Technical and Bibliographic Notes/Notes techniques et bibliographiques

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming, are checked below.

- Coloured covers/  
Couverture de couleur
- Covers damaged/  
Couverture endommagée
- Covers restored and/or laminated/  
Couverture restaurée et/ou pelliculée
- Cover title missing/  
Le titre de couverture manque
- Coloured maps/  
Cartes géographiques en couleur
- Coloured ink (i.e. other than blue or black)/  
Encre de couleur (i.e. autre que bleue ou noire)
- Coloured plates and/or illustrations/  
Planches et/ou illustrations en couleur
- Bound with other material/  
Relié avec d'autres documents
- Tight binding may cause shadows or distortion  
along interior margin/  
La reliure serrée peut causer de l'ombre ou de la  
distortion le long de la marge intérieure
- Blank leaves added during restoration may  
appear within the text. Whenever possible, these  
have been omitted from filming/  
Il se peut que certaines pages blanches ajoutées  
lors d'une restauration apparaissent dans le texte,  
mais, lorsque cela était possible, ces pages n'ont  
pas été filmées.
- Additional comments:/  
Commentaires supplémentaires:

L'Institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

- Coloured pages/  
Pages de couleur
- Pages damaged/  
Pages endommagées
- Pages restored and/or laminated/  
Pages restaurées et/ou pelliculées
- Pages discoloured, stained or foxed/  
Pages décolorées, tachetées ou piquées
- Pages detached/  
Pages détachées
- Showthrough/  
Transparence
- Quality of print varies/  
Qualité inégale de l'impression
- Includes supplementary material/  
Comprend du matériel supplémentaire
- Only edition available/  
Seule édition disponible
- Pages wholly or partially obscured by errata  
slips, tissues, etc., have been refilmed to  
ensure the best possible image/  
Les pages totalement ou partiellement  
obscures par un feuillet d'errata, une pelure,  
etc., ont été filmées à nouveau de façon à  
obtenir la meilleure image possible.

This item is filmed at the reduction ratio checked below/  
Ce document est filmé au taux de réduction indiqué ci-dessous.

The copy filmed here has been reproduced thanks to the generosity of:

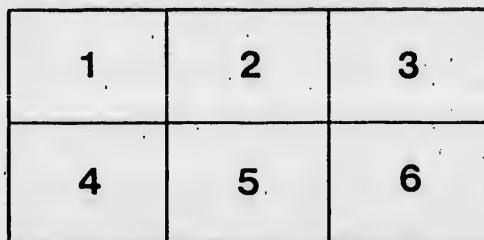

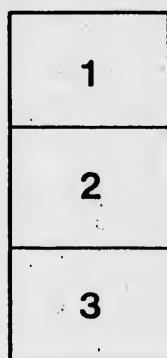

Seminary of Quebec  
Library

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol → (meaning "CONTINUED"), or the symbol ▽ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Séminaire de Québec  
Bibliothèque

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plié et en terminant soit par le dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plié, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole → signifie "A SUIVRE", le symbole ▽ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

## PARIS UNIVERSAL EXHIBITION, 1855.

### OUVERTURE DE L'EXPOSITION UNIVERSELLE.

*Paris, 15 Mai.*

Le prince Napoléon, se tournant vers l'Empereur, lui a adressé le discours suivant :

“SIRE,

“L'Exposition universelle de 1855 s'ouvre aujourd'hui, et la première partie de la tâche que vous nous avez donnée est remplie.

“Une Exposition universelle, qui en tout temps eût été un fait considérable, devient un fait unique dans l'histoire par les circonstances au milieu desquelles celle-ci se produit. La France, engagée depuis un an dans une guerre sérieuse à 800 lieues de ses frontières, lutte avec gloire contre ses ennemis. Il était réservé au règne de Votre Majesté de montrer la France digne de son passé dans la guerre, et plus grande qu'elle ne l'a jamais été dans les arts de la paix. Le peuple français fait voir au monde que toutes les fois que l'on comprendra son génie et qu'il sera bien dirigé, il sera toujours la grande nation.

“Permettez-moi, Sire, de vous exposer, au nom de la commission impériale, le but que nous avons voulu atteindre, les moyens que nous avons employés, et les résultats que nous avons obtenus.

“Nous avons voulu que l'Exposition universelle ne fût pas uniquement un concours de curiosité, mais un grand enseignement pour l'agriculture, l'industrie et le commerce, ainsi que pour les arts du monde entier. Ce doit être une vaste enquête pratique, un moyen de mettre les forces industrielles en contact, les matières premières à portée du producteur, les produits à portée du consommateur; c'est un nouveau pas vers le perfectionnement; cette loi qui vient du Créateur, ce premier besoin de l'humanité et cette indispensable condition de l'organisation sociale.

“Quelques esprits ont pu s'effrayer d'un pareil concours, et ont naguère cherché à le retarder; mais vous avez voulu que les premières années de votre règne fussent illustrées par une Exposition du monde entier, suivant en cela les traditions du premier Empereur, car l'idée d'une Exposition est éminemment française. Elle a progressé avec le temps, de nationale elle est devenue universelle.

“Nous avons suivi nos voisins et alliés, qui ont en la gloire du premier essai; nous l'avons complété par l'appel aux beaux-arts.

“Votre Majesté a constitué la commission impériale le 24 décembre 1853. Notre premier travail

### OPENING OF THE UNIVERSAL EXHIBITION.

*Paris, May 15.*

Prince Napoleon's address at the opening on 15th May was as follows:—

“SIRE,

“The Universal Exhibition of 1855 is opened to-day, and the first part of the task intrusted to us is accomplished. A universal exhibition, which at any time would have been a great fact, becomes unique in history from the circumstances under which it is produced. France, engaged in a serious war at 800 leagues from her frontiers, struggles with glory against her enemies. It was reserved for the reign of your Majesty to show France worthy of the past in war, and greater than ever she was in the arts of peace. The French people show the world that whenever its genius is understood and is well directed, it will always be the great nation.

“Allow me, Sire, to explain to you, in the name of the Imperial commission, the object we had in view, the means which we have employed, and the results which we have obtained.

“We wished that the Universal Exhibition should not be exclusively an attraction for the curious, but a great school for agriculture, industry, and commerce, and for the arts of the whole world. It is to be a great practical investigation—a means for bringing the powers of industry into contact, of placing raw materials within reach of the producer, the produce within reach of the consumer; it is another step towards perfection—that law which emanates from the Creator—that first want of humanity, and that indispensable condition of social organization.

“Some minds may have been startled at such a concourse, and wished not long since to adjourn it, but it was your wish that the first years of your reign should be rendered famous by an Exhibition of the whole world, following therein the traditions of the first Emperor, for the idea of an Exhibition is eminently French; it has progressed with time, and, from being national, it has become universal.

“We have followed our neighbours and allies, who have had the glory of the first attempt; we completed it by an appeal to the fine arts.

“Your Majesty constituted the Imperial Commission on the 24th of December, 1853. Our first labour was the general regulations, which you approved by a decree of the 6th of April, which has become the constituent law of the Exhibition, and

a été le règlement général que vous avez approuvé par décret du 6 avril, qui est devenu la loi constitutive de l'Exposition, et qui comprend une nouvelle classification que nous croyons plus rationnelle.

“ L'accord le plus parfait a régné entre les membres de la commission, et je suis d'autant plus heureux de le constater, que les tendances, les opinions et les points de départ de mes collègues étaient très différents. La diversité d'opinions nous a éclairés sans nous entraîner, l'importance de notre mission a écarté tout dissensément.

“ Deux précédents nous ont naturellement guidés : les Expositions françaises et l'Exposition universelle de 1851. Quelques modifications ont cependant été apportées ; elles sont toutes dans un sens de liberté et de progrès.

“ Nous avons établi pour l'Exposition un tarif douanier exceptionnel d'où le mot de *prohibition* a été effacé. Tous les produits exposables sont entrés en France avec un droit *ad valorem* de 20 pour 100. Nous avons trouvé le plus bienveillant concours dans la direction des douanes, et j'espère que nos hôtes étrangers emporteront une bonne impression de leurs relations avec cette administration.

“ La même liberalité a été appliquée dans les transports, dont nous avons pris les frais à notre charge depuis la frontière.

“ Enfin, par une innovation hardie qui n'avait pas été faite à Londres, les produits exposés peuvent porter l'indication de leur prix, qui devient ainsi un élément sérieux d'appreciation pour les récompenses. Tous ceux qui s'occupent des questions industrielles comprendront combien ce principe est important et quelles peuvent en être les conséquences, malgré certaines difficultés d'application.

“ Dans les beaux-arts, deux systèmes se présentaient : fallait-il faire une Exposition pour les œuvres, sans se préoccuper de savoir si les artistes étaient morts ou vivants, ou pour les artistes, en n'admettant que les œuvres des vivants ?

“ La première idée a été soutenue ; elle répondait peut-être mieux au programme qui voulait un concours de l'art au dix-neuvième siècle ; elle n'a cependant pas été adoptée à cause des difficultés d'exécution qu'elle soulevait.

“ Nous avons accueilli sans révision toutes les œuvres des artistes étrangers admises par leurs comités ; nous n'avons été sévères que pour nous-mêmes. La tâche d'un jury d'admission est difficile et ingrate, surtout dans une Exposition universelle, où les principes des Expositions ordinaires n'étaient plus applicables, et où le jury avait à choisir les armes de la France dans cette lutte qui s'agrandissait.

“ L'insuffisance du bâtiment nous a suscité des difficultés sérieuses. La construction d'un édifice spécial ayant été écartée, il a fallu nous installer dans le Palais de l'Industrie, dont les inconvénients viennent de ce qu'il n'a pas été établi en vue d'une Exposition aussi vaste.

“ Nous tenons à le dire hautement à Votre Majesté et à l'Europe, le concours des exposants a été si grand, que la place nous a manqué, malgré les 117,840 mètres carrés de superficie, sur lesquels 53,900 mètres carrés de surface exposable.

which comprises a new classification, which we believe more rational.

“ The most perfect harmony has prevailed among the members of the commission, and I am the more happy in stating it, as the tendencies, opinions, and views of my colleagues were very different. The diversity of opinion enlightened us without impeding us—the importance of our mission put aside all dissent.

“ Two precedents naturally guided us—the French exhibitions and the Universal Exhibition of 1851. Some modifications were, however, adopted ; they are all in the direction of freedom and progress.

“ We established for the Exhibition an exceptional Customs' tariff, from which the word *prohibition* was erased. All exhibitable produce entered France at an *ad valorem* duty of 20 per cent. We found the most hearty assistance in the direction of the Customs, and I trust that our foreign guests will take away with them a good impression of their relations with that administration.

“ The same liberality was shown with regard to transport, the expense of which was defrayed by us from the frontier.

“ Finally, by a bold innovation, which was not made in London, the produce exhibited may be labelled with its price, which thus becomes an important element of appreciation for reward. All who are engaged in commercial pursuits will understand the importance of this principle, and the consequences which may result therefrom, notwithstanding certain difficulties of application.

“ In the Fine Arts two systems offered themselves. Was it to be an Exhibition for works of art, without regard to whether the artists were living or dead, or for artists, admitting only the works of the living ?

“ The first idea was supported ; it responded better, perhaps, to the programme which demanded an assemblage of art in the nineteenth century. It was not, however, adopted, because of the difficulties of execution to which it gave rise.

“ We have accepted, without revision, all the works of foreign artists admitted by their committees ; we have only been severe towards ourselves. The task of a jury of admission is a difficult and an ungrateful one, especially in a universal exhibition, where the principles of ordinary exhibitions were no longer applicable, and where the jury had to select the weapons of France for this struggle, which was growing in dimensions.

“ The insufficient size of the building caused us serious difficulties. The construction of a special edifice having been set aside, it was necessary for us to instal ourselves in the Palace of Industry, the inconvenience of which arises from the fact, that it was not built with a view to so vast an exhibition.

“ We have to declare publicly to your Majesty and to Europe that the concourse of exhibitors was so great that we stood in need of room, notwithstanding the 117,840 square metres of surface, of which 53,900 square metres could be made available for exhibiting.

“ Obliged to recommend great reserve to the committees of admission, we could not depart from

" Obligés de recommander aux comités d'admission une grande réserve, nous ne pouvions nous en départir qu'à mesure qu'il nous était permis de disposer d'un peu plus d'emplacement; ce défaut d'ensemble dans le commencement des opérations a nui à la régularité et à la justice des admissions, et a rendu encore plus difficile la tâche des comités locaux, auxquels je me plaît à rendre hommage pour le concours qu'ils nous ont prêté."

" Des retards fâcheux ont eu lieu dans les travaux, malgré l'activité et l'intelligence de leur direction; mais on avait vraiment trop présumé de ce qu'il était possible de faire. Ce vaste et splendide palais a été construit en moins de deux ans et n'est pas encore complètement terminé; nous avons pensé que le meilleur moyen d'en presser l'achèvement était d'y installer l'Exposition, dont l'ouverture ne pouvait plus être retardée.

" La séparation du bâtiment affecté aux beaux-arts a tout d'abord été reconnue indispensable, et cette construction provisoire a été achevée à l'époque fixée. A mesure que l'Exposition prenait du développement, on décidait une construction nouvelle. Pendant que j'étais en Orient pour le service de la France et de Votre Majesté, une annexe de 1,200 mètres de long sur le bord de la Seine a été établie. Cette annexe, qui contenait les machines en mouvement, sera terminée dans quinze jours.

" Depuis quelques semaines seulement le Panorama a été reconnu indispensable; il doit être entouré d'une vaste galerie qui mettra en communication le bâtiment principal avec l'annexe, et qui sera prête avant un mois.

" Alors l'Exposition sera complète.

" Dans notre pays, c'est habituellement le gouvernement qui se charge de toutes les grandes entreprises; pour arrêter l'exagération de cette tendance, Votre Majesté a donné un grand essor à l'industrie privée. La Compagnie à laquelle l'exploitation du palais de l'Industrie a été concédée devait trouver dans le prix d'entrée la rémunération du capital employé à la construction; de là la nécessité d'un prix d'entrée. Nous avons cependant sauvegardé autant que possible les intérêts du peuple en obtenant que les dimanches l'entrée fut réduite à 20 centimes.

" Nous pouvons dès à présent, grâce au catalogue fait avec une grande activité, indiquer le nombre des exposants. Il ne s'élèvera pas à moins de 20,000, dont 9,500 de l'empire français et 10,500 environ de l'étranger.

" La puissance que nous combattions elle-même n'a pas été exclue. Si les industriels russes s'étaient présentés en se soumettant aux règles établies pour toutes les nations, nous les aurions admis, afin de bien fixer la démarcation à établir entre les peuples slaves qui ne sont point nos ennemis, et ce gouvernement dont les nations civilisées doivent combattre la prépondérance.

" A la fin de l'Exposition, quand nous proposerons à Votre Majesté les récompenses à décerner, nous pourrons juger les résultats de cette grande Exposition, que nous prions Votre Majesté de déclarer ouverte."

it until a little more room was placed at our disposal. This want of *ensemble* at the commencement of operations was detrimental to the regularity and justice of admissions, and rendered the task of the local committees still more difficult; and I tender them our thanks for the assistance they have given us.

" Lamentable delays took place in the works, notwithstanding the activity and intelligence of the directors, but, in fact, too much had been presumed upon. This vast and splendid palace was constructed in less than two years, and is not yet completely finished; we thought that the best way to hasten its completion was to instal the Exhibition, the opening of which could brook no longer delay.

" The separation of the building devoted to the Fine Arts was at the very first recognized as indispensable, and that provisional construction was ready at the time fixed. As the Exhibition developed itself a new construction was decided upon. While I was in the East, in the service of France and of your Majesty, a wing 1,200 metres in length on the banks of the Seine was built; this addition, which contains the machinery in motion, will be finished in fortnight.

" It was only within the last few weeks that the Panorama was deemed indispensable; it is to be surrounded by a vast gallery, which will connect the main building with the new wing, and which will be ready within a month.

" The Exhibition will then be complete.

" In our country it is usually the Government which undertakes all great enterprises; to stop the exaggeration of that tendency your Majesty has given a great impulse to private industry. The Company to whom the management of the Palace of Industry was conceded were to find the return of their capital in the price of admission; hence the necessity of a price of admission. We have, however, provided as much as possible for the interests of the people, by stipulating that on Sundays the price of admission shall be reduced to 20 centimes.

" We can already indicate, thanks to the catalogue, compiled with great activity, the number of exhibitors. It will not be less than 20,000, of which number 9,500 belong to the French empire, and about 10,500 to foreign States.

" The very Power with which we are at war has not been excluded. If Russian producers had presented themselves, submitting to the regulations established for all nations, we should have admitted them, so as to define distinctly the demarcation to be established between the Slavonic races, who are not our enemies, and that Government the preponderance of which it is the duty of civilized nations to combat.

" At the close of the Exhibition, when we shall propose to your Majesty the prizes to be awarded, we shall be able to judge of the results of this great Exhibition, which we beg of your Majesty to declare open."

L'Empereur a répondu à S. A. I. :

" MON CHER COUSIN,

" En vous plaçant à la tête d'une commission appelée à surmonter tant de difficultés, j'ai voulu vous donner une preuve particulière de ma confiance. Je suis heureux de voir que vous l'avez si bien justifiée. Je vous prie de remercier, en mon nom, la commission des soins éclairés et du zèle infatigable dont elle a fait preuve. J'ouvre avec bonheur ce temple de la paix qui convie tous les peuples à la concorde."

The Emperor replied.—

" My dear Cousin,—In placing you at the head of a commission which had so many difficulties to overcome, I wished to give you a particular proof of my confidence. I am happy to find that you have so fully justified it. I beg of you to thank the Commission in my name for the enlightened care and indefatigable zeal it has displayed.

" I open with happiness this Temple of Peace, which invites all nations to concord."

### CLÔTURE DE L'EXPOSITION UNIVERSELLE.

*Paris, 15 Novembre.*

S. A. I. le Prince Napoléon, président de la Commission impériale, a lu le rapport suivant, que Leurs Majestés et tous les assistants ont écouté debout:—

" SIRE,

" Il y a six mois, à l'ouverture de l'Exposition, j'ai eu l'honneur de soumettre à Votre Majesté le résumé des travaux accomplis par la Commission que je préside pour l'exécution de la première partie de sa mission.

" À cette époque, on pouvait ne pas prévoir le succès qui vient de couronner nos efforts. L'opinion publique était frappée, avant tout, des difficultés de la situation. Une guerre lointaine et acharnée, un siège opinionnaire, sans précédent dans l'histoire, attiraient au loin les regards inquiets du pays. Mais, dans notre patrie, les chances de succès se mesurent à la grandeur des entreprises. Votre Majesté poursuivit tranquillement son but; ses prévisions se sont réalisées: l'ennemi, qui comptait déjà autant de défaites que de rencontres avec notre glorieuse armée, a enfin été chassé de la ville de Sébastopol, tombée devant la valeur de nos soldats; notre marine s'est emparée de chaque point de la côte qu'elle a jugé utile d'attaquer. L'alliance des peuples unis contre la barbarie ne s'opérait pas seulement sur les champs de bataille: la Souveraine de la Grande-Bretagne, par sa présence au milieu de nous, a donné un gage éclatant des sentiments de la nation anglaise, et le bâton militaire de la civilisation s'est accru d'un peuple petit par son territoire, mais grand par les hauts faits de ses ancêtres et par son avenir.

" Cependant, à l'intérieur, l'Exposition était un spectacle digne des grands faits qui se passaient au dehors de la France. Ici également, les premiers pas ont rencontré de nombreuses difficultés. Le classement des produits du travail de tant de nations, représentées par vingt-cinq mille exposants, a nécess-

### CLOSING OF THE UNIVERSAL EXHIBITION.

*Paris, November 15.*

At the close of the Exhibition on the 15th November 1855, Prince Napoleon read the following Address:—

" SIRE,

" Six months ago, at the opening of the Exhibition, I had the honour to submit to your Majesty the summary of the works accomplished by the Commission over which I preside, in execution of the first part of its mission.

" At that period, no one could foresee the success which has just crowned our efforts. Public opinion was, above all, struck with the difficulties of the state of things. A distant and sanguinary war, a siege without precedent in history for its obstinacy, attracted to a distance the uneasy attention of the country. But in our country, the chances of success are measured by the greatness of the undertakings. Your Majesty tranquilly pursued your object; your previsions have been realised; the enemy, who had already undergone as many defeats as they had encounters with our glorious army, has at length been driven out of Sebastopol, which has fallen before the valour of our soldiers; and our navy has taken possession of every point of the coast which it has been thought useful to attack. The alliance of nations, united against barbarism, does not only operate on fields of battle. The Sovereign of Great Britain, by her presence in the midst of us, has given a striking pledge of the sentiments of the English nation, and the militant bâton militaire of civilisation has been increased by a nation, small by its territory, but great from the exalted acts of its ancestors, and by its future destiny.

" At home, however, the Exhibition presented a spectacle worthy of the great events which were occurring out of France. Here, too, the first steps were encumbered with difficulties. The classification of the products of the labour of so many nations, represented by twenty-five thousand exhibitors re-

sité un zèle tout particulier, des soins constants et minutieux, qui ont fini par tirer l'harmonie de la confusion, et ont permis au travail de poursuivre en pleine lumière ses études et de signaler les œuvres marquantes de l'industrie et des arts.

“ Les âpres rivalités, les haines internationales naissent de l'isolement : il suffit souvent de rapprocher les peuples pour éteindre ces haines. Sous ce rapport, l'Exposition universelle a produit un immense résultat.

“ De tous les coins du globe, les visiteurs ont afflué à Paris. Le spectacle des progrès réels accomplis dans la voie du bien-être moral et matériel a développé parmi tous, étrangers et Français, des sentiments de considération réciproque.

“ C'est ainsi que se propage la fraternité des peuples.

“ Voilà ce que peuvent, dans cette France restituée à sa mission, la volonté et la persévérance appuyées sur le droit qui soutient et sur la force qui exécute les idées conformes à la conscience du pays et à la vraie opinion publique.

“ J'ai soumis à Votre Majesté une série de décrets concernant l'installation et les travaux du jury international. Ce jury comprend 390 membres, divisés en 31 classes et 8 groupes ; il est composé d'hommes éminents de tous les pays et dans toutes les branches du savoir humain. Ce jury a consciencieusement et utilement rempli sa mission, si diverse, si étendue, si compliquée !

“ L'indépendance la plus complète a été laissée aux jurés, et je me plaît à revenir sur l'idée exprimée déjà d'une façon générale, et à la confirmer d'un fait que le dois signaler, à l'honneur de l'esprit de notre époque. Parmi ces représentants de tant de peuples, il ne s'est certainement pas manifesté plus de dissidence internationale qu'il n'y en avait jadis entre nos provinces de France.

“ De l'émulation partout et toujours, de la rivalité nulle part. Aussi voyons nous l'esprit qui anime cette honorable assemblée se traduire en faits d'une grande portée, et qui donnent, pour ainsi dire, la mesure des conséquences que produira successivement l'Exposition universelle de Paris.

“ Un vœu unanime a été émis pour l'introduction de l'uniformité des monnaies, poids et mesures ; des liens sérieux se sont formés pour amener l'Europe à ne former qu'une grande famille, ainsi que le prédisait l'Empereur, votre prédécesseur.

“ Les travaux du jury ont été poussés avec une infatigable activité : tous les rapports seront publiés avant la fin de l'année.

“ Appelé à la présidence du conseil des présidents et vice-présidents, j'ai eu devoir m'y préparer en suivant la trace du jury international.

“ Accompagné de quelques hommes dévoués et savants, j'ai examiné en détail les œuvres remarquables des artistes et les produits de l'industrie. J'ai pu ainsi me rendre compte de la grandeur du progrès réalisé dans le présent et de ses conséquences prochaines.

“ Les difficultés sérieuses, impossibles même à trancher d'une façon absolue, se sont présentées

requiert special zeal, constant and minute care, which in the end drew forth harmony from the midst of confusion, and have opened to labour a clear path for continuing its studies and for noticing the remarkable objects of industry and art.

“ Fierce rivalry and international hatred are produced by insulation : to quench such sentiments, it often suffices to bring the peoples together. With respect to this point, the Exhibition has produced an immense result.

“ From all parts of the world visitors have flocked to Paris. The spectacle of the real progress attained with regard to moral and physical well-being, has developed amongst all, both Frenchmen and foreigners, sentiments of reciprocal esteem.

“ It is thus that is spread the brotherhood of peoples.

“ This is what can be done in this France, restored to her mission, by force of will and perseverance based upon the right which supports, and on the strength which executes the ideas which are consonant with the feelings of the country and true public opinion.

“ I have submitted to your Majesty a series of decrees touching the installation and the labours of the international jury. This jury consists of 390 members, divided into 31 classes and 8 groups ; it is composed of the most eminent men of every country, and in every branch of human knowledge. This jury has conscientiously and usefully performed its mission, so diverse, so immense, so complicated !

“ The most complete independence has been left to the juries, and I am pleased to revert to an idea which I have before expressed in a general manner, and to confirm it by a fact, which I must point out, to the honour of the spirit of our age. Among the representatives of so many nations, there has not manifested itself any more international dissidence than formerly existed between the different provinces of France. Emulation was everywhere present—rivalry nowhere.

“ Thus it is that we see the spirit which animated this honourable assembly develop itself into facts of a high import, which enable us to measure as it were the consequences which will result from the Universal Exhibition of Paris.

“ A unanimous wish has been expressed for the introduction of uniformity in coins, weights, and measures ; serious bonds have been formed to produce in Europe only one great family, as the Emperor, your predecessor, predicted. The task of the jury has been carried on with indefatigable activity ; all the reports will be published before the end of the year. Being called on to preside at the Council of the Presidents and Vice-Presidents, I thought it my duty to prepare myself for it by following the trace of the international jury.

“ Accompanied by some devoted and learned men, I have examined in detail the remarkable works of the artists, and the productions of industry. I have thus been able to render myself an account of the extent of the progress realised in the present, and of its consequences in the future.

“ Serious difficulties, which are even impossible to overcome in an absolute manner, presented them

à l'occasion de la classification et de la nature des récompenses à décerner.

“ Dans l'industrie, le progrès de toutes les spécialités de la production est si général, de tous les points surgissent des mérites et des services si éclatants, que, si ce grand concours universel devait se renouveler, il serait impossible de décerner des récompenses individuelles, à moins de détruire totalement leur valeur par leur nombre. Aussi, nous nous sommes vus forcés de fixer aux récompenses des limites qui peuvent paraître restreintes.

“ Les jurys de l'Industrie, après des délibérations multiples et laborieuses, ont eu l'honneur de recommander à Votre Majesté un certain nombre de distinctions. De plus, ils ont voté :

- “ 112 grandes médailles d'honneur,
- 252 médailles d'honneur,
- 2,300 médailles de 1<sup>re</sup> classe,
- 3,900 médailles de 2<sup>e</sup> classe,
- 4,000 mentions honorables.

“ Dans les Beaux-Arts, le rôle du jury a été plus difficile et plus délicat encore. Je me suis abstenu d'y paraître, et n'ai fait que sanctionner ses choix. J'ai seulement témoigné le désir qu'il me fut permis de proposer à Votre Majesté une haute distinction pour celui de nos artistes qui, suivant la glorieuse tradition des beaux siècles de l'antiquité, a consacré toute sa vie et son talent au genre que, dans mon opinion personnelle, je regarde comme le type éternel du beau.

“ Les récompenses décernées aux Beaux-Arts sont réparties ainsi qu'il suit :—

- “ 40 décorations données par Votre Majesté ;
- “ 16 médailles d'honneur votées par le jury ;
- “ 67 médailles de 1<sup>re</sup> classe ;
- “ 87 médailles de seconde classe ;
- “ 77 médailles de troisième classe ;
- “ 222 mentions honorables.

“ En décernant ces récompenses au travail, vous prouvez une fois de plus, Sire, que, dans la France de nos jours, la vraie, la seule noblesse se compose des soldats et des travailleurs qui se distinguent.

“ L'appréciation juste de l'époque de l'Exposition universelle, époque qui, je l'espère, restera gravée dans l'histoire, m'amène à pouvoir constater le rôle échu à la France et le triomphe qu'elle recueille en l'accomplissant. Au milieu des efforts et des sacrifices d'une grande guerre, au milieu des embarras d'une mauvaise récolte, elle a montré au monde sa force et sa richesse en ne se relâchant pas un instant de ses travaux pacifiques.

“ Quelle est donc la source où elle a puisé ce redoublement d'énergie et de virtualité ? Cette source, c'est le travail libre mais incessant, cette grande loi de l'humanité, qui fait sortir l'homme de la sauvagerie et lui permet de s'acheminer sûrement vers les sommets de la civilisation.

“ J'ajouterais, en empruntant des paroles célèbres, que : ‘Le problème de l'avenir est de faire partager à l'universalité ce qui n'est que le partage du petit nombre.’”

“ La postérité constatera que nous sommes à une de ces époques où une révolution dynastique répond

selves with regard to the classification, and the nature of the recompenses to be awarded.

“ In industry the progress of all the specialities of production is so general, that if another universal competition were to take place, it would be impossible to award individual recompenses, without totally destroying their value by their number. We have been thus forced to fix limits to the recompenses which may appear restricted.

“ The juries of Industry, after multiplied and laborious deliberations, have had the honour to recommend to your Majesty a certain number of distinctions. They have also voted 112 grand medals of honour, 252 medals of honour, 2,300 medals 1<sup>st</sup> class, 3,900 medals of 2<sup>nd</sup> class, and 4,000 honourable mentions. In the Beaux-Arts, the work of the jury has been still more difficult. I abstained from appearing there, and only sanctioned its choice. I have only testified the desire that I might be permitted to propose to your Majesty a high distinction for such of our artists who, following the glorious tradition of the bright ages of antiquity, have devoted their whole lives and talent to a style which, in my personal opinion, I regard as the eternal type of what is beautiful.

“ The recompenses awarded to the Beaux-Arts are divided as follows :—40 decorations given by your Majesty ; 16 medals of honour voted by the jury ; 67 medals first class ; 87 second class ; 77 third class ; and 222 honourable mentions.

“ In awarding these recompenses to labour, you will, Sire, prove once more, that in the France of our day, the true and the sole nobility is composed of the soldiers and workmen who distinguish themselves. The just appreciation of the epoch of the Universal Exhibition—a period which I hope will remain engraven in history—enables me to point out the triumph which France has achieved in accomplishing it. In the midst of the efforts and sacrifices of a great war, and the embarrassments of a deficient harvest, she has shown to the world her strength and her riches, by not relaxing for a moment in her pacific labours.

“ What, then, is the source from whence she has drawn this increased energy and power ? This source is free but incessant labour, that great law of humanity, which raises man from the savage, and leads him towards the summit of civilisation. I will add in the celebrated words that : ‘The problem which the future has to solve is to disseminate on all sides that which only belongs to a small number.’ Posterity will state, that we are at one of those epochs, where a dynastic revolution responds to a great want of new society. Races as well as individuals get old, and universal suffrage was to be the

à un grand besoin de la société nouvelle. Les races vieillissent comme les individus, et le suffrage universel devait être la base du Gouvernement appelé à conduire la France vers son nouveau but.

“ Dès aujourd’hui, en contemplant les faits sans passion, sans préjugés, on peut dire que vous avez, Sire, donné à la France de la gloire et du travail.

“ Que ceux qui, uniquement préoccupés de venger leur impuissance, s’efforcent à glorifier le passé et à représenter le peuple français comme des Romains de la décadence, en prennent bien leur parti: leurs efforts dans l’avenir seront frappés de stérilité comme ils l’ont été dans le passé.

“ Les étrangers reporteront dans leur pays, avec le souvenir de notre hospitalité, la conviction de tout ce que peut faire la France quand le sentiment national a remplacé, dans son Gouvernement, l’agitation stérile des ambitions subalternes.

“ Aujourd’hui, nous avons de nombreuses armées, des flottes redoutables, des alliés puissants. Les peuples font des voeux pour nos succès; ils fêtent nos victoires, ils acclament nos triomphes, et ils le font parce qu’ils savent que notre intérêt national est un intérêt européen.

“ A côté des résultats politiques de l’Exposition universelle, peut-être jugerez-vous, Sire, qu’elle doit être appellée à donner le signal de l’amélioration dans les conditions sociales.

“ Le perfectionnement des méthodes et des instruments de travail généralise le progrès. Une sorte d’organisation naturelle s’établit entre tous les peuples, et semble pousser à la modification de ce qu’il y a de trop restrictif dans les lois qui régulent leurs échanges.

“ L’épreuve que vient de subir la France prouve qu’elle peut entrer dans cette voie, qui doit assurer l’intérêt du consommateur sans effrayer le producteur ni diminuer son travail.

“ L’agriculture, qui excite à un si haut degré la sollicitude de Votre Majesté, doit se féliciter du perfectionnement des machines; peu à peu, l’homme des champs s’affranchit de la partie brutale de sa peine, et si, à côté de ces admirables engins qui vont élargir le domaine de sa liberté et de son intelligence, il est mis en possession du crédit, le plus puissant des instruments du travail, de ce crédit véritable qui, dans le calme, développe la prospérité, et, aux moments de crise, diminue le mal au lieu de l’augmenter, nul doute que sous peu la situation de nos agriculteurs ne subisse une notable amélioration.

“ Je ne fais qu’exprimer ici les idées dont Votre Majesté poursuit déjà la réalisation, et qu’elle a commencé à appliquer.

“ Il me reste un dernier et bien agréable devoir: c’est celui d’exprimer ici toute ma reconnaissance à Votre Majesté, qui n bien voulu me mettre à même de servir notre pays, dans la même année, sur les champs de bataille et dans ce concours pacifique.

“ Je tiens aussi à remercier hautement les hommes intelligents et dévoués qui m’ont secondé, et que j’ai toujours trouvés à la hauteur de leurs devoirs.”

basis of the Government called to lead France towards a new object.

“ From the present time, in contemplating facts without passion and without prejudice, it may be said that you, Sire, have given to France glory and employment.

“ Let those who are solely engaged in avenging their own weakness, and who strive to glorify the past and to represent the French people like the Romans in their decline, resign themselves; their efforts will be as useless in the future as they have been in the past.

“ Foreigners will carry back to their country, with the remembrance of our hospitality, the conviction of all that France can do, when the national sentiment has replaced in her Government the sterile agitation of common-place ambitions. Now we have numerous arms, formidable fleets, and powerful allies. Nations offer up prayers for our success; they *fête* our victories and proclaim our triumphs, and they do so because they know that our national interest is a European one.

“ By the side of the political results of the Universal Exhibition, you will perhaps judge, Sire, that it must be called on to give the signal for an amelioration in social conditions. The improvement in methods and instruments of labour generalises progress. A sort of natural organisation is established between all nations, and appears to impel towards the modification of all that is too restrictive in the laws which regulate our foreign trade. The trial which France has just undergone proves that she may enter on that path which must secure the interest of the consumer, without alarming the producer or diminishing his employment.

“ Agriculture, which excites so highly your Majesty’s solicitude, should rejoice in the improvement of the machines: by degrees the labourer divests himself of the brutish part of his work, and if, by the side of those admirable machines which will extend the domain of his liberty and of his intelligence, credit be granted to him, that most powerful tool, that real credit which in quiet times develops prosperity, and when a crisis supervenes diminishes instead of increasing the evil, there is no doubt but that shortly the state of our agricultural population will be greatly ameliorated.

“ I only here express the ideas which your Majesty is already trying to realize, and has begun to apply.

“ I have one more duty to perform, and it is a very agreeable one: I must here express all my gratitude to your Majesty for having placed me in a position to serve our country, in the same year, on the field of battle and in this peaceful gathering.

“ I must also openly thank those intelligent and devoted men who have seconded my exertions, and whom I have ever found equal to the duty they had to perform.”

Après la lecture de ce rapport, l'Empereur a répondu d'une voix énergiquement accentuée :

“MESSIEURS,

“L'EXPOSITION qui va finir offre au monde un grand spectacle. C'est pendant une guerre sérieuse que de tous les points de l'univers sont accourus à Paris, pour y exposer leurs travaux, les hommes les plus distingués de la science, des arts et de l'industrie. Ce concours dans des circonstances semblables est là, j'aime à le croire, à cette conviction générale, que la guerre entreprise ne menaçait que ceux qui l'avaient provoquée, qu'elle était poursuivie dans l'intérêt de tous, et que l'Europe, loin d'y voir un danger pour l'avenir, y trouvait plutôt un gage d'indépendance et de sécurité.

“Néanmoins, à la vue de tant de merveilles étalées à nos yeux, la première impression est un désir de paix.—La paix seule, en effet, peut développer encore ces remarquables produits de l'intelligence humaine.—Vous devez donc tous souhaiter comme moi que cette paix soit prompte et durable. —Mais, pour être durable, elle doit résoudre nettement la question qui a fait entreprendre la guerre. Pour être prompte, il faut que l'Europe se prononce; car, sans la pression de l'opinion générale, les luttes entre grandes puissances menacent de se prolonger; tandis qu'au contraire, si l'Europe se décide à déclarer qui a tort ou qui a raison, ce sera un grand pas vers la solution.—A l'époque de civilisation où nous sommes, les succès des armées, quelque brillants qu'ils soient, ne sont que passagers; c'est, en définitive, l'opinion publique qui remporte toujours la dernière victoire.

“Vous tous donc qui pensez que les progrès de l'agriculture, de l'industrie, du commerce d'une nation contribuent au bien-être de toutes les autres, et que plus les rapports réciproques se multiplient, plus les préjugés nationaux tendent à s'effacer, dites à vos concitoyens, en retournant dans votre patrie, que la France n'a de haine contre aucun peuple, qu'elle a de la sympathie pour tous ceux qui veulent comme elle le triomphe du droit et de la justice; dites-leur que, s'ils désirent la paix, il faut qu'ouvertement ils fassent au moins des vœux pour ou contre nous; car, au milieu d'un grave conflit européen, l'indifférence est un mauvais calcul, et le silence une erreur.

“Quant à nous, peuples alliés pour le triomphe d'une grande cause, forgeons des armes sans ralentir nos usines, sans arrêter nos métiers; soyons grands par les arts de la paix comme par ceux de la guerre; soyons forts par la concorde, et mettons notre confiance en Dieu pour nous faire triompher des difficultés du jour et des chances de l'avenir.”

The Emperor replied as follows:—

“MESSIEURS,

“The Exhibition now about to close offers a grand spectacle to the world. It is during a serious war that the most distinguished men of science, of art, and industry, have come from all parts of the Universe to Paris to exhibit their works. This conourse in such circumstances is owing, I am glad to believe, to the general conviction that the war which we have undertaken menaces only those who have provoked it; that it has been pursued in the interest of all; and that Europe, far from seeing in it a future danger, finds rather in it a pledge of independence and security.

“Nevertheless, with so many marvellous works exposed to our view, the first impression is a desire for peace; peace alone, in fact, can further develop these remarkable products of human intelligence. You ought all, then, to wish with me that this peace may be prompt and durable.

“But, to be durable, it must distinctly settle the question for which the war was commenced. To be prompt, Europe must declare itself: for, without the pressure of general opinion, contests between great Powers threaten to be prolonged; while, on the contrary, if Europe resolves to declare who is right and who is wrong, a great step will be taken towards the solution.

“In the epoch of civilisation at which we have arrived, the successes of armies, however brilliant, are but transient: it is public opinion which in the end carries off the final victory.

“All of you, then, who think that the progress of the agriculture, industry, and commerce of one nation contributes to the well-being of all others, and that, as mutual relations multiply, national prejudices fade—tell your fellow-citizens, on returning to your country, that France has no hatred for any people, that she has sympathy for all who desire with her the triumph of right and justice.

“Tell them that, if they desire peace, it is necessary that they at least offer some wishes for or against us; for, in the midst of a great European conflict, indifference is a bad calculation, and silence an error.

“As for us, peoples who are allied together for the triumph of a great cause, let us forge arms without slackening our manufactures or stopping our looms; let us be great by the arts of peace as well as by the arts of war; let us be strong by union, and put our confidence in God, that we may triumph over the difficulties of the day, and the chances of the future.”

NOTES SUR LE PROGRÈS COMMERCIAL DU ROYAUME-UNI DE  
LA GRANDE-BRETAGNE ET D'IRLANDE.

*MEMORANDA ON THE COMMERCIAL PROGRESS OF THE UNITED  
KINGDOM OF GREAT BRITAIN AND IRELAND.*

**LES Manufactures et le Commerce du Royaume-Uni**  
ont fait un grand progrès depuis que les mesures de  
*Free-trade* furent adoptées par sir Robert Peel en  
1843.\* Ces mesures avaient en vue :—

1<sup>o</sup> La suppression des droits sur les matières premières et sur les articles de première nécessité ;

2<sup>o</sup> L'abolition des droits différenciels, qui mettaient des entraves au commerce, haussaient les prix et limitaient la consommation ;

3<sup>o</sup> La réduction des droits dont la diminution devait avoir pour effet d'étendre le commerce, de faire bénéficier le consommateur et de ne pas diminuer le revenu ;

4<sup>o</sup> L'entière abolition des droits sur quelques articles produisant un revenu insignifiant, et courvant à peine les frais de perception ;

5<sup>o</sup> La suppression des drawbacks et autres immunités, comme une source féconde de fraudes.

L'effet de ces changements va être considéré sous trois différents rapports : celui du commerce, de la consommation et du revenu public.

Le rapport des droits sur les matières premières a donné une grande impulsion à notre commerce, en faisant baisser le prix de chaque article et en accroissant beaucoup la demande, soit pour la consommation intérieure, soit pour l'exportation.

En ce qui concerne nos importations, nous n'avons qu'un moyen de les apprécier, c'est la valeur officielle.† Quelque imparfaite que soit cette indication, surtout pour certains articles, c'est cependant une indication assurée pour les comparaisons à faire.

La valeur officielle de nos importations a été :

En 1842, de . . . . .	65,200,000 liv. st.
1853, de . . . . .	123,000,000
Augmentation	57,800,000 liv. st.

Soit 88 pour 100 en onze ans, ou 8 pour 100 par an.‡

**THE Trade and Commerce of the United Kingdom**  
have made considerable progress since the Free-trade  
measures were adopted by Sir Robert Peel in 1842.\*  
These measures had the following main objects in view :—

1. The repeal of duty on Raw Materials, and on articles of prime necessity.

2. The abolition of Differential duties, which tend to check trade, to enhance prices, and to limit consumption.

3. The reduction of duties, even when free from any special objection, the reduction being so adjusted as to extend trade, to benefit the consumer, and not to diminish the revenue.

4. The entire abolition of duty on such articles as yield an insignificant revenue, barely covering the expense of collection.

5. The removal of Drawbacks and Exemptions, as a fruitful source of fraud.

The effect of these changes will now be considered under three different heads; viz., Trade, Consumption, and Revenue.

The repeal of duties upon Raw materials of all descriptions has given a great impulse to our trade, by cheapening every article and by greatly increasing the demand, both for home consumption and for exportation.

With regard to our Imports, we have only one common measure of their extent, viz., their official value.† However imperfect a test this may be of their actual value, especially of particular articles, yet it is an accurate test of quantity, and so far as quantities are concerned, this test will furnish a perfect comparison for all practical purposes.

In 1842 the official value of our Imports was :—

	£.
1842 . . . . .	65,200,000
1853 . . . . .	123,000,000
Increase . . . . .	57,800,000

Thus showing an increase of 88 per cent. in eleven years, or at the rate of 8 per cent. per annum.‡

\* Ces remarques générales ont paru dans le 'Journal des Economistes' (Guillaumin et Cie, éditeurs, rue Richelieu, 14, à Paris), pour les mois de juin, etc. 1855.

† La valeur officielle, depuis longtemps, a cessé de représenter la valeur réelle des importations; elle a été fixée il y a environ 150 ans, et n'a pas été changée depuis.

‡ On a pris dans ces rapprochements l'année 1853, parce qu'à partir de l'année suivante le commerce a été

\* These general remarks were first published in the 'Journal des Economistes' (Paris), for the months of June, &c., 1855. (Guillaumin et Cie, Éditeurs, 14 rue Richelieu, Paris.)

† The official value has long ceased to represent the real value of imports; it was fixed more than 150 years ago, and has not been changed since.

‡ This statement has been brought down to the year 1853 only, as in the following year trade was influenced

Pour les exportations, la valeur réelle ou déclarée nous donne la comparaison suivante :

1842 . . .	47,300,000 liv. st.
1847 . . .	58,842,377
Augmentation	11,542,377
1847 . . .	58,842,377
1853 . . .	98,700,000
Augmentation	39,857,623
1842 . . .	47,300,000
1853 . . .	98,700,000
Augmentation	51,400,000

Soit 24 $\frac{1}{4}$  pour 100, ou 5 pour 100 par an de 1842 à 1847; 69 pour 100, ou 14 pour 100 par an, de 1847 à 1853; 109 pour 100, ou 10 pour 100 par an, de 1842 à 1853.

En constatant ce développement extraordinaire du commerce, il faut cependant considérer que des circonstances tout à fait indépendantes des mesures économiques ont eu une grande part à ces résultats. La découverte des mines d'or en Californie, et plus particulièrement en Australie, a donné à l'exportation un stimulant qui aurait agi même sous l'ancien régime économique. En effet, la valeur des exportations de la Grande-Bretagne aux colonies australiennes s'est élevée, en 1853, à plus de 14 millions de livres, dépassant d'environ 10 millions de livres la valeur de ces exportations dans l'année précédente, et formant 50 pour 100 de l'accroissement des exportations de 1853 sur celles de 1852.

Ces résultats sont encore plus frappants quand on les compare à ceux de la période de 1830 à 1842, année antérieure à l'adoption des mesures de réforme. En effet, la valeur officielle des importations a été :

En 1830, de . . .	46,300,000 liv. st.
1842, de . . .	65,200,000
Augmentation	18,900,000 liv. st.

Soit 40 pour 100 en douze ans, ou 3 $\frac{1}{2}$  pour 100 par an, au lieu de 8 pour 100, comme dans la période de 1842 à 1853.

La valeur réelle ou déclarée de nos exportations a été :

influencée par la crainte de la guerre, et ensuite interrompu quand elle a été déclarée. Dans les années antérieures, le commerce a été dans une situation normale. Quoique les résultats de 1854 soient supérieurs à ceux de 1853, ces derniers représentent plus fidèlement l'effet des mesures de *Free trade* adoptées en 1842.

As to Exports, the real or declared value gives the following comparison:—

Exports in 1842 . . .	£47,300,000
Exports in 1847 . . .	58,842,377
Increase 1847 over 1842	11,542,377
Exports in 1847 . . .	58,842,377
Exports in 1853 . . .	98,700,000
Increase 1853 over 1847	39,857,623
Exports in 1842 . . .	47,300,000
Exports in 1853 . . .	98,700,000
Increase 1853 over 1842	51,400,000

Thus showing an increase of 24 $\frac{1}{4}$  per cent. in 1847, or at the rate of nearly 5 per cent. per annum; and an increase of 69 per cent. in 1853 over 1847, or at the rate of nearly 14 per cent. per annum; and also an increase of 109 per cent. in the year 1853 over 1842, or at the rate of about 10 per cent. per annum.

In estimating the extraordinary development of this trade, it must, however, be borne in mind that circumstances, quite independent of the commercial measures under consideration, have had a great share in bringing about these results. The discoveries of gold in California, and more particularly in Australia, have given a stimulus to the export trade from this country which must have been felt even under a different policy. In proof of this it may be observed, that the value of the British exports to the Australian colonies alone in the year 1853, amounted to more than £14,000,000, being an advance of about 10,000,000, over the value of those exports in the preceding year, and thus constituting 50 per cent. of the total increase in the value of British exports for the year 1853 over 1852.

These results are again the more striking when compared with those exhibited by the period from 1830 to 1842, preceding the adoption of the measures which it is the object of the present Memorandum to consider.

The official value of our Imports was:—

In 1830 . . .	£46,300,000
1842 . . .	65,200,000
Increase . . .	18,900,000

Being an increase of 40 per cent. in twelve years, or at the rate of 3 $\frac{1}{2}$  per cent. per annum, instead of 8 per cent., as in the period between 1842 and 1853.

The real or declared value of our Exports was:

by the apprehension, and interrupted by the actual occurrence, of war, whereas the antecedent period exhibits the normal and natural current of commerce in all its relations. And although the returns of 1854 exhibit larger results than those of 1853, the results of the latter year represent more fairly the ordinary operation of the free-trade measures adopted in 1842.

En 1830, de . . . . .	38,200,000 liv. st.
1842, de . . . . .	47,300,000

Augmentation 9,100,000 liv. st.

Soit 24 pour 100 en douze ans, ou 2 pour 100 par an, au lieu de 10 pour 100, comme dans la période de 1842 à 1853.

Afin de rendre ces comparaisons plus claires, elles sont mises dans l'ordre suivant :—

*Importations.—Valeurs officielles.*

Première période, de 1830 à 1842 :

1830 . . . . .	46,300,000 liv. st.
1842 . . . . .	65,200,000

Augmentation 18,900,000 liv. st.

Soit 40 pour 100 en douze ans, ou 3½ pour 100 par an.

Seconde période, 1842 à 1853 :

1842 . . . . .	65,000,000 liv. st.
1853 . . . . .	123,000,000

Augmentation 58,000,000 liv. st.

Soit 88 pour 100 en onze ans, ou 8 pour 100 par an.

*Exportations.—Valeur déclarée.*

1830 . . . . .	38,200,000 liv. st.
1842 . . . . .	47,300,000

Augmentation 9,100,000 liv. st.

Soit 24 pour 100 en douze ans, ou 2 pour 100 par an.

1842 . . . . .	47,300,000 liv. st.
1853 . . . . .	98,700,000

Augmentation 51,400,000

Soit 109 pour 100 en ouze ans, ou à peu près 10 pour 100 par an.

Il est juste d'observer que les importations et les exportations de 1842 ont été plus faibles que celles de quelques-unes des années précédentes. Il est donc préférable de prendre la moyenne des cinq années finissant à 1830, et celle des cinq années finissant à 1842, comme suit :

*Importations.—Valeurs officielles.*

Moyenne de 1826 à 1830 . . . . .	43,600,000 liv. st.
Moyenne de 1838 à 1842 . . . . .	64,100,000

Augmentation 20,500,000 liv. st.

Soit 47 pour 100 en douze ans, ou 4 pour 100 par an.

In 1830 . . . . .	£38,200,000
1842 . . . . .	47,300,000

Increase . . . . . 9,100,000

Showing an increase of about 24 per cent. in twelve years, or 2 per cent. per annum, in place of 10 per cent. in the period between 1842 and 1853.

These comparisons, for the sake of clearness, may be thus put :

*Official Value of Imports.*

First period, 1830 to 1842 :

1830 . . . . .	£46,300,000
1842 . . . . .	65,200,000

Increase . . . . . 18,900,000

Or in twelve years 40 per cent., or annually 3½ per cent.

Second period, 1842 to 1853 :

1842 . . . . .	£65,000,000
1853 . . . . .	123,000,000

Increase . . . . . 58,000,000

Or in eleven years 88 per cent., or annually 8 per cent.

*Declared Value of Exports.*

1830 . . . . .	£38,200,000
1842 . . . . .	47,300,000

Increase . . . . . 9,100,000

Or in twelve years 24 per cent., or annually 2 per cent.

1842 . . . . .	£47,300,000
1853 . . . . .	98,700,000

Increase . . . . . 51,400,000

Or in eleven years 109 per cent., or annually nearly 10 per cent.

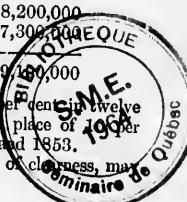

It may perhaps be right to observe, that the imports and exports of 1842 were lower than those of some of the preceding years. In order to avoid any unfairness in the present comparison, it may be well to insert a comparison between the average of the five years ending 1830, and of the five years ending 1842, of which the result will be as follows :—

*Average Official Value of Imports.*

1826—1830 . . . . .	£43,600,000
1838—1842 . . . . .	64,100,000

Increase . . . . . 20,500,000

Or in twelve years 47 per cent., or annually nearly 4 per cent.

*Exportations.—Valeurs déclarées.*

Moyenne de 1826 à 1830 . . .	35,900,000 liv. st.
Moyenne de 1838 à 1842 . . .	50,700,000
Augmentation . . .	14,800,000 liv. st.

Soit 41 pour 100 en douze ans, ou  $3\frac{1}{2}$  pour 100 par an.

Ces moyennes, quoique plus élevées que les résultats des années 1830 à 1842, laissent l'argument général intact : la moyenne de l'augmentation des importations ainsi que des exportations étant annuellement plus grande que celles des années avant l'adoption des mesures de 1842.

Durant la première période de 1830 à 1842, la réduction des taxes, tout en soulageant certaines classes, ou même la masse toute entière, eut peu d'effet sur le commerce et l'industrie en général, et par conséquent sur l'augmentation du revenu.

Dans la dernière période de 1842 à 1853, les suppressions et les réductions de taxes, (presqu'exclusivement les contributions indirectes,) ayant eu une grande influence sur le commerce, ont ainsi compensé la perte de revenu subie d'abord et ont produit un accroissement successif contrebalançant l'effet des mauvaises années et elles rendront encore facile des réductions et des réformes en suivant les mêmes principes de finance.

En 1842, le commerce du pays était dans un état de grand déclin. La valeur des exportations anglaises était tombée de 53,233,000 liv. st. en 1839, à 47,381,000 liv. st. en 1842. Depuis cette époque, la valeur des exportations anglaises a plus que doublé, s'étant élevée à 98,700,000 liv. st. en 1853. Comme on l'a vu plus haut, l'effet d'une réduction des droits protecteurs sur les manufactures britanniques est attesté par l'augmentation progressive des exportations, en proportion de cette réduction.

C'est depuis 1830 que les droits sur l'importation ont commencé à être réduits à ce qu'ils sont aujourd'hui.

Au commencement de cette période, les droits sur les coton et les laines manufacuturés montaient à 50 pour 100 de leur valeur, et les droits sur les toiles et les soieries étaient au moins aussi élevés.

En 1834, ces droits furent réduits comme suit : sur les coton et les laines non travaillés à 10 et à 15 pour 100 *ad valorem*, et sur les lins et les chanvres non préparés, à 25 pour 100 *ad valorem*; sur les coton et les laines, entièrement ou en partie préparés, à 20 pour 100 *ad valorem*, et sur les fils et toiles de lin et de chanvre, à 40 pour 100.

En 1842, ces droits furent encore modifiés : ceux sur les coton, les laines, les chanvres et les lins non travaillés furent entièrement abolis, tandis que ceux sur les mêmes matières, entièrement ou à moitié préparées, furent réduits à 10 pour 100 *ad valorem*, et plus tard, en 1853, à 5 pour 100.\*

\* Pour les détails sur les Coton, les Laines et les Lins, voir aux pages 31, 32 et 34.

*Average Declared Value of Exports.*

1826—1830 . . .	£35,900,000
1838—1842 . . .	50,700,000
Increase. . .	14,800,000

Or in twelve years 41 per cent, or annually  $3\frac{1}{2}$  per cent.

These averages, although higher than those obtained from taking the single years 1830 and 1842, leave the general argument unaffected, the average annual increase both of imports and exports since the adoption of the measures of 1842, being still very much greater than in the preceding years.

During the first period, from 1830 to 1842, the reduction of taxation was generally of a character which, although relieving particular classes, or even the whole community, had little effect upon trade and industry in general, and consequently did little to restore the surrendered revenue.

In the latter period, 1842 to 1853, the taxes which have been repealed or reduced have been almost exclusively of an indirect kind, and the remissions having had a great bearing on trade and commerce, have thus compensated for the sacrifice of revenue first sustained, and have reproduced a constantly-augmenting surplus which will guard against the consequences of bad years, and will enable future reductions and reforms to be made so long as the same principles of finance are still observed.

In 1842 the trade of this country was in a state of great depression. The value of British exports had fallen from 53,233,000l. in 1839, to 47,381,000l. in 1842. Since that date the value of British exports has more than doubled, having risen to 98,700,000l. in 1853. As has been seen in the first table given in this Memorandum, the beneficial effect of a remission of protective duties upon British manufactures is attested by the progressive increase which has taken place in the exports of our staple manufactures in proportion as that protection has been withdrawn.

Since 1830 the duties upon the importation of foreign manufactures have been reduced to their present low amount.

At the beginning of that period the duty upon Cotton and Woollen manufactures amounted to 50 per cent, on their values, and the rated duties upon the various kinds of Linens and Silks were at the least equally onerous.

In 1834 these duties were reduced as follows: upon cotton and woollen manufactures not made up, 10 to 15 per cent. *ad valorem* respectively, and upon linen manufactures not made up, 25 per cent. *ad valorem*; upon cotton or woollen goods, wholly or in part made up, 20 per cent. *ad valorem*, upon linen goods wholly or in part made up, 40 per cent.

In 1842 these duties were further modified, those upon cotton, woollen, and linen goods, not made up, being wholly abolished, while those upon the same goods, wholly or in part made up, were reduced to 10 per cent. *ad valorem*, and these have been still further reduced in 1853 to 5 per cent.\*

\* For details respecting Cottons, Woollens, and Linens, see pp. 31, 32, and 34.

L'observation qui a été faite du déclin du commerce en 1842 semble fournir l'occasion de faire cette importante remarque, que, sous le régime de la protection, le commerce de la Grande-Bretagne était sujet à de grandes crises périodiques. Le système de liberté n'a pas été établi depuis assez longtemps pour qu'on en tire la conclusion décisive qu'il peut préserver le commerce du pays de ce grave inconvénient; mais on peut présumer avec confiance qu'un marché ouvert en tout temps à l'action naturelle du offre et de la demande, dans le monde entier, sera moins exposé à subir le fâcheux effet des causes qui peuvent l'influencer, et qu'en s'accommodeant aux effets que ces causes peuvent produire, il sera délivré des convulsions qui entraînent son essor ou agravaient sa situation sous le système protecteur.

Il faut maintenant considérer le grand bienfait au consommateur par la réduction des taxes sur l'importation des articles d'une grande consommation.

Les réductions des droits prohibitifs et excessifs sur les articles de consommation générale ont eu l'effet de baisser leurs prix, même plus que le montant de ces réductions, et en ont beaucoup augmenté la consommation. Dans quelques cas (et cela à cause de l'augmentation seulement), le revenu abandonné a été entièrement rétabli; et même où cela n'est pas arrivé, la consommation étendue ayant beaucoup augmenté nos importations, a causé de nouvelles demandes pour nos exportations, et a donné un nouveau stimulant à notre industrie intérieure et au commerce étranger; ainsi, ces deux causes ont indirectement avancé les intérêts du revenu.

La suppression des droits sur les matières premières, et la levée des entraves à l'industrie, ont contribué non-seulement à faire baisser les prix des articles d'habillement, mais à accroître beaucoup le travail.

De plus, la réduction des droits sur le sucre et d'autres droits excessifs ont eu un effet semblable sur le thé, le tabac et autres articles encore sujets aux droits, en baissant le prix d'une classe d'articles nécessaires, et laissant ainsi plus à dépenser pour d'autres; et encore, en augmentant la demande pour le travail à produire les articles pour payer les importations croissantes.

L'effet de la politique que l'on a suivie dans ce pays sur le revenu obtenu des droits sur les importations est un de ses résultats les plus remarquables.

Le revenu total de ces sources montait en 1824, à 18,251,133 liv. st. Depuis cette époque jusqu'à la fin de 1850, l'excès des droits de douane remis sur ceux imposés a été 8,826,128 liv. st., et nonobstant ces remises, le revenu de la douane se montait en 1853 jusqu'à 20,902,734 liv. st., comme on voit par le tableau suivant:—

The reference that has just been made to the great depression of trade in 1842 seems to make this the proper opportunity for introducing an observation to which it is considered that great weight may justly be attached, namely, that under the system of Protection, the trade of Great Britain was subject to great periodical reverses. The system of Free Trade has not been established for a sufficiently long period to justify any decided inference with regard to its effects in guarding the trade of the country against that serious evil. But it may be confidently anticipated that a market open at all times to the natural action of general supply and demand throughout the world, will sympathize more immediately with the causes which are from time to time in operation to influence it, and by early accommodating itself to the effects which those causes must produce, will be freed from the convulsions consequent upon the retarded, and thereby aggravated, action of them under the system of Protection.

The next point for consideration is the beneficial effect to the consumer, derived from a reduction of duty upon the importation of articles of large consumption.

The reductions of protective and excessive duties on articles of general consumption have had the effect of lowering the price of such articles generally, even more than to the extent of the reduction of duty, have greatly extended the consumption, and have in some cases (from the latter cause alone) entirely restored the revenue surrendered; but even where this has not been the case, the extended consumption has increased largely our imports, has thus given a new demand for our exports, and a fresh impulse to our home industry and foreign commerce, both causes greatly promoting indirectly the interests of the revenue.

The repeal of duties on raw materials, and the removal of impediments to trade, conducted in every way to this end, not alone by cheapening articles of clothing, but by greatly increasing employment.

Again, the reduction of the sugar and other excessive duties had a similar effect upon tea and tobacco and other articles not touched, by cheapening the cost of one necessary class of articles, thus having more to spare for others; and again, by promoting more demand for labour in producing articles to pay for the increased importations.

The effect of the policy that has been pursued in this country upon the revenue derived from import duties is among the most striking of its results.

The total Revenue derived from this source, in 1824, was 18,251,133*l.*; since that period to the end of 1850 the excess of Customs duties remitted over those imposed has been 8,826,128*l.*, and notwithstanding these remissions, the customs revenue amounted to no less than 20,902,734*l.* in 1853, as shown by the annexed table:—

*Revenu net de la Douane du Royaume-Uni.*

1841 . . .	21,898,845 liv. st.
1842 . . .	21,025,145
1843 . . .	21,033,717
1844 . . .	22,504,821
1845 . . .	20,196,856
1846 . . .	20,568,909
1847 . . .	20,024,431
1848 . . .	20,999,132
1849 . . .	20,636,921
1850 . . .	20,442,170
1851 . . .	20,615,338
1852 . . .	20,551,541
1853 . . .	20,902,734

L'histoire du revenu des droits d'accise fournit l'évidence semblable de l'effet salutaire que la substitution des droits modérés pour les droits excessifs a produit.

Dans l'année finissant le 5 janvier 1842, les droits d'accise montaient à 13,678,835, liv. st.

En 1844 le droit sur le Verre } était réduit . . .	45,000 liv. st.
En 1845 id. id. .	624,000
En 1845 le droit sur la Vente aux enchères était supprimé }	281,280
En 1850 le droit sur les Briques } était supprimé . . .	456,000
Total . . .	1,406,280 liv. st

Total . . . 1,406,280 liv. st

Malgré ces remises, le revenu des droits d'accise montait en 1851 à 14,235,509 liv. st., d'où résulte une augmentation de 556,674 liv. st. depuis l'année 1842.

Les divers effets sur le commerce général du pays estimés par les importations et les exportations, par la navigation, par la consommation et par le revenu, fournissent des preuves convaincantes du succès des mesures de *Free trade* adoptées par la Grande-Bretagne.

En dix ans l'Angleterre a augmenté ses exportations, de 47,000,000 liv. st. à 78,000,000 liv. st.; ses importations, de 65,000,000 liv. st. à 109,000,000 liv. st.; le montant du tonnage de ses vaisseaux pour ce commerce, de 7,678,791 tonnes à 13,602,750 tonnes.

Les revenus des droits de douane et d'accise montaient dans l'année finissant le 5 avril 1842 à 35,480,607 liv. st. Des taxes furent supprimées en 1842 1843, 1844, qui montaient à 1,900,000 liv. st., et en 1845 les droits de douane et d'accise produisaient encore 35,744,247 liv. st. D'autres taxes ont été supprimées dans les huit années suivantes (la suppression du droit sur le blé non comptée), faisant un total de 8,700,000 liv. st., et encore en 1853 les droits de douane et d'accise ont produit 36,240,458 liv. st. Par conséquent, la réduction totale des taxes en onze ans a été de 10,600,000 liv. st., tandis que le revenu est aussi grand qu'auparavant. Pendant cette période les gages se sont élevés, les crimes ont diminué, et le paupérisme de personnes capables de travailler a presque cessé.

*Net Income from Customs Revenue, United Kingdom.*

1841 . . .	£21,898,845
1842 . . .	21,025,145
1843 . . .	21,033,717
1844 . . .	22,504,821
1845 . . .	20,196,856
1846 . . .	20,568,909
1847 . . .	20,024,431
1848 . . .	20,999,132
1849 . . .	20,636,921
1850 . . .	20,442,170
1851 . . .	20,615,338
1852 . . .	20,551,541
1853 . . .	20,902,734

Similar evidence of the beneficial effect on the revenue produced by the substitution of moderate for excessive duties, is afforded by the history of the revenue derived from Excise duties.

In the year ending January 5th, 1842, the excise gave 13,678,835l.

In 1844 the duty on Glass was reduced.	£45,000
In 1845 ditto ditto .	624,000
In 1845 Auction duty was repealed .	281,280
In 1850 the duty on Bricks was repealed	456,000
Total . . .	1,406,280

In spite of these remissions, the revenue derived in 1851 from excise amounted to no less than 14,235,509l., showing an increase since 1842 of 556,674l.

The several effects upon the general commerce of the country, as measured by the import and export trades, by navigation, by consumption, and by revenue, afford convincing proofs of the success of the Free Trade policy which has been pursued by Great Britain.

England has in ten years increased her Exports from 47,000,000l. to 78,000,000l.; her Imports from 65,000,000l. to 109,000,000l.: the amount of Shipping which she employs to carry on that trade, from 7,678,791 tons to 13,602,750 tons.

Her Customs and Excise in the year ending 5th April, 1842, produced a net revenue of 35,480,607l. Taxes were repealed in 1842, 1843, 1844, amounting to 1,900,000l., and in 1845 again the customs and excise produced 35,744,247l. Further taxes have been repealed in the eight subsequent years, exclusive of the repeal of the duties upon corn, to the amount in the whole of 8,700,000l., and again in 1853 the customs and excise produced 36,240,458l. The whole reduction of taxes in eleven years has, therefore, been 10,600,000l., while the revenue remains as large as before. During this period wages have risen, crime has diminished, and able-bodied pauperism has almost ceased.

Les réformes que M. Gladstone faisait au Tarif en 1853 n'avaient introduit aucun nouveau principe, mais elles donnaient une plus grande étendue à celles de Sir R. Peel. Les réductions des droits qu'il faisait étaient très générales dans leur caractère, affectant 126 articles, parmi lesquels étaient plusieurs articles de subsistance, comme le thé, les fruits, le beurre, le fromage, etc.; plusieurs des principaux articles des manufactures, comme le fer, l'acier, le cuivre, le lin, le coton, la huile, le verre, la poterie, etc. Les droits sur 105 articles étaient entièrement supprimés; parmi lesquels étaient les poissons de toutes sortes, le minerai de cuivre, le zinc, le bois de cimpeche, la térébenthine, le fil de soie et de coton sans teint, etc. M. Gladstone supprimait aussi le droit additionnel de 5 pour cent levé auparavant sur tous les articles compris dans le Tarif, à l'exception des sept suivants:—

Le Théâtre	Les Raisins de Corinthe
Le Vin	Les Fèves
Le Bois colonial	Les Gants.
Le Poivre	

On ne peut pas encore estimer l'effet de ces mesures, et les événements politiques de la dernière année ayant interrompu le développement naturel de l'industrie, il sera difficile de juger des résultats des réductions de M. Gladstone avant que cessent les causes de cette interruption. Toutefois on peut dire que les revenus de douane montaient en 1852 à 20,551,542 liv. st.; en 1853, à 20,902,734 liv. st.; et en 1854, à 20,777,714 liv. st.

#### NAVIGATION.\*

Le tonnage des vaisseaux britanniques entrés et sortis avec cargaison en 1842 était de 5,415,821; en 1853, de 9,064,705 tonnes.

Le tonnage des vaisseaux étrangers faisant le commerce avec ce pays s'est accru dans le même espace de temps de 1,930,983 à 6,316,456 tonnes.

Le tonnage total s'est conséquemment accrue de 7,346,804 tonnes à 15,381,161 tonnes, c'est-à-dire beaucoup plus que le double.

#### CONSTRUCTION DE NAVIRES.

Le tonnage des navires construits en 1842 était de 129,929 tonnes, dont 13,716 tonnes bateaux à vapeur. En 1853, on a construit 203,171 tonnes, dont 48,215 tonnes bateaux à vapeur.

#### EFFETS SUR LA CONDITION SOCIALE DU PEUPLE.

##### LA BANQUE D'ANGLETERRE.

Les dépôts à la banque d'Angleterre montaient, à la fin de 1842, à 9,063,000 liv. st. À la fin de 1853, cette somme a doublé, c'est-à-dire elle était de 18,232,000 liv. st. Son actif s'est augmenté dans le même espace de temps, de 30,890,000 liv. st. à 44,864,000 liv. st.

\* Ces détails et les suivants ont paru dans le 'Moniteur' du 25 juillet 1855.

The further reforms effected in the Tariff in 1853 by Mr. Gladstone, introduced no new principles, but gave a further extension to those upon which the measures of Sir R. Peel were based. The reductions of duty which he effected were very general in their character, affecting 126 articles, among which were included several articles of food, such as tea, fruit, butter, cheese, &c., several of the principal articles of manufacture, such as those of iron, steel, copper, linens, cottons and woollens, glass, earthenware, &c. The duties on no less than 105 articles were altogether repealed; among the number were, fish of all kinds, copper ore, zinc, legwood, turpentine, and silk and worsted yarn undyed, &c. Mr. Gladstone also repealed the additional duty of 5 per cent. before levied on all the articles included in the Tariff, except with regard to seven articles, viz.:

Tobacco	Currants
Wine	Figs
Colonial Timber	Gloves.
Pepper	

The effects of these measures cannot yet be estimated, and the political events of the last year, which have interfered with the natural development of trade, will render it difficult to trace the result of Mr. Gladstone's reductions until the causes of this disturbance have subsided. It may, however, be stated that the total amount of customs revenue received in the year 1852 was 20,551,542.; in 1853, 20,902,734.; and in 1854, 20,777,714.

#### SHIPPING.\*

The tonnage of British shipping that entered and cleared with cargoes in 1842 was 5,415,821 tons. In 1853 it was 9,064,705 tons.

The tonnage of Foreign shipping similarly trading with this country increased in the same time from 1,930,983 to 6,316,456 tons.

The total tonnage, therefore, increased from 7,346,804 tons to 15,381,161 tons; that is to say, considerably more than doubled.

#### SHIP-BUILDING.

The tonnage of ships built in 1842 was 129,929 tons, of which 13,716 tons were steamers. In 1853 there were built 203,171 tons, of which 48,215 tons were steamers.

#### EFFECTS ON THE SOCIAL CONDITION OF THE PEOPLE.

##### BANK OF ENGLAND.

The deposits in the Bank of England at the end of 1842 amounted to 9,063,000.; at the end of 1853 to double that amount, namely, 18,232,000. Its assets increased in the same time from 30,890,000. to 44,864,000.

\* These and the following statements were first published in the 'Moniteur' of 25 July, 1855.

## DETTE NATIONALE.

La dette nationale, qui était en 1842 de 791,250,440 liv. st., est descendue en 1853 à 771,335,801 liv. st.

## ETAT DES FINANCES DE LA NATION.

Les dépenses ont excédé les revenus de 3,979,539 liv. st. en 1842. En 1853, au contraire, les revenus ont dépassé les dépenses de 3,255,505 liv. st.

Les dépenses, en 1853, excédaient seulement de 229,670 liv. st. celles de 1842, mais les revenus étaient de 7,464,714 liv. st. supérieurs à celles de 1842.

## CAISSES D'ÉPARGNE.

Le capital des caisses d'épargne était en 1842 de 25,319,336 liv. st., et en 1853 il était de 33,362,260 liv. st., c'est-à-dire une augmentation d'un tiers. C'est une preuve concluante de la prospérité des classes ouvrières depuis l'introduction de la liberté du commerce.

## PAUPÉRISME.

La somme dépensée au soulagement des pauvres montait, en 1842 (fin de mars 1843), à 5,208,027 liv. st., ce qui fait 6 sh. 5½ d. par tête, la population étant estimée à 16,194,000 âmes. En 1853, avec une population de 18,617,000 âmes, la somme dépensée pour les pauvres était presque la même, c'est-à-dire de 5,282,853 liv. st., ce qui ne fait que 5 sh. 8 d. par tête. Si la taxe pour les pauvres avait augmenté en proportion de l'accroissement de la population, elle aurait atteint 6,000,000 liv. st.

## CRIMES.

Le nombre d'accusés en Angleterre et dans le pays de Galles était, en 1842, de 31,309. En 1853, malgré un accroissement de la population de presque 2,500,000, le nombre des prévenus est descendu à 27,057 ; c'est-à-dire, en 1842 il y avait 193 personnes sur 100,000 qui avaient offendé la loi, tandis qu'en 1853 il n'y en avait que 145, ou un quart de moins.

## NATIONAL DEBT.

The national debt, which amounted in 1842 to 791,250,440<sup>l.</sup>, had decreased in 1853 to 771,335,801<sup>l.</sup>

## STATE OF THE NATIONAL FINANCES.

In 1842 the expenditure exceeded the income by 3,979,539<sup>l.</sup>. In 1853, on the contrary, the income, exceeded the expenditure by no less than 3,255,505<sup>l.</sup>

The expenditure in 1853 was only 229,670<sup>l.</sup> more than in 1842 ; but the income was 7,464,714<sup>l.</sup> greater than in that year.

## SAVINGS' BANKS.

The capital of Savings' banks in 1842 was 25,319,336<sup>l.</sup>; in 1853, 33,362,260<sup>l.</sup>,—an increase of one-third. This is a conclusive proof of the increased prosperity of the working classes since the introduction of Free Trade.

## PAUPERISM.

In the year 1842 (ending March 1843), with an estimated population of 16,194,000, the amount expended in England and Wales for the relief of the Poor was 5,208,027<sup>l.</sup>, being at the rate of 6s. 5½d. per head. In the year 1853, with a population of 18,617,000, the amount expended was as nearly as possible the same, namely, 5,282,853<sup>l.</sup>, being only at the rate of 5s. 8d. per head. Had the poor rates increased in proportion to the population, they would have amounted in the latter year to 6,000,000<sup>l.</sup>.

## CRIME.

The number of Commitments for trial in England and Wales in 1842 amounted to 31,309. In 1853, notwithstanding an increase to the population of nearly 2,500,000, the commitments had fallen off to 27,057. In the former year 193 persons out of every 100,000 were, therefore, grave offenders against the law ; in the latter 145, or one-fourth less.

## NOTES BREVES

*Sur l'Industrie et le Commerce du Royaume-Uni,  
pour servir d'Introductions à quelques-unes des  
Classes dans l'Exposition. Compilées par R. H.  
LACK.*

### 1re CLASSE.

#### *Arts des Mines et Métallurgie.*

[Voir p. 36.]

Depuis l'époque la plus reculée l'Angleterre a été renommée pour l'abondance et la variété de ses productions minérales, ayant fait un commerce assez important dans l'exportation d'étain dans le temps des Romains. Le développement de l'extraction de la houille aussi bien que la manufacture des fers, ont été grandement favorisés par la distribution générale de la houille et des minéraux de fer par tout le pays. Ces deux branches de l'industrie minérale se sont beaucoup augmentées dans les dernières années, à cause des chemins de fer et de la construction des vaisseaux en fer.

Il n'existe pas des détails précis des quantités de houille extraites annuellement dans le Royaume-Uni, mais les dernières estimations publiées par l'Ecole des Mines du Gouvernement donnent la somme énorme de 64,661,401 tonnes comme le produit de l'année 1854.

Les quantités des autres principales productions minérales en 1853, étaient comme suit:—

Cuivre . . .	13,030 tonnes*
Plomb . . .	61,021 "
Argent . . .	700,000 onces
Etain . . .	6,000 tonnes

La production de fer forgé dans le Royaume-Uni en 1840, était estimée à 1,396,000 tonnes; en 1850, elle était de 2,250,000 tonnes; et selon la dernière estimation pour 1854, elle s'étaient augmentée à 3,069,838 tonnes.

L'estimation de la valeur totale des produits minéraux du Royaume-Uni, montait en 1854 à 28,575,922 liv. st.

Les Quantités de ces différentes sortes de Métaux importées en 1840 et 1853, étaient comme suit:—

	Importations.	
	1840. Tonnes.	1853. Tonnes.
Houille, etc.	..	
Fer en barres, non forgé	18,949	44,776
Mineraï de cuivre . . .	42,248	45,286
Plomb, en saumons . . .	1,600	17,564
Etain . . .	469	2,487

\* De plus, 3,442 tonnes furent vendues à Swansea en 1853.

## BRIEF NOTES

*On the Trade and Commerce of the United Kingdom,  
arranged as Introductions to some of the Classes of  
the Exhibition. Compiled by R. H. LACK.*

### CLASS I.

#### *Mining and Metallurgy.*

[See p. 36.]

England has from a very early period been celebrated for the abundance and variety of her mineral productions, the exportation of tin having been carried on to a considerable extent in the time of the Romans. The peculiar manner in which the Cobalt and Iron ores are distributed over the surface of the country has been highly favourable to the development of coal mining as well as to the manufacture of iron, both of which branches of mineral industry have increased very largely of late years—especially since the introduction of railroads and the construction of iron ships.

There are no exact returns of the quantities of Coal raised in the United Kingdom in each year, but the latest estimate published by the Government School of Mines, gives the enormous sum of 64,661,401 tons as the produce of the year 1854.

The following were the quantities of the other principal mineral productions in 1853.

Copper . . .	tons 13,030*
Lead . . .	" 61,021
Silver . . .	ounces 700,000
Tin . . .	tons 6,000

The production of cast or pig iron in the United Kingdom in the year 1840, was estimated at 1,396,000 tons; in 1850 it had reached 2,250,000 tons; and according to the latest account, for the year 1854, it had further increased to 3,069,838 tons.

The total estimated value of the mineral produce of the United Kingdom in the year 1854, amounted to 28,575,922l. sterling.

The Quantities of these different kinds of Metals Imported in each of the years 1840 and 1853, were as follows:—

	Imports.	
	1840. Tons.	1853. Tons.
Coals, &c..	..	..
Iron in bars, unwrought	18,949	44,776
Copper, Ore . . .	42,248	45,286
Lead, Pig . . .	1,600	17,564
Tin . . .	469	2,487

\* In addition to this 3,442 tons were sold at Swansea in the year 1853.

La valeur déclarée des exportations des deux principaux minéraux de production *britannique* s'est augmentée considérablement pendant les quinze années de 1840 à 1854, comme fuit connaître le tableau suivant :—

	Exportations.	
	1840.	1854.
Liv. ster.	Liv. ster.	
Houille, Coke et Fraisil	576,519	2,125,758
Fer et acier, forgé et non forgé . . .	2,524,859	11,668,042

La prospérité des mines britanniques est due en partie à l'amélioration de la mécanique employée dans les divers travaux pour leur exploitation et à l'habileté croissante des surintendants.

Aux productions minérales ci-dessus du Royaume-Uni, il faut ajouter le Sel, comme méritant une mention spéciale, parcequ'il n'y a pas de pays mieux fourni de sources salées et de bancs de sel gemme qu'en est l'Angleterre. Au commencement du dernier siècle, le sel britannique était regardé comme inférieur à celui d'autres pays, et tandis qu'on importait du sel étranger en grande quantité, on n'exportait que peu de sel du pays. Cependant cette industrie s'améliorait progressivement, et il y a plusieurs années que la production du sel est devenue un objet d'importance nationale.

La consommation de cet article dans la Grande-Bretagne seulement est estimée à 200,000 tonnes par an, et la moyenne exportée annuellement de 300,000 à 400,000 tonnes.

Les droits sur le sel furent supprimés en 1825, et la consommation s'est beaucoup augmentée depuis, parce qu'on l'emploie dans l'industrie en place de caillotis, de barille et de potasse, dans la manufacture de la verrerie, du savon, etc.; usages auxquels on ne l'aurait pas appliquée si son prix n'avait pas été considérablement réduit.

## 2e CLASSE.

### Industries forestières.

[Voir p. 40.]

Les Bois et Forêts du Royaume-Uni appartiennent généralement aux particuliers, par conséquent on ne peut pas faire une estimation séparée de leurs produits ni de leur étendue. La valeur totale du bois en Angleterre et dans le pays de Galles est estimée de 40 à 50 millions de livres sterling.

Le tableau suivant fait connaître l'étendue totale des forêts royales en Angleterre et dans le pays de Galles, et le nombre d'arpents enclos pour la culture du bois de charpente :—

Etendue totale des Forêts royales en Angleterre et dans le pays de Galles	Arpents.
	122,622
Autres Terres appartenant à la Couronne, plantées de Chênes, etc. . .	13,612
Total enclos pour la culture du Bois . . .	51,612

The declared value of the Exports of the two principal minerals of British production increased to a very great extent during the fifteen years 1840 to 1854, as will be seen from the following table :—

	Exports.	
	1840.	1854.
	£.	£.
Coals, Coke, and Culm	576,519	2,125,758
Iron & Steel, wrought and unwrought . . .	2,524,859	11,668,042

The prosperity of the British mines is also due in some measure to the continual improvement in the machinery employed in the various mining operations, and to the increasing ability of the superintendents of the mines.

In addition to the above mineral productions of the United Kingdom, that of Salt is also deserving of notice, as there is no country better supplied with brine springs and beds of fossil or rock salt than England. In the early part of the last century British salt was reckoned inferior to that produced by other countries, and whilst large quantities of foreign salt were imported, very little native salt was exported. The manufacture, however, progressively improved, and for many years past the production of salt has become an object of national importance.

The estimated home consumption of this article in Great Britain alone, is taken at 200,000 tons annually, besides the quantity exported, which averages from 300,000 to 400,000 tons annually.

The duties on salt were finally repealed in 1825, and since that date its consumption has increased very largely, having been applied to many purposes in the arts as a substitute for kelp, barilla and potash, in the manufacture of glass, soap, &c.; purposes to which it would not have been applied but for the great reduction in its price.

## CLASS II.

### Forestry.

[See p. 40.]

The Woods and Forests in the United Kingdom are mostly in the hands of private individuals, and therefore no separate account of their productions or extent can be given. The total value of the Timber in England and Wales is estimated at from 40 to 50 millions sterling.

The following table shows the total area of the Royal Forests in England and Wales, and the number of acres enclosed within them for the growth of timber.

	Acres.
Total Area of Royal Forests in England and Wales . . . . .	122,622
Inclosed for the growth of timber . . . . .	38,000
Other Crown Lands, planted with Oak, &c. . . . .	13,612
Total inclosed for growth of Timber . . . . .	51,612

Exports of the two  
duction increased to  
years 1840 to

38,000	
13,612	
51,612	

L'étendue totale du pays boisé d'Ecosse est estimée à environ un million d'arpents. L'Irlande est comparativement dénuée de bois.

Le total d'arpents dans la Grande-Bretagne rapportés comme occupés par les fermiers, etc., se montaient en 1851, à 29,213,312, et ceux dont on ne saurait rendre compte et les terres tuclées à 28,411,065 arpents.

Les pêcheries de la Grande-Bretagne sont d'une grande importance, parce que les mers qui entourent ses côtes abondent en poissons de toutes sortes.

On prend en abondance les Harengs, les Morues, les Pilchards, les Maqueraux et les Huîtres. La pêche de ces poissons est la principale branche des pêcheries britanniques.

Le tableau suivant fait connaître l'augmentation dans les quantités de Harengs et de la Morue préparées et exportées dans chacune des années 1840 et 1853 :—

	Quantités Pré- parées.		Quantités Ex- portées.	
	1840.	1853.	1840.	1853.
Harengs, Barils	543,945	778,040	252,522	342,630
Morue, Lingue, Quint, ou "Hake" (Barils)	93,560	105,596	29,659	22,650
	6,053	5,122	24	14

Les Pêcheries des Pilchards se font sur une grande échelle sur les côtes de Devon et de Cornouailles. On trouve les maqueraux dans plusieurs endroits de la côte; on les consomme principalement à l'intérieur.

Les Pêcheries irlandaises, quoique peu importantes en comparaison de celles de la Grande-Bretagne, donnent de l'occupation à un grand nombre d'hommes et de garçons, et elles ont fait grand progrès dans les dernières années.

### 3<sup>e</sup> CLASSE.

#### Agriculture.

[Voir p. 40.]

Les améliorations continues que l'on fait dans la manufacture des machines, outils et autres instruments d'Agriculture, et l'extension des connaissances auxquelles on se livre dans les travaux agricoles, contribuent à éléver la Grande-Bretagne à un haut rang comme pays agricole. Dans ces dernières années, on a même mis grand soin à la fabrication des outils les plus ordinaires, plus spécialement par rapport à leurs usages particuliers. L'adaptation des machines à vapeur et autres à l'agriculture a nécessairement l'effet de baisser le nombre des personnes employées dans les travaux rudes, cela est prouvé par le fait que, tandis que les autres grandes classes de la population, c'est-à-dire les classes manufacturière et commerciale, se sont augmentées en proportion de l'augmentation de la population, celle de l'agriculture a diminué en comparaison.

Il n'y a pas à présent malheureusement des rapports précis sur le montant des produits de l'agriculture du Royaume-Uni, mais tel qu'il soit il est bien au-dessous des besoins de la nation, comme

The total extent of woodland in Scotland is estimated at about one million of acres. Ireland is comparatively destitute of timber.

The total number of *acres* returned as occupied by Farmers, &c., in Great Britain in 1851, amounted to 29,213,312, and those unaccounted for and waste land to 28,411,065 acres.

The Fisheries of Great Britain are of great magnitude, in fact, the seas round the coast of Britain abound with fish of almost all descriptions.

Herrings, Cod, Pilchards, Mackerel, and Oysters, are taken in great abundance, and may be regarded as constituting the principal branches of the British Fisheries.

The following table shows the increase in the quantities of Herrings and Cod cured and exported in each of the years 1840 and 1853.

	Quantities Cured.		Quantities Ex- ported.	
	1840.	1853.	1840.	1853.
Herrings, Barrels	543,945	778,040	252,522	342,630
Cod, Ling, & Cwts. or Hake (Barrels)	93,560	105,596	29,659	22,650
	6,053	5,122	24	14

The Pilchard Fisheries, which are carried on along the coasts of Devon and Cornwall, are of considerable extent. Mackerel are found in many parts along the coast; they are chiefly used for home consumption.

The Irish Fisheries, although of small importance when compared with those of Great Britain, afford employment to a large number of men and boys, and have made great progress of late years.

### CLASS III.

#### Agriculture.

[See p. 40.]

The gradual improvements in the manufacture of Agricultural machines, tools, and implements, together with the greater amount of knowledge and skill expended upon agricultural pursuits in Great Britain, are tending to elevate her to a high rank as an agricultural country. Of late years even the commonest tools have been designed with great care, and with especial regard to their particular uses. The use of steam and other machinery for agricultural purposes necessarily decreases the number of hands required for unskilful labour, and this is borne out by the fact that whilst the other great classes of the population, the manufacturing and the commercial, have increased in proportion with the increased population, the agricultural class shows a decrease when so compared.

Unfortunately at present there are no exact returns of the amount of agricultural produce raised in the United Kingdom, but whatever it may be, it falls far short of the requirements of the nation, as

on voit par les détails suivants des importations des principales sortes de grains dans chacune des années 1840 et 1854 :—

		Quarts impériaux.
Blé et Farine de	1840 ..	2,432,000
Blé . . .	1854 ..	4,473,000
Autres sortes de	1840 ..	1,487,000
Grains et Farines	1854 ..	3,436,000
Total . .	1840 ..	3,920,000
	1854 ..	7,909,000

Les prix moyens du Blé en Angleterre et dans le pays de Galles, par quart impérial, pour les cinq ans qui précédaient l'année de disette, 1851, étaient comme suit :—

	Par Quart impérial.
1848 . . .	50 sh. 6 d.
1849 . . .	44 3
1850 . . .	40 3
1851 . . .	38 6
1852 . . .	40 9

C'est un fait remarquable que le prix moyen du Blé en Angleterre et dans le pays de Galles dans l'année de la Grande Exposition, 1851, était plus bas que dans toutes celles des cinquante quatre dernières.

Beaucoup de personnes ont regardé l'abolition des Droits sur le Blé, le 1<sup>er</sup> février 1849, comme la ruine des cultivateurs et des laboureurs du pays, par l'introduction du blé étranger et conséquemment la réduction du prix du marché ; ils craignaient aussi d'exposer la nation à la grande risque de dépendre sur l'étranger pour ses provisions de grains. Les résultats de l'abolition des droits sur le blé ont été bien différents de ceux qu'on a prédit : la position des cultivateurs s'est beaucoup améliorée, les marchés ont été aussi bien fournis, et les producteurs ont vendu leur blé à des prix aussi élevés sous le système de libre commerce que sous celui de droits protecteurs.

Les effets de *Free-trade* sur les producteurs de blé ont été mis sous les yeux du public comme suit :—

" Le rapport des quantités de blé indigène vendu dans nos marchés étaient de 4,091,235 quarts en 1842, et de 4,560,912 quarts en 1853, constatant une augmentation dans la demande pour le blé anglais sous le système de *Free-trade*. Le prix moyen dans la première année était de 57 sh. 3 d. le quart ; dans la dernière, 53 sh. 3 d. On voit par le fait que le prix moyen de l'année dernière (72 sh. 5d.) est plus élevé que celui d'aucune des années depuis 1819, que les cultivateurs obtiennent un aussi bon prix sous le *Free-trade* pendant que le pays est dans un état de prospérité, que sous le système de droits protecteurs quand il est malheureux."

On n'a pas encore obtenu des rapports précis sur le mobilier vif du Royaume-Uni. On craignait que l'introduction des chemins de fer aurait eu une tendance non seulement à diminuer la quantité des chevaux dans le pays, mais encore à en détériorer la race. Cependant cette crainte ne s'est pas réalisée, car la demande pour les chevaux est aussi grande à présent qu'elle était avant l'introduction des chemins de fer.

will be seen from the following accounts of the importation of the principal kinds of Grain in each of the years 1840 and 1854.

		Imp. Qrs.
Wheat and Wheat-	1840 ..	2,452,000
flour . . .	1854 ..	4,473,000
Other kinds of Grain	1840 ..	1,487,000
and Flour . .	1854 ..	3,436,000
Total . .	1840 ..	3,920,000
	1854 ..	7,909,000

The following were the average prices of Wheat in England and Wales per Imperial Quarter, for the five years preceding the year of scarcity, 1853.

	Per Imp. Qr.
1848 . . .	50s. 6d.
1849 . . .	44s. 3d.
1850 . . .	40s. 3d.
1851 . . .	38s. 6d.
1852 . . .	40s. 9d.

It is a singular fact that the average price of Wheat in England and Wales in the year of the Great Exhibition, 1851, was the lowest that has occurred within the last fifty-four years.

The abolition of the Corn Laws on the 1<sup>st</sup> of February, 1849, was looked upon by many as the ruin of the farmers and farm-labourers of the country, by the introduction of foreign corn, and thus reducing the market-price of wheat, as well as exposing the nation to great risk in depending upon foreign supplies of grain. The results produced by the removal of the Corn Laws have been very different to those predicted ; the position of the farmers having greatly improved, the markets having been as constantly supplied, and the producers having realized as high prices for their wheat under the free-trade as under the protective system.

The effects of the Free Trade policy on the producers of wheat has been lately brought before the public notice in the following words :—

" The quantities of home-grown wheat returned as sold in our markets in 1842 were 4,091,235 quarters, and in 1853, 4,560,912 quarters, exhibiting an increased demand for English corn under Free Trade. The average price in the former year was 57s. 3d. per quarter ; in the latter 53s. 3d. That farmers can get as high a price under Free Trade while the country is prosperous, as under protection while it is badly off, is shown by the fact that the average price last year (72s. 5d.) is higher than the average for any year since 1819."

No exact returns of the Live Stock in the United Kingdom have as yet been obtained. It was feared by many that the introduction of railways would not only tend to decrease the number, but also to deteriorate the breed of horses in this country. Such, however, has not been the case, the demand for horses being as great now as it was before the introduction of railroads.

Le produit annuel de Laine dans le Royaume-Uni est estimé à environ 130 millions de livres. Jusqu'à l'année 1825, on ne permit pas l'exportation de la laine britannique, mais dans cette année la prohibition fut levée, et à présent on importe et on exporte les laines de toutes sortes sans payer aucun droit.

The estimated annual produce of Wool in the United Kingdom is about 130 millions of lbs. Until the year 1825 British wool was not allowed to be exported, but in that year the prohibition was removed, and now both the import and export of wools of any kinds are permitted free of duty.

## 4e CLASSE.

Mécanique générale appliquée à l'Industrie.

[Voir p. 42.]

Nonobstant la supériorité de la manufacture des machines britanniques, leur exportation était prohibée pendant une longue période, et plus tard elle était restreinte par divers droits. Depuis le mois d'août 1843 tous les droits sur leur exportation ont été entièrement supprimés. La valeur déclarée des exportations des machines de fabrication britannique montait en 1843 à 713,474 liv. st., et en 1854 elle avait augmenté à 1,932,963 liv. st., soit une augmentation de 1,219,489 liv. st. dans l'année 1854 sur celle de 1843.

