to examine the law, and he pointed out to us that the law was very narrow in its application to murder. I am not a lawyer, of course; but I should like to read to the House just how loose, or narrow rather, this application is. I am reading from sections 259 and 260 of the Criminal Code at page 77:

> Culpable homicide is murder,—
>
> (a) if the offender means to cause the death of the person killed;
>
> (b) if the offender means to cause to the person killed any bodily injury which is known to the offender to be likely to cause death, and is reckless whether death ensues or not;
>
> (c) if the offender means to cause death, or being so reckless as aforesaid, means to cause such bodily injury as aforesaid to one person, and by accident or mistake kills another person, though he does not mean to hurt the person killed;
>
> (d) if the offender, for any unlawful object, does an act which he knows or ought to have known to be likely to cause death, and thereby kills any person, though he may have desired that his object should be effected without hurting any one. 55-56 V., c. 29, s. 227.
>
> 260. In case of treason and the other offences against the King's authority and person mentioned in Part II, piracy and offences deemed to be piracy, escape or rescue from prison or lawful custody, resisting lawful apprehension, murder, rape, forcible abduction, robbery, burglary or arson, culpable homicide is also murder, whether the offender means or not, death to ensue, or knows or not that death is likely to ensue,—

It would appear therefore that there is nothing narrow about the application in so far as the criminal code is concerned. The leader of the opposition was rather careful to emphasize the cold-blooded murders. But had he known a little more about the subject he would have realized that the cold-blooded murder, although it is perhaps the more culpable in the eyes of the law, is really the less culpable from the scientific standpoint; for only a man who is lacking in some fundamental human trait could actually sit down and in cold blood calculate the means whereby to take the life of a fellow man. And that is one of the outstanding arguments in favour of the abolition of capital punishment. The man who is so lacking either in mentality or in morality as to figure a murder cold-blooded is the kind of man who should not be punished by the kind of death which he has visited upon some one else. He is the man that ought to be protected against himself while we protect society from him.

The leader of the opposition does not consider that there is much in my argument in regard to the causes of crime; he does not regard it as sufficient to say that crime is caused by hereditary influences aggravated by the influences of environment. But he accepts the hypothesis for the sake of argument. Well, he should have followed it to its logical conclusion. Had he done so he would have realized that there should be no place for punishment, on that assumption. And yet he speaks of punishment. But in this respect he misrepresented what I said. I said that there was no place for punishment, but I did not mean that there was no place for prisons. I rather insisted that our attitude with respect to the prisoner should not be influenced by any consideration of punishment; but that does not mean that the criminal should roam around the country committing crime. The member for Kindersley (Mr. Carmichael) was of the opinion that some prisons were quite attractive, so attractive indeed that he would almost like to go there himself. He rather indicated that they were better than home. Well, that is the sort of prison that I should like to see established. That however is not to be interpreted as a suggestion that we should put a premium upon crime. The fact is that we recognize the importance of treating criminals in the way we treat our insane and diseased people. Concluding his speech the right hon. gentleman emphasized the necessity of protecting society, failing to realize that capital punishment does not serve this end. Let me point out the difference between capital punishment and life imprisonment from the standpoint of the actual protection which is afforded human life. To-morrow morning some man commits a murder. Well now, the offence has been perpetrated, and whatever steps may be taken to protect society thereafter, society certainly had not been protected before. The leader of the opposition would put this man upon the gallows and let him hang on a rope; I on the other hand would put him in gaol or confine him in an insane asylum, according to the diagnosis of a competent person. I would not take his life. But in each case he would be prevented from killing any one else. My system would equally protect society, because my right hon. friend's method undoubtedly did not protect the life of the man that was killed. As an hon. gentleman observed, the man could not kill anybody else after he had been hanged, nor under my system would he be able to commit the crime again. So that there is no argument left my right hon. friend. The leader of the opposition made a pathetic appeal to sentiment. Let me assure him that there is something wrong with legislators who have to fall back upon the gallows as a protection to society, and I hope that he will discover where the weakness is.

[Mr. Irvine.]

The Prime Minister (Mr. Mackenzie King), accepting the arguments of the leader of the opposition, deplores the onerous task that devolves upon him under the present law; and on being asked to give a reason for the perpetuation of the thing that gives him such an unpleasant duty he replies that statistics can prove anything, and on this ground refuses to give any. Unfortunately there is a great deal of truth in that. But surely the Prime Minister would not like hon. members on this side of the House to test the merits of his budget by that principle. Figures can prove anything, certainly; and no doubt it can prove a surplus where a deficit actually exists. The Prime Minister, I say, would not like to have his budget analyzed in that fashion. We must stop somewhere with that kind of criticism, and while I know that figures may be misleading, at the same time the leader of the government might have favoured the House with one citation, let us twist it as we might, to prove our justification in maintaining capital punishment. I agree that his task is a difficult one under the present law. He tells us that he feels the solemnity of the matter; I hope we all feel it. But the Prime Minister might feel more solemn if next week he sanctioned the regular course of the law, and the execution thereby of an innocent man. In order to save him some of that awful anxiety and to free him from the solemn responsibility of that onerous duty I would urge him to vote for this measure and at least give it a trial. Let us try it for one year, and we can keep our eye on the hon. member for Battleford (Mr. McConica) for that length of time. Then, if we have not all killed one another in the interval, we might extend the period of trial to two years. That is the only way we can prove the efficacy of such a new law; and I have so much faith in humanity, and in Canadians particularly, that I do not believe that the number of murders would be increased in any degree whatever by the enactment of this bill.

The House divided on the motion (Mr. Irvine) which was negatived on the following division:

YEAS

Messrs.

Bancroft,	Euler,
Brown,	Forke,
Carroll,	Gardiner,
Crerar,	Garland (Bow River),
Elliott (Dundas),	Good,

PAIRS

(The list of Pairs is furnished by the Chief Whips).

Messrs.

McMaster,
Milne,
Woodsworth,
Martell,
Bird,
Robinson,
Graham,
Morrison,
Evans.
Gordon,
Fansher,
Carmichael,
Harris,
Hodgins,
Brethen,
Ryckman,
Charters,
Manion.

Mr. GRAHAM: I was paired with the hon. member for East Toronto (Mr. Ryckman). Had I voted I would have voted for the motion.

Mr. MARTELL: I was paired with the hon. member for East York (Mr. Harris). Had I voted I would have voted for the motion.

Mr. MORRISON: I was paired with the hon. member for Peel (Mr. Charters). Had I voted I would have voted for the motion.

Mr. CARMICHAEL: I was paired with the hon. member for Centre Winnipeg (Mr. Woodsworth). Had I voted I would have voted against the motion.

Mr. EVANS: I was paired with the hon. member for Fort William and Rainy River (Mr. Manion). Had I voted it would have been for the bill.

Mr. McMASTER: I was paired with the hon. member for West Peterborough (Mr. Gordon). Had I voted I would have voted for the bill.

SELECT STANDING COMMITTEE

INDUSTRIAL AND INTERNATIONAL RELATIONS

Right Hon. W. L. MACKENZIE KING (Prime Minister): With the permission of the House I would move, seconded by Mr. Lapointe, that the name of Mr. Woodsworth be added to the select standing committee on Industrial and International Relations.

Mr. SPEAKER: By unanimous consent.

Motion agreed to.

On motion of Mr. Mackenzie King the House adjourned at twelve o'clock (midnight).

Monday, April 14, 1924

The House met at three o'clock.

YUKON QUARTZ MINING BILL

Right Hon. W. L. MACKENZIE KING (Prime Minister) moved:

That the order of the House of the 24th March, referring Bill No. 6, respecting quartz mining in the Yukon Territory to the select standing committee on Mines and Minerals be discharged, and that the said bill be referred to the select standing committee on Mines, Forests and Waters.

Motion agreed to.

THE HOME BANK

Mr. R. H. HALBERT (North Ontario): I beg leave to present a petition signed by 571 residents of the towns of Cannington and

Sunderland and surrounding districts praying that the depositors in the Home Bank be indemnified.

Mr. L. W. HUMPHREY (West Kootenay): I beg leave to present a petition signed by 1,441 residents of the city of Fernie and district in British Columbia, praying that the depositors in the Home Bank be indemnified.

PRIVATE BILLS

FIRST READINGS

Bill No. 56 (from the Senate), for the relief of Theresa Agnes Sprague.—Mr. Kennedy (Glengarry).

Bill No. 57 (from the Senate), for the relief of Terry Andrea Maxwell Bruce.—Mr. Boys.

Bill No. 58, to incorporate the Confederation Canal and Power Company.

INDIAN RESERVE LANDS BILL

Hon. CHARLES STEWART (Minister of the Interior) moved for leave to introduce Bill No. 59, for the settlement of certain questions between the governments of Canada and Ontario respecting Indian reserve lands.

Motion agreed to and bill read the first time.

QUESTIONS

(Questions answered orally are indicated by an asterisk)

CANADIAN NATIONAL RAILWAYS—FINANCIAL STATISTICS

Sir HENRY DRAYTON:

In the answer given on March 24th, 1924, to a question concerning the Canadian National Railways it is stated that "all revenues on inter-system company material which is used in operation is included as a part of operating expenses and to that extent cancels the revenue thereon shown in the revenue account."

1. What is the total amount of revenue so charged in the year 1923?

2. What amount of such materials to be used in operation as above indicated were shown in inventories at the close of the year 1923?

3. What rates are charged on coal for the system (a) on shipments from the Maritime provinces; (b) on coal received via Massena Springs, Cobourg and Black Rock (c) on coal from the Brule Mines, Alberta, and (d) how much coal do the inventories show as on hand, and the amount of freight thus charged against such coal, at the close of the year 1923?

Hon. Mr. GRAHAM:

1 and 2. Railway accounting methods do not provide for the taking out of such information concerning inter-company material, except at much cost of time and labour and the dislocation of the necessary railway business of serving the public.

3. (a) and (c) There were no charges at any time during the year on shipments of coal from the Maritime provinces, or from Brule Mines, Alberta.

(b) Subsequent to May 1 (date of consolidation) coal received for the system via Massena Springs, Cobourg and Black Rock was moved free; prior to that date, between January 1, 1923, and April 30, the following amount of revenue was accrued: via Massena Springs, $158,876.06; via Cobourg, $4,471.51; via Black Rock, $28,463.40.

(d) We have 3,646,711 net tons of coal on hand for the system at December 31, 1923. It is impossible to state the amount of freight, if any, included in this inventory at the close of the year.

THE HOME BANK

Sir HENRY DRAYTON:

1. In view of the fact that the liquidator's report shows that the Home Bank was never in receipt of income or profits on which taxes could be levied, has the government refunded to the liquidator such taxes paid by the Home Bank?

2. If not, what is the intention of the government in this respect?

Hon. Mr. ROBB: The answer to the first question is "no," and, to the second question, the answer is, "under consideration".

CANADIAN NATIONAL RAILWAYS—RADIO EQUIPMENT

Mr. CHARTERS:

1. What is the estimated cost of the installation of the radio equipment in the Canadian National Railways?

2. Who is the director of such service and what salary does he receive?

3. What is the estimated cost of the operation of radio on the Canadian National Railways during the current year?

Hon. Mr. GRAHAM:

1. To date management have spent on the installation of radio equipment approximately $26,000, of which sum approximately $18,000 covers the cost of erection of broadcasting station at Ottawa.

2. W. H. Swift, Jr. The management does not consider it desirable in the interest of the Canadian National Railways to publish salary.

3. The estimated cost of operation of the Radio department for the fiscal year ending March 31st, 1925, including salaries, travelling expenses, equipment, etc., is approximately $90,000.

TRAVELLING EXPENSES OF MINISTER OF LABOUR

Mr. ARTHURS:

What were the total travelling expenses of the Honourable Minister of Labour for fiscal years ending March 31st, 1920, 1921, 1922 and 1923?

Hon. Mr. MURDOCK: This question will be handled as a part of and answered by the answer to question No. 50.

GOVERNMENT SALE OF WASTE PAPER

Mr. PRITCHARD:

1. How many tons of waste paper have been sold by the government during the last fiscal year?
2. What is the total amount received for same?
3. What per cent of this amount was obtained from the Department of Agriculture?

Hon. Mr. COPP:

Department of Customs and Excise

1. The weight of paper sold is not available.
2. $497.36.
3. Does not refer to this department.

Post Office Department.

1. 350.
2. $4,199.65.
3. No information.

Department of Public Printing and Stationery

1. 722 tons, 1,509 lbs.
2. $26,558.30.
3. Waste paper accumulated in the government buildings in Ottawa is collected under contract made with the Department of Public Printing and Stationery but the amounts received from different buildings are not separately weighed, and it is therefore impossible to state the proportion obtained from the Department of Agriculture.

DISMISSAL OF JOSEPH L. GAUVIN

Hon. Mr. BAXTER:

1. When, why and on whose report was Jos. L. Gauvin dismissed from the position of collector of customs at Shippigan, New Brunswick?
2. Was Gauvin present during the whole or what part of the investigation, if any, was held?
3. How many witnesses testified, was there evidence, and if so, which was given on oath?
4. How many testified against Gauvin?

Hon. Mr. BUREAU:

1. Order in council was passed on January 16th, 1924 on the recommendation of the Minister of Customs and Excise, dispensing with the services of Jos. L. Gauvin for being under the influence of liquor while on duty.

2. Officer Gauvin was notified of the nature of the charge preferred against him and furnished his affidavit in connection therewith.

3. Six persons were interviewed regarding these charges and statutory declarations obtained from three.

4. Three persons.

ROYAL CANADIAN MOUNTED POLICE—APPOINTMENTS

Mr. WARD:

1. What is the total number of Royal Canadian Mounted Police on headquarters staff in Ottawa, and what is the total cost of maintaining this staff?
2. What number of permanent appointments have been made by the Civil Service Commission in the Royal Canadian Mounted Police department since January 1st, 1924, by reason of organization?
3. What number of recommendations for permanent appointments have been rejected since January 1st, 1924, in the same department?
4. What section of the Civil Service Act or Civil Service Commission regulation was considered in making appointments?
5. Are those whose permanent appointments were rejected not eligible under the same section of the act or Civil Service Commission regulation referred to?
6. What is the total number of civil servants attached to the headquarters staff of the Royal Canadian Mounted Police?

Hon. Mr. LAPOINTE:

1. Total number 71. Total cost of maintenance, including pay and allowances, quarters, light and heat, approximately $11,673.58 per month.
2. Nil.
3. Nil.
4. Answered by No. 2.
5. Answered by No. 3.
6. 36.

DANIEL J. ZINCK

Mr. HANSON:

1. What is the salary of Daniel J. Zinck, excise and customs officer at Lunenburg, Nova Scotia, and when was he appointed to said present position?
2. What is the nature of his duties?
3. Is the government aware that Mr. Zinck when appointed to this position was seventy years of age or over?
4. Were there any returned soldiers applicants for the position to which Mr. Zinck was appointed?
5. If so, why was preference not given to said returned soldiers?

Hon. Mr. BUREAU:

1 and 2. Employment as acting customs-excise enforcement officer, without salary, was authorized 19th June, 1922.

3. No information.
4. No.
5. Answered by No. 4.

RAILWAY RESTAURANT AT GRAND NARROWS

Hon. Mr. STEVENS:

1. Has the government purchased a building at Grand Narrows, Cape Breton, used as a railway restaurant?
2. If so, from whom was the building purchased and on what date?
3. Was the said building taken down in sections and moved to North Sydney and rebuilt as an express office?
4. If so, what was the total cost of said work and date of removal?
5. For what is the building now used, and what is the floor space, and on what property is it located?

Hon. Mr. GRAHAM:

1. Yes.

2. Purchased from J. C. McNeil on December 22nd, 1922.

3. Yes, a portion was used for extending the baggage room.

4. Work of extending baggage room was completed July 24th, 1923, at cost of $289.49.

5. Building which is now used for handling express has 590 square feet of floor space and is located on property of the Railways.

SILVER CURRENCY

Mr. SHAW:

1. What is the value of the silver currency coined by the Ottawa Mint during each of the years from 1914 to 1923, inclusive?

2. What is the total value of silver currency issued by the Finance department during each of said years?

Hon. Mr. ROBB:

1.	1914	$ 843,224 05
	1915	184,548 60
	1916	1,134,301 00
	1917	1,951,168 10
	1918	2,258,744 55
	1919	3,195,878 15
	1920	1,838,371 60
	1921	603,081 80
	1922	Nil
	1923	Nil
2.	1914	734,002 00
	1915	206,000 00
	1916	1,302,000 00
	1917	1,862,200 00
	1918	2,402,000 00
	1919	3,276,044 00
	1920	1,338,000 00
	1921	128,000 00
	1922	24,000 00
	1923	28,000 00

CANADIAN PACIFIC RAILWAY TELEGRAPH LINES

Mr. MacLAREN:

What amount does the Canadian Pacific Railway Company pay the Canadian National Railway Company for the privilege of running its telegraph lines over the Canadian National Railways right of way?

Hon. Mr. GRAHAM: There is no general arrangement with the Canadian Pacific Railway to run its telegraph lines over the Canadian National Railways right of way, but certain special arrangements have been made, as follows:

Between Levis and the inter-provincial boundary via Riviere du Loup the Canadian Pacific Railway have one wire on the poles of the Great North Western Telegraph Company. For this privilege they pay an annual rental of $732.

Between Hope and Lytton, B.C., the Canadian Pacific Railway has the use of poles for one wire, for which they pay a rental of $340 per annum.

There are several crossings or similar privileges, for which the Canadian Pacific Railway pays nominal rentals, but there are no other occupancies on right of way to any extent other than those two named above for which they pay.

CANADIAN CONFECTIONERY AND BAKERY SALES TAX

Mr. WARD:

1. Did certain bakery firms in the city of Toronto refuse to pay the sales tax on confectionery and bakery products during the year 1923?

2. If so, what action has the government taken to collect such taxes?

Hon. Mr. BUREAU:

1. Yes.

2. Legal action was taken against the firm of Versailles Sweets, Toronto, as a test case. The department was successful in this action but appeal was made to the Supreme Court of Ontario. The department was successful in this court also, but appeal was again made, and it is expected the case will be tried before the Supreme Court of Canada in May next.

OVERAGES IN LAKES TERMINAL ELEVATOR

Mr. EVANS:

1. What has been the disposition of the overages in the terminal elevator at the head of the lakes, and elsewhere, as adjusted with the government, over the period of years, since this arrangement has been in effect?

2. What has been the amount of such overages?

3. How much accrued to the government of such overages?

4. What was the amount retained between terminal companies?

5. What was the value of such overages to the government, as adjusted?

Hon. Mr. LOW:

1. In accordance with the provisions of subsection 7 of section 95 of the Canada Grain Act, as amended at the second session of parliament in 1919, the Board of Grain Commissioners determines from its official weigh-up and records the surplus of grain in all public terminal elevators and authorizes terminal elevator companies having a surplus to issue warehouse receipts for such overage after taking into account the amount, if any, to be delivered to the government as provided by section 95 of the act. The board requests the terminal elevator companies having a surplus to deliver to the board either warehouse receipts for that portion of their surplus over one-quarter of one per cent, or a cheque based on the market price for the value of same.

2. The total overages in public elevators from 1920 to 1923, inclusive, amounts to 95,943,345 pounds of all grains.

3. Covering the same period the government is entitled to receive under the above section of the act 22,914,154 pounds of all grains.

4. The amount retained by the terminal elevator companies for the same period was 73,029,191 pounds.

5. The value of such overages due to the government for the period 1920 to 1923, inclusive, amounts to $477,152.03.

GRAIN WEIGHING

Mr. COOTE:

What were the total receipts and expenditures respectively incident to the inspection and weighing of grain by the Board of Grain Commissioners for the years ending August 31st 1921, 1922 and 1923?

Hon. Mr. LOW: Year ending Aug. 31, 1921—Receipts, $1,011,678.84; expenditures, $742,314.98. Year ending Aug. 31, 1922—Receipts, $1,263,253.47; expenditures, $847,-186.90. Year ending Aug. 31, 1923—Receipts, $1,433,984.32; expenditures, $972,631.16.

SOLDIER SETTLEMENT BOARD

Mr. KELLNER:

1. Did the Soldier Settlement Board have any of its officers or employees visit any foreign country or countries in the interest of the board?
2. If so, what were their names?
3. What country or countries have they visited?
4. What was the purpose of such visit or visits?
5. What was accomplished by such visit or visits?
6. What was the total cost of such trips?

Hon. Mr. ROBB:

1. No.
2. 2, 3, 4, 5, and 6—Answered by No. 1.

INVERNESS RAILWAY AND COAL COMPANY

Mr. HOCKEN:

1. Has the Inverness Railway and Coal Company's line in Cape Breton been taken over for operation by the Canadian National Railways, and if so, on what date and what official is in charge of the operation?
2. If not, are any negotiations going on in reference to the line being taken over for operation by the Canadian National Railways?

Hon. Mr. GRAHAM:

1. Yes—April 1st, 1924.
General Manager—Moncton, N.B.
2. Answered by No. 1.

OTTAWA RIVER WATER-POWERS AT CARILLON

Mr. BINETTE*

1. Does the government intend to help in the development of the Ottawa river water-powers, at Carillon?
2. Have reports been submitted to the government, either by private persons or companies, and have said reports been taken under consideration?
3. What assistance will the government give to further said project?

Hon. Mr. GRAHAM: In reply to question No. 41, the government has not been asked to help in the development of the Ottawa river water-powers at Carillon. As I explained the other day, many years ago a lease was given to a company to develop water-power at Carillon. In 1921 that lease was renewed, or rather a new lease was given with very much enlarged powers. At the present time there is before the Department of Railways and Canals an application by a company for a still greater enlargement of the powers given under that lease in 1921, and that is now being considered.

COST OF PARLIAMENT BUILDINGS

Mr. BENOIT:

1. What has been the cost, to date, of the parliament buildings?
2. What is the name of the contractor?
3. What percentage is he paid for his work?
4. What amount has he been paid, to date, for work accomplished?
5. What is the name of architect who drew the plans for the parliament buildings?
6. What percentage and what amount, to date, has said architect drawn for his work?
7. What is the name of the assistant architect?
8. What percentage and what amount has said assistant architect drawn, up to date, for his work?
9. Has the architect who drew the plans for the parliament buildings, received, over and above his commission, from the government, other amounts as reimbursements for travelling expenses, either for himself or his assistants, also for telegrams, messenger service, etc.?
10. If so, under what agreement with the government and under what budget items have these amounts been paid to him?

Hon. Mr. KING (Kootenay):

1. $11,273,785.39.

2. P. Lyall & Sons Construction Co., Ltd.

3. Eight per cent commission on value of work to $4,000,000; 7 per cent above that amount.

4. $646,331.46.

5. Mr. John A. Pearson, Toronto, Ont.

6. Four and five-eighths per cent on ordinary work with an additional commission of 2⅞ per cent for work of special nature. Total to date, $412,344.92.

7. Associate architect, Mr. J. O. Marchand, Montreal, Que.

8. Seven-eighths of 1 per cent. Total to date, $71,990.69.

9 and 10. Yes; $3,170.14, covering two visits to the United States to investigate electric heating and modern methods of lighting; in Canada for inspection and delivery of special furniture; and a visit to Europe authorized by the Joint committee. Payments were made from appropriation for Ottawa parliament building.

CANADIAN NATIONAL RAILWAYS—PARRY SOUND

Mr. ARTHURS:

1. Is Parry Sound on the main line of Canadian National Railways, Winnipeg to Toronto?
2. What are the grades on the Canadian National Railways north and south from Parry Sound and near that point?
3. Is it necessary to use additional power to aid trains over such grades?
4. Have proposals been made to reduce or overcome such grades? If so, when?
5. Have surveys been made or plans prepared to overcome or reduce such grades?
6. If so, why has the necessary work not been proceeded with?

Hon. Mr. GRAHAM: I suppose my hon. friend would be able to give an answer to No. 1 himself and try to find out the rest.

Mr. SPEAKER: Stands.

POSTMASTER St. GEDEON, QUE.

Mr. DOUCET:

1. Was the postmaster at St. Gedeon, Chicoutimi county, dismissed?
2. If so, for what reason?
3. Was an investigation held in connection with this employee, and by whom?
4. On what date was this investigation made, and on what date was the report remitted to the minister?
5. To whom was the post office assigned, on whose recommendation was action taken, and in whose house was the office placed?
6. Did the Civil Service Commission by published notice call for applications for this post office?
7. If so, how many applications were received, and who was their selection?
8. Has the new postmaster been nominated? If not, why?
9. Is the government aware that what has passed at St. Gedeon since the 15th November, in connection with the post office, is a disgrace without precedent?

Hon. Mr. COPP:

1. Yes.
2. On account of active political partisanship.
3. Yes. By Oscar Drouin, barrister, Quebec.
4. Investigation held 14th November, 1922. Report to Postmaster General dated 8th August, 1923.
5. Etienne Coulombe was placed in charge as acting postmaster on the recommendation of Dr. E. Savard, M.P., pending a permanent appointment by the Civil Service Commission. Department informed recently that post office was placed in residence of Mr. Louis Parent.
6. Yes.
7. Seven. Miss Blanche Laberge selected by commission.
8. Yes.
9. No information.

DEPARTMENT OF IMMIGRATION

Mr. LAVIGUEUR:

1. Does the Department of Immigration intend to transfer to Quebec, this year, the staff of St. John, New Brunswick, or employ persons of the city of Quebec or district?
2. Will the said department insist that the whole of their immigration staff, at Quebec, speak French fluently?

Hon. Mr. ROBB: My recollection is that this question was answered last week.

ST. GREGOIRE WHARF

Mr. LAVIGUEUR:

1. In what year was the wharf which serves as a retaining-wall to part of the village of St. Gregoire, Montmorency, constructed?
2. What was the initial cost of its construction?
3. What are the amounts which were voted for the upkeep and repairs of above wharf, and in what year were said amounts voted?

Hon. Mr. KING (Kootenay):

1 and 2. The wharf at St. Gregoire, Montmorency, built in 1912 at a cost of $4,998.37, does not serve as a retaining wall. The construction of the retaining wall was commenced in 1904-05 and continued to 1913-14 at an expenditure as follows:

1904-05	$6,508 82
1905-06	7,158 00
1906-07	3,270 89
1912-13	5,115 69
1913-14	1,799 07
	$23,852 47

3. $3,800 in fiscal year 1915-16.

MR. J. H. R. BYRNES

Mr. LAVIGUEUR:

1. Has the Minister of Immigration already received a request for an inquiry regarding certain charges made against J. H. R. Byrnes who had the contract for the immigration canteen and restaurant, at the port of Quebec, for the years 1922, 1923?
2. If so, does the minister intend to allow said inquiry as requested, in order to permit Mr. Byrnes to refute the accusations, and, if so, when will this inquiry take place, and who will have charge of same?

Hon. Mr. ROBB:

1. Verbal representations have been made that Mr. Byrnes would welcome a full inquiry into the administration of immigration canteen and restaurant.
2. The Department of Immigration have decided to abandon for this season the contract system. The work will be done under the supervision of an officer of the department, which makes such an inquiry unnecessary.

CANADIAN NATIONAL RAILWAYS—EARNINGS

Mr. RYCKMAN:

1. What were the gross earnings and working expenses on (a) Atlantic division of the Canadian National Railways; (b) on the Central division; (c) on the Western division for the year 1923?
2. What are the figures for 1924?

Hon. Mr. GRAHAM:

1. The information called for by these questions was brought down on Thursday, April 10, and is to be found in Hansard of that date, pages 1207 and 1210.

2. Not yet available.

BANK NOTE CIRCULATION

Mr. COOTE:

1. What was the total amount of Canadian bank notes in circulation on January 31, 1924?

2. What was the total amount held in the bank note redemption fund on the above date?

Hon. Mr. ROBB:

1. $156,865,776.

2. $6,119,119.

JUDGES, SALARIES AND PENSIONS

Mr. LEADER:

1. What was the total number of judges employed in the courts of Canada in the year 1919?

2. What was the aggregate amount of annual salaries paid for the year 1919?

3. What is the total number of judges employed at the present time?

4. What is the aggregate amount of the annual salaries at present payable?

5. What was the total amount of travelling expenses incurred by judges during the last fiscal year?

6. What is the number of judges retired on pensions now living?

7. What is the amount of pensions paid annually to retired judges?

Hon. Mr. LAPOINTE:

1. 280.

2. $1,452,554.57.

3. 277.

4. $1,982,400.00.

5. $134,623.47.

6. 38.

7. $179,166.63.

MONTREAL POST OFFICE

Mr. CHAPLIN:

1. How many permanent employees, other than carriers, were employed in the post offices in the city of Montreal during the fiscal year ending March 31, 1923?

2. What was the amount of income derived from these post offices for the above period?

3. How many pieces of mail matter were handled during the above period?

4. What were the total salaries paid in the above-named offices for the period named?

Hon. Mr. STEWART:

1. 811.

2. $3,680,396.67.

3. No record.

4. $1,230,247.84 (excluding salaries of carriers).

QUEBEC POST OFFICE

Mr. CHAPLIN:

1. How many permanent employees, other than carriers, were employed in the post office in the city of Quebec, during the fiscal year ending March 31, 1923?

2. What was the amount of income derived from these post offices for the above period?

3. How many pieces of mail matter were handled during the above period?

4. What were the total salaries paid in the above-named offices for the period named?

Hon. Mr. STEWART:

1. 171.

2. $523,025.91.

3. No record.

4. $225,230.09 (excluding salaries of carriers).

HAMILTON POST OFFICE

Mr. CHAPLIN:

1. How many permanent employees, other than carriers, were employed in the post offices in the city of Hamilton during the fiscal year ending March 31, 1923?

2. What was the amount of income derived from these post offices for the above period?

3. How many pieces of mail matter were handled during the above period?

4. What were the total salaries paid in the above-named offices for the period named?

Hon. Mr. STEWART:

1. 112.

2. $588,297.10.

3. No record.

4. $159,579.40 (excluding salaries of carriers).

TORONTO POST OFFICE

Mr. CHAPLIN:

1. How many permanent employees, other than carriers, were employed in the post offices in the city of Toronto, during the fiscal year ending March 31, 1923?

2. What was the amount of income derived from these post offices for the above period?

3. How many pieces of mail matter were handled during the above period?

4. What were the total salaries paid in the above-named offices for the period named?

Hon. Mr. STEWART:

1. 950.

2. $5,798,015.40.

3. No record.

4. $1,189,917.25 (excluding salaries of carriers).

GERMAN IMMIGRATION

Mr. HARRIS:

1. How many Germans arrived in Canada during 1923?

2. What number of these were artisans and what number were agriculturists?

3. How many Germans arrived in the months of January, February and March, 1924?

4. How many of those in question (3) were artisans and how many agriculturists?

Hon. Mr. ROBB:

1. 1,258.

2. Artisans, 32. Agriculturists, 794.

3. 524.

4. Artisans, 8. Agriculturists, 249.

Note: Figures for March, 1924, are incomplete.

COMPLETION OF QUEBEC BRIDGE

Mr. ROBERGE:*

1. Does the government propose to complete the Quebec bridge, especially the central space reserved to vehicles?

2. If so, when?

Hon. Mr. GRAHAM: The matter is under consideration.

STEEL IMPORTS FROM GREAT BRITAIN

Mr. SIMPSON:

1. Are the articles which were quoted in a recent issue of the Glasgow (Scotland) Herald, as follows,—

	Home Consumption	Export
Steel angles and sections.. ..	£10	£8/10 to £9
Steel joists..	£10	£8/10 to £9
Steel beams..	£11/10	£9/12
Steel channels..	£10/5	£8/15 to £9

Subject on importation to a customs valuation at the export price, or the price for the home market?

2. Have the customs authorities applied the provisions of the dumping sections to importations of the above?

Hon. Mr. BUREAU:

1. Subject on importation to customs valuation at fair market value when sold for home consumption in the usual and ordinary course in the country whence exported to Canada at the time of exportation to Canada.

2. No information that such goods have been sold to purchasers in Canada under conditions stated.

IMPORTS FROM THE UNITED STATES

Mr. TOBIN:

1. What was the amount of the total imports to Canada from the United States during 1914-15, 1915-16, 1916-17, 1917-18, 1918-19, 1919-20, 1921-22, 1922-23 and 1923-24?

2. What was the amount of duty collected on boots and shoes coming in from the United States during the same years?

3. What is the tariff on boots and shoes entering the United States from Canada?

Hon. Mr. BUREAU:

1 and 2. Statement of imports of boots and shoes from the United States entered for consumption in Canada and Customs duty collected:

[Mr. Harris.]

Item	Fiscal Year	Value	Customs Duty
Boots and shoes, rubber	1915	$100,352	$25,088
	1916	94,162	23,541
	1917	186,862	46,716

3. This question is being answered by the Department of Trade and Commerce.

SOLDIER SETTLEMENT BOARD—FIRE INSURANCE

Mr. JACOBS:

1. What amount of fire and other insurance is carried to cover property handled by the Soldier Settlement Board?

2. What is the sum paid out annually for premiums for the carrying of such insurance?

3. Did the firm of Lougheed and Taylor of Calgary act in placing of the above insurance?

4. Is the said firm still acting for the government as brokers in the above business?

Hon. Mr. ROBB:

1. As at February 29, 1924—In tariff companies, 23,949,844.25; in mutual companies, $4,804,638.73.

2. On tariff insurance, $148,380.87; on mutual insurance, $36,864.08. These amounts include those premiums paid by settlers themselves as well as those paid by the board as advances to settlers.

3. Prior to September, 1922, this firm was on the list of agents for the Calgary district and wrote a portion of the business in that district.

4. No.

NATIONAL DEBT

Mr. RINFRET:

1. Has the government any knowledge of a circular which has been wide spread by the Board of Trade of Montreal, placing at $3,513,000,000 the public debt of Canada?

2. Are those figures exact?

3. If not, what are the exact figures of the public debt of Canada?

Hon. Mr. ROBB:

1. Reference to this leaflet has been seen in the press. The figure of $3,513,000,000 apparently purports to include with the direct obligations of the Dominion, contingent liabilities in connection with the Canadian National Railway system.

2 and 3. The net debt of Canada at March 31st, 1924, as estimated for the budget speech, was $2,423,367,759.37.

DRY DOCK SUBSIDIES

Mr. WOODSWORTH:

1. How many dry docks are receiving subsidies from the government?

2. What are the names and locations of same?

3. What are the respective subsidies paid?

4. Under what conditions are they paid?

Hon. Mr. KING (Kootenay):

1. Six.

2 and 3—

Docks Completed and In Operation:—

	Annual subsidy
Duke of Connaught floating dock at Montreal, Que.	$105,000.00
Collingwood dry dock No. 2 at Collingwood, Ont.	9,208.96
Port Arthur dry dock at Port Arthur, Ont.	37,741.50
Prince Rupert dry dock at Prince Rupert, B.C.	76,970.88
Docks Under Construction:—	
St. John dry dock at Courtenay bay, St. John, N.B.	198,459.46
Burrard dry dock at North Vancouver, B.C.	19,981.96

4. Under conditions specified in Dry Docks Subsidies Act and respective agreement for each dock. These conditions are: (a) Dry dock to be kept in a constant state of efficiency. (b) No discrimination to be used against any vessel wishing to use the dock. (c) Rates charged for docking not to exceed rates agreed upon between the department and the company.

QUEBEC HARBOUR

Mr. LAVIGUEUR:

1. Does the government intend to take advantage of the extensive properties acquired along the St. Lawrence river, from Sillery to Champlain market, by the old Transcontinental Commission in order to build railway lines and deep water wharves, also to complete the Quebec harbour?

2. Has the government brought to the attention of the new board of directors of the National Railways the rights held and contracts made between the city of Quebec and the Transcontinental Commission in May, 1910, for the development and improvement of the Quebec harbour?

Hon. Mr. GRAHAM:

1. As warranted, property will be utilized for development purposes.

2. Management of Canadian National Railways are seized of all the information in connection with situation at Quebec.

POST OFFICE REVENUE AND EXPENDITURE

Mr. CARMICHAEL:

1. What was the net revenue of the Post Office Department for the fiscal year ending March 31, 1915?

2. What has been the net revenue for each of the fiscal years since above date at the three cent postage rate but exclusive of war tax stamps for cheques, etc.?

3. What was the total expenditure of the Post Office Department for the fiscal year ending March 31, 1915?

4. What has been the total expenditure for each of the fiscal years since?

Hon. Mr. STEWART:

1. $13,046,649.57.

[Mr. J. H. King.]

2. 1916, $18,858,409.93; 1917, $20,902,384.46; 1918, $21,345,394.48; 1919, $21,602,712.65; 1920, $24,449,916.97; 1921, $26,331,118.97; 1922, $26,-554,538.24; 1923, $29,262,232.78. No figures available as to amount used on cheques.

3. 1915, $15,961,191.47.

4. 1916, $16,090,138.77; 1917, $16,300,578.65; 1918, $18,046,557.90; 1919, $19,273,583.94; 1920, $20,774,385.20; 1921, $24,661,262.26; 1922, $28,-121,533.95; 1923, $27,794,501.89.

QUESTIONS PASSED AS ORDERS FOR RETURNS

MILITARY CLOTHING

Mr. THURSTON:

1. At whose request was the Order in Council No. P.C. 2263, published in The Canada Gazette of January 12, page 2348, passed?

2. What quantities of military clothing have been sold by the government during the years 1917 to 1923, inclusive?

3. To whom was this material sold?

Hon. Mr. MACDONALD: I have conferred with the hon. member who placed this question on the order paper, and find that the information he asked for refers not to military clothing, but to military uniforms. In that case the question stands as an order for return.

IMMIGRATION STAFFS

Mr. GARLAND (Carleton):

1. What are the names of the officials and other employees of the immigration staffs in (a) Great Britain; (b) Europe; (c) United States?

2. What did it cost to carry on this service during the fiscal year 1923 in the countries mentioned?

3. What countries, if any, in Europe, have been added to the preferred zone of immigration during the past year?

Hon. Mr. ROBB: Mr. Speaker, I ask that this stand as an order for return, and I now file the return.

VANCOUVER, TORONTO, MONTREAL AND QUEBEC PORTS

Mr. LAVIGUEUR:

What amount has been voted to develop each of the following ports—Vancouver, Toronto, Montreal and Quebec, and what amount has been spent up to date in connection with each of these ports?

APPOINTMENT OF RETURNED SOLDIERS

Mr. CLARK:

1. How many returned soldiers have been employed through appointment by the Civil Service Commission (a) since January 1, 1922; and (b) prior to January 1, 1922?

2. What proportion of appointments made by the Civil Service Commission between January 1, 1919, and January 1, 1922, were awarded to returned soldiers?

3. What proportion of appointments made by the Civil Service Commission since January 1, 1922, were awarded to returned soldiers?

Mr. CLARK:

1. How many appointments in the civil service have been exempted from the power of appointment by the Civil Service Commission since January 1, 1922?
2. How many of the appointments referred to in paragraph 1 are under the jurisdiction of the Department of Soldiers' Civil Re-establishment?
3. What proportion of the appointments made by departments other than Soldiers' Civil Re-establishment have been awarded to returned soldiers?
4. What proportion of the appointments made by the Department of Soldiers' Civil Re-establishment have been awarded to returned soldiers?

TRAVELLING EXPENSES OF MINISTERS

Mr. McBRIDE:

What were the total travelling expenses of each minister of the government for the fiscal years ending March 31, 1920, 1921, 1922 and 1923, or any portion of such fiscal years that each or any such ministers held office?

PULPWOOD COMMISSION

Mr. SHEARD (for Hon. Mr. STEVENS) moved:

For a copy of all evidence or statements made before the Royal Pulpwood Commission by Mr. Piche and other witnesses, members or officers of the government of Quebec.

Hon. J. A. ROBB (Acting Minister of Finance): Mr. Speaker, with reference to this motion, the Royal Commission on Pulpwood submit the following:

The commission desired to have a full discussion with the Quebec forestry officials which, among other things, involved matters concerning the internal policy of the Forest Service. In order to permit of frank discussion of such matters, a private hearing was requested by the forestry officials, which request was granted.

Under these circumstances the commission does not consider that it would be justified in disclosing the evidence presented by the Quebec forestry officials without the consent of that department of the Quebec government service.

I would therefore ask that my hon. friend withdraw the motion.

Right Hon. ARTHUR MEIGHEN: My hon. friend who made the motion is not here. I would suggest that it be allowed to stand in the meantime. I do not yet appreciate the reason for not disclosing the evidence.

Motion stands.

CANADIAN NATIONAL RAILWAYS—PURCHASE OF TIES

Mr. CHAPLIN moved:

For a copy of all letters, papers, reports and other documents relating to the purchase of railway ties by the Canadian National Railways or any of its officials, including correspondence with the firm or firms from which the said ties were purchased, reports on the price or prices of same, and also returns and vouchers showing the cost of all creosoting plants either under construction or completed by the Canadian National Railways, during the year 1923.

Hon. GEORGE P. GRAHAM (Minister of Railways): Mr. Speaker, the hon. gentleman (Mr. Chaplin) and myself promised the House that we would talk this over, but I regret to say that we have not done so yet. If you will bear with us a little while longer we will work it out.

Motion stands.

MOSER'S RIVER WHARF

Mr. BLACK (Halifax) moved:

For a copy of all correspondence exchanged between any member or members of the government, members of parliament, engineers, or representatives of government, or other party or parties during the years 1921, 1922 and 1923, in relation to the wharf, piers and warehouse at Moser's River, Halifax county, Nova Scotia (Necum Teuch).

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, I am not at all sure that it is possible for the government to comply with this motion. The hon. member asks, "For a copy of all correspondence exchanged between any member or members of the government, members of parliament, engineers, or representatives of government," and so on. Of course, a return may be brought down of any correspondence between the government and the other persons mentioned, but the government has not any knowledge of correspondence with members of parliament.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): The motion must be intended to have that meaning. The word "and" should be inserted before "members of parliament."

Mr. MACKENZIE KING: Yes.

Mr. SPEAKER: Motion as amended agreed to.

DEPARTMENT OF JUSTICE—LEGAL OPINIONS RE SALES TAX

Mr. CHAPLIN moved:

For a copy of all legal opinions given by the Department of Justice with respect to interpretation or effect of the present sales tax—Special War Revenue Act as re-enacted and amended by chapter 70 of the Statutes 1923.

Hon. ERNEST LAPOINTE (Minister of Justice): Mr. Speaker, I am sorry that I must object to the adoption of this motion. Such legal opinions are given by the Department of Justice in cases which are now pending before the courts, and to bring them down would, in my opinion, prejudice the Crown. It has never been the practice to produce these opinions.

Mr. SPEAKER: Is it the pleasure of the House that the hon. member shall have leave to withdraw his motion? Carried.

Motion withdrawn.

ST. FRANCOIS, ILE D'ORLEANS LIGHT-HOUSE KEEPER

Mr. DOUCET moved:

For a copy of all correspondence exchanged between the Minister of Marine and Fisheries, the government of Canada, the Civil Service Commission or its employees, and all other persons since the first day of January, 1923, on the subject of the dismissal of Mr. Lemelin, lighthouse-keeper at St. François, Ile d'Orleans, and the nomination of a new light-house-keeper.

Mr. MACKENZIE KING: This is another order that is badly worded. It says:

For a copy of all correspondence exchanged between the Minister of Marine and Fisheries, the government of Canada, the Civil Service Commission or its employees, and all other persons.

If what is sought is any correspondence the government or any member of the government has had with any of these parties, well and good, but as it is phrased it would seem to include any correspondence that employees or civil servants have had with any person. Of course, that could not possibly be brought down.

Mr. MEIGHEN: I would say there is no need of the words "or its employees."

Mr. SPEAKER: Motion as amended agreed to.

EXPORT LIQUOR LICENSES—SASKATCHEWAN

Mr. MORRISON moved:

For a copy of all letters, telegrams, correspondence and other documents in the possession of the government or any department of the government between the government and the government of Saskatchewan on the question of licenses for export liquor houses.

Mr. BUREAU: I would ask the hon. member to let this motion stand, as there are some suggestions to be made as to its wording.

Motion stands.

ST. GEDEON POSTMASTERSHIP

Mr. DOUCET moved:

For a copy of all correspondence exchanged between the Postmaster General or the government of Canada, the Civil Service Commission or its employees, and all other persons since the 1st January, 1922, to date, on the subject of the dismissal of Thomas Lavoie, postmaster at St. Gedeon, Chicoutimi county, and the nomination of a new postmaster at St. Gedeon. Also copies of the investigation that was held on the said Thomas Lavoie, and of the report of the investigators, as well as copies of applications made to the Civil Service Commission for the position of postmaster at St. Gedeon, and all petitions and certificates given in favour of or against, any of the applicants.

Mr. MACKENZIE KING: This order also is badly phrased. If the words "or its employees" were struck out and the word "other" before "persons," I think the order could pass in that form.

Mr. SPEAKER: Motion as amended agreed to.

HUDSON BAY RAILWAY

Hon. Mr. STEVENS moved:

For a copy of all reports, letters, telegrams and other documents, during the year 1917, from the resident engineer or any of his staff located at Port Nelson to the chief engineer of the Department of Railways and Canals, or the deputy minister or the minister or any official of the said department, having reference to the Hudson Bay Railway route and grain or other harbour facilities.

Mr. MACKENZIE KING: If this order passes it must be with the understanding that what is unreasonable in it will not be brought down. It might be interpreted as meaning that any communication from any member of the staff of the resident engineer to any clerk in the department would have to be brought down. I do not think the mover intended the motion to have that construction.

Motion agreed to.

UNOPPOSED MOTIONS FOR PAPERS

PORT JOLI-SABLE ISLAND ROAD

Mr. BLACK (Halifax):

For a copy of all correspondence and other documents between the Dominion government and the government of Nova Scotia in respect to construction of the Port Joli-Sable Island road, Nova Scotia, and federal aid thereto; also copies of estimates, engineers' reports, applications for federal aid, vouchers and other documents relating to said matters.

ST. MARGARET'S BAY ROAD

Mr. BLACK (Halifax):

For a copy of all correspondence between the Dominion government and the government of Nova Scotia in respect to construction of the St. Margaret's Bay road, Nova Scotia, and federal aid thereto; also copies of estimates, engineers' reports, applications for federal aid, vouchers and other documents relating to said matters.

MR. PETER HICKEY

Mr. HANSON:

For a copy of all correspondence, letters, telegrams and other documents, with regard to the dismissal of Mr. Peter Hickey as lighthouse-keeper at Fish island light, Prince county, Prince Edward Island, and if an investigation was held, a copy of the evidence and the investigator's report.

DISMISSAL OF C. A. COX

Hon. Mr. STEVENS:

For a copy of all correspondence, since January, 1922, between the Department of Indian Affairs and Mr. Ditchburn, representative of the department in British Columbia, and members of parliament, or others, in connection with the dismissal of C. A. Cox.

GLOUCESTER LOBSTER FISHING SEASON

Mr. ROBICHAUD:

For a copy of all correspondence, petitions, telegrams and other documents relating to certain representations made to the Department of Marine and Fisheries for the granting of a fall season to the lobster fishermen in the county of Gloucester, during the fishing season of 1923.

TORONTO VIADUCT

Mr. CHURCH:

For a copy of all reports, recommendations, papers, contracts, letters, telegrams and other documents from Sir Henry Thornton, president of the National Railways, relating to the carrying out of the viaduct agreement at Toronto, and all replies of the government thereto; also copy of all correspondence with the Canadian Pacific Railway, if any, or from the city of Toronto or the Harbour Commission of Toronto on this question.

IMPORTATION OF ELECTRIC LAMPS FROM HOLLAND

Mr. COOTE:

For a copy of all papers and documents, including appraiser's reports, relating to the importation of electric lamps from Holland since the 1st of January, 1923.

CUSTOMS REGULATIONS

Mr. COOTE:

For a copy of all regulations made by the Minister of Customs under S.S.5, sec. 6, chapter 11, Statutes of Canada 1907, an Act to amend the Customs Act.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed from Thursday, April 10, the debate on the motion of Hon. J. A. Robb (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into committee of Ways and Means.

Sir HENRY DRAYTON (West York): Mr. Speaker, in commenting on the budget the other day I pointed out that it was frank and friendly. It was frank in that the Acting Minister of Finance (Mr. Robb) pointed very clearly to some important items in the figures he presented in connection with the reduction of debt which were legacies from the past, legacies which in this case were fruitful of dividend. It was friendly in that he approved of the action I took some years ago in trying to tell the truth to the people of this country as to what our exact financial position was. I wish our hon. friend would stick a little closer to the text, however. I am afraid that it is idle for the country to congratulate itself upon the fact that there is some suggested diminution in the national debt. Of course it entirely depends on how you figure it; it entirely depends on the method you adopt in your calculations. My hon. friend's own figures show that the whole surplus for the year's operations amounted to $20,000,000 odd. The salvage of former years, now applied, amounted to $9,600,000 odd. That of course, was made up, as is shown by the budget itself, in part by the writing off of our obligation on the basis of the present rate of interest as against the interest calculated upon all our bonds retired. That was something that had nothing to do with this year's operations as such. Then again my hon. friend has some further figures which amount to $1,300,000. I have a recollection of some old credits which were kept. There is one old credit which was kept faithfully and religiously. It was so old that I would be afraid to say when it started: It had to do with the pelagic sealing claims which might arise against us.

There was another one which arose out of the sale of the Royal Mounted Police buildings at Calgary, which was claimed to be a sum of money which could not be taken into our general accounting but which had to be held over on further future investment; and, of course there is also the ever-present balance in connection with exchange. I have no doubt but that what my hon. friend has done is to go back to these old matters—perhaps perfectly properly; I am not going to say not. It may be that no sealing claim will ever be made; it may be that the trust fund in connection with the Calgary property is in such a position that it could be applied to our purpose. But the point is that the whole of this $1,300,000, odd as pointed out by my hon. friend, has absolutely nothing to do with this year's operations.

Let us just see how the miracle happened—one year a deficit of $31,000,000; the next year a writing off of $30,000,000 of debt; the whole saving claimed this year being some $4,000,000 with a comparatively small increase in the nation's income. How does it come about? It simply comes about by treating that $50,000,000 which had to be raised for railway purposes as not affecting the debt one way or the other. That is how it is all done, just a mere matter of bookkeeping; you can do it any way you like, but that is the way in which it has been done.

Mr. ROBB: Will my hon. friend say in what respect we differed from the methods followed by himself?

Sir HENRY DRAYTON: My hon. friend, I think, is wrong. I might very well say to my hon. friend that if we in times of stress, far different times from what we have to-day, had to raise money in a manner which was not customary, that is no answer to-day. But my hon. friend is not right even then. Any moneys which were raised in former times by a guaranteed loan and not carried into the debt, as I recollect it, were invariably either for the retirement of existing capital obligations or else the construction of absolutely new works. Now I am going to modify that again. I say that when you do that, there is certainly some excuse for it if you are retiring capital obligations; there is certainly some excuse for it if you are constructing new property; but even then, unless we delude ourselves, those sums ought not now to be looked upon as an asset, but as an addition to the debt. Why? Hon. gentlemen have not got to remember very far back to what took place in the House the other day. we have cut down the list upwards of $400,000,000, if not more, of moneys which we have advanced to the system as being in active assets and representing nothing. My hon. friend the Minister of Railways said, and said very truly, that further reductions ought to be made; he is right. Why, every single year we own this property we go behind in connection with it the exact amount that we put up, having regard to our deficit account, interest and the like; so it becomes increasingly necessary that we ought not to look upon advances to railways, no matter how we disguise them, as constituting an asset which is net; it is not. Last year my hon. friend knows the railways went behind millions, and to the extent that they went behind millions to that extent is the position made just so much worse.

Let us go back to that $50,000,000 item again. The minister says that a substantial amount of that still stands on hand. I venture to say that if my hon. friend to-day has $18,000,000 of it left he is lucky, and if he has more he will tell me. But I venture to say he has not, and I further venture to say that before this year's figures are properly and finally closed, instead of having a balance of $18,000,000, his balance will look much more like $15,000,000, and I think my hon. friend will agree with me. What is this $50,000,000 for? My hon. friend says, new capital construction. What new capital construction has this House authorized? There is just one bit, and I am going to ask my hon. friend to interrupt me at once if I am wrong—only one bit of capital construction has been authorized and has taken place that I know of, and that is the "Longlac" cut-off connecting the old Canadian Northern line with the Transcontinental in the West. Am I wrong? Here is the Minister of Railways on the one hand, and the Acting Minister of Finance on the other; I ask them am I wrong? Both gentlemen know that that is the only bit of capital work that is being carried on. and what did that cost? It might cost $2,000,000; it might be worked up to $2,500,000; but again I venture to say that neither of these gentlemen will correct me when I say that it will not exceed $2,500,000.

Mr. GRAHAM: Would not betterments be included in capital?

Sir HENRY DRAYTON: I am coming to that in a minute. I am taking one thing at a time and I am now taking new construction. Does the minister desire to contradict that statement?

Mr. GRAHAM: I have not the figures with me, but I think probably the hon. member is wrong.

Sir HENRY DRAYTON: The minister thinks so. He will not hazard this statement, that there has been one single bit of other capital new work done; and if he does not know it, he ought to know it. But the truth is there is nothing further except that small bit of work, $2,500,000, which justifies a charge against capital in so far as new work is concerned, out of this whole $50,000,000.

Next, there is a twilight zone which is exceedingly hard to find things in and define things in, and that twilight zone is the zone that exists between betterments on the one hand and maintenance on the other; it is very, very hard to distinguish there. Why, if you want to so run a railway, you can have such charges to betterments that you can relieve yourself of practically all maintenance charges, get a wonderful operating statement, and frightfully overload your capital account. Betterments? I wonder if it is going to be suggested that all the rest of this is in betterments outside of that $2,500,000. Well, if it be all in betterments, Mr. Speaker, I marvel very much that instead of having an operating result of $20,000,000 this year, we have not an operating result of $50,000,000 or $60,000,000, because that ought to be arrived at if those methods be adopted. Betterments? Why, the Minister of Railways himself says that we have

already got more moneys against these railways than they are worth. Betterments against a property that we have already got charged up in our books with a sum far greater than its value? To talk about betterments in connection with that as a matter of net capital not subject to deduction, I submit, Mr. Speaker, is perfectly ridiculous. Well, there we are. That is how this surplus is arrived at; that is how we have the miracle, that claimed saving of only $4,000,000, on the one side, with but a small increase of revenue on the other. That is how the change is brought about from this deficit of $31,000,000 to the credit of $30,000,000.

Now, Mr. Speaker, the government claim to be an economical government. They actually have managed to economize in some things. I have gone over the formal statements, the last one bringing the period down to the 10th April, 1924, and I find the government have made some savings or savings have been made for them—in fact the latter statement is true of most of the savings. I am going to deal with these savings for a few minutes. In the first instance there is a saving on interest of $1,518,680. I wonder if the Acting Minister of Finance claims the credit for all that saving. The truth is that in all these refunding operations the government, of course, gets the benefit of the current rate of interest on the new bonds sold, and the people that lend the money really are the ones that bring about the result. We therefore have a saving of $1,518,680 but I do not know that anyone could look upon that as a great government achievement. Then we have a saving on premiums, discount and exchange of $121,413. My own opinion as to that is that it depends entirely upon the extent of the movement of money from one country to the other. That was something which no government could help, whether we take the year before last, or this year and in the year before last the amount was very small. Then we have these other savings claimed:

Legislation	$ 385,832
Health	10,079
Pensions	529,027
National Defence	677,430
Mounted Police	81,511
Railways and Canals, consolidated fund	1,617,462
Lighthouse and coast service	9,358
Mines	206,748
Railways and Canals, collection	1,459,173
Dominion Lands and Parks	535,590
Labour	1,033,642
Soldiers' Land Settlement	306,982
Soldiers' Civil Re-establishment	2,528,518
Total over	$11,021,000

The savings which involve no administrative credit are:

Savings on interest	$1,518,680
Premium, discount and exchange	121,413
Pensions	529,027
Soldiers' Land Settlement	306,982
Soldiers' Civil Re-establishment	2,528,518
Total over	$5,004,620

Now when we start to check up this matter the official returns show that the whole of the savings in all these consolidated fund payments for the year actually amounts to the magnificent sum of $1,055,060 only. That is why I have gone into this matter in detail. The items that I have enumerated are not items that any government desirous of considering the situation fairly could claim any credit for. We concede the items to which the government properly should not claim for amount to $5,004,000. Then there are other things working in favour of the government. The business of the Department of Railways and Canals is disappearing day by day; it is being more and more taken over by the management of the amalgamated lines. The tremendous machinery once required to run the Intercolonial is required no longer. Of course, expenses have got to come down there, and the added savings there alone amount to $3,076,635 which makes a total of $8,088,225 of savings that could not very well be avoided by the government—savings that were actually forced upon them. So that if you deduct these from the total savings effected it will be seen that the government can claim credit for administrative savings amounting to $2,940,000, but the statement of the government itself shows only $1,055,000 in all. Let us go a little bit further in the analysis of this matter. If you take the amount of net savings left from the savings shown by the government's own documents you have left a balance of $9,965,000 that has been entirely dissipated by the government. It is gone, gone into new ventures, new schemes of expenditure, new ideas of getting rid of money—either that or else there has been great extravagance in the control of existing departments. Well, if such be the definition of an economical government I wonder what the definition of an extravagant government ought to be. The figures are there to speak for themselves. However, I am not going to detain the House further in going over these figures. I am now going to address myself to the fiscal policy of the government.

