DEVOTED TO TEMPERANCE, SGIENCE, EDUGATION, AND LITERATURE;

## VOLUME XXIX, NO: 6.

MONTREAL \& NEW YORK, MAROH 2, 1894.
30 Cts. Per An. Post-Paid.
fully to carry out the intentions of its founders - the reception and treatment of sick and injured persons of all races and creeds without distinction.'. The founders. Sir Donald A. Smithand Lord MountStephon, formerly Sir George Stephen, aro both well known in Montreal, and, indeed, over the rican Continent, for their hard work and generous donations for the benefit of humen ity. Perhaps the fact that both are Scotclimen had some. thing to do with the architect's selecting the Scottish

THE ROYAL VICTORIA HOSPITAL. Montreal's latest addition to her magni ficent buildings is the Royal Victoria Hospital, donated by two of her millionnaire citizens Lord Mount-Stephen and Sir Donald Smith. Although the money was given in $188 \%$ to commemurate the jubilee of Her Majesty Queen Victoria, the greatness of the work prevented its completion until towards the close of last year. The opening ceremonies were held on the 2nd of Deceniber last when the building was declared open, by his Excellency the Governer General of Canada, Lord Aberdeen. The building was erected from designs by Mr. H. Saxon Snell, of London, England, in the best. Scottish Baroninl style. Situated as it is at the foot, or rather on the slope, of lovely Mount Royil, and overlooking the city and the grand St Luwrene Piverit seem destined

Baronial as the style of architecturc. In 1887, the jubilee your of Queen Victoria, the two founders made known their intention of having this institution erected, and intimated that they would each giye $\$ 500$,000 towards its foundation. The city offered a site on the mountain-side, but this not being considered altogether suitable, and the founders, perhaps, not desiring that others should participate in their benefaction, the present site was purchased by them from the Frothingham estate for $\$ 86,000$.
The buildings and grounds cover min area of twenty-three acres. For the walls, Montreal gray limestone has been used. Oontracts were signed on June 18, 1890, and work was begun two days later. The building was practically completed in June; 1892, but it was then decided to make cernin additions, which wiere not finisl
$\qquad$ $\therefore$

LORD MOUNT-STEPHEN.

until the end of the yenr. In the construction, 200 stone-masons, 80 carpenters, 40 plasterers, 20 steam-fitters, and over 200 laborers were employed. The building itself cost $\$ 650,000$, the heating, plumbing, and electric wiring $\$ 50,000$ more, and $\$ 80,000$ additional. While the building is practically in one, thero are in reality three-separate buildings, the wings being connected with the main structure by devoted to tho administrative work or the devoted to tho administrative work or the
institution. The chief entrance leads into a institution. The chet entrance leads into a
spacious hall, wide, lofty, well ventilated, and well lighted. The floor is of marble, beautifully tiled and wainscoted. The walls are of cement, and they, together with the ceiling, are delicatcly tinted. At the head of the staircase leading to the upper stories is a statue of Queen Victoria, ably exegreatly to the beauty of tho hall, and is constructed with slabs of slate bound together with iron straps in such a manner as to unite beauty with strength and at the same time preserve the fire-proof nature of the building, a matter whinch has been
carefully attended to throughout. On the ground-floor, to the left of the main entrance, are the secretary's office and the
board-room; on the right, the medical board-room; on the right, the medical staff's room and the porter's room. On the second floor are situated the lady superintendent's apartments, the nurses' parlor, dining-rooms, and bedrooms. On wings from the main edifice by means of the stone bridges. Owing to the sloping nature of the ground, this third floor in the rear is only a few feet above the level of the ground, and here is found the entrance for the patients. Near the doorwiy are
the admission and casualty rooms, where the admission and casualty rooms; where
the applicants for admission will be exthe applicants for admission will be ex-
amined by the medical officer, and on beamined by the medical ofncer, and on beto the surgical or the medical wing, as the case may be, by means of an elevator large enough to contain a bed and other necessaries. On this floor are also to be found a large waiting-room, medical officers' mess-room, linen-room, work-room, and a few nurses' bedrooms, as also the dispenup to the nurses, while on the fifth floor are the kitchen, and the housekeeper's and the cook's quarters, and the servants' dining-hill. The kitchen is an ideal one for a true housekeeper- 44 fcet long, 26 for a true housekeeper-44 fcet long, 26
wide, and $18 t$ in lieight. It is fitted up
with kitchen utensils and anparatus of the most approved fashion. On the sixth floor are the servants' quarters, and from the windows of this foor a splendid panoramic view is had.
Crossing the bridge to the east the medical wing is entered. Here are found three long wards, alike in every respect, feet high, feet long, 2od feet wa, ind for thirty patients. The floors are of linard wood, thoroughly saturated will boiled linseed oil,- which fills up the crevices be linseed oil,-which fills up the crevices bo-
tween the planks and mikes the floor like tween the pianks and mikes the floor hke
a solid piece of wood. Above each bed a solid piece of wood. Above each bed the patient can be turned or raised in. his bed, when necessary. The system of ven tilation, it is claimed, is wellnigh perfection. Ducts at regular intervals along the side of the walls lead to a great tunnal rumning along the bottom of the wing, and opening into an octagonal shaft, which survounds the smoke-stack, and which is cirried ul with it to the outer air. Tho heated air passing up the smoke-stack cunses an up ward current in the shaft, and thus draws the air from the wards through the duct into the tunnel. Fresh air is supplied to he wards by ducts similar to those used for the withdrawal of the foul air. At the
end of each ward is a room 12 feet long by 16 feet wide, which may be used as neces sity shall dictate. The three flats of both wings are alike, with the exception that in the medical wing there is a bright, cory children's ward, and a medical theatre fitted up with all the most improved ap students, while in the surgical wing thore are a children's ward, several female wards, and a surgical theatre on the ground-floor with accommodation for 300 students. Between the theatre and the ward is a series of rooms-the anæesthetic room, the after-recovery room, the splint room, the surgeons' private room, and the nurses private room.
The building is heated by hot water supplied by boilers in the basement of each wing. The sanitary arrangements are con sidered perfect; as is also the plumbing. From the situation of the hospital there should be no difficulty as to thorough drain age. Not only has everything been done to secure the comfort of patients by all needful and improved appliances, but much attention has been given to the adornment, as far as possible, of the various apartments, so that weary sufferers may not
gazing on bare andunsightly walls. ${ }^{\text {With }}$ all the natural advantages in its fivor, and all the appliances of modern science placed at the disposal of stiff of skilled. physicians, and erected under the dany and personal supervision or M. . Rind, the assistant architect, Hospital of Montren should be not only a credit to its founders, its architect, and the city, but a boon and a blessing to suffering humanity.

## YOU ARE LATE

If your society is troubled with members who uniformly come late to the meetings, let the prayer-meeting committee trya plan Which is putinto effective operation by the Central Presbyterian Society of Kinsns city. They got a blackboard, and printed upon it in great staring letters these words. 'you are late.' As soon as the meeting is open they put the blackboard in a prominent position, so that all the new-comers may see it, as well as the members of the
society. It is said that those who are tardy once are not tardy again-Golden Rutle.

## TAKING TIME.

Linger at the place of secret prayer. If you do not know just what to pray about, look to Jesus for him to give you prayer. Look to him for your prayer and your faith. After you have opened all your heart to l:im, take time to linger for his answer, to listen to marching orders; and should he choose not to speak, 'trust him just the same, and take time to adore him. - Wratson.'

BUT PRAYER IS NOT ALL.
We can no more pray the gospel out to China than we can pray a harvest out on China than we can pray a harvest out on
a Manitoba farm. If we want the gospel to go to China we must send somebody with it. And the gospel must go not only with somebody, but inside of somebody. And one thing is sure, we cannot dedicate other people's children ; and somebody's sons and daughters must be sent, if the heathen world is ever to hear of Jesus Christ. - $D$ Herrick Johnson.

its vietiins. 3. We may best gunrd ourselves agninst the
mockery of wine by nostaining fromall nse of it 4. Remember the wiso man's caution: Looknot

## REVIETV QUESTIONS

1. What does Solomon sny of wine and strong drink? Ans. Wine is a mocker, strong drink is not wise, $\begin{gathered}\text { 2. What do wo rend in Provi } 23: 21 \text { ? Ans. Tho } \\ \text { drin }\end{gathered}$ and drowsiness shall clothe a mnn come to poverty; 3. Whatwarai ngdes Solomon wive rat he deceitfinlncss, of wine? Ans, It promises pleasuro ind bitethlike a serpent.and stingethlike an adder.
2. What do wo learn from 1 Cor. 6:109 Ang.