La suppression des droits sur les matières premières de toutes sortes, tout en donnant une grande impulsion au commerce en général, a été cause de la fabrication d'une grande quantité de machines pour aider le manufacturier dans la préparation de ces matières premières pour les marchés de l'intérieur et de l'extérieur.

Les inventions pendant le siècle actuel qui ont grandement facilité nos procédés manufacturiers et qui ont perfectionné les articles fabriqués, sont trop nombreuses pour être décrites ici; toutefois on peut bien mentionner le grand bienfait qu'ont reçu les terrains marécageux de ces pays de l'usage des machines pour les dessécher, parce que le cultivateur ou le propriétaire, en dépensant quelques bushells de charbon, a l'avantage de faire dessécher ses champs de toute eau superficie à l'aide des machines à vapeur, dans lesquelles on a fait de grands perfectionnements. On aura une très bonne idée des services que peuvent rendre ces sortes de machines, si l'on examine attentivement la pompe centrifuge exposée par MM. Easton et Amos, dans le département des Machines, et connue sous le nom de 'Appold's Centrifugal Pump.'

## 5e CLASSE.

Mécanique des Chemins de Fer; Carrosserie et Sellerie.

[Voir p. 43.]

Le développement rapide des chemins de fer dans le Royaume-Uni pendant les dix dernières années a naturellement augmenté la demande pour les machines à vapeur et autres, et l'ouvrier britannique a montré beaucoup d'habileté et d'adresse dans leur manufacture, ses produits étant placés au premier rang parmi ceux des nations d'Europe qui s'occupent de la fabrication des machines.

Le nombre de milles de chemins de fer ouverts dans le Royaume-Uni à la fin de 1849 montait à 6,032, et il avait augmenté à 8,053 à la fin de 1854.

## CLASS IV.

Machinery in General as applied to Industry.

[See p. 42.]

Notwithstanding the superiority of the manufacture of British machinery, its exportation was for a long time prohibited, and subsequently restricted by various export duties. Since August 1843, however, the duties on its exportation have been entirely repealed. The declared value of machinery of British manufacture exported from the United Kingdom in the year 1843, amounted to 713,474*l.*, and in the year 1854, it had increased to 1,932,963*l.*, or an increase of 1,219,489*l.* in the year 1854 over that of 1843.

The repeal of the duties on raw materials of all descriptions, besides giving a great impulse to trade generally, called forth a very large amount of machinery of all descriptions for assisting the manufacturer in the preparation of those raw materials for the home and foreign markets.

The inventions which have imparted facility to our manufacturing processes, and given perfection to the articles made, during the present century, are too numerous to describe here; it may, however, be permitted to mention the great benefit that has been derived from the use of machinery in draining the fens and lowlands in this country, it being always in the power of the farmer or landowner, at the expense of a few bushels of coals, to drain his fields of superfluous water by the assistance of machinery, which has of late years been brought to great perfection. The centrifugal pump in the Machinery Department, exhibited by Messrs. Easton and Amos, and known by the name of 'Appold's Centrifugal pump,' will give some idea of the services performed by these most useful machines.

## CLASS V.

Railway Machinery; Coaches and Harness.

[See p. 43.]

The rapid extension of Railway communication in the United Kingdom within the last ten years has naturally called forth a large amount of steam and other machinery, in the manufacture of which the British workmen have displayed great ingenuity and skill; their productions occupying the highest rank in the list of machine-making nations of Europe.

The number of miles of railway open in the United Kingdom at the end of the year 1849 amounted to 6,032, and increased to 8,053 at the

Le nombre total des voyageurs était de 63,841,539 en 1849, et de 111,206,707 en 1854.

Les recettes totales augmentèrent de 11,806,498 liv. st. qu'elles étaient en 1849, à 20,215,724 liv. st. en 1854.

Le nombre total des personnes employées sur tous les chemins de fer le 30 juin 1854, montait jusqu'à 135,810.

L'exportation de la mécanique à vapeur du Royaume-Uni est considérable, la valeur déclarée des machines à vapeur de toutes sortes étant de 458,376 liv. st. en 1853.

Parmi les autres subdivisions de cette Classe, celle de la Sellerie et de la Bonnellerie occupe une position importante. Le siège principal de cette manufacture est à Walsall, dans le Staffordshire, où on en fabrique de grandes quantités pour l'exportation. La valeur déclarée des exportations de sellerie et de bonnellerie du Royaume-Uni montait en 1853 à 300,000 liv. st.

#### 6e CLASSE.

*Mécanique à vapeur et Matériel des Ateliers industriels.*  
[Voir p. 47.]

La Mécanique comprise dans cette Classe est fort variée, contenant celle employée pour l'exploitation des Mines, la Construction des Bâtiments, les travaux d'Agriculture, et les inventions mécaniques pour les Ateliers industriels, etc.

Quant à la Mécanique pour l'exploitation des Mines, il est bien reconnu que sans l'invention de la machine à vapeur, on n'aurait pu les exploiter si profitamment qu'à présent, à cause des frais d'exploitation par d'autres moyens; et peut-être aurait-on été obligé de les abandonner dans certains cas. Le nombre et la force des machines employées dans les mines sont très-grands. Dans celles de Cornouailles et de Devon, par exemple, il n'y avait pas moins de 82 machines fonctionnant en 1853, de la force totale de 5,510 chevaux. La moyenne de l'eau tirée des mines dans ces deux comtés est environ 9,000 gallons impériaux par minute—ce qui prouve sans contredit l'importance de la machine à vapeur pour l'exploitation des mines. Le produit total de minerai de cuivre de ces mines montait en 1853 à 181,944 tonnes, rendant 11,913 tonnes de cuivre. Celui d'étain montait à 8,866 tonnes. On a fait de grandes améliorations dans les machines à vapeur employées dans les mines de Cornouailles, et on dit que celles dont on s'y sert à présent produisent autant, si non davantage, pour la quantité de charbon qu'elles consomment, qu'aucunes autres machines en Europe.

On se sert aussi de la vapeur avec succès dans plusieurs branches de l'industrie ayant rapport à la Construction des Bâtiments—dont une (qui est d'une grande importance) est la fabrication des briques.

Quant à la troisième division dont on a fait mention ci-dessus, il faut remarquer les machines à vapeur portatives, de date récente, adaptées à battre blé, à scier, moudre, pomper et autres usages d'Agriculture.

end of 1854. The total number of passengers conveyed in the year 1849 was 63,841,539, and 111,206,707 in 1854.

The total receipts increased from 11,806,498l. in 1849 to 20,215,724l. in 1854.

The total number of persons employed on all the railways on the 30th of June, 1854, amounted to no less than 135,810.

The exportation of steam machinery from the United Kingdom is considerable, the declared value of Steam Engines of all kinds being 458,376l. in the year 1853.

Of the other subdivisions of this Class, that of Saddlery and Harness occupies an important position. The chief seat of this manufacture is in Walsall, in Staffordshire, where large quantities are prepared for exportation. The total declared value of saddlery and harness of British manufacture exported from the United Kingdom in the year 1853 amounted to 300,000l.

#### CLASS VI.

*Special Machinery and Apparatus for Workshops.*  
[See p. 47.]

The Machinery comprehended in this class is very varied in its nature, including that used for Mining, Building, and Agricultural purposes, and also mechanical contrivances for Workshops, &c.

With regard to the first of these, Machinery for Mining, it is well known that but for the invention of the steam-engine a large proportion of the coal and other mines of this country, now profitably worked, could not have been opened, or must have been abandoned, owing to the cost of working them by other labour. The number and power of the machines employed in mines are very great. In those of Cornwall and Devon, for instance, there were no less than 82 engines at work during the year 1853, of 5,510 horse-power. The average quantity of water raised from mines in these two counties is about 9,000 imperial gallons per minute,—a fact unmistakably illustrating the importance of the steam-engine for mining purposes. The total amount of copper ore raised in these mines during the year 1853 amounted to 181,944 tons, yielding 11,913 tons of copper. That of tin ore amounted to 8,866 tons. Great improvements have been made in the steam-engines employed in the Cornish mines, and those now in use are said to perform as much, if not more work, for the amount of fuel they consume, as any engines in Europe.

Steam power is also used most successfully in many branches connected with Building,—and one, not the least in importance, is that of brickmaking.

With reference to the third division as above stated, we may mention the portable steam-engines lately introduced, adapted for thrashing, sawing, grinding, pumping, and other general Agricultural purposes.

Les inventions mécaniques pour les Ateliers industriels sont si nombreux et si multiformes, qu'une description même des plus récentes occuperait plus d'espace que nous en avons pour cette notice nécessairement si limitée; il suffit de dire, que tout obstacle est vaincu aussitôt qu'il se présente par quelque nouvelle mécanique, ou mécanique nouvellement adaptée; quelquesfois par quelque belle combinaison mécanique.

The mechanical contrivances for workshops are so numerous and multifarious in their nature, that a description of them, or of even the more recently-invented ones, would occupy more space than the limits of this note affords; suffice it to say, that almost every obstacle is overcome as soon as it presents itself, by some new or newly-adapted machinery or beautiful mechanical contrivance.

#### 7<sup>e</sup> CLASSE.

##### *Mécanique des Manufactures de Tissus.*

[Voir p. 49.]

C'est au perfectionnement de la mécanique dont on se sert dans les grands établissements de ce pays, qu'il faut attribuer le succès des différentes manufactures des tissus, et la Grande-Bretagne est mieux fournie de ces machines utiles qu'aucun autre pays; mais c'est peut-être à l'abolition des droits inutiles et à la libre entrée de toutes les diverses matières employées dans les manufactures du pays, qu'est due leur grandeur actuelle, comme le prouvent sans contre-dire les résultats frappants depuis que cette mesure fut adoptée, la valeur réelle des exportations des produits et manufactures britanniques et irlandais s'étant augmentée de 47,300,000 liv. st. en 1842 à 98,700,000 liv. st. en 1853, soit plus que doublée. Un examen attentif des machines exposées dans cette Classe offre une meilleure idée de leurs usages respectifs qu'on ne peut donner dans un aperçu si abrégé.

Le nombre des métiers mécaniques employés dans toutes les fabriques du Royaume-Uni s'est beaucoup accru dans les dernières années. En 1835 il était de 116,801, et en 1850 de 298,916, soit une augmentation de 182,115 métiers mécaniques en 1853 sur ceux employés en 1835.

Les 298,916 métiers mécaniques en 1850 étaient employés comme suit:—

Dans les Filatures de Coton . . . .	249,627
" " Laine . . . .	9,439
" " Tissus de Laine	32,617
" " Lin . . . .	1,141
" " Soie . . . .	6,092

Le nombre total des personnes employées dans les filatures, qui montait à 4,330 en 1850, était de 596,082, dont 246,867 hommes, et 349,215 femmes.

En 1850 le nombre des broches dans les 4,330 filatures du Royaume-Uni montait jusqu'à 25,638,716. On employait dans ces filatures dans la même année des machines à vapeur de la force totale de 108,113 chevaux, et celles à eau, de la force totale de 26,104 chevaux.

De ces filatures, 3,689 étaient en Angleterre et dans le pays de Galles, 550 en Ecosse et 91 en Irlande.

Il nous montrerait beaucoup trop loin d'indiquer les inventions et procédés perfectionnés presque sans nombre qui ont considérablement ajouté au progrès de nos manufactures.

#### CLASS VII.

##### *Machinery for Woven Fabrics.*

[See p. 49.]

It is to the perfection of the Machinery used in factories of this country that the success of the various manufactures of textile fabrics is to be ascribed, and no other country is so well supplied in this respect as Great Britain; but it is perhaps to the abolition of all unnecessary duties, and to the free admission of the various substances employed in the several manufactures of the country, that their present eminence is due, as the striking results since that measure was taken fully prove, the real value of British and Irish produce and manufactures exported having increased from 47,300,000L in 1842, to 98,700,000L in the year 1853, or more than double. An inspection of the machines exhibited in this Class will afford a better idea of their several uses than could be conveyed in a short note.

The number of power-looms used in the various factories in the United Kingdom has very greatly increased of late years. In the year 1835 it was 116,801, and in 1850, 298,916, or an increase of 182,115 power-looms in 1850 as compared with the year 1835.

The 298,916 power-looms in 1850 were employed as follows:—

In Cotton Factories . . . .	249,627
Woolen . . . .	9,439
Worsted . . . .	32,617
Flax . . . .	1,141
Silk . . . .	6,092

The total number of workpeople engaged at the factories, which amounted to 4,330 in the year 1850, was 596,082; of this sum 246,867 were males and 349,215 females.

The number of spindles in the 4,330 factories in the United Kingdom in the year 1850 amounted to no less than 25,638,716. The total amount of moving-power in the factories in the same year was 108,113 horses-power steam, and 26,104 horses-power water.

Of the total number of factories 3,689 were situated in England and Wales, 550 in Scotland, and 91 in Ireland.

To point out the almost numberless recent improved contrivances and processes which have added considerably to the progress of our manufactures, is beyond the scope of these remarks.

10<sup>e</sup> CLASSE.*Arts chimiques; Industries des Papiers, etc.*

[Voir p. 56.]

Un des articles les plus importants de manufacture britannique compris dans cette Classe, est celui de Papier, dans la fabrication duquel on a fait de très-grands perfectionnements. On voit par les chiffres suivants l'augmentation qui a eu lieu dernièrement dans la manufacture de cet article :—

	Livres.
Papier grevé de droit d'accise dans le Royaume-Uni	1840      97,237,000 1854      177,896,000
Soit une augmentation de . . .	80,659,000 liv.

dans l'année 1854 sur le produit de l'année 1840.

Le nombre des moulins à papier en activité dans le Royaume-Uni montait en 1852 à 380.

La quantité de papier de manufacture britannique, exportée dans chacune des années ci-dessus était de 5,058,000 liv. en 1840, et de 16,112,000 liv. en 1854, soit une augmentation de 11,054,000 liv. en 1854 sur la quantité exportée en 1840.

Il faut compter la réduction des frais du port de lettres parmi les causes de cette grande augmentation dans la consommation de papier dans ce royaume.

L'introduction du port de lettres à un penny a eu l'effet d'accroître le nombre des lettres envoyées par la poste, de 76 millions en 1839, à presque 169 millions en 1840, et à 443 millions en 1854.

La proportion des lettres à la population montait en 1854 à environ 19 pour chaque personne en Angleterre, 15 en Ecosse, et 7 en Irlande. La réduction du timbre sur les journaux, de 3½ d. à un penny, occasionna aussi une grande augmentation dans le nombre des journaux envoyés par la poste.

Une autre subdivision de cette Classe comprend les Cuirs et les Peaux, dont la préparation se fait sur une grande échelle dans le Royaume-Uni. Les importations en 1853 des peaux non apprêtées étaient :—

	Quintaux.
Non-séchées . . .	568,548
Séchées . . .	231,761

La valeur du cuir britannique exporté du Royaume-Uni s'est beaucoup augmentée dans les années récentes. En 1840 la valeur déclarée de cuir et des articles en cuir de toutes sortes montait seulement à 417,074 liv. st., tandis qu'en 1854 elle s'était élevée à 1,512,771 liv. st.

La consommation du Tabac dans le Royaume-Uni est très-considérable, quoiqu'il ne soit pas une production britannique; la moyenne en est presqu'une livre par tête de la population. En proportion avec la population cependant, la consommation a un peu diminué depuis le commencement du siècle :—

## CLASS X.

*Chemical Substances; Paper, &c.*

[See p. 56.]

One of the most important articles of British manufacture comprised in this Class is that of Paper, which is now brought to great perfection. The increase in the manufacture of this article of late years may be gathered from the following figures :—

	Lbs.
Paper charged with the Duty of Excise in the United Kingdom .	1840      97,237,000 1854      177,896,000
Showing an increase of . . .	80,659,000 lbs.

in the year 1854 over the production of the year 1840. The number of paper-mills at work in the United Kingdom in the year 1852 amounted to 380.

The quantity of paper of British manufacture, exported in each of the above-mentioned years was, in 1840, 5,058,000 lbs., and in 1854, 16,112,000 lbs., or an increase of 11,054,000 lbs. in 1854, over the amount exported in 1840.

The reduction of the Postage rates has been amongst the causes of this large increase in the consumption of paper in this kingdom.

The introduction of the Penny Postage had the effect of increasing the number of chargeable letters passing through the post-office from 76 millions in 1839 to nearly 169 millions in 1840, and to 443 millions in 1854.

The proportion of letters to the population in the year 1854 amounted to about 19 to each person in England, 15 in Scotland, and 7 in Ireland. The reduction of the stamp duty on newspapers in 1836 from 3½ d. to one penny, also led to a great increase in the number of newspapers sent through the post-office.

Another subdivision of this Class includes Leather and Skins, the preparation of which is carried on to a great extent in the United Kingdom. The importation of undressed hides in the year 1853 was—

	Cwts.
Wet . . .	568,548
Dry . . .	231,761

The value of British leather manufactures exported from the United Kingdom has made rapid strides of late years. In the year 1840 the declared value of leather and leather wares of all kinds amounted only to 417,074l.; in the year 1854 it had risen to 1,512,771l.

Tobacco, though not an article of British production, is consumed very largely in the United Kingdom; the consumption averaging nearly one pound per head of the population. In proportion to the population, however, the consumption has somewhat diminished since the commencement of the present century :—

	Poids en Livres qui a été consommé dans le Royaume-Uni.	Montant du Droit. Liv. st.
1801	16,904,752	1,209,337
1841	22,309,360	3,580,164
1851	28,062,841	4,486,469

Quoique le total de la consommation du tabac dans le Royaume-Uni ait beaucoup augmenté depuis 1801, la proportion par tête était moindre en 1841 et 1851 qu'elle n'était en 1801. La diminution dans la consommation se fait principalement en Irlande.

L'accroissement du droit en 1821 de 2 sh. 2d. à 4 s. la livre, occasionnait une diminution d'un quart dans la consommation ; mais ensuite, par la réduction à 3 sh. la livre, elle s'est augmentée, et le revenu surpassé maintenant beaucoup celui obtenu par les droits élevés de 1821.

La comparaison des importations totales de tabac à fumer, cigares et tabac à priser en 1854, avec celles de 1840, fait voir l'augmentation suivante :—

	1840. Livres.	1854. Livres.
Tabac à fumer, cigares} et tabac à priser .}	1,406,054	2,710,063
Tabac à fumer non pré- paré . . . . }	36,680,887	32,492,851

On exporte annuellement du Royaume-Uni de grandes quantités de tabac à fumer de toutes espèces.

	Pounds weight con- sumed in the United Kingdom.	Amount of Duty. £.
1801	16,904,752	1,209,337
1841	22,309,360	3,580,164
1851	28,062,841	4,486,469

Although the total amount of tobacco consumed in the United Kingdom has largely increased since 1801, the proportion per head was less in 1841 and 1851 than in the year 1801. The falling off in the consumption is principally in Ireland.

The advance in the duty in 1821 from 2s. 2d. to 4s. per pound, caused a diminished consumption to the extent of one-fourth; but on the subsequent reduction to 3s. per pound, it was again augmented, and the revenue now far exceeds that collected under the high rates in 1821.

The increase in the total imports of tobacco, cigars, and snuff, in the year 1854 as compared with 1840 was as follows :—

	1840 Lbs.	1854 Lbs.
Tobacco, Manufactured}{ Cigars and Snuff .}	1,406,054	2,710,063
Tobacco, Unmanufactured	36,680,887	32,492,851

Large quantities of tobacco of all kinds are exported annually from the United Kingdom.

### 11e CLASSE.

#### Substances alimentaires.

[Voir p. 60.]

Les différents articles de cette Classe, comme le thé, le café, le sucre et l'eau-de-vie, ont une grande part dans le commerce du Royaume-Uni. On voit l'étendue de ce commerce par l'exposé suivant des importations de ces articles :—

	Importations en 1840. Liv.	Importations en 1854. Liv.
Thé. . . . .	28,021,882	85,792,760
Café, le produit ou ve- nant des Posses- sions britanniques	20,987,869	48,934,814
Id., le produit ou ve- nant des pays étran- gers . . . . .	49,262,897	17,566,858
Sucre brut, le produit ou venant des Pos- sessions britan- niennes . . . . .	3,230,666	5,875,910
Id., le produit ou ve- nant des pays étran- gers . . . . .	805,179	3,220,842

On doit principalement la grande augmentation dans les importations de ces articles en 1854 sur celles de 1840 (à l'exception du café étranger), à la réduction des droits. L'augmentation dans la con-

### CLASS XI.

#### Alimentary Substances.

[See p. 60.]

The various articles of tea, coffee, sugar, and brandy, included in this Class, take a large share in the trade of the United Kingdom. The following statement of the importations of these articles will show the extent of the trade :—

	Imports in 1840. Lbs.	Imports in 1854. Lbs.
Tea . . . . .	28,021,882	85,792,760
Coffee, or from Bri- tish Possessions .}	20,987,869	48,934,814
Do., or from Fo- reign Countries .}	49,262,897	17,566,858
Sugar, raw, or from British Possessions .}	3,230,666	5,875,910
Do., or from Fo- reign Countries .}	805,179	3,220,842

The large increase in the importation of these articles in 1854 over those in the year 1840 (with the exception of foreign coffee), is mainly owing to the reduction in the import duties imposed upon

## NOTES SUR L'INDUSTRIE ET LE COMMERCE DU ROYAUME-UNI.

sommation de ces articles par tête de la population est comme suit:—

	Moyenne décennale de la Consommation par tête de la Population.		
	1830.	1840.	1850.
Thé . .	Liv. 1·26	Liv. 1·35	Liv. 1·62
Café . .	0·58	0·98	1·21
Sucre . .	16·5	16·75	20·75

Malgré les réductions dans les droits d'importation sur ces articles, l'accroissement de leur importation et de leur consommation avec un droit minime rapporte autant au gouvernement que rapportaient les importations quand elles étaient moindres, mais avec des droits élevés, tandis qu'une grande portion de la population jouit de l'usage de ces articles dont elle était privée sous l'ancien système.

*Eau-de-vie.*—“Les effets de la réduction des droits sur l'eau-de-vie ont été remarquables, d'autant plus qu'on a raison de croire que la grande augmentation dans l'importation légitime d'eau-de-vie, qui remplissait entièrement le vide provenant d'une diminution de 30 pour cent dans les droits d'entrée, ‘tait due en grande partie à l'influence qu'avait cette réduction à détruire les profits du contrebandier.

“Nous avons ici un exemple d'une augmentation plus rapide encore de la consommation et du rétablissement du revenu que dans les autres déjà citées.”

En 1846 le droit sur l'eau-de-vie étrangère fut réduit de 22 sh. 10 d. le gallon à 15 sh.

Le tableau suivant fait connaître le progrès de la consommation et du revenu avant et après cette période:—

Années.	Quantités Importées.	Quantités retenues pour la consommation du pays.	Taux du droit par Gallon.	Revenu Net.
1841	Gallons. 2,918,387	Gallons. 1,164,506	sh. d. 22 10	Liv. st. 1,329,083
1846	2,437,203	1,514,465	*15 0	1,165,046
1851	2,930,967	1,859,273	15 0	1,393,862
1853	5,005,911	1,870,567	15 0	1,402,933

## 13e CLASSE.

*Marine et Art Militaire.*

[Voir p. 63.]

Il n'y a pas le moindre doute que le “Propulseur à Hélice” est au premier rang parmi les améliorations récentes dans les constructions navales, comme offrant tous les avantages d'un bateau à vapeur à roues, sans plusieurs de ses entraves.

On peut citer le “grand vaisseau” que construit M. Scott Russell, de Millwall, près de Londres, comme un exemple de l'avancement dans

l'autre. The increase in the consumption of these articles per head of the population is given below:—

	Decennial Average consumed per head of Population.		
	1830.	1840.	1850.
Tea . .	Lbs. 1·26	Lbs. 1·35	Lbs. 1·62
Coffee . .	0·58	0·98	1·21
Sugar . .	16·5	16·75	20·75

Notwithstanding the reductions in the import duties on these articles, their increased importation and consumption, at a low duty, returns the Government as much revenue as the less amount of imports did at a high rate, whilst a large portion of the population of the country now enjoy the use of these articles who were deprived of their use under the old system.

*Brandy.*—“The effects of the reduction of the duty on brandy have been remarkable, and the more so as there is reason to believe that the great increase of brandy legitimately imported, which fully supplied to the Treasury the vacuum arising from a diminution of 30 per cent. in the rate of duty, was very much owing to the influence of that reduction in destroying the profits of the smuggler.

“We have here an example of even a more rapid increase of consumption and recovery of revenue, than in the other instances which have been mentioned.”

In 1846 the duty on foreign brandy was reduced from 22s. 10d. per gallon to 15s.

The following table shows the progress of consumption and revenue before and since that period:—

Years.	Quantities Imported.	Quantities retained for Home Consumption.	Rate of Duty per Gallon.	Net Revenue.
1841	Gallons. 2,918,387	Gallons. 1,164,506	sh. d. 22 10	Liv. st. 1,329,083
1846	2,437,203	1,514,465	*15 0	1,165,046
1851	2,930,967	1,859,273	15 0	1,393,862
1853	5,005,911	1,870,567	15 0	1,402,933

## CLASS XIII.

*Naval and Military Arts.*

[See p. 63.]

Among the recent improvements in Naval Architecture, the “Screw-Propeller” undoubtedly holds the highest position—as affording all the facilities of a steam-paddle ship, without many of its inconveniences.

The “big ship” now building at Messrs. Scott Russell's at Millwall, London, may also be noticed as an instance of the advancement in ship-building

ip-building

l'art de construire les navires dans ce pays. Ce vaisseau-monstre, qu'on fera mouvoir par des roues et des propulseurs à hélice de la force de 2,600 chevaux, sera de la contenance de 22,500 tonnes. On estime le poids du fer employé dans sa construction à 10,000 tonnes.

Le progrès de la Navigation à vapeur de ce pays a été très rapide, le tonnage des bateaux à vapeur construits dans le Royaume-Uni s'étant sextuplé depuis 1840. Le total des vaisseaux construits et enregistrés dans le Royaume-Uni montait, de 1837 à 1854, à 619. Dans la même proportion s'étendent progressivement les dimensions des vaisseaux, et le grand navire auquel on a fait allusion, outre une quantité de charbon suffisant pour un voyage autour du monde, portera 5,000 tonnes de marchandises, et aura 500 cabines pour voyageurs de première classe, avec bien assez de place pour les troupes et pour les voyageurs des autres classes.

“ Il est impossible encore de bien apprécier les effets de notre politique restrictive de 1849 sur la navigation ; mais le tableau suivant fait connaître le total du tonnage employé dans le commerce du Royaume-Uni avant et après l'abrogation de sa législation maritime ” :—

Années.	Total.		
	Britannique.	Etranger.	Tonnes.
1843	5,646,834	2,031,957	7,678,791
1846	6,714,156	2,785,740	9,499,896
1849	8,152,557	3,348,620	11,501,177
1852	8,726,136	4,875,614	13,602,750
1853	9,064,705	6,316,456	15,381,161

La prospérité des intérêts maritimes de la Grande-Bretagne est bien démontrée en regardant l'augmentation de son tonnage ; tandis que le progrès du tonnage total offre une preuve convaincante des bienfaits conférés à son commerce.

#### 14e CLASSE. *Constructions civiles.*

[Voir p. 66.]

C'est peut-être à l'abondance et au bon marché du fer que les travaux des ingénieurs civils du Royaume-Uni, surtout ceux de fraîche date, doivent en partie leur renom. Cette matière sert à faire les ponts-tubes, les ponts suspendus et autres, aussi bien qu'à la construction des toitures gigantesques des embarcadères des chemins de fer et autres grands bâtiments.

La beauté du Palais de Cristal à Sydenham est due autant au fer qu'elle est au verre. Enfin, c'est du fer que les ingénieurs d'aujourd'hui semblent servir presque exclusivement.

Les docks et les ports, les digues et les phares, qui entourent la côte, sont aussi des preuves incontestables de l'esprit entreprenant de cette nation commercante, qu'ont fait naître la liberté de son peuple et le développement de son industrie.

in this country. This monster vessel, which is to be propelled by paddles and screw-propellers of 2,600 horses power, will be 22,500 tons burthen. The weight of the iron employed in its construction is estimated at 10,000 tons.

The growth of the Steam Navigation of this country has been very rapid, the tonnage of the steam-vessels built in the United Kingdom having increased six-fold since 1840. The total number of steam vessels built and registered in the United Kingdom from 1837 to 1854 amounted to 619. The increase in the size of the vessels progresses in like proportion, and the large ship above alluded to, in addition to a supply of coals for a voyage round the world, will carry 5,000 tons of merchandise, and will have 500 cabins for passengers of the highest class, with ample space for troops and lower class passengers.

“ The effects of our restrictive Navigation Policy in 1849 cannot as yet be fully appreciated ; but the following table shows the amount of tonnage employed in the trade of the United Kingdom before and since the repeal of the Navigation Laws ” :—

Years.	Total.		
	British.	Foreign.	Tons.
1843	5,646,834	2,031,957	7,678,791
1846	6,714,156	2,785,740	9,499,896
1849	8,152,557	3,348,620	11,501,177
1852	8,726,136	4,875,614	13,602,750
1853	9,064,705	6,316,456	15,381,161

The increase of British tonnage may be taken as a test of the prosperity of the British shipping interests ; while the progress of the total tonnage employed affords convincing evidence of the benefit conferred upon British commerce.

#### CLASS XIV.

*Civil Engineering.*

[See ... 66.]

The eminence of the works of Civil Engineers in the United Kingdom, and especially those of recent date, is perhaps due in some degree to the abundance and cheapness of iron. Tubular, suspension, and other bridges, as well as the gigantic roofs of railway-stations and numerous buildings, are formed of this material.

The Crystal Palace itself, now re-erected at Sydenham, owes as much of its beauty to this material, iron, as it does to that of glass. In short, iron appears to be almost the exclusive working material of Engineers of the present day.

The docks and harbours, breakwaters and lighthouses, which surround the coast, are also monuments of the enterprising spirit of this commercial country, called forth by the enlargement of its trade, and the freedom of its people.

Outre ces grands travaux, les canaux du Royaume-Uni méritent bien une attention particulière. On estime les canaux navigables, employés pour le transport des marchandises et des produits en Angleterre seulement, à plus de 2,200 milles en longueur, tandis que les rivières navigables excèdent 1,800 milles, faisant ensemble plus de 4,000 milles de navigation intérieure, dont la plus grande partie a été créée ou rendue utile dans les derniers quarante-vingt ans.

Le nombre des canaux commencés et achevés dans le Royaume-Uni depuis 1800, n'est pas moins de 30, ayant une longueur de 582 $\frac{1}{2}$  milles.

On croyait dans le temps que les chemins de fer se substituaient entièrement aux canaux, et par conséquent occasionneraient une grande perte de capital; cependant ces suppositions étaient erronées, parce que depuis que les chemins de fer se sont étendus par tout le pays, le trafic sur les canaux s'est beaucoup augmenté.

L'accroissement du nombre des docks, exigés par le vaste commerce du pays, a été très considérable dans les dernières années.

#### 15e CLASSE. *Industrie des Aciers bruts et ouvrés.*

[See p. 67.]

Le renom de l'acier de Sheffield est presqu'universel, et malgré l'accroissement de la fabrication d'acier par les nations continentales, les exportations du Royaume-Uni de l'acier brut de manufacture britannique se sont augmentées de 2,583 tonnes en 1840, à 20,288 tonnes en 1853.

Les avantages sont grands que possèdent les manufacturiers nationaux sur ceux des pays étrangers, à cause de l'abondance de combustible minéral; c'est cette circonstance qui fait tant prospérer les manufactures d'acier d'Angleterre.

Le plus grand nombre des objets de cette Classe sont exposés par les principaux établissements de Sheffield, qui fabriquent tout, "depuis le plus beau rasoir jusqu'à l'plus simple couteau de poche, et depuis la scie ou la lime la plus fine jusqu'au ciseau le plus commun."

La valeur déclarée des exportations de Quincaillerie\* britannique et de Coutellerie dans les années 1840 et 1854 était—

1840 . . .	1,349,000 liv. st.
1854 . . .	3,869,000

Soit une augmentation de 2,520,000 liv. st. dans l'année 1854 sur celle de 1840.

#### 16e CLASSE. *Fabrication des ouvrages en Métaux, d'un travail ordinaire.*

[Voir p. 69.]

Les divers objets de cette Classe sont d'une grande importance au pays. Il y a longtemps que Bir-

\* Voir à la 16<sup>e</sup> Classe.

Besides these works, the canals of the United Kingdom are specially deserving of notice. The navigable canals, used for the transport of goods and produce in England alone, are estimated to exceed 2,200 miles in length, while the navigable rivers exceed 1,800 miles, making together more than 4,000 miles of inland navigation, the greater part of which has been created or rendered available within the last eighty years.

The number of canals begun and completed since 1800 in the United Kingdom, amount to no less than 30, having a length of 582 $\frac{1}{2}$  miles.

It was imagined at one time, that the railroads would entirely supersede the use of canals, and would thereby cause a great loss of capital; such imaginations, however, were not correct, for since the extension of railroads throughout the country, the canal traffic has very much increased.

The increase in the number of docks, of late years, called forth by the extended trade of the country, is very considerable.

#### CLASS XV.

##### *Steel and its Products.*

[Voir p. 67.]

The reputation of the Sheffield Steel is almost universal, and notwithstanding the increase in the manufacture of steel in Continental nations, the exports of unwrought steel of British manufacture have risen, from 2,583 tons exported from the United Kingdom in the year 1840, to 20,288 tons in 1853.

The advantage possessed by native manufacturers of this article over most foreign producers, in the plenteous supply of mineral fuel, is very great, and it is to this circumstance that the steel manufacturers of England owe their prosperity.

The larger proportion of the exhibits in this Class are the production of Sheffield firms, who manufacture every article, "from the most exquisite razor down to the plainest pocket-knife, and from the finest saw, or file, to the most ordinary description of chisel."

The declared value of British Hardware\* and Cutlery exported in each of the years 1840 and 1854 was—

1840 . . .	£1,349,000
1854 . . .	3,869,000

Or an increase of £2,520,000 in the year 1854 over that of 1840.

#### CLASS XVI.

##### *General Metal Work.*

[See p. 69.]

The various works contained within this Class are of considerable importance to this country. The

mingham a été le siège principal de la manufacture des articles de Quincaillerie de toutes sortes ; et quiconque en a établi plusieurs branches dans d'autres endroits, Birmingham reste toujours à leur tête.

Les ouvrages de laiton du Royaume-Uni sont plus particulièrement renommés pour leur main-d'œuvre ; et les objets ordinaires de quincaillerie en tous genres ont été souvent notés pour "leur variété et leur utilité aussi bien que pour leur bon marché et leur convenance aux besoins de tous les acheteurs."

La valeur déclarée des exportations des objets de quincaillerie\* britannique et de coutellerie, et des articles en laiton et en cuivre, dans les années 1840 et 1854, était—

	1840. Liv. st.	1854. Liv. st.
Quincaillerie et coutellerie . . .	1,349,000	3,869,000
Articles en laiton et en cuivre . . .	1,450,000	1,770,000

manufacture of Hardwares of all descriptions has long been carried on at Birmingham ; and although several branches have arisen at other places in the kingdom, Birmingham still remains at the head of them.

The brass-work of the United Kingdom is particularly noted for its workmanship ; and the commoner sorts of hardware of all descriptions have been often remarked for their "variety and utility, as well as for their cheapness and adaptation to the wants of every class of purchasers."

The declared value of British Hardwares and Cutlery,\* and Brass and Copper manufactures exported from the United Kingdom in each of the years 1840 and 1854, was as follows—

	1840. £.	1854. £.
Hardwares and Cutlery	1,349,000	3,869,000
Brass and Copper Manufactures . . .	1,450,000	1,770,000

## CLASS XVII.

*Orfèvrerie, Bijouterie et industrie des Bronzes d'Art.*

[Voir p. 72.]

Par suite de l'introduction des objets en plaqué, on n'a pas fait grand progrès dans la manufacture d'orfèvrerie d'or et d'argent. Le tableau suivant fait connaître le nombre d'onces sur lesquelles on a payé le droit, et la quantité retenue pour l'intérieur, dans les années 1825 et 1850 :—

	Droit payé.		Retenu pour l'Intérieur.	
	Or.	Argent.	Or.	Argent.
	Onces.	Onces.	Onces.	Onces.
1825	7,662	1,258,658	7,624	1,188,176
1850	7,373	735,865	7,370	659,106

Les améliorations qu'on a fait dans la manufacture d'objets en plaqué, a eu beaucoup d'influence en diminuant la vente de l'orfèvrerie réelle, quoiqu'elles aient occasionné un accroissement dans la consommation des métaux précieux.

On ne peut pas avoir une estimation des quantités d'or et d'argent employées annuellement dans la manufacture des articles faits de ces métaux, et objets en plaqué, etc., dans le Royaume-Uni. Cependant elle doit être assez considérable, puis qu'on produit des articles faits de métaux précieux dans presque toutes les grandes villes. Birmingham est le chef-lieu de l'orfèvrerie argentée par électrisation.

La valeur des exportations d'orfèvrerie britannique montait en 1853 à 102,430 liv. st. On voit par le rapport ci-dessus du droit payé sur l'orfèvrerie, etc.,

\* Voir à la 15<sup>e</sup> Classe.

In consequence of the introduction of plated goods, the manufacture of gold and silver plate has not made much progress. The following Table shows the number of *ounces* of gold and silver plate upon which duty was paid, and the quantity retained for home use, in each of the years 1825 and 1850.

	Duty Paid.		Retained for Home Use.	
	Gold.	Silver.	Gold.	Silver.
	oz.	oz.	oz.	oz.
1825	7,662	1,258,658	7,624	1,188,176
1850	7,373	735,865	7,370	659,106

The improvement that has been made in the manufacture of plated wares, has had a great influence in diminishing the sale of real plate,—although it may have led to an increased consumption of the precious metals.

There are no means for obtaining an estimate of the quantities of gold and silver annually consumed in the manufacture of gold and silver wares, and plated goods, etc., in the United Kingdom. It must, however, be very considerable, as articles in precious metals are produced in almost all large towns. The chief seat of electro-plating is at Birmingham.

The value of British plate exported in the year 1853, amounted to 102,430l. It will be seen from the return above, of the duty paid on plate, etc., that

\* See Class XV.

que la plus grande partie en est retenue pour l'intérieur.

La valeur des exportations de bijouterie britannique, etc., montait en 1853 à 378,741 liv. st.

### 18e CLASSE.

#### *Industrie de la Verrerie et de la Céramique.*

[Voir p. 74.]

En conséquence des règlements très-rigoureux qui ont été imposés, jusqu'à un temps récent, sur les fabricants des objets de verrerie, ces manufactures n'ont fait que peu de progrès, et si ces règlements avaient existé en 1850 et en 1851, il n'est pas probable que le monde se serait étonné d'un palais de cristal ou de verre.

Cependant dans les dix dernières années la fabrication de la verrerie s'est accrue beaucoup, et on l'a appliquée à une grande variété d'usages, aussi bien à l'ornement qu'à l'utilité, et plus spécialement à l'usage domestique. Les exportations ne se sont pas augmentées en proportion. La valeur déclarée de la verrerie britannique qui a été exportée du Royaume-Uni en 1840, calculée selon son poids, était de 404,000 liv. st., et en 1853, seulement de 486,000 liv. st.

Un des usages les plus importants du verre est peut-être celui pour les phares, et nos fabricants ont atteint une grande habileté dans le dessin et la construction des lanternes pour ces bâtiments.

La manufacture des autres articles représentés dans cette Classe, comme la Porcelaine, la Faïence, la Poterie, etc., se fait sur une grande échelle dans le Royaume-Uni pour l'intérieur, et pour l'extérieur autant que le permettent les tarifs des pays étrangers. Dans quelques-uns, la France par exemple, la faïence a été jusqu'à présent prohibée. Le siège principal de cette branche d'industrie nationale est dans le Staffordshire, dont les productions sont renommées aussi bien pour leur qualité supérieure que pour leur bon marché.

On peut former quelque idée de l'étendue de cette branche des manufactures par la valeur des exportations, qui était dans les années 1840 et 1853 comme suit :

La Faïence et la	{	1840 . . .	573,000 liv. st.
Porcelaine .	{	1853 . . .	1,338,000

Soit une augmentation de 765,000 liv. st. en 1853 sur les exportations de 1840.

### 19e CLASSE.

#### *Industrie des Coton.*

[Voir p. 76.]

On doit regarder l'élevation et le progrès de la manufacture des Coton dans la Grande-Bretagne comme l'événement le plus extraordinaire de l'industrie : un peu avant le commencement du siècle elle était dans son enfance, et maintenant elle tient la plus importante position dans l'industrie du pays. En effet, il y avait même des doutes si les pays

the larger part of this manufacture is retained for home use.

The value of British jewellery, etc., exported in the year 1853, amounted to 378,741l.

### CLASS XVIII.

#### *Glass and Pottery.*

[See p. 74.]

In consequence of the very stringent regulations imposed upon Glass Manufacturers, until within a recent period, for the due observance of the Excise Laws, the Glass Manufacturers of the United Kingdom made but little progress, and it is not likely, if those regulations had existed in 1850 and 1851, that the world would have been astonished by a Palace of Crystal or Glass.

Within the last ten years, however, the manufacture of glass, especially for home consumption, has increased to an enormous extent, and has been applied to an infinity of uses, both of ornament and utility. The export trade has not increased in the same proportion. The declared value of British glass entered by weight, exported from the United Kingdom in the year 1840, amounted to 404,000l., and in 1853, only to 486,000l.

One of the most important uses of glass, perhaps, is that for lighthouse purposes, and our manufacturers have attained a considerable amount of skill in the design and construction of lanterns for these buildings.

The manufacture of the other objects represented in this Class, China, Earthenware, and Pottery, &c., is also carried on in the United Kingdom to a vast extent, both for home use and for exportation, so far as it is allowed by the tariffs of other countries. In some, France for example, earthenware has hitherto been prohibited. The chief seat of this branch of native industry is in Staffordshire, the productions of which are noted as well for their excellence as their cheapness.

\* Some idea of the extent of this manufacture may be formed from the value of the British exports, which was in each of the years 1840 and 1853, as follows :—

Earthenware and	{	1840 . . .	£573,000
Porcelain .	{	1853 . . .	1,338,000

Or, an increase of 765,000l. in the year 1853 over the exports of the year 1840.

### CLASS XIX.

#### *Cotton Manufactures.*

[See p. 76.]

The rise and progress of the Cotton Manufacture in Great Britain may be regarded as the most extraordinary event in the annals of human industry. In its infancy shortly before the commencement of the present century, it now occupies the most important position in the manufacturing industry of the country. In fact, so rapidly did it progress, that at one time

is retained for  
etc., exported in  
all.

étrangers pourraient fournir la demande croissante  
pour le coton brut.

Les importations de coton brut montaient en 1800 à 56,010,000 livres, en 1825 à 228,005,000 liv., en 1850 à 663,576,000 liv., et en 1854 à 887,335,000 liv. D'où il résulte que les importations se sont augmentées presque seize fois en cinquante-quatre ans.

L'introduction de la mécanique à vapeur pour exécuter les différents procédés nécessaires à la fabrication des articles de coton, en remplaçant le travail manuel, a été la principale cause de la prospérité de cette branche d'industrie, et par son action et celle de la libre importation de la matière première, le prix de l'article fabriqué est aujourd'hui si bas que le plus pauvre peut en profiter. On calcule que l'on dépense 13,000,000 liv. st. par an pour la mécanique, etc., et la même somme est payée aux personnes employées dans la manufacture, dont le nombre monte à un demi-million.

La valeur des exportations des articles fabriqués de coton et du fil de coton montait en 1825 à 18,359,050 liv. st., en 1850 à 28,259,000 liv. st., et en 1854 à 31,644,000 liv. st.

Il est inutile d'ajouter aux faits ci-dessus, qui sont suffisants pour démontrer le développement extraordinaire de cette industrie sous une politique libérale et sans entraves.

Il y a une petite diminution dans l'exportation du fil de coton : en 1840 sa valeur déclarée montait à 7,101,000 liv. st., tandis qu'en 1854 elle ne montait qu'à 6,695,000 liv. st.

#### 20e CLASSE.

*Industrie des Laines.*

[Voir p. 79.]

On a toujours regardé la manufacture des articles de Laine, quoique moins étendue que celle du coton, comme une des principales industries du pays. On a fait de grandes améliorations dans la fabrication des draps depuis 1824, par l'introduction dans cette année d'un nouveau procédé pour produire un lustre permanent sur la surface du drap.

On a mis beaucoup d'attention dans ces derniers temps aux perfectionnements de la fabrication des laines dans toutes les branches ; et on a fait grand progrès dans la fabrication des tissus de laine, plus spécialement de ceux où sont mélangés la laine et le coton, connus sous le nom de drap de Cobourg et de drap d'Orléans, dont la consommation est très-considérable.

La statistique suivante fait voir l'avancement qu'a fait l'industrie des laines pendant le dernier demi-siècle :—

La quantité de laine (de mouton, d'agneau et d'alpaca) qui a été importée dans le Royaume-Uni en 1801 ne montait qu'à 7,371,000 livres, tandis qu'elle s'est accrue en 1854 à 106,121,000 livres ; et la valeur déclarée des exportations des articles de

some doubts were entertained as to whether foreign nations would be able to supply the increasing demand for the raw cotton.

The total imports of Raw Cotton in the year 1800 amounted to 56,010,000 lbs., in 1825 to 228,005,000 lbs., in 1850 to 663,576,000 lbs., and in 1854 to 887,335,000 lbs. From these figures it will be seen that the imports increased nearly sixteen times in fifty-four years.

The introduction of steam machinery for performing various processes in the manufacture, which are too numerous to be mentioned here, as a substitute for hand labour, has been the chief cause of the prosperity of this branch of our manufacturing industry ; and through its agency, added to that of the free importation of the raw material, the cost of the manufactured article is now so low as to bring it within the reach of the very poorest in the land. It is estimated that about 13 millions sterling are annually paid away for machinery, &c. ; the same amount to persons engaged in the manufacture, who number about half a million.

The total value of the exports of Cotton Manufactures and Cotton Yarn in 1825 amounted to 18,359,000L, in 1850 to 28,259,000L, and in 1854 to 31,644,000L.

It is needless to add to the above facts, which are amply sufficient to illustrate the extraordinary development of this manufacture under a liberal and unrestricted policy.

The declared value of Cotton Yarn exported has slightly fallen off since the year 1840, being 7,101,000L in that year, as compared with 6,695,000L in 1854.

#### CLASS XX.

*Woolen and Worsted Manufactures.*

[See p. 79.]

The manufacture of Woolen Goods, though less extensive than that of Cotton, has been regarded, from a very early period, as one of the staple manufactures of the country. Since the year 1824 a great improvement in the manufacture of woolen cloths has taken place, consequent upon the introduction of a new process, in that year, for producing a permanent lustre on the face of the cloth.

Great attention of late has been paid to the perfecting of the woolen manufacture in all its branches ; and in the fabrication of worsted stuffs considerable progress has been made, especially in those composed of wool and cotton, denominated Cobourg and Orleans cloth, of which the consumption has been immense.

The advancement of the woollen trade during the past half century may be deduced from the following statistics :—

The quantity of Wool (sheep, lamb, and alpaca) imported into the United Kingdom, which amounted in the year 1801 to only 7,371,000 lbs. had increased to 106,121,000 lbs. in the year 1854 ; and the declared value of the exports of woollen goods and

laine et des fils de laine s'est augmentée de 5,586,000 vil. st. en 1820 à 10,678,000 liv. st. en 1854.

Les détails suivants, extraits d'un document officiel, font voir l'effet des mesures de *Free trade* adoptées en Angleterre sur la matière première employée dans cette industrie :—

“ En 1842 le droit sur la laine étrangère était de  $\frac{1}{4}d.$  à 1d. par livre, tandis qu'on admettait librement la laine coloniale. Dans cette année les importations de la laine coloniale montaient à 18,467,212 livres, et celles de la laine étrangère à 27,114,995 livres. On a entièrement supprimé en 1844 les droits avec lesquels on a voulu protéger le producteur de l'intérieur et celui des colonies ; et en 1853, tandis que les importations de laine étrangère s'étaient augmentées à 50,549,902 livres, (ou un peu moins que le double de leur valeur en 1842,) les importations de la laine coloniale se sont augmentées à 66,982,280 livres, c'est-à-dire elles ont plus que triple leur valeur précédente, et cela malgré la perte de toute protection. En même temps la production de la laine à l'intérieur s'est beaucoup accrue. Mais le pouvoir de la consommation est si grand sous la liberté du commerce, que nonobstant tout cet accroissement d'entrées de matière première, les demandes en ont élevé le prix de 11d. par livre qu'il était en 1842, à 1 sh. 6 d. par livre en 1853 ;—bien entendu au grand avantage du producteur. Dans ce temps aussi les exportations de l'industrie des laines se sont augmentées de 5,185,015 liv. st. à 9,883,850 liv. st.”

#### 21e CLASSE.

##### *Industrie des Soies.*

[Voir p. 82.]

L'industrie des Soies du Royaume-Uni, qui était de peu d'importance jusqu'à ces vingt dernières années, a fait depuis beaucoup de progrès dans la qualité, le dessin et le bon marché, et à présent elle soutient heureusement la concurrence avec quelquesunes des plus belles productions des tisserands étrangers ; elle est aussi un article d'exportation assez considérable. La valeur déclarée des exportations des soies britanniques fabriquées ne montait qu'à 296,700 liv. st. en 1825 ; en 1854 elle atteignait la forte somme de 1,691,000 liv. st.

Les importations des soies grèges et ouvrées montaient en 1825 à 3,408,000 livres, et en 1854 à 8,557,000 livres.

La réduction des droits élevés qui pesaient sur les importations des soies, aussi bien que ceux sur les cotonns, a eu pour effet de donner un grand stimulant aux fabricants de soie ; par conséquent, on produit maintenant sur une grande échelle les articles de gaze, de crêpe et autres tissus semblables dans beaucoup de villes où il n'y avait pas des fabriques de soie à l'époque des grands impôts.

On voit par ce qui suit, extrait de documents officiels, l'avancement qu'a fait l'industrie des soies dans ces dernières années :—

“ On a réduit à 15 pour cent le droit sur les soies étrangères fabriquées, qui montait auparavant à 30 pour cent. Les exportations des soies britan-

woollen and worsted yarns from 5,586,000l. in 1820 to 10,678,000l. in 1854.

The following extract from an official paper illustrates the effect of the free-trade measures on the raw material employed in this industry :—

“ In 1842 Foreign wool was subject to a duty of from  $\frac{1}{4}d.$  to 1d. per lb., while Colonial wool was admitted duty free. In that year 18,467,212 lbs. of Colonial and 27,114,995 lbs. of Foreign wool were imported. The protection with which it was thus attempted to nurture the home and colonial producer was entirely abolished in 1844 ; and in 1853, while the importations of foreign wool had increased to 50,549,902 lbs., or not quite double their amount in 1842, the importations of colonial wool increased to 66,982,280 lbs., or more than three times their former amount, despite the loss of all protection. The production of wool at home has also largely increased in the same time. But so great is the power of consumption under free trade, that notwithstanding all this increase of supply, the demand has raised the price from 11d. per lb., in 1842, to 1s. 6d. per lb. in 1853, of course to the great advantage of the producer. The exports of woollen manufactures also increased in that time from 5,185,015l. to 9,883,850l.”

#### CLASS XXI.

##### *Silk Manufactures.*

[See p. 82.]

The Silk Manufactures of the United Kingdom, which, till within the last twenty years, were of comparatively little importance, have since that period made great progress in quality, design, and cheapness, and now sustain a successful competition with some of the most beautiful productions of foreign looms, as well as form an article of exportation to considerable extent. The declared value of British manufactured Silk goods exported in the year 1825 amounted only to 296,700l. ; in the year 1854 it attained to the large sum of 1,691,000l.

The imports of Raw and Thrown Silk in the year 1825 amounted to 3,408,000 lbs., and in 1854 to 8,557,000 lbs.

The removal of the heavy import duties in this instance, as well as in that of cotton, afforded a great stimulus to the silk manufacturers ; and in many towns where, under the system of large import duties, silk manufactures scarcely existed, articles of gauze, crêpe, and other similar fabrics are now produced on a large scale.

The following extracts from official papers will more particularly illustrate the advancement made by the silk industry of late years :—

“ The duty on Foreign Silk Manufactures, which formerly amounted to 30 per cent., has been reduced to 15 per cent. The exports of British manufactured

niques fabriquées, qui montaient en 1842 à 590,189 liv. st., s'augmentaient en 1853 à 2,044,361 liv. st., ou de trois à quatre fois autant. Les soies étrangères étaient entièrement prohibées jusqu'à 1826; mais quoique le fabricant britannique jouissait du monopole du marché intérieur, ce commerce était bien loin d'être dans un état prospère, la moyenne des exportations n'étant qu'environ 350,000 liv. st. par an.

“ L'industrie des soieries présente un exemple frappant des mauvais effets des droits protecteurs. Les soies étrangères furent prohibées jusqu'à 1826, et les fabricants britanniques jouissaient du monopole du marché intérieur.

“ Cependant cette industrie était loin d'être dans un état satisfaisant; la moyenne annuelle des exportations dans les six années 1820 à 1825 fut de 369,778 liv. st.

“ La moyenne annuelle des exportations de 1827 à 1846, sous l'influence des droits protecteurs imposés en 1826, fut de 649,124 liv. st.; tandis que, de 1848 à 1853, sous l'influence des droits modérés qui existent aujourd'hui, elle s'est élevée à 1,372,586 liv. st.

“ D'où il résulte que le commerce s'est accru en proportion de la disparition de la protection, en partie sans doute à cause de la diminution de la contrebande, mais principalement par suite du stimulant énergique donné au commerce par la libre concurrence.”

#### 22e CLASSE.

##### *Le Lin et le Chanvre.*

[Voir p. 83.]

La grande extension de l'industrie des Cotonns a eu nécessairement l'effet de restreindre le développement de celle des Lins, que le coton a remplacé dans plusieurs de ses branches.

Cependant, depuis qu'on a réussi à produire la laine filée de chanvre et de lin au moyen de la mécanique, l'industrie des lins a fait beaucoup de progrès, et elle s'est augmentée par la suppression, en 1842, des droits d'importation. La valeur déclarée des exportations des lins britanniques fabriqués et des fils de lin monta en 1840 à 4,128,000 liv. st., et en 1854 à 5,062,000 liv. st.

On cultive le lin dans le Royaume-Uni sur une grande échelle, et plus spécialement en Irlande; et outre la grande quantité produite à l'intérieur, on en importe beaucoup encore. La production du chanvre est peu considérable dans le Royaume-Uni. On emploie largement à présent la *Jute* dans la manufacture des articles grossiers, comme les tapis, les sacs, etc.

La comparaison suivante de l'augmentation dans les importations du chanvre et du lin étrangers, pendant les derniers quinze ans, indique la prospérité de cette branche d'industrie:—

Le total des importations du chanvre, préparé et brut, dans le Royaume-Uni, montait en 1840 à 1,253,000 quintaux, et en 1854 à 1,303,000 quint.; et ceux du lin brut, à 684,000 quint. en 1840, et à 1,211,000 quint. en 1854.

silks, which amounted in 1842 to 590,189*l.*, increased in 1853 to 2,044,361*l.*, or between three and four times as much. Until 1826 foreign silks were entirely prohibited; but although the British manufacturer had a complete monopoly of the home market, the trade was far from being prosperous, the exports only averaging about 350,000*l.* per annum.

“ The silk trade affords a striking illustration of the injurious operation of protective duties. Down to 1826 foreign silk manufactures were prohibited, and the British manufacturer enjoyed a complete monopoly of the home market.

“ The trade, however, was far from being in a prosperous state: the average annual exports during the six years from 1820 to 1825 was 369,778*l.*

“ The average export during the years from 1827 to 1846, under the full operation of the high protective duties imposed in 1826, was 649,124*l.*; while that during the years from 1848 to 1853, under the present moderate rates of duty, amounted to 1,372,586*l.*

“ From this it will be seen that the trade has increased in proportion as protection has been withdrawn, partly, no doubt, owing to the check to contraband importation, but principally to the healthy stimulus given to the trade by affording it a free competition.”

#### CLASS XXII.

##### *Flax and Hemp.*

[See p. 83.]

The immense extension of the Cotton trade has necessarily limited the growth of our Linen manufactures, which have in many branches been superseded and replaced by that of cotton.

Notwithstanding this drawback, however, the Linen manufactures, since the introduction of machinery into the flax-mills for producing mill-spun yarn from hemp and flax, have made considerable progress, which was greatly increased by the removal of the import duties in 1842. The declared value of the total exports of British Linen manufactures and linen yarn, in the year 1840, amounted to 4,128,000*l.*, and in 1854 to 5,062,000*l.*

Flax is largely cultivated in the United Kingdom, especially in Ireland; but besides the amount produced at home, it is imported to a considerable extent from abroad. Very little hemp is produced in the United Kingdom. *Jute* is now extensively employed in the manufacture of coarse goods, as carpetings, bags, sacks, &c.

The following comparison of the increase during the last fifteen years in the imports of foreign Hemp and Flax, indicates the prosperity of this branch of industry:—

The total quantities of Flax, dressed and undressed, imported into the United Kingdom in the year 1840, was 1,253,000 cwts., and in 1854, 1,303,000 cwts.; and that of Hemp, undressed, 684,000 cwts. in 1840, and 1,211,000 cwts. in 1854.

**23e CLASSE.**

*Industrie de la Bonneterie, des Tapis, etc.*  
[Voir p. 85.]

On fait principalement la Bonneterie dans le Nottinghamshire, dans le Derbyshire et dans le Leicestershire, et dans quelques autres villes en Angleterre; à Balbriggan, en Irlande; et à Hawick, Galashiels, etc., en Ecosse.

La suppression des droits sur l'importation de la matière première a agi avantageusement sur cette industrie; et depuis 1844 il y a eu un grand accroissement du nombre des machines employées dans la manufacture des bas, etc.; et quoiqu'on consomme la plus grande partie de ces manufactures à l'intérieur, les exportations s'augmentent tous les ans.

Les chiffres suivants, qui font voir la valeur déclarée des articles de bonneterie exportés en 1853, donnent une idée de l'étendue de cette industrie:—

Bas de Coton . . .	461,000 liv. st.
Autres articles de Coton	238,000
Bas de Soie . . .	2,000
Autres articles de Soie	4,000
Bas de Laine . . .	261,000
Autres articles de Laine	154,000
 Total . . .	 1,120,000 liv. st.

L'industrie des Tapis de la Grande-Bretagne a fait beaucoup de progrès dans ces dernières années, et la consommation s'est grandement accrue, aussi bien à l'intérieur qu'à l'extérieur.

Un autre article important de manufacture britannique, qui est compris dans cette Classe, est celui de la Dentelle, qui fournit de l'occupation à un grand nombre de personnes. Nottingham est la ville principale où la dentelle est faite à la mécanique; ses productions sont renommées autant par leur bon marché que par leur convenance aux acheteurs pour lesquels on les destine. Les productions de Honiton et du Buckinghamshire, faites à la main, sont aussi très-renommées; mais elles ne peuvent pas entrer en concurrence avec celles de Nottingham, faites à la mécanique.

On introduit en Irlande la fabrication de la dentelle, et plusieurs milliers de femmes, dans ce pays aussi bien qu'en Ecosse, sont occupées dans la production de collerettes et autres articles de mousseline brodées à l'aiguille.

La valeur des exportations de dentelle et de tulle montait en 1853 à plus de 596,900 liv. st.

**CLASS XXIII.**

*Hosiery, Carpets, &c.*  
[See p. 85.]

The manufacture of Hosiery is chiefly carried on in Nottinghamshire, Derbyshire, and Leicestershire, and at a few other towns in England; at Balbriggan, in Ireland; and at Hawick, Galashiels, &c., in Scotland.

The abolition of the duties on the importation of the raw materials used in this trade, acted very sensibly upon this branch of industry; and since the year 1844, a large increase in the number of machines employed in the manufacture of stockings, &c., has taken place; and although the larger proportion of the manufactures are consumed at home, the exports to foreign countries are annually increasing.

The following figures, showing the declared value of British hosiery exported in the year 1853, will give some idea of the extent of this trade:—

Cotton Stockings . . . .	£461,000
" Hosiery and Small Wares . .	238,000
Silk Stockings . . . .	2,000
" Hosiery, except Stockings . .	4,000
Woollen Stockings . . . .	201,000
" Hosiery, other than Stockings	154,000
 Total . . . .	 £1,120,000

The Carpet Manufacture of Great Britain has very rapidly extended of late years, and the consumption, both in the home and foreign markets, has greatly increased.

Another important article of British manufacture included in this Class, is that of Lace, which affords employment to a large number of persons. The chief seat of this manufacture produced by machinery, is at Nottingham; and the productions of this place are noted for their cheapness and suitability to the markets for which they are designed. The productions of Honiton and Buckinghamshire are by hand labour and of great renown, but for cheapness they do not affect to compete with the machine-made lace of Nottingham.

Lace-making is being introduced in Ireland, and many thousands of females, both in that country and Scotland, are employed in the production of ornamental collars, &c., in sewed muslin.

The value of Lace and Net of British manufacture, exported from the United Kingdom in the year 1853, amounted to upwards of 596,000l.

## PREFACE TO THE FIRST EDITION OF THE CATALOGUE.

BEFORE the British Goods were sent to Paris, a Catalogue of the proposed Exhibitors' Names was published, which was arranged according to the system of Classification adopted by the Imperial Commission, and a Rotation Number was given to every Exhibitor. This was found of great service in the transport, receipt, and arrangement of the Goods.

The French authorities, however, according to their own views, have preferred to re-arrange this Catalogue, to change the classification of the Exhibitors, placing them alphabetically in Sections, and to assign different Numbers. As it would have been inconvenient to have had the French International Catalogue in one form, and a British edition in another, the latter has been changed to agree with the French version, except in those cases where Exhibitors' names have been removed in consequence of resignation. The French numbering has been adopted, and the original Rotation Numbers have been placed at the end of the British entries. Consequently, if any British Exhibitors find their goods unexpectedly in some new places, as for instance, in Class 2, they will bear in mind that the responsibility rests wholly with the French authorities, and that the British authorities have simply followed their arrangements.

The greater detail which is to be found in some of the French entries arises from additional information furnished direct by Exhibitors to the Imperial Commission.

Names of Exhibitors are sometimes repeated, where their goods belong to two or more Classes. Thus, Messrs. Crosskill's are entered in Class 3, No. 73, as exhibiting *Agricultural Tools*; in Class 5, because they exhibit a *Cart*; and in Class 6, on account of a *Reaping Machine*. These entries are not re-numbered, but have \* before them.

Exhibitors are requested to communicate any errors of names, address, &c., direct to the Printers, Messrs. CLOWES & SONS, Stamford-street, Blackfriars, London.

and rye. (See cl. 11.) Bronze Medal, cl. 11. 168**
- SECTION 5. Special Produce.**
- 98 PRICE, ASTLEY PASTON, Government School of Mines,  
London. Specimens of vines, chemically prepared  
for the prevention of the grape disease. (See cl. 10.) 173**
- 99 WAIRD, N. BAGSHAW, 14 Clapham Rise, near London.  
Cases for importing living plants. Silver Medal. 180  
[See APP., p. 216.]**
- SECTION 6. Rearing of Useful Animals.**
- 101 BIGG, THOMAS, Leicester House, Great Dover-street,  
Southwark. Sheep-dipping apparatus. 136**

Class 3.  
Agriculture.

Class 3.  
Agriculture.

- 102 MANNINUS, G., à Wedhampton, Wilt., A.—Tolsons de moutons Southdown pour le peigne et la cardé.  
Laine tricotée pour le peigne et la cardé.  
103 MILLNER, R., à Dublin, I.—Tolsons de bêtes à laine.  
104 NEONHOUR et FILS, à Londres, A.—Ruches brevetées.

Class 4.  
Machinery  
applied to  
Industry.

4<sup>e</sup> CLASSE.  
*Mécanique générale appliquée à l'industrie.*  
[Voir NOTES D'INTRODUCTION, p. 21.]

- 1<sup>re</sup> SECTION. *Appareils de l'usage et de l'usage employés dans l'industrie.*  
109 CHADWICK, D., à Salford, A.—Jaugeur d'eau.  
110 GLOVER, TH., à Londres, A.—Compteur à gaz.  
111 MILNE, J., et FILS, à Edimbourg, E.—Compteurs à gaz.  
112 OSLER, FOLLET, à Birmingham, Warwick, A.—Anémomètre soi-réglant.  
113 PADDON et FORD, à Londres, A.—Compteurs à gaz, avec ou sans eau.  
114 WEST et GREGSON, à Oldham, Lancastre, A.—Compteurs à gaz.  
2<sup>e</sup> SECTION. *Organes de transmission et Pièces détachées.*  
117 CORBET, REGINALD J., à Londres A.—Mécanisme pour multiplier le mouvement rotatoire.  
118 WINTON, E. W., à Birmingham, Warwick, A.—Organes de machines.—N.S.

- 3<sup>e</sup> SECTION. *Manèges et autres Appareils pour l'utilisation par machines du Travail développé par les Animaux.*

4<sup>e</sup> SECTION. *Moulins à vent.*

5<sup>e</sup> SECTION. *Moteurs hydrauliques*

6<sup>e</sup> SECTION. *Machines à vapeur et à gaz.*

- 120 ALLEN, EDWARD E., à Londres, A.—Modèle de machine à vapeur pour la marine, avec propulseur à hélice.  
\* BARRETT, EXALL et ANDREWES.—Machine horizontale fixe à vapeur, de la force de huit chevaux, et manège à quatre chevaux pour les travaux des fermes. (Voir cl. 6.)  
121 BOTHAMS, J. C., à Salisbury, Wilt., A.—Modèle de machine à vapeur, avec propulseur à hélice. Modèle du condenseur à surface équilibrée.  
122 BURLINSON, J., et CIE, à Sunderland, Durham, A.—Modèles de machines motrices.  
123 GARRET et MARSHALL, à Leeds, York, A.—Pompe à vapeur pour alimenter les locomotives et les chaudières de bateaux à vapeur.  
124 CLAYTON, SHUTTLEWORTH et CIE, à Lincoln, A.—Machine à vapeur locomobile et machine à vapeur fixe pour les travaux agricoles. (Voir cl. 6.)

\* DRAY et CIE.—Machine à vapeur fixe pour les travaux des fermes. Machine à faucher. (Voir cl. 6.)

- 124 FAIRBAIRN et FILS, à Manchester, A.—Machine à vapeur sphérique. pompes sphériques. Fauaux et lanternes de navire. Appareils divers.

\* HORNBY, RICHARD, et FILS, à Grantham, Lincoln, A.—Machine à vapeur locomobile. (Voir cl. 3 et 6.)

- 126 LAMBERT, TH., et FILS, à Londres, A.—Pièces de bronze et de métal à canon pour les machines à vapeur. Soupirage pour les machines à haute pression. [Voir APP., p. 210.]

- 102 MANNINUS, GROHOR, Wedhampton, near Devizes, South Down sheep's wool. 2129  
103 MILLNER, R., 56 Queen-street, Dublin. Fleeces of wool.—N.S. 2128  
104 NELSON and SON, 127 High Holborn, London. Patent beehives. Bronze Medal.

CLASS IV.

*Machinery in general as applied to Industry.*  
[See INTRODUCTORY NOTES, p. 21.]

SECTION 1. *Apparatus for Weighing and Gauging.*

- 109 CHADWICK, DAVID, Town Hall, Salford. Water-meter. Honourable Mention. 2115  
110 GLOVER, THOMAS, Suffolk-street, Clerkenwell-green. Gas meter. Bronze Medal. 207  
111 MILNE and SON, Chalmers-close, Edin. Gas meters. 208  
112 OSLER, FOLLET, Birmingham. Self-registering anemometer and rain gauge. 206  
113 PADDON and FORD, Foundling-terrace, Grays-inn-road, London. Gas meters, dry and wet. Honourable Mention. 210  
114 WEST and GREGSON, Union-street, Oldham. Gas meters. 209

SECTION 2. *Instruments used for conveying Power, and detailed Portions of Machinery.*

- 117 CORBET, REGINALD J. (per II. Repton, 3 Hanover Chambers, Adelphi, London.) Invention for multiplying rotary motion. Honourable Mention. 214  
118 WINTON, E. W., Birmingham. Machinery.—N.S. 213

SECTION 3. *Horse Gins.*

SECTION 4. *Windmills.*

SECTION 5. *Hydraulic Machines.*

- 120 ALLEN, EDW. E., 376 Strand, London. Model of marine steam engine, with screw propeller. 256

\* BARRETT, EXALL and ANDREWES, Reading, Berks. Steam engine, fixed; horse works, thrashing machine, hand; barley-hummeller. (See cl. 6.) 134

- 121 BOTHAMS, JOHN C., Wilton-road, Salisbury. Model of steam engine for screw propellers, also model of equilibrium surface condenser. 257

- 122 BURLINSON, J., and COMPANY, Sunderland. Models of machinery.—N.S. 258

- 123 GARRET and MARSHALL, Leeds. Steam pumps. Bronze Medal. 259

- 124 CLAYTON, SHUTTLEWORTH, and CO., Lincoln. Steam engine, portable; steam engine, fixed; thrashing machine, combined; grinding mill. Silver Medal in cl. 6. (See cl. 6.) 138

\* DRAY and COMPANY. Steam engine, fixed; reaping machine (Hussey's); cheese press. (See cl. 6.) 141

- 124 FAIRBAIRN and SONS, Manchester. Steam-engine.

- 125 GRAY, THOMAS WOOD, 55 King William-street, City, London. Spherical steam engine, spherical pumps, ship's scuttles, water closets, and lanterns. Bronze Medal. 260

\* HORNBY, RICHARD, and SON. Steam engine, portable; thrashing machine, combined. (See cl. 3 & 6.)

- 126 LAMBERT, THOMAS, and SON, Short-street, Lambeth. Watergauge for steam-boilers. Honourable Mention. 211

[See APP., p. 210.]

- 126<sup>a</sup>** NAPIER, R., et FILS, à Glasgow, E.—Machine à hélice agissant directement.
- 127** NEWTON et FULLER, à Londres, A.—Modèle et coupe de nouveau système de machine à vapeur.
- 128** NICOLE, Ad., à Londres, A.—Modèle de machine à vapeur rotative.
- 129<sup>a</sup>** PENN, J., Greenwich, près de Londres, A.—Modèle des machines à vapeur oscillantes du pouvoir de 500 chevaux mises dans le bateau à vapeur du Sa Majesté, le Sphinx.
- \* RANSOMES et SIMS.—Machine à vapeur fixe. Machine à vapeur locomobile. (Voir cl. 3 et 6.)
- 129** RENNIE, G., et FILS, à Londres, A.—Machine à vapeur.
- 130** SEAWARD et CAPEL, à Londres, A.—Modèle de machine atmosphérique à l'usage de la marine.
- 131** SIEMENS, CH.-W., à Londres, A.—Machine à vapeur de nouveau système.
- 132** TODD et MACGREGOR, à Glasgow, Lanark, E.—Machines à vapeur pour la marine.
- 133** WALKER, THOMAS, à Birmingham, A.—Machine à vapeur rotative. Loch pour la marine. Appareil pour sonder les mers profondes. Calorifère rayonnant et s'alimentant de lui-même. Talons mobiles pour les chaussures.
- 134** WILLIAMS, J., à Bath, Somerset, A.—Machines à vapeur.
- 7<sup>e</sup>** SECTION. *Machines servant à la manœuvre des Fardreaux.*
- \* THORNTON, J., et FILS, à Birmingham, Warwick, A.—Cric pour soulever les fardreaux. (Voir cl. 9.)
- 8<sup>e</sup>** SECTION. *Machines hydrauliques, élévatoires et autres.*
- \* BRAHMIN et CIE, à Londres, A.—Pompes. Presses hydrauliques. (Voir cl. 16.)
- 140** DANORRAT, J., à Sur Yerland, Durham, A.—Pompes de navires. Pompe à incendie pour la marine.
- 141** EASTON et AMOS, à Londres, A.—Pompe centrifuge, par Appold.
- 142** GWINNE FILS et CIE, à Londres, A.—Pompe centrifuge.
- 143** JAMES, JANEZ, 28A Broadwall, Lambeth, à Londres, A.—Modèle de machine d'épuisement.
- 144** MANLOVE, ALIOTT et SEYING, à Nottingham, A.—Machine à force centrifuge pour le travail des ressources. Machines à sécher et à laver. Petite machine à vapeur mettant en mouvement les machines précédentes.
- 145** MERRYWEATHER, MOSES, à Londres, A.—Pompes à incendie de divers modèles. Pompes de ferme pour l'engrangé liquide. [Voir ARR., p. 212.]
- \* MOONSON, W.-S.—Modèle de pompe pour l'épuisement de l'eau dans les mines. (Voir cl. 14.)
- 146** MOSE et FILS, à Glasgow, E.—Presses hydrauliques et pompes pour l'extraction des huiles.
- 147** SANKEY, W. H. V., Ingénieur civil.—Pompe rotative, système Heppel. (Voir "Confédération Suisse," N° 17.)
- 5<sup>e</sup>** SECTION. *Ventilateurs et Songleries.*
- 150** LLOYD, G., à Londres, A.—Ventilateur pour les mines, les houillères et les environs. Machine soufflante à l'aide d'un disque qui ne produit aucun bruit.
- 5<sup>e</sup>** CLASSE.
- Mécanique spéciale et Matériel des Chemins de fer et des autres modes de transport.*
- [Voir NOTES D'INTRODUCTION, p. 21.]
- 1<sup>e</sup>** SECTION. *Matériel pour le Transport des fardreaux à bras, à dos, ou sur la tête.*
- 126<sup>a</sup>** NAPIER, R., and Sons, Glasgow. Direct-acting screw engine.
- 127** NEWTON and FULLER, 16 King William Street, City, London. Model of a new steam-engine.
- 128** NICOLE, ADOLINE, 80 Dean-street, Soho-square, London. Model of rotary engine.
- 128<sup>a</sup>** PENN, J., Greenwich, near London. Model of a pair of oscillating marine engines, as fitted in Her Majesty's steam-ship Sphinx, of 500-horse power.
- \* RANSOMES and Sims, Ipswich. Ploughs, steam engine, portable; steam engine, fixed. (See cl. 3 and 6.) 147
- 129** RENNIE, GEORGE, and SONS, Holland-street, Blackfriars, London. Steam engine, &c.
- 130** SEAWARD and CAPEL, Mill-wall, London. Model of a set of steam engines (atmospheric). Silver Medal. 264
- 131** SIEMENS, C. W., 7 John-street, Adelphi. New steam engine. Silver Medal. 265
- 132** TODD and MACGREGOR, Clyde Works, Glasgow. Pair of steeples engines. Médaille d'Honneur. 255
- 133** WALKER, THOMAS, Birmingham. Rotary steam engine; deep sea line; calorifère, &c. Bronze Medal. Honourable Mention, cl. 9. 266
- 134** WILLIAMS, JAMES, Pickwick Iron-works, Bath. Pendulous stem engine. 267
- SECTION 7. Machines used in moving heavy Weights.**
- \* THORNTON and SONS, Birmingham. Railway iron-mongery, lifting jack, and signal. (See cl. 9.) 444
- SECTION 8. Hydraulic Engines for Lifting, &c.**
- \* BRAHMIN and COMPANY, London. Pumps, &c., fire-snuff boxes, hydraulic presses. (See cl. 16.) 298
- 140** DANORRAT, JAMES, Norfolk-street, Sunderland. Ship's pumps and fire-engines as one.—N.S. 302
- 141** EASTON and AMOS, Orange-street, Leicester-square, London. Centrifugal pump by Appold. Silver Medal. 303
- 142** GWINNE, SONS, and COMPANY, Essex-street, Strand. Centrifugal pump.—N.S. 304
- 143** JAMES, JANEZ, 28A Broadwall, Lambeth, London. Model of a pumping engine. 300
- 144** MANLOVE, ALIOTT, and SEYING, Nottingham. Centrifugal drying machine and engine. 296
- 145** MERRYWEATHER, MOSES, 63 Long Acre. Fire-extinguishing apparatus. Bronze Medal. [See APP., p. 212.] 301
- \* MOONSON, W. S., 17 Great George-street, Westminster. Model of a viaduct and of a coppermine. (See cl. 14.) 297
- 146** MOSE and SONS, 33 Montrose-street, Glasgow. Hydraulic press and pumps for extracting oils.—N.S. 297
- 147** SANKEY, W. H. VILLEINS, C.E., St. Gall, Switzerland. Rotary engine, invented by J. M. Heppel. (Drawings in Swiss Department, No. 17.)
- SECTION 9. Ventilators and Bellows.**
- 150** LLOYD, GEORGE, 70 Great Guildford-street, Southwark, London. Ventilator for mines, buildings, and ships, also a noiseless disc fan blowing machine. Silver Medal. 303
- CLASS V.**
- Special Machinery and Apparatus for Railways, and other Modes of Transport.*
- [See INTRODUCTORY NOTES, p. 21.]
- SECTION 1. Apparatus for carrying burdens on the back, the arm, or the head.**

- 2<sup>e</sup> SECTION.—*Objets de Bourrellerie et de Sellerie.*
- 154 ASHFORD, WILLIAM et GEORGE, à Birmingham, Warwick, A.—Selles; harnais; fous; brides; mors; brosse et quincaillerie pour la sellerie.**
- 155 BAHES, T. et W., à Poyle, Middlesex, A.—Cravaches faites de cuir et de baleine.**
- 156 BENGOUGH FIERES, à Londres, A.—Portemanteaux.**
- 157 BLACKWELL, S., à Londres, A.—Selles, bretelles et harnais, pour hommes, pour dames et pour l'armée. Objets de sellerie pour les courses.**  
[Voir Arr., p. 183.]
- 158 BLYTH, R., à Londres, A.—Selles de tout genre.**
- 159 BRAER, H., à Walsall, Stafford, A.—Harnais. Objets de sellerie; objets de quincaillerie pour les selliers.**
- 160 CASTON, A.-B., à Londres, A.—Selles.**
- 161 CHAWNER et NEWMAN, à Walsall, Stafford, A.—Selles; harnais; objets de quincaillerie propre à la sellerie.**
- 162 CLARK, W., et FILS, à Leeds, A.—Sellerie.**
- 163 COE, E.-F., à Londres, A.—Éperons.**
- 164 CURR, R., à Londres, A.—Selles et harnais. Objets de sellerie et de bourrellerie.**
- 165 DURAND, W., jeune, à Birmingham, Warwick, A.—Harnais; garnitures de voiture.**
- 166 DUNLOP, J., à Haddington, Lothian, E.—Objets de bourrellerie et de sellerie pour les fermes.**
- 167 ELLAM, BENJAMIN, à Londres, A.—Fonets de baleine avec montures d'or et d'argent.**
- 168 GAHREN et FILS, à Londres, A.—Sellerie.**
- 169 GUTTING, J. O., à Londres, A.—Sellerie.**
- 170 HALE, JAMES, à Walsall, Stafford, A.—Crochets à ressort. Ressorts billes. Châbles pour timon. Mors, gourmettes et épérons, pour l'Amérique du Sud.**
- 171 HAWKINS, JOHN, à Londres, A.—Mors de bride; étriers, etc.**
- 172 HILL, FRÈRES, à Walsall, Stafford, A.—Mors, étriers, épérons et autres objets de quincaillerie pour la sellerie, faits pour l'Amérique du Sud.**
- 173 JAMES, F., à Londres, A.—Porte-manteaux.**
- 174 JONES, W.-D., à Shrewsbury, Shrop., A.—Selle élégante et légère pour cheval de course. Objets de sellerie.**
- 174a KANE, G., à Dublin, I.—Portemanteaux.**
- 175 LANGDON, W., jeune, à Londres, A.—Selles et harnais de luxe. Selles de dame et selles de chasse. Brides et mors.**
- 176 LENNOS, W., à Dublin, I.—Selles d'homme et selles de dame. Harnais pour un cheval; harnais plaque d'argent pour deux chevaux.**
- 177 LOWE, SAMUEL, à Walsall, Stafford, A.—Selles et harnais. Quincaillerie propre à la sellerie. Lampes à l'usage de la sellerie et de la carrosserie. Dessins de harnais et de selles.**
- 178 MARTIN, W.-H., à Londres, A.—Fonet, cannes, etc.**
- 179 MIDDLEMORE, W., à Birmingham, Warwick, A.—Selles, harnais. Fous. Quincaillerie pour la sellerie.**
- 180 NEWTON, TH., à Walsall, Stafford, A.—Mors, épérons et étriers d'acier. Boucles de cuivre; boucles argentées et montures de harnois. Quincaillerie à l'usage de la sellerie et de la carrosserie. Dessins de harnais et de selles.**
- 181 PENNY, JOHN, à Londres, A.—Modèle de brides de cérémonie, avec armoiries, ornements et emblèmes.**
- 182 SHIPLEY, J.-G., à Londres, A.—Selles et harnais.**
- 183 SWAINE et ADENEY, à Londres, A.—Fonets, cravaches et cannes de tout genre.**
- 184 VICK, R., à Gloucester, A.—Objets de sellerie et de bourrellerie.**
- 185 WHITE, TH., à Shiford, Lincoln, A.—Selles de promenade, de course, de chasse et de dame. Harnais et rapaces.**
- 186 WINTON, E.-W., à Birmingham, Warwick, A.—Matériel de sellerie et de carrosserie.**
- SECTION 2. *Saddlery and Harness.*
- 154 ASHFORD, W. and G., Esser-street, Birmingham, Saddlers' ironmongery, Saddlery, and whips. Honourable Mention.**  
322
- 155 BAHES, T. and W., Poyle, near Colabrook, Middlesex, Whip-thongs.**  
323
- 156 BENGOUGH, BROTHERS, 4 Tieborow-street, London, Portmanteaus. Honourable Mention.**  
324
- 157 BLACKWELL, SAMUEL, 259 Oxford-street, London, Saddlery and harness, with four patent improvements. Silver Medal.**  
325
- [See APP., p. 189.]
- 158 BLYTH, ROBERT, 4 Park-lane, London, Saddles. Honourable Mention.**  
326
- 159 BRAER, HENRY, Walsall, Stafford, A.—Selles; harnais; objets de quincaillerie pour les selliers.**  
327
- 160 CAITRON, A. H., 7 Baker-st., Portman-sq., Saddles.**  
328
- 161 CHAWNER and NEWMAN, Walsall, Stafford, A.—Selles; harnais; objets de quincaillerie propre à la sellerie.**

- 205 MAGILL, G., 13 *Redmond's Hill*, *Dublin*. Carriages. 338
- 206 PEPPER AND SONS, *Park-street*, *Grosvenor-square*, *London*. Carriages. Silver Medal. 400
- 207 RIGBY AND ROBINSON, 7 *Park-lane*, *Piccadilly*, *London*. Carriage. 401
- 208 STARKEY, T. R., *Nottingham*. Cottage plateau. Silver Medal. 405
- 209 ROCK AND SOX, *Hastings*. Carriage-Diorophia, a two-decked railway carriage; a railway truck with tarpaulin and rollers; a new military tent. Bronze Medal. [See APP., p. 213.] 408
- 210 THOMSON, G., *Stirling*, N.B. Dog-cart. 404
- 211 THORN, W. and F., 10 *Oxford-street*, *London*. Carriages. Honorable Mention. 402
- 212 THRUFT, C., and COMPANY, 260 *Oxford-street*, *London*. Dog-cart. Bronze Medal. 403
- 213 HEATH, J., *Bath*. Bath chair. 410
- SECTION 6. *Improved Apparatus for Conveyance within limited Distances.*
- 217 POWELL, T., *Cardiff*. Model of an apparatus for shipping coals, with a specimen of Powell's smokeless Dudley steam coal. 415
- SECTION 7. *Railway Apparatus.*
- \* CARR, HENRY, 3 *Victoria-street*, *Westminster*, *London*. Model of a railway crossing. (See cl. 1.) 427
- 218 CRAMPTON, THOMAS R., 15 *Buckingham-street*, *Adelphi*, *London*. A locomotive engine. 428

Class 5.  
Machinery  
for Railways  
and Trans-  
port.

- 219** DE BERGUE, CH., à Londres, A.—Rails, consinets, traverses et attaches formant la voie fixe du chemin de fer. Propulseur de nouveau système. Pompe. (Voir cl. 6.)
- 220** DOWNING, S. J., à Dublin, I.—Modèle de locomotive.
- 221** DUNN, HATTERSLEY et CIE, à Manchester, Lancashire, A.—Plaque tournante de fer forgé. Modèle de grue portative. [Voir APP., p. 191.]
- 222** EASIE, W., à Gloucester, A.—Trucks et wagons perfectionnés. Pièces et appareils du matériel roulant des chemins de fer.
- 223** EASTWOOD, JAMES, à Derby, A.—Roues de fer forgé pour locomotives et wagons.
- 224** FAIRDALIN, W., à Manchester, Lancashire, A.—Locomotive et tender.
- 226** JACKSON, P.-R., à Manchester, Lancashire, A.—Bandes; roues; roues à crans; pistons et autres pièces du matériel roulant des chemins de fer.
- 227** LLOYD, S., à Dudley, Worcester, A.—Modèle de plaque tournante.
- 227a** MILES, EZRA, C. E., Stoke Hammond, A.—Modèle du frein hydrostatique pour la prévention des accidents sur les chemins de fer. Méthode nouvelle d'écoulement des tuyaux pour vapeur ou des fluides. Machine pour sabiller les rails des chemins de fer.
- 228** NEWALL, JAMES, à Redruth, Bury, Lancashire, A.—Modèles de voitures de chemins de fer. Modèle de tender.
- 229** PALMER, EDW., à Southampton, Hamp., A.—Modèle d'appareil de sûreté pour chemins de fer.
- 230** PARSONS, P., à Londres, A.—Cousinet joint pour relier les rails des chemins de fer, coussinet en bois sans boulons pour l'assujettissement aux traverses.
- 231** PATENT RAILWAY SLEEPER COMPANY (GREAVES), à Londres, A.—Rails, consinets et traverses pour la voie fixe de chemin de fer, adaptés pour les chemins de fer d'Alexandrie, de Barcelone, de Parahiba, etc.
- 231a** WILLIAMS, C-II., à Londres, A.—Changement de voie.
- 232** PAYNE, NEWMAN et CIE, à Birmingham, Warwick, A.—Rails et barres de fer forgé.
- 233** PERMANENT WAY COMPANY (MAY, CH.), à Londres, A.—Matériel de la voie des chemins de fer.
- 233a** ROBERTSON, J., à Londres.—Fusil à bouche de trompette pour donner des signaux en mer, &c.
- \* SAUNDERS et MITCHELL, à Londres, A.—Pièces d'acier pour voies de voitures de chemins de fer. Essieux de voitures de chemin de fer. Rails acierés. (Voir cl. 14.)
- 234** SEATON, W.-Ba., à Londres, A.—Voie fixe de chemins de fer.
- 234a** ENGLAND, G., et CIE, New Cross, à Londres, A.—Voie de chemin de fer.
- 235** SPENCER, G., à Londres, A.—Ressorts de caoutchouc pour voitures et tampons de chemins de fer.
- 236** SPENCER, TH., à Dudley, Worcester, A.—Essieux pour voitures de chemins de fer.
- 237** STEPHENSON, R., et CIE, à Newcastle-sur-Tyne, Northumberland, A.—Locomotive et tender.
- 238** STEVENS, J., à Londres, A.—Signaux sémaphores pour chemins de fer. (Voir cl. 9.)
- 239** THOMAS, FR. S., à Londres, A.—Dessins de nouvelles voitures et de locomotives pour les chemins de fer.
- 240** SMITH, FREDERICK HENRY, Old Jewry Chambers, à Londres, A.—Appareil breveté pour nettoyer les chaudières tubulaires.
- 8<sup>e</sup> SECTION. Matériel des Transports par eau (renvoi à la classe XIII).
- 9<sup>e</sup> SECTION. Aérostats.
- 219** DE BERGUE, CHARLES, 9, Dowgate Hill, London. Permanent way, new propeller, moulding apparatus, patent pump. (See cl. 6.) Honorable Mention, cl. 4 and cl. 16. 445
- 220** DOWNING, S. J., Trinity College, Dublin. Model of a locomotive engine. 446
- 221** DUNN, HATTERSLEY, and COMPANY, Windsor-bridge Iron Works, near Manchester. Wrought-iron turntable and model of portable crane. Honourable Mention. 447
- [See APP., p. 191.]
- 222** EASIE, WILLIAM, Gloucester. Railway trucks and breaks. 381
- 223** EASTWOOD, JAMES, Railway Iron Works, Derby. Solid wrought-iron rail, engine, and carriage wheels. Silver Medal. 365
- 224** FAIRBAIRN, WILLIAM, Manchester. Locomotive engine and tender. Silver Medal. 429
- 226** JACKSON, PETER R., Salford Rolling Mills, Manchester. Railway tyres and wheels, cogwheels, pistons. Bronze Medal. 430
- 227** LLOYD, SAMUEL, Dudley. Model of patent turntable. 431
- 227a** MILES, EZRA, C. E., Stoke Hammond.—Model of an hydrostatic break for preventing accidents on railroads. New system of coupling pipes for steam or fluids. Machine for sanding the rails of railways. 432
- 228** NEWALL, JAMES, Redvales, Bury, Lancashire. Models of carriages and tenders fitted with Newall's patent break. 399
- 229** PALMER, EDWARD, 9, Brunswick-terrace, Southampton. Model of safety apparatus for railway. 433
- 230** PARSONS, PERCIVAL, 6, Duke-street, Adelphi, London. Permanent way and model of railway crossing. Bronze Medal. 434
- 231** PERMANENT WAY (GREAVES), 8, New Palace-yd, Westminster, London. Permanent way for railways, adopted on the Alexandria, Barcelona, and Parahiba railways. Honourable Mention. 436
- 231a** WILLIAMS, C-II., 103 St. Martin's-lane, London. Railway crossings. Silver Medal. 437
- 232** PAYNE, NEWMAN, and COMPANY, 1, Bennett's-hill, Birmingham. Wrought-iron rails and rails.—N.S. 435
- 233** PERMANENT WAY (MAY), 26, Great George-street, Westminster, London. Permanent way for railways. Bronze Medal. 437
- 233a** ROBERTSON, J., Poplar, London. Gun trumpet for giving signals. \* SAUNDERS and MITCHELL, London. Engineering models; steel for railway wheels, &c. (See cl. 14.) 1481
- 234** SEATON, W. Ba., London. Permanent way for railways. 447
- 234a** ENGLAND, G., and Co., New Cross, London. Railway apparatus. 448
- 235** SPENCER, GEORGE, 6, Cannon-street West, City, London. Patent India-rubber springs for railway carriages and buffers. 439
- 236** SPENCER, THOMAS, Dudley. Railway axles. 440
- 237** STEPHENSON, R., Newcastle-on-Tyne. Locomotive engine. Grande Médaille d'Honneur, cl. 14. 441
- 238** STEVENS, JAMES, Southwark-bridge-road, London. Semaphore railway signals. (See cl. 9.) Honourable Mention. 442
- 239** THOMAS, FREDERICK S., 17, Cornhill, London. Drawings of new railway carriages and locomotive.—N.S. 443
- 240** SMITH, F. II., 11 Old Jewry Chambers, London. A patent apparatus for cleansing the interior of tubular boilers and other hollow articles. 444

**6<sup>e</sup> CLASSE.**  
*Mécanique spéciale et Matériel des Ateliers industriels.*  
[Voir NOTES d'INTRODUCTION, p. 22.]

**1<sup>e</sup> SECTION. Pièces détachées et Machines élémentaires.**

**246** MUIR et CIE, à *Manchester, Lancashire*, A.—Fabrication de vis. Tours. Machines à raboter et à forer. Meules brevetées. Outils d'ingénieurs et de mécaniciens. Presse à copier et à bosseler.

**247** SCHIELE, CHIR., à *Oldham, Lancashire*, A.—Machines ayant pour effet de prévenir et régulariser la détérioration par le frottement des surfaces des machines.

**248** SADLER, JOHN II., *Leeds, A.*—Une nouvelle description de roues.

**2<sup>e</sup> SECTION. Machines de l'exploitation des Mines.**

**249** BROWNE et FILS, à *Saint-Austell, Cornwall*, A.—Collection d'outils à l'usage des mineurs du Cornouailles.

**3<sup>e</sup> SECTION. Machines relatives à l'art des constructions.**

**252** OATES, J. PINLOTT, à *Lichfield, Stratford*, A.—Modèle de machine pour la fabrication des briques, des tuiles, des tuyaux, etc.

**253** WARING, CH., à *Neath-Abey, Glamorgan*, A.—Machine mue à la vapeur ou à bras, servant à couper dans la masse des blocs de houille ou d'autres substances minérales, de façon à économiser les frais d'extraction et de travail.

**254** WHITEHEAD, JOHN, à *Preston, Lancashire*, A.—Machine pour la fabrication des tuiles, des briques, des tuyaux de drainage et de toutes sortes d'ouvrages en argile.