4 p.m.

The Great War was often referred to as one of attrition. The government's campaign against Canadian industry might also be re-

ferred to as one of attrition. Here a bite and there a bite; something lopped off this man and a present given to that man; no general policy, no declaration of policy at all, but a process of tariff changing and tariff meddling brought about simply and solely for the purpose of deriving political advantage—that and nothing else. I should like to know who is helped by these tariff changes? Outside of my hon. friends opposite who are enjoying the emoluments of office we know that nobody whatever has been helped.

Who can honestly say that agriculture is to-day one whit better off than it was two years ago? No one can honestly say that. Who can say that agriculture to-day has received the slightest benefit from the cut in the tariff here and the cut there? No one will say so, not even anyone from the serried ranks of agriculture itself. They know that no one has received any benefit; they know that their position to-day has not been helped one whit by all the so-called measures of relief, the chipping of the tariff here and the chipping of it there. But what about industry? What about the other productive agencies of the country? You may have little changes here and little changes there that mean nothing whatever to the consumer, but which may mean everything to the worker, which may mean all the difference between profit and loss to the producer, and which may cut down his output and profit to such an extent that inevitably his cost of output must increase. Yes, it has helped nobody in Canada other than those occuping the treasury benches, and those of us drawing our parliamentary indemnities and seeking to continue to draw them. But it certainly has helped others. It certainly has helped the American manufacturer, the American railroader. What have my hon. friends already done in connection with their changes in the agricultural implement schedule? I am going to read a quotation from the United States Department of Commerce, which is interested in these things from an American standpoint. This is what it says:

> The outstanding feature is the large increase in exports to Argentine, amounting to nearly $8,000,000 and showing a total of $12,975,828. Exports for Canada, however, were greater, amounting to $13,736,091, an increase of more than four million dollars. Canada and Argentine occupied first and second place, respectively, in the value of implements purchased from this country.

Yes, my hon. friends are able to boast of something. They have done something. They have placed this country that used to be looked upon, and rightly so, as a great country of export as regards agricultural implements, in the position of ranking first in the list of Uncle Sam's exports of helping American manufacturers and American labour in something which ought to be indigenous to our country to a greater extent than any other industry.

Mr. McMASTER: For what year are those imports of American agricultural implements into Canada calculated?

Sir HENRY DRAYTON: This is the last statement I have been able to get. I have not the exact date with me, but I will get it for my hon. friend afterwards.

Mr. McMASTER: It would not be under the operation of the new duties.

Sir HENRY DRAYTON: To-day's duties? Certainly not. But we have had a continuous succession of cuts in the duty on agricultural implements.

Mr. McMASTER: For some of which my right hon. friend's leader boasted a short time ago.

Sir HENRY DRAYTON: I will debate that question now if my hon. friend so desires.

Mr. McMASTER: Not if my hon. friend would rather not be interrupted now.

Sir HENRY DRAYTON: I do not mind a bit; but if I digress, my hon. friend knows that I shall be doing so on his account, and I do not want to take up too much of the time of the House.

That is pretty good for this process of attrition; these strategic methods of the government are doing pretty well. More than one-half of the men who ought to be employed in the agricultural implement business are either idle in Canada or working in the United States. The process of attrition is going along well. I do not know if my hon. friends are very proud of the fact. Not only is there attrition in this industry, but the tinplate industry, the window-glass industry and the woollen industry are being strangled, starved to death. Let us assume that the western farmer has to pay all the duties in connection with the agricultural implements. Does anyone seriously think that a further remission of those duties is really going to help the farmer one bit? Surely, everybody who thinks about the matter at all, knows full well that Canadian agricultural duties have absolutely nothing whatever to do with the plight of the Canadian farmer to-day. Surely they know that all this is merely a political cry. If they do not know that, they pay no attention whatever to current economic happenings. There is no duty on agricultural im-

plements to-day in the United States. There was until they got the markets. They may have put the duty back on the last tariff; I did not bother to look, but they are not worrying about the duty there. Will anyone say that the American grain grower is better off than the Canadian grain grower? Why, hon gentlemen know that that is not the case. They know that the position of the western states is infinitely worse than that of our western territory, and they further know that mile for mile, load for load, it would cost the Canadian farmer over $15,000,000 more annually to transport his crop by existing railway rates in the United States. What the real difficulties of the farmer are, is also known very well. I am going to state them, and I am going to ask hon. gentlemen representing the West to tell me if I am wrong in connection with them. The first great difficulty of the farmer is loss of purchasing power in the great food consuming countries as a result of the war. Is there any dispute about that? Is that not the first and the greatest? The second difficulty is the practically prohibitive tariff of the United States, in the main directed against Canadian farm products. Is there any dispute about that?

Mr. McMASTER: I must draw the hon. member's attention to the fact that between 1913 and 1922 the exports of farm products, cereals, to Europe that is to say, continental Europe, increased six times and to Great Britain and continental Europe taken together about twice.

Sir HENRY DRAYTON: Perfectly true, there was an increase. Have you purchasing power to-day in Europe which will anything like look after your present crop that is now being offered, at a price that will enable you to live?

Mr. McMASTER: No.

Sir HENRY DRAYTON: We all know that the destruction in Europe is one of the chief and main troubles of the farmers.

An hon. MEMBER: What about the manufacturer?

Sir HENRY DRAYTON: The manufacturer of to-day is full of trouble, so much that I would not think the hon. gentleman who interrupts would want to increase it. These changes in the tariff are doing no good to anybody and only causing further trouble to the manufacturers.

My second point is this: The practically prohibitive tariff of the United States which is in the main directed against Canadian farm products. Is there any dispute about that? I pause for a reply on this point. Well, apparently there is none. I do not see very well how there could be an honest dispute on that point. The third point is that there has been a deflation of prices which has been more acute in grain and live stock, without anything like a corresponding deflation in the farmers' cost of operation. Is there any dispute about that? Can there be? There being no dispute on that point, we have the three reasons to-day why the agricultural West is languishing. Can anyone honestly say that the Canadian customs tariff on agricultural implements has the slightest thing to do with any one of these points?

An hon. MEMBER: Why, certainly.

Sir HENRY DRAYTON: An hon. member says "why, certainly". I would like to know how and why. It is beyond me. It certainly was not responsible for the war. It certainly has not been responsible for the United States tariff, and I venture to say that any hon. gentleman who takes the trouble to seriously consider the question will see it has little to do with the costs of operation. It is a mere bagatelle. If it averaged seven dollars a year, it is every cent it would average. What are we doing? What is the government's idea? There are the three difficulties with the farmers, and what they propose to do to meet those difficulties is not to help the farmer but to injure the manufacturers and to injure industrial workers. The government's past record of itself was such as to promote uneasiness and fear in the minds of business men, and I am going to quote now what the right hon. Minister of Finance (Mr. Fielding) said. The country deplores his absence to-day, and the thinking men of the country, at any rate economically, are convinced that he would never have brought down this budget. Less than a year ago on the question of stability he said:

> Nevertheless it is desirable that something like an assurance of tariff stability should be given to business men. Speaking broadly, it is possible to give the country a reasonable assurance of stability of tariff. Such assurances are very desirable for no business man would care to enter upon enterprises which may be brought into peril by frequent tariff changes.

Does that not sound sane and reasonable? The government was pledged to such a policy before fresh political exigencies arose. Then he goes on:

> Subject to the exceptional conditions such as I have mentioned, I think the country should be content to accept the tariff as it will now stand as one as fair and reasonable as can be prepared under all the circumstances, and business men should be able to carry on the various enterprises without the fear of being soon disturbed by further changes.

Stability of tariff cannot be expected while rates are high. But where the rates are for the most part, as in our tariff, moderate, a reasonable measure of tariff stability should be assured.

He said: "Where rates are high." I think the Acting Minister of Finance (Mr. Robb) would be unable to find lower rates anywhere in the whole tariff than those applicable to-day to agricultural implements. My hon. friend knows there is no lower rate. Further, let him go back ten years; was there ever any rate as low as the rate on agricultural implements? Why this budget, Mr. Speaker, shows that the government cares nothing about business stability, nothing whatever about industrial stability, nothing whatever about almost the last word of the right hon. minister whom hon. members opposite all so much delighted to honour, but whom they hold in such short recollection. Oh, no. There has been a new political exigency. Something more had to be done for and with the West. A new deal had to be made. The Right Hon. Mr. Fielding, his wisdom and experience are cast aside. Oh, no, this government did not care for stability in business, for stability in production, but they are very much concerned in stability of office and in the stability of the votes to be obtained from the Progressive party. Working to these ends, they are working well, and they think it is worth while. After all is it worth while? The right hon. gentleman had something else to say. I want to point out to the country that practically all the important tariff cuts in this budget are in favour of American importations. Is there any dispute about that? Is it not well known? What did the right hon. minister have to say about that? He said in this same budget:

Any desire that we may have towards a modification of our own tariff is naturally held in check by the high tariff of the United States.

That was Right Hon. Mr. Fielding's stand, not going at that time, as I then thought, nearly as far as Canada's national interests really demanded. However, Mr. Fielding did not want to see the country entirely handed over to the United States manufacturers. He wanted to see what would happen. Well, what has happened? The only thing that has happened since is that there are further barriers placed against the sale of our farm products in the American markets. That is all that has happened—nothing else. If this government ever thinks nationally, if they ever think in the general Canadian interests, do hon. members think after the United States tariff on wheat, for example, had been further raised from 30 to 42 cents, that they would have then turned round and seized the opportunity to give further concessions to the American exporters of this country? It really, Mr. Speaker, would appear consonant with Canadian government policy that if the United States had placed an absolute embargo on Canadian foodstuffs going into the United States to counter by placing certain favoured lines of American manufacture on the free list. That would seem to be the logical result of what they are doing.

We think seriously of this budget, Mr. Speaker, not only for what it does, but, we think far more of the state of mind it portrays, of the attitude on the part of the government that it shows, and of the absolute uncertainty that it creates. Look for one minute, Mr. Speaker, upon our position and consider the action of the government in relation to it, and you will appreciate to the full what I mean. We believe that Canadian interests ought to be the first concern of this House—not a pandering to the interest of those representing any section, but a furtherance of the interests of the whole country. In other words, we believe that this parliament should be just as much Canadian and look just as much after the building up of the Dominion as the American congress is American in looking after the building up of the United States and the advancement of its national interests. We believe therefore that the duty of our public men to-day is to see that Canada conserves and preserves every single one of her natural resources, to the end that the maximum amount of work can be got out of them, with the result that our workmen will earn the maximum amount of wages; that is, we ought to get 100 per cent of what our resources are capable of returning to us.

The negation of all these ideas is seen in the budget. Our conviction is that the bigger the pay roll the better for Canada; that to-day, probably more than at any other time, the happiness of our people can be best measured by our pay roll, whether that pay roll be industrial or whether it be agricultural; in a word, that purchasing power does not lose its virtues merely because it is derived from the factory instead of from the farm. The United States, for example, has not suffered because her industrial pay roll rose from $2,600,000,000 in 1904 to $8,200,000,000 in 1921; because the cost of raw material she used in her factories rose from $14,000,000,000 to $43,000,000,000 in the same period; nor because the value added by manufacture rose from $6,000,000,000 to $18,000,000,000. The purchasing power of her people was just as good, and enabled them to live just as well

and just as happily, and kept up just as many homes. In like manner Canada has not suffered because her industrial pay roll increased from $113,000,000 in 1900 to $581,000,000 in 1921; she has not suffered, nor have her farmers and producers suffered, because the raw materials used rose from $226,000,000 to $1,446,000,000 in the same period, and the gross value of manufactured products from $481,000,000 to $2,747,000,000.

I should like to know how our national business could have been carried on unless that had happened; I should like to know how the western railways could have been built; I should like to know how it would have been possible for our roads to-day to be carrying grain from the prairies at but a percentage of the cost charged by American roads. Would all of this have been possible but for the increase I have just indicated of Canada's industrial resources, her industrial wealth, her industrial output, and the tremendous field of taxation thus afforded.

Agriculture and manufacturing industry ought not to be antagonistic one to the other. They are not; they are complementary. They are made antagonistic from time to time simply for political purposes by people who think more of office than of the good of the country. What does the farmer grow his grain for? Not to eat it himself. What does he make his butter for? Not to eat it himself. His interest is in the industrial worker. The industrial worker has to be fed, and it is the providing him with foodstuffs that brings profits to the farmer. Surely it would be very, very much better for the Canadian farmer to-day to add to our population rather than send many of our best to the United States, where he cannot reach them with his products. Every single man that this policy sends across the line to join the 181,000 Canadians who have already migrated there is just simply further depleting the farmer's market.

Mr. COOTE: Does the hon. member insinuate that the farmers of this country wish our workmen to migrate to the United States? If so, would he please give the House some proof in support of his insinuation?

Sir HENRY DRAYTON: The hon. gentleman must not think that anyone is going to mix up the farmer with the farmer-politician. I never have. I do not believe there is one farmer in the West to-day who wants to hurt Canadian industry.

Mr. COOTE: I am merely asking the hon. member if he does insinuate that.

Sir HENRY DRAYTON: I have answered the hon. gentleman. I do say that for political purposes the thing is being done. No one knows that better than the hon. gentleman himself. He knows perfectly well that the total savings to his constituents by reason of the tariff reductions will amount to nothing individually. But nevertheless for the purpose of taking that rag from the wavering hands across the aisle and flaunting it in his constituency, he is quite willing to imperil the standing of our industrial workers.

Some hon. MEMBERS: Oh, oh.

Sir HENRY DRAYTON: I am extremely serious when I say that.

Mr. WOODSWORTH: Would the hon. member distinguish between workers in various sections of Canada? Does he think it will imperil the standing of workers in the Maritime provinces and not the standing of workers west of the Great Lakes?

Sir HENRY DRAYTON: I tell my hon. friend that there should be absolutely no difference made between our workers anywhere. Wherever there is work to be done in this country, it should be our interest to help our workers to secure it. I know of no distinction one way or the other.

Now, Mr. Speaker, Ontario is looked upon as the home of the agricultural implement industry.

Mr. MacLEAN (Prince): Before the hon. member proceeds would he kindly define what those Canadian interests are that he says should be protected?

Sir HENRY DRAYTON: Canadian interests surely must mean the interests of every proper activity in the whole Dominion which will afford our people the opportunity of supporting their families. That is a truly Canadian policy. I place no limitation on it. I know some people would introduce exceptions, favouring one class here as against another class there, creating trouble between this man and that man. But I do not understand the word "Canadian" to be so circumscribed.

Now, Mr. Speaker, I was saying that Ontario is looked upon as the home of the agricultural implement industry. It is a province which probably can be injured by my hon. friends with the least possible political danger to themselves. They are pretty well known in Ontario now. It may be the judgment of my hon. friends that it is largely the industries of Ontario which are being handed over as a sacrifice, as a burnt offering on this occasion. But I think they are wrong. This industry, which is indigenous to this country, has achieved a great deal of growth and has been continually expanding.

It is represented to-day in practically every province; I could give a few names in each province in the Dominion.

Mr. LAPOINTE: Hear, hear.

Sir HENRY DRAYTON: My hon. friend says, "hear, hear." I am going to get him to say "hear, hear" again, because I will show that this industry has made conspicuous progress in his own fair province. I am going to illustrate that by reading a few names.

Mr. LAPOINTE: That is not what the Tory newspapers say.

Sir HENRY DRAYTON: My Hon. friend will find that I am perfectly fair with him. There is quite a bit of business done in Quebec, and I am going to be quite fair and read the list. Here are the names, and I daresay my hon. friend will be familiar with a lot of them:

Beauchemin & Fils, Sorel.
The Matthew Moody & Sons Co., Terrebone.
W. F. Vilas, Cowansville.
A. Bélanger, Limited, Montmagny.
J. B. Doré & Fils, Montreal.
P. T. Legare, Limited, Quebec.
T. P. Logan Company, Limited, Quebec.
La Cie Charles A. Julien, Limitee, Port Rouge.
Plessisville Foundry, Plessisville.
Omega Machinery Company, Limited, St. Hyacinthe.
Roch Beauvais, Laprairie.
La Compagnie Bedard Limitee, L'Assumption.
La Cie Dussault & Lamoureaux, St. Hyacinthe.
Chalifoux & Fils, St. Hyacinthe.
The Godbout Company, Limited, St. Almé.
Laliberte & Boisvert, Plessisville.
Separateurs Domo, St. Hyacinthe.
Jean Tardiff, Plessisville.
La Compagnie Industrielle de St. François, Ltd.
Canadian Fairbanks-Morse Company, Limited, Montreal.
Canada Axe and Harvest Tool Company, Limited, Montreal.
Dominion Snath Company, Limited, Waterville.
Thomas Davidson Manufacturing Company, Limited, Montreal.
The Bedford Manufacturing Company, Bedford.
La Cie Desjardins, Limitee, St. André de Kamouraska.
Dominion Carriage Company, Limited, Montreal.
James Kenehan, Montreal.
Latour and Frere, Lesage.
La Manufacture de Voitures de Laurierville, Laurierville.
Arthur Richard, Ignace.
St. Lawrence Wagon Company, Limited, Montreal.

That is a rather large list. My hon. friend says that the Conservative papers say there are none in Quebec. I want to do Quebec full justice, and I have presented the list of them. I do not, however, remember any Conservative paper having said that. But my hon. friend tells me that is the case; perhaps he will deal with that when he is speaking on the budget.

[Sir Henry Drayton.]

Mr. LAPOINTE: I shall take that liberty.

Sir HENRY DRAYTON: Are the members who represent Quebec constituencies interested in the industrial welfare of their province? They have seen the industrial pay roll of the province of Quebec increase from $36,000,000 in 1900 to $164,000,000 in 1921. Are they entirely indifferent to the record of their province in that respect? Is it a matter of no moment to them? They have seen the cost of materials used in Quebec factories rise from $86,000,000 in 1900 to $406,000,000 in 1921; are they indifferent to that market for the Quebec farmer, the Quebec lumberman, the Quebec raw material producer? They have seen the gross value of their manufactured products increased from $158,000,000 to $784,000,000 in the same period. Are they interested? I should think they would be rather proud of that record. Are they really interested in keeping Quebec industrial workers at home, or do they want to wish them God-speed on their exodus to the States? They have had plenty of opportunities to do that during the last year; there have been any number of trains from Quebec carrying workmen from Quebec parishes, workmen who have been going to the States to get that which was denied them at home.

Mr. LAPOINTE: Mostly farmers.

Sir HENRY DRAYTON: My hon. friend says they are whiskey farmers?

Mr. LAPOINTE: There is something wrong with my hon. friend's ear. I said, mostly farmers.

Sir HENRY DRAYTON: I thank my hon. friend. I do not know where the trouble was, but I thought he said whiskey farmers.

Mr. LAPOINTE: The hon. gentleman wanted to hear that word.

Sir HENRY DRAYTON: Well, maybe they are mostly farmers. But is my hon. friend going to say that that was because the implement men were charging too high prices in Quebec? He has the opportunity.

Mr. LAPOINTE: What?

Sir HENRY DRAYTON: What is the matter with my hon. friend's ears?

Mr. LAPOINTE: What is the matter with my hon. friend himself?

Sir HENRY DRAYTON: My hon. friend knows it is nonsense. He knows that workers

have left Quebec in considerable numbers, yes, in thousands, and there is no use shutting one's eyes to it. Is he not interested, are the Quebec members not interested, in keeping the people of that province at home? Or do they want to wish them God-speed as they go to the States? The industrial record of Quebec is a fine record. I wonder how many gentlemen from Quebec are not only proud of it, but remembering also, as they do, their great compatriot, Sir Wilfrid Laurier, look upon the achievement of Quebec industry as one of the great monuments of his life? Do Quebec members believe in the Laurier-Fielding tariff, which they so assiduously preached at the last election? If they believe in it, if there be any honesty left in connection with the consideration of these questions; if these gentlemen believe in their province and believe in themselves, they will vote against this budget; they will vote to promote the interests of their province and the interests of their country. What is the reason of this cut in the duty on agricultural implements?

Mr. CALDWELL: As the hon. member is dwelling so largely on agricultural implements, may I ask him what is to hinder the Canadian manufacturer from taking advantage of that great market to the south when there is no duty on farm implements entering there?

Sir HENRY DRAYTON: That indeed is a brilliant suggestion. That is just the sort of suggestion I would expect from the hon. gentleman. It is just the sort of suggestion—

Some hon. MEMBERS: Answer it; answer it.

Sir HENRY DRAYTON: What is the matter with hon. gentlemen? They will get their answer. I do not mind being interrupted. They will get their answer just when I am going to answer the question; I have the floor. I say that this is the kind of question I would expect to get put to me by somebody, that in this year of grace it would honestly be suggested that something could be done by a country of nine millions of people towards forcing upon a world of tariffs everywhere free trade, and being able to get away with it. My hon. friend asks what about the great country to the south. Surely my hon. friend knows the size and the output of the American manufacturer. Surely he knows that so far in Canada we have been trying to get along as a united country doing something each for the other. Surely he knows, for example, that the Canadian manufacturer helps pay the wages by special duty, small it is true, of the miners down in Nova Scotia. Surely he knows that he helps to pay through taxes on a hundred and one things. Surely he knows that mass production always is and always must be cheaper.

Mr. CALDWELL: I am afraid the hon. member did not hear my question.

Sir HENRY DRAYTON: Well, let us have it again.

Mr. CALDWELL: What is to prevent the Canadian manufacturer of farm inplements from taking advantage of that great market to the south in view of the fact that there is no duty on farm implements entering the United States?

Sir HENRY DRAYTON: I have been trying to show that it is more expensive to manufacture here, but I will tell my hon. friend something that is just as plain as the nose on anybody's face. Let Canadians once start putting agents in United States territory, let them once get their foot in there in connection with the manufacture of farm implements or anything else, and you will have an emergency measure brought down in congress the next day and a tariff put on. We have had a tariff put on grain, on everything.

Mr. CALDWELL: May I ask another question?

Sir HENRY DRAYTON: If it is closer to the point, I do not mind.

Mr. CALDWELL: Is it not a fact that the Canadian manufacturer of farm implements is competing not only with the United States manufacturer, but with the European manufacturer who has the advantage of the cheap labour of Europe? The only place the Canadian manufacturer cannot compete is at home.

Sir HENRY DRAYTON: My hon. friend is an agent himself.

Mr. CALDWELL: No.

Sir HENRY DRAYTON: He sells fertilizers.

Mr. CALDWELL: I wish to correct my hon. friend. I am not an agent for anything, and have not been for a long number of years.

Sir HENRY DRAYTON: He used to be.

Mr. CALDWELL: I was never a machinery agent.

Sir HENRY DRAYTON: If the hon. member had known anything about it he would not have asked the question. My hon. friend must know very well that to-day Canadian manufacturers are maintaining factories in American territory because it is cheaper; he knows that is where they sell from. If he does not know it, it is quite impossible for me to try and inform him.

Mr. MORRISON: I was told by the manager of one of the largest implement manufacturing concerns in Canada last July that they sell most of their output in the United States, that if it was not for the United States market they would go broke, that they have a better market there than in Canada and sell their goods from New Jersey to California.

Sir HENRY DRAYTON: If that is the case, it is very remarkable that with this duty, which, of course, my hon. friend looks upon as being so enormous, $13,000,000 worth of the American product comes over to Canada. But that is very much by the way.

Now what is the reason of this cut on agricultural implements? It cannot be that the duties are out of line with other duties; we know they are not. It cannot be that the companies are making money. Again, we know they are not; they are passing their dividends; business is falling off, and falling off for obvious reasons. The latest figures I have are for 1922, and they show the value of products of all Canadian factories to be $18,240,000 as against $38,900,000 for the year 1921. Just think of that, Mr. Speaker, as the result of this government's shall I say fatherly care, or rather its tactics of attrition which are showing such wonderful results—a reduction in one year from $38,900,000 to $18,240,000. It cannot be they are making money. Everybody knows what the reason is. Everybody knows the reason is political. Everybody knows it is the retention of political power at the expense of Canadian industrial workers, and the amazing part of the whole thing is that the western farmer places his support at so low a price. What is he getting? Just let us see what he is getting out of this, that is, sticking always to the assumption I started out with, that the West does not want to injure the East, and I will never believe that it does; with that assumption what is the western farmer getting out of this? I have not any hesitation in saying that no real benefit is being obtained by the western farmer out of any single one of these tariff reductions. Let us see what they are. We have got budget resolutions dealing with 29 specific customs items; we have 8 items providing for increased, and heavily increased drawbacks. Now the budget gives us a forecast of an estimated reduction in taxation of $24,000,000. How much do my hon. friends figure they are getting out of that $24,000,000 in connection with these customs duties? Have they ever thought of that? Has a single one of them ever sat down to think, are my constituents getting out of this anything commensurate with the injury that will be done others? Allow for the fullest amount of selfishness—

Mr. SEXSMITH: On which side?

Sir HENRY DRAYTON: The hon. member says, "on which side?" He has it always. Giving him the fullest amount of selfishness. what does he think his support should go for? What is it worth? How much ought he to get from these cuts? How much does it take for the western farmer to support that wonderful endorsation of the government from the leader of the Progressive party? How much do they think they should get? Have they the slightest idea? Have they taken the slightest trouble any one of them, to see whether they are getting anything or not, or whether the country is not simply being injured? From the home and source of frequent interruptions I cannot now get a peep. Not one of them has considered, not one could even hazard a guess as to the price of western support.

Mr. GARLAND (Bow River): We are not for sale.

Sir HENRY DRAYTON: I am delighted to hear that. If you are not I know how you will vote on this budget.

Mr. GARLAND (Bow River): Perhaps you do.

Sir HENRY DRAYTON: The budget does not give any particulars as to that $24,000,000. I communicated with my hon. friend in an effort to learn how his estimate was made up. He referred me to his officials. If hon. gentlemen want to know the details, I will give them to them at once: Customs, $750,000. All this fuss and feathers, all the industrial disarrangement we have, the further cloud thrown over the whole of our business activities, for the sake of $750,000. Surely there is something wrong here: Customs $750,000; sales tax, $23,250,000; total $24,000,000. Has it come to this, that the whole underlying structure of our industrial edifice is to be imperilled for the sake of $750,000? I think it is perfectly ridiculous. My hon. friends to my left will not derive the smallest

advantage from some of the tariff items. There are twenty-nine such items and only fourteen of them affect the farmers. There are eight drawback items that will not give the farmers five cents; the manufacturer will derive the greatest benefit. This gain of $750,000 is not my estimate, it is the estimate of the government's expert.

Mr. SPEAKMAN: Does the hon. gentleman mean to say that this cloud of $750,000, this cloud no larger than a man's hand, threatens the industrial structure of the East?

Sir HENRY DRAYTON: In one sense the hon. gentleman is right; in another sense he is entirely wrong. So far as industry is concerned it is absolutely at the cross roads to-day. It does not know what is going to happen to it; it does not know whose head will next be demanded on a charger in order that the present government may be kept in power. Of course industry can stand a loss of three-quarters of a million of dollars if that is all that is meant. But hon. gentlemen know that that is not all that is meant. They know that in the case of the particular industry to which I have been referring its output is being cut down to $18,000,000 and that there are imports to the extent of $13,000,000. Do my hon. friends consider that is a very healthful position for an industry to be in? Do they think it is a good time to put a gun at its head no matter how small the object that is sought to be accomplished? Now, as I have already said all that the West gets out of this budget is a percentage of $750,000. But they get a grand political cry, they get something which to them as politicians is of great value. Is it worth it? The West may look upon this customs reduction as a victory but it is a pyrrhic victory of such a character that given a few more of them the West will be entirely undone. A few more attacks on industries will so affect the purchasing power of this country, will so limit the taxable field of Canada, that the West will feel it and feel it very severely. But even this government is aware that the agricultural industry is an important one and that it cannot be entirely sacrificed. With the reduced rates of the budget something had to be done to help the implement manufacturers get their raw materials and they are getting those materials free or at greatly reduced tariff rates. But these raw materials form the finished output of other Canadian industries. The publication issued by the Department of Trade and Commerce in 1923 deals with the agricultural implement industry from 1870 to 1920. It shows an increase in the payroll from $925,324 to $13,894,561 in that period. It also shows that in 1920 the materials used in the industry amounted to $22,588,390.

5 p.m.

Now, these materials, purchased as they were to a very great extent in Canada provided a substantial pay roll to the Canadian worker. I want to give the House some ideas of the other industries in Canada that are being injured by this tariff tinkering. I think the steel industry is being injured to a greater degree than even the agricultural implement industry. The former industry is getting no such concessions as the agricultural implement industry. The $22,588,390 of materials used in the manufacture of agricultural implements consist of the following:

Steel	$ 6,007,969
Pig and scrap iron	376,422
Malleable and grey iron	1,717,593
Iron, other	1,255,468
Other metals	136,387
Steel castings	192,198
Iron castings	1,421,161
Other castings	163,565
Iron piping	307,337
Galvanized and black sheets	589,481
Lumber and timber	2,673,993
Wood turned shapes	138,058
Metal wheels	153,262
Leather	114,316
Cotton, duck, canvas and textile goods	930,825
Paints, oils and varnishes	670,425
Rubber goods	195,258
Accessories and equipment for tractors and engines	475 851
Separator parts	77,927
Stampings	91,797
Bolts, nuts, rivets, etc	127,070
All other specified materials	347,541
All other materials	4,424,486
Total over	$22,588,390

The direct effect of this budget will be to transfer the purchase of these materials to the United States, and there is no compensation at all for the Canadian manufacturers of the above. Thus there will be an intensification of the present distrust and instability in Canada. The result will bear out the correctness of the prophecy of Right Hon. Mr. Fielding as Finance Minister. He showed what the results of further tariff tinkering would be and my hon. friends opposite will find his views in this case absolutely correct. Now, drawback provisions are always more serious to industry than direct tariff provisions. The drawback provisions of the present tariff are hitting the steel industry right and left. The great trouble is that no one knows what the next political exigency is going to be. The government are actuated by no principle one way or the other.

An hon. MEMBER: Why worry?

Sir HENRY DRAYTON: An hon. member says: "Why worry"? I wonder whether he thinks Canada has not a right to worry at the present time? Where is he? What hon. gentleman says: "Why worry"? Is he not concerned about a matter that goes to the very threshold of the Canadian worker? The hon. member sounds as if he came from Nova Scotia. Is he not interested in steel? The whole question is, whether you worry or not, whose head will go next. I am going to make a violent assumption. If this government, instead of being influenced by political motives, had really sought to look upon the whole question with a view of doing the right thing for the country in connection with this question of American importations, what would they do? They would look at their own trade returns and carefully note that our international trade with the United States for the past four years and ten months down to the end of January last resulted in an unfavourable trade balance to Canada of $1,100,000,000. Do you think, after noting that, if the care, if the good of the country, were a governing motive they would seek to enlarge directly that tremendous burden on Canada? If they were actuated as I was saying, under my violent assumption, by a desire to endeavour to do the best for the country, they would note that the United States were aiming to increase that tremendous drain on the resources of our country by increasing tariff exactions. They would observe the returns of the foreign commerce of the United States and learn from the statistical abstract of 1922 that while France purchased but $312,479,000 worth from the United States, Canada bought $536,513,000. They would learn that, apart from the United Kingdom, dependent as it is upon the importation of foodstuffs and raw materials, Canada bought more and far more from the United States than any other country in the world. After learning all that, they would come to the conclusion that Canadian business ought to be worth something to the United States, and that in view of those increased duties against Canadian products, to lower further our duties is but to betray the country. Is that nothing to worry about? Does this government like the recent tariff enactments of the United States? Did they like the increase from thirty to forty-two cents on grain? It is easy to say "no"—to deplore them—but just so long as prohibitive tariffs against us are met by cuts in our own tariff —and that is the way in which this government treats the matter—just so long are the prohibitive foreign tariffs invited.

[Sir Henry Drayton.]

Let me refer for a few minutes to taxation. Surely there is something that we can agree upon. Surely, we can all agree upon the fact that the race for first place amongst the most complicated, troublesome, vexatious and stupid measures of taxation which were ever conceived, is exceedingly close between the progressive stamp taxes and the sales tax as amended. I really do not know which is worse. We have still to bear the progressive stamp taxes, but just a little of the blister of the sales tax is to go. I have no doubt that those who are going to get total exemption will be extremely grateful, but I have no doubt they will wonder how the other poor chap who is left is going to get along. But it is humorous for this government to take credit for reducing the sales tax to a point that still takes much more money out of the public than the original sales tax which they found when they came into office and which they so much denounced. They call this a measure of reduction of taxation! If you make the thing absolutely top-heavy, you cannot do anything with it, and the government are not half collecting the sales tax today. We have questions on the order paper and we cannot get answers to them; but when those answers are brought down, we shall know the facts. When this government took office, the sales tax was one and one-half per cent on the manufacturer and one and one-half per cent on the jobber, an impost that was so small that, in most instances, it was not passed on to the consumer. The government immediately increased it by 50 per cent in each case—that is this government's method of reducing taxes,—and last year they increased the rate to 6 per cent, placing it at the source, thus entailing an actual cost, in the usual course of trade, of over 11 per cent to the consumer. Hon. gentlemen will find that result very easily by looking at the evidence given last year in the discussion on the matter. That 6 per cent tax is now to be cut to 5 per cent. That is a great achievement for this Progressive-Liberal government. We have a cut from 6 to 5 per cent—a wonderful achievement—and we have all the taxes left just as we had them, increased right and left. Why, the law of last session ought to have been repealed altogether. We got little out of it. For example, I do not know if that bothersome provision as to the $10,000 limit was ever seriously meant. It was absolutely unenforceable; it could not be worked. It has not worked, and thousands upon thousands of dollars of expense have been put upon Canadian business men as a result of that foolish bit of legislation. As I say, instead of its being simply amended, it should have

been repealed; but even crumbs are better than no bread, and we have a tardy recognition by the government, in the amendments proposed, of its palpable errors in its measure of last year.

This Progressive-Liberal government—I wonder where the heads are going to meet. I wonder who is going to swallow the other in this combination. I think both crowds will be rather hard to digest, but the spectacle is an interesting one. The real trouble is that the one thing which the Canadian public really knows is that, no matter what the cost may be to the business of Canada, whatever is necessary to be given up, whatever concession must be made in order that my hon. friends may remain in office, will be made, and yet people wonder that there is doubt, uncertainty and trouble in business circles. Oh, it is easy to turn up these trade reports and show results sometimes which, instead of showing a good state of affairs, indicate a very bad state of affairs. You can turn up reports and show exports when you have got a condition at home where your purchasing power has so gone down that perforce export has to be made willy nilly, but does anyone really think that those customs returns portray anything like the real condition of affairs?

This budget, Mr. Speaker, instead of helping this country as it should only adds to its difficulties. It does nothing whatever to help labour or to supply a job for anyone. Take the tin plate business, gone as it is, it does nothing to help it. Take the window glass business ,nothing is done to help it. In regard to woollen mills, even the Globe is crying for relief and talks about the necessity to do something, and contends there should be a recognition of our duty to do something to prevent the abolition of this important industry. But we find nothing here. The government are concerned with other things. Yes, the woollen mills may go to the United States, but for the moment the King administration must stand.

Hon. CHARLES STEWART (Minister of the Interior): Before beginning my remarks on the budget I should like to say how much we miss our old and faithful friend, the right hon. the Minister of Finance (Mr. Fielding). Recent reports would indicate that his health is much improved, and that we shall again have the pleasure of his counsel and advice in the government as well as in parliament itself. And may I say that, while we miss him, his position is very ably filled. I wish to congratulate my colleague, the acting minister (Mr. Robb), on the splendid presentation that he has made to the House in the well rounded out budget that he presented to us last Thursday.

To those of us who believe in the reduction of duties on the implements of production, coupled with the abolition of the sales tax, and followed by the large list of foods partially reduced or placed on the free list, the budget offers an alleviation from those burdens which we believe were crushing enterprise and industry, and goes a long way towards carrying out the desire of the Prime Minister in establishing mutual trust and national unity. I shall try to follow the acting minister's example by being brief, and I hope to the point.

May I, first of all, deal with the situation in Canada and the difference that exists between the Conservative party and those of more liberal thought for the improvement of the national situation.

The two old parties have always differed in methods to be adopted for the advancement of the agricultural and industrial life of Canada. The Conservative party have clung to their traditional attitude of protection for the manufacturing interests, while the Liberal party have adopted a more lenient course.

One could not help but be struck this afternoon, in listening to the address of the ex-Finance Minister (Sir Henry Drayton) by the fact that he saw very little wrong with the budget as presented on this occasion, but it was interesting to note the desperate way in which the hon. member declared that it was the death knell of protection. One would have thought that we were listening to a funeral oration this afternoon, and I trust that it will be the death knell of protection. I do not mean to suggest for a single moment that we should vote at this time to abolish the tariff in its entirety, but rather that we should do as we have been doing,—as to which my hon. friend complained so bitterly,—continually amend the tariff where it bears too heavily upon the production of the country. To listen to my hon. friend this afternoon one would imagine that, by the adoption of the protectionist policy, conditions in Canada would improve but he seems to forget, as all hon. members who advocate protection do, that in a new country like this, protection has imposed a burden upon the masses of the people, out of all proportion to the benefits enjoyed by the comparatively few engaged in industry. Let me draw attention to the fact that in agriculture and the various industries this tariff proposes to assist, there are engaged to-day nearly five million five hundred thousand souls. I have not a word to say against industry. I should like to see it encouraged in every way, and I argue that this budget will encourage it in every

way. It will encourage labour. My hon. friend asks: "What about the labour that is going to the United States?" I ask him: "What about the agriculturists who have been leaving Canada and going to the United States under present conditions?" With the number of people engaged in agriculture, in mining and in lumbering, Mr. Speaker, is it not meet and proper that at this time this government should be alive to the interests of so large a proportion of our population? Having that in mind, we have presented to this House a budget that seeks to ameliorate to a very large degree the burden those people have been carrying for a large number of years.

Mr. MEIGHEN: Will the hon. minister permit me—

Mr. STEWART (Argenteuil): The right hon. leader of the opposition will have all the opportunity he desires at a later date. Then, take the small number of people engaged in the manufacturing industries in the country, and reverse the problem. My hon. friend from Vancouver (Mr. Stevens)—and I listened to his statement with interest—argued that the ultimate hope of the Canadian people was the home market, and that the ultimate hope of the Canadian farmer was the home market. If the ultimate hope of the Canadian farmer is the home market, then a great many more of us than those who have had to leave Canada will have to depart in the very near future. My hon. friend mentions the fact that there has been a reduction in the sale of farm implements. Why should there not be? If my hon. friend knows anything about the agricultural interests throughout Canada to-day, large as the wheat crop has been, he knows that for the past three years agriculturists have been unable to purchase farm implements. It has been an impossibility to purchase them, and the stifling of the purchasing power of the people at home is the real reason that we have had a reduction in manufactured products. My hon. friend will know the facts, of course, and I accept his figures when he states that a goodly number of implements went abroad and still continue to go abroad. The manufacturers are able to meet the competition in the foreign field, and let me refer, Mr. Speaker to the care that is exercised in connection with the preparation of this budget. We took into consideration the fact that we should, not to any extent, injure the manufacturers of farm implements in Canada, and it is not the desire of the government to interfere with the interests of any industry in Canada. But let me say that, when the full effects of these reductions are felt and when the encouragement which will be given to agriculture permeates through the business of Canada, there will be less unemployment and less emigration to the United States than under existing conditions to-day. My hon. friend well knows that. And what I have said with reference to the agricultural industry applies also to the manufacturing industry.

But if we want a striking illustration of what effect protection has had on Canada, we have only to turn back to the decade following 1878, when under the Macdonald regime the National Policy was introduced embracing all the elements of protection. Perhaps I am going back a little too far for some of our younger members. But what happened? And I am very glad that a number of Toronto's representatives are in their seats. In 1878 we were told that protection would fill the dinner pail of the working man, that it would increase manufacturing throughout the Dominion, and that an era of real prosperity would descend upon us by its adoption. Toronto got along very well while the smaller manufacturing concerns were being amalgamated into larger institutions, for the National Policy had the effect of concentrating a large number of the smaller manufacturers into a few large corporations. As a result there was expansion in all directions in that great city, and building construction was undertaken on a large scale—my hon. friend from South Oxford (Mr. Sutherland) will very well remember the circumstances. But by 1890 the National Policy had placed the country in such a condition of depression that hogs were selling on the farm for $4 a hundred dressed weight, and cattle could not be disposed of at all; agriculture was at the lowest ebb in our history. This was after protection had had an opportunity to demonstrate to the people of Canada what it could do in the way of filling their dinner pails. Let me say to my hon. friends opposite that there was no period in our history when more of our people left for the United States. Let me say further, particularly to my hon. friend (Sir Henry Drayton) who spoke so glowingly of the great city of Toronto—and he has good reason to be proud of it—that there were thousands of vacant dwellings in the city and their owners were only too glad to let them free of rent in order that the windows might not be broken. That was the condition in the great city of Toronto after protection had been in operation for some years. I have no doubt that many hon. members will recollect that in those days the black flag was very much in evidence as processions of working-

men paraded the streets demanding "work or bread."

In 1896 we had a change of government; Sir Wilfrid Laurier came into office. Now, no one is going to suggest that overnight Sir Wilfrid Laurier changed the whole fiscal policy of this country. He did not. But he did one thing—he succeeded in removing the quarantine regulations against Canadian cattle. I went to the trouble the other day to look up the records in that connection. I remember the circumstances well because in those days I was living in this province. I remember that at once we had an increase in the price of our live stock. In a word, there was direct encouragement to our agriculturists —whom you have to encourage if you are to make the country prosperous, rather than begin at the other end and build up industry by imposing a toll on everyone. That is an example of what protection did for Canada, and I am sure that our older members who have had to do with public affairs for many years have not forgotten the circumstances.

From 1896 to 1911 we had a gradual growth, but without question it was the greatest since confederation. In 1911 we had another election, and the westerners were beaten on reciprocity. My hon. friends opposite accused the government of that time, as they are accusing the government to-day, of wishing to "truck and trade with the Yankees," or to "sell out to the American nation." Mr. Speaker, there was never anything further from the minds of any members of the government so far as I have been able to discover; rather they were and are, imbued with a whole-hearted desire to improve the economic condition of the Dominion. Strange to say, I notice from the record that both Sir Wilfrid Laurier and the present right hon. leader of the opposition were in favour of free agricultural implements.

Mr. MEIGHEN: I must object to the hon. minister misrepresenting me, even if he will not permit me to ask a question. I never expressed any such opinion at any time.

Mr. STEWART (Argenteuil): Not in 1911?

Mr. MEIGHEN: No.

Mr. STEWART (Argenteuil): I accept my hon. friend's correction. However that may be, he at least accepted the idea of lower tariffs, and he did one thing that I think is somewhat to his credit: During the regime of his government he put on the free list—and rightly so because he believed it would encourage production, which at the time we needed so badly—one implement which the farmer uses quite extensively; I am speaking of the small tractor.

Mr. SUTHERLAND: If my hon. friend will permit a question—what important reductions were made in the tariff on agricultural implements between 1896 and 1911?

Mr. STEWART (Argenteuil): Very little. But very great encouragement was given the farmer to sell what he could not dispose of in his home market at that particular time under protection which was to increase this market to such an extent that he would never need to export a single dollar's worth of his products.

My hon. friend (Sir Henry Drayton) pointed to the United States as an example of the benefits of protection. All I have to say is this: In the most highly protected country in the world, and the most favoured, the country that comes nearest to being able to consume its own products—because it exports only 8 per cent—the country that comes nearest to raising everything that is required for the support of its people—that country has to-day the highest tariff protection of any in the world. Has it helped the agriculturist there? I challenge my hon. friends to contradict my assertion that the agriculturists of the United States are in a worse condition than they have ever been in the last decade or two. that deplorable condition has been brought about—and no one will attempt to deny it—under a protective policy. I do not need to take up the time of the House by dwelling any longer upon a matter that is so obvious.

I do not believe, Mr. Speaker, that this budget was framed for the West at all, although my hon. friend has implied that it was put forward for the purpose of securing Progressive support. But I say to my hon. friends opposite, that if we had never had a policy that permitted trusts, mergers and combines in this country, I do not believe we would to-day have the cast iron Labour organizations which our workmen have formed in self-defence, nor do I believe there would have been any necessity for the farmers of western Canada or any other part of the Dominion to have organized a political party. These are the results, and the inevitable results, that flow from a policy of protection. But the budget is framed on broad lines and touches every part of Canada, particularly the interests of our agriculturists, in the hope that they will have a revival of prosperity and be able to purchase from our manufacturers to such an extent that instead of $18,000,000 worth of machinery being turned out by Canadian factories the demand

will necessitate a production of $140,000,000 worth. And then we will have the mass production that my hon. friend talks so much about, the mass production that reduces cost; that is the ultimate object of this budget.

I want to deal primarily with the condition in western Canada, and in order to be brief I have placed my remarks on paper.

Looking at the budget from the standpoint of a westerner, no one can fail to observe that while the measure, as a whole, has been prepared with scrupulous regard for the interests of all classes of producers and consumers in every part of the country, it has at the same time succeeded in extending the most clear-cut and practical recognition that has ever been given to the needs of those immense new agricultural and commercial interests which have arisen in western Canada within recent years.

This budget proposes a number of fiscal changes. And if there are any of these changes which should command the unanimous approval of all broad-minded Canadians, they are undoubtedly those changes that have been introduced mainly with the aim of fostering western industry and of stimulating further western development. Certainly the various fiscal departures that are being submitted to lighten the load on western producers will be accepted without question and with the keenest welcome by innumerable commercial interests throughout the Dominion as well as in the West itself. No argument whatever is needed to justify them in the eyes of any Canadian who has disinterestedly studied the vital importance of the part which the West is playing in the business life of Canada to-day.

As for the man who, on national grounds, still quarrels with the wisdom of these steps that are being proposed for the benefit of the West, there is only one explanation of his attitude. The explanation is this: That, as a student of our national affairs and position, he has failed entirely to appreciate the remarkable transformation which has taken place in western Canada in the last twenty years or so; and he has also failed to get any idea of the prodigious effect that western development has had in practically remoulding the commercial life of the whole Dominion.

With regard to this man who, for one reason or another, is still short on his knowledge and appreciation of the importance of the West as a factor in the business life of Canada, there is not much room for argument in his case. What he really needs is information. His chief need is to brush up on the business history and progress of his own country, especially during the short period since the opening of this century. When he has done that, even in a very superficial way, he will have gained some idea of the immense extent to which western development has been responsible for the general commercial advance of the Dominion. And he will also have gained an iron-clad respect and justification for the judgment which has framed those features of this budget which seek particularly to meet western needs.

He will find that just a quarter of a century ago neither Saskatchewan nor Alberta could muster a hundred thousand people all told. Commercially their contribution to the business of the country was equivalent to that of perhaps half-a-dozen or so of Ontario's forty odd counties.

Let him then take a glance at the contrast presented to-day. To-day the crops of the West and the buying power of the West furnish the life blood to a huge part of Canadian enterprise. Western prosperity has become a barometer for business throughout the country. The western wheat crop is of vital concern to commercial interests from Montreal to Vancouver. To-day no other single item in the whole range of Canadian production is watched with anything approaching the same degree of national interest as is centred upon the progress of the crops on the prairies from the time they are sown until they are reaped. Manufacturers, wholesalers, railways, financial institutions, business interests of all kinds, large and small, share in the boon or in the disappointments of the western harvest. The eagerness with which the crop estimates are received in every industrial or commercial centre in the Dominion tells the tale of how the rise of western agriculture has shifted the whole outlook of Canadian business.

But it is not only in its influence upon current business that western agriculture displays its vital importance to Canadian prosperity. It is also the fundamental constructive force behind the building up of huge additions to the country's permament producing assets of every kind.

One need only mention a few of the innumerable cases where western farm expansion has vitalized growth in other directions. Whole communities, divorced entirely from direct farm pursuits, owe their rise or growth to the settlement of the prairies. The coal fields of Alberta have been opened hardly less by the grain-grower than by the miner.

The lumberman and fruit-grower of British Columbia, the shipping cities of the Great Lakes and the St. Lawrence, owe a heavy measure of their growth and prosperity to the flow of business to and from the agricultural West. Dozens of manufacturing cities in eastern Canada have their flour-mills built or enlarged to grind western grain, their implement factories, their textile mills, furniture, leather, rubber and countless other manufacturing concerns leaning strongly upon the orders turned in by their western salesmen.

Take another method of measuring the tremendous importance of the place occupied by western Canada to-day, and of estimating its relative contribution to the commercial strength of the country. Lumbering has for generations been one of Canada's great industries. Mining, from Cape Breton to the Yukon; is a great and growing source of national wealth. Canada's famous fisheries employ tens of thousands of people and support a far-flung foreign trade. But it helps to give some idea of the business revolution that the growth of western Canada has effected in this Dominion when it is realized that to-day these three great basic industries of lumbering, mining, and fishing—despite their generations of growth—do not together equal, in value of annual output, the vast agricultural industries which have spread over the prairies of the West within an amazingly short term of years.

To-day all of the lumber sawn in the whole of Canada, plus all of the fish caught and landed, plus again all of the gold and silver, copper and coal, nickel and other wealth produced from Canada's mines—all of these lumped together do not equal the farm output of the prairie provinces which, only twenty or twenty-five years ago, were a decidedly minor factor in sustaining the commercial life of Canada. This commercial rise of the prairie provinces has formed the greatest single development in the entire economic history of the Dominion. Their agricultural expansion has been unquestionably the most powerful and versatile nation-building force that Canada has ever enjoyed. It has been an unrivalled force not merely in extending the areas of settlement but equally in attracting new population and capital, in widening both the markets and the sources of raw materials for Canadian manufacturers, in building up Canadian trade abroad, and in a dozen and one other nation-building activities.

Not in a single instance have the present budget proposals lost sight of the many varied interests in the country that must be given the most studious and enlightened attention —the interests of fisherman and farmer, of lumberman and miner, of merchant and manufacturer, and of the consumer in every walk of life. At the same time the budget is concrete and clear-cut in its recognition of these facts: That the new agricultural empire of the West is one of the great salient features of modern commercial Canada, and that the building of the West has injected into the business life of the Dominion a new producing and consuming area so big that the Canada of twenty or even of fifteen years ago presented few features at all comparable with it—so big in every business sense that no present or future Canadian statesmanship worthy of the name can even attempt to ignore it.

From the man who has failed to grasp these facts there can be expected no sound criticism of the present budget proposals in so far as they have been framed to meet the needs of western Canada—certainly he can submit no criticism founded on a true perception of the importance of western agriculture as one of the major and fundamental sources of the Dominion's prosperity and progress.

Mr. SUTHERLAND: Did this great development not take place under a high protective policy?

Mr. STEWART (Argenteuil): No. It never would have taken place under a high protective policy.

Mr. MEIGHEN: Never had one?

Mr. STEWART (Argenteuil): No, because the high protective tariff has gradually disappeared. We have had no high protective policy since 1878 or 1896.

Mr. MEIGHEN: The hon. member said it was not changed appreciably in 1896.

Mr. STEWART (Argenteuil): It was reduced appreciably all along the line and has been reduced by this government. I want to show in a few minutes wherein my hon. friend the ex-Minister of Finance (Sir Henry Drayton) is entirely astray in his deductions in connection with this matter.

I want to refer for a moment to forestry. For generations the forests of eastern Canada had played a leading role in building up industry and trade. The sawmill had founded more Canadian communities and fortunes than almost any other form of industry. But it was left to the last ten or fifteen years to witness an utterly astonishing advance of forest development. In that period the pulp and paper mill has usurped the prestige of

the sawmill. Lumbering, with its decades and even centuries of growth, still stands as one of the major pillars of Canadian industry; but in an amazingly short term it has seen the rise of a gigantic rival which in some respects already overshadows it.

Let me now make some reference to our minerals—because I am dealing with what may be regarded as our basic industries. The budget does not deal entirely with the interests of agriculture, although agriculture perhaps occupies a paramount place among our industries.

So far as mining is concerned, Canada to-day is very heavily a debtor nation in mineral trade. In fact, from the standpoint of strengthening our commercial position nothing would appear to be more desirable than to see growth of mining enterprise hold the centre of the stage in new Canadian development for the next ten or twenty years. It is true that mining and mineral using industries can show a record of steady and in some respects remarkable progress. But during the greater part of the last twenty-five years mining in Canada has been more or less crowded out of the limelight—first by the sweeping advance of agricultural settlement over the prairies and later by the equally spectacular rise of the pulp and paper industry. The result is that the Dominion's present position in mineral commerce does not appear to do anything like full justice to her natural capacity as a mineral producing country.

Our water power development, which plays so important a part not only in connection with the fuel situation but industry generally, is looked upon with great interest because it provides cheap power for the manufacture of electricity for our manufacturing interests throughout the country. The water power now developed in Canada amounts to nearly 3¼ million horse power, and represents, including transmission and distribution, a capital investment of $687,000,000. Despite the continuous development that has taken place in the past and some 750,000 horse power of new construction now in hand, the demand constantly exceeds the supply and it is estimated that some $300,000,000 of additional capital will be needed to meet the actual power demand of the next ten years.

May I refer for a moment to the implements on which the tariff has been reduced by the present budget in order to encourage the industries upon which I have already touched, outlining the position they occupy in the economic life of Canada. We have reduced the tariff, in order to encourage the basic industries of this country on the following: Mowing machines, harvesters, binders, reapers, cultivators, harrows, horse rakes, seed drills, manure spreaders, weeders, plows, threshing machines complete, field rollers, post hole diggers, hay loaders, stumping machines, grain crushers, potato diggers, hay tedders, farm wagons, fertilizers, axes, scythes, forks, spades and shovels; spraying machines, shears, pruning hooks and grading machines, incubators, brooders, milking machines, centrifugal machines for testing butter fat, rock drills, coal cutters, coal augers, stamp mills, ore and rock crushers, rotary and coal drills, coal washing machines, coke making machinery, saw mill machinery, logging machinery, and well drilling machinery.

So it will be seen that we have touched the whole field so far as our basic industries are concerned. The total reduction in the tariff amounts to $750,000, all told, to the tax payers of Canada, but I want to say to my hon. friend from West York that the effect it will have on the five and a half millions of people that I have mentioned and who make up the greater part of the population of Canada will be inestimable. It is impossible to compute the ultimate advantage they will derive in the way of encouragement by these reductions.

Then in addition, we have a reduction in the neighbourhood of $22,000,000 in the sales tax. I shall not deal with that except to say this: My hon. friend from West York has had a great deal to say about the pyramiding of the sales tax. Let me say to him for his information that upon careful computation the sales tax at six per cent is not one whit higher than the sales tax imposed by the recent government when pyramided to the ultimate consumer, and I make that statement without fear of contradiction. So when my hon. friend makes the statement that we increased the sales tax, we did nothing of the kind; we placed it at the point of manufacture, and it does not cost the ultimate consumer one whit more than the sales tax of the former government under the pyramiding process that went on.

Another very important item upon which the sales tax has been reduced is boots and shoes, and rubber boots. Here the sales tax has been reduced from six to two and one-half per cent. Surely this will not be for the benefit of the farmer alone; it will benefit not only the agriculturist but the worker throughout the length and breadth

of this country, and I am sure that will appeal to everyone. I am arguing from the standpoint that this budget is not one-sided; it does not apply to one particular industry or to one part of the country only, but to all our basic industries and to every part of Canada. It will give encouragement and hope to the manufacturers to increase their output and attain to mass production; it will mean more employment for the workmen of this country than they have enjoyed in the past three or four years.

One other thing I should like to say in passing, and this has nothing at all to do with the tariff, but it is of particular interest to the West, and that is that from a careful study of conditions as I see them in Canada to-day, if we are to succeed at all as farmers we shall have to meet the competition in world markets. There is scarcely a single article that is grown on the farm in Canada to-day of which the price is regulated by the home market that we hear so much about. Nearly every article of any importance that is produced on the farm to-day finds its way to the foreign market, and the foreign market fixes the price, and what we shall have to do if we are to succeed is to bring about co-operation among the farming forces, not for political purposes, but in our own economic interest, and cut down the immense spread that exists to-day between the price the producer receives and the amount paid by the ultimate consumer. That is something outside the tariff altogether, but I take this opportunity of expressing my firm conviction that we can do a great deal to help ourselves in this respect.