## THE HOUSEHOLD.

## oriliga Gimpren.

The firs fidizilie of $a$ wonan who hears a baby cy yis to look for a pin. Failing to find une sticking into the little body, she supposes the infant has cramps. Indeed, it is inatural and reasonable to presume
that the crying indicates pain. But many a baby will cense crying at onceif its attention be called to something new. This is plain proof that the crying is not always caused by physical pain. But there is no effect without cause, andone cryigh of it cim lead it aright, will tell us much about the baby's health.
Little children are nothing but little animals, and the cause of any act of theirs is a merely animal cause. In treating them we do not have to puzzle our bunins over that 'mind diseased' which is so often a of adult humanity.
Supposing, then, that no pin is torturing the biby and no colic is giving it pain; why does the baby cry? There is not the slightest doubt that
it perfectly healthy.
Unfortunately for children, they inherit from their parents much more than mere
life, flesh, bone and muscle. The irritable, nervous organism which is a result of this terribly stimulated modern life descends to our children. These are boin nervous, and the inherited irritability of their nerves manifests itself at n time when.
they lad their due of good henlth, they they had their due of good health, they
would be merely little bundles of mimal wrould be merely littie bundles of animal
processes going on silently and unconsciuusly.
It is of great importance that the continued crying of children should not be attributed to ill-temper or 'badness.'. It is of great importance that pareints or those who have charge of the babies should
recognize crying for what it commonly is, mamely, the symptom which points to mamely, the syility of the child's nerves. It is of great importanco to recognize the evil, be: ciluse we cammot
measures to end it.
Recognizing the evil, then,', ouir first step should be to find out the general condition of the infant's health. It is of esplecial importance to ascertain whether
the alimentary canal be healthy, and the natural processes of life going on properly. When the alimentary canal is clogged from any caluse, or when the digestion of the
baby is imperfect. there is set up a disarrangement of the nerves of the stomach, which are among the most inportant of the body. When they are in an inritated
condition they will sympathetically affect the whole nervous system.
It is of primary importance that the blriod should be in good condition. We
must be carcful to see that it does not becume poor by the retention of particles of efiete matter. To this end we must see that the liver does its work properly
If the stomach, liver and alimentary
canal are found in good order, we must, if the child still shows nervousness. search further for the ciuse. One of the first thingss to which attention should be paid is baby lives or sleeps.
While a very young child demands and must have heat, its need for good air is
one of the greatest. Babies are yery susone of the greatest. Babies are very sus-
ceptible to every cause of physicil ovil, and ceptible to every cause of physicial ovil, and
bind air is one of the commonest of them. How people can expect a baby to oxygenate its blood properly, and properly burn up
the waste in rooms that I have been in, I the waste in rooms
cmunot understand.
I have found infants in atmospheres that made me feel faint. I have often, when the witched the child's long breaths and seen color come back to the pallid cheeks. Give the babies fresh air
It is easy enough so to wrip a child up that it may be taken out-of-doors with perfect. safety to its henlth, even in the coldest weather. Of course it would be folly to
take the little one out in a driving raintake the little one out in a driving rain-
storm, but baring the rain, there are not many days when the open air will not do
far more gond than harm. The child needs far more gond than harm. The child needs
change, too, and if it be only from one room change, too, and if it be only from
0 another win benefit thereby.

Special onre must be tiken to see that
nothing like sewer gas can get into the room where the baby sleeps or lives. I would not allow a standing wash-basin, conniected with a sewer or cesspool, in any nursery or sleeping-room if I could preven t. Very young children are affected by fiance, and tro much care cannot be shown in such matters.
To preserve the health of children, especinlly if they be of the nervous kind, they must take all the exercise they can. As lowed to play out-of-doors as much as possible. The fact that it plays in the dirt, providing the enrth be dry, is of no
consequence. Clothe it in such fashion consequence, clothe it in such ashion
that it cannot hurt the clothes, and then let it eijoy itself.
Fresh air and plenty of it; warm cloth ing and as soon as possible, exercise plenty of sleep aid in short, a rational sort of life and the best health attainable are
the remedies for those mournful, wailing the remedies for those mournful, wailing cries that try the grown people almost a
much as the little ones.-Youth's Com panion.

## IMPERFECT DEVELOPMENT.

## BY JOHN ELLIS, M.d.

'From nothing nothing comes. If children are to have good teeth, bones, and
nuscles, they must be fed on food which muscles, they must be fed on food which
contains an adequate supply of inourishment for the above structures; otherwise they are half-starved and are quite sure to teeth, contracted jaws, crooked spines and legs, and delicate muscles. We have not to look far for the chief cause of the decaying teeth which of ten crowd the poorly developed jaws of the rising generation.
To-day our children are fed largely upon To-day our children are fed largely upon
bread, cakes, pie-crusts, and pudaings. made from the finest white superfine flou which an be ground or rolled and bolted from wheat and rye. A careful analysis
of these grains shows that immediately beof these grains shows that immediately benenth the hull lies the dirk portion of the
kernel, which is hird; firm, and very difficult to grind or roll into a fine flour, and more or less of it is quite sure to remain in contact with the bran, and in bolting the rest of it is mostly separated from the fine flour. Now this dark portion, thus
disposed of, contains in excess the very disposed of, contains in excess the very
substances required to nourish the teeth, bones, muscles, and brain;-namely, the gluten and phosphates; whereas the cen-
tral or white portion of the grain contains tral or white portion of the grain contains
an excess of starch which is easily pulverized, and by boltiug, fives the supertine white flour. The superfine white flour is composed of an undue portion of stnrch, which, where in proper proportion as it exists in the grain, is useful for supplying hent and fat-producing material, but it
does not contain enough teeth, bone, muscle, brain; and nerve-nourishing materials, to sustain animal life for any considerable length of time: : consequently,
superfine white flour will keep in barrels superfine white flour will keep in barrels
and bags for a long time without being and bags for a long time without being
disturbed by insects, worms, or must wherens the unbolted menl will not keep for any great length or time without becoming unpleasant to the tasto. Magendi, ever lived, demonstrated by experiments that animals fed exclusively upon the Ginest superfine fiour died in a few weeks, thrived. During the study and practice of medicine for over thinty years the worst case of scurvy $I$ have ever seen occurred in a girl tive oi six years old who for some weeks would eat nothing but toast made
from superfine flour bread. I only rescued her from death by requiring her mother to mix mashed potatoes with the flour from which her bread was made.
Inperfect development of the teeth, inevitable result which follows if children are fed largely on superfine white flour cooked in any form, and deformity, dys pepsin, and dive on unbolted whent or rye flour or menl, they have good teeth; bones, and muscles. $\cdot$ I well remember, when in Egypt in 1884, at Thebes, the little Arab girl who, with a vessel of water upon her
head, ran over the sand, stones, rocks, and head, ran over the sand, stones, rocks, and
hills as we rode upon our donkeys to visit the tombs of the kings, for she had splen-
did teeth, sparkling eyes, and a benitiful and well-developed waist, symimetricul in orm, and visaceful in every movement. dragoman, or guide, to look at suine curiosities which had been obtained from the tombs of the ancient Egyptians, we saw two women grinding at a mill and making the kind of flour which that young girl ate.
There were two mill-stones; perhaps eighteen or twenty inches in diameter, standing in a tray, with an opening through the centre of the upper one for pouring in the grain, and at opposite sides erect handles and turned the upper stone around and around, and back and forth, and the flour or meal came out between the outer dges of the stones. I said to our guide, We have not had a bit of good bread in Egypt, for at the hotels at which we have been stopping they think that they must furnish superfine flour bread for foreigners
to eit: Now, I want you to make us a oan of bread from that flour and bring it to our hotel to-morrow and I will pay you for your trouble. He did so, a
the best bread we had in Egypt.
It is wonderful to see the improvement in health, developnent, and vitality which frequently ensues when delicate, sickly chiddren, and even old dyspeptics, who
have been living largely upon superfine lour and its products, are fed upon unbolted whent or rye flour bread or pudding.
But, if the stomach and bowels are weak But, if the stomach and bo wels are weak
from the want of proper nourishment, If they are irritable or inflamed, then for a limited time, or until they gain strength and health from the use of this more nourishing food, it is necessary either to bift out with a conrse sieve the coarsest of the bran from the graham flour, or to obwhent which has been hulled bofore grinding, which can be had in some of our cities. f this catution is not heeded by those beginning the use of graham or unbolted flour, it will not infrequently, in the cases named above, prove too irritating at first and its use abmandoned and condemned, butfor strong, healthy children and adults, this flour, brin and all; is just right, as the Lord intended it.-National Temperance Adrocate.

## BLACKING AND BRUSHING.

'Mrs. Peters,' remarked Mrs. Price, ter the ladies had chatted on various opics of interest for some time, how do you keep your shoes always looking so nice rubbed in spite of all the blacking I put in it does not last.
'I wondered why, you were observing
ny feet so closely,' siiid Mrs. Peters, smilingly, and draving her foot under her dress. 'But I am very willing to tell all I know on the subject. An old shoe sales man told me once that to keep shoes in good condition one should use vaseliine on them, applying lightly with a cloth at night. Occasionaly I put on a little polish, and by
giving them a dry rub night or morning. I usually keep thom looking well until they are worn out
I'm afraid I have so much blacking in the pores of the lenther, the vaseline will not penetrate,' sinid :Mrs. Price, looking down at her shoes.
'This sime man told. me,' said Mrs. Peters, that when blacking commences water, no soap. Perhaps that will help yours.'

I beliave I will try it,' was Mrs. Price's
conclusion.—Standard.