**4<sup>e</sup> SECTION. Machines servant au travail des Matières minérales autres que les métaux.**

**255** CLAYTON, H., à *Londres*, A.—Machine à faire les briques.

**255<sup>a</sup>** POUTER, LINDE, et POUTER, à *Carlisle*, A.—Machine à faire les briques.

**5<sup>e</sup> SECTION. Machines métallurgiques.**

**256** CHAPLIN, AL., *Hill-street, à Glasgow, Lanark*, E.—Forge portative. Machine soufflante.

**257** MACKWORTH, H., à *Clifton, Gloucester*, A.—Modèles de machines et d'instruments à l'usage des mines.

**258** PENNY, TH., et FILS, à *Bilston, Stafford*, A.—Modèle de laminoir à cingler le fer.

**6<sup>e</sup> SECTION. Matériel des ateliers de constructions mécaniques.**

**259** BUCKTON, JOSHUA, et CIE, à *Leeds, York*, A.—Machine pour découper les roues de bois et de métal. Machines à tourner, à forer, à percer, à raboter, et autres machines et outils pour les ateliers de construction.

**261** HARVEY, G. et A., à *Glasgow, Lanark*, E.—Slotting Machine.

**262** LEWIS, FR., et FILS, à *Salford, Manchester, Lancashire*, A.—Machines à alésier, percer, tourner et raboter.

**263** SHEPHERD, HILL et SPINK, à *Leeds, York*, A.—Machine à raboter. Martinet.

**264** SMITH, BEACOCK, et TANNETT, à *Leeds, York*, A.—Machines à tourner, à alésoir, à raboter et autres machines-outils pour les ateliers de construction.

**265** WHITWORTH, J., et CIE, à *Manchester, Lancashire*, A.—Machines à tourner, à raboter, à forer, à percer, à façoner, à rainer, à filer, à décomposer les roues, et autres machines d'atelier de construction. (Voir cl. 12.)

**7<sup>e</sup> SECTION. Machines servant à la fabrication de petits objets en métal.**

**CLASS VI.**

*Special Machinery and Apparatus for Workshops.*  
[See INTRODUCTORY NOTES, p. 22.]

Class 6.  
Machinery  
for Work-  
shops.

**SECTION 1. Separate Pieces of Machinery and Apparatus for Workshops.**

**246** MUIR and COMPANY, *Britannia Works, Manchester*. Screwing tackle; lathes; planing and drilling machines; patent grindstones; engineering and mechanical tools; copying and embossing presses. *Bronze Medal.* 464

**247** SCHIELE, CHRISTIAN, *North Moor Foundry, Oldham*. Models, principally illustrative of his anti-friction curve. *Bronze Medal*, cl. 4, and *Honourable Mention*. 438

**248** SADLER, JOHN II., *Leeds*. A new description of wheels. 462

**SECTION 2. Machines used in Mining Operations.**

**249** BROWNE and SONS, *St. Austell, Cornwall*. A set of Cornish miners' tools, &c. 483

**SECTION 3. Machinery used in Building.**

**252** OATES, JOSEPH PINLOTT, *Saint John-street, Lichfield*. Model of brick-making machine. 501

**253** WARING, CHARLES, *Neath-Abey, Glamorganshire*. S. W. Model of a machine for cutting coal by steam power, or by hand, and saving both labour and capital. 490

**254** WHITEHEAD, JOHN, *Preston, Lancashire*. Tile machine, &c. *Silver Medal*. 157

**SECTION 4. Machines for working Non-Metallic Minerals.**

**255** CLAYTON, H., *Dorset-square, London*. Brick-making machine. *Medaille d'Honneur*.

**255<sup>a</sup>** PONTER, LINDE, and PONTER, *Carlisle*. Brick-making machine. *Silver Medal*.

**SECTION 5. Metallurgic Machines.**

**256** CHAPLIN, ALEXANDER, *Cranston, Hill-street, Glasgow*. A patent blowing machine and portable forge. 524

**257** MACKWORTH HERBERT, *Clifton Wood House, Clifton*. Models of mining apparatus. *Bronze Medal*, cl. 1. 487

**258** PENNY, THOMAS, and SONS, *Bilston, Staffordshire*. Model of iron rolling mill. 466

**SECTION 6. Apparatus and Mechanical Contrivances used in Workshops.**

**259** BUCKTON, JOSHUA, and COMPANY, *Well House Foundry, Leeds*. Machine for cutting wheels in wood and metal. Machines for turning, boring, planing, &c., in metals. *Silver Medal*. 530

**261** HARVEY, G. and A., *Allion Machine Works, Glasgow*. Slotting machine. *Bronze Medal*. 531

**262** LEWIS, FRANCIS, and SONS, *Hawley-street Works, Salford, Manchester*. Machine tools for boring, turning, and planing. *Bronze Medal*. 532

**263** SHEPHERD, HILL, and SPINK, *Hunslet-road, Leeds*. Machine tools. *Bronze Medal*. 533

**264** SMITH, BEACOCK, and TANNETT, *Leeds*. Machine tools for turning, boring, planing, &c. *Silver Medal*. 534

**265** WHITWORTH, JOSEPH, and CO., *Chorlton-street, Manchester*. Machine tools for turning, boring, planing, &c. (See cl. 12.) *Grande Médaille d'Honneur*. 535

**SECTION 7. Machines used in the Manufacture of Small Articles in Metal.**

Class 6.  
Machinery  
for Work-  
shops.

- 8<sup>e</sup> SECTION. *Machines de l'exploitation forestière, ou servant spécialement au travail du bois.*
- 271 ARISS, à Londres.—Machine pour travailler le bois.
- 272 BIRCH, J., à Londres, A.—Seule mécanique à couper les montants et les moulures de portes, fenêtres et châssis.
- 273 COULSON, W., à York, A.—Machine à creuser, à forcer et entailler le bois.
- 274 DEPPA, TH.-D.-LLOYD, à Shrewsbury, Shropshire, A.—Machine à débiter et façonnez le bois.
- 275 HANNAH, A., à Glasgow, Lanark, E.—Outils pour creuser le bois.
- 9<sup>e</sup> SECTION. *Machines de l'Agriculture et des Industries agricoles et alimentaires.*
- 278 BARRETT, EXALL, et ANDREWES, à Reading, Berks, A.—Machine à bras pour battre les grains. Machine à monter l'orge. (Voir cl. 4.)
- 279 BURGESS et KEY, à Londres, A.—Machine à moissonner. Baratte. Tubes de gutta-percha.
- \* CLAYTON, SHUTTLEWORTH, et Cie, à Lincoln, A.—Machine combinée pour battre les grains, hacher les tourteaux, vanner les céréales et mettre les grains en sac. Moulin à mouler les grains. (Voir cl. 4.)
- 280 CORCORAN, H., et Cie, à Londres, A.—Modèle de four à dréche.
- \* CROSSKILL, W., à Beverley, York, A.—Machine à moissonner. (Voir cl. 3 et 5.)
- 281 DRAVY, W., et Cie, à Londres, A.—Machine à moissonner, système Bussey; presse à fromage. (Voir cl. 4.)
- 282 FAIRBOW, CIT., à Londres, A.—Machine pour mettre les vins en bouteille et pour boucher les bouteilles.
- \* GARRETT, RICHARD, et FILS, à Stamfordham, Suffolk, A.—Machine à vaporiser pour battre les céréales; machine à concasser les tourteaux pour l'alimentation du bétail. (Voir cl. 3.)
- \* HORNSBY, RICHARD, et FILS, à Grantham, Lincoln, A.—Machine pour épurer le blé; machine pour battre les céréales; machine à concasser les tourteaux pour l'alimentation du bétail. (Voir cl. 3 et 4.)
- 283 HURWOO, G., à Ipswich, Suffolk, A.—Moulin avec menues de métal pour moudre les céréales, le riz, le café, les légumes, etc. (Voir cl. 13.)
- 284 HUXHAM et BROWN, à Exeter, Devon, A.—Moulin à taa. Moulin à farine. Fourneau de cuisine. Ecouilles de navires. [Voir APP., p. 192.]
- 284a LOYSET, E., à Londres, A.—Machine hydrostatique pour faire filtrer le café.
- 284b LYON, A., à Londres, A.—Machine pour couper la viande, le pain et les légumes.
- 285 ORR, W., à Greenock, Renfrew, E.—Modèle de machine à purger le sucre.
- 286 PIERCE, WILLIAM, à Londres, A.—Hachepaille du système Corne.
- \* RANSOME et SIMS, à Ipswich, Suffolk, A.—Machine pour préparer le lin; moulin à broyer les fèves, Coupe-racines. (Voir cl. 3.)
- 287 REID, ROBERT, à Arbroath, Forfar, E.—Machine à vanner et trier le blé.
- \* STANLEY, W.-P., à Peterborough, Northampton, A.—Appareil propre à la cissois des racines; appareil pour broyer les céréales. (Voir cl. 3.)
- \* STOCKER FRÈRES.—Machines à l'usage des brasseries. (Voir cl. 16.)
- 288 TYLOR, J., et FILS, à Londres, A.—Machine pour la fabrication du soda-water. Ouvrage de métal. (Voir cl. 13.)
- 291 BRYAN, CORCORAN, et Cie, à Londres.—Machine employée dans la fabrication du papier.
- 10<sup>e</sup> SECTION. *Machines des arts chiniqués.*

- 1<sup>e</sup> SECTION. Pièces détachées pour la Filature et le Tissage.**
- 308** BROWN, AL., à *Barnsley, A.*—Pelages et lisses de fer et d'airain pour le tissage.
- 309** CRAHREF, TH., à *Halifax, York, A.*—Machine à fabriquer les cardes.
- 310** FOXWELL, DAN., à *Manchester, Lancastre, A.*—Machine à fabriquer les cardes.
- 311** WATKINS, W. T., à *Bradford, York, A.*—Bobines, dévidoirs cylindriques et autres pièces de porcelaine pour les filatures et les fabriques de tissus de soie et de laine poignée. Pièces de porcelaine pour toute espèce de mécanique.
- 312** SMITH, JOSPH, à *Keighley, près de Bradford, A.*—Lames de maillois et de peignes de fer et d'airain pour le tissage.
- 313** ROBSON, BYRNE, et GOODALL, à *York*.—Cardes à point d'aiguilles pour le lin et l'étope.
- 313a** HATTERSLEY, J., à *Leeds, A.*—Broches et volants.
- 2<sup>e</sup> SECTION. Machines pour la préparation et la Filature du Coton.**
- 314** BOOTH, H., et CIE, à *Preston, Lancastre, A.*—Bancs à broches et matériel pour la filature du coton.
- 314a** COATS, J. P., à *Paisley, E.*—Machine pour mettre le fil sur des bobines.
- 315** BURN, ROMEAT, à *Edinbourg, E.*—Machine à nettoyer le coton.
- 316** COONDE et CIE, à *Londres, A.*—Machine. (Voir cl. 3.)
- 317** ELCF, J., et CIE, à *Manchester, Lancastre, A.*—Machines à préparer et mètiers à filer le coton.
- 318** HORSFALL, W., à *Manchester, Lancastre, A.*—Cardes de fil de fer à l'usage des filatures de coton.
- 319** LEIGH, EV., à *Manchester, Lancastre*, et DONSON et BARLOW, à *Bolton, A.*—Machines à carder et mètiers à filer le coton.
- 292** KINSFORD, C., *Cardiff, Cardif*.—Press for the solidification and conversion into an effective combustible of turf and coal dust. *Honourable Mention.* 582
- 293** PRICE, ASTLEY PASTON, *Margate, Kent*. Apparatus for distilling wood. 560
- SECTION 11. Machines used in connection with Dyeing and Printing.**
- 296** CRIBBS, J. and W., *Victoria-buildings, Manchester*. Patent cotton-cylinder engraving machinery. *Silver Medal.* cl. 26. 594
- 297** JABRETT, GRIFFITH, 37 *Poultry, London*. Patent printing and other presses. 715
- 298** JOHNSON, JOHN ROMEAT, 43A, *Liquorpond-street, Gray's-inn-lane, London*. Machine for casting printing-type machine for flushing ditto. *Silver Medal.* 512
- 300** NEALE, R. (per Nourse and Company, 17 *Cornhill, London*). Steam copper-plate printing machine. *Silver Medal.* 596
- 301** STRAKEN, SAMUEL, 80, *Bishopsgate Within, London*. Patent side lever lithographic press. 595
- 302** WATERLOW and SONS, 65 *London-wall, London*. Stamping machine. (See cl. 25 and 26.) 1035
- SECTION 12. Machines used only in certain Trades.**
- \* DE BERGER, CHARLES, 9 *Dowgate-hill, London*. Permanent way, now propeller, moulding apparatus, patent pump. (See cl. 5.) 445
- CLASS VII.**  
*Special Machinery and Apparatus for the manufacture of Woven Fabrics.*  
[See INTRODUCTORY NOTES, p. 23.]
- SECTION 1. Instruments used in Spinning and Weaving.**
- 308** BROWN, ALEXANDER, *Shambles street, Barnsley*. Reeds of iron and brass, used in weaving cloths. *Honourable Mention.* 627
- 309** CRAHFER, THOMAS, *Well-lane, Halifax*. Card-making machine. *Bronze Medal.* 624
- 310** FOXWELL, DANIEL, *Roger-street, Red Bank, Manchester*. Card-making machine. *Silver Medal.* 625
- 311** WATKINS, W. and T., 53 *Bridge-street, Bradford, Yorkshire*. Porcelain shuttle eyes, and other weaving implements. All manner of mechanical agents in porcelain. *Bronze Medal.* 622
- 312** SMITH, JOSEPH, *Keighley, near Bradford*. Reeds of iron and brass and mail heads used in weaving cloths. 630
- 313** ROBSON, BYRNE, and GOODALL, *Brighouse, York*. Needle-point tow cards. *Bronze Medal.*
- 313a** HATTERSLEY, J., *Leeds*.—Spindles and flyers. *Bronze Medal.*
- SECTION 2. Machines used in the Preparation and Spinning of Cotton.**
- 314** BOOTH, H., and COMPANY, *Edward-street, Preston*. Mule and throttle, &c., spindles. *Bronze Medal.* 633
- 314a** COATS, J. P., *Paisley*. Machine for reeling sewing thread. 634
- 315** BURN, ROBERT, *Castle Mills, Edinburgh*. Cotton-seeding machine. 634
- 316** COOMBE and COMPANY, 30 *Mark-lane, London*. Machine. (See cl. 3.) *Honourable Mention.* cl. 6.
- 317** ELCF, JOHN, and COMPANY, *Jersey-street, Manchester*. Cotton-spinning machinery. *Silver Medal.* 637
- 318** HORSFALL, WILLIAM, *Great Bridgewater-street, Manchester*. Specimens of wire cards for spinning. *Silver Medal.* 626
- 319** LEIGH, EV., *Miles Platting, Manchester*. *Bronze Medal.*
- 319** DONSON and BARLOW, *Bolton*. Cotton-spinning machinery. *Silver Medal.* 640

**Class 7.**  
Machinery  
for Woven  
Fabrics.

- 320 LISTER, S., CUNLIFFE, à Bradford, A.—Machine à carder.  
 321 MASON, J., à Rotherhithe, Lancastre, A.—Machines pour carder, peigner et filer le coton. Machine à carder la laine.  
 322 MITH, —, à Glasgow, Lanark, E.—Métier à filer.  
 324 PLATT FIERES ET CIE, à Oldham, Lancastre, A.—Série complète de machines servant à la préparation, au cardage, à la filature et au doublement du coton.
- 3<sup>e</sup> SECTION. Machines pour la préparation et la filature du Lin et du Chanvre.
- 328 COMBE, J., et CIE, à Belfast, Antrim, I.—Machines à séparer le lin.
- 329 DAVY, EDW., à Fordton, près d'Exeter, Devon A.—Machine à préparer le lin et le chanvre sans roulis-sage.
- 4<sup>e</sup> SECTION. Machines pour la préparation et la filature de la Laine.
- 332 SYKES et OGDEN, à Huddersfield, York, A.—Machine à nettoyer la laine.
- 5<sup>e</sup> SECTION. Machines pour la préparation et la filature de la Soie.
- 334 CHADWICK, J., 12A Mosley-street, et DICKENS, TH., à Middleton, Lancastre, A.—Machine à filer la soie, procédé ayant pour objet d'obtenir, directement du cocon, de la soie monilée.
- 334<sup>a</sup> CROSSLEY, JOHN, à Cheshire, A.—Machine de Jacquard perfectionnée.
- 334<sup>b</sup> MURRAY, B. A., à Dublin, I.—Machine pour filer la soie du cocon.
- 335 PRIESTLEY, EDMUND, à Halifax, York, A.—Pêignes pour préparer les déchets de soie.
- 6<sup>e</sup> SECTION. Machines de Cordierie, de Passementerie, et machines spéciales.
- 7<sup>e</sup> SECTION. Tissage à basses lisses et hautes lisses.
- 336 DUREU, JÉRÔME-ANDRÉ, à Patricroft, près de Manchester, Lancastre, A.—Métier à tisser la fustaine et le velours de coton.
- 340 HART, J., à Coventry, Warwick, A.—Métier à tisser les rubans, mu par la vapeur. (Voir cl. 21.)
- 341 TODD, W. et G., à Heywood, Manchester, Lancastre, A.—Métiers pour tisser les toiles de coton.
- 342 MATHER et PLATT, à Manchester, Lancastre, A.—Métiers pour tisser les toilles.
- 343 PARKER, CH., et fils, à Dundee, Forfar, E.—Métier pour le tissage mécanique des toiles à voiles et d'autres tissus.
- 345 SHAW, J., à Bradford, A.—Métier à la Jacquard.
- 346 SMITH, W., et frères, à Heywood, près Manchester, Lancastre, A.—Métier mécanique à la Jacquard pour le tissage de soieries brochées à plusieurs couleurs.
- 347 WHITEHAL, S., à Nottingham, A.—Métier à la Jacquard.
- 348 WOOD, W., à Monkhill, Pontefract, York, A.—Métier à tisser les tapis.
- 349 HODGSON, GEO., à Bradford, York, A.—Métier pour tisser les alpacas.
- 8<sup>e</sup> SECTION. Métiers à tisser, à mailles; Métiers à faire le fil à tricoter, à broder, à tricoter et à coudre.
- 354 HOWDSORTH, J., à Manchester, Lancastre, A.—Machine à broder, breveté.
- 355 THOMAS, W., et Fils, à Londres, A.—Machines à coudre.
- 9<sup>e</sup> SECTION. Appareils et Machines pour le blanchiment, la teinture, l'apprêt et le pliage des tissus.
- 320 LISTER, S., CUNLIFFE, Bradford. Carding machine.  
 321 MASON, JOHN, Globe Works, Rotherhithe. Wool-spinning machinery. Machine for carding, combing, and spinning cotton. Silver Medal. 670  
 322 MITH, —, Clyde Works, Glasgow. Spinning-machine.  
 324 PLATT, BROTHERS, and COMPANY, Oldham. A complete series of machines for the preparation and spinning of cotton. Grande Médaille d'Honneur. 643
- SECTION 3. Machines used in the Preparation and Spinning of Flax and Hemp.
- 328 COMBE, JAMES, and COMPANY, Belfast. Patent hacking machine for flax. Silver Medal. 636
- 329 DAVY, EDWARD, Fordton, near Exeter, Devon. Machinery for preparing unsteeped flax and hemp. 657
- SECTION 4. Machines used in the Preparation and Spinning of Wool.
- 332 SYKES and OGDEN, Quay-street, Huddersfield. Patent wool-cleaning machines. Silver Medal. 644
- SECTION 5. Machines used in the Preparation and Spinning of Silk.
- 334 CHADWICK, J., 12A Mosley-street, Manchester, and DICKENS, THOMAS, Spring Vale Works, Middleton. Silk reeling machine for obtaining at once milled silk from the cocoon. Bronze Medal. 681
- 334<sup>a</sup> CROSSLEY, JOHN, Newton Moor, Cheshire. Improved double-lift Jacquard machine. Silver Medal.
- 334<sup>b</sup> MURRAY, B. A., Dublin. Machine for spinning silk from the cocoon.
- 335 PRIESTLEY, EDMUND, Halifax. Silk combs for dressing waste silk. Honourable Mention. 682
- SECTION. 6. Rope-making, Lace-making, and Special Machines.
- SECTION 7. Weaving of the Low Warp and High Warp.
- 339 DUREU, JÉRÔME ANDRÉ, Patricroft, near Manchester. A power loom for fustian and velvetee. 635
- 340 HART, JAMES, Earl-street, Coventry. Steam ribbon loom. (See cl. 21) Bronze Medal. 685
- 341 TODD, W. and G., Heywood, Manchester. Power looms for weaving cottons. Bronze Medal.
- 342 MATHER and PLATT, Manchester. Canvas loom. 684
- 343 PARKER, CHARLES, and Sons, Chapelshude, Dundee. Power-loom for navy canvas. Médaille d'Honneur. 659
- 345 SHAW, JOHN, Gordon Street, Bradford. Jacquard machine. 686
- 346 SMITH, WM., and BROTHERS, Swan Iron Works, Heywood, near Manchester. Power loom (Jacquard's) for the manufacture of silks with various colours interwoven. Silver Medal, and Honourable Mention. 683
- 347 WHITEHAL, S., Nottingham. Jacquard loom and machine. 684
- 348 WOOD, WILLIAM, Monkhill, Pontefract, Yorkshire. Machine for weaving Brussels and pile carpets. Silver Medal. 709
- 349 HODGSON, GEO., Bradford, Yorkshire. Loom for alpacas.
- SECTION 8. Looms for Making Hosiery.
- 354 HOWDSORTH, JAMES, Manchester. Patent embroidery machine. Silver Medal. 710
- 355 THOMAS, W., and Son, St. Martin's-le-Grand, London. Sewing machines. Bronze Medal.
- SECTION 9. Apparatus and Machinery for Bleaching, Dyeing, Dressing, and the Folding of Fabrics.

362 BECKER, CHARLES, 39 Newman-street, London. Balance. Gyroscope. Refractometer, &c. 721

363 CUTTS, CHESTERMAN and COMPANY, Sheffield. Measuring tape. 719

364 HERSCHEL, SIR JOHN, Royal Mint, London. Coin-weighting machines. Invented by W. Cotton, Director of the Bank of England. 724

365 OERTLING, LUDWIG, 12 and 13 Store-street, London. Balances for weighing bullion, and for chemical analysis. Silver Medal. 726

366 SAUNDERSON, CHARLES, 13 Delamere-street, Paddington, London. Sealed and instruments for setting out railway curves. 727

367 SHEEPSHANKS, REV. R., Atheneum Club, London. Standard measures. Honourable Mention. 728

368 WILSON, J. PROFESSOR, Edinburgh. Coin-counting machine. 728

SECTION 2. *Clockwork.*

371 ADAMS, F. B., and SONS, 21 St. John's-square, London. Watches. Honourable Mention. 730

372 COLE, THOMAS, 6 Castle-street, Holborn, London. Clocks. Honourable Mention. 731

373 DAVIS, W., and SON, 37 Gracechurch-street, London. Watches. 732

375 FRODSHAM, CHARLES, 84 Strand, London. Watches and chronometers. Médaille d'Honneur. 734

376 FRODSHAM and BAKER, 31 Gracechurch-street, London. Watches and chronometers. 736

376 FUNNELL, E., Brighton. Small lever watch,  $\frac{1}{2}$  of an inch thick. Honourable Mention. 736

377 GENHAAS, ALEX. (Tenchier), Gordon's Hospital, Aberdeen. Clock, barometer, spherograph. 735

378 HALL, GEORGE FREDERICK, 15 Norfolk-street, Fitzroy-square, London. Clock pendulum and mechanical apparatus. 737

379 LOSEY, E. T., 44 Gerrard-street, Islington, London. Chronometers and watches. Silver Medal. 738

380 NICOLE and CAPT., 80 Dean-street, Soho-square, London. Watches for astronomers, engineers, and physicians. Watches, self-adjusting, without key. Silver Medal. 740

382 POOLE, JOHN, 57 Fenchurch-street, London. Chronometers. Bronze Medal. 742

383 WATKINS, A., 67 Strand, London. Watches. 744

384 WEBSTER, RICHARD, 74 Corahill, London. Chronometers and watches. 743

385 AUBERT et KLAITENBERGER, Regent-street, London. Watches and clocks. Bronze Medal. 745

386 BENNETT, JOHN, Cheapside, London. Turret clock and watches. 739

SECTION 3. *Optical Instruments and Apparatus of all kinds used in measuring Space.*

388 ADIE, —, Edinburgh. Astronomical instruments. 755

389 ADIE, PATRICK, 395 Strand, London. Mathematical, optical, and meteorological instruments. Bronze Medal. 756

390 BREWSTER, SIR DAVID, St. Leonard's College, St. Andrew's N.B. Solar telescope by Dollond—Lithoscope. Telescope for the precise measure of angles and distances. Kaleidoscopes. 764

- Class 8.
- 391** CALLAGHAN, W., à Londres, A.—Instruments d'optique.
- Arts, Sciences, and Instruction.**
- 392** COOKE, TH., à York, A.—Instruments d'astronomie. Instruments à l'usage de la marine.
- 393** DE LA RUE, WARREN, à Londres, A.—Modèle indiquant la manière de monter le télescope aérien de Huyghens. Instruments d'optique.
- 394** DICK, A., à Glasgow, Lanark, E.—Chaines d'arpentage.
- 395** ELLIOT FRENES, à Londres, A.—Instruments de mathématiques, de physique, d'optique et d'arpentage.
- 396** FIELD, R., et FILS, à Birmingham, Warwick, A.—Lentilles de microscope. Vues catotypes.
- 397** GRAY, J., à Liverpool, Lancastre, A.—Habitacles; boussoles.
- 398** GRUB, —, à Dublin, I.—Instruments d'astronomie.
- 399** HAGGARD, W.-D., à Brighton, Sussex, A.—Double rapporteur.
- 399a** HEPERATH, DR., à Bristol, A.—Tourmalines artificielles. Polariscope portatif monté avec de grandes plaques de sulphate d'iode-quinine comme polariseurs et analyseurs; cet appareil est accompagné d'un cristal de nitre taillé perpendiculairement à l'axe pour servir d'examen ainsi qu'à développer le système bin-axial des anneaux.
- 400** HOPPE AND THORNTWHAITE, à Londres, A.—Chambres noires pour la photographie. Lentilles perfectionnées. Instruments de physique. Télescopes.
- 401** JACON, CAPT. W. S., Astronome à l'Ilon. East India Company. Modèle d'un toit plan pour télescope équatorial.
- 402** KING, T.-D., à Bristol, A.—Microscope achromatique; microscope achromatique portatif. Chambre obsoète pour la photographie.
- 403** LADD, W., à Londres, A.—Microscopes achromatiques; machine pneumatique à double levier; baromètre et siphon.
- 404** LASSELL, W., à Liverpool, Lancastre, A.—Modèle de télescope équatorial.
- 405** OBSERVATOIRE ROYAL DE GREENWICH (Ainy, G.-B.), à Greenwich, A.—Grand cercle pour observer le passage des astres au méridien astronomique; modèles et coupes.
- 406** OBSERVATOIRE ROYAL D'ECOSSE (SMYTH, CH. PIAZZI, astronome royal), à Edimbourg, E.—Instruments d'astronomie et de météorologie.
- 407** PILLSCHEN, MORITZ, à Londres, A.—Microscopes et instruments d'optique.
- 407a** POWELL, REV., Prof. M.A., à Londres, A.—Nouveau micromètre à double image.
- 408** PRITCHARD, AND., à Londres, A.—Microscopes avec porte-objet mobile.
- 408a** RANKINE, W. J. M., Glasgow, E.—Règle anomalographique.
- 410** ROSE, LE COMTE DE, à Parsonstown, King., I.—Modèle de son télescope.
- 411** SOLOMON, J., à Londres, A.—Instruments d'optique et de mathématiques.
- 412** SMITH et BECK, à Londres, A.—Microscopes.
- 412a** SOCIETE DES ARTS, à Londres, A.—Deux microscopes qui ont gagné des prix pour leur bon marché: l'un coûte 9 fr. 35 c., et l'autre 37 fr. 50 c.
- 413** SOCIETE ASTRONOMIQUE DE LONDRES, A.—Modèles d'instruments d'astronomie.
- 414** STEPHENSON, S., à Londres, A.—Lentilles fabriquées par procédé mécanique.
- 415** TOPPING, C. M., à Londres, A.—Objets microscopiques pour les microscopes.
- \* VARLEV, C., à Londres, A.—Télescope graphique avec support d'acajou. (Voir cl. 9.)
- 391** CALLAGHAN, W., 45 Great Russell-street, London. Optical instruments. 762
- 392** COOKE, THOMAS, York. Astronomical and nautical instruments. Silver Medal. 761
- 393** DE LA RUE, WARREN, 7 St. Mary's-road, Canonbury-square, Islington, London. Model of method of mounting the aerial telescopes of Huyghens. 763
- 394** DICK, A., Glasgow. Measuring chains. 763a
- 395** ELLIOT, BROTHERS, 56 Strand, London. Mathematical and surveying instruments. 765
- 396** FIELD, R., and Son, 113 New-street, Birmingham. Microscopes, lenses, enotype views. 764

- 4<sup>e</sup> SECTION.** *Instruments de Physique, de Chimie, de Météorologie, destinés à l'étude des sciences ou appliqués aux usages ordinaires.*

- 422 DICKINSON, J., à Manchester, Lancashire, A.—**Nouveau baromètre, dit baromètre angulaire. Anémomètre portatif propre à mesurer la vitesse de l'air dans les mines et les lieux habités.
- 423 GERRARD, A., à Aberdeen, E.—**Pendule; baromètre; sphéromètre; projection stéréographique à l'usage des marins.
- 424 GLAISTER, J., à Lewisham, Kent, A.—**Instruments de météorologie.
- 424a GOWLAND, G., à Liverpool, A.—**Compas.
- 425 KNIGHT et FILS, à Londres, A.—**Instruments de physique.
- 426 OBSERVATOIRE DE KEW, près de Londres, A.—**Instruments de météorologie de l'Observatoire.
- 426a PENROSE, F. C., à Trafalgar-square, Londres.—**Heliocographes.
- 427 STEVENSON, P., à Edimbourg, E.—**Instruments de physique.
- 428 TYNDAL, DR., F.R.S., à Londres, A.—**Instruments servant à la démonstration des phénomènes magnétiques.
- 430 WHEWELL, PROFESSEUR, à Cambridge A—**Anémomètre.

Class 8.  
—  
Sciences, and  
Instruction.

- 5<sup>e</sup> SECTION.** *Cartes, Modèles et documents d'Astronomie, de Géographie, de Topographie et de Statistique sans renvoi à la classe (XXVI).*

- 436 JAMES, lieut.-col.** au corps royal du génie, à Southampton, Hamp., A.—Instruments servant à l'arpentage trigonométrique de la Grande-Bretagne; anémomètre employé par le Board of Ordnance.
- 437 COLLINS, H.-G., à Londres, A.—**Cartes géographiques.
- 438 MANNING, J., à Londres, A.—**Sphères.
- 439 WROTTESLEY, LORD, à Wolverhampton, Stafford, A.—**Plan de son observatoire avec les instruments d'astronomie en place.
- 440 WYLD, JAMES, à Londres, A.—**Globe terrestre et globe céleste. Cartes de la Crimée.

- 6<sup>e</sup> SECTION.** *Modèles, Cartes, Ouvrages, Instruments et Appareils destinés à l'enseignement des sciences, des lettres et des arts libéraux.*

- 442 ARCHER, T.-C., à Higher-Tranmere, Cheshire, A.—**Collection de matières premières pour l'enseignement.
- 443 HENSLOW, PROFESSEUR, à Hadleigh, Suffolk, A.—**Préparations carpiologiques. Fruits et sections de fruits et de semences, moulés et dessinés, servant à l'étude de la physiologie végétale.
- 444 STEVENS, W., à Londres, A.—**Plantes desséchées, servant à l'étude de la botanique.
- 445 WILLIAMS, R., à Londres, A.—**Instruments de mathématiques.
- 446 WILLIS, PROFESSEUR, Regent's Park, à Londres, A.—**Matériel pour l'enseignement des sciences mécaniques.

- 7<sup>e</sup> SECTION.** *Matériel de l'Enseignement élémentaire.*

- 447 MINISTÈRE DU COMMERCE (DÉPARTEMENT DES SCIENCES ET DES ARTS), à Londres, A.—**Appareils modèles et dessins en usage dans les écoles de science et d'art du Royaume-Uni. (Voir cl. 1, cl. 3, et cl. 10.)

#### 9<sup>e</sup> CLASS.

*Industries concernant l'emploi économique de la Chaleur, de la Lumière et de l'Électricité.*

- 1<sup>e</sup> SECTION.** *Procédés ayant pour objet l'emploi des sources naturelles de Chaleur ou de Froid, de Lumière et d'Électricité.*

#### CLASS IX.

*Manufactures relating to the economical production and employment of Heat, Light, and Electricity.*

Class 9.  
Heat, Light,  
and Elec-  
tricity.

- SECTION 1.** *Processes having for their object the Employment of Heat, Cold, Light and Electricity, derived from natural sources.*

Class 9.  
Heat, Light,  
and Elec-  
tricity.

- 2<sup>e</sup> SECTION.** Procédés ayant pour objet la production initiale du Feu et de la Lumière.
- 3<sup>e</sup> SECTION.** Combustibles spécialement destinés au chauffage économique.
- 4<sup>e</sup> SECTION.** Chauffage et Ventilation des Habitations.
- 452** AUNOTT, DU. (par BAILEY et CIE), à Londres, A.—Foyer ouvert avec appareil fumivore. Appareil de ventilation pour appartement. Thermosiphon pour le chauffage des habitations et des serres. Pompe à air pour la ventilation des grands bâtiments.
- 453** EDWARDS, F., and FILS, à Londres, A.—Poêles.
- 454** FEETHAM et CIE, à Londres, A.—Grilles de poêles; guide-œuf.
- 454<sup>a</sup>** FLAVER, S., à Leamington, Warwick, A.—Cheminée de cuisine.
- 454<sup>b</sup>** FINLAY, J., à Glasgow, Lanark, E.—Grilles de foyer à registre et garniture complète de cheminée.
- 455** JEEKES, W., à Londres, A.—Poêle richement décoré. Appareil fumivore.
- 456** HOOLE, H.-E., à Sheffield, York, A.—Grilles de poêle, etc.
- 458** EDWARDS, TH., à Liverpool, Lancashire, A.—Modèles d'appareils pour l'éclairage et la ventilation des monuments publics.
- 459** MOON, J., à Barnstaple, Devon, A.—Poêles.
- 460** ONIONS, J.-C., à Birmingham, A.—Forge portative avec soufflet. Soufflets à main ordinaires et de luxe avec bois sculpté.
- 461** PIERCE, W., à Londres, A.—Grilles de poêle.
- 462** PAIDEAUX, TH.-S., à Londres, A.—Soupeuse de fourneau se fermant d'elle-même, pour empêcher la fumée et économiser le combustible.
- 463** TURNER, H. et W., à Sheffield, A.—Grilles de poêles, poêles, etc.
- 464** VARLEY, MME C., à Londres, A.—Modèle d'un ventilateur pour appartement.
- 5<sup>e</sup> SECTION.** Production et emploi de la Chaleur et du Froid pour l'économie domestique.
- 469** BENHAM, J.-L., et FILS, à Londres, A.—Fourneaux de tête pour cuisine. Grilles de poêle. Baignoires.
- 470** DULEY, J., et FILS, à Northampton, A.—Fourneau de cuisine.
- 471** EVANS FILS et CIE, à Londres, A.—Fourneaux de cuisine—brevetés.
- 472** GARTON et JAHVIS, à Exeter, Devon, A.—Fourneaux de cuisine, de fer forgé.
- 473** LOYSET, EDW., à Londres, A.—Appareil pour obtenir des extraits de substances végétales. Moulin à mouler le café. Appareil de cuisine pour le soldat en campagne. (Voir cl. 12 et 25.)
- 474** WAKEFIELD, F., à Mansfield, Nottingham, A.—Fourneaux de cuisine. Poêles.
- 6<sup>e</sup> SECTION.** Production et emploi de la Chaleur et du Froid dans les arts.
- 478** COFFEY, J.-AMB., à Londres, A.—Modèle de machine pour l'évaporation des liquides.
- 479** VIVIAN et FILS, à Tai Bach, Glamorgan, A.—Modèles de fourneaux; fours à coke.
- 7<sup>e</sup> SECTION.** Éclairage.
- 482** BRIGHT, R., à Londres, A.—Lampes et mèches.
- 483** HILL, J., à Birmingham, Warwick, A.—Lampes et leurs supports.
- 483<sup>a</sup>** HENDERSON, R., à Durham, A.—Lampes de sûreté.
- SECTION 2.** Processes having for their object the production of Fire and Light.
- SECTION 3.** Combustibles to be used as Cheap Fuel.
- SECTION 4.** Warming and Ventilation of Houses.
- 452** AUNOTT, DU. (manufactured by BAILEY and COMPANY), Holborn, London. Ventilating and heating contrivances. Silver Medal. Grande Médaille d'Honneur, cl. 12. 829
- 453** EDWARDS, F., and SON, 42 Poland-street, London. Stoves. Silver Medal. 818
- 454** FEETHAM and COMPANY, 9 Clifford-street, London. Stove-grates, fenders, &c. Honourable Mention. Bronze Medal, cl. 21. 820
- 454<sup>a</sup>** FLAVER, S., Leamington. Kitchen range.
- 454<sup>b</sup>** FINLAY, JOHN, Glasgow. Grates. Honourable Mention, cl. 21. 1703
- 455** JEEKES, WILLIAM, 57 Great Russell-street, London. Stoves, &c. Bronze Medal. 823
- 456** HOOLE, H. E., Green-lane Works, Sheffield. Stove-grates, &c. Bronze Medal. Médaille d'Honneur, cl. 24. 822
- 458** EDWARDS, TH., 7 Church-street, Liverpool. Models of apparatus for lighting and ventilating public buildings. 831
- 459** MOON, JAMES, 76 High-street, Barnstaple, Devonshire. Stoves. 841
- 460** ONIONS, J. C., Bradford-street, Birmingham. Bellows. 825
- 461** PIERCE, W., 5 Jermyn-street, London. Stove-grates, &c. Bronze Medal. Honourable Mention, cl. 24. 826
- 462** PRIDEAUX, THOMAS SYMES, 23 Paulton-square, London. Furnace door, for preventing smoke and economising fuel. Bronze Medal, cl. 4, ant cl. 9. 853
- 463** TURNER, H. and W., Bridge-street, Sheffield. Stove-grates, &c. 828
- 464** VARLEY, MRS. C., 1 Charles-street, Clarendon-square, London. Model of a room with cornice arranged for ventilation. 830
- SECTION 5.** Production and Employment of Heat and Cold in Domestic Economy.
- 469** BENHAM and SONS, 19 Wigmore-street, London. Stoves, grates, &c. Bronze Medal. 817
- 470** DULEY, JOHN, and SON, Northampton. Patent cooking stove. Bronze Medal. 839
- 471** EVANS, SON, and COMPANY, 33, King William-street, London. Kitchen ranges, &c. Honourable Mention. 819
- 472** GARTON and JAHVIS, 190 High-street, Exeter. Cooking stoves. 840
- 473** LOXLETT, EDWARD, 68, Snow-hill, City, London. Patent hydrostatic percolators for coffee, tea, &c. Cooking apparatus for the soldier in the field. Bronze Medal in cl. 11. Honourable Mention, cl. 25. 574
- 474** WAKEFIELD, F., Sherwood Iron Works, Mansfield. Cooking apparatus, stoves, &c. 842
- SECTION 6.** Production and use of Heat and Cold in the Arts.
- 478** COFFEY, JOHN AMBROSE, 4, Providence-row, Finsbury. Model of machine for evaporating liquids. Honourable Mention, cl. 4. 571
- 479** VIVIAN and SONS, Tai Bach, South Wales. Models of a furnace, cokeing-ovens. 854
- SECTION 7.** Lighting.
- 482** BRIGHT, R., 37 Bruton-street, London. Lamps. 865
- 483** HILL, J., Broad-street, Birmingham. Lamps and brackets.
- 483<sup>a</sup>** HENDERSON, R., Seacham Colliery, Durham. Safety lamps.

- 484 MESSINGER et FILS, à Birmingham, Warwick, A.—** Candélabre de bronze antique et doré. Appareils pour l'éclairage au gaz. Fanaux et lanternes servant aux chemins de fer et à la navigation. **485 NIMES, J.-S., à Bakewell, Derby, A.—** Lampes.
- 486 PHILIP, C.-J., à Birmingham, Warwick, A.—** Lampes et leurs supports.
- 487 PRICE'S PATENT CANDLE COMPANY, à Londres, A.—** Huile du palme et séries de produits relatifs à la conversion des corps gras neutres en acides gras et glycerine, et au procédé d'acidification et de distillation. Huile de coco, stéarine, oléine. Acide stéarique et bougies, faits avec des débris de corps gras. Cires et suifs végétaux. Etuve à bougie pour chauffer l'eau.
- 488 ROSS, ARCHIBALD-W., à Sunniside, Sunderland, Durham, A.—** Lampe de sûreté de Davy à l'usage des mines. Lampe de sûreté perfectionnée.
- 489 SALT and LLOYD, à Birmingham, Warwick, A.—** Lampes, etc.
- 8<sup>e</sup> SECTION. Phares, Signaux et Télégraphes aériens.**
- 493 BEADLETT, J., à Poringland, Norfolk, A.—** Télégraphe pour le service intérieur des maisons.
- \* **STEVENS, J., à Londres, A.—** Lampes pour signaux de nuit sur les chemins de fer. (Voir cl. 5.)
- 495 THORNTON, J., et FILS, à Birmingham, Warwick, A.—** Signaux de jour pour chemins de fer; lampes pour signaux de nuit. (Voir cl. 4.)
- 9<sup>e</sup> SECTION. Production et emploi de l'Électricité.**
- 498 ALLAN, TH., à Londres, A.—** Modèle d'une machine à moteur électrique.
- 499 BROOKE, CH., à Londres, A.—** Appareil photographique pour constater les changements des appareils magnétiques et météorologiques. Appareil électrique. Instruments de chirurgie pour les sutures.
- 499a CAMPION, T.-R., à Londres, A.—** Câble sous-marin.
- 500 DERING, G.-E., à Welwyn, Hertford, A.—** Télégraphe électrique.
- 501 DUNDONALD, LE COMTE DE, à Londres, A.—** Fil de télégraphe électrique.
- 502 ELECTRIC TELEGRAPH COMPANY, Lothbury, à Londres.** —Appareil électrique.
- 503 GASSIOT, J.-P., F.R.S., à Clapham, près de Londres, A.—** Batterie électrique de Grove, alimentée par l'acide nitrique.
- 504 GROVE, W.-R., F.R.S., à Londres, A.—** Batterie voltaïque à gaz donnant un courant constant.
- 505 HARRIS, SIR SNOW, F.R.S., à Plymouth, Devon, A.—** Appareils électriques.
- 506 HENLEY, W.-TH., à Londres, A.—** Télégraphes électriques. Aimants; appareils magnétiques.
- 507 KUPER, W., et CIE, à Londres, A.—** Câble de fils métalliques pour le télégraphe sous-marin, les chemins de fer et les mines.
- 508 LYONS, M., à Birmingham, Warwick, A.—** Appareil électro-magnétique, pour usage privé.
- 509 MEINIG, C., à Londres, A.—** Electro-générateur.
- 509a NEWALL, R. S., et CIE, à Gateshead, Durham, A.—** Fil métallique pour le télégraphe sous-marin. Télégraphe électrique.
- 509b PULVERMACHER, à Londres.—** Electro-générateur.
- 510 SHEPARD, CH., à Londres, A.—** Horloges électriques.
- 511 SOUTH-EASTERN RAILWAY COMPANY, à Londres, A.—** Appareils du télégraphe électrique employés sur le South-eastern railway, inventés par CH. N. Walker, ingénieur des télégraphes de la Compagnie.
- 512 VARLEY, C. J., à Londres, A.—** Instruments pour le télégraphe électrique. (Voir cl. 8.)
- 513 WHEATSTONE, PROFESSOR, à Londres, A.—** Appareils électriques et magnétiques.
- 484 MESSINGER and Sons, Broad-street, Birmingham, Rail-way lamps and ships' lights. Honourable Mention.** **485 NIMES, J. S., Rutland-terrace, Bakewell, Derbyshire.** Class 9. Heat, Light, and Electricity.
- Lamps, coloured. **486 PHILIP, C. J., St. George's-place, Birmingham.** Lamps and brackets. **487 PRICE'S PATENT CANDLE COMPANY, Belmont, Vauxhall, London.** Palm oil, and a series of products connected with the conversion of neutral greases into acid greases and glycerine—and in the process of acidification and distillation. Cocoon-nut oil, stearin and oleine. Avid tallow and candles made from the waste of certain greases. Vegetable waxes and tallow. Chimney-stoves for heating water. Médaille d'Honneur, cl. 10. **488 ROSS, ARCHIBALD WILSON, Sunniside, Sunderland.** A safety-lamp (Davy's) rendered unerringly secure. **489 SALT and LLOYD, Edmund-street, Birmingham.** Lamps.
- SECTION 8. Lighthouses, Signals, and Aerial Telegraphs.**
- 493 BEADLETT, J., Poringland, Norfolk.** Telegraph for the interior of houses.
- \* **STEVENS, JAMES, Southwark-bridge-road, London.** Semaphore railway signals and gas meter. (See cl. 5.) **495 THORNTON and SONS, Birmingham.** Railway ironmongery. Lifting jack. Railway day indicators and night signal lamps. (See cl. 4.) Bronze Medal, cl. 4. Honourable Mention, cl. 5. **499 CRAMPTON, T. R., Buckingham-street, London.** Submarine cable.
- 500 DERING, G. E., Lockley's, Welwyn, Herts.** Electric telegraph apparatus. Bronze Medal. **501 DUNDONALD, THE EARL OF.** Electrical apparatus. **502 ELECTRIC TELEGRAPH COMPANY, Lothbury.** Electrical apparatus. **503 GASSIOT, JOHN P., F.R.S., Clapham Common, near London.** Grove's nitric-acid battery. **504 GROVE, W. R., F.R.S., London Institution.** Voltaic gas battery, with incessant current. **505 HARRIS, SIR SNOW, F.R.S., Plymouth.** Electrical instruments. **506 HENLEY, WILLIAM THOMAS, 46 St. John's-street Road, London.** Electric and magnetic telegraphs, magnets and apparatus, &c. Silver Medal. **507 KUPER, W., and COMPANY, 15 Leadenhall-street, London.** Electric telegraphs, wires. Silver Medal. **508 LYONS, MONAS, 143 Suffolk-street, Birmingham.** Magneto-electric apparatus, for personal use. **509 MEINIG, C., Piccadilly, London.** Electro-generator. **509a NEWALL, R. S., and COMPANY, Gateshead.** Submarine wire electric telegraph. Silver Medal, and in cl. 16. **509b PULVERMACHER, London.** Electro-generator. **510 SHEPARD, CH., 5 Leadenhall-street.** Electric clock. **511 WALKER, C. N., South Eastern Railway, London.** Electric telegraphs, &c., used on the railway, invented by him. **512 VARLEY, C. J., 1 Charles-st., Chancery-lane, London.** Electric-telegraph instrument. (See cl. 8.) Bronze Medal. **513 WHEATSTONE, PROFESSOR, The Mall, Hammersmith, London.** Electrical and magnetic apparatus. **E 2** **902**

Class 10  
Chemicals,  
Paper,  
Leather, &c.

10<sup>e</sup> CLASSE.  
*Arts chimiques, Teintures et Impressions; Industries des Papiers, des Peaux, du Caoutchouc, etc.*  
[Voir NOTES D'INTRODUCTION, p. 24.]

1<sup>re</sup> SECTION. *Produits chimiques.*

- 520 ALBRIGHT, A., à Birmingham, A.—Phosphore commun ; phosphore allotropique ; chlorure de potasse.
- 521 ALLIJSEN, C., et Cie, à Gateshead, Durham, A.—Sulfate de soude, carbonate de soude, alcali de 52/0 de soude, alcali de 36/0 de soude, bi-carbonate de soude, chlorure de chaux, soda-ash de 54/0 de soude.
- 522 BAHNS, J.-B., à Londres, A.—Acide valérianique ; valérianates de sesqu-oxyde de fer, de zinc, de quinine, etc.
- 523 BEATSON, W., à Rotherham, York, A.—Sodium à l'état métallique, fabriqué par un procédé nouveau.
- 524 BROMÉ, B.-C., à Londres, A.—Graphite préparé par un procédé chimique particulier.
- 525 BULLOCK, LLOYD, à Londres, A.—Produits chimiques
- 525<sup>a</sup> DAVY, MACMURDO, et Cie, à Londres, A.—Produits chimiques
- 525<sup>b</sup> DE LA RUE, W., à Londres, A.—Produits de cochenille.
- 526 DUFAVILLE et Cie, à Londres, A.—Colle de poisson ; gélatine.
- 527 DUNN et Cie, à Glasgow, E.—Produits chimiques.
- 528 FRANKLAND, DR., Owen's College, à Manchester, Lancashire, A.—Composés organiques et composés organométalliques.
- 529 GLASS, G. M., à Londres, A.—Colle de poisson ; gélatine.
- 530 HEMINGWAY, A. et W., à Londres, A.—Citrates de fer.
- 530<sup>a</sup> HENLEY et Cie, à Londres, A.—Couleur préparée de l'insecte le lac.
- 531 HESTET et BROOKE, à Leeds, York, A.—Produits de la distillation du bois ; acide acétique ; esprit de bois rectifié ; acétates et pyrolyginites. Carmine d'indigo et indigo. Vert de Schweinfurt. Solution xyloïdique pour la photographie.
- 532 HOPKINS et WILLIAMS, à Londres, A.—Produits chimiques.
- 533 HURET et CAMPSIE ALUM COMPANY (KING, J.), à Glasgow, E.—Prussiates de potasse jaunes et rouges. Matières premières servant à leur fabrication.
- 534 IRVINE et BRYCE, à Glasgow, E.—Iode et iodures.
- 534<sup>a</sup> JONES, ELAM, et Cie, Markeaton Mills, à Derby, A.—Eneri, safran, couleurs, etc.
- 535 LINDSAY, G., à Sunderland, Durham, A.—Sulfate de fer.
- 537 MANSFIELD, B., à Weybridge, A.—Benzole obtenu par la distillation du naphthe de houille.
- 538 MORSON & FILS, à Londres, A.—Produits chimiques.
- 539 MÜLLER, H.-W., à Londres, A.—Lithie, et sels de lithie.
- 540 MILLER-GRENET, F., à Londres, A.—Gélatine ; colle forte fine.
- 541 PENNEY, CHIL, à Glasgow, Lanark, E.—Iode et iodures.
- 542 POYNTER, J., à Glasgow, Lanark, E.—Iode et iodure de potassium ; noir d'as ; sulfate de zinc ; phosphate de soude ; salpêtre raffiné. Sulfate d'ammonium, et naphthe rectifié provenant de la distillation de la houille. Magnésie calcinée.
- \* PRICE, ASTLEY-PASTON, à Londres, A.—Acide tartrique. Bi-tartrate de potasse et nitrate de potasse, tirés des argols. (Voir cl. 3.)
- 543 PRICE, A.-P., à Margate, Kent, A.—Produits chimiques provenant de la distillation du bois.
- 544 SMITH, J. et II., à Edinburgh.—Produits chimiques.

CLASS X.

*Chemical Manufactures, Dyeing and Printing ; Paper Leather, Skins, India Rubber, &c.*  
[See INTRODUCTORY NOTES, p. 24.]

SECTION 1. *Chemical Products.*

- 520 ALBRIGHT, ARTHUR, Oldbury, Birmingham. Common and allotropic phosphorus—chlorate of potash. Silver Medal, and in cl. 12. 929
- 521 ALLIJSEN, C. and COMPANY, South Shore, Gateshead. Chemicals. Sulphate of soda, carbonate of soda, alcali of 52 per cent. of soda, alcali of 36 per cent. of soda, bicarbonate of soda, chlorure of lime, soda-ash at 54 per cent. of soda. Silver Medal. 904
- 522 BAHNS, J. B., London. Valerianic acid ; valerenates of sesqu-oxyde of iron, of zinc, of quinine, &c.—N.S.
- 523 BEATSON, W., Rotherham. Metallic sodium, manufactured by new continued process. Bronze Medal. 930
- 524 BROMÉ, B. C., F.R.S., 13 Albert-road, Regent's-park, London. Modifications of graphite. Silver Medal. 935
- 525 BULLOCK, LLOYD, Battersea, London. Chemicals. 907
- 525<sup>a</sup> DAVY, MACMURDO, and Co., Upper Thames-street, London. Chemicals. Bronze Medal.
- 525<sup>b</sup> DE LA RUE, W., Canongate, London. Products of cochineal.
- 526 DUFAVILLE and COMPANY, Broughton House, Islington, London. Gelatine and isinglass. 1101
- 527 DUNN and COMPANY, Glasgow. Fine chemicals. 909
- 528 FRANKLAND, DR., Owen's College, Manchester. Organic radicals, and organo-metallic compounds.—N.S. 931
- 529 GLASS, G. M., Brandon-street, Walworth, London. Isinglass and gelatine.—N.S. 1102
- 530 HEMINGWAY, A. and W., Portman-street, London. Chemicals. 910
- 530<sup>a</sup> HENLEY and COMPANY, Bromley, Bow, near London. A new preparation of the pure colouring matter of the lac insect. 911
- 531 HESTET and BROOKE, Hunslet, near Leeds. Chemicals. Product of the distillation of wood ; acetic acid ; rectified wood-spirit ; acetates and pyrolyginites. Carmine of indigo and indigo. "Vert de Schweinfurt." Xyloïdine solution for the purposes of photography. Bronze Medal. 911
- 532 HOPKINS and WILLIAMS, 5 New Cavendish-street, London. Chemicals. 912
- 533 HURET and CAMPSIE ALUM COMPANY (KING, J.), Glasgow. Prussiates of potassium, yellow and red. The raw material, from whence derived. Silver Medal. 914
- 534 IRVINE and BRYCE, Glasgow. Iodine, &c. 915
- 534<sup>a</sup> JONES, ELLAM, and COMPANY, Markeaton Mills, Derby. Emeric, erous, colours, &c.
- 535 LINDSAY, G., 38 West Sunnyside, Sunderland. Sulphate of iron. 936
- 537 MANSFIELD, B., Weybridge. Benzole, obtained by the distillation of coal naphtha.—N.S. 933
- 538 MONSON and Son, 19 Southampton-row, London. Chemicals. Bronze Medal. 918
- 539 MÜLLER, H. W., 110 Bushill Row, London. Lithia and its salts. Honourable Mention. 932
- 540 MILLER-GRENET, F., East-street, Cambridge-leach, London. Gelatine and glue. 1103
- 541 PENNEY, CHARLES, Glasgow. Iodine, &c. 919
- 542 POYNTER, JOHN, Glasgow. Iodide of potassium, bone black. Sulphate of zinc ; phosphate of soda ; refined salpêtre. Sulphate of ammonia and rectified naphtha derived from coal distillation. Calcined magnesia. Silver Medal. 921
- \* PRICE, ASTLEY-PASTON, Government School of Mines, London. Tartric acid. Bi-tartrate of potass, &c. (See cl. 3.) 922
- 543 PRICE, ASTLEY-PASTON, Margate, Kent. Products obtained by the distillation of woods.—N.S. 560
- 544 SMITH, J. and II., Edinburgh. Chemical products. Bronze Medal, cl. 12. 937

- 545 SQUIRE, P., à Londres, A.—Composés d'acide urique. Couleurs chiniques. Extraits et préparations pharmaceutiques.
- 546 TURNBULL et Cie, à Glasgow, Lanark, E.—Produits de la distillation du bois; acide pyrogénique; acide acétique; goudrons et huiles minérales.
- 547 WATSON et PALMER, à Londres, A.—Préparations chimiques. Hydrate de magnésie.
- 548 WHIFFR, J. et J., à Glasgow, Lanark, E.—Cristaux de bichromate de potasse; minerai de chrome d'Ecosse.
- 549 WILSON, J., et Cie, à Glasgow, Lanark, E.—Alum. Sulfate de fer. Naphtha et sulfate d'ammoniaque obtenu dans les usines à gaz.
- 549a WOOD, E., à Stafford, A.—Borax.
- 550 WRIGHT, Dr. H., à Londres, A.—Appareils pour reconnaître la présence de l'acide cymhydrique.
- 551 YOUNG, J., à Glasgow, Lanark, E.—Produits minéraux; paraffine. (Voir cl. 12.)
- 2<sup>e</sup> SECTION. Corps gras, Résines, Essences, Savons, Vernis et Enduits divers.
- 558 ALLAN, W.-S., à Londres, A.—Cirage. Poudre pour nettoyer les métiers.
- 559 BONAS, W.-E., à Londres, A.—Huiles et essences pour teindre les cheveux.
- 560 BAUWENS, F.-L., à Londres, A.—Chandelles de suif, de graisses, d'huile de palme. Savons fabriqués avec les résidus des manufactures de chandelles. Oléines de suif, d'huile de palme, de graisse de canistre, de graisse de cheval, etc. Acide oléique brûlé.
- 560a BUCKLEY and COMPANY, Westminster, à Londres, A.—Toiles cirées pour planchers.
- 561 CLEAVER, F.-S., à Londres, A.—Savons et parfumerie.
- 562 CONNELL, J., à Greenwich, Kent, A.—Toiles cirées pour planchers.
- 563 COOKE, J., et FILS, à Londres, A.—Cire à cacheter.
- 564 COWAN et FILS, à Londres, A.—Savons.
- 565 HARRE, J., et Cie, à Bristol, Gloucester, A.—Tapis de fil pour plancher, imprégné avec des couleurs à l'huile.
- 566 HENDERSON, W., et FILS, à Glasgow, E.—Savons.
- 567 HIGHAM, J., à Plymouth, Devon, A.—Pommades.
- 568 HILLAS, F., à Londres, A.—Huiles épurées.
- 569 JENNINGS, H.-C., à Londres, A.—Stéarine.
- 570 KNIGHT et FILS, à Londres, A.—Savons pour les usages domestiques.
- 571 LANGDALE, E.-F., et BONAS, W.-E., à Londres, A.—Essences artificielles pour aromatiser les vins, les liquens spiritueux, les pastilles, les sorbets. Pastilles aromatisées, reproduisant la saveur de différents fruits.
- 572 MANDER FRÈRES, à Wolverhampton, Stafford, A.—Vernis gras; résines. [Voir APP., p. 212.]
- 573 NIXON, TH., à Rothwell, près Kettering, Northampton, A.—Painbeaux de sapon peints et vernis avec des couleurs à l'huile résistant à l'action de l'air et de la chaleur.
- 574 PERKS, S., à Hitchin, Hertford, A.—Huile de lavande purifiée; eau de lavande.
- 575 RIMMEL, E., à Londres, A.—Vinaigre hygiénique de toilette. Eau de senteur pour parfumer. Bouquets artificiels reproduisant le parfum des fleurs naturelles. Savons de toilette. Pommades; poudres d'effervescentes.
- 576 SMITH, RICHARD, à Glasgow, Lanark, E.—Huiles et produits extraits des résines.
- 577 TENNANT, C., et Cie, à Glasgow, Lanark, E.—Soude. Poudre à blanchir. Savon.
- 578 WALLS, G. et T., à Londres, A.—Vernis résineux; laques et vernis. Huiles. Couleurs.
- 545 SQUIRE, PETER, 277 Oxford-street, London. Chemicals and pharmaceutical preparations. Honourable Mention. 923
- 546 TURNBULL and COMPANY, Glasgow. Distillation from wood; pyrogénous acid; acetic acid; tars and mineral oils. Bronze Medal. 924
- 547 WATSON and PALMER, Wilton-place, Belgrave-square, London. Hydrate of magnesia. 925
- 548 WHITE, J. and J., Glasgow. Chromate of potash. Silver Medal. 926
- 549 WILSON, JOHN, and COMPANY, Glasgow. Alum and coal tar products. 927
- 549a WOOD, E., Post Hill, Staffordshire Potteries. Borax. Bronze Medal.
- 550 WRIGHT, Dr. H., 23 Somerset Street, Portman Square, London. Apparatus for detecting the presence of cyanhydric acid.—N.S. 1237
- 551 YOUNG, JAMES, Glasgow. Mineral products, paraffine, &c. (See cl. 12.) Honourable Mention, cl. 12. 928
- SECTION 2.—Fatty Substances, Rosins, Scents, Soaps, Varnishes, and all kinds of Coatings.
- 558 ALLIN, W. S., 35 Dorset-street East, Portman-square, London. Blacking and plate powder.—N.S. 961
- 559 BONES, W. E., 7 York-place, Brompton, London. Hair dye and essences. 940
- 560 BAUWENS, F. L., Ranelagh-road, Pimlico, London. Candles, made from tallow; from various greases; from palm-oil. Soap made from the refuse of candle manufacture. Silver Medal. 939
- 560a BUCKLEY and COMPANY, Westminster Bridge-road, London. Floor-cloths. Honourable Mention.
- 561 CLEAVER, F. S., 18 Red Lion-square, London. Soaps and perfume. Honourable Mention. 932
- 562 CONNELL, J., Greenwich. Floor-cloths. Honourable Mention. 962
- 563 COOKE and SONS, 84 Cannon-street, City, London. Sealing wax. Honourable Mention. 943
- 564 COWAN and SONS, New Gravel-lane, Shadwell, London. Soaps. 944
- 565 HAILE, J., and COMPANY, Temple Gate, Bristol. Floor cloth. Bronze Medal. 946
- 566 HENDERSON, W., and Sons, Glasgow. Soap.—N.S. 947
- 567 HIGHAM, JAMES, Sussex-terrace, Plymouth. Case of pomatum, &c.—N.S. 94
- 568 HILLAS, F., 19 Gracechurch-street, London. Purified oils.—N.S. 949
- 569 JENNINGS, H. C., London. Stearine.—N.S. 950
- 570 KNIGHT and SONS, Old Gravel-lane, St. George's East, London. Soap for household work. 951
- 571 LANGDALE, E. F., 59 Berwick-street, Soho, London. Essences to impart aroma to wine, spirituous liquors, pastilles, &c. 952
- 572 MANDER, BROTHERS, Wolverhampton. Varnishes and gums. Bronze Medal. [See APP., p. 212.] 953
- 573 NIXON, THOMAS, Rothwell, Northamptonshire. Specimens of oil tinting and varnishing deal, capable of resisting atmospheric influences. 2839
- 574 PERKS, SAMUEL, Hitchin, Herts. Perfumery. 954
- 575 RIMMEL, E., 39 Gerrard-street, Soho, London. Perfumery. Soaps, pomades, and tooth-powder. Honourable Mention. 956
- 576 SMITH, RICHARD, Glasgow. Tin salts, resin, oil, &c. 957
- 577 TENNANT, C., and COMPANY, Glasgow. Soda, bleaching powder, soap. Grande Médaille d'Honneur. 958
- 578 WALLS, G. and T., 64 Long Acre, London. Resins, varnishes, &c. Silver Medal. 959

- Class 10. **579** WATERSTON, G., à *Edimbourg*, E.—Clres à cacher préparées avec de la colophane et des matières colorantes.
- 3<sup>e</sup> SECTION. Caoutchouc et Gutta Percha.**
- 582** CARPENTER et CIE, à *Birmingham*, *Warwick*, A.—Bretelles, jarretières et éclatures de caoutchouc.  
\* DISTRICT DE MANCHESTER ET SALFORD.—Tissus enduits de caoutchouc. (Voir cl. 19, s. 2.)
- 583** GOODYEAR, CH., à *Londres*, A.—Machine électrique de caoutchouc.
- 584** HODGES, R.-E., à *Londres*, A.—Objets de caoutchouc à l'usage des arts mécaniques.
- 4<sup>e</sup> SECTION. Cuir et Peaux.**
- 587** HEPBURN, J. et FILS, à *Londres*, A.—Cuir pour semelles, pour harnais, pour empeignes, pour courroies et émichines. Tuynix de cuir. Cuirs vernis.  
[Voir APP., p. 192.]
- 588** INCE, J., à *Londres*, A.—Fourrures.  
[Voir APP., p. 210.]
- 589** BEVINGTON et MOUNTS, à *Londres*, A.—Convertures de cuir et de peaux de mouton.
- 590** BOSSARD, J., à *Londres*, A.—Peaux de veau brutes et préparées; peaux cirées, tannées et corroyées. Tiges et empeignes de bottes.
- 591** CLARK, C. et J., à *Street, Somerset*, A.—Peaux de mouton et d'agneau garnies de laine, pour garniture de portes, de fenêtres, pour tapis de cheminée et de voiture. Peaux de chevreuils d'Angora avec le poil. Bottes et souliers fourrés. Galoches.
- 592** CORRY, J. et J., à *Hilchester, Somerset*, A.—Peaux méglissées d'agneau d'Italie, pour gants.
- 593** COZZENS et GREATREX, à *Walsall, Stafford*, A.—Cuirs de sanglier pour sellerie; cuirs pour brides et courroies.
- 594** DAWSON, A., et CIE, à *Dalkeith*, A.—Cuirs pour bouteille et harnais.
- 595** DEED, J.-S., à *Londres*, A.—Maroquins. Convertures faites de peaux de mouton et d'agneau d'Angleterre, avec leur laine.
- 596** DIXON et WHITING, à *Londres*, A.—Cuir fendu. Peau de bœuf tannée.
- 597** DRAPER, R. et H., à *Kenilworth, Warwick*, A.—Cuir pour semelles, de peau de bœuf anglais.
- 598** EAST, TH., et FILS, à *Londres*, A.—Cuirs en relief.
- 599** FISHER, N., et FILS, à *Londres*, A.—Cuirs préparés.
- 599a** HASSELL, S. T.—Produits commerciaux de Hull, Yorkshire, contribués par le Président de la Chambre de Commerce de Hull.
- 601** LISTER, G., à *Dursley, Gloucester*, A.—Cuir tanné, courroies de cuir.
- 602** LATWYCHE et GEORGE, à *Londres*, A.—Cuirs et maroquins.
- 604** OASTLER et PALMER, à *Londres*, A.—Cuirs.
- 606** ORD, ARTH., à *Dublin*, I.—Peaux tannées.
- 607** PETO, J., et BRYAN, J.-S., à *Westminster*, A.—Cuirs brevetés.
- 608** PRELLER, CH.-A., à *Londres*, A.—Courroies et lanières de cuir pour les machines de transport.
- 609** PUCKLING, F., à *Londres*, A.—Bandruche à l'usage des batteurs d'or.
- 610** ROBERTS, D.-W. et H., à *Londres*, A.—Maroquins de différentes couleurs. Peaux de bœufs et de veau.
- 611** ROSS, A., et CIE, à *Londres*, A.—Cuirs.
- 612** SIMMONS, G., à *East Peckham, Kent*, A.—Cuirs.
- 613** STOCKIL, W., à *Birmingham*, A.—Cuirs corroyés.
- 614** WALKER, W., à *Buckingham*, A.—Peaux de veau tannées.
- 579** WATERSTON, GEORGE, *Hanover-street, Edinburgh*. Scaling-wax. Bronze Medal. 960
- SECTION 3. India Rubber and Gutta Percha.**
- 582** CARPENTER and COMPANY, 43 *Temple-street, Birmingham*. Braces, garters, and belts of caoutchouc. 2:24
- \* MANCHESTER AND SALFORD DISTRICT. Tissus sheathed in caoutchouc. (See cl. 19, sec. 2.)
- 583** GOODYEAR, CHARLES, 47 *Leicester-square, London*. India rubber electric machine.—N.S. 896
- 584** HODGES, R.-E., 44 *Southampton-row, London*. Articles in vulcanized India-rubber, applied to mechanical purposes. 971
- SECTION 4. Leather and Skins.**
- 587** HEPBURN, J. and T., and SONS, 16 *Long-lane, Southwark, London*. Lentilles for harness and machines. Leather tubes, &c. Silver Medal. 993  
[See APP., p. 192.]
- 588** INCE, JAMES, 75 *Oxford-street, London*. FURS. 1009  
[See APP., p. 210.]
- 589** BEVINGTON and MOUNTS, 67 *King William-street, City, London*. Leather and sheep-skin rugs. Bronze Medal. 982
- 590** BOSSARD, JOHN, 9 *Church-street, Russell-street, Bermondsey, London*. Calf skins, &c. Bronze Medal. 983
- 591** CLARK, C., and J., *Street, near Glastonbury*. Sheep and lamb skins prepared with their wool unremoved, for door, window, fire-place, and carriage rugs. Angora goat-skins. Boots, shoes, and galoches lined with furs. Bronze Medal, and *Hon. Mention*. 984
- 592** CORAY, J. and J., *Queen Camel, Ilchester, Somersetshire*. White and coloured leather. 985
- 593** COZZENS and GREATREX, *Walsall, Stafford*. Hog-skins for saddlers, bridle and stirrup leather for saddlers. 986

Class 14.  
Civil  
Engineering.

14<sup>e</sup> CLASSE.  
*Constructions civiles.*  
[Voir NOTES D'INTRODUCTION, p. 27.]

1<sup>e</sup> SECTION.—*Matériaux de Construction.*

- 863 CHEEWSWING GRANITE COMPANY, à Londres, A.—Pierres.
- 864 LES COMMISSIONNAIRES ROYAUX POUR L'EXPOSITION UNIVERSELLE DE 1851, à Londres.—Pierres à bâtir de Cornouailles. (Voir cl. 22.)
- 865 COTTRILL, G., à Exeter, Devon, A.—Ciment de nouvelle espèce.
- 867 GHEEVES, J.-W., à Port-Madoc, Carnarvon, A.—Ardoises.
- 868 HENSON, R., à Londres, A.—Ornements de marbre. Minéraux.
- 869 HOLLAND, SAMUEL, à Port-Madoc, Carnarvon, A.—Ardoises.
- 870 SAUNDERS et MITCHELL, à Londres, A.—Pillier de fer et de fonte de fer à helice pour phares, quais, ponts et autres constructions. (Voir cl. 5.)
- 871 SCOTT, H.-Y.-D., CAPITAINE, R.E., à Woolwich, Kent, A.—Ciment.
- 872 TAYLOR, J., jeune, à Londres, A.—Modèle d'un mur de briques, avec façade de terre cuite.
- 873 WORKMAN, J., Poplar, à Londres, A.—Ciments.
- 874 RAMSAY, G. II., Newcastle-sur-Tyne, A.—Briques à l'épreuve du feu, Cornues.

2<sup>e</sup> SECTION. *Arts divers se rattachant aux Constructions.*

- 875 GRIMMON, E.-P., à Dublin, I.—Modèle de eroisée. Châssis et charnières de croisée.
- 876 SINGER et GREEN, à Londres, A.—Dallage de mosaïque.
- 879 LEATHER, J. W., à Leeds, York, A.—Le "Calder Aqueduct," et "Crown Point Bridge," Leeds.

3<sup>e</sup> SECTION. *Fondations.*

4<sup>e</sup> SECTION. *Travaux relatifs à la Navigation maritime.*

- 880 MURRAY, J., à Londres, A.—Modèle en relief des docks et du port de Sunderland.
- 881 REDMAN, J.-B., à Londres, A.—Modèle de la jetée de la terrasse royale de Milton, près Gravesend.
- 882 RENDEL, J.-M., à Londres, A.—Modèles des docks de Great Grimsby.
- 884 TRINITY HOUSE, CORPORATION DE, à Londres, A.—Modèles de phares.
- 885 WALKER, J., à Londres, A.—Modèle du Phare de Bishop's Rock. Modèle du pont de Glasgow.
- 886 SALTER, S., à Londres. Modèles.

5<sup>e</sup> SECTION. *Travaux relatifs à la Navigation intérieure.*

7<sup>e</sup> SECTION. *Routes et Chemins de fer.*

- 889 BRUNELLES, J., à Manchester, Lancashire, A.—Modèle de viaduc de chemin de fer.
- 890 FOWLER, J., à Londres, A.—Modèle du débarcadère de New-Holland. Modèle de dock et de station de chemin de fer. Modèle du pont de bâts de Gainbridge rough.

8<sup>e</sup> SECTION. *Ponts.*

- 894 BRUNEL, J.-K., C.E., à Londres, A.—Modèle du pont de Salt-Ash. Modèle du pont de Chepstow.
- 895 MOORSON, W.-S., à Londres, A.—Modèle d'un viaduc sur la rivière Nore, en Irlande. (Voir cl. 4.)

CLASS XIV.  
*Civil Engineering.*  
[See INTRODUCTORY NOTES, p. 27.]

SECTION 1. *Building Materials.*

- 863 CHEEWSWING GRANITE COMPANY, Broad-street, London. Specimen of stone. Honourable Mention.
- 864 ROYAL COMMISSIONERS FOR THE EXHIBITION OF 1851, London. Building stones of Cornwall. (See cl. 22.) 1397

- 865 COTTRILL, G., Exeter, Devonshire. New kind of cement. 66
- 867 GHEEVES, J. W., Port Madoc, Carnarvonshire. Roofing slates. 72

- 868 HENSON, R., 113 Strand, London. Marble ornaments and minerals.—N.S. 68

- 869 HOLLAND, SAMUEL, Port Madoc, Carnarvonshire. Roofing slates. Honourable Mention. 73

- 870 SAUNDERS and MITCHELL, 12 North-street, Westminster, London. Engineering models, &c. (See cl. 5.) Silver Medal. 1481

- 871 SCOTT, H. Y. D., CAPTAIN, R. E., Woolwich, Kent. Cements. 1398

- 872 TAYLOR, J., jun., Spring-grove, Hounslow. Model of a brick-wall with terra-cotta facings. 1336

- 873 WORKMAN, J., Poplar, London. Cements. 1482

- 874 RAMSAY, G. II., Newcastle-upon-Tyne. Fire bricks. Retorts. 1490

SECTION 2. *Divers Branches of Work connected with Building.*

- 875 GRIMMON, E. P., Lower Gardiner-street, Dublin. Window fixings. Honourable Mention. 1716

- 876 SINGER and GREEN, Vauxhall Pottery, London. Mosaic pavement. Honourable Mention, and Bronze Medal. cl. 18.

- 878 LEATHER, J. W., Leeds. Designer and modeller of the Calder Aqueduct and Crown Point Bridge, Leeds. Bronze Medal. 1449

SECTION 3. *Foundations.*

SECTION 4. *Works in connection with Marine Navigation.*

- 880 MURRAY, JOH., C. E., 11 Great Queen-street, Westminster, London. Model of Sunderland docks and harbour. Silver Medal. 1426

- 881 REDMAN, J. B., 2 New Palace-yard, London. Model of the Royal Terrace Pier, Gravesend. Bronze Medal. 1423

- 882 RENDEL, J. M., 8 Great George-street, Westminster, London. Model of Great Grimsby Docks. Grande Médaille d'Honneur. 1244

- 884 TRINITY HOUSE, CORPORATION OF THE, London. Models of lighthouses. 1422 a

- 885 WALKER, JAMES, 23 Great George-street, Westminster, London. Models of the Bishop's Rock lighthouse and a bridge over the Clyde, at Glasgow. 1453

- 886 SALTER, STEPHEN, Hammersmith, London. Models. 1454

SECTION 5. *Works in connection with Inland Navigation.*

SECTION 7. *Roads and Railways.*

- 889 BRUNELLES, J., Essex-street, Manchester. Model of a railway viaduct. 1448

- 890 FOWLER, JOHN, 2 Queen-square-place, Westminster, London. Architectural models. Silver Medal. 1422

SECTION 8. *Bridges.*

- 894 BRUNEL, J. K., C. E., 18 Duke-street, Westminster, London. Models of Sutish Bridge and Chepstow Bridge. Silver Medal. 1450

- 895 MOORSON, W. S., 17 Great George-street, Westminster. Models of a viaduct across the river Nor, in Ireland, and of a copper mine. (See cl. 4.) 1451

## COLONIES ANGLAISES.

## NOUVELLE-GALLES DU SUD—AUSTRALIE.

Commissaires spéciaux : MM. EDW. DEAS THOMSON, W. MACARTHUR, M. H. MAHUL.—Secrétaire du comité : M. FH. BOUSFIELD.—Agents : MM. DESGRAND père et fils.

1<sup>re</sup> CLASSE.

- 1 Arkell, Mme, à Bathurst.—Asbesto.
- 2 Blake, J., à Newcastle.—Cristaux de scénite.
- 3 Bligh, R., commissaire des mines d'or, à Bingera.—Quartz aurifères et minéraux montrant la nature des gîtes aurifères de Bingera.
- 4 Bousfield, Mme.—Or dans la serpentine et dans d'autres gauges où l'or se rencontre rarement. Pépites d'argent. (Voir cl. 2.)
- 5 Brodrribb, W. A., à Cooma.—Ossements fossiles et minéraux.
- 6 Broughton, A.-D., commissaire des mines d'or, à Tambaroora.—Roches aurifères et minéraux montrant la nature des gîtes aurifères de Tambaroora.
- 7 Brown, J., à Hartley.—Houille et autres minéraux.
- 8 Buchanan, J., commissaire des mines d'or, à Burrendong.—Or, roches aurifères et minéraux montrant la nature des gîtes aurifères de Burrendong.

- 9 Buckley, H., à Moreton-Bay.—Houilles.
- 10 Cadell junior, Th., à Ben Bullen.—Minéraux, fossiles, etc.
- 10 Calvert, J.-S., à Sydney.—Minéraux.
- 11 Clarke, Rev. W.-B., à Sydney.—Collection de 500 éch., de roches, minéraux, minéraux et fossiles de la Nouvelle-Galles du Sud.—Or en cristaux, en pépites, en poudre et engagé dans les gauges diverses. Tableau géologique dessiné par Martens, d'après des esquisses de M. Clarke.—GEOLOGICAL SPECIMENS, illustrating the succession of the Rock Formations in New South Wales, collected and exhibited by the Rev. W. B. CLARKE, M.A., F.G.S.—The intention of the Exhibitor has not been directed so much to the illustration of the Geology of every separate district in the colony, as to that of the whole—when viewed with respect to the stratigraphical arrangement of the formations that compose it. But, as the specimens contained in this collection have been gathered from almost every district between the latitudes of 23° S. and 37° S., and even from beyond these limits, north and south, and between the meridians of 147° E. and 153° E., it may be fairly assumed to represent the geographical as well as the geological areas. It is the first attempt that has been made to classify and arrange a general, and (though limited, by want of space, for the introduction of more numerous specimens) a geologically complete collection of the rocks, fossils, and minerals, of New South Wales; and is, therefore, neither uninteresting nor unimportant to the student in Australian geology.

The whole number of specimens collected by the Exhibitor, between the years 1839 and 1854, has amounted to between eleven and twelve thousand. Of these, selections amounting to upwards of four thousand, were forwarded to the Rev. Professor Sedgwick eight years ago; and now form part of the collections in the Woodwardian Museum of the University of Cambridge. A further contribution has been made in 1851 to the same university; and local selections have been distributed in other influential quarters. But, in the colony, or elsewhere, the representatives of the whole series of formations have never before been congregated in one comprehensive collection. In order to make it as useful as possible, the Exhibitor has arranged it according to the natural divisions of the systems, as now generally adopted by geologists; and he has endeavoured to classify each system in the exact order of its deposits, so far as he has been able to ascertain the succession: so that, whether the whole collection be read upwards or downwards, the regular sequence will be discovered to be maintained throughout; and thus each local rock, fossil, and mineral, finds its peculiar position in the

## BRITISH COLONIES.

## NEW SOUTH WALES—AUSTRALIA.

Special Commissioners — EDW. DEAN THOMSON, W. New South MACARTHUR, M. H. MAHUL, Esqrs.—Secretary of the Committee: Mr. FH. BOUSFIELD.—Agents: Messrs. DESGRAND and Son, 33, Rue de l'Enfrevôte.

## CLASS I.

- |  |                     |
|--|---------------------|
| 1 Arkell, Mrs., Bathurst.—Asbesto.   | Class I.            |
| 2 Blake, James, Newcastle.—Crystals of Selenite.   | Mines, Metal        |
| 3 Bligh, R., Gold Commissioner, Bingera.—Collection of auriferous and other rocks and minerals, illustrative of the gold localities of the Bingera district.   | Lurgy, and Minerals |
| 4 Bousfield, Mrs., Gold, in serpentines and other unusual matrices; nugget of silver; ring, &c. Honorable Mention.   |                     |
| 5 Brodrribb, W. A., Cooma.—Fossils and other mineral specimens.  |                     |
| 6 Broughton, A. D., Gold Commissioner, Tambaroora.—Collection of auriferous and other rocks and minerals, illustrative of the gold localities of Tambaroora.   |                     |
| 7 Brown, T., Hartley.—Specimens of coal and other minerals.  |                     |
| 8 Buchanan, James, Gold Commissioner, Burrendong.—Collection of auriferous and other rocks and minerals, illustrative of the gold localities of Burrendong.  |                     |
| 9 Buckley, Hy., Moreton Bay.—Sample of coal.   |                     |
| 10 Cadell, Thomson, Jun., Ben Bullen.—Minerals; fossils, &c.   |                     |
| 10 Calvert, J. S., Sydney.—Minerals.   |                     |
| 11 Clarke, Rev. W. B.—Collection containing several hundred specimens, illustrative of the mineralogy and geology of New South Wales; geological view, drawn by Martens, from a sketch by Rev. W. B. Clarke. Silver Medal. |                     |

ascending or descending scale. By this means also, as the characteristic features of each formation are maintained, the geology of the localities not represented may, by comparison, be ascertained.

It may be well to mention, moreover, that where contributions from local districts have been sent by other persons to the Exhibition, the position of those collections in the scale may be also ascertained by reference to this general collection; and inasmuch as the variety of specimens in some of those local collections is more expanded than their representatives in this collection, it has been the Exhibitor's aim in such cases to merely indicate the geological horizon. Thus the valuable collection from the coal seams and plants of the Newcastle beds, by the Rev. C. P. N. Wilton, M.A., (see No. 69), represents in full what is merely indicated by one specimen in this collection, namely No. 156. Thus, also, the specimens of fossils, coal, and concretions, from Bulli, exhibited by Mr. Keene (see No. 34), are found to belong to that part of the geological series which is represented in this collection from No. 157 to No. 186. The proper position of the Fitzroy iron ore is also marked at No. 127. Again, the true position of the alluvial gold is marked, and that gold in quartz and granite is equally indicated by the selection of specimens collected at the various localities enumerated in the catalogue, and by the arrangement of the rocks in their stratigraphical position. It is to be regretted that there is no room to introduce a greater number of fossils; but those which are introduced are quite sufficient for the purpose intended.

Without entering in this place into any discussion as to the reasons why the Exhibitor has chosen to arrange all the specimens from No. 73 to No. 270 inclusive, under the head of carboniferous, without attending to the divisions which might be made in the scale, according to the probable evidence of certain fossils, and which, if suffered to obtain preponderance above other evidence, would, though not altering the actual succession of the rocks as exhibited in this collection, remove all, from No. 73 to No. 156 inclusive, out of the Palaeozoic formations, and place them under the head of Jurassic, Trias, and Permian, it remains to state

Class I.  
Mining and  
Metals.

that there are sufficient grounds why, for the present at least, the adopted classification holds good as respects Australia; and for which there will be found abundant testimony in the writings of the Rev. W. B. Clarke, Professor Dana, Professor Jukes, and Mr. Stutchbury—testimony which has received the sanction also of Professor Edward Forbes.

The reader will perceive in this Catalogue that no "secondary" formations are marked as existing in New South Wales. The whole series, from the middle tertiary formations, including the lower Tertiary, the Cretaceous, and Jurassic groups, are excluded; and the inference is, that, during the period in which those groups were forming in Europe, Asia, and America, as well as in Africa, the Australian Palaeozoic formations were dry land, and remained unbroken by the sea. And, inasmuch as the living shells, plants and animals in Australia have among them types of shells, plants, and animals which in Europe characterize the Jurassic (Oolite) group of rocks, it is not improbable that the living Fauna and Flora of Australia—which are to so great a degree peculiar—represent what may be to a certain extent considered, as regards the present epoch, the most ancient and primitive of living animal and vegetable forms.

It may, however, be right to mention here, that the exclusion of "secondary" formations is justified by the law laid down by Professor Agassiz, viz., that none of the fishes which belong to the secondary formations are *heterocercal*. The fish, No. 83, which belongs to the Wianamatta beds, is decidedly heterocercal; and, therefore, by the law in question, those beds are Palaeozoic. Heterocercal fishes, in the next division, have been discovered in Cockatoo Island and in the Newcastle coal-beds. The *Urotheces Australis* (exhibited by the Rev. C. P. N. Wilton) is also heterocercal. The Ichthyological evidence is therefore quite clear, as to the absence of homocercal forms in the rocks of New South Wales. Perfect tails of fishes from Campbelltown (No. 82), have not yet been found; but the character of the scales is Ganoid, and Palaeozoic, and what is seen of the tail offers no objection.

In short, an inspection of the present collection will sufficiently demonstrate the high antiquity of the solid portions of the Australian lands; for nearly the whole of the formations are Palaeozoic, with an absence of all (or nearly all) traces of secondary, and with nothing left but two divisions of tertiary formations, and these scantly expanded, to mark the interval of enormous periods of time, and the break of many thousand vertical feet in the stratigraphical scale.

The alluvial beds of the auriferous districts above the gold deposits, are not represented in this collection; because the Exhibitor, having examined and tabulated the products of those beds with a separate intention, and for the purpose of preserving an independent record of the specimens in the gold collections made by the various Commissioners, saw no necessity for introducing them here. But he takes this opportunity of stating, after some experience, and from a thorough acquaintance with nearly the whole of the colony, as his opinion respecting the age of its gold, that its formation has taken place in rocks of the Silurian, Devonian, and Carboniferous eras; and (as well expressed by M. Jules Marcon, in the explanatory text of his geological map of the United States, p. 75), "in rocks whose dislocations have taken place during the second period of the Palaeozoic formations, from the end of the Silurian deposit to the Permian epoch." This admission would show that the Mitta Mitta granite must be more recent than its actual position in this Catalogue. It must therefore be explained, that, inasmuch as there is not space to introduce sufficient of the neighbouring rocks to show its probable relative locality, the Mitta Mitta granite, and the red granites, Nos. 424 and 425, have been placed with more quartziferous, and, therefore, older granites, below the latter; the specimens from No. 393 to No. 406 illustrating the distinct passage, in another part of the colony, from the schistose to the granitic structure.

The Bradfield granite, which is felspathic and hornblende, and which is also, probably, of no great comparative antiquity, is placed in connection with its neighbouring rocks, in which alluvial gold is found, in a more suitable position. In order, however, to bring together some instances of naturally-connected rocks, the Bradfield auriferous district is represented from No. 317 to No. 325. The rocks, from No. 326 to No. 333, and Nos. 344 and 345, represent the formations in the western gold-fields. The Peel River auriferous district is represented by the specimens from No. 338 to No. 343; and the principal igneous rocks in the colony are briefly represented, from No. 271

to No. 297, inclusive; although, as it is impossible distinctly to assign the exact age of each, from the want of consecutive tertiary and secondary sedimentary groups, they are placed together for convenience.

There are a few specimens introduced, not strictly from within the present limits of New South Wales, but such once belonged to that colony, and are added to complete the series, where there is a considerable break. The stratified rocks of the present colony, with the exception of modern deposits, only commence, however, at No. 73.

W. B. C.

11th November, 1854.

A AND II.—MODEHN AND QUATERNARY ROCKS.

- 1 Soundings with sp. of Venus—Reef off King's Island.
- 2 Ashes from Bush Fire of February, 1850, swept from—Deck of Vessel, mouth of Bass' Strait.
- 3 Recent Fluvioatile Conglomerate—Murrumbidgee.
- 4 Shells from raised beach—Ilotay Bay.
- 5 Shells from raised beach—Kissing Point.
- 6 Salt, by natural evaporation—Carangamito Lake.
- 7 Recent Marine Conglomerate—Beach, Wollongong.
- 8 Oxidation of Sandstone—North Shore, Sydney.
- 9 Raised Beach—Richmond River.
- 10 Raised Coral—Littoral Island, New Caledonia.
- 11 Earth baked by Bush Fire—Prospect.
- 12 Auriferous Earth fused by Bush Fire—Turon River.
- 13 Tuff entangling Basalt—Scott's Mountain, Walbong.
- 14 Raised Coral Beach—St. Helena Island, Moreton Bay.
- 15 Travertin—Harragorang.
- 16 Travertin with Shells—Scott's Mountain, Walbong.
- 17 Shells from Travertin—Scott's Mountain, Walbong.
- 18 Phyllites in Iron Clay—Bank of Hookanvil Creek, Peel River.
- 19 Raised Coral Beach—N. end of Great Sandy Island, Hervey's Bay, lat. 25° S.
- 20 Casts of Coprolites in Iron-stone—South Coast.
- 21 Bat's Head outcrops in Stalactite—Cavern, head of Cooradigbee River.
- 21a Travertin with Phyllites—Stonequarry Creek (Picton).
- 22 Shells from Alluvial Deposit—Ash Island, Hunter River.
- 22a & 26a Rock basins or cups from the Beach at entrance of Middle Harbour.
- 23 Sand bed of Murray—Near Swan Hill.
- 24 Iron Sand—Tuggerah Beach Lake.
- 25 Iron Sand—Near Goulburn.
- 26 Drift Punice—Bradley's Head.
- 27 Stream Tin—Reedy Creek.
- 28 Iridium and Native Lead-stone—Bingera Diggings.
- 29 Gold rendered globular by action of heat on the rock—Murrumbidgee.
- 30 Globular Gold from Conglomerate—Shelly's Flat, near Marulan.
- 31 Gold in Pebbles of Conglomerate—Shelly's Flat, near Marulan.
- 32 Selenite—Ash Island, Hunter River.
- 33 Calcareous Deposit from Shells and Corals—Red Point, Moreton Bay.
- 34 Crystals of Gold—Southern Diggings.
- 35 Gold found in Wild Duck's Gizzard—Gyra River, New England.
- 36 Gold found in Crop of Wonga Wonga Pigeons—Gyra River, 14 miles from Armidale.
- 37 Gold—Yass River, 16 miles from Yass.
- 38 Gold—Bendoc River, Maneero.
- 39 Gold—Eucumbene River, Maneero.
- 40 Gold—Gungaijiong River, Maneero.
- 41 Gold—Kentucky, New England.
- 42 Tailings of Washed Earth—Reed's Creek, Albury.
- 43 Auriferous Ironstone—Omega Lake.
- 44 Drifted Malibydah of Lead—North Shore.
- 45 Drifted Yente—Tuggerah Beach Lake.
- 46 Drifted Red Hematite—Port Essington.
- 47 Drifted Concretions from Tiap—Goomburra, Darling Downs.
- 48 Native Silver—Southern Gold Diggings.
- 49 Osseous Breccia (Bird Bones)—Cooradiggee Cavern.

72 Calcareous Marl, very like Chalk—Mouth of Clarence River.

#### D.—SECONDARY ROCKS.

Missing in Australia according to various Geologists, or without the Cretaceous Group according to others.

#### E.—PALEOZOIC ROCKS.—CARBONIFEROUS GROUP.

[The Carboniferous Group of New South Wales includes the "Wianamatta Beds" of Rev. W. B. Clarke; the great sandstone of the Hawkesbury ("Sydney Sandstone," of Dana); and the Coal Seams of Newcastle, Bulimba, and other localities, all which, inclusive, are considered by Professor McCoy, to belong to the Jurasie Group of the Secondary Rocks. But as they all appear in consecutive order to pass downwards into each other, and finally descend to the Fossiliferous Beds, containing true Mountain Limestone Fossils, with which are mingled the Vegetable Fossils of the so-called "Jurasie Group," the whole series is here classed under one head in three divisions.]

#### 1. The Upper Carboniferous or Wianamatta Beds.

- 73 Greenish Sandstone with Plants—Badjalla, near Campbelltown.  
74 Greenish Sandstone with Plants—Badjalla, near Campbelltown.  
75 Vermicular marks on Saadstone—Glenalpine, near Campbelltown.  
76 Sandstone and Shale with Vegetable Remains—Glenalpine.  
77 Yellow Sandstone with Plants—Cecil Hills.  
78 Calcareous Sandstone—Glebe, Campbelltown.  
79 Calcareous Sandstone with Coal—Glenalpine.  
80 Calcareous Sandstone—Mount Annan.  
81 Calcareous Sandstone with Plants—Wianamatta.  
82 Fish Remains in Ironstone of the Shale just over Hawkesbury Rocks—Chapel Hill, Campbelltown.  
83 Tail of Heterocercal Fish in ironstone—Parsonage Hill, Paramatta.  
84 Fine Sandstone with Plants—Camden.  
85 Sandstone, with Clay nodule and Coal-like surface—George's River, Liverpool.  
86 Ironstone with Plants—Leppington.  
87 Calcareous Sandstone and Plants—Campbelltown.  
88 Plants in Shale—Bolborook and Penrith.  
89 Coral allied to Verticillipora in Ironstone—Campbelltown.  
90 Fish Remains in Ironstone—Paramatta.  
91 Unio in Shale over Hawkesbury Rocks—Luddenham.  
92 Ferruginous Sandstone with Plants—Menangle.  
93 Green Sandstone with Plants—Mount Annan.  
94 Vein of Serpentine in Basalt—Pikibba-ba; basalt quarry, Pennant Hills.  
95 Plants from Sandstone—Clarke's Hill, &c., Nepean River.  
96 Crystals in Ironstone—Camden.  
97 Ripple Marks on Sandstone—Paramatta.  
98 Coal—Creek near Glenalpine.  
99 Spotted Shale—Castle Hill.  
100 Carbonaceous Shale—Pitt Water.