Now a word as to transportation, which plays so important a part in the life of our country. Just now a great deal is being said of the St. Lawrence waterway, and a significant fact in that connection is that sixty per cent of the wheat crop that comes over the lakes passes through the port of Buffalo. Ontario has come forward and is demanding in the interests of power development that they be given the right to secure power development on the St. Lawrence. That, of course, introduces the larger subject, but if this project goes on, I see in it something of immense benefit to the western farmer inasmuch as the grain boats that go to the ports of Montreal and Quebec will be able to proceed to Sydney and other Nova Scotia points and load with coal for a return cargo. One of the difficulties in the transportation problem not only in western Canada but the country generally is that we have only a one-way cargo and our trains go back empty. That has been one of the difficulties in connection with the movement of Alberta coal, but that difficulty will be overcome on our great lakes and rivers if this scheme can be worked out successfully, and it will cut the cost of transportation both ways and mean a saving of a very considerable amount annually to the western grain grower.

Something has been said about the cattle industry. I have already mentioned the impetus given to that industry in 1896. Again I think this government can do something that will be of benefit to the producers of cattle throughout Canada. Our great market for cattle to-day is the British market. We have to ship our cattle to that market over the north Atlantic, and the rates are very high. Negotiations are going on at the moment, and I hope before this House rises that we shall have something of interest to say to the House with respect to the transportation of cattle to Great Britain.

May I give a quotation to show how Canada is viewed by the eyes of the outside world? What is the opinion and outlook of the informed American with regard to Canada? The United States has invested an enormous amount of capital in the Dominion in recent years and American financial men have given keen study to the position of this country in regard to resources, to industry, to commerce and to finance. Quite aside from their investments which speak for themselves, their opinions are worth something. They give us the impartial view of the foreign business man. Let me quote a statement from an article which appeared not long ago in an American financial publication of the highest standard, over the signature of a vice-president of one of the leading national banks of New York city—Vice-President Russel, of the National Bank of Commerce, New York. He says:

> To-day Canada is probably the most favourable field in the world for investment, comparable only with the United States in the era of its most rapid physical development, from the close of the Civil War to the opening of the present century.

That statement, coming from an American, from a banker associated with one of the greatest institutions in the commercial capital of the new world, constitutes about the most sweeping tribute that could be paid to Canada or to any other country in a material sense. Anyone who has the faintest idea of the unparalleled progress made by the United States since the sixties will have some idea and appreciation of the confidence it betokens in Canada's present, and of the faith it implies in her future. The statement I have

quoted is not a solitary and isolated one. To take another instance, the Bankers' Trust Company of New York has published through its research department a volume on Canada in order that its stockholders and clients and friends may have reliable data about the Dominion. Among other statements the author of that book says: "Canada has scarcely begun to grow. Canada of to-day will without doubt develop during the next fifty years into a very powerful nation." These, Mr. Speaker, are some of the views held by our friends across the line with respect to Canada.

Let me say that eighty per cent of Canada's indebtedness is held by her own citizens. Canada's deposits in banks are increasing as rapidly as can be expected, showing that our people still have surplus amounts for investment. Returns for the eleven months ended February, 1924, indicate continued healthy growth of Canadian foreign trade. Already both imports and exports exceed those of 1923, and the balance of trade favourable to Canada on eleven months' business is $158,524,707. The figures indicate that at the close of this year we shall undoubtedly have exceeded our trade of a year ago by the sum of twenty millions odd. Statistics indicate that each succeeding year Canadians are increasing the percentage of products marketed in the finished or semi-finished condition, thus providing more labour for our own people and higher class freight for Canadian railways.

Canada occupies second place among the world's greatest per capita exporters. She occupies fourth place among the world's greatest traders in foreign markets. With only one-twelfth the population of the United States, Canada does nearly one-fourth as much world trade.

To lend further encouragement, the government is able to strike off by tax reduction no less a sum than $24,000,000. When it is remembered, as pointed out by the Prime Minister, that we have fixed charges of $300,000,000, this is a very considerable amount, but no doubt it will be realized through the impetus given to the basic industries.

May I say in conclusion that this budget should relieve the burden on, and increase the purchasing power of, five million agriculturists, and another 500,000 who are directly or indirectly engaged in mining, lumbering, fishing and kindred industries in Canada. I am therefore safe in assuming that it will lend encouragement to more than half of our population, and I feel confident that this will commend itself to all the people of Canada when it is fully understood in all its bearings upon our economic life.

Despite the lamentations of the Conservative party, telegrams are pouring in from all over Canada, congratulating the government on the splendid showing. Canada is coming back in fine shape under a business administration. The dawn of prosperity illuminates the business sky. The great producing interests of the country have taken fresh courage. There is now a feeling that the government is being conducted for the many and not for the select few. The grouch will pass away as a night illusion fed by the after effects of war and misleading propaganda. Canada is all right—I am convinced that we will have a steady growth in trade along all lines. Canada's great natural industries will flourish in proportion to the extent that they are unhampered. The government is removing the barriers. Canadians can take heart and go forward.

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

Mr. J. FRED JOHNSTON (Last Mountain): Mr. Speaker, I wish at the outset to congratulate the Acting Minister of Finance (Mr. Robb), although he is not in his seat, upon the splendid statement that he furnished to the House on Thursday last in connection with the financial affairs of this country. One could tell from that statement that the minister was a business man. The statement was clear, concise and well delivered. At the present time in Canada there is a great cry for economy, economy in the expenditure of public money. This is true as regards every spending body, municipal councils, provincial legislatures as well as the federal parliament. This is a time when economy should be practised; but economy, like practically everything else, can be overdone, and wise expenditure of public money in times of stress can be made to pay dividends to the public weal. While I want the government of this country to practise economy in every way, I wish to stress that point, that the thing can be overdone. In the statement presented to parliament by the minister the other day, we have reason to take heart from the figures that he gave us. While the public debt stands at a tremendous amount, $2,453,776,868.74, and that has grown from $335,996,850 in 1914, we can see that a tremendous load has been placed on the shoulders of the taxpayers of Canada.

I wish to refer to some figures that the Prime Minister (Mr. Mackenzie King) put on the records of this House in his speech on the Address. He pointed out in that speech that during the six years of what might be termed the war period, $13,773,733 was added to the public debt over and above what might be termed expenditure for war purposes. That is, the government of that time did not meet their ordinary expenditure, but added this amount to the public debt, while for this year, out of an estimated ordinary revenue of $396,000,000 the Acting Minister of Finance on Thursday last reported a surplus of $20,786,349. He stated further that there might be added to this two other amounts, one of $8,305,760.37 received in settlement of an adjustment between this government and the Imperial government, and another item of $1,317,000, sundry outstanding indebtedness cancelled during the past year. This makes a total of over $30,000,000 as a reduction in our national debt for last year, and this, to my mind, is an encouraging statement for the people of this country. There is also an estimated reduction in the expenditure for the coming year of some $46,000,000 over that of last year. These reductions should be appreciated by the heavily burdened taxpayer of this country.

I think I remarked in this House on a previous occasion that, to my mind, the government having control of the finances of this country during the war period, did not impose taxes in the way that they should have done. When money was free in this country during the war period and huge fortunes were being piled up, it would have been a much easier task to impose and collect taxes than it is at the present time. The people were then better able to pay taxes, but they were not taxed. In connection with our loans that were floated during that period, all but the last of these were made free of taxation. To-day the people who are fortunate enough to have those bonds in their possession are sitting back and leaving what might be termed the producers of this country to carry the load of taxation. If we take into consideration the amount of uncontrollable expenditure that is necessitated principally on account of war activities, I think the taxpayers of Canada must give credit to this administration for materially reducing expenditure. We have that heavy overhead charge which this and no other government can get away from for a great many years, and I think this is a time when we all should be fair, particularly in connection with matters of finance.

Coming now to a brief consideration of the proposals in the budget as brought down last Thursday, the minister told the House that the reductions would result in a loss of some $24,000,000 of revenue. I think it is not unfair to say that the bulk or the larger proportion of this will come from the reduction of the sales tax. The saving that will result from the reduction of customs duties on certain commodities will form the smaller part. But in that connection it must not be forgotten that the amount of revenue lost from the reduction of these duties is not the whole amount when it comes to the taxpayer. These duties are pyramided very materially. Tariff revenue represents only a part of the burden imposed on sellers by protective duties. I think that is a statement that cannot be gainsaid. The total value of dutiable goods imported in 1923 was $537,258,782, producing a revenue of $133,803,370.12. The significant part of this statement is that of this amount $274,322,000 was the value of articles commonly used in consumption by producers or wage-earners; but these imports produced over $71,000,000 of duty, which is considerably more than half of the total revenue; so that necessities coming into this country are carrying the larger percentage of the customs taxation. Fifty-four per cent. of tariff revenue is derived from 51 per cent. of the dutiable imports. How are these reductions in customs duties received in the country? I noticed a few days ago a Canadian Press despatch dated Windsor, Ontario, where the leader of the official opposition was speaking, and it has this to say:

> Prediction that the coming budget at Ottawa will contain no announcement of further reductions in the tariff on agricultural implements was made by Right Hon. Arthur Meighen, speaking here on Saturday afternoon.
>
> "The budget is to be down next week," said the Conservative leader. "I stand here and assume, perhaps for the first time, the role of prophet in this Dominion and venture to say, having watched the whitening gills of the government for the last three weeks, that when the budget is delivered all the reduction you will see on farm implements you can place in the left hand corner of a thimble. The Progressives will be fooled just the way they have been fooled every session since the government came into power."

I think the right hon. gentleman will have to admit that he is no relation of Jeremiah of old and cannot take his place as a real prophet. I noticed too that after the budget had been delivered the same hon. gentleman stated that the reductions in these duties meant a fatal blow to the industries affected.

Another despatch from Toronto dated April 10th which to my mind is a lot more encouraging and nearer the truth, states:

Hon. John S. Martin, Ontario Minister of Agriculture, who farms four hundred acres at Port Dover, Ontario, thinks the Robb budget will benefit Ontario farmers. He could not tell the full effect of the tariff reductions on agricultural machinery without an opportunity of studying the details.

"So far as the proposals affect incubators and brooders," he said, "the reduction will be of material benefit to poultrymen and will undoubtedly aid in increasing poultry production. I say it is a good move, unhesitatingly, because there are no mammoth incubators manufactured in this country.

"The doing away with the sales tax on farm implements and machinery I also have no hesitation in saying is a good thing for agriculture in Ontario, and will to a certain extent relieve the farmer of the difficulties under which he is now working."

Mr. STANSELL: Will the hon. member also read the statement of the same Minister of Agriculture for Ontario the following day, in which he contradicts in large part the statement which has just been read, and states that it was overdrawn from the facts he gave out?

Mr. JOHNSTON: I did not happen to see that article my hon. friend mentions. However, when I read the article I expected there would be another one following because the hon. gentleman in question belongs to the same party as my hon. friends to my right. I know Mr. Martin by reputation. He is an active agriculturist in the province of Ontario, known in every part of Canada. In the article I have quoted from he is speaking as an agriculturist, and I expect that in the article my hon. friend refers to he is speaking as a politician. I expect, Mr. Speaker, that in the case of every industry which happens to get into financial difficulties in this country in the next two months or two years, the failure will be attributed to the reductions in the customs duties. I have also a despatch from Montreal dated April 11th. It is in the form of a letter and reads:

R. W. Gould, secretary of the Quebec division of the Canadian Manufacturers' Association stated today that he had received a letter from the vice-chairman of the St. Hyacinthe branch, and who is also head of an agricultural implements plant at St. Hyacinthe, informing him that his firm had been compelled to go into liqidation as a direct result of the budget.

That is pretty quick work. The budget came down Thursday afternoon about four o'clock, and this letter must have been written that day or early next morning in order to arrive in Montreal on April 11th.

Mr. HOCKEN: Will the hon. gentleman read the opinion of that good Liberal organ the Brantford Expositor?

[Mr. Johnston.]

Mr. JOHNSTON: I happen to be a busy man and I have not time to read all these articles.

Mr. MORIN: I am the member for the St. Hyacinthe riding and I may tell hon. members that the news published in the Gazette which the hon. member refers to was fabricated in every part of it and that there is no question of the liquidation of the company referred to.

Mr. JOHNSTON: I am glad to have that assurance. I understand that the hon. ex-Minister of Finance (Sir Henry Drayton) during the course of his speech this afternoon stated that the farmers of this country were not asking for reductions in the customs tariff, that the demand came from farmer politicians. I am sorry the hon. gentleman is not in his seat, for I should like to ask him how it is that we happen to have farmer politicians in the Dominion. We did not have them prior to 1911. At that time his party came into power, and it was during its term of office that the farmers reached the decision that it would be necessary for them to take political action to get a change in the fiscal policy. That is the reason why we have the farmer in politics to-day. I remember reading an address delivered by the right hon. Minister of Finance (Mr. Fielding) in the city of Montreal during the campaign of 1911 in which he expressed the hope that the manufacturers would not turn down the reciprocity pact, and he added, "If you do, I can see the day when you will be sorry." Probably the dawn of that day is about to break.

The hon. member for West York also said that Canada was losing her artisans, the exodus to the United States being made up largely of this class. But many farmers have been and are still leaving this country. In this morning's Citizen I noticed this article:

The problem of the intending farmer who arrives in Canada—

From overseas I expect.

—with little or no capital is occupying the Land Settlement branch of the Department of Immigration just now. A statement issued by the Hon. J. A. Robb says that recent surveys of the situation in Canada have disclosed that in many communities there are farms equipped with habitable buildings which can be had on very nominal first payments or without any cash deposits at all.

That does not bespeak a very flourishing condition of agriculture in this country.

I wish to digress for a moment to take up a couple of matters that are more or less local in their nature, but are nevertheless of vast importance to western Canada. One of

these may not be very popular with some people in the East, but nevertheless it must be faced squarely by this House. I refer to the completion of the Hudson Bay railway. Last week a delegation came to this city from an organization that was formed in Winnipeg some ten days ago, known as the "On-to-the-Bay-Association." This organization was the outcome of a convention attended by about fifteen hundred delegates, including some from across the international boundary, one of these being an ex-governor. The people of western Canada are desperately in earnest about the completion of this road. It is not necessary for me to go into the history of the project in detail, for it is pretty common knowledge to hon. members. It has been before the country for forty years and was endorsed as far back as 1906 by Sir George Foster, in 1908 by Sir Wilfrid Laurier, and in 1910 the present Minister of Railways (Mr. Graham) turned the first sod at The Pas. I am sure the people of the West are hoping that he may in the very near future drive the last spike on the completion of the road. In the interval we have had several changes of government, but since the project was undertaken we have had no administration that has not endorsed it. Therefore I would impress upon the government the absolute necessity of completing the road. This will call for some additional expenditure, it is true, but the western people believe that the lands of their provinces have about financed the scheme, and they want it completed. I believe that if for no other reason than to steady the morale of the people of the western provinces, it would be money well spent to complete the road to the bay. One of the delegates, a Mr. Patterson, whose firm handles grain in large quantities, operating 130 elevators on the prairies and terminal elevators at the head of the lakes, stated to members of this House that as soon as the road reached the bay he was ready to build an elevator. Enthusiastic delegates both here and at Winnipeg claimed that once the road is built to the bay private enterprise will look after whatever elevator accommodation may be necessary.

The other matter has to do with the effort that is being made in the western provinces to form pools for the co-operative handling of our grain. In this connection a resolution has been forwarded to me from the legislature of Saskatchewan. It is as follows:

"That the federal government be asked to immediately make a division or partial division of the surplus funds from the operation of the Canada Wheat Board among the provinces in proportion to the amount of wheat contributed by the producers of each province, and that in the opinion of this assembly in case such division or partial division is made, the government of the province of Saskatchewan should advance to the Saskatchewan Co-operative Wheat Producers' Limited, such sum or sums as would from time to time appear to be necessary and warranted, and that the expenditure of any moneys thus advanced should be subject to audit by the provincial auditor."

I believe a delegation waited upon the Acting Minister of Finance (Mr. Robb) in the fall months of last year, but they did not meet with much success. That delegation came from the wheat producers' organization. While I can understand that the minister might hesitate to act on the representation of a delegation such as the one which waited on him, surely he can have no misgivings when he is dealing with a responsible body like the legislature of Saskatchewan. Therefore I hope he may see his way clear to turn over that proportion of the surplus funds which rightly belong to the province of Saskatchewan, and which have been in the Dominion treasury as the result of the operations of the old Canada Wheat Board. It is true the western people owe the federal government money on another account, but it is not right to rob Peter to pay Paul, and the withholding of these moneys from the province is not the way to secure payment of an account that has been past due for years in connection with certain relief given the farmers of the West. I am sorry the right hon. leader of the opposition (Mr. Meighen) is not in his seat.

An hon. MEMBER: He is behind you.

Mr. JOHNSTON: During last summer the right hon. gentleman visited the constituency which I have the honour to represent, and on that occasion he discussed wheat pools and wheat boards. At the town of Govan in the Last Mountain constituency—I hope my right hon. friend will correct me if I am wrong in my statement of what occurred there—he took occasion, in referring to the wheat board legislation of this parliament which was put through in 1922, to say to his audience in the hall that evening that there was only one man in this parliament, one member of this whole House, who thought that that legislation would ever be put into effect, or, if it was put into effect, that it would be any good, and that was the member for Last Mountain. In making this statement, the right hon. gentleman did not have any foundation in fact—

Mr. MEIGHEN: May I correct the hon. gentleman? He could not have been there or he would not make such a statement. I made no assertion of that kind at all.

Mr. JOHNSTON: I am glad to have that from the right hon. gentleman. I did not lightly bring this matter up on the floor of the House; I had the statement from responsible persons in the Govan district.

Mr. McMASTER: Were they Conservatives?

Mr. MEIGHEN: I am afraid they must have been pretty strong Liberals, or Progressives.

Mr. JOHNSTON: They were Progressives.

Mr. MEIGHEN: It is just the same.

Mr. JOHNSTON: That is what I wanted to get from my right hon. friend, because it puts me absolutely right.

Reverting to matters pertaining more to federal affairs, I feel that those who are to-day charged with the responsibility of government in this country are not responsible for the geography of the country, and we have geographical conditions to contend with. It is often stated, and I think generally agreed to, that we in this country are divided into three sections, the Maritime provinces, the central provinces and the western provinces. In many ways British Columbia cannot fairly be classed with the prairie provinces. This geographical condition makes for division in an economic sense, for the needs of one section are different from those of another. I think it may fairly be stated that the needs of the Maritime provinces and those of the prairie provinces are nearer alike than the needs of these six provinces are with the other three. The natural market for the Maritime provinces lies in the New England states, and the natural market for the prairie section lies to the south of the international boundary. If this be true, it must follow that we are going against an economic law in endeavouring to build up trade channels east and west when natural routes lie in the opposite directions. Let us then admit this difficulty frankly and seek for a remedy or for the best way to overcome the handicap. I may say, Sir, that the people of the prairie provinces are not only willing but anxious to do their share to build up a united Canada, but they will not continue indefinitely to pay tributes to other parts of Canada in bonusing industries that cannot stand on their own feet, particularly those industries which are not based on products natural to this country and from the operation of which the agriculturists receive little or no benefit. So far as the prairie sections of Canada are concerned, I make this statement, Mr. Speaker: they are through with high tariffs in this country. All changes must be downward.

[Mr. Meighen.]

I am going to read to the House a statement made by a gentleman whose views will, I am sure, carry some weight with my hon friends to the right. It is a statement made by the Lieutenant Governor of Alberta, speaking in Winnipeg some little time ago, and reads as follows:

> Until we have a real voice in the settlement of our own affairs Canada as a whole will not go ahead efficiently. During my recent visit to the East, I have at times been goaded to exasperation when I have heard people there saying that it has been the East that has developed the West. It has been the West which has been a godsend to the eastern manufacturer and I would say it was the West that had made possible the efficient development of the East and the stabilization of its industries. If a barrier was placed at Fort William, what would happen to all the eastern industries? They would be ruined. I am not given to talking but, on this occasion, I feel called upon to give out this statement, so that the peoples of the West will realize the absolute importance of continuing to hammer away until they have a real voice in their own affairs.

The article goes on:

> When a man in Dr. Brett's position, whose loyalty to Canadian ideals cannot be challenged, allows himself to speak for publication of cutting Canada in two at the head of the Great Lakes his words should not pass unnoticed in the older provinces to the East. There are only three ways in which the western provinces can secure "a real voice in their own affairs." They are secession, outvoting the other provinces in the House of Commons and convincing those provinces of the justice and necessity of admitting the right of the western provinces to a larger measure of authority in the determination of questions vitally and primarily affecting them.

I thought when I read this article that if a western member from this part of the House had given expression to a sentiment of that kind, he would have been severely taken to task. Nevertheless there is some feeling along that line in western Canada and it behooves not only members of this House but the people generally of the central provinces to take heed. Political discontent is reflected in threats against confederation in some quarters. Political unrest has its root in economic disability, and so long as in this or any other country you have people labouring under economic disabilities you are going to have trouble which, if prolonged, will lead to political disintegration.

When the hon. member for Springfield (Mr. Hoey) was speaking in the debate on the Address some weeks ago, he proposed that this government call an economic conference. I think that was a wise suggestion, and I was confirmed in that idea when I had the pleasure of listening to a gentleman known personally to some members of this House and by reputation to many, Mr. John F. Sinclair, the United States economist, author and banker, and an ex-Canadian. Mr. Sinclair, speaking to the Canadian Club here a few days ago,

stated that the United States must co-operate with England and other nations by calling an international trade congress which must accomplish everything necessary to build up again the broken industrial machinery. Mr. Sinclair advanced five courses of action which he considered were necessary to solve this problem.

The first was, and I would direct this to the attention of my friends to my right, that tariff walls all over the world must be cut down and cut down drastically; 50 per cent now, and 5 per cent per annum for the next ten years.

Secondly, all nations, creditors and debtors too, must be gathered at the round table and must cut arms and arsenals; 50 per cent at once and a further percentage each year until they reach the vanishing point.

Thirdly, a moratorium must be declared for 15 years all over the world in the matter of the payment of war debts. Six hundred million dollars a month is an altogether impossible sum to be paying in interest charges on these.

Fourthly, the surplus of gold that America has, and does not need, must be handed back to Europe.

Fifthly, credit must be extended by the United States and by England to other nations; for Europe cannot live as peasants.

By these means Mr. Sinclair thought the industrial machine could be rebuilt. With regard to the tariff walls he admitted that the United States led in this respect and he characterized it as an exceedingly bad lead. As to the gold, he stated that America had two billion dollars more gold over there than she had three years ago. Her federal reserve was bigger than necessary. A $10 bill had $15.64 of gold behind it in the treasury. "We don't need it," he said, "and Europe does." Besides this, we find that seventeen nations of Europe owe the United States twelve thousand million dollars, with interest charges piling up at the rate of two million dollars per day, or as my hon. friend from Springfield (Mr. Hoey) calculates, at the rate of $4,000 per minute. It would appear that there is need for such a conference, and as has been suggested what a fine thing it would be if this young country representing the two great races, could be the first in the field and take the initiative in calling a conference.

In conclusion, I wish to quote from the words of the Acting Minister of Finance (Mr. Robb) in his address of Thursday last. He says in Hansard at page 1218:

> Whatever division of opinion Canadians may have, surely we share a united confidence in the future of our country. We have great natural resources. We have certain basic industries, upon the success of which depend the growth of all other industries, and the greater development of our trade. Of these basic industries, I would place agriculture, in all its varied branches, first. Next to agriculture, I would place our forests, our minerals and our fisheries. A real national policy is a policy that will encourage the growth and development of these basic industries.

Too bad, Mr. Speaker, that this was not thought of some fifty years ago when we adopted a national policy in this country that started to build from the top down instead of from the bottom up. We have got an economic structure to-day as a result that is like a pyramid standing on its apex. Had we given a chance to the basic industries as pointed out in the words I have just quoted of the Acting Minister of Finance, we would have had a much greater development and a much larger population in this country. He continues:

> The more of the products of the farm, the fisheries, the mines and the forest we have going to market, the greater will be the earnings of our transportation companies—

And no one will deny that our transportation companies need more tonnage.

> —the greater the purchasing power of the nation, and as a consequence we shall have factories running full time and tradesmen working overtime to supply the needs of those who will have money to buy.

There is the point. Had we given a chance to these basic industries to develop as they would have done, the factories of this country would not be crying out to-day against reductions in the tariff, as they would have had a much larger population to cater to. Now that the government have taken this step, let them not stand still, but press forward until the protective element in our tariff is completely eliminated. This will remove the shackles from our basic industries, and we may then look for that progress and development in our country which is so much desired by all.

Mr. HOCKEN: May I ask the hon. member a question? He told us that the natural market of the West was to the south. Will he explain to us how the West is going to get entrance to that market with the existing United States tariff?

Mr. JOHNSTON: My hon. friend will remember that I spoke of the year 1911, when an attempt was made to get into that market with our natural products, but my hon. friend and his friends denied us the right.

Mr. HOCKEN: That is thirteen years ago. If the hon. gentleman cannot answer the question, I will accept that statement, of course.

Mr. JOHNSTON: I am dealing with conditions as we have them to-day and have pointed out the geographical handicaps we have to contend with. Canada is a young country, and I hope for better conditions, as I hope my hon. friend does.

Mr. J. L. STANSELL (East Elgin): Mr. Speaker, before entering upon the few remarks I have to make on the subject now before the House, that of the budget, I feel that I should say a few words on another subject in order to protect the interests of a gentleman who is not able to appear on the floor of this House to protect himself. I refer to the statements attributed to the Hon. Mr. Martin, Minister of Agriculture in the Ontario government. I have been intimately acquainted with the Hon. Mr. Martin; I have appeared on the same platform with him, and I know his views on the fiscal question very well. From the standpoint of the farmer he is a pronounced protectionist. I believe, however, that he is not the first public man who has had a chance remark distorted or twisted in a way to bolster up some argument entirely foreign to his views. I noticed that the article that was read here to-night by the hon. member for Last Mountain (Mr. Johnston) was followed by an explanation in the press the following day that in a large measure contradicted what the hon. member has just read. I think every member of the House will recognize that the views of the Hon. Mr. Martin should be given to the House as he wished to express them, rather than as they have been read this evening. I quote from the Canadian Press:

> Hon. John S. Martin, Minister of Agriculture, in the Ontario government to-day denied that an interview given by him last night in connection with the Dominion government's budget could be construed as a general approval of the budget.
>
> "Such an impression is entirely erroneous," said Mr. Martin to-day. "So far from approving of the budget I consider it disastrous from the standpoint of the Canadian farmer, particularly the eastern farmer."

I might say further that he explained that his remarks had reference to a style of incubator not made in this country, and naturally if the duty were taken off an article not made in Canada it might be of assistance to those who wished to purchase it. However, it would be of very little advantage to the great majority of farmers because most of us do not use that style of implement. I am quite sure that the House will feel that it should have the Hon. Mr. Martin's actual views upon this question.

First I must offer my congratulations to the Acting Minister of Finance (Mr. Robb), who is not in his seat, for the manner in which he delivered the budget. The financial statement was brief and concise, and for that the hon. gentleman is entitled to commendation; but I am not so sure that we can congratulate him upon the subject matter of the budget itself. The budget leads inevitably to a discussion of the question of protection versus free trade. In the few words I wish to utter on this question I shall do so from the standpoint of the farmer. I shall not speak as a theorist, but as one who is interested in agriculture and having a practical experience of that great industry.

The hon. member for Springfield (Mr. Hoey) in outlining his views on one occasion stated that he was entirely free from political bias, that he was simply uttering his own personal views absolutely untrammelled, and that in giving such expression he was as free as the wind which sweeps over the western prairies. I have no reason whatever to dispute that statement on the part of the hon. gentleman, and the only request I have to make is, that in the discussion of this question my hon. friend and his followers will give me credit for the same independence. Any claim which he set up to freedom from political bias I should like to apply with equal force to myself under the present circumstances.

Before referring to the tariff changes I might say just a word or two with respect to the government's claim to have balanced the budget and reduced the national debt by about thirty million dollars. I believe it is generally understood that this result has been arrived at by a process of figuring in which, by guaranteeing fifty millions more of railway securities, we have lessened our obligations to that extent. To cite the minister's own words this is merely a guarantee or a simple endorsement, and does not add to the national debt. Perhaps I am not the only member of the House who knows what "signing a note" or "endorsing" one means. This is the first time I ever heard the effect of such a policy of this kind explained in this manner. Because it must be remembered, when it comes to dealing with the National Railway system, that the people of Canada are the owners, and hon. gentlemen in this House are simply the directors of that system. If that be so then the people of Canada have got rid of fifty millions of indebtedness by endorsing their own note. On many an occasion, in my own experience I should have been glad to have been able to get rid of an obligation by such a simple process. It is a very simple matter to balance a budget or reduce the national debt by any such means. However, in my humble opinion more sub-

stantial evidence will be needed before the House, or the country, is convinced that we are prospering to that extent.

Conflicting views prevail among hon. gentlemen with respect to the tariff. Some hold that free trade is a very desirable thing, and they would like to see the principle adopted in our fiscal policy. Others—and among them must be included those of us sitting in this corner of the House and representing the Liberal Conservative party—believe in a moderate protection. It will, I believe, be admitted that in Canada we must either have tariff protection or we must have recourse to free trade. Surely no one will argue that we can have free trade in operation on part of our industries and protection in force as respects the balance. I think it will be apparent also that the framing of a policy by the counting of votes does not demand a very high order of statesmanship. Nor is the national interest best served by evolving a policy calculated to win sufficient votes to enable a party to remain in office. In this country we do not want such a policy as that. What we want is a tariff which will protect all industries that are natural to Canada, including agriculture. I believe hon. gentlemen to my left are more inclined to favour a policy of free trade than are other members in this House. But even these hon. gentlemen, I think, would scarcely deny that if the time has come for tariff cutting, the reduction should be upon all lines of manufactured articles to which the tariff at present applies. Otherwise it cannot for a moment be claimed that the policy proposed is a national policy at all. I believe that the farmers generally throughout Canada only want fair play in this matter. They are not asking for anything more than they consider is their just right. Now, agricultural implements are not the only articles that the farmers are interested in. If the tariff is too high we should have a gradual lowering of the duty on all articles. If the tariff is not too high a few industries should not be singled out for sacrifice.

Let me point out that the imposition of duties is not the only form of protection. We hear a great deal about free trade in Great Britain, and the advantages which that country enjoys under such a policy have been depicted from time to time.. The hon. member for Brome (Mr. McMaster) can always quote authorities in support of free trade. Nevertheless I want to point out this very interesting fact, that notwithstanding the advantages of free trade the United Kingdom is suffering far more from unemployment than Canada is. Furthermore, if the conditions in free trade England are so much better than they are in Canada, where we have a policy of moderate protection how is it that so many people have emigrated from Great Britain to this country in the hope of bettering their conditions? We know there are quite a number of former residents of the United Kingdom who are much better off in this country than they would have been had they remained in free trade England. They came to this country and have benefited from a protective tariff, and yet they come down here and tell us that in a country such as this we do not need protection, but that free trade is what we want. As I have already said there are different forms of protection. Great Britain so highly lauded as a free trade country has some of these forms. They may be camouflaged a little but they are protection just the same. In addition there are certain natural advantages which exercise a protective influence for Great Britain. First, she has a splendid isolation which, of itself, is a natural protection. Then she has the protection of the greatest shipping industry in the world, which controls markets in a way which it is impossible for a country such as Canada to do. I know it is said by some that farmers do not profit from a protective tariff in the same ways as those engaged in other industries, and to some extent that is true. Possibly it is true to a greater extent on the prairies than in Ontario or Quebec, but I want to point out that Canada has almost unlimited territory containing perhaps the richest wheat fields in the world, so that the farmer who goes in there has a protection of cheap land such as he cannot get in any other country.

9 p.m.

Reference has been made, from time to time, to the policy of the United States, which, as we all know, has been that of high protection. If we refer to the United States as prosperous under protection we are at once told by those representing the policies of my hon. friends to my left that the United States is the greatest free trade area in the world. If we observe the condition of the farmers in the western states, we have every reason to believe, from reports that we have, that they are not nearly in as favourable position as our own farmers. What then becomes of the "free trade area" argument? Surely hon. members know that our difficulties cannot be solved by a policy of free trade, although in theory it has a very enticing sound. But beautiful as this theory may be, we are living, not on theories, but in a real world and a world of competition, and even though we were all united in the belief that free trade

would be a desirable policy, we must admit that other countries are not practising that, and that to a large extent we are controlled in our policy by the actions of those countries with whom we have to deal. Particularly are we affected by our nearest neighbour, our great competitor, the United States. It is foreign to our very being to reduce this matter to an individual basis and promulgate any such doctrine as that. That is, we would not think for a minute of throwing down the bars, trying to encourage dealings with a neighbour who was absolutely antagonistic to us and who did everything possible to prevent trade. Satisfactory trade relations can come only by mutual goodwill and co-operation. I believe if I were to ask members of this House who sit to my left their personal, private opinions in matters of this kind, as I have sometimes heard them expressed, they would say that when our chief competitor put up the bars against our trade, that was not the time for us to lower ours to their advantage.

From the standpoint of the farmer, let us see what is the Liberal policy as indicated by the budget that has been presented to the House. Before doing that, I wish to refer for just a moment to a quotation read by the hon. member for Springfield (Mr. Hoey) dealing with this question. He quotes, I think, Mr. J. F. Sinclair, who said in part, as follows:

> Business is slowing down. Farmers and live stock men have as a result been ruined by the hundreds of thousands. The disease of Europe has spread to America. The manufacturer will be next to suffer.

And it goes on. I believe we are prepared to admit that after all, what we in Canada are suffering from is not so much a high tariff, but the general economic condition of the world. In a reaction such as that which has come after the war, I believe it is easily understood that farmers will be the first to suffer; but they are not the only ones to suffer, and I think anyone with ordinary powers of observation would say to-day that many other industries are suffering equally as much as the farmers were a year ago and, in some cases, even more so. It has been said that farmers do not profit as much by protection as others, and in part I am ready to admit that; but I want to point out in that connection that the average farmer who operates a small farm, say 100, 150 or 200 acres—I am speaking more particularly of Ontario farmers—does not require a great deal of outside help. When the pinch comes, he is able to adjust himself to conditions in this way: He will have to reorganize to cut down expenditures, but there is still a safe living on which he can depend. The manufacturer is not in quite as favourable a position. When a factory is shut down and men are out of employment, they do not have a living that they can fall back upon. They either become a burden upon the state or emigrate to a foreign country, and that very thing has been going on during the past year. When any of us farmers have an animal that is sick, we try to take proper measures to ensure its recovery; but if we operated in that respect in the same way as the Acting Minister of Finance has in respect to the budget, having regard to the condition of Canada at the present time, when the animal became sick, we would attempt to cure it by knocking it on the head. This is not the time for tariff cutting, for readjustment, for uncertainty. If this country were in a prosperous condition and we felt that the tariff was higher than necessary to effect the purposes for which it was imposed, namely, that of keeping, as far as may be possible, men and capital employed within our own boundaries, then I might say that the time was ripe for making reductions in the tariff, but in a time of difficulty when business is stagnant, when men are out of employment, tariff cutting is the height of folly, because it leads to uncertainty disruption of business and emigration.

The conditions under which farmers are suffering to-day is not that of too high protection on agricultural implements. Let me illustrate that. I do not know exactly how many implements are required on the average farm in the West, but from experience I can say what the amount of reduction, as shown in this budget, of about 50 per cent on the existing tariff would be if applied to implements actually required on an Ontario farm. Such implements, if they were looked after carefully, would have to be renewed about once in ten years. Personally, I believe greater economy than that can be effected. I had a binder made by a reputable Canadian firm which has done a great deal to build up Canadian industry, and this binder was used on a farm on which the average cut was fifty acres per annum. I used it for nineteen years, and it was still in working condition. So that if I place the average at ten years I think I am safe. It would surprise hon. gentlemen to know that by the method this government has adopted for the advantage of farmers of this country the benefit from the tariff reduction will amount to an average of about $2.50 per annum. Does the minister mean to tell me that he will assist agriculture by a sop of $2.50 a year for farming? At the same time

that this is being done we have a duty of 3 cents on eggs coming into this country. If we wish to ship eggs to the country to the south of us we pay 8 cents. Can any one by any stretch of the imagination say that that is a square deal? Conditions are even worse than that, because they have a warmer climate in the country to the south of us, and can produce eggs more cheaply and place them on the market earlier in the season than we can. As a result, we had the spectacle a short time ago of 20 carloads of American eggs being shipped into Toronto by those whose interest it was to control the market, and the price dropped in one week 10 cents Do not get the idea that the 10 cents would re-act entirely to the benefit of the consumer. Not at all. It broke the market to the extent of 10 cents a dozen, and the housewife in the country lost 10 cents on every dozen of eggs she took to the market. The price having been lowered, the eggs will go into storage till next winter when they will reach the consumer at a high price. Because of the break in price due to insufficient protection the farmer and the producer will suffer, and the consumer will not benefit in proportion. If this government were anxious to help the farmer and make a reasonable increase in the duties on eggs, I am free to say that the advantage in one month would be greater to the Ontario farmer than the slight benefit he may hope to get from the reduction of duty on farm implements.

When we base our argument on these figures we assume a reduction in duty means a lowering in price and I think a great mistake is made in always assuming that this is so. I doubt very much if the price of farm implements will be reduced very materially because of the lowering of the duty. I am willing to admit that a reduction in the sales tax may have some slight advantage, but I wish to point out that we heard previous to the last general election volumes of eloquence about the iniquitous sales tax which, in the words of the present Prime Minister (Mr. Mackenzie King), added to the existing visible tariff an invisible tariff in the form of a sales tax. Now the manner in which he altered it was by the increase of 50 per cent to that already iniquitous invisible tariff. That iniquitous tariff has been remodelled once or twice since, and still it is higher than it was when they came into power. If the desire was to assist the agricultural people in this country they might have at least taken off a few of the taxes they themselves have put on.

There is another thing that might have been a great advantage to the farmers of this country, many of whom are being carried at the present time by the banks. If the government had been desirous of assisting the farmer do hon. members not think it would have been some help if they could have cut down a little of the stamp tax? I will refer to the condition of the farmer who is being carried by the financial institutions of the country. Possibly he owes the bank a thousand dollars and has given a note for the indebtedness which he must renew every three months. He has to plaster this with stamps at the rate of 2 cents per $50 and thus pay $1.60 per year or nearly as much as the whole benefit he would reap from the reduction in the duty on agricultural implements. It is even worse than that, because if he pays the money by cheque he has to place stamps on the cheques at the same rate. The result is at the end of the year he has paid an amount for stamps in excess of the reduction on implements. Do hon. members not think it is more in the interests of the farmers of this country that we should attempt to remedy the conditions under which they suffer by some internal arrangement rather than to attempt to remedy these conditions by handing our interests over to the big concerns of the United States?

A great deal has been said about the big interests. I must admit that I do not like to think that I am contributing to the big interests an unfair share of my earnings, but I want to say, if you are going to take that view, that I prefer very much to contribute to the big interests in this country which are taxable and which will help to pay our national debt, rather than to contribute to build up big industries on the other side of the border, which are of no use whatever to us. We have incurred a great debt partly through the building of railroads and industries which we hope will operate for the best interests of our country, but are we going to nullify all our efforts in this direction by building up big interests on the American side of the border?

There are matters which could have been dealt with to the real advantage of the Canadian farmer other than the tariff. I mentioned before the case of the man who was being carried by the bank. It seems to me something might be devised in the form of rural credits more generally adapted to agricultural requirements than that which we have at present. If that could be done, the relief would be far in excess of any relief which could come to us by tariff reductions. Another thing which possibly could be done—but this could only be done by building up

the industries in Canada—is a reduction of transportation costs. It is impossible to hope for the reduction of transportation costs while we send our men out of the country. We might get a little revenue for the railway which carried the men out of the country, but we might better have them here and get a profit on the goods they would manufacture. This is a time when we should consider ourselves as Canadian members of parliament and not as United States senators? What are we here for? For our own country or for our neighbours to the south? I believe Canadian farmers will take that view. We should endeavour to benefit our people by something in the way of internal arrangements and not by concessions to foreign countries. Times of difficulty and times of stagnation are not proper times for tariff tinkering.

Some years ago—and this has been referred to by the previous speaker—there was a reciprocity arrangement made with the United States. It was not ratified but that proposal did have some advantages. There were features perhaps not so desirable. But it did have this advantage that it was an attempt at a fair bargain between the two countries. But what could we say in regard to the budget proposal? This is not a bargain. Out of respect to the Acting Minister of Finance (Mr. Robb) I will not call it a national robbery, but I think I am justified in terming it a national giveaway. When one is engaged in bargaining, I quite understand that one must give something in order to get something, but this is a direct hand-out to another nation. The hon. member for Springfield (Mr. Hoey) quoted from an address recently delivered in this city by Mr. John F. Sinclair, a citizen of the United States, in which he advised the calling of an international conference to settle all trade difficulties. For the sake of argument let us suppose that such a conference actually recommends a general tariff readjustment, then, if we believe that this is likely, let us in the name of all that is sensible maintain our present tariff so that we may have a chance to bargain, otherwise we shall simply be bonusing the industries of the United States.

The right hon. Prime Minister, on whose shoulders the mantle of Laurier has fallen, has desecrated it by shooting holes in the Laurier-Fielding fiscal policy, in an effort to maintain in power a wobbling administration. But as the wearer of that mantle he should follow in the footsteps of his illustrious predecessor and appeal to the country for endorsement of this change of policy, this national giveaway. If he does seek such a verdict I think there can be no doubt that the people will have no hesitation in voting for the retention of a policy adapted to the national requirements of this country and the rejection of the present makeshift budget.

Mr. R. J. WOODS (Dufferin): Mr. Speaker, in opening my remarks I congratulate the Acting Minister of Finance (Mr. Robb) on the concise, clear and very able manner in which he delivered his first budget speech. I also congratulate the government on steering the course which I believe the Liberal compass has been indicating for some time. Possibly they have not sailed as far in the right direction as some of us would wish, but when they steer their course by the compass there appears to be no great danger of immediate shipwreck.

Naturally in this debate we are dealing largely with the tariff question. To my mind the tariff may be considered as a wall, or rather as a network of schedules and of clauses dealing with dumping, drawbacks and so forth; in a word, its purpose is to protect a certain class of our citizens. Now, we have been told by certain hon. members and by the press that last session the representatives of the farmers indulged in a great deal of complaining and whining about the difficulties confronting agriculture in this country, that they were in fact crying blue ruin, which it was claimed was not a very wise proceeding in the national interest. But this session the cry of blue ruin has been taken up by the manufacturers. By circulars, by delegations, and by every other conceivable means our industrialists have been bringing to bear upon the government and upon individual members of this House the greatest possible pressure, pointing out that the Speech from the Throne spelt ruination to the manufacturing interests of the Dominion, and implying that the wheels of industry would stop and the workers be turned out on the streets if any reductions were made in the tariff on manufactured commodities. That has been the cry. An hon. gentleman met me in the corridor after the presentation of the budget, and said, "Ontario has get a terrible blow." I inferred that he was thinking only of the industrial interests of the province. But we must not lose sight of the fact that the manufacturers do not compose the total population of the province of Ontario; our labourers, our retail merchants and our agriculturists form a very large proportion of the population, and their interests must not be overlooked. Is it not true that every section of our people have been hard hit? We can sympathize with the manufacturers; they have had many difficulties to contend with no doubt; but other

classes of the community also deserve our sympathy. Are not the retail business men in our cities, towns and villages passing through very trying times just now? Are the farmers not passing through trying times? I venture to say that they have never had greater difficulty in making ends meet and keeping things going than they are having at present. But so far as I can learn the farmers are not threatening to desert their farms, to pull up stakes and leave, to turn their boys and girls out to rustle for themselves or to send adrift the farm labour that they have engaged. I believe that the farmers, notwithstanding the strenuous times through which they are passing, are going to carry on and try to make the best of it, are going to produce as they have done in the past and work for the best interests of this country until conditions are readjusted and we get back to a better footing. And if we have to take our medicine in passing through these hard times, why should not the industrial classes take a share of the same medicine?

I am going to quote a few figures taken from the 1921 census returns which will give hon. gentlemen some idea of the relative standing of the industrial and agricultural portions of this country. In 1921 there were 711,090 occupied farms in Canada, ranging in size from one acre to upwards of 200 acres; I do not know how far in excess of 200 acres the larger ones would range. I will give the figures of the number of farms of different sizes up to 200 acres:

No. of Acres	No. of Farms
1 to 4	21,503
5 to 10	22,555
11 to 50	82,713
51 to 100	158,292
101 to 200	229,648
201 and upwards	196,379

So you see by these figures that the greater number are large farms. These farms represent a total invested capital, including the value of the land, buildings, equipment and stock, of $6,586,648,126, and that means that the average farmer in Canada is worth approximately—the value does not quite reach that figure—$10,000. The farmers, therefore, are not so exceedingly wealthy as some people try to make us believe. I have heard persons who have driven through the country say, "Look at the fine buildings, look at the surroundings; the farmers are immensely rich". Especially was this said some years ago, at the close of the war, but as I have pointed out, the census of 1921 shows that, taking into account total capital value of land, buildings, equipment and stock, the average farmer in Canada is worth only $10,000.

Now let us look for a moment at the industrial classes and see what similar figures show in regard to that. The statistics of the same census indicate that in Canada there are 41,323 manufacturing industries. These are made up of a great many different industrial activities, and in order that we may have the matter clearly in our minds and also have them on record I will give the list of industries which go to make up that total figure:

Flour and grist mill products.
Slaughtering and meat-packing.
Pulp and paper.
Saw, lath and shingle mills.
Butter and cheese.
House building and construction.
Electric light and power.
Sugar, refined.
Automobiles and motor trucks.
Cotton yarn and cloth.
Rolling mills and steel furnaces.
Printing and publishing.
Tobacco, cigars and cigarettes.
Petroleum, refined.
Bread and other bakery products.
Biscuits and confectionery.
Boots and shoes (leather).
Electrical apparatus and supplies.
Clothing, men's factory.
Foundries and machine shop products.
Steam railway cars.
Agricultural implements.
Hosiery and knit goods.
Clothing, women's factory.
Woodworking, sash and door factories.
Printing and bookbinding.
Breweries.
Plumbing and tinsmithing.
Sheet metal products.
Rubber goods.
Furniture and upholstering.
Leather tanneries.
Industrial machinery.
Shipbuilding and repairs.
Fish curing and packing.
Gas, lighting and heating.
Automobile repairs.
Paints and varnishes.
Furnishing goods, men's.
Heating and ventilating appliances.

Those are the lines of industry listed, comprising altogether 41,323 established in this Dominion. The capital invested in those industries is $3,210,709,288, according to the census report of 1921. That figures out at approximately $78,000 capital for each industry, showing the difference between the wealth of our industrial enterprises and the wealth of the agricultural industries of this Dominion.

Let us now take the income tax figures, which will indicate very clearly the degree of prosperity these industries enjoy and the amount of money they get from their investments, for if we have not the income we cannot pay the income tax. In the four years from 1920 to 1923 inclusive, the manufacturers

paid $14,111,979 in income tax, and the farmers $2,909,724, a difference in favour of the manufacturers of $11,202,255. That to my mind is a very clear indication of the comparative prosperity of our industrial and agricultural industries.

I wish to quote a clause from a little pamphlet published by the committee representing the agricultural implement industry of this Dominion:

> Through the energy of their executives and their salesmen, and through the high standard of their implements, Canadian manufacturers have built up a great export trade. Canadian implements are a familiar sight on the farms of every important country in the world.

Note the sentence which follows:

> The beginnings of this export trade were laid when the tariff was at 35 per cent, which gave the Canadian manufacturers the firm foundation of an assured home market from which to operate in their struggles to secure trade abroad.

Now if I understand that aright, it is capable of no other interpretation than that the farmers of this Dominion have been unduly taxed through the customs tariff in order that the manufacturers might build up large industries and sell their goods on foreign markets in competition with the manufacturing industries of the world. That is the meaning; that the manufacturers have been enabled to raise the price of their goods to the consumers in Canada and at the expense of our agriculturists accumulate wealth and build up a large export trade selling their goods in foreign markets in competition with the large manufacturing industries of other nations.

I wish to make a reference to the textile companies. We have heard a great deal about them since this session began. We have been flooded with a lot of literature. they have been trying to influence us by telling us they were in a very precarious position, that many of their mills had to close down, and that unless some remedy was provided through the preferential tariff a lot of these textile companies would have to go out of business. In that connection I wish to quote from an article that appeared in the Toronto Financial Post of February 29, 1924. It is referring to the success of Penman's Textile Company and says:

> The company's sales increased during the year by a moderate amount and made possible an increase in profits that more than justified the payment of a common stock bonus of 2 per cent above the regular dividend of 8 per cent.

There is one at all events of the textile companies that has made a success. I wish now to quote the latest available figures that I could obtain from the Bureau of Statistics.

They show that in the year 1922, the textile companies in their knitted and cloth departments increased their number of employees by nearly four thousand. That does not indicate that these textile companies are in such a serious condition as they would make us believe. Some of them may be going out of business, but where is there an industry in this country of which the same thing cannot be said. Take the retail merchant, the farmer, and those engaged in other occupations, numbers of them are being forced out of business from time to time and—let me ask it again—why should these particular industries not be willing to take their medicine along with other lines of business?

As to the fiscal policy, the government have advanced in the direction of reduced taxation in the interests of the agriculturists of Canada. But the compass is still pointing forward, and I believe that the great consuming masses of the people will not be satisfied until the ship of state pushes considerably further in the same course. There should be further relief in the customs duties on boots and shoes, on clothing, and on other necessaries of life. We appreciate what we are getting and we feel confident that it is impossible to revolutionize the fiscal policy of this country at one stroke. We know that, and we are content to rest for the moment at the state which has been reached. But we are looking for more, and we want the government not to remain satisfied with the progress they have made. We want them to press on to a far greater reduction in the customs taxation and the other taxation of this country as conditions may warrant. I want to repeat that the government have diagnosed the economic condition of Canada and they are prescribing the remedy. The doses they are administering are not, perhaps, as large as the patient can stand, but the treatment, if continued, will eventually prove a remedy for the malady from which the country is suffering.

I should like for a few minutes to try and analyze the policy of hon. gentlemen to my right. They tell us that we must have greater protection. In an editorial in the Mail and Empire, which is the favourite organ of the Conservative party, of about the 8th April, last, reference was made to the necessity of increasing the customs taxation and at the same time lowering the sales tax. So the prescription advocated by the Conservative party is higher customs duties. That is in line with the policy of that party for a great number of years past. Well, what has that policy accomplished? Seeing that it has been

in force since 1878 if it is of any practical value at all it should have accomplished something.

Now, the constituency that I have the honour to represent was practically, until a few years ago, Conservative to the core, and I personally know something about the working of the Conservative party in past years in the county I now have the honour to represent. But during all these years what has the policy of protection accomplished? We live in a country whose climate cannot be excelled, well adapted for a virile race of people, splendidly endowed with natural resources, possessing agricultural lands that are unequalled elsewhere on the face of the globe. A protective policy was in force when Conservatives occupied the treasury benches, and it was in force when Liberals administered the government. During all this time we have had what I term a high protective policy; I cannot see it in any other light than a policy that has protected the special classes of this Dominion. But that policy having been in force for over forty years, I cannot see anything it has accomplished. As many people formerly left the country as are quitting it to-day; there have been in the past times equally as strenuous as we are going through to-day; but the policy of protection has failed to build up this country in the way it should have been built up considering Canada's unexcelled natural advantages and resources. We are told that the great thing is to restore our prosperity. But why did the prosperity collapse seeing that the policy which we are now told is going to restore prosperity, was in force for so many years? If protection is needed to restore prosperity why did that policy not keep prosperity during the forty years of its operation?

It is said that we are in the midst of a readjustment period following the events of the Great War. That is true. We are told that there is difficulty in readjustment; that it will take some time to readjust everything as it ought to be readjusted. But let us leave the war period and go back prior to the war. What prosperity could we reasonably boast of prior to 1914? I refer particularly to the agriculturists of this country. I am prepared to admit frankly that, during the period of the war, the agriculturists of Canada made a little money, but it was at the sacrifice of blood. If a little money was made and if more money was in circulation, we deplore the fact that it was co-incident with the sacrifice of the young men from the farms, towns and cities of Canada who laid down their lives on the battlefield. I think those figures that I quoted to-night, taken from the census of 1921, are possibly just as high or a little higher than they would have been had the census been taken in 1914, that is, probably an average of $10,000 for the total value of every occupied farm of this Dominion. Was that great prosperity? To my mind, there was nothing to be elated over. It is true the farmers struggled; they worked from daylight until dark; they worked holidays and every day. Many of them took scarcely a holiday. While driving along the roadway, you would see nice-looking houses and fine barns; but if you investigated, how many Canadian farms would you find with city conveniences? You would find that the housewife has to take her pail and walk to a well in the barnyard or some other place in order to get a pail of water. The farmers have to contend with outdoor conditions in storm as well as sunshine, and I venture to predict, although I do not know the facts, that not two per cent of the farmers of Canada have on their farms conveniences such as the people have in the cities, and as we enjoy when we have the privilege of spending a little while in this city. We do not by any means begrudge the people in the cities or towns their conveniences, but the nice-looking houses and fine barns are no indication of prosperity on the part of the farmers who work hard, toil early and late and seldom take a holiday. I know farmers who live not a hundred miles from the city of Toronto, who have never attended the national exhibition there. Why? Because they are interested in their home, their children and in making things as comfortable, convenient and happy as they can for their families. Because of that, they fail to spend the money or to take the time to attend many of those events that they would enjoy and be glad to attend if their financial condition would warrant their doing so.

Let us go back to the war period again and refer to the attitude of the government of that day. Those are the hon. gentlemen who are telling us that this country will return to prosperity if their policy is adopted and they are given the privilege of handling the fiscal policy of Canada. In those years, as I stated before, we had a free circulation of money, and while the farmers made a little money, every other class made money. Many manufacturers built themselves up to be millionaires while the war went on. Money was in circulation abundantly. The labouring classes had plenty of money. While our boys were fighting overseas at $1.10 a day, foreign workers manning our munition factories and so forth were making money, getting rich, re-

ceiving from ten to possibly twenty dollars a day. What were the government of that day doing? When there was an abundance of money in circulation, the government of that day fell down in failing to pay off a great portion of the war debt instead of saddling the enormous debt of the war upon the government which now occupies the treasury benches and the people of this Dominion. The government of that day fell down, and yet they are the men who are telling us that they will restore prosperity and good times and that everybody will be happy, if they are again permitted to occupy the treasury benches and to put into force the fiscal policy as they had it in the past.

I come to another reference that I saw in the Mail and Empire. Sometimes when I quote things from memory, I make a mistake. I have this extract here and I am going to read it so that there will be no mistake. This is the Mail and Empire, the official organ of the Conservative party, and it reports an address delivered by the right hon. leader of the opposition (Mr. Meighen) in the city of Windsor. I am going to read this paragraph from it. He went on to say:

> I would make a treaty with Britain on just the same basis as others. I do not believe in showing loyalty by giving industrial concessions unless you get something in return.

What does that mean? I do not know if the leader of the opposition could give any other explanation or not, but the only meaning I can get out of it is that he would abolish the preferential tariff to Great Britain; that he would deal with other nations in exactly the same way as with Britain. That would be doing away with the preferential tariff and putting the British nation on exactly the same fiscal terms as other foreign nations the world over. That is the way I look at it, and I cannot arrive at any other understanding, so far as my limited knowledge goes. Now I want to compare that with the utterances of those hon. gentlemen in the campaign of 1911, where the real issue was camouflaged—at least, I am going to assert that it was camouflaged in the part of the country where I live and possibly all over Canada. In that campaign it was stated to the people "If you adopt the reciprocity treaty you are going to be swallowed up by the United States of America; the treaty spells annexation and it savours of disloyalty to the British nation." They quoted Champ Clark of the United States as saying that it meant the parting of the ways. That is what was coming to us in 1911, and the same gentlemen who in 1911 waved the Union Jack, cried loyalty, and trembled at the knees for fear of annexation, now draw right back, hit out from the shoulder and say "Britain, we will deal with you the same as any other foreign nation." My attitude from youth up has been that I will take second place to no man in the Dominion of Canada for loyalty to Great Britain; but I condemn most emphatically any man or body of men, any political organization or other organization that will take the Union Jack in a campaign and make a political football out of it. I think in the first speech I made in this House I said I was not here to play politics, not here to do or to undo any political party, nor to oppose any government for the sake of making opposition. I am not here to support any government nor any party simply for the sake of supporting that political party; but I am standing here solidly on the foundation of true principle and will support any party or government that will enact legislation in this country that will be, in my opinion, of the greatest benefit to the greatest number, and I would oppose any government or any party that legislates to build up a favoured few at the expense of the masses of the consuming public of Canada.