## SIMPLE DISINFECTANTS.

Lime is one of the cheapest and most efficient disinfectints, combined with fresh air, sunshime and cleanliness, nothing else in $P$ itdic Hectll refers to this important matter as follows:
I wish to call attention to the means of disinfection at our disposal other than boil ing. They are, the use of concentrated nlkaiies, caustic lime in the form of fresh whitewash, or lime water prepared after
the form here reprinted for convenience, and for washing clothing, floors, etc., strong soft soan, which is a potash soap and very
fatal to microbic growths. These two
agents are cheap, prepared by any one, and arailable in country and town alike. The free use of the first upon all collections of excreta or other decayiug matter, and of the last for cleansing purposes, make up a sufficient list of means for ordinary purposes, and if properly used add largely to Lime
Lime water is the clear solution of quicklime. Take best quick-lime in lumps, put in a pail, pour on one-third as much water, cover slowly and slack till it is a fine powder or creamy fluid ; one part of this to tion. Add will make arortion to the mixture, stir well and then pour on half a teacupful of kerosene, which will protect it from the air and preserve its strength. Use the clear solution as needed, and the semi-solid matter can be made into whitewash or thrown into vaults, cess-pool or garbuge barrel. Always use soft (potash) soap for cleaning floors, furniture and the like after infectious diseases ; it is a power ful disinfectant.

## POOLS OF STAGNANT AIR.

There are sentences in this description, quoted from the New York Times, that might make a nervous person hesitate to intrust himself to a bedroom until a sani tary expert has passed upon it ; but the obeyed.
It has been proved by actual experiment that a layer of air lies against the walls, which is subject to very little movement, even when there is a strong circulation in the middle of the room. It is, therefore,
important that a bed should not be placed close to the wall. If kept there during the daytime, it should be moved at least several inches out into the room at night.
Alcoves and curtains should be avoided. Alcoves and curtains should be avoided. of air forms, which may be compared to the stagnant pools often observed along the margins of rivers. A few yards away a rushing tide may be moving swiftly along, but these
by the current.

While placing the bed, especially the head of it, where it will be shielded from the strongest dinught, there should still
be enough motion to the air in that vicinity be enough motion to the air in' that vicinity
to insure fresh supplies constantly throughout the night. The prevailing lack of appetite for breakfast, as well as many cases the breathing over and over ngain of the same air in restricted bedrooins, where beds are too often placed in alcoves or are shielded by curtains, which are far too seldom shaken out in the fresh air.-Golden Rule.

## RECIPES.

Steamed Apples.-Pare and halve good sour apples. rompone the ocres, and sterm overed boiling
water tilt tender. Servo with sumar and creani. Apple PIEs, Fill a dish two or three inches
 crust and bake till the apples are dono.
thus made there is no sogyy undercust.
Gratami bread.-To three small cuptuls of
white four sponge add a tablespoonful of

 dough. When lipht, flll
full, and when risen, bake.
Pressed Chicken:-Boil two chickens till the season with salt, popper, and butter. pour in enough of the liquor they wero boiled in to mako the neat very moist. Put in a dish and place a
weight on it till cold. Nico forlunch or tea, and
for travelling lunches orschool lunches. For Breakfast, stir together over the firc a tablesponful of four and bulter till thy bubble,
add two gills of boiling wnter and one of inilk,
season with sait and pepper and dash of nutimer. add
season with sait and pepper and dash of nutwerg.
In this sance cut up ns many cold boiled potatoes
as it will cover when they are hented through
pour all into an enrthen dish, dust with brchd pour all into an earthen dish, dust with brcid
crumbs, and a littlograted chcesc, brown in a hot

StuFfed Datrs.- This is a very nice sweet-
meat to have on the luncheon table, besides being
easily and cheaply mado. Allow a quart of pea meat to have on the luncheon table, besides being
ensily and cheaply made. Allow quart of pea-
nuts to $\AA$ pound of dates. Slit the dnte open
along the side and remove the stono, flling its
place with $a$ pernut. Press the dnte together pace with a pennut. Press the dnto together
and roll it in fine
o keptanulated sumgri; if they arolo bo kept for any length of lime. they should be
closely packed in air-tight boxes.
Hard and Soft Warer in Cooking. Peas
and bcinns should bo boiled in soft water. if hard and beans should bo boiled in soft water. If hard
water must bo used. add n little sodn. Salt ardens soft water. cold soft wreter

## SOAP-BUBBLES,

AND THE FORCES WHICL BOULD THEMS By C. F: Boys, A. R.S.M. F.R.S. of the Royal (Continued.)
I want you now to consider what is happening when two flat plates partly immersed in water are held close together. We have seen that the water rises between them. Those parts of these two plates, which have air between them and also air outside them (indicated by the letter $a$ in Tig. 11), are each of then pressed equally in opposite directions by the pressure of tho air, ind so these parts do not tend to approach or to recede from one another.
These parts again which have water on cach side of each of them (as judicated by cach side of atch of them (as maicated be are prossed in opposite
the leter

fig. 11.
directions by the pressure of the water, and so these parts do not tend to approach or to recede from one another: ${ }^{\text {a }}$ But those parts of the plates ( $b$ ) which have water between them and air outside would, you might think, be pushed apart by the water between them with a greater force thim that which oonld be exerted by the air outside, and so you might be led to expect that on this account a pair of plates if free to move would separate at once. But such in iden though very natural is wrong, and for this renson. The water that is raised betweon the plates being above the general level nust be under a less pressure, because, as every one knows, as you go down in water the pressure increases, and so as you go up the pressure must get less. The water then that is raised between the plates is under a less pressure than the air outside, and so, on the whole, the platies are pushed together. You can ensily sce that this is the case. I have two very light
hollow glass bends such as are used to hollow glass beads such as are used to
decorate a Christmas tiee. These will float decorate a Christmas tree. These will float
in water if one end is stopped with sealingwax. These are both wetted by water, and so the water between them is slightly raised, for they act in the same way as the two plates, but not so powerfully. However, you will hare no difficulty in seeing that the moment I leave them alone they rush toriether with considerable force. Now if you refer to the second figure in the diagrim, which represents two plates which are neither of them wetted, I think you will see, without any explanation from me, that they should be pressed together, me, that they should be pressed together, Two other bends which have expen dipped. Two other beads which have been clipped in paraflin: wax so that they are neither of
them wetted by water flont up to one anthem wetted by wnter flont up to one an-
other agiin when separated as though they attracted each other just as the clean glass beads did.
If you again consider these two cases, you will see that a plate that is wette tends to move towards the higher level of the liquid, whereas one that is not wetted tends to move to whirds the lower level, that is if the level of the liquid on the two sides

## Fic. 12.

is made different by capillary action. Now suppose one plate wetted and the other not wetted, then, as the diagram imperfectly shows, the level of the liquid between the plates where it meets the non-wetted plate
is ligher than that outside, while where
it meets the wetted plate it is luwer than that outside ; so each plate tends to go away trom the other, as you can soe now that L lave one paraffined and one clein ball floating in the same water: They appeai to repel one another

Fou may also notice that the surface of the liquid near a wetted plate is curved, with the hollow of the curve upwards, while neat a non-wetted plate the reverse is the case. That this curvature of the surface is of the first importance I can show you by a very simple experiment, which you can repent at home as easily as the las that I have shown. I have a clean glass bead flonting in water in a clean glass ves sel, which is not quite full. The bead al ways goes to the side of the yessel. It is impossible to make it remain in the middle, it always gets to one side or the other directly. I shall now gradually add water until the level of the witer is rather: higher than that of the edge of the vessel. The surface is then rounded near the vessel, While it is hollow near the bead, and now the bend sails awiy towards the centre, and can by no possibility be mide to stop near either side. With a parathned bead the reverse is the case, as you would expect. Instead of a paraffined bead you find will flont on needle, which you will placed upon it very gently. If the tumbler is not quite full the needle will always go away from the edge, but if rather overfilled it will work up to one side, and then possibly roll over the edge ; any bubbles, on the other hand, which were adhering to the gliss before will, the instant that the water is above the edige of the glass, shoot away from the edge in the most sudden
and surprising manner. This sudden and surprising manner. This sudden change caln be most easily seen by nearly
filling the glass with water, and then gradually dipping in and tiking out a cork, which will cause the level to slowly change. So far I have given you no idea whit force is exerted by this elastic skin of water. Measurements mide with nariow tubes, with drops, and in other ways, all show that it is almost exactly equal to the

G. 13
weight of three and a quarter grains to the inch Wo have, moreover, not yet seen whether other liquids act in the same way, and if so whether in other cases thestrength of the elastic.skin is the same.
You now see a second tube identical with that from which drops of water were formed, but in this case the liquid is alcohol. Now that drops are forming, you see at once that while alcohol makes drops which have a delimite size and shape when they fall away, the alcohol drops are not by any means so large as the drops of Two possible reasons might be given to exTwo possible zeasons might be given to ex-
plain this. Eithor alcohol is a heavier liquid than water, which would account for the smanller drop if the skin in ench liquid had the samo strength, or else if alcohol is not heavier than water its skin must be weaker than the skin of water. As a matter of fact alcohol is a lighter liquid thm water, and so still more must the skin of alcohol be weaker than that of water.
We can easily put this to the test of experiment. In the game that is called the tug-of-war you know well enough which side is the strongest ; it is the side which pulls the other over the line. Let us then make alcohol and water play the same game. In order that you may seo the
water, it is colored blue. It is lying as a shallow layer on the bottom of this white dish. At the present time the skin of the water is pulling equally in all directions, and so nothing happens; but if i pour a
few drops of alcohol into the middle, then
at the line which separates the alcohol from the water we have alcohal on one side pulling in, while we have watel on the other side pulling out, and you see the re sult. The water is victorious; it rushes away in all directions, carrying a quantity of the alconol awny with it, nnd