(Supposed by some to be identical with a Coal Seam on Newcastle Beach, but full eight hundred feet (geologically) above that Seam.)

- 101 Fish Remains in ironstone—Paramatta.

- 102 Columnar Iron in Shale—Red Bank, Stonequarry Creek.  
103 Shale with Plants not known in the Newcastle Seams—Hollo in the Wall, Coast E. of Pitt Water.  
104 Phrenite in Diorite—Prospect Hill.  
105 Psilomylonite—Windsor.  
106 Shale with Plants—Campbelltown.  
107 Vegetable Tissue of Fern from Shale in Sandstone—Wooloomooloo Bay, Sydney.

Class I.  
Mining and  
Metals.

#### 2. The Middle Carboniferous or Hawkesbury Rocks.

- 108 Polkillet Sandstone—North Shore, Sydney.  
109 Sandstone with Graphite—North Shore.  
110 Irritated Iron on Sandstone—Cook's River.  
111 Black Hematite—Soldier's Pinch, near Blackheath.  
112 Black Hematite—Soldier's Pinch.  
113 Black Hematite—Soldier's Pinch.  
114 Shale from a shaft 152 feet below the sea—North Head of Broken Bay.  
115 Stalactite from a Cave in Sandstone—Geeral, near Wattamoola.  
116 Fish in Micaceous Shale under Sandstone—Cockatoo Island.  
117 Coal on Sandstone—Sydney.  
118 Coal, Sandstone, and Shale above the Fish-bed—Cockatoo Island.  
119 Baked Shale, or Chert—Awaaba.  
120 \* Calcareaous-cherty Rock—Ipswich.  
121 \* Cherty Limestone—Ipswich.  
122 \* Cherty Limestone—Ipswich.

\* [N.B.—These are portions of a mass which seems to have been produced by boiling springs; they are in immediate contact with Basalt. They are included here for convenience, but are probably much more recent than the rocks amidst which this Cherty and Trappean Ridge appears. The same rock occurs, under similar circumstances, under Mount Flinders.]

- 123 Clasteria—Head of Manilla River.  
124 Coal Plant—Ilexham Pit.  
125 Glossopteris in Concretionary Ironstone, close to Trap Hill near Edenglassie, Hunter River.  
126 Ironstone—Port Curtis.  
127 Ironstone—Under Mittagong Range (Pitzroy Mine).  
128 Alum in Conglomerate—Gibraltar Rocks, Wollondilly River.  
129 Sulphur of Magnesia—Barrogorang.  
130 Stified Wood—Gumnum Plain.  
131 Plants in Shale—E. of Bulimba, Moreton Bay.  
132 Plants in Shale—E. of Bulimba.  
133 Plants in Shale—E. of Bulimba.  
134 Plants in Shale—E. of Bulimba.  
135 Plants in Shale—E. of Bulimba.  
136 Plants in Shale—Goomburra, Darling Downs.  
137 Coal in Grit—Rosenthal, near Warwick.  
138 Glossopteris in Sandstone—Ward's River (Gloucester).  
139 Carbonaceous Cast of Stem of Plant—Rosenthal.  
140 Plants in White Conglomerate—Muswellbrook.  
141 Antimony—Paterson.  
142 Plants in White Conglomerate—Muswellbrook.  
143 Shale altered by Trap, from a pit 25 feet below surface—Between Wollongong and Mount Keera.  
144 Altered Shale—Base of Mount Keera.  
145 Altered Shale—Base of Mount Keera.  
146 Altered Shale—Base of Mount Keera.  
147 Altered Shale—Mount Wingan.  
148 Glossopteris in plakish Shale—Mount Vincent (near Maitland).  
149 Cyclopterus in Shale—Mount Vincent.  
150 Glossopteris in baked (red) Shale—Foy Brook.  
151 Casts of Plants in hard shelly Rock—Upper William River.  
152 Fera impression in fine Sandstone—Near junction of Murray and Darling Rivers.  
153 Sphenopteris in Cherty Rock—Smith's Creek, Stroud.  
154 Sphenopteris in Cherty Rock—Smith's Creek.  
155 Various Ferns in Cherty Rock—Smith's Creek.  
156 Seed-vessel allied to Termianalia in Grit of the Fish-bed—Newcastle.

#### 3. Lower Carboniferous Rocks, the Equivalents of the "Mountain Limestone" of Europe.

- 157 Concretion with Cast of Nucula—Wollongong Beach Rock.  
158 Basalt—Ghoondarrin, Illawarra.  
The designation of each Specimen immediately follows the Number. The then following Name marks the Locality.  
159 Sandstone altered by Basalt—Ghoondarrin.  
160 Various Fossils—Wollongong.

- Class I.**

- P.S.—Since this Catalogue (Sydney edition) was sent to the press, a full collection of the rocks from the Peel River Field has been contributed to the Exhibition by M. Tidmarsh, with an instructive description. It will be seen that he also confirms the fact, that the gold field is not older than the base of the Carboniferous formation (or the top of the middle Palaeozoic group), and, as reported to the Government by the writer of this note, the gold belongs to the igneous rocks that have transmuted that group upon the Peel.
- 4th December, 1854. W. B. C.

Class I.  
Mining and  
Metals.

- 11a *Commissioners for New South Wales.*—Collection of specimens of gold from the different gold fields in New South Wales, accompanied by illustrative specimens of the overlying and auriferous strata, adjacent rocks, tables of assay, &c.

advisable by the Commission to introduce the following sections of certain Gold Fields, with a few remarks illustrative of the geological distribution of the chief sources of gold in the colony of New South Wales.

With reference to the capital of the colony, the auriferous region may be divided into four districts: namely,

**Class I.**  
Mining and  
Metals.

1, The Southern; 2, The South-Western; 3, The Western; and 4, The Northern District.

1. The Southern is chiefly confined to the basin of the Shoalhaven River, between the parallels of 35 degrees and 36 degrees south, on the *eastern side* of which is sometimes called "The Coast Range." The whole of the affluents of this river, from east and west, supply more or less gold; and the rich Gold Fields of Arafura are, although on the head of the Moruya River, only separated from the waters flowing to the Shoalhaven by a distance of less than three miles. The principal north-flowing streams of the county of St. Vincent, which joins the Shoalhaven, are also auriferous. The gold is found chiefly within that part of the county which exhibits the presence of abundant hornblende granite and associated metamorphic schists.

2. The South-Western District embraces the north-flowing affluents of the Murrumbidgee between the Coast Range and the meridian of 147 degrees east, and also between the parallels of 35 degrees and 36 degrees. Coupled with the preceding district, we thus have an area of 4000 square miles in which gold is generally scattered in the soil; and in which the Yass River is known to contain much gold, and the Adelong River has been worked for a space of nearly 30 miles, from its source to its junction with the Murrumbidgee. Although, at present, other affluents in this district have not been worked, it is not doubted that they would be found equally rich. The specimens from the Adelong diggings show that the principal rocks are igneous. The eisopscus of that field is interesting, as exhibiting a relative proportion between the distances from the head of the creek and the amount of gold procurable.

3. The Western District comprises the Abercrombie and some other heads of the Lachlan River, together with the Turon, the Pyramul, the Meroo, the Cudgegong, Lewis Ponds, and various other affluents of the Macquarie River; the area being not much less than 9000 square miles—in which occur the various rich and extensive fields from which so many and so different specimens of gold and alluvia are now exhibited, and of which the geological statistics are given in the following details. There is every reason to believe that other localities besides those now worked in this district will be hereafter proved to be equally prolific. The writer has examined the detritus of the basin of the Upper Bogong River, and finds that it is rich in the peculiar minerals which distinguish the known Gold Fields; and amongst them he found gold, as well as tin and magnetic iron.

4. The Northern District may be considered as embracing, 1st, the Gold Fields along the Peel, the Macdonald and other sources of the Nymoi; 2nd, that along the Uralla, or Rocky River; and 3rd, that along the Bingera Creek—the two latter being the upper portion, and one main affluent of the Gwydir River. In this district there is an area of about 5000 square miles in which gold has been found distributed in a great variety of places, and in which it is prolific at the head of the Peel, on the Uralla, and for fifteen miles along the Bingera and neighbouring creeks. These waters, their dividing ranges, and the strike of the formations, run all nearly N.W., or about N. 30 degrees W. The chief auriferous region lies along the 151st meridian, and between the parallels of 32 degrees and 29 degrees S. The gold of the Uralla is found over, and in the detritus of, hornblende granite; that of the Hanging Rock and Peel, as well as that of Bingera, is associated with the transmuted members of the base of the upper or the top of the middle palaeozoic groups, with which serpentine, charged with chromate of iron, is in close connection, and which have been, doubtless, affected by diorite or greenstone.

Besides these fields which are being worked, there is a district more northerly than they, along the 152d meridian, and between the parallels of 30 degrees and 29 degrees S., and which is watered by the north-flowing heads of the northern branch of the Clarence River, but which has not yet been wrought, except experimentally, owing to the abundance of water. This district comprises the country about Mount Mitchell and the "Rocky River," and the gold is found in association with granite, of the same character as that which constitutes the principal formation on the other "Rocky River," or Uralla, near Armidale. From 1000 to 1200 square miles in this district may be considered as exhibiting the presence of gold, associated, as in other granite regions, with garnets, sapphires, and tin ore.

In the more southern counties of Minnamurra, between the parallels of 36 degrees and 37 degrees S., and between the Alps and the Coast Range, and for half a degree on each side of the 149th meridian, there are also minor Gold Fields,

not yet worked, along the Delegat and Bendee Rivers, which flow north to the Snowy River; on the Eucumbene, which is the chief branch of that river; and on the various waters flowing from the west—"i side of the Coast Range to the Upper Murrumbidgee, as well as from the eastern side of that range to the coast of the county of Dampier. There are also little tracts auriferous on the waters of the Macintyre River, the Condamine, the Brisbane, the Mary, the Burnett, and the Fitzroy, in the back of Port Curtis. These are mentioned to show that gold is dispersed in some quantity over all the older portions of the colony, throughout thirteen degrees of latitude and four and a half degrees of longitude, or more than 200,000 square miles of country. But the chief productive sources at present known are on Lewis Ponds Creek (as Ophir); the Turon (as Oaky Creek and near Sofala) at Tamboura; Pyramul; Louisa Creek; the Meroo and its tributaries; Burrendong and Muckera; at Tuena, on the Abercrombie (all to the westward of Sydney); at Arafura, on the Moruya; and at the Mongarlow, a tributary of the Murrumbidgee; at Hanging Rock, and for some miles below, on the Peel; at the Uralla, which is at the head of the Gwydir; and at Bingera, which is an affluent of that river.

No mention has been made of the Tumut, the "Crack-em-back," or the Wollondilly; but gold is known to exist in these rivers, and has been procured by various persons, as well as in other places not alluded to. To complete the statement respecting the almost universal occurrence of gold, it may be mentioned here, that it has, within few weeks, been found in Gipsy Land, so low down as the crossing place of the Tambo River, and at the tidal junction with the water of Lake King, within less than 25 miles of the sea.

Without, therefore, wishing to assume that all parts of the country are equally rich, or to raise expectations which may never be realised, it may fairly be stated that, when considered in relation with the known Gold Fields of Victoria, with which there is a clear connection along the Alps, the whole of the region of "Australia Felix" and New South Wales Proper is auriferous towards the sources of the great rivers flowing in the basins of the Murray and Darling; and that some of the region also is auriferous, which lies to the seaward of the mountain chains whence those waters rise. It is worthy of remark, that the waters which flow *north*erly or *north-westerly* are almost invariably found to traverse the principal tracts of auriferous country.

Sir T. L. Mitchell and Mr. Stutchbury have reported to the Government on the Western Gold Fields; and the Rev. W. B. Clarke has reported on the Northern and Southern Districts, and generally on the geology of about 108,000 square miles of territory.

**DAINT DEPOSITS DUG THROUGH, IN SINKING FOR GOLD, ON THE TURON RIVER.**

(These deposits, along with the corresponding specimens of gold, have been furnished by WILLIAM JOHNSON, Esq., Gold Commissioners, Sofala.\* They have been examined, and their mineralogical character determined, as under, by the Rev. W. B. CLARKE.)

*Paterno's Point.*

1. Gravel; red micaceous slate; breccia of quartz, trap, ironstone, abraded.—2 feet thick.
2. Conglomerate of green jasper, ironstone, sandstone, greenish quartz; green, hard chlorite-schist, containing gold, cemented by ironstone, and rounded pebbles of gold, &c.—6 inches thick.
3. Greenish trap, with gold in blueish mud.—6 inches to 1 foot thick.
4. Bed rock, with particles of gold.

*Golden Point.*

1. Yellowish-brown clay, with fragments of slate and trap; magnetic iron.—5 feet thick.
2. Yellowish-brown clay; sandstone; quartz; magnetic iron.—15 feet thick.
3. Puddingstone; grit; trap; sandstone, cemented by felspathic paste.—3 inches to 5 inches thick.
4. Round grit; coarse sand and magnetic iron; with gold.—12 inches to 15 inches thick.
5. River shingle; trap; sandstone; quartzite, with gold.—12 inches to 18 inches thick.
6. Bed rock, greenish and blue-grey diorite.

\* The intrinsic value only, of this and the following collections of gold having been paid by the Commission.

<i>Erskine Flat.</i>								<i>Class I.</i>
1. Ferruginous clay, with pebbles of Lydian-stone and quartz.—10 feet thick.								Mining and Metals.
2. Sand, with quartz and fine grit; altered grit; and decomposing granite—3 feet thick.								
3. Coarse sand, with pebbles of altered slate and sandstone; grit; trap; and magnetic iron in fine particles.—2 feet thick.								
4. Sand, with pebbles of trap; schist; slate; and quartz.—1 foot 6 inches thick.								
5. Coarse shingle of trap; quartzite and white quartz.—1 foot thick.								
6. Coarse yellowish sand, with quartzite (sandstone); grit, in rounded masses, and fluviatile drift; magnetic iron.—1 foot to 3 feet thick.								
7. Coarse sand, and fragments of quartz, ironstone, Lydian-stone, &c.—increasing in size, below, to masses of many ewt.—4 feet to 7 feet thick.								
8. Conglomerate of clay and pebbles of grit, trap, quartzite, and white quartz, with gold.—3 feet to 5 feet thick.								
9. Bluish-grey mud, with quartzite and blue siliceous serpentine; hard sandstone; siliceous vein stone, covered by blisters of pyrites, with gold.—2 feet to 4 feet thick.								
10. Bed rock, bluish serpentine.								
<i>Nuggety Gully.</i>								
1. Earth from schist, particles of the latter, and magnetic iron.—2 feet thick.								
2. Grey decomposing schist; porphyry; fine magnetic iron.—3 feet 6 inches thick.								
<i>Big Oaky Creek.</i>								
1. Gravel and shingle; grit, sandstone, trap, in brown soil.—5 feet.								
2. Ironstone and trap, with gold.—1 foot 6 inches thick.								
3. Bed rock, trap.								
<i>Little Oaky Creek.</i>								
1. Clay, with fragments of spotted grit; gold; and magnetic iron.								
2. Bed rock, felspathic rock, approaching trachyte.								
<i>Green Wattle Flat.</i>								
1. Whitish-grey sandy marl, externally like chalk, but not calcareous.—1 foot to 1 foot 6 inches thick.								
2. Sandy clay, with ironstone and iron pyrites.—5 feet to 7 feet thick.								
3. Sandy clay and pebbles.—5 feet to 7 feet thick.								
4. Brown, unctuous clay, with small shingle of ironstone, trap, and red breccia.—1 foot to 1 foot 6 inches thick.								
5. Buff-coloured clay, with pebbles of trap, ironstone, and red quartz breccia.—2 feet 6 inches thick.								
6. Bed rock, siliceous and trappaceous rock, with black striated iron pyrites.								
<i>Mundy Point.</i>								
Washing stuff:—silted and baked slate, with quartz and gold, in large abraded pieces.								

MEROO RIVER DIGGINGS.—Specimens furnished by T. D. MILLER, Esq., Gold Commissioner, Avisford.

<i>Locality.</i>	<i>A.</i> Devil's Hole Creek, Meroo River.	<i>B.</i> Spring Flat upper part of Devil's Hole Creek.	<i>C.</i> Nuggety Gully.	<i>D.</i> Stockyard Point, Long Creek.	<i>E.</i> Richardson's Point, Right Bank of Meroo.	<i>F.</i> $\frac{1}{4}$ mile from E. Griffith's Point, Right Bank of Meroo.	<i>G.</i> Deep Crossing Place, Meroo, Left Bank.
Height above the Meroo.	• •	• •		150 feet.	• •	• •	100 feet apart.
Surface soil.	Pale yellow clay, with pebbles of decomposing Sandstone, and effervescent calcareous paste.	Alluvium 18 inches to 2 feet.					20 feet.
Sub-soil.	Decomposing conglomerate cemented by highly effervescent white paste.	Red clay 4 to 11 feet. Boulders 2 to 10 feet.	• •	• •	Bright yellow effervescent clay, with large lumps of Quartz; Slate; flat pebbles of Sandstone, &c., called "Drift"; Gold in it; but will not pay.		30 feet.
Washing stuff.	• •	Concrete 6 inches to 3 feet.	Ironstone conglomerate, in yellow clay, with Magnetic Iron. "The diggers call it Burnt Gravel."	Effervescent white calcareous concretionary clay, holding quartz.	White calcareous clay and calcareous ruck.	Pale yellow clay.	Pale yellow clay; conglomerate of Quartz; Slate, &c., Boulders, and Garnets, where the gold is richest.
Depth of Sinking.	8 feet to 29 feet.	14 feet.	15 feet.	4 feet.	14 to 20 feet.	4 feet.	6 feet.
Nature of Gold.	Nuggety, water-worn. Site of 26 oz. nugget.	Small rough nuggets.	Very bright, nuggety, water-worn.	Nuggety, water-worn.	Bright scaly, Bright granular.		Bright Granular.
Under-lying or bed-rock.	Vertically cleaved Slate.	Vertically cleaved Slate.	Quartz.	Pale, glossy Slate.	Drab clay. Slate, ferruginous at the joints, forming "Bars."	Grey, soft, glossy Slate, decomposing into clay, and forming "Bars."	Pale Slate.

\* Any deposit, containing gold in paying quantity, is termed by the diggers "washing stuff."

Class I.  
Mining and  
Metals.

- Rose Hill.*
1. Washing stuff:—yellow slate; quartz; sandstone; and grit cemented by gold.
  2. Ditto, ditto:—Pebbles of coarse sandstone, cemented by hydrate of iron; small shingle and pebbles holding water-worn gold.

#### THE TAMBAROORA GOLD FIELD.

The following, with the specimens illustrating these Diggings, is furnished by A. D. Broughton, Esq., Gold Commissioner:—

The Gold-bearing district of Tambaroora has the Macquarie River on its west side, the Turon on its south, and the Pyramul Creek on its North, the two latter being tributaries of the Macquarie. The district is an elevated plateau, made up of spurs and gullies, branching off from one of the westerly spurs of the great dividing range of the colony. The valleys of the three rivers named above, are at least 1000 feet below the township of Tambaroora. The flanks of the ranges are very steep; and the passes, or descents from the table land into the valleys, are mostly practical only for foot and horse traffic.

The rocks of the district are mostly clay-slate, in vertical or nearly vertical strata, intersected by veins of quartz. Bald Hill, the highest point of the district, is formed of igneous rock; and there is a bold outcrop of granite near it. The view from the summit of Bald Hill is very extensive, having a radius of upwards of thirty miles in every direction; but the scene is sombre, barren, and monotonous, presenting only ranges of grey-brown forest, deep valleys without visible water, scrubby trees devoid of cheerful tints, and long mountain ridges without picturesque outlines.

The soil of the district is thin and poor; the vegetation dry, harsh, and scrubby; the climate, as might be expected from the elevation, severe in winter, but mild in summer. Fearful storms of wind, rain, and hail, are of not infrequent occurrence in the summer season, sweeping away in the space of a few minutes, the results of many weeks' work, and rendering the operation of the gold-digger expensive and uncertain. The Commissioner gives it as his opinion, that immense quantities of gold would be obtained, if the beds of the Macquarie and Lower Turon could be worked for one or two summers continuously.

#### WESTERN DISTRICT GENERALLY.

In addition to the foregoing collections, which illustrate the more important of the Western Gold Fields, there is exhibited a variety of interesting specimens from other diggings of the same district. Among these may be mentioned the collections from Burrendong, Mookerawa, and Ophir, furnished by J. Buchanan, Esq., Gold Commissioner. Burrendong is on the east side of the Macquarie River, near the junction of the Cudgegong. Mookerawa Creek is a tributary of the Macquarie, about six miles from Burrendong: it has proved rich gold-field. Ophir is situated at the junction of the Lewis Ponds and Summerhill Creeks. It is interesting as being the place where Mr. Hargraves made his first discovery of gold on February 12th, 1851. It is at present very little resorted to by diggers.

Charles H. Green, Esq., Chief Gold Commissioner for the Western District, has supplied (along with a Geological collection) specimens of gold from Brown's Creek, about twenty-two miles south of Bathurst; and from Caulena Creek, a northerly fork of Brown's Creek. The Commissioner states, that although few miners are at work on these creeks at present, yet, from the yield obtained, and the extent of apparently auriferous ground, these localities, when more fairly tested, will afford profitable employment to a large population.

The Louise Creek and "Great Nugget Vein" (both on the Meroo), are represented by many very beautiful masses of gold and quartz. Some of these are contributed by Mr. Speace on the part of the Colonial Gold Company. The Turon Golden Ridge Quartz Crushing Company have sent, through Mr. G. A. Lloyd, block of auriferous quartz, weighing nearly one hundredweight; and the Wentworth Gold Company have contributed five specimens of auriferous ironstone, through Messrs. Ferris and Arkins.

#### SOUTHERN AND NORTHERN DISTRICTS.

The diggings of the Southern District are represented by specimens of gold and strata from Major's Creek, and Bell's

Paddock, transmitted by W. Essington King, Esq. The specimen of washing stuff from Major's Creek, marked C 2, is very rich; a bucketful of it having produced ten ounces of gold.

The South-Western Gold Field is represented by a collection from Adelong Creek, furnished by Charles Lockhart, Esq. Four specimens, taken from different points of the Creek, show an interesting gradation from large rough masses of gold, near the source of the Creek, to small and waterworn fragments farther down. The specimen No. 1, was obtained five miles below the source of the Creek, and about eight feet from the surface of the ground. The Commissioner states that there the average gains are 4d. a day per man. No. 2 is from a place three miles below No. 1, and about six feet from the surface: average gains 3d. daily per man. No. 3 was obtained three miles below No. 2, and about eight feet from the surface: average gains about 3d. daily per man. No. 4 was procured from a party at work fourteen miles below No. 3, and twenty-five miles from the source of the Creek. This gold was found on the surface of a hill sloping gently to the Creek, about forty feet above the level of the water: average daily gains about 2s. per man.

The diggings of the Northern Districts are fully represented by a collection of gold and strata from the Hanging Rock, furnished by C. McArthur King, Esq.; and a similar collection from Bingera by Richard Bligh, Esq. The latter collection has been examined and tabulated by the Rev. W. B. Clarke, as on the following page. There is also a specimen of gold from the Rocky River, but its exact history has not been supplied.

In regard to the number of licenses issued on the Turon Mr. Johnson remarks that many individuals take out as many as four, or even more, in order to cover ground. He estimates the number of working-men in his district, at 700 during October, but states that they have since largely increased.

The total number of licenses issued in the Western District during October, was, according to Mr. Green, the Chief Commissioner, 2,770. The whole quantity of gold conveyed by escort to Sydney during the same time, according to Treasury returns, was 5,858 ounces; Mr. Green estimates that at least 4,000 ounces had been sent by private hand. He has also supplied the following comparative statement of the number of licenses issued for ten months of three consecutive years:—

Years.	1852	1853	1854
Licenses issued from January to October inclusive . . .	22,705	21,468	26,279

In 1852, and to October in 1853, all residents on a gold-field paid the license; since October 1853, only actual diggers have been required to pay the fee. Licenses have to be renewed monthly. Mr. Green estimates the total population of the Western Gold Fields at from eight to nine thousand.

Diamonds have frequently been reported as occurring on the Gold Fields; but, on examination, they have generally turned out to be alumious minerals, probably the "Diamond Spar" of Werner. They are of great hardness, and possessed of considerable lustre. In the present collection, however, there is an interesting specimen contributed by Mr. A. F. Tompson, Wellington, which appears to be a true diamond. It was found by Mr. Tompson in the bed of the Macquarie at Burrendong, in a conglomerate resembling the specimen marked F. No. 2 in Mr. Buchanan's collection. It is apparently a dodecahedron, with curved rhomboidal faces; of a pale straw colour, and great lustre. It weighs about three-fourths of a grain.\*

#### GOLD EXPORTED.

The quantity of gold exported from the colony of New South Wales during the last twelve months (according to a return obligingly furnished by Lieut.-Col. Gibbes, M.C., collector of customs), has been 233,547 ounces, of which the estimated value at 3d. 15s. per ounce, is 875,801.

\* The New South Wales collection contains a second diamond found in the same locality, on the estate of the exhibitor, "The Great Nugget Vein Company."

## THE BINGERA GOLD FIELD, Gwydir River.—Specimens furnished by R. Bligh, Esq., C.C.L.

Class I.  
Mining and  
Metals.

Name and Locality of Diggings.	A. "Thompson's Surface Diggings," on the Table Land between the heads of Bingara and Courrongoura Creeks.	B. "Black Surface Diggings," 30 Chain from A., separated by an Auriferous Gully.	C. "Little Bendigo Gully," head of Courrongoura Creek.	D. "Markham's Swamp," head of Bingara Creek.	E. "Red Surface Diggings" at "Blacksmith's Gully."	F. "Bingara Creek," Length of Course 14 Miles, running North to the Gwydir.
Surface Rock	At highest point, white iron-stained Serpentine Clay (No. 26); on the Dividing Ridge pale Serpentine with superficial coating of green Carbonate of Copper. (No. 25.) See also No. 26 of General Collection, p. 48; and Quartz N.S.E. to N.W. in black alluvium. (No. 1.)	Serpentine on low ridge under from 6 inches to 2 feet of black alluvial soil. (No. 5.)	Mottled green Serpentine, covered by fragmentary Quartz and Gild in equal proportion. Specimens of Gold Quartz weigh from 10 to 100 ounces. (No. 9.)	Chromate of Iron, in modules scattered on the surface. (No. 12.)	Hard Serpentine, with white m. tal and blocks of ferruginous Quartz, fragments of veins broken up and abundantly spread. (Nos. 14, 15, 16.)	Hard Quartziferous Serpentine on bank of Creek. Red Jasperid Quartz to N.E., extending to the Gwydir. (Nos. 17 and 18.)
Washing Stuff	Frags of Serpentine in clay about 2 feet thick, resting on white clay which overlies fragmentary Serpentine. (No. 2.)	Decomposed Serpentine over fragmentary Serpentine. (No. 6.)	In old bed of the Gully 3 feet below the surface, consisting of clay, concrete of Serpentine, and Tmp. (No. 16.)	Black alluvial soil of the swamp which forms one head of the Creek.	Reddish fragmentary clay. (No. 13.) All the surrounding surface is full of Gold; but none now procurable, owing drought. 4 December, 1854.	Decomposed Serpentine and Trap below boulders of the Creek bed. (No. 19.) Gold most plentiful at about 2 inches below the Table Land, and near junction with the Gwydir, but found all along the Creek. Solid bright, yellow nuggets, or with interior richly frosted in small hollows. But little Quartz. One specimen weighed 26 ounces. (No. 20.)
Gold . . . .	Bright and small nuggety, semi-crystallized, with traces of Quartz. (No. 3.)	Similar to No. 3. Identically obtained by hoeing the upper stratum to 2 or 3 inches, and washing the earth and grass. (No. 7.)	No Gold now procurable, owing to want of water. (4 Dec., 1854.)	Plentiful at a depth of 2 feet 6 inches.	Large nuggets, dirty and tarnished.	Solid bright, yellow nuggets, or with interior richly frosted in small hollows. But little Quartz. One specimen weighed 26 ounces. (No. 20.)
Rock below the Washing Stuff.	Fragmentary Serpentine without Gold. (No. 4.)	Fragmentary Serpentine, with asbestos fragments, apparently like wood. (No. 8.)	Quartz veins in Serpentine. Gold was found at a depth of 20 feet from surface of bed of rock, in a vein dipping N.W. 45 deg. No Gold at 40 feet.	• •	• •	Jasperoid Rock, and hard Quartziferous Serpentine, forming precipitous falls. (Nos. 21 and 22.)

N.B.—The numbers in this Table refer to the Specimens exhibited by R. Bligh, Esq., C.C.L. A general description of this Gold Field and its geological relations, is given in Rev. W. B. Clarke's Report to the Government, dated 7th May, 1853.

The following Table has been compiled partly from returns obligingly supplied by the Gold Commissioners, and partly from information obtained at the Treasury and Audit Offices.

Name of Gold Field.	Number of Digging Licenses issued during October, 1854.	Quantity of Gold Remitted by Escort during that Month.	Estimated Quantity conveyed away by other means during the same Month.	Estimated Earnings per Man during the Month.
Turon River . . . . .	894	Ounces. 1940	About 800 ounces.	£14 or £15, calculated from the rate of wages.
Tambaroora . . . . .	319	919	Very little; but no correct data.	About £12.
Meroo River . . . . .	1236	2569. (Including Gold from Louisa Creek and Mudgee.) None.	Ditto.	£12 to £15, deduced from the rate of wages.
Burrendong and Ophir . . . . .	133	400 ounces.	400 ounces.	£12.
Hanging Rock . . . . .	375	No Escort.	800 ounces.	£8
Bingara . . . . .	33.	The number of Diggers is limited by the supply of water, which is never abundant, and in summer is very scarce.	There is no Escort at present from any of the Northern Diggings.	£15 is probably below the average earnings of those who work steadily.
Adelong Creek . . . . .	187	No Escort.	400 ounces. This represents simply what the Diggers expend in the purchase of necessaries. They prefer to keep their savings in the shape of gold.	£36.
Araluen.	681	About 2000 ounces.	About 1000 ounces.	£16.

King, Esq. The week, marked C 2, produced ten ounces presented by a colony Charles Lock, different points of from large rough week, to small and specimen No. 1, of the Creek, and sand. The Companys are 4d, a day weeks below No. 1, average gains 3d. miles below No. 2, average gains about from a party at twenty-five miles was found on the creek, about forty days ago daily gains

are fully represented on the Hanging Rock, and a similar Esq. The latter is said by the Rev. W. There is also a specimen of its exact history

Hurrendong. Long Point (Maequarie, below junction of Ophir Creek) . . . . .	932·15	
" Devil's Hole Creek, " Dry Diggings" . . . . .	924·85	
Ophir Creek . . . . .	917·90	Nuggety gold, with marks of crystallization.
Brown's Creek, 22 miles south of Bathurst . . . . .	942·80	Dull, dirty scales, and waterworn nuggets.
BROWN'S CREEK.	940·60	Nuggety gold, much waterworn.
	932·35	Dark, rough grains, mixed with blackish impurities.
SOUTH-WESTERN DISTRICT.		
Adelong Creek. No. 1. 5 miles below source . . . . .	936·85	Rough nuggety gold.
" " 2. 8 . . . . .	946·45	{ Nuggety, smaller, and more waterworn than last.
" " 3. 11 miles from source . . . . .	945·20	Fine granular gold, light in colour.
" " 4. 23 . . . . .	948·60	Fine, bright, scaly gold.
" " 5. . . . .	932·00	
SOUTHERN DISTRICT.		
Araluen. A 1. Major's Creek, Southern Arm . . . . .	953·10	Bright granular gold.
" B 1. Hell's Paddock . . . . .	885·90	Dull granular, with rough nuggets.
" C 1. Major's Creek, Western Arm . . . . .	949·20	Dark-coloured, rounded grains, larger than last.
" In broken granite, 10 feet below surface . . . . .	915·05	Bright granular gold.
NORTHERN DISTRICT.		
Hanging Rock (Nunuckle). A. Oaksville Creek . . . . .	936·80	Rough nuggety gold.
" " B. Same Creek 3 miles farther down . . . . .	937·60	Rough scaly gold.
" " C. Cordillera Gold Company's property on the River Peel . . . . .	909·65	{ Small dark-coloured nuggets, moderately waterworn.
" " C. Gully leading to the Peel, north of Oaksville Creek . . . . .	930·15	
Bingera. Nugget weighing 4 oz, 3 dwt. . . . .	874·25	A porous, spongy kind of nugget, containing dusty impurities in the pores.
No 3 . . . . .	894·45	Faint rounded grains and nuggets of brightish colour.
Rocky River . . . . .	943·70	Very small granular gold, light and brilliant.

## THE COAL FIELDS.

*Paper communicated by the Rev. W. B. Clarke.*

The coal of New South Wales is connected with deposits, respecting the age of which there has been some difference of opinion; but, as their actual position in the geological scale has been assigned in this Catalogue (p. 99 to 100), there is no necessity to enter further upon the question.

The extent of these deposits, and the consequent probable abundance of fossil fuel, is, however, a subject of such vast importance to the present and rapidly-increasing interests of the colony, that it must not be neglected in these pages. A general outline of the carboniferous regions is, nevertheless, all that our limited space allows.

In the year 1847, the author of this notice stated (in evidence before a Committee of the Legislative Council), that he had then obtained acquaintance with the existence of the carboniferous formation over from 17,000 to 18,000 square miles on the eastern side of the colony, between

32 degrees and 35 degrees south. Since then, his own experience has been much enlarged during his explorations of Australia; and, coupling his present actual knowledge with the information derived from other explorers, he is now enabled to state that, compared with its gold-fields, the carboniferous portion of this territory is of infinitely greater value.

"It has been said of North America, that "no part of the known world offers so great a development of carboniferous rocks."\* It now may be said, that whatever be the rental of its coal-beds, Australia presents a close parallel with that rich coal-bearing region.

On the east coast of New South Wales, the carboniferous formation presents itself with little interruption, except from extensive dykes of trap (of which the basaltic dykes strike N.E., and the greenstone dykes, which are well exemplified on the coast of Newcastle, strike N.W.), from

\* Marcus' Geol. Map of U. S.—Boston, 1853, p. 32.

between 31 degrees 30 minutes south, to at least 36 degrees south; and in two principal parts of this coast line, valuable coal-seams occupy the cliffs washed by the ocean, about Newcastle and the north of Illawarra. The position of the former is very disadvantageous for all the purposes of commerce; the latter has some disadvantages, owing to the difficulty of approach to the cliffs from seaward, which, in time the ingenuity of science will overcome. The country more immediately connected with Newcastle, in which workable coal-seams exist, may be considered as occupying an area of at least 20 square miles, in which there is a known series of four or five seams, making an average of from 19 to 20 feet of coal; but, owing to the extremely complicated variations in the accompanying sedimentary deposits, the numerous local derangements, and the separate accumulations of the coal, it is extremely difficult to come to any positive determination as to the actual amount of that fuel in existence. The seams which are prominent from the Williams' River to Lake Macquarie die out in the midst of the sedimentary deposits north of the Hawkesbury.

Coal-seams, however, are found in the county of Gloucester, associated with the Newcastle plants, and in one locality (though of limited extent, and in the midst of igneous rocks), the writer measured a seam upwards of 60 feet thick.

On the parallel of 32 degrees, from the coast to the 149th meridian, the lower members of the carboniferous formation crop out from beneath the coal-seams, which on the right banks, and in the beds of the Hunter and Goulburn, rise from below the escarpment of the Hawkesbury rocks, presenting workable coal of varying thickness and extent, at the following localities:—Four Mile Creek; Hexham, base of the Myall Range; Wollombi; Morpeth; Maitland; Wallis Creek; Anvil Creek; Purrendura; Glendon Brook; Toiga Creek on the Paterson; Leamington; Wollon; Jerry's Plains; Sadlier's Creek; Foy Brook; Falbrook; Ravensworth; Maid-Water Creek; Muswell Creek; Eungella; Piercefield; north of Bengala; at Gill's Cliff and Coyo on the Page; near Murrurundi and Harbenvale; Kingdon Ponds; Mount Wingan; near Scone; and at the junction of the Hunter and Gourburn, as well as above on the latter river, near Gummum. Coal-beds also occur on the Talbragar and Cudgewong Rivers.

South-east of these localities, coal appears at the foot of Mount York, and at Bowfells, near Hassan's Walls; on the rivers Cox and Wollondilly; on the Nattai; at Barragong; on Black Bob's Creek; to the west of the Southern Hanging Rock; at Balango Creek, west of Arthur's Leigh; in the deep gullies about Bundanoon, Meryla, and the Kangaroo Ground; below the plateaux, of which the seams again crop out on the face of the Illawarra escarpment, above Jamberoo and Mulier Creek; and below Mount Kembla and Keera, lower seams, to the amount of four or five, occupying patches of cliff along the coast from near Waniora Point to a great fault ten or twelve miles northwards, northwards of which, at Gara, the beds of shale connected with the coal rise at an angle of 4 degrees from beneath the Hawkesbury rocks, which thence, to the north of Brisbane Water, occupy the coast.

The strike and joints of the rocks in this region, lead to the conclusion that the coast line merely intersects obliquely the general area or basin, which has thus its minor axis along the Hawkesbury, the Newcastle seams finding their prolongation about the Werribee Creek on the Warragamba River, and the Bulli seams having had their northern prolongation many miles in advance of Newcastle, in a tract destroyed, or below the sea—all the evidence collected by observation leading to the inference that this eastern Coal Field is only a portion of a once much larger area, distinctive portions of which are occasionally thrown up by the sea on the beach rocks and sands.

Judging from the enormous development of the Hawkesbury rocks on the western slopes of the Cordillera, where they occur in patches at very great elevations on the summits of the older formations, or on the plains from the western end of the Liverpool range to the parallie of 26 degrees south, it may be fairly concluded that there is no present possibility of calculating the actual amount of available coal on that side of the colony. Seams of coal are known, however, to occur in this area, on the Castle-Ring; near the Nundawar Ranges; on Reedy Creek, near Whirlrala, whence the writer procured Cannel coal; and on the Condamine and its tributaries.

A considerable portion of the counties of Clarence, Richmond, and Rous, is occupied by a similar formation, and workable coal exists therein, both on the Richmond and Clarence Rivers.

The Moreton Bay district is also covered in while areas by this coal formation, and workable and valuable coal-seams exist on the Bremer and Brisbane Rivers, and along the shores of the bay. As on the coast and on Mount Keera, so here the coal-seams are accessible by allts, and on the Brisbane the steamers can load by lying literally at the mouth of the mines, as is the case at Lake Macquarie. This phenomenon is characteristic of the coal of New South Wales. It is due to three principal conditions: 1. The generally nearly horizontal planes of some of the seams; 2. The elevation of the coal country above the sea-level; and, 3, the persistent nature of the joints which traverse these elevated beds, at right angles to the bed planes, thus occasioning continual escarpments, in which the out-cropping seams appear on the faces of cliffs, or in more or less accessible ravines. That more coal exists than appears is certain, from the fact that in deep gullies there are often blocks and drifted boulders of coal, which have fallen from a higher position.

To the northward of the areas already mentioned, the carboniferous formation extends over vast regions, in which coal undoubtedly exists. The writer has reported (Report X., October 1853) the formation on the Condamine as occupying probably 20,000 square miles. He calculates also, from such data as are available, that on the M'Kenzie it occupies an extent of 40,000 square miles; and on the Robinson, 20,000 square miles. It is quite impossible that such enormous regions can be deficient in the providential supply of fossil fuel for the wants and demands of the coming era. The country between the Condamine and the parallel of 32 degrees, occupied by similar beds, cannot be less than 15,000 square miles. And if we take into account the facts stated by Sir T. L. Mitchell, in his history of the explorations of the far interior, and the existence of the same carboniferous formation, not only in various parts of the frontier districts of Victoria, but especially in the Grampian Mountains, westward of the 143rd meridian, it becomes manifest that there is no country in the globe occupied to so large an extent by one formation, America excepted, as Australia; and, with trifling exceptions, nearly the whole of the enormous areas occupied by these carboniferous beds belong to New South Wales.

#### THE NEWCASTLE COAL FIELD.

The following note is abridged from information furnished by W. KEENE, Esq., Government Examiner of Coal Fields.

Newcastle lies at the mouth of the Hunter River, about 70 miles north from Sydney; and steamers, keeping up daily communication with the capital, ascend the river to Morpeth, a distance of 30 miles. All this district is carboniferous, and several thick seams of coal are worked, at various places on the right bank of the river, between Newcastle and Morpeth.

The Australian Agricultural Company, in the year 1825, commenced operations at Newcastle on a large scale; sank pits, erected steam-engines, and made iron tramways for transport of the coal to the water-side—and they now employ about 200 workmen. Notwithstanding this, and that there are other Companies and individuals at Newcastle working for coal, their united labours were unequal in the last year to supply the demand. Ships were therefore subjected to great inconvenience from delay in loading, and the price of coal rose from 9s. 6d. to 40s. a ton. At present, in consequence of improvements, the collieries can send to the water-side 2000 tons of coal a day more easily than they could have sent 500 only three months ago. The price is therefore reduced to 15s.; and there is reason to believe that, in future, all demands can be supplied at a rate which will not exceed, but probably fall below, the present price.

Ships of a thousand tons have loaded at Newcastle—and there is no port in the southern hemisphere which offers equal facilities for loading coal, of various qualities, for steam navigation, the smelting of metals, smiths' work, and domestic purposes. Merchants who send their vessels to New South Wales may therefore be sure that, after discharging cargo, another can be obtained without delay, sailing in the ports of the Pacific and the Indian Seas.

Extensive works for the smelting of copper ores are now completed. They are on the coast, at Burwood, three miles from Newcastle. Coal abounds close to the works, and furnaces there are producing coke, in anticipation of the demand for the railways (from Sydney to Parramatta, and Newcastle to Maitland) now in course of construction.

I have satisfaction in exhibiting a fine ingot of copper from the Burwood Works, produced from a mixture, in cor-

Mining and  
Metals.

tain proportions, of the different copper ores of the colony, much approved of for coinage by the mint of Calcutta.

As to the geological formation in which the coal is found, I may perhaps be permitted to say a few words. The upper seams are intercalated in siliceous sandstone, in the lower bed of which coloured clays (red, purple, &c.) are found. In lithological character, the sandstone bears considerable resemblance to the formation seen on the French coast from St. Jean de Luz to the Bidassoa, and across the frontier to San Sebastian; and the *façades* of the handsome new buildings in Sydney resemble strongly, in tint and grain, the sandstone buildings of the new edifices in San Sebastian. A deposit of chert, at some places 100 feet thick, is traceable between two of the best seams of coal from Newcastle to Wollongong. Specimens of this rock, and of the coal above and below, are in the collection exhibited by the Rev. C. P. N. Wilton, M.A., incumbent of Newcastle. His long residence in the colony has enabled him to make a very varied collection, which will be found in the Exhibition, add to which he permits me to refer. I therefore content myself with exhibiting a few fossils detached from fossiliferous beds separating the coal seams at Wollongong and Bullial, 60 miles south of Sydney.

I am of opinion that the deposits along the whole of the coast, from Newcastle to Wollongong, belong to one epoch — are continuous — disturbed only by the upheaval of igneous rocks — and that the chief inequalities of the surface are the effects of denudation. Over the whole area examined I have found no trace of tertiary deposits; and the most recent deposit is a conglomerate, of which I send a labelled specimen. It is taken from a bed of considerable thickness 150 feet above the sea-level. The strata below, schist, coal, chert, grit, as well as the conglomerate, are all traversed by a trap rock, which rises like a wall of about six feet thick, through and up to the surface of the conglomerate, with little or no derangement of the strata on either side. I send also a specimen of this trap rock. The greater part of the igneous rocks traverse the coal seams, and prove active volcanic agency since the carboniferous deposits.

**TIN FITZROY IRON AND COAL MINES.**  
(Extract from a paper communicated by F. J. Rothery, Eng.)

The Fitzroy Mine is situated at Mittagong, in the county of Camden, 75 miles from Sydney, on the Goulburn or Great Southern Road, at an elevation of 2053 feet above the sea, from which it is distant, at Wollongong, 21 miles. The mine, *as visible to the eye*, covers an area of about 16 acres, and lies, in a compact mass, on a gentle inclination at the head of a valley, surrounded by a succession of undulating lands, flanked by lofty and precipitous ranges — the Gibraltar Rocks standing several hundred feet above the level of the mine, at a distance of about a mile. The actual extent of the mine is supposed to be about 100 acres.

This Iron Field offers to the ordinary observer some remarkable features. The ore lies scattered on a surface of gentle inclination, in huge blocks, the intervals being, in many places, occupied by a rich red oxide. The investigations of Mr. Keeue, the Government mineralogical sur-

From examination of the bluff and washed escarpments of the coast, we learn that the sandstone and grits of the coal formation are 2000 feet in thickness, and may be much more.

#### COPPER MINES.

The only copper mines in which of late operations have been extensively conducted are the "Summer Hill Mine," about 28 miles south of Bathurst; the "Ophir Mine," 24 miles westward of Bathurst; and the "Carangari Mine," about 5 miles from the latter. The works of the "Belubula Mine," in the Coonar District, notwithstanding the richness of its ores, have for a time been suspended, in consequence of the high price of labour, and the enormous expense of land carriage.

The Summer Hill Mine belongs to the "Bathurst Copper Mining Company," which has been in existence some years. There are several lodes on this mine, the main one containing about 6 feet wide of solid ore. The ore consists of yellow pyrites. One main shaft has been sunk upwards of 20 fathoms upon the lode. The Company have erected smelting works, by which they have been enabled to bring their ores into a regulus of upwards of 40 per cent.

The mine of the "Ophir Copper Mining Company," formed in the year 1852, is on land consisting of 640 acres, and is at present worked by the Company, who employ on it about 100 persons. There are several valuable lodes of ore running through the land, of a very rich character. The average quality of the two largest specimens exhibited exceeds 40 per cent. A furnace has been erected for the purpose of smelting the ore, and is expected to be shortly in operation. Limestone has been found on the property, and gold is to be procured from the gossan at the back of the copper lodes.

The Carangari is worked by the "Carangara Copper Mining Company." It is on a property of nearly 900 acres; and there are at present about 200 tons of grey ore raised — ready for smelting. As yet, however, no furnace has been erected by the Company.

veyor in the vicinity, having satisfied him that the iron ore had been protruded through a coal field, this mineral was searched for successfully a short distance beyond the edge of the iron field, and found in seams from 3 to 3½ feet in thickness.

The iron produced from this ore possesses remarkable qualities; it requires no flux in smelting, and the metal, when smelted, is made perfectly malleable with very little labour. The specimens exhibited are calculated to show the facility with which it can be applied to work requiring the finest descriptions of iron.

It appears to exist in quantities practically inexhaustible, sinking to the depth of 28 feet, having been made the whole way through an unbroken mass of ore. Formations of similar character abound in many parts of the colony.

c Rock, No. 1,

base with Crys-

tals of Felspar.—Of more frequent occurrence, than the Granitic Rock No. 1; either in layers a few feet thick, or of larger extent, so as to form ridges of hills for itself. Conformable in bearing with common Slate, and often alternating with it, without any apparent metamorphosing influence on the Slate;—or in close connection with Syenitic and Dioritic Rocks, and accompanied with brecciated and Silicified Rocks of the most varying mineral composition. Highly metamorphosed Districts accompany the Peel River on both sides. On the East side, towards the Dividing Range, the Igneous Rocks are more extensively spread; whilst, at the West or Company's side of the Peel, the brecciated and Silicified Rocks prevail, still however with a vast development of Diorite, Syenite, Porphyry, and Serpentinite. At the West of the Peel, the metamorphosing influence of Igneous Rocks on a large scale reaches a breadth of 3 to 5 and 7 miles, and at some places more, from that River. Farther West appear Shaly Rocks, slightly altered and silicified in immediate contact with the often-repeated layers of Diorite, Syenite, and Porphyry; which are seen, in rare cases, intersecting the sedimentary strata. Still farther west appears again a high spur, parallel with the middle course of the Peel, comprising the Turl Mountains, 7 miles west of Goonoo-Goonoo, and composed for the most part of Igneous Rocks.

5 Felspar-Porphyry.—Compact Granite base with Crystals of Felspar, with cubic Crystals of Iron-Pyrites.

6-8 Hornstone Porphyry, or Siliceous Felspar-Porphyry.—Base of the Porphyry Felspathic with great preponderance of admixed Silex; containing numerous Hornblende, but few Felspar Crystals.—Near the Granite Rock, No. 1, comprising a high isolated hill (called Table Mountain) rising above the unaltered Slate Rock, which forms the base of this hill.

9 & 10 Dioritic Porphyry.—Base Dioritic, with Crystals of Felspar and Hornblende disseminated in it.—Not of very frequent occurrence, in immediate connection with other Dioritic and Syenitic rocks.

11-30 Serpentine.—Great variety of structure and colour. No. 11 the most common variety; wedge-shaped, laminated, 15 & 16. Disclosed by exposure at the surface. 17. Compact; uniformly dark coloured. 18-20. With Manganite. 21 & 22. With Schiller-Spar. 23 & 24. With minute grains of Chromate of Iron. 25 & 26. Mottled, and Breccia-like coloured varieties. 27. Dito. 28-30. With veins of Adesite.—Serpentine is very largely developed, especially on the East of the Peel; but also passing over to the West of the River. It is closely connected with Dioritic and Syenitic Rocks, and, being itself a metamorphosed Rock, in close connection with other Rocks of the same class, especially Silicified Slates, and Quartz Rocks.—The Serpentine bears in several places Chromate of Iron in minute particles. One great mass of this Ore is found East of the Peel. —*Vide* No. 32.—No Gold-bearing Quartz veins have been met with in the Serpentine.

31-33 Minerals contained in Serpentine.

31 Aragonite.—Of fibrous structure.—Head of Hookevil Creek, below Hanging Rock.

32 Chromate of Iron.—Out-cropping from the surrounding Serpentine, is a large mass of 12 feet thickness, and about 30 yards length; ½ miles East of the Peel, not far from the Diggings in Blackfellow's Gully, north 6 miles from Hanging Rock.

33 Chalcedony, and common Quartz.—Laminated and cellular.—Head of Hookevil Creek, below Hanging Rock. Opal has been found in Alluvial Drift below a hill of Serpentine.

34-35 Basalt.—With traces of Olivine Aragonite, and Basaltic Hornblende. Of rare occurrence in the Peel district. A vein on the West side of the Peel, intersecting Brecciated and Silicified Rocks.

36 Brecciated Basalt Tuff.—With Basaltic Hornblende.—In immediate connection with Nos. 34 and 35; and enveloping the compact Basalt on all sides.

37 Diorite.—Compact, with nodules of Calc spar. 38 & 39 Porphyritic Diorite.—Dioritic base prevailing, with few and mostly obscure Crystals of Felspar; being, by that character, distinct from the Dioritic-Porphyry, No. 9 and 10. 40. Syenitic Diorite.—Dioritic base; more or less

assuming a Crystalline structure in the whole mass, and passing into Syenite: better called Hornblende Granite, because of the great quantity of Quartz, in this Rock. 41-43 Syenite Rock, or Hornblende Granite.—The Crystalline structure, especially of the Felspar, prevailing: great amount of Quartz.—Ad. 37-43. The Dioritic and Syenitic Rocks are closely allied together, and pass imperceptibly into one another; so as not well to be separated, according to the space to be allotted to them in a Geological map, although the extreme members of this series of Rocks are well defined. The Dioritic and Syenitic Rocks are accompanied almost constantly with Brecciated Rocks, containing more or less of the Dioritic base, and properly to be called Dioritic or Syenitic Breccias.

The Dioritic and Syenitic Rocks, with their Breccias, are, in the Goldfields of the Peel, the exclusive bearers of the Gold-Quartz veins, and are to be regarded as the main source of the gold. They occupy the greatest area of that District, East and West of the Peel, from the Hanging Rock to the North.

Silicified Rocks, and Siliceous Breccias, spread out in every direction at the borders of the Dioritic and Syenitic Rocks, and alternate between them. The close affinity of the Serpentine to these Rocks has already been mentioned. (*Vide* Nos. 11-30.)

The Dioritic Rocks prove to be the constant source of gold, even at a distance North and West of the metamorphosed area of the gold fields. Traces of gold have been obtained as far down the Peel as Tamworth, immediately near Dioritic ridges, at some height above the Peel; and, by its appearance, as well as its situation, not to be referred to floods of that river.

44-46 Gold-bearing Quartz.—The Gold-bearing Quartz is in general highly Crystalline, where it is of any good yield.—The Gold-bearing Quartz veins are, as already mentioned, exclusively confined to the Dioritic and Syenitic Rocks, (Hornblende-Granite), and their Breccias. They belong to two systems of strike, one parallel to the strike of the Schists, one vertical to it. The produce of Gold is richest at the out-cropping parts of the veins, which are generally decomposed and partly drifted. The alluvial soil around those veins is visibly enriched by gold; and the richest parts of the gold-fields are below those veins, in gullies, and adjoining portions of the river bed, favourably situated for the accumulation of heavy boulders of the old alluvial drift.

47 Quartz-Crystals.—Some completely formed at both ends.—The out-cropping of the Gold-Quartz veins is commonly overlaid by a partly drifted layer of loose crystals, mixed with soft clay, and hydrate of iron Oxyle. Those layers of Crystalline Quartz yield remarkably beautiful specimens of Crystalline Gold.

48 Gold; one ounce 18 dwts. including Quartz, &c.—Crystalline.—Gold obtained from the out-cropping of the Gold-Quartz veins, by washing the decomposed layers of loose Quartz. (*Vide* No. 47.)

49-64 Brecciated Rocks.—The prevailing base of these Rocks most variable; either Dioritic, Syenitic, or Porphyritic (of Felspar or Hornstone Porphyry), of Siliceous Rock, or of Limestone. 49-54. Dioritic and Syenitic Breccia. 55-59 Porphyritic Breccia. 60-61. Siliceous Breccia. 62-64 Limestone Breccia. The Breccias contain often a great deal of Iron-Pyrites.—The Geological position of the Dioritic, Syenitic, Porphyritic, and Siliceous Breccias has already been described. The Limestone Breccias are also a remarkable feature of the agency of Igneous Rocks. Large beds of Limestone are seen running in one line of strike for several miles; accompanied on both sides by Breccias and Dioritic Rocks, and showing only an alteration of structure, by becoming more crystalline, and being deprived of fossils, which are observed only at few places in the middle portion of large beds. Those beds of Limestone are, at their ends, and at several intermediate places of their vein, suddenly changed into Breccias, where the Dioritic Rocks attain greater development, and the silicification is marked on a larger scale. Smaller beds of Limestone appear often only as Breccias, and sometimes altogether altered into Siliceous Rock, charged with Carbonate of Lime.

65 Antimony-Ore.—Sulphuret of Antimony.—Related to Siliceous and Limestone Breccia, West of the Peel.

Class I.  
Mining and  
Metals.

- about 3 miles from the River, 12 miles North of the Hanging Rock.
- 66 Copper Ore.—*Copper Pyrites*.—In a cluster of Quartz veins, In the Granite Rock, No. 1.
- 67-79 Silicified Rock, Siliceous Slate Rock and Quartz Rock.—*The Silicified Rocks*, even when they most approach to real flinty slate, are still distinct from the pure Silix, by being charged with Felspathic matter, and the clay slaty base of the original rock; being more or less fusible, at least at the edges; and showing their composition by the appearance of the decomposed surface, 67-69. Quartz Rock with many small veins of Quartz; often assuming the character of Iron Flint. 70. Fine and coarse grained Quartz Rock, connected with Iron Flint. 71. Red Iron Ore (Hematite), with the Iron Flity Rock. 72-76. Silicified Rock, approaching to Flinty slate. 77-79. Siliceous Slate; showing still the lamination of deposition of the original slate; containing frequently small specks of Iron Pyrites.—The Silicified Rocks occupy a large area on both sides of the Peel, in close connection with igneous Rocks and Breccias. Even at a distance from the Peel to the West, where the metamorphosing process was less energetic, the Slates are often, but not always, silicified in immediate contact with beds and veins of Diorite or Porphyry; but only to short distance—from a few inches to one foot, and seldom more.
- 80 & 81 Soft Slate.—*Lamination of deposition prevailing rarely with the structure of roofing slate*.—The soft slate appears in the metamorphosed districts towards the Dividing Range, and to some distance West of the Peel, very rarely in isolated patches among the Silicified Rocks. Farther West the soft slate is prevailing; still however frequently alternating with beds of Diorite and Porphyry, and in a few instances intersected by veins of Diorite. The slate is in general highly inclined, and where not locally disturbed by Diorite veins, it strikes North-West—South-East, parallel to the prevailing run of the ridges of hills in the lower part of the country.
- 82 & 83 Fossil Plants in Soft slate.—*Lepidodendron*.—No. 82 is derived from an isolated patch of soft slate in the middle of the metamorphosed district of the Peel, West of the river; showing that those Silicified Rocks are to be referred to the same age; most probably to the lower division of the Carboniferous system. The existence of an older formation of Schists has no where at the Peel been proved. No. 83, found at some distance West of the metamorphosed district, near Goonoo-
- goonoo. No trace of shells or Crustacea has yet been met with in the soft slate.
- 84 Fine grained Quartzose Rock.—*Resembling indurated Sandstone*.—Compact beds of a few inches to one foot and more in thickness; frequently alternating with soft slate.
- 85 Calcareous slate.—*Slate with much Carbonate of Lime, passing into pure Limestone*.—Frequently alternating with soft slate.
- 86-88 Limestone.—*Compact, or of Crystalline structure; Marble of variegated colour*.—The Limestone forms a few large layers of some miles extent in the line of strike, West of the Peel, accompanied by Breccias and Diorite Rocks, and altered frequently by them to a crystalline structure, or transformed into Breccias at their ends, or in the middle of their course. Some layers of Limestone are altogether brecciated, and of small extent in length, losing themselves in Silicified Rocks. (Vide Nos. 62-64.)
- 89-91 Limestones with Fossil Corals.—*The Corals mostly Siliceous, and standing out from the eroded surfaces of the pure Limestone*.—The Fossil Corals are of rare occurrence in the metamorphosed district; and only preserved in the middle portions of thick layers of Limestone. Obscure traces of Shells are but rarely met with.
- 92 Micaceous Rock.—Small bed inclosed in the Limestone No. 86-88.
- 93 Coarse Conglomerate.—*Containing Boulders of all the Rocks, commonly found in the diluvial drift of the district*.—The coarse conglomerate of cemented Diluvial Drift is found over a large range of hills West of the Peel; covering the slate, and Diorite and Porphyritic Rocks, often at considerable height above the present general level of the Diluvial Drift; proving the comparatively recent upheaval of those hills.
- 94 & 95 Fine-grained Conglomerate.—Allied to the coarse conglomerate; and also of Diluvial formation.
- 96 Hydrate of Iron-Oxyd, with impressions of leaves.—*Formed in globular bands round nodules of the conglomerate*, No. 94 and 95.—This interesting bed, with impressions of leaves, occurs on the summit of the high hill range, 3 miles South West of the Nundle.

Table de marquerie faite avec 64 espèces de bois de la Nouvelle-Galles. (Voir cl. 1 et 26.)

CATALOGUE (see No. 77) of SPECIMENS OF WOODS indigenous to the SOUTHERN DISTRICTS, collected by Mr. W. MACARTHUR, and exhibited by the Commissioners; with Remarks descriptive of the nature of the Trees, and the qualities of their Wood, so far as these could be ascertained.

A short description of the general features of the kinds of woodland, from which have been collected the majority of the specimens of woods hereinafter described in detail, with a few observations upon the general character of the latter, would seem to be a desirable introduction to the Catalogue. They will be useful in rendering the subject more intelligible to all who have not had the opportunity of informing themselves by personal observation. For greater convenience, the different descriptions of natural woodlands will be included under three classes; and the letter denoting its class will be inserted opposite to each specimen of wood.

65 *Turon Gold Ridge Quartz Crushing Company* (per G. A. Lloyd), Sydney.—Large block of auriferous quartz.

66 *Want, R. J.*, Sydney.—Minerals; root of cypress pine.

67 *Warde, Captain of the Mint*, Sydney.—Report of his assays of the samples of gold exhibited by the Commissioners.

68 *Wilson, W.*, Lismore, Moreton Bay.—Meerschaum and other minerals; aboriginal weapons; woods, barks, etc.

69 *Wilton, Rev. C. P. N.*, Newcastle.—Collection of 77 specimens (mostly fossil), illustrative of the Newcastle coal-fields.

#### CLASS II.

70 *Adams, Francis*, Sydney.—Gum of the grass tree.

71 *Alcock, G.*, Moreton Bay.—Impregnated juice of a species of Fleus.

72 *Batty, Mr.*, Sydney.—Specimen of cedar wood.

73 *Blaxland, John*, Liverpool Plains.—Log of Myall wood.

73a *Bousfield, F. (the Secretary)*, Moreton Bay.—Pearls in their shells.

73b *Bousfield, Mrs.*—Large pearl from Moreton Bay. Honourable Mention.

74 *Busby, W.*, Cassilis.—Log of Myall wood.

74a *Calvert, J. S.*, Sydney.—Seeds obtained by him whilst travelling with Leichhardt.

75 *Child, W.*, Maitland.—Gum; plants bearing insects said to afford a dye; insects said to afford a dyeing material; native basket.

76 *Chisholm, James*, Goulburn.—Specimens of woods growing near Goulburn.

77 *Commissioners for New South Wales.*—Collection, formed by Mr. W. MacArthur, of Canand (Médaille d'Honneur), of 240 species of wood from the southern districts of New South Wales, and of 90 species of the woods of the northern districts, collected by Mr. C. Moore (Silver Medal), director of the Botanic Gardens, Sydney, both collections accompanied by dried specimens to verify their scientific names. Extensive collection of specimens of gold from the different gold-fields in New South Wales, accompanied by illustrative specimens of the overlying and auriferous strata. — Glass cases, tables, &c., made of woods of the colony, by M. Caumont and M. Marsoulet. — Marbles from the Abercrombie Caves and Emu Swamp. — Stump of a tree bearing sepulchral inscription to the memory of M. Le Receveur, naturalist to the expedition, who died at Botany Bay, and who was interred at the foot of the tree by his companions, La Perouse and crew, on their last and fatal expedition. — Daguerreotype views of the Sydney exhibition of the products forwarded to Paris. — Drawings of ditto. — Medal, 1st class silver, ditto 2nd bronze, distributed at the Sydney exhibition of the products forwarded to the Paris exhibition, from dyes sunk by Leonard C. Wyon, Esq., after designs made in the colony by T. Andrews and F. C. Terry. — Slab, containing 64 specimens of New South Wales woods, inlaid, made at Sydney by Wilekens.

Class A.—Forest more or less open; generally composed of trees with little or no underwood; their trunks more or less naked and lofty, height being a more conspicuous feature than diameter; their heads small in proportion to the trunks, divided into few secondary or tertiary ramifications, and thinly clothed with persistent, dry, dull-coloured, thick, leathery leaves, abounding in essential oils, and in their decomposition adding little to the vegetable matter in the soil. The different species of Eucalyptus and Angophora, with Melaleuca, Callistemon, Syncarpia, and Lophostemon, compose the larger trees which furnish all the common durable hard wood timber used in Sydney and the adjoining districts. Occasionally these dry forests pass into tracts crowded with trees, generally of a single species (still with little or no underwood), their trunks being drawn up to a great height, and of small diameter. The trees of this class are usually produced to a greater size, and with better quality of timber, on lands rather poor than

good; the comparative surface, ' are excepted timbered, from A. to "There are the large and rarely immediate extreme boards, the which the bark to t way", but few of the this rule; sis, and o teenem. to Class B do the O defect pre such exten "Gum ve greater or particular probably is a much cessive lay blisht, a the same worthless, wood drie from each take from cepting of of Angop or Gums, to be reg why many amongst Another of notice fuel, and tity of st part are s at all. trunks being  
meter. The  
greater size,  
the poor than

good; the more fertile lands commonly producing trees of comparatively small dimensions, thinly scattered over their surface. The rich alluvial lands on the margins of rivers are exceptions to this rule. They are almost always heavily timbered, and towards the coast their character passes from A. to C.

There are some characteristics applicable to the whole of the large trees of this class. When at full maturity they are rarely sound at heart, and even when they are so, the immediate heart-wood is of no value on account of its extreme brittleness. In sawing up logs into scantlings or larches, the heart is always rejected. The direction in which the larger species split most freely is never from the bark to the heart (technically speaking, the "bursting way"), but in concentric circles round the latter. Some few of the smaller species of forest trees are exceptions to this rule; such as the different species of Casuarina, Blankia, and other species belonging to the natural order Proteaceae. The latter, however, with little exception, belong to Class B. They split most freely the "bursting way," as do the Oaks, &c., of Europe and America. A very serious defect prevails amongst a portion of the trees of this class, to such extent, as to demand especial notice here. It is termed "Gum vein," and consists simply in the extravasation, in greater or less quantity, of the gum resin of the tree in particular spots, amongst the fibres of woody tissue, and probably where some injury has been sustained; or, which is a much greater evil, in concentric circles between successive layers of the wood. The former is often merely a blemish, affecting the appearance rather than the utility of the timber; but the latter, when occurring frequently in the same section of the trunk, renders it comparatively worthless, excepting for fuel. In the latter case, as the wood dries, the layers with gum veins interposing separate from each other; and it is consequently impracticable to take from tree so affected, a sound piece of timber, excepting of very small dimensions. The whole of the species of Angophora, or Apple tree, and many of the Eucalypti, or Gums, are subject to be thus affected; and it is the more to be regretted, because it appears to be the only reason why many of the trees so blighted should not be classed amongst the most useful of the hard woods of the colony. Another characteristic among these hard woods is deserving of notice. Although the majority of them make excellent fuel, and are valuable on account of the comparative quantity of stem they are capable of generating, the greater part are slow to kindle, and a few of them will hardly burn at all. To this circumstance, probably, is to be attributed the small number of houses burnt in a climate, and amongst a population likely to afford an unusual proportion of such accidents. Few of the species of Eucalypti are rich in potash; but several of the genus Angophora contain it abundantly.

It would be difficult to form even an approximate estimate of the number of species of Class A, producing good timber, throughout the settled districts of New South Wales. It is believed that very few of them have a wide range; the same local names being applied many times over to different species, in different districts.

*Class B.*—Barren Scrub, covered either wholly with low shrubby vegetation without trees, or with short-stemmed stunted trees, rarely or never producing serviceable timber. The same dry character of vegetation prevails over this description of country, as over the last. The "muir-fires," which sweep over these barren Scrubs once, at least, in every four or five years, effectually prevent the species which do not grow with naked trunks, from obtaining the dimensions they might otherwise be susceptible of acquiring. At each burning, the majority are killed to the ground, to be reproduced from the collar. Good specimens of their wood for illustration are therefore scarcely attainable.\* It may be observed, that the majority of the beautiful flowering Shrubs of the colony have their habitats in this sort of country, which is always more or less rocky, stony, or sandy.

*Class C.*—Rich Brush, or "Cedar Brush." Tracts of country rarely of great continuous breadth, but often alternating at short intervals with Class A, and prevalent only at moderate distances from the sea, or, at all events, to the eastward of the great dividing range.

\* In the first catalogue all the systematic names which have been accepted are given in Roman capitals; the aboriginal names in common type, and the local names in italics.

The writer takes this opportunity to acknowledge the valuable aid he has received in the systematic nomenclature of the specimens in this collection from W. S. McLeay, Esq., Sydney—Professor Desmarest, of the Jardin des Plantes—and Robert Brown, Esq., British Museum.

This description of woodland often occupies country covered with rocks and stones, but of such geological character that a rich soil results from their decomposition. It usually follows the courses of streams; and, in country favourable, geologically speaking, to the formation of good land, the Cedar Brushes fill up the valleys and the gorges of ravines with their dense vegetation. They are to be found in the greatest perfection at Illawarra, a few miles from the open sea-coast, upon natural terraces, skirting the mountain-side, at various elevations, up to 1500 feet, and upon rich alluvial plains, particularly in the districts to the northward of Sydney, where they are described to be of great continuous extent. They produce few shrubs, but a variety of trees of considerable altitude; frequently of comparatively slender growth, almost universally clothed with beautiful, dense, bright green foliage, their unlarious character being much increased by the numerous lofty ligneous climbers ("lush-ropes") which attain their topmost branches, and frequently throw themselves from tree to tree. At Illawarra, and in some other districts, four species of arboreous Ferns, and two more species of Palms, add materially to the tropical aspect of this description of country. A few of the trees of Class A are to be observed thinly scattered through the Cedar Brushes. In such case they often attain the most magnificent dimensions, but their general character remains unaltered.

During the heats of summer, the atmosphere of the Cedar Brushes is always much less dry, and the temperature more equable than it is upon adjoining lands not clothed with rich vegetation. Bush fires rarely or never extend into their recesses, which are difficult to penetrate, even on foot, owing to the numerous irregularities of surface which prevail, and to the tangled nature of the vegetation. These difficulties apart, nothing can be imagined more charming to the holder; especially where glades or natural openings occur, to enable him to comprehend the full grandeur of the still life around him. The extreme softness of the noble trees, which are thrown together in surprising variety, with stems, rarely cylindrical, but of the most picturesquely irregular forms,\* covered with mosses and orchids, and loaded aloft with huge masses of epiphytical ferns of exquisite beauty; all these vegetable wonders, viewed in the transparent, green, and almost sunless light, which even on the brightest days pervades their recesses, combined with the delicious fragrance and the agreeable temperature, which in this weather invariably characterizes the Cedar Brushes, astonish and gratify the lovers of sylvan scenery. But, although the senses are charmed, the difficulties in exploring them, to ascertain of what species of trees they consist, are very great; and still more serious are the obstacles to be surmounted in getting out new trees when found. The common use of the wood of the Cedar (*Cedrela Australis*) in joiners' and cabinet work, and its extensive exportation to the neighbouring colonies and to Europe, have induced the sawyers to penetrate into every nook from whence sawn timber could be dragged out. But in seeking out this particular tree, they would appear to have neglected all the rest. The most experienced amongst them have no names for a great number, and can give little

\* Amongst the forms which attract the attention of a stranger, may be instanced the Giant Nettle (*Urtica Gigas*), a common brush tree which occasionally attains very noble proportions. Two specimens, growing near each other, upon measurement, proved respectively to be 40 and 42 feet in circumference, at four feet from the ground. The smaller one, still in full vigour, rises from its base, by a series of buttresses of singularly regular outline, gradually tapering upwards without a branch, to the height of 120 to 140 feet; the trunk then dividing into a regularly-formed, wide-spreading head.

But in picturesqueness of beauty, as well as in size, the Nettle must give place to the Giant Fig, a tree five times the size of the genus common to the brushwood. (*Ficus Macrophylla*), and two with very small leaves (the names of which we have not ascertained), become huge trees. The largest actually measured girthed about 80 or 87 feet; its very irregular form preventing any approach to accuracy. It would be difficult by description to convey an adequate idea of the grand, yet wild, character of these singular trees. Originating from seed deposited by birds, high up among the branches of the tallest trees, the plant commences its growth by extending its rope-like roots directly downwards. Getting firm possession of the soil, it then gradually embraces the parent stem, and so gradually descends under the successive ligneous layers deposited by the Fig, and becomes a perfectly flattened column, generally of very irregular form, but always supported by huge buttresses, which extend to a great circumference at the base. The Fig has now become the monarch of the surrounding brush; extending its immense cupola-shaped head high above the surrounding trees, and its roots, far around, in ridges like low walls, several feet above the soil. An instance was observed, in which, supposing the tree to be standing alone upon a plain, a hundred men might be placed, sitting or lying down between the root, perfectly concealed from view at a short distance.

Class II.  
Products  
obtained  
without  
cultivation.

**Class II.**  
Products obtained without Cultivation.

Information to be relied upon with regard to the qualities of their timber. They have been in the habit of confounding together numerous species, under the general designation of "brush trees." It requires careful and laborious investigation on the part of a stranger in these brushes, to distinguish trees even of very different families; their foliage is often so far overhead, and so intermingled with that of the neighbouring trees and climbers, their trunks are so covered with epiphytes, and the light so imperfect, that the tree often requires to be cut down to determine its identity; even then it frequently becomes further requisite to cut down several of the neighbouring trees, which have their branches attached to by the "bush-ropes," before the tree will fall, and bring the foliage within the explorer's reach. The uncertainty of their periods of flowering and fruiting gives rise to further difficulty. On the present occasion, although they have been repeatedly examined at short intervals over a period of six months, comprising the seasons at which they might be expected to show flowers or fruit, it is remarkable how few have been detected in a fertile state. These few forming the exception rather than the rule with the particular species to which they belong, it would appear to be certain that the great majority of the trees of this class do not flower every year, and many of them only at long intervals. In proof of the intimate intermixture of many kinds of trees, it may be stated that, skirting a narrow track through a Cedar Brush for about half a mile, more than sixty species were observed all, growing within twenty or twenty-five yards of the track; of these, above three-fourths were of the stature of trees. It may be remarked, also, that no two brushes resemble each other precisely; fresh species of trees make their appearance in each succeeding brush, whilst others disappear. This characteristic seems to prevail wherever an opportunity of examining them closely has been afforded.

The timber of the trees of this class differ remarkably from Class A. The grain is much finer; it is also, for the most part, sound at heart; and the heart-wood, if not shaken in the fall of the tree, may be used, as is the case with the timber-trees of Europe: even when of very large size, and not sound at the butt, they are usually perfectly so a little higher up; they differ generally, also, from the trees of Class A, in splitting most freely the "bursting-way."

Although their qualities be so little known, it is not to be doubted that some of them would prove of great value. The very imperfect collection of them, which has been made on this occasion, affords evidence that some possess considerable beauty. At the same time it should be observed, that the timber of a considerable portion is not durable when exposed to the weather or to damp; and that, as a class, they are, neither for strength nor lasting qualities, to be compared with the numerous, more coarsely-grained, but almost imperishable woods of Class A.

It is to be regretted that, in offering for the first time to the European world a considerable number of the woods of Australia, so little time should have been available for collecting them. Instead of six months, two or three years would scarcely have sufficed to form a tolerable collection. The necessity, which on the present occasion has existed, of cutting them down whether the season was favourable or not; their exposure immediately afterwards in the sun, and frequently for many weeks, to the action of sun and wind during a season of unusual dryness and aridity, has been injurious to the majority of them, and has caused some valuable timbers to assume a very unfavourable appearance. Some of the woods with the closest grain require to be steeped in water for several weeks immediately after being cut down and sawn up, and afterwards to be carefully dried in the shade. In forming this collection, no precaution to prevent damage from the weather has, for the most part been available. In other respects, the shortness of the period which could be devoted to the object, the limited funds at command, combined with the difficulty of procuring labour, have all operated to prevent it from representing more worthily the richness of New South Wales in woods. Inferior specimens had generally to be taken, because the labour requisite to get out the better was not to be procured; but it was considered advisable rather to secure examples from trees of under size, than to leave the species unrepresented. Even as it is, a great many which are known have not been obtained, and some which were procured have not been forwarded, or, at all events, have not reached their destination. In the Catalogue, the average full-sized dimensions of each species are stated, actual measurement, in almost every instance, having been the authority. The dried specimens of the fronds, which have

been procured with the woods, have corresponding numbers attached to them; and, whether in a perfect state or not, as regards their fructification, they may be relied upon as being, in each case, from the same species as the timber.

WILLIAM MACARTHUR,  
Camden, New South Wales, Commissioner at  
the Paris Universal Exhibition, from that Colony.

- 1 C *POLYOSMA CUNNINGHAMII*.—Yerralla.—D. 10 to 15 inches. H. 30 to 40 ft.—A very beautiful small tree, with bright glossy foliage, and very fragrant flowers; the wood close grained, easily worked, apt to rend in drying, but when dried properly likely to be serviceable for turning and for cabinet work. Found at Illawarra, only upon the mountain side. The specimens collected much damaged.
- 2 C *MOMIACEAE*.—Meew-werang.—D. 8 to 10 inches. H. 150 to 180 ft.—A woody climber of very lofty growth; wood soft, weak, and apparently of no value.
- 3 C *EUPOMATIA LAUBINA*.—Balwarrá.—D. 8 to 16 inches. H. 20 to 30 ft.—A low, branching tree with handsome foliage, producing a profusion of fragrant flowers, and fruit, eatable, but insipid; wood, yellowish brown, prettily marked, but soft, its quality not known.
- 4 C *BRACHYCHITON ACERIFOLIUM*.—Courainy. Flame Tree.—D. 12 to 30 inches. H. 60 to 120 ft.—A slender-growing, lofty tree, with bright green foliage, the leaves in form resembling those of the common Sycamore, protracting large racemes of bright coral-coloured flowers, rendering the tree conspicuous from afar, whence its local name; wood, soft and spongy; the bark used by the aborigines to make nets and fishing lines.
- 5 C *STENOCARPUS SALIGNUS*.—Moleyn. Beef Wood. \* Silky Oak.—D. 18 to 36 inches. H. 50 to 100 ft.—A tree with very sparse foliage; one of the few Proteaceae growing in the Cedar Brushes; producing wood of great beauty, susceptible of high polish, and promising to be valuable for veneers and cabinet-work, hitherto used only for shingles of inferior quality.
- 6 C *CASuarina* sp.—Oorawaag. Laurel.—D. 24 to 48 inches. H. 70 to 120 ft.—A noble tree, with lofty symmetrical hole, and dense rich foliage; wood, soft, not durable, but useful, and not without beauty.
- 7 C *SAPINDUS* sp.—Balm bowlimba.—D. 20 to 40 inches. H. 60 to 80 ft.—Tree of moderate size, but one of the most beautiful of its class in form and foliage; the trunk never cylindrical, but of the most irregular outline; the quality of the wood unknown. Found only at Illawarra. The specimens indifferent and damaged.
- 8 C *ACMENA ELLIPTICA*.—Tidjallal.—D. 16 to 20 inches. H. 60 to 80 ft.—Beautiful small tree, with dense foliage, producing clusters of fruit, very acid, but wholesome and eatable; wood, compact, apt to split in drying, quality little known. The specimens collected much damaged.
- 9 C *PANAX* sp.—D. 9 to 18 inches. H. 30 to 50 ft.—A remarkable, tall, slender-growing, small tree, with few or no branches, and very large pinnate leaves often more than four feet long; wood, white, very soft and light, very perishable.
- 10 C *CASSINIA* sp.—D. 5 to 10 inches. H. 15 to 18 ft.—A tall, branching shrub, of irregular growth; wood generally damaged by the larvae of coleopterous insects. Found at Illawarra, high up upon the side of the mountain.
- 11 C *PRUNUS SALICINA*.—Babatil.—D. 4 to 8 inches. H. 12 to 16 ft.—Pretty, branching shrub. Comonay at Illawarra, at the outskirts of Cedar Brushes, towards the summit of the mountain. The fruit eaten by the aborigines.
- 12 C *TROCHOCARPA LAUBINA*.—Baranduna. Beech. \* Brush Cherry.—D. 10 to 16 inches. H. 20 to 30 ft.—Pretty, small tree, seldom of very straight growth; wood firm, very close grained, and in some specimens, very ornamental, likely to be useful to the turner and cabinet-maker, but hitherto little known. It requires to be carefully

- 13 C PITTEA SP.—D. 4 to 6 inches. H. 15 to 18 ft.—Tall, branching shrub. Found at Illawarra, towards the outskirts of Cedar Brushes, high up the mountain.
- 14 C PIPER (?) SP.—Möh-wnräng. Pepper Pine.—D. 6 to 8 inches. H. 150 to 180 ft.—A magnificent, woody, climber, one of the greatest ornaments of the Cedar Brushes; the wood, soft, weak, and worthless.
- 15 C DORYPHORA SASAFRAS.—Calang. Sasafras or Sasafras.—D. 24 to 36 inches. H. 80 to 120 ft.—A most beautiful tree, with dense, bright green, glossy foliage, emitting an agreeable aromatic fragrance; the bark containing an agreeable bitter principle of much repute; a tonic amongst the colonists who dwell near the Cedar Brush; wood soft and weak, of little value except for packing cases. A very common tree of its class.
- 16 C ACMEA SP.—Galing arra. Brush Cherry.—D. 18 to 30 inches. H. 60 to 100 ft.—A handsome, small tree, the wood of which is little known, but is close grained and hard; the fruit is beautiful to the eye, and has an agreeable acid flavour. Common at Illawarra.
- 17 C KINGIANA.—Tdjerrall. Hickory.\*—D. 24 to 36 inches. H. 80 to 100 ft.—Handsome tree, not much known; wood, close grained, but seems to split in drying.
- 18 C BOSWELLIA (?) SP.—D. 6 to 8 inches. H. 25 to 30 ft.—Small, upright, slender tree.
- 19 C TRICHILIA GLANDULOSA (?).—Dog-wood.\* Blood-wood.\*—D. 12 to 18 inches. H. 25 to 50 ft.—A beautiful, small tree, producing showy flowers. An imperfect specimen of the wood obtained.
- 20 C CARGILLA AUSTRALIS.—Booreera. Black Plum.\*—D. 10 to 14 inches. H. 20 to 40 ft.—Upright, slender, graceful tree; wood, close grained and firm, appears to work well, and to be fit for turning. Specimens discoloured by mildew.
- 21 C ICACINEAE.—Ngeureen minan. White Maple.\*—D. 40 to 80 inches. H. 100 to 150 ft.—Magnificent tree, with lofty straight bole, always of triangular form; wood, close grained, firm, moderately hard and tough, containing a peculiar tasting bitter principle; little known, but likely to be useful for joiners' work and turning. The largest tree which was measured girthed 27 feet.
- 22 C TRAGIA SP.—D. 6 to 8 inches. H. 25 to 30 ft.—Very slender growing, little tree; wood, close grained.
- 23 C TASMANIA AROMATICA.—Mourao. Pepper Shrub.\*—D. 3 to 5 inches. H. 10 to 15 ft.—Branching, or reclining, shrub.
- 24 C CRYPTOCARYA OHOVATA.—D. 18 to 30 inches. H. 60 to 90 ft.—Beautiful, small tree; wood, tolerably close grained, but soft.
- 25 C EUPHORBIACEAE.—Munnill-gang.—D. 6 to 9 inches. H. 20 to 30 ft.—Slender little tree. Very common at Illawarra.
- 26 C PITTSOPHORUM UNDULATUM (?).—Wällundun-dreyren.—D. 18 to 30 inches. H. 60 to 90 ft.—Handsome small tree, with very close-grained, hard, white wood, likely to be very valuable to the turner, affording handsome veneers to the cabinet-maker, and when carefully seasoned, so firm and close as to give hope of becoming a substitute for box in engraving. Sound transverse sections of more than 18 to 20 inches would, however, be rare. A common brush tree at Illawarra. The wood of this tree was damaged by the heat of the ship's hold during the voyage, and the same accident happened to several other white woods of fine grain and satiny lustre through their green state when shipped.
- 27 C ELEODENDRON AUSTRALE.—Conral-ho.—D. 8 to 14 inches. H. 25 to 40 ft.—Slender-growing tree, with sparse foliage; wood, close grained and firm, good for the turner and cabinet-maker. Common at Illawarra.
- 28 C SEAFORTHIA ELEGANS.—Bangalay. Bangalore.—D. 8 to 14 inches. H. 40 to 60 ft.—The most beautiful of Australian palms, with fronds from 9 to 12 feet long; wood, soft, spongy, and worthless.
- 29 C TRICHILIA SP.—Blood-wood.\*—D. 8 to 16 inches. H. 30 to 50 ft.—Slender-growing, small tree, i.e. habit and general character much resembling the common Cedrela Australis, but of diminutive proportions.
- 30 C CRYPTOCARYA GLAUCESCENS (?).—Oorawang. Black Pine.\*—D. 24 to 48 inches. H. 80 to 120 ft.—A noble tree, closely resembling No. 6; wood, soft, moderately close, but perishable when exposed to damp, and not esteemed.
- 31 C APIHOPETALUM SP.—Titleumen. White Myrtle.\* Blue Ash.\* Ash†—D. 30 to 48 inches. H. 80 to 120 ft.—A noble tree, of considerable beauty, producing a large quantity of eatable, acid fruit, in terminal racemes; wood, close grained, easily worked, and likely to be valuable for joiners' and cabinet-work.
- 32 C PODOCARPA SPINULOSA.—Dyrren-dyren. Pine.\* White Pine.\*—D. 24 to 48 inches. H. 70 to 120 ft.—A beautiful tree, of upright elongated trunk, but rarely cylindrical; wood, free from knots, soft, close, easily worked, good for joiners' and cabinet-work, some trees affording planks of great beauty. It has been observed from lat. 35° to 24°; and in the northern districts is reported to attain immense growth. Query.—May this wood not prove to be valuable for the sounding boards, &c., of musical instruments?
- 33 C CEADOMITELIA APETALUM.—Boola. Light-wood.\* Leather Jacket.\* Coach-wood,†—D. 24 to 48 inches. H. 80 to 130 ft.—A very beautiful tree, with elongated cylindrical stem; wood, soft, light, fine grained, of agreeable fragrance, good for joiners' and cabinet work, much in request for coach building; not durable when exposed to damp.
- 34 C & B CORPOREA OVALIFOLIA.—Ngaarecaroing. Orange Thorn.—D. 2 to 3 inches. H. 4 to 8 ft.—Low, branching shrub, of no interest.
- 35 C APIHOPETALUM SP.—D. 40 to 50 inches. H. 100 to 130 ft.—A noble tree, greatly resembling No. 31 in foliage, in general appearance, and in its wood; and although when collected it was considered to be distinct, is now believed to be the same.
- 36 C D. 8 to 10 inches. H. 35 to 40 ft.—Slender, upright growing, small tree.
- 37 C THUSTANIA NEUFIOLIA.—Ooramilly. Water Gum.\*—D. 30 to 50 inches. H. 100 to 130 ft.—A very fine tree, with lofty cylindrical bole; timber, close grained and elastic, valuable for boat-building. Common at Illawarra, high up the side of the mountain; requires to be seasoned carefully.
- 38 C ACMEA SP.—Lily-pilly.—D. 24 to 30 inches. H. 60 to 160 ft.—Beautiful small tree, with very branching head, and bright glossy green foliage; exceedingly umbrageous; wood, little, if at all known; appears to be apt to rend in drying.
- 39 C SAPINDACEAE (?).—Diuwawah. Maiden's Blush.\* Ladiés Blush.—D. 18 to 40 inches. H. 40 to 100 ft.—Small tree, with magnificent large leaves, crowded together towards the ends of its long, pendulous, slender branches; the trunk often of tortuous, irregular growth; the whole tree of remarkable beauty, and exceedingly umbrageous; wood, soft, tolerably fine and close in the grain, and of pink hue, whence its local names. The largest specimen measured was 14 feet in circumference.
- 40 C OMALANTHUS POPULIFOLIA.—Bulla-wullang.—D. 4 to 8 inches. H. 15 to 20 ft.—Tall, rather branchless shrub, with large, beautiful leaves; wood, spongy and soft.
- 41 C FICUS MUNTA.—Ulowang. Rough-leaved Fig.—D. 18 to 24 inches. H. 30 to 50 ft.—Handsome, small tree, with short stem and branching head; wood, very soft when green; appears to contract very much in drying.
- 42 C ACACIA SP.—Baling.—D. 12 to 24 inches. H. 20 to 40 ft.—A beautiful species of acacia, with fine, close-grained, richly-marked duramen. Common at Illawarra.
- 43 C EPICAMPTUS SP.—Marrulang. Rough Fig.\*—D. 8 to 16 inches. H. 30 to 50 ft.—Small tree of elegant, upright growth, with milky sap, and bright glossy, very rigid, nettle-shaped leaves; wood, hard, close

- grained, tough and firm, likely to be useful for turning, and to the cabinet-maker. Common at Illawarra.
- 44 C ACIRAS AUSTRALIS.—Jerrawwa. *Brude Apple*\* *Wild Plum*.†—D. 12 to 36 inches. H. 30 to 100 ft.—A beautiful small tree, with thick milky sap, in taste resembling fresh cream; producing abundance of large purple fruit, of coarse, insipid flavour; the wood, close grained, firm, prettily marked, likely to be useful in cabinet making. Common at Illawarra, and at Brisbane Water, at which last place it attains considerable stature. The largest tree actually measured was 10 feet 6 inches in girth.
- 45 C NOTELIAA OVATA.—Dunga-riunga.—D. 6 to 14 inches. H. 15 to 25 ft.—Small tree, of crooked growth, and little beauty; wood close and firm.
- 46 C POMADERUS sp. (?)—Murr-ring. *Red Ash*\* *Leather Jacket*,\* *Copper's Wood*.—D. 20 to 40 inches. H. 50 to 100 ft.—A remarkable, small tree, with very branching head and sparse foliage; the trunk cylindrical, erect, and yielding excellent, sound, close-grained wood, good for coopers' work, for turning, and other purposes.
- 47 C CAPANEA sp. (?)—Yo-warro.—D. 9 to 12 inches. H. 30 to 35 ft.—Small tree, with erect, slender, irregularly-shaped, fluted stem; wood, fine grained and firm, little known. Common at Illawarra.
- 48 C MELIACEAE (?)—Wean-derry. *Jenny Donelly*,\* *White Cedar*.†—D. 24 to 60 inches. H. 60 to 100 ft.—Handsome tree, producing soft, pale-coloured wood, occasionally passed off upon the unwary as the wood of the cedar (*Cedrus Australis*). Apparently of little value.
- 49 C CARIGILLA sp. (?)—Carimbao. *Grey Plum*.\*—D. 12 to 14 inches. H. 50 to 100 ft.—Slender-growing, small tree with elongated trunk, and elegant, rigid foliage; producing great abundance of small fruit, eaten by the aborigines; wood, very tough and firm, of little beauty, but likely to be useful for many purposes.
- 50 C MELANTHES sp. (?)—Monnen-way-wayri.—D. 3 to 4 inches. H. 10 to 15 ft.—Pretty shrub, of branching habit.
- 51 C SIMLOCOS sp.—Dtharanda.—D. 20 to 30 inches. H. 30 to 100 ft.—Small tree, with spreading branches, and lofty erect trunk; producing very bright blue olive-shaped fruit, but with superior calyx; wood, close, fine grained, and firm, its other qualities not known.
- 52 C CAPANEA AUSTRALIS.—Burrunedura. *Tamarind Tree*.—D. 12 to 30 inches. H. 50 to 90 ft.—Slender-growing, elegant tree, with magnificent large pinnate leaves, producing, every third or fourth year, large racemes of acid fruit, used for preserves by the colonists; wood, white, close grained, and firm.
- 53 C ZIERIA OCTANDRA, (?)—Beud-ding. *Turneric*.—D. 12 to 24 inches. H. 40 to 80 ft.—A remarkable, small tree, with yellow duramen, and very yellow inner bark, yielding a valuable dye; wood, hard, close grained, and firm, likely to be valuable for useful and ornamental purposes. Common at Illawarra.
- 54 C MELIACEAE (?)—D. 6 to 8 inches. H. 20 to 30 ft.—Very slender-growing, small tree.
- 55 C PSYCHOTRIA sp. (?)—D. 3 to 5 inches. H. 12 to 15 ft.—Slender-growing shrub, of no beauty.
- 56 C CELEBOGNE ILICIFOLIA.—Holly.—D. 2 to 4 inches. H. 12 to 15 ft.—Shrub, with numerous branching stems.
- 57 C & A ACACIA MINERVOSA.—Myimbarr. *Black Wattle*.\*—D. 12 to 18 inches. H. 20 to 50 ft.—handsome species with wide-spreading, umbaceous head, of great beauty when in blossom; wood, close grained, tough, and light. Very abundant at Illawarra.
- 58 C ACMENA sp.—Kunguloon. *Myrtle*,\* *White Myrtle*.†—D. 12 to 40 inches. H. 30 to 80 ft.—At Illawarra, a tree, occasionally of considerable dimensions, but generally small, and branching low; wood, exceedingly hard, dense, and heavy; preferred by the aborigines for their clubs, boomerangs, and spear points; apt to split in drying, but when seasoned carefully, of great strength and firmness. Common, in almost every rocky ravine, on the east coast.
- 59 C ACACIA sp.—Murrui no. *Sallow*.—D. 12 to 24 inches.
- II. 40 to 80 ft.—A tall-growing species, with very long phyllodia, beautiful when young. Its wood much prized for axe handles, or other purposes requiring lightness combined with toughness and strength; of considerable beauty in grain and colour, and likely to be valuable to the cabinet-maker and turner.
- 60 C HIRSUS HISTEROPHYLLUS.—Dtharang gang. *Cory-jong*.—D. 6 to 9 inches. H. 30 to 40 ft.—Very slender stemmed, small, tree, beautiful in flower; wood, soft and spongy; the bark used by the aborigines for fishing lines and nets.
- 61 C EXOCARpus CUPRESSIFORMIS.—Ko-le-yatt. *Cherry*.—D. 12 to 24 inches. H. 40 to 50 ft.—A beautiful, small tree, differing from the common Exocarpus Cupressiformis in its greater stature, more spreading, loose habit of growth, more sparse foliage, and yellow instead of red fruit; wood, close grained, good for turning, but very liable to split open in drying, unless the process be conducted carefully.
- 62 C MYRSINE sp.—D. 8 to 14 inches. H. 30 to 40 ft.—Handsome, small, slender tree.
- 63 C D. 10 to 14 inches. H. 30 to 40 ft.—Handsome, small tree, found in a dense cedar brush, growing as a parasite upon the arborescent stems of Dicksonia Antartica; in some few instances, of such size as entirely to grow over and cover the tree fern with its layers of wood and bark.
- 64 C CALICOMA sp.—Tdjerring.—D. 12 to 20 inches. H. 50 to 70 ft.—Beautiful, small, slender tree; wood, close grained, and promising to be handsome when seasoned.
- 65 C ASTROTRICHA sp.—D. 3 to 4 inches. H. 10 to 20 ft.—Tall, slender, branchless tree; wood, soft and spongy.
- 66 C MYRSINE sp.—D. 5 to 6 inches. H. 25 to 40 ft.—Slender, small tree; wood, white and prettily grained. *Query*.—May not this be one of the forms of Myrsine Variabilis?
- 67 C NOTELIAA sp.—D. 6 to 7 inches. H. 30 to 35 ft.—Close, firm wood.
- 68 C RULINGA PANNOZA.—Kerart-wah. *Black Coryjone*.\*—D. 6 to 9 inches. H. 20 to 25 ft.—Light, soft wood: inner bark used by the aborigines to make nets and fishing-lines.
- 69 C ASTER ARGOPHYLLUS, EUCRYPHIA ARGOPHYLLA.—*Musk Aster*.†—D. 6 to 18 inches. H. 15 to 30 ft.—A low, branching tree, growing on the outskirts of cedar bushes; and said to be almost the only tree forming the vast dense thickets between Gipps Land and Western Port. The leaves and young shoots emit the odour of musk; the heart wood dark and handsome, but the tree is subject to much damage from attacks of the larvae of coleopterous insects, and from bush fires. The specimen collected is very inferior, and does not fairly represent the character of the wood.
- 70 C MYRTUS THINERVIS.—Dthalandoon.—D. 10 to 24 inches. H. 40 to 70 ft.—Handsome small tree, beautiful when in flower; wood, close grained and firm, the larger specimens rarely sound.
- 71 C CALLISTEMON SALIGNUM, (?)—Boodjoong.—*Broad-leaved Tea-tree*.\*—D. 12 to 36 inches. H. 50 to 80 ft.—Handsome tree; wood, very lard and close grained, and like that of almost all the other species of Callistemon and Melaleuca, very apt to split open in drying. All of them have the reputation of being very durable under ground; it is said their decay has never been observed.
- 72 C & A MELALEUCA STYLLOIDES.—Niambarra. *Pritchard-leaved Tea-tree*.—D. 18 to 42 inches. H. 60 to 80 ft.—Hard, close-grained wood. Same remarks apply to this as to the preceding species. The outer bark of these two, as of nearly all the other species, peels off in numerous, thin, membranous folds; it has been suggested as a fit material to enter into the manufacture of paper. A specimen of the outer bark of Melaleuca Uniflora (No. 99) is forwarded.
- 73 C SAPINDACEAE.—D. 8 to 12 inches. H. 30 to 50 ft.—Tall, slender, little tree; wood, close, tough, and firm. Common in cedar bushes.
- 74 C XANTHOXYLLEAE (?)—Kalgineen.—D. 12 to 24 inches. H. 40 to 90 ft.—Small tree, with handsome foliage; the wood, very hard, close, and firm, promising to

wood, intended to make

*PHYLLOXERA</i*

Class II.  
Products obtained without Cultivation.