Mr. R. K. ANDERSON (Halton): I understand that the government has no followers who are ready or perhaps willing to support the proposal made in the budget; and it is left to the members of the opposition to continue the discussion. The Acting Minister of Finance (Mr. Robb) is new to the office which he holds, otherwise I do not think he would have introduced the budget which he presented last Thursday. It is a budget, Mr. Speaker, that has brought dismay to the minds of the people of this country. It was so prominently heralded in the Speech from the Throne, much to the delight of hon. members to my left, and it fulfilled its worst expectations. Not since confederation has there been a budget which has created so much dismay and consternation in all parts of the country, particularly amongst the industrial and also the agricultural classes. It is a budget which has been actuated more by expediency than by the exigency of the national situation, a budget that is scarcely intended to assist the national affairs of the country, but rather to assist the government in carrying on in the House and in office, a budget which is intended to purchase—and I use the word "purchase" advisedly—the support of hon. members to my left. I think that is its main purpose. Had the reciprocity pact of 1911 been consummated by the government and announced in the Speech, it would not have created greater consternation than the

present budget throughout the country to-day. The people of Canada spoke emphatically against the reciprocity pact, and I prophesy that they will speak just as emphatically against the policy indicated in the budget when they get the opportunity.

The reductions in the tariff announced on Thursday are not so sweeping in themselves, but it is the menace for the future that alarms people. This is the second instalment of the Progressive policy of free trade introduced by the present government. I am constrained to believe that those reductions would not have been propounded by the hon. Acting Minister of Finance (Mr. Robb) if he had had his own way, and I am quite satisfied that if the Minister of Finance himself had been in the House such a budget would not have been introduced. The Finance Minister is the pilot who has been thrown overboard, so eloquently referred to by the hon. member for Brantford (Mr. Raymond) in his speech on the Address, and with him has been thrown overboard his promise of last year that there would be stability—stability which is so badly needed at the present time, which industry needs and must have before it will be able to take its proper place again. After thinking over our protective policy for the last twenty-eight years, the Liberal party has finally decided to leave the harbour of protection and sail for the open sea of free trade. Fortunately the issue is now clear cut, for the Liberal party have stepped off the platform of protection, a platform which has always belonged to the Conservative party.

The hon. gentleman who has just taken his seat (Mr. Woods) wants to know what protection has done for the Dominion since the inception of the National Policy in 1878. Well, if that policy has not done anything for us, what policy has? Our industrial development during the past forty years has been due to the National Policy, which was inaugurated by the Conservative party, and was never departed from by the Liberal party until to-day. Indeed, what we in this quarter of the House are complaining of is that the tariff policy which has served the country so well is now being interfered with. Had it been such a poor policy as some hon. members would have us believe, it would have been eradicated from the statutes many years ago. But it is there yet, and probably will remain in spite of the reductions introduced by the present budget.

The hon. gentleman seemed to be dissatisfied with the growth of the country. From 1911 to 1921 Canada had a greater per cent increase of population than any other country in the world. Surely that is not a bad showing. To-day our percentage of growth is, in proportion, equal to the rate of growth of the United States a hundred years ago; they are about that far ahead of us. As to the prosperity of our farmers, my observations would lead me to believe that they are just as prosperous to-day as they have been at any time, even under Liberal rule. The Minister of the Interior (Mr. Stewart) had a good deal to say about the prosperity of the Dominion from 1896 to 1911. Well, that prosperity was enjoyed under the National Policy. I remember the former hon. member for Red Deer—Mr. Clark—stating in this House that during their fifteen years in office the Liberal party had reduced the protective duties by seventy-nine hundredths of one per cent! Not very much of a reduction. But they are making a reduction to-day—a reduction which I believe will not be in the interests of the country, indeed, will be absolutely detrimental not only to the industrialists but to the farmers themselves. Anything that tends to destroy the home market is certainly not in the best interests of our agriculturists. Our farmers—including those of the West—sell something like 80 per cent of their produce in the home market. By doing away with some of our industries the population of our cities naturally will be adversely affected, and consequently our farmers will have to seek the foreign market for the disposal of more of their products. There is no market like the home market, for it is close at hand and the best prices are obtained there.

Since the withdrawal of those in the cabinet who overshadowed him the right hon. Prime Minister is more the leader of his party than at any time since he took office. Therefore he has been able the better to control his followers and to lend a more attentive ear to the advice he receives from the Progressives to my left. Since the opening of this session—and probably it existed last session—there has been a sort of underground coalition between the Liberal and Progressive parties. The right hon. Prime Minister has in fact capitulated to the Progressive group, and I notice with a great deal of amusement that since the opening of the session he has been received by the leader of the Progressives with a sort of conquering smile —a "smile that won't come off."

Canadian industry was stunned by the ill-timed announcement in the Speech from the Throne of tariff reductions on the implements of production; to-day our manufacturing business is practically paralyzed by the budget. I can scarcely reconcile the budget with the statements which appeared in the press a week ago of what the government

said to the delegations of interested industries that came to Ottawa. Those delegations were positively assured that no tariff reductions would take place. It was also stated that the country had looked upon the announcement in the Speech from the Throne too seriously, and that it was not intended by the government to reduce the tariff. Yet to-day we find the very worst fears of the people have been realized. No revival of trade can be expected under present conditions, particularly when the gun of the free trader is pointed at the very heart of capital. Under such circumstances capital will go into hiding; it cannot do anything else. No capitalist is likely to start an industry at the present time when he does not know how long our tariff duties are to be maintained. If they are to be tinkered with every year, reduced a bit here and a bit there, a sales tax put on one article and left off another, no capitalist will invest in industrial enterprises, consequently industry will stagnate and unemployment will increase throughout the country.

I cannot see how those interests which expect to be benefited by these tariff reductions can receive any assistance whatever. Our economic ills cannot be cured by pulling down the tariff wall which protects them, especially when all other countries have adopted a high protection policy. Under the circumstances it is simply a suicidal policy to move towards free trade when our neighbours are still further raising their already high protective wall. Such a policy will not assist our manufacturers and farmers to get into the markets of the United States; on the contrary, while we languish our neighbours will invade our markets and profit at our expense.

The annual budget, Mr. Speaker, is always awaited with a great deal of interest, for it deals with the taxation necessary to keep the machinery of government running. It is a huge proposition to gather revenue from a population of only nine million people scattered over such a vast area. With our country stretching from ocean to ocean, with many miles of wilderness separating different sections, we have to carry a burden of government machinery which would easily suffice for more than three times our population were it all in one compact homogeneous mass.

We require probably five times the transportation facilities on account of the long distances lying between the different parts of our sparsely settled territory. If our nine millions were congregated say in Ontario or Quebec we could do with very much less government and would incur very much less expense. It is hardly fair to compare our expenditure with that of other countries of less extent and greater population, and it is even hardly fair to compare it with that of the United States, which has a similar extent of territory and a very much larger population. The expense of government does not increase in proportion to increase in population, consequently our per capita expenses of government are necessarily larger than those of other more thickly settled countries. It is easy to criticize but not quite so easy to offer a remedy, and that is one of the things that the citizens of this country should consider when they have a tendency to criticize too severely the expenditure of government.

We have a huge debt, amounting to $2,453,000,000, or $260 per capita, but we have great natural resources to compensate us for that debt. We must remember that the great bulk of the debt was incurred in the defence o fthe country. The Great War was a war of conquest by Germany and defeat would have meant confiscation of our property, or, if not confiscation, very heavy imposts in favour of the victor, so that we look upon this $2,453,000,000 as not too much of a price to pay for our national liberty. As to the amount paid to our railways, that also is a capital investment which, with careful management, will some day yield a return: these are the principal items which have increased our public debt so tremendously since 1914. In 1914 our debt was something like $335,000,000. There is a big difference between $335,000,000 and $2,453,000,000. We have invested in our railways something over $900,000,000 of the peoples' money—I mean through the government channels; the total investment in the roads is very much more than that,—and we are investing more each year in rolling stock and branch lines in an effort to provide efficient transport service for the people. Competition with the Canadian Pacific should not be the object of making these roads efficient, because both roads are needed and should be sustained. Our great object should be to make the Canadian National Railways efficient for the needs of the people in the sections which they serve; I am opposed to any encroachment upon the sections adequately served by the Canadian Pacific.

In view of our large debt, Mr. Speaker, it behooves us to retrench, and that applies not only to the Dominion government but to all provincial governments as well. There has been a spending orgy in this country ever since the war and individuals as well as governments, municipal, provincial and Dominion, have been responsible for it. The time has

arrived when we should retrench and when our budget should more than balance: not only should we pay our running expenses but we should have a surplus each year to apply to the reduction of the debt and thus to the lessening of the heavy interest charges which take such a large part of our annual income. Our interest payments last year were $137,892,000, or $10,000,000 in excess of our total expenditure for all purposes in 1914. Our interest charges in 1914 were $12,893,000, so that $125,000,000 of the annual interest charge is due to the war and to our national railways. The National railways may be regarded as a sort of war casualty, because the government were compelled to take them over in the national interest. Pensions, which in 1914 amounted to $311,900 had increased in 1923 to $32,985,000, an increase of $32,674,000 directly due to our war effort. This expenditure will of course continue for two or three generations in varying amount, but it is a just claim on the bounty of the government. Our soldier land settlement in 1923-24 cost $12,000,000 and soldiers' civil re-establishment cost $15,573,000, making in all $21,262,000 which must be added to our direct war expenditure. This amount will decrease year by year as the Great War recedes into history, but so long as there is the slightest need this expenditure must be retained in order that the returned soldiers may receive every consideration at the hands of the country. These amounts make quite a large demand on the annual revenue, something like $199,250,000 over what was needed in pre-war years. Taking this amount from the expenditure of 1923—and these figures are for 1923—as constituted in the consolidated fund, $332,293,000 we have left a balance of $132,689,000 for governmental purposes on the basis of pre-war expenditure.

The government has been speaking during this session about economy, and I am glad to see that they are beginning to practise economy, or at least to say that they are. Let us see how far the government have gone in this direction. Economy is a vital necessity; the time has arrived when we should make our revenue more than pay our expenditure. Let us compare our current expenditure, chargeable to the consolidated fund account, with what it was before the war so that we may see how near we are getting to pre-war conditions. We will eliminate such charges as interest on public debt, war pensions, soldiers' civil re-establishment, land settlement—in other words expenditures due to the war—in order to see how our expenditure compares with that of 1914, at the beginning of the war. I think that is a reasonable way to compare our annual operations of government. We find that the expenditures have been as follows: In 1914 our total expenditure was $127,384,000; eliminating pensions, $311,000, and interest on debt, $12,893,000, a total of $13,204,000, we have a balance left of $114,180,000. That is, taking out what I am going to eliminate from the figures of subsequent years, namely, expenditure on the public debt and the amount paid for pensions. During the year ending March 31st, 1922, the expenditure for interest, pensions, land settlement and soldiers' civil re-establishment amounted to $222,633,000 If you take that from the total expenditure of that year, approximately $347,560,000, it leaves $124,827,000, compared with what it was in 1914, $114,180,000. So that in the year 1922 the expenditure was only $10,647,000 in excess of the expenditure on the same basis in 1914. In 1923 the amount spent on these four items was $199,604,000. Taking that from the total expenditure of that year, $332,293,000, you have a balance of $132,689,000, and deducting from that the amount spent in 1914 you have an amount of $18,709,000 in excess of the expenditure in 1914. In 1924 the amount spent on these four items was $190,369,000; taking that from the $328,250,000 of total expenditure in that year you have a balance of $137,881,000, leaving an excess over the expenditure of 1914 of $23,701,000. That places the expenditure of those three years on the same basis as that of the years previous to the war. You will therefore see that the present government has not advanced very far in the direction of economy over any other year. In fact, there was a smaller amount in excess of the expenditure in 1922, than in 1923 and 1924 over 1914.

Coming to the surplus which the Acting Minister of Finance shows, of $67,000,000 or thereabouts, on consolidated fund account, if we compare that with the figures for other years we find that this is not the first year we have had a surplus, although it was fairly prominently featured in the budget speech that this was the first year our revenue and expenditure had balanced, or more than balanced. According to the Public Accounts I find that in 1916 there was a surplus, in round figures of $41,979,000; 1917, $101,000,000; 1918, $40,463,900; 1919, $80,215,000; 1920, $45,902,000; 1921, $73,268,000; 1922, $34,391,000; 1923, $62,321,000. Those are the surpluses for those years on consolidated fund account, in each of which the revenue exceeded the expenditure; so this is not the first year we have had a surplus.

Coming now to the trade of Canada, of course our trade is increasing, and it has in-

creased very markedly during the last ten years. The war gave it a great impetus, and the increase has kept up since that time. I will give just a few percentages with regard to our trade with the British Empire and the United States. In 1924, 26 per cent of the total trade of Canada went to the British Empire, and 52 per cent to the United States; in 1923, 35 per cent to the British Empire, and 51 per cent to the United States; 1922, 33 per cent went to the British Empire, and 54 per cent to the United States; 1921, 27 per cent to the British Empire, and 57 per cent to the United States. You will notice that the amount going to the United States has decreased somewhat, and the amount going to the British Empire has increased: we are gradually beginning to send our trade across the ocean.

As regards imports, the percentages of imports from the British Empire and from the United States relatively to the total imports wese as follows:

Imports from the British Empire and the United States

Year	British Empire per cent	United States per cent
1921..	21.45	69.4
1922..	19.94	68.6
1923..	22.3	67.3
1924..	17.5	68.5

In 1924 our imports from the United Kingdom were less than at any other time since 1921 and our imports from the United States were slightly larger.

I will give the export figures. Of our total exports the percentages going to Great Britain and the United States were as follows:

Exports to the British Empire and the United States

Year	British Empire per cent	United States per cent
1921..	33.77	43.38
1922..	46.7	39.1
1923..	47.3	39.7
1924..	34.1	40.8

We have gradually been increasing our exports to the British Empire, but in 1924 those exports fell off as was the case also with our exports to the United States; but there was quite a large increase in our exports to the other countries of the world, 25.1 per cent of our total exports going to foreign countries.

If you take dutiable and free goods for the twelve months ending February, 1922, 1923 and 1924, we find that dutiable goods entered for consumption into Canada amounted to $512,533,000; free goods, $248,492,000. The amount of duty on all dutiable goods collected in 1921-1922 was 23.6 per cent, while on all imports the percentage of duty amounted to 15.9; 1923, the duty collected on dutiable goods amounted to 25.7 per cent, or a little over 2 per cent higher than for the previous year, while the percentage of duty collected on all imports was 16.3 per cent, a slight rise in the duty; 1924, the duty collected on all dutiable goods was 23 per cent, and on all imports 15.3 per cent. You will see from these figures that the duty tax collected by both governments, Conservative and Liberal, has been very similar; in fact, it has been almost unchanged up to the present day. The year 1923 shows an increase over 1922, of 2.1 per cent, and 1924 shows a decrease over 1922 of .6 per cent on dutiable goods, while on all imports 1923 shows an increase over 1922 of .4 per cent, and 1924 shows a decrease of .7 per cent over 1922.

Of our exports of agricultural and animal products for 1923-1924, 74 per cent went to the United Kingdom and the United States, and 26 per cent to the rest of the world; 54.6 per cent of these goods going to the United Kingdom and 19.4 per cent to the United States, showing that England is the country which takes the greater proportion of our agricultural products, a great deal more than the United States. I cannot quite understand why hon. gentlemen to my left want to trade so much with the United States, which does not take anything like the same amount of farm products from us that the United Kingdom does. It is our duty and in the best interests of the farmer to cultivate our trade with the United Kingdom.

We imported from the United Kingdom in 1923-1924 goods amounting to $155,000,000 and exported to the United Kingdom $355,000,000, leaving a favourable trade balance of something like $200,000,000

An examination of these returns for the above years shows that 54.6 per cent of our agricultural exports were sold in the English market, while only 19.4 per cent went to the United States, and 26 per cent to other countries. The United States is our poorest customer and our greatest competitor in farm products. In 1923 we exported 166¾ million bushels of wheat to the United Kingdom and only 16 million bushels to the United States, or ten times as much to the former; of flour in 1923 we exported 4¾ million barrels to the United Kingdom and 612,000 to the United States, or eight times as much to the United Kingdom as we sent to the United States; oats, 20¾ million bushels went to the United Kingdom and 842,000 bushels to the United States; or twenty-five times as much to the United Kingdom as to the United States; of barley we sent 13¾ million bushels to the

United Kingdom. For the same year, 1923, we exported 20 million pounds of cheese to the United Kingdom and about the same quantity to the United States, 22 million pounds; butter 17,500 pounds; eggs 3,158,000 dozen. On the other hand we imported from the United States something like 140,000 dozen eggs and 5,500,000 pounds of butter. If the tariff wall between this country and the United States were taken down the Americans would flood this country with the produce of farm and factory to the detriment, if not to the extinction of similar industries in Canada. We have a standing offer of reciprocity in natural products at the present time from this government, but so far the offer has been treated with disdain. The only reply given by the United States is to raise their duties on many articles we raise, particularly the one commodity produced by the prairies, wheat, to a prohibitive height. That does not look very much like a reciprocal spirit on their part. I think their duty at the present time on wheat is 42 cents a bushel, on mill feed 22½ per cent ad valorem, and $1.12 per hundred weight on flour. That does not look very much as if the United States were ready to trade with Canada on a reciprocal basis. It is a direct slap in the face, you may say, to this government for the reciprocity resolution of last year. I cannot see any reason for going on with such a policy, or holding out a proposition of that kind to the United States. The United States does not want Canadian wheat. If they did they would not put on such an import duty against it. That duty of 42 cents on wheat says so emphatically, but just the same they would like our market for their surplus foods in Canada.

An examination of the trade returns for 1924 discloses that we imported from the United States $603,709,000 worth of goods and exported to that country $420,148,000 worth, leaving an adverse balance of $177,580,000 against Canada, resulting in the Canadian dollar being at a discount of 2 per cent on exchange—9 millions of people purchasing $177,000,000 of goods more from 110 millions of people than they are willing to purchase. Putting it on a per capita basis we spend in the United States $67 per capita while they reciprocate to the extent of $3.82 per capita. Talk about reciprocity with a people so self-centred as that.

Examine our trade with the United States on farm and garden produce. Of fresh vegetables in 1923-24, largely potatoes and tomatoes, our imports were $3,051,000 from the United States while they bought from us $1,025,000. Fresh fruit imports, largely apples, pears, plums, grapes, berries, from the same source amounted to 53,388,000 pounds, valued at $4,500,000, while they bought from us fruit to the amount of $691,000. These two classes of products left us an adverse trade balance of $5,796,000. This amount if spent in Canada would make up the difference between success and failure of our fruit farming industry. We import annually over $100,000,000 worth of American agricultural, vegetable and animal products, and in 1923-24 it amounted to $113,000,000. This is a demand which can be supplied by our own farmers. Give our farmers greater protection from United States competition, particularly since their tariff wall is so high on these classes of product, and this money will stay in Canada to improve the home market to the benefit of all.

Our coal bill to the United States in 1923-24 amounted to $89,250,000, and these two items alone would balance our trade returns with that country. It is our duty to make an effort to rectify this unfavourable trade balance by reducing our imports from the United States. This can easily be done by stimulating our coal production and putting a higher import duty on the products of the farm.

The sales tax, Mr. Speaker, has received a good deal of attention since the government increased the amount to 6 per cent. The present unsatisfactory conditions in regard to the sales tax have been largely due to the inefficiency and vacillating methods of the present government. The sales tax provided for in the last budget was to come into effect in January this year. But the government, or the Department of Customs and Excise, could not arrange regulations as to how the sales tax should be applied. They made two or three attempts without meeting any degree of success. As first introduced, I think, it was not to be shown on the invoice; it was to be absorbed or hidden in the price of the article. That announcement came so late that it caused a good deal of distress and dissatisfaction throughout the manufacturing industry. Some of these industries had finished their price list for the coming year, had sent out their travellers on the road, and did not want to change that price list. On the other hand there was quite a demand for the government to make a change so that the sales tax should be shown on the invoice. The government adopted the change and required it to be shown on the invoice. Immediately those firms that had got out their price lists in which the tax was hidden in the price of the article set up an outcry and the government came back and agreed to another change. They said it might be optional, and that is the course which has been followed up to the present

time. The government, seeing their mistake, came forward this session and reduced the tax to 5 per cent. They also provided for taking it off many articles altogether, and on other articles making it 2½ per cent. It was amusing to hear the Finance Minister last session talk about his desire to reduce the cost of living, and then impose a sales tax greater than had ever been seen before. The sales tax is a home tax. It must be paid by the Canadian people, there is nobody else to pay it. It was almost immediately shown in the increased price of the article —it could have no other effect.

11 p.m.

There may be some question as to who pays an import duty. But there is no question as to who pays the sales tax; it is always added to the price unless it is absorbed by the manufacturer himself. The sales tax —and I am not objecting to it; if amounts of money are to be raised it is certainly a good way of raising revenue—has provided the government with large revenue. The revenue from sales tax in 1921-22 amounted to $56,325,000. In 1922-23 it yielded $81,428,000; and in 1923-24, $94,911,000. That is a peculiar way to reduce the cost of living, to increase a direct tax so that it shall yield $94,000,000 of revenue. The government increased this tax twice. In 1922-23 it was increased by 50 per cent over 1921-22. In 1923 the government raised the tax to 6 per cent. If the government reduces that tax now, it is simply a case of lowering a tax they put on themselves.

The tariff reductions will not afford any particular relief to the average farmer. As mentioned by my hon. friend from East Elgin (Mr. Stansell) the reductions are so small that they would not be recognized by the average farmer in his annual statement of receipts and expenditure—they would hardly be known.

There is one feature of the budget to which I want to draw the particular attention of the government. The Acting Minister of Finance said with respect to materials for agricultural implements:

> Materials which enter into the cost of the aforementioned items and other implements on which the duty is to be reduced will be entitled to entry at 7½ per cent under all tariffs.

That, if one read it over carelessly might not be considered as much; but when you come to take into account the number of industries affected, that would make quite a reduction in the tariff protection which they enjoy. Those industries manufacture the materials that go into the manufacture of all things in connection with agricultural implements, mining implements and so forth. That reduction will cause a reduction of duties on quite a large number of articles such as screw nails, nails, bolts, nuts, malleable iron, steel and so on, and there are in the country quite a number of those industries which will be very injuriously affected by that reduction to 7½ per cent in the tariff. I do not think the government has any idea yet how many industries will be affected by that one reduction. There will certainly be quite a large number, and as time goes on, the government will be hearing more about the matter.

The sales tax has been removed from milk products and milk foods. If I am not mistaken, milk foods are already exempted from the sales tax. The woollen industry will get very little benefit from the reduction in the sales tax because at the present time it is not subject to the sales tax. The reduction in the sales tax will, therefore, be of little benefit in connection with these industries.

I want to call the attention of the House to a few more points in regard to the present government. During the time that they have been in office, they have introduced a good deal of legislation, legislation that has not been very beneficial to the country, legislation that they have made practically to suit themselves. I might call them conspicuous failures in legislation. There was the wheat board legislation of 1922. I think my hon. friends to my left will say that that was a complete fiasco. It did not give any relief whatever as regards the marketing of wheat and it is a dead letter at the present time.

Legislation passed a year ago in regard to the control of freight rates on the Great Lakes was a costly failure, and it gave no relief whatever to the wheat farmers of the West. It had to be declared inoperative by the Governor-in-Council in order to save the situation.

The Halibut treaty with the United States was another matter that failed to go through. The Minister of Marine and Fisheries (Mr. Lapointe) signed that treaty without the signature of the British Ambassador, and the United States refused to ratify the treaty.

The attempt made by the present Acting Minister of Finance (Mr. Robb) to bring about reciprocity with Australia was also a failure. The correspondence and the visit of the minister to Australia resulted in nothing.

The attempt to bring about a reciprocity pact with the United States has been a failure.

The treaty with France was largely a padded document. There were in it a number of things that were not exported by Can-

ada; it gave no benefit to this country, and it will be of no use to the people of Canada.

These things and many others might be taken as the record of failures of this government during their three years in office, the sales tax being another failure. These are things which the people of this country should very well consider and will consider when the government goes to the country at the next election.

On motion of Mr. Sinclair the debate was adjourned.

On motion of Mr. Graham the House adjourned at 11.05 p.m.

Tuesday, April 15, 1924

The House met at three o'clock.

REDISTRIBUTION

Right Hon. W. L. MACKENZIE KING (Prime Minister): I beg to move, seconded by Mr. Lapointe, that the special committee to whom was referred Bill No. 2, to readjust the representation in the House of Commons, be given leave to report from time to time.

Motion agreed to.

UNITED CHURCH OF CANADA

Hon. A. B. COPP (Secretary of State): I beg to present a petition from the Western Association of Congregational Churches,, representing all the Congregational churches in Ontario, west and north of Hamilton, in favour of church union.

Mr. R. F. PRESTON (Lanark): I desire to present petitions from the members and adherents of Zion church and St. Andrew's church at Carleton Place, Ontario, and also from the members and adherents of Knox Presbyterian church, at Beckwith, Ontario, both opposed to the church union bill.

Mr. J. F. WHITE (London): I desire to present a petition from the officials and members of the Methodist church of London, Ontario, for the incorporation of the United Church of Canada.

BANKING AND COMMERCE COMMITTEE

Right Hon. W. L. MACKENZIE KING (Prime Minister): I move, seconded by Mr. Lapointe, that the name of Mr. Ward be substituted for that of Mr. Forke on the select standing committee on Banking and Commerce.

Motion agreed to.

PENSIONS, INSURANCE AND RE-ESTABLISHMENT

MOTION FOR SPECIAL COMMITTEE

Right Hon. W. L. MACKENZIE KING (Prime Minister) moved:

That a special committee be appointed to consider questions relating to pensions, insurance and re-establishment of returned soldiers, and any amendments to existing laws in relation thereto which may be proposed or considered necessary by the committee, with power to send for persons, papers and records, and to print from day to day its proceedings and evidence taken, for the use of the committee, and to report from time to time, and that the said committee do consist of the following members, namely: Messieurs Arthurs, Black (Yukon), Brown, Caldwell, Carroll, Chisholm, Clark, Clifford, Denis (Joliette), Hudson, Humphrey, Knox, MacLaren, McKay, Munro, Pelletier, Power, Raymond, Robinson, Robichaud, Ross (Kingston), Sinclair (Queens, P.E.I.), Sinclair (Oxford), Speakman, Stork, Sutherland and Wallace; and that rule 11 be suspended in relation thereto.

Mr. SPEAKER: Is it the unanimous pleasure of the House to adopt the motion?

Motion agreed to.

THE BUDGET

PRECEDENCE OVER OTHER BUSINESS

Hon. J. A. ROBB (Acting Minister of Finance): I beg to move:

That the order for consideration of the motion for Mr. Speaker to leave the chair for the House to go into committee of Ways and Means have precedence over all other business except on Wednesday, April 16, and except the introduction of bills, until disposed of.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): I have no objection to the budget being given reasonable priority, but I do not think it is necessary that it should have precedence over, say, the answering of questions. I am afraid the order paper would become badly cluttered if there is to be no answering of questions until the budget debate is disposed of. I should think that unopposed motions for papers might also be given consideration before the budget inasmuch as they take but a few minutes.

Mr. ROBB: I think the request of my right hon. friend is reasonable.

Mr. SPEAKER: Is it the pleasure of the House to adopt the motion with the proposed amendment?

Some hon. MEMBERS: Carried.

Motion agreed to.

REPORT

Report on Agricultural Credit, by Dr. H. M. Tory—Hon. Mr. Robb.

CONCERTS IN PENITENTIARIES

Mr. J. A. C. ETHIER (Translation) Before, Mr. Speaker, passing to the Orders of the Day, I wish to draw the attention of the hon. Minister of Justice (Mr. Lapointe) to an article which appeared, yesterday, in La Presse of Montreal, and which reads as follows:

> Concert in the Penitentiary
>
> The 35 members of the Knights of Columbus' orchestra, under the direction of Mr. J. A. Du Hayne, journeyed to St. Vincent de Paul penitentiary and gave a concert there yesterday afternoon, a delightful programme was rendered. It has become a custom to entertain convicts with musical concerts around New Year's day and Easter. Lt. Col. de la Bruère Girouard, Governor of the Penitentiary, thanked the musicians on behalf of the convicts.

I wish to find out from the hon. Minister of Justice how long has been in existence this custom of giving concerts to charm the leisure hours of convicts; who inaugurated this kind of pastime in the St. Vincent de Paul penitentiary; what was the cost of said concert and who is to defray the expenses; by what authority did the governor, the worthy Lt. Col. de la Bruère Girouard, become the spokesman for the convicts; in what manner did he express himself to thank the musicians on behalf of the convicts?

Hon. ERNEST LAPOINTE (Minister of Justice) (Translation): With reference, Sir, to the question of treatment of convicts in penitentiaries, opinions vary. Many believe that this treatment should be as harsh as possible. On the other hand, I notice, in the Votes and Proceedings of the House, a resolution stating that under the present act the most elementary principles of ethics, hygiene and humanity are violated. However, my hon. friend finds that there is too much entertaining. I shall make the necessary inquiries so as to furnish the hon. member with the information he desires.

PAINTING OF LATE PRESIDENT HARDING

On the Orders of the Day:

Mr. L. H. LADNER (Vancouver South): Mr. Speaker, may I inquire from the Prime Minister if the government will consider having reproduced the beautiful painting depicting the visit of the late President Harding to Vancouver, the reproduction to be hung in the Hall of Fame in this building? The painting in question is being presented by Mr. R. J. Crombie of Vancouver on behalf of the people of Canada to the American nation, and is now on view in Birks' store, Ottawa. President Harding's visit was the first of any President of the United States to Canada, and was a notable event in a century of peace. Has the government any plan to commemorate this historic event?

Right Hon. W. L. MACKENZIE KING (Prime Minister): When the government begins to hang paintings in the Hall of Fame I think they should be originals and not reproductions.

EMIGRANTS FROM CANADA TO UNITED STATES

On the Orders of the Day:

Mr. J. S. WOODSWORTH (Centre Winnipeg): Mr. Speaker, last week the attention of the government was called to the fact that legislation had been introduced in the United States congress providing that no quota barrier should be erected against native born Canadians, but that other immigrants from Canada would be treated as though coming from the land of their birth. Thus Canadian citizens born in England would be refused admission if the British quota was exhausted. Has the government made any representations to the United States with respect to this discrimination against certain classes of our citizens?

Hon. J. A. ROBB (Minister of Immigration and Colonization): Mr. Speaker, the government have no knowledge of any changes in the United States quota regulations which will affect Canada.

CIVIL SERVICE SUPERANNUATION

Hon. J. A. ROBB (Acting Minister of Finance) moved that the House go into committee to consider the following proposed resolution:

> That it is expedient to bring in a measure to provide for the superannuation of civil servants, to provide for contributions by civil servants to the consolidated revenue fund, to provide for payment out of the consolidated revenue fund to civil servants and to the widows and children of deceased civil servants of superannuation allowances or gratuities, and to provide for the making of regulations by the Governor in Council to give effect to the terms of the said measure.

Motion agreed to and the House went into committee, Mr. Gordon in the chair.

Sir HENRY DRAYTON: Explain.

Mr. ROBB: Mr. Chairman, it is intended to go on with the budget debate, and we are merely advancing this resolution a stage so

that the bill may be tabled for the information of hon. members before the Easter holidays. The bill to be submitted will be based on the recommendations of the committee of last session, reported to this House on June 22, 1923, too late then for legislative action. It will be introduced to carry out a promise made by the Prime Minister. It is proposed to submit the bill to a special committee for consideration—probably the same special committee that considered this matter last session.

Sir HENRY DRAYTON: Could not the minister tell us now what in his view the charge on the treasury would be? Can he not give us any financial details at all?

Mr. ROBB: I did have a memorandum of such details but I cannot place my hand on it now. I shall be prepared to give the information as soon as the bill is referred to the committee.

Sir HENRY DRAYTON: I should have thought the appropriate time to have the memorandum before us would be when the resolution is being discussed so that the committee may see what it is being committed to. I hope my hon. friend will be able to find his memorandum, for it seems to me the information it should contain goes to the basis of the resolution.

Mr. ROBB: I will give it to my hon. friend later. If he does not wish to advance the bill at this stage, it must stand over until after the Easter holidays.

Sir HENRY DRAYTON: I have not the slightest wish to delay anything. I only desire that we conduct our business in such a way that we may know what we are doing. If the government are not in a position to furnish the information now, perhaps they can send it over to us later on.

The CHAIRMAN: Shall the resolution carry?

Mr. MEIGHEN: May I ask how rapidly the government is proceeding with its plans for old age pensions and unemployment insurance? If I remember rightly, this superannuation measure was not mentioned in the Liberal platform, but the others were. It is said of the late Sir Richard Cartwright, that when a delegation came to him asking that a certain measure be adopted, he answered: He saw no objection; it had not been mentioned in the Liberal platform. Is it on that principle that this measure takes precedence over all that was contained in the platform? Also, what is the value of this resolution stage if we are going it blind, if we are just to pass the resolution and be told later on why we passed it? The minister should have had his information here, perhaps not as detailed as is given on a bill, but at least he should have had some general information as to what the scheme is and what it entails. We have not the slightest information about it, and to pass it now really is grotesque; it is absurd.

Mr. ROBB: I am prepared to send the information over to my hon. friend; I know it is in my desk in the office. However, if my right hon. friend desires it, we will let the resolution stand.

Mr. MEIGHEN: I do not feel content to pass a resolution that we know nothing about.

Mr. ROBB: I move that the committee rise, report progress and ask leave to sit again.

Progress reported.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed from Monday, April 14, the debate on the motion of Hon. J. A. Robb (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into committee of Ways and Means.

Hon. J. E. SINCLAIR (Queens): Mr. Speaker, I wish at the outset to associate myself with the sentiment expressed by the hon. Acting Minister of Finance (Mr. Robb) when he delivered his statement to the House, in which he voiced his regret that the right hon. Minister of Finance (Mr. Fielding) is not able to be in his place in the House and could not be here to present the annual financial statement. I am sure that it would have been a pleasure to him to announce to the House and the country the successful consummation of the policy of economy and retrenchment which this government has put in force during the past two years. The announcement, however, that the Minister of Immigration and Colonization (Mr. Robb) was to take the place of the Minister of Finance was received by the people with confidence and assurance, knowing, as they did, that the record of my hon. colleague since he has been in public life would be assurance of the delivery of an able budget speech.

If I may be permitted, Mr. Speaker, I should like to review briefly a few of the steps that have led up to the conditions that

obtain in Canada to-day and which have culminated in the announcement of the Acting Minister of Finance that the government have been able to balance their budget and to effect a considerable reduction of the public debt. I will ask hon. members to look back over the period of the last two years, or a little more, during which the present government have been in power. By doing this we will see the many obstacles which the government have had to overcome in arriving at the position indicated by the Acting Finance Minister.

When the government took office we found that the exchange as applied to our dealings with our greatest customer, the United States, was at a discount of from 10 to 12 and sometimes 15 per cent. Conditions generally in Canada were not good. Unemployment was rife in our industrial centres; we found it necessary during our first year of office to pay out over a million and a half dollars for unemployment. Business was not steady; business men were looking about for markets; the purchasing power of the people was lower than it had been for many years. That was the condition that obtained when the government took office. One of the first things we did was to review the estimates that had been placed before council by the officials under the regime of the ministers who had gone out of power, and our first act of retrenchment and economy was that of cutting those estimates down to the extent of over $130,000,000. In doing that we had to exercise great discretion in matters of expenditure. I think the best way to illustrate that is to give to the House the total expenditures for the years preceding and following the time of the government's accession to office. In 1920, the year in which the armistice was signed, the total expenditure of Canada amounted to $785,869,611. In the year 1920-21, in which the control of expenditure was, with the exception of the last three months, in the hands of my hon. friends opposite, the expenditure amounted to $528,283,199. In 1922 it was $463,652,436, showing a gradual reduction of expenditure. In the year that has just closed a considerable further reduction was effected, so that the total expenditure amounted to $375,213,651.

As well as effecting economies in expenditure it was necessary that we should look also to our revenue. The outlook in the year 1922 was such that if we had carried on affairs as they were left to us by the government that went out of power we would have been face to face with a deficit of $200,000,000 that year. It was necessary to grapple with that condition, and to that end we had to find more revenue. The revenue in 1920 amounted to $349,000,000, in 1921 to $436,000,000 and in 1922 to $389,898,000. In 1923 the revenue had increased to $405,414,000. We have heard some criticism in the House, and particularly in the country, in public addresses and in representations made through the press, to the effect that the government had increased taxation. Let me say emphatically that it was necessary in some way to provide for the commitments that had been made during the years of the war and after.

If it was necessary for the government to increase taxation, it was necessary only by reason of the fact that the government that preceded us neglected to make a proper impost of taxation when the people of this country had the money to pay taxation, and I am free to say, and I think the people of the country will agree with me, that any increases in taxation that we found necessary to make were largely along the line of taxation upon those who were in the position to pay. We increased the sales tax, and we have heard a great deal of criticism, especially during the past year, of that increase, but let me say that this was done after the business men and those engaged in industry in this country, those who had experienced the results of the taxation of the former government, and particularly of what is known as the luxury taxes, were ready to say to us, and say without hesitation that the best method of imposing the increased taxation was by means of a sales tax. So I would say to those who criticise that method of raising revenue that it meets with the approval of those who have to pay the revenue very much better than any impost such as the luxury taxes imposed by the former Minister of Finance.

Passing from that phase of the financial situation, we had to provide for a revenue that would not only pay our interest and our running expenses, but also for the whole capital cost of the war. It is not necessary for me to go into detail, because it has been very well put before the House on two or three previous occasions during this session, but I think it is something that is worth repeating, for if there is one thing more than another that my hon. friends opposite fell down in it was in not providing the necessary revenue to meet the expenditure when money was flowing freely into this country during the war. I say again that it was necessary for us to provide for the capital cost of the war and demobilization, which amounted at the end of the fiscal year 1920 to $1,670,406,242. Aside from that, the previous government added $13,733,333 to the national debt.

Mr. LADNER: Is the hon. member aware that during the war Canada paid approximately 48 per cent of the cost of her share of the war?

Mr. SINCLAIR (Queens): If my hon. friend will pay strict attention to what I am saying and look at the blue books also he will find that the capital cost of the war is still outstanding, plus $13,000,000 more.

Mr. LADNER: The American Bankers' Association engaged an expert to examine the cost of the war to all foreign countries, the revenues raised during the war, and the amount paid on war account, and if the hon. gentleman will read that report he will find that Canada paid during the war 48 per cent of the cost of the war.

Mr. SINCLAIR (Queens): My hon. friends on the other side are very ready to quote from the United States, but they were not so ready in years past to quote authorities from that country. If my hon. friend will look at the blue books published under the authority of this government and analyse the figures, he will find that those I have presented to the House are correct. There is nothing in the blue books or in any documents published under the authority of the Auditor General of this country that will show anything different. If my hon. friend has to go to foreign countries to bolster up his case and excuse the party he represents for not doing their duty during the war in finding the revenue necessary when such could have been obtained from the people who had the money, he must be in a very bad plight.

I was speaking, when the interruption took place, of the national debt. The national debt at the end of March last was $2,423,367,759.37. In the last two years our debt has increased considerably. In the year 1920-21, which was the first year after the armistice was signed, and a year in which the government of that day should have exercised a careful supervision over expenditure and exerted themselves to the utmost to raise the necessary revenue, the amount of $92,000,000 was added to our national debt. During the fiscal year ending March 31, 1922, $81,000,000 more was added. I may point out that for the last three months of that year this government was liable for expenditure, but the programme for expenditure was largely laid down by our predecessors in office, and all that could be done by us was simply to slow up on the expenditure, and I think it is safe for me to say that if there had not been a strong hand exercised during those three months in controlling expenditure the addition to our national debt would have been much greater. During the first year we had control of affairs in Canada, our national debt increased by $31,000,000, but last year we are in the happy position of being able to say to the people of this country that our national debt did not increase, but on the contrary showed a net decrease of $30,409,109.37, or an improvement when compared with the year previous of about $61,000,000. That was largely brought about by exercising a strong hand on economy, and also by collecting the taxes that were properly due without fear or favour. If we do not act with firmness and see that those who are able to pay, pay their just share of taxation, we cannot expect to bring Canada back to the era of prosperity which we all so much desire.

It is also to be remembered when considering this phase of the financial situation, that a large part of our expenditure is expenditure which we cannot control. In the year preceding last, our uncontrollable expenditure amounted to over $300,000,000. During the year that has just closed our uncontrollable expenditure has been reduced considerably, and when we analyse the figures closely we find that that reduction in uncontrollable expenditure is largely due to the increased earning powers of our Canadian National Railways. The management of the National Railways has been of such a kind that it has given results in this country; the increase of revenue has been very marked, and the decrease in expenditure in carrying on the railways has been equally, if not even more marked.

One of the principal factors enabling the government to balance the budget this year was the success encountered in the management of the Canadian National Railways, resulting in a reduction of the uncontrollable expenditure this year to about $250,000,000. The balancing of the budget was also made possible by the economies carried out in the general expenditure on ordinary consolidated fund account. These economies were rendered more difficult by the fact that during the war public works in Canada were allowed to stand. I am not criticizing hon. gentlemen opposite because of the fact, I am simply saying that it is the case, and that we encountered that difficulty when we assumed office. We found then that the public works of the country had deteriorated greatly and in consequence during our first year or two in office it was almost impossible to economize in expenditure of this character. However, although delayed at first in carrying out economy we have striven to make up for lost time, and the estimates presented to the House this session bear evidence as to the

sincerity of our efforts along that line. Sir, what do these reductions of expenditure mean to the people of Canada? That has been very clearly demonstrated in the budget brought down last Thursday by the Acting Minister of Finance. The reductions of expenditure made in 1923 amount to $29,000,000, those in 1924 to $59,000,000, and our estimates for the year we are facing, compared with the total estimates for last year, will show a reduction of $46,000,000.

There is one remarkable feature in connection with the reduction of the national debt which deserves special emphasis. It is that there has been a greater reduction of debt than has ever been announced by any previous government. It is a greater reduction than the aggregate reductions which characterized the golden era of Canada's prosperity under the Laurier-Fielding regime, from 1896 to 1911. The reduction made this year is also larger than the aggregate reductions made during the years of Conservative rule from 1911 to 1921. Sir, the budget so recently brought down is one which we may well be proud of, and one that should excite great pleasure among the people of this country.

It is scarcely necessary to refer to the reductions of duty that have gone into effect; they are apparent to everyone. But there is one feature of the tariff question to which I should like to refer. It was argued during the reciprocity election of 1911, and the same argument was brought forward at political meetings during the recess and during the present debate, that the farmers of this country require more protection, that from year to year agricultural products from the United States are being dumped in this country thereby demoralizing the markets of Canada, and that more protection in the matter of grain, vegetable and animal products should be given to our farming population. Sir, from my understanding of the situation no more unreasonable proposition was ever placed before the people. Hon. gentlemen opposite who represent the "interests" of this country—and I do not think it is unfair to them to make that statement—must be extremely anxious to make out a case when they say that the Canadian farmers need more protection. I repudiate any such idea. I say the farmers of the Dominion are not crying out for more protection. Let me devote a few minutes to an analysis of imports of agricultural products that enter Canada, and for the purpose of the comparison I shall take the latest figures available, as given in the trade returns for the nine months from April 1st to 31st December, 1923; it is not possible to get the figures in detail up to 31st March last. The necessity for more protection for the farmer was set out in the amendment moved to the motion for the adoption of the Address in reply to the Speech from the Throne this session. Is that claim borne out by the imports of agricultural products entering Canada from the United States? If we look at the trade statement to which I have referred we find the imports of animal and vegetable products—except chemicals, fibres and wood, amounted to $141,493,793. We also imported animal and animal products to the amount of $32,561,941. Now let me separate the imports of articles that are not produced in Canada from the imports of articles that are produced here. In the first table of vegetable products, mainly food stuffs, we find a total of $97,890,344 imported. Those imports are divided as follows, and I shall ask that the statement be incorporated in Hansard in tabulated form:

Imports of Vegetable Products

	Of a kind produced in Canada	Of a kind not produced in Canada
Total fresh fruits	$3,370,641	$12,318,349
Total dried fruits	854,087	4,316,865
Total prepared fruits and juices	802,215	896,331
Total nuts	.....	2,950,058
Total fresh vegetables	3,069,238	80,485
Total vegetables sauces and pickles	461,500	.....
Total grain	6,153,722	1,881,227
Total mill products	664,360	.....
Total prepared foods and bakery products	609,546	.....
Total vegetable oils for food	.....	613,138
Total sugar products and refined sugar	4,086,746	37,000,142
Total teas, cocoa and spices	.....	9,486,221
Hops, etc	724,068	
Various others	1,183,802	2,367,603
Total	$22,979,925	$74,910,419

Grand total of Vegetable products (mainly foods), $97,890,344.

Now, Sir, that is an analysis of imports as applied to vegetables and vegetable products.

Mr. STANSELL: Could the hon. member place on the record the amount of vegetable products sold to the United States for the same period?

Mr. SINCLAIR (Queens): Yes. Our exports during that period from Canada were $321,893,404.

Mr. STANSELL: Is that to the United States?

Mr. SINCLAIR (Queens): That is the amount of exports from Canada.

Mr. STANSELL: To the United States?

Mr. SINCLAIR (Queens): I have not analysed the exports to the United States. My analysis was of the imports. The duties we impose in Canada of course, have no effect on exports to other countries. The argument my hon. friend makes is that we should have higher protection in order to prevent the import of goods into the Canadian market.

Mr. STANSELL: No, it seems to me a fair comparison to examine our imports of animal and vegetable products from the United States. The figures on the other hand would only be the exports to the United States, not taking the entire exports of Canada.

Mr. SINCLAIR (Queens): If my hon. friend desires to analyse Canadian trade, he must go on the assumption that this country and other countries will produce and export articles that are indigenous to that country. In analysing Canadian trade we cannot confine it solely to the trade that passes between one country and another. If my hon. friend will look at our total Canadian trade he will see that the balance of trade between Canada and the United States is about $118,000,000 in favour of the United States. That is we still import $118,000,000 more than we sell them, but both the United States and Canada deal with other countries as well as dealing with each other, and if my hon. friend will analyse the trade between Canada and Great Britain he will find that the balance is about equal on the other side of the ledger. So that if we want to have a proper analysis of Canadian trade and our balance of trade, we must take into consideration the trade that goes to all countries. It is unfair to confine it to a comparison of the trade between any two countries. Now, sir, I might say with reference to the balance of Canadian trade, according to my hon. friend's method of figuring, our exports exceeded our imports by $152,000,000 last year. In that respect I think our trade is in a very fair condition.

Mr. SUTHERLAND: Did the hon. member give the imports of each animal product?

Mr. SINCLAIR (Queens): The table I analysed so far only applies to Canadian vegetable products. If the House will bear with me I will give some of the importations of animal products. In giving this summary, or in dividing the imports, it will be necessary to go into more detail and take each item as it is, and show what the duty is on each of the various items coming into Canada, because it is only by doing so we can get a true conception of what it means to the Canadian farmer, and what it means to, particularly, Canadian consumers, the labourers in the industrial centres who purchase these articles. During the period that I have referred to, the nine months ending 31st December, 1923, there were imported into Canada animal and animal products of a total value of $32,561,941. Included in this total are animals for exhibition purposes which may be classed as a kind not produced in Canada. For exhibition purposes, we have a reciprocity agreement with the United States; allowing their animals to enter Canada free of duty and sales tax which privilege they extend to those of this country:

Summary

Animals and Animal Products

	Of a kind Produced in Canada	Of a kind not produced in Canada
Animals for exhibition	.....	$1,749,263
Animals for improvement of stock	$357,357	
Common live stock	130,119	
Other animals living	103,449	
Bone, ivory and shell products	102,791	145,332
Feathers and quills	235,968	
Fresh fish	370,207	
Dried, salted, smoked or pickled fish	444,466	
Fish preserved or canned	717,385	
Other fishing products	62,996	51,632
Fur skins unmanufactured	5,921,873	
Fur skins manufactured	79,556	
Hides and skins, N.O.P.	5,297,049	
Leather unmanufactured	3,085,253	
Leather manufactured	2,229,534	
Hair and bristles	500,002	
Meats, fresh, chilled or frozen	2,465,877	
Meats prepared or preserved or cannod	3,256,724	
Milk and its products	773,426	
Oils, fats, greases or waxes	2,386,893	
Miscell. animal products	2,094,789	
Total	$30,615,714	$1,946,227

Total, $32,561,941.

Exports, $110,176,144.

Mr. SUTHERLAND: I am afraid my hon. friend's total is incorrect because the quantity of meat products imported, such as fresh pork and cured meats, aggregate more than the figures he has given.

Mr. SINCLAIR (Queens): I think the hon. member will find that the figures I have given are correct; I can assure him that I have very carefully prepared them. There is another table included in these figures which I think we might well take into consideration as indicating a very important balance in trade. I refer to the summary of agricultural and vegetable products other than food. This summary is largely comprised of one or two items, and shows in one column

what is produced in Canada and in the other the commodities not produced here. This list is as follows:

Summary

Animal Vegetables Products Other Than Food

	Produced in Canada	Not produced in Canada
Alcoholic beverages	$16,285,454	
Gums & resins	498,815	$ 1,204,888
Oil cake meal	15,876	27,883
Oils vegetables not food	163,370	5,782,141
Plants, shrubs, trees & vines.	925,388	
Rubber and its products		6,155,750
Rubber manufactured	2,100,166	
Seeds	2,341,940	389,286
Tobacco	4,663,875	
All other vegetable products.	1,831,852	1,190,742
Various		26,023
	$28,826,736	$14,776,713
Grand total	$43,603,449	
Exports	$30,605,456	

I will now give a summary of the imports of the three kinds which I have given in tabular form:

Grand Summary

	Of a kind grown in Canada	Of a kind not grown in Canada
Vegetable products (a) Mainly food	$22,979,925	$74,910,419
Vegetable products (b) Other than food	28,826,736	14,776,713
Animal and animal products.	30,615,714	1,946,227
	$82,422,375	$91,633,359
Total	$174,055,734	

I realize that I have trespassed upon the temper of the House in reading these tables, but there is a further analysis that is necessary before the full import of these statistics can be appreciated.

Mr. SUTHERLAND: I do not wish to interrupt the hon. member, but I scarcely understand how the animal products of Canada can be so low. As a matter of fact, during the year 1922, there was $9,286,000 worth of these products.

Mr. SINCLAIR (Queens): Well, I have given $30,000,000 for nine months.

Mr. SUTHERLAND: Does that figure refer to such articles as might be produced in Canada?

Mr. SINCLAIR (Queens): The figures refer to articles of a kind produced in Canada. Now, with reference to these imports, which we are told should be given more protection in order to prevent the commodities of other countries and particularly of the United States being dumped into the Canadian market to the detriment of the Canadian producer, let me analyse the figures so that hon. members may see the rate of duty imposed upon these goods at present:

Total Imports to Canada for nine months ending December 31, 1923

Vegetable products (a) Mainly foods	$ 97,890,344
Animal products	32,561,941
	$130,452,285
Vegetable products (b) Other than food	43,603,449
Total	$174,055,734

An analysis of the above figures reveals the following facts:—

Total Fresh Fruits

Principal fruits which may be grown in Canada.—

	Value	Rate of duty
Apples	$ 700,089	90c. per bbl.
Cherries	105,978	2c. per lb.
Cranberries	191,303	25 per cent.
Pears	768,872	30c. per bu.
Peaches	510,604	1c. per lb.
Plums	374,365	30c. per bu.
Strawberry	719,430	2c. per lb.
Total	$3,370,641	

Principal fruits not grown in Canada.—

	Value	Rate of duty
Bananas	$ 4,315,644	Free
Grape fruit	513,947	Free
Grapes	827,014	2c. per lb.
Lemons	998,909	Free
Melons	378,802	3c. each.
Oranges	4,532,146	Free
Pineapples	520,586	Free
Various	231,301	
Total	$12,318,349	

Total $15,688,990

The highest ad valorem duty is 25 per cent. The specific duties vary according to the prices of the articles, and in many cases they are even higher than 25 per cent. The point I make is that if we impose a further duty on these items, which my hon. friends opposite are so ready to ask us to do, it will not benefit our producers, because at the time of the year when these commodities are imported our fresh fruits are not in season, and consequently by imposing a higher duty we are simply making our labourers and artisans pay more for fresh fruits out of season without any corresponding benefit resulting to our own producers.

Mr. CALDWELL: Is it not a fact that these articles are also subject to a dumping duty in addition to the duties the hon. minister has cited?

Mr. SINCLAIR (Queens): The hon. member is quite correct; a dumping duty is imposed if the articles imported are sold here at a lower price than that which they command in the country of origin.

Mr. CALDWELL: Which adds to the protection.

Mr. SINCLAIR (Queens): It protects us from the dumping of inferior products. But it does not afford any protection to our people; it rather handicaps them if they want to buy fruit which is produced cheaply in another country. I do not think it is necessary to read the whole list of articles imported of a kind not produced in Canada; suffice it to say that they are mainly on the free list. Should any duties be imposed upon those articles, no benefit accrues to the Canadian producer because he does not grow them.

The argument I have presented with regard to fresh fruits is equally applicable to dried fruits, of which only a very small percentage are of a kind produced in this country and are valued at $854,087; whereas we imported $4,316,865 worth of a kind not produced in Canada. A small revenue tax is collected on these, varying from half a cent a pound up to 55 cents a hundred pounds. The same is true of prepared fruits of a kind not grown in Canada, of which we imported $896,000, and of a kind grown in Canada we imported $802,000.

Without wearying the House with an analysis of the whole table, I will deal with vegetables. These appeal more directly to the producer in Canada perhaps than any other commodity in this table. During the period mentioned we imported the following fresh vegetables:

Principal vegetables which can be grown in Canada

	Value	Rate of duty
Cabbage	$ 234,913	30%
Onions	337,650	30%
Potatoes	536,366	35c. per 100 lbs.
Tomatoes	904,596	30%
N. O. P.	1,055,723	30%
	$3,069,238	

Vegetables of a kind not grown in Canada

	Value	Rate of duty
Sweet potatoes	$80,475	30%
Various	10	
	$80,485	

Total fresh vegetables, $3,149,723.

Now, in the face of these facts, which are plainly brought out in the trade returns, I would ask my hon. friends who advocate high protection, in what way a higher protection than 30 per cent would benefit our farmers, seeing that these importations are made at a time of the year when we are not producing and have not on hand a sufficient supply of fresh vegetables for our own market? I repeat what I have said in relation to fresh fruits, that if we impose further duties on these commodities we do not benefit our farmers, we simply make our artisans and labourers pay more for articles of food which they must buy during the season of low domestic production and we thereby increase their cost of living. I think that those engaged in industrial occupations will agree with me that the cost of living and the cost of labour are two of the most serious factors that enter into manufacturing costs, and that it is only by reducing these costs that they can bring the price of their manufactured products within reach of the purchasing power of the people.

A large item of our imports is grain and farinaceous products as follows:

Grain and Farinaceous Products

Of a kind grown in Canada

	Value	Rate of duty
Beans	$ 636,703	25c. per bush.
Indian corn not for distillation	5,216,540	free
Corn for distillation	201,334	7½c. per bush.
Peas	99,145	15c. per bush.
Total	$6,153,722	

Of a kind not grown in Canada

	Value	Rate of duty
Rice uncleaned	$1,226,169	free
Rice cleaned	521,519	¾c. per lb.
Various	133,439	
Total	$1,881,227	

Total Grains, $8,034,949.

Milled Products

Of a kind produced in Canada

	Value	Rate of duty
Cornmeal	$135,607	25c. per bbl.
Sago and tapioca	34,694	27½%
Wheat flour	359,085	50c. per bbl.
Various	134,974	
Total	$664,360	

Total milled products, $664,360.

Prepared Foods and Bakery Products

Of a kind produced in Canada

	Value	Rate of duty
Such as biscuits, milk foods, cereal foods, Total	$609,546	Fram 25% to 30%

Total grains and farinaceous products, $9,881,094.
Exports, $301,677,777.

Let me pass on to animals and animal products.

Animals and Animal products

Total value of imports, $32,561,941.

Animals for Exhibition

Not produced in Canada

	Value	Rate of duty
Cattle	$ 101,955	free
Horses	1,628,403	"
Sheep	18,740	"
Various	165	"
Total	$1,749,263	
Various	134,974	

A large part of this represents horses for exhibition purposes. I may say that horses imported for exhibition purposes are exported but are not included as exports from Canada in our trade returns. Our friends would not say for a moment that we should put a duty, not to speak of a prohibitive duty, on horses or cattle coming in for exhibition purposes. We exported during the same period $392,651 worth for exhibition purposes. Cattle for the improvement of stock are free under the system of national registration; I need not go into that in detail. Of common live stock we imported only $130,119 worth, which paid a duty of 25 per cent, and in the case of horses a duty of $12.50 each. Of other animals, living, we imported $103,000 worth, to which different rates of duty applied. That makes a total value of animals imported of $2,340,188, 70 per cent of which represents horses for exhibition purposes. Our exports for the same period were valued at $10,791,026, over eighty per cent of which were cattle and were sent to the British markets.