This difference in the strength of the skin of alcolol and of water, or of water containing much or littlo nleohol, gives rise to a curious motion which you may see on the side of a wine-glass in which there is some fairly strong wine, such as port: The liquid is observed to climb up the sides of the glias, then to gather into drops, aud to an down ngam, ravined as follows :- The

FIG. 14.
thin layer of wine on the side of the glass being exposed to the air, loses its alcohol by evaporation more quickly thim the wine in the glass. It therefore becomes weake in alconol or stronger in water than that below, and for this reason it has a stronger fin. It therefore pulls up moro wine so much that drops form, and it runs bick again into the glass, is you now see upon the screen (Fig 14). There can be no doubt that this movenent is referred to in Proverbs xxiii, 31 : 'Look not upon the
wine when it is red, when it riveth his wine when it is red, when it giveth his color in the cup, when it moveth itself uright.'
If you
If you remember that this novement only occurs with strong wine, and that it must lave been known to every one at the time that these words were written, and used as a test of the streugth of wine, because in those diys every one drank wine, then you will agree that this explanation one I would osk you filso to conside whether it is nost probiable that other whether it is not probable that other
passages which do not now seem to convey to us any meaning. whatever, miry not in the same way have referred to the common knowledge and customs of the day, of
which at the present time wo happen to be which at th
Ether, in the same way, has a skin which is weaker than the skin of water. The very smallest quantity of ether on the surface of water will produce a perceptible effect. For instance, the wire frame which I left some time acro is still resting agrinst the water-skin. The buoy ancy of the glass bulb is trying to push it hrough, but the upward force is just not sufficient. I will however pour in few drops
of ether into the glass, ind simply pour the vapor upon the surface of the water (not a drop of liquid is passing over), and almost immediately suflicient ether has condensed upon the water to reduce the strength of the skin to such an extent that the frame jumps up out of the water.
There is a well-known case in which the difference between the stirength of the skin of two liquids miy be either a source of vexation or, if we kunw how to make use of it, an advantige. If you spill grease on your coat you can take it out very well with benzine. Now if you apply benzine to the grease, and then apply fresh benzine to that already there, you have this result there is then greasy benzine on the coat to which you apply fresh benzine: It so happens that greasy benaine has a stronger skin than the puro benzine. The greasy benzine before plays at tug-of-war with pure benzine, and being stronger wins and runs aiving in all directions, and the more you apply benzine the more the grensy
benzine runs away carrying the grease with
it. But if you follow the dircetions on the bottle, and first makeradoribor of can benzine round the grease spotitand then apply zenzinc to the grease, youthen huve pure benge pure benzine ring and heargy, zsels together ing that you apply, so that the grease resh rag thatyou appl
is anl of it removed.

There is a difference again betiveen hot. and cold grease, as you may see, when you get home, if you watch a common candle burining. Close to the flame the grease is: ontter than it is near the outsido. It has: herofore il wenker skin, and so a perpetual irculation is kept up, and the grease runs, out on the surface and back again below, carrying little specks of dust which make this movement visible and makine the cindle burn regularly.
You probably know how to take out grease-stains with a hot poker and blotting-grease-stains with a hot poker and bloting-
patper. Hereagain the same kind of action paper. He
is going on.

A piece of lighted camphor floating in water is another example move up by difference in the strength of the skin of water owing to the action of the camphor.

## (To bc Continued.)

## A BORN LAWYER.

A lawyer advertised foir a clerk. The next morning the office was crowded with applicants-all bright, and many suitable. He b:ade them wait until all should arrive, and then arranged them all in a row and said he would tell them a story, note their comments, and judge from that whom he would chonse.
'A certain farmer,' began the lawyer, was troubled with a red squirrel that got in through a hole in his barn and stolo his seed corn. He resolved to kill the squirrel at the first opportunity. Secing hinn go in at the hole one noon, he took his shotgun and fired away; the first shot sot the barn on fire.'
'Did the barn burn?' said one of the boys.

The lawyer, without answer, continued: 'And seeine the barn on fire, the firmer seized ar pail of water and ran to put it

Did
Did he put it out?' said another
As he passed inside, the door shut to and the barn was soon in flames. When the hired girl rushed out with more water--
'Did they all burn up ?' said another
The lawyer went on without answer Then the old latly came out, and all was oise and confusion, and
'Did iny one burn up?' said another.
The lawyer said: "There, that will' do; you have all shown great interest in the you ha:'
But cubserving one little bright-eyed fellow in deep silence, he said : 'Now, my little man, what have you to say?'
The little fellow blushed, grew unensy, and stammered out: 'I want to know what became of that squirrel ; that's what I want to know.

You'll do,' said the lawyer ; 'you are my man : you have not been switched off by a confusion and barn burning and the hired girls and water pails. You have kept your eye on the squirrel.'-Tact in Convt.

## THE LIGHT THAT IS FELT

## A tender child of summers three,

 Soeking her little bed at night,Paused on the dark stair timidly.
O mother ! take my hand,' said she,
older children grope our way
Wo older children grope our way
From dark behind to dark before; From dark behind to dark before; Dear Lord, in thine, the night is day, And there is darknoss nevermore.

Reach downward to the sunless days Wherein our guides are blind as we, And faith is small and hope delays; And let us feel the light of theol John G. Whimtier,

One Blow Rightly aimed with your hammer That hits the nail well on the head,
Does moro in making a building and frightens the dead.

MR. W. H. HOWLAND AT HOME. BY bentram. whegh, otrawa.
The inner life of a much-talked-of man is always of interest to the outside public, and especially the life of one whose mannes of thouglit and expression is oftentimes incomprehensible to the world, as was Mr W. H. Howland's:

It is always of interest to meet for the first tine a person of whom you have heard much, concerning whom you have formed all kinds of opinions, against whom possibly, you may have entertained absurd prejudices. It was a beautiful evening in July, 1886, as a party of Christian worker were returning to Toronto on the 'Chicora' from the Niagara conference for Bible study, that a friend said, 'Come, let me introduce you to Mr. Howland.'. I wondered to myself 'liow far in this case wil the real diffor from the ideal; or:how nearly the real the two correspond?

To give you an iden of my first impres sion of Mr. Howland, I will try and record faithfully, though briefly, as best I can remember, what took place between us. We simply talked as ordinary mortals do, and I was onabled to get a far more renl and
true ider of what kind of a man he really true iden of what kind of $\Omega$ man he really
was than if $I$ hatd set to work deliberately to pump out certain facts and fancies. 'So you've come ail the wiy from Ottawa, he said, in his bright, genial way, 'for a good square meal-you dear hungry soul1 trust you were satisfied this afternoon I do so thank God for' your work' he con-
tizued, 'and thought I've never before had the pleasure of meeting you, have often prayed that fie would preserve you in health and strength and so fill your heart with His own love and desire for"poor sinstricken souls, and your very nature with holy fire that you will be satisfied only when lighting unlighted torches overy where.
For
thoughtfully, 'By the paused, then saic thoughtfully, ' By the way, how old aro
you I mean since you were born again? youl I mean since you were born again ?
How did it happen? Tell meall about it.' At first I hesitated, no one had ever before asked me such a question, and as it was not customary to renate ones experiences in
the church to which I belonged, I tried to evade the question by replying, 'Well really, Mr. Howland, I don't remember how it happened. 'One thing, I know wherens I was blind now I see.' Mry I ask. 'How, were thine eyes opened in Acton, England, at the time, about ten years ago. In the bedroom assigned me there hang upon the wall the text 'Fear
not, for I have redeemed thee, thou art not, for I have redeemed thee, thou art
mine.' I had come upstairs after a pleasantly spent evening with conversation and laughter in which there was no thought of anything beyond this world's matters. I was careless and indifferent to the things of God. Not an atheist but a practical unbeliever, as I had no faith in any exercise of Divine will or power in mundane affars. Never was any frame of mind so seemingly opposed to the admittance of serious thought, as I sat on the edge of the bed carelessly reviewing the events of the day. Presently my eyes caught the words of the text, but whether any special interest came at the moment of reading them I do not remember; but I do remember distinctly that neither that night noi until I came into the light of tho knowledge of Jesus Christ, did those words parss from my mind. 'Fear not.' What had I to fear Gradually, and unwilningly, I wa and on my knees. Prejudice, prido, love of the woild, all operated adversely to the accoptance of the fact, that I was a poor lost sinner in God's sight, and in need of a
Saviour ; but thanks be to His name He Saviour ; but thanks be to His name, He
led me on until light dawned on my souf led me on until light dawned on my soud
and I saw Him whom to know is life eternibl.'