111. 30 to 35 ft.—Elegant, small tree, with magnificient pinnate leaves; wood, soft, white, and spongy.
- 108 A *EUCALYPTUS* sp.—*Flooded Gum of Camden*.—D. 36 to 48 inches. H. 80 to 120 ft.—A fine-looking tree, with elegant pendant foliage; the timber not valued, being weak and perishable in comparison with many other of the common hard woods.
- 109 A *EUCALYPTUS RADIANA*. (?)—Kayer-rô. *River Gum of Camden*.—D. 12 to 18 inches. H. 30 to 50 ft.—A small, quick-growing species, very elegant when in blossom; it is found only on the immediate sandy banks of rivers; the wood of no value; the inner bark used for tying grafts, and other similar common purposes.
- 110 A *CALLITRIS*, on *FNENELLA*, sp.—*Cypress*.—D. 8 to 12 inches. H. 20 to 40 ft.—Elegant, bushy, small tree, affecting sandy soil; wood soft, prettily marked, but not supposed to be durable.
- 111 A *HYMENANTHEA DENTATA*.—D. 4 to 8 inches. H. 12 to 16 ft.—Branching shrub, affecting moist situations.
- 112 C *EHRHETIA ACUMINATA*.—D. 10 to 12 inches. H. 20 to 30 ft.—Small, deciduous tree; wood, soft, pale, and apparently of little value; tree out of leaf when cut down.
- 113 A *ACACIA ADENOPHORA*. (?)—D. 6 to 8 inches. H. 20 to 25 ft.—A species with very slender stem and elegant light foliage.
- 114 C *ZIERIA LANCEOLATA*.—D. 12 to 30 inches. H. 40 to 80 ft.—Handsome, small tree; wood soft, but close and prettily grained, likely to be ornamental in cabinet-work. Damaged on the voyage.
- 115 A *PISONIA LINEARIS*. (?)—Nânnibura. *Jibong*.—D. 6 to 10 inches. H. 10 to 20 ft. Small branching tree; wood close, and prettily marked will yield handsome veneers.
- 116 C *BURSANIA SPINOSA*, VAN. (?)—Ngnârrâ warrâ. *Black-thorn*.—D. 4 to 8 inches. H. 15 to 20 ft.—Tall growing shrub, with very dense wood.
- 117 A *JACKSONIA SCOPARIA*.—Moutangourra. *Dog-wool*.—D. 4 to 6 inches. H. 12 to 15 ft.—Tall shrub, with slender, single stem. Its local name given on account of the offensive odour emitted by it when burning.
- 118 A *ACACIA* sp.—D. 8 to 12 inches. H. 20 to 30 ft.—Pretty, small tree, with handsome wood.
- 119 A *BRACHYCHITON POPULOIDES*.—Courmyrn.—D. 18 to 36 inches. H. 30 to 50 ft.—Pretty, short stemmed little tree, with graceful, aspen-like foliage; the wood, soft and spongy, containing much gum mucilage; the tap roots of young trees, and the smaller roots of larger trees, prized for food by the aborigines; the inner bark also used by them for making nets and fishing-lines.
- 120 A *ACACIA FALCATA*. (?)—*Lignum Vitæ*.—E. 8 to 15 inches. H. 15 to 25 ft.—Pretty, small tree; wood, hard, close, and prettily marked; bark, containing much tannin, and used by the aborigines to poison fish.
- 121 A *ACACIA SUBCERULEA* (?) *HOMOMALLA* (?)—Karreewan.—D. 12 to 24 inches. H. 20 to 30 ft.—Very handsome species, with phyllodia of remarkable glaucous hue; wood, hard, close, fine, and prettily marked.
- 122 A *EUCALYPTUS CORNUTUS*.—Bourrayra—gourroo. *True Box of Camden*.—D. 18 to 36 inches. H. 30 to 50 ft.—A low, branching species of Eucalyptus, not very abundant; timber of excellent quality.
- 123 A *EUCALYPTUS* sp.—Mokirago. *Narrow-leaved Iron Bark*.—D. 24 to 48 inches. H. 50 to 90 ft.—The most picturesque of the different species of Eucalyptus called iron bark; the wood not so hard, and not believed to be so strong, as that of Nos. 90 and 137, but still of excellent quality, and very durable.
- 124 A *EUCALYPTUS* sp.—Bour-rougne. *Stringy Bark of Camden*.—D. 24 to 54 inches. H. 50 to 100 ft.—A species yielding timber much prized for flooring boards and house carpentry, of considerable strength and durability; differs from No. 96, the stringy bark of the coast.
- 125 A *ANGOPHORA* sp.—Boonda. *Apple-tree of Camden*.—D. 18 to 48 inches. H. 40 to 80 ft.—A species, often of very great beauty, and much resembling the oak of Europe in its growth; the wood, when free from gum veins, prized for wheelwrights' work and for boards.
- 126 A *CASUARINA* sp.—Coom-ban. *Forest-swamp Oak*.—D. 12 to 30 inches. H. 40 to 80 ft.—Small tree, usually forming small, detached, dense thickets in open forest ground, where the situation is moist; wood, tolerably close, prettily marked, not durable, but much used where lightness and toughness are required.
- 127 A *CASUARINA* sp.—Nar-râ. *Small spreading forest Oak*.—D. 10 to 15 inches. H. 15 to 30 ft.—Small tree of no beauty; wood not used excepting for fuel, for which it is excellent.
- 128 A *ACACIA LONGIFOLIA*. (?)—D. 4 to 8 inches. H. 20 to 40 ft.—A very slender, tall species. A very bad specimen collected.
- 129 A *ACACIA* sp.—*Willow*.—D. 10 to 15 inches. H. 20 to 30 ft.—A beautiful species, affecting the banks of streams; wood, close grained and tough.
- 130 A *TRISTANEA LAUHINA*. (?)—*Water Gum of River Nepean*.—D. 12 to 24 inches. H. 20 to 30 ft.—A remarkable small tree, found only in the beds of streams; of very branching habit; wood, very fine and close in grain, easily worked, but acquiring an exceedingly hard and bony texture when carefully seasoned; very apt to split if not dried with great precaution. A most valuable wood of its dimensions.
- 131 A *CASUARINA SUNDENOSA*. (?)—Dahl-wah. *Forest Oak. Beech-wood. Shingle Oak*.—D. 18 to 30 inches. H. 20 to 40 ft.—A low, branching tree; its wood much used for shingles, but possessing considerable beauty for cabinet-work; very apt to split in drying if the process be not carefully managed.
- 132 A *LEPTOSPERMUM* sp.—Tibbekin.—D. 6 to 8 inches. H. 12 to 15 ft.—Crooked-growing, large shrub of no beauty.
- 133 A *LEPTOSPERMUM* sp.—D. 3 to 5 inches. H. 10 to 15 ft.—Branching shrub, showy when in blossom.
- 134 A *CASUARINA* sp.—Billagin. *River, or White Oak*.—D. 24 to 60 inches. H. 50 to 120 ft.—A beautiful picturesque tree, growing only in or near the beds of rivers; its wood, strong, light, very tough when dry; excellent for many purposes requiring lightness and strength; not durable if exposed to the weather.
- 135 A *EUCALYPTUS* sp.—Barroul-gourra. *Bastard Box*.—D. 24 to 48 inches. H. 60 to 100 ft.—The most unsightly, perhaps, of all the Eucalypti in appearance; generally very much decayed at the heart before it attains its full stature. Its timber is, nevertheless, in high repute for great strength and durable qualities. For the poles and shafts of drays and carts, and for the spokes of wheels, it is supposed to have no equal.
- 136 A *EUCALYPTUS* sp.—*Swamp Mahogany, Camden*.—D. 36 to 48 inches. H. 80 to 100 ft.—A fine species with handsome foliage, yielding fine timber, but not of such strength and durability as many other kinds.
- 137 A *EUCALYPTUS* sp.—Terri barri. *Rough-leaved, rough-barked Iron Bark*.—D. 24 to 48 inches. H. 80 to 130 ft.—One of the species which yield the strongest and most durable timber; bark very rugged and durable. This tree has been proposed for their emblem, by the colonists of New South Wales.
- 138 A *CASUARINA STRICTA*. (?)—Oomburra. *Salt-water swamp Oak*.—D. 12 to 24 inches. H. 60 to 80 ft.—Very tall species of Casuarina, growing only in thickets, near salt-water marshes, or inlets; the wood not esteemed.
- 139 C Jinda-yinda.—D. 12 to 24 inches. H. 40 to 60 ft.—Apparently differing from No. 112, but if so, closely allied to it; tree out of leaf when cut down.
- 140 B *CALISTEMON* sp.—D. 2 to 3 inches. H. 8 to 12 ft.—Tall shrub, with many stems; of great beauty when in blossom.
- 141 B *POMADERIS* sp.—D. 3 to 5 inches. H. 10 to 15 ft.—Tall shrub of some beauty.
- 142 A *EUCALYPTUS* sp.—*Woolly Gum of Argyle*.—D. 36 to 48 inches. H. 40 to 80 ft.—A species of picturesque growth, confined to a limited extent of country; wood not esteemed, reputed to possess little comparative strength or durability. The specimen was taken from a tree planted in the year 1829, then about the diameter of a quill. When cut down it had acquired a diameter of nearly 30 inches, and was 70 feet high.

- 143 A *CASUARINA* sp.—*Coomban*. *Forest-swamp Oak*.—D. 4 to 8 inches. H. 40 to 80 ft.—Small tree, usually forming small, detached, dense thickets in open forest ground, where the situation is moist; wood, tolerably close, prettily marked, not durable, but much used where lightness and toughness are required.
- 144 B *CASUARINA* sp.—*Shrub Oak*.—D. 10 to 15 inches. H. 15 to 30 ft.—Small tree of no beauty; wood not used excepting for fuel, for which it is excellent.
- 145 B *VITEX* sp.—*White Vitex*.—D. 20 to 30 inches. H. 10 to 20 ft.—A very slender, tall species. A very bad specimen collected.
- 146 B *MORINDA* sp.—*White Morinda*.—D. 10 to 15 inches. H. 10 to 20 ft.—A species with very branching habit; wood, very fine and close in grain, easily worked, but acquiring an exceedingly hard and bony texture when carefully seasoned; very apt to split if not dried with great precaution. A most valuable wood of its dimensions.
- 147 B *PRUNUS* sp.—*Prune*.—D. 10 to 15 inches. H. 10 to 20 ft.—A species with very branching habit; wood, very fine and close in grain, easily worked, but acquiring an exceedingly hard and bony texture when carefully seasoned; very apt to split if not dried with great precaution. A most valuable wood of its dimensions.
- 148 B *STYRAX* sp.—*Styrax*.—D. 10 to 15 inches. H. 10 to 20 ft.—A species with very branching habit; wood, very fine and close in grain, easily worked, but acquiring an exceedingly hard and bony texture when carefully seasoned; very apt to split if not dried with great precaution. A most valuable wood of its dimensions.
- 149 B *FAUCIA* sp.—*Faucia*.—D. 10 to 15 inches. H. 10 to 20 ft.—A species with very branching habit; wood, very fine and close in grain, easily worked, but acquiring an exceedingly hard and bony texture when carefully seasoned; very apt to split if not dried with great precaution. A most valuable wood of its dimensions.
- 150 B *PEPLUM* sp.—*Peplum*.—D. 10 to 15 inches. H. 10 to 20 ft.—A species with very branching habit; wood, very fine and close in grain, easily worked, but acquiring an exceedingly hard and bony texture when carefully seasoned; very apt to split if not dried with great precaution. A most valuable wood of its dimensions.
- 151 B *CASUARINA* sp.—*Shrub Oak*.—D. 10 to 15 inches. H. 10 to 20 ft.—A species with very branching habit; wood, very fine and close in grain, easily worked, but acquiring an exceedingly hard and bony texture when carefully seasoned; very apt to split if not dried with great precaution. A most valuable wood of its dimensions.
- 152 A *LEPTOSPERMUM* sp.—*Leptospermum*.—D. 10 to 15 inches. H. 10 to 20 ft.—A species with very branching habit; wood, very fine and close in grain, easily worked, but acquiring an exceedingly hard and bony texture when carefully seasoned; very apt to split if not dried with great precaution. A most valuable wood of its dimensions.
- 153 C *TEPHROXYLON* sp.—*Tephroxylon*.—D. 10 to 15 inches. H. 10 to 20 ft.—A species with very branching habit; wood, very fine and close in grain, easily worked, but acquiring an exceedingly hard and bony texture when carefully seasoned; very apt to split if not dried with great precaution. A most valuable wood of its dimensions.
- 154 B *LEPTOSPERMUM* sp.—*Leptospermum*.—D. 10 to 15 inches. H. 10 to 20 ft.—A species with very branching habit; wood, very fine and close in grain, easily worked, but acquiring an exceedingly hard and bony texture when carefully seasoned; very apt to split if not dried with great precaution. A most valuable wood of its dimensions.
- 155 C *BUXUS* sp.—*Buxus*.—D. 10 to 15 inches. H. 10 to 20 ft.—A species with very branching habit; wood, very fine and close in grain, easily worked, but acquiring an exceedingly hard and bony texture when carefully seasoned; very apt to split if not dried with great precaution. A most valuable wood of its dimensions.
- 156 B *XYLOMORPHUS* sp.—*Xylomorphus*.—D. 10 to 15 inches. H. 10 to 20 ft.—A species with very branching habit; wood, very fine and close in grain, easily worked, but acquiring an exceedingly hard and bony texture when carefully seasoned; very apt to split if not dried with great precaution. A most valuable wood of its dimensions.
- 157 B *BALI* sp.—*Bali*.—D. 10 to 15 inches. H. 10 to 20 ft.—A species with very branching habit; wood, very fine and close in grain, easily worked, but acquiring an exceedingly hard and bony texture when carefully seasoned; very apt to split if not dried with great precaution. A most valuable wood of its dimensions.
- 158 B *BALI* sp.—*Bali*.—D. 10 to 15 inches. H. 10 to 20 ft.—A species with very branching habit; wood, very fine and close in grain, easily worked, but acquiring an exceedingly hard and bony texture when carefully seasoned; very apt to split if not dried with great precaution. A most valuable wood of its dimensions.
- 159 C *GINKGO* sp.—*Ginkgo*.—D. 10 to 15 inches. H. 10 to 20 ft.—A species with very branching habit; wood, very fine and close in grain, easily worked, but acquiring an exceedingly hard and bony texture when carefully seasoned; very apt to split if not dried with great precaution. A most valuable wood of its dimensions.
- 160 B *CASUARINA* sp.—*Shrub Oak*.—D. 10 to 15 inches. H. 10 to 20 ft.—A species with very branching habit; wood, very fine and close in grain, easily worked, but acquiring an exceedingly hard and bony texture when carefully seasoned; very apt to split if not dried with great precaution. A most valuable wood of its dimensions.
- 161 C *CASUARINA* sp.—*Shrub Oak*.—D. 10 to 15 inches. H. 10 to 20 ft.—A species with very branching habit; wood, very fine and close in grain, easily worked, but acquiring an exceedingly hard and bony texture when carefully seasoned; very apt to split if not dried with great precaution. A most valuable wood of its dimensions.
- 162 A *FICUS* sp.—*Ficus*.—D. 10 to 15 inches. H. 10 to 20 ft.—A species with very branching habit; wood, very fine and close in grain, easily worked, but acquiring an exceedingly hard and bony texture when carefully seasoned; very apt to split if not dried with great precaution. A most valuable wood of its dimensions.
- 163 A *EUCALYPTUS* sp.—*Eucalyptus*.—D. 10 to 15 inches. H. 10 to 20 ft.—A species with very branching habit; wood, very fine and close in grain, easily worked, but acquiring an exceedingly hard and bony texture when carefully seasoned; very apt to split if not dried with great precaution. A most valuable wood of its dimensions.
- 164 B *MELIA* sp.—*Melia*.—D. 10 to 15 inches. H. 10 to 20 ft.—A species with very branching habit; wood, very fine and close in grain, easily worked, but acquiring an exceedingly hard and bony texture when carefully seasoned; very apt to split if not dried with great precaution. A most valuable wood of its dimensions.
- 165 B *FAGUS* sp.—*Fagus*.—D. 10 to 15 inches. H. 10 to 20 ft.—A species with very branching habit; wood, very fine and close in grain, easily worked, but acquiring an exceedingly hard and bony texture when carefully seasoned; very apt to split if not dried with great precaution. A most valuable wood of its dimensions.

- Camp Oak.**—Small tree, the thickets in which are moist; not durable, toughness are

- 143 A ACACIA SP.—Myall.**—D. 10 to 18 inches. II. 20 to 40 ft.—Small tree, with graceful pendant foliage; one of several species with rich, dark-coloured wood, and the odour of violets, called Myall by the colonists. The present specimen was presented by Mr. William Busby, from the neighbourhood of Cassilis.
- 144 B CALLISTEMON PALLIDUM.—Broad-leaved Tea Tree.**—D. 24 to 60 inches. H. 30 to 50 ft.—A tree with short, stout trunk, and spreading branches, full of foliage; very picturesque; wood, close grained and hard, very apt to crack and fly open in drying, like all the genus. Common about the shores of Botany Bay.
- 145 B VIMINARIA BENJAMINA.—**—D. 3 to 5 inches. II. 15 to 20 ft.—Slender, naked growing shrub, of no interest; wood, soft and spongy.
- 146 B MONOTOCIA ALBIFLORA.—Beech.**—D. 6 to 12 inches. H. 10 to 20 ft.—Very branching, large shrub, often with several stems; wood much sought after by carpenters and other workmen, to make handles for chisels, mallets, and other tools. Common about the shores of Port Jackson.
- 147 B PERSOONIA LATIFOLIA.—Proteaceae.** Jibong.—Jibong.—D. 6 to 12 inches. H. 10 to 20 ft.
- 148 B STYPHELACEAE. (?)—**—D. 6 to 8 inches. II. 10 to 15 ft.
- 149 B FABRICIA SP.—**—D. 12 to 24 inches. H. 30 to 40 ft.—A large species, with stems of very irregular growth, none apparently without damage from insect or decay; wood, close, hard, and heavy.
- 150 B PERSOONIA SP.—**—D. 6 to 8 inches. II. 12 to 15 ft.—A species with very long, narrow, falcate leaves.
- 151 B CALITRIS OR FRENELLA SP.—**—D. 6 to 12 in. II. 20 to 25 ft.—Species from the shores of Port Jackson.
- 152 A & B EXOCARPOS CUPRESSIFORMIS.—Cherry.**—D. 8 to 12 inches. II. 12 to 15 ft.—Species, or subspecies, of upright close growth, different altogether from No. 61.
- 153 C TETRANTHERA FERRUGinea.—**The specimen is from a tree grown in the Botanic Garden, Sydney, and has been transferred to the collection of Northern Woods.
- 154 B LEPTOSPERMUM SP.—**—D. 4 to 8 inches. H. 10 to 15 ft.—Branching shrub, common on the shores of Port Jackson.
- 155 C BLADDEA SP.—**—D. 12 to 24 inches. H. 50 to 60 ft.—Small tree with rather sparse foliage.
- 156 B XYLOMELUM PYRIFORME.—**Merrigga-courroo.—Nature, or wooden pear.—D. 6 to 18 inches. II. 20 to 50 ft.—Small tree, yielding dark-coloured, prettily-marked wood, but rather coarse in the grain; will turn out handsome panels for the cabinet-maker.
- 157 B BANKSIA SERRATA.—Honeysuckle.**—D. 12 to 24 inches. H. 20 to 30 ft.—Low branching tree, with handsome wood, but always more or less bored by the larvae of Coleopterous insects.
- 158 B BANKSIA INTEGRIFOLIA.—Honeysuckle.**—D. 12 to 24 inches. II. 20 to 30 ft.—Small, rather handsome, branching tree; its wood, like the preceding, subject to be damaged by the larvae of Coleoptera. These two species are called honeysuckles, from the quantity of honey secreted in their flowers.
- 159 C GREVILLEA RONCUTA.—Silky Oak.**—The specimen is from a tree in the Botanic Garden, and has been transferred to the collection of Northern Woods.
- 160 B & C ELEOCARPS CYANEA.—**—D. 6 to 10 inches. II. 15 to 25 ft.—A pretty, small tree, conspicuous by its bright blue fruit. Specimen of the wood, indistinct.
- 161 C CASTANOSPERMUM AUSTRALE.—**Bean Tree.—Said to attain immense size. The specimen is from a tree grown in the Botanic Garden, and has been transferred to the collection of Northern Woods.
- 162 A FRENELLA OR CALITRIS SP.—Cypress Pine.**—D. 12 to 24 inches. II. 50 to 80 ft.—A very fine species of Calitris, growing only to the westward of the great dividing range, and quite distinct from species at Moreton Bay, and in the south-west interior. The specimen was presented by Mr. E. Cox, from the neighbourhood of Mudgee.
- 163 A EUCLAYPTUS SP.—Calang arra.—White Gum.**—D. 24 to 40 inches. H. 60 to 80 ft.—A very ugly species, the timber of which is not valued.
- 164 B MELALEUCA NODOSA?**—D. 4 to 6 inches. II. 15 to 25 ft.—A species with bushy habit.
- 165 B FABRICIA SP. (?)—**—D. 4 to 8 inches. II. 15 to 20 ft.—A barren scrub plant without much interest.
- 166 A EUCLAYPTUS SP.—Burraai burrang? Hoolly Gum.**—D. 24 to 40 inches. H. 60 to 100 ft.—Collected at Parramatta, and upon examination, considered to be the same as No. 94, collected at Wollongong, Illawarra, which has not been forwarded.
- 167 B ILAKEA ACICULANS.—**—D. 6 to 7 inches. II. 10 to 15 ft.—Branching, large shrub, wood very much bored by the larvae of Coleoptera.
- 168 B MELALEUCA SP.—**—D. 3 to 4 inches. II. 10 to 15 ft.—Small species with very narrow leaves.
- 169 A ACACIA DECURRENS.—**Wat tah. Green Wattle.—D. 10 to 15 inches. II. 20 to 30 ft. Handsome, small tree, the larger specimens always much bored by the larvae of Coleoptera.
- 170 A ANGOPHOIA SP.—Kadjimbourra. Red Gum.**—D. 36 to 70 inches. II. 80 to 100 ft.—A very fine-looking tree, the largest of the genus. It is believed that the wood, on account of frequent gum veins, is applied to no useful purpose, except the fuel.
- 171 A ANGOPHOIA SP.—**—D. 24 to 36 inches. II. 50 to 80 ft.—Another species, which is not valued for its timber.
- 172 A CALLISTEMON SP.—**—D. 8 to 10 inches. II. 20 to 30 ft.—The wood of this small species appears to resemble that of some of the larger trees of the same genus.
- 173 A CALLISTEMON SP.—**—D. 4 to 6 inches. II. 15 to 20 ft.—A small tree, which produces several stems; but, unlike the generality of the species of Callistemon, with rough, hard, instead of thin, foliaceous, outer bark.
- 174 A NOTELIA SP.—**—D. 3 to 4 inches. II. 10 to 12 ft.—Shrub of no interest.
- 175 B LEPTOSPERMUM, sp.**
- 176 B ILAKEA DACTYLOIDES.—**—D. 6 to 9 inches. II. 15 to 20 ft.—Tall, straight stemmed, Proteaceous shrub, with handsomely-marked wood.
- 177 B LOMATIA LONGIFOLIA.—**—D. 3 to 4 inches. II. 8 to 10 ft.
- 178 B ACACIA SP.—**—D. 3 to 4 inches. II. 10 to 15 ft.—Barren scrub plant; affording moist situations, and not possessing much interest.
- 179 B LEPTOSPERMUM SP.—**—D. 8 to 9 inches. II. 10 to 15 ft.—Query, if not the same as No. 132.
- 180 B WESTRINGIA SP.—**A very bad specimen.
- 181 B GREVILLEA LONGIFOLIA.—**—D. 5 to 6 inches. II. 12 to 15 ft.—Beautiful flowering shrub.
- 182 B MELALEUCA SQUAMOSA.—**—D. 3 to 4 inches. II. 10 to 15 ft.
- 183 B CERATOPETALEM GUMMIFERUM.—Officer Plant. Light Wood. Chritmas.**—D. 6 to 15 inches. II. 20 to 40 ft.—A beautiful flowering plant; rendered conspicuous from afar, by the brilliant scarlet colour of the persistent calyxes of its numerous flowers. Used for the decoration of the churches at Christmas; whence one of its local names.
- 184 B EPACRIS SP.—**—D. 4 to 6 inches. II. 6 to 10 ft.—A remarkable species of Epacris, found growing only in crevices in the face of precipitous cliffs. A very bad specimen; better being, from their situations, inaccessible.
- 185 C BALOGHIA SP.—Nullierra. Roger Gongh.\*—**—D. 9 to 18 inches. H. 50 to 80 ft.—Beautiful, cedar brush tree, with dense, glossy, very dark-green foliage; wood, fine and close in grain, burns freely when green, and appears to contain an oily, resinous secretion. Common at Illawarra.
- 186 C NOTELIA SP.—**—D. 6 to 8 inches. II. 20 to 30 ft.—Differing apparently from Nos. 45 and 67.
- 187 C D. 12 to 14 inches. II. 40 to 50 ft.—**Small tree, with elegant foliage; wood, fine, close in the grain, and hard.
- 188 C ACACIA UMBROSA. (?)—**Meroon gnagne.—D. 15 to 20 inches. H. 40 to 60 ft.—A beautiful species, with large pinnate leaves; the wood close, and promising to be useful to the cabinet-maker. Common at Illawarra.
- 189 C ACACIA SP.—**—D. 12 to 14 inches. II. 35 to 40 ft.—Query, if not the same as 16.
- 190 C CEDRELLA AUSTRALIS.—**Pohal. Cedar.—D. 36 to 48 inches. H. 80 to 120 ft.—A poor specimen of a most valuable wood; almost the only kind used in joiners' and cabinet work amongst the colonists for the last fifty years; is said to attain ten feet in diameter.
- 191 C RUBIACEAE SP.—**—D. 6 to 14 inches. II. 30 to 50 ft.—Small tree, with close-grained, plain-looking wood.
- 192 C CHYPROCARPA SP. (?)—**Myndee.—White sycamore.—

Class II.  
Products obtained without cultivation.

Class II.  
Products obtained without Cultivation.

- D. 12 to 54 inches. H. 50 to 120 ft.—A handsome tree (doubtful if not the same as No. 24); wood, fine grained, soft.
- 193 C *VITEX* sp.—*White Beech,\* Beech,†*—D. 36 to 70 inches. H. 80 to 140 ft.—A noble tree; its wood much prized for the decks of coasting vessels; of fine, bright, silvery grain; said never to shrivel in floors (as do the majority of the colonial woods) after moderate seasoning.
- 194 C *ACMENA* sp.?—*Nguringn-nguringn.* *Pariby,*—D. 6 to 7 inches. H. 20 to 25 ft.—A remarkable, small myrtaceous tree, with very bright pale-green foliage, and dense heavy wood; said never to split when dry; in great request for the swings of halls to thrash out grain.
- 195 C *RILAMNE*, (?)—D. 24 to 48 inches. H. 60 to 120 ft.—A noble tree, with magnificent canopy of foliage, and lofty, erect, cylindrical bole; wood, very close and hard, likely to prove ornamental; evidently a serviceable wood. The specimen from a small tree. Common at Illawarra, and found at Brisbane Water.
- 196 C *MYSURINE VARIAHILIS*, (?)—D. 6 to 8 inches. H. 40 to 50 ft.—A small tree, with prettily-grained white wood.
- 197 C *BERRYODENDRON* sp.?—*Laurel, Birdlime,*—D. 10 to 14 inches. H. 15 to 20 ft.—A singular, small tree, with magnificent, large, simple leaves, and soft, spongy, white wood; the seeds are covered with a sticky glutinous substance, whence one of its local names. A bad specimen.
- 198 C *LAPACHACEAE*, (?)—*Yellow Wood,\**—D. 12 to 18 inches. H. 40 to 60 ft.—Very slender, tall tree.
- 199 C *SYNOXYLUM* sp. (G)—D. 18 to 24 inches. H. 80 to 100 ft.—A small tree, with wood promising, from its pretty grain, to be useful in cabinet-work.
- 200 C *ELEOCARPU* sp. (?)—*Yander-airy, Mountain Ash?*—D. 24 to 36 inches. H. 70 to 100 ft.—Beautiful tree; the timber much used for oars, and other purposes requiring lightness and toughness.
- 201 C *DORYPHORINA* sp. (?)—*Black Suafra†*—D. 30 to 60 inches. H. 80 to 130 ft.—A beautiful tree; distinct from No. 15 in foliage, bark, and wood (fructification not seen). One of the most charming trees of the cedar brushes, from its rich, noble appearance, and the delightful fragrance it imparts to the surrounding atmosphere. Wood, soft, but said to be very superior in its qualities to that of No. 15. The present species is from the southern parts of Illawarra.
- 202 C *MELALEUCA* sp.—*Ngarree-a-roung,*—D. 12 to 14 inches. H. 40 to 50 ft.—A Melaleuca, with rough bark and dense heavy wood.
- 203 C *ACACIA* sp.—*Nummerak, Green Wattle,\**—D. 12 to 18 inches. H. 30 to 50 ft.—A very common tree at Illawarra; which, in the flowering season, quite perfumes the district with its nutty fragrance; wood, close and tough.
- 204 C *ZIENIA* sp. (?)—D. 3 to 4 inches. H. 10 to 15 ft.
- 205 C *DODONEA TRIQUETRA*,—*Wallum-buunang,*—D. 3 to 5 inches. H. 10 to 20 ft.
- 206 C *EUSTHEMON* sp. (?)—*Yander Manna,*—D. 18 to 24 inches. H. 50 to 70 ft.—A handsome, small tree, with close-grained, very white wood, like that of the orange. Damaged on the voyage.
- 207 C *PIMELIA* sp.—*Marind-djerowa,*—D. 2 to 4 inches. H. 8 to 10 ft.
- 208 C *GOODIA LOTIFOLIA*,—*Booro-molle*—D. 2 to 4 inches. H. 10 to 15 ft.—Beautiful flowering shrub.
- 209 C *SOIANACEAE*,—*Mara-coroo,*—D. 3 to 4 inches. H. 15 to 18 ft.—Ripe fruit eaten by aborigines.
- 210 C *ASplenophila* sp. (?)—*Denn-Nangue, Tree Fern,\**—D. 9 to 12 inches. H. 12 to 18 ft.—Beautiful species, with stony cylindrical stem; the midribs of the fronds, yellow and quite smooth.
- 211 C *ASplenophila* sp. (?)—*Yarra-wah, Tree Fern,\**—D. 8 to 14 inches. H. 10 to 15 ft.—Very slender-growing species; the midribs of the fronds, dark purple, and very spiny.
- 212 C *RUMACER*,—D. 10 to 14 inches. H. 40 to 50 ft.—Small tree, at first supposed to be identical with No. 191, collected in a different locality; upon comparison believed to be a distinct species.
- 213 C *PALMAEAE*.—*Dwarf Palm*—D. 1 to 2 inches. H. 6 to 10 ft.—Pretty species of Palm, common in the
- Cedar Brushes, from Brisbane Water northerly; much in request for walking-canes.
- 214 B *PETROPHILA* sp.—D. 2 to 3 inches. H. 8 to 12 ft.
- 215 B *BANKSIA* sp.—*Honeysuckle,*—D. 3 to 4 inches. H. 8 to 12 ft.
- 216 B *PERSONIA* sp.—D. 3 to 4 inches. H. 8 to 10 ft.
- 217 A & B *ACACIA PUERICENS*.—D. 2 to 3 inches. H. 8 to 12 ft.
- 218 A *ACACIA* sp.—*Borrelli gin, Slender Wattle,*—D. 2 to 4 inches. H. 10 to 20 ft.—The stems of this slender common species were split into laths, for "wattling" the walls of the rude habitations in the earliest days of the colony. This circumstance has caused the local name of "wattle" to be applied generally to the numerous species of Acacia.
- 219 C *LOMATIA* sp.—*Bung Wall\**—D. 8 to 12 inches. H. 15 to 25 ft.—A crooked-stemmed, small tree, common on the banks of streams at Brisbane Water.
- 220 C *ACACIA* sp.—*Green Wattle,\**—D. 10 to 14 inches. H. 40 to 50 ft.
- 221 C *MELALEUCA* sp.—*Tra Tree,\**—D. 18 to 36 inches. H. 60 to 80 ft.—A very bad specimen.
- 222 C *CALISTEMON* sp.—D. 7 to 8 inches. H. 35 to 40 ft.
- 223 C *CUNINIAEAE*.—*Cork Wood\**—D. 18 to 36 inches. H. 80 to 120 ft.—Small tree, with close-grained, reddish-brown wood; said to make good staves.
- 224 C *ENDIANDRA GLAUCA*, (?)—*Teak Wood,\**—D. 30 to 60 inches. H. 100 to 140 ft.—A magnificent tree, with lofty cylindrical stem, and ample head, well clothed with foliage; wood, hard, close, fine, dark-coloured in the duramen, with a powerful aromatic fragrance throughout; said to be very durable, evidently a valuable timber; common in the Cedar Brushes at Brisbane Water.
- 225 B *PUNICOSA* sp.—D. 4 to 6 inches. H. 12 to 18 ft.—A very indifferent specimen.
- 226 C *EUSTHEMON* sp. (?)—D. 12 to 15 inches. H. 40 to 50 ft.—A pretty, small tree, with close white wood, like that of the orange. Wood damaged on the voyage.
- 227 C *TRISTANIA* sp.—*Hickory,\**—D. 24 to 36 inches. H. 80 to 120 ft.—A species apparently differing from No. 37, common at Illawarra, and in high repute for toughness and strength. Collected at Brisbane Water, where it grows on low moist land; and never attains the dimensions of No. 37, at Illawarra; the latter was found only high up the mountain. Not having found a single specimen of No. 227 in a state of fructification, the question of the identity of the two Nas, seems to be doubtful.
- 228 C *Cyatocarya* sp.—*Flindosa,\**—D. 36 to 72 inches. H. 100 to 150 ft.—A tree of noble dimensions, in general habit resembling *Cryptocarya* obovata; leaves, very much smaller; stature, much greater; wood, soft and light; in request for decking small craft, and Joiners work. The local name is apparently a corruption of *Flindersia*, with which, however, it has no affinity.
- 229 C *ACACIA* sp.—D. 6 to 10 inches. H. 25 to 40 ft.—Tall, slender species, with beautiful, soft-looking foliage.
- 230 B *ACACIA DECURRENS* VAR.—*Black Wattle,*—D. 9 to 18 inches. H. 40 to 60 ft.—Fine species of *Acacia*; bark much prized for tanning.
- 231 C *ELEOCARPU CYANEUS*,—D. 8 to 10 inches. H. 30 to 50 ft.—Bad specimen. This was considered to be distinct from *Eleocarpus Cyanus*. Upon further examination, however, no distinctive difference can be observed.
- 232 C *XANTHOCYBE*, (?)—D. 10 to 18 inches. H. 40 to 50 ft.—Bad specimen.
- 233 C *SAPOTACE*, (?)—D. 18 to 24 inches. H. 50 to 70 ft.—Small tree, much resembling No. 199, from which, however, it is believed to be distinct; wood, prettily marked, and likely to be useful for veneers, &c.
- 234 C *LAPACHACEAE*,—D. 16 to 24 inches. H. 50 to 70 ft.—Small tree, yielding yellowish-brown wood, with dark veins, apparently related to 198.
- 235 C *ACMENA* sp. (?)—D. 12 to 18 inches. H. 40 to 60 ft.—Small tree, yielding a dense close wood.
- 236 C *CALICOMA* sp.—D. 6 to 12 inches. H. 30 to 40 ft.—Supposed to be a species distinct from No. 61; but now, upon comparison, believed to be the same.
- 237 C *TRISTANIA* sp.—*Wader Gum,\**—D. 12 to 24 inches.

2 to 24 inches.

- 11, 30 to 50 ft.—A species bearing the same name as Nos. 37 and 130, but from which it is quite distinct; the wood much valued at Brisbane Water for its toughness and strength; preferred for the knees and ribs of boats and coasting vessels.
- 238 C MELIACEAE. (?)—*Rosewood*,?—D. 36 to 72 inches. 11, 80 to 120 ft.—A beautiful tree, producing the finest timber, both durable and ornamental. It possesses an agreeable fragrance, the effect of an essential oil. Bedsteads made of this wood never harbour insects.
- 239 C CALLITRUS or FIENELLA SP. (?)—*Cypress Pine*.—From Moreton Island. Presented by Mr. Want.
- 240 B EUCALYPTUS SP.—*Red Flowered Iron Bark*.—D. 18 to 30 inches. 11, 40 to 60 ft.—A rugged-growing tree, producing beautiful pink or crimson flowers; wood, apparently very durable.
- 241 B EUCALYPTUS SP.—*Mahogany*.—D. 30 to 70 inches. 11, 60 to 130 ft.—A very noble timber tree; its wood much prized for its strength and durable qualities. One of the specimens is from a principal rafter of the roof of Paramatta Church, built in 1798. One face of this specimen shows the original surface of the rafter.
- 242 A AVICINIA TOMENTOSA.—*Mangrove*.—D. 15 to 25 inches. 11, 12 to 30 ft.—Low, branching tree, growing in the mud of salt-water estuaries; its wood, when small, valued on account of its interlocked fibre, for stonemasons' mallets, &c. The specimen very indifferent.
- 243 B EUCALYPTUS SP.—*Dhakka-kourou*.—D. 24 to 48 inches. 11, 60 to 100 ft.—One of the species known under the names of Blue Gum and Grey Gum. A valuable and durable timber. The specimen from Appin.
- 244 B EUCALYPTUS SP.—*Mandowai*.—D. 24 to 48 inches. 11, 50 to 80 ft.—The specimen from Appin.
- 245 B EUCALYPTUS SP.—*Grey Gum*.—D. 24 to 48 inches. 11, 60 to 100 ft.—A fine hard wood timber; may be the same as No. 143 from Appin. The present specimen is from the neighbourhood of Windsor.
- 246 B CASSINA SP.—D. 2 to 4 inches. 11, 10 to 15 ft.
- 247 C FICUS MACROPHYLLA.—*Karenreira*.—Moreton Bay Fig.—D. 50 to 120 inches. 11, 100 to 150 ft.
- 248 C FICUS NUMIGINOSA.—*Dthamian*.—D. 24 to 48 inches. 11, 40 to 60 ft.
- 249 C FICUS SP.—*Bairia*.—Small-leaved Fly.—D. 50 to 150 inches. 11, 100 to 200 ft.

CATALOGUE (see No. 77) of INDIGENOUS Woods of the NORTHERN DISTRICTS, collected by Mr. C. Moore, and exhibited by the Commissioners.

In reference to the following Catalogue of the Woods from the Moreton and Wide Bay districts, it may be remarked, as a fact of some importance, that owing to a variety of circumstances, but principally to the want of adequate assistance, and indeed to the total impossibility of procuring labour of any description, in some of the most favourable localities—the kinds exhibited are necessarily small in size, as well as limited in number; more particularly as only those were selected from amongst the most prevailing kinds, which appeared to possess some value for purposes of economy, or commerce. Dyes of a superior description have already been extracted from several of them. There is also reason to believe that others contain valuable medicinal properties. Some are suitable for wood engraving, and many of them for cabinet work. These, notwithstanding, very imperfectly represent the timber resources of the Northern Districts. The dense jungle scrub forests, from which they were mostly procured, were scarcely even penetrated; while the extensive regions of similar forest land, on the banks of the Clarence, Richmond, Tweed, and other of the northern rivers, have not been examined at all. So little is yet known of the timbers growing in these localities, that, beyond the pine and the cedar, scarcely any others are at all appreciated by the sawyers, or by the settlers; and, as the name given to each variety by the aboriginal natives was found to vary, more or less, with each tribe, it was not considered advisable to take any notice of this nomenclature.

The genera and species of the several kinds have not yet been accurately determined. For this reason, such general remarks only are here given as were made on the spot, in the localities in which the trees were cut down. These include, however, the name in English of the family or

tribe to which they belong; the local name, if any, given to them by the settlers; the average height of the tree, and diameter of the stem; and such other information as could be obtained concerning them.

The terms "Scrub" and "Open Forest Land," used as indicating the localities from which they were selected, have already been explained in the introduction to the Woods of the Southern districts. The "Cedar-wood Brush" described there, is precisely similar to the Northern Scrub Forest; and though the terms "Pine Scrub," "Bunya Scrub," and "Palin Scrub," are occasionally used by the settlers, yet the same general description will apply to all; differing only in this respect, that the presence of any one of these plants in considerable abundance is sufficient to characterize a locality—and hence the name.

CHARLES MOORE,  
Director of the Botanic Gardens, Sydney.

Class II.  
Projects  
obtained  
without  
Cultivation.

- 1 A small-sized tree of the *Myrtle* kind; abundant in all the northern scrub forests; called by the settlers, "Lancewood."
- 2 A tree of the *Nettle* tribe; of moderate size, varying from 50 to 70 feet in height, 18 to 24 inches in diameter; bark bitter, resembling Balsam Copiava. Of common occurrence on the banks of the Brisbane River.
- 3 A lofty straight stemmed tree; plentiful in the Moreton and Wide Bay scrub forests; called by the sawyers "Black Satinwood"; stem from 2 to 4 feet in diameter, and from 80 to 100 feet in height.
- 4 The "Illawarra" or Hunter River "Deal" of the south—the "She Pine" of the north; a tree of considerable size and of an extensive geographical range, being found in more or less abundance in nearly all the scrub forests from Illawarra to the Burnett River. The specimen here represented is that of a small tree.
- 5 Tree allied to the *Laurus* or Cinnamon tribe; of erect growth and moderate size, averaging 50 feet in height, and 18 inches diameter in the stem; common in the northern scrub forests.
- 6 The native Lime of Moreton Bay; a small tree, seldom more than 30 feet high, and from 8 to 12 inches diameter in the stem. The fruit of this tree is very bitter, and occasionally used as a preserve by the settlers. Common in the scrub forests near Brisbane.
- 7 A lofty large sized open forest tree, called "Bastard Box" by the settlers; a plant of the *Myrtle* family, and allied to the gum tribe. This tree is found growing extensively in open forest ground, from Port Stephens to Wide Bay; the timber is hard, and very durable.
- 8 A tree allied to the last, and growing in the same localities, but not found far north of Moreton Bay; called "Bastard Mahogany" by sawyers. This timber requires being steeped in water for some time after cutting, to prevent its splitting or cracking.
- 9 A tree of considerable size and of great beauty, frequent in the northern scrub forests; stem from 60 to 70 feet high, and often 2 feet in diameter.
- 10 A lofty, erect, growing tree, allied to the *Elder* tribe. Observed in the scrub forest of Moreton and Wide Bay; stem averaging from 20 to 30 inches in diameter.
- 11 A moderate-sized tree, of rigid appearance, and apparently allied to the *Nettle* family. The stem of this is seldom more than from 12 to 18 inches in diameter, but valuable for small cask staves; sometimes, on this account, called Cask Wood. Abundant in the northern scrub forests.
- 12 A scrub forest tree, the wood of which is occasionally employed for splitting purposes; found plentifully near Brisbane.
- 13 A handsome moderate-sized tree, commonly called the "Scrub Myrtle," from its resemblance to the *Myrtle* family, of which it forms one of the tribe. Wood compact, and probably suited for cabinet purposes; common in the northern scrub forests.
- 14 A tree of frequent occurrence in the Wide Bay Scrubs, seldom more than 60 feet high, with a stem averaging 20 inches in diameter.
- 15 A scrub tree, of the *Laurus* or Cinnamon Tree family; averaging in size 2 feet in diameter in the stem, and from 70 to 80 feet in height. A common scrub tree near Brisbane.
- 16 A tree of common occurrence in the northern scrub forests; timber of no known value, though appar-

\* Name at Brisbane Water, Hunter River, &c.

Class II.  
Products obtained without Cultivation.

- rently of a durable nature; stem from 18 to 30 inches diameter.
- 17 The wood of the "Swamp Tea Tree," an excellent and durable timber, when placed in moist or wet situations; very suitable for piles in the erection of wharfs. Allied to the *Myrtle* family.
- 18 A tree of the "Tea Tree" tribe, lofty in growth, with a stem from 2 to 3 feet in diameter. Timber said to be valuable for gun-stocks. Occasionally called "Cherry Tree" by the sawyers. Plentiful on the banks of the Mary and Brisbane Rivers; of the *Myrtle* family.
- 19 A tree of the *Olive* family, of moderate height, wood light and durable. In scrub in the Moreton Bay district.
- 20 The "Scrub Box" wood of the northern settlers; timber beautiful and compact, suitable for turning purposes; stem averaging from 1 to 2 feet in diameter. Allied to the *Spindle* tree family.
- 21 A tree common in the scrubs between Moreton Bay and Wide Bay. Stem averaging in diameter 20 inches; allied to the *Lauraceae* family.
- 22 A handsome small-sized tree, of the *Myrtle* family; wood, tough and durable, common in all the northern scrub forests.
- 23 One of the largest of all the scrub timbers in the northern district, stem often 3 feet in diameter; allied to the *Lauraceae* family.
- 24 The "Tulip Wood" of the northern sawyers. The specimen represented is very poor. This tree is of lofty growth, with a stem varying from 18 to 20 inches diameter. Found in more or less abundance in the scrubs on the banks of nearly all the great northern rivers.
- 25 A tree of the Kurrajong family, found generally on the borders of scrub forests; timber moderately hard, bark tough, and on this account employed by the aborigines for making nets, &c.
- 26 A scrub forest tree, abounding in most of the northern scrubs. Wood seldom used by sawyers, and not appreciated; stem from 18 to 26 inches in diameter, and from 40 to 50 feet in height.
- 27 A tree of the *Ebony* tribe; of common occurrence in the northern scrub forests, but seldom of great size; not known to sawyers.
- 28 A tree generally found growing on the borders of the northern creeks. Very ornamental in appearance, but the wood of no known value. Stem generally straight, averaging in diameter 20 inches.
- 29 A tree similar in appearance to the last, and found in the same situations, but of no known value to the settlers; stem averaging from 20 to 30 inches in diameter, and straight.
- 30 A tree allied to the *Ebony* family, plentiful in the Wide Bay and Moreton Bay scrub forests; wood very hard, and generally of small size.
- 31 A tree of the *Sapwort* family; plentiful in the scrub forests of Moreton Bay. In height from 40 to 50 feet, with a stem seldom more than 30 inches in diameter.
- 32 A moderate-sized erect growing tree, of the *Pittosporum* family, frequent in the northern inland scrubs. Not known to the sawyers.
- 33 A tree of the *Spruce* tribe, of large size, varying from 60 to 80 feet in height, with a stem averaging 30 inches in diameter.
- 34 Allied to the *Olive* family; unknown to the sawyers. From 40 to 60 feet in height, with a stem from 28 to 36 inches in diameter.
- 35 A moderate-sized tree, apparently allied to the *Oleaster* family. From 18 to 24 inches diameter in the stem, and from 40 to 50 feet in height; generally found growing on the borders of the northern scrub forests.
- 36 A large and common scrub forest tree, allied to the *Ebony* tribe; wood durable, and sometimes cut down by sawyers, but not much valued by them.
- 37 The "Lignum Vitæ" of the northern settlers. Allied to the *Acacia* or *Wattle* genus. Growing in open forest ground very plentifully.
- 38 A tree of the *Figwort* tribe. Wood well marked, and said to be valuable for cabinet purposes. Stem from 2 to 3 feet in diameter, and 70 feet in height.
- 39 A tree allied to the *Cyper* family; frequent in the scrub forests in the northern districts. Timber generally small, and of no acknowledged value.
- 40 A tree growing both in the scrubs and in open forest ground, in the northern districts; varying in height from 50 to 70 feet, and averaging 2 feet diameter in the stem. Allied to the *Ebony* family.
- 41 The "Scrub Cedar" of the sawyers. A valuable wood and of large size, from 2 to 3 feet in diameter. In northern scrubs.
- 42 A tree of the *Myrtle* or "Lillypilly" tribe; allied to the "Lancewood" of the northern settlers. A small tree from 40 to 50 feet in height.
- 43 The scrub "Iron Bark" of the northern sawyers. A tree of considerable size, varying from 60 to 70 feet in height, with a stem averaging 2 feet in diameter. Common in the inland northern scrub forests.
- 44 A small tree allied to the "Forest Oak" family. Wood of no known value; growing upon Moreton Island.
- 45 The stem of the "Bread-fruit" of the northern settlers. A sea-coast plant, which produces a fruit resembling a pine-apple in shape. Allied to the *Screw-pine* family.
- 46 The wood of the "Flooded Gum," of Moreton Bay. A straight-stemmed, very large-sized tree, frequently attaining a height of 150 feet. Growing in damp open forest ground.
- 47 The "Bloodwood" of the northern districts. A large-sized tree of common occurrence in open forest ground. Stem occasionally from 3 to 4 feet in diameter. Allied to the *Gum* tribe.
- 48 The "Stringy Bark," of the northern districts. Timber much valued by the sawyers; of large size and very abundant in the northern districts. Allied to the *Gum* tribe.
- 49 The Moreton Bay Pine, allied to the Norfolk Island Pine. Next to the Red Cedar, this is perhaps the most valuable timber the colony produces, and can be easily procured in inexhaustible quantities. It occupies vast tracts of land along the coast, north of the Richmond River, occasionally extending inland for a considerable distance. In favourable situations this tree attains a height of from 200 to 300 feet, with a perfectly-straight, solid stem.
- 50 A tree of moderate size, frequent in the pine forests of Moreton and Wide Bay. Unknown to the settlers.
- 51 A tree of the *Cedar* tribe. Wood durable, and easily worked. From 50 to 60 feet in height, and from 20 to 30 inches diameter in the stem. Scrub forests, Moreton Bay.
- 52 The "Prickly Barked Box Wood," of the northern scrubs. A small, erect-growing tree, allied to the *Pea* flowering family; similar in quality to the British box wood.
- 53 A tree of moderate size, plentiful on the banks of the River Mary, Wide Bay. Unknown to the northern sawyers.
- 54 A tree allied to the *Rue* family; stem from 18 to 26 inches in diameter, and varying in height from 40 to 50 feet. Scrub forests, Moreton Bay.
- 55 A large tree, of common occurrence in the northern pine scrub forests, stem averaging 2 feet in diameter.
- 56 Tree allied to the *Xanthoxylid* family, sometimes called the "Silver Leaf," of lofty growth, attaining a height of 100 feet, with a stem from 2 to  $\frac{1}{2}$  feet in diameter.
- 57 A small tree, allied to the Red *Cedar* family; invariably found on the borders of the northern inland scrubs.
- 58 A tree of the Kurrajong tribe, frequent in the northern scrubs. Wood of no recognised value; generally of small size.
- 59 CASuarina sp.
- 60 The "Yellow Wood" of the northern sawyers. From the heart wood of this tree a valuable yellow dye is obtained; and from the bark, a dye of reddish colour. Of general occurrence in all the scrub forests north of the Richmond River. Stem seldom more than 20 inches in diameter, and from 40 to 50 feet high. Allied to the *Cedar* family.
- 61 The common Mangrove, of the northern salt rivers. Timber valuable for knees of boats. Stem from 12 to 18 inches in diameter. Allied to the *Myoporad* family.
- 62 The Moreton Bay Cypress. The root stem is much valued for cabinet purposes. A tree from 50 to 60 feet in height, growing in great quantities upon Moreton Island, near the entrance to the Brisbane River.

- 78 A tree of the *Spindle Tree* family; occasionally used by the Wide Bay settlers for splitting purposes. Cultivation. The wood emits a most agreeable odour when first cut. In Scrubs.
- 79 The Yellow Wood from Wide Bay: same as No. 60.
- 80 A tree of considerable size, allied to the *Mulberry* tribe. Frequent in the Moreton Bay and Wide Bay Scrubs.
- 81 A tree of the *Sapwort* family. Timber very hard, and said to be durable: perhaps valuable for carving purposes. From 50 to 60 feet high, 12 to 18 inches diameter in the stem.
- 82 A tree allied to the *Dogbane* family. Of moderate size; frequent in the Scrub forests, near the sea, Wide Bay. Wood said to be suitable for cask staves.
- 83 A slender-growing tree, allied to the *Myoporum* family; generally found near the sea, in the northern districts.
- 84 A tree of the *Acacia* genus; found in open forest ground; very generally distributed in the northern districts, but very abundant near Gnyndah. This is the Bricklow of Leichhardt. Presented by W. H. Walsh, Esq., J.P.
- 85 The Swamp Oak of northern districts. From 50 to 60 feet high, and from 20 to 30 inches in diameter.
- 86 A handsome tree of the *Acacia* or *Wattle* genus; found growing plentifully in open forest ground, on the Upper Burnett river. Wood handsome, and sweet scented; on this account valued by stockmen for whip-handles. Presented by W. H. Walsh, Esq., J.P.
- 87 A specimen of the Red Cedar Wood. Presented by Messrs. Beaumont and Waller.
- 88 The Silky Oak Grevillea, of Moreton Bay; a tree allied to the *Protea* family. Wood valuable for cask staves, and very generally used for this purpose, both in the Moreton Bay and Wide Bay districts. Stem averaging two feet in diameter.
- 89 A small specimen of the singular "Bottle Tree" of the northern districts. A tree allied to the *Kurrajong* family, and found growing in dry rocky places, between Moreton Bay and Wide Bay. A rough measurement was made of one of these trees, growing near Degilbo, Wide Bay, by which the stem was calculated to be about 25 feet in height, and the diameter was, at its base, 8 feet, in the middle, 16 feet, and at its upper extremity, 6 feet. This singularly formed stem is almost wholly constituted of a mucilaginous substance resembling Gum Tragacanth, and sufficiently nutritious to support human life in cases of emergency. Presented by W. H. Walsh, Esq., J.P.
- 90 The Moreton Bay Chestnut, a tree of the *Pea* flowering family; very general on the banks of all the northern rivers; wood splitting freely, and useful for cask staves; stem occasionally 2 feet in diameter.
- 91 A tree of the *Dogbane* family, the bark of which is more intensely bitter than that of Cinchona, and may yet be found to possess similar qualities. The specimen is from the Richmond River district; and was presented by Alfred Lardner, Esq., Grafton.

- 156a *Hollinshead, A.*, à Sydney.—Liquide antiseptique. (Voir cl. 3, n. 111.)
- 156u *Horley, J. S.*, à Sydney.—Iodine. Huile de foie de requin. Huile de ricin. (Voir cl. 1, n. 48, et cl. 3.)
- 157 *Paterson, H.*, à Sydney.—Modèle de mécanisme dentaire.
- 158a *Rixon, J.*, à Twofold-Bay.—Huile de humper.
- 158u *White, J.*, à Paramatta.—Huile d'emu réputée efficace contre les rhumatismes.
- 159 *Wilcox, J.*, à Sydney.—Reptiles, *ornithorhynchus paradoxus* et autres objets d'histoire naturelle, conservés dans l'alcool.

Class XIII.  
Naval and Military Arts.

- 13<sup>e</sup> CLASSE.
- 159a *Mac Arthur, A.*, à Moreton-Bay.—Armes des naturels de l'Australie. (Voir cl. 3, n. 112, et cl. 1, 8 et 25.)
- 160 *Mitchell, Sir Th.*, à Sydney.—Modèle du propulseur Bomerang, inventé par l'exposant. (Voir cl. 2 et 3.)

- 160a *Wilson, W.*, à Lismore, Moreton-Bay.—Armes des naturels de l'Australie. (Voir cl. 1, n. 68, et cl. 2.)

Class XIV.  
Civil Engineering.

- 14<sup>e</sup> CLASSE.
- 161 *Beverley, H. C.*, à Sydney.—Modèle de la prison de Darlinghurst.
- 162 *Dawson, Th.*, à Sydney.—Modèle d'appareil (*coffer-dam*) employé pour la réparation du gouvernail et de la quille des bâtiments.
- 163 *Munn, G. K.*—Modèle du bassin de carénage de Fitzroy. (Voir cl. 1.)

- 137 *Australian Sugar Company*, Sydney.—Sugars, raw and refined.

- 138 *Curtis, Mrs.*, North Shore, Sydney.—Champagne, grown and made at Sydney.

- 139 *Dunay and Company*, Newcastle, New South Wales.—Preserved meat, mutton and beef, in air-tight tins.

- 140 *Eldridge, Ambrose*, Moreton Bay.—Arrowroot, &c. Silver Medal.

- 141 *Hamilton, George*, Sydney.—Biscuits of various kinds manufactured in Sydney by machinery. Honourable Mention.

- 142 *Hayes and Company*, Sydney.—Colonial flour ground by machinery made in the colony.

- 142a *King, J.*, Irrawang.—Wines. Brandy. Bronze Medal.

- 143 *Lavers, J. V.*, Sydney.—Ginger wine. Honourable Mention.

- 144 *Leslie, Mrs.*, Sydney.—Arrowroot.

- 145 *Lyddington, J.*, Camden.—Wine manufactured at Morpeth.

- 145a *Mac Arthur, J. and W.*, Camden.—Wines. Silver Medal.

- 146 *McLay, Mrs.*, Sydney.—Preserved fruits.

- 147 *Mayo, W.*, Sydney.—Preserved fruits.

- 148 *Rodd, B. C.*, Sydney.—Tomago wine, grown by Mrs. Windyer. Honourable Mention.

- 149 *Stephens, John*, Moreton Bay.—Tforce of pickled beef.

- 150 *Vindra, Solomon, and Co.*, Sydney.—Sample of colonial flour.

- 151 *Warry, T.*, Brisbane.—Arrowroot; Dugong oil; cayenne pepper, &c. Honourable Mention.

- 152 *Wilcox, Mrs.*—Preserved native fruits.

- 152a *Windyer, Mrs.*—Wines. Honourable Mention.

- 153 *Wangh, Miss*, Wollongong.—Mead. Honourable Mention.

- 154 *Wilkie and Company*, Sydney.—Biscuits of various kinds, made by steam. Honourable Mention.

## CLASS XII.

- 155 *Chowne, Joseph*, Clarence River.—Wood and bark of a tree, yielding, it is believed, crystals of Quina.

- 156 *Hobbs, Dr.*, Heath office, Brisbane.—Dugong oil, superior, in his opinion, to cod-liver oil; said to contain no iodine.

- 156a *Hollinshead, A.*, Sydney.—Antiseptic fluid.

- 156a *Norrile, J. S.*, Sydney.—Iodine. Shark liver oil. Castor oil, &c.

- 157 *Paterson, Hugh*, Sydney.—Model of dental mechanism.

- 158a *Rixon, J.*, Twofold Bay.—Fish-oil obtained from the humper or humpback. Sand for glass. Musk-wood.

- 158u *White, J.*, Paramatta.—Oil obtained from the Eum; of great repute in the colony as a rubefacient in rheumatic affections.

- 159 *Wilcox, James*, Sydney.—*Ornithorhynchus paradoxus* in spirits. Snakes, fish, &c., preserved in spirits.

## CLASS XIII.

- 159a *Mac Arthur, A.*, Moreton Bay.—Weapons of the natives.

- 160 *Mitchell, Sir Thomas*, Surveyor-General, Sydney.—Models of the boomerang propeller, his own invention. Ilive of glass, showing the manner in which the native bees construct their cells, &c. Specimen of *Doryanthus excelsa*.

- 160a *Wilson, W.*, Lismore, Moreton Bay.—Weapons of the natives.

## CLASS XIV.

- 161 *Beverley, H. C.*, Sydney.—Model of Darlinghurst gaol.

- 162 *Dawson, Thomas*, Sydney.—Model of a coffer-dam for repairing rudder-posts, stern-posts, and keels of ships, where there are no dry docks.

- 163 *Munn, G. K.*, Engineer at Cockatoo Island, Sydney.—Oil-stones for sharpening cutlery. Model of dry dock at Cockatoo Island.

- 164 *Mort, James*, Sydney.

- 165 *Patten, J.*, Sydney.

- 166 *Rankin, J.*, Sydney.

- 167 *Rirkham, J.*, Sydney.

- 167a *Compton, J.*, Sydney.

- 168 *Arnold, J.*, Sydney.

- 169 *Archer, J.*, Sydney.

- 170 *Uhr, J.*, Sydney.

- 171 *King, J.*, Sydney.

- 171a *Rixon, J.*, Sydney.

- 172 *Young, J.*, Sydney.

- 173 *Barker, J.*, Sydney.

- 173a *Corlett, J.*, Sydney.

- 174 *Boardman, J.*, Sydney.

- 175 *Cohen, J.*, Sydney.

- 176 *Curtis, J.*, Sydney.

- 177 *Warren, J.*, Sydney.

- 178 *Wangh, J.*, Sydney.

- 178a *Wangh, J.*, Sydney.

- 179 *Ponsford, J.*, Sydney.

- 180 *Woolley, J.*, Sydney.

- 181 *Calvert, J.*, Sydney.

- 181a *Child, J.*, Sydney.

- 182 *Donaldson, J.*, Sydney.

- 183 *Forster, J.*, Sydney.

- 183a *Hall, J.*, Sydney.

- 184 *Hocken, J.*, Sydney.

- 185 *Langford, J.*, Sydney.

- 185a *Macpherson, J.*, Sydney.

**W I N E S.**

THE specimens of wine and brandy, the produce of New South Wales, which are exhibited, having created considerable interest, and having been very favourably classed by the "Experts" called in to assist the Jury of Class XI., a few explanatory observations upon this interesting branch of agricultural produce are added to the Catalogue. The wines and brandy exhibited are the produce of four vineyards, three of which are in the Hunter's River district, between lat.  $32^{\circ}$  and  $33^{\circ}$  S., and the other in the Sydney district, and south of lat.  $34^{\circ}$  S. Of the former, there are six samples of wine and one of brandy from Irrawang vineyard, the property of Mr. James King, President of the Hunter River Vineyard Association; one from Tomago, the property of Mrs. Windyer; and one from Colstoun, the property of Mr. Brown. Of the latter, there are nine specimens from Cauden, the property of James and William Macarthur. It is to be regretted that other proprietors of vineyards could not be induced to contribute wine of their produce; the writer of this Memorandum having for several years occupied the position of President of the Vineyard Association of New South Wales, and being thus enabled to state from personal knowledge that their wines might have successfully competed for precedence with those which are exhibited.

Note on the  
Wines of  
New South  
Wales.

As an inquiry will naturally be made to what extent the Colony of New South Wales may be expected to contribute this species of produce, should a demand for it be created, it may be stated that the statistics compiled by the Government of the Colony give the extent of land under vineyards at more than 1,000 acres; but as the same table gives the annual produce at only from 80,000 to 110,000 gallons (the average crop in ordinary years being actually from 400 to 800 gallons per acre) it may be presumed that much of the land returned as vineyard is only partially occupied by vines, and that the produce of a large portion of the whole is supplied to the towns in the shape of fruit. No limit, however, can be assigned to the extent of land capable of being profitably converted into vineyards, should a demand for the wine arise. There is, perhaps, no country in the world possessing such an extent of territory, the climate and soil of which offer the most favourable conditions for vine culture. Over at least twelve degrees of latitude, and five or six degrees of longitude, innumerable sites exist, which almost seem to invite their application to this branch of industry.\*

Two most important conditions for the production of wine on a large scale are, however, still wanting—skilled labour to accomplish the serious task of converting the waste into vineyards, and to tend them afterwards, and a sufficient demand for their produce when they are formed. The first want would be rapidly supplied by the efforts of the colonists themselves, were there a reasonable assurance that the removal of the second impediment would follow. Hitherto, the proprietors of vineyards in New South Wales have experienced difficulty in finding a sale for their produce beyond the requirements of their immediate neighbourhood. The better classes of inhabitants in the towns complain, on the other hand, that if they wish to purchase colonial wine, there is no town establishment where they can be supplied. Such a state of things may seem curious, but admits of easy explanation; and a second reference to the government tables of statistics will enable one to furnish it. It appears that the importation of wine into New South Wales in 1853 amounted to 757,000 gallons, valued at 198,000*l.* Now, it is evident that the interests of the importing merchant and the vendor of foreign wines to the immediate consumer (often the same individual) are opposed to the extended consumption of home grown wines; the one, because his import trade would be interfered with; and the other, because his profits upon the sale of wine would be diminished, and his mode of conducting his business require to be modified; and, in fact, the character of the colonial wine has been much cried down by some importers and dealers in foreign wine, not one of whom, on the other hand, undertakes as a business to interpose between the growers in the country and the consumers in the towns. The producer cannot manage an establishment in the town for the sale of his produce, because his time is occupied by his avocations in the country, and the merchant will not do so. On this account, the progress of vine-culture is checked, and the pursuit languishes in the hands of a few dozen of proprietors, who make enough good wine for themselves, and a few habitual customers, but who, in general, do not take pains much further. A demand from without would soon overcome this difficulty, reconcile the opposing interests of the producer and the merchant, and promote the rapid extension of vine culture. The distance from Europe would form no serious obstacle to the importation of wine of good quality; even at present the freight may be stated at 20*s.* per hogshead, or 4*d.* per gallon; and an extensive trade might be expected to produce a material abatement. According to the best information procurable, the finest wines of the colony could now be supplied in England, duty paid, at 24*s.* to 30*s.* per dozen.

\* Since the favourable notice which the Australian wines obtained at Paris, statements have been publicly made that wine in New South Wales was a mere fancy production, and not obtainable as an article of trade, it may be well to observe, therefore, that the average produce of one vineyard in the metropolitan district may be taken at 150 pipes per annum, that there are several more in the district of the Hunter, the produce of which is at least as great, and that there are, besides, a number of smaller vineyards scattered over the country.

- 1 Arnott, R.—Petrified wood. (See cl. 13.)

- 2 Cartwright, H. E.—Granite. Quartz.

- 3 Duggin, T. B.—Sand. Jasper. Clay. Honourable Mention in cl. 2.

- 4 Jones, H. E.—Sand.

- 5 Knowles, R. J.—Quartz.

- 6 Pearce, J.—Jasper.

#### CLASS II.

- 6a Allt, J.—Fibre from the plantain.

- 7 Boatwain, J.—Mohoe fibre.

- 8 Buchanan, A.—Woods.

- Campbell, W. H.—Mohoe fibre.

- Cartwright, H. E.—Plantain fibre.

- 9 Chisholm, J.—Ochre (wild).

- 10 *Guiana Executive Committee*.—Fibres from corawa. Mohoe. Ita palm. Barks for medicinal and tanning purposes. Woods. Resins and gums. Nets and fishing-tackle. Silver Medal in cl. 3.

- 11 Couchman, G.—Corawa fibre.

- 12 Curry, C.—Mohoe fibre.

- 13 Dennis, G.—Seeds. Nests of mocking bird.

- 14 Dillon, Edward.—Plantain fibre.

- 15 O'Doughgue, W.—Plantain fibre.

- Duggin, T. B.—Leaves and fibres of Ita palm and Corawa. Gums and resins. Wax. Woods. Seeds.

- 16 Faust, Thomas.—Wood.

- 17 Filly, Benjamin.—Mohoe fibre.

Class II.

Forestry, &c.

Mining and  
Metals.

- British Guiana,**
- Class 2.**
- Forestry, &c.**
- 18 Goddard, M.—Fibres de bananier.**
- 19 Van Harenarspel, A.—Fibres de corawa. Feuilles d'ita. Ecorces.**
- 20 Hayley.—Ecorce de simarouba.**
- 21 Hunter, And.—Bols.**
- 22 Julian, Ph.—Fibres de bananier.**
- 23 Manget, Mme, à George-town.—Tiquants de porc-épic.**
- 24 Muirhead, A. F.—Résine de gilbacker.**
- 25 Pearce, J.—Bois et fibres de bananier. (Voir cl. 1 et 22.)**
- 26 Rattray, Ch.—Fibres et graines de mohoe.**
- 27 Rodie, R.—Ecorces.**
- Ross, G.—Fibres du bananier. Fenilles, bois ecorces, herbes. (Voir cl. 11, n. 53, et cl. 3, 12 et 25.)**
- Shier, D.—Feuilles sèches de bananier. (Voir cl. 6, n. 42, et cl. 11.)**
- 28 Stewart, H. F.—Peau d'ours. Nid de guêpes.**
- 29 Vauder Gon-Netscher, A. D.—Fibres de bananier et d'aloès. Graines d'arbres. (Voir cl. 3.)**
- 30 Watson, G.—Bols. (Voir cl. 11.)**
- Class 3.**
- Agriculture.**
- 31 Arrindell, W.—Ble de Guinée. (Voir cl. 11.)**
- Cartwright, H. E.—Bananes. Fruits. (Voir cl. 1, n. 2, et cl. 2 et 11.)**
- 32 Charles-Benjamin.—Coton.**
- 33 Colrir, A. V.—Riz. Tabac.**
- Comité pour l'Exposition universelle.—Coton. Graines et fruits. Tabac. (Voir cl. 2, n. 10.)**
- Duggin, T.-B.—Graines de légumes. Cassave. Poivre. Ochro (*hibiscus esculentus*). (Voir cl. 1, n. 3.)**
- 34 De Florimont, J.—Café.**
- 35 Friday-Bergen, Mme.—Café.**
- 36 Kennedy, J.—Poivres. (Voir cl. 24.)**
- Knowles, A.-J.—Graines. Huiles. Rocou. (Voir cl. 1 et 5.)**
- 37 Lowe, J. G.—Mais. Café.**
- Lucky frères et Cie.—Riz. (Voir cl. 11, n. 50.)**
- 38 Lyons, Mlle.—Graines de *mirabilis dichotoma*.**
- 39 Ross, Mlle, à George-town.—Graines. Poivres. (Voir cl. 25.)**
- Ross, G.—Graines du muse. (Voir cl. 11, n. 53, et cl. 2, 12 et 25.)**
- 40 Stewart, F. II.—Huiles. Miel.**
- 41 Tacheira, T.—Poivre de Cayenne.**
- Vauder Gon-Netscher, A.-D.—Coton. Café. Ochro (*hibiscus esculentus*). (Voir cl. 2, n. 29.)**
- Class 6.**
- Tools, &c.**
- 42 Shier, D.—Instrument pour exprimer le jus de la cassave. (Voir cl. 2 et 11.)**
- Class 9.**
- Heat, Light, &c.**
- Comité pour l'Exposition universelle.—Bâtonnets pour allumer le feu en les frottant l'un contre l'autre. (Voir cl. 2, n. 10.)**
- Duggin, T.-B.—Torches indiennes. (Voir cl. 1, n. 3.)**
- 10<sup>e</sup> CLASSE.**
- Comité pour l'Exposition universelle.—Rouge indien. (Voir cl. 2, n. 10.)**
- Duggin, T.-B.—Huile de *xyllocarpus carapa*. Baume de copauba. Ecorce pour le tannage. (Voir cl. 1, n. 3.)**
- Knowles, R.-J.—Huiles. Rocou. Citrate de chaux. Acide citrique. (Voir cl. 1, n. 5.)**
- 11<sup>e</sup> CLASSE.**
- 43 Ambrose, Clarissa.—Farine de banane.**
- Arrindell, W.—Sauce tomate. (Voir cl. 3, n. 31.)**
- 44 Bridges, R. II.—Sucre. Rhum.**
- Cartwright, H. E.—Amidon tiré du fruit de l'arbre à pain. (Voir cl. 1, n. 2, et cl. 2 et 3.)**
- 45 Caran frères et Cie.—Rhum.**
- Curry, C.—Arrow-root. Farine de *tann'a*. (Voir cl. 2, n. 12.)**
- 18 Goddard,—Plantain fibre.**
- 19 Van Harenarspel,—Corawa fibre.**
- 20 Hayley,—Simarouba bark.**
- 21 Hunter, And.—Wood.**
- 22 Julian, Ph.—Plantain fibre.**
- 23 Manget, Mrs., George Town.—Porcupine.**
- 24 Muirhead, A. F.—Gillbacker resin.**
- 25 Pearce, J.—Wood and plantain fibre.**
- 26 Rattray, C.—Fibres and grain of mohoe.**
- 27 Rodie, R.—Bark.**
- 28 Stewart, H. F.—Bear-skin. Wasp's nest.**
- 29 Vauder Gon-Netscher, A. D.—Plantain fibre. Aloe fibre. Seeds. (See cl. 3.)**
- 30 Watson, G.—Woods.**
- CLASS III.**
- 31 Arrindell, W.—Wheat.**
- 32 Charles-Benjamin.—Cotton.**
- 33 Colrir, A. V.—Tobacco.**
- Guiana Executive Committee.—(See cl. 2, No. 10.) Cotton. Seeds and fruits. Tobacco.**
- 34 De Florimont, J.—Coffee. Honourable Mention.**
- 35 Friday-Bergen, Mrs.—Coffee. Honourable Mention.**
- 36 Kennedy, J.—Peppers. (See cl. 24.)**
- 37 Lowe, J. G.—Maze. Coffee. Honourable Mention.**
- 38 Lyons, Miss.—Seeds of the *mirabilis dichotoma*.**
- 39 Ross, Miss, Georgetown.—Seeds. Peppers. (See cl. 23.)**
- 40 Stewart, F. II.—Oils. Honey.**
- 41 Tacheira, T.—Cayenne pepper.**
- Vauder Gon-Netscher, A. D.—Cotton. Coffee. Ochro. (See cl. 2, No. 29.)**
- CLASS VI.**
- 42 Shier, D.—Squeezer for bitter cassava.**
- CLASS IX.**
- Guiana Executive Committee.—(See cl. 2, No. 10.) Sticks used by the Indians to obtain fire by friction.**
- Duggin, T. B.—(See cl. 1, No. 3.) Indian torches.**
- CLASS X.**
- Guiana Executive Committee.—Indian red.**
- Duggin, T. B.—Balsam of copaiba. Bark for tanning.**
- Knowles, R. J.—Oils. Citrate of lime. Citric acid.**
- CLASS XI.**
- The Colony of British Guiana. Honourable Mention.**
- 43 Ambrose, Clarissa.—Plantain flour.**
- Arrindell, W.—Tomato sauce.**
- 44 Bridges, R. II.—Sugars. Rum.**
- Cartwright, H. E.—Starch from the bread-fruit tree.**
- 45 Caran Brothers and Co.—Rum.**
- Curry, C.—Arrow-root.**

<i>Duggin, T.-B.</i> —Amidon et jus épaissi de cassave amère. Poivre noir. Gousses, graines et fruits conservés. Vinaique de bananes. (Voir cl. 1, n. 3.)	<i>Duggin, T. B.</i> —Bitter cassava starch. Black pepper. Vinegar extracted from the plantain. <span style="float: right;">British Guiana. Class 11.</span>
<b>46 Garnett, H. T.</b> —Pain de racine de cassave. Bananes sèches. Farine de banane.	<b>46 Garnett, H. T.</b> —Cassava bread. Plantain fruit and flour. <span style="float: right;">Alimentary Substances.</span>
<b>47 Gordon, J.</b> —Sucres.	<b>47 Gordon, J.</b> —Sugar. <i>Bronze Medal.</i>
<b>48 Henery, W.-P. et T.</b> —Sucres. Rhum. Knowles, R. J.—Poivre de Guinée. (Voir cl. 1, n. 5.)	<b>48 Henery, W. P. and T.</b> —Sugars. Rum. <i>Bronze Medal.</i> Knowles, R. J.—Pepper.

- 58 Dubéau, Jean, Quebec.**—Coopers' work, and a wooden bottle as a specimen of coopers' work.
- 59 Farmer and De Blaquière, Woodstock.**—Collection of Canadian woods. Bronze Medal.
- 60 Gamble, J. W., Vaughan.**—Collection of woods.
- 61 Grant and Hall, Montreal.**—Barrels.
- 62 Halliday, J., Montreal.**—Specimens of coopers' work.
- 63 Kennedy, William, Montreal.**—Specimens of wood.
- 64 Lamouche, A., Montreal.**—Wooden shovels.
- 65 Laroche, Abram, Rimouski.**—White spruce.
- 66 Laroche, Joseph, Rimouski.**—Tamarack.
- 67 Léveillé, Célestine, Rimouski.**—Tamarack knee.
- 68 Léveillé, George, Pointe-aux-Orignaux.**—Model of a fishery.
- 69 Mac Gibbon, William, Montreal.**—Barrels, staves, and hoops.
- 70 Marmon, Ivan, Rimouski.**—Hemlock.
- 71 Manning, William, Montreal.**—Staves.
- 72 Mercier, David, Quebec.**—Caribou's skin, with the hair.
- 73 Moore, Thomas, Miamico.**—Axe handles.
- 74 Murphy, M., Montreal.**—Fishing lines.

Canada,  
Class I.

Class 2.

- Canada.
- Class 2.  
Forestry.
- Class 3.  
Agriculture.
- Class 4.  
Machinery  
in General.
- 75 *Paxton et Jennings*, à Montréal.—Douves.
- 76 *Peacock, G.*, à Montréal.—Mouches artificielles pour la pêche.
- 77 *St-Arnaud, M.*, à Québec.—Rouleau d'érable.
- 78 *Saint-Arnaud, M.*, à Bécancour.—Bois poli.
- 79 *Sharples, G.*, à Québec.—Collection de bois du Canada.
- 80 *Smith, D. et J.*, à Montréal.—Manches d'outils.
- 3<sup>e</sup> CLASSE.
- 81 *Badham*, à Drummondville.—Avoine.
- 82 *Bingham, J.*, à Norwich.—Charue de fer.  
*Brough, R.*, à Guananoque (Haut-Canada).—Râteaux.  
(Voir cl. 7, n. 164.)
- 83 *Clark, J.*, à Longue-Pointe, près de Montréal.—Pois.
- 84 *Coffin, Abt.*, à Gaspé.—Blé du printemps.
- 85 *Compagnie du Canada*, à Toronto.—Blé.
- 86 *Corse et May*, à Montréal.—Briquettes de lin.
- 87 *Croes, G.*, à Montréal.—Fromages.
- 88 *Dagg, J.*, à Montréal.—Avoine.
- 89 *Daws et fils*, à Lachine.—Houblon. I.M. 1851.
- 90 *Derrick, H.*, à Lacolle.—Pois.
- 91 *Dillon, J.*, à Longue-Pointe, près de Montréal.—Pois.
- 92 *Evens, W.*, à Montréal.—Plan de ferme. Graine de mil.
- 93 *Fisher, J.*, à Montréal.—Orge; graine de canneline. I.M. 1851.
- 94 *Fleming, J.*, à Toronto.—Pois, graines.
- 95 *Graham*, à Châteauguay.—Orge.
- 96 *Jarvis, F.-W.*, à Toronto.—Houblon.
- 97 *Jeffries, J.*, à la Petite-Côte, près de Montréal.—Coupes-racines.
- 98 *Kempston, A.*, à Ste-Thérèse.—Blé du printemps; haricots.
- 99 *Knox, W.-J.*, à Lachine.—Lin.
- 100 *Logan, J.*, à Montréal.—Orge; graines de carotte et de mangold-wurzel.
- 101 *Lavrent, D.*, à Varennes.—Avoine.
- 102 *Lyonan, W., et Cie*, à Montréal.—Graine de trèfle; torteau de lin; graine de lin. (Voir cl. 10.)
- 103 *Mac-Cowan, J.*, à Lachine.—Blé de printemps.
- 104 *Miller, W.*, à Ste-Rose.—Pois.
- 105 *Morse, L.*, à Milton.—Charrue.
- 106 *Ossage, F.-M.*, à Saint-au-Récollet.—Chanvre.
- 107 *Oswald, J.*, à Ste-Thérèse.—Orge.
- 108 *Peterson, J.*, à Montréal.—Charrue.
- 109 *Pelletier, J.-F.*, à Isle-Jésus.—Blé de printemps.
- 110 *Perry, A.*, à Montréal.—Noix.
- 111 *Praonat, N.*, à Rimouski.—Fèves.
- 112 *Robertson, J.*, à Laizolle.—Laine.
- 113 *Robertson, J.*, à Longue-Pointe, près de Montréal.—Pois.
- 114 *Romaine, R.*, à Peterborough.—Charrue à vapeur.
- 115 *Saint-Pierre, J.*, à Rimouski.—Blé de printemps.
- 115a *Shaw, A.*, à Toronto.—Froment et maïs.
- 116 *Shepherd, G.*, à Montréal.—Graines.
- 117 *Shoane, Al.*, à Toronto.—Blé et maïs.
- 118 *Société agricole de Saguenay*, à Saguenay.—Blé de printemps; pois.
- 119 *Southwick, M.-O.*, à St-Hilaire.—Laine.
- 120 *Stevens, W.*, à St-Martin.—Graine de mil.
- 121 *Thayer, J.*, à Montréal.—Maïs; haricots.
- 122 *Villeneuve, Abb.*; à Montréal.—Froment; pois.
- 123 *Wade, R.*, à Cobourg.—Blé, avoine, sarrazin, orge, fromago.
- 4<sup>e</sup> CLASSE.
- 125 *Clark, Mme*, à Montréal.—Poulies.
- 126 *Ferguson, W.-J.*, à Montréal.—Tuyaux de pompe en cuir; tuyaux de conduite.
- 127 *Ladd, C.-P.*, à Montréal.—Balancee. I.M. 1851. (Voir cl. 6 et 16.)
- 75 *Paxton and Jennings*, Montréal.—Staves.
- 76 *Peacock, John*, Montréal.—Artificial flies for fishing.
- 77 *Saint Amand, M.*, Québec.—Roll of maple veneer.
- 78 *Saint Arnaud, Bécancour*.—Polished ash.
- 79 *Sharples, John*, Québec.—Collection of Canadian woods. *Bronze Medal.*
- 80 *Smith, D. and J.*, Montréal.—Axe and other handles.
- CLASS III.
- 81 *Badham*, Drummondville.—Oats.
- 82 *Bingham, J.*, Norwich.—An iron plough.  
*Brough, R.*, Guananoque.—Rakes.
- 83 *Clark, J.*, Long Point, near Montreal.—Peas.
- 84 *Coffin, A.*, Gaspé.—Spring wheat. *Honourable Mention.*
- 85 *Canada Company*, Toronto.—Fall wheat. *Silver Medal.*
- 86 *Corse and May*, Montréal.—Oil cake.
- 87 *Cross, George*, Montréal.—Cheese. *Silver Medal* nad *Honourable Mention* given by Commission Mixte, cl. 31.
- 88 *Dagg, J.*, Montréal.—Oats.
- 89 *Daws and Sons*, Lachine.—Hops. II. M. 1851.
- 90 *Derrick, H.*, Lacolle.—Peas.
- 91 *Dillon, J.*, Longue-Pointe, near Montreal.—Peas.
- 92 *Evens, William*, Montréal.—Plan of a Canadian farm. Timothy seed. *Honourable Mention.*
- 93 *Fisher, J.*, Montréal.—Barley and cameline seed. II. M., 1851. *Bronze Medal.*
- 94 *Fleming, J.*, Toronto.—Peas and seeds. *Bronze Medal.*
- 95 *Graham*, Chateauguay.—Barley.
- 96 *Jarvis, F. W.*, Toronto.—Hops. *Honourable Mention.*
- 97 *Jeffries, J.*, Petite-Côte, near Montréal.—Root-cutter.
- 98 *Kempton, A.*, Saint-Thérèse.—Spring wheat and beans. *Honourable Mention.*
- 99 *Knox, W. J.*, Lachine.—Flax.
- 100 *Logan, Jones*, Montréal.—Barley, carrot seed, and mangold-wurzel.
- 101 *Lavrent, David*, Varennes.—Oats. *Bronze Medal.*
- 102 *Lynnau, W., and Company*, Montréal.—Clover seed; finned cake; finned. (See cl. 10.) *Silver Medal.*
- 103 *MacCowan, John*, Lachine.—Spring wheat.
- 104 *Miller, Walter*, Saint-Rose.—Peas.
- 105 *Morse, L.*, Milton.—Plough. *Bronze Medal.*
- 106 *Ossage, F. M.*, Saint-au-Récollet.—Hemp.
- 107 *Oswald, J.*, Saint-Thérèse.—Barley.
- 108 *Peterson, J.*, Montréal.—Plough.
- 109 *Pelletier, J. F.*, Isle-Jésus.—Spring wheat.
- 110 *Perry, A.*, Montréal.—Hickory nuts.
- 111 *Pinault, Nicolas*, Rimouski.—Beans.
- 112 *Robertson, J.*, Lacolle.—Wool.
- 113 *Robertson, J.*, Long-Point, near Montréal.—Peas.
- 114 *Romaine, Robert*, Peterborough.—Steam plough.
- 115 *Saint-Pierre, Jean*, Rimouski.—Spring wheat.
- 115a *Shaw, A.*, Toronto.—Spring wheat and Indian corn. *Silver Medal.*
- 116 *Shepherd, George*, Montréal.—Seeds. *Bronze Medal.*
- 117 *Shoane, Alexander*, Toronto.—Wheat and Indian corn.
- 118 *Saguenay Agricultural Society*.—Spring wheat and peas.
- 119 *Southwick, M. O.*, Saint Hilaire.—Wool.
- 120 *Stevens, William*, Saint-Martin.—Timothy seed.

Kut le mundo (euphorbia species) Vizagapatam (M).

Résines et gommes-résines.

Oliban ou encens (boswellia species?) (Aden).  
Oliban ou encens (boswellia thurifera) (Inde Centrale).  
Myrrhe (balsamodendron myrrha) (Aden).  
Bifellium (balsamodendron makul) (Scinde).  
Melsaskhi (balsamodendron).  
Muttypaul (ailanthus malabarica).  
Résine piney (vatertia indica) (Malabar).  
,, sal (shorea robusta) (Nord-ouest de l'Inde).  
,, liquide de bois (wood oil), (dipterocarpus laevis),  
(Assam, Rangoon), &c.

Huiles fixes.

Huile de lin (linum usitatissimum).

„ riein (ricinus communis).  
„ pavot (papaver somniferum).  
„ sesame (sesamum orientale).  
„ moutarde (sinapis toria, glauca, dichotoma).  
„ ben (hyperanthra aptera).  
„ pistache de terre (arachis hypogaea).  
„ margosa (melia azadirachta, etc.)—E. I. C.; Rajah  
de Vizianagram.  
„ cocotier (cocos nucifera), de phulwa, de muohwra,  
de epie (bussia butyracea, latifolia et longifolia),  
de piney (vatertia indica), etc.

Steel, called *Wootz*, from different parts of India.  
Antimony ores, from Tenasserim (B), from Sarawak (S)  
—John Jarvis, Esq.; and from the Himalayan.  
Oxide of tin and tin, from Tenasserim and Siam (S).

Lead and copper ores, from the Himalaya.

Gold-dust, from Assam.

Gem sand—J. Cumming, Moulmein.

Collection of coins, from Madras, Népal, and Jyepore.—  
E. I. C.; H. V. Conolly, Esq.; Hon. W. Elliott, and Mr.  
McArthur.

Alum, from Cutch

Sulphur, from Kulabagh.

Borax, from the Himalayas.

Rock salt, from the Punjab.

Sea salt, from Bengal, from Madras, and from Ahmedabad.

Saltpetre or nitrate of potash.—J. Ouchterlony, Esq. (M).

Corundum in crystal and powder.

Flexible sandstone.—Ali Bahadur Jung Khan of Delhi.

Marbles, from Bellary (M).—H. E. I. C.

Chunar marble.—Messrs. Burk and Son.

Precious stones from India, and pebbles from Godavery  
(M), from Soane (B), and from Cambay (Bo).

CLASS II.

Vegetable Productions.

1 SILVER MEDAL. 1 BRONZE MEDAL. 1 HONOURABLE  
MENTION.

Gums.

Gum babool (acacia arabica), (B.)  
,, gattee (arabica), (Bo.)  
,, kutecra (cochlospermum gossypium), (N. W. India).

,, keekur (acacia farnesiana), (B.)

,, margosa (melia azadirachta).

,, balleo (sterculia urens).

,, of feronia elephantum.

Sap nut (sapindus detergens), (B.)

Gum ammoniac (dormea ammoniacum), (Bo.)

Assafetida (narthex assafetida), (Bo.)

Gamboge from Siam (garcinia sp.), (S.)

,, from Mysore (garcinia pictorum), (Mysore).—  
N. Mally, Esq.

Dragon's blood (dracaena draco), (S.)

Kutteemundo (euphorbia spec.), (Vizagapatam).

Résins and Gum-resins.

Incense (boswellia spec.), (Aden).

Incense (boswellia thurifera), (Central India).

Myrrh (balsamodendron myrrha), (Aden).

Bdellium (balsamodendron makul), (Scinde).

Melsaskhi (balsamodendron).

Muttypaul (ailanthus malabarica).

Resin piney (vatertia indica), (Malabar).

Resin sal (shorea robusta), (N. W. India).

Wood oil (dipterocarpus laevis), (Assam and Rangoon), &c.

Fired Oils.

Linseed oil (linum usitatissimum).

Castor oil (ricinus communis).

Poppy oil (papaver somniferum).

Til oil (sesamum orientale).

Mustard oil (sinapis toria, glauca, dichotoma).

Ben oil (hyperanthra aptera).

Ground nut oil (arachis hypogaea).

Margosa oil (meli azadirachta, &c.)—East India Company  
and the Rajah of Vizianagram.

Cocoanut oil (cocos nucifera).

Pulwa oil, muohwra oil and elephi (bussia butyracea, bussia  
latifolia, and bussia longifolia), &c.

Piney oil (vatertia indica), &c.

*Fibres.*  
Fibres de bhabur (*eriophorum cannabinum*), de pandanus, — *W. E. Underwood, Esq.*; d'ananas (*bromelia ananas*), de moorva (*sanseviera zeylanica*), d'agavo (*agave vivipara*), de bananier (*musa paradisiaca*), etc.; des palmiers, d'ejo (arenga *saccharifera*), et de kitkul (*caryota urens*), de cocotier (*cocos nucifera*).

Lin (*linum usitatissimum*), fibres de jute (*cörchorus olitorius*), d'ambara (*hibiscus cannabinus*), de summ (*crotalaria juncea*), de dhanchi (*sesbania aculeata*), de mudar (*calotropis gigantea*).