I should like to refer also to the fisheries. We imported of fresh halibut during the period referred to, $36,916 worth at a duty of one cent a pound; of oysters in bulk, $156,000 worth at 10 cents a gallon; of fresh salmon, $60,000 worth at one cent a pound; of other fresh fish, $117,104 worth at one cent a pound. All these are subject to this low rate of duty. It would be unfair to contend that we should have a higher duty on fish. They are imported into Canada at a season of the year when we are not catching fish in large quantities, and to increase the duty would simply mean to increase the cost of living to the Canadian consumer. I do not think it is necessary for me to detain the House at further length in going into these figures. When my hon. friends of the Conservative party argue that the duty on these articles should be increased, they are simply asking for an increase in those living costs which already bear so heavily upon the labourers and artisans in the industrial centres. It is a mistake at this time, a mistake at any time and not in any way beneficial to agriculture, to increase the duties upon these articles.

Mr. CHAPLIN: Would the hon. gentleman say that the artisans and labourers of this country purchase these early fruits and vegetables that come in from the United States?

Mr. CHISHOLM: Certainly they do, in some cases.

Mr. SINCLAIR (Queens): Will my hon. friend tell me where they can get them if they do not purchase them? The ex-Minister of Finance (Sir Henry Drayton), in the few remarks he made the other day after the budget speech had been delivered, referred to two articles that are commonly used and largely produced in this country, namely, eggs and cheese. I think he said that the imports of cheese into Canada had increased 86 per cent. Ordinarily when an outstanding statement of that kind is made, the period is given to which the figures apply. Let me give to the House a few facts in connection with the imports of cheese into Canada.

Sir HENRY DRAYTON: The period to which the 86 per cent increase of imports from the United States applied was the year 1923, ending February 29, 1924. The figures with respect to the decrease of our exports, 50 per cent, were for the same year. Other periods, of course, might be chosen.

Mr. SINCLAIR (Queens): If my hon. friend had then given the period to which his figures applied I would have had an opportunity to compare them with the actual facts. I would like to submit to the House a statement which I think is correct in regard to the cheese industry in Canada. I have under my hand a statement showing the imports of cheese for the last twenty years.

Sir HENRY DRAYTON: I was getting mine down to date.

Mr. SINCLAIR (Queens): My hon. friend says he was trying to get down to late figures, but he should also apply those figures to late facts. I will tell him what the facts are: We import very little, if any, cheese of the kind that is manufactured in Canada. The cheese we import is sometimes high priced, sometimes not—Italian and Swiss cheese, cheese of fancy kinds which certain sections of our population are anxious to have but which are not produced in our country. During the last year a factory was started in Canada with a view to meeting the demand for this kind of cheese, and I may tell my hon. friend that one factory is sufficient to supply that demand. So that when he makes the statement that our imports of cheese have increased by 86 per cent and gives no information as to the kind of cheese that is referred to and as to the conditions generally with respect to the manufacture of cheese in Canada, his statement is calculated to arouse a suspicion in the minds of our people which has no foundation in fact. The imports of cheese for the calendar year 1923 amounted to $614,872 worth, and our exports for the same year were valued at $5,902,300.

Our exports were of Cheddar cheese and our imports were not: scarcely one pound of our

import was of this kind of cheese. So we find when we analyze my hon. friend's statement that it was made simply to create a spirit of unrest among Canadian producers and particularly among Canadian farmers, and made to bolster up the case for high protection on manufactured products. But every time that these assertions are made it is found that the real facts do not back them up, and especially is this the case in regard to cheese.

Mr. SUTHERLAND: What were the figures in regard to butter?

Mr. SINCLAIR (Queens): In 1923 we exported 2,403,086 pounds of butter and imported 1,523,381 pounds. Does my hon. friend think it would be wise to put a further duty on butter to keep it out?

Mr. SUTHERLAND: As high as the American tariff.

Mr. SINCLAIR (Queens): Does my hon. friend think it would be wise to increase the cost of butter to the labouring man and artisan in the industrial centres of Canada by a further duty on it?

Mr. SUTHERLAND: Our exports exceed our imports, so we have a surplus.

Mr. SINCLAIR (Queens): To go into this matter thoroughly, my hon. friend from South Oxford (Mr. Sutherland) knows as well as any other member of the House, because he is a practical agriculturist, that in Canada, and when I say Canada I mean the whole country from the Atlantic to the Pacific, we have a season of high production and a season of low production, and that is so because of our northern latitude. During our season of low production is it fair to those who consume this article every day, and who have no season of high consumption and low consumption as have the producers, to put on a tariff and prevent the importation of this product which our people wish to buy, in order to protect those people whom a high duty will not protect? That is the whole point.

Mr. SUTHERLAND: Is there a month in which we do not produce more butter than we consume in Canada?

Mr. SINCLAIR (Queens): There certainly is, and more especially in the outlying provinces. Conditions may not be quite the same in Ontario, because that is the most southerly situated province in Canada, but we cannot base our tariff policy on the needs of Ontario alone; we must take into consideration the whole of Canada when we are making tariff changes.

Sir HENRY DRAYTON: Why don't you?

Mr. SINCLAIR (Queens): My hon. friend is wrong. We did consider the whole of Canada. I wish to refer for a moment to animal products under the heading of eggs. Eggs have been referred to during this debate and also in the debate on the Address, as well as in many agricultural papers, and in fact the press generally throughout Canada. The general situation with regard to eggs, and I suppose the point my hon. friend has referred to is that the duty on United States eggs coming into Canada is 3 cents per dozen, while the duty on Canadian eggs going into the United States is 8 cents a dozen. Eggs are available to the common people of the country as a fresh and wholesome food and are used more than any other single article, because they can be purchased and kept in a fresh state and are available to the ordinary people when properly handled. Now what is the situation? The export and import figures show that for the fiscal year 1923 we imported 8,319,622 dozen, of which 8,256,168 dozen came from the United States. In dealing with eggs we must remember that it is an article in the production of which more particularly than is the case with any other article there is a season of high production and a season of low production. I think it is safe to say that in Canada generally during the months of December, January and February, our production of eggs in Canada is almost nil. Eggs are an article of food that our people wish to buy in the fresh state, and they will pay quite a premium for fresh eggs, so during the winter months there is a demand for fresh eggs which our Canadian producers are not able to supply. I will read to the House a list of the imports of eggs into Canada, showing the provinces into which they are imported, and analyze the statement later.

Eggs imported in 1923

Province—	Quantity in dozens	Value
British Columbia	298,950	$ 94,846
Alberta	67,541	21,404
Saskatchewan	23,516	7,896
Manitoba	337,517	104,973
Ontario	3,592,666	1,133,187
Quebec	2,126,397	671,365
New Brunswick	79,551	24,365
Nova Scotia	95,374	28,448
Prince Edward Island	1	18
Yukon	1,740	550
	6,623,253	$2,087,306

Not to take up too much of the time of the House, I may say that I have a table here which shows that the greater part of the importations of these eggs were made during the months of December, January and February, and a few in March. About five years ago the largest importer of eggs was the

province of British Columbia, but during the past three years there has been quite a lot of activity to encourage the production of eggs in that province carried on by the department of my hon. friend the Minister of Agriculture (Mr. Motherwell). The climate there is particularly suitable for producing eggs, especially during the winter season, and the result has been that to-day British Columbia is one of the smallest importers of eggs; in fact, they produce sufficient not only to supply their own needs but a considerable portion of the needs of the prairie provinces. You will see that almost the whole importation of eggs is into the provinces of Ontario and Quebec. Now, realizing that eggs are imported into Canada in the months when there is no production in this country, and the import figures show that during the months when there is production in Canada there is no importation of eggs worth speaking about, we see at once that a further duty upon eggs entering into Canada, which my hon. friend the Minister of Finance referred to a few days ago, would simply mean an increased cost of eggs to those who consume them in this country.

There is one feature in regard to the egg trade which may seem a little strange. During this time of the year, when eggs are plentiful in the republic to the south, it is common for large dealers to import eggs into Canada, and by means of that importation they are able to control and cut down the price in the Canadian market. I do not think that anybody whose economic principles are sound would object to that, because the cutting down of the price, when the supply is increasing, benefits the consumer although it may not be profitable to the producer. There is another feature about this question: When these eggs are imported and distributed in our Canadian market they have a tendency to decrease the consumption of eggs by our own people, a feature that is to be deplored. In order to offset that regulations have been passed requiring these low grade eggs to be marked according to quality in the same way that Canadian eggs are marked. Last year our inspectors inspected 6,623,253 dozen of eggs coming into Canada out of a total importation of 8,000,000 dozen eggs. I say that the Canadian producer is able to compete with his competitior in the United States providing that the competition is of a fair character. I think that the regulation now in force for the inspection of eggs is controlling and will continue to control the shooting in of low grade eggs from the American republic, to the extent that it affects or destroys egg consumption in Canada. As to the decrease in prices in Canada, the needs of the industrial population in this country must be considered, and if these workers, under the operation of the law of supply and demand, can buy their eggs at a lower price they are entitled to do so. Therefore I submit to hon. gentlemen who advocate a higher duty on eggs that it would not be in the best interest of Canada, now or at any future time, to raise the duty upon an article which is really one of the necessaries of life, and thus cause the workers in our industrial centres to pay more for the commodity than they really would have to pay if our producers were in open competition with the producers of other countries.

Mr. SUTHERLAND: Can my hon. friend give the estimated production of eggs in Canada, the estimated quantity exported from this country, and the estimated quantity exported to the United States?

Mr. SINCLAIR (Queens): I am not a walking encyclopaedia—

Mr. McMASTER: Pretty near.

Mr. SINCLAIR (Queens): —much as I should like to give my hon. friend that information.

Mr. SUTHERLAND: The hon. gentleman has been giving us the details of imports. Surely he can give us the figures in respect to the exports also.

Mr. SINCLAIR (Queens): In order to assuage the anxiety of my hon. friend I may tell him that I am not refusing to give that information. I have before me a statement showing the estimated production of eggs in Canada. The first note I have relates to the statement of the ex-Minister of Finance (Sir Henry Drayton) that the sale of Canadian eggs in the adjoining republic amounted to the small sum of $49,000. I do not know where the ex-Minister of Finance obtained those figures.

Sir HENRY DRAYTON: The figures will be found in the report of the Department of Trade and Commerce for the twelve months in question. My hon. friend will find that the quantity was 104,836 dozen and the value $49,227.

Mr. SINCLAIR (Queens): I thought my hon. friend stated that the figures were for the period ending February, 1924.

Sir HENRY DRAYTON: They were the latest I could get.

Mr. SINCLAIR (Queens): I took my figures from the trade returns to be found in the official blue book. I find for the year previous we exported eggs to the value of $126,851.

Sir HENRY DRAYTON: Those were exports to the United States.

Mr. SINCLAIR (Queens): Yes to the United States, and the quantity was 311,271 dozen.

Sir HENRY DRAYTON: I was not speaking of the general export, but simply the export to the United States.

Mr. SINCLAIR (Queens): No doubt my hon. friend chose the year that best suited his argument.

Sir HENRY DRAYTON: I took the latest figures that I could get.

Mr. SINCLAIR (Queens): I am very glad my hon. friend from South Oxford (Mr. Sutherland) has brought up this point. I had taken a note of it but in my desire to condense my remarks I was almost passing it over. The estimate of egg production in Canada for 1921 is calculated by the Dominion Bureau of Statistics at 168,049,154 dozen, valued at $40,968,841, from 25,755,356 hens or an average of 78 eggs per hen. In 1922 the production of eggs in Canada amounted to 194,058,468 dozen, valued at $48,490,578, from 29,945,484 hens, or the same average production per hen as in the year previously. The point I want to make is this: We have heard a good deal of criticism, during this debate and during the discussion of the estimates, as to the expenditure of the Department of Agriculture for the purpose of raising the standard of agricultural products for export. In the statement I have just read you will find figures which suggest the necessity of doing all we can to encourage Canadian producers to pay further attention to production in Canada. By our egg laying contests the possibility has been demonstrated of doubling the production of Canadian poultrymen as shown by these figures. If that can be done—and that it can is beyond question; as a practical agriculturist I am well aware that it is within the possible accomplishment of Canadian poultrymen—we may yet see a production of 150 eggs per hen provided those engaged pay greater attention to the development of the industry. If movements along these lines are encouraged it is almost impossible to estimate the progress that can be made in egg production in Canada. We are to-day producing $48,000,000 worth of poultry products, chiefly eggs. Production may be doubled by the application of proper methods to the industry. Now, as I said a few days ago, the expenditure we are making in Canada for inspection services is one of the best outlays that could be undertaken by this government. It raises the standard of our agricultural products and enables those products to take their proper place in the markets of the world, especially in the British market which in the past has not been taken advantage of to the extent that it should have been by Canadian producers. That is true not only of eggs; it applies also to meat and dairy products.

Mr. SUTHERLAND: My hon. friend promised to give us the figures of the export of eggs.

Mr. SINCLAIR (Queens): In order to gratify the desire for knowledge of my hon. friend from South Oxford (Mr. Sutherland) I may say that the exports of Canadian eggs for the year 1922 amounted to 4,399,534 dozens, whereas our production was 168,000,000. My hon. friend will see that the people of Canada, in the rural and urban districts are depending upon that article of food for their sustenance. They could not use any article that would be more nutritive than fresh eggs.

Mr. GARLAND (Carleton): The productions did not respond very well to the invitations of the Minister of Agriculture (Mr. Motherwell).

Mr. SINCLAIR (Queens): I am giving the statistics. The efforts of the present Minister of Agriculture are now beginning to show their effects. If my hon. friend will wait till he gets the returns for next year, he will probably find better results. I think I have made it clear that the references made by the apostles of high protection, and their arguments that these articles should receive more protection, are simply out of place. They can show no article in the trade returns in regard to which a benefit would accrue to the Canadian producer by an increase of duty at the present day. Comparing production in Canada with production in the States, I may say that the average production of farm products, apart from sugar, corn and cotton and the products of live stock, per capita of the United States is $73, as compared with $93 in Canada. Now if we produce more than they do in the United States, is it not to be supposed that we can produce it cheaper. Why should we enhance the cost to the consumers of Canada by an extra duty, when the price of our export surplus is based on the world markets?

Mr. SUTHERLAND: In order to keep out the American eggs that are coming in at the present time.

Mr. SINCLAIR (Queens): Am I right in assuming that the interpretation to be given to my hon. friend's contention is that it is better to make the consumer of eggs in Canada pay more for the eggs he consumes, and also to discourage him from consuming eggs by bringing in a low grade product, rather than to give him a good article at a reasonable price?

Mr. SUTHERLAND: The hon. member has contended that it is possible to increase the production of eggs enormously in this country. How can we encourage production by permitting foreign produce to come in.

Mr. SINCLAIR (Queens): I have just outlined the matter to the House. To encourage production in the line I have suggested means cheaper production than we have at the present time. We can increase production by the methods taught by the agricultural colleges and the experts in Canada, and we can increase production with the same number of hens that we have at the present time. We are feeding the hens to-day, and if by intelligent methods we increase production, I claim that we cheapen production, and we give to the consumers a better article at a lower price. If I understand my hon. friend's argument aright, he contends that the only way to increase production in Canada is to raise the price to the consumer by an artificial duty imposed by the government.

Mr. SUTHERLAND: The incentive to production is to show a profitable production.

Mr. SINCLAIR (Queens): Yes.

In connection with the railway situation, I stated in my opening remarks that the railways were largely responsible or responsible in considerable degree for the showing made in balancing the budget. I think that the management of the Canadian National Railways under the present board are to be commended for the showing they have made. It is not too much to say that I believe that the government when they secured the services of Sir Henry Thornton as president of the board of management, secured a man who has proven himself to be a real asset to the people of Canada. His management of the road as illustrated in the returns for the last year has proven that he has given to the country the value he was expected to give, and we believe he will continue to give that value.

5 p.m.

[Mr. J. E. Sinclair.]

We have had a good deal of discussion during the session with respect to branch lines, a discussion touching upon almost every problem presented to the board of management, whose recommendations have been endorsed by the Minister of Railways (Mr. Graham), and submitted to the House for its consideration and decision. I am sure, Mr. Chairman, that we all heartily endorse the proposition of the board of management and believe that its adoption will conduce to the betterment of the railway. We believe the additional expenditures will be more than repaid by the construction of the branch lines.

I desire for a short time to refer to matters that are of more provincial interest and I wish to point out that the province from which I come does not benefit in any way by the extensions which have been proposed and the building of the branch lines. I am raising no objection to that and not making it a ground for objection to the extensions in other provinces. I believe those extensions are all justified, but I may say that while no provision is made, the people in the province of Prince Edward Island have been urging the present government and the previous government to provide for railway extensions and branch lines in that province. The necessity for this is particularly acute, on account of the development that has taken place in the last two or three years in the growing of seed potatoes in the Maritime provinces. This industry has proven to be particularly profitable to our people. They find a very ready market among the people of the southern states, where they do not grow a high grade potato. The seed potato is one of the articles on which we make the American pay the duty imposed by his own government but the production of which we cannot carry on with success any great distance from a shipping point. I think it is safe to say that if a farmer is located four miles, or five miles at the outside, from the shipping point, it is almost impossible to carry on the seed potato business on a large scale, because the transportation costs on such a bulky article are very great. The development of this business has created a desire among our people for short railway extensions. The government in power in 1911 foresaw the position we were in, and provided for a branch line to run from Emerald Junction to New London. The contract was let and signed, and the government which succeeded the government of that day cancelled the contract. The matter stands to-day just as it stood at that time, and those people feel the loss thus sustained by the cancellation of the contract.

Mr. MEIGHEN: Is the hon. member now urging these branch lines on himself?

Mr. SINCLAIR (Queens): The leader of the opposition will see my statement. He has heard what I have said and I think it is quite clear to the House just what I mean. I stand by what I said.

Mr. MEIGHEN: The hon. gentleman is a member of the government and I am asking him the question. Is he pressing this policy on himself?

Mr. SINCLAIR (Queens): I am citing the condition that exists in the province in regard to railway extension, and when I have fully stated the case I am sure my right hon. friend will have no misapprehension as to the position I occupy, or the attitude the government is taking, in the matter. There is another section in our province that is also asking for an extension in order to develop fishing and advance the interests of agriculture in the special line I have mentioned: I am referring to that section from Hunter River to Rustico, a distance of eight miles. It has also been proposed, and indeed a petition was presented to the late government, to have another extension provided, and it is still looked forward to with confidence as something that will be taken up in the future. This other extension which I am now referring to is between a point on the Murray Harbour railway and a point on the Georgetown railway, namely, from Mount Herbert to Birt's Siding, a distance of twelve miles, which opens up a country the equal of which cannot be found in Canada from the point of view of production. The people in all these sections are anxious to take up a special line of farming, and unless some outlet is provided it will scarcely be possible for those who live more than five miles from a railway to engage in this work.

Let me impress upon the House the fact that our people are not unreasonable. They know the transportation situation in the province, and they realise that we are passing through a transition stage in which we are continuing the work that was begun by the government of Sir Robert Borden in relation to the island's connection with the mainland and the standardization of its railways. The work was begun in 1913 and continued during the war, but I am very sorry to say that my right hon. friend (Mr. Meighen) who interrupted me a moment ago allowed this work to lapse during the term in which he was leader of the government. Our people very much deprecated that fact; but fortunately the work has been carried on during the term of this government. The people of Prince Edward Island take the view that in order to have proper transportation facilities this undertaking must be completed before extensions can be made; and I am free to say that, to my knowledge, the view which the management of the Canadian National Railways take of this matter is that the break in the continuity of the work which was permitted by my right hon. friend should never have been allowed.

Mr. MEIGHEN: Does the hon. gentleman say that it was under the influence of this government that the Canadian National Railways continued the widening of the gauge?

Mr. SINCLAIR (Queens): I am sorry that my right hon. friend was not paying attention to my remarks. I said that the work was begun by the government of Sir Robert Borden in 1913 and continued step by step during the years of the war. And I say now that it is carried on with unbroken continuity.

Mr. MEIGHEN: My hon. friend is dodging the question.

Mr. SINCLAIR (Queens): What is the question?

Mr. MEIGHEN: I asked the hon. member whether he was suggesting that it was under the influence of this government that the railway board decided to continue the widening of the gauge.

Mr. SINCLAIR (Queens): My right hon. friend has formed a wrong impression of my remarks, but evidently the wish was father to the thought in this instance. I said that the work had been continued since he and his government went out of power, and I added that, according to my information, it was the intention of the management of the Canadian National Railways to continue the work until the standardization of the railways in the province had been completed. In that regard I think that the railway management are taking the proper step in the interests of transportation in Prince Edward Island, and I know that the people of that province will support them so far as that question is concerned. The people of Prince Edward Island, who have been looking forward to these extensions to which I have referred, are not unmindful of the financial conditions that render economy imperative not only in connection with our railways but also in regard to public expenditures generally. But they also are firmly of the opinion that it is absolutely necessary that the work of standardizing the railways in that province should be pushed to completion before further exten-

sions be made. The present state of affairs is one that cannot obtain indefinitely, as the needs of the people must be met.

I do not wish to detain the House at much greater length. I have referred to many matters that are of interest generally as well as from a local point of view, and in regard to the budget, I think it is one that will appeal to the common people of this country. It makes for a reduction in taxation of $2.70 per capita of our population, or over $13 per family of five. I have now nearly closed all the considerations which I have at present to offer the House on this budget. I have endeavoured to give a distinct and fair view of the financial condition of this country, and of the many obstacles we have encountered in attaining a balanced budget. I have compared the result of our effort with that accomplished by any of our predecessors regardless of the political party in power. I have pointed out that the budget of this year has not increased the burden of taxation now borne by our people, but that the reductions contemplated will mean a saving of $2.70 to every man, woman and child in Canada, I have referred to the increase in trade and production and have proven beyond the shadow of a doubt that more protection is not essential for the prosperity and success of the Canadian farmer; and I have shown that the injury assumed by the former Minister of Finance to have been perpetrated on our egg and cheese production in Canada is wholly imaginary. Look at the improvement in our railways. To-day they are a real asset to our country; a few years ago they were one of our greatest liabilities. Compare the value of our dollar in the money markets with its quotations in the beginning of 1922. Note the increase in bank deposits and in the volume of our foreign trade. Our production for the year 1923 was over four billions of dollars. The era of prosperity now reached is not the transient effect of an accident, not the short lived success of a day, but the genuine, natural and direct result of the confidence and faith which business and industry have in Liberal policies and principles.

Let us hope that the season of our severe trial is at an end, and that we are at length relieved, not only from the dejection and gloom which a few years since hung over the country, but from the doubt and uncertainty which, even for a considerable time after our prospect had begun to brighten, still mingled with the hopes and expectations of the public.

On our present situation fortunate beyond our more sanguine expectations, let me congratulate you, Mr. Speaker, the House, and my country! And, as I conclude, let me express my earnest wish, my anxious and fervent prayer, that now in this period of success, for the sake of our present age and of posterity, there may be no intermission in that vigilant attention of parliament to every object connected with the revenue, the expenditure, the resources and the industries, which have carried us through all our difficulties and led to this rapid and wonderful improvement; and that under the favour of Providence we may ensure the continuance of this unexampled progress.

[Mr. J. E. Sinclair.]

Mr. A. W. NEILL (Comox-Alberni): Mr. Speaker, I do not propose at this stage of the debate to discuss the tariff issues of the budget. No doubt the House will hear enough on the subject from other members, and should I find it necessary to discuss it later there may be an amendment introduced which will afford me the necessary opportunity. I wish, however, to make one comment upon the budget. I understood the Speech from the Throne foreshadowed the introduction of legislation to reduce taxation on the instruments of production, more particularly on those lines which have their origin in the natural products of the country. This has been carried out in the budget proposals by means of reductions either in the tariff or in the sales tax on the leading lines of instruments of production, such as farming, mining, fishing and lumbering; but it would appear that the paper-making industry has been overlooked, either accidentally or deliberately. It is certainly a business which is based upon the natural produce of the country. It is a very important industry in British Columbia, and there are four paper-making plants in the district I represent alone, as well as similar plants in other parts of the province. It appears to me that it would have been thoroughly in line with the declared policy of the government to have given the very expensive machinery which enters into papermaking—nearly all of which machinery has to be bought in the United States, —a rebate either in the sales tax or in the tariff, for the industry is by no means too prosperous at the present time. If the omission was merely an oversight, I hope the government will see their way to amend it when the resolutions come before the House.

I was sorry not to see either in the Speech from the Throne or in the budget any reference to a treaty with Australia, which was much talked of a year ago. I presume that the government has been unable to negotiate such a treaty at the present time. I hope, however, that it will engage their attention, for the conclusion of a treaty with Australia would be of very material advantage to the progress of British Columbia.

Now I propose to lay some facts before the House in connection with oriental immigration —not as respects British Columbia alone but all Canada. I know the oriental question is somewhat tiresome to many members, but I do not intend to discuss it in a parochial or even a provincial manner. It is unnecessary to do so, because two years ago the House passed a resolution, placing themselves and the whole of Canada on record as being in favour of effective restriction of all oriental immigration. Therefore it will only be necessary for me to touch on the salient points and keep the discussion, if possible, on the plane of a national question. In fact in view of certain events which are happening to the south of us to-day, I may say it is quite likely to become an international question in the near future. I wish particularly to confine my remarks to an absolutely non-partisan attitude. In 1922 the House will recall that the British Columbia members and some others debated the oriental question, and that not one of us introduced any note of partisanship; no reflections were cast upon one party or another. The result was that in a comparatively short debate—it lasted only one afternoon and evening—a great deal of what I think was useful information was given to the House, information that had the advantage of being unbiased and of representing the various points of view from which this question is regarded in the West. In sharp contrast to this, I had occasion the other day to look up Hansard for a debate on the same subject in 1913. On that occasion unfortunately a partisan tinge was given to the discussion. It was a very long debate, covering over two hundred pages of Hansard, but its informative value was very much impaired by the fact that every hon. gentleman who spoke took up a violent partisan attitude, and the debate degenerated into a series of reproaches, each party blaming the other for having or not having done something which they should not or should have done.

There are two phases of this question—the Japanese and the Chinese. I shall deal very briefly for the moment with the Chinese phase. When this parliament first assembled in 1922 we had a Chinese Immigration Act, which allowed Chinese to come in practically without limit on payment of a head tax of $500. After the House two years ago passed the resolution to which I have referred, pronouncing in favour of effective restriction, the government, in the following year, 1923, brought down a Chinese Immigration Bill which allowed entrance of the following classes: Members of the diplomatic service and their servants; Canadian or naturalized Chinamen going away for a visit and coming back to Canada; merchants; students. Under section 9 the minister was allowed at his discretion to permit any particular individual to enter for a strictly limited period, which had to be specified. Section 41 also provided that within ninety days of the act coming into force any Chinaman who was then en route to Canada would be allowed to enter; which of course was a reasonable provision. There was also a section, and a very important one, which required all Chinese to be registered within twelve months, this registration to take place at various designated offices.

It has been said that the act was loosely drawn and provided many loopholes for evasion. There seemed to be too many exempted classes. But results are always the best criterion of the effectiveness of any legislation, so let us see what the results were in this case. I have under my hand the results for seven months after the act came into force. In that time there entered Canada from China 455 Chinese—a large number apparently. But of these 438 came in under section 41—the section allowing Chinamen en route to Canada to complete their journey within 90 days of the passing of the act—and of course this provision will never be available again. So we may dismiss these from our consideration of the effectiveness of the act. This leaves only seventeen to be accounted for. Of these ten were Canadian Chinamen coming back after a visit. Of the remaining seven, five were students, one was a consular servant, and one came in by virtue of section 9, under which the minister could let anyone in at his discretion. It appeared that this man was a student at Berkeley, California, who wished to obtain some data in connection with our universities. As he was coming here not as a student he could not be enrolled as one; therefore he was admitted under section 9, for six months. At the end of five months he went away. So the net result of the operations of the act for seven months is that five Chinese students entered Canada who will have to go away at the termination of their scholastic career, and one consular servant, who also will have to go away when his master dispenses with him.

I think it can be truly said, Mr. Speaker, that in view of this record, this is a really effective measure of restriction, and that it can be regarded as a permanent solution of Chinese immigration—a long fought out question in this country.

There are some 40,000 Chinamen in Canada. Of these only about 6 per cent are women, and consequently the birthrate is very low.

In fact the birth rate is only 7.6 as compared to 21.4 of white people and 36.8 of Japanese —note how much more prolific the Japanese are. So the result might well be that the birth rate will hardly keep up with the death rate of those 40,000, and in time we may look to their gradual elimination and the final solution of the Chinese question in Canada. I think British Columbia and Alberta—because Alberta shares in this matter—are to be congratulated, and the members from those provinces are also to be congratulated upon helping, by their non-partisan attitude in this House, to bring about that result, because had we been squabbling and attacking each other no doubt the government would not have felt itself called upon to take any very decisive action. Perhaps we may also congratulate the members of the government who carried out the wishes of the House and of the West in that regard. All this is very satisfactory, Mr. Speaker, but there is no rose without its thorn, there is no ointment without its fly, and there is always a nigger in the woodpile. Before we finish congratulating ourselves on the result of this act we must realize that we are confronted with a very pertinent question from British Columbia and the West generally: Why was this act not made applicable to the Japanese as well? The British Columbia members are well aware, and we emphasized that in the debate two years ago, that the Japanese situation was the more acute, and the resolution was passed not only with the approval of the government but also with an amendment moved by a member of the government largely changing the wording of it, that Canada as a whole stood for the effective restriction not merely of Chinese but of oriental immigration. Nothing could be clearer or more emphatic. And why was it not made applicable to the Japanese? Well, Mr. Speaker, we were told it was because the Japanese objected. I recall an occasion some years ago when I asked the government of the day to close up a certain office. It was a sinecure: there was nothing wrong with the occupant, but he was not doing anything to earn his money and I suggested that in the interests of economy the office should be closed. Of course I got the stereotyped reply that we always get from governments: "We must have a report on this." So in due time a report was made and I was furnished with the information that it would not be possible to close this office, that grave objections existed against such a procedure. Of course I was supposed to be satisfied with that, and I have no doubt it was presumed by the department in question that I would never be heard of again. But with what I have no doubt they regarded as stupid obstinacy, I insisted upon knowing what those grave objections were and who made them, and after the usual delay it turned out that the grave objections were made by the gentleman who occupied the position. That was all the objection; it came entirely from him and it was merely founded on the fact that he did not want to give up the job. We have the same thing here. "Japan objects," but surely, Mr. Speaker, that is not enough: we are entitled to ask and we do ask the Japanese why they object. And what answer do we get? We are met with a plethora of vague and illusory arguments—I will not call them arguments: statements—which cannot stand the test of logic or of the precedent of international law. We hear the argument used, "We are a proud nation"; in fact, I have heard so much about that "proud nation" that it almost gives me nausea. "We are a proud nation," says Japan, "and we cannot tolerate anything that looks like discrimination against our nationals." But is a treaty ever made under which one nation does not give something to another which may be regarded as discrimination against some other nation which is left out of the deal? That is patent; everything of that kind implies directly or indirectly some measure of discrimination. We may be held to be discriminating against the United States manufacturers when we give a very decided preference in our markets to British manufacturers. Why does the United States not call us to account and say: "This is a discrimination"—which it certainly is—"against our manufacturers; we demand that you withdraw that legislation." Not long ago we had the instance of the United States putting a very high tariff on cattle and wheat—Canadian cattle and Canadian wheat. The word "Canadian" may not have been inserted in the original tariff, but it was absolutely designed to hit Canadian cattle and Canadian wheat, and I am pretty sure that in the case of the last increase, made a few months ago, by which an even higher duty was imposed on wheat, the words "Canadian wheat" were actually used. And is it not on record that recently there has been talk of their putting an embargo upon these same Canadian products, and Canadian products only? There can be no question at all that the result of that tariff has been the loss of a large market for our western farmers; there is no doubt that it has cost our people millions of dollars. And what have we done about it? We know that it has been bad for us and for our trade. We believe, in fact we hope, as we are entitled to hope, that it has proved harmful also tc

the United States; and we believe that in time they will realize that a mistake was made both from their point of view and from our point of view, and will repudiate that legislation. But in the meantime what have we done? Did we go down to Washington, rattle the sword in its scabbard, and give them to understand that if such and so was not done, "grave international complications" would ensue—as was done, in fact in connection with the Japanese question in the republic to the south of us a few days ago? We did nothing of the kind, and had we done so I think we would have been very promptly and very properly told to mind our own business. What we did do was to accept the thing with such resignation as we could muster, recognizing the right of these people to control imports into their country in their own way and to impose what terms they saw fit with regard to such products as should be received. And if that is a proper procedure with regard to products, why not also with regard to people? Why have we not the right to say what people shall come into our country and form the basis of our future citizenship? Even in matters of immigration we find that the United States is discriminating against Great Britain in the establishment of a quota, but we do not find Great Britain, who is so very anxious to get rid of her surplus population, talking threateningly about "grave international complications." Why, Sir, the very policy that we seek to adopt in Canada is followed by Japan herself. Is our policy not this: That we wish to restrict Japanese and oriental immigration generally because we do not want to subject our white population to an intense economic competition with a race whose standards of living are lower than ours? Well, those are almost identically the words which Japan herself uses in restricting the immigration of orientals—orientals, mark you—from China, and also from Korea, the latter a province of Japan. Japan, I say, imposes these restrictions upon the numbers entering her own country, practically in the language I have just quoted, and she does it by Imperial Ordinance No. 352.

Mr. WOODSWORTH: Would the hon. gentleman suggest the exclusion from Canada of all goods from oriental or other countries where there is a lower standard of living than that of our own Canadian workmen?

Mr. NEILL: Mr. Speaker, the hon. member is an adept at devising these—what shall I say?—these situations which may confront us some time in the distant future. We are dealing now with immigration; let us make this country a white Canada and we will deal with the products later on. For the present let us confine ourselves to the immigration of people, not the importation of products. If the hon. member has any idea that the restriction of oriental immigration will affect our trade with the East, he may disabuse his mind of it, because experience the world over has shown that people will always trade where it is convenient and profitable to trade. Another reason: if they do not buy the goods from us, where are they going to buy them? Certainly not in the States; so that there is no fear that we will suffer in that regard.

Mr. WOODSWORTH: I think my question has been misunderstood. It is simply because we are obtaining large quantities of goods from the Orient, those goods being produced under conditions where the standard of living is much lower than that which exists in this country, and my question was whether it was suggested that we should exclude all imports which were produced in a country where the standard of living is lower than in Canada.

Mr. NEILL: My hon. friend apparently is drifting up the House; that is a question I would expect to come from my right. Would he suggest as a remedy that we put a tariff on these goods?

Mr. WOODSWORTH: No. I simply asked whether the hon. gentleman would propose that.

Mr. NEILL: I am not in favour of puting a high tariff on food entering Canada at the present moment, but I do not wish to be drawn into a discussion of tariff issues, which I think have no bearing on this subject.

Now I wish to summarize the status of the situation to-day, so that we can see what confronts us with regard to the Japanese. Many years ago the immigration of Japanese into Canada was regulated by our ordinary Immigration Act. We had no special Immigration Act such as we had with respect to the Chinese, but in 1907, owing to the pressure of a large influx of Japanese, the government of the day negotiated what was called a "gentleman's agreement" with the government of Japan. I think the right hon. the Minister of Finance (Mr. Fielding) described it as a somewhat loosely expressed agreement, and I think that is a very good description. There has been a good deal of misconception and a good deal of misunder-

standing has arisen concerning this mysterious document known as a gentleman's agreement. Once you make something hidden and mysterious all kinds of suspicions and myths and misunderstandings grow up around it. I think it might be profitable to put some portion of that agreement on Hansard, so that we would have something to start from and have a place of ready reference. I might say that a great deal, in fact almost all, so far as I know, that has ever been printed in regard to this gentleman's agreement is found in Hansard in the year 1913, when this debate I refer to was going on. It is not very long and the House will bear with me perhaps if I put it on Hansard, because this is a matter that is going to be of very great importance in the near future, and it is much more convenient to find the agreement in the Hansard of to-day than to turn back ten years ago. Here are the two regulations which form the basis of the gentleman's agreement. The letter is dated December, 1907:

Following is the agreement which was included therein:

The regulations (a) would be sent at once to the governors of the several prefectures of Japan, and the regulations (b) to the consuls of Japan in Canada.

(A)

The following classes of emigrants only are those to whom the Japanese government will grant permission to emigrate to Canada

1. Emigrants having previously resided in Canada and holding certificates of such residence issued by the Japanese consular authorities in the Dominion, and the wives and children of such emigrants.

2. Emigrants specially engaged by Japanese residents in Canada for bona fide personal or domestic service, upon production of written evidence of such engagement, attested by the competent Japanese consular authorities.

3. Contract emigrants, where terms of the contract, works to be done, names and standing of the intended employers are satisfactorily specified; such contracts to be accompanied by a certificate from the Japanese consul of the district where the labourers are to be employed.

In addition to the above, emigrants brought in under contract by Japanese resident agricultural holders in Canada and especially required for the promotion of such agriculture; such contract to be accompanied by the certificate of the Japanese consular authority in the district where the labourers are to be employed.

(B) Copy of Memorandum to Consular Authorities.

The consular authorities to whom application is made for the issue of a certificate attesting the genuineness of contracts for the employment of Japanese labour in Canada shall not issue the certificate unless they receive satisfactory evidence that such contract has the approval of the Canadian government.

As an exception to this rule, Japanese consular authorities in Canada may issue certificates to Japanese resident agricultural holders who require Japanese labour for the working of their agricultural lands at the rate of from five to ten labourers per one hundred acres of land held by the applicant.

It does not say whether it is per annum, per day or per month. It continues:

It is necessary, however, that before issuing these certificates all Japanese consular authorities shall exercise great care to ascertain the bona fides of the applicant and will take into close consideration the existing state of the labour market and of public feeling.

With reference to domestic and agricultural labourers mentioned in the regulations, the Japanese government do not contemplate that under existing circumstances these two classes should exceed four hundred annually.

The last sentence I read is not in Hansard; it is in the letter accompanying these regulations, and it follows closely the language used in the correspondence which the right hon. the Prime Minister tabled the other day, so we may conclude that it is fairly correct. It is well known that 400 was the figure referred to. I would like the House to note the language used there: "The government of Japan do not contemplate—"; that is the only binding clause in it, the only one that suggests that somebody will do something. "The government of Japan do not contemplate" doing such and so. It is not put any more definitely than that, and it is surely a very vague commitment on which to found what ought to be a treaty.

Now it is easy for me, and it could very readily be not only easy but cheap for me to stand here and criticise the statesmen of twenty years ago. Times have changed since then, and I do not want to fall into that fault, because conditions were different then from what they are now. But I think two mistakes were made in that connection; first, there was an error made in the principle adopted in making this agreement—the principle by which we should surrender to a foreign nation our right to control our immigration; and the second error was in the details under which it was worked out, inasmuch as they were much too limited. But I must remember, and I will frankly admit, that conditions were different then. Canada was a very young nation in those days, and we did not possess or if we possessed, we had not learned to use the right to make treaties and bargain with foreign nations ourselves. In those days any negotiations of that kind had to be done through the British Embassy in the old country —a very slow, a very long and a very tedious method. Quick action was desirable in this case, and the government of the day and the men who went there to negotiate that agreement probably did the best that could be done at that time. The condition was urgent: the Japanese were coming in at the rate of between seven and eight thousand a year, and we find that after the passing of this agreement, in the following year only 495 came in; so at least it can be well claimed that this agreement, whatever its defects, had an immediate success in that regard. But unfortunately,

while there was such a violent drop, conditions were such that it did not prevent the numbers rising again, as it did later on. The fact that the agreement was so loosely drawn made it possible to increase, perhaps without infraction of the agreement, the immigration to an extent that we find a few years ago, in 1919, the total immigration from Japan amounted to 1,178—a very big increase indeed.

Now the popular conception of that agreement I think has always been that 400 was the total limit of immigration into Canada. I know I myself entertained that idea for many years until recently, and I think it was generally accepted in that way; but as a matter of fact far more could come in, as we have shown. In some respects there was almost no limit. We have heard a great deal during the late war of the evils of secret treaties, but these treaties were at least written and in a concrete form; but here is an example of the evils not only of secret treaties but of treaties that were practically unwritten, or at least very loosely expressed in the manner I have indicated. It makes it doubly hazardous to deal with an agreement—an international agreement remember—when it is expressed in this vague way. Now owing to the garbled version we thought that 400 was fixed as the limit of the total emigration; but that restriction of 400 a year was only confined to two classes. One was people employed in domestic service and that does not necessarily mean the employment of females only because the word "personal" was used in the agreement, which might mean men as well as women. The Japanese returns are classified so differently from what they are under our system that it is almost impossible to check the two up and show whether the proper number came in or not. If we were to take the total emigration of Japanese during those sixteen years which the agreement covers we would find that the number clearly had been grossly exceeded. But that would be improper because the return contains a large number of women some of whom were not subject to restriction under the gentleman's agreement. If, on the other hand, we eliminated all the women that would not be fair because a number of them might come in. or perhaps did come in, under the heading of "domestic servants." It is almost impossible to say whether the gentleman's agreement was adhered to or not, but I do find that the following classified people, according to our returns, came into Canada during the sixteen years that agreement was in force: There were 1,139 farmers, 145 mechanics, 484 clerks, 8 miners, and 737 not classified. These are all males. Well, it is apparent that none of these should have been allowed in, because the gentleman's agreement made no provision at all for the entry of mechanics, clerks, miners or farmers, but only agricultural labourers; and of course in the majority of cases the unclassified might be anything at all. Therefore it is very difficult to say whether the Japanese government adhered to the strict letter of their agreement or not. It may be advisable to concede. for the sake of argument, that they did, because my own argument is based on something different to that.

I have before me a pamphlet issued by the Consul General of Japan in Ottawa in the year 1922. The title of this pamphlet is "Facts about Japanese in Canada and other miscellaneous information." I remember once reading a pamphlet called "Facts and Fancies" and somehow or other the Japanese pamphlet reminds me of it. I see that the title, very properly I think, makes a distinction between "facts about Japanese" and "other miscellaneous information." The suggestion is that the facts are facts and the miscellaneous information may or may not be facts. I think it is a very good definition because there are a great many facts that I do not find in this pamphlet, and a great many of the facts that are stated to be facts are certainly not facts at all. We were all furnished with a copy of this pamphlet at the time of its issue, and it was of course prepared by the Japanese authorities. Now, I turn to page 10 and it gives a statement of Japanese labourers sailing to Canada during the fourteen years between 1908 and 1921, and it shows that the total number of domestic servants that sailed during that period was 1,015. That is according to this little pamphlet. But, Mr. Speaker, it is well known that you can prove anything by figures, especially when you have the preparing of the figures yourself. I have here our census returns which are supposed, at least, to be more or less accurate, and I find that during the same period the emigration from Japan of domestic servants was 110. I am not saying there was deliberate fraud there at all, I do not think so. but when the returns of our government show 110 domestic servants coming to Canada whereas the Japanese returns gives the number as 1,015, the figures in both cases being applicable to the same period it shows how impossible it is to know what number of emigrants is or is not coming in to the country. There is no question but that the same difficulty exists, as regards the emigration of women. Now, the gentleman's agreement said that all women and children could come in provided the women were wives of Japanese in Canada; and, of

course, any one would say the agreement meant the wives of Japanese then in Canada. However, I think there can be no question, although it is very difficult to prove—there is no question I think after careful consideration of these statistics—that there was a good deal of evasion practised in that regard. Many of these men, the majority of them, must have been single when they came, and the evasion I am afraid was worked in this way: The Japanese women could come in if they were the wives of Japanese in Canada. Well, what happened? Somebody in Japan, issued a book called The Picture Bride's Book the same as one of Eaton's catalogues, and the Japanese living in British Columbia would turn the pictures over and when he came to a picture that he liked he would select it and forward it with a sum of money to Japan. On the return trip the woman would come accompanied by a guarantee that she was the party represented. She brought with her a certificate of some form or proof that she was the wife of this man. I have no doubt that when she arrived the man married her willingly enough provided there was a certain amount of resemblance between the woman herself and the picture he had paid for. That is how, I think, the thing was worked. I do not say it was done with the connivance or knowledge of the Japanese government, but it was certainly done by the nationals of Japan. The same thing happened, although upon a larger scale, in California. There it was carried out on such a wholesale scale, it developed into such a scandal and caused such a fuss, that in deference to the pressure of public opinion the Japanese government themselves interfered and stopped the practice. For the Picture Bride's Book they substituted the "Kandokan" system, but I believe a great many more Japanese were brought in under the latter than under the former. I think there is no doubt that a great many of these women who came to Canada as wives were not wives. If we turn to page 13 of the pamphlet I have already referred to we find a statement of Japanese passengers returned from Canada. On page 9 is given another statement showing the number of Japanese passengers that sailed to Canada. Now if we deduct the one from the other it shows that in fourteen years, taking in the period from 1908 to 1921, there were 113 more Japs went back to Japan than came to this country and naturally the inference is "What on earth are the British Columbia people kicking about, if as a result of sixteen years' operation of the gentleman's agreement there were 113 fewer Japs in Canada than there were at the beginning." Now those are Japanese statistics.

[Mr. Neill.]

Let us turn now to our own statistics, and I think our census returns can be held to be more or less reliable. Our census returns show that in 1911, which was three years after the beginning of this period remember, there were in Canada 9,021 Japs. Now if we wish to get the correct number for 1908 we must make a deduction from the figures of 1911 to allow for emigration in those three years. A reasonable proportion, perhaps, would be 7,000, but to be well within the mark I shall say 7,500. In 1921 according to our census returns the number was 15,868 so that at the end of fourteen years the increase was at least 100 per cent. I will also refer to page 13 of this pamphlet, where they quote the right hon. Prime Minister (Mr. Mackenzie King) in the debate in May, 1922, and he in turn quotes a remark made in April 1919 by the Hon. Mr. Calder then in the government, wherein he uses the following language:

> I have gone into the situation very carefully, and I can tell the House that the agreement has been lived up to by the Japanese government to the letter. As a matter of fact, taking the figures for the last four or five years there are in the neighbourhood of four or five hundred fewer Japs in Canada to-day than there were in 1914.

This assertion is in line with the one I quoted from the pamphlet and yet I have quoted our own census returns, which show an increase in the Japanese population of 100 per cent.

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

PRIVATE BILLS

SECOND READINGS

Bill No. 56, for the relief of Theresa Agnes Sprague.—Mr. Kennedy (Glengarry and Stormont).

Bill No. 57, for the relief of Terry Andrea Maxwell Bruce.—Mr. Boys.

Bill No. 58, to incorporate The Confederation Canal and Power Company.—Mr. Rankin.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

Mr. NEILL: When the House adjourned at six o'clock I had been pointing out the discrepancy between a statement quoted in the House by Mr. Calder, which no doubt was made in perfect good faith, as well as a statement in a pamphlet got up by the Japanese

Consul, on the one hand, and, on the other hand, the records as disclosed by our Canadian census. The same thing can be observed in the United States; and it is remarkable how closely the conditions there approximate, either in the past or now, with the conditions in this country. Under pressure of public sentiment some years ago the United States government proposed to introduce an oriental exclusion law, but by reason of strong representations on the part of the Japanese they confined themselves instead to the introduction of a Chinese exclusion law, entering into a gentleman's agreement with the Japanese, which was very similar to our gentleman's agreement with those people. Under the Chinese exclusion law, in a given period of years thereafter, the Chinese population in California, which was a very large one, decreased by 50 per cent. I might point out that this gentleman's agreement with the Japanese was intended, as it was actually stated, to take the place and serve the same purpose as an exclusion act; but to save the face of the Japanese nation it was agreed that the arrangement should take that form. There was no four hundred limit as in our case; it was supposed to be absolute. Yet in the same period as I have indicated in which the Chinese population decreased by 50 per cent, the Japanese population increased by 25,000. That I think speaks for itself. This gentleman's agreement, both in the United States and in Canada, has proved itself a failure. I am willing for the sake of argument, if that will save time or save the face of the Japanese government, to admit that I at least for the moment am unable to prove that that government has been knowingly privy to any fraud in the carrying out of this agreement. The returns are so involved and divergent in their purport that it is impossible to prove anything of the kind, and I say frankly that I could not to-day show that the Japanese government were privy to any fraud in carrying out the terms of the agreement. But that statement does not apply to the nationals of Japan, who were acting more or less on their own authority. I am not looking at the methods but at the results; and the net result of this gentleman's agreement, which was intended to restrict, has not been to restrict but instead to increase the Japanese population, in a given period, 100 per cent. It has resulted in a large increase, out of all proportion, in the number of Japanese women coming into the country; and with their large birth rate of 31.8 per cent, nearly 40 per cent greater than that of Canada as a whole, the result will be by natural means to largely increase the Japanese population in this country and thereby foment and increase the economic disturbance which the presence of these people creates in whatever part of Canada they are living. Therefore I maintain that the agreement has proved a failure in that it has not restricted Japanese immigration. So much for that.

In 1910 the Immigration Act was amended, and section 38, we find, gave the minister power to prohibit for a stated period, or permanently, the landing in Canada of immigrants belonging to any race deemed unsuited to the climate or the requirements of Canada, or of any immigrants of any specified class, occupation or character. That certainly gave us power to exclude Japanese or any similar class of immigration. But we do not have it now because in 1919 that section was repealed and a much stronger section put in its place, section 13, which not only goes the distance I have already recited but includes power to the minister to reject immigrants who, in his opinion, are undesirable from their probable inability to become readily assimilated. That is all on that subject, which I merely introduce now that I may refer to it in my general argument later on.

In 1913 we passed an act adopting a treaty of trade and commerce which had been entered into between Great Britain and Japan. It was devoted entirely to trade and shipping matters, but it contained a clause which allowed the nationals of either race to live and trade in the country of the other contracting party. Now, the act by which we ratified that treaty contained a provision which said that nothing in the treaty itself, or in our act, should be held to repeal or affect the provisions of our immigration law. There was a very long and acrimonious debate over the matter and on some correspondence which had passed between the government of the day and the Japanese authorities. The discussion centered for a long time around the point: Did this correspondence in any way modify or qualify the clause which stipulated that the treaty would be subject to our immigration law? The leader of the government of the day, Sir Robert Borden, said emphatically and repeatedly—and he was backed up by his ministers—that in his opinion the correspondence did not affect the stipulation, and never was intended to affect it, but was purely of an academic character, and that the section still stood good in law and in practice making the treaty subject to the Immigration Act of that day at least.

There was further discussion as to the point: Would this treaty be subject to any future amendment of our immigration law.

There was no doubt that it was subject to the Immigration Act of that day. There was a long discussion on this point also, which developed some divergence of opinion, but I notice that the right hon. gentleman who is now the leader of the opposition (Mr. Meighen) made a strong argument to the effect that the act of that date gave power to the minister to make regulations, and that this power could not be affected or vitiated in any way, but would always endure, and that under it we could make any further restrictive regulations that we might deem advisable. He made a strong and, I think, forcible argument in that regard. In any case, whether that is so or not, there is no question that the act of that day at least applied to the treaty then made. I would remind hon. members that this act contains section 38 which I have quoted.

Now, to summarize the situation up to date. We have, first, this loosely drawn agreement which, if adhered to by the Japanese government, was at least evaded by their nationals, especially in regard to the immigration of their women, resulting in a 100 per cent increase of the Japanese population. Then we have this treaty, subject, however, to section 38 of our Immigration Act, and perhaps subject also to section 13 of the 1919 act, which was even more stringent. Then we have the agreement made by the right hon. leader of the government (Mr. Mackenzie King) and recorded in the correspondence which he brought down a few weeks ago, whereby the number of Japanese immigrants under the gentleman's agreement was reduced from 400 to 150, but leaving intact all the other provisions of the original agreement. Then finally we have the resolution—and I think it is a very important one—passed by this House two years ago—in May 1922—affirming the opinion that we should have effective restriction of all oriental immigration. I leave myself in the hands of the House, Mr. Speaker, to say whether the foregoing is not a fair summary of the situation as it exists to date.

Beyond that we have two other phases that have only recently arisen. We have the fact that in California the legislature some time ago passed legislation forbidding Japanese to own, lease or hold agricultural land. That act was sustained by the Supreme Court of the United States. It practically means that something like 50,000 Japanese have been thrown out of occupation in California and the adjoining states. It naturally follows that there will be more or less of a desire on the part of at least a proportion of those 50,000 Japanese to make their way into Canada by legitimate or illegitimate means. I saw in the paper the other night that about 20,000 of them may go to Mexico. I hope so.

The other phase is the outcome of the Immigration Act which the American congress recently passed, one of the most important features of which is the practical exclusion of Japanese immigration. This is the first time they have taken such a drastic course, and apparently they have gone at it in a very whole-hearted way. I have had some correspondence with the honourable congressman who had charge of that particular measure. He writes me that they had there the same difficulty that we have had, the difficulty of convincing congressmen from the eastern part of the States that the Japanese problem was not confined to the Pacific coast; but apparently they have at last managed to convince congress that the situation involved the whole country. Congress passed the measure by a large majority, some 330 for and some 72 against. The Washington papers of last week stated that the act was coming before the Senate and it was anticipated that the restrictive clause would be struck out, but that there was some feeling in favour of such a restriction and there might possibly be a close vote. That was the expectation a few days ago. But what happened, Mr. Speaker? We see in the papers to-day that the measure passed the Senate by a very large majority, 72 senators being in favour of retaining the clause and only 2 voting for its deletion.

Now, we have an Asiatic Germany as well as a European Germany. Just at the very moment when diplomacy was specially called for we find the true tactics of the Germans in evidence—the Japanese came down with a boast and a threat: the old game of the sword and the drum. At the psychological moment the Japanese ambassador practically threatened the United States as to what would happen if the legislation was passed. I think probably nothing tended more to its passing the Senate than this teutonic attitude. For instance, one senator said that:

> The right and power of congress to exclude "whom it will" was not to be challenged. Other nations were aware of that, and it was unnecessary to seek the consent of any nation to proceed.

Another senator said:

> The protest of the Japanese ambassador against the exclusion provisions was an impertinent communication, which would not be tolerated even by a fourth-rate power.

I presume that the measure will be ratified by the President and become law. I have not for years heard any news of a political character which has given me more satisfaction than this action by congress. As to this I feel like saying with the prophet, "Now

is our salvation nearer than we believed." Certainly it is nearer than when I saw this correspondence brought down a few weeks ago. The very fact that that legislation is passed will also tend to set the tide of Japanese immigration still stronger towards our shores, and it behooves us to be especially careful in guarding our rights in this respect. For that reason I was sadly disappointed when I saw the correspondence and saw what arrangement had been made with the Japanese authorities. I was disappointed in two ways. First, in the immediate results: True there has been a considerable reduction, but the door is still left open, especially to women, and that in many ways is very undesirable. I have looked up the immigration returns since then, and I find that there has been a substantial reduction. Fewer Japanese have come in since that agreement was arrived at than before, but unfortunately there is nothing to prevent an increase of the numbers later. This condition always arises when we make an agreement of that character with Japan. The last time it dropped from 7,000 to 495, and afterwards it went up to 1,200. Here it has dropped considerably, but the possibility is there, the opportunity is there, and we have no guarantee that it will not in the future, as in the past, go up again to a very large extent. We may have next year 1,178 instead of the number that it is now, or even more. Now, had the exemption been fixed, not at 150 of certain grades or classes or occupations, but at 150 of all grades of Japanese, the situation would have been much more satisfactory. It could not even then be regarded as a permanent solution, for nothing short of definite and permanent exclusion would reach that end, but it might be regarded as a temporary solution because the power would then be vested in us to check this immigration as it came in. So it would have been taking a proper step to confine it absolutely to 150; it would have been a simple matter of counting heads—which, by the way, Mr. Speaker, is the only safe way in dealing with a question of this kind in connection with orientals.

The Minister of Justice (Mr. Lapointe) when he was Minister of Marine and Fisheries helped us a great deal out on the coast by introducing regulations in his department reducing the number of Japanese who could get fishing licenses. We appreciated his action, and it will be remembered by many fishermen on the Pacific long after some of his more notable achievements have been forgotten. A few months ago it became necessary, in continuance of this reduction policy, to refuse to renew certain Japanese licenses, and the question that naturally arose was, whose licenses should be refused? An extraordinary situation at once developed. There had been no question of suspicion in regard to the men who had the licenses the previous year; there was no suggestion that there had been anything improper about their naturalization papers or their licenses. But this year as soon as it was discovered that some of these men had to forfeit their licenses, affidavits commenced to come in to the effect that certain fishermen were holding their licenses improperly. These representations were to the effect, for instance, that a certain man in whose name a license had been issued had been dead for two years. Or, they would say, "This man over here was never on the west coast at all; he was up at the Skeena; this other man is in Japan," and so on. The unfortunate official who had to decide this question found his desk stacked up with affidavits, each one more vehement and positive than the last one, alleging that absolute fraud had been perpetrated by certain numbers of these Japanese, the whole idea, of course, being that if they could get these men whom they were accusing eliminated, they would themselves be able to get licenses. The official, of course, gave the accused persons an opportunity of rebutting the charges made, and presently an equal number of equally vehement affidavits were filed in defence of those accused and charging every crime in the calendar against those who had originally made the complaints. Now, it is of no importance to my argument which of these affidavits were wrong, which of the bunch perjured themselves or whether they all did. As to that I do not know, but it was a revelation of how little we know of what goes on when we are dealing with orientals. Had it not been for that chance occurrence in connection with the elimination of some of these men we would never have heard any suggestion that there had been any impropriety about the way they were holding their licenses. It therefore makes me anxious to see that the immigration, if it must be under the gentleman's agreement, is confined to a very definite number that would take in all classes, so that it would only be a question, as I have said, of counting heads.