## When on the cross my Lord $I$ saw <br> Nailed thero by sins of mine, Fast foll the burning tars; but now I'm singing all the time. ?

We were just coming into Toronto. Before us was the city with its magnificent buildings, the lake like a sea of glass reflected the rays of the setting sun, which cast a halo of glory over it all. As wo stond on the deck, enraptured with the scene, some. one remarked : 'I should think, Mr. Hnwland, that your heart would
belifted up with pride as you look out over be lifted up with pride as you look out ove
this beautiful city, and remember that you are its chief magistrate, and the first to
open its session with prayer, and to place over the throne of its Council Chamber the text: "Unless the Lord keep the city, the watchman watcheth but in wain? Bless you, no,' was the characteristic reply; 'What are the empty titles of earth compared with those bestowed upon me by "the city which hath foundations whose builder and maker is God." Praise His denr name : that is something worth boasting about, is it not?
Several days later, an invitation came from Mrs. Howland-denr Mrs. Howland, whom to know is to love-to spend Saturday evening and Sunday with them in their charming home at Queen's Park. Never did I so realize the beauty of home-life as during that little visit with this deally wedded couple and their six beautiful children. One regrets the limitations that good taste puts upon one's expression of one's thoughts and opinions concerning
friends, for I cannot say all that. I think and feel as to the relations of loving confidence and mutun trust between father, mother and children.
As we gathered in the study after dinner, Mr. Howland said :-

Now children, we must study our Sun-

mr. W: h. howland.
day lesson. Who would be Matthew Ienry?"

I will' said one
And I will be Barnes,' said nnother. 'May I be Sundry School Times?
Yes, dearie.
'And may I find passages in the Concordanco ?
'Yes, and Fraulein will be the Westminister Teacher. Now then, are we ready ?
Taking his sent at the desk, with Bible, pencil and paper, baby on his knee, and a beautiful little boy of three years of age standing on the chair behind him, with both arms around his father's neck, he read the first verse of the appointed lesson, and proceeded to draw from the children their own ideas with reference to the meaning of he passages. 'Now, Matthew Henry, said he 'let us hear what you have to say about this verse.' One of the children, seated on a stool at his feet, with a huge commentary, read aloud, while he made ia note of , my point of special interest. - Barnes,' the Times, and the Westminster. Teacher, wero then called upon in turn for their opinions; while now and then it bright, interesting story was told to illuswate the case in point nu
minds of the childiren.
A ploasanit; profitable evening was thus pent' in tho study of the Word.
Harly Sunday morning we were nuakened by the patter of little feet in the hall, and merry childish voices calling-'Father, may we conie in ?' 'We've got ever so
many kisses, and a bootifultext for papa,' chimed in the baby.

Come in, come in, you dear, "bootiful" children. Let us have buby's kiss and baby's text first.' Sweeter than the sweet est music were the words lisped by baby lips-' Bless the Lord, O my soul, and for get not all his benefits who crowneth thee with lovely kindness aud tender mercies.

That's beautiful, little one. Now, dear have
ng?
Yes, but I want to whisper it in your ear, for it is a secret-" Unto us who be lieve," slie said softly, "He is precious.

Yes, darling, He is, indeed.
Ain hour later, parents, children, gover ness and servants, gathered in the study for worship. If one may judge from the bright, happy faces which greeted one fanily worship was not regirded as a solemn duty to be perforned religiously every morning, but rather as a blessed privilege in which atl participated. An appropriate hynm was chosen by the chil dren, one of whom presided at the organ. A portion of Scripture was then rend, cach one taking a verse in turn, which was conmented upon by Mr. Howland, after which he led in prayer. What a prayer It was no whining supplication-no forma petitioning of a divine majesty. Coming is he did, from the presence chamber of the King, with whom he always spent an
several colored people, two Chinamen, in act all sorts and conditions of men, women rid children. It was a wonderful sight.
The blessed work carried on in connec tion with this class is-best described in Mr. Howland's own words: 'Last Sunday was one long-tci-be-remembered. The blessing was a very sweet one, for Jesus Himself was there, and with heartand soul the benutiful hymn was sung on our knees.

## Reign, Master, Jesus, reign.'

## At the last verso-

'I never knew such love before,
Snying' Go in peace and sin no
poor, tired, darkened soul stretched forth the arms of faith, saying, 'That's for me,' and immediately the grent, loving arms encircled him, and the 'peace which passeth all understanding' filled his soul, God spenking with him face to face. None around him knew of it, or saw the Father's joy in clasping the 'lost one found,' but the courts of heaven echoed and re-echoed the joyful penl, and Jesus saw of the travail f his soul and was satisfied.
Do you ask if the real differed from the deal? Or if the seven years which have fince elapsed have changed, in iny measure, hose early impressions? I would say no thas only served to deepen them, so that o words of mine can tell all that I feel with reference to the splendor of that man's life and work.
It was a life and work which made itself felt throughout the whole of our social system, for it went out in a spirit of Christ-like self-sacrifice to save and to bless men, women and children without reference to social, denominational or national distinction.
'One of the grandest monuments to his public spirited benevolence, says The Globe, is the Industrial School at Mimico, in the establishment of which he was not only the prime mover, but the very life and soul of its existence.
He was instrumental in founding the Toronto Mission Union, with a view of reaching, with the Gospel, the unreached masses. He was ulso one of the founders of tho Prisoners' Aid Association, and though he, threw his whole heirt and soul into. every movement which had for its object the alleviation of the woes of the unfortunate, he wis not content with a philnathropy which picks up the victims as they fy broken from the wheel of oppression, but he puts forth every effort to stop the wheel itself.
He so aroused public sentiment thre:ugh is lectures on 'Neglected Childrer,' that at the last session of the Ontario Legislature, an Act. was passed for the prevention of cruelty to and the better protection o children, and the Children's Aid Society was organized and incorporated.
For several years as President of the Ontario Branch of the Dominion Allinnce, he has thrown his energies into the Prohibition movement, and as a result of tho pressure brought to bear upon the Mowat Government by that organization, it was finally decided to take a Plebiscite on January 1st.
Thus in patient continuous labor has he served his God, his home and his native lund ; through good report and evil report, (for he hats had his share of adverse criticism resulting from tho prejudice of ignorance) until (One whom having not seen he loved,' beckoned to him from the glory, and we could almost hear the "Well done good and faithful servant, enter thou into the joy of thy Lord.'

Fromiss a den fnco From its wontcd plnce. Rut looking above.
To the God we lo
Tho sorrow is chang la to gladness.
For we know that there,
The that, purer air- of our Honenly Father Inc hene one we miss.
In that land of biss.
Whero tho angels lovo to gather.

## Wo'll not renine,

## Oh! wo yet shanl mect

On the golden streat
Ond never ngain shall wo sevor; And never ngain shail wo sevor;
Earth's troubles all past, Inrths troubles an past,
In ourt riven an hat.
With fulness of joy for over.

' with a hoabing fine in the stove.

THE NIOEST ITND OF A PARTY. Yes, it is all over now. Tho Christ-mas-tree his been decked and rifled, the Christmas pudding stoned and caten, the snapdragon lit and scrambled for by troops of merry youngsters. All the fun of the fair is over. But it is only for a of fime; for despite what the would-be cynics time; for despite what the would-be cynics
say of the decline of Christmas, and the say of the clecine of Christmas, and the
folly of old customs, we know that the folly of old customs, we know that the
loveliest of all our holidays will never be loveliest of all our holidays will never be
forgotten while boys and girls, and homes exist.
I have taken my share of the festivities, of course. I have stirred three puddiags, and assured myself of at least six lappy months' by partaking of a mince-pie at the houses of six different friends. I havo been to it merry family gathering, and pulled innumerable crickers. And Ihave dinced the New Yeur in. And whilo this year is still a happy biby, what grime resolutions we are all making! We intend to be so industrious, and work so hard, and not give ourselves half so miny holidays as last year. Boys and girls have settled stendily dow. Boys and girls have settled stendly down
to lessons, and are planing to carry off to lessons, and are plimning to carry off
ench a midsumme prize; and although our each a midsumme ${ }_{2}$ prize; and although our
laudable resolutions maty be fated to be laudable resolutions may be fated to be
upset, we start with the very best intenupset, we stant with the very best inten-
tions of keeping every one of them-and tions of keeping every one of
that's a great thing, you know.
The very nicest party Thave been to this winter, took place at Christmans time, in a large school room belonging to two young relatives of mine. I was invited to their grand schoolroom dimer, which was an exciting entertainment if only from the fact that the whole of it was cooked upon the tiny stove made by the elder brother of my two young cousins-a youth of sixteen, with wonderful constructing capabilities. Ho is, indeed, is clever boy', and deserves a special notice, although his mechanical mind is a cause of some little anxiety to his fond parents. You see, he wants to make everything go by sterm or clrickwork. The ming go by stenm or clockwork. The mangle and knife-grinder, his nother's
sewing-machine, and the rocking-horse in sewing-machine, and the rocking-horse in
the nursery have all been. 'improved, as the nursery have all been .improved, as
he said. The mangle wis a complete suche said. The mangle whs a complete suc-
cess for two days, for the young engineer - made a berutiful steam-engine to drive it. Then a dreadful thing happened; it blew
up-the engine, I mean-and the rest of the househodd nearly followed its example. This was at littlo discournging, and calculated to create a nervous feeling in the family with regard to future experiments. But the rocking-horse and sewing-machine were made to go on different principles. They were driven by clockwork, and the only difliculty that arose then was that, when once started, they couldn't bestopped; and the rocking-horse pranced for a whole and the rocking-horse princed for and the sewing-machino whinled round
day, for three, without one halt. It became a trifle wearying, as it was not what could bu called 'silent' clockwork
Still, with all these little failures, the miniature stove made by tho aspiring mechanic is in overy way a success, and burns real wood and coal, and cooks real things, as you will hear. To the stove is attached a set of cooking utensils, tiny aaucepmons and frying pans, and, best of all, a little copper kettlo, all manufactured by my young kinsman's clever fingers. Oh, the pleasure that has been extracted from this pigmy stove! Rainy half-holidays are renerally given over to the cooking of a feast; but, of course, at Christmas time something special was desired, and a menu of many dishes was drawn out. Here it is:-