Chanvre (*cannabis sativa*), fibre des orties, caloee, rhea ramee ou châ mâ (*urtica ou Boehmeria nivea*), etc.—*E. I. C., Major Hannay, Lieut. Emerson, Dr. McClelland, J. Burkinghough, H. Thurlburn, Esq., A. C. W. Begbie, Esq., W. Hudson, Esq., J. Ripley, J. F. Royle, M. D. and Wugentrüber.*

Fibre de rhea (*boehmeria nivea*).—*Rajah Pertaub Chund Singh.*

*Bois.*

Bois de tek (*teckta grandis*), de deodarn (*cedrus deodara*), de sal (*shorea robusta*), de toon (*cedrela toona*), etc., de bois noir (*blackwood*, *dalbergia latifolia*), de Sisso (*dalbergia sissoo*), de sandal blanc (*santalum album*), Lieut. Michel; de sandal rouge (*pterocarpus santalinus*), etc., etc.—*C. Begbie, Esq., Lieut. Stevenson, et Jischay de Mergui.*

*Produits des Animaux.*

Crâne avec les dents d'un éléphant, de Gour, Bos cavifrons. Crânes ou cornes de buffle, d'Antelope picta, de *Cervus (Muntjac) vaginalis*, de *Moschus moschiferus*, d'*Ovis Polii*, de *Capra jomblana*, de yak. Bos gruuniens.

Défenses de sanglier.—*Rajah d'Odyopore.*

Peaux d'Antilope Hodsonii, Tibbet, de *Moschus moschiferus*, Himalaya. (*d'Axis maculata*, d'A. porcinus).

Peaux d'ours de Deyra Doon.

Peaux de tigre, de léopard, de loutre, d'écreureils.

Bouclier de tortue.

Plumes de marabout du Crane.

Coquille coupée de Dacca, laque en bâton, en grains, de Bengale, Jubbulpore, contribuée par l'E. I. C., M. Williams, Majors Ramsey and Hannay, Capitaines Layard, Birdmore, Holroyd, MM. Cheap, Begbie and Mackay, Capit. Tickell, M. Guthrie, Messrs. Peltinean and Co., Baboo Moderneran Sing, Amurool Begum et le Surintendant de Dhoom.

Cornes d'antilope, d'élan, de bison, de buffle, etc.

Cornes de bisons, de buffles polies et variées.

Peaux de tigre, de léopard, de cheeta, etc. Coquilles, laque en bâtons, en grains de Madras, exposées par l'E. I. C.; Rajah of Vizianagram; MM. Cooy, Baynes, Fane, Conolly and Matby; Jarunjea Soobbaranje Venecarleegdu, Veircata Peernaul, Ramann, Doomjee Rumjadoo, Apparoo, Amar, and Lieut. Syme.

Colle de poisson (*Polynemus plebeius*), huile de poisson, huile de requin, Malabar.

Nageoires de requin, de Mergui.

Collection des insectes de l'Himalayah.—Cpt. Chamberlain, M. J. O. Becket, et M. Anderson.

Soie, variétés de. (Voir cl. 21.) Laine. (Voir cl. 20.)

Class 3.  
Agriculture.

3<sup>e</sup> CLASSE.  
Agriculture,  
Céréales.

Blé, psysse *julalia* et autres variétés. *Triticum sativum*. Orge et avoine cultivées dans le nord de l'Inde.

*Fibres.*

Bhabur (*eriophorum cannabinum*). Pandanus odoratissimus.—*W. E. Underwood, Esq. Honourable Mention.*

Pine apple (*brunella ananas*).

Moorva (*sanseviera zeylanica*).

Agave (*agave vivipara*).

Plantain (*musa paradisiaca*).

Palm and c'oo (*arenga saccharifera*).

Kittul (*caryota urens*).

Cocoon nut (*coco nucifera*).

Flax (*linum usitatissimum*).

Jute (*cörchorus olitorius*).

Ambara (*hibiscus cannabinus*).

Sum (*crotalaria juncea*).

Dhanchee (*sesbania aculeata*).

Mudar (*calotropis gigantea*).

Hemp (*cannabis sativa*).

Nettle, caloee, rhea, ramee or chumé (*urtica or boehmeria nivea*, &c.)—By the E. I. Company, Major Hannay, Lieut. Emerson, Dr. McClelland, J. Burkinghough, H. Thurlburn, A. C. W. Begbie, W. Hudson, J. Ripley, and J. F. Royle, M.D., and Wugentrüber.

Fibre of the rhea (*boehmeria nivea*).—From the *Rajah Pertaub Chund Singh*.

*Timbers.*

Teak (*teckta grandis*).

Deodarn (*cedrus deodara*).

Saul (*shorea robusta*).

Toon (*cedrela toona*).

Blackwood (*dalbergia latifolia*).

Sisso (*dalbergia sissoo*).

Sandalwood (*santalum album*).—Lieut. Michael.

Red sandalwood (*pterocarpus santalinus*).—C. Begbie, Lieut. Stevenson, and Seikay of Mirga.

*Animal Productions.*

Skull and tusks of an elephant, of the Gour, Bos cavifrons. Horns of the buffalo, of the antelope, of deers, muntjac, of musk deer, of the wild sheep, of the wild goat. Tails of the yak.

Wild boar's tusks.—*Rajah of Odyopore.*

Skins of antelopes and of musk deer, Tibbet and Himalaya.

Bears' skins, from Deyra Doon.

Tigers', leopards', and squirrels' skins.

Tortoise shell.

Marabout feathers.—*Major Fytche.*

Shells from Dacca; stick lac, seed lac, from Bengal, Jubbulpore, contributed by the E. I. C., Mr. Williams, Majors Ramsey and Hannay, Captains Layard, Birdmore, Holroyd, MM. Cheap, Begbie, Mackay, Captain Tickell, Mr. Guthrie, Messrs. Peltinean and Co., Baboo Moderneran Sing, Amurool Begum, and the Superintendent of the Dhoon.

Antelope, elk, bison, and buffalo horns.

Bison and buffalo horns, polished and figured.

Tiger, cheeta, and leopard skins; shells, stick-lac, bead-lac, from Madras, exhibited by the E. I. C.; Rajah of Vizianagram; Messrs. Cooy, Baynes, Fane, Conolly, and Matby; Jarunjea Soobbaranje, Venecarleegdu, Veircata Peernaul, Ramann, Doomjee Rumjadoo, Apparoo, Amar, and Lieut. Syme.

Isinglass (*Polynemus plebeius*), fish oil, shark's oil, Malabar.

Shark fins, from Megni.

Collection of insects from the Himalayah.—Cpt. Chamberlain, Mr. J. O. Becket, and Mr. Anderson.

Varieties of silk. (See cl. 21.) Wools. (See cl. 20.)

*CLASS III.*

Agriculture.

Cereals.

Wheat, psysse *julalia* and other varieties (*triticum sativum*). Oats and barley, cultivated in the north of India.

## UNITED KINGDOM OF GREAT BRITAIN AND IRELAND.

## FINE ART DIVISION.

REPORT on the ARRANGEMENT of the PICTURES, &c., contributed by GREAT BRITAIN  
and IRELAND to the PARIS UNIVERSAL EXHIBITION.

*Arrangement  
of the Pictures.*

Having been deputed by the Lords of Her Majesty's Committee of Privy Council for Trade to proceed to Paris to aid Mr. Redgrave with our advice as to the hanging and arranging the Paintings, Architectural Designs, and Engravings contributed by the Artists of the United Kingdom to the Paris Universal Exhibition, we beg to submit the following Report of our proceedings:—

On our arrival in Paris, we found that a long side hall of the main floor of the "Palais des Beaux-Arts" had been appropriated to the British Oil Pictures, and an upper gallery, on the same side of the building, to Water-colour Paintings, Architectural Designs, and Engravings.

This appropriation has been made partly because the British works were mostly of a cabinet size, and partly because the allotted space was that part of the building the farthest possible removed from apprehended danger by fire; which danger is, however, now greatly abated by the increased precautions adopted by the French Government.

The space allotted in the lower hall to the Oil Pictures is well lighted, and sufficiently low to prevent the necessity of hanging the works at a great elevation; it also affords the opportunity for all the works of this kind to hang in one continuity. The space, however, presented many obstacles to an agreeable arrangement of the pictures; it was broken into short lengths by numerous openings and doors, and interrupted by many projections.

The light and space in the upper gallery provided for the Water-colour Paintings, the Architectural Designs, and the Engravings, are quite inobjectionable.

There were, however, other difficulties to be surmounted in the prosecution of our labours. It might have been desirable to adopt an alphabetic arrangement, and to hang all the works of each Artist in close proximity; but this was found to be wholly impracticable, not only from the causes before mentioned—the divided nature of the space, but more especially from the extreme irregularity in the arrival of the works, many of which were not deposited in the building until the last week in April, while others by the same Artists had already been placed on the walls. This irregularity arose from the circumstance of the varied localities in England whence the pictures were obtained from the various proprietors.

Notwithstanding, however, the hindrances and obstacles, we trust that we may safely report that a very satisfactory arrangement has been made of all the works intrusted to us; that all are well seen; that the space allotted to British Art has been occupied with the least possible loss of room; and the whole completed and in order, so that nothing on our part prevented the opening of the "Exhibition of Beaux-Arts" on the first of May, had other circumstances permitted the adherence to this date.

It has long been felt desirable to exhibit a suitable collection of British Art on the Continent, where hitherto the works of the British School have been but little known. While we regret that the date determined by the Decree of the French Imperial Commission has prevented the exhibition of the works of many of our most eminent artists lately deceased, we still venture to believe that the present collection will redound to the honour of British Art.

At the same time, impressed with the many excellences of the French and other foreign works in this collection, we feel satisfied of the general benefit to art that will arise from the assembled Exhibition. Each will learn from all; many prejudices will gradually be eradicated; and we may trust in future to a better appreciation of one another.

In conclusion, we would venture to hope, that in the event of the British Government, as in the Great Exhibition of 1851, devoting a sum of money to the purchase of rare works contained in the Exhibition, the department of the Fine Arts, now, as a whole, for the first time, combined with industry in a universal Exhibition, may not be excluded from a proper share of consideration.

URLSTONE.

REPORT on the ARRANGEMENT of the WORKS of SCULPTURE contributed by GREAT BRITAIN and IRELAND to the PARIS UNIVERSAL EXHIBITION.

*To the Lords of the Committee of Privy Council for Trade.*

MY LORDS,

WHEN I arrived in Paris on the 10th of April last, according to your Lordships' request, in order to arrange, in concert with Mr. Redgrave, the Sculpture of the United Kingdom in the Beaux-Arts Department of the Universal Exhibition, its location in the Building was not fixed. One of two situations was offered by the French authorities. We had the option of a portion of the great Hall of French Sculpture combined with that of other nations, or of an apartment rather scanty of both space and light parallel and close to the gallery of British oil-paintings, with which it directly communicated by two doorways.

After some consideration, deeming it, for various reasons, better that we should stand alone, and that our Sculpture should group with the other art-works of Britain, so as to better illustrate her school, with the concurrence of Messrs. Cole and Redgrave, I accepted the latter arrangement from the French authorities, on condition of being allowed to re-colour the walls of the apartment differently, and to make what further special arrangements I thought fit; with the permission also of occupying with statues certain intercolumniations occurring on one side of the gallery of British oil-paintings, and also of placing groups of statues and single statues at certain points down the centre of the same gallery, and of placing busts against the columns on either side of the principal entrances.

The two latter propositions were at first demurred at by the French authorities, but eventually, by their kind permission, they were carried into effect. The staircase to the upper gallery, on the British side, was also granted for the arrangement of busts; in consequence of which I placed on the centre of the first flight of four or five steps facing the entrance, a bust of His Majesty Napoleon III. by Mr. Park, and on the centre of the next landing, a bronze bust of Her Majesty Queen Victoria, by Mrs. Thornycroft, and a few other busts and two reliefs on other parts of the staircase leading to the gallery of British water-colours, engravings and architectural drawing and models; just within which room I placed a case of medals.

The collection contained in the special apartment of British Sculpture consists wholly of works of a poetic character. This room is lighted wholly by a line of upright windows tolerably high up on one side. The two side entrances, one toward either end, and which are opposite to the windows, open into the gallery of British oil-paintings. At first sight this apartment appeared very dark, but I judged that this was greatly owing to the sombre green with which its walls, like those of the rest of the Exhibition, were coloured. However this tint may suit a gallery of paintings where the wall is much covered, it does not appear calculated for a Sculpture-room, where so small a portion is hidden. Moreover its effect is harsh and cold, and it casts vivid reflections on the statues, where cheering ones are more desirable; and these evils are enhanced where the light is scanty. With this impression, I judged that a different treatment of colour would do much toward lightening and adapting this apartment for Sculpture. In accordance, the tint of its walls was changed to a warm grey, of an atmospheric character, that is, of a nature that retreats from the eye instead of advancing towards it, as do most violent colours, especially those wherein red has the preponderance. Its degree of force was regulated by the requirements of affording sufficient relief to the general colour of the statues in the case in which it was applied, and at the same time of being sufficiently light for their outlines to merge and soften into the background. Too violent a contrast of shade and colour in the background of Sculpture makes the statues look flat and stony, and gives to a marble figure an opaque appearance like plaster, whereas it is to be sought rather so to adjust the tints as to assimilate the effect of plaster to the soft and fleshy character of marble by rounding and melting the edges into the background.

I had accepted the honour of arranging the British Sculpture on this occasion with a hope that such top centre lights and other requisites would have been available that I should have been able to put in

*Arrangement  
of the Sculpture.* execution a cherished plan of mine for greatly enhancing the effect of Sculpture by special arrangements of which much drapery forms a part, but on seeing the best advantages which could be afforded us on this occasion, I at once relinquished as impossible the idea of introducing it in this case, and addressed myself to do the best I could under the circumstances.

In carrying out these arrangements, the Sculpture-room being lighted wholly from one side, opposite the doorways, the wall of which, therefore, appearing very dark on entering the room, I had it coloured much lighter than the other sides of the apartment, so as to make it look the same tint, and to give the room a more cheerful appearance; also there being no proper light under the windows, I placed no works whatever on that side, but left it wholly for passage and for couches and seats placed against it opposite the statues, which are arranged in little more than the opposite half of the room, not more being available as regards light. Between the doors the statues advance to the light in two bays or waves, retreating from it in the centre. At the ends of the room also the lines of arrangement are waved. A waved line of arrangement was adopted to avoid the abrupt and mutually interfering effect of statues, when numerous and near together, coming at once upon the eye in a straight line. By a waved line, the statues are in turn presented in various views in passing through the room, and each has its front to itself as the spectator comes opposite to it. The works are placed on separate pedestals, of varied height, to meet the requirements of each work. Each work of the forward line may be walked round and seen in various views, and those few only are placed against the wall which present but front views, or require a low angle of light. The waved line afforded the means of accommodating each statue as to its front or the side whence it would receive the most favouring light, and also of adapting the angle of light to its requirement, giving, for instance, a more vertical light to the upright figures, and one more horizontal to those in recumbent positions.

These waves of arrangement left in front certain spaces, which are occupied by Mr. Baily's "Eve at the Fountain," and Mr. Gibson's "Hylas and the Nymphs." Mr. Macdowell's "Reading Girl" occupies also the point of another line that projects into the third space, which was obliged to be so arranged on account of the scantiness of room at that end.

The walls of the Sculpture Room being of a warm grey, the pedestals are covered with a cloth of a full green, as also the couches and seats, and the floor is painted of a dark reddish brown. I could not get it stained.

According to the permission that statues might be arranged in connection with the oil paintings, such works were chosen for the intercolumniations as were in some degree architectural, as Mr. Foley's "Hampden and Selden," which thus form a pair, one on either side of a doorway, entering on the centre of the British Gallery of Oil Paintings. Other statues occupy certain points down the centre of the Gallery. There occur three times in the British part of the Gallery, doorways, opposite each other, being the meeting of four ways. At two of these a symmetrical group of upright statues are placed, back to back, facing the four approaches. "The Concordia," by Mr. Marshall, a figure emblematic of the alliance between France and England, being one of these, and facing the principal entrance from the French side. Such figures were chosen for these groups as lost least by having their backs hidden, and although this arrangement was suggested greatly by the small amount of room at our disposal for Sculpture, yet it did not appear to me that any of the works so placed were injured in effect in consequence. Had, however, the Gallery been wide enough to allow of such arrangement without impeding the free circulation of the visitors, on which much stress was laid by the French authorities, I should have separated the statues in these groups more from each other, and supplied in their common centre a background of drapery, arranged in some simple ornamental form. The third crossway is occupied by Mr. Gibson's "Hunter."

Four other statues, singly, occupy four other points down the centre of the Gallery, opposite doorways existing only on one side of the way, no place in the centre being occupied by a statue except opposite a doorway. "The Houseless Wanderer," by Sir Richard Westmacott, is one of these, and occupies a point in front of one of the entrances to the Sculpture Room.

Six busts are also placed on pedestals, close to the columns of the three principal entrances. The pedestals in this gallery, as also those of the busts on the staircase, are covered with a cloth of a full red.

In all cases tickets have been affixed, with the name of the artist, and the subject, in French and English. On the green pedestals in the Sculpture Room these tickets are of the warm grey of the

wall. On the red pedestals, in the Gallery of Paintings, they are green, of the same colour as the wall there, the lettering, in all cases, being in gold.

The Sculpture Room contains thirty-five works, viz., thirty statues, two poetic busts, and three reliefs.

The Painting Gallery accommodates twenty-five works of Sculpture, viz., two groups of four statues each, and five single ones down the centre; also six statues in the intercolumniations, and six busts close to the columns.

Arranged on the staircase are ten works, viz., eight busts and two reliefs; and in the upper gallery is placed a case of medals.

The examples of Sculpture from the United Kingdom thus amount to seventy-one.

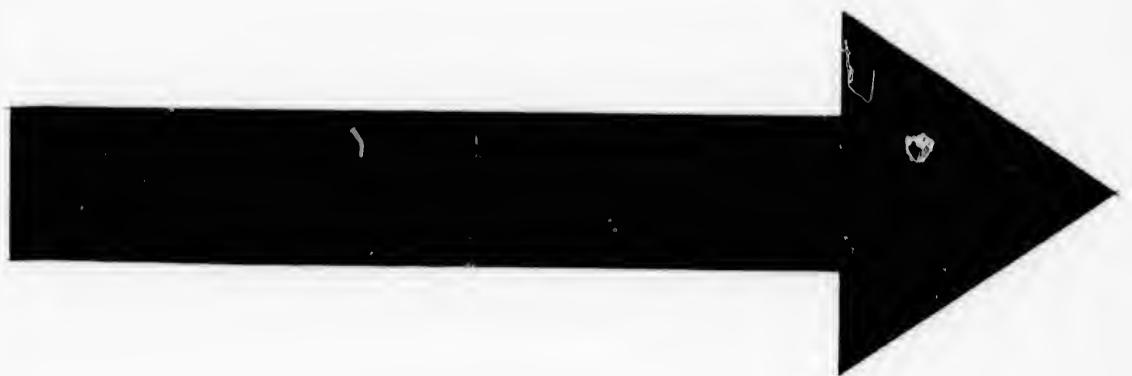

The arrangement of the Sculpture was completed by the 1st of May, with the exception of the non-arrival of two works, which were delayed at Dunkirk, but for which pedestals were ready and fixed.

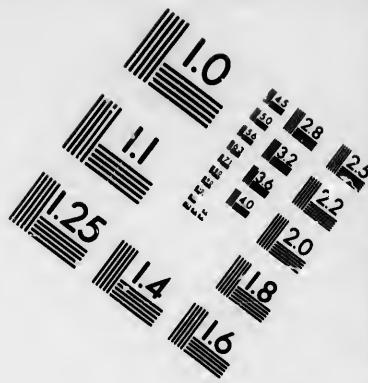

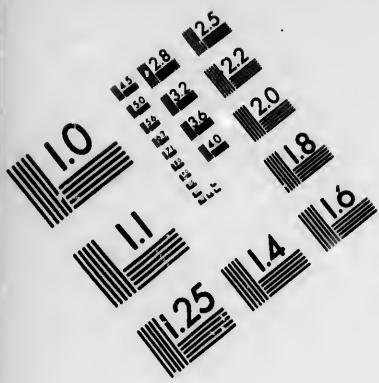

I beg to add, that I met with the greatest civility and kindness on the part of the French Authorities, and though several of the arrangements we desired differed from their own conceptions, they gave way on each point.

I have the honour to be,  
My Lords,

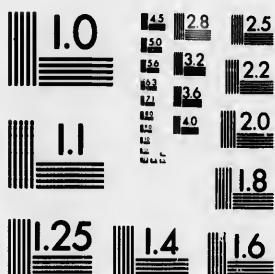

Your Lordships' obedient Servant,

JOHN BELL.

**1510** Arch of Titus, at Rome.  
**1511** Loggia of the Italian Court, Crystal Palace.

## REWARDS TO WORKMEN.

The Imperial Commission having announced that it was the intention of the International Jury to reward the services rendered to Agriculture and Manufactures by the Managers of Works and Factories, Foremen, Artizans, or Labourers, the following CIRCULAR was addressed to every BRITISH EXHIBITOR, and all the answers which were received were forwarded to the Juries:—

No. 133.

SIR,

It is officially announced that the Jury of the PARIS UNIVERSAL EXHIBITION intend to reward Foremen of Works and Workmen who have distinguished themselves in the production of any objects exhibited which the Jury may judge to deserve it.

It will aid the Jury if Exhibitors will indicate the objects exhibited by them which they think display meritorious Workmanship, and give the names of the respective Workmen who have executed the various stages in the production of them.

Thus piece of Cabinet work may display excellent Joinery done by one workman, and Carving by another; or a piece of Porcelain may exhibit excellencies of Turning, Glazing, Gilding, or Painting, each performed by a separate Workman.

Should you desire to offer any suggestion to the Juries in this respect, I have to request that you will fill up the accompanying Form, and return it to me, *post-paid*, as addressed, on or before the 15th day of June.

I take this opportunity of transmitting a Circular relative to the free issue of Passports to Workmen who may desire to visit the Exhibition, and I shall be obliged by your making it known to your Workmen.

I have the honour to be, Sir,  
Your obedient Servant,

FRANCIS FOWKE, Capt. R.E.,  
Secretary.

It should be stated that the number of names of Workmen returned was very few in proportion to the number of Exhibitors.

*List of Co-operators and Workmen (United Kingdom) to whom Prizes have been Awarded by the International Jury.*

## CLASS II.

(*Forestry, &c., and Products obtained without Cultivation.*)

**BLUNDELL, SPENCE, & CO.**—CLASS X.—Section 7.—Annexe east.

- 669 **BLUNDELL, SPENCE** et Cie, à Londres et à Hull, A.—Couleurs; vernis.

PRIX MEDAILLE, EXPOSITION DE LONDRES, 1851.

Manufacturiers de toutes sortes de couleurs et vernis, tant chimiques que végétales. Broyeurs de semeuses et de couleurs. Raffineurs d'huiles de commerce de toutes espèces.

Couleurs broyées et sèches expressément préparées et emballées pour les marchés étrangers.

Cette Maison expose les échantillons de—

Jaune de chrome	A l'épreuve de l'action de l'atmosphère et du soleil, spécialement
Jaune de chrome	préparés à l'usage des fabricants de papiers peints.
Vert de Brunswick	
Vert de Paris	
Vert de feuille morte	
Rouges indiennes	A l'usage des carrossiers.
Copal vernis	

Aussi un grand assortiment de couleurs fines à l'usage des artistes et des décorateurs, lesquelles sont préparées au moyen de procédés nouveaux, et supérieures à celui dont on s'est servi pour les échantillons exposés en 1851, et qui y ont remporté le Prix d'honneur.

Chrome greens      Chrome red      Brunswick greens      Paris greens      Bronze greens      Indian reds      Copal varnishes

Specially manufactured for paper-stainers to resist the influence of light and atmosphere.

For coachmakers.

Assortment of fine colours for decorators and artists, prepared by improved process, and superior, both in solidity and body, to the sample which gained the Prize at the Universal Exhibition in London in 1851.

## BROWN &amp; POLSON.—CLASS XI.—Sections 1.—Annexe east.

**690 BROWN et POLSON, à Paisley, E.**—Fécule de sagou, dont ils sont les inventeurs. Prix, 52 fr. 50 c. les 50 kil.

Aussi Fécules de toutes sortes retirées de maïs :—

1<sup>o</sup> Fécule granulée qu'il n'est pas nécessaire de faire bouillir. Elle fait un macillage clair très perméable par tout le tissage de la toile à laquelle on l'applique. Prix, 62 fr. 50 c. les 50 kil.

2<sup>o</sup> Fécule granulée, qu'on peut ou ne peut pas faire bouillir. Elle fait un macillage épais. Prix, 52 fr. 30 c. les 50 kil.

3<sup>o</sup> Fécule non granulée. Prix, 45 fr. les 50 kil.

4<sup>o</sup> Baile et matière fibreuse provenant de l'opération ; elles sont préférées comme nourriture pour les bestiaux. Prix, 10 fr. 60 c. les 50 kil.

5<sup>o</sup> Farine composée principalement de gluten et des matières grasses provenant de l'opération, et échantillons de biscuits dont 3 parties de cette farine et 2 parties de farine de froment.

Les Lettres-patentes ont été accordées pour ce procédé dans la Grande-Bretagne et en France.

Pour entrer en arrangement pour les brevets, s'adresser à M. J. B. Mitchell, boulevard des Italiens, 17, à Paris.

**690 BROWN and POLSON, Paisley, Scotland.** Starch from sago-flour, of which they are the inventors, price 42s. per cwt. 1039

Also Starches of various kinds, obtained from Indian corn: 1st. Granulated starch, that does not require to be boiled, and gives a thin macilage, very permeable throughout the texture of the fabric to which it is applied. Price 50s. per cwt.

2nd. Granulated starch, that may or may not be boiled, and forms a thick macilage, price 42s. per cwt.

3rd. Ungranulated starch, price 36s. per cwt.

4th. Husk and fibrous matter obtained in the process, valuable food for cattle, price 8s. 6d. per cwt.

5th. Meal, consisting chiefly of gluten and fat also obtained in the process, and samples of biscuit, composed of three parts of this meal and two parts of wheat flour.

Letters patent have been obtained for this process in Great Britain and France.

For terms of license apply to Mr. J. B. Mitchell, 17 boulevard des Italiens, Paris.

## CLARK, J. &amp; J., &amp; CO.—CLASS XIX.—Section 2.—Palais.

**COLLYER, R. H.—CLASS I.—Section 7.—Annexe Machinery.**

- 38 COLLYER, R. H., à Ipswich, Suffolk, A.—Modèle de machine pour la réduction et le traitement des minéraux.** **38 COLLYER, ROBERT H., Orwell Works, Ipswich.** **Model of machine for crushing ore.** 525

Quartz Crushing Machine.

(Prix.) Breveté en France, en Angleterre, dans les Etats-Unis, etc. Ces machines ont fonctionné pour trois années en Californie, Virginie et la Nouvelle-Grenade avec le plus grand succès. Elles sauvent plus de 25 pour cent d'or, qui a été perdu avec tout autre système. Cette machine est bien adaptée pour les fabricants de porcelaine. S'adresser à MM. Ransomes and Sims, Ipswich, Angleterre; ou à l'inventeur, Dr. Collyer, Ipswich. Prix de la machine complète, 4,000 francs, capable de réduire 10 tonnes par jour. Le brevet français est à vendre. S'adresser à M. Dowson, 14 rue du Cirque.

Patented in France, England, United States, &c. These machines have been at work for above three years in California, North Carolina and Virginia, New Granada, &c., with the greatest success. They save more than 25 per cent. more gold than any other invented, which has been hitherto lost. This machine will be found of great service to porcelain manufacturers. For further particulars address to Dr. Collyer, Ipswich; or to Messrs. Ransomes and Sims, Ipswich, the manufacturers. Price of machine complete, 160*l.*, capable of reducing 10 tons per diem.

**DUNN, HATTERSLEY, & CO.—CLASS V.—Section 7.—Annexe Machinery.**

- 221 DUNN, HATTERSLEY, et Cie, à Manchester, Lancashire, A.—Plaque tournante de fer forgé. Modèle de machine à éprouver la force des câbles en fer.**

**221 DUNN, HATTERSLEY, and COMPANY, Windsorbridge Iron Works, near Manchester. Wrought iron turn-table and chain-cable and timber testing machine, full size.** 414

Machines mises en action.

Table tournante avec poutres en fer battu, brevétée par M. Dunn, pour locomotive et tender, 40 pieds de diamètre ( <i>à l'extérieur du pavillon</i> ) .	7,250 fr.
Table tournante de surface en fer flingué, pour des wagons chargés de 15 tonnes, 12 pieds de diamètre ( <i>à l'extérieur du pavillon</i> ) .	885
Machine à éprouver la force des câbles en fer .	6,750

Devises.

Machine hydraulique pour poser et retirer les roues sur leurs essieux, pression de 200 tonnes .	3,750
Roues et essieux avec coussinets et anneaux extérieurs en double .	500
Presse pour le coton à double action, brevetée .	15,000
Table à tourner et à traverser, combinée .	4,000
Grues à vapeur, brevetée par M. Dunn, de 2,500 fr. à .	12,500
Derricks à vapeur, brevetés par M. Dunn, de 5,000 fr. à .	20,000
Grues perfectionnées pour magasins et quais, de 700 fr. à .	10,000
Poulies perfectionnées, avec appareil à appliquer l'huile, pour lever jusqu'à 50 tonnes .	1,250
Idem, pour 3 tonnes .	75
Presse à vis double .	1,000
Presses hydrauliques pour l'emballage et pour les huiles, pression de 200 tonnes .	2,250
Idem, pression de 500 tonnes .	5,000
Idem, " 1,000 .	9,500
Grues perfectionnées mobiles à vapeur, brevetées par M. Dunn, pour lever 10 tonnes, semblables à celles qui ont été envoyées au Canada, pour l'érection du pont de Victoria, sur la rivière St. Lawrence .	12,500

Machines in full operation.

Dunn's patent wrought-iron beam Turntable, 40 feet diameter, for turning engine and tender ( <i>in the Pavilion-yard</i> ) .	£290
Cast-iron surfaced Turntables, for turning waggons with a load of 15 tons, 12 feet diameter ( <i>in the Pavilion-yard</i> ) .	35
Chain-cable testing machine .	270

Drawings.

Hydraulic wheel-forcing machine, 200 tons pressure .	150

**FINCHAM, JOHN.**—CLASS XIII.—Section 4.—*Puluis.*

**815 FINCHAM, J., à Portsmouth, Hamp., A.**—Modèles de yachts.

Les modèles de sept yachts faisant partie de l'Eseadre Royale des Yachts, dont les plans ont été dressés par lui, et les yachts construits par M. Camper, de Gosport: savoir, le "Fair Rosamond," construit pour M. le Marquis de Blandford; le "Novice," pour M. le Comte de Desart; "l'Erminia," pour M. le Comte d'Ellesmere; le "Lotus" pour M. le Vicomte Clifden; le "Breeze," pour M. le Capitaine James Lyon; le "Dream," pour M. George Bentinck, Esq.; et le "Circassian," pour M. le Capitaine William Lyon. Les quatre premiers yachts ci-dessous sont des schooners, dans les plans successifs desquels on a voulu faire voir que le principe d'induction est celui sur lequel le perfectionnement dans l'architecture navale peut être le plus sûrement conduit, et ainsi la perfection plus tôt atteinte. Voilà ce qu'on a eu dessin de prouver en exposant ces modèles, accompagnés d'une brochure qui explique le principe et en donne des exemples, en rappelant les éléments de construction des navires, ainsi que les résultats des épreuves qui en ont été faites.

**815 FINCHAM, JOHN, Highland Home, Landport, Portsmouth.** Models of yachts.

The models of seven yachts belonging to the Royal Yacht Squadron, the designs for which were prepared by himself; and the yachts were built by Mr. Camper, of Gosport: namely, the "Fair Rosamond," built for the Marquis of Blandford; the "Novice," for the Earl of Desart; the "Erminia," for the Earl of Ellesmere; the "Lotus" for Viscount Clifden; the "Breeze," for Captain James Lyon; the "Dream," for George Bentinck, Esq., M.P.; and the "Circassian," for Captain William Lyon. The first four of the above yachts were schooners, and in the successive designs for them it was intended to show that the principle of induction is that on which improvement in naval architecture can be the most certainly carried on, and thus perfection be the soonest reached. The exhibition of the models was intended to show this fact; and a pamphlet, setting forth and exemplifying the principle, by recording the elements of construction of the vessels, and also the results of their trials, was sent with the models.

**HORROCKSES, MILLER, & CO.**—CLASS XIX.—Section 3.

**1262 HORROCKSES, MILLER et CIE, à Londres, Manchester et Preston.** Tissus de coton unis ("long cloths and shirtings").

La seule Médaille fut accordée à MM. Horrockses, Miller et Cie, à l'Exposition Universelle de 1851, pour leurs tissus de coton unis ("long cloths and shirtings").

Les produits de MM. Horrockses, Miller et Cie, sont arrivés au Palais de l'Industrie trop tard pour l'examen du Jury, et n'ont pas été admis en concurrence avec les tissus de coton; par conséquent ils ne sont pas adjugés dans le rapport du Jury, ni ne participeront aux récompenses à être accordées.

**1262 HORROCKSES, MILLER, and Co., London, Manchester, and Preston.** Cotton shirtings (long cloths) bleached.

The only Prize Medal was awarded to Horrockses, Miller, and Co., in the Great Exhibition of 1851, for bleached shirtings and long cloths.

Horrockses, Miller, and Co.'s goods arrived at the Paris Exhibition too late for inspection by the Jury, and were not allowed to compete with the Cotton Fabrics; consequently they do not appear in the Official Report, or participate in any award that may be given.

**HUXHAMS & BROWN.**—CLASS VI.—Section 9.—Annexe Machinery.

**284 HUXHAMS et BROWN, à Exeter, Devon, A.**—Moulin à tan. Moulin à farine. Fourneau de cuisine. Ecouteilles de navires.

Le moulin à tan, qui moule, à la manière que préfèrent les meilleurs tanneurs anglais, à peu près 1,500 kil. par jour à l'aide d'un bon cheval; ou 400 ou 500 kil. par heure avec la machine à vapeur de la force de quatre chevaux de MM. Huxhams et Brown, coupant au même temps la longue écorce. Prix, 1,350 fr.

On peut avoir des renseignements de beaucoup de tanneurs anglais q'ti s'en servent.

**284 HUXHAMS and BROWN, Exeter.** Mills, kitchen-stoves, and ships' coabose.

1721

Tanners'-bark mill, which grinds, in the manner most preferred by the best English tanners, about 1,500 kilogrammes a-day with a good horse; or 400 to 500 kilogrammes an hour, by Huxhams and Brown's 4-horse steam-engine, chopping the long bark at the same time. Price 54/-.

Les avantages qui résultent de l'application de la houe à cheval, en cultivant les intervalles entre les rangées, sont maintenant si généralement reconnus, qu'un bon instrument de ce genre est devenu presqu'indispensable à une ferme bien organisée, et la culture au semoir ne peut être parfaite et complète sans cette machine.

Messieurs R. GARRETT & FILS recommandent avec grand intérêt cette machine dont le dessin est ci-dessous à leurs clients, avec leur conviction, résultant d'années d'expérience et de nombreux essais dans toute espèce de sol, qu'on la regardera comme un des instruments les plus précieux et les plus économiques que l'on puisse employer.

La houe à cheval est adaptée à toutes les méthodes dominantes de culture avec semoirs, pour nettoyer les récoltes sur surface plate ou sur sillons, l'essieu étant mobile à chaque bout afin de s'incliner à tous les intervalles entre les rangées. On peut houer d'une manière parfaite et à une dépense variant de 6*s*. à 1*s*, par arpent, le blé, l'orge, les fèves, les pois, les navets, les betteraves, les pommes de terre, les carottes, et toute autre graine et racine. On obtient un résultat bien plus parfait qu'avec la houe à la main; et une pénétration bien plus profonde, et un homme avec un garçon et un cheval peut houer 10 arpents par jour.

Chaque houe fonctionne sur un levier séparé, et est conçue à une profondeur uniforme à l'aide de clofs régulatrices, de sorte que, quelqu'inégale que soit le terrain, on est certain de détruire complètement les mauvaises herbes.

Un moyen du timon on peut facilement tenir les houes entre les rangées du blé qui pousse, parce qu'elles peuvent être réglées avec une précision telle, qu'elles nettoieront parfaitement les intervalles, sans faire le moindre mal aux plantes.

On peut varier la distance entre les houes, ainsi que le démontrent les tables suivantes, afin de les adapter aux différentes récoltes.

Les lames coupantes sont faites d'acier, et attachées par des verrous à vis et par des écrous aux tiges qui les relient aux leviers, et elles peuvent être facilement remplacées, au besoin, par le laboureur.

*Instructions pour les commandes à faire de la Houe à cheval de Messieurs Garrett et Fils.*

Quand on commande cette machine, il faut expliquer la largeur que l'on veut entre les roues (en mesurant sur la terre), et aussi le plus grand nombre de rangées de grains ou plantes à houer à cheval qui sont comprises dans une largeur du Semoir, parceque la Houe à cheval doit couvrir la même espace de terre et nettoyer autant de rangées que le Semoir en a déposée chaque fois.

Si l'on destine la Houe à cheval à suivre des Semoirs de grandeurs diverses, il faut donner exactement la distance entre les rônes du Semoir la plus large, comme on peut adapter la houe aux plus petits Semoirs en tenant un nombre proportionnel de leviers.

*Prix au comptant.*

	Rangées,	Pouces
	gées, distance,	
1. Houe à Cheval Brevetée de 6 rangées avec 12 leviers, en y comprenant 12 lames d'acier de 4 pouces, et 8 lames de 7 pouces, 3 demi-circulaires et 2 lames à sillons, 4 pieds 6 pouces entre les roues —400 fr.	6 7 <i>s</i> 6 9 5 11 4 12 <i>s</i> 3 18 2 27	

\* Ces rangées sont calculées pour sillons, et on donne 14 pouces de distance entre les rangées. Si l'on veut des changements dans l'étendue des roues, ou dans le nombre des rangées, il faudra tout expliquer, en communiquant la machine.

The advantages resulting from Horse Hoeing and cultivating the land between the rows of drilled crops are now so universally admitted, that a good implement for the purpose becomes almost an indispensable appendage to good farming, and the Drill husbandry cannot be fully carried out without it.

R. GARRETT & Sons have especial pleasure in recommending their Patent Horse-Hoe, represented above, to the notice of their agricultural connexions, from firm conviction, founded on the experience of several years' actual trial on almost every variety of soil, that it is one of the most valuable and economical implements that they can possess.

It is adapted to all the prevailing methods of Drill culture, either for cleaning crops drilled on the level surface, or on ridges, the last being moveable at both ends, to suit the varied intervals between the rows of plums, Wheat, barley, beans, peas, oats, turnips, mangold, potatoes, carrots, and other grain and roots, may be hoed in a superior manner, at an expense of from 6*s*. to 1*s*. per acre. The work performed is much more perfect than that done by the hand-hoe; the depth penetrated is greater, and as much as 10 acres per day may be done with a horse, a man, and a boy.

Each hoe works on a separate lever, and is kept a uniform depth, by means of regulating keys, so that however uneven the surface of the ground, the weeds are sure to be effectively destroyed.

The steering afford a ready means of keeping the hoes between the rows of growing corn, as they may thereby be regulated with the greatest precision, perfectly scaring the intervals, without the possibility of injuring the plants.

The hoes may be varied in distance, as indicated in the following Tables, at pleasure, to suit the implement for different crops.

The cutting blades are made of steel, and attached by screw-bolts and nuts to the stalks which hold them in the levers, and may readily be replaced, when worn, by any husbandman.

*Directions for ordering Garrett's Patent Horse-Hoe.*

In ordering this implement, it is necessary that the width between the carriage wheels of the Drill (measuring on the ground) which it is intended to follow, should be stated; and also the greatest number of rows of corn or roots, intended for horse-hoeing, that are deposited in one width of the drill; as it is recommended that the Horse Hoe should cover the same space of ground, and clear at once as many rows of plants as the drill deposited each time.

If the Hoe be required to follow drills of different sizes, the distance between the carriage wheels of the widest should be given, as the Hoe may be made to suit the smaller drills, by taking out a proportionate number of Levers.

*Net Prices, May, 1855, including a complete set of Steel Hoes, to suit any widths of Rows.*

	Rows apart.	Inches
1. A six-row Patent Horse-Hoe, with twelve Levers, including twelve 4-inch, and eight 7-inch Steel Blades, three semicircular, and two furrow Hoes, 4 feet 6 inches between the wheels—16 <i>s</i> .	6 7 <i>s</i> 6 9 5 11 4 12 <i>s</i> 3 18 2 27	

\* These rows are calculated for Stetch Work, and 14 inches allowed as the distance between the furrow rows. If any alteration be required in the spread of the wheels, or number of the rows, it is necessary, in ordering, that it should be explained.

Machin à semence d'herbe, pour semer à la volée la linzine et l'ivraie, avec conducteurs pour mener jusqu'à 6 pouces du sol, et brosses adaptées à l'une ou l'autre des hoes ci-dessus. Prix : Houe N° 1, 75 francs ; et 6 francs en plus pour chaque 6 pouces de largeur au-dessus de No. 1 ; extra, pour plus de largeur qu'il n'est spécifié ci-dessus, pour chaque intervalle d'un pied, 12 fr. 50 c.

N.B.—On envoie avec ces Instruments des Instructions complètes pour les faire fonctionner.

SEMIS DE SCOPLES PERFECTIONNÉS DE GARRETT, POUR BLE ET SEMENCES, SANS L'APPAREIL POUR ENGRAIS. (Voir la Gravure, p. 136.)

PRIX décernés à MM. R. GARRETT et Fils, par diverses Sociétés d'Agriculture pour leurs Semoirs Brevetés.

La Grande Médaille à l'Exposition Universelle de Londres en 1851, était adjugée à Messieurs R. GARRETT et FILS, pour leur Semoir à toutes fleurs, leur Semoir à Semence et leur Semoir à Engrais.

1810 Société Royale d'Agriculture d'Angleterre, à Cambridge—250 francs.

1841 Société Royale d'Agriculture d'Angleterre, à Liverpool—230 francs.

Grass Seed Engine, for sowing broad-cast Clover and Ryegrass, with Conductors to lead within 6 inches of the ground, with Brushes fitted to either of the above Hoes. Price to suit No. 1 Hoe, 3L.; and 5s. extra for every 6 inches width above No. 1 size. Extra, if made wider than above described, for every additional foot spread, 10s.

N.B.—Full directions for working will be sent with each Implement.

GARRETT'S IMPROVED SCOPLES COHN AND SEED DRILLING MACHINES, WITHOUT THE APPARATUS FOR DRILLING MANURE. (See Engraving, p. 136.)

PRIZES awarded by different Agricultural Societies to

RICHARD GARRETT and SON, for their PATENT DRILLS.

The Great Council Medal of the Exhibition of Industry of All Nations for 1851 was awarded to R. GARRETT and SON's General Purpose Drill, Seed and Manure Drill, and Seed Sowing Engine.

1840 The Royal Agricultural Society of England, at Cambridge—10L.

1855 Société Royale d'Agriculture d'Irlande à Carlisle (noté), pour le meilleur Semoir à blé—200 francs.  
1855 Société Royale d'Agriculture d'Irlande à Carlisle (noté), pour le meilleur Semoir à navets et à engrais—Prix spécial de 125 francs.  
1855 Société Royale d'Agriculture d'Irlande à Carlisle (noté), pour le meilleur Semoir à engrais liquide—125 francs.

La gravure représente le Semoir à Blé du comté de Suffolk, dont la forme et les mérites sont généralement connus aux agronomes. On a, à diverses époques, introduit dans sa construction différents perfectionnements afin d'en simplifier les parties, et de l'adapter mieux aux usages pour lesquels il est employé, mais le principe est resté le même que celui du Semoir en usage depuis tant d'années dans le comté de Suffolk, et tel qu'il est fabriqué par Messieurs GARRETT et FILS.

On peut aisément changer les contres du Semoir pour semer n'importe quelles distances du blé, de l'orge, des fèves, des pois, ou toute autre graine; et, en changeant le tambour d'alimentation, des navets, des cheux, des bettes, et autres semences. L'alimentation est déterminée par des roues dentelées de vitesse différente, disposées pour semer de  $\frac{1}{2}$  à 5 boisseaux de grain, et de 1 à 6 livres de semence par arpent.

La machine est disposée de façon à assurer une alimentation régulière, soit en montant soit en descendant une colline, aussi bien que sur un terrain plat, à l'aide de deux roues dentelées de vitesse différente, une à chaque bout du tambour alimentant, et qui peuvent facilement chacune être mise en jeu ou hors d'action, à volonté, pour faire agir le tambour alternativement par chaque bout; la petite roue en montant, la grande en descendant une colline.

La gravure représente une vue latérale du Semoir, avec train de devant à timon, et boîte pour semer l'herbe. Avec ce timon, qui est adapté pour le labourage à plat, et qui forme le devant de l'instrument, un homme peut conserver ses rangées de blé parfaitement parallèles au tracé précédent du Semoir. Ceci s'obtient par l'homme tenant

1855 The Royal Agricultural Society of Ireland, at Carlow, August, best Liquid Manure Drill—*5*l**.

The engraving shows the Suffolk Corn Drill, the form and merits of which are familiar to agriculturists generally. Various improvements have from time to time been made in its construction, tending to simplify the working parts, and better adapt it to all the purposes for which it is required, but the principle remains the same as has been in use in Suffolk, and manufactured by R. GARRETT AND SONS for many years.

The coulters of the Drill may readily be altered to deposit at any distances apart, wheat, barley, beans, peas, or other grain; and by changing the delivery barrel, turnip, colewort, mangold-wurzel, and other seeds. The delivery is regulated by cog-wheels of different speeds, adapted to drill from say 5 to 18 pecks of grain, and from 1 to 6 lbs. of seed per acre.

The arrangements are so contrived as to insure an equally regular delivery when going up or down hill, as on level ground, by having two cog-wheels of different speeds, one placed on each end of the delivery barrel, either of which may readily be put in or out of gear, as required, to work the barrel from alternate ends; the small wheel when going up hill, and the larger one when going down.

The engraving represents a side view of the Drill, showing it with a fore carriage steering, and box for sowing grass seeds. With this steering, which is adapted for lands ploughed flat, and acts as a fore-carriage to the implement, a man may keep the rows of corn perfectly parallel with the preceding course of the Drill; this is done by a

en mal la poignée du timon, comme le montre la gravure, et guidant la petite roue de devant dans le tracé de la grande roue précédente. Ceci, avec un peu d'habileté, est très facile, et la régularité parfaite de la récolte sera une récompense bien suffisante, en donnant une grande facilité pour faire passer la houe à cheval entre les rangées, avec une précision égale, dans les endroits où le semis se répète dans le champ. Le timon à bascule, qui coûte moins cher, et guidé sans un laboureur de plus, est suffisant lorsque le semoir parcourt deux fois chaque partie du terrain, et où une roue peut être guidée dans un sillou ouvert.

La machine à semer s'attache quelquefois au Semoir à Blé, et est disposée pour semer en même temps que le blé de printemps, ou elle peut s'employer comme un instrument séparé pour les semences d'herbes à la vêture, ou pour les navets et betteraves en sillons.

Afin d'assurer une égale distribution des différentes espèces de semences, la boîte est divisée en deux compartiments; l'une pour semences lourdes, telles que la luzerne et le trèfle, &c., et l'autre pour les semences plus légères, telles que l'avoine; les premières sont distribuées en sortant de cylindres ou godets, et les dernières de pinceaux effilés, tout en descendant par les mêmes conducteurs. Les quantités voulues de chaque semence sont de la sorte bien mesurées, et semées également dans toute l'étendue du champ, et peuvent d'ailleurs être réglées en tournant la vis au bout de la boîte à levier, et en changeant de roues sur le cylindre-godet pour la luzerne, &c. Quand on désire avoir cette addition, il faut que les leviers du Semoir soient faits de fer au lieu de bois, à un prix additionnel de 3 fr. 75 c. par chaque levier. (Voyez les Extras.)

Les Semoirs ci-dessous sont généralement construits pour déposer un nombre égal de rangées, et à des intervalles

man holding the steering handle as shown, and keeping the small fore-wheel in the track of the former large one; this, with a little practice, is very easy, and will amply repay by the perfect regularity in the crop, affording the greatest facility for the horse-hoe going between all the rows of plants, and with equal precision, where the Drills join in their different courses through the field. The swing steering, at a less cost, and managed without an additional attendant, is amply sufficient where the Drill covers each stetch, or land, in twice, and where one wheel can be kept in the open furrow.

The seed-engine is sometimes made to affix to the Corn Drill, and is adapted to sow at the same time with spring corn, or may be used as a separate implement for grass seeds, broadcast, or turnips and mangold-wurtzel in rows.

In order to ensure an equal delivery of the different kinds of seed, the box is partitioned off into two departments, one for heavy seeds, such as clover, trefoil, &c., and the other for lighter seeds, such as rye-grass; the former being delivered from cups, and the latter from brushes, down the same conductors with it. The required quantities of each seed are thus nicely mixed, and evenly sown all over the land, and may be regulated by turning the screw at the end of the box for rye grass, and changing wheels on the cup-barrel, for clover, &c. When this addition is wanted, the levers of the Drill must be made of iron instead of wood, at an additional cost of 3s. each lever. (See "extras.")

N.B.—The above Drills are usually made to deposit an equal number of rows, and at the same distances apart, as

égaux, comme nous l'avons expliquée pour les semoirs à toutes fins d'une grandeur correspondante; mais si l'on désire quelque changement dans l'étendue des roues, ou dans le nombre des rangées, il est nécessaire d'en donner l'explication, en marquant le nombre de rangées et l'intervalle entre les roues mesuré sur le terrain.

*On peut ajouter les parties suivantes aux Semoirs à Blé ou à Semence,*

Extra, pour un train de devant avec timon, comme il est décrit à la fin du page 198—87 fr. 50c.

Extra, lorsque le semoir est fait avec un timon à bascule, comme il est décrit à la page 199—62 fr. 50c.

Extra, s'il est fait avec timon perfectionné, avec l'enrayage de friction et le levier complexe breveté pour assujettir le timon dans les terres lugubres, comme on voit par la gravure, p. 196—112 fr. 50c.

Extra, tambours d'étain à attacher sous la boîte pour apporter la semence de deux semoirs dans un contou, à l'usage des fèves ou pois—chaque tambour—2 fr. 50c.

Extra, courtes avec tiges forgées et lames tondues, chaque—1 fr. 25 c.

Extra, tambours en étain pour s'adapter au fond de la boîte à grains, sous le cylindre avant, de faire sortir la semence en petite quantité, chaque—1 fr. 25 c.

Extra, courtes en acier forgé, pour terres marécageuses, chaque—2 fr. 50c.

Extra, leviers en fer pour courtes doubles, chaque—3 fr. 75 c.

Extra, machine semoir perfectionnée, pour luzerno et l'avoine en même temps que pour blé, ainsi qu'il est décrit, page 199, chaque distributeur—11 fr. 25 c.

Extra, un cylindre additionnel pour semence de navet et de betterave, pour chaque roue, y compris le fusain—6 fr.

Extra, pour deux timons en plus—25 fr.

Extra, si le semoir est construit pour couvrir plus de terrain que les courtes ne le comportent, à l'intervalle de 6 pouces, pour chaque 6 pouces plus large dans l'intervalle des roues—6 fr.

Extra, s'il est fait pour s'alléger à chaque bout afin d'obtenir une alimentation régulière en montant ou en descendant une colline—12 fr. 50c.

Extra, si on ajoute l'appareil perfectionné pour lever et baisser la boîte, afin de pouvoir la placer dans toute position pour adapter le semoir aux terrains très accidentés—62 fr. 50c.

Délivré sans frais jusqu'à Londres, Hull, ou Newcastle-on-Tyne.

described against the corresponding size Drills for General Purposes; but if any alteration be required in the spread of the wheels, or number of the rows, IT IS NECESSARY IN ORDERING TO EXPLAIN IT, by stating the number of rows and spread between the travelling wheels measured on the ground.

*The following additions may be had with the Corn or Seed-Drilling Machine, if required:*—

Extra, for a fore-carriage steering work, as described at bottom of page 198—37. 10s.

Extra, when a drill is made with a swing steering, as described at page 199—2L. 10s.

Extra, if made with improved fore-steering, fitted with friction break and patent compound lever for steadyng steering in going over rough lands, as shown in engraving, page 196—4L. 10s.

Extra, wide tins to hang under the box to convey seed from 2 hoppers into 1 coulter, used for beans and peas, each tin—2s.

Extra, coulters with hammered stalks and cast blades, each—1s.

Extra, for tins to fit in the bottom of corn-box, under the barrel, in order to drill out seeds to a very small quantity, each—1s.

Extra, wrought-steel coulters for fen lands, each—2s.

Extra, if made with iron instead of wood levers, each—3s.

Extra, for improved seed-engine, to sow clover and ryegrass, at the same time with the corn, as described page 199, each seedling—9s.

Extra, for an additional barrel for depositing turnip and mangold seed, for each wheel or rim, including spindle—3s.

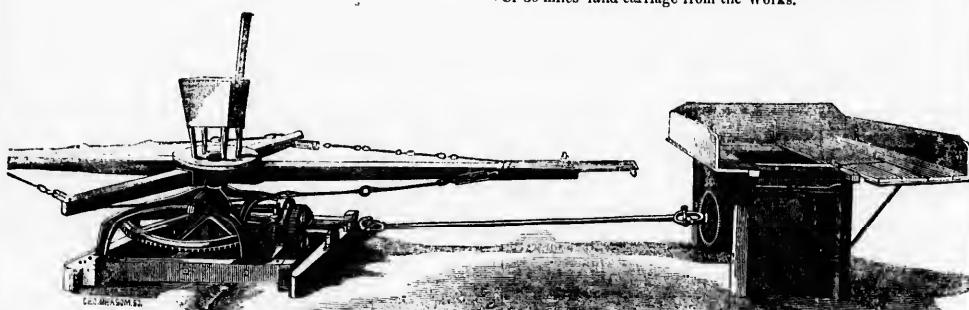

Extra, for an additional pair of shafts—1L.

Extra, if the Drill be made to extend over more land than the coulters will allow, when set at six inches apart, for every additional six inches wider in the spread of the wheels—5s.

Extra, if made to lighten at each end to regulate an equal delivery, whether going up or down hill—10s.

Extra, if made with improved apparatus for raising and lowering the Box, so that it may be placed in any required position to adapt the Drill for very hilly lands—2L. 10s.

Delivered Carriage Free to London or Newcastle-on-Tyne by water; to any Station on the Line of the Eastern Counties and Eastern Union Railways between London, Ipswich, Bury St. Edmund's, Norwich, and Peterborough; or 30 miles' land-carriage from the Works.

MACHINE À BATTUE PURIFICATIONNÉE DE GARRETT, DE LA FORCE DE DEUX CHEVAUX.

*Le prix de 250 francs a été accordé pour cette Machine à Messieurs R. GARRATT et FILS, par la Société Royale d'Agriculture à Lewes, Juillet 1852.*

*Cette Gravure représente la Machine à Battre de la force de deux Chevaux, N° 48, prête à fonctionner.*

Cette Machine est semblable en principe aux Machines à tambours ouverts, décrites à la page 25 de l'édition française du Catalogue de M. R. Garrett and Fils, mais avec un changement de construction afin de correspondre à la diminution

GARRETT'S TWO-HORSE POWER IMPROVED THRASHING MACHINE.

*The Prize of 10L. was awarded to R. GARRATT and Son for this Machine, at the Royal Agricultural Society's Meeting, at Lewes, July 1852.*

*The above Engraving represents the two-horse power Thrashing Machine, No. 48, set down for work.*

This Machine is similar in principle to the Improved Open Drum Machines described at page 25 of the French edition of R. Garrett and Son's Catalogue, but altered in construction to meet its diminished power. From its ex-

de puissance. Elle est extrêmement facile à diriger pendant qu'elle fonctionne, et peut aisément se déplacer. Les moyens de régler le concave qui entoure le tambour, pour l'adapter à battre les différentes espèces de grains, sont sous la main du laboureur, ainsi que le montre la gravure. Elle peut travailler toute espèce de grain.

La force motrice à cheval de cette machine est activée d'une façon convenable et s'adapte parfaitement à toutes les machines à couper la paille, à broyer, et à moudre, décrites dans le Catalogue de Messieurs GARRETT et FILS, et peut se faire mouvoir pour ces différents travaux avec un ou deux chevaux, à volonté.

*Prix Net.*

48. Machine pour deux chevaux, à trois mouvements, y compris siège du conducteur, deux palonniers et traits de conduite, fermoirs et plateforme pour empêcher les graines éparpillées de toucher de l'appareil parmi la paille ou le blé; deux pleins pour assurer la machine pendant qu'elle fonctionne, clef à écrous, et vase en fer-blanc pour l'huile, complète comme machine statuaire . . . . .	875 fr.
Pair de roues 2½ pouces et train pour transport . . . . .	125
Complete et portable . . . . .	1000fr.

Additions qu'on peut faire à cette Machine, Fuscau articulé et converti do fer, pour que les chevaux puissent passer dessus . . . . .	75
Fuscau articulé sans couverture . . . . .	43

*BROYEUR DE TOUREAUX, N° 67A.*

Cet appareil a remporté pendant trois années consécutives les Prix décernés par la Société d'Agriculture à Gloucester en 1853, à Lincoln en 1854, et à Carlisle en 1855.

Ce broyeur s'élève sur un bâti solide en bois, et sert à casser et réduire les tourteaux épais et durs provenant de l'étranger. Il comporte deux groupes de cylindres qui peuvent être ajustés selon les besoins, de façon à produire des morceaux de dimensions différentes pour bouillons ou brébis, ou même de la poudre pour engrangé. Entre ses rouleaux est fixé un crible, qui laisse passer toute la quantité qui a déjà été suffisamment réduite en passant par les premiers rouleaux. Cette disposition assure une égalité plus parfaite entre les différents morceaux, et elle fait éviter le travail superflu en empêchant la matière qui est déjà moulinée de passer entre les rouleaux avec la matière qui est encore à mouler. Cette machine peut être mue soit par deux hommes, soit au moyen d'un manège.

Prix net . . . . . fr. 275

treme compactness it is rendered very easy of management when in work, and of removal from place to place. The means of regulating the concave which surrounds the drum, to set it for thrashing different kinds of grain, are immediately within the reach of the attendant, as shewn in the engraving. It is capable of thrashing any kind of grain.

The horse-power of this Machine is properly speeded, and exactly suited for any of the Chaff-cutting Engines, Grinding Mills, or Coko Crushers described in GARRETT and Son's Catalogue, and for such purposes may be worked with one or two horses, as the nature of the work may require.

*Net Prices.*

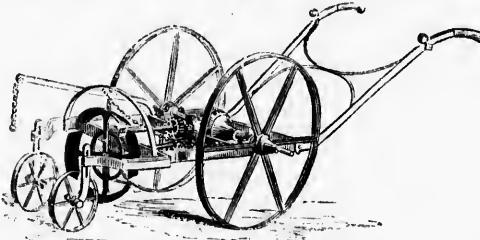

48. Two-horse power, three-motion time, including driver's seat, 2 whippletree and leading sticks, shutters, and standing stage to form a platform for preventing the loose ears falling off the barn-work amongst the straw or corn, 2 spikes for securing the Machine while at work, spanner for the nuts, and tin oil-preserved, complete as a fixture . . . . .	£35 0 0

*CAKE CRUSHER, N° 67A.*

This Crusher took the Prizes of the Royal Agricultural Society three years in succession, viz., at Gloucester, 1852, at Lincoln, 1854, and at Carlisle in 1855, as the best Machine for all varieties of Cake.

This Machine is made on a strong wood frame, and is for the purpose of breaking very thick hard foreign cakes. It is fitted with two sets of barrels, which may be adjusted as required, to break cake into different sized pieces, for bullocks or sheep, or powder for manure. A screen is fixed between these barrels, through which as much of the cake as is sufficiently broken in passing through the first rollers is sifted; thus insuring pieces of more uniform size, and avoiding the unnecessary labour occasioned by that which is already sufficiently broken passing through the bottom rollers with that which is not. The Machine may be worked by two men, or horse-power.

Net Price . . . . . £11

HOVE-A-CHEVAL À REVOLUTION, BREVETÉ, DE BUCKVALE, FABRIQUE PAR MESSIEURS R. GARRETT ET FILS.

Cet instrument sert à houer et à éclaircir à la fois une seule rangée de navets ou autres plantes à plat ou sur sillons. Il fonctionne avec un homme et un petit cheval, et il est disposé de façon à pouvoir régler à volonté la profondeur à laquelle pénètrent les lames. Le laboureur équipant et l'empêche de fonctionner lorsque les plantes sont chair-serrées, sans affecter les houes employées, couper

HUCKVALE'S PATENT REVOLVING HOE, MANUFACTURED BY RICHARD GARRETT AND SON.

This implement is for the purpose of hoeing and thinning at once and the same time a single row of Turnips or other roots on either flat or ridge ploughed lands. It is worked by a light horse or pony and one man, and is so constructed that the depth to which the cutters enter the ground can be regulated as required, and the attendant by pressing down the handles can immediately lift the cutting apparatus out of work where the plants are thin on the row, without

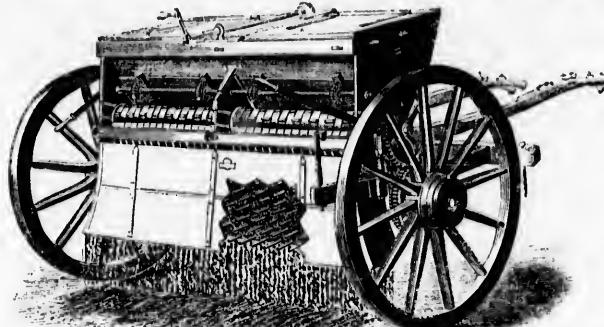

ROYAUME-UNI DE LA GRANDE-BRETAGNE ET D'IRLANDE.  
GARRETT'S Implements continued—CLASS III.—Section 3.—*Annexe east.*

In surface du sol, ou arrêter le mouvement de la machine, et à faire fonctionner de nouveau aussi facilement sans s'arrêter. Cette houe laisse les plantes à toute distance souhaitée.

Prix, complète avec l'houe pour houer toute la surface du sol en même temps que les plantes sont éclaircies . . . . . fr. 200

Comme houe pour éclaircir seulement les navets 150

A obtenu le Prix de 125 francs de la Société Royale d'Agriculture d'Angleterre, à Lincoln, en 1854, et 125 fr. à Carlisle, en 1855, comme étant la meilleure Housse à Cheval pour activer et éclaircir les navets.

DISTRIBUTEUR BREVETÉ D'ENGRAIS À LA VOLÉE,

Inventé par CHAMBERS, et fabriqué seulement par Messieurs R. GARNETT et FILS.

Prix net, 525 francs.

Un Prix de 250 fr. a été décerné à cette machine par la Société Royale d'Agriculture à Lincoln en 1854, et un prix de 250 fr. a été décerné à cette machine par la Société d'Agriculture à Carlisle en 1855.

Cette machine est construite sur un plan entièrement nouveau, et consiste dans un tambour ou cylindre formé d'une série d'anneaux, ayant chacun des surfaces en saillie (pour déposer des engrâis grossiers ou de la plus grande finesse) qui viennent en contact avec des racloirs placés sous la boîte, et dont la pression sur le cylindre est réglée par des poids mobiles de la manière la plus exacte, d'après l'adhérence des engrâis employé. Elle a aussi un moyen nouveau et excellent d'agiter l'engrais, par lequel on est certain d'une distribution constante et régulière de la boîte dans le cylindre, quelle que soit l'humidité du contenu de la boîte. On peut semer depuis deux boîtes et au-dessus en quelque quantité que ce soit, et on l'ajuste si facilement par la coulisse, que même en pleine action la quantité distribuée peut être variée en rapport avec la nature du sol, sans changer les rones. A tous les agriculteurs qui se servent d'engrais artificiels, on recommande cette machine comme un instrument des plus efficaces, et devenant chaque jour plus indispensable, maintenant qu'on a acquis la conviction que les engrâis, pour donner un résultat satisfaisant, doivent être parfaitement mélangés avec le sol.

SEMOUR DE GARRETT, PERFECTIONNÉ ET ÉCONOMIQUE, POUR UN CHEVAL, POUR DISTRIBUER NAVETS ET ENGRAIS, ADAPTE AUX PETITES FERMES.

Ce Semoir obtient un Prix de 125 francs de la Société Royale d'Agriculture à Lewes, en juillet, 1852.

La gravure ci-dessous représente un excellent Semoir économique, pour semer en rangées dans les terres plates ou à sillons, des semences de navets et betteraves, avec tourteaux de colza, guano, super-phosphate, tourbe, et tout engrâis léger pulvérisé. Ce semoir comprend, malgré sa simplicité, presque tous les avantages importants des semoirs les plus chers. Les coulisses à engrâis sont fixées à un timon

affectant la houe employée, coulissant la surface, ou vérifiant le mouvement de la Machine, et il peut, sans arrêt, être aisément abaissé pour faire à nouveau du travail.

Price complete, with hoe to hoe the whole surface of the land, at the same time that the ploughs are thinned on the row, for both flat and ridged work £8  
Ditto, ditto, if made for ridge work only . . . . . 7  
Ditto, ditto, if made flat only . . . . . 7  
Ditto, as a turnip thinner only . . . . . 6

*A Prize of 51, for the above implement, as the best Horse Hoe for setting out or thinning Turnips, was awarded by the Royal Agricultural Society of England at the Lincoln Meeting, 1854, and 51. at Carlisle, July, 1855.*

CHAMBERS'S PATENT BROADCAST MANURE DISTRIBUTOR.

Sole Manufacturers—RICHARD GARNETT and Son.

The Prize of 101, was awarded for this machine by the Royal Agricultural Society at their meeting at Lincoln, 1854, and again at their meeting at Carlisle, July, 1855, 101, and at the Carlow Meeting of Royal Irish Society, August, 1855, 51.

Price, spreading  $7\frac{1}{2}$  feet between the travelling-wheels . . . . . 21  
" extra for every additional 6 inches : 1

This machine is constructed upon an entirely new principle, and consists of a barrel or cylinder formed of a series of rings, each having projecting surfaces (for the delivery of either highly comminuted or rough manure), which come in contact with scrapers placed beneath the box, the pressure of which on the barrel being regulated by moveable weights to the greatest nicety, according to the adhesiveness of the manure used. It is also fitted with a novel and excellent stirrer, which never fails to give a constant and regular delivery from the box to the barrel, however moist the contents of the box may be. It will sow from two bushels to any quantity required; and it is so easily adjusted by the slide, that even when at work the quantity can be varied according to the quality of the soil, to deposit more or less as required, and without the change of wheels. To all agriculturists using artificial manures, this is recommended as a most efficient machine, and one that is daily being more needed from the now well assured conviction, that manures never act so efficiently as when thoroughly incorporated with the soil.

GARRETT'S IMPROVED WEST OF ENGLAND ONE-HORSE ECONOMICAL TURNIP AND MANURE DRILL FOR SMALL STOCK FARMS.

A Prize of 51, was awarded for this Drill at the Royal Agricultural Society's meeting at Lewes in July, 1852.

The above engraving represents a cheap and efficient Drill, for the purpose of drilling in rows either flat or ridge-ploughed lands, turnip and mangold-wurtzel seeds, with rape-cake, guano, superphosphate, Irish peat, charcoal, or any light pulverized manures. It comprises, in a simple form, most of the important features in the more expensive Drills: the manure coulters are fixed to a swing beam, while

balancant, pendant que ceux à semence sont attachés aux leviers, afin de pouvoir enfouir l'engrais dans la terre à n'importe quelle profondeur, et de pouvoir déposer la semence juste au-dessus de l'engrais, avec une certaine

those for seed are attached to levers, to admit of the manure being buried any depth in the soil, and the seed to be deposited directly over it, with a portion of mould between them, for which forks are provided. It is calculated for two

quantité de terre entre les deux, et pour laquelle il y a des fourches. Il est adapté pour deux rangées à une distance de 30 à 24 pouces, et trois rangées à 15 pouces, ou à toute autre distance voulue et commandée; et les quantités de semences peuvent être délivrées à volonté, par exemple de 1 à 6 livres par arpent pour balets, et de 3 à 8 livres par arpent pour betteraves. On pourra également distribuer l'engrais comme on le desire de 2 à 12 bushels par arpent. Le semoir ne nécessite qu'un cheval, et peut se diriger avec la plus grande facilité, n'ayant que 3 pieds 8 pouces de hauteur, 4 pieds de large, et ne pesant que 150 kilos. Dans les fermes où l'on produit peu de récoltes à racines et pour l'exportation, son bon marché (le prix n'est guère que la moitié du prix de tout autre semoir à engrais) doit le faire apprécier. Les maisons d'exportation trouveront dans ce semoir un article excellent, non seulement à cause du petit coûts dans lequel il peut s'embellir, mais aussi parce que sa construction est tellement simple qu'elle peut facilement être comprise par les agronomes étrangers. Les fabricants recommandent donc ce semoir, en toute confiance, aux maisons d'exportation, comme le premier essai fait jusqu'ici pour présenter un semoir à engrais à un prix aussi modéré, et néanmoins possédant toutes les avantages voulus.

Prix net . . . . . 350 francs.

Envoi sans frais jusqu'à Londres, Hull, ou Newcastle-on-Tyne.

MACHINES À VAPEUR PORTATIVES ET MACHINES À BATTRE COMBINÉES À VAPEUR, BIÈVETTES.

(Voir la Gravure, p. 204.)

A l'EXPOSITION DE L'INDUSTRIE DE TOUTES LES NATIONS, en 1851, la GRANDE MEDAILLE a été décernée à Messrs. R. GARRETT & FINS, pour leurs Machines à vapeur Portatives et Machines à Battre Combinées.

*Les Machines à vapeur Portatives de Messrs. R. GARRETT et FILS, ont aussi obtenu les Prix suivants :—*

1846 Société Royale d'Agriculture d'Angleterre, à Newcastle-on-Tyne—625 francs.

1847 Société Royale d'Agriculture d'Angleterre, à Northampton, où 47 différentes machines à battre étaient inscrites pour entrer en concurrence—500 francs.

1848 Société Royale d'Agriculture d'Angleterre, à York, où 48 machines à battre étaient inscrites pour entrer en concurrence—500 francs.

1849 Société Royale d'Agriculture d'Angleterre, à Norwich, où 57 différentes machines étaient inscrites pour entrer en concurrence—625 francs.

rows from 20 to 21 inches apart, and three rows at 15 inches apart, or any other spaces that may be specified for with the order; and the quantities may be delivered as required—say, for turnips 1 to 6 lbs. per acre, and beet-seed 3 to 8 lbs. per acre. The manure may be regulated as required, from 2 to 12 bushels per acre. The drill is draught of a horse or pony, and, being only 3 feet 8 inches high, 4 feet wide, and only weighing 3 cwt., will be found most convenient and easy of management. On farms where small quantities of roots are grown, and for exportation, its cheapness (the first cost not being more than half the price of any manure Drill hitherto offered) and compactness must recommend it to general notice. To shippers it will prove a great desideratum, not only in consequence of the small compass into which it can be packed, but its construction is so simple that it cannot fail to be readily understood by agricultural workmen abroad. As a first attempt at introducing a drill for depositing manure at such a reduced price, to meet the increasing requirements of the farmer, the manufacturers respectfully submit it, with every confidence, to their notice.

Net price . . . . . £14.  
Delivered, carriage free, to London, or Newcastle-on-Tyne, or to any station on the lines of the Eastern Counties and Eastern Union Railways.

POWER STEAM ENGINE AND PATENT COMBINED STEAM-POWER THRESHING MACHINES.

(See Engraving, p. 204.)

The GREAT MEDAL of the EXHIBITION OF INDUSTRY OF ALL NATIONS for 1851, was awarded to GARRETT and SON for their Portable Steam Engines and Improved Threshing Machines.

The following Prizes have also been awarded to R. GARRETT and SON, for their Portable Steam Engines and Improved Threshing Machines :—

1846 The Royal Agricultural Society of England, at Newcastle-on-Tyne—25.

1847 The Royal Agricultural Society of England, at Northampton, where 47 different threshing machines were entered for competition—20.

1848 The Royal Agricultural Society of England, at York, where 48 different threshing machines were entered for competition—20.

1849 The Royal Agricultural Society of England, at Norwich, where 57 different threshing machines were entered for competition—25.

#### MACHINES À VAPEUR PORTATIVES.

Il y a peu d'opérations qui paient mieux la dépense première de la vapeur que celles qui ont à être exécutées dans une ferme à l'aide de chevaux. Lorsqu'on considère qu'un cinquième du produit entier de la terre (ainsi que l'ont calculé avec soin des hommes d'expérience pratique) est consommé par les chevaux employés à sa culture, il est impossible que ceux qui ont le moins du monde examiné cette question ne comprennent pas qu'en diminuant cette dépense, on rendrait aux agriculteurs un immense service. L'emploi de la vapeur en offre l'occasion, car il est calculé que dans les localités où le charbon de terre est à 25 francs les 1000 kilogrammes, on peut obtenir autant d'ouvrage pour 20 centimes à l'aide de la vapeur, que pour 1 franc 25 cent. avec chevaux. On pourrait croire que cette économie est exagérée; mais l'expérience prouvera que nous sommes au-dessous plutôt qu'à un-dessus de la réalité, et que cette nouvelle application de la vapeur mérite la considération sérieuse de tous les agriculteurs qui sont en position de l'adopter.

La dépense première pourra être une objection pour quelques personnes, mais cette dépense donnera un bénéfice plus grand que toute autre dépense faite dans une ferme, et tout ce qu'il faut pour convaincre ceux qui sont disposés à l'adopter, est d'essayer une machine, afin de pouvoir faire leurs calculs; ou dans les fermes de trop peu d'étendue pour demander une telle dépense, que deux ou trois voisins se réunissent, et en achètent une entre eux, afin que chacun puisse s'assurer les avantages que sur. Il ne pourraient peut-être obtenir.

Les principales opérations d'une ferme auxquelles on puisse appliquer la vapeur comme force motrice avec avantage sont: Battre et nettoyer le blé, couper les légumes, le foin, ou la paille; monter le blé, l'orge, les fèves, les pois, les avocates et le lin; Broyer les tourteaux de lin et de colza; pomper et sécher. Pour tout ce que nous venons d'énumérer, les Machines à Vapeur Portatives fonctionnent dans la perfection.

Les chaudières sont construites avec foyer et tubes, exposant au feu une grande surface, et produisant rapidement la vapeur, avec une petite quantité de combustible. Afin de donner plus de force, plus de durée, et de rendre la chaudière moins apte à être abimée par les dépos et les matières étrangères auxquels sont toujours sujettes les machines portatives qui fonctionnent en différents endroits avec de l'eau sale, le foyer est construit d'une façon particulière, dont les avantages ont reçu la notice favorable des rapports insérés dans le Journal de la Société d'Agriculture. Les chaudières sont reconvertis d'un surtout ou enveloppe faite d'une matière non-conductrice, enveloppée elle-même de fer, ce qui est d'un très-grand avantage pour conserver et économiser la vapeur, lorsque la machine fonctionne exposée au froid dans des endroits exposés. Les tubes de chaudières et la cheminée sont arrangés de façon qu'il n'y a aucun danger d'ignition par étincelles, ou matière allumée, qui sont éloignées avant de pouvoir s'échapper. Les machines sont construites d'après le meilleur système, avec robinets jungle et à vapeur, soupapes de sûreté, modérateur, &c., &c. La pompe pour alimenter la chaudière d'eau est arrangée de façon à fonctionner continuellement, l'eau retournant à la bûche alimentaire, lorsque la chaudière n'en a pas besoin. On trouvera que cette construction est un perfectionnement important sur les machines dans lesquelles la pompe fonctionne lorsque la chaudière a besoin d'eau, parce qu'il n'y a plus possibilité d'explosion, et la pompe n'est pas sujette à se déranger aussi facilement que lorsque l'eau doit être élevée du terrain et le vide fait seulement à intervalles.

Ces machines sont montées sur un train solide de quatre roues avec essieu en fer forgé, et peuvent facilement tourner et être transportées de place en place avec deux ou trois chevaux. Les trains sont construits entièrement de fer forgé, ce qui ajoute beaucoup à leur légèreté et à leur solidité.

#### MACHINE À VAPEUR PORTATIVE À QUATRE CHEVAUX.

Cette machine sert à faire marcher les machines à battre ordinaires fabriquées par Messrs. GARRETT and FILS, avec une machine à secouer la paille. La consommation de charbon de terre par journée de 10 heures est d'environ 125 kilogrammes, et de 1,320 litres d'eau.

Prix net . . . . . 4,625 francs.

#### PORTABLE STEAM ENGINES.

There are few operations that will pay better for the outlay on steam power than those that have to be performed on a farm by horses. When it is considered that one-fifth part of the whole produce of the land (as has been carefully calculated by experienced and practical men) is consumed by the horses employed to cultivate it, it can hardly fail to occur to every one who has given the matter the least consideration, that to decrease this expense would be one of the greatest boons that could be conferred on the agriculturists. The use of steam power offers this opportunity, as it is calculated that in localities where coals are 20*fr.* per ton, as much work can be done for two pence by steam as for one shilling by horses. The saving may appear to be overdrawn, but will be found on trial to be rather under than over-rated, and well worthy the consideration of all those engaged in farming who may have it in their power to avail themselves of these means.

The outlay may be considered by some as an objection, but the cost will pay more profit than any other outlay on a farm, and all that is wanted to convince parties inclined to adopt it, is the trial of an engine, upon which to make their own calculation; or where the operations are too limited to warrant such an expenditure, let two or three neighbours join and purchase one between them, that each may be allowed to reap the benefit which ALONE perhaps he might not have the power to attain.

The chief operations in farming to which steam power may be advantageously applied, are thrashing and dressing corn, cutting vegetables and hay or straw, grinding wheat, barley, beans, peas, oats, and linseed; crushing linseed and rape cake; pumping and sawing; and G. and Sons' Improved Portable Engines, will be found equally adapted for these purposes.

The boilers are constructed with fire-box and tubes, giving a large heating surface exposed to the fire, and generating steam quickly, with a small quantity of fuel. In order to impart greater strength and durability, and to render the boiler less liable to injury from sediment and extraneous deposits, to which all portable engines must be subject from working in different situations with dirty water, the fire-box is of peculiar construction, the advantages of which are particularly noticed in the reports of the Royal Agricultural Society's Journal. The boilers are covered with a jacket of non-conducting material, and that encased with iron, which will be found very advantageous in retaining and economising the steam when at work in cold weather in exposed situations. The boiler tubes and smoke funnel are so arranged that there is no danger of ignition from sparks, or lighted matter, which become extinguished before they can possibly escape. The engines are constructed on the most improved principle, and fitted with steam and gauge cocks, safety valves, governors, and other requisites. The pump for supplying water to the boiler is so arranged as to be kept *always at work*, the water, when not required for the boiler, being returned into the supply cistern. This will be found a great advantage over those which are only set to work when the boiler requires water, as the liability of the pipes to burst is obviated, and the pump not so liable to get disarranged as when the water has to be raised from the ground and the vacuum formed only at intervals.

They are mounted on four strong wood carriage wheels with wrought-iron axletrees, and may easily be turned round or removed from place to place with two or three horses. The carriages are constructed of wrought iron throughout, which adds much to their lightness and durability.

#### FOUR-HORSE POWER PORTABLE STEAM ENGINE.

This Engine is adapted for driving the ordinary thrashing machine barn works, made by R. GARRETT and Sons; either with or without straw shaker. The consumption of coals per day of ten hours, about 2*q* cwt., and of water 340 gallons.

Net price . . . . . £185

ROYAUME-UNI DE LA GRANDE-BRETAGNE ET D'IRLANDE.  
GARRETT's Implements continued—CLASS III.—Section 3.—*Ancêne east.*

**MACHINE À VAPEUR PORTATIVE À CINQ CHEVAUX.**

Cette machine s'emploie pour mettre en mouvement la même description de machines à battre que celle à quatre chevaux, mais ayant plus de pouvoir moteur, peut faire en proportion plus d'ouvrage, et est surtout convenable pour les districts où la paille est longue et les récoltes lourdes. Elle consomme par journée de 10 heures 176 kilogrammes de charbon de terre, et 1,720 litres d'eau.

Prix net . . . . . 5,000 francs.

**MACHINE À VAPEUR PORTATIVE À SIX CHEVAUX.**

Cette machine à vapeur est adaptée à mettre en mouvement la machine à battre avec appareil combiné pour secouer et cribler la paille, N° 50 F, décrit à la page 207. On peut également l'appliquer à faire fonctionner les mécaniques de la grange, pour broyer et couper les produits de la ferme, pomper, &c. La consommation de charbon par journée de 10 heures est de 200 kilogrammes, et de 2,000 litres d'eau.

Prix net . . . . . 5,500 francs.

**MACHINE À VAPEUR PORTATIVE À SEPT CHEVAUX.**

Cette machine s'emploie pour faire fonctionner l'appareil à battre, à secouer la paille, à cribler et à vanner, N° 50 F, décrit page 207, soit comme machine portative ou fixe. On l'emploie également pour faire marcher une scie mécanique circulaire. Consommation de charbon par journée de 10 heures 225 kilogrammes, et 2,400 litres d'eau.

Prix net . . . . . 5,875 francs.

**MACHINE À VAPEUR PORTATIVE À HUIT CHEVAUX.**

Cette machine sera à mettre en mouvement l'instrument combiné pour apprêter, battre, et nettoyer, N° 50 L, page 207, et possède de grandes avantages pour les propriétaires de grandes fermes et de grandes propriétés, dans lesquelles, outre les opérations ordinaires d'une ferme, on peut employer à faire fonctionner une scie circulaire avec bane à cheville, pour couper des bois ronds, ou les pompes d'arrosement, de séchage, etc. Consommation de charbon par journée de 10 heures 250 kilogrammes, et 2,800 litres d'eau.

Prix net . . . . . 6,125 francs.

**MACHINES À BATTRE PERFECTIONNÉES COMBINES.**

Depuis que la vapeur a été généralement adoptée comme la force motrice la plus convenable et la plus économique pour faire fonctionner les instruments d'agriculture, Messrs. GARRETT et FILS ont dirigé tous leurs efforts vers le perfectionnement des machines à battre, pouvant même temps remplir aussi bien les travaux pour le dressage du blé et pouvant se mettre en mouvement à l'aide de machines fixes ou portatives.

Messrs. R. GARRETT et FILS avaient pris un brevet d'invention pour une machine portative de cette description, dès l'année 1849, avant tout autre fabricant, de sorte qu'ils ont acquis déjà une grande expérience dans le construction de ces machines, et ils peuvent les recommander en toute confiance comme les instruments les plus parfaits et les plus efficaces qui aient encore été présentées au public.

Ces machines possèdent les appareils brevetés et perfectionnés pour secouer la paille, ainsi que le tambour perfectionné fait entièrement de fer forgé, d'une construction nouvelle et particulière, combinant une grande solidité et légèreté, et elles peuvent battre de la manière la plus parfaite et la plus expéditive. Elles ne nécessitent qu'une petite quantité de force motrice, parce que les battoirs sont formés de fer de cornière qui n'oppose qu'une petite surface à la résistance de l'air.

Ces machines réunissent également les dispositions perfectionnées des appareils moteurs, par lesquelles on évite les inconveniences qui résultent généralement de la méthode appliquant au trait du tambour toute la force motrice nécessaire à la machine. L'amélioration consiste dans l'introduction d'un trait intermédiaire supporté sur le châssis de la machine auquel s'attache la machine motrice, et ce trait a les pouilles nécessaires pour faire fonctionner le tambour et autres parties actives de l'instrument, en sorte que la force est appliquée plus près du sol et contribue beaucoup à la régularité du travail, et empêche tout usure inutile aux différents fuseaux.

**FIVE-HORSE POWER PORTABLE STEAM ENGINE.**

This Engine is suitable for driving the same description of threshing machines as the 4-horse, but being of greater power, is adapted for performing an increased quantity of work in proportion, and is calculated for districts where the straw is long and the crops heavy. The consumption of coals per day of 10 hours, 3½ cwt., and of water 430 gallons.

Net price . . . . . £200

**SIX-HORSE POWER PORTABLE STEAM ENGINE.**

This Engine is adapted for driving the threshing machine, with straw-shaking and screening apparatus combined, No. 50 F, described at page 207. It may also be advantageously applied for driving barn machinery, for grinding and cutting farm produce, pumping, &c. The consumption of coals per day of 10 hours, 4 cwt., and of water 500 gallons.

Net price . . . . . £220

**SEVEN-HORSE POWER PORTABLE STEAM ENGINE.**

This Engine is adapted for driving the threshing, straw-shaking, screening, and winnowing apparatus, No. 50 F, described at page 207, either portable or as a fixture. It may also be used for driving a circular saw beach, in addition to the other purposes before described. Consumption of coals per day of 10 hours, 4½ cwt., and of water 600 gallons.

Net price . . . . . £235

**EIGHT-HORSE POWER PORTABLE STEAM ENGINE.**

This Engine is adapted for driving the Combined Finishing, Trashing, and Dressing Machine, No. 50 L, described at page 207, and will be found to possess advantages for landed proprietors and large estates, where in addition to the usual farming operations, it may be employed to drive a circular saw with rock bench, for cutting round timber, or driving pumps for drainage, irrigation, &c. Consumption of coals per day of 10 hours, 5 cwt., and of water 700 gallons.

Net price . . . . . £245

**IMPROVED COMBINED THRESHING MACHINES.**

Since the general application of steam as the most available and economical power for driving agricultural machinery, R. GARRETT and Sons have directed their attention to perfecting a class of Machines for threshing, and performing, at the same time, as much of the operations of preparing the corn for market as possible; to be worked by portable and fixed Steam Engines.

R. G. and Son obtained letters-patent for a portable machine of this description, as long since as the year 1849, previous to the introduction of them by any other manufacturer, so that their experience in their construction has already been very considerable, and they can with much confidence recommend them as the most efficient and economical apparatus of the kind yet before the public.

These machines are fitted with R. G. and Son's patent Improved Straw-Shakers and their Improved Drum, made of wrought iron throughout, and of a novel and peculiar construction, which combines great strength with lightness, and performs the threshing in the most perfect and expeditious manner; a small amount of power only is required to drive it, owing to the beaters being formed of angle iron opposing but a small surface to the resistance of the air.

These machines combine R. G. and Son's improved patented arrangements of the driving gears, by means of which the evils proceeding from the method usually adopted of applying to the drum shaft the whole amount of power required by the machine are avoided. The improvement consists in the introduction of an intermediate shaft supported on the frame of the machine to which the engine is attached, and this shaft carries the necessary pulleys for driving the drum and other working parts of the machines; by means of this the power is applied nearer the ground, contributing very much to the steady working of the machine; and the spindles of the various working parts are not subject to any undue wear and tear by transmitting the power one to the other.

FONNE BLUTOIR à BATTRE DE QUATRE CHEVAUX, № 50 c.

Cette force battante est construite avec le tambour et concave brevetés de Messrs. R. GARRETT et FILS, et est adaptée pour battre toute espèce de graines, sans endommager le grain ou la paille. On peut y appliquer avec avantage la machine à vapeur portative de quatre chevaux. Cette machine est garnie de la poulie motrice sur train de tambour, pour courroie plate ou ronde à volonté.

Prix, comme machine fixe . . . . .	825 fr.
Montée sur 4 roues en bois et châssis, avec train et branards complets, pour la rendre portative . . . . .	1,050

FORCE BLUTOIR à BATTRE DE CINQ CHEVAUX, AVEC L'APPAREIL ENREGISTRE POUR SECOUER LA PAILLE, № 50 d.

Cette machine n'a la même construction que la précédente 50 c, avec l'addition de l'appareil à secouer la paille, pour séparer le blé, etc., de la paille, au sortir du tambour. Elle a une poulie motrice sur train du tambour, pour courroie plate ou ronde à volonté, et peut fonctionner avec la machine à vapeur portative de cinq chevaux.

Prix, comme machine fixe . . . . .	1,175 fr.
Avec 4 roues en bois et châssis, train et branards complets, pour la rendre portative . . . . .	1,400

MACHINE BLUTOIR à BATTRE DE SIX CHEVAUX, AVEC APPAREIL À CRIBLER ET À SECOUER LA PAILLE, № 50 e.

*La Grande Médaille fut décernée à cette machine par le Jury à l'Exposition Universelle de Londres en 1851.*

Cette machine est construite avec le tambour et concave brevetés de Messrs. R. GARRETT et FILS, et est adaptée pour battre toute espèce de graine sans endommager le grain ou la paille. Elle est garnie des appareils brevetés à cribler et à secouer la paille pour séparer toutes les pailles courtes du blé. Elle peut fonctionner avec la machine à vapeur portative de six chevaux, et a une poulie motrice sur train du tambour, pour courroie plate ou ronde à volonté.

Prix, comme machine fixe . . . . .	1,375 fr.
Avec 4 roues en bois et châssis, train et branards, pour la rendre portative . . . . .	1,650

APPAREIL BLUTOIR à SEPT CHEVAUX POUR BATTRE LA PAILLE, CRIBLER ET VANNER, № 50 f.

Cette machine remporta le Prix de 500 fr. à la Réunion de la Société Royale d'Agriculture, à Lewes, en juillet, 1852, et la Médaille à Gloucester en 1853.

Cette machine est de la même construction que la précédente 50 e, mais elle a, outre l'appareil à cribler et à secouer, un appareil vanner parfaitement pour séparer le blé de la paille, et laisser le grain assez propre pour qu'il puisse être mis en vente avec un seul dressage. Elle peut fonctionner avec la machine à vapeur portative de sept chevaux, et est garnie d'une poulie motrice sur train du tambour pour courroie plate ou ronde à volonté.

Prix, comme machine fixe . . . . .	1,800 fr.
Sur 4 roues en bois, avec essieu, train et branards . . . . .	2,100
Avec série d'élevateurs pour délivrer le blé dans les sacs . . . . . extra	250

APPAREIL BLUTOIR à HUIT CHEVAUX, POUR BATTRE, SECOUER, CRIBLER, VANNER, ELEVER ET ÉMONDIER, № 50 g.

Même construction que la précédente 50 r, mais garnie, outre les appareils à secouer, cribler, vanner et éléver, d'une émondier d'orge perfectionnée. Il peut fonctionner avec la machine à vapeur portative de huit chevaux, et a la poulie motrice sur train du tambour, pour courroie plate ou ronde, à volonté.

Prix, complète et portatif . . . . .	2,600 fr.
--------------------------------------	-----------

FOUR-HORSE BOLTING THRESHING POWER, № 50 c.

This threshing power is constructed with R. G. and Son's patent drum and concave, and is adapted for threshing all kinds of corn without injuring the grain or straw. It may be driven with advantage by R. G. and Son's portable Steam Engine of 4-horse power. The Machine is fitted with driving pulley in drum shaft, for flat or round strap, as preferred.

Price, as a fixture . . . . .	£33
If mounted on four wood travelling wheels with frame, and carriage and shafts complete, to render it portable . . . . .	42

FIVE-HORSE BOLTING THRESHING POWER, WITH REGISTERED STRAW-SHAKER, № 50 d.

This Machine is the same in construction as No. 50 c, with the addition of R. G. and Son's registered straw-shaker, for separating the corn, leaf, &c., from the straw as it comes from the drum. It is fitted with driving pulley in the drum shaft for flat or round belt, as preferred, and adapted to be driven by R. G. and Son's five-horse portable Steam Engine.

Price, as a fixture . . . . .	£47
If mounted on four wood travelling wheels with frame, carriage, and shafts complete, to render it portable . . . . .	56

SIX-HORSE BOLTING THRESHING MACHINE, WITH STRAW-SHAKING AND SCREENING APPARATUS, № 50 e.

*The Council Medal of the Exhibition of Industry of All Nations in 1851 was awarded to this Machine.*

This Machine is constructed with R. G. and Son's patent drum and concave, and adapted for threshing all kinds of corn without injuring the grain or straw. It is fitted with R. G. and Son's registered straw-shaker and patent screen, for the purpose of separating from the corn and chaff all loose and short straws. It is calculated to be driven by R. G. and Son's six-horse portable Engine, and is fitted with pulley on drum shaft, for either flat or round belt.

Price as a fixture . . . . .	£55
If mounted on four wood travelling wheels with frame, carriage, and shafts, to render it portable . . . . .	66

SEVEN-HORSE BOLTING THRESHING, STRAW-SHAKING, SCREENING AND WINNOWING APPARATUS, № 50 f.

*The Prize of £20 was awarded to R. G. and Son for this Machine at the Royal Agricultural Society's Meeting at Lewes, July, 1852, and the Prize Medal at the Royal Agricultural Society's Meeting at Gloucester, 1853.*

This Machine is on the same construction as No. 50 r, but fitted, in addition to the straw-shaker and screen, with an improved winnowing apparatus for separating the corn from the chaff, leaving it so nearly clean that once passing it through the finishing dressing machine will render it fit for market. It is adapted to be driven by R. G. and Son's seven-horse power portable Steam Engine, and is sent fitted with driving pulley on drum shaft, for either flat or round belt.