So much for the result, so to speak, of that agreement; now a word as to the method. I was very sorry indeed to see the gentleman's agreement maintained. I had

hoped it would have been withdrawn. It was an opportunity to place Canada, I was going to say, almost on a pedestal, certainly to bring her into considerable prominence in the North American continent, probably among all civilized nations, as having been the first, though a small and a young nation, to take a firm stand in the matter, to tell the Japanese that we were done with gentlemen's agreements and that hereafter we were going to be mistress in our own house. We should have been in the enviable position of having given a lead in the matter and the great republic to the south would have had no recourse but meekly to follow our example. Unfortunately we lost that opportunity. Now, this government since it has been in office—and I am not complaining of it in any way at all—have emphasized, I will not say the independence of Canada, because that does not express what I mean and might be misunderstood, but, if I may use the word in connection with a nation, they have emphasized the individuality or the individual entity of Canada as a nation. We saw that in the determination to negotiate our own halibut treaty with the United States, and also to sign it ourselves. We saw it more recently in the correspondence in connection with the Lausanne treaty, and in some other matters that I do not recall at the moment. But it is ten times more necessary that we should take such a stand in connection with immigration and ten times more necessary that we should control it ourselves than it was in any of the instances I have mentioned, and I regret very much that the same policy was not adopted. We should have told the Japanese nation that their objection to our restricting their immigration on the ground of economic competition was not a tenable one, in view of the fact that they themselves adopted exactly the same procedure in restricting immigration into Japan of Chinese and of their own subjects from Korea. We should have told them that we could no longer hand over to somebody else the control of one of our fundamental rights. We should have told them that entrance into Canada is not a right to be possessed by anyone, but is entirely a privilege to be retained by us and controlled entirely by us in our own interest. With the exception of this particular instance in connection with ourselves and the States there is no record in history of one nation, except under stress of military force and subjection, giving up such an important right to another nation. As I say, the two instances I gave were exceptions, and we find that the United States has now repudiated the arrangement. I hope that it is our intention to follow suit. We should have told the Japanese nation that the gentleman's agreement was a generation old, that while we were then a young nation, what was suitable then is not suitable now. We have grown up and we must forget those boy and girl entanglements of the past. We are now a man among men, a nation among nations. We have the full rights of a nation, but we shall never be accorded recognition of those rights in the civilized world if we do not exercise and maintain them to the full. Surely, Mr. Speaker, we have as much right as Australia or New Zealand to set up as our ideal of citizenship, a white Canadian manhood. It is so in Australia, it is practically so in New Zealand; why should it not be so here?

I do not suggest for a moment that this matter should have been put up to the Japanese nation aggressively, or in any way offensively at all. It should have been put up resolutely and firmly, and with this fixed determination, to get it into the minds of the Japanese statesmen that this matter had got to be settled, and that there was only one way to settle it, that the best solution both for them and for us was an effective measure of restriction. I say for both of us advisedly. For us because we will never be satisfied with anything less, and the longer it is left the more difficult it will be, with Canadian-born Japanese children growing up in increasing numbers to deal adequately with the situation; and it will be best for the Japanese nation too to understand once and for all, and understand now, what I do not believe they have grasped, that they must not think they can look here for an outlet for their overflowing population. It will give them an opportunity to turn to some other country where perhaps they will even be welcomed. They no doubt have the idea, and there is much in our past history to justify it, that perhaps in time they would overcome our prejudice against them and that we would allow them to over-run our country. The sooner they understand that is not so, and that our determination is for all time, the better for them, because it will afford them an opportunity to turn to other spheres and possibly to nations where they really would be welcomed.

The records of political history, and our own experience as business men, both unite to tell us that no arrangement can be satisfactory when it is framed in such vague and indeterminate language as this so-called, gentleman's agreement. "It is not contemplated"—that is the operative clause, so to speak, the binding portion of this agreement.

"It is not contemplated"—that is all. I wonder how hon. gentlemen would like to see an expression like that on a note given by some creditor of theirs—"It is not contemplated." That is the only binding clause in the agreement. The whole thing is wrapped up—we surround it ourselves inevitably, it is not in the thing itself—with pretence and suspicion, because pretence leads to suspicion. On the one hand, we are in the position of saying, "Gentlemen, this is an agreement, but it is not binding." On the other hand, we say, "Gentlemen, this is binding, but it is not an agreement." Which is right? They both cannot be, and yet we alternately use both, that is the situation.

I would certainly ask the government not to regard as final, indeed, there was nothing to suggest that they were final, the negotiations that are revealed in the correspondence brought down a few weeks ago. I would not ask them to renew those negotiations, but rather to drop them, and to come before this House with a bill constituting a true measure of effective restriction, which indeed would be thoroughly in accord with the expressed wish of this House as recorded in the vote of May, 1922, when we passed unanimously a resolution that we were in favour of effective restriction of all oriental immigration. I would appeal, I would pray the Prime Minister—I would paraphrase Scripture and ask him to forget the things which are behind and press towards the mark for the prize of our high calling. In this case the prize, the grand prize, would be the realization of our ambition to create in Canada a white Canadian citizenship, a citizenship all white, and all Canadian.

Mr. J. D. CHAPLIN (Lincoln): Mr. Speaker, I wish to express the regret that we all feel on this side of the House at the enforced absence through illness of the Minister of Finance (Mr. Fielding). We hope he may soon recover; we believe it is the hope of the country at this particular time that he may have a speedy recovery. I think the country feels that it is a misfortune that he should have been taken ill at the present time.

I wish to say a word in respect to some of the statements made by the minister without portfolio (Mr. Sinclair) who spoke before six o'clock. Briefly I will take his own figures. He tells us that we are importing into this country from the United States $82,000,000 worth of products of the farm, which are entering into direct competition with our own farm products. According to him we must not increase our tariff; we must not defend ourselves against the nation that practically puts an embargo on our products; we are to crawl—and he makes the excuse that we must not do it because of the artisans of this country. Well, all I can say to the hon. gentleman is that he and this government are not worrying very much about the artisan just now. I come from a section of the country that is right up against that competition, a section close to the border, and I am not afraid to tell him that we want a tariff and an increased tariff on that kind of product.

He says that it is impossible to put a tariff on vegetable products because of the artisans; it is impossible to put a tariff on early fruits because of the artisans. Let me tell him that the United States are several weeks in advance of us in our section of the country; their products come in several weeks earlier, and I would ask the minister or any other member of the government if those early fruits from the United States that spoil the early market of the growers in the province of Ontario and all along the border are for the artisans of this country. The people that use that stuff, selling at high prices, are the people that can well afford to pay, and it is from those people the tax should be taken, and not from the artisans. Who of the artisans in Ontario are buying tomatoes at 40 cents a pound, for they are coming in right at the present time. Are the artisans of this country likely to buy these tomatoes from the full pay roll that is going to come from this so-called reduced taxation, these reduced duties that are coming into force?

Take eggs, which the minister (Mr. Sinclair) spoke of. The same thing applies there. Fowls mature a month earlier in the warmer climate of the United States than they do with us. We have to house our cattle and our poultry over a longer period. Why should the extra profit in that business be handed over to the United States people? Is it not pretty nearly time something was done for that particular industry?

Now I want to say a word to the minister without portfolio in reference to this so-called surplus and this so-called saving. The minister and the government put me in mind of a merchant who used to meet his bills by means of a note. When he had signed the note he would shove the bill in the drawer and say, "Thank God, that is paid." Now, that is exactly what occurred in this railway situation; it was exactly the same thing over again. We have bills payable coming due that this government will have to meet. Why should it not put those in its bills payable ledger? I very well remember that last year the Minister of Finance, who is unfor-

tunately ill at the present time, in delivering the budget said, not exactly in these words but to this effect: "Dear me, up to the time that I met that unfortunate railway deficit I had a surplus. But I met that unfortunate deficit. It knocked my surplus out but I paid it." Now, this government has not met the obligation—it passes by on the other side and forgets to meet it. It has not been as frank as the Finance Minister was last year. The government thinks it is going to get the people of this country to believe that it has a surplus when in reality it has a liability on its hands. The government really ought to be frank about the matter but that is what it is not. It looks to me as if there was a sort of arrangement under which every minister comes along with a prepared statement of a campaign character, a statement got up in first class style. These ministerial statements are being issued to us in reams. It is against the rule to read speeches in this chamber but the Minister of Finance and young members of the House are allowed the privilege as a courtesy. And so we are getting these ministerial statements. We have had a number, I wonder if there are any more to come.

Before entering into any further criticism of the budget resolutions I wish to lay before the House an analysis of the French treaty.

Some hon. MEMBERS: Oh, oh.

An hon. MEMBER: You did that last year.

Mr. CHAPLIN: Oh no, I did not do it last year. What I did at that time was to criticize the proposition. Now I am going to give an account of the workings of this treaty. The Minister of Justice (Mr. Lapointe) told us the other day that the French treaty was working out fine—

Mr. MEIGHEN: Hear, hear.

Mr. CHAPLIN:—and he gave us the illustration of agricultural implements. But when he was asked what the exports of canned salmon were he said: "Oh well, you will have to put a question on the order paper. I do not carry that information with me." There has been an increase in the export of agricultural implements, I am glad to say. But this government acts in a peculiar way. With one hand it signs a treaty giving the implement manufacturer some export trade with France, and with the other hand it extends the home market to the American manufacturer. To such an extent has the home market been handed over, that during the past ten months $11,000,000 of agricultural implements were supplied to this country by American manufacturers. This government does not exactly follow the Biblical admonition. On the contrary it does not let its right hand know what its left hand is doing.

Mr. McMASTER: That is what you are told to do, that is the admonition.

Mr. CHAPLIN: In other words the Minister of Justice was prepared to take all the encomiums that would come from an increase in the trade with France, but he did not want to tell the House anything about the possible losses under the treaty. Now I propose to give the House an exact analysis of the trade with France during the last five months. In the first place, however, I desire to say that I am not opposed to a treaty with France or with any nation. All I ask is, that if we make a treaty it be a fair and reasonable one and suitable for us. When I criticized the French treaty in the first place I declared that it was not reasonable or fair. I think the results of five months have pretty well shown that; I am quite satisfied that at the end of the year it will be demonstrated beyond all fear of contradiction.

I regret that I have to read quite a few figures. In order to get at the facts it is necessary to do this. I intend to place these figures on Hansard so that those who want to check them up can do so. The statement I have prepared covers five months, including the month of September, 1923, which is the date of the treaty coming into force, up to the end of January this year. I have prepared a list of sixty articles imported from France showing the value in each case of the goods, the amount of duty collected, the amount of duty that would have been collected had the treaty not been made, and the loss to the country on account of the treaty. Not only that, but I have also prepared a further statement with respect to some of the treaty countries that had the benefit of these reductions which were given to France. I have prepared a statement dealing with Switzerland and Japan which I wish also to go on record. I shall read the list of articles referred to in their entirety. I should prefer not to be interrupted; if there are any questions to be asked I shall be glad to reply to them afterwards:

GOODS IMPORTED FROM FRANCE during five months, viz., September, October, November, December, 1923, and January, 1924, showing duty collected, also amount that would have been collected if French treaty had not been made.

Article	Quantity	Value	Duty	Duty that would have been collected	Loss
		$ cts.	$ cts.	$ cts.	$ cts.
1. Non sparkling wines	65,326 gal.	85,816 00	14,288,65	61,964,91	47,676 26

					140,895 98

The total figures of losses under the French treaty may be recapitulated as follows:

On French imports	$387,204
On Swiss imports	140,895
On Japanese imports	53,000

On Norwegian imports, the amount would be $30,000 for the year, which would make a grand total for five months of $611,099. At the rate of $122,000 a month for 12 months it means $1,464,000. In addition to this there is a loss of revenue from wines manufactured at home because of a mistake that somebody made; when the treaty was brought back here it was discovered that the French

wines were allowed to come into Canada at 15 cents a gallon, whereas there was an excise tax of 30 cents charged on the home product, and of course that was something that could not be very well fixed up. The only way it could be arranged was by cutting off 22½ cents and that was done. In other words, on an article that could well afford to pay it, this government lost 22½ cents a gallon of revenue. That cost us another $120,000, making the grand total loss under the French treaty $1,584,000. That is not all, because there are a lot of treaty nations. There are nine treaty nations that are ready to take advantage of that treaty, and the sorry thing about it is that the loss occurs on articles that could well afford to pay the tariff—pure luxuries, such as velvets and velveteens, plushes and lace, lace collars and ribbons, silk fabrics and blouses and shirtwaists, furs, embroidery, perfume, cosmetics and toilet preparations, china and porcelains,—a bunch of articles that are used by the artisans and farmers of this country, not to speak of the wines, brandies, champagnes and cigarettes —a million and a half thrown away by an economical government which does not hesitate to spend another million and a half on an uneconomic proposition in London, and upon the Scribe hotel in Paris. A minister of the Crown gets up this afternoon and gives us a long tirade about the tremendous struggle the members of the cabinet have had to stop each other from spending, and to stop the deputy ministers from spending for them, because of the economy they wanted to practise.

Now, Mr. Speaker, I have shown you the loss in revenue on the articles coming into Canada. I desire to give the other side of the story also and to show exactly what we have had out of the treaty. Unless I tell the whole story I might be accused of keeping something back.

9 p.m.

Sir HENRY DRAYTON: What was the estimate as to the loss?

Mr. CHAPLIN: The Minister of Finance last year estimated the loss at between $500,000 and $800,000. My calculations are based upon the ten-month period ending at the close of January, 1924, and the calculations in regard to the French treaty are of the same dates. The exports of Canada to France for these ten months were, in round figures, $15,400,000 while our importations from that country amounted to $13,100,000, leaving a balance in our favour of $2,300,000 for that period. The principal items that comprised that $15,000,000 were wheat, sugar, pulp, including sulphite and mechanical pulp, agricultural implements, lobsters, salmon, pig lead, ore, asbestos, coal, tar and rubber goods. There are a number of smaller items which I shall not weary the House by detailing; I am not omitting them for any other reason than that I do not wish to delay the House. These however are the most important items. During this period that I have stated France took from us, in wheat, $6,400,000, in sugar $1,600,000; pulp, sulphite and mechanical, $1,467,000; pig lead, $266,000; ore, $115,000; asbestos, $378,000; coal, $50,000; tar, $350,000; agricultural implements, $1,600,000; rubber goods, $400,000; lobsters, $400,000; and canned salmon, $1,200,000. This makes a total of something over $14,000,000 out of the $15,000,000, leaving out odds and ends in other items which are too small to mention. In respect to wheat and sugar no change was made in the French treaty and we obtained no advantage in wheat. We had last year under the treaty the same advantage that we enjoyed before; and the same is true of sugar, of pulp, of lobsters, of pig lead, of ore, asbestos, coal and tar. There were only two items in the list in regard to which we derived any advantage, these being agricultural implements and rubber goods. I must say that we got a real advantage in agricultural implements, and at the time I noticed this I said that some of our manufacturers would benefit.

Mr. McMASTER: What was the increase in agricultural implements over the year before?

Mr. CHAPLIN: There was an increase of $800,000. Let us take the item of salmon. It will be remembered that when I criticised the treaty last year my complaint in regard to canned salmon was that although we were selling them a good deal of salmon the gentlemen who had made the treaty came back with an increased duty on this commodity, and I asked the question whether it was feared that we were selling too much fish to France. The result, at any rate, was a loss in salmon and lobster equal to the gain which we derived in agricultural implements. In other words, we lost on salmon and lobster $800,000. It will be observed that these various items that I have indicated, such as wheat, sugar, pulp, pig lead, ore, asbestos, coal and tar, are all purely raw materials; and my complaint against the French treaty was that quite evidently France did not want to buy from us any manufactured products or any article that had any finish on it. They bought, as I have stated $6,400,000 worth of wheat. But

Germany takes $6,000,000 worth of flour; and Germany to that extent is a better customer. Now, I am not making any apology for Germany, but I am ready to trade with everybody on an absolutely fair basis. And that is the remark I made in regard to the United States a few minutes ago: let us trade on a fair basis which will give us a show. Last year we shipped to France, of wheat, 5,665,000 bushels; to Belgium, 9,232,000 bushels; to Italy, 13,451,000 bushels.

The Minister of Finance the other day took a good deal of pains to inform us that Canada had a favourable trade balance. We are all glad to know that, and it is a good thing that we should have such a balance. Indeed, one of our troubles is that we have been buying too much; and if we bought a little less it would, I think, be better for some of us. Let me point out to the minister that—leaving Britain and the United States out of consideration for the moment—Italy shows the best trade balance with us of any of the European nations. The favourable trade balance with her is $16,000,000; Japan, among the smaller nations, comes next with $14,000,000; Belgium, $9,000,000; Germany, $7,000,000; the Netherlands, $3,600,000 and France $2,300,000. I am not blaming France for this; I am blaming our ministers. It is with the government that the responsibility rests. France made a good treaty; we did not; and that is the whole matter. There is no use in trying to evade that fact, because it cannot be denied; and our arrangement with them is not going to work in any other way than to our disadvantage. I took the trouble to criticise the treaty last year, running the risk of being wrong; but the truth of what I said at that time has been demonstrated. Let me give further particulars as to how the treaty has worked out. To begin with, the treaty gives to France the right to have a fixed duty on a considerable list of goods; and if we wanted to change the tariff to-morrow we could not do so, so far as these articles are concerned. The queer thing about it is that some of the very goods on which they have a fixed duty are covered by the treaty. But do you suppose, Mr. Speaker, that the rates of duty on French goods entering France are the same as our rates of duty on French goods entering Canada? Naturally one would think that in such a treaty the rates of duty would be the same; but they are not. Take, for instance, canned vegetables. When the treaty was made—of course, I must offer this explantation because the franc has changed somewhat in value in the interval—canned vegetables could enter Canada at a cent a pound,

and our exports to France were subject to a duty of $1.70 per hundred pounds, or 1¾ cents a pound. Again, automobiles and similar articles come in here at a duty of 25 per cent, but when we send them to France they are subject to a duty of 35 per cent. And this is called a treaty!

Now, let me trace the history of the canned vegetable trade to show how the trade has worked out under this treaty. My calculations are based for the ten months ending January in each year. In 1923 we sold to France 1,394,000 pounds of canned vegetables, and in 1924 only 21,000 pounds; during the same period last year they sold us 381,000 pounds. Before the treaty was made the French duty was 47 francs per 100 kilogrammes; by the treaty this was raised to 54 francs. I figure the franc at the date of the treaty to have been worth about 6¾ cents. The duty on our canned vegetables going into France is 1¾ cents a pound, while on the French commodity entering Canada our duty is a cent a pound. That is how the treaty has worked out on this commodity. Then take canned fruits. They sold us 16,000 pounds in 1923, and in 1924 they had increased that quantity to 165,000 pounds, while we sold them nothing. In fact their minimum tariff duty was too high for us to do business on. Then take condensed milk. For the ten months to January 1922, we sold France $568,000 of canned milk, and early in the spring of 1923, before the treaty came into force, we sold them $118,000 more. Since the treaty has been in effect,—five months,—we have sold them only $1,325 worth. The duty on condensed milk was raised 50 per cent. At the time I asked the minister whether they wanted to stop us from doing business with France. Now hon. members see the result. Take the case of butter. The Minister of Justice is not in his seat to-night, and I cannot blame him for the way our trade has been affected by this treaty, but he had something to say last session about butter. He told the House that the idea was to sell fresh butter to France. I was glad to get the information. He also informed the House that:

> The Quebec government had made a contract with a firm in Belgium for 20,000 boxes of butter at 60 pounds to the box. The hon. gentleman can figure how much that amounts to.

Well, I have figured that it amounts to a very considerable quantity—1,200,000 pounds. Of course, I was very glad to get the information. But on looking up the trade returns to date I am surprised to find that during the ten months we shipped to Belgium only 266,000 pounds of butter. I wonder where the other million pounds have melted. Per-

haps the contract referred to may have been merely an option, or an agreement of sale. However, I cannot blame the minister for that. He said he did the best he could and wanted to sell our butter to France. The truth is that we have not sold France one single pound of butter. As to cattle, our sales have decreased about two-thirds. We sold to France some oatmeal before the treaty came into effect; that trade is gone. We sold her some oats; that business is gone. We sold her some clover seed; that business has decreased. We sold her some hay; that business has decreased also. We sold her some canned lobster, to which I have already referred; that trade is cut in half, from $708,000 to $402,000. Our exports of agricultural implements to France have increased by $800,000. But our export of canned salmon has decreased $500,000. Our export business in auto parts has decreased somewhat, but the loss is not worth troubling about.

It will be remembered that when this treaty was before the House for ratification we found it contained a long list of about two hundred chemical products, the names of which no one knew the meaning of, but a few of these were picked out as being especially interesting to Canadian shippers. They are as follows: sulphate of ammonia, crude, calcium carbide, formic aldehyde, trioximethylene, acetone, acetic acid, acetate of sodium. The gentlemen who got this list up evidently were ashamed of the long list of 200 articles, so they kept it out of the book of particulars and just left these few in. I have looked carefully over the list and I cannot find one of the articles in the index of trade returns, which shows that so far as we know there have been no exports. Of these ten items that are important to Canadian trade, not one dollar's worth goes out to France.

For the benefit of some hon. members who have probably never seen a copy of the American tariff I would like to read a few words that appear on the front page of the 1922 tariff, as showing what some people who make tariffs somewhere have in their minds. I quote:

> To provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

We can all have our own ideas as to what the "other purposes" are. We have met those other purposes here; we see them in the placing by the United States of a rate of 42 cents on wheat, a rate of 8 cents a dozen on eggs against our 3, a rate of 8 cents a pound on butter against our 3—and we have not the nerve, or have not a government with the nerve, to meet them.

The Minister of the Interior (Mr. Stewart) gave us yesterday a very glowing picture of the wonderful strides that Canada made during that halcyon period between 1896 and 1911. He was so much interested, however, in his well prepared speech that he did not want to have anybody interrupt him to ask a question. I tried to get his attention, but no, he would not listen to anybody. I hope we shall not have any more of these prepared speeches, because you cannot get a chance to say a word to a man. However, we had a very fine speech—a well written speech. The hon. gentleman described in a pitiful way the state of this country from 1878, when that terrible Tory government came into power and put the National Policy into effect. Well, I can tell that minister that I passed through that period. I was in Ontario all the time and I can tell him—and I defy any person in the House or out of it to deny it—that this country in its whole history never passed through a worse period than the years immediately prior to 1878. I have no quarrel with what he says about the period between 1896 and 1911—not at all. I may differ from him, however, as to the reason why the conditions were better then. If the Liberal party in those days had carried out their pledges they would not be able now to talk about that as a halcyon period. I would like to have asked the minister—I do not see him yet—what he considered a high protectionist policy. I would like to know what he thinks a high protectionist tariff is. I would like to ask any of the ministers what they consider a high tariff—25 per cent? 30 per cent, or something of that kind? I would not, however, expect any of them to answer. The Minister of the Interior forgot that the high protectionist party was in power at the time. We have a book of trade returns published by the authority of the Minister of Trade and Commerce (Mr. Low) and on pages 10 and 11 a list is given of import and export returns with respect to articles that are free and also, shown separately, to articles that bear duties. This table indicates to a hair's breadth what tariff was collected on the articles subject to duty, and the information goes back to 1868. And what do we find? That the period between 1896 and 1911 was characterized by the highest average tariff for a period of that length in the whole history of Canada. Now I am not quarrelling with that, I approve of it; I am not finding any fault. But when a minister gets up and says, "Why, we put into effect a tariff policy that built up this

country," I want to let him know what they were doing at that time; he must have been asleep. This country was built up on a policy that the Liberals grabbed when they came into power and that they hung on to until they went out, and they went out of power because they insisted on bringing in reciprocity. That is what put them out of the game.

The Minister of the Interior further said, "Why, we are making a tariff for five and a half million people; we are making a tariff for the bulk of the people of this country; we are reducing the tariff so that these people can be relieved of their burden," Well, what is the relief afforded? It is on an article like agricultural implements, where the reduction is from 10 to 6 per cent. If the proposal is really an honest one, why do the government not reduce the duty on an article that the whole nine million people of our country consume? If they want to reach out and do the greatest good to the greatest number, why do they not reduce the duty on boots and shoes which we all wear?

Some hon. MEMBERS: Hear, hear.

Mr. CHAPLIN: I do not want anybody to misunderstand me—I am simply asking the question. I am not in favour of that; not at all, and I would not vote for it. But if my hon. friends opposite are sincere in what they are doing they will put it into effect, and so will the gentlemen to my left who are supporting this government. To them I say, no longer are you the dilapidated annex; you are the overflow, I repeat, if the principle is sound put it into effect where nine millions of people will get the benefit, and not three and a half or four millions. Why reduce the tariff on an article where the duty is already low, ten per cent, when you can go after an article with a duty of twenty-five or thirty per cent, and effect something substantial by a reduction?

Some hon. MEMBER: Furniture.

Mr. CHAPLIN: Furniture; you might reduce the duty on that.

Mr. ARCHAMBAULT: Axes.

Mr. CHAPLIN: The Minister of Trade and Commerce last year told us that we were exporting lots of bronze powder. I never found it yet in the trade returns, I can tell him that. It is not in this year, and it was not in last. I have looked through the returns for ten years, and I find that the article never was exported in ten years. It has got lost. Bronze powder! Let me say in reference to bronze powder that the duty is 27½ per cent. Bronze powder is used in the finishing of those axes that the hon. member for Chambly and Verchères (Mr. Archambault) mentions. It is also used in the finishing of spades and shovels and some agricultural machines that have all been reduced in duty; but I do not find bronze powder on the cut list. The duty still stays at 27½ per cent. Why? It is made in the constituency of the Acting Minister of Customs.

Mr. BUREAU: Who is the Acting Minister of Customs?

Mr. CHAPLIN: I beg pardon; the Acting Minister of Finance (Mr. Robb). I would venture the opinion, though, without having looked into it, that there is no considerable industry in the constituency represented by the hon. member who has just spoken that is touched by any reduction.

The Minister of the Interior (Mr. Stewart) said yesterday that the tariff was responsible for cast-iron labour organizations. I would suggest that he get in touch with the Minister of Labour (Mr. Murdock) and find out just what that means. I never heard of a cast-iron labour organization. Perhaps the Minister of Labour could tell us something about it. I would also suggest that Great Britain, which is practically a free trade country, at least it is always referred to by members to my left and by some hon. gentlemen on the other side as being free trade, has its labour troubles. I would venture the opinion that they have more labour troubles in Great Britain than we have. I would venture the further opinion, and I think the Minister of Labour will confirm it, that they have, if anything, more cast-iron labour organizations than we have. I do not know just what the Minister of the Interior meant by cast-iron organizations; I do not know whether it was a derogatory term or not; but certainly it would not mean an organization that was malleable or elastic.

The hon. minister also said that tariffs developed mergers. I would like to know if it has not been proved here time and again that Great Britain is not free from mergers. I will venture the opinion that for every merger that can be named in this country taking into account the fact that Great Britain has probably five times the population we have, you will find ten mergers in Britain. There may be some here; there used to be, so we were told, but the Minister of Labour got a bill through the House to hold them in order. He had the act amended this year,

but I have not heard of any prosecutions under that act. I have not heard of anybody being hauled before a tribunal to account for some wrong doing.

Mr. ARCHAMBAULT: Good government.

Mr. MEIGHEN: Good government leaves them alone.

Mr. CHAPLIN: I wish to refer now to a short article I saw in a Toronto paper the other day in reference to the cut in duty on agricultural implements. The statement is contained in an interview with a gentleman in Toronto representing the J. I. Case Threshing Machine Company, and he is represented as saying that he thought the tariff would be beneficial and that it would stimulate trade. On my way through Toronto over the week-end I dropped off to take a look at the outfit, and I found that this man was truly the representative of the J. I. Case Threshing Machine Company from Racine, Wisconsin, that they had a warehouse in Toronto, and that they were not manufacturing a dollar's worth of goods there. So I presume that when he said the reduction in duty would stimulate business, he meant stimulate business in the United States. That is what this government is doing, stimulating business in the United States. Here is what the Acting Minister of Finance (Mr. Robb) said the other day after he had delivered his budget, and I must compliment him on the way he delivered it, on the short time in which he took to present it, and the ease with which he handled the subject. He said:

> We shall have factories running full time and tradesmen working over time to supply the needs of those who will have money to buy.

I would like to ask this question, Mr. Speaker: What has helped to bring about stagnation and lack of employment in this country and the exodus from Ontario and Quebec?

Mr. CALDWELL: The high tariff.

Mr. CHAPLIN: No, I will tell you. It is the importation of $100,000,000 of goods that should have been made in our own factories; and the Acting Minister of Finance proposes in the face of the experience that we have had, to reduce the duties a little more in order to put a few more people out of employment! This new wizard of finance by some legerdemain hitherto unknown proposes to still further reduce the tariff to increase our imports and thus provide employment for an additional number of industrial workers! I would rather believe the stories I heard when I was a boy taken from Gulliver's Travels, the Arabian Nights Entertainment and Baron Munchausen, than take the thoughtful word of the Acting Minister of Finance in this matter.

Mr. FRANK S. CAHILL (Pontiac): For the first time in my parliamentary experience a budget has been presented to this House which I will have very much pleasure in supporting. The budgets of last year and the year before were in the right direction, but the present budget is a real accomplishment for the Prime Minister and the Liberal party, and something that I believe will meet with the general approval of the tax payers of the Dominion. It does not meet with the approval of hon. gentlemen directly opposite.

Mr. MEIGHEN: Hear, hear.

Mr. CAHILL: The leader of the opposition says "hear, hear" and the hon. member for West York (Sir Henry Drayton) smiles in co-operation with his leader. Nevertheless these hon. gentlemen do admit that this year's budget clearly draws a line between those who preach the principle of protection and those who are in favour of allowing the Canadian people to get their goods at the lowest possible prices.

Mr. MEIGHEN: I wish it did.

Mr. CAHILL: They at last admit the fighting ground is now clearly defined, and I am glad of it. I am glad that the line of cleavage between us is distinct and well defined, and that we have a platform upon which we can fight and appeal with confidence to the public. I am one of those who believe with Aristotle when he said "One man's privilege ends where the other man's rights begin." Hon. gentlemen opposite are the party of the privileged classes. We of the rest of the House are the supporters of the idea that every man should stand in an equal position before the government of the country. The ex-Minister of Finance when he was speaking on the budget the other day talked of paying due regard to the labouring interests and the interests of the producers of Canada. But what would happen if the producers of the Dominion were to come and ask the protectionist manufacturers of the country—those who are now enjoying the benefit of a protective tariff—to bonus the farmer for every head of live stock or every bushel of wheat he produced. What a howl would go up if such a request were preferred, and yet that is exactly the kind of claim my hon. friends opposite are advancing at the present time. My hon. friends make no attempt to disguise the nature of their request.

They are quite frank in asking on behalf of the protected interests to be allowed to coin profits from the tax payers of this country. I remember reading when Mussolini came into power in Italy that one of his first acts was to banish the professional beggars from Rome. If Mussolini were in this country to-day one of his first acts would be to banish the class of supplicants to which I refer. I have no quarrel with those who honestly believe that protection is a good thing. Doubtless there are many in this country who hold that view; but if I were to make profits from an industry in this country that could only exist under a system of protection I should consider myself dishonest. I should not consider I was getting my money honestly if I could not make a living out of an enterprise capable of standing on its own footing without the slightest assistance from the tax payers of this country. I am satisfied that many manufacturers do not view the question in that light, that even the leader of the opposition does not take that view, but that is the way it appeals to me. If a manufacturer cannot conduct his business without it being bolstered up by the money of the tax payers it is a case of others submitting to taxation for his benefit, and that is certainly not right conduct on the part of a citizen of any country.

The hon. member for West York referred to the labouring man in the Maritime provinces and to the wheat grower in the West. Take the case of a fisherman returning from the Grand banks to his home in Lunenburg with a cargo of fish. What would he think if, after going into the Boston market and selling his fish there, he had to give a portion of his gain from that sale to bolster up a plough manufacturer in Hamilton or some other place in Ontario. What benefit to the fisherman of the Maritime provinces would there be in such a policy as that? Or what encouragement or profit can a farmer who is growing wheat in Alberta and shipping it to Vancouver and from there to Liverpool derive from the fact that he had to pay a few more dollars for a binder in order to give protection to a manufacturer in Toronto or elsewhere in Canada? Such an argument is not reasonable or sound. It is a fact that the customs duties in the past have been regarded as an easy way of collecting taxation.

Mr. MEIGHEN: You might try boots and shoes for another illustration.

Mr. McMASTER: One is always thinking of one's feet.

Mr. CAHILL: I should be quite willing to have a reduction in the duty on boots and shoes, I hope it will come. I believe the people in this country will support that reduction when it does come. The provisions of this budget are not the last word in the matter of tariff reduction. I am not like my right hon. friend who attempts to preach against the government on the ground that they have reduced the tariff too much, and then takes the other tack that the reductions made are not going to help the consumer.

Mr. MEIGHEN: What does my hon. friend say?

Mr. CAHILL: I say that my right hon. friend always tries to take both sides of the question. He preaches that the tariff reductions are not going to benefit the consumer at all and argues in the same breath that industries will be injured. His supporters argue in the same fashion. The hon. member who has just taken his seat (Mr. Chaplin) deplored the fact that duties to the extent of something like a million and a half of dollars were cut off certain imports to this country as if that were not a decided gain to the consumers of Canada. The day when a Tory is not taxing some person is looked upon by hon. gentlemen opposite as a lost day.

My hon. friends are attempting to make a great cry out of the fact that there is an emigration movement from this country. It is true that a great many people have left Canada, but that was largely on account of the huge and extravagant expenditures of previous governments. They felt that they were going to be taxed and taxed heavily, and in order to avoid it they left the country. The income tax is not conducive to good business, many of the taxes in force at the present time are not helpful to industries, but hon. gentlemen opposite left such a tremendous debt that taxation had to be resorted to. They talk about the expenditures for the war. Why after the war was over they spent money with a free hand. They built a merchant marine at a cost of some sixty or seventy million dollars. They made loans to Roumania and other European countries. We told them at the time that they might never expect to get a cent of it back, and they have not. They went on expending money in that way, and they are now criticizing the government for not reducing taxation, balancing the budget the first year after they came into power, or doing all kinds of things they never expected or hoped to do or never attempted to do when they were collecting the taxation during the time of inflated business in the war period and the immediate period after the war.

Mr. MEIGHEN: Does the hon. gentleman not remember—I think he was in the House at the time—when the present Minister of Railways (Mr. Graham) warned us that we were taxing too highly?

Mr. CAHILL: My recollection is that the present Minister of Railways was not in the House from 1917 to 1921.

Mr. MEIGHEN: Yes, but the war was on before 1917. My hon. friend will find, if he will look up the record, that in the year 1917 he was not alone in that warning to the government. This last tale of woe is a very recent edition. In those days the warning came very frequently that we were too severe and that we were taxing business too heavily.

Mr. CAHILL: I only came into the House in 1917 and I do not recollect any advice of that kind to the government from my side of the House after 1917. I think the general consensus of opinion then was that the government was spending money with too free a hand and not collecting enough taxation. During my experience as a member of the opposition, we were asking the government to collect heavier taxes from the profiteers; we said that they were allowing them to escape and that they should bear a part of the burden of the war by taxation during that time.

Mr. MEIGHEN: That is quite true. I do not want to be misunderstood. A vague cry to collect from the profiteers always went up, but whenever a concrete tax came down to be voted on the cry was the other way.

Mr. CAHILL: My hon. friend will have the last word on every subject. It would be useless for me to attempt to argue with him, but the fact remains that during that period they were spending money as if the leaves of the trees were dollars and they owned the forests of the world; and they were taxing as if the trees were rosebuds and they should not touch them. During all that period they failed to collect the taxes that would have lightened the burdens of the taxpayers to-day. The same thing applied previous to 1896. We had an exodus from this country during that period. After the Liberal administration came into power in 1896 and got going for two or three years, conditions changed and people began to come back to the country instead of leaving it. I expect we will have the same result from the administration of this government. I feel confident that in three or four years we will begin to forget all about our tax troubles of to-day or our huge debt, because people will be coming in and prosperity will be returning, under an administration that allows something of equality to the consumer and producer of the country, as against my hon. friend's special privileged friends that he is so interested in looking after.

Mr. MEIGHEN: What ones?

Mr. CAHILL: The manufacturers.

Mr. MEIGHEN: Of implements?

Mr. CAHILL: Of implements and of shoes.

Mr. MEIGHEN: I cannot speak as to boots and shoes. The hon. Minister of Justice (Mr. Lapointe) will do that. As to the manufacturers of implements, my hon. friend's colleague told us a few days ago they lost over two million dollars in one concern in the last two years.

Mr. CAHILL: The hon. ex-Minister of Finance (Sir Henry Drayton) told the House that this budget was prepared for the purpose of catching the Progressive vote.

Mr. MEIGHEN: Hear, hear.

Mr. CAHILL: My right hon. friend says "hear, hear." I remember he applauded that idea. It also catches the votes on this side of the House, and it will probably catch a vote of a majority in the neighbourhood of a hundred over my hon. friend's party. If we should go to the country, and if the members of the Progressive party and the members on this side of the House are good judges of the feelings of their constituents and their desires it should catch the same proportion in the country. That is the quarrel my hon. friend has with the budget. It is not what he wants; far from it. But he will hope to succeed with the assistance of practically all the great organizations of this country at his back, because he will practically have the railway corporation, the banking institutions, the press of the country and all the special interests and specially priviliged people at his back, trying to fool the electors of this country again as they did in 1911. But it will probably take the people a few years yet to forget, and they will not have forgotten by the time the next election takes place, nor is it likely they will forget the administration of my right hon. friend till doomsday. After the election of 1896 the Liberal party remained in power for fifteen years, and it is probable that their present tenure of office will be longer than that.

It is wise for the government to practise economy. I do not believe in a government attempting to do all the business of a country. I think the government should practise

economy in their expenditure and reduce taxation as much as possible, in order to allow business to develop. The people will take care of the business enterprises if the government will look after purely governmental matters. I am tempted to quote from Macaulay a few words which appealed to me as one of the best political platforms for the Liberal party that I know of. He said:

> Our rulers will best promote the improvement of the nation by strictly confining themselves to their own legitimate duties, by leaving capital to find its most lucrative course, commodities their fair price, industry and intelligence their natural reward, idleness and folly their natural punishment; by maintaining peace, by defending property, by diminishing the price of law, and by observing strict economy in every department of the state.' Let the government do this; the people will assuredly do the rest.

If my hon. friend the leader of the opposition and his party had followed that policy this country to-day would not be loaded with responsibility with which they are burdened. Far from it. We would have been in a much better position, and the country would have been back to that condition of prosperity which it enjoyed during the time of the previous Liberal administration, when the party tried to leave private business in the hands of private corporations. That, after all, is the best policy for any country, especially a young country.

10 p.m.

I do not think the exodus from Canada to the United States is altogether due to the high taxation that has been necessary for the last year or two. I think our banking system is organized on a wrong basis for the development of this country. I hope we will be able to work out something in the Banking and Commerce committee that will give us a better banking system for the people. The present system is merely one for gathering, in numerous branches throughout the country, moneys to be devoted to investments at the head offices, which happen to be in the cities of Montreal and Toronto. This system does not make for a balanced development of the country. I believe that has as much to do with people leaving the country as has the tariff.

Another thing that I believe will have to be adjusted before we get any great volume of immigrants to this country is our naturalization policy. The principle of an immigrant's forswearing allegiance to his former state and swearing allegiance to the government of the country of his adoption is a relic of European conditions under which it was necessary for a man to pledge himself during his lifetime to fight the battles of the country into which he moved. For example, if a man moved from Belgium to France, or from France to Germany, the government naturally expected him to forswear his allegiance to his native country, because he would be required to shoulder arms in the near future in defence of his adopted land. That is absolutely unnecessary in this country. I think that we should have a simple system whereby an immigrant would declare his allegiance to Canada without being obliged to do something that is so distasteful to many people who come here. Forswearing one's allegiance is something that has no particular significance to the native-born Canadian inasmuch as he is never called upon to comply with any such painful obligation; but it does mean a great deal indeed to the immigrant who comes here. Something therefore should be done in this direction to facilitate the entry of immigrants into Canada.

In conclusion, I would observe that the budget is one that lends encouragement to the country generally, and I believe that it has been accepted throughout the length and breadth of the land. And if by any chance the government should deem it necessary to go to the country at this time I am convinced that they would come back very much stronger than they are to-day and much stronger than both of the parties combined who are expected to support the budget that is at present under consideration.

Mr. HUBBS: I wish to move the adjournment of the debate, Mr. Speaker. Before I do so, however, I want to compliment the Acting Minister of Finance (Mr. Robb) on the presentation of his first budget to the people of Canada.

Mr. MARCIL (Bonaventure): I understood, Mr. Speaker, that the arrangement was that I should speak on the budget to-night. Evidently there has been a misunderstanding, and I would ask the hon. member to withdraw his motion.

Mr. HUBBS: I have no objection to doing so; I withdraw the motion.

Hon. CHARLES MARCIL (Bonaventure): In common with you, Mr. Speaker, and every other hon. member of this House, I regret that on the present occasion I have not had the pleasure of listening to the Minister of Finance himself (Mr. Fielding) in the delivery of the budget speech. It has been my good fortune to have listened to, and supported by my vote in this House, thirteen of the seventeen budget speeches that have been delivered by that hon. gentleman, and while I shall not attempt to eulogize him in the presence of hon. members who have seen him

discharge his responsible duties as Minister of Finance in this House, I do desire to say a word or two in regard to my own personal experience with him. I had the pleasure of being in that part of Canada where he is best known, having had an opportunity at two general elections, in 1908 and 1911, of accompanying the Minister of Finance through the Maritime provinces where I witnessed the prestige and general confidence which he inspired in these three provinces by the sea. His record as provincial premier was behind him and his work as Minister of Finance in Canada was then meeting with success, to the general satisfaction and advantage of this country. I hope that Providence will spare him to return to us to continue the good work that he has done; for a man who has given forty years of his life to the service of his country cannot easily be dispensed with without a great loss all round.

It was also my good fortune to hear, with pleasure and approval, the present budget speech delivered by the Acting Minister of Finance (Mr. Robb). I have known the Acting Minister of Finance for some time; he represents the combined constituencies of Chateauguay-Huntingdon, an ideal combination of English-speaking and French-speaking Canadians. These constituencies have been represented in this House in the past by some distinguished men, to mention only the late Hon. Mr. Holton and Mr. Julius Scriver, two of the most distinguished members of the Liberal party hailing from the province of Quebec in the old days. The Acting Minister of Finance has worthily stepped into their place and is performing his duties in his present responsible position quite satisfactorily. As a man who has listened to various speeches in this House during many years, I wish to congratulate him on his performance, and more particularly on the brevity of his speech; and I hope that in the budget speech of this year a record has been established which public men in Canada will emulate. The shorter a speech is the more effective it becomes. For many years in Great Britain, in the mother of parliaments, the budget speech has invariably been delivered in about an hour, and some of the greatest orations of Gladstone and other eminent statesmen have been delivered within that space of time. I trust that the example which the hon. the Acting Minister has set will be followed by all; and with that end in view I do not intend to speak at great length this evening. I think it is my duty however, both to my constituents and to the people of the country at large, that I should refer to the budget to some extent. The keynote of the budget is, in a few words, the development of Canadian basic industries. The concluding paragraph of the speech of the Acting Minister of Finance defines the policy of the present government, which I know will have the support of the immense majority in this House and the equally immense majority of the country on the first occasion that presents itself for the demonstration of the confidence of the people in the administration. The words of the Acting Minister to which I refer are:

> Whatever division of opinion Canadians may have, surely we share a united confidence in the future of our country. We have great natural resources. We have certain basic industries, upon the success of which depend the growth of all other industries, the greater development of our trade. Of these basic industries, I would place agriculture, in all its varied branches, first. Next to agriculture, I would place our forests, our minerals and our fisheries. A real national policy is a policy that will encourage the growth and development of these basic industries. The more of the products of the farm, the fisheries, the mines and the forest we have going to market, the greater will be the earnings of our transportation companies—the greater the purchasing power of the nation and as a consequence we shall have factories running full time and tradesmen working overtime to supply the needs of those who will have money to buy. In that belief, Sir, we submit to-day proposals to lighten the burden of taxation on these primary, basic industries. Our budget shows a reduction in debt of $30,000,000 last year, and a reduction in taxation of $24,000,000 this year. It is confidently expected that this reduction will give such impetus to trade that it will result in greater development and prosperity to all the provinces of Canada.

I regret having had to read an extract from a speech that is still so fresh in the minds of all hon. gentlemen, but I have done so because it epitomises in a few lines the precise policy of the present administration which, as far as I understand, is in keeping with the policy of the Liberal party as enunciated in convention in 1919. The four foundation stones of national prosperity are agriculture, the forests, the fisheries and the mines; and without the prosperity of these four great branches of industry no prosperity is possible in any other direction. We may venture to foster and to encourage the manufacture of anything under the sun, and we may attempt to compete with the Americans, with the French, with the English or with any other manufacturing nation. But we shall never attain success in any branch of manufacturing unless these four basic industries are prosperous in this country.

The hon. minister has faced a problem that was well-nigh overwhelming. Older members of this House and you, Mr. Speaker, will

remember when we had to gather but $18,000,000 a year to meet the interest charges on a public debt of only $350,000,000. That is long, long since. Now we have to face conditions that are almost overwhelming compared with what they were in the old days. But the Canadian people are equal to the task. They have already accomplished what has never been surpassed by any other nation in the world. Therefore I am confident that with the working out of this policy and with proper legislative encouragement which will keep our people at home and attract newcomers—immigrants who will be willing to share our burdens and to abide by our laws and constitution, thus becoming good Canadians—the future of Canada is as bright as it ever was. In fact the position of this country is to-day the best in the world, for we are free from many of the disturbing questions which trouble many other countries, and which we hope will never arise here. As Canadians, regardless of provincial boundaries, come together and get to know each other better, so will all our difficulties be overcome, and we shall be able to build up on this North American continent a nation of which we and our descendants may be truly proud.

The Acting Minister of Finance is a Scotsman in origin, and therefore a very prudent man in dealing with money matters. After giving us this great relief of decreasing our public debt to the extent of $30,000,000 and reducing our taxation by $24,000,000, he turned to the fiscal year 1924-25 and said:

> I come now to the fiscal year 1924-25. Estimates of revenue for the year upon which we have just entered cannot be made with any degree of accuracy. The revenue we would receive on the present basis of taxation would be materially affected by reductions in taxes which, in view of the most satisfactory out-come of the year just closed, it is proposed to submit to parliament. It is hoped, however, to offset any considerable reduction in the revenue by a most rigid economy in expenditures. The estimates now before the House show a very substantial reduction as compared with the estimates of last year. We shall no doubt have supplementaries, but rigid economy will be exercised in their preparation; and in this the government hopes for and expects co-operation from all sections of Canada.

For my part, Mr. Speaker, I am willing by speech and by vote to support any proposal that will tend to do away with waste and extravagance. But there is such a thing as productive expenditure, and I am going to call the attention of the government and the House to an expenditure of this class, not because it happens to be in my own constituency, for I am sure there must be many similar cases in the rest of the Dominion, but because such productive expenditure is necessary to help us meet our obligations. There is no doubt that we must increase our population, and the most effective way to do so is to keep our people at home; this means that we must give them employment; to give them employment we must develop our resources, and to develop our resources the public moneys have on certain occasions to be brought into profitable and effective use. There are in my constituency, Mr. Speaker, as you are aware, large timber limits covering thousands of square miles. The country is barely developed, but on the seashore there is considerable settlement. In the centre of my constituency the Bathurst Lumber Company own five hundred square miles of timber limits formerly the property of Lieutenant Governor Robitaille. The outlet for these limits is on the Bonaventure river, practically half-way between Gaspe and Campbellton, the only deep water ports we have on the bay of Chaleur. In the old days the company had at its head the late Senator Edwards and other capitalists of these parts who established mills at Bonaventure and New Richmond, giving employment to several hundred men. For more than ten years under very trying circumstances they operated the mills but what with defective railway facilities, due to shortage of motive power and rolling stock, and lack of any deep water port on a shore line of 200 miles, they finally had to close them down. As a result the population of Bonaventure has decreased by eight hundred, and the mayor writes me that fifty families are preparing to leave in the spring for other parts of Canada or for the United States. There has been an exodus from Gaspe and Bonaventure, largely owing to the fact that we have lost our industries for want of effective means of transportation by rail and by water. The Bathurst Lumber Company, as my friends from the Maritime provinces know, is one of the soundest and most enterprising corporations in that part of the Dominion. At the present time they have a large industry at Bathurst, and to keep it in operation they have to cut their timber in Bonaventure and raft it 25 miles across the bay of Chaleur to Bathurst, where they are served by the Intercolonial railway. Consequently the people of my constituency lose the work of converting the timber into lumber, and have to go away to seek work, while our farmers are deprived of any home market and agriculture is decreasing every year.

What has happened to the Bathurst Lumber Company has also happened to the Province of Quebec Lumber Association, which owns large timber limits in the county. They moved across the bay to Dalhousie, and they are

rafting their timber over to this mill, with the result that the men living in the vicinity of the timber limits are left without employment. In the county which you, Mr. Speaker, have the honour to represent we have a large pulp mill at Chandler which was erected some years ago by capitalists from Philadelphia, but to-day it is owned largely by Canadians. They have to export their product down to Gaspe to find a deep water terminus, having no shipping facilities of any kind, and therefore the place is seriously handicapped.

With your permission, Mr. Speaker, and that of the House, I wish to lay these concrete proposals before the government as they have already been laid before the hon. Minister of Public Works (Mr. King) by the Bathurst Lumber Company. The directors of that company say: Give us increased harbour facilities at Bonaventure. It will cost you $200,000 according to the estimates of last year. It will take at least four years to spend that sum of money, but if the government are prepared to do that, we are prepared to spend $300,000 on our own part, and the result will be the building up of an industry that will employ three or four hundred men. In order that the matter may be better understood I would like to have the privilege of reading a letter sent by Mr. McLean, president of the company, to the hon. Minister of Public Works (Mr. King). It reads as follows:

August 14, 1923.

Dear Mr. King:—

The people of Bonaventure, Quebec, have been requesting us for some time to start an industry at Bonaventure for manufacturing at least a portion of the timber that we are now cutting on the Gaspe peninsula at that point and we had a meeting there two weeks ago at which a very large number of the residents of Bonaventure were present and resolutions were passed at this meeting, copies of which I understand the Hon. Chas. Marcil has forwarded to you. The position is as follows: We are prepared to put in a good, substantial plant there for manufacturing providing we can obtain the necessary facilities to make a success of our enterprise, and in order to do this it will be necessary that we should have a protected harbour and dredging done so that sea-going vessels could go into the harbour and lie in safe protection. In addition to this, of course, we will have to have railway facilities but this is something that we can easily arrange outside of the harbour improvements required. We have agreed with the people of Bonaventure that we will proceed to put in this plant providing they can succeed in getting their harbour improvements made, and as they are desirous of having this done at the earliest possible moment in order that our construction work may begin there, we wish to add our plea for this work being done. Under the circumstances if you could arrange to have a survey made and ascertain what is necessary to make this a good shipping port where vessels could take cargo on or discharge cargo during a period of seven or eight months of the year, we would like very much to see this survey made. You probably know that Bonaventure is about half way between Matapedia and Gaspe and it is the only available port on that whole coast where a deep water harbour is possible and as it so centrally located and also is at the mouth of the important Bonaventure river, where there are large quantities of wood, there is no reason why this could not be made a very important shipping port for that whole coast as well as a point where materials of all kinds could go in and be loaded on board cars for distribution to that whole district. We simply want to add our request to that of the people of Bonaventure to have this work done at as early a date as possible and we are prepared to proceed with our enterprise and give business for shipping so that the port would justify the expense of making the harbour.

Thanking you for your consideration.

Yours very truly,

Angus McLean,

President.

That was the proposal that was made to the minister at a time when he and his colleagues were striving to practise the most rigid economy. At first glance they felt it necessary to turn down the proposal, as they had been obliged to turn down many others relating to other parts of Canada. But I make a special plea in favour of this one, for several reasons. In the first place, we are isolated from the large centres. We are 600 miles from Montreal, and we have a very inefficient railway service. We have a hard country to live in, because of the long winter season. It is a part of Canada in which very few immigrants from Europe will ever settle; they generally go to the Eastern townships, to Ontario or to the West, and not one in a thousand would dream of locating in the Gaspé district. We have a population born in the place; the people have lived there for generations, and it is in the interests of the country that these young people, who are ideal axemen, ideal men for the lumber camps and the lumbering industry, for the deep sea fishing we have on the coast and for agriculture as well, should be given employment and kept at home.

The minister, in response to the resolution that was sent to him, adopted at a public meeting held at Bonaventure on the first of August, presided over by Monseigneur Matte Vicar General of the new see of Gaspé, kindly sent down an engineer to make a very thorough survey of the whole situation, especially in view of the fact that under the Laurier administration $100,000 had been expended at Bonaventure for the purpose of creating a harbour and building a breakwater. But it is needless to say that from 1911 until 1921 nothing whatever was done; the work was abandoned and these industries moved away. The question is this: Can Canada afford to lose this population? Can Canada afford to lose this industry? Can Canada afford the $100,000 that has already been ex-

pended?—because that expenditure has not resulted in deepening the harbour as it would be deepened by the extension of this breakwater and by deepening the basin as asked for. The report of the engineer is typical of conditions in many parts of eastern Quebec and, I believe, in the Maritime provinces. Our friends in Ontario and in the West do not have to contend with the sea; they are not familiar with these conditions, and I have no doubt that when they hear this report they will have some idea of the importance of this matter to the people living down by the sea, people who, as I have said, live under difficult conditions, far removed from the thickly settled portions of Canada. This is the report of the engineer:

Department of Public Works,
District Engineer's Office,
Rimouski, P.Q., Oct. 25, 1923.

Sir:—

With reference to your telegram of Oct. 17th, and to your letter of Aug. 10th ult., re file P.Q. 36, in regard to harbour improvements which are being requested at Bonaventure river, County of Bonaventure, P.Q., I beg to submit the following.

Bonaventure river or St. Bonaventure, in the county of the same name, is situated on the north shore of the Baie des Chaleurs, 10 miles west from New Carlisle and 90 miles east from Matapedia. It is the largest village of the county; lumbering, farming and fishing are extensive. The fish export firm of Robin Jones & Whitman has a large establishment at that place, which is also a distribution centre; all kind of farm and dairy produce, cattle, etc., are yearly exported; several thousand cords of pulpwood are cut in the vicinity and shipped through this point.

In addition to this local traffic, the Bathurst Lumber Co., Limited, owns, on the westerly shore of the mouth of the Bonaventure river, flowing into the sea, through the easterly portion of the village, large saw, shingle and planing mills, which have been left vacant and idle during the last ten years, due to the fact that the annual timber cut done in their Bonaventure river limits was being rafted to Bathurst, N.B., to be milled in the company's plant at that place.

The annual cut of timber done by the Bathurst Co., in their limits of the Bonaventure river (about 500 sq. miles) approximates 20,000,000 ft. B.M. of lumber; approximately 10 to 15 million feet are also taken out of the Little Cascapedia river, the mouth of which is located about 20 miles west from Bonaventure river.

It is evident that this rafting over the New Brunswick of the lumber cut in the Bonaventure county means a serious loss to the local industry and traffic.

It is now proposed, however, as stated by Mr. McLean, president of the Bathurst Lumber Co., that the said company make at Bonaventure village the centre of their milling operations in the region: they will consequently reopen their mills, enlarge them if necessary to ensure employment to at least 300 men: the company stands prepared to an outlay of $300,000 to modernize the existing saw-mills, and to build a pulp rossing mill as promised to the population of Bonaventure, during the meeting held at that place on August 1, by the head of the Bathurst Lumber Co., Mr. McLean.

But all this industrial boom will take place only if the necessary shipping accommodation and harbour facilities are provided, permitting ocean-going freighters and steam barges to load and unload from a wharf which should be built at that place with sufficient depth of water to allow safe navigation in the harbour: a deep water harbour has consequently to be found or created in the vicinity of the mouth of Bonaventure river.