> Coa and Oyster sauce.
Brussels sprouts. Turkcy. Potato snow.
Plum pudding.
> Mince pies, Custards. in glasses.
Apple cronm. $\Delta p p l e$ cranm.
Dessert.

I was allowed to be present, and assist it the preparation of the dimner, and I will try and tell you a little of how we managed. Clear soup; well, that wo did get from cook, but it was not quite prepared, and wo thickened it with $n$ pinch of corn-flour, and found it beatutiful. Codish and oyster sauce-a big sprat made a truly handsome dish, and one oyster mixed up was ample A pluinp lark stuffed quite in the ord one. A plump lark, stuffed quite in the orthodox way, and ronsted in our stove's real oven,
made a noble turkey. The plum pudding made a noble turkey. The plum pudding
was a little bit of the family one, boiled in a tiny bisin; but the custards and apple cream were prepared by us. You can in agine how exciting it was when, with a
rouring fire in the stove, we watched the
urkey ronsting, and the fishind pudding boiling mevily away; then when the moment came to 'dish-up, expectation reached $i$ its highest pitch. We were so frightened for fear anything might turn out a failure. But it didn't; and when the bell was rung, and the rest of the family trooped in to view our labors, we were proud, I can tell you. We arranged the banquet on a small table we rigged up on the very big one in the schoolroom, and everything wis set out and served on the benutiful miniature dinner-service owned by my small cousins. We spent a lung time over our table decora toos-and very charming the eftect was the centre of the table; tiny bouquets of scarlet geraniums were dotted hero and there, while the whole vas lit up by colored candles in silver candelabra borrowed from the dolls' house.
During the dinner, of which we all partook with a solemnity that was very improssive, tonsts were proposed and drunk to the health of the 'maker of the stove wis sue promuters of the banquet, and it applause thit every birthday in the family should be mado the occasion of snch an other banquet. I must not forget to tel you that our dessert was crowned with a
box of crackers-tiny bon-bons manufactured by my littlo cousins, and filled with sweets and a motto. This gave a realistic trouch to our Christmas dimner, especially when we pulled them.-Pall Mall Budget

## A CUNNING SCHEME.

'T'll sond her a valentine,' quoth he, 'And only Mabel shall know it's me I'll popitinto the box at night,
When there isn't a singlo soul in sight.'
If wrote on the envelope,' quoth he, 'Most any one of them might know'twas me So never a word outside I'll write. But I'il keep the address blank and white.'
'I'll send her a valentine,' quoth he, 'And dear little Mabel will know it's mo; But won't tho postmin bo wid 10 kn Just who had tho wit to fool him so!

THE STORY ON A NEIV DRESS.
'Are you going to hape two puffs on your skirt, or only one? This question Mrs. Baker cilled out from the sewingroom. as her young diaghter flitted by.

Why, two, of course.
It is a good deal of work,' Mrs. Baker said, and she sighed
'I know thit; but when one has a nice dress, why, one wants it made nicely.'
From the sewing-room came the sound of Miss Wheeler's voice, singing softly :-

- Itenventy Father, I would wenr,
Angel garments, white and fuir.'
'Miss Wheeler,' called Cornie, 'you think it ought to bo mado with two puffs, don't you ?'

I don't know. I hiven't thought about Do you want me to think?
Cornic cime and stood in the door and looked at her in a surprised sont of way. 'Don't you think about your sewing when you are cloing it?' she asked.

- Well, not more than I have to in order to do it well. It would be hard work to think nbout clothes all the time, you know. But about the puffs-that is the way most people think they must have them.'
They went into the front room. Mrs. Baker and Cornie talked it over, and all the time came that humming voice from the other room :-
- Take nway my cionk of pride,
And the worthless rags twould

She has rather a sweet voice,' Cornie said. 'Mother, I believe I shall have to get some more silk for this sash ; it isn't going to be heavy enough. I want it to weal over my white dress, you know, and it onght to be rich for that. Susie rrahame thinks she has the very grandest things made to look as well as hers.' And Miss Wheeler sang :-

> Lot mo wear the white robes here.
> Even on earth, my Father dear, Holding fnst Thy hand, and so
Througn the world unspotted go

Cornie shivered a little. "INow she
does harp on that hymn, she said nervously; 'I wish she wouldn't I'm tired of vously
it.:
Ca

- Can't you let the poor thing sing ? her mother said. 'It's all the comfortshe has.' - She might sing sumething besides that one hymn 1 Cornie said. But she didn't, she seemed to delight in that; and she sang it over and over, especially those two lines:-

## 'Let mo wear the white robes here Evon on carth, ny Father dear.'

At last Cornie went and stood in the door again. 'Do you like that hymn better than any other in the world, she asked, 'that you sing it so much?'
Miss Wheeler locked up brightly. She Ind an old, rather faded face, but a wonderfully pleasant mouth and smiling eyes.
'Oh!' she said ; 'I didn't realize that I was singing loud enough to be heard. Yes, I do like that hymn wonderfully well:. sing it a great deal. It is natural that I should, you know, as it is all about dress, and I have so much to do with dresses.'
Coruie laughed a little. 'Not much to do with that kind of dress, I should say. The sort that you have to sew on is mostly the "worthless rigs," I should think. You see you have sung it so much that have caught some of the words,
"It was this white dress of yours that made me think of it to-day,' the little scamstress suid. 'It is so pretty, and I was thinking how much I liked white, and then, maturilly, that made me think of my own white dress, and, I begin singing about it before I thought.
'It is not much like mine,' Cornic said, with a little sigh, "Mine is all spotted up with the world even before it is made. I wish the world wasn't su full of dress, Miss Wheeler. Sometimes I am tired of it, and I should think you would hate it.

I like dress ever so much,' Miss Wheeler said, softly. "I am never tired of thinking about it. "Clean linen, pure and white." I alvays did like white linen."
Cornie stoud looking at her in silent wonder for a fow minutes, then sje went wonder for a fow minutes, then she the dress-bestrewn rooms, away, out of tho dress-bestrewn rooms,
downstairs to the parlor, and turning over downstairs to the parlor, and turning over
the leaves of tho hymn-book on the piano the lenves of tho hymn-b
she-found tho words:-

## 'Henrenly Father, I would wear

and read them carefully through. Upstairs in the sewing-room Miss Whecler stopped her singing and sewed away steadily, with a little shidow on her face. 'That's just like me,' she murmured at last. 'I am always singing, but I never seem rendy to speak a word for Jesus. Why couldn't I have asked her how she was getting on with her other white dress that the hym tells about? The poor lanb may need a word of comfort that even I could speak.'
'Cornie Baker,' some of the girls said to her, months afterward, 'how came you to
take such o suddon and decided stand; be tako such n suddon and decided stand; be so different, you. know, from what you this long, time, but not such a one as you are now.
Cornie was still for a minute, then she looked up with eager, suiling eyes: 'I found my help in the sewing room among my new dresses,' she said brichtly.

What a queer place to find help in! one of them said.
Cornie then told them the story of the little seamstress. and her hymn about dress, that she sang over and over, speaking her name with a terider voice and a teir in her eye. But the little seminstress knew nothing about it. -The Pavsy.

## A DREADFUL POSSIBILITY.

## bY jessie b. sherman.

Molly stood beside the shore, When the sun was sotling, Snw him drop into the seaFeared he'd get a wotting.
'Nursey, denr!' she cried, distressed, 'Can't wo help him out? Some big fish will come along And swallow him, no doubt
Then to-morrow morning How ever shall we see ? We'd have to dress by candle light

ST. VALENTINES DAY.
The spring is for lovinge Oh, gladn of it yett?
Oh, glad hearts, be moring.
She does not forget She does not forget 1
She whispers a secret
For snowdrops to hear
For snowdrops to hear,
But they cannot keep itBut they cannot keep it
Do you hold it, dearl
The spring has her heralde Preparing her way:
The gorse and the daisies And soft are the whispers And soft are the whr,
Of love in the air, Jiko fonces st air, Like a a smile in a prayer.