Price, as a fixture . . . . .	£72
If mounted on four wood travelling wheels with frame, carriage, and shafts, to render it portable . . . . .	84
If with a set of elevators for delivering the corn into sacks . . . . . extra	10

EIGHT-HORSE POWER BOLTING, THRESHING, STRAW-SHAKING, SCREENING, WINNOWING, ELEVATING, AND AVELLING APPARATUS, № 50 g.

This Machine is on the same construction as No. 50 r, but fitted, in addition to the straw-shakers, screen winnowing, and elevators, with an improved harley aveller. It is adapted to be driven by R. G. and Son's eight-horse power portable Steam Engine, and is fitted with driving pulley on drum shaft, for either flat or round belt.

Price, complete and portable . . . . .	£104

ROYAUME-UNI DE LA GRANDE-BRETAGNE ET D'IRLANDE.  
GARRETT's Implements continued.—CLASS III.—Section 3.—Annexe east.

MACHINE à BATTRE LE BLE, à TAMBOUR OUVERT, DE LA FORCE DE QUATRE CHEVAUX, AVEC UN APPAREIL à SECOURIR LA PAILLE, ENREGISTRÉE, N° 50 G.

Cette machine est construite avec un tambour perfectionné à battre à cinq cylindres en fer, de 36 pouces de longueur. Elle est propre aux districts où on ne demande pas de la paille droite et liée en bottes, pour la vente. Cette machine, pourvue d'un appareil à secourir la paille enregistré de R. Garrett et Fils, peut servir à battre toute sorte de graino d'une manière très expéditive; elle la rend tout-à-fait propre et n'endommage pas le grain, quoique la paille soit légèrement brisée. Elle est adaptée à la machine à vapeur portative de Richard Garrett et Fils, de la force de quatre chevaux, pourvue d'une poule sur le trait du tambour, pour courroie soit plate, soit ronde, à volonté.

Prix de la machine fixe . . . . . 1,050 fr.  
Montée sur 4 roues en bois, avec train,  
monture, et brançards, pour la rendre  
portative . . . . . 1,275

MACHINE à BATTRE LE BLE, à TAMBOUR OUVERT, DE LA FORCE DE CINQ CHEVAUX, AVEC UN APPAREIL à SECOURIR LA PAILLE ET à CRIBLER, N° 50 H.

Cette machine est construite de la même manière que la précédente N° 50 G., mais elle est pourvue en outre de l'appareil à cribler breveté de Richard Garrett et Fils, afin de séparer la graine et la menue paille de la paille détachée et courte. On la met en mouvement avec la machine à vapeur portative de Richard Garrett et fils, de la force de cinq chevaux; et elle est pourvue d'une poule sur le trait du tambour, pouvant servir également pour une courroie ronde ou plate, à volonté.

Prix de la machine fixe . . . . . 237 fr. 50 c.  
Montée sur quatre roues en bois, avec  
train et brançards pour la rendre  
portative . . . . . 1,500 0

MACHINE à BATTRE LE BLE, à TAMBOUR OUVERT, DE LA FORCE DE SIX CHEVAUX, AVEC UN APPAREIL à SECOURIR LA PAILLE ET UN APPAREIL à CRIBLER, N° 50 I.

Cette machine est de la même construction que celle N° 50 H., mais son tambour, qui a 42 pouces de longueur, la rend capable de fonctionner d'une manière plus expéditive et en même temps aussi efficace que celle des précédentes machines. On la met en mouvement avec la machine à vapeur portative de la force de six chevaux de Richard Garrett et Fils. Mise en pleine activité, elle pent battre en moyenne 100 à 120 litres par jour. Elle est pourvue d'une poule sur le trait du tambour, pour courroie soit plate, soit ronde, à volonté.

Prix de la machine fixe . . . . . 1,300 fr.  
Portative . . . . . 1,575

MACHINE à BATTRE LE BLE, à TAMBOUR OUVERT, DE LA FORCE DE SEPT CHEVAUX, AVEC APPAREIL à SECOURIR LA PAILLE, à CRIBLER ET à VANNER, N° 50 J.

Cette machine a obtenu la seule Grande Médaille d'*Or* qui fut accordée par la Société Royale d'Agriculture d'Irlande, à la Grande Exposition de Dublin, à Killarney, en 1853.

Cette machine est parfaite en construction à celle 50 I., mais elle est pourvue, en outre de l'appareil à secourir et à cribler, d'un appareil perfectionné à vanner, afin de séparer la graine de la menue paille, et de laisser la graine tellelement propre, qu'une fois passée par la machine à nettoyer, elle peut être vendue. On la met en mouvement avec la machine à vapeur portative de Richard Garrett et Fils, de la force de sept chevaux. Elle est pourvue d'une poule motrice sur le trait du tambour, pour courroie soit ronde, soit plate, à volonté.

Prix de la machine fixe . . . . . 1,700 fr. 0 c.  
Montée sur 4 roues en bois, avec train  
monture et brançards pour la rendre  
portative . . . . . 1,962 50

\* \* On peut se procurer une description détaillée de tous les instruments et machines perfectionnés de MM. GARRETT et FILS (comprissons les instruments et machines employés dans l'agriculture), en anglais, français ou allemand, ainsi que tous les renseignements, en s'adressant aux Usines, à Leiston, près Sudwold, Suffolk, Angleterre; à leur agent, M. Dowson, dans l'Exposition, et à 14 rue du Cirque, à Paris; et à leurs correspondants dans les principales villes d'Europe.

FOUR-HORSE POWER OPEN DRUM THRASHING MACHINE,  
WITH REGISTERED STRAW-SHAKER, N° 50 G.

This Machine is constructed with an improved five-beater iron drum, 36 inches wide, and is adapted for districts where straw is not required straight or to be tied up for sale. It is fitted with R. G. and Son's registered straw-shaker, and will thrash out all descriptions of corn in a most expeditious manner, perfectly clean, without injury to the grain, although the straw is slightly bruised. It is adapted for R. G. and Son's four-horse power portable Steam Engine, and fitted with pulley on drum shaft, for either flat or round belt, as required.

Price, as a fixture . . . . . £42  
If mounted on four wood travelling wheels,  
with carriage, frame, and shafts, to render  
it portable . . . . . 51

FIVE-HORSE POWER OPEN DRUM, THRASHING MACHINE,  
WITH STRAW-SHAKER AND SCREENING APPARATUS, N° 50 H.

This Machine is the same in construction as No. 50 G., with the addition of R. G. and Son's patent screen for the purpose of separating from the corn and chaff all loose and short straws. It is calculated to be driven by R. G. and Son's five-horse power portable Steam Engine, and is fitted with pulley on drum shaft, for either flat or round belt, as required.

Price, as a fixture . . . . . £49 10  
If mounted on four wood carriage wheels,  
with frame and shafts to render it portable 60 0

SIX-HORSE POWER OPEN DRUM THRASHING MACHINE, WITH  
STRAW-SHAKER AND SCREENING APPARATUS, N° 50 I.

This Machine is on the same construction as No. 50 H., but with drum 42 inches wide, which renders it capable of performing the work more expeditiously at the same time in an equally efficient manner as the above machines. It is calculated to be driven by R. G. and Son's six-horse power portable Steam Engine, and when kept in full work will, with an average yield, thrash 50 to 60 quarters per day. It is fitted with pulley on drum shaft for either flat or round belt as required.

Price, as a fixture . . . . . £52  
Portable . . . . . 63

SEVEN-HORSE POWER OPEN DRUM THRASHING, STRAW  
SHAKING, SCREENING, AND WINNOWING APPARATUS,  
N° 50 J.

*This Machine received the only Council's Gold Medal awarded by the Royal Irish Agricultural Society at their Meeting held in conjunction with the Great Dublin Exhibition at Killarney, 1853.*

This Machine is similar in construction to No. 50 I., but fitted, in addition to the shaker and screen, with an improved winnowing apparatus, for separating the corn from the chaff, leaving it nearly clean, so that once passing it through the finishing dressing machine will render it fit for market. It is adapted to be driven by R. G. and Son's seven-horse power portable Steam Engine, and is fitted with driving pulley on the drum shaft, for either flat or round belt as required.

Price, as a fixture . . . . . £68 0  
If mounted on four wood travelling wheels,  
with carriage, frame, and shafts, to render  
it portable . . . . . 78 10  
If with a set of elevators for delivering the  
corn into sacks . . . . . extra 10 0  
If with an improved barley aveller . . . . . extra 10 0

**HOOPER & CO.—CLASS V.—Section 5.—Annexe Machinery.**

**202 HOOPER ET CIE, à Londres, A.—Voiture légère.**  
Dessins de voitures. Reproduction photographique  
d'une voiture d'apparat de S. M. la reine d'Angle-  
terre.

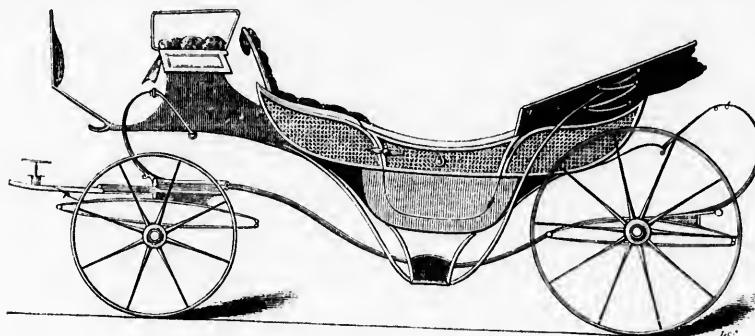

La Voiture, dite "Sociable," à panneaux couverts en  
cannage—dont le train a flèche en fer, les doubles ressorts  
les soupentes en cuir, réunissant la légèreté et l'élegance de  
construction, à un mouvement bien doux, d'une entrée aisée,  
et d'un prix modéré—a été perfectionnée par Hooper et Cie.

La Grande Médaille et approbation spéciale ont été  
accordées à Hooper et Cie, par le jury de la Classe 5a à la  
Grande Exposition de Londres en 1851.

**202 HOOPER AND COMPANY, 28, Haymarket, London**  
Carriage. Drawings of carriages. Photograph of  
a state carriage made for Her Majesty the Queen  
of England.

A "Sociable" carriage, with caned panels, hung on  
their improved iron perch under carriage, with under and  
C springs and leather braces, combining lightness of con-  
struction with extremely easy motion, elegance of appear-  
ance, facility of access, and moderate price.

The Prize Medal and special approval were awarded to  
H. and Co. by the Jury of Class 5a at the Great Exhibition  
of London in 1851.

Hooper and Company's "Sociable" at the Paris Exhibition.

On peut se procurer dans leur établissement, N° 28, Hay-  
market, toute espèce de voitures, du meilleur goût, et d'un  
style supérieur; les matériaux et la main-d'œuvre ne laisse-  
nt rien à désirer. Telles que berlines, landaus, coupes,  
caleches, landau-clarences, voitures légères de famille et  
clareances, voitures de messieurs à quatre chevaux,  
broughams ou petits coupés, à deux ou quatre places, à  
ressorts elliptiques, ou à doubles ressorts, suspendues par  
des soupentes de cuir, avec la flèche en fer.—Sociables en  
tous genres, cabriolets, gigs, tilbury, phætons à un ou  
deux chevaux, breaks, fourgons, phætons de chasse, char-  
à-bancs, etc. Ils construisent, en outre, toute espèce de  
voitures qu'on puisse demander pour des usages spéciaux.

Hooper et Cie construisent des voitures à ressorts de  
caoutchouc, au lieu d'acier, d'une longue durée.—Le sys-  
tème en a été mis grandement en pratique pour les am-  
bulances fournies depuis peu à l'armée anglaise, dans la Crimée,  
et fortement approuvées par les officiers, membres de la  
commission formée par le gouvernement anglais pour  
examiner les différents moyens d'obtenir un roulement facile  
et doux à ces ambulances.

Un choix de dessins photographiques de voitures con-  
struites par Hooper et Cie, est soumis à l'inspection du  
public. On a par ce procédé une représentation parfaite  
d'une voiture en perspective, car par cela on en voit tous les  
détails avec la plus grande exactitude, et met les personnes  
qui désirent avoir une voiture neuve dans une position de  
juger, plus exactement que par un simple dessin ordinaire,  
quel pourra être l'effet de la voiture, quand elle sera finie.  
C'est aussi le moyen de conserver à un carrossier une copie  
exacte d'une voiture rare et compliquée, lorsqu'il est obligé,  
après plusieurs années, à en faire une autre semblable,  
quand il aura lui-même oublié les détails.

The following carriages, of the best style, materials, and  
workmanship, are manufactured by H. and Co., besides  
any others that may be required for special purposes:—

Town coaches, landaus, chariots, barouches, barouche-  
landaus, light family coaches and clareances, four-in-hand  
coaches, single and double broughams, either on the ordinary  
elliptic springs, or on their improved light iron perches,  
with double springs, and leather braces. Sociables in a  
great variety of patterns, cabriolets, gigs, tilbury, stanhope  
and mail phætons, breaks, fourgons, sporting phætons,  
char-à-bancs, &c.

Hooper and Co. also build carriages with springs of india-  
rubber instead of steel, which are particularly durable: the  
principle has been largely carried out in the hospital  
carriages lately furnished to the English army in the  
Crimea, and is highly approved by the officers appointed  
by the English Government to examine the various plans  
proposed to afford easy movement to such carriages.

A selection of photographic views of carriages built by  
H. and Co. is shown: by this process, they produce a per-  
fect view of a carriage in perspective, showing all its parts,  
proportions, and details with the greatest accuracy, and  
enabling persons requiring a new carriage to judge of what  
will be the general effect of a finished carriage with more  
certainty than from an ordinary side view drawn by hand.  
It is also a means of preserving to a coach-builder an  
accurate copy of any uncommon or complicated carriage,  
and of which he may be required to build a duplicate after  
a lapse of many years, when the details may have been  
forgotten.

Agent in Paris,  
Mr. F. SPIERS, 13 rue de la Paix.

Specimens of foot-warmers, fur boots, caps, and gloves.

The choicest collection of the richest fur skins, and the most extensive assortment of manufactured articles, may always be seen by parties visiting the above establishment.

Both American and European furs can be purchased here at lower prices than at any other city in the world.

Superior outfit adapted for cold climates.

Established 1812.

**LAMBERT, THOMAS, AND SON.**—CLASS IV.—Section 6.—Annexe Machinery.
**120 LAMBERT, TH.**, et FILS, à Londres, A.—Pièces de bronze et de métal à canon pour les machines à vapeur. Soupape pour les machines à haute pression.

Robinet de Lambert, à haute pression (Breveté).

Fig. 1.

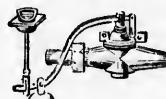

$\frac{1}{2}$  inch, 3s. 10d.  
½ pouce, 4 fr. 75 c.

Fig. 2.

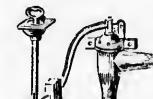

$\frac{1}{2}$  inch, 3s. 9d.  
½ pouce, 4 fr. 65 c.

Fig. 6.

¾ de pouce, 12 fr. 50 c.

Fig. 7.

$\frac{3}{4}$  inch, 6s. 6d.  
¾ de pouce, 8 fr. 10 c.

Fig. 1 représente un robinet à haute pression et à flotteur, ayant pour objet de fournir et de régler le niveau des liquides dans les réservoirs.

Fig. 2 représente un robinet applicable aux fontaines, lavabos, évier, cuvettes, cuisines, etc.

Fig. 6 représente une valve ou robinet pour latrines se fermant seul, avec plaque et poignée noyées dans l'épaisseur du siège.

Fig. 7 représente une autre forme de robinet pour latrines, pouvant être directement fixé au tuyau. L'utilité de ces inventions est prouvée par leur grand usage en Angleterre, et partout où le système de distribution d'eau à haute pression est prévalant, et aussi à Hambourg, Amsterdam, Copenhague, Trinidad, Halifax (Nouvelle Ecosse), etc.

Ces robinets peuvent être indifféremment employés pour la distribution de l'eau froide ou de l'eau chaude et peuvent être chargés avec sécurité d'une colonne d'eau de 1 m. 50 à 15 mètres. Tout défaut accidentel peut être réparé facilement et à peu de frais, le chapeau seul devant être enlevé.

Son Altesse Royale le Prince Albert, comme Président de

Fig. 1 is an equilibrium ball valve, suitable for supply cisterns.

Fig. 2 is a bib valve, for sinks, pantries, wash-hand basins, &c.

Fig. 6 is a valve for water-closets, and may be attached to any kind of basin.

Fig. 7 is another form of closet valve: these valves may be attached direct to the main.

The efficiency of these inventions is shown by their extensive use in all parts of England where the high-pressure system of water supply prevails, and also at Hamburg, Amsterdam, Copenhagen, Trinidad, Halifax (Nova Scotia), &c.

These valves are as well adapted for hot, as for cold water, and may be used with a pressure varying from 5 to 500 feet. Any accidental defect can be remedied with ease and at a slight cost, the cover alone requiring removal.

His Royal Highness Prince Albert, as President of the

LAMBERT, THOMAS, ET FILS—*Suite.*

la Société des Arts, offrit à Thomas Lambert les remerciements et le Mention l'honorables de la Société pour ses robinets à diaphragmes flexibles, le 10 juin 1847. Aux décernée à l'Exposition Universelle de Londres en 1851.

Thomas Lambert et Fils, fondateurs, mécaniciens, et manufacteurs de tuyaux d'étain pur, de composition et de tuyaux de plomb; appareils hydrauliques à vapeur et à gaz; tuyaux de fer galvanisés, raccords et brouzes. Brevets pour les rotinets à diaphragmes flexibles, robinets de latrines se fermant seul, robinets de sûreté à gaz de Carter, Short-street, New Cut, Lambeth, à Londres.

LAMBERT, THOMAS, AND SON—*continued.*

Society of Arts, presented Thomas Lambert with the thanks and Honorary Testimonial of the Society for the flexible diaphragm water valves, on the 10th of June, 1847. The diaphragm valves also received a Prize Medal at the Great Exhibition of 1851.

Thomas Lambert and Son, founders and machinists, manufacturers of black-tin, composition, and lead pipe, hydraulic, steam, and gas apparatus, wrought and galvanized iron pipe and fittings; patentees of the flexible diaphragm water valves, self-acting water closets, and Carter's safety gas valves, Short-street, New Cut, Lambeth London.

LINE, WILLIAM & JOHN.—CLASS XXV.—Section 4.—*Palais Gallery.*

1778 LINE, W. et J., à Daventry, Northampton, A.—Bottes et souliers solides et à bout marqué.

L'aisance et l'élegance, réunies à l'utilité et au bon marché, étant le trait caractéristique des marchandises de MM. Line, ils ont l'honneur de soumettre les prix suivants, numérotés pour correspondre avec le contenu de leur monture:

LLOYD & SUMMERFIELD.—CLASS XVIII.—Section 5.—*Palais.*

1190 LLOYD et SUMMERFIELD, Park Glass Works, à Birmingham, Warwick, A.—Barreaux de fenêtre en cristal, patentes. Mon'tre d'étagage en cristal. Tringle et anneaux en cristal pour rideaux. Verre taillé.

Les barreaux de fenêtre en cristal, patentes, de Lloyd et Summerfield. Ces barreaux de cristal pur ou coloré, simples ou cannelés en octogone et polis, sont faits solides ou creux, selon leur usage et leur longueur, et se forment de l'ailut, de la base, des cercles et du chapiteau, qui sont fermement fixés par une verge de fer qui traverse le milieu et qui est enclos par une tige argentée et fortement brûlée. Une rainure est coupée par toute la longueur de la barre pour recevoir les carreaux, qui se maintiennent en place au moyen d'une mince couche de ciment ou de mastice. Ces barreaux sont de toutes grandeurs et de toutes formes, et s'appliquent aux fenêtres ordinaires, ou aux celles de boutiques, aux châssis vitrés, aux verandas, aux montures d'étagage, aux encadrements de glaces, etc.

## Dimensions et Prix des Barreaux de Fenêtre.

Barreaux plus petits pour fenêtres ordinaires, châssis vitrés, etc., de 1 fr. 85 c. à 7 fr. 50 c. le pied.

1190 LLOYD et SUMMERFIELD, Park Glass Works, Birmingham, Patent crystal window bars. Crystal show-case. Crystal curtain rod and rings. Cut table glass.

Lloyd and Summerfield's patent crystal window bars. These bars of pure crystal or coloured, plain, or cut in octagonal flutes and polished, are made either solid or hollow, according to the size and length required, and consist of shaft, base, rings, and cap, which are firmly connected by an iron rod passing through the centre, and concealed by a silvered tube highly burnished. A groove is cut the whole length of the bar for the reception of the plate glass, which is kept in place by a thin line of cement or putty. These bars are of various dimensions and form, and are applicable to ordinary domestic windows, shop fronts, skylights, verandahs, conservatories, exhibition and counter cases, fern cases, looking-glass frames, piano legs.

**MANDER, BROTHERS.**—CLASS X.—Section 2.—Annexe east.**572 MANDER FRÈRES,** à *Wolverhampton, Stafford, A.*

Vernis gras; résines.

Fabricants de vernis du Japon, et de toute espèce de vernis pour carrossiers, décorateurs, peintres et vernisseurs.

Établi l'an 1803.

On peut se procurer la liste des prix en s'adressant à MM. Mander frères, Wolverhampton, ou à M. Dowson, 14 rue du Cirque.

\* \* La caisse contient des échantillons des gommes diverses qui forment les bases des vernis, aussi bien que des échantillons de vernis tout faits.

**572 MANDER, BROTHERS,** *Wolverhampton.* Varnishes and gums.

Manufacturers of japan, and every description of varnish for coach-builders, decorators, painters, and japanners.

Established in the year 1803.

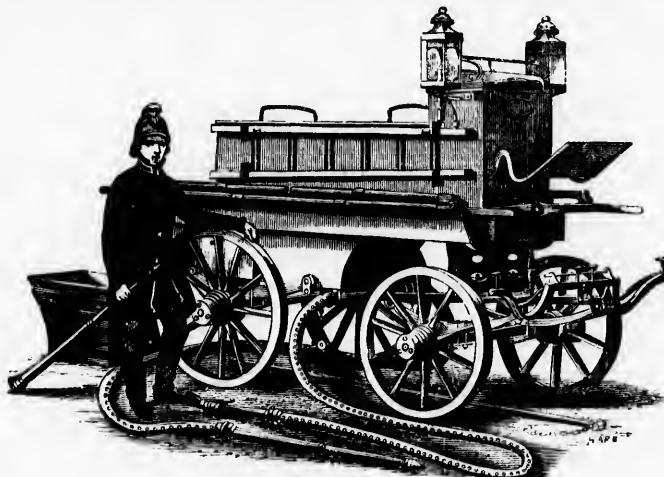

Prices will be given on application to the Firm, or to Mr. Dowson, 14 rue du Cirque.

\* \* The case contains specimens of various gums which form the base of varnish, and likewise samples of manufactured varnishes.

**MERRYWEATHER, M.**—CLASS IV.—Section 8.—Annexe Machinery.**145 MERRYWEATHER, M.**, à *Londres.*—Pompes à incendie. Pompes de fermes pour l'engras liquide. Pompes à incendie pour la marine et à usages domestiques. Tuyaux élastiques, seaux, casques, etc.**145 MERRYWEATHER, M.**, 63 *Long Acre, London.* Patent fire-engines, agricultural and liquid-manure machines, ship and cabinet fire-engines. Hoses, buckets, helmets, &c.

MEDAILLE DE LA GRANDE EXPOSITION DE 1851.—PRIZE MEDAL OF THE GREAT EXHIBITION, 1851.

Pompe à incendie de Merryweather, employée par la Brigade des Pompiers de Londres.

Merryweather's London Fire Brigade Fire-Engine.

Fig 1.

No 1. Pompe à incendie (l'Empereur) pour être traînée par deux ou quatre chevaux, modèle de celle employée par la Brigade des Pompiers de Londres, avec les cylindres et le réservoir d'air en fonte à canon, les pistons et les soupapes en fonte à canon en boîtes séparées. Brimbales pour 30 hommes, qui se plient à l'avant à l'arrière. Train parfait en fer forgé. Essieux et ressorts patentés. Doubles vis pour fixer deux lignes de tuyaux élastiques pour lancer une double colonne d'eau; au complet, comprenant les tuyaux élastiques, soupapes d'ascension, tuyaux d'embranchement, tuyaux de sortie et distributeur de jet (patente).

Fig. 1 représente cette pompe, et le costume d'un pompier de la Brigade de Londres.

No 2. Pompe à incendie pour la marine à l'usage de six hommes, sur le principe breveté, avec tuyaux aspirants, tuyaux de décharge, tuyau d'embranchement, etc.

No 3. Pompe à incendie de fermes et pompe à engras liquide, sur le principe breveté, avec tuyau élastique, tuyau aspirant et tuyau de distribution.

No 4. Pompe à incendie portative pour maisons, galeries de tableaux, etc.

No 5. Plusieurs pompes portatives, à la main et aux seaux; pompes pour les conservatoires. Seaux; casques, ceinturons et haches des pompiers. Fontaine portative. Tuyaux de cuir rivé et de toile, etc.

No 1. Patent carriage fire-engine (L'Empereur), to be drawn by two or four horses, London Fire Brigade pattern, with gun-metal cylinders and spherical air-vessel, gun-metal pistons and valves in separate valve-chambers; handles for 30 men, to fold up fore and aft; improved wrought-iron under carriage, patent axles and springs; double-delivery screws for attaching two lines of hose to discharge a double column of water; fully equipped with hose, suction, branch-pipes, discharging nozzles and patent jet spreader.

Fig. 1 represents this engine, and the peculiar dress of the London Fire Brigade.

No. 2. Ship fire-engine for six men, on the patent principle, with suction-pipes, delivery hose, branch-pipe, &c.

No. 3. Farmer's fire-engine and liquid manure-pump, on the patent principle, with hose, suction, and distributor.

No. 4. Cabinet fire-engine for mansions, picture galleries, &c.

No. 5. Several portable pail and hand pumps; conservatory engines; buckets; firemen's helmets, belts and axes; portable cistern; riveted leather and web hose, &c.

ROCK & SON.—CLASS V.—Section 5.—*Annexe Machinery.*

209 ROCK et FILS, à *Hastings*, Sussex, A.—Voiture-Dirophe.

Dirophe; voiture à trois formes. (Système Rock.) La voiture ainsi nommée est d'une espèce tout-à-fait sans pareille. Elle réunit en elle-même sans perte d'élegance tous les attributs et toutes les convenances de trois voitures distinctes: c'est-à-dire,

1. Une voiture fermée.
2. Une voiture à demi-ouverte.
3. Une voiture entièrement ouverte.

Ainsi elle sert pour toutes les saisons et pour tous les climats du monde.

La Dirophe est fabriquée dans toutes les formes des voitures ordinaires, parceque le principe de sa construction n'empêche pas l'application de n'importe quel dessin.

Son économie est apparente; la Dirophe ne coûte pas beaucoup plus que d'autres voitures, quoiqu'elle réunisse les convenances de plusieurs.

Le Jury de l'Exposition Universelle à Londres en 1851 a accordé la Prix-Médaille à Rock et Fils pour cette invention.

209 ROCK and SON, *Hastings*. Dirophe Carriage, 408

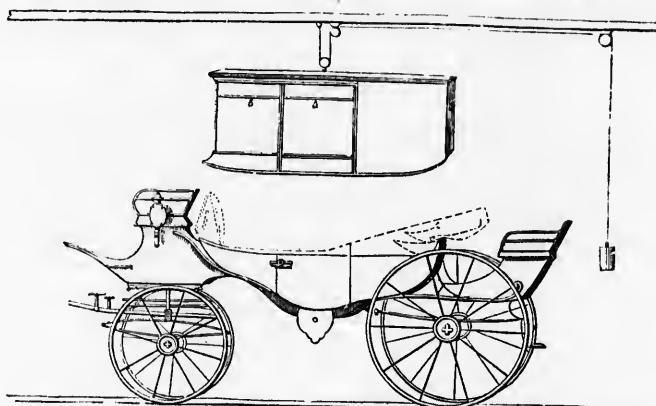

Dirophe; or carriage with two heads. (J. Rock, jun.'s patent.) This carriage, in its most improved form, combines all the advantages of three distinct vehicles:

1. A close carriage.
2. A barouche, or half-headed carriage.
3. An entirely open carriage.

It is, therefore, suited for all climates and seasons.

The Dirophe may be built of any size and in any style that may be preferred. Its economy is evident from the fact that it costs but little more than an ordinary carriage, although it possesses so many additional advantages.

The Jury of the Universal Exhibition of London in 1851 awarded the Prize Medal to Rock and Son for this invention.

*Prix.*

No. 1. Dirophe (la plus petite, pour un cheval) . . . . .	3,750 à 4,250 fr.
No. 2. Dito (pour un cheval, et quelquefois pour deux chevaux) . . . . .	4,125 à 5,000
No. 3. Dito (pour une paire de petits chevaux) . . . . .	4,750 à 6,125

**SAUNDERS, T. H.—CLASS X.—Section 5.—Annexe east.****633 SAUNDERS, T. H., à Londres.—Papiers.**

Quoiques uns des articles fabriqués par M. Saunders sont exposés dans le Palais de l'Industrie, et d'autres dans l'Annexe.

*Palais de l'Industrie.*

Dans la vitrine qui se trouve dans la galerie, sont déposés trois forts volumes reliés, et l'on peut obtenir la clef de la vitrine au bureau anglais, ou chez Mr. Harding, N° 15, rue de l'Echiquier, à Paris.

Ces volumes présentent un abrégé exact de la manufacture actuelle de papier selon le système anglais.

Pour faciliter les recherches, on a essayé d'arranger en groupes les produits si variés de cette fabrique, et la classification suivante a été adoptée.

Toute la fabrique de papier a été divisée en cinq classes, dont trois se trouvent dans le premier volume, et un volume séparé a été approprié à chacune des deux autres classes.

**1<sup>er</sup> VOLUME—Classe A.**—Papiers faits à la main, comprenant les papiers à écrire, les papiers pour livres de comptes et les papiers à dessin.

**Classe B**—Papiers faits à la mécanique, comprenant les papiers à écrire, les papiers pour livres de comptes, les papiers à dessin, ceux à imprimer et les papiers de couleur.

**Classe C**—Les papiers particuliers faits, soit à la main, soit à la mécanique, et adaptés à un but spécial seulement, tels que les papiers à bank-notes (billets de banque), les papiers à souche, les papiers pour emprunts et pour actions, demandant une force particulière, une coloration ou des marques intérieures (alliances) plus compliquées, en vue de sûreté.

Au moyen des produits de ses propres établissements, M. Saunders a pu représenter ces trois branches de fabrication, et, par conséquent, tous les spécimens dans le premier volume ont été produits dans ses propres moulins.

**2<sup>e</sup> VOLUME—Classe D.**—Spécimens de papiers qui forment la matière première d'autres objets de fabrication, ou qui demandent de nouvelles opérations avant de pouvoir entrer dans la consommation.

Aulmé du désir de voir la fabrication anglaise de papier représentée dans toutes ses branches, et de mettre à exécution ce qu'il a cru être l'intention du Gouvernement anglais, M. Saunders n'a épargné ni temps ni dépense pour se procurer, soit par l'obligéance d'autres fabricants, soit par achat, une collection convenable de cette classe nombreuse de papiers qui ne sont point employés par le public en général dans l'état dans lequel ils sortent de la fabrique.

Il serait presque impossible de faire, à moins de tomber dans de grands détails, la description du contenu de ce volume, dont M. Saunders se flatte que l'inspection sera trouvée, par les personnes qui voudront bien la faire, extrêmement intéressante.

**3<sup>e</sup> VOLUME—Classe E.**—Spécimens de papiers à emballage ou à envelopper.

La collection contenue dans ce volume représente bien la grande variété de ces papiers, préparés, comme ils le sont souvent, à l'intention spécialement des articles extrêmement variés qui sont destinés à être couverts ou enveloppés.

Pour compléter la vue de la fabrication, les spécimens sont précédés de courtes notices, avec texte en anglais et en français, contenant leur histoire, et l'explication des matières, des procédés et des machines employés à leur préparation, et leurs diverses singularités et adaptations ou emplois spéciaux, le tout accompagné de dessins de machines employées à la fabrication du papier, et d'une lithographie de l'extérieur de la principale fabrique de M. Saunders, à Dartford.

Le texte est entouré d'une bordure formée de la combinaison des principales plantes qui fournissent les matières propres à la fabrication du papier, telles que le papyrus, le lin, le coton, le chanvre et le palmier.

*Annexe.*

Les papiers exposés par M. Saunders dans l'Annexe, consistent de parties de rames choisies dans les papiers fabriqués dans ses propres moulins, et comprennent—

**Classe A.**—Papiers faits à la main.—**Classe B.**—Papiers faits à la mécanique. Les deux rouleaux sont des spécimens de papiers glacés de grandes dimensions.—**Classe C.**—Papiers particuliers.

**633 SAUNDERS, T. H., Maidstone-wharf, Queenhithe, London. Paper.**

Some of the articles manufactured by Mr. Saunders are exhibited in the Palais de l'Industrie, and part in the Annex.

*Palais de l'Industrie.*

In the glass case in the gallery are deposited three large volumes, whole bound in Russia, and a key of the case can be obtained at the English Bureau, or from Mr. Harding, 15 rue de l'Echiquier, Paris.

These volumes present a correct epitome of the English paper manufacture in its present state.

For convenience of reference, an attempt has been made to arrange the productions of this very miscellaneous manufacture into groups, and the following classification has been adopted.

The whole paper manufacture has been divided into five classes, three of which will be found in the first volume, and to each of the other two classes a separate volume has been allotted.

**1<sup>st</sup> VOLUME—Class A.**—Papers made by hand, comprising writing, account book, and drawing papers.

**Class B.**—Papers made by machinery, including writing, account book, drawing, printing, and coloured papers.

**Class C.**—Special papers, whether made by the hand or machine process, and adapted for particular purposes only, as bank-note papers, cheque papers, loan and share papers requiring peculiar strength, tinting, or elaborate watermarking for protective purposes.

From his own establishments Mr. Saunders has been enabled to represent these three branches of manufacture; and, consequently, every specimen in the first volume has been produced at his own works.

**2<sup>d</sup> VOLUME—Class D.**—Specimens of papers which form the raw material of other manufactures, or require some further operation before consumption.

Actuated by the desire that the English paper manufacture should be represented in all its branches, and to carry out what he conceived to be the wish of the British Government, Mr. Saunders has spared neither time nor expense in procuring, either by favour of other manufacturers or purchase, a suitable collection of specimens of that large class of papers which are not used by the general public in the condition in which they leave the paper manufactory.

Without excessive detail it is scarcely possible to describe the contents of this volume, an inspection of which will, he believes, be found exceedingly interesting.

**3<sup>rd</sup> VOLUME—Class E.**—Specimens of packing or wrapping papers.

The collection in this volume adequately exhibits the great variety of these papers, prepared, as they frequently are, with special reference to the extremely miscellaneous articles which are to be enclosed.

To complete the view of the manufacture, the specimens are preceded by short letter-press notices, in English and French, of the history, materials, processes, and machinery used in their preparation, and their several peculiarities and adaptations, accompanied by drawings of paper machinery, and a lithograph of the exterior of his principal manufactory at Dartford.

The letter-press is encircled by a border formed by the combination of the principal plants furnishing paper materials, as the papyrus, flax, cotton, hemp, and palm.

*Annex.*

The papers exhibited by Mr. Saunders in the Annex consist of portions of reams selected from the papers manufactured at his various mills, and comprise—

**Class A.**—Hand-made papers.—**Class B.**—Machine-made papers. The two rolls are specimens of paper glazed in long lengths.—**Class C.**—Special papers.

SALT, T. P.—CLASS XII.—Section 5.—*Palais Gallery.*

**770 SALT, T. P., à Birmingham, Warwick, A.—Instrument de chirurgie. Trocar et canula pour l'opération de l'empyème. Pessary et nouveau tourniquet militaire.**

Catalogue des instruments de chirurgie, appareils pour enema, trousses ; une jambe artificielle perfectionnée exposée à l'Exposition Universelle de Paris, 1855, par T. P. SALT, Birmingham, Angleterre, Coutellier de Sa Majesté la Reine d'Angleterre, fournisseur de Sa Majesté l'Empereur des Français, fabricant d'instruments de chirurgie aux hôpitaux.

*La jambe artificielle perfectionnée* est une des inventions la plus remarquable du jour, le mécanisme en étant réduit au minimum et la durée élevée au maximum.

*Le nouveau tourniquet militaire* peut servir pour membre de tout grosseur, peut être appliqué à l'instant, et l'artère arrêtée parfaitement dans un sixième du temps ordinaire. Il évite la nécessité de courroies et de boucles, et n'a aucune partie détachée.

*Le pessaire gonflé* pour prolapsus uteri est recommandé pour sa légèreté, sa souplesse, et son élasticité, et peut être gonflé à toute grandeur après avoir été introduit.

*Nouveau trois-quarts et canules* pour l'opération de l'empyème.

*Echantillons de trousses* pour hernie, comprenant tous les derniers perfectionnements, et la trousses de Salt à pression graduée. Trousse pour la classe ouverte, 26 fr. la douzaine.

*Appareils pour Lavements.*  
En mélchior, complet, 50 fr. la doz.  
En cuivre, complet, 60 fr. la doz.  
En cuivre articulé sans parties détachées.  
Plaqué à action double.  
Enema à réservoir.

“Percolator,” filtrant le liquide de toute impureté, et déchargeant l'injection d'un coup du piston. L'enéma spontane (déposé) par l'emploi d'air comprimé, administre une injection de toute quantité à jet continu sans la nécessité de faire marcher le piston.

On peut obtenir des Catalogues en détail de M. Dowson, 14 rue du Cirque, à Paris.

Fabriquant de charpie superfine.

**770 SALT, T. P., Bull-street, Birmingham. Surgical Instruments. A trocar and canula for paracentesis thoracis. A collapsing pessary and a new military tourniquet.**

*The improved artificial limb* is one of the greatest improvements of the day; the mechanism being reduced to the minimum and the durability raised to the maximum.

*The new military tourniquet* is adapted for every sized limb, may be instantly applied, and the artery effectually secured in one-sixth the time of any other. It dispenses with straps and buckles, and is without any detached parts.

*The collapsing pessary* is recommended for its lightness, softness, and elasticity, and may be inflated to any size after it has been introduced.

*New trocars and canulas* for paracentesis thoracis.

*Pattern of trusses* for hernia, comprising the latest improvements, and Salt's graduated pressure truss; also an useful truss for the working classes, 21s. per dozen.

*Lavement Apparatus.*

In white metal, complete, 41s. 8d. per dozen.

In brass metal, complete, 50s. per dozen.

In brass, without detached parts.

Enemas, double action, plated.

Enemas, reservoir.

Percolator; removes any impurity from the fluid, and discharges the injection with one stroke of the piston.

The registered spontaneous enema, which, by the employment of compressed air, administers an injection in a continuous stream, without the necessity of pumping during the operation.

Catalogues in detail may be obtained from Mr. Dowson,

14 rue du Cirque, Paris.

Superfine flut manufacturer.

SMITH & HAWKES.—CLASS XVI.—Section 5.—*Annexe.*

**1071 SMITH et IIAWKES, à Birmingham, A.—Une paire de CYLINDRES EN FONTE TREMPÉE pour laminer le cuivre, et une petite paire pour laminer l'or ; aussi 29 échantillons de fonte de fer, qui montrent l'effet de 20 réfentes sur la force et la qualité du métal.**

Smith et Hawkes, Eagle Foundry, Birmingham, fabriquent toute espèce de CYLINDRES EN FONTE TREMPÉE du diamètre de 4 pouces et de la longueur de 3 pouces de table, jusqu'au diamètre de 22 pouces et jusqu'à la longueur de 4 pieds de table (mesure anglaise), pour le laminage de l'argent, du cuivre, du laiton, de l'acier, du fer, etc.

Aussi les cages, les vis et l'appareil complet pour les cylindres.

Smith et Hawkes continuent l'usage du système qu'ils ont adopté il y a vingt-cinq ans, d'épreuve toute la fonte dont ils se servent dans la fabrication des cylindres et des machinies

**1071 SMITH et IIAWKES, Birmingham. One pair of CHILLED ROLLES for rolling copper, and a small pair for rolling gold; also 29 specimens of cast iron, showing the effect of that number of repeated meltings upon its strength and quality.**

Smith and Hawkes, Eagle Foundry, Birmingham, manufacture every description of CHILLED ROLLES from 4 inches diameter and 3 inches long up to 22 inches diameter and 7 feet long on the body (English measure), for rolling gold, silver, copper, brass, steel, iron, &c.

Also frames, brasses, set screws and boxes fitted to the above.

Smith and Hawkes continue the system they have adopted for the last quarter of a century of testing all the iron which they use in making rolls and machinery.

STANLEY, W. P.—CLASS III.—Section 3.—*Annexe cast.*

**WARD, N. BAGSHAW.—CLASS III.—Section 5.—Annexe Gallery.**

**WARD, N. BAGSHAW, à Clapham Rise, près de Londres, A.—Caisse pour l'importation des plantes vivantes.**

"Wardian cases"—à l'aide desquelles on peut cultiver des plantes dans toute localité, même au milieu des villes les plus peuplées, ou les transporter avec tout succès pendant les plus longs voyages.

Pour obtenir ce résultat, il faut que la plante soit placée dans ses conditions normales d'existence, c'est-à-dire que la chaleur, l'humidité, la nature du sol, etc., qui lui conviennent, soient observées.

M. Fortune, envoyé en Chine par la Société d'Horticulture avec des "Wardian cases," dans le but de rapporter des sujets au jardin de Chiswick, compara l'ancienne et la nouvelle méthode pour le transport des plantes. Il dit—dans un article communiqué par M. Livingstone, de Macao, et publié dans le troisième volume des *Transactions of the Society of Horticulture*—que d'après l'ancien procédé une seule plante sur mille survit à la traversée de Chine en Angleterre. Arrivé en Chine, M. Fortune plaça 250 plantes dans les "Wardian cases," et 215 arrivèrent à Londres en bonne condition.

Par la suite, au moyen du même procédé, plus de 20,000 plantes du thé ont été transportées de la Chine aux Indes sans qu'une seule ait péri.

Plus récemment, des centaines de plantes Cinchona ont été enlevées de leurs forêts natives, au Pérou, et sont parvenues saines et sauves sur les montagnes de Java.

L'inventeur pense que ce procédé peut s'appliquer avec succès à tout le règne animal, voire même à l'homme. Des poissons dorés ont séjourné et prospéré pendant plusieurs années dans des "Wardian cases." Ils y étaient renfermés dans une vase en verre contenant environ 90 litres d'eau. Celte-ci ne fut jamais changée, mais des plantes aquatiques la maintinrent dans sa pureté. Un rouge-gorge habite aussi une de ces serres pendant plusieurs mois.

M. Bowerbank a répété ces expériences sur des poissons dans un grand vase en verre; c'est, suivant le témoignage de M. Mitchell, l'origine du magnifique vivier de la Société Zoologique de Regent's Park.

Il est bien certain que si une atmosphère pure et convenablement humide favorise la croissance des plantes les plus délicates au centre d'un endroit envahi par la fumée, elle doit offrir des avantages incalculables pour maintenir la santé, écartier les maladies et en faciliter la guérison.

**99 WARD, N. BAGSHAW, 14 Clapham Rise, near London. Cases for importing living plants.**

Closed cases—by means of which plants may be grown in any locality, even in the midst of the most crowded cities, or conveyed on the longest voyages, with complete success.

In order to ensure this success, the natural conditions of the plants must be fulfilled with respect to heat, light, moisture, and soil.

Mr. Fortune, who was sent by the Horticultural Society to China with glazed cases for the purpose of procuring plants for their garden at Chiswick, comparing the old and the new methods of conveying plants, says that in a paper communicated by Mr. Livingstone, of Macao, and published in the third volume of the *Transactions of the Horticultural Society*, it is stated that at that time only one plant in a thousand survived the voyage from China to England. Mr. Fortune put 250 plants into the cases in China, and landed 215 in good condition.

Subsequently, by the same means, more than 20,000 tea plants have been transferred, without loss, from China to the East Indies.

And more recently, several hundred plants of cinchona have been safely conveyed from their native forests in Peru to the mountains of Java.

The inventor believes that the same principle is capable of beneficial application to the whole of the animal kingdom—even to man. For several years gold and silver fish have been the constant inhabitants of his closed cases, living and flourishing in an earthen vessel containing about 20 gallons of water, which was never changed, but retained its purity by means of the aquatic plants growing in it. A robin likewise was an inmate for several months.

Mr. Bowerbank repeated the experiments on the fish in a large glass jar, whence originated, according to the testimony of Mr. Mitchell, the splendid vivaria in the gardens of the Zoological Society in Regent's Park.

There cannot be a doubt that the same pure and properly moistened atmosphere which favoured the growth of the most delicate plants in the most smoky localities, would be of invaluable advantage in the preservation of health and the prevention or cure of disease.

**WHITE, T.—CLASS XIV.—Section 10.—Outside.**

**999 WHITE, T., à Sandport, Portsmouth, Hamp., A.—Modèle de caserne portative.**

**999 WHITE, T., Sandport, Portsmouth. Model of portable barracks.**

Manufactured by THOMAS WHITE, Jun., Thorpe Hesley, near Sheffield, and Rotherham.

PATTERNS OF IMPROVED HOOKS, for fixing Gas and Water Pipes in a neat and expeditious manner, made either Bright or Black.

Prices.—From 1s. per gross and upwards, according to size.

PATTERNS OF IMPROVED HORSE NAILS, showing the proper shape these ought to be, as adapted to the formation of the Horse's Hoof. Nails made to these Patterns will effectually secure the Shoe without injuring the most tender Hoof.

Lbs.	3	4	5	6	7	8	9	10	11	12	14
Per M.	3/11	4/2	4/5	4/8	4/11	5/2	5/5	5/8	6/.	6/4	7/.

PATTERNS OF NEWLY-INVENTED WOOD-IRON NAILS, for Ship-Builders, Carpenters, Joiners, and Cabinet-Makers. The superiority of this Nail over one that is cut or rolled consists in its gradual thickness towards the head; whereas the others are drawn in under the head, and thereby leave a space where wet may get in and rust the Nail.

The price of these is 25 per cent. below the regular List.

PATTERNS OF IMPROVED RIVETS, made in Iron, Brass, Copper, and Zinc, to any length and strength.

Price.—From 18s. per cwt., according to size.

BEEFSTEAK TENDERING APPARATUS and SUGAR-CUTTING MACHINE. A newly-invented Apparatus, for dividing the Muscular Tissue of Animal Food, such as Steaks, Chops, &c., thereby tendering a Tough Steak, making it easier to masticate, and better for digestion.

Price, complete, with extra Cutters for cutting Loaf-Sugar, and Cutters for Toast, &c., 40s. each.

PATTERNS OF NEWLY-INVENTED PRUNING-HOOKS, for cutting Gooseberry Trees with ease, and without scratching the hand; also applicable for all kinds of small Shrubs and Plants.

Price 1s., or 10s. per dozen.

## WEST OF ENGLAND CHINA STONE AND CLAY COMPANY.

CLASS I.—Section 8.—*Annexe east.*

**50 WEST OF ENGLAND CHINA STONE AND CLAY COMPANY, à St. Austell, Cornwall.**—Produceurs d'argile et de pierres pour la manufacture de poterie et de porcelaine; kraolin à blanchir le papier et la toile; kraolin employé dans la manufacture d'alun et de savon.

A cause de leur pureté (n'ayant point de minéral de fer dont la présence a été tant ruineuse au manufacturier), ces produits ont jusqu'ici pris le premier rang dans le débouché, surtout dans les poteries de Staffordshire, où ils sont beaucoup employés. Cette Compagnie est une des plus grandes en Angleterre dans cette espèce de commerce, ayant le droit exclusif d'exploiter plus de 3,000 arpens (anglais). Le prix en est de 1*£s.* par ton. à 30*s.* par ton. rendus sans frais à bord à notre port; s'ils sont mis en barriés, 10*s.* par ton. d'extra.

**50 WEST OF ENGLAND CHINA STONE AND CLAY COMPANY, St. Austell, Cornwall.**—Producers of china clay and china stone for the manufacture of earthenware and porcelain; bleaching clay for paper and linen; clay used for making alum and soap. 8

Owing to their purity (being free from iron, the presence of which has proved so ruinous to the manufacturer,) these products have hitherto taken the first position in the market, especially in the Staffordshire potteries, where they are much used. This Company is one of the largest in England in this branch of trade, having the exclusive right of working more than 3,000 acres. The price is from 1*£s.* per ton to 30*s.* per ton free on board at our port; if put in casks, 10*s.* per ton extra.

## INDEX TO THE BRITISH EXHIBITORS IN THE INDUSTRIAL SECTION.

WM. MUIR & CO.,  
ENGINEERS, TOOLMAKERS, AND IRONFOUNDERS,  
Britannia Works,  
STRANGEWAYS,  
MANCHESTER,  
ESTABLISHED 1842,

RESPECTFULLY beg to intimate to the Public that for the last three years they have been engaged in making an entirely new and improved set of Engineers' Tools, designed and manufactured with great care. They consist of *Foot and Power Lathes* of all sizes for hand-turning, sliding, and screw-cutting, with peculiar improvements, patented by W. M. and Co.; *Self-acting Drilling, Slotting, and Planing Machines*; *Universal Shaping Machines* to plane circular, round, hollow, and flat surfaces without refixing the article operated upon; *Self-acting Nutshaping Machines* with circular cutters; *Bolt-Screwing Machines and Screwing Tackle*.

The following Illustrations are copies from Photographs:

No. 1. PATENT GRINDSTONES FOR EDGE TOOLS,

Will be found an invaluable acquisition to Engineers and others in whose Establishments Edge Tools are in constant use. These Stones require no turning or raising; the peripheries touch each other, and, by a lateral motion given to one of them, the Edges are kept perfectly true. Adopted in H.M. Arsenal, Woolwich.

Price, with Driving Apparatus complete, £25.

Paris Exhibition.—Class VI. Section 1. Rotation No. 246.

**WM. MUIR AND CO., BRITANNIA WORKS, MANCHESTER.**

No. 2. FOOT LATHE FOR SLIDING AND SCREW CUTTING. Price £90.

The same as Exhibited Class IV.  
Section I.

A PRIZE MEDAL was awarded to WM. MUIR for a Lathe Screwing Tackle and other Tools at the Great Exhibition of 1861.

**FOOT LATHES.**

No. 1.—5-inch centre Foot Lathe, single speed, 4-ft. bed, four speeds, with band of equal tension; improved crank, anti-friction treadle with chain.  
No. 2.—5 or 6-in. centre heavy pattern, 5-ft. bed, double geared, with treadles, &c., as above; also slide rests to suit.

No. 3.—The same Lathe with joiner's bench attached, with nest of drawers to contain full sets of screwing tackle, joiners', wood turners', engineers', and machinists' tools, &c., &c.  
No. 4.—6-in. centre Lathe for sliding and screw-cutting, very complete, as exhibited Class VI. Section 6. Price £90.

**POWER LATHES.**

No. 5.—5-in. single speed Lathe, with conical steel bearings, hand rest, slide rest, and driving apparatus; also with double gear if required.

No. 6.—6-in. single speed, or double gear, as above.

No. 7.—8-in.

No. 8.—10-in.

No. 9.—12-in. 15-in. 18-in. and 24-in. centre, with double gear, used for sliding and screw cutting, on the same plan as patented and exhibited by WM. MUIR & CO.

Any of the foregoing, with break consisting of one bed to slide upon another to any required width, to take in diam. 4 times the height of centre, with chuck or face-plate driven by internal wheel and pinion.

No. 10.—Vertical Drilling Machine, double geared, with driving apparatus complete, to drill up to 4 in., as Exhibited Class VI. Section 6. Price £55.

No. 11. Also single speed on the same plan, to be driven by power, the feeding motion by hand or foot.

No. 12.—Slotting or Key-grooving Machine, 6-in. stroke, self-acting, with revolving table and cross slides.

No. 13.—Universal Shaping Machines of 3-in. 6-in. 12-in. and 18-in. stroke to plane detail work; it can be changed to plane round hollow or flat surfaces without refixing the article operated upon.

No. 14.—2-ft. Planing Machines, with elliptical wheels, to produce uniform motion for cutting and treble speed in return of the stroke.

Also Planing Machines worked by screw and quick return of the table to any required length and width.

Bolt-screwing Machines, with taps and dies fitted. See

List of Prices for Taps, Dies, &c.

Patent Grindstones for Edge Tools, as Exhibited Class VI. Section 6. Price £25 complete.

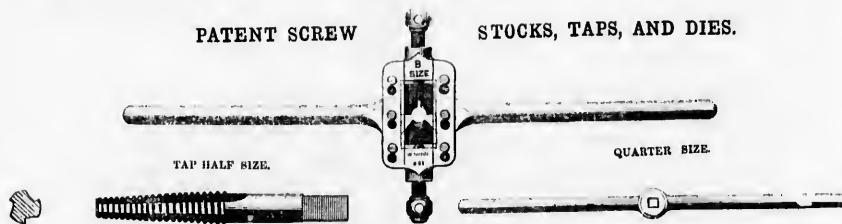

WM. MUIR and CO. have opened a Spacious Show Room at Britannia Buildings, contiguous to their Works, where they keep a large Stock of Tools and other Articles, exclusively their own Manufacture, ready for Sale. Specifications and Estimates forwarded on application (if required, in French, Italian, or German Language).

Paris Exhibition.—Class VI. Section 1. Rotation No. 246.

**WM. MUIR AND CO., BRITANNIA WORKS, MANCHESTER.**

PATENT SCREW

STOCKS, TAPS, AND DIES.

W. MUIR and Co. beg respectfully to call the attention of Engineers, Railway Companies, and the Trade generally, to their Improved SCREW STOCKS, TAPS, DIES, &c, which, from their efficiency and adaptation to the work they have to perform, will bear an advantageous comparison with any other Screwing Tackle that has ever been offered to the Public. The Dies are so formed, that one serves as a guide, and the other as a cutter, which can be sharpened on a Grindstone, as other Edge Tools. The Taps are fluted in a superior form for cutting; the cutting edge is a radial line through Section of Tap, which is found by experience to take about one-third less power than Taps that have hitherto been in use.

The following Table shows the number of Threads to the Inch, per standard measure of the realm. The Taps are made to standard Gauges, and the angle of the Thread is 55° for all diameters, rounded at top and bottom; warranted the same as are used in Her Majesty's Dockyards, and at the principal Railway Companies' Engine and Machine Works in the United Kingdom.

Diameter in Inches .	$\frac{1}{16}$	$\frac{3}{32}$	$\frac{1}{8}$	$\frac{5}{32}$	$\frac{3}{16}$	$\frac{7}{32}$	$\frac{1}{4}$	$\frac{9}{32}$	$\frac{5}{16}$	$\frac{3}{8}$	$\frac{7}{16}$	$\frac{1}{2}$	$1\frac{1}{16}$	$1\frac{3}{16}$	$1\frac{5}{16}$	$1\frac{7}{16}$	$1\frac{9}{16}$	$2$	$2\frac{1}{16}$	$2\frac{3}{16}$	$3$

Paris Exhibition.—Class VI. Section 1. Rotation No. 246.

WM. MUIR AND CO., BRITANNIA WORKS, MANCHESTER.

**THE VERTICAL DOUBLE-GEERED DRILLING MACHINE,  
Exhibited Class 6, No. 246,**

Is suitable for every description of Work. It drills up to  $1\frac{1}{4}$  inches, single speed, and with double gear up to 5 inches. The slide is raised or lowered by a rack and pinion that requires no fixing or catches of any kind, the table of which is circular, and easily adjusted to a vertical position by means of set screws.

The Self-acting Motion is worked by Strap and Tangent Screw, and the Feed-Screw is embraced with an opening met by Eccentric ; and, when released, a Balance Weight withdraws the Drill instantaneously.

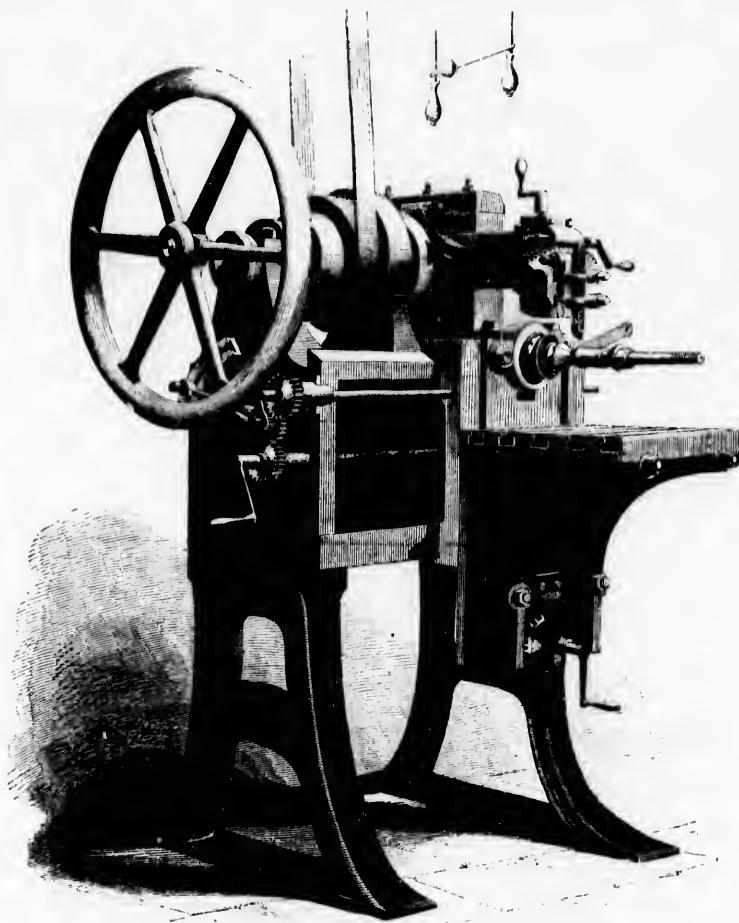

WM. MUIR AND CO. also make J. G. BODMER's Patent Pentograph; a large Stock of Wheel Cutters made upon same always on hand.

*And Cutters to any Form or Size made to order.*

6.  
STER.

Paris Exhibition.—Class VI. Section 1. Rotation No. 246.

**WM. MUIR AND CO., BRITANNIA WORKS, MANCHESTER.**

**UNIVERSAL SHAPING MACHINE,  
6-inch Stroke,**

ble gear up to  
any kind, the  
raced with an  
ously.  
Wheel Cutters

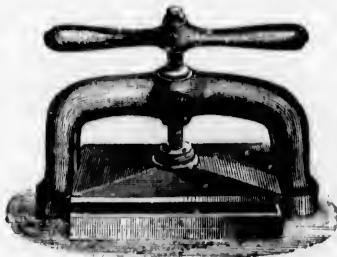

Is a new Design by Messrs. WM. MUIR AND CO. The Arm, as it is called, is of a peculiar form, to resist the strain in working, and more suitable for oiling, and is worked by an Eccentric without connecting rod; the Spindle for circular work is fixed to the Horizontal Slide, so that Cranks, Levers, or the like description of work can be operated upon, the circular, hollow, and flat surfaces of which can be finished without refixing them. The adaptation of the one Catch can do for all the motions of the Circular and Horizontal Cutting.

**PRICE £75.**

The Patterns of the Geering of all the Machines, Lathes, and other Tools are cut by Cutters made upon Bodmer's Patent Pentograph, the beauty and smoothness in working of which cannot be too highly appreciated.

Paris Exhibition.—Class VI. Section 1. Rotation No. 246.

Flat Folio, 423 lb. 24 x 18 . . .	9 0 0	9 15 0	..	..	..	

The great superiority of these Presses is in their strength, the beautiful form of the Elliptical Beam, and their excellency of workmanship.

The great demand for these Presses have induced a number of other Makers to imitate the form, but put in inferior workmanship, which causes disappointment.

## **EXPOSITION DE PARIS, Rotation N° 255.**

### **MACHINES POUR FABRIQUER LES BRIQUES ET LES TUILES.**

#### **MACHINES UNIVERSELLES QUI ONT GAGNÉS DES PRIX.**

#### **BREVETÉES DE CLAYTON.**

**Sous le Patronage de S.A.R. le Prince Albert.**

Les Machines à fabriquer les Briques exposées par H. CLAYTON, ont été achetées par le Gouvernement français et par M. le baron Thenard, un membre du Jury.

On fait grand usage de ces Machines, pour lesquelles le Breveté a reçu le Prix de la Grande Exposition de toutes les Nations, et aussi ceux des Sociétés Royales Agricoles d'Angleterre, d'Irlande, d'Ecosse, de France, de la Belgique, du Hanovre, de la Sardaigne, d'Amsterdam, etc. etc.

H. CLAYTON, Inventeur, Breveté et Fabricant de Machines de différentes grandeurs (adaptées pour être mises en action par l'homme, le cheval, la vapeur ou l'eau) pour toutes sortes de manufactures; c'est-à-dire—

Machines à Fabriquer les Briques Solides.

" les Briques Creuses.

" les Tuyaux et les Tuiles de Drainage.

" les Tuyaux d'Egouts et Siphons.

" les Tuiles pour Toitures et à Pavier.

Moulin à "Piler.

Moulin à Pétrir l'Argile.

Moulin à Cribler l'Argile.

Machines à Presser les Briques et les Tuiles, etc. etc.

Plans pour la Construction des Fourrs à Briques et à Tuiles, des Fourneaux à secher, etc.

On peut procurer des Cataiogues illustrés (en anglais ou en français) en s'adressant, franc de port, à

**HENRY CLAYTON,**  
*Atlas Works, Upper Park-place, Dorset-square, London.*

On peut voir ces Machines fonctionnant à la Manufacture, à l'Exposition de Paris (Annexe Département) ou au Palais de Cristal, à Sydenham.

## **PARIS EXHIBITION, Rotation N° 255.**

### **BRICK AND TILE MACHINES.**

#### **THE CHAMPION PRIZE MACHINES OF THE UNIVERSE.**

#### **CLAYTON'S PATENTS.**

**PATRONIZED BY H.R.H. PRINCE ALBERT.**

The Brick-making Machines exhibited by H. CLAYTON have been purchased by the Government of France and by Baron Thenard, a Member of the Jury.

These Machines are in most extensive use, and for which the Patentee has received the Prizes of the Great Exhibition of All Nations, and also the Prizes of the Royal Agricultural Societies of England, Ireland, Scotland, France, Belgium, Hanover, Sardinia, Amsterdam, &c. &c.

H. CLAYTON, Inventor, Patentee, and Manufacturer of Machines of various sizes and construction (adapted to Hand, Horse, Steam or Water Power) for every description of goods, viz.—

Machines for Solid Bricks.

" Perforated, or Hollow Bricks.

" Drainage Pipes or Tiles.

" Sewerage Pipes and Culvert Goods.

" Roofing and Paving Tiles.

Pugging Mills.

Clay Crushing Roller Mills.

Machines for Clay Screening (Cleansing).

" Brick and Tile Pressing, &c. &c.

Plans for the erection of Kilns, Drying Sheds, &c., for Brick and Tile Works.

Illustrated priced Cataiogues (in either English or French language) to be had on application, if by letter prepaid, to

**HENRY CLAYTON,**  
*Atlas Works, Upper Park-place, Dorset-square, London.*

These Machines may be seen in operation at the Manufactory, at the Exhibition in Paris (Annexe Department), or at the Crystal Palace, Sydenham.

Group 3, Class 4, Section 5. Rotation No. 627.

# JOHN LAMB,

11 MARSH TERRACE, AND HOLBORN PAPER MILLS,  
NEWCASTLE, STAFFORDSHIRE,  
MANUFACTURER.

REEL of POTTERY TISSUE PAPER, used for printing Earthenware by machinery from engraved Copper Rollers.

REAM of POTTERY TISSUE, for printing China and Earthenware from flat Copper Plates.

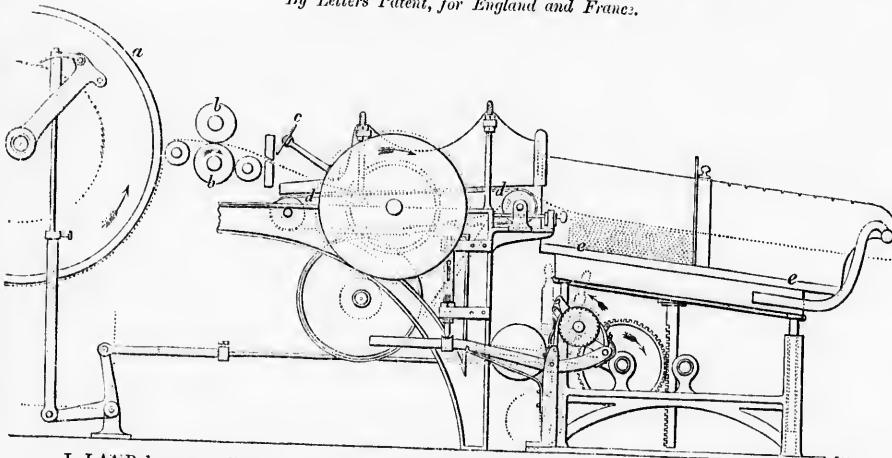

PIECE of OLD ROUND ROPE, and PIECE of OLD FLAT COALPIT ROPE: with this Material in progressive stages of conversion.

"POTTERY TISSUE" was formerly made of linen rags, but it is now always made from cordages, and rubbed upon the ware when the latter is in a "biscuit" state, with a roll of flannel. After a short period, the ware is plunged into water, and the bibulous paper removed with a sponge, leaving the impression on the pieces of Pottery.

The Maker of this Paper gained the Prize Medal for the United Kingdom at the Great Exhibition in London in 1851, Class 17, No. 147.

## J. LAMB'S Apparatus for laying paper direct from the Machines.

By Letters Patent, for England and France.

J. LAMB begs to call attention also to his lately patented improvements applicable to Machines for Cutting Paper, illustrated by the accompanying engraving. The object is to collect the Paper in heaps for operation hitherto performed by manual labour: *a*, represents the drum of an ordinary Paper-Cutting Machine; *b*, the circular cutters; *c*, the knife; and *d*, the felt from which the sheets of paper have heretofore been removed by hand.

According to these improvements, the paper is delivered by the felt, *d*, on to a platform marked *e*, and as the paper accumulates, the platform gradually descends.

When a sufficient quantity of paper has been thus laid on the platform, the Machinery by which it is lowered throws itself out of gear (previously ringing a bell), and the platform rises to its original position. The attendant then removes the piles of paper, and the operation proceeds as before.

Thus the assistants otherwise required to pile the paper are dispensed with; thereby not only effecting a considerable saving in wages, but also avoiding the injury and waste resulting from finger-marks.

J. L.'s improved Machinery is suitable also for collecting the paper in single sheets, direct from the Paper Machine.

In this instance the advantages are still greater; for when each sheet is deposited singly on the piles, the platform is nearly an hour in receiving its complement of a paper of moderate thickness.

Another advantage in this self-acting Machinery is, that at whatever speed the Paper or Cutting Machines may travel, the platform will receive the paper.

The Machine represented by the figure has been in successful operation for several months at the Holborn Mills, Newcastle, Staffordshire; where it may be seen at work, on application.

3<sup>e</sup> Groupe; 4<sup>e</sup> Classe, 5<sup>e</sup> Section. Rotation N° 627.

# JOHN LAMB,

11 MARSH TERRACE, ET HOLBORN PAPER MILLS,  
À NEWCASTLE, STAFFORDSHIRE,  
FABRICANT.

BOBINE de PAPIER de SOIE à POTERIE, pour imprimer la faïence à la mécanique au moyen de cylindres en cuivre gravés.

RAME de PAPIER de SOIE à POTERIE, pour imprimer la porcelaine et la faïence au moyen des plaques plates en cuivre.

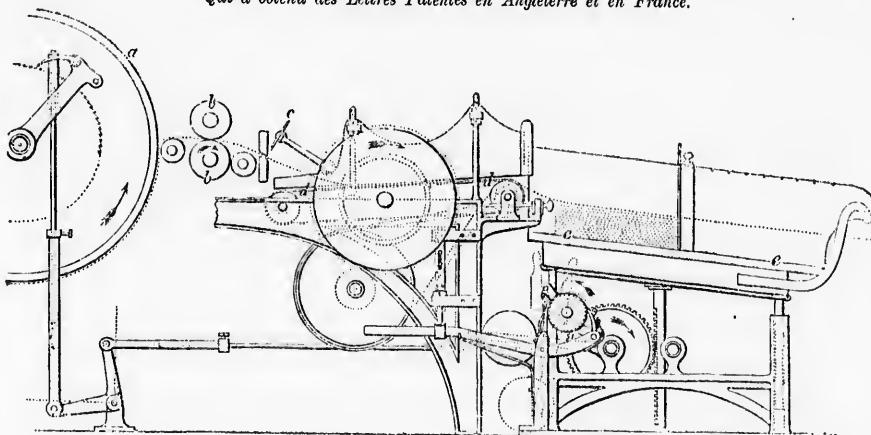

MORCEAU de VIEUX CORDAGE ROND, et un MORCEAU de VIEUX CORDAGE PLAT de HOUILLÈRE : avec ce matériel dans les états progressifs de changement.

Le "PAPIER de SOIE à POTERIE" était autrefois fait de chiffons de toile, mais à présent on le fait toujours de cordages; il n'est pas collé. Après qu'on a imprimé dessus avec l'encre de la couleur requise et faite de sorte qu'elle s'attache fortement au papier, avec un rouleau de flanelle ou le frotte sur la poterie quand elle est en "biscuit." Ensuite, après un court délai, la poterie est mise dans l'eau, et avec une éponge on enlève le papier qui boit, laissant l'impression sur la poterie.

Le fabricant de ce papier a obtenu le Prix pour le Royaume-Uni à la Grande Exposition de Londres in 1851, 17<sup>e</sup> Classe, N° 147.

## Appareil pour déposer le papier directement des Machines, INVENTÉ PAR J. LAMB,

*Qui a obtenu des Lettres Patentes en Angleterre et en France.*

J. LAMB a l'honneur aussi d'attirer l'attention à ses perfectionnements pour couper le papier, dernièrement brevetés, illustrés avec la gravure ci-dessus. L'objet en est de mettre en tas le papier, une opération qui a été faite jusqu'à présent à la main: *a*, représente le tambour d'une machine ordinaire à couper le papier; *b*, les découpoirs circulaires; *c*, le couteau; et *d*, le feutre d'où on levaît à la main les feuilles jusqu'à présent.

D'après ces perfectionnements, le papier est livré par le feutre *d*, à la table *e*, et la table s'abaisse à mesure que le papier s'accumule.

Quand la table a reçu une quantité suffisante de papier, la mécanique qui la fait baisser se désengrène (agitant auparavant une sonnette), et la table se lève à son ancienne position. Alors l'ouvrier enlève le tas de papier, et l'opération continue comme auparavant.

Ainsi on peut se dispenser des ouvriers pour entasser le papier, par ce moyen on fait non-seulement une grande économie de frais, mais on évite les dégâts et les pertes occasionnés par les marques des doigts.

On peut appliquer la mécanique perfectionnée de J. L. à ramasser le papier par feuilles, directement de la machine à papier.

Dans ce cas les avantages sont encore plus grands; parce que quand les feuilles sont empilées une à une, il faut une heure pour que la table reçoit son complément de papier d'une épaisseur ordinaire.

Un autre avantage de cette mécanique automotrice, c'est que n'importe à quelle vitesse fonctionne la machine à couper ou la machine à papier, la table recevra le papier.

La Machine que représente la gravure a été en opération avec succès pendant plusieurs mois aux Holborn Mills, à Newcastle, Staffordshire, où on peut la voir fonctionnant.

Honorary Secretaries.

This Society has for its object, to promote the knowledge and love of the Fine Arts, and their general advancement in the British Empire, by a wide diffusion of the works of native artists; and to elevate Art and encourage its Professors, by creating an increased demand for their works, and an improved taste on the part of the Public.

Subscribers of one guinea, or upwards, are Members of the Society for the year for which the subscription is paid.

The Subscriptions are devoted to the purchase of Pictures, Drawings, Enamels, Sculpture, Medals, Engravings, and other works of art.

Every Member, for each guinea subscribed, is entitled to—

- I. An impression of one or more plates engraved expressly for the Society, and printed for the Members only; admission for himself and friends, to the General Meeting and to the Exhibition of Prizes; and a copy of the Annual Report and Almanac.
- II. One share in the distribution of Prizes at the Annual General Meeting.

For the Current Year ending 31st March, 1856.

Every Member will be entitled to—

- I. An impression of a plate, by J. T. WILLMORE, A.R.A., from the well-known original picture by SIR EDWIN LANDSEER, R.A. and SIR AUGUSTUS CALCOTT, R.A., “HARVEST IN THE HIGHLANDS;” or, by choice, any other of the Prints produced for the Society.

- II. The chance of obtaining one of the Prizes to be allotted at the General Meeting in April, including—

THE RIGHT TO SELECT FOR HIMSELF A VALUABLE WORK OF ART FROM ONE OF THE PUBLIC EXHIBITIONS.

STATUETTES IN BRONZE, PORCELAIN, AND PARIAN.

PROOF IMPRESSIONS OF TWO LARGE LITHOGRAPHS, by T. H. MAGUIRE, after the original pictures by W. P. FRITH, R.A., “Scenes” from Molière’s “Bourgeois Gentilhomme.”

The Prizes are publicly distributed by lot, at the General Meeting of the Members, held every year on the last Tuesday in April, by two ladies chosen at the time, and every Member who gains a Prize receives intimation of it by the same night’s post.

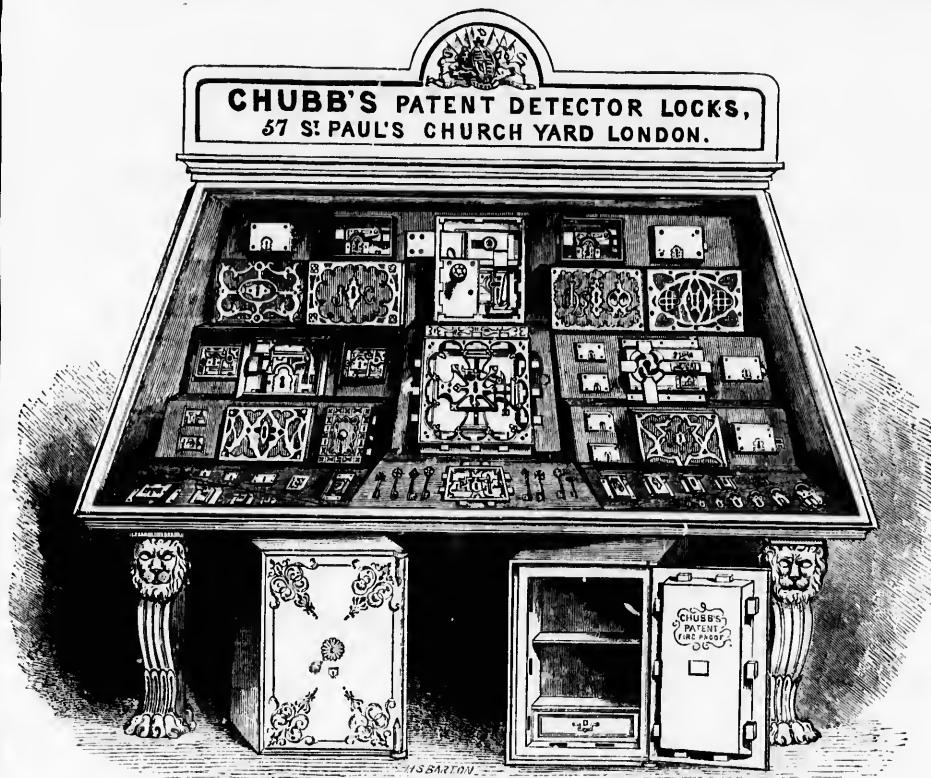

The Council select Works of Art for such Prizeholders as desire it; and for all those residing in distant parts who may not have delegated the selection to friends in England.

Subscriptions will be received, and every information will be given, by the Honorary Secretary for Paris,  
W. TILLY, Esq., Passage Violet, No. 10, Rue Faubourg Poissonnière.

**G R E A T   E X H I B I T I O N   O F   1851.**

**"CHUBB & SON—FOR LOCKS, Prize Medal and Special Approbation."**

CHUBB's Locks have now been used for more than thirty years by Bankers, the Governments of this and other Countries, and by many hundreds of thousands of individuals, and no instance has ever occurred of any robberies having taken place through these Locks having been picked or opened by false Keys. The great care exercised in their manufacture, and the moderate prices at which they are sold, still cause them to maintain their pre-eminent position as the most secure Locks for general as well as special purposes.

CHUBB & SON have invented and applied such improvements in the manufacture of their Locks, as to combine the greatest security with that simplicity which is essential to Locks used for ordinary purposes. They have lately added, besides other improvements, a Patented Invention of great simplicity, which will in future be applied without any additional cost. This addition consists of a contrivance, by which, if a false Key or Pick should be inserted, and turned even a small part of the way round, a metal curtain entirely closes up the whole opening, so that all access to the works is effectually cut off, and no Picks can be worked.

## TESTIMONIALS TO THE SECURITY OF CHUBB'S LOCKS.

*From A. F. Tracey, Esq., Governor of the Westminster House of Correction.*

"House of Correction, Westminster, March 11, 1850.  
"I am of opinion, after an experience of nearly sixteen years, that your Locks are admirably adapted for every use in prisons, and wherever security is deemed an important consideration."

*From Mr. Pearce, Superintendent of the A. Division, Metropolitan Police.*

"Great Exhibition, Hyde Park, 29th October, 1851.  
"GENTLEMEN.—I can say, after 27 years' experience as an officer in the Old and Metropolitan Police, that I have never known an instance of a robbery having been committed by picking one of your Locks."

*From Mr. Otway, Superintendent of C. Division, Metropolitan Police.*

"8, Great Vine Street, 3rd May, 1853.  
"GENTLEMEN.—I have the pleasure to inform you, that having one of your Locks on the street door of my house prevented my being robbed last night.—I am, Gentlemen, your obedient Servant,  
"Messrs. Chubb & Son."

"C. OTWAY.

*From the Cashier of the Dundee Bank.*

"An attempt was made upon this Bank on the night of 31st January, 1852, by a set of thieves evidently quite accomplished in their profession. They selected for their operations an Iron door secured by one of Chubb's Locks. In attempting to pick which all their ingenuity was at first exercised, but the only alternative was the tedious and laborious one of boring into the Lock in order to destroy it. Before this could be accomplished a violent alarm was given, and the thief fled; but the work done in boring, &c., could not have occupied less than half a dozen hours. In their flight they left all their implements behind them, including a perfect set of Lock-picking instruments, being amply furnished for their work."

*From the London and North Western Railway Company, Liverpool.*

"17th May, 1853.  
"GENTLEMEN.—I have much pleasure in bearing testimony to the efficiency of the Iron Door and Locks of your make, which secure the Strong Room at this Office, and which completely baffled the efforts of one or more Burglars to get at the Money Chest, on the night of Thursday last, although it is evident that considerable force was used to break open the Door.—I am, Gentlemen, your obedient Servant,  
"Messrs. Chubb & Son."

"GEO. PALMER.

## CHUBB'S FIRE-PROOF STRONG WROUGHT IRON SAFES.

### ABSTRACTS OF TESTIMONIALS TO THE SECURITY OF CHUBB'S FIRE-PROOF SAFES.

In the Great Fire at Messrs. Rylands and Sons', Manchester, 1st March, 1854, the whole of the Books, Papers, and Cash were preserved in one of Chubb's Fire-proof Safes, after it had been subjected to **FOURTEEN HOURS' INTENSE HEAT**.

In the Fire at Messrs. Wm. Jones and Sons, Storo Street Mills, Manchester, on 15th May, 1854, all the Cash, Notes, Policies, &c., were enclosed in a Chubb's Fire-proof Safe, which, being built in a chimney-flue, was exposed to an extraordinary amount of heat, yet the contents were found **PERFECTLY UNINJURED**.

*Unsuccessful Attempt to Blow Open a Chubb's Safe with Gunpowder.*—On the night of 30th August, 1854, some burglars broke into the counting-house of Mr. Blair, Irk Mills, Manchester, and introduced a very heavy charge of Gunpowder into the keyhole of a Chubb's Safe, endeavouring by firing it, to force open the safe, but were unsuccessful, although the force of the explosion was so great as to move the Safe some inches from its position.

*At the extensive Fire in Bread Street, Cheapside, on January, 1854, when the premises of Messrs. Townsend and others were destroyed, the adjoining warehouse of Messrs. Liddiard and Co. was preserved by means of a Chubb's Fire-proof Door fixed in the party-wall.*

*Fire at the Manchester, Sheffield, and Lincolnshire Railway Offices, Manchester.*—In this Fire, on 25th November, 1854, one of Chubb's Fire-proof Safes was exposed to such intense heat that all the brass handles and knobs were melted off, yet all its contents, consisting of valuable books, bank-notes, &c., escaped without the slightest injury.

*Burglary Defeated.*—On 8th February, 1855, the office of Messrs. T. and S. Jones, of Wolverhampton, was broken into, and the thieves made a violent attack upon a Chubb's Thief-proof Safe, which contained a large sum of money. They spared no efforts, having broken several very strong house-breaking instruments in the attempt, and considerably disfigured the Safe, but were obliged to retire without effecting their object.

The only Fire-proof Safes in the United Kingdom which received the award of the Prize Medal, with "Special Approbation," at the Great Exhibition of 1851, were of Chubb and Son's manufacture. The decision of the Jury is therefore conclusive of the great superiority of Chubb's Fire-proof and Thief-proof Safes against Fire or Thieves. They are made of the strongest Wrought Iron, and the Fire-proof Linings are filled with the best proved non-conductors of heat, being put together so strongly as to resist the falling of timbers, brick-work, &c., in case of fire.

*Japanned Cash, Deed, Paper, and Writing Boxes; Morocco Despatch Boxes, &c., of all sizes, fitted with the Patent Detector Lock.*

## PATENT TRUSSSED BEAM TWO-HORSE IRON PLOUGH,

MARKED Y. L.

Awarded the Prize of £10 and Silver Medal, as the Best Heavy Land Plough. A Prize of £10 and Silver Medal as the Best Light Land Plough, at the Royal Agricultural Society's Meeting at Southampton. Also a Prize of £10 at the Royal Agricultural Society's Meeting at Northampton, and the Council Medal of the Great Exhibition with this Plough as made by Bushy, under license.

For general purposes this Plough obtains the preference over most, if not all, others; and, by changing the mould board only—as was the case at the great trial at Southampton in 1814—it will answer equally well for heavy as for light land; and, upon the occasion referred to, it obtained the double Prize of the Royal Agricultural Society, "As the Best Plough both for Heavy and Light Land." (Vide pages 19 and 20.) The construction of this Plough is very simple, and its draught light. In its original form, it was first introduced by Richard Westbrook Baker, Esq., into Rutland, and obtained general use there. Prizes were won with it in many successive years at the Cottesmore Meetings of the above county, and subsequently, from various trials and experiments, it was brought to its

present approved form, and is now known as the Improved Rutland Plough, marked Y. L. The share is fixed to a patent lever neck, which is an effective arrangement for giving it more or less "pitch," or in directing the point more or less to land.

The coulter fittings are on a simple plan, affording facilities for quickly placing the coulter in any required position.

There are upwards of twenty varieties of mould boards to this Plough, adapted for every description of soil; and it is desirable, in giving orders for this and similar Ploughs, to state whether required for heavy or light land, and if fitted with one or two wheels, or as a Swing Plough.

### PRICE:

	£. s. d.

Do, with Steel Breast, extra . . . . .	0 12 0

## PATENT TRUSSSED BEAM TWO-HORSE IRON PLOUGH,

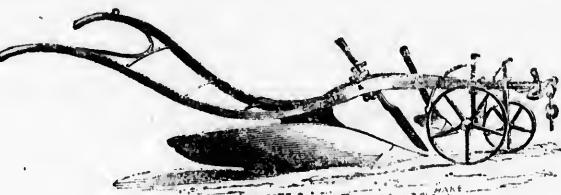

MARKED Y. R. C.

Awarded the Prize at the Meeting of the Royal Agricultural Society at Lewes, 1852; and again at a Meeting of the same Society at Lincoln, 1854, as

### THE BEST PLOUGH

FOR

GENERAL PURPOSES.

In its general formation this Plough is similar to the well-known Y. L. Plough previously described, but without the contrivance for altering the dip of the share. The mould board has been constructed with every attention to correctness of form and adaptation to variations of soil; and its superiority was fully proved at the Meeting of the Royal Agricultural Society at Lewes, in 1852, and

at Lincoln 1854, where this Plough successfully competed for the Prize offered for "The Best Plough for General Purposes."

As tested by the Dynamometer it is found to be exceedingly light of draught, while the steadiness with which it works, and its simplicity of construction, commend it to the practical agriculturist.

### PRICE:

	£. s. d.
As a Swing Plough . . . . .	3 14 0
Fitted with One Wheel . . . . .	4 0 0
Do, with Two Wheels . . . . .	4 10 0
Do, with Skim Coulter, extra . . . . .	0 5 0
Do, with Steel Breast, extra . . . . .	0 12 0

# RANSOMES & SIMS, IPSWICH.

## PATENT TRUSSSED BEAM IRON UNIVERSAL RIDGE PLOUGH, MARKED Y. U. L.

Silver Medal of the Royal Agricultural Society at Norwich, 1849.

This Plough was constructed under the direction of John Clarke, Long Sutton Marsh, for which he was awarded the Silver Medal of the Royal Agricultural Society of England, and the Prize at the R. A. S. Meeting at Norwich, in 1849.

the heel piece, or back part of the frame, being removed, and having two frames made to shift to any width, with a share in front, and two curved cutters; thus used, it is a perfect Horse Hoe, the share cleaning the bottom of the furrow, while the hoes shave the sides of the ridges.

If needed to be used as a Scarifier for bean rows, potatoes, &c., substitute the flat hoes for the curved cutters. As the Hoe-frame will expand about 3 feet 6 in., it will allow two flat hoes to be used on each side, and thus form a superior Nidget for hop-yards, as also for loose follows.

**SECOND.—A MOULDING PLOUGH,** to be used in moulding up root-crops, peas, or beans. The cut shows the form of mould boards, &c. &c.

**THIRD.—A HORSE HOE, OR CLEANING PLOUGH.**

The cut represents the implement without the mould boards, &c. &c.

**FOURTH.—A SKELETON, OR BROAD-SHARE PLOUGH.**

As a Broad-share Plough, use one of the large-sized shares, 14 in. or 18 in., and the small mould boards; or, if preferred without the mould boards, use the prongs. In the former case it will effect good trench ploughing; and, in the latter, it will break up the soil, and leave it in the best state for pulverization. If it be desired merely to cut up weeds, use the large broadshare only without prongs. As a Skeleton Plough, use the large single-winged share, either with or without prongs.

By broad-sharing, or skeleton-ploughing in the autumn, not only is the soil brought into a pulverized state, but the seeds of annuals, roots, weeds, &c., are stimulated to vegetate, and grubs, worms, and the larvae of insects are destroyed; and it is supposed that, by promoting the attraction and deposit of vegetable effluvia, extensively given off by decayed vegetation at this season, the productive powers of the soil are much increased.

In all these stages it may readily be worked with one horse, and the adjustment of its various parts are so simple as to render further directions unnecessary.

Price of the Plough, complete, with fittings to perform all the above-named operations . . . . . £6 6 0

### GARDNER'S DOUBLE ACTION TURNIP CUTTER.

This well-known and indispensable machine, is used for cutting Turnips into slices suitable for sheep. The pieces average  $\frac{1}{4}$  in. wide by  $\frac{1}{2}$  in. thick, while the waste by small irregular pieces is very trifling. By turning the fly-wheel in a contrary way it cuts the turnips into pieces  $2\frac{1}{2}$  in. wide by  $\frac{1}{2}$  in. thick for cattle. When required, they are sent out fitted with wheels and handles, for convenience of removing from place to place.

#### PRICE:

	£.	s.	d.
As a Single Action Machine for Sheep only . . . . .	4	10	0
As a Double Action Machine for Beasts and Sheep . . . . .	5	10	0
Fitted with Wheels and Handles, extra . . . . .	0	13	0

## RANSOMES & SIMS, IPSWICH.

### BIDDELL'S PATENT BEAN CUTTER, FOR HARD AND SOFT BEANS.

Awarded the Silver Medal of the Royal Agricultural Society at Gloucester ; the Silver Medal of the Yorkshire Agricultural Society, at York, 1853 ; and a Second Class Medal, at the Meeting of the Royal Agricultural Improvement Society of Ireland, at Killarney, 1853.

This Mill, pronounced to be the Gem of the Show Yard at Gloucester, from its simple and novel construction,

possesses advantages which will be obvious to the practical Agriculturist. The largest and smallest varieties of

beans are equally well prepared, and this quite independently of the dryness of the grain, for, whether hard or soft, the efficiency of the operation is the same, while no choking can take place. The power required to prepare a given quantity of grain is less than with the ordinary Bean Mill. The great novelty of this Mill consists in the teeth or cutters being made of separate pieces of hardened steel, fixed in a cylinder ; each tooth has three prepared cutting edges, so that when one edge, or set of edges, becomes dull, they may be taken out, turned one-third round, put in again, and a new edge or set of edges is obtained ; and when these fail, they may be again taken out and turned one-third round, and it makes a second fresh set ; and when this third resource fails, they may be taken out and easily replaced with new teeth, by an ordinary labourer, at a very small cost, viz. 6s.

As a satisfactory proof of the estimation in which this Mill was held at the Royal Agricultural Society's Meeting at Gloucester, upwards of ONE HUNDRED were sold on the Show Ground.

One man can crush . . . . .	3 bushels of Beans per hour.
Two men ditto . . . . .	5 ditto ditto
If driven by horse or steam power, at a speed of 150 revolutions per minute,	24 ditto ditto
will grind . . . . .	

Price . . . . .	£. s. d.
Do., fitted with Crotch for Horse-power . . . . .	3 15 0
Do., fitted with fast and loose Pulleys for Steam-power . . . . .	4 5 6
	4 16 0

### IMPROVED HORIZONTAL DIRECT ACTION FIXED STEAM ENGINE.

Royal Agricultural Society's Meeting, at Lewes, 1852 . . . . .	Prize.
Royal Agricultural Society's Meeting, at Gloucester, 1853 . . . . .	Commended.
Royal Agricultural Society's Meeting, at Lincoln, 1854 . . . . .	First Prize.

The following Engraving represents R. and S.'s Eight-Horse Power PRIZE Fixed Steam Engine. The Engine exhibited is of FOUR-HORSE POWER, and in its general arrangement is similar to the Prize Engine.

These ENGINES are made of the best materials, and first-class workmanship. They are exceedingly simple in construction, and compact in form. All the parts are easy of access, and afford every facility for adjustment or repairs. They are principally supported on a cast-iron frame, made very strong, and do not require any attachment to the walls of the building in which the Engine is placed. They can be either erected on a stone or brick foundation, or be carried on two wood sills.

These Engines are peculiarly adapted for driving Fixed Thrashing Machines and Barn Machinery, or for sawing and pumping.

They are fitted with a wrought-iron crank shaft and connecting rod; the slide valve is on the best principle; the feed pump is very simple, and not liable to be put out of order; the supply of water to the boiler is very easily regulated : there is a governor of the best construction for controlling the speed of the Engine, and an improved valve for stopping the Engine, when required, without interfering with the throttle valve. The boiler is very

simple, and is perfectly safe and easy to manage; the fire is placed in an internal circular flue, and the flame passes through, and along each side of the boiler to the chimney: by this arrangement, all sediment contained in the water can collect underneath the fire-flue without causing any injury to the boiler, which obviates a too frequent source of expense and annoyance in common boilers with the fire placed under the bottom. Any ordinary bricklayer can set the boiler in a very short time, and only a small chimney, of about 30 feet high, is necessary. The boiler is fitted with good safety valves, glass water gauge, and everything necessary for its safe and efficient working; and is very economical in the consumption of fuel.

Engines of this construction are well adapted for grinding corn, as one of *Eight-Horse* power will drive three pairs of 3 feet 8 in. millstones; and they can readily be attached to ordinary millstones in wind or water mills, and are, therefore, well worthy the attention of millers, who may wish to insure the means of driving a pair of stones, at all times, with economy and regularity.

## RANSOMES & SIMS, IPSWICH.

The following Prices of Engines of similar construction to the above include the Engine, Boiler, and all the necessary Fittings for the Boiler, but not the connections between it and the Engine, the cost of which varies according to the distances they are placed asunder. If required, RANSOMES & SIMS will send a competent mechanic to fix the Engine and set the Boiler, charging for his time and the amount paid for travelling expenses.

### SEVEN-HORSE POWER PORTABLE STEAM ENGINE.

Consuming 5½ lbs. of Coals per Horse-power per hour.

Royal Agricultural Society's Meeting, at Lewes, 1852 . . . . .	Commended.
Royal Agricultural Society's Meeting, at Gloucester, 1853 . . . . .	Commended.
Royal Agricultural Society's Meeting, at Lincoln, 1854 . . . . .	Prize.