In regard to deep water harbours, allow me to call your attention to the fact that the whole of this region of eastern Quebec lies as yet only partly developed, owing to the lack of transport facilities: there is only one railroad in both counties of Bonaventure and Gaspe operating from Matapedia to Gaspe, a distance of 202 miles, only one passenger train and one freight train a day. Moreover, owing to the bad condition of the road-bed, only very light cars are hauled so that the traffic is very poorly accommodated; consequently to relieve congestion of travelling and freight hauling, transportation by water should be resorted to. Unfortunately nature has not favoured most of the localities along this coast with natural facilities; harbours there are a-plenty but, in practically all of them the water is shallow and, with very few exceptions, unless they are improved, they do not afford the required accommodation.

Bonaventure river is located approximately half way between Gaspe and Matapedia and should be, from this geographical location, the commercial and industrial centre of the region. In former times, before 1914, such a condition was existing, and Bonaventure was enjoying a prosperous trade and traffic which would certainly be resumed with the revival of industry as above outlined.

With deep water harbour facilities at Bonaventure, this place should become a business centre of large importance. It would be the meeting place of both ends of the Gaspe peninsula and become the principal timber market place of the region.

To meet the requirements such as described by the interested parties during the meeting held at Bonaventure. I consider that, in order not to have the expenditure already incurred by the department in the locality wasted, the existing training pier should be extended 1,000 feet in length by 20 feet in width in a straight direction, and 600 feet in length by 30 feet in width in a south direction: a basin along the easterly side of the 30-foot wide portion of the wharf should also be dredged as shown on accompanying plan.

The construction of the above-mentioned extension 1,600 feet in length by 20 feet and 30 feet in width would cost approximately $145,000; the dredging of a basin averaging 1,040 feet in length by 300 feet in width to 16 feet L.W.S.T., would involve the removal of approximately 68,000 cubic yards of material, measured in place, which at 50 cents per cubic yard would cost $34,000.

No borings have been taken out in vicinity, but I am of the opinion that the dredging can be done without meeting with considerable hardships.

The whole cost of the requested and described improvements should be approximately, including cost of necessary contingencies, $190,000.

Yours obediently,
P. E. Amiot,
District Engineer.

A similar letter was forwarded to the right hon. the Prime Minister, and I have no doubt that he will give the matter proper consideration when it is taken up in council. Here is the situation: Even if a small amount were granted in the supplementary estimates of say $25,000 or thereabouts, to commence this work, not one dollar of that money could be spent before next winter because the timber has to be taken out of

the forests and hauled down to the seashore, so the work practically would not begin until the spring of 1925. They could only do a certain amount of work each year, and this expenditure of $200,000 would cover certainly a period of two or three years, if not four, which would mean a spread of the expenditure. I am not asking for this amount to be spent in one year. The Bathurst Lumber Company spent this year $40,000 there in the construction of piers and booms for the distribution of their logs and to carry on their operations.

I hope I shall have the indulgence of this House for having brought this matter up, but I think I am giving expression to the feeling not only of the government but of many members in this House when I say that in applying rigid economy we must not go too far. We must not cut out what, as in this case, we might call productive expenditure. Whenever a reasonable proposition or a concrete proposal is made by a solvent corporation, when the work is already under way, when a large amount of money has already been expended, when the limits are there, when the resources are there, when the people exploiting them have undoubted capital, when their standing is of the first order, I think, Mr. Speaker, it would be false economy on the part of the Canadian government to turn down an offer such as this or to turn down any offer which would give an opportunity to develop our resources and give employment to our people and keep them at home.

This question of carrying our lumber over into another province is not a new one. It has been discussed many times in the Quebec legislature. It has been brought up on several occasions by Hon. John Hall Kelly, now solicitor for the Lumber Association, and by Mr. Bugeaud, late member for Bonaventure and now on the bench, but the answer of the Quebec government was always this, that the clause in the British North America Act which prevents any barriers being placed against interprovincial trade applies to lumber as to everything else. Along the Ottawa river practically all the mills in this province are kept going by timber from the province of Quebec, and the same thing is true of New Brunswick to-day. The lumber manufactured in New Brunswick is brought over from the province of Quebec. I do not object to the prosperity of New Brunswick at all. I am advocating at the present time, and will continue to advocate, a closer relationship between Quebec and New Brunswick at that point, because our people from the province of Quebec and from New Brunswick are becoming more and more allied every day. There is an invasion of New Brunswick by Quebec, and I hope that the old settlers of the province of New Brunswick will stay at home and not be attracted by the lure of the west or of the United States, because some day they may find another Quebec in the province of New Brunswick. The French-Canadians are going into New Brunswick because they have an opportunity there; they have faith in that province, and I would like to see the old settlers of New Brunswick stay in that province rather than leave for the United States or the West.

I would like, Mr. Speaker, to say one last word in support of this proposal, and to ask the government to give it fair consideration. I think I have advanced arguments which cannot easily be refuted. They speak for keeping the people at home, for giving them employment, for developing our resources, and the moment the government have the necessary guarantees I hope they will find their way, notwithstanding the wise caution given by the Acting Minister of Finance, to at least complete this work so that we shall be able to keep our people at home and continue to share in the general prosperity of Canada.

Mr. Hubbs moved the adjournment of the debate.

Mr. SPEAKER: Before putting the motion I wish to explain, in justice to the hon. member, that being a new member he did not realize he was losing his right to address the House again on this question by withdrawing his motion for the adjournment of the debate, in order that the hon. member for Bonaventure (Mr. Marcil) might have an opportunity of speaking. According to May and Bourinot the House in such a case is generally very indulgent, and I hope that the hon. gentleman may not lose his right to address the House on this question. Is it the pleasure of the House that the hon. member shall have leave to address the House in this debate and now move its adjournment?

Motion agreed to and debate adjourned.

INTERPARLIAMENTARY UNION.

INVITATION TO MEET IN WASHINGTON IN 1925

Mr. SPEAKER: I have the honour to inform the House that I have received from the Acting Under Secretary of State for External Affairs the following letter:

Ottawa, 14th April, 1924.

Sir,—I have the honour to transmit, herewith, copy of a letter which has been received from the agent of this department at Washington, D.C., United States, en-

closing copies of H. J. Res. 204, requesting the President to invite the Interparliamentary Union to meet in Washington City in 1925, and authorizing an appropriation to defray the expenses of the meeting, together with copies of Report No. 475 on the above bill.

I have the honour to be, Sir,
Your obedient servant,
(Signed) W. H. WALKER.
Acting Under-Secretary of State
for External Affairs.

The Speaker of the House of Commons,
Ottawa.

The resolution adopted by the House of Representatives reads as follows:

In the House of Representatives

March 3, 1924

Mr. Temple introduced the following joint resolution; which was referred to the Committee on Foreign Affairs and ordered to be printed

April 8, 1924

Reported with amendments, committed to the committee of the Whole House on the state of the Union, and ordered to be printed.

Joint Resolution

Requesting the President to invite the Interparliamentary Union to meet in Washington City in 1925, and authorizing an appropriation to defray the expenses of the meeting.

Whereas the Congress, in an act approved June 30, 1914, requested the President to extend an invitation to the Interparliamentary Union to hold its annual meeting for the year 1915 in the city of Washington, and in the same act appropriated the sum of $40,000 to defray the expenses of the said meeting; and

Whereas when the World War led to repeated postponements of the said meeting the Congress repeatedly extended the appropriation: first, the act of July 1, 1916 extended it and made it available for the calendar years 1916 and 1917; second, the act of March 3rd, 1917, extended the appropriation and made it available for the calendar year 1918; third, the act of April 15, 1918, extended the appropriation and made it available for the calendar year 1919; and

Whereas this appropriation repeatedly extended has lapsed, no part of it having been expended, and the meeting thus arranged for in the city of Washington has not been held; Therefore be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled,

That the President be requested to invite the Interparliamentary Union to hold its annual meeting for the year 1925 in the city of Washington.

Sec. 2. That for the purpose of defraying the expenses incident to said meeting the appropriation of $50,000, to be expended under such rules and regulations as the Secretary of State may prescribe, is hereby authorized.

I thought I should read that resolution which has been sent to me by the Under Secretary of State for External Affairs because many members of the House of Commons as well as of the Senate are members of the Interparliamentary Union.

EASTER ADJOURNMENT—BUSINESS OF THE HOUSE

Mr. MACKENZIE KING: Before moving the adjournment of the House I wish to mention to hon. members that to-morrow I propose to move that the resolution passed providing for an Easter adjournment until the 22nd instant, be rescinded, and that the date for reassembling after the recess be fixed for April 24th, instead of April 22nd, should the House give unanimous consent. I may say that one of the reasons for making the motion is that the governments of Nova Scotia and New Brunswick have extended an invitation to hon. members from the West to visit the Maritime provinces during the Easter vacation. A large number of hon. gentlemen are taking advantage of the invitation so extended but the time we have agreed upon will allow them scarcely any time to inspect objects of interest. I may add that the government itself would welcome two days' extension of the recess if the House is unanimous in its favour. I now move that the House adjourn.

On motion of Mr. Mackenzie King the House adjourned at 10.45 p.m.

Wednesday, April 16, 1924

The House met at three o'clock.

PRIVATE BILL

FIRST READING

Bill No. 60, to incorporate The Life Underwriters' Association of Canada.—Mr. McKay.

MEMORIAL TO LATE BOWMAN B. LAW

Mr. SPEAKER: I have the honour to announce that on Thursday the 24th day of April—when the House resumes its sittings—at 2.15 in the afternoon the memorial tablet in the lobby of the House of Commons to the late Bowman B. Law, M.P., will be unveiled. As hon. members are aware, Mr. Law met his death in the fire which destroyed the parliament buildings on February 3, 1916.

REPORT PRESENTED

First report of the select standing committee on Railways, Canals and Telegraph Lines—Mr. Cahill.

PENSIONS, INSURANCE AND RE-ESTABISHMENT COMMITTEE

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, I beg to move that the name of Miss Macphail be added to the special committee on Soldiers' Pensions, Insurance and Re-establishment.

Motion agreed to.

EASTER ADJOURNMENT

Right Hon. W. L. MACKENZIE KING (Prime Minister): In accordance with the notice I gave last night, I beg to move that the resolution adopted on the 26th March last in respect to the adjournment from Wednesday the 16th to Tuesday the 22nd of April be rescinded, and that it be resolved that when the House adjourns this day it do stand adjourned until Thursday the 24th instant.

Mr. SPEAKER: By unanimous consent.

Motion agreed to.

AUDITOR GENERAL'S REPORT

Hon. J. A. ROBB (Acting Minister of Finance): I beg to move that the Auditor General's report for the year ending March 31st, 1923, and the public accounts of Canada for the year ending March 31st, 1923, be referred to the select standing committee on Public Accounts.

Motion agreed to.

UNITED CHURCH OF CANADA

Mr. PRESTON ELLIOTT (Dundas): I desire to present a petition signed by a number of people in the county of Dundas in favour of church union; also a petition signed by the members and adherents of St. Paul's Church, Winchester, in opposition to church union; also a petition signed by members and adherents of Knox Presbyterian Church, Iroquois, in opposition to church union.

Mr. J. P. RANKIN (North Perth): I desire to present a petition from members of the Session of St. Andrew's Presbyterian Church, Stratford, in favour of church union.

THE HOME BANK

Mr. A. L. HODGINS (East Middlesex): I desire to present a petition from 1,046 depositors of the Home Bank praying that they be indemnified for their losses.

Mr. JOHN MORRISON (Weyburn): I beg to present a petition signed by 200 depositors of the Home Bank in Weyburn constituency praying that this government take whatever action is necessary to ensure depositors full payment of their deposits.

QUESTIONS

(Questions answered orally are indicated by an asterisk).

YUKON—LIQUOR IMPORTS

Mr. BLACK (Yukon):

1. Does the government of the United States admit the right of subjects of His Britannic Majesty to import liquors through the three-mile limit off the coast of Alaska into and up the Yukon river into Canada in British ships, under section 26 of the treaty of Washington ratified on the 17th June, 1891, which provides that: "The navigation of the rivers Yukon, Porcupine and Stikine, ascending and descending from, to and into the sea, shall forever remain free and open for the purposes of commerce to the subjects of Her Britannic Majesty and to the citizens of the United States, subject to any laws and regulations of either country within its own territory, not inconsistent with such privilege of free navigation"?

2. If the government has not ascertained what interpretation the United States puts on said clause of said treaty will the government ascertain the same at the earliest possible date?

Right Hon. Mr. MACKENZIE KING:

1. The right of Canada under article 26 of the treaty of Washington of 1871 to transport liquor into the Yukon territory by way of the Yukon river was asserted by His Majesty's Ambassador in her behalf in the course of correspondence recently carried on with the object of getting the permission of the United States government for such transportation overland via Skagway and Whitehorse, and was not formally disputed by the United States government.

The route by the Yukon was not considered as of great practical value for the purpose in question, and a conference was arranged between the two governments for the conclusion of an agreement to provide for the overland transportation to Yukon territory through Alaska.

2. In these circumstances it is not considered expedient further to inquire as to the interpretation placed by the United States government on the article referred to.

BUILDING OF SHIPS AT PRINCE RUPERT

Mr. COOTE:

With regard to the bond for $321,000 given by the contractors for completion of two ships at Prince Rupert, referred to on page 3514 Revised Hansard 1922:

1. What was the name of the bonding company.

2. Has the bonding company paid this amount to the government?

3. If so, on what date was payment received by the government.

Hon. Mr. CARDIN:

1. The London Guarantee & Accident Company, Ltd. Head office for Canada, Toronto.

2. No. Negotiations for settlement now proceeding.

3. Answered by No. 2.

CANADIAN NATIONAL RAILWAYS—GRADES

Mr. ARTHURS:

1. Is Parry Sound on the main line of Canadian National Railways, Winnipeg to Toronto?

2. What are the grades on the Canadian National Railways north and south from Parry Sound and near that point?

3. Is it necessary to use additional power to aid trains over such grades?
4. Have proposals been made to reduce or overcome such grades? If so, when?
5. Have surveys been made or plans prepared to overcome or reduce such grades?
6. If so, why has the necessary work not been proceeded with?

Right Hon. Mr. MACKENZIE KING (for the Minister of Railways and Canals):

1. Yes.
2. 1 per cent.
3. Yes.
4. Yes, in 1922.
5. Yes.
6. Still being considered from an economical standpoint.

HIGH COMMISSIONER'S OFFICE

Mr. BENOIT:

1. What has been the cost to Canada of the Canadian High Commissioner's office at London, for the years 1921, 1922, 1923 respectively?
2. What was the nature of the work accomplished during such years?
3. What is the yearly salary of the High Commissioner?
4. What allowance is granted in lieu of residence?

Right Hon. Mr. MACKENZIE KING:

1. Fiscal year 1920-21, $116,778.62; fiscal year 1921-22, $147,594.45; fiscal year 1922-23, $135,408.56.
2. Representation of Canadian interests in London.
3. $10,000.
4. $5,000.

LEAGUE OF NATIONS

Mr. BENOIT:

1. What has been the cost to Canada of the League of Nations, since its inception?
2. What advantage have the people of Canada derived?
3. If such advantages do not justify expectations and expenditures incurred, does not the government think that it is expedient to take leave of said League of Nations?

Right Hon. Mr. MACKENZIE KING:

1. $818,355.76, made up as follows: Secretariat, $765,045.81; Cost of Canadian delegations (4), $53,309.95.
2. Different opinions are entertained as to extent of advantages.
3. Answered by answer to No. 2.

EXPORT OF AUTOMOBILES THROUGH NEW LONDON

Hon. Mr. BAXTER:

1. During the year 1923, how many automobiles were carried to New London, Connecticut, for export shipment, and during what months were they so carried?
2. What was the point of origin of such automobiles and by what routes were they carried to New London?
3. Who were the shippers of said automobiles and what routing instructions did they give with respect to said automobiles?
4. What was the overseas destination of said automobiles?

Hon. Mr. BUREAU: I am told by officers of the department that this question can hardly be answered. To answer Nos. 2 and 3 would require some time and a great deal of work; it would be necessary to refer to every bill of lading and every entry that was made. The question might better stand as an order for return, because the answer would be a very long one.

Mr. MEIGHEN: There is no long answer required; either an answer can be given or not. I suggest that the question stand until the member who put it on the order paper is here.

Mr. BUREAU: All right.

Question stands.

LA CROIX

Mr. JACOBS:

1. Has the Postmaster General's department received complaints objecting to the use of His Majesty's mails against a newspaper in Montreal called La Croix?
2. If so, what was the nature of the complaints?
3. Was the Justice department asked to pass upon the complaints made against La Croix?
4. What did the Justice department advise in the matter?
5. Does the Postmaster General's department intend to permit such newspaper the use of His Majesty's mails?

Hon. Mr. SINCLAIR (Queens, for the Postmaster General):

1. Yes.
2. That the paper was directing attacks against Jewish citizens.
3. Yes.
4 and 5. That the paper was not of such a character as to disclose an intent, or to have a direct tendency, to excite His Majesty's subjects to a violation of the laws or to offend against public order.

LIEUT.-COLONEL BROTHERS

Mr. JACOBS:

1. Was Lt.-Col. Brothers attached to the Canadian delegation to the recent Imperial Conference and in what capacity?
2. If so, what qualifications did he possess for such position?
3. What stipend did he receive for his services, if any?
4. Was the gentleman previous to his selection as above, on the staff of the Montreal Herald?
5. Did Lt.-Col. Brothers give any value to the delegation for the money paid him and, if so, what?

Right Hon. MACKENZIE KING:

1. No.
2, 3 and 5. Answered by the answer to No. 1.
4. No official information.

[Mr. Arthurs.]

QUEBEC IMMIGRATION RESTAURANT

Mr. LAVIGUEUR:

1. Has the Department of Immigration asked for tenders for the immigration canteen and restaurant, at the port of Quebec?
2. If so, how many tenders were received and from whom?
3. On what date had the tenders to be in the hands of the Department of Immigration, according to notice?

Hon. Mr. ROBB:

1. Yes.
2. Ten: J. L. Proulx, J. R. H. Byrne, Jos. Clark, G. Rosseau, John J. Burrill, Eugene Lamontagne, Thos. Grenier, F. Kirouac and Sons, Alex. A. Boivin, and Messrs. J. E. Tessier and A. Arseneault.
3. March 24th.

Mr. LAVIGUEUR:

1. Did Mr. P. W. Dugal, of Quebec, tender according to specifications and requirements of the Department of Immigration, for the restaurant and canteen, at Quebec?
2. Was said Dugal engaged by the department to take charge of the restaurant and canteen and, if so, on what conditions, was there a contract made, when was it signed, what is the salary or commission to be paid and for how long is the contract?
3. By whom was Mr. Dugal recommended?
4. Did he put in an application to obtain the said position, or was it offered to him, and if so, by whom?

Hon. Mr. ROBB:

1. No.
2. Yes, at $4,000 for the season, Mr. Dugal to have complete charge of the purchasing of supplies and also the engagement of the necessary staff. Contract signed April 10 to cover season of navigation.
3. Not recommended but selected on account of ability as restaurant caterer.
4. No; position tendered Mr. Dugal by deputy minister of department.

EMPIRE SETTLEMENT SCHEME

Mr. RYCKMAN:

1. What is the substance of the arrangement entered into by the Canadian National Railways with the Empire Settlement Board?
2. What is the extent of the financial obligations undertaken by the railway?

Right Hon. Mr. MACKENZIE KING (for the Minister of Railways and Canals): The arrangement entered into by the Canadian National Railways with the Overseas Settlement Committee of the Colonial Office under the British Empire Settlement Act provides for the settlement of immigrants on lands owned by the railway in groups of twenty (20) families.

The extent of the financial obligations of the railway is to advance, or make arrangements to have advanced, an amount not to exceed three hundred pounds (£300) to enable settlers to purchase stock and equipment, and the British Secretary of State guarantees payment of full amount of any loss incurred through such advances, but total guarantee not to exceed fifty per cent (50 per cent) of total amount advanced to all of the settlers.

PETITION FROM BRENTON A. MACNAB

Hon. Mr. BAXTER:

1. Has the government received a petition or communication addressed to His Excellency the Governor General in Council, subscribed by Brenton A. Macnab of Montreal, dated May 17, 1923?
2. If so, what is requested by said petition or communication?
3. Has receipt of said petition been acknowledged to the said Brenton A. Macnab?
4. What action, if any, has been taken upon the said petition, and if no action has been taken, why not?

Hon. Mr. LAPOINTE:

1. Yes.

2, 3 and 4. The petition alleged complaints against the Prime Minister and the Attorney General of Quebec, but no action has been taken because, among other reasons, these charges are not within the authority of this government to inquire into and determine.

RURAL EGG CIRCLES

Mr. SENN:

1. Is the Department of Agriculture helping to establish egg circles in rural districts either by bonuses or by sending out persons to assist in organization of the same?
2. Has the department issued any regulations or advice or instructions regarding the same?

Hon. Mr. MOTHERWELL:

1. During the past twelve years the department has encouraged the co-operative marketing of eggs in many districts throughout Canada where the conditions as regards quantity and facilities for marketing would permit, and where there has been an expressed desire on the part of the people for assistance along this line. The assistance given has been in the form of public addresses and personal advice and instruction on the part of departmental officers. In no instances have there been any direct expenditure of money in the form of bonuses or otherwise to encourage this work.

2. Leaflets containing instructions in connection with the organization of egg circles have been published by the department.

VANCOUVER HARBOUR COMMISSIONERS

Mr. BLACK (Yukon):

1. What are the names of the Vancouver Harbour Commissioners?
2. What is the official title of each?
3. What is the salary of each?

4. Do any of the said commissioners hold any public office, or office other than that of commissioner?
5. If so, is appointment to such office, under or within the gift of said Harbour Commissioners?
6. What is the nature of each of such offices?
7. By whom are each of such offices held and at what salary?

Hon. Mr. CARDIN:

1. Guy H. Kirkpatrick, President; Samuel Prenter, Commissioner; R. E. Beattie, Commissioner.
2. Answered by No. 1.
3. President, $6,000; commissioners, $4,000 each.
4. Yes, one.
5. Yes.
6. General superintendent of the port.
7. R. E. Beattie, $4,000.

ST. LAWRENCE WATERWAY—UNITED STATES ENGINEERS

Mr. ROSS (Kingston):

1. What engineers have been appointed by United States to consider the St. Lawrence navigation and power possibilities?
2. Are these engineers connected with the United States army organizations?
3. Is it the intention of the government to recommend any engineers now connected with the Canadian Defence department to represent Canada?

Right Hon. Mr. MACKENZIE KING:

1. Colonel William P. Wooten, Corps of Engineers, United States army, was appointed in January, 1920, as the American member of the Joint Engineering Board to consider this question. It has been agreed, however, that the board should be enlarged so as to include two additional United States engineers. No notification has so far been received of these additional appointments.
2. Colonel Wooten is connected with the Corps of Engineers of the United States army.
3. Under consideration.

CANADIAN NATIONAL RAILWAYS—BRANCH LINES

Mr. LAVIGUEUR:

1. What will be the cost of the construction of the new railway lines or branch lines to be voted by the House?
2. What is the amount voted for the construction of proposed lines or branch lines in the province of Quebec?
3. What is the total mileage of said proposed lines or branch lines for the whole Dominion, and also for the province of Quebec?

Right Hon. Mr. MACKENZIE KING (for the Minister of Railways and Canals):

1. Approximate estimate of cost—$28,311,300.
2. No vote yet made.

[Mr. George Black.]

3. Total mileage—965 miles. Mileage for Quebec, 31 miles.

MEMBERS' STENOGRAPHERS

Mr. SEGUIN:

1. What is the total number of lady typewriters acting as secretary and in the employ of the Speaker and members of the House of Commons?
2. What is the name and salary of each, respectively?
3. How many have a knowledge of both languages?
4. Why is there a difference in their salaries?
5. Are the services of those having a knowledge of both languages better paid? If not, why?
6. Are there amongst them married women?
7. If so, are there any whose husbands are also in the employ of the government?
8. Are any of the mentioned employees absent and in receipt of salary? If so, what are their names?

Right Hon. Mr. MACKENZIE KING:

1. Fifty-six, two of whom are typewriters and stenographers in the Speaker's office in lieu of secretary, which office has not been filled for purposes of economy.
2. A. E. Anderson, $4; M. Anderson, $4; D. Barbes, $6; M. F. Berube, $4; H. Brankin, $4; M. Brennan, $3.50; C. L. Cameron, $4; G. Charron, $4; A. Christie, $4; B. Cook, $4; A. Culross, $4; J. Dechamps, $4; M. R. Dickner, $4; J. Donaldson, $4; I. Fellows, $4; B. H. Foster, $4; M. J. Gagnon, $4; M. E. Garceau, $4; G. Garrow, $4; O. Graham, $4; M. Gravelle, $4; E. Guerin, $6.50; F. Halliday, $4; Y. Kipp, $5; M. A. Lafond, $4; M. R. Laperriere, $4; K. Leaver, $4; E. Leclerc, $4; J. Lefebvre, $4; M. Lefebvre, $3; B. Locke, $4; M. E. McEwan, $5; R. McGuigan, $4; J. McKinley, $3.50; N. MacBean, $4; M. H. Macdonald, $4; A. MacRitchie, $4; M. Marcotte, $4; I. Marriotte, $4; M. Miller, $4; R. Miller, $4; K. O'Connor, $4; A. Ouimet, $4; G. Quin, $4; B. Reynolds, $4; Y. Robichaud, $3.50; G. Sharp, $4; A. Sinclair, $4; K. Soper, $3.50; D. Stewart, $4; M. Sullivan, $4; J. K. Taylor, $4; C. Theobald, $4; M. G. Webster, $3.50; A. L. Weilbrenner, $4; A. Wright, $4 per day.
3. Twenty.
4. Graded according to competence and nature of duties.
5. No: There is no such distinction in any of the governmental departments.
6. Three.
7. One.
8. One, who is absent through illness, Mrs. Barbes.

CABINET MINISTERS' MOTOR CARS

*Mr. GRIMMER:

1. What department furnishes drivers for cabinet ministers' motor cars?
2. To what account are their salaries charged?
3. To what account are repairs charged?

Right Hon. Mr. MACKENZIE KING: I might answer this question verbally. There is no department that furnishes drivers for cabinet ministers' motor cars. The motor cars are arranged for by each department, and the accounts pertaining to them, both for salaries and for repairs, are paid for by each department.

TAX ON AERATED BEVERAGES

Mr. GRIMMER:

1. What percentage of the bottlers in each province have paid the gallonage tax on aerated beverages in full?
2. Is it the intention of the government to compel payment of these taxes by the delinquents?
3. If not, is it the intention of the government to reimburse those bottlers who have already paid the tax?

Hon. Mr. BUREAU:

1. Information not available until completion of audit of sales of beverages subject to the tax.
2. Yes. Action has been taken to compel payment.
3. Answered by No. 2.

IMPORTS OF BABY CHICKS

Mr. GARLAND (Carleton):

1. How many baby chicks were imported from the United States during the fiscal year ending March 31, 1924?
2. Upon what number of baby chicks was duty paid and what amount was received from this source?
3. What number of baby chicks were imported from the United States during the fiscal year ending March 31, 1924, upon which there was no duty collected?

Hon. Mr. BUREAU:

1. and 3. Imports of baby chicks from the United States free of duty,-fiscal year ended March, 1924: Number, 467,154; value, $78,-486.

2. Imports of baby chicks, dutiable, are not separately recorded for statistics.

INCUBATOR IMPORTS

Mr. GARLAND (Carleton):

1. How many incubators have been imported from the United States during the fiscal year ending March 31, 1924, of the following capacities: (a) 100 egg; (b) 101 to 200; (c) 201 to 300; (d) 301 to 600; (e) 601 to 1,200; (f) 1,200 to 2,440; (g) 2,440 to 7,400; (h) 7,401 to 10,000; and (i) 10,000 capacity and over?
2. What amount of duty was collected from each of the above-mentioned classes?
3. What were the imports from Great Britain of incubators of the above classes for the same period, and what amount of duty was collected on same?

Hon. Mr. BUREAU:

1 and 2. Fiscal year ended March, 1924: Incubators and brooders imported from the United States: Number, 6,861; value, $148,638; customs duty collected, $22,295.70.

There are no statistical records showing different sizes of incubators imported.

3. Incubators and brooders imported from Great Britain: Number, 2; value, $81; customs duty collected, $8.10.

UNOPPOSED MOTIONS FOR PAPERS

SASKATCHEWAN EXPORT LIQUOR LICENSES

Mr. MORRISON:

For a copy of all letters, telegrams, correspondence and other documents in the possession of the government or any department of the government, between the government and the government of Saskatchewan on the question of licenses for export liquor houses.

KENTVILLE AND NAPPAN EXPERIMENTAL FARMS

Mr. BOWEN:

For a copy of all correspondence, petitions and other documents between the Department of Agriculture and the pure-bred stock breeders of Nova Scotia, with regard to the experimental farms at Kentville and Nappan in the province of Nova Scotia.

APPLICATION OF DUMPING CLAUSE

Mr. EVANS:

For a return showing the number of importations to which the dumping clause of the tariff has been applied during the fiscal year 1923-24, the class of goods to which it has been applied, the reasons therefor and the amount of duty collected.

PROPOSED INCOME TAX AMENDMENTS

Mr. JOSEPH ARCHAMBAULT (Chambly and Vercheres) moved:

That, in the opinion of this House, the government should consider the advisability of amending the Income Tax Act by making the following changes: (1) To increase from $300 to $500 the exemption granted for every child; (2) to differentiate in the amount of taxation against invested capital and that placed against revenue derived from salaries or wages; (3) to grant to people married under the community regime an exemption equal to that which is granted to people married under the regime of separate maintenance.

He said: Mr. Speaker, the matter involved in the resolution that stands in my name has been brought before this House by myself on many occasions, with more or less success. It is evident that in bringing forward arguments in favour of the resolution I shall have to repeat myself, and I therefore crave the indulgence and the attention of hon. members for a few moments.

As hon. members will notice, the resolution is threefold in its purpose, but all relating to the same subject, the income tax. The first object sought is to increase from $300 to $500 the exemption granted for each child; the second is to differentiate in the amount of taxation against invested capital and that placed against revenue derived from salaries

or wages; and the third is to grant to people married under the community regime an exemption equal to that which is granted to people married under the regime of separate maintenance. My task will be much easier this afternoon, because the Acting Minister of Finance (Mr. Robb) has given notice of a resolution, which is now on the order paper, embodying an increase in the exemption for children from $300 to $500, thus giving effect to the wish of the House as expressed last year. I shall therefore refrain from making any remarks on that first point, reserving any observations I may find it necessary to make for the time when the resolution will be brought down. But I wish to congratulate the government heartily upon bringing in this legislation, which I with many other members have been advocating for many years. Under the old administration, which seemed to be in favour of birth control, I advocated on many occasions that this increased exemption be granted, but without success. I remember the first time I introduced a similar resolution, in 1919 or 1921, I think it was. That resolution was opposed and defeated at the request of the ex-Minister of Finance (Sir Henry Drayton), and those members who were in the House at the time will recollect the incongruous and uncouth remarks and objections that were made by some hon. members. They may remember, for instance, that the then hon. member for Peterborough, Mr. Burnham, opposed the resolution because, he said, it would be an encouragement to animal instincts. The then hon. member for Frontenac, Doctor Edwards, opposed the resolution because, he said, it was a disguised way of allowing the province of Quebec to avoid paying their share of the taxes. However, I am glad to say that the first year this government were in power they increased the exemption from $200 to $300, and now this year there is a resolution on the order paper in the name of the Acting Minister of Finance for increasing it from $300 to $500. I repeat again, the government are to be congratulated on this step, which I am sure will win the gratitude of all those who believe that the best citizen, after all, is the Canadian born, and the best immigrant the one that God himself brings into your home.

There remain, Mr. Speaker, two other points in my resolution, which I will discuss very briefly. The first one is a ruling by the Department of Taxation regarding the tax imposed on persons married under the regime of community of property. I may explain to hon. members who may not be entirely familiar with the civil law of Quebec that in the province of Quebec there are two marriage regimes. There is the regime of community of property, and there is the regime of separation of property. If people are married without a contract they fall under the first regime, that of community of property. The properties and the moneys belonging to the wife or to the husband before marriage and the properties or monies that they may receive after marriage form one whole. When they are married under the regime of separation of property, the husband and the wife each keeps the property or moneys, they may have had before entering into marriage and any moneys or property they may inherit after they are married.

Mr. CARROLL: Does the regime of community of property apply to the Mennonite settlement in the West, where the property is held by trustees?

Mr. ARCHAMBAULT: I could not tell my hon. friend. It might be so. But what I am discussing is a ruling that has been made by the department regarding the regime of community of property as we have it in Quebec. The same ruling may have been made with regard to the Mennonites in the West. At all events, under the ruling of the department, if the people are married separate as to property they enjoy the benefit of two exemptions, and if they are married under the regime of community of property they enjoy the benefit of only one exemption. Let me give an example. Suppose a married couple has an income of $6,000, the husband earning a salary of $3,000, and the wife possessing an income of $3,000, derived from inheritance or otherwise. If they are married under the regime of separation as to property the husband gets his exemption of $2,000, and the wife gets her exemption of $2,000. Therefore, out of that sum of $6,000, $4,000 is exempted, and they pay a tax on only $2,000, the 4 per cent normal tax, making $80. But if the same parties are married under the regime of community property, under what I might call the absurd ruling of the department they are given only one exemption, that is, only $2,000 is exempted, and they pay $160 on the other $4,000; that is just double the amount paid by those who are married under the regime of separation as to property. I pointed out this ruling last year, Mr. Speaker, and I thought it would be changed. The injustice is apparent, and I hope that when the Acting Minister of Finance brings in his amendments to the Income Tax Act he will have this ruling changed. I trust that he will give orders to

the effect that the people who are married under the regime of community as to property will get the same benefit of two exemptions enjoyed by those who are married under the regime of separation as to property.

My second point, Mr. Speaker, is regarding the differentiation that should be made in income tax from earned and unearned income. I consider earned income to be, for instance, profits of office, pensions, income derived from farms, or from professions, or from trade. In order to be more explicit I shall read to the House the definition in the English law of earned income:

> The expression "earned income" means—
>
> Profits of office.—Any income arising in respect of any office or employment of profit held by the individual.
>
> Pensions.—Income in respect of any pension, superannuation, or other allowance, deferred pay, or compensation for loss of office given in respect of the past services of the individual or of the husband or parent of the individual in any office or employment of profit, whether the individual or husband or parent of the individual shall have contributed to such pension, superannuation allowance, or deferred pay or not.
>
> Property emoluments of office.—Any income from any property which is attached to or forms part of the emoluments of any office or employment of profit held by the individual.
>
> Any income derived from farms.
>
> Any income derived from a profession or trade.

All other income, outside of that just defined, is unearned income. In my opinion this differentiation is most commendable. The man who derives his money from his daily toil, from his daily work, should not be asked to pay as much tax as the one who derives an income from money invested or money inherited. The salary of a man is his capital. When a man, earning $5,000 a year, for instance, dies, his family is practically left with nothing because he has been forced to spend the most of his salary during his lifetime to provide for his wife and children. On the other hand, when a man who derives an income of $5,000 from money invested dies, his wife and family still have the $5,000 income, plus the capital probably of $100,000 from which the income is taken.

Mr. MEIGHEN: Take the case of a farmer retired on the money he has worked for and earned, and his income is, say, $1,500 a year, would my hon. friend consider that income as not earned?

Mr. ARCHAMBAULT: I expected the remark from the right hon. gentleman. It is not a new one, it was made last year. First of all the right hon. gentleman should be aware that the farmer who derives an income of $1,500 does not pay one cent of income tax if he is married. He only has to pay when his income is above $2,000. That is the law.

Mr. MEIGHEN: That is the case, of course, but it does not affect the principle. It is not the case in the city income taxation.

Mr. ARCHAMBAULT: It is the federal income tax that I am discussing. We might fix another day to discuss municipal and provincial taxation if it be deemed necessary.

Mr. MEIGHEN: But it illustrates the principle.

Mr. ARCHAMBAULT: What my right hon. friend probably wishes to point out is this, that it would not be fair to tax a farmer or a labourer who has accumulated a certain amount of money and derives an income from it more than a man who earns a very high salary. I think my right hon. friend is right in his contention. I was going to explain that my idea was to create three rates of income taxation in order that the state should derive practically the same income. At the present time the normal tax is 4 per cent. Now, I submit that a fair adjustment of the income tax would be the following:

Income derived from inheritance money I would tax at 6 per cent.

Income derived from money that has been set aside by a certain person through his work I would tax at 4 per cent.

Salary and the different earnings I have mentioned in speaking of earned income I would tax at 2 per cent.

Regarding salaries I would consider that the tax of 2 per cent should only apply to a reasonable living salary, limited, say, to $10,000. I believe that legislation of this character would be very sound. If you look into the income tax returns you find that those who pay the most are the salaried and professional people. Consequently there should be a fair readjustment and reapportionment of the tax. I will not occupy any more of the time of the House in discussing this matter. In closing, however, I wish to congratulate the government for having acceded to the first point of my resolution and raised the amount of exemption from $300 to $500. But they should also consider at the earliest opportunity the advisability of changing the law regarding the two points which I have dwelt on this afternoon.

Mr. FONTAINE (Hull) (Translation): It affords me, Mr. Speaker, much pleasure to second the resolution which the hon. member for Chambly and Verchères (Mr. Archambault) has so ably proposed to the House.

I am especially pleased to support such a resolution for the reason that a great number of the electors whom I have the honour to represent in this House, have asked me to do so, among these I may mention the "Cercle Catholique des Voyageurs de Commerce" of Hull. It is hardly necessary for me to speak at length on this question, the hon. Acting Minister of Finance (Mr. Robb) having recently announced that a bill would soon be brought down to grant the first part of the resolution, that is to say the part which refers to the increase of the exemption from $300 to $500 for each child under 18 years old. I wish to thank the government on their decision, it is another popular measure which will redound to their credit. Indeed, Sir, no one in this House will contend, I am sure, that schooling, education and bringing up of a child only, costs $300 per year. I am speaking of a child to whom we wish to give the necessary means of earning a good living, so that he may be in a position to do his share of work and good for his country, especially in our dear province of Quebec where, let us thank God, families are large. The present act is certainly a hardship and hindrance to the education of the children, and I am not astonished that the hon. Acting Minister of Finance, who lives in our province, and therefore knows the facts upon which this resolution is based, has decided to increase to $500 the amount of the exemption for each child.

I also think that the second request mentioned in this resolution should be allowed. Indeed, Sir, in my opinion, the government should establish a difference between the tax levied on the salary and the one levied on the income of money invested in companies or paying enterprises. It is only fair that the salary of the person who works—even if it is large—should not be taxed as high as the income of the person who has inherited his capital or receives large dividends without having to work.

Finally, I come to the third and last part of this resolution, namely: That married people under the regime of community of property should enjoy the same privilege, as regards exemption, as those married under the regime of separation of property. I think, Sir, that it should not be necessary to insist upon this point. It should be sufficient to bring out the facts so as to show that there is a serious injustice. Indeed, here are two neighbours of whom one is married under the system of separation of property, he is entitled to an exemption of $2,000 and his wife is also entitled to an exemption of $2,000, that is $4,000 for the two, while the other neighbour who is married under the regime of community of property is only entitled to $2,000 and his wife gets no exemption. As you are aware, Sir, this only affects our province, since the regime of community of property only exists in the province of Quebec.

Before resuming my seat, I wish to congratulate the hon. member for Chambly and Verchères for his courage and perseverance in demanding justice, and I trust that the government who have already acquiesed in the first part of the resolution, will consent, after further consideration of the question, to adopt the other two parts of the resolution.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): There has not been much discussion on this motion, and I do not feel that my opinions on all the points of the resolution are matured; but I feel like stating them, such as they are, as respects all three. I am in full accord with the first portion of the resolution. I have always felt that the allowance in respect of children was not adequate, having regard to the individual and to the married man, and having regard, of course, as well to the high cost of living now prevailing, making the lot of him who had a family, particularly a large one, much more difficult than the lot of the single man. Of course $500 is a very considerable increase from $300, but, in my individual opinion I feel it is not too much even yet. Of course, when the tax was put on, as with many other features, we awaited the working out of it, and we learned in respect to it by experience, just as we have learned in respect of many other things. I think I recall the other unreasonable objection by the member for Peterborough at that time, referred to by the hon. member for Chambly and Vercheres (Mr. Archambault); and as he referred to it, I could not help also recollecting that the same member for Peterborough was the only one man to the right of the chair who agreed with the equally absurd contention of hon. members opposite that the government of that day was usurping power.

I do not feel at all convinced of the wisdom of the second portion of the resolution. I mentioned to the hon. member, just by way of illustration, in the hope that the question would lead to a free elucidation, the instance, of a man who has earned at farming, or some other hard labour, a competence for his old age, has it invested, secures the revenue, and I questioned the hon. member whether he considered that revenue any less earned than that

earned by the bank president, say, $50,000, or that of the railway general manager, or some other highly paid official of a large concern. He answered me by saying first of all, that the man with $1,500 had no tax to pay. Well I do not think he is right to begin with, but even if he were it would not be an answer. He is not, if the subject is a married man; but if he is a single man, as I understand the law, his exemption is only $1,000. So that I was scarcely entitled to the rebuke which the hon. gentleman administered. I would consider it nothing but the grossest hardship to come with special emphasis on a man in receipt of a small income upon which he hopes to maintain himself in old age, and tell him, "That is something you did not earn, something coming to you as a result of fortune or legacy, so we are going to tax you extra on that amount," while saying to his brother in receipt of a very large income, because it took the name of a salary, "We will let you off practically free, and what we lose from you, we will exact from the fellow who has lived upon the money he has earned." I know other countries have adopted that proposition. I know particularly that cities and towns have adopted it, and I think provinces as well, but I have myself seen the grossest hardship as a result of its adoption. I have seen instances where, as a consequence, there being no exemption at all in cases of persons who had not sufficient income to live upon, the result of accumulation of a lifetime, there was an invasion of the capital in order that this money might be exacted for the benefit of the municipality. I am not at all convinced that there is any rule different in character between incomes that are honestly earned. If the income is honestly accumulated by work and toil, or by the use of brain or body, I have never been able to convince myself that the state has a right to classify one as against the other, and to say that one may be exempted and the less fortunate one penalized. There may be cases where the incidence would be fair, but there would be very many where the incidence would be anything but fair.

The hon. member proceeds further and says "In case of property that comes down through legacy, I would pounce on that harder still; I would exact six per cent; whereas in the case of income derived from other unearned investment only 4 per cent would be exacted." Well, what is going to be the result of that. Very much that comes through legacy is pretty hardly earned. The son on the farm who labours till he is thirty or forty—say twenty-five—gets by legacy a portion of the homestead. Is it to be said that that is not earned, that because it comes to him under a will he will have to pay an extra tax upon it, in order that some other property which perhaps is a result of speculation, may be partially exempt? A man becomes the owner of property, partly the result, say, of legacy, partly the result of his own toil and partly the result perhaps of one of the many investments that turn out fortunately. How in the world is the state going to examine his property to ascertain just what part of that is legacy, what part is the result of his brain, properly exercised, and what part is the result of the labour of his body? For the life of me, I do not know how that is going to be done. It may be done immediately with some fair accuracy; but after a few years, how is it going to be done? Some of his property is lost. Against what share is that going to be assessed? What part is going to be reduced of those three divisions, in order that the state may apply this complicated system on what remains? In respect of the division of assets, although, of course, one can make a very forcible case for what one might describe as the earner as against the man who is in receipt of a revenue from investments that he earned before, I do not believe you are going to get very far, and in my humble judgment, you are going to produce more complication and do more harm than good. Undoubtedly, in many cases you are going to impose hardships on individuals.

Coming to the third phase of the resolution, I am not quite certain yet that I am clear upon it. So far as I know, in the provinces in which I have lived, there are no divisions as respects classes of marriages. I do not know that that can be said absolutely. There may be cases where property is held in common, even though it is

4 p.m.

not a consequence of the marriage settlement, and there certainly are cases where husband and wife would have individual properties and individual incomes assessable under the law. The hon. member pointed out that in case, for example, of an income of $6,000, where $3,000 is income from property rights of the wife, and $3,000 income from property rights of the husband, if those are held separately under the separate income marriage, there are two exemptions of $2,000 each, whereas, in the case of the same property, with $6,000 of income derived therefrom, where it is held under a community system, the exemption is only $2,000. I would presume there would be some discrimination, but for the life of me I do not know how you are going very fairly to get over it in the way the hon. member describes. I would be disposed

to get over it in the other way—to take the case of the wife who has an income and the husband an income and allow the two of them only the one exemption, dividing it half way between them. There is really only one home, one unit, and it does not seem to me fair that there should be the total exemption, particularly the total married exemption, if I may so describe it, attributable to both the husband and the wife where each has a separate income. These things tend to an apportionment of what really was the property of the one amongst the two in order that double exemption may be enjoyed. Would this difficulty not be met in the straightest, easiest, as well as the fairest way, by allowing the one home the one exemption, added, of course, to the one exemption being the exemption in favour of the children?

Mr. PAUL MERCIER (Westmount-St. Henri (Translation): Let there be no misapprehension, Mr. Speaker, we are fully aware that Canada's debt is enormous and that a strict economy is necessary in all departments, if we wish to meet the obligations that Canada has assumed. We also know that customs, excise, the revenue of the Interior and the income tax are the main sources of revenue which enable the Dominion administration to carry on. We wish to diminish in the least possible measure the flow of revenue into the coffers of our government, so convinced are we that for several months past they have been following the road which leads to prospertiy which had been deserted by the previous administration from 1911 to 1921. Moreover, the Canadian public will presently be looking to the coming of an era of real prosperity, owing to the balancing of this year's budget.

However, Mr. Speaker, would it not be possible to lighten the burden of the heads of large families who come under the Income Tax Act? Such is the aim of the resolution of the hon. member for Chambly and Verchères (Mr. Archambault) which is, at present, being considered by the House. An amendment to this act, 12-13 George V, chapter 25 grants an exemption of $300 for each child less than eighteen years old who is a dependent. We are now asked to increase this exemption from $300 to $500. The government has consented, and ought to be congratulated for so doing. Surely, no member of this House will oppose this change. A father of a large family with a salary of $3,000, and even $4,000, ecounters great difficulties in balancing the family budget. Full of energy, thrifty and far seeing, he plans as much as possible a brilliant career for his children; with such an aim in view, he looks forward to giving them the necessaries of life at home as well as a proper education. An education Sir, has, in some cases, become a luxury in this country; for instance, when a son wishes to take up a profession or when a daughter desires to perfect herself in literature, arts and sciences. The salary of the father soon goes for the upkeep and the education of such a family. If, perchance, through praiseworthy thrift, he carries insurance on his life, so as to provide for the future of those who will survive him, what wonders must he not perform to meet the payments on his policies!

We notice with pleasure, Sir, that the government has given a favourable answer pursuant to its generous policy which we all acknowledge, to the just demand contained in the first part of the resolution, and that an amendment is to be added to the act 7-8 George V, Chapter 28, which refers to the authorization of levying a war tax on certain revenues.

Let us now come to the second part of said resolution which reads as follows:

> To differentiate in the amount of taxation against invested capital and that placed against revenue derived from salaries or wages.

The hon. member for Chambly and Vercheres, the mover of this resolution, now requests a substantial change in the principle of taxation on incomes in force up to date.

Certainly one may say that it is a new departure in our statutory law to thus discriminate between taxation on incomes from invested capital and that on incomes derived from wages or salary. In principle, this change seems justifiable. It is, in fact, accepting the system of proportionality in the levying of taxes on incomes in Canada, a system in opposition to that of progressive taxation at present in force.

Mr. Passy, a distinguished French economist, in an article written for the Dictionnaire de l'Economie Politique expresses himself thus on the subject of proportionality:

> This rule is far the most important; what it sets down, is the observance of the most elementary principles of equality. Taxation requires for the benefit of the State a fixed portion of the wealth distributed among all; it must only take from each person according to the amount which his share will allow, and every time it does not follow this rule, it favours some at the expense of others, and compensates immunities by spoliations.

These statements, Sir, are only too true. This rule must exist if justice is to prevail in this world and government institutions are to preserve the respect of nations. Moreover, the economic interest of Canada demands it as well as the principles upon which has

rested heretofore the development of our wealth.

It is not only, further adds Mr. Passy, from the standpoint of purely distributive justice that proportionality is necessary; it is a matter of the highest economic import, it is one of the conditions of social order that there should be an absence of all impediment to the natural flow of wealth. Whenever taxation is unequally distributed among the various component parts of the population, whenever more is exacted from some, and less from others than each one is liable to in proportion to his share in the general revenue, the proper balancing of abilities and liabilities is disturbed and thereby impediments are put in the way of development which cannot take place with the required unity and regularity.

A system of taxation consonant with Mr. Passy's beautiful conception, would be the ideal on earth, and the word taxation would be a delight instead of being looked upon as daily hardships.

Our legislation, Sir, establishing a system of taxation on incomes, was adopted in this country in 1917 and enacted on September 20th of the same year. To try to bring on an immediate change in its intrinsic working would, we admit, upset the trend of our activities in civil and commercial life, and especially the finances of the country whose estimates are based on current incomes. However, it would be expedient that there be added to the act an amendment discriminating between incomes on invested capital and incomes derived from salary or wages, for it is but right that one who earns a salary or wages should be less taxed than he who draws a revenue from unearned sources, while possibly at the same time earning a salary. Should the legislator take this view, it would be only conforming to the most elementary principles of equality and justice, that is taking from the one as much as from the other, in proportion to each one's share in the general revenue, and maintaining finally, the natural flow of wealth so as to make of Canada a country in which taxation would equally be distributed among the various component parts of its finally satisfied population.

As to the third part of this resolution, Sir, it is only necessary to look at the privileges afforded by this act to married people under the system of separation of property to grant these same privileges to married people under the system of community of property in the province of Quebec, that is an exemption of $2,000 for each married person.

A well distributed taxation, Sir, means all to a state. And as Mr. Drumont, the editor of the Libre Parole, in France, expressed it: "In the Congo as everywhere else, it is the question of taxation which is of the utmost importance."

I shall support the resolution.

Mr. HERMAS DESLAURIERS(St. Mary) (Translation): I desire at the outset, Mr. Speaker, to congratulate the hon. member for Chambly and Verchères (Mr. Archambault), for the welcome initiative he has taken in introducing this resolution and I deem it my duty to strongly support him, without however aspiring to throw new light on the subject, for I think he has clearly established his point and has shown upon what good grounds rests the amendement moved by himself.

After making allowance for peculiarities in all legislation, the enactment under discussion seems based on a misconception. Indeed, when the government decided to allow an exemption of $1,000 for a grown-up person, they certainly had in mind that this amount was altogether indispensable for his subsistence. That is why they allowed an exemption of $2,000 for a married man and wife. We all admit that such a married person subject to be taxed is, owing to his position, obliged to have in his service a domestic or servant. Now, the latter who is a grown up person, receiving wages, lodged, clothed and fed out of that $2,000 exemption allowed to that married person, deducts by the fact from said amount, $1,200 to $1,500; which means that there only remains out of the $2,000, the small sum of $500 to meet the necessities of life, which weigh more heavily upon the man subject to be taxed than upon the one who is exempted and this notwithstanding that he has to provide for the education of his children. No doubt, that the reason for this act remaining so long on our statutes was due to the urgent need of money; but to-day seeing that most of our public men, even the newspapers concede, and the government themselves seem also to admit that immigration is the greatest possible means of solving the problem of our colossal national debt—which I do not deny—when I see that it is intended to withdraw from the public treasury funds accruing from taxation to bring to this country youthful subjects without means of supporting themselves, that it is intended to instruct and give them the necessary education, and, once they have reached manhood we further intend to settle them by means of loans, I think it is strange that we burden, in this country, the newborn children with taxes or that we continuously drain our finances with the object of bringing over and settling in Canada, these children who for the most part will bid us farewell later. I think it would rather be

more appropriate to help the country's children and give them the schooling and education necessary, so that some day the country may make use of their strength and intelligence to help in developing our resources in every sphere. I think it would be regrettable to lose sight of that aim owing to a very badly conceived legislation which would prevent us giving a good education to our youths and oblige us to look towards immigration to obtain the brains which we need to administer our affairs.

As to the difference which exists between married people under the system of separation of property and those under the system of community of property, this act seems to unjustly hit this class of citizens who bring as a part of their marriage the sacramental condition, which is love, while it favours, I will not say those who unite without love, but those who seem not to have lost sight in their marriage of the pecuniary side of the question. I fail to see why two married women, equally subject to taxation, should not be placed on an equal footing, and, if there is to be any discrimination, I think it should be the one who is under the regime of separation of property that should be taxed, and not the former, because the woman under the regime of separation of property is more often than otherwise in a position to contribut to the treasury.

I believe that the married man, the head of a large family, does his share for the country and it is in him that our hopes must rest for the safeguard and building up of our country. This is demonstrated, in a most striking manner, in every war. It is especially the families that have sons who win the wars and certainly render the greatest services in that connection. One must never, I think, draw a parallel between money values and human lives. We saw during the last war many people, very patriotic in words, who wanted to send everybody overseas, not having sons themselves, while they remained here and succeeded in winning the title of what is known to-day as war profiteers. These people made a great fuss to win the war. To-day when our country is overburdened with debts, I do not see why we should allow to remain on our statutes laws sponsored by them to protect their own interests. Under these circumstances I deem it my duty to strongly support the resolution of the hon. member for Chambly and Vercheres. Being fully aware of the sense of justice and uprightness of the hon. Acting Minister of Finance (Mr. Robb), I hope that, at this present session, we shall receive a square deal in connection with this legislation.

[Mr. Deslauriers.]

Mr. E. C. St. PERE (Hochelaga) (Translation): The resolution, Mr. Speaker, that the hon. member for Chambly and Verchères (Mr. Archambault) has introduced, seems to express the request of a great number of people, if one may judge from the numerous petitions addressed to members. The present system of taxation on incomes, which is so much in evidence since it has been imposed upon us to defray the expenses of the war, seems to me the most equitable, because it must be commensurate, according to our progressive system, with the resources of each one. This does not imply that it is not susceptible to improvement. The champions of progressive taxation must be guided by the rules governing strict justice. Indeed, it is through sacrifices that each citizen shoulders his share of social burdens. The sacrifice of the poor is always felt more than that of the rich. The former tells on the necessities of life, the latter bears on luxuries. Wrongly is taxation considered as a spoliation. It is the acknowledgement of a public service and it is unjust and disloyal, on the part of citizens, to cheat the law or seek, by underhand dealings, to avoid it. However, if all members of a community are forced to contribute to the public taxes, it does not follow that they must all do so in the same proportion. As a principle, every one is held to pay for a service according to his means and the benefit he may derive. It is self-evident that large land owners or manufacturers, who have important interests at stake, benefit in a greater measure from the protection of the law and the public services than the man whose interest consists in the work that his two hands perform; the former must therefore contribute in a greater measure to their support. I approve of the suggestion of increasing from $300 to $500 the margin of exemption allowed for each child under 18 years old, but I add that this exemption of the tax is cut off exactly when it becomes most needed. You have, for instance, a son who is just eighteen. He is endowed with talent, and you intend to give him a profession which he will later on do honour and exercise for the welfare of society. Up to the day he is received a lawyer, a doctor, and so forth, he will entail heavier expenses from year to year, yet it is just the time chosen to cut off the exemption. Does the legislator wish to punish you for working to provide for the future of your child, when you might have unburdened yourself of a great yearly expense by placing him in apprenticeship in some trade, the moment he has reached the age when the law obligingly dispenses him with further schooling? No doubt, such was not

the intention of the law but the exact result nevertheless is to discourage education among those who are not wealthy, or in other words, it aims at restricting education to those who are favoured by fortune. In the case of boys it has especially an economic bearing. However, when it comes to girls, we meet with a problem which has to do with the home life of a family. At eighteen, it is the age when, under normal conditions, a young girl leaves the convent. Back to her home, what will be her future. "There are parents whose thoughts dwell only on the mighty dollar;" they have already heavy burdens; they will not add another one, the young girl must therefore earn her living, she is given her full freedom, a position must be found for her in a manufacture, a store, an office, or—a superlative honour and blissfulness—"in the government." what will be her fate, it is of small consequence, what is there to be feared? "Miss so and so" earns her living.

It is the reverse with other parents, they look after the future of their daughters. They must think of means so as to support, feed, clothe them, also do a little entertaining, and this is not accomplished without money. On the other hand, the young girl at home, under the eye of her mother, will learn how to keep house, prepare and cook the food, sew, and so forth, in a word to equip herself so as to be a good wife and a good mother. You may think that the father should receive some compensation? You are wrong. Since he has chosen to keep his daughter at home until she finds a suitable husband, instead of giving her the opportunity of following some line of business and leaving her without protection amid the dangers which surround such existences, let him pay for it. He does not deserve to be exempted from taxation. What is most astonishing, is that a heavier tax is not levied for having lost his business acumen.