## The gardens of mosses,

The catkins and bossce The chocolate woods, And the birds' merry moodsYen, all things declare it (Oh, hasten to share it!): The springtide is neat, And the love-time is here
Tho winter is over ! Soon the sun and the rain The landscape will cover With blossoms again, Tho old earth is ready For laughter and song. Oh, young hearts, keep steady Though the waiting be long.
For lifo is too dreary, Iflove be not there. And all hearts aro weary, Aut all worlds aro baro But grey skies are lighted And troth that is plighted No sunshine can miss,

## The spring is for loving.

Oh, young hearts, be moving; Joy comes with bright weather, Go, mect it together; Love only can hind it And tho spriugtido is nea And tho love-time is hear,

Marianne Faringeham.

## A FINANOIAL EXPERIMENT.

by mrs. F. m. Howari.
'Some crackers and cheese, if you please,' anid the agent, as she came up to the little fly-specked counter of a small store in the suburbs of the town which she was can-vassing-a river town in the West, having its full quota of foreign inhabitants.
'How many pounds, nem?
'How many pounds, nem. Only a little of ench for my lunch.'
'Vell den, de leetle gal, she vaits on you while I goos to mine dinner.' The broad smile faded into disappointment on the ruddy German face as its owner lumbered away toward the door which led to the upper regions. Customers were. not too
plenty in that quiet vicinity. A small plenty in that quiet vicinity. A small girl, perhaps nine or ten years old, took his
place behind the counter. She was a weazened, ferret-faced little thing, with sharp eyes which seemed to picce and turn into your thought like a cork-screw. There was calculation and shrewdness in every was calculation nose and lips, and a singularly unchildlike expression upon her fice -the face of a little, old, miserly woman, set upon $n$ child's shoulders. There was nothing young about her save'a pink manfore, several inches too short, and the braided tnil of flaxen hair, tied with a skimpy blue ribbon, which hung down her back.
'How much is the cheese?' asked the agent as the sharp girl stood by the cheese case, knife in hand. She was an elderly, motherly person, footsore and weary with travel, yet she was watching this small
developinent of character with much indevelop
terest.
'Sixteen cents a pound, maiam, half a nound will be eight cents.'
'But couldn't you put me up a lunch -a little of cheese, pickles, cruckers and cookies,' said the ngent. 'I have no room in my bag for leavings, and I could never
finish a half pound of cheese at one meal, finish a half
'Oh, no,' replied the child. 'We never cut less'n five cents worth o' cheese, and I don't sell nothin' unless I can weigh it and kiow just what it's worth.'
The agent could not heip smiling as the
$\mid$ small financier carefully weighed the trifling bits of food, making sure ench time that the balance of weight was not a crumb too much in favor of the customer, and carefully carrying the half cent to her own credit with a skill which a Shylock might Yy.

You can set here and eat it if you want to,' she added magnanimously, after she had rung the quarter on the counter and given back the change, inaking sure that the
it.
'I suppose you have a good many customers here, remarked the agent, by way of making talk as she sat on a pickle keg, not the most restful seat for a weary body, but the best which the small saleswoman had seen fit to offer her.
'Yes, we have a good many.'
'And you have a nice, quiet location and 110 saloons to trouble you.
'I wish there was,' said the child eagerly. 'I wish there was one right over there,' pointing with her elfsh finger to a vacant lot across the street. 'A saloon would make business livelier, you know.'
'No, I don't know,' replied the agent earnestly. 'The people who have money to buy food of you now, would go there to buy food of you no
'oh, no, ma'am. It's just the other way. Lots of folks would go there to buy beer, and then come over and tiade with us.'

- But even if it were so, would you be willing to have the wicked liquor going into people's homes and making drunkards? Would you like to be a drunkard's child ?'
'No;' the speculative light died out a trifle from the little, old face, 'but then my pa knows when to stop-every man ought to know.
- When men get where they feel the necessity for stopping, they are oftentimes where they cannot,' returned the agent earnestly. It was a shock to her honest. motherly heart to hear such uncanny wisdom from the lips of a child.
'Oh, pshaw!' the flaxen hend tossed disdainfully, 'men can stop drinking when they want to, my pa says so.'
The customer turned the subject. 'Can you give me a drink of water '"'
'Yes'm ;' then, with an adroit cye to further business, 'We've got some lemonade under the counter.
'But I prefer water:'.
The child's face fell. They had not yet set a price on that commodity, and she watched with a half grudging air while the agent drank some very warm, insipid water from a battered tin cup with a hole in the side.
'Thank you, my little girl,' she said, as she returned the cup and brushed the crumbs from her neat walking suit. 'Here is a little book for you to read when I am
gone,' and she placed it temperance tract in gone, and she placed it tem
the small, grasping haud.
Hans, the father, came down the stairsn few monents later picking his teeth with a satistied smile. 'Vell, Kitrine, did you vait on te lady some more?'
'Tes, pa. She didn't want nothin' but ittle things, but I got tho half cent every
'Hiaw-haw-haw,' roared the proud father delightedly. 'Dot. vas my own sharp leetle gal. You will make a goot merchant sometime alretty.'
'And she says it wouldn't be gooa for us to hrve a saloon near by us, and she gave 'She we book.
She vas one of dose temperance cranks, Katrine. I'll pet you put some fleas in her ears some more, hey!
'I told her what you said, pa. Did ma keep my dinner warm?'
'Ynw, Katrine. You runs right along and eats it now.'
In course of time the vigilant eyes of a saloon-keeper espied the quiet spot where his business was not represented- $a$ community of simple working people who hnd and even water as a beverage, in place of and even water as a beverage, in place of
salubrious beer, and naturally his philanthropic heart ached for them, and he straightway set about relieving their condition.
Katrine and her father watched with lively interest the cheap board structure going up over the winy 'It makes peesbing his hands joyfully.
-And sone day you ll buy me a piano,

Yaw, Katrine, just so soon as peesness comes lifely you shall have him, for you pees.
There was a grand display when the saloon was formally opened for businessa free lunch and free beer to all who came. The saloon-keeper also had a daughter, a bold, saucy girl of sixteen, who waited upon customers in a costume as loud as her upon
voice.
Katr
Katrine and her father went over to welcome the new-comers.
'Dot vas goot-a goot-lookin' girl behint der counter helps peesness,' said Hans with $a$ wink-at the saloon-keeper.
'Mine leetle gal here is petter as tivo clerks; she's a sharp leetle voman, Katrine pees.'
Is dot so. You see to it that she gets not ahead of you, Gretchen,' said the
saloon-keeper, smiling broadly. 'We'll try and keep business brisk between us, neighbor.'
New brooms sweep clean. The saloon started upona cash basis. 'I wants no man to drink my beer that's too poor to pay for it. I don't take no bread from wives and lettle childrens, as tem temperance cranks say, heannounced pompously, and soit came to pass that nickels and dimes dropped bill might be in other quarters. - It was remarkible how many men's stomachs needed toning up in that vicinity ; the very smell of the stuff from the outside seemed to create an aching void which nothing but beer could satisfy, and business was certainly lievly on that side of the street.
It has never bcen necessary for the police to patrol that quiet locality before, but well moistened with beer becimo , twen well moistened with beer, becume a fulness
which could only be relieved by having a fight with somebody, and the patrol wig. gon, tho star and billy became a familiar sight, and things generally grew livelier every day.
There were more washings being done by women whose husbands had furmerly supported their families without the aid of the mother's earnings, and girls were going out to work who had heretofore been able to stily in their own homes ind go to
Tho dendly suckers of the octopus were -enching out in every direction, mo mothers began to dread seeing their young sons
come home with the flush of intoxicants come home with the flush of intoxicants
upon their faces, and the smell of tobacco upon their faces, and the smell of tobaceo lad been soher, indu trious citizens began to tremble with fear of the salloom intluence.
Tho industry of patching and darning also became brisker than ever before, as nothers strove to keep. their loved ones decently whole while the suloon
Buached upon the family income.
Business was certainy
Business was certainly brisk in more ways than one ; the influence of the increased activity was being felt at the little
store across the wiry, though not in just the direction tho proprietor had cilculited. As the saloon till filled, his credit book filled also, and families which had done $n$ safe cash business with him before the salonn came, were forced to beg for credit

## o keep from starving.

Men who had ordered formerly a sack of four and a dollar's worth of sugar, buaght little meal and a pitcher of molasses, it they were obliged to pity carsh, and sculded who are ruining the country and grinding the face of the poor.'
The rubicund face of Hans grew longer from day to day, and he puzzled over
financial questions and studied his long aredit accounts disconsolately.
'I must get me some money's some more, etty, 'he suid one day, as he sury his neighbor's wife and daughter stepping into anew carriage for a drive. 'It must pe I makes carriage for h drive. t must pe makes some saloon himself, or else keep just as far away from it as he can when he makes moneys.
Even sharp-oyed Tatrine began to mistrust that there was an error in the calculation somewhere, and to look wistfully at the prosperous family over the way.
'I thought, pa, that we was acgoin' to have lots more business when we got a saloon here, she snid one day, as she
watched the unloading of a piano, which
had been bought for the bold faced daughter of the bar.
I tought so, too, mine Katrine,' replied her father, despondently, 'but I tinks we makes some mistakes mit dót salon. Dot agent vomans, she vas pritty near right after all. We seems to be supportin' dose communityall around dere, while dot salown akes all dere meney. Dey buys new pianos 'an'. carriages, while we blays der nouth organ and goes afoot.
Hans was not alone in his experience, and if any other financier entertains the same idea of commercial prospeiity he would better sitisfy himselr by doing business for a while in a locality where beer from the cash saloon is a necessity, and food and clothing, the luxuries of life, to be paid for when convenient.-Union Signal.