In the manufacture and construction of these Engines the best materials and workmanship are combined.

These Portable Steam Engines, adapted for thrashing, sawing, grinding, pumping, and other agricultural purposes, are of very simple construction, and, having but few working parts, there is little liability to get out of order. All the parts are so placed as to be constantly under the eye of the Engine-man, and are very easy of access.

They are fitted with a superior governor, and an effective regulator valve for stopping and controlling the speed of the Engine. There is a simple and efficient feed pump, which insures, at all times, a regular supply of water to the boiler. The crank shaft and connecting rod are of wrought iron, and the slide valve is of the most im-

## RANSOMES & SIMS, IPSWICH.

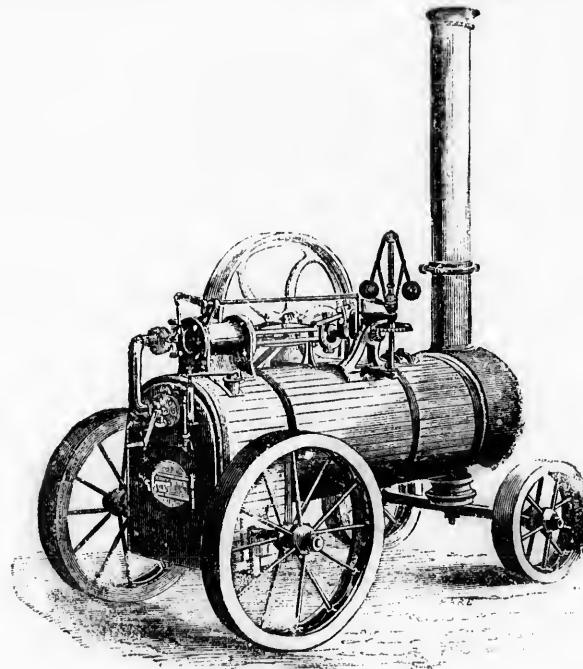

proved construction. The boilers are of a superior description, made on the same principle as the best locomotive boilers, and tested to a pressure of 100 lbs. per square inch. R. and S. have directed especial attention to this important part of the Engine, with a view of obviating the danger arising from the inferior manner in which boilers fitted to Agricultural Engines are too often made. These Engines require but little fuel, and are free from danger by fire to the surrounding ricks and farm buildings, the ash pan being closely fitted to the fire box, and containing water for extinguishing the embers as they fall from the bars.

These Engines thrash, with ease, from 50 to 80 quarters of wheat of average yield per day, and are readily managed by an intelligent farm servant, on whose care will depend, in a great measure, the quantity of fuel consumed. The price quoted includes water-proof cover, tube cleaner, fire pricker, rake, screw spanners, oil can, a large funnel, and spare gauge glass.

RANSOMES & SIMS' Portable Engines are fitted with their

### REGISTERED LOCKING GEAR,

the underside or bearing surface of which (secured to the Engine smoke box) is made spherically convex, whilst the corresponding surface, bolted to the top of the axle, is concave to fit, instead of having flat working surfaces of the usual kind, the central bolt forming the link of connection between the two. The advantages of the plan are, that whilst the fore axle and wheels are perfectly free to turn horizontally, the axle itself is also free to move vertically; so that, should either of the fore wheels meet with any obstruction tending to alter the axle's horizontal position, the body of the vehicle is at once relieved from all cross strain, and is maintained undisturbed in its level position.

FULL WORKING DIRECTIONS ARE SENT WITH EACH ENGINE.

## RANSOMES & SIMS, IPSWICH.

### DAVY'S PATENT FLAX MACHINE.

RANSOMES & SIMS are the appointed Manufacturers of the above Machines, and will be pleased to execute any order for them. The Decorticating Machine was exhibited by them in work at the late Annual Meeting of the Royal Agricultural Society of England and attracted much attention there.

The following is extracted from the Society's Report on the Exhibition, and Trials of Implements at the Lincoln Meeting, 1854.

*Flax Machine.* This Machine removes the objection that exists among farmers to the cultivation of flax, as it brings the fibre into a marketable condition without the troublesome process of retting and hand scutching; it was

driven by steam and required but one horse-power to work it.

"We had only one machine to try for the purpose of breaking flax and separating the seed and fibre from the straw as soon as harvested. We consider it capable of effecting these objects without steeping. We weighed out 7 lbs. of straw, which produced 41 lbs. of rough flax for the Scutching Machine. After the process of scutching we had 21 lbs. 9 oz. of marketable flax and tow; 1 lb. of the former and 1 lb. 9 oz. of the latter.—On the above grounds we had no hesitation in awarding a Medal,

"JAMES HALL NALDER.  
"H. B. CALDWELL."

### DAVY'S SCUTCHING MACHINE.

The Scutching Machine is employed for removing the broken and loose woody particles which will be found partially adhering to the fibre after it has passed through the Decorticator—and it is then marketable for manufacturing purposes.

N.B. The Inventor of the above Patent Machinery had intended to have exhibited the same at work at the Paris

Exhibition, and had made his arrangements for this purpose, but his rather sudden and lamented death has prevented this arrangement from being carried out at the present time.

Patents have been taken out, or applied for, for Davy's Flax Machinery, in France, Belgium, Holland, Austria, Saxony, and America, and Ransomes and Sims are prepared to receive propositions for working the same.

### RANSOMES & SIMS' DESCRIPTIVE CATALOGUE SENT FREE BY POST THROUGHOUT ENGLAND,

On application by letter addressed to them at Ipswich, or to SHEPPARD RANSOME, 31, Essex Street, Strand, London.  
They may also be had at R. & S.'s Staud, No. 147, at the Paris Exhibition.

**The Goods described in R. & S.'s Catalogues are delivered by Rail to London.**

*A Discount of 5 per cent. will be allowed for Cash on receipt of Invoice, excepting Steam Engines, Thrashing Machines and Horse-powers, upon which 2½ per cent. for Cash will be allowed.*

### TERMS FOR STEAM ENGINES AND STEAM THRASHING MACHINES, Cash on receipt of Invoice, with a Discount of 2½ per Cent.

**ALL FOREIGN ORDERS TO BE ACCOMPANIED BY AN ORDER FOR PAYMENT IN LONDON ON PRESENTATION OF INVOICE.**

PARIS UNIVERSAL EXHIBITION, 1855.

WORKS OF INDUSTRY AND ART

EXHIBITED BY

SPIERS & SON,

MANUFACTURERS OF

DECORATED PAPIER MÂCHÉ, ETC.

102 & 103 HIGH STREET, OXFORD.

HONORABLE MENTION

awarded by the Jurors at the

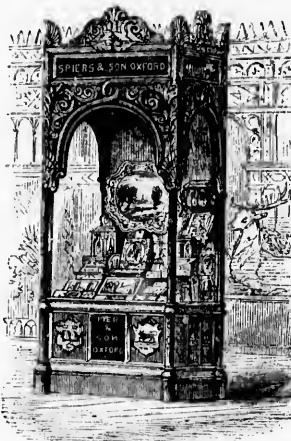

GREAT EXHIBITION OF 1851.

PRIZE MEDAL

awarded by the Directors of the

GREAT EXHIBITION AT NEW

YORK IN 1853.

The above Case contains specimens of their Manufacture, and comprises a Table, Cabinets, Writing-desks, Envelope-cases, Portfolios, Work-boxes, Card-trays, Papetéries, Hand-screens, Card-cases, etc. The following is a list of various other articles manufactured of Papier Mâché, and decorated with picturesque delineations of architecture and landscape, executed at their establishment:—

CHESS-TABLES.	NETTING-BOXES.	PEN-TRAYS.	CIGAR-CASES.
FINE-SCREENS.	TEA-CADDIES.	READING-DESKS.	JEWEL-BOXES.
MULTIFORMIAS.	CHESS-BOARDS.	CARD-BOXES.	WATCH-STANDS.
ALBUMS.	SPILL-JARS.	PAPER-KNIVES.	CARD-RACKS.
TEA-TRAYS.	CANDLESTICKS.	INKSTANDS.	NEEDLE-BOXES.
PANELS FOR INTERNAL DECORATION, ETC. ETC. ETC.			

In the decoration of these goods upwards of 300 different subjects are employed, being by far the largest in number and the greatest in variety which has ever been attempted. They comprise views of every college, hall, and public building in Oxford; besides views of the college gardens, the public walks, the river scenery, and the neighbourhood. Interesting subjects in various parts of the United Kingdom and of the Continent are also represented. Paintings are executed to order, either from nature or from sketches supplied to them, and heraldic or other devices and inscriptions may be introduced.

Their painting room and extensive establishments are always open to visitors.

SPIERS & SON are Publishers of the "ILLUSTRATED MEMORIAL FOR VISITORS TO OXFORD," containing Views, Maps, and general local information useful to the Tourist.

SPIERS & SON,  
MANUFACTURERS OF DECORATED PAPIER MÂCHÉ, ETC.,  
102 & 103 HIGH STREET, OXFORD,

Respectfully beg to submit the following extracts from Newspapers and other Publications, referring to Goods exhibited by them.

"There is perhaps no city in the kingdom which presents so many objects of high interest for the pencil of the artist as Oxford; and the enterprise of many of our citizens has been largely exercised from time to time in the publication of engravings of them in various styles of art, and different degrees of merit. But a new and ingenious mode of representing the architectural and other beauties of the city has for some time past been adopted, and is already brought to a state of the greatest perfection—that of the papier mâché manufacture, upon articles of which, in endless variety, are painted views of the Colleges, Halls, and other public buildings, and also some of the more picturesque landscapes in the suburbs, and the adjoining districts. The sketches are taken upon the spot, and the paintings are done upon the premises of the firm which has the great merit of first introducing, and exclusively carrying on, so elegant a manufacture here—Messrs. Spiers and Son of High-street, who employ, as their articles abundantly testify, first-rate artists, and thereby produce works of art of great beauty and excellence. The pictures, as subjects of art, could not be better of their class. The architectural features from their striking character and great variety, united with the broken and picturesque groups of trees, form views of the most enchanting kind; and they are represented under all the advantages of effect which can be imparted by the hazy grey or the clear light of morning, or in the quiet of evening, when the orb of day is just sinking below the horizon. These representations of the most beautiful objects for which our city is so justly celebrated, may be possessed in articles which are both useful and ornamental—representations which are executed in an admirable style of art, and upon a material of the most elegant and durable kind. As mementos of Oxford they are in all respects excellent; and few members of the University, one would think, can resist the temptation to possess such elegant and interesting memorials of their *Alma Mater*."—*Oxford Herald*.

"THE OXFORD CONTRIBUTIONS TO THE GREAT EXHIBITION.—The first collection of articles, which, from its interest, variety, and excellence, deserves to be placed at the head of our list, is that of Messrs. Spiers and Son, of the High-street, in this city, which occupies, and most deservedly so, a very prominent position on the north side of the western nave. The articles exhibited by Messrs. Spiers and Son are arranged in a large and elegant case of brass-work and plate-glass, 14 feet in height, designed by Mr. Owen Jones, and fitted up by Messrs. Fox and Henderson at great cost. The contents of the case are—a large screen which forms the apex of the arrangement, below and around which are grouped tables, cabinets, desks, work-boxes, albums, portfolios, waiters, tea-caddies, &c., in papier mâché, in number nearly 300, ornamented with upwards of 150 different views of the colleges, public buildings, the college-walks, and general views of the city and neighbourhood; around the back of the case, hand-screens, &c., are arranged in a fan-like ornament. From this slight sketch of this collection, which is well worthy of the prominent position it occupies, and the notice which it excites, it will be seen that Oxford is well represented in the Great Exhibition, having its name and attractions placed conspicuously amongst those of our great marts of industry and commerce. Nor will such a display be without its use, for it will not fail to awaken in the minds of many pleasing reminiscences of olden times. And we can well imagine that many of our foreign and country visitors, when tired of the heat and dust of the metropolis, may gladly be tempted to sojourn amidst the cool and delicious cloisters and gardens of a place so world-renowned as Oxford, and to possess themselves with some such pleasing reminiscence of it as these articles afford."—*Oxford Journal*.

"We observe with much pleasure in the north-west side of the nave of the Crystal Palace, a very elegant selection of papier mâché articles from the classic city of Oxford, contributed by the Messrs. Spiers and Son. Throughout these examples there is a manifestly wholesome departure from the cockatoo and peacock style hitherto so much in vogue. With a material eminently adapted for works of art, and a manipulatory process which renders such results ever enduring, the style hitherto adopted was becoming not only painful to the eye, but lamentable to the mind. Messrs. Spiers' exquisite paintings are purely English; for while they have devoted their energies and talents to the illustration of their noble city and its vicinity, they may be said to have entered their campaign of taste under St. George, as their well-directed efforts must scout for ever from the field of art, those nondescript dragons and Chinese monstrosities, once inseparable from papier mâché decoration."—*Standard*.

"Fronting the nave, will be found the fine collection of ornamental work, exhibited by Spiers and Son, of Oxford. The Messrs. Spiers have been at some pains to impress the public with the love of their city, by taking all the subjects for the decoration of their papier mâché works from Oxford. Oxford is seen under every aspect: its colleges, its streets, its very seals are all illustrated."—*How to See the Exhibition*.

"The contributions of Messrs. Spiers and Son, of Oxford, are shown in a semi-octagonal dome-shaped glass-case in the nave, designed by Mr. Owen Jones. They consist of tables, cabinets, desks, work-boxes, albums, portfolios, waiters, tea-caddies, &c., in papier mâché, ornamented with views of the colleges, public buildings, college-gardens, and other objects of interest in the university and its neighbourhood. Here, again, we are happy to notice endeavours after a truer and less meretricious style of ornamentation. As the taste of the Oxford people seems to run in a contrary direction to that of the usual purchasers of this description of goods, this firm have taken up the ornamentation of papier mâché in a new style. Instead of adopting the usual subjects of birds, flowers, Chinese landscapes, and other less pleasing styles, they conceived that picturesque representations of architectural and landscape subjects, treated in an artist-like manner, to which other ornament should be subservient, would be equally interesting to many persons, equally popular, and more conducive to the diffusion of a sound taste; and, judging from the display of articles exhibited by them, we cannot help thinking that they have acted wisely in carrying out their intentions."—*Morning Chronicle*.

"The Messrs. Spiers and Son, of Oxford, have long been known as strenuously exerting themselves to give a higher direction to the ornamentation of the material known as papier mâché. In this praiseworthy task they have eminently succeeded; and a class of art has been enlisted for this purpose no far superior to that which has hitherto been employed, as are the paintings upon the porcelain of Sèvres to the worn out plate of the willow pattern. The consequence is that our drawing-rooms, our libraries, and our boudoirs, become pictorially decorated with objects of utility agreeable to the senses, instead of being positively offensive to a refined perception. In Class 26, in the Crystal Palace, is a large dome-shaped glass-case, in which may be seen several charming evidences of the facts here enunciated, which are at the same time acceptable proofs of the good taste prevailing in, and encouraged at Oxford."—*Morning Herald*.

"On the opposite side of the nave stands a large glass-case devoted to the handiwork of Messrs. Spiers and Son, of Oxford, who immortalize their native and most learned city in every possible point of view and upon every possible variety of article. We have Oxford from the fields, and Oxford from the river, Oxford in the streets, Oxford colleges, Oxford halls, Oxford staircases, and Oxford seals. These paintings which are scattered over desks, tables, secretaries, and work-boxes, are all beautifully executed."—*Daily News*.

"In taste of ornament and execution the London houses seem to stand first; then the works from Oxford, Wolverhampton, and Birmingham follow. Of Messrs. Spiers and Son's collection the most prominent features are tables with landscapes; the largest has a very pretty ornament, *a la Louis XIV.*, well designed, enclosing a general view of Oxford; and another with the front of Christ Church is accompanied by some good telescopie ornament of the succeeding style. The oval table is very nicely designed, and great praise is due to a round one with a landscape of pollards, and an excellent ornament. There are some exquisite card-trays, and about forty specimens of paintings on flat surfaces, as book-covers, &c., the borders are irreproachable, and some birds are very well drawn. Every visitor to the Exposition must be pleased with those really noble inkstands which are unadorned, and manufacturers may take a useful hint from a coat of arms under a cardinal's hat."—*Illustrated London News*.

"During the last week the sale of things of all descriptions have been carried on to an incredible extent. Few of the smaller things in the Fine Arts department, either Foreign or English, that would serve as souvenirs of the 'World's Fair,' remain unsold. Not a French bronze is to be had, and the inquiries at the beautiful display of papier mâché Views of Oxford seem to have given full employment to the parties in attendance at the glass-case of Messrs. Spiers and Son. We have mentioned this latter instance to enable us to bestow a meed of praise we ought not to have left till so late a period. These views of spots so interesting to the sons of Alma Mater indicate a higher walk of art than we have been disposed hitherto to accord to the gaudy and glittering beauties of papier mâché, an advance to be chronicled among the testimonials to English art displayed by the Exhibition of 1851."—*Guardian*.

"The contributions in papier mâché of Messrs. Spiers and Son of Oxford, consist of tables, writing-desks, albums, fire-screens, &c., all of which are in good taste; the ornamentation being sufficiently subdued, and due regard being had to harmony of composition. They derive much of their interest and attraction from the paintings with which they are embellished, consisting of some of the most picturesque or celebrated edifices in Oxford, as well as sketches taken from its outskirts."—*Art Journal*.

"Messrs. Spiers, of Oxford, exhibit numerous examples of papier mâché, many of them beautifully ornamented."—*Juries' Report on the Great Exhibition of 1851*.

"Among the latter, Messrs. Spiers and Son, of Oxford, have contributed a large case of papier mâché articles, decorated with very well-executed scenes in and about Oxford, including the colleges, cathedrals, chapels, monuments, and other haunts of the young students."—*Ladies' Newspaper*.

"Messrs. Spiers and Son, of Oxford, have contributed a highly valuable and interesting series of objects in papier mâché, consisting of trays, cabinets, fire-screens, envelope-cases, work-boxes, portfolios, desks, writing-cases, &c., &c. On these are delineated with extreme fidelity views of the principal buildings and scenes in and about Oxford. The collection is both valuable and unique."—*Illustrated Exhibitor*.

"The importance of papier mâché manufactory may be fairly estimated from the variety and number of articles displayed in the Great Industrial Exhibition. Class XXVI. has been more particularly devoted to this article, and here we find, as large exhibitors, Messrs. Jennens and Bettridge of Birmingham, Messrs. Spiers and Son of Oxford, and several other manufacturers. From the continent we find papier mâché goods exhibited by at least a dozen firms, but it is questionable, however, if any of them equal in perfection of material, beauty of form, and chasteness of ornamentation, those which are exhibited by the manufacturers of our own country. \* \* \* Some of the earliest paper trays were ornamented with polychromatic borders from the decorations in the Vatican, and in the centres were painted monochrome groups of figures copied from the antique. Next came the style adopted from the Chinese, consisting of Chinese landscapes, temples, and figures. Any attempt to reform the Chinese patterns was cried down; hence it became one of the requisites, in ornamenting trays, to pay no attention to the laws of aerial and linear perspective. In connection with this style, a peculiar mode of painting flowers in colours was now very frequent—this was also adopted from the Chinese. Stained silver in the shape of birds, combined with bronze skies, was much in request. Since that time by the exertions of Messrs. Spiers and Son, of Oxford, topographical, architectural, and pictorial landscapes have been introduced. And thus views of the University of Oxford, of its many colleges and halls, upon articles of ornament and utility, have found their way into various parts of the world as remembrances of times past and early associations. \* \* \* Various methods of ornamenting papier mâché works are in vogue, and, as a material upon which the artist's pencil may be employed, its capabilities are exceedingly great. As examples of this we may refer to any of the beautiful and really artistic works of Messrs. Spiers and Son, of Oxford, alluded to above, who have devoted their works principally to views of the colleges, churches, and objects of historical interest about Oxford, and its neighbourhood. Their ornamental fire-screen on which is a view of the Martyrs' Memorial, is an exceedingly good example of that class of painting. All the views on their works are painted by hand, and studious care is paid to drawing, light and shade, and colour. The views being all painted in Oxford, more attention is paid to local correctness in colour, and in the architectural details, than is commonly the case. Many of the scenes are sketched upon the spot, and studies of details made by the persons employed to paint them. There appears to be quite as much care bestowed on these views before varnishing, as is given to oil-paintings upon canvas. These remarks may be the more necessary because some persons, not acquainted with the executive of painting, imagine, from the correctness of the architectural details, that they are done by some block-printing process."—*From an article by Professor Robert Hunt, in the Art Journal, Nov. 1851, on Papier Mâché Manufacture*.

"If the Messrs. Spiers, of Oxford, do not exhibit the largest assortment of papier mâché goods in the Exhibition, they are certainly by no means behind their competitors in the beauty of the articles, or the artistic skill with which they are decorated. The principal article exhibited is a table with a most elaborately-executed landscape in the centre, surrounded by a beautiful lace-like border; the stand of the table being also most tastefully decorated. The other articles exhibited are work-boxes, portfolios, trays, &c., the whole of which are ornamented with pure artistic taste, rendering them peculiarly adapted for presents, or *gades d'amour*. On the stand of the Messrs. Spiers, who were also successful exhibitors in Hyde Park, are laid some very curious pocket memorials of Oxford, which contain a map of that town, a table of distances from Oxford of the principal places in England, a list of the principal objects of interest in the city, views of the interior and exterior of Messrs. Spiers' own establishment, in the High-street, (surrounded by an illuminated border, containing shields with the armorial bearings of the several Colleges,) St. John's College and gardens, entrance to Oxford, Christ Church, &c. The ornaments and architectural devices on this memorial are taken from illuminated MSS. in the Bodleian Library, and from buildings in Oxford, and are executed in the best style; the various views (which are printed in colours from lithographic-stones) being perfect gems of art."—*Morning Post; Report of the Dublin Exhibition*.

"In that artistic-looking case, designed by Mr. Owen Jones, Mr. R. J. Spiers, the Mayor of Oxford, of the firm of Spiers and Son, whose valuable private collection of works of art attests his taste and liberality, exhibits the choicest of his far-famed papier mâché productions. In the centre is a table, on the top of which are portrayed picturesque views of the city of which he is the chief magistrate, with its many towers and spires, taken from the well-known meadows, which, with their pollards, give a character by their contrast to the beautiful city of Oxford. Around it are desks, and cabinets, and portfolios, and some of those thousand of fanciful forms which papier mâché is made to assume for the purpose of graceful ornamentation and household decoration.—*Guide to the Crystal Palace, Sydenham*.

## THOMAS POWELL'S

# DUFFRYN STEAM COAL,

CARDIFF, SOUTH WALES.

It is now universally admitted that the description of Fuel best suited for Steamers should possess the following properties, viz.:—

1. The power of evolving heat of great intensity with flame.
2. Great economy in consumption.
3. High specific gravity.
4. Freedom from smoke and clinkers.
5. *The non-liability to spontaneous combustion.*

All these requisites are combined in "POWELL'S DUFFRYN STEAM COAL," which has been proved to be unrivalled for Marine Boilers of any description; but especially for *Tubular Boilers*, for which it is particularly adapted.

Its economy is so great, that a saving of 30 per cent, will be found where Newcastle or Seaton Coal is used, and from 15 to 20 per cent. over Steam Coal shipped at Newport, Monmouthshire, or any Ports in South Wales.

DR. URE, the celebrated Chemist, having analysed this Coal, describes it as the *most valuable* of the vast variety which had come under his notice: his report is annexed.

"POWELL'S DUFFRYN STEAM COAL" is highly approved by the British and Foreign Governments, and is used in their Naval Steamers. A letter from the Storekeeper-General of the Admiralty, London, will be found herewith; also testimonials from some of the principal Steam Navigation Companies in the Kingdom.

The specific gravity of this Fuel being unusually high, the same weight of Coal occupies much less space than any other, which, added to its great durability, causes it to be much valued for Steamers going long voyages. It is also hard and compact, and is found to lose little or none of its effective power in transit to hot climates, or on exposure to the influence of the atmosphere; it is consequently in great demand for shipment to the West Indies, South America, and other distant parts of the world. The Atlantic Steam Ships are supplied with this Coal, viz.:—The British and North American Steam Navigation Company's Flotilla, the United States Mail Steamers (Collins's Line), &c. &c. Certificates of its quality when used in the Steam Ships "Pacific" and "Atlantic" are given. Captain HOSKEN, of the "Great Britain," and Captain MATTHEWS, of the "Great Western," both write in the highest terms of this Fuel: their reports are also annexed.

THE LORDS COMMISSIONERS OF THE ADMIRALTY, being convinced of the vast importance of ascertaining the comparative usefulness of the various descriptions of Coal in the Provinces of Great Britain, with a view to their consumption in our Naval Steamers, directed experiments to be made on a very extensive scale, at the Museum of Practical Geology, London, by Sir H. DE LA BECHE, Dr. PLAYFAIR, &c., the reports of which have been presented to both Houses of Parliament by command of Her Majesty.

The DUFFRYN COAL has been proved to be of the **BEST** description for consumption in Steam Vessels, as respects economical combustion, the absence of clinker and smoke, and other important considerations, which will be found on reference to the *Extracts from the Report* on the next page.

### EXTRACT FROM THE REPORT OF SIR H. DE LA BECHE AND DR. PLAYFAIR ON POWELL'S "DUFFRYN COAL."

"Our remarks during the trials show that it kindles very readily, and burns freely, raising the steam with great rapidity. It makes a remarkably clean fire, without any smoke, opening well on the bars, without caking. No clinkers were made. The ashes and cinders left were clean, and of a whitish colour."

*The following is a letter from the Admiralty, intimating the approval of POWELL'S DUFFRYN STEAM COAL, for use in Her Majesty's Steam Ships:*

Sir,

ADMIRALTY, 3rd January, 1845.

Referring to my letter of the 29th of April last, I have to acquaint you, in pursuance of the directions of the Lords Commissioners of the Admiralty, that favourable reports of the trial of your Duffryn Coals on board Her Majesty's Steam Vessels having been received, the "Duffryn" will be included in the List of Coals supplied under the Naval Contracts.

I am, Sir,

Your humble Servant,

Thomas Powell, Esq.

(Signed) R. DUNDAS, Storekeeper-General.

*"Great Britain" Steam Ship, Liverpool, 14th February, 1846.*

I hereby certify, that I have found Powell's Duffryn Steam Coal the best I have yet used for Atlantic Steaming, being hard, strong, and durable Coal, making very little clinker, and easy on the fire-bars.

(Signed) JAMES HOSKEN, Commander.

*"Great Western" Steam Ship, Liverpool, 12th October, 1845.*

We, the undersigned, have much pleasure in recommending Powell's Duffryn Steam Coal. Having used it on board this vessel in competition with several descriptions of Welsh Coal, we find it possesses greater durability, and is more free from smoke and soot than any other Coal we have yet met with.

(Signed) B. R. MATTHEWS, Commander.  
JOSEPH WILLIAMS, Engineer.

This is to certify, that we have used Powell's Duffryn Steam Coal in the "Swift" Steamer, running between this Port and Newport, and have found it superior to any other Coal for tubular boilers, with which this vessel is fitted, both from its economy and freedom from soot and smoke.

(Signed) JAMES PARFITT, Commander.  
CHARLES MILLER, Engineer.

Bristol, August 2nd, 1845.

South-Western Steam Packet Company, Southampton, August 31st, 1844.

I hereby certify that, having sole management of the Steam Vessels belonging to this Company, and having tried several descriptions of Welsh Coal on the common and tubular boilers, none have been found equal to Powell's Duffryn Steam Coal, the saving of fuel being in both descriptions of boilers about *one-fifth* over that of any others that have been tried; that for tubular boilers I have frequently stated to other Coal proprietors, I have not found any equal to them in keeping the tubes and flues clean. I may further state that, in the consumption of about 5000 tons, I have found little or no variation in the quality of the several cargoes.

(Signed) N. M. PRIAULX, General Manager.

I hereby certify, that Powell's Duffryn Steam Coal was tried in three vessels belonging to the Peninsular and Oriental Steam Company, namely, the "Royal Tar," "Lady Mary Wood," and "Great Liverpool," and the reports from all these vessels were highly favourable as to its efficiency and economical combustion.

Given under my hand at Southampton, this 17th day of March, 1843.

E. S. KENDALL, Superintendent.

Having used Powell's Duffryn Steam Coal for the last seven months in the Steam Ship "Osprey," trading between Bristol and Waterford, we find a saving of at least from eight to ten tons per voyage in our consumption, over the Coal we formerly burnt.

The same fire-bars are now in use that have been from the commencement of our having the Duffryn Steam Coal, and are no more injured than they would have been had we used any other Coal.

Bristol, 21st June, 1843.

(Signed) G. H. BURGESS, Commander.  
JAMES HODGES, Engineer.

Having used Powell's Duffryn Steam Coal on board the Steamer "Shamrock," I find that it possesses great power in generating Steam, *its durability is at least one-third greater than Scotch Coal*, it makes but few ashes, and does not clinker nor burn the bars.

RICHARD JONES, Commander of "Shamrock" Steamer.

Waterford, 8th October, 1852.

River Steamer's Office, Cork, 12th October, 1842.

I have used in our Steamers Powell's Duffryn Steam Coal, and I find it to be *at least one-third more durable than Scotch Coal*, of greater strength, and quite free from clinker.

JOHN D. DONEGAN, Agent to the River Steamers.

Liverpool, 15th October, 1850.

Having used Powell's Duffryn Steam Coal in the United States Mail Ship "Pacific," plying between Liverpool and New York, I have much pleasure in certifying that it is decidedly the best Steam Coal I have yet known, both from its durability and power of generating Steam. The "Pacific" having performed the last voyage from Liverpool to New York in ten days and four-and-a-half hours, being the shortest on record; which I partly attribute to the very superior quality of the Coal.

(Signed) G. NYE.

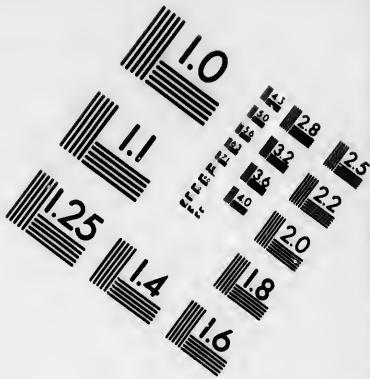

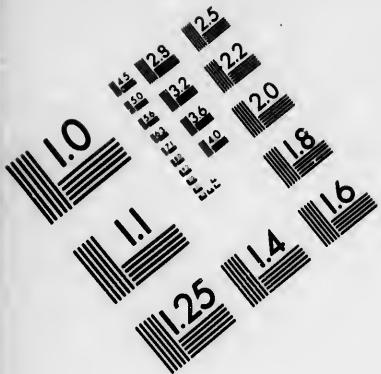

Liverpool, October 15th, 1850.

This may certify that I have been using Powell's Duffryn Steam Coal for the past six months on board the U. S. Mail Steamer "Atlantic," plying between this Port and New York, and without hesitation must say, on all occasions, have found the quality most excellent, and believe it to be equal, if not superior, to any Coal now used.

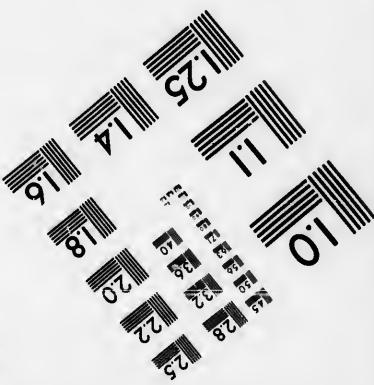

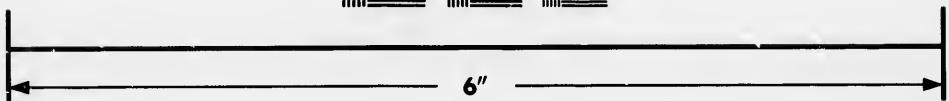

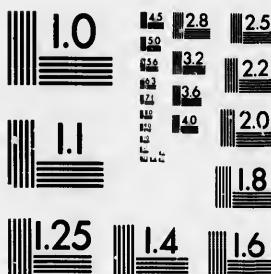

(Signed) J. W. ROGERS, Chief Engineer, Steam Ship "Atlantic."

# Report of a Chemical Analysis and Practical Examination of a Sample of Coal, called

## "POWELL'S DUFFRYN STEAM COAL,"

By ANDREW URE, Esq., M.D., F.R.S.,  
*Professor of Chemistry and Analytical Chemist.*

THIS Coal has a glistening jet-black colour, a coarse-grained fracture, is compact, without being stony or dusty, and does not soil the fingers. Its specific gravity is 1.32, so that a cubic foot of it weighs 1,320 ounces avoirdupois, whilst a cubic foot of water weighs 1,000 ounces. It thus possesses a density intermediate between that of the bituminous Coal of Newcastle, and the Anthracite of Wales. It also possesses the best properties of each; for it burns with a bright flame and most intense heat, but without smoke; and is, for these reasons, a better fuel for Steam Navigation than even the Llangeanech Coal used in the Government Steamers. It contains less sulphur than the said Coal.

Mr. POWELL's Coal affords a clear, bright, and powerful fire in the parlour grate.

When it is incinerated in a platinum basin, at a red heat, it leaves only 2.6 per cent of a dark grey earthy residuum, which is about one-half the quantity left by good Newcastle Coal. One hundred parts of this Coal, on being strongly calcined in a close platinum crucible, emit 14 parts of gaseous products, and leave 86 parts of a brilliant and excellent Coke.

Of the vast variety of Coals which I have analysed, Mr. Powell's Duffryn Coal is the most valuable for the purpose of fuel, either in private houses or in public works.

London, 13, Charlotte Street, Bedford Square, Dec. 1, 1842.

ANDREW URE, M.D., F.R.S., &c. &c.

I hereby certify that Powell's Duffryn Steam Coal, of which I made an analysis in the year 1842, is *not liable to spontaneous combustion.*

London, April 9th, 1855.

(Signed) ANDREW URE, M.D., F.R.S., &c.

POWELL'S DUFFRYN STEAM COAL is shipped at Cardiff with extraordinary facility and despatch by means of Steam Machinery, which almost precludes breakage of the Coal—a Model of which was in the Exhibition of 1851, and is now in the Paris Exhibition.

### DIRECTIONS.

The Duffryn Steam Coal should not be used in the furnaces of a greater thickness than five or six inches. The fire should not be stirred; but any accumulation of ashes on the bars should be removed by a hooked instrument from below.

EXHIBITED IN THE GREAT EXHIBITION, 1851.

# STEPHEN GREEN, IMPERIAL POTTERIES, LAMBETH, LONDON.

## EXTRACT (see *Jurors' Report, Class XXV., page 541*).

"STEPHEN GREEN and Co., Lambeth. This firm exhibits some very remarkable specimens of Stoneware, of great size, designed for the use of Breweries, Distillories, &c., and which, on account of their hardness of glaze and other qualities, are of great value in many processes of chemical manufacture." The Jury have awarded a Prize Medal.

## EXTRACT (see *Jurors' Report, Class XXVII., page 583*).

"Although by the decision of the constituted authorities, the Medal which has been awarded to Messrs. Stephen Green and Co., in Class XXVII., has been withdrawn in favour of the similar honour awarded by the Jury of Class XXV., the author of the present Report cannot pass on to other Exhibitors without giving some account of the objects which chiefly attracted the attention of his Jury. These are the large Jar, the Condensers, the Air-tight Stoppers, and the Acid-pump, exhibited within the Building, and the whole apparatus of the Retort placed outside. The Condensers are not only large, but perfect; and the Spherical Stopper and Valve are so ground to be perfectly air-tight, and must be regarded as an admirable and most useful contrivance. The Jar is perhaps the largest piece ever manufactured in this ware." The Jury noticed with great commendation the care and attention bestowed by these Exhibitors on chemical and other apparatus.

RECEIVERS, STILLS, PANS, STORE JARS, &c.  
To 20 gallons, 1/- per gallon. Larger sizes, on every gallon  
in excess of 20 gallons add 1/6 per gallon; thus a 20 gallon  
will be 20/-, 21 gallons 21/-.

### STILL HEADS.

1/2 per inch, measured where they fit upon the Still (out  
to out).

### CONDENSING-WORMS.

No. 1.—18 in. high, 9 in. diameter,  $\frac{1}{4}$  in. bore, 10/- each.  
2.—25 " 14 " 1/1/-  
3.—30 " 18 " 1 " 2/2/- "  
4.—40 " 24 " 11 " 3/3/- "  
5.—45 " 26 " 2 " 4/4/- "  
6.—50 " 27 " 21 " 5/5/- "  
7.—54 " 28 " 3 $\frac{1}{2}$  " 6/6/- "

### STONE COCKS.

4-in. bore, 2/- each. 3-in. 2/6. 3-in. 4/. 1-in. 7/6.  
14-in. 10/6. 11-in. 15/. 2-in. 25/. 21-in. 40/-.  
Grinding Cocks into Vessels, 1/- each.

### EVAPORATING DISHES.

1 to 10 inches, 1/- per inch. 10 to 15, 2/. 15 to 18, 3/-.  
18 to 25, 4/. 25 to 30, 5/.

### VITRIFIED TUBING TO ORDER.

1-in. bore, 6/- per foot, 2-in. 7/. 3-in. 8/. 4-in. 9/. 5-in. 10/.  
6-in. 1/.

### FALSE ARMS.

12 in. long, 1/ each. 16 in. 2/. 20 in. 2/6. 24 in. 3/-.  
30 in. 3/6. 36 in. 5/.

### DIP ARMS.

12 in. long, 1/6 each. 16 in. 2/6. 20 in. 3/. 24 in. 4/-.  
30 in. 5/. 36 in. 6/. 48 in. 8/. 60 in. 10/.

### CONNECTING PIPES.

Clay lute, 2 $\frac{1}{2}$ -in. bore, 2/6 each. 3-in. 3/6. 4-in. 5/-.  
Water lute, 2 $\frac{1}{2}$ -in. 3/. 3-in. 4/. 4-in. 5/.

### ACID JUGS.

1 pint, 3/- per dozen. 1 quart, 4/. 3 pints, 6/. 2 quarts, 7/-.  
3 quarts, 8/.

### RETORTS TUBULATED.

1 quart, 1/ each. 2 quarts, 2/. 3 quarts, 2/6. 1 gallon, 3/6.  
2 gallons, 5/.

Above 2 gallons, add 1/6 per gallon.  
LADLES AND TAPER OR BOWL-SHAPE FUNNELS,

1/2 pint, 4/- per dozen. 1 pint, 6/. 1 quart, 8/. 3 pints, 10/-.  
2 quarts, 12/. 3 quarts, 15/. 1 gallon, 18/. 2 gallons, 36/.

### IMPROVED FILTERING FUNNELS.

1/4 pint, 1/4 each. 1/2 pint, 5/. 1 pint, 6/. 1 quart, 9/-.  
3 pints, 1/.

### INFUSION JUGS AND MUGS, with Double Strainers.

1/2 pint, 9/- each. 1 quart, 1/.

3 pints, 2/6. 1 gallon, 3/6.

### ALEMBIC HEADS, 8/- each.

### SUBLIMATE POTS, 12/- each.

Covers to ditto, 10/6 each.

### PATENT JARS,

Spherically Ground, with Stoppers, Air tight and Improved,  
Metal Fastenings.

1/2 pint, 7/- per dozen. 1 pint, 9/-. 1 quart, 10/-. 3 pints, 12/-.  
2 quarts, 15/. 3 quarts, 18/-. 1 gallon, 21/-. 6 quarts, 24/-.  
2 to 6 gallons, 1/3 per gallon.

### PATENT JARS, Wide Mouth and Air-tight.

This article is invaluable for preserving Extracts and all  
articles acted upon by the atmosphere.

1/2 pint, 9/- per dozen. 1 pint, 12/-. 1 quart, 15/-. 3 pints, 18/-.  
2 quarts, 21/-. 3 quarts, 24/-. 1 gallon, 30/-. 2 gallons, 60/.

### BUNG JARS.

1/4 pint, 1/3 per dozen. 1/2 pint, 1/6. 1 pint, 2/-. 1 quart, 3/-.  
3 pints, 4/-. 2 quarts, 5/-. 3 quarts, 6/-. 1 gallon, 7/-.  
Above 1 gallon, 1/6 per gallon.

### DRUGGIST POTS (16 oz. to 1 lb.)

1 oz. 8/- per dozen. 2 oz. 10/. 3 oz. 1/. 4 oz. 1/3. 6 oz. 1/5.  
8 oz. or 1 lb. 1/6. 10 oz. 1/8. 12 oz. 1/10. 1 lb. 2/-.  
2 lbs. 3/-. 3 lbs. 4/-. 4 lbs. 5/-. 6 lbs. 2/-. 8 lbs. 7/-.  
10 lbs. 12/-. 12 lbs. 15/-. 15 lbs. 18/-. 18 lbs. 21/-.  
22 lbs. 24/-. 25 lbs. 27/-. 28 lbs. 30/-. 31 lbs. 33/-. 34 lbs. 36/-.  
35 lbs. 38/-. 36 lbs. 42/-.  
37 lbs. 45/-. 38 lbs. 48/-. 39 lbs. 51/-. 40 lbs. 54/-.  
41 lbs. 57/-. 42 lbs. 60/-. 43 lbs. 63/-. 44 lbs. 66/-.  
45 lbs. 69/-. 46 lbs. 72/-. 47 lbs. 75/-. 48 lbs. 78/-.

## Exposition Universelle, 1865.

### BATIMENT AU COURS-LA-REINE,

Groupe 3, Classe 11, Substances Alimentaires.

# HUNTLEY ET PALMER,

Fabricants de Biscuits Sucrés et non Sucrés,  
FABRIQUE À READING (ANGLETERRE).

### LISTE DES BISCUITS EXPOSÉS.

<i>Biscuits sucrés et mélangés se composant des dix espèces suivantes, en quantités égales.</i>		Ginger Tunbridge Biscuits.	Traveller	Biscuits.
Currant Tunbridge.	Rich Arrowroot.	Victoria	id.	Lunch id.
Caraway id.	Cracknel.	Queen	id.	Fine Cabin id.
Lemon id.	Filbert.	Albert	id.	Oval Thin Captain id.
Citron id.	African.	Fancy Machine	id.	Brown College id.
Shrewsbury.	Jamaica.	Pic Nic	id.	Coffee id.
Ces Biscuits se trouvent aussi dans des verres séparément.		Plain Arrowroot	id.	Ginger Drops.
		Abernethy et Captain	id.	Ginger Nuts.

Ces Biscuits sont faits avec la meilleure farine de froment et varient depuis les simples Biscuits de marins jusqu'aux Biscuits pour dessert. Ils diffèrent des Biscuits qui se vendent ordinairement en France, par cela qu'ils sont plus propres comme objet de consommation générale, ce qu'ils sont maintenant devenus en Angleterre.

Tout le procédé de fabrication est aidé par des machines, depuis le mélange et le pétrissage jusqu'à l'opération de la cuison, de sorte que la manipulation est presque entièrement évitée, d'où résulte une propreté la plus parfaite.

Ces Biscuits servent pour le dessert, pour prendre avec du vin, du café, ou pour le déjeuner. Les espèces les plus communes remplacent agréablement le pain avec ou sans beurre ou fromage ; ils sont aussi très propres pour les enfants, étant beaucoup plus sains et nourrissants que la plupart des confitures qui sont dans la consommation ordinaire.

Ces Biscuits se conserveront longtemps dans tous les climats, pourvu qu'ils soient préservés du contact de l'air ; cette qualité les a rendus un article de grande exportation, et a fait qu'ils se trouvent maintenant dans presque tous les pays du monde.

Ils sont emballés dans des boîtes en fer blanc de toutes dimensions pour la convenance des acheteurs.

*Représenté par M. DE FONTAINE MOREAU, Agent de Brevets, rue de l'Echiquier, 39, à Paris, et dans l'Exposition, qui fournira tous les renseignements désirés.*

Les Biscuits se vendent en détail à Paris, chez H. CUVILLIER, 16 rue de la Paix ; HARRIS et C°, 17 boulevard de la Madeleine ; HERIOT et C°, 361 rue Saint-Honoré ; THOMAS DELEVINGNE, 49 faubourg Saint-Honoré, etc., etc.

# HOOOPER & CO.,

(Late ADAMS & HOOPER.)

COACH BUILDERS TO HER MAJESTY THE QUEEN  
OF ENGLAND,

THE ROYAL FAMILY, AND SEVERAL FOREIGN COURTS,

HAYMARKET, LONDON.

Prize Medal and Special Approval awarded to H. and Co., at the

**GREAT EXHIBITION IN LONDON, 1851,**

For the elegance, good taste, and excellence of their Carriages.

H. & Co. beg respectfully to draw the attention of the Nobility and Gentry to the superior manufacture of their Carriages, as regards lightness of construction combined with strength, elegance of outline, and taste in the Equipments.

Drawings and Estimates for new Carriages are forwarded on application, as also Estimates for repairing Carriages, to include the entire outlay.

Parties preferring to job their Carriages by the year, or term of years, will find it a most convenient arrangement, as a Yearly Payment includes the use of a Carriage kept in good repair; an agreement can be made to purchase a Carriage taken on job, during the first year of the job.

A large Stock of neat and sound modern second-hand Carriages is always kept, either for Sale or to Let on Hire by the Week, Month, or Year.

H. & Co. undertake the repairing of Carriages, for which they have great facilities, in the arrangements of a new Factory recently built for them.

The Carriages built by H. & Co. are of the best manufacture, and at moderate Prices; Purchasers paying Cash will have the advantage of a Discount.

Merchants and Agents having foreign Orders to execute, are invited to apply to H. & Co. before executing their Commissions; they build Carriages suitable for all Climates, and on liberal Terms.

The Carriage contributed to the Paris Exhibition of 1855 is an "English Sociable" with head, hung on an iron perch with under and C springs and leather braces; combining very easy motion, with lightness of construction, and durability.

AGENT IN PARIS:

Mr. F. SPIERS, 13 rue de la Paix.

# HOOPER ET CIE,

(Ci-devant ADAMS et HOOPER,)

CARROSSIERS DE S. M. LA REINE D'ANGLETERRE,  
DE LA FAMILLE ROYALE,  
ET DE PLUSIEURS COURS ETRANGERES,  
HAYMARKET, À LONDRES.

H. et Cie ont obtenu

## UNE MEDAILLE COMME PRIX,

Et aussi l'Approbation Spéciale à LA GRANDE EXPOSITION DE LONDRES, en 1851, certifiant à l'élégance, le bon goût et l'excellence de leurs Voitures.

H. et Cie désirent attirer l'attention de la Noblesse, des Gens du bon ton et du Public en général, à l'égard des Voitures de leur Etablissement, dont la confection ne laisse rien à désirer en ce qui concerne la force relative à la légèreté, les formes élégantes et le bon goût requis en fait d'équipages.

Ils envoyoient à ceux qui en demandent des Modèles de Voitures avec les détails de l'équipement et le Prix des Voitures neuves ; ils se chargent aussi de l'évaluation des réparations, y compris tous les déboursés qu'il faut faire.

Les personnes qui préfèrent louer des Voitures neuves, ou d'occasion, à l'année, ou pour un plus long terme, y trouveront l'avantage, car le paiement à l'année se fait à condition que H. et Cie maintiendront la Voiture en bon état ; on peut s'arranger aussi pour acheter la Voiture la première année qu'elle est louée.

On trouve toujours en réserve dans leur Etablissement un grand assortiment de jolies Voitures modernes d'occasion, en très-bonne condition, qu'on peut acheter ou louer à la semaine, au mois ou à l'année.

H. et Cie se chargent des réparations de Voitures, ayant fait construire récemment un nouvel atelier pour faciliter leurs travaux de tous genres.

Les Voitures confectionnées par H. et Cie sont de la meilleure qualité, et à des Prix modérés ; ils font l'essompte à ceux qui achètent argent comptant.

Les Marchands, les Négociants et les Agents qui ont des commissions pour l'étranger, feront bien de s'adresser à H. et Cie, car ils confectionnent si soigneusement les Voitures qu'elles résistent à tous les climats ; et à des Prix avantageux.

La Voiture à l'Exposition de Paris de 1851 est "La Sociable anglaise" à demi-époque, à flèche de fer, à doubles ressorts et à soupentes de cuir ; le mouvement en est doux, la construction légère, et la durabilité recommandable.

AGENT À PARIS :

M. F. SPIERS, 13 rue de la Paix.

# FLAVEL'S PRIZE KITCHENER.

The only Kitchen Range which obtained a Prize Medal and Special Approbation at the Great Exhibition, 1851.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

They are made from 3 feet to 18 feet in width, suitable for large or small Establishments, and may be arranged to supply a Bath, Steam Kettles, Steam Closets, etc. They are admirably adapted for the Cure of Smoky Chimneys.

No. 1, A.

This Range is made from 3 feet to 5 feet wide, and consists of a hot plate, on which vessels may be kept boiling without soiling or injuring them—open fire (lined with fire quarries) for roasting—stout wrought-iron roaster, fitted with ventilating tube and valve, for meat, fowls, etc., with moveable shelves—double dripping pan—meat stand and draw-out stand thoroughly ventilated by means of air tubes and valves, by closing which the roaster becomes an excellent oven for baking bread and pastry—a stout iron side boiler, with steam-pipe and brass tap—moveable panels over the fire—fitted with round and square gridirons, for chops, steaks, etc.—ash pan—flat and false bottoms—fire quarries, hook, key, and raker.

#### PRICES.

If with iron skirting, 7 inches high, at the back and sides of the fireplace, as drawn, from £7 15s. to £12 10s., according to size.

Or, with the high panelled iron Covings and Plate Rack, (as shown in the other drawing,) from £10 to £15.

No. 4, B.

This Range is made from 4 feet to 6 feet wide, and consists of a hot plate, whereon boiling, stewing, etc., may be done without injuring or soiling the vessels in use (it is also an excellent ironing stove)—wrought-iron oven and one roaster, fitted with ventilating tube and valve—moveable shelves—double dripping pan—meat stand and draw-out stand. The roaster may be converted into an excellent oven, (by closing the valve,) in which bread, pastry, etc., can be baked in the most satisfactory manner—a large wrought-iron boiler, for supplying hot water to kitchen and scullery, with inlet and outlet pipes, brass tap, round and square gridirons, for chops, steaks, etc.—open fire for roasting—ash pan—flat and false bottoms, fire quarries, hook, key, and raker.

#### PRICES.

If with iron skirting, 7 inches high, at the back and sides of the fireplace, (as shown in the other drawing,) from £15 to £23 10s., according to size.

Or, with the high panelled iron Covings and Plate Rack, as drawn, from £18 to £28 5s.

**BENHAM & SONS, 19, WIGMORE STREET, LONDON.**

Also in the HARDWARE COURT of the Crystal Palace, Sydenham,  
and in the PALAIS DE L'EXPOSITION, PARIS,

(Class 9, Section 5, No. 409.)

[TURN OVER.]

# FLAVEL'S PRIZE KITCHENER.

No. 8.

This Range consists of a hot plate on which vessels may be kept boiling without injuring or soiling them—moveable middle panels, fitted with round and square gridirons for broiling chops and steaks (the hot plate may be used as an ironing stove)—two wrought-iron roasters (for cooking joints, fowls, etc.) fitted with ventilating tubes and valves, loose shelves, double dripping pans, meat stands, and draw-out stands. By closing the valves, the roasters become excellent ovens for baking bread and pastry—a large wrought-iron boiler for supplying hot water to the kitchen and scullery, with inlet and outlet pipes, brass tap, and steam pipe—two wrought-iron hot closets, with moveable shelves—iron skirting at back and sides—dampers—register door—fire quarries, etc.

Nine Feet wide, price (as described above) £40.

They are also made with Grilling or Broiling Stoves at the end if required.

## TESTIMONIALS.

From DR. FERGUSON, 125, Park Street, Grosvenor Square.

Dr. Ferguson begs to say he is completely satisfied in every respect with his Grate. It is economical, and the meat is as perfectly well roasted in the Roaster as at an open fire.

From REV. ALFRED POTTER, Principal of Cuddeston College, Whalley, Lancs.

Our Kitchener answers still quite to our satisfaction. The roasting is quite satisfactory, and the kitchen quite free from all smell. The joints come to table quite as well dressed as by an open fire; I should say better. My servants are quite satisfied with it.

From REV. JAMES MARSHALL, Little Dean's Yard, Westminster.

In reply to your letter, I beg to say that the Flavel's Kitchen apparatus in my house, has answered most excellently the purposes for which it was intended. Cooking of all kinds is done with the greatest certainty and ease. A very great number of different dishes can be prepared at once. Cleanliness and saving of labour are its most important advantages. As far as I can guess, the apparatus seems to consume rather more coal than an ordinary range; but I think it would require less, if proper skill and care were shown in the management.

From J. W. LARKING, Esq., Milton Place, Egham, Surrey.  
The Stove has now been in operation some time, and gives great satisfaction to our French cook, who admits that, in some respects, it is superior to those made in Paris.

From MRS. KNIGHT, Vernon House, Farnham, Surrey.  
We find the Range answers remarkably well.

From REV. F. K. LEIGHTON, Harpenden Rectory, Henley-on-Thames.

Rev. F. K. Leighton has much pleasure in informing Mr. Benham that the Kitchener answers its purpose well, and hitherto gives entire satisfaction.

The workmen did their work well, and in all respects conducted themselves properly while at his house.

From MESSRS. KEAR & SCOTT, Cannon Street West, City.

In reply to your favour, we beg to state that the Cooking Apparatus has given entire satisfaction, and we have no doubt of its giving satisfaction to any one so long as there is care in attending to the instructions given with it. We have had it in use for three months.

## TESTIMONIALS

From MR. J. M. CHAPMAN, Grocer, Great  
New Bond Street, *Berwick-upon-Tweed*.

We are very well pleased with the operations of the Flavel's Kitchenette you recently supplied. It roasts and味道极佳。

The workmen you sent acquainted themselves with the simplest  
utility and propriety.

From LADY WILLIAMSON, Woburn Hall, *Hertfordshire*.

Lady Williamson begs to inform Mr. Benham that the  
Kitchenette which she has purchased perfectly, and gives to the  
entire satisfaction. Nothing could be more obliging and civil  
than the conduct of the young man Mr. Weston sent down,  
he took every pains about the whole affair, and managed it all so  
well as possible.

From COLONEL MAXWELL, Royal Marine Barracks, *Gosport*.

In reply to your note, I beg to inform you that your workmen  
plied the Kitchenette entirely to my satisfaction. It answers  
excellently in every respect. He worked well and hard.

From REV. H. BRANCHER, Mortlake, *Surrey*.

The Rev. H. Brancher begs to inform Messrs. Benham that  
the Flavel's Stove has answered perfectly so far as it has been  
tried.

He is also glad to be able to express his satisfaction at the  
manner in which the work has been performed by the man who  
came to set the Stove.

From LORD W. POWELL, M.P., 18, *Cavendish Street, Mayfair*.

I have much pleasure in satisfactorily replying to your inquiry  
as to the operations of the new Kitchen Apparatus you put up  
for me. I am told the roasting answers very well.

From THOMAS PARKER, Esq., *Bingley Grove, Brixton, Berks*.

In reply to your note, I have to inform you that, so far as  
our experience of it goes, we are well satisfied with the Range  
(Flavel's Kitchenette) which you have lately fitted for us, partic-  
ularly as regards its roasting powers.

From REV. F. BENDALL, *Harrow-on-the-Hill*.

I think the Patent Kitchen Stove, which I have in use, very  
well fitted for Hospital purposes. It possesses considerable  
power, the greater part of which may be applied, whenever  
required, to heating water in large quantities, and by the prop-  
erty of the dampers it admits of the most accurate regulation.

Its economy depends entirely on the person in charge of the  
fire, but the results obtained, in comparison with the fuel used, is  
very satisfactory.

From W. DUNNISON, Esq., *Buntingford*.

I have the pleasure to inform you that the Flavel's Kitchenette  
which you sent us for us answer extremely well; the meat  
in the oven, which I am — doubtless, is perfect, and we  
are very fond of both dishes.

I am also pleased that it is economical in fuel.

From the REV. H. M. ALEXANDER, *The Rectory, Chipping, Essex*.

The Rev. H. M. Alexander begs to inform Messrs. Benham  
he is much pleased with Flavel's Kitchenette which has fully  
answered his expectations, and is satisfactory on all points.  
The roasting is better than before on open fire.

From D. S. LAMMEN, Esq., *Castlereagh College, Dublin*.

In reply to your letter, I beg to say that the Range which  
you send for me gives great satisfaction. The roasting done by  
it is, I think, quite equal to that done before an open fire, and, I  
consider the Range economical in point of fire as well as cleanly  
and efficient in all respects, when properly managed.

From MR. SAYERS, 33, *Harrowden Street, Holloway*.

I have much pleasure in stating that the Kitchenette which I  
purchased of you has far exceeded my expectations, and is far  
superior to what was represented by your shopman.

The roasting of joints, etc., is done better than before the open  
fire; the meat is not only of a better flavour, but is more tender  
and does not lose so much in weight. The consumption of fuel  
is not so much (if properly managed) as in ordinary Ranges.

There is only one thing I have to regret, which is that we  
have been so long prejudiced against Close Crooking Ranges, as I  
would not now part with mine for double its cost.

Should you need to give a reference to any person, I shall be  
most happy to show mine to any person whom you may wish,  
and give them all particulars.

From CHARLES S. LINDELL, Esq., *The Holme, Biggleswade*.

I should have answered your inquiry respecting the Kitchenette  
which I had of you ere this, but was anxious to have a good trial  
of it before doing so.

I can now say that it answers in every way most perfectly,  
and the meat roasted in it is quite as good as when done before  
an open fire, in fact I cannot perceive any difference.

My cook likes it very much, and finds it most convenient  
when we have a dinner party.

**BENHAM & SONS,**  
**19, WIGMORE STREET, LONDON.**

# M A S O N ' S

## PATENT SLUBBING & ROVING FRAMES.

The object of this improvement is to give a firmer support to the Spindles, and obtain greater speed and steadiness. This is accomplished by making the Collar in the Lifting Rail longer, continuing it through the Pinion Wheel, up the inside of the Bobbin Barrel to the top thereof, where the bearing for the Spindle is formed, as shown at (a) Figs. 1 and 2.

Frames constructed on this principle have been at work four years, running upwards of 50 per cent. faster, and producing an increase of work in the same ratio. They require less outlay, less room, power, and attention (to produce a given quantity,) and are less liable to get out of repair, because the vibration of the Spindle is prevented, and that injurious action which takes place upon the Collar and Spindle when the bearing is so much below.

In order to reduce the friction still more, the Collar is made with a recess or hollow chamber inside, so that the Spindle only fits at the end. The Bobbin at its upper end runs on the Spindle as usual, and is prevented rubbing upon the outside of the Collar, by being made to pass at its lower end upon a Flanch, which projects from the top of the Pinion Wheel. Thus, the Bobbin entirely covers the Collar—protects the bearing from injury by dust or other matter—and causes it to require less oil.

The top of the flyer is left clear for piecing up and doffing; and as the Spindle works in two rails only, as usual, there is no difficulty to contend with, requiring a greater degree of truth, or causing more friction upon the Spindle.

The difference between this mode and the best arrangement of Collar previously used, is shown at Figs. 2 and 3, the bearing for the Spindle in the one being at (a), and in the other at (b),—a difference equal to the length of the lift (say 10 inches in Slubbing and 7 inches in Roving Frames), in favor of this Patent, the effect of which is evident in greater steadiness of the Spindles, less friction upon them, and diminished wear and tear.

These advantages are much more manifest after the Machines have been some time at work, when instead of having to reduce the speed, it is generally increased a little.

Although the Bobbin Barrel is about  $\frac{1}{16}$  in. larger in diameter, it is not found to be a disadvantage; the Frame starts better upon the empty Bobbin, and a trifling addition to the diameter, when full, will hold the same length of Slubbing or Roving. Frames upon the old system are easily altered; the same Bobbins may be made to answer by reducing the diameter of the Spindles (making them true again), and widening the inside of the Bobbin Barrels to receive the Collars.

N.B.—This invention has been mistaken for a loose Tube, running with the Pinion Wheel, and projecting inside the Bobbin, used for keeping the Bobbin clean and preventing it wearing. It is, therefore, as well to add, that the Collar (a) is a fixture, firmly screwed down to the Lifting Rail for steadyng the Spindle at its upper end, and the Pinion Wheel and Bobbin run loosely round it, as represented.

They are working at the following Speeds with great advantage:—

Slubbing,	12-inch lift.....	700 Revolutions.
Ditto,	10     "	800     "
Intermediate,	8     "	1000     "
Roving 6 and	7     "	1200 to 1400     "
Ditto	5     "	1600 to 2000     "

The Spindles and Flyers are no longer the limit to the speed of the Machine,—they may be run much quicker when required; but, whether high or ordinary speeds be preferred, they run more steadily and produce better work.

The Separating Plates (c) prevent any of the ends, when broken, becoming entangled with the others, and making waste.

The Bobbins are made to pass over the junction of the Spindles and Flyers, so that one inch longer lift is obtained in the same length of Flyer.

**CHROMATIQUES EN COULEURS.**

MESSIEURS ROWNY & CO. VIENNENT DE PUBLIER, LES IMPRESSIONS CHROMATIQUES SUIVANTES.

Ces Impressions ci-dessous sont montrées comme les originaux dont elles sont des copies très exactes, tant en couleur qu'en effet. Ces copies s'emploient en grande quantité dans les écoles et gouvernement pour les élèves en peinture à l'aquarelle. Les professeurs les trouveront très utiles leur donnant le moyen de choisir des spécimens des artistes les plus célèbres du jour. Les amateurs pourront satisfaire leur goût et embellir leurs appartements de fac-simile de tableaux par des artistes renommés. Plusieurs autres ouvrages par des peintres éminents sont en main et seront annoncés aussiôt parus.

**EXTRACTS.**

WINDSOR CASTLE, December 14, 1848.

SIR HENRY WHEATLEY begs to acknowledge the receipt of a case, containing a Pair of Scissors for HER MAJESTY, which he has not failed to submit to THE QUEEN, and Sir Honny is desired to express Her Majesty's ADMIRATION OF THEIR WORKMANSHIP AND EXECUTION, which reflects much credit on Messrs. WILKINSON.

WINDSOR CASTLE, October 16, 1840.

SIR,  
I lose no time in acquainting you that I have presented the Case of Cutlery which you left with me to H. R. H. PRINCE ALBERT, and that His Royal Highness has been pleased to accept it. It will give His Royal Highness great pleasure to appoint you his Cutlers at Sheffield.

To Messrs. WILKINSON & Son,  
SHEFFIELD.

I am your most obedient Servant,  
(Signed) G. E. ANSON.

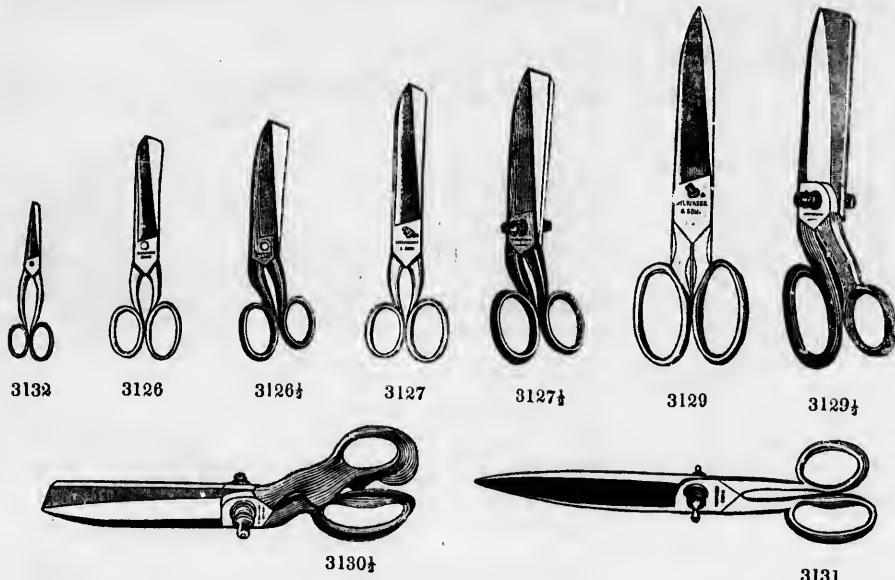

FROM "THE ART JOURNAL," November 1850.—Messrs. THOMAS WILKINSON & SON, (17, New Church Street,) are among the most ingenious of the scissor-makers of the town, and have adopted many new and useful improvements, as well in the manufacture and form as in the applicability of their various implements. Our cuts will exhibit the taste and elegance of their finer and more delicate work, destined for the use of the fair sex; but an equal amount of ingenuity of a different kind has been exerted upon articles of a coarser kind. The tailors' scissors which they manufacture are remarkable for the peculiar merit of their general construction, and for the excellent manner in which they are adapted to their necessary uses. The best mode of giving strength and protection to each finger of the hand has been well considered, and the scissor designed so that it may be a most useful auxiliary to the workman, obeying his every want, and befitting his every wish. It is this strict attention to the *minutiae* of each article among the many manufactured in Sheffield which gives the town its position, and assures the confidence of the world in its varied fabrications in steel; a character which commenced amongst us in the middle ages, and has been triumphantly maintained until the present day.—(See also "ART JOURNAL CATALOGUE, EXHIBITION, 1851.")

FROM "THE PATENT JOURNAL," June 21, 1851.—In Scissors, Messrs. WILKINSONS, of New Church Street, Sheffield, occupy a leading position, both as regards correct taste, novelty of design, and excellence of workmanship. The duplicate specimen of scissors, Manufactured by them for the Queen, with the ornamental part filed out of solid steel, have attracted much notice, and are interesting specimens of what labour and ingenuity can effect.—Messrs. Wilkinson and Sons have also carried the manufacture of shears to a high degree of perfection, specimens of which are exhibited.

(Over.)

# THOMAS WILKINSON & SON'S CELEBRATED TAILORS' SHEARS,

WITH BRASS AND GERMAN SILVER HANDLES,  
TAILORS' SCISSORS, AND SMALL CUT OR BUTTON-HOLE SCISSORS,  
MANUFACTURED FROM THE BEST STEEL,  
AND TEMPERED WITH THE GREATEST CARE BY ONE OF THE FIRM.

T. W. & Son have received many flattering Testimonials from first-rate Cutters, and have had practical experience in manufacturing the above articles for upwards of Thirty Years, can with confidence recommend them to the trade.

Observe the Stamp,

T. Wilkinson & Son, Sheffield.

# JARRETT'S IMPROVED EMBOSSED PRESS

AS EXHIBITED AT THE  
GREAT EXHIBITION OF 1851,  
IN THE  
Crystal Palace, Hyde Park,  
CLASS 6, No. 154.

AND AS NOW EXHIBITING AT THE  
Crystal Palace, Sydenham,  
AND THE  
Paris Universal Exhibition.  
AGENT IN PARIS—  
M. STERN, 47, PASSAGE PANORAMAS.

Adapted for easily and effectually Embossing Crests, Coats of Arms, Names, or any other Engraving on Writing Paper, Envelopes, Books, Official Documents, &c.

## CASH PRICES.

	Best quality.	2nd quality.	3rd quality.
For a small-sized Press, with Die and Counterpart, including the engraving of either a coronet; or a crest; or initials; or name, business, and address	24s.	21s.	17s. 6d.
For a second-sized Press, furnished as above.....	28s.	25s.	21s. Od.
For a third sized Press, with Die, &c., fitted as above.....	36s.	34s.	30s. Od.
The small Press will take in any Die not exceeding in size the diameter of a shilling. The second-sized Press admits of a Die as large, if necessary, as the diameter of half-a-crown; and the third sized Press is adapted for any Die up to 14-inch in diameter.			

Two or more Dies may be used in these Presses.

Ladies and Gentlemen having already dies of their own, may have the same fitted to these Presses.

## EXTRA LARGE LEVER PRESSES ADAPTED FOR PUBLIC COMPANIES, TWO GUINEAS.

N.B.—The superiority of JARRETT'S EMBOSSED PRESSES, and the continued favor in which they are held by the public, may be clearly discerned from the fact of other makers having been compelled to resort to the expedient of imitating the shape of these Presses, and, as far as they are capable, of adopting the principle of their construction. The great demand for these Presses has enabled MR. JARRETT to make a considerable reduction in their prices.

## JARRETT'S IMPROVED COPYING PRESSES.

	OAST BEAMS.	WROUGHT IRON BEAMS.	LEVER.
Note Size .....	8-in. by 6-in.....	30s.....	38s.....

No. 3. Ditto 1¾-in. do. ....	78s.....
No. 4. Ditto 2½-in. do. ....	116s.....

## JARRETT'S IMPROVED COMBINATION PRESS.

WITH WROUGHT IRON BEAM, BRACKET ARM, &c.

Answering the purpose of both a Copying and Embossing Press, and so contrived that no shifting of parts is required to apply it to either purpose.

### PRICES OF PRESSES ONLY.

Large Post Size, 68s..... Folio Size, 94s.

## JARRETT'S PATENT PRINTING OR ENDORSING PRESS.

The very general objection to endorsement Stamps, &c. where fluid ink is used, from the inconvenience incident upon the drying or caking of the ink, which renders the production of a correct or satisfactory impression so uncertain, has induced the Patentee of the above Press to substitute Carbonic or other Chemically prepared Paper or material for the ordinary printing inks.

JARRETT'S PATENT PRINTING PRESS is a Self-acting Apparatus, adapted for the desk, counter, or writing table; it is very portable, and easily worked by the hand—the stamping action of the Machine brings continually a fresh supply of colouring matter to the Die or Type, so that there is no interval of time wasted between the successive impressions, and the Press is always ready for use.

Among the many purposes to which this Press is eminently adapted may be mentioned, the endorsing of Cheques, &c., the stamping on Price Current, Sale Lists, Bills of Lading, Tradesmen's Bills, Prescription Wrappers, Cards, Letters, Books, &c.; and the marking of Linen, Silks, &c.

### PRICES.

No. 4 Press, capable of stamping with any number of dies, of any size and shape,

not exceeding 4½ inches in length . . . . . 2½ Guineas.

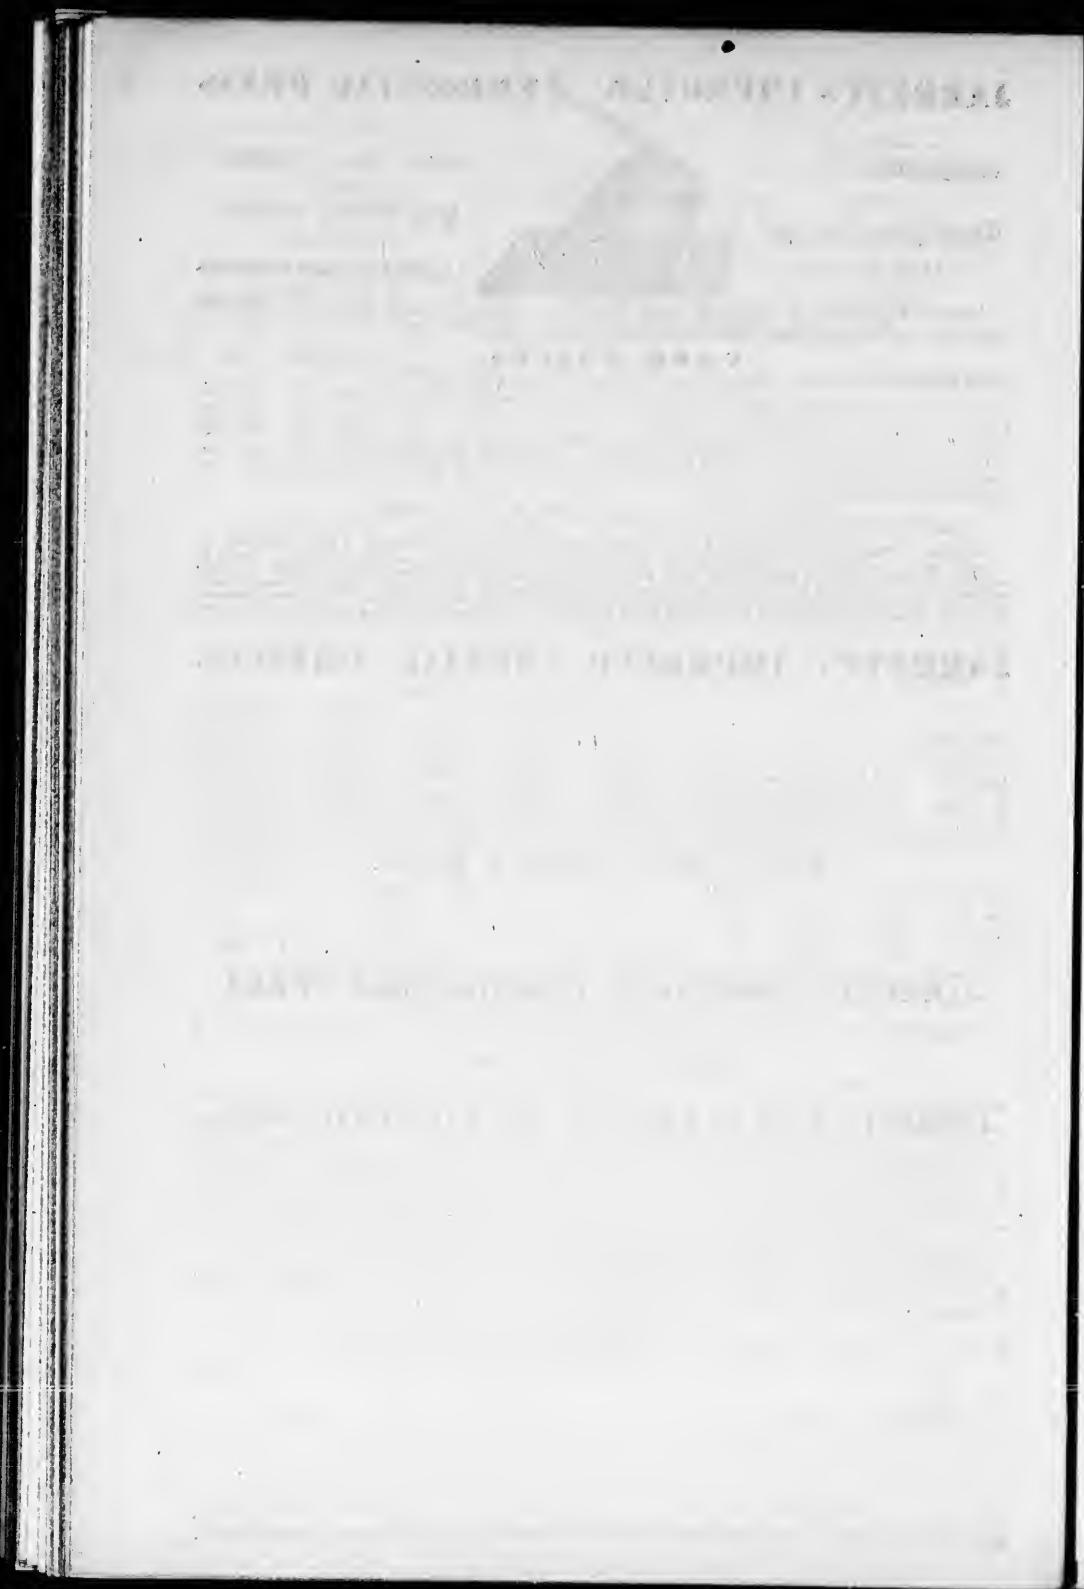

No. 3 Press, " 2½ " " . . . . . 2 "

No. 2 Press, " 1½ " " . . . . . 1½ "

No. 1 Press, (made of Gun-metal) " 1 " " . . . . . 1 "

The prices of the Dies prepared for lettering, from 1s. each; Lettering of Brass Dies in raised Characters, from 3d. per letter; Chemically prepared coloured paper, from 1s. 6d. per Box, containing Two dozen Slips.

**GRIFFITH JARRETT, Press Manufacturer & Patentee, Die Sinker & General Engraver,  
37, POULTRY, (a Dozen doors West of the Mansion House,) LONDON.**

NO. 341.

CLASS V.

SECTION 1.

PARIS EXHIBITION, 1855.

# WILLIAM D. JONES,

SADDLER, HARNESS, & CAP MANUFACTURER,

NO. 5, HIGH STREET,

## SHREWSBURY,

ESTABLISHED UPWARDS OF 50 YEARS,

Respectfully solicits the attention of visitors to the elegant Race Saddle in above Class, and exhibited by him at the Dublin Exhibition, 1853; when the following handsome testimony of it appeared in the *London Morning Post*:

"Foremost in the list of exhibitors for beautiful workmanship stands the name of Mr. W. D. Jones, of No. 5, High Street, Shrewsbury. This gentleman shows a very elegant racing saddle, designed and manufactured by himself, and exhibited for its extreme lightness, its comfort combined with elegance of shape, and the novelty of its embellishments. The saddle is little if any thing more than 2lbs. in weight, though of course, that can always be increased to please the customer--it is sufficiently long in the seat to give the greatest ease to the rider, and it is embellished with bunches of roses, thistles, and shamrocks, interwoven with oak foliage and acorns--the whole of the ornamentation being executed in relief by hand labour only. The case containing this beautiful saddle is always surrounded by large numbers of the higher class of visitors to the Exhibition, to whom it appears to give universal satisfaction. Mr. Jones was an exhibitor in Hyde-Park, of the Royal Albert Shot belt, which is very highly approved, and extensively used by those classes who take a delight in the sports of the field."

W. D. J. begs to call particular attention to his *very superior Hunting, Steeple Chase, and Race Saddles*, from 2lbs. weight and upwards. *Gig, Tandem, and every other description of Harness, Hunting and Racing Horse Clothing. Ventilated Hunting, and Steeple Chase Caps. London Whips and Brushes, &c. &c.*

W.D.J. Gratefully acknowledges the kind patronage he has experienced from the Nobility, Gentry, and the Public in all parts of the United Kingdom, and assures them that the same attention is paid in every department (to ensure good workmanship and materials) which has for so long a period been the distinguished character of this establishment, and as his primary object is to make the best articles and to charge the lowest price that the superiority of the work will allow, he trusts it will secure to him a continuance of those esteemed favors he has hitherto received.

**Jones's Improved Greyhound Slips, Shot Belts, Retriever Starters, and Game Carriers**, are patronized by some of the first sportsmen in the United Kingdom; Testimonials of which from several noblemen and others will be supplied upon application. For further particulars and opinions of the above, see *Journal of Royal Agricultural Society of England, Sunday Times, Eddowes's Shrewsbury Journal, Bell's Life, Hereford Journal, The Era, Shropshire Conservative, Shrewsbury Chronicle, Hereford Times, Dundalk Democrat, Ulster Gazette, Limerick Chronicle, &c. &c.*

## LITHOGRAPHIC DEPOT

FOR PRESSES, STONES,

AND EVERY MATERIAL REQUIRED IN LITHOGRAPHY,

80, BISHOPSGATE STREET WITHIN,

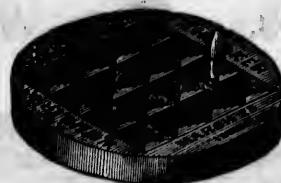

LONDON.

TO LITHOGRAPHERS.

## THE LEVIGATOR,

REGISTERED

MARCH, 1854.

FOR EFFECTUALLY

RUBBING OFF STONES PERFECTLY LEVEL,

AND

Equally adapted for every other Material requiring a mathematically level surface,

AT A

*Saving of one-third the usual Labour and Time.*

This important invention consists of a Metal Disc, mathematically levelled on its under surface, on the upper parts of which are quadrangular perforations, ending in a tubular form, which are supplied with sand and water, the same being subjected to a rotary motion by the handle, the continuous supply of the sand readily and effectually effaces the subject to be removed.

The BREAKAGE OF STONES so frequently arising, as it does, from the uneven performance of the ordinary method of grinding, being for the future avoided by the application of the Lévigator, it is confidently introduced to the Trade as the most important machine yet invented; while, at the same time, it effects a great SAVING OF TIME AND LABOUR, it produces a mathematically level surface, with that ease, that it may be worked readily by a lad.

These Machines, the most useful invention yet introduced, have met with the universal approval of the Lithographic Trade, and have become generally adopted.

Prices—small size, 12in. diameter, 40s.; large ditto, 15in. diameter, 50s.

## S. STRAKER'S

**ARTICLE, No. 1.**

The Royal Albert Prize Linseed and Corn Crushing Mill, two of which have been fixed upon the recommendation of Messrs. Easton and Amos, the eminent Engineers of the Royal Agricultural Society of England, for the use of His Royal Highness Prince Albert, at Windsor and Osborne Farms.

**STANLEY's Patent Roller Mill, for Crushing Linseed, Oats, Malt, Barley, Beans and Wheat. Price £12. 2-inch Pulley for Power, 12s. Shackle, 7s. 6d. If made to split Beans, £1. 10s. extra.**

For which he obtained the Prize at Gloucester, 1853; Plymouth, 1853; North Lincolnshire—at Gainsborough, 1853; Killarney, August, 1853; The Royal Society's Show at Lincoln, 1854; Aberdeen, 1854; and Carlisle, 1855.

The ROYAL EXHIBITION MEDAL was awarded to W. P. STANLEY for this Mill, July, 1851—and the first Prize at the Peterborough Show, November, 1851, 1852 and 1853.

W. P. S. had the honor of Exhibiting this Mill before Her Majesty and His Royal Highness Prince Albert, on Wednesday the 10th of July, 1851, by special command, in the Exhibition.

*Extracts from the Royal Agricultural Society's Journal, October, 1851.*

**Linseed and Corn Crushers.**—The same extraordinary disparity of power required was found also two years since, at the Norwich Meeting, in this class of Implements.—

	Linseed Crushed. lbs.	Power required. lbs.		Linseed Crushed. lbs.	Power required. lbs.	
STANLEY.....	112	24,238		W. NICHOLSON.....	112	94,080

In fact this is the greatest difference we have found yet in any machine worked by hand, being about four to one: so that to obtain the same work four men must turn one machine, while a single labourer turns the other.

**Linseed and Corn Crushers.**—Mr. STANLEY, of Peterborough, at present stands unrivalled with this Machine. By the recent improvement of a lever in front to relieve the pressure when the corn is first let in upon the rollers, he has perfected this machine, which was much needed, as machines on this principle have been made by various other makers, but have always been subjected to the inconvenience of being choked with the corn at starting. On these trials, Mr. Stanley's machine required less power to move it than others; and was in consequence, awarded a medal. C. B. CHALLONER.

**ARTICLE, No. 3.—STANLEY'S ROLLER MILL.**—This article is similar in principle to No. 1, but smaller. Price £8.

**ARTICLE, No. 4.—STANLEY'S ROLLER MILL** and will split Beans.—This Article is similar in principle to No. 1, but smaller than No. 3, and adapted to hand power only. Price £6. 0s.

**ARTICLE, No. 5.**

**Stanley's Corn Bruising Machine.**

This article is particularly adapted for Gentlemen's Stables, has been well tested, and is confidently recommended as an efficient and useful Machine.

Price, £4. 4s. Rollers for Linseed at £1. 1s.

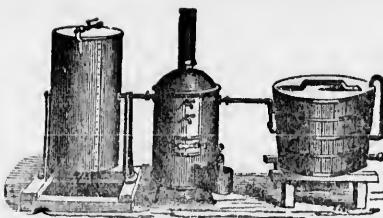

\* **Machine à Écraser le Grain,  
par W. P. Stanley.**

“Deux boisseaux d'avoine écrasée offre autant de parties nutritives que trois boisseaux à l'état naturel.”

\* W. P. S. font diverses sortes de moulins à écraser le grain, et dont le prix augmente en raison de leur perfection. Ils sont faits express pour écraser l'avoine, les fèves, les pois et le maïs.

PRIX.—150fr. 0s.

Générateur de la vapeur et une marmite de la capacité de six boisseaux .....	312 50
Générateur de la vapeur avec tonneau de 40 gallons, et une marmite de la capacité de six boisseaux... ..	437 50

#### ARTICLE No. 7.—STANLEY'S Registered Steaming Apparatus.

This Article is similar to No. 6, is adapted to cook Hay, Chaff, Roots, &c. and consists of a Steam Generator and a 6-bushel steaming pan complete for immediate use. Price £12. 10s. od.

#### ARTICLE No. 8.—STANLEY'S Registered Steaming Apparatus.

This Article is upon a larger scale to fix in brickwork, with force pump for supplying, and fitted with 2 sixty-gallon compound tubs and 6-bushel roll steaming pan with all the necessary cocks, valves, pipes and dampers. This article has been fitted up in Unions, Gaols, and large Establish-

ments, and W. P. S. has very flattering testimonials of its extraordinary efficacy and economy; also for Cooking for Hounds, and is working satisfactorily at the Vine, Berkshire, Milton, Hants and Waddon Kennels. Price £35. 0s. Od.—If fitted with nine-bushel pan, £1. 10s. extra.

Testimonial from the Board of Guardians of the Eastry Union, Sandwich, Kent.

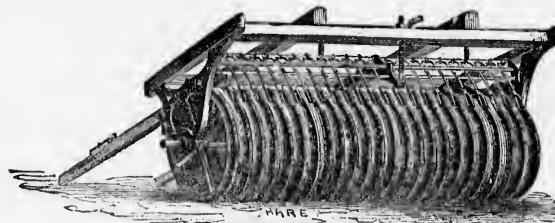

The Guardians of the Poor of the Eastry Union, in the County of Kent, hereby certify that a Steam Apparatus for the purposes of Cooking and heating Water for Washing, was erected at the Union Workhouse, by Mr. W. P. STANLEY, of Peterborough, in the month of March last; and from that period to the present time, it has worked satisfactorily, effecting a considerable reduction in the consumption of Coal.

Given under our Common Seal, at a meeting of the Board, held this Thirteenth day of September, 1851.

EDWD. GREEN, Clerk to the Guardians.

Cooking, Washing and other purposes for 417 Inmates, reducing the consumption of Coal 41 Tons annually.

W. P. S. has had as favourable an account from the Bradfield and Fulham Unions, Glasneavon Model Farm, Dublin, Spalding House of Correction, Milton and Waddon Kennels, &c. and is fitting up the Dover Union.

#### CAMBRIDGE'S Press Roller or Clod Crusher, with STANLEY'S Patent Scrapers.

This implement is much used for other purposes besides clod-crushing; namely, for rolling meadows or pasture land, also parks and lawns. By breaking the hard surface of the land, the grass springs up thickly, and of luxuriant appearance.

The Press Roller is also very effective for re-setting wheat, vetches, and other plants made light by frost; and the ravages of the wire-worm or grub are at once stopped by its application.

Prizes have been awarded by various Agricultural Societies.

PRICES :—	£. s.
6 feet 6 inches wide, 20 inches diameter.....	15 10
6 " " 26 inches diameter.....	17 0
Double shaft, £1. 0s. extra.	

#### Rouleau à Presser de CAMBRIDGE ou Ecraseur de Mottes et des ratissoires patentes de STANLEY.

Cet instrument peut encore servir à d'autres usages; par exemple, pour rouler les prairies ou les terres à pâture, les parcs, les pelouses, et après qu'on a brisé la surface dure du terrain, le gazon pousse vite et dru et a une apparence luxuriante.

Le Rouleau à Presser est surtout très efficace pour raffermir le blé, la vête et d'autres plantes que la gelée a rendu flâties, et par son emploi on arrête de suite les ravages du charognard.

Divers Prix ont été accordés à l'inventeur par plusieurs Sociétés d'Agriculture.

#### STANLEY'S Lawn-Mowing Machine.

It is 30 inches wide, and is fitted to be drawn by one horse, it performs the operations of mowing and rolling lawn and pleasure grounds to perfection.

Price £16. 10s.

W. P. STANLEY manufactures LAWN MOWING MACHINES of similar construction, to be worked by one man.

The Improved Lawn-Mowing Machine manufactured by W. P. STANLEY is most easy of management. It removes all the cut grass; and leaves no scum on the lawn.

STANLEY's Lawn-Mower is provided with wheels, attached directly over the cutters; by the adjustment of which the length of cut of the grass is regulated. As these wheels, in combination with the large iron roller, give a broad base to the machine, it need only be pushed along before the operator, requiring no effort whatever in handling. This substitution for the small wood roller formerly used greatly reduces friction. A modification is also introduced into the spiral apparatus, which effectually does away with the tendency the cutters had to choke. The wood roller is now used only in mowing narrow borders; and at that time the wheels are raised clear of the ground.

#### Machine à Faucher les Pelouses, inventée par STANLEY.

Elle a 30 pouces de large, et elle est arrangée pour être tirée par un cheval. Elle fauche et roule les pelouses et les jardins d'agrément dans une grande perfection. Prix, 412fr. 50c.

W. P. STANLEY fabrique des MACHINES à FAUCHER des PELOUSES d'une construction semblable et qu'un homme peut faire marcher.

La Machine perfectionnée pour Faucher les Pelouses, et fabriquée par STANLEY, est très aisée à manœuvrer. Elle emporte tout l'herbe fauchée et ne laisse pas de traces sur la pelouse.

Le Faucheur de pelouse de STANLEY est garni de roues attachées directement au-dessus des lames, et qui par leur ajustement permettent de régler la longueur de la coupe du gazon. Comme ces roues, combinées avec le gros rouleau en fer, donnent une large base à la machine, il suffit de la pousser devant celui qui y veille et qui n'a pas besoin d'y toucher. Cette substitution au petit rouleau de bois ancialement en usage réduit de beaucoup la friction. On a aussi introduit une modification dans l'appareil en spirale, qui détruit la tendance qu'avait les lames à s'engorger. On ne se sert maintenant du rouleau de bois qu'en flanquant des bordures étroites, et dans cette opération les roues sont complètement élevées au-dessus du terrain.

#### Stanley's Chaff-Cutting Machine.

A great many Prizes have been awarded for this implement by the Royal Agricultural Society of England and others.

#### Machine de Corne à Couper la Faille.

Plusieurs Prix ont été accordés à cet appareil par la Société Royale d'Agriculture et d'autres.

**STANLEY's Patent Bean Cutter for Hard and Soft Beans.**

By this Mill the largest, and smallest varieties of beans are equally well prepared, and this quite independently of the dryness of the grain, for whether hard or soft, the efficiency of the operation is the same, while no choking can take place. The power required to prepare a given quantity of grain is less than with the ordinary Bean Mill.

One man can crush 3 bushels of beans per hour.  
Two men can crush 5 bushels of beans per hour.

Price, £2. 10s.

**Machine à Couper les Feves dures et Tendres, Inventee et Patenttee par W. P. Stanley.**

Par le moyen de cette machine toutes les variétés de fèves sont préparées également bien, quelle que soit la sécheresse du grain, car dur ou tendre on le prépare avec facilité, et il n'y a point d'engorgement. La force nécessaire pour préparer une quantité donnée de grain est moindre quo celle qu'exige le moulin ordinaire à fèves.

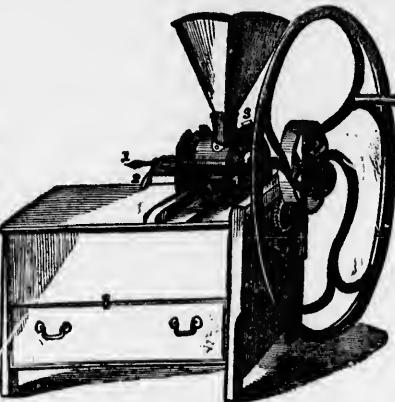

Un homme peut broyer 3 boisseaux de fèves par heure.  
Deux hommes - - 5 " "

Prix, 62fr. 50c.

**Stanley's Wheat Mill and Flour Dressing Machines combined; manufactured by W. P. S.**

These Mills will grind and dress from 24lbs. to 30lbs. per hour by hand, is quite effectual in its operation, and exceedingly valuable for household purposes; and invaluable for grinding barley, for feeding cattle and pigs.

Price £7. 10s.

**Monlin pour Fromen et pour farine en une Machine par W. P. Stanley.**

On moudra et rendra environ 24 à 30 livres de la plus belle farine par heure (à la main) son opération est effectuel et très utile pour l'usage des maisons particulières et très avantageux pour mondro l'orgue pour la nourriture des bestiaux et des cochons.

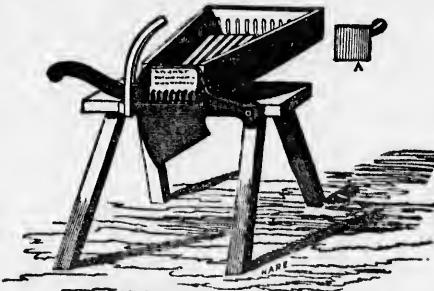

Prix 187fr. 50c.

**STANLEY'S Hand Turnip Cutter for Sheep and Beast.**

**Stanley's double-action Turnip Cutter.**

This well-known and indispensable machine is used for cutting turnips into slices suitable for sheep. The pieces average  $\frac{1}{4}$ -in. wide by  $\frac{1}{8}$ -in. thick, while the waste by small irregular pieces is very trifling.

Price, £1. 5s.

**Machine à double action Pour Couper.**

Cet ustensile si connu et si indispensab le sert à couper les navets en tranches qui conviennent aux moutons. Les morceaux ont en général  $\frac{1}{4}$  de pouce de largeur sur  $\frac{1}{8}$  p. d'épaisseur, et la perte occasionnée par les petits morceaux est très minime.

Prix 31fr. 25c.