To establish a difference between the portion of taxation which is applied to the income on capital and that which is applied to salary or wages. Everything, in this world, Sir, harmonizes through the relation, which one thing bears to another, for progression is always, so to speak, a kind of proportion. In the case we are dealing with at present, it means that the rate increases in proportion to the amount taxed, it matters little whether the income is derived from unearned capital or consists in a salary or wages.

An employee on a small salary, let us say between $3,000 and $4,000 per year, must necessarily be very sparing to make both ends meet. In the advent of sickness or death, his family will be left without a cent; and yet during all his life he will have paid to the state the same rate of taxation as the person enjoying the same income from investments which will shelter his heirs from want. Let us take the case of a father with three children having a yearly earned income of $5,000. He has an exemption to the amount of $2,000 plus $900 as long as his children are under 18 years. On what remains he will have to pay a tax of $84. Do you expect that this man, at his death, will leave a fortune to be compared to Croesus' wealth? No, for the cost of living, to-day, is too high for those who wish to give their children the education so necessary to encounter the struggle for life. If success belongs to the most qualified, we must not take away from those in charge of their education, the means of starting them in life. My hon. colleague from Chambly and Verchères (Mr. Archambault) asks us to discriminate in the rate of taxation on the earned and the unearned income. When should an income be considered as earned? The committee on Ways and Means of the United States Congress are of the opinion that the said income should never exceed the sum of $20,000, and that all salary above this amount must come under the maximum tax and surtax. I think it is but right to establish this difference, because it removes from the class of reasonable salaries and minimum taxation, those who, among the people on a salary, receive large amounts for their services. If the citizens of a state must contribute to the maintenance of the government, each, as much as possible, to the extent of his ability, that is, in proportion to the income he receives under the protection of the state, I think that the system favoured by the committee on Ways and Means of the United States Congress is the most equitable. It protects the workman and the wage-earner who have begun to set aside their savings, rewards the person who, after having saved, is receiving a small income from his investments in real estate, and allows the merchants to provide for financial crises brought on by trade depression. Should the amount of $20,000, as mentioned, appear too high as an earned income let us adopt the amount favoured by the United States farming group, that is $6,000, and, all incomes above this sum must be debarred from the minimum rate of taxation, under the term of earned interest.

Should we adopt either one system or the other, equally destined to protect the small wage earner while not ruining the magnates of the financial world, we must apply the

maximum tax and surtax to all the incomes over the amounts above stated. The government could not do otherwise in these days when money is needed to meet the expenses of the country.

This side issue, Sir, does not alter in any way the just and equitable principle of the second part of the resolution under debate. It only throws more light on the subject and demands more precision as to the definition "in dollars" on the income earned or income derived from labour.

I cannot conceive, Sir, that a salary earned or the income derived from labour can apply indifferently, and in the same way, to the wages of a mechanic of the Angus shops and to that of a general manager of an important bank, or of any other large financial institution or railway company. It would be the proportional taxation instead of the progressive one. The Italian government had to face a similar problem which it solved in the following manner: Income earned, income mixed and income derived from capital. These mixed incomes are partly derived from labour and partly from income on capital. It is thought in Italy that these mixed incomes are better applied to small merchants and to farmers than all other systems. People are taxed in a proportion known as intermediate between the income earned and the income unearned.

As regards the proposal to give married people under the system of community of property the same exemption as to those under the separation of property system, I think it is but just and necessary.

However, it is absolutely indispensable that in all well organized society, the old maxim of the "stronger supporting the weaker" should continue to be put into practice and I think that the government were well advised—and I congratulate them—in showing their sympathy and giving their support to the first part of the so needed resolution which the hon. member for Chambly and Verchères has introduced.

Mr. LAVIGUEUR (Quebec County) (Translation): It is, Sir, a genuine pleasure to associate myself with those who have supported the resolution of the hon. member for Chambly and Verchères (Mr. Archambault) I think it is fair and equitable to establish a distinction between the father of a large family and one who has no dependents. It is true that the present act allows an exemption of $300 per child; but on the other hand, if we consider what it costs to a father of a family for schooling, education and the incidental expenses of bringing up children, the increase of the exemption which is proposed in the resolution before the House, is simply a trifle.

Years ago, the government of the province of Quebec, then under the leadership of the late Hon. Honoré Mercier, made a grant to all fathers of twelve children. This legislation was a beneficial act, and I think that it is an example which can well be pointed out to this House, especially at a time when we are deploring the emigration of our Canadian families to the United States. Who are the families that are thus leaving the country? They are, generally, those of good farmers of the province of Quebec and of other provinces; our labourers with large families who toil and find it hard to provide for their children. Well, Sir, if it is desired to stem the tide of emigration towards the United States, is not this resolution of a nature to bring back hope to our worthy bread earners, in the province of Quebec, who are on the eve of emigrating.

Moreover, Sir, should the head of a family having ten or twelve children be taxed at the same rate? I feel satisfied that we should go one step further than the resolution of the hon. member does, and that the father of a family of ten or twelve children should entirely be exempted of the income tax.

I now come to the second part of this resolution. It would only be right and equitable that persons having inherited of a capital which they did not earn, should contribute more in taxes than a poor wage earner who must support his dependents out of a salary hardly sufficient to meet the necessities of life.

I also think, Sir, that it would be quite right and just to further consider the third part of this resolution and accept it, so as to remedy this unjust distinction which exists between married persons under the regime of separation of property and those who are under the regime of community of property. If married persons under the former system have a right to an exemption of $4,000, I do not see why married persons under the system of community of property should not enjoy the same exemption.

I deemed it my duty, for the reasons given above, to address the House in support of the resolution of the hon. member for Chambly and Verchères (Mr. Archambault) for which I intend to vote.

Mr. W. C. GOOD (Brant): Mr. Speaker, I think the hon. member for Chambly and Vercheres (Mr. Archambault) deserves to be commended for bringing this matter to the attention of the House. I very heartily endorse the first paragraph of the resolution; I

suppose there is very little difference of opinion among hon. members with regard to increasing the tax exemption for every child.

With respect to the second paragraph, it seems to me that the phrase, "invested capital" does not indicate the distinction which the hon. member and many of us would make, that is, the distinction between earned and unearned income. The right hon. leader of the opposition (Mr. Meighen) has already pointed out that the income on savings is earned. I think there should be no discrimination against such income. I do believe, however, that in the administration of income tax we ought to make a distinction between earned and unearned income, and during the debate on the budget, when I trust the hon. member will be in his seat, I shall discuss the matter more fully than I care to at present.

With regard to the third clause, it seems to me that the right hon. leader of the opposition has made a very practical suggestion to avoid what is obviously unfair at present; that is, that the family shall be taken as a unit in considering the income. If I understood the hon. member for Chambly and Vercheres correctly, he advocates the splitting up of the unit income into two parts, that of the husband and that of the wife. In this event we would have the double exemption in practically every case.

Mr. ARCHAMBAULT: May I point out to my hon. friend that the ruling of the department is that in the case of people married under separation of property there are two exemptions, one for the husband and one for the wife; but that those who are married under the regime of community of property are entitled to only one exemption. My hon. friend will appreciate the difference in taxation. In the one case there is taxation on $2,000 only—$80; in the other case there is taxation on $4,000—$160.

Mr. GOOD: The ruling of the department is obviously illogical and absurd, as the hon. member has pointed out, and I think some remedy should be devised. I would suggest that the family be considered a unit, and that the particular ruling which applies to people married under the regime of separate maintenance should be abrogated. If that is the intention of the hon. member, I shall be very glad to endorse his position. Again, I commend my hon. friend for bringing this matter to the attention of the House.

Mr. FORTIER (Labelle) (Translation): Mr. Speaker, the resolution of the hon. member for Chambly and Verchères (Mr. Archambault) aims at amending the Income Tax Act, so as to decrease the burden which weighs upon heads of families. It is a most popular resolution. It has the support of all heads of families in this country, and certainly the hon. Acting Minister of Finance (Mr. Robb), who acceded to this request, performed an act deserving the approbation of the country by assuring us that this tax exemption for each child under 18 years old, will be changed from $300 to $500.

Do we always do the right thing, when legislating for the head of a family, for the one who has the care of a home, for the father who is surrounded by numerous children whom he is obliged to bring up, feed and provide with the necessary education? Do we perform our entire duty towards the head of a family? For my part, when it is a question to help my electors, the person who is at the head of a large family is always given preference. I think that we can never do too much to acknowledge the sacrifices he makes so as to bring up his family in a proper way. One of our great statesmen of the province of Quebec, the hon. Honoré Mercier, had one of the most popular measures passed which consisted in the grant of a parcel of land containing 100 acres to the father of twelve children. His successors carried out the same policy for a certain time. Unfortunately, to-day, this grant is abolished. The example given by this great statesman should be followed, I think it is somewhat in this spirit that the hon. Acting Minister of Finance has promised this House to further help the head of a family by unburdening him of the income tax which weighs so heavily upon him. By lightening the burden, it is, in a way, the country which comes to the rescue of the toiler, of this home provider, of one who has brought up numerous children; and rightly are we doing so. Glancing over this land of ours, I notice that as a whole the country reflects the development of its smaller units which are the towns and parishes. And who are those responsible for the development of these smaller units of our fatherland? They are the heads of families. They are the ones who, by their sacrifices, create the activities extant in these small country places and it is the latter which ensure the prosperity and wealth of our country.

There is another reason that should induce us to protect the head of large families, it is that to be powerful, countries are bound to have numerous subjects. The great nations, are those that are peopled by millions

of citizens, such as England, France, the United States and all the countries that are densely populated. In our young country we strive to increase the number of our inhabitants. Should we not favour the makers of homes, should we not encourage the heads of families, should not our thoughts dwell on the cradle? We do give some thoughts to all this when we support the resolution of the hon. member for Chambly and Verchères. It is, therefore, with pleasure that I give my sincere support to this resolution. I know not of any more popular measure which can be adopted by the government to further lighten the burden of taxation.

Hon. J. A. ROBB (Acting Minister of Finance): Mr. Speaker, the hon. member for Chambly and Vercheres (Mr. Archambault) has, if anything, added to his already widespread popularity by again bringing forward this resolution. I recall that in response to the resolution and the speeches of the hon. member on this subject on a former occasion, the exemption of $200 which was in the original act was increased in 1922 to $300, and I am willing to give him the credit for having advanced that idea. This year the government, recognizing the justice of the request, have proposed to increase that exemption to $500, and the resolutions are now on the order paper.

As I listened to the hon. member for Chambly and Vercheres it occurred to me that I would like to enlist his sympathies and his energy and support toward trying to collect taxes from those who apparently sit up at night trying to evade the just payment of them. It is apparent from the experience of the administration that there are a good many people trying to evade taxes who are quite able to pay and that we have the least trouble collecting taxes from those who, perhaps, are the least able to pay. I admit that there are some defects in the act and that the legislation should possibly be reviewed. I am inclined to agree with the right hon. leader of the opposition (Mr. Meighen) in his observations in regard to the exemptions as between husband and wife. It seems to me that the fairer method would be to recognize the home as a single unit.

I do not wish to delay the House more than to say this: All that the hon. member for Chambly and Vercheres asks is that we give the matter consideration. We are always prepared to give fair consideration to all measures brought before the House. The government offer no objection to this resolution.

Motion agreed to.

[Mr. Fortier.]

IMMIGRATION OF CHILDREN FROM GREAT BRITAIN

Mr. JOSEPH ARCHAMBAULT (Chambly and Vercheres) moved:

For a copy of all correspondence exchanged between the government of Canada and other governments, corporations or individuals relating to the proposed acceptance, by the government, of the sending into Canada of about fifty thousand children now occupants of houses of detention, reformatories, or beneficent institutions of Great Britain.

He said: Mr. Speaker, in the month of January last there appeared in the press a despatch which indicated that an offer had been made to the Canadian government by some institutions in England to send to Canada 50,000 children from reformatories, houses of detention and beneficent institutions. I do not wish at the moment to discuss the question of immigration; my motion is only for the purpose of having the correspondence in respect to that offer tabled in the House. Until I shall have had an opportunity to peruse the correspondence I shall refrain from making any remarks regarding the advisability of accepting any such offer. I only wish to point out to the government that if it is true that the larger number of these children would come from such institutions as I have mentioned, their inheritance might be dangerous, and the wisdom of allowing them to come to this country is questionable. For my part I would be very chary if I were in the government about taking any such chances without examining very carefully into the circumstances. Undoubtedly these children, some of them destitutes, some of them criminals—because they come from reformatories—deserve sympathy and assistance, but I submit that charity begins at home. I shall not make any further remarks on the subject at this stage, but will simply move that the correspondence be tabled.

Mr. J. S. WOODSWORTH (Centre Winnipeg): Mr. Speaker, this is a matter which, it seems to me, is of very great importance indeed to the whole country. We have from time to time had a good deal of discussion as to the character of the live stock we admit into this country. We have had a good deal of discussion with regard to the maintenance of a high standard of seed grain and that kind of thing, but apparently we have not yet taken it into consideration that it is tremendously important that we should have as high a class as possible of human beings if we are to develop in this country a high grade of Canadian citizenship. For some years I had considerable to do with the immigrant people of western Canada, perhaps

particularly with the younger people among the immigrants, for some time having to make investigations with regard to the character of these immigrants. No one can come into close contact with the peoples coming to this country without recognizing that we have been altogether too slack in regard to the character of our immigrants. I do not wish to impress my own personal views upon the House, but propose rather to quote a few passages from the second interim report of the Public Welfare Commission of Manitoba, as printed by the order of the legislative assembly of Manitoba in February, 1919:

A careful study of the figures regarding the nationality of the various persons examined makes it more than evident that Canada has received an undue share of immigrants who under a proper system of inspection would not have been allowed to enter this country. Those familiar with social conditions among the defective classes realized that the welfare of the nation is seriously threatened by the influx of undesirables, and a brief survey of the facts obtained in Manitoba are of interest. Let us consider those in regard to illegitimacy, defectives and delinquents, as under these three headings we shall find grouped the worst of the imported classes. In considering these facts it must always be remembered that the Canadian population of Manitoba is 46 per cent of the whole. In other words, the foreign born outnumber the native born by almost three per cent. * * * * * To deal with the jail population of the province, taking 400 consecutive admissions to the jails, what do we find? Twenty-three per cent are of Canadian birth, while the Austrians, who should under normal conditions only number eight per cent rise to thirty-three per cent of the total; and the Russians, who should number 1 per cent, contribute 11 per cent.

It is not clear from these figures as to what is the underlying reason that these foreigners should contribute a larger per cent to the jail population. It may be, and in my own judgment it is, very largely owing to the fact that we have rather bad social conditions to which these people come, and we have not yet provided the machinery for welding them into our Canadian citizenship; but it may also be, and to a certain extent I think it is true, that some of them come of a stock that is not altogether desirable, or that their children when first introduced into this country are not able to fit into our life here.

Taking another table—there are a number given here, and I shall quote from only a few:

Nationality of 269 unmarried mothers in Grace Hospital and Misericordia Hospital during the past year: British, 44.23 per cent; Canada, 25.76 per cent; United States, 9.23 per cent.

And so on. I will not give the smaller percentages. The comment is:

It is somewhat surprising to find such a proportion of British born among these mothers of illegitimate children, but comparing the figures with those of a study of 266 cases in the last two years in one Ontario hospital, we find the most striking similarity; in Manitoba, 44 per cent; in Ontario, 40 per cent. When we study the character of much of the immigration we are in a position to make clear some reasons why such burdens have been imposed upon a long suffering public. In the craze for numbers we have allowed quantity rather than quality to be the slogan, and no better illustration can be brought forward than that furnished by a brief survey of the 266 Ontario cases. Eighteen (22.75 per cent) of the British born mothers were brought to Canada by one well-known home which has already foisted an immense number of defectives on the Canadian public, as the records of criminality and deficiency will show. Surely this one fact should be worthy of serious study by the Dominion immigration authorities. When it is stated, too, that only 26 of the 266 could be classified as normal—45 borderline cases, 191 feeble-minded, and 4 insane and feeble-minded—further comment is unnecessary.

Again:

As pointed out before small wages and mental defect have a much closer connection than superficial students of social conditions suspect.

I quote again:

From a study of immigration statistics it is evident that some nationalities have contributed far more than their share to the defective and insane classes. Now that we appreciate this fact it is evident that the attention of the federal authorities should be asked to make a careful study of the whole problem and provide the proper remedies.

That report, as I have said, was circulated in 1919 by the legislature of Manitoba. We are told by those who have charge of the juvenile immigration that the idea is to relieve the Motherland of a large number who find it hard work to make a living over there and to give these young people a chance out here. In the foreword of the report of the Supervisor of Juvenile Immigration we read:

Juvenile immigration is a direct response to what humanity pleads, patriotism wants and Christianity demands—giving the younger generation a chance.

But as we read on in the report there grows upon one the suspicion that the real reason for developing our juvenile immigration is that we may be provided here with cheap child labour. Expressions are used with regard to the distribution of young workers, with regard to their services. It also says:

The importation of thousands of boys and girls of ages varying from fourteen to eighteen years, will in a large measure meet the needs of Canada in respect to farm and domestic labour.

Are we to be dependent for our development upon the importation of these children from the old land?

Mr. ARCHAMBAULT: What is my hon. friend quoting from?

Mr. WOODSWORTH: From the report of the Supervisor of Juvenile Immigration, for

1923. Still further in his report he points out that of these children who come 1,426 are wage-earning. The total wages paid to the above children amount to $173,190; that is, they are employed at an average of a little over $100 each per year. It is a serious situation; as I have said, we import these children under the guise of philanthropy and turn them into cheap child labourers. Again quoting from the report:

It was ascertained that the outstanding condition of the children was poverty, but the great majority are the children of respectable parents.

As regards these children who come from respectable homes of the workers of Great Britain, I may say that at the present time in England there is a very strong protest being made against allowing their migration. It is being felt over in the Old Land that children should not be forced to leave respectable homes there and be sent to this country. Again quoting from the report:

The children come largely from overcrowded centres of population, London and the surrounding towns supplying the greater proportion of the children in the homes.

Some of us who have lived in the slums of East London and have visited some of the institutions there, who have lived among the people in their homes, while having every sympathy with the poor there cannot view with any great equanimity the bringing over of that class into Canada with the idea of building up a strong Canadian public. Again quoting from the report:

There are openings throughout the Dominion for British children of all ages but of course these openings are affected by the positions the children are expected to fill on arrival here, viz.; helpers from ten to thirteen years of age placed under principle of adoption or boarded out—various ages up to fourteen —workers fourteen to seventeen and over.

And again:

The most suitable ages to send a child to Canada for service are from five to fourteen years for boys, and from thirteen to sixteen for girls.

Do we propose in Canada to import children for service from the tender age of five years up to the age of fourteen for boys, and of the age from thirteen to sixteen for girls? I should like to read a clipping concerning one of the older boys brought over here at the time of the harvest excursion last year. This is a despatch from Brandon, Man.:

Trying to die by starvation because he had no money to take him back to England and because he was afraid of the stern Canadian winter he had read about, Walter Jones, a 19-year-old lad, who came to the prairie in the autumn with a contingent of British harvesters, crawled into a haystack on a farm at Rapid City and waited two weeks for death.

Suffering from terrible frost bites, his body emaciated from hunger, he is in the Brandon General hospital to-day. He will recover, but doctors say they will have to amputate both feet.

The youth had worked in the Rapid City territory throughout the harvest season, but he found himself without funds when the threshing finished. Depressed, lonesome, friendless, he decided to end his life. So he began his vigil, buried in his hay pile, out in the centre of an open stretch of country.

Then a little later on the despatch says:

Fourteen days and fourteen nights passed before the first determination, which had brought him to his haystack, crumbled and gave way to the demands of agony. Half mad he came from his place of hiding, staggered, stumbled across the prairies.

And so on. I know this is a very extreme case, but it is not an isolated case by any means. We have had within the last twelve months, both in western Canada and in the province of Ontario, a very considerable number of cases in which children who have been brought to this country have suffered very greatly at the hands of some of the foster parents and of their employers, a few of the children having been driven to commit suicide. This problem was discussed at great length last autumn at a Child Welfare Conference held at the city of Winnipeg at which reports were presented from the various child caring agencies in all parts of Canada. From the statistics there presented, and the investigations which were subsequently made, I should like to quote a few statements. The question was asked very clearly at this conference: "Does Canadian public opinion countenance importation of child labourers into this country?" And then the report from which I quote goes on to say:

The social workers of this Dominion are more than half convinced that, under the guise of child immigration, child exploitation is not only tolerated, but actually assisted by Canada's present juvenile immigration policy which has been followed for the past twenty years.

If the idea is to settle children in farm homes across the country, the question that the child welfare workers asked in this conference was "Why not so settle the children that are already in our own homes in Canada." The report continues:

To date, with returns from but six provinces complete, there are in Canadian institutions 21,557 wholly or partially dependent children, distributed as follows:

British Columbia	723
Alberta	966
Saskatchewan	353
Manitoba	1,315
Ontario	2,533
Quebec	15,667
	21,557
New Brunswick, St. John, Protestant Agencies only	75
Moncton	40

The social workers who are collecting the figures have not yet succeeded in getting returns from all the provinces.

Mr. STEWART (Argenteuil): Could my hon. friend give the institutions in Alberta engaged in this work? They are not under the care of the provincial government.

Mr. WOODSWORTH: I am not prepared to give the names of all the institutions but I have the figures in the case of Manitoba. I am quoting from the statistics collected by the child welfare workers.

Mr. STEWART (Argenteuil): Are these the children that might be put into foster homes?

Mr. WOODSWORTH: A certain proportion are.

Mr. STEWART (Argenteuil): Because we have never had enough children that were not mentally deficient to go round in Alberta.

Mr. WOODSWORTH: I am quite well aware as the minister states, that a certain number of these children are not mentally capable of being placed. But as far as my own experience goes with our child welfare work in the city of Winnipeg there are a large number of homes that apply to which we will not send the children at all. And that is a point to which I shall come in a moment, I think the inspection is deficient. Again to quote from this report:

> The placements in these provinces carried out by the provincial agencies for the last year amounted to 2,814 children, though 3,924 applications were received.

This bears out the contention of the minister:

> These provinces in the aggregate could not place in suitable homes as many children as they have applications. The province of Quebec states definitely it cannot take any juvenile immigrants. Yet over and above these children the Juvenile Immigration Department is prepared to bring in under the Empire Settlement scheme 5,000 juveniles a year. And for 1922 and 1923, the Department of Immigration had under their supervision in these provinces, 3,125 (page 58 of 1922 report) and 3,513 (page 57 of 1923 report). The child welfare workers of the Dominion contend that this can be possible only because lower standards of placement in the choice of homes are being observed by the immigration agencies and the Federal Department of Immigration, than are tolerated by the public opinion of the provinces as represented in their child welfare work.

Again:

> This lack of provision for at least one visit in the year in order to guarantee regular supervision of 4,336 children is witness of social work, which so far fails to conform to modern standards of child-placing.

That is a point I should like to emphasize. In nearly all our cities to-day we have developed fairly efficient children's aid societies and child placing agencies and the workers who are engaged in this particular branch of social service are very earnest in insisting that certain standards should not be lowered. They think that before a child is placed in a foster home that home should be visited. They think it is not sufficient to obtain excellent reports as to the welfare of the child, perhaps from the employers themselves. They urge that there should be inspectors who would go out into the district, carefully inquire from the neighbours, see for themselves the conditions and report to the officers in charge. In the case of immigrant children this is not being done. There is less than one visit a year paid to the homes of these children, this permits a great deal of laxity which in some cases involves cruelty to the children. A suggestion has been made that a very considerable number of our own home children are not fit to be placed in foster homes. That is true, but I should like to point out that there is a very large number of old country home children who belong to precisely the same class. Let me quote again from this report as follows:

> We submit the evidence of a few of the clinics maintained in Canada, in support of our contention that adequate precaution is not being observed in this field of immigration.
>
> In one general health clinic in Toronto alone, 128 cases of juvenile immigration brought out in recent years by the same agency have required attention. Of these 23 were boys and 105 girls. Their story of social disaster is briefly summarized,—
>
> Of the girls, 105—40 per cent confirmed prostitutes, 25 per cent venereally diseased, 70 have had 94 illegitimate children, 95 per cent examined mentally abnormal.
>
> Of the boys, 23—2 known to have had venereal disease, 95 per cent examined mentally abnormal.

Mr. ROBB: Will the hon. member just quote the record to the statement he has already made and say what society he is referring to.

Mr. WOODSWORTH: I will give the minister the name of the society later on. This report continues:

> We quote further a statement of Dr. Eric K. Clarke, of the Canadian Committee on Mental Hygiene, "It is a well established fact that 75.3 per cent of the mentally defective children found in our public schools are there as a direct result of our lack of immigration inspectors. 27.9 per cent of these children were born outside Canada, while the remaining 47.4 per cent were born in Canada of parents who arrived since the beginning of the present century. Only 24.7 per cent of our subnormal children can be truly classed as coming of Canadian stock."

I think that is a very significant statement; only 24.7 per cent of our subnormal children can be truly classed as coming of Canadian stock. We have to deal in all our cities with immense numbers who are imported and will constantly be a drain on the resources of the country and a menace to our whole community life. The report continues:

> We also quote a summary of a survey carried out by the Toronto General Hospital of a certain agency's girls since 1917.

Agency girls known to the Social Service Department since 1917.

Number	125
Ages ranging from 14	43
Majority between 18-21 years inclusive.	
Occupation, Domestic	77
Factory workers	11
Mentality, Mentally defective	77
Dementia Praedox	5
Normal	6
Not diagnosed	37
With two or more illegitimate children	18
Prostitutes	36
With Gonorrhoea	12
With Syphilis	16
With both V.D.G. and V.D.S.	3
Served jail or Mercer terms	4

The question was asked at the Child Welfare Conference, "Is Great Britain unloading her child problems on Canada and being subsidized $40 per child—a total of $80—by the respective governments under the Empire Settlement Scheme?" I think I might well read in this connection a paragraph published in the Manchester Guardian of April 11th, 1923, by Henry Cotton, in which the following view is advanced. I am summarizing this as I proceed:

> Child immigration originated in the desire on the part of the Poor Law authorities in Great Britain to rid themselves of the responsibility of providing for the boys and girls in their charge, when they were prevented by law from working in the factories. Instead of adopting educational measures to meet the case, the authorities conceived the plan of shipping across the Atlantic as many boys and girls as they could persuade to go.

It is not my desire to comment on these extracts. I think they speak for themselves. It seems to me that there are two or three things that would be absolutely necessary if we are to bring child immigrants to this country. One would be a most rigid and careful examination of the children before they leave the Old Country, an examination not merely for physical defects but an examination in regard to their mental condition. I could quote, were it necessary, some statistics made by our immigration medical health officers with regard to the large numbers that slip through the hands of our inspectors. As one medical man said to me at the city of Quebec, "We can easily recognize as unfit a man who is minus an arm, a leg or an ear, but we cannot tell whether or not he has any brains inside his skull." We need more careful inspection.

There is another very practical point and that is with regard to the payment of children's wages. Under the present management the department leaves the matter entirely to the agency and the employer. Surely, it is not safe to trust this matter entirely to an agency of this character. The agency should be subject to the inspection of the provincial child welfare authorities.

Still further I would urge that the children and the homes should be under careful inspection of the provincial authorities. One of the inspectors speaking at Winnipeg admitted that sometimes reports were taken from various land agents and others as to the character of the homes in which the children were placed. Surely, it is not fair to the little children we bring here to allow interested land agents to report as to the character of the foster homes or of the homes in which they are employed. Still further, may I urge a point that I have brought up in another connection? The care of defective and dependent children under our existing arrangements is entirely a provincial matter, just the same as the federal government would make unemployment a provincial matter; and yet the federal government can bring in any number of immigrants it pleases, including any number of these juvenile immigrants who may or may not be defective; and unload them upon the various localities, while the localities are perfectly helpless. The local community must go on building bigger and yet bigger institutions to care for them. It would seem to me that this is a matter that requires from this House a great deal more serious consideration than has ever been given to it.

Hon. J. A. ROBB (Minister of Immigration and Colonization): To the resolutions suggested by the hon. member for Chambly and Vercheres (Mr. Archambault) the government offers no objection. The records show we have no correspondence whatever in the department between the government and other corporations or individuals relating to the proposed acceptance by the government of the sending into Canada of about fifty thousand children now occupants of houses of detention, reformatories, or beneficent institutions of Great Britain.

I imagine, however, my hon. friend has in mind the statement made in Toronto by Mr. M. J. O'Brien, who claimed to be representing the British Immigration and Colonization Society. According to newspaper despatches, he made the statement that he expected that 50,000 boys would be brought to Canada in 1924 from the Mother Country. I do not know Mr. O'Brien; I do not know what authority he had to say that he was representing any immigration society in the Old World.

As regards the question generally, I am not prepared to admit all that has been said by

the hon. member for Centre Winnipeg (Mr. Woodsworth). I am prepared to say that, as the years go along, and more immigrant boys and girls are coming to Canada, we should have, I would not say, a more rigid inspection, but as it is just possible that the staff has been undermanned, I think we should have more inspectors. Generally speaking, however, I am not prepared to say that Canada has suffered from immigration coming to us particularly from the Motherland. I will admit that in past years some immigrants have been admitted who, perhaps, should not have been admitted to Canada. Each year the inspection is made stricter and stricter. We do not always meet with public approval; it is not always easy for officials of the department to give rulings protecting Canada; but the instructions to the inspector of the Immigration department are that they are to take care of Canada rather than of families coming to Canada. It sometimes happens that an excellent family leave their home in the Old Land to come to Canada, and that when they reach the port of debarkation in Canada it is discovered that, possibly in a family of four, five, six or seven, one child may be defective, perhaps that child is a little girl, and it is pretty hard to separate her from her mother and to send her back home. No later than this year the department have had protests from different organizations in Montreal. I recall one case where the department thought it better that the girl should be sent back home. Other members of the family, the father and, perhaps, two of the boys, had already been more than a year in Canada; they had established a home, and they had sent word over to the mother to sell out their little belongings and to come and join them in the new home in Canada which they had built for them.

Mr. WOODSWORTH: That is an altogether different proposition from the one which we are discussing. We are speaking about the bringing over of unattended children, quite apart from their homes and their parents.

Mr. ROBB: I will come to that in a moment. When the department, representing the people of Canada, was insisting upon sending this girl back, we had protests from social organizations, church organizations, fraternal organizations, against this inhuman method of treating people coming into this country. I mention this to show the difficulty we have.

As regards the homes that have been bringing people to this country, they are not all bad. notwithstanding the figures which my hon. friend has presented, there are in Canada many splendid citizens who have come to this country in that way, who have established homes for themselves, who are taxpayers and who, perhaps, are now members of the executive administering some of these homes. The federal department is not the only immigration department which is operating at the present time. Some of the provinces, indeed, I think the majority of the provinces, have agencies in the Mother Country, and they are arranging to bring people to Canada. It may interest the House to know that last year—and I speak from memory—we had applications for about four times the number of boys and girls that we were able to supply, and these applications were all from good homes, homes that were certificated by the mayor of the community, or the resident clergyman.

Mr. GARLAND (Bow River): Were those homes, in the majority rural or urban?

Mr. ROBB: I think they were mostly rural. I would imagine that most of them would be rural, although I am not definite as to that point. For that reason it is proposed to try to select and to bring to Canada children to meet that demand. But as I said in the beginning, orders have been sent out to the different inspectors to be most rigid in their inspection before these children are allowed to start out for Canada. Not only is it the desire of the department to examine carefully the children before they come to Canada, but we are endeavouring to have a more careful inspection of the different homes into which they go.

Mr. GOOD: Is there any inspection of the mental condition of the children, intending immigrants? Has any attention been given to feeble-mindedness?

Mr. ROBB: I said just a moment ago that we had turned back several, and sometimes we are compelled to separate families. That is what causes protests to be raised with the department. I should like the House to believe that it is the desire of the government and the Department of Immigration to examine carefully, not only juvenile immigrants, but all immigrants coming to Canada. We realize that these people are coming here to be fellow-citizens with us, to be members of our family, and we are all interested in having the very best immigration. We have sent word over to the other side to tell the British authorities emphatically that we do not want people sent to Canada whose record is not of the very best. I should like to assure my hon. friends that the department is doing and will

do everything possible to see to it that there is a rigid inspection of immigrants coming to this country, and that care is taken of the immigrant after he comes to Canada.

Mr. GARLAND (Bow River): What was the reply received from England when the minister sent over the request that only the most select should be sent to Canada?

Mr. ROBB: We sent the instructions to our agents. We are not worried much about what the people on the other side say. We have in England Canadians representing Canada, and they are the people to whom we look to protect the interests of Canada.

Mr. MARCIL (Bonaventure): Do the deportation clauses of the Immigration Act apply to children? Supposing the department meets with a bad case that has been here for a couple of years, can such a child be deported?

Mr. ROBB: I could not say offhand about the number of years, but the deportation clauses apply to children.

Miss AGNES C. MACPHAIL (Southeast Grey): Mr. Speaker, I should like to add my voice to those who are protesting against the possibly lax, or what looks like lax, immigration of children. It would seem to me that the way to attack this problem is to turn our full attention to the possibility of raising the standard of life on the farms of Canada. Then the farmers would not require cheap child labour.

But there are really two sides to this question. In my home we have had many immigrant boys between the ages of fourteen and sixteen, and of these I remember only one who was satisfactory to us and happy in his new surroundings. I feel sorry for the children; I also feel sorry for the people who sometimes have to put up with unsatisfactory help. When the hon. member for Centre Winnipeg (Mr. Woodsworth) began to speak I was writing a letter to the county of Dufferin authorities asking who could take charge there of a family of six children. They are all Canadian born, and their parents are Canadians. Unfortunately the father does not like work. The children, however, cannot help their father's laziness, but by reason of it they are getting insufficient to eat and exceedingly little to wear, while their education is entirely neglected. This is a case in Ontario of native born children. I suppose there must be some way in which we can help these unfortunates.

It would seem to me that our greatest problem is to help our Canadian children by raising the standard of life, particularly in rural districts. This would do away with the demand to bring in any kind of labour in order to get work done very cheaply, especially on our farms, because farmers are not getting sufficient returns from the sale of their products to pay the rate of wages which good and intelligent labour commands. I think the department should be exceedingly strict and admit only such children as are strong in body and intelligent.

The minister really did not answer the figures given by the hon. member for Centre Winnipeg. These figures were not compiled by someone trying to make out a particular case. They were compiled by social service workers who are trying to benefit poor immigrant children. Undoubtedly it is a great loss to pay out money to bring such children here when, as too often happens, the provincial authorities have to incur the cost of keeping defectives in detention homes, penitentiaries or insane asylums. It is a serious problem, and no pressure brought to bear by colonization bodies or homes should affect the government in the rigid enforcement to the limit of all restrictive regulations directed to the exclusion of defective immigrants.

Mr. E. J. GARLAND (Bow River): Mr. Speaker, I do not desire at this time to enter into a tedious debate of this particular question. My own position, I think has been made abundantly clear in the past. Two years ago on the immigration debate I took the opportunity of pointing out the evils which have been so trenchantly brought to the attention of the House to-day by the hon. member for Centre Winnipeg (Mr. Woodsworth). When the proper time comes I may again have more to say on the subject.

May I, however, take this opportunity of completely dissociating myself from those who endeavour to exploit children from other countries? If the government is to be a party to any such plans, I would urge upon the minister concerned more and more mature consideration of all that they involve. Canada is a young country, and we cannot afford to debase our nationhood. Having commenced our development late instead of in the early days of Christianity, we ought to profit by the lessons of other countries. I think the greatest danger to be apprehended is from the government apparently lending a willing ear to those who bring pressure upon it to relax restrictive regulations in order that they may secure child labour for farms and other places. I protest, Mr. Speaker, against such exploitation.

Hon. CHARLES MARCIL (Bonaventure): Mr. Speaker, I am not familiar with conditions in the West, but I know something of conditions prevailing in the province of Quebec, having had to do with this matter while a commissioner of the city of Montreal. If I caught the figures rightly which were presented by the hon. member for Centre Winnipeg (Mr. Woodsworth) fifteen thousand children are being cared for now in various institutions in the province of Quebec. Already we have to look after thousands of such children in the city of Montreal. I do not think child immigration would be looked on with favour in the province of Quebec where the birthrate is very high. Only a few weeks ago legislation was passed in Quebec dealing with this subject, and I think it would be well for the minister to consult the authorities of the province before encouraging child immigration.

Mr. ROBB: May I point out to my hon. friend that the total child immigration into the province of Quebec for the year ending the 3rd March, 1924, was 203, of whom 117 were brought out by the Catholic Immigration Association; 3 by the Church of England; 5 by the Salvation Army; and 11 by the National Children's Home.

Mr. MARCIL: I am glad to know the number is so small, and I am also glad to observe that no French Canadian institution has been engaged in this work, because in the province of Quebec we do not need to bring in children from the other side of the Atlantic. I think it would be wise on the part of the department to consult with the municipal authorities, especially those of Montreal, which is the largest centre for immigrant children, and where conditions are changing rapidly from year to year owing largely to the increase of foreign population.

Hon. CHARLES STEWART (Minister of the Interior): Mr. Speaker, I am very much interested in the report of my hon. friend from Centre Winnipeg (Mr. Woodsworth) on investigations carried on with respect to juvenile immigration into Canada. However, I would point out to him that there is a very strong desire to bring in all classes of immigrants provided they are physically and mentally fit. That is, and always has been, the first requirement, but it is hardly to be expected that out of an influx of a few hundred thousand every defective immigrant will be detected and turned back.

Dealing particularly with the subject matter of the resolution, that of child immigration, two years ago there was a demand for over five thousand children, mainly from homes that were certified by the provincial authorities. I shall deal in a minute or two with the provincial aspect of the case, because as my hon. friend has rightly pointed out, the provincial authorities become responsible for immigrants when placed, whether they be children or adults. It would appear therefore that there was a reasonable demand for these children, every one of whom was required to be under the age of fourteen years. I state most emphatically that no child below the age of fourteen years is being brought to Canada to earn its livelihood. The age limit from fourteen to eighteen was more or less an experiment. My hon. friend is quite correct when he states that at that age there is an expectation of some results from their employment; I am bound to say that that is not unreasonable. These boys and girls have passed the school age and their services might be expected to be of some value. They are bound to the family for a period of years, until they become old enough to take care of themselves. Only a few thousand of them are placed in this way, and one cannot say what the ultimate results may be. But they are given the regular inspection, and there must be the usual recommendations. In that unfortunate London case there was a good recommendation; the boy had been recommended by the clergyman and by influential people in the neighbourhood. In all matters of this kind there undoubtedly are lapses and there always will be.

Mr. WOODSWORTH: Will the minister suggest that an average of one inspection per year is anything like sufficient?

Mr. STEWART (Argenteuil): I am coming to that. The department does not attempt to send any children into a province where the provincial authorities are not prepared to agree that they be sent there, and the same applies to domestics. That is not true, perhaps, in cases where people are in a position to establish themselves, but it does apply to the two classes I have mentioned; at least, it has applied in the past two years. I am prepared to admit the statement of my hon. friend with respect to the immigration that came to Canada around 1920, but the medical inspection has in more recent years been tightened up. More than that, last year when we undertook to bring out children in a larger way than ever we provided for medical inspection before the children started. Despite that fact and de-

spite the inspection in our own ports, children will get through who are mentally deficient; I do not think that is overstating the case. But so far as it is possible to ascertain the mental condition of the children, that is being done. Furthermore, we are to-day asking for a history of the child, where he sprung from, what his environment has been, and so on. In England to-day there are a large number of children with a good history who have been splendidly cared for and who can be brought to Canada and established here. My hon. friend is probably referring to the results of what might be regarded as lax inspection. Well, that is the sort of thing we have been trying to overcome.

So far as establishing our own children is concerned, I fail to appreciate why there should be a demand for children from the Old Land if they are available here in Canada. As to Quebec, I did not know that two hundred of these children had gone into that province. There is no doubt that large numbers of children may be found in the homes of that province, being well brought up and well cared for, and any citizen of Quebec who wanted to have a child in his home should be able to obtain one. In our own province, during the period that I lived there, covering some twelve or fourteen years, every child who came under the inspection of the provincial government and who was physically and mentally fit could find a foster home at a very tender age, usually between three and four years. Undoubtedly those who adopt children at that age do not do so to exploit their services, but rather to bring them into homes where there are no children. That has been kept in mind by the gentleman from whose report the hon. member for Centre Winnipeg read; it is one of the things he lays a great deal of stress upon. It is true that he cannot personally visit all these homes. I think in Ontario they have a very splendid officer in the person of Mr. Kelso who does make frequent inspections. While I doubt whether we can get 100 per cent efficiency so far as mental examination goes, that is what the department has been aiming at by trying to improve and strengthen the medical inspection. Take, for example, the provincial mental hospital at Ponoka, Alberta; there is no use denying the fact that a great many people get into Canada who should never have been admitted. I found in the case of this institution that only a very small percentage of the inmates were native Canadians; by far the largest percentage of them had come from other countries. It is with a view to overcoming that condition that we have provided for more rigid medical inspection, and it is the aim of the department, as I have said, to reach the highest standard that it is possible to attain.

Mr. SPEAKER: If no other hon. member desires to address the House on this resolution, the mover will close the debate.

Mr. WOODSWORTH: May I ask one question? Is the sentence correct in the memorandum which I read, which stated that the arrangement was that the British government paid a subsidy of $40 and our own federal government $40?

Mr. STEWART (Argenteuil): Yes, that is correct with respect to the arrangement last year. I do not know anything about what arrangement was made this year. That was with reference to children under the age of fourteen, carefully selected.

Mr. ARCHAMBAULT: Mr. Speaker, since the Minister of Immigration (Mr. Robb) has declared that there is no such correspondence as is called for in my motion, I will withdraw the motion. I may say, however, that I do not regret having brought the matter to the attention of the House, because it has been the occasion of a very interesting and instructive discussion, especially in the speech of the hon. member for Centre Winnipeg (Mr. Woodsworth). The figures he has quoted only go to show that we should be very cautious in dealing with juvenile immigration. The Minister of Immigration has pointed out that quite a number of young men from good homes in England have become excellent citizens of this country. There is no doubt about that, but my resolution did not have reference to children coming from private homes, rural or urban. The despatch in the press which prompted me to put this resolution on the order paper stated that an arrangement had been made between the Canadian government and some institutions in England, such as reformatories, houses of detention and beneficent institutions, which wished to send these young children to Canada. Where it is proposed to have such children come to this country I think we should be very careful about what course we pursue; we should be very chary about accepting these offers. I wish to withdraw the resolution.

Mr. GARLAND (Bow River): Does the hon. member understand that the minister has no arrangement with any home?

Mr. ARCHAMBAULT: I understand the minister to have said that he has had no

correspondence in that regard and that there is no arrangement with any home. That, I believe, is correct.

Mr. WOODSWORTH: Are these homes still being subsidized as they were two years ago?

Mr. ROBB: What homes does the hon. member refer to?

Mr. WOODSWORTH: I am referring to the agencies or homes for the care of children who come out to this country.

Mr. ROBB: I have no knowledge of any such homes ever having been subsidized. We have an arrangement with the British government whereby we pay a part and they in the same proportion and if there are any homes operating they deal with the British government.

Mr. WOODSWORTH: Surely there is some arrangement between this government and the various agencies that are placing children in this country.

Mr. ROBB: I do not quite understand what the hon. gentleman is driving at but if he will let me know I will give him any information that I have on the subject when the estimates are under consideration.

Mr. WOODSWORTH: I understand that two years ago there was an arrangement by which the Canadian government paid $40 per head and the Imperial government a like sum for certain selected children to be brought to this country. My question is has the Canadian government any definite arrangement with certain homes or agencies in the Old Country or in this country in regard to this class of immigration?

Mr. STEWART (Argenteuil): The arrangement which we had a year ago was for a period of one year. There was no central home but there was an understanding that the children were to be acceptable to the Canadian authorities. Any legitimate organization might apply, but we reserved the right of inspection and also of investigation as to where the children should be placed and the kind of homes they were going to. Many such organizations have established homes in this country and some of them have been bringing children in for the last fifteen years. There was no necessity for establishing homes of the kind my hon. friend refers to so long as the children were physically and mentally fit and we knew that there was an opening for them in Canada before their arrival. That, of course, was also required by the British government before they were prepared to advance their share of the money. The Canadian government was made responsible for the accepting and the placing of the children, and half a dozen different organizations took advantage of this opportunity to place the children.

Motion withdrawn.

REGULATIONS FOR OBTAINING PASSPORTS

Mr. A. W. NEILL (Comox-Alberni) moved:

That, in the opinion of this House, reform is needed in the regulations for obtaining passports.

He said: It is no use my attempting at this late hour to elaborate a debate on this subject, and I have allowed the motion to be called simply because, as I understand, it gives me some strategical advantage when next the subject comes up: the motion will be on the order paper in a more favourable position. I suggest therefore, Mr. Speaker, that, as it is almost the hour, you call it six o'clock.

Mr. SPEAKER: I understand that the Acting Minister of Finance (Mr. Robb) desires to have the House revert to the order, Motions.

Mr. NEILL: I wish it understood, Mr. Speaker, that I am not moving the adjournment of the debate. I wish to retain my strategic right in regard to this motion.

Mr. SPEAKER: On Wednesdays the House adjourns without question being put and the Speaker does not call six o'clock. The Acting Minister of Finance would like to have the House revert to "Motions" in order to move that the report of Dr. H. M. Tory on Agricultural Credit be printed.

Mr. MEIGHEN: Then I suppose it is assumed that motion No. 39, which the hon. member (Mr. Neill) has just moved, has not yet been reached, technically. If it is six o'clock we cannot proceed.

Mr. ROBB: I do not wish to press the motion that would allow me to move that the report in question be printed.

At six o'clock the House adjourned, without question being put, pursuant to rule.

Thursday, April 24, 1924

The House met at three o'clock.

UNITED CHURCH OF CANADA

Mr. PAUL MERCIER (Westmount-St. Henri): Mr. Speaker, I desire to present a

petition from the officials and members of the Melville Presbyterian church, Montreal, in opposition to the Church Union bill.

Hon. T. A. LOW (Minister of Trade and Commerce): I desire to present a petition of members and adherents of St. Andrew's Presbyterian church of the town of Renfrew in opposition to the Church Union bill now before the House; also a petition signed by officers of the Arnprior branch of the Presbyterian Women's League, in opposition to the Church Union bill; also a petition of the members and adherents of St. Andrew's Presbyterian church, Arnprior, in opposition to the Church Union bill.

Mr. HERBERT MARLER (St. Lawrence-St. George): I desire to present three petitions against the Church Union bill: first, of communicants of Knox Crescent Presbyterian church, Montreal; second, from the church of St. Andrew and St. Paul, Montreal, and third, from certain members of the First Presbyterian church of Montreal.

Mr. MATTHEW R. DUNCAN (North Grey): Mr. Speaker, in reference to the petition that I presented on April 9 against the proposed Church Union bill, I would like to correct the wording of Hansard of that date. What I intended to say was that I desired to present the petition of certain Presbyterians of the Owen Sound Presbytery opposing the United Church of Canada bill.

IRREGULARITY OF PETITIONS

Mr. SPEAKER: The Clerk of the House calls my attention to the fact that many of these petitions are not in order in that they are not properly headed. There is a special heading for each petition sent to the House of Commons, and when an hon. member receives a petition without this formality he had better consult the Clerk of the House with a view to having it put in correct form.

HOME BANK

Mr. EDWARD N. HOPKINS (Moose Jaw): Mr. Speaker, I desire to present a petition of residents of the province of Saskatchewan, depositors of the Home Bank of Canada, requesting that the government take whatever action is necessary to ensure the depositors of full payment of all their deposits.

LAW MEMORIAL—HANSARD REPORT

Right Hon. W. L. MACKENZIE KING (Prime Minister): I beg to move, seconded by Right Hon. Arthur Meighen (Leader of the Opposition):

That the addresses delivered to-day by Mr. Speaker, the Prime Minister, the Right Honourable Arthur Meighen, Robert Forke, Esquire, the Honourable E. M. Macdonald, and P. Lacombe Hatfield, Esquire, on the occasion of the unveiling of the tablet to the memory of the late Bowman Brown Law, M.P., be printed in Hansard as a supplement to the proceedings of this day.

Motion agreed to.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

HOTEL SCRIBE

Sir HENRY DRAYTON:

1. What was the total amount paid by or on account of the Canadian National Railways for and in connection with the Hotel Scribe, Paris?
2. Was the said amount paid out of the cash receipts of the National Railways? If not, how was the purchase financed and at what rate of interest?
3. What is the name of the company now nominally owning the Hotel Scribe and who are the directors?
4. What is the total amount of taxes paid or payable in respect of the said hotel for the year 1923?

Hon. Mr. GRAHAM:

1. $2,733,693 including cost of property, taxes, imposts, removal of tenants, etc.
2. Current cash.
3. Société Anonyme Immobilière de la Rue Scribe; S. G. Archibald, Arthur Vanson, F. A. Young, Major Graham A. Bell, H. W. Harding.
4. $10,939.65.

Sir HENRY DRAYTON:

1. Was the title to the Scribe Hotel, Paris, taken in the name of Aronovici, when first purchased by the Canadian National Railways?
2. Has title to the said hotel been since transferred by Aronovici, and if so, to whom?
3. What taxes or imposts were paid in connection with such transfer from Aronovici?

Hon. Mr. GRAHAM:

1. Yes.
2. Société Anonyme Immobilière de la Rue Scribe.
3. $62,153.39.

EMIGRATION OF CANADIANS

Mr. CHURCH:

1. Is it the intention of the government to appoint a special committee of the House to investigate and report on the question of the great exodus of Canadian citizens to the United States and the reasons therefor?
2. How many Canadians have emigrated to the United States of America since the Great War closed, per annum?
3. How many of these were veterans of the Great War?

Hon. Mr. ROBB:

1. No.
2. No official information.
3. Answered by Nos. 1 and 2.

BOARD OF AUDIT

Mr. GARLAND (Carleton):

1. Respecting the report of the Malcolm Committee on the civil service, tabled last session, what action has been taken by the government?
2. Was it referred to the Board of Audit?
3. Has this board met?
4. If so, does it still meet?
5. Is the press report correct, to the effect that the new Auditor General declined to act in conjunction with the other members of the board?

Hon. Mr. ROBB:

1. Announcement has been made as to the government's action with reference to the matter of civil service bonus, salary revision and superannuation measure.
2. Not specifically. The report of the committee is a public document, available for the information of any body dealing with civil service matters.
3. Yes.
4. Yes
5. No.

FREIGHT RATES

Mr. HANSON:

1. Do the reductions in freight rates that are to go into effect in the Maritime provinces on April 14, apply to both class and commodity rates, or to class rates only?
2. How much freight was moved last year within the region to which these reductions apply?
3. How much was moved on class, and how much on commodity rates?
4. On the basis of the freight movement in 1923, what is the estimated saving in freight charges this year under the reductions?

Hon. Mr. GRAHAM:

1. Class rates only.
2. It is not possible, without making a detailed check of every shipment handled, to give any definite figures as to the volume of freight which was moved during the year 1923 on which the reduced basis will apply.
3. It is not possible, without making a detailed check of every shipment handled, to say how much was moved on class rates and how much on commodity rates.
4. An estimate, based on general knowledge of the situation, is approximately 10 per cent.

VANCOUVER ISLAND FREIGHT RATES

Sir HENRY DRAYTON:

1. What rates are proposed to be charged on logs and lumber to be moved (a) on the proposed line of railway from a point at mile 58.3 near Deerholme on the Vancouver Island Main line to Cowichan bay; (b) on the proposed extension of the Vancouver Island main line, from mile 74 to mile 100?
2. What is the estimated annual haul of lumber or logs in each case?
3. What other traffic, if any, is anticipated, and to what extent, in each case?
4. What return freight business, if any, will be carried in each instance?

Hon. Mr. GRAHAM:

1. Logs.—Movement will be largely to tidewater at Cowichan bay and, based on current rates applicable on other portions of Vancouver island, it is considered rates of from $2 to $3.50 per 1,000 feet, according to the distance, will be applied.

Lumber.—The rail movement of lumber will be largely to the prairies, eastern Canada and the United States and, based on current rates applicable from other points on Vancouver island, it is considered rates varying from 1½ to 3½ cents per 100 lbs. higher than from coast points will be applied.

2. It is estimated there will be an annual movement of over 150 million feet of logs and 50 million feet of lumber.
3. Practically nothing as the territory to be served by the line is essentially a timber country.
4. Largely supplies and machinery for logging camps and sawmills along the line.

VANCOUVER TERMINAL GRAIN COMPANY

Mr. BLACK (Yukon):

1. Has a lease of land been granted by the Vancouver Harbour Commissioners to the Terminal Grain Company, R. H. Gale, president, otherwise known as Spillers?
2. For what period has the lease been granted?
3. What rental is payable?
4. When does payment of rental commence?
5. Does the harbour commission hold title to said land, and, if so, what is the legal description?
6. When did the harbour commission acquire said property, and what amount was paid for it?
7. Was said property acquired by private purchase or by expropriation, and from whom was said property purchased?

Hon. Mr. CARDIN:

1. Yes.
2. 99 years.
3. From August 1, 1923 to August 1, 1924, a sum of $2,566.67. From August 1, 1924 to August 1, 1964, $12,000 per year. From August 1, 1964 to balance of term at a rental to be agreed upon, but failing any agreement to be set by arbitration.
4. August 1, 1923.
5. Yes, it is a portion of property to which title is held by the commissioners under an agreement of sale. A description of the area included in the lease to the Terminal Grain Co., is in the appendix hereto attached.
6. May 14th, 1923; $325,000. $50,000 cash; balance spread over two years.

7. The property was acquired from Fred William Tiffin by private purchase. Expropriation was considered, but, owing to the fact that there was a going business in the shape of an operating lumber mill, with personal property of insurable value of $112,000 located thereon and that the loss entailed in the removal of this business would, undoubtedly, be considered in the arbitration fixing the value to be paid for the property by expropriation, and the purchase price being within the amount fixed by independent valuation and less than the amount estimated as the probable arbitration award, the commissioners adopted the first method as being the cheapest price at which to obtain the property. Valuation was made for the commissioners by the firm of A. M. Pound & Co., valuators, Vancouver, B.C.

Appendix

F. W. TIFFIN

All and singular those certain parcels or tracts of lands and premises situate, lying and being in the city of Vancouver, in the province of British Columbia and more particularly known and described as lot one (1) in block one (1) subdivision "E" of district lot one hundred and eighty-three (183), group one (1), New Westminster district according to a map or plan deposited in the Land Registry Office at the said city of Vancouver and numbered 5155; together with all the right title and interest of the vendor in the tidal lands and premises in front of that portion of said lot number one (1), formerly known and described as lots numbers one (1), two (2), and three (3) block (1), subdivision "E" of said district lot one hundred and eigthty-three (183) and more particularly described in the quit claim of the same from His Majesty the King in right of his Dominion of Canada and dated the 29th day of June, 1906, to Forbes George Vernon; and secondly, all and singular those certain parcels or tracts of land and premises situate, lying and being in the said city of Vancouver, in the province of British Columbia, and more particularly known and described as follows, that is to say: Firstly, lot fourteen (14), in block number one (1), subdivision "D" of district lot one hundred and eighty-three (183), group one (1), New Westminister (now Vancouver) district, according to a map or plan deposited in the Land Registry Office, at the said city of Vancouver and numbered: Secondly, that portion of the foreshore abutting on the said lot fourteen (14) not expropriated or acquired by His Majesty the King in right of the Dominion of Canada, and which may be shortly described as follows, that is to say: Beginning at the intersection of the easterly boundary of said lot 14 with high water mark on Burrard Inlet thence northerly along the prolongation of the said easterly boundary a distance of 140 feet more or less to a point distance 450 feet from the southeast corner of said lot 14; thence westerly and parallel to the south boundary of said lot 14 a distance of 45 feet more or less to the intersection with the western boundary of said lot 14 produced northerly; thence southerly along the said production of said western boundary of said lot 14 a distance of 160 feet more or less to the intersection with high water mark on Burrard Inlet; thence easterly following along the said high water mark a distance of 44 feet more or less to point of commencement.

[Mr. Cardin.]

MR. WILFRID LALIBERTE

Mr. ROBERGE:

1. Has Mr. Wilfrid Laliberté, advocate of Arthabaska, county of Arthabaska, province of Quebec, been in the employ of the Dominion government from the year 1914 to 1921 inclusive?
2. If so, what were his duties?
3. What amounts was he paid for services from the year 1914 to 1921 inclusive?
4. Where were his professional services rendered?

Hon. Mr. LAPOINTE:

1. Yes.