## CIGARS AND A HOME.

It is true that a man who is foolish enough tu become a suinker is usually weak, enough to pay more regard to his comrades neers and his own pleasures than to the wisdom and experience or all tho world. Nevertheless, all young men should know that such a shrewd ind successful man as Chauncey M. Deper declare: that his success in life is dui in grear measure to his firnness in breaking off the habit of moking. He used to be an arden devoteo of the weed, but when he found that he must choose between tobacco and brain, he bade an eternal good-bye to the former. Another successful New Yorker who gives similar testimony is Mr. Luther Prescott Hubbard: This successful man of Wall street chewed and smoked when a mere lad. The advice of a dear racnd constrained him to break off the habit. Just after he had passed his eighty-fifth year Mr. Fubbard printed and circulated a little tract, copies of which should be given to every young man in the land. Its title is, 'How a Simoker Got a Home.' In it Mr. Hubbard tells how ho used to moke only six cigars a day, fewer han mnny smokers indulge in. These cost him sixand a tcurth. cents each, or $\$ 136.50$ a year. Atter breaking of the habit Mr. Hubbard laid loy that amount, and at seven percent interestit amounted, during his sixty-one, ears of alstinence, to the this sum Mr Hubbrd educated From this sum Mr. Hubbard educated hr: chil-
dren, and gave liberally to benevolent dren, and gave liberally to benevolent
objects. In the early years of his saving objects. In the early years of his saving
from this source, moreover, he accumulated enough money to buy him a comfortable home.-Golder Inule.

## ECONOMIZE THE HOURS.

It is wonderful to see how many hours prompt people contrive to make of $a$ day ; it is as if they picked up the moments the dinvalers lost. And if ever you find yourself where you have so many things pressing upon you that you hardly know how to begin, let me tell you a secret : Take hold of the very ono that comes to hand, and you will find the rest will all fall into file, and follow after, like a company of well drilled soldiers; and though work may be hard to meet when it charges in a squad, it is easily vanquished if you can bring it into line. You may havo often seen the anecdote of tho man who was asked how he had accomplished so much in his life. 'My father tilught me,' was the reply,
when I had anything to do to go nud do
it.' There is the secret-tho magic word now 1

ONE TO FIVE MILLLION,
When the tutal statistios of missions are submitted to hearers, one gets the notion that the laborers are many rather than few. But let the number be placed side by side with the populations to whom they are China has one to 733,000 of population; Siam, one to 600,000 ; Corea, one to $500,-$ 000 ; India, one to 350,000 ; Africa, one to 300,000 . In Central sifrica and the Soudan the proportion is one to each 5,000 ,

## NORTHERNMESSENGER

## MAIDIE AND NED.

## BY Birs. GEORGE A. PAULL

-We then that are strong ought to bea the infirmities of the wenk, and not to please ourselves,' Maidie repeated fuentl at family worship
In had been a custom in the family ever since Maidie had been old enough to memorize the words, for her to learn the Golden Text for the coming Sunday upon the previous Sunday afternoon, in that delightful hour that she always spent with her mother, and then to repeat it at fanily worship every morning, thus not only impressing it more firmly upon her memory, but helping to keep its teachings before her all the week.
Sometimes the texts seemed to fit into her overyday girlish life, so that she could not forget them nor sot them aside, and this bright October morning, as the words fell from her lips, she wondered whether that very day might not bring her an op portunity to give up her own pleasure for the sake of another, and thus weny
Slie would be very ready to do it, she fancied, as she started off to school, for fancied, as she started of to school, for
Maidie was kind hearted, and it was notas Maidie was kind hearted, and it was notins
much of a self-denial to her as it was to many another of her girlish friends to do a kind deed when the opportunity came.
On the contrary she really enjoyed an opportunity to help others, not only for the salke of the gratitude expressed, but for the sake of knowing that sho had lightened another's burden.

To-day, however, her opportunity came in a way that she would not have chosen if she could have foreseen it. Just when school had been dismissed, and the girls were flocking out into the sunshine, old black Nancy came hobbling past, carrying with evident pain a basket of laundried clothes which she was taking home. She
stood back and let the girls pass her, leaning against the fence and breathing heavily with her exertions.
Muidie had -lingered by the teacher's desk, waiting for an explanation of a problem in her algebra that had puzzled her, so when at last she thrust her book into her school bag and started out, she found that she should have to hurry to overtake the other girls, or else she must walk home alone, and Maidie was too socinble in her mature to like to go home nlone when she could have so much company.

She had gone but a few steps when she overtook old Nancy, who had begun her journey again, dragging the brsket as if each moment it was increasing in weight. Nancy had often worked for Maidie's mother, so the young girl felt very well acquainted with the old woman and always had a kindly greeting for her.

Why, Nancy, what makes you so lame to-day?' she asked. 'You look as if you couldn't carry that basket another step.'
'It's the misery in my back again, groaned old Nancy. 'It seems as if I couldn't hardly step, let alone take these clothes home ; but I promised to get then and she's dreadful particulin, you know. - Maidie hesitated. Here surely was a royal chance for service, but how could she bring herself to help old Nancy with her basket along the main street of the village. Pride whispered to her that people would laugh, or else would say that she was doing
it for effect. It was hard worl to say brighty.

T'Il help you with it, Nancy. It isn't heary for me, for my back is good and strong, and I will go to the gate with you, and see you safely there.'
thing for sure Mis tet you do no such thing for sure, Miss Maidie,' exclaimedold
Nnncy, whose face had brightened con Nnncy, whose face. had brightened con-
siderably nevertheless when the strong siderably nevertheless when thi
young liands lightened her load.
Dut mrotestations were of no avail, and so the oddly assorted pair started up the street, Maidie congratulating herself that the other girls were well in advance. Presently she heard the sound of wheels, and glancing behind her slie gromed inwardly. Ned Lawrence was driving up the streetin his new yellow buckbond, and in a moment he would pass them and recognize her. She was not exactly ashanied, but see her. Somehow all the girls cared a good deal about Ned's opinion ; and the fact that he was very fastidious in his tastes,
and thought that his dignified, statel mother was perfection in the way of woman hood, made all-his girl friends shinink from doing anything that m
Maidie's cheels grew rosy red as the wheels came nearer, and slie resolved not o:look around, but Ned drove up by the in his hand.
${ }^{\text {'Can't }}$ I be of some use?' he asked. 'Let me help with the basket. I cin do it over so much better than you can, Miss Maidie, because I have my buckboard here Ou see. Where are the clothes to go?
Old Nancy explained, and when Nod found that as long as the clothes arrived them, he made the old woman's heart glad by swinging the bashet into the back of the buckboard and securing it with a strap while he insisted upon Maidie's accompany to see that he did his errand properly.
More than one of the girls envied Maidie as she rode past them, and they were much puzzled to know what could be in the bas et that was evidently of such importance
'I feel honored indeed,' Mrs. Davis said as Ned asked to see her, and explained his eriand. 'I am glad, too, to seo that we have young people in our village who are
so willing to help any one in need. It reso willing to help any one in need. It re proves me, for I might have sent down for you have proved yourselves to be.
'Do you mind measking you something?' Ned asked as he drew up his horse before Maidie's home.
'No,' Maidie answered.
'How did you come to think of helping the poor old body? Most girls wouldn't have done it.
A pink flusid stolo into Maidie's cheeks and slie hesitated. Then she looked up bravely.
'Do you know what the Golden Text fo next Sunday is?' she asked in her turn.

## ' No, ' he answered

"That will explain it then. Look and se when you go home,' she answered.
It was with a thoughtful face that Ned urned over the leaves of his Bible and rend the text.
You know boys don't always put their resolves into words, nor talk ibout the things they care most about, but I am quite safe in telling you that the words found a place in Ned's heart from which they were never dislodged. It was a noble and grand thing to use his strength to help those who were weak. It was manliness in the true
sense of the word, and Ned meant to be a manly boy, and so it happened that just as a pebble thrown into the water makes widening circles whose outside limit we sometimes cannot see, so Maidio's example of helpfulness, and her brave effort to bear the infirmities of the weals were which Ned made of himself later on, when he recognized the beauty of the Example he was trying to follow in pleasing not he was trying to follow in
himself.-Christian at Work.

## A LESSON TROM A MONKEY.

## by edward garsweld

Everybody loved 'Aunt Jine,' as Mrs Town was called by many in tho village. Many of the children knew her by no othe loved them, for 'love begets love.' She had a beautiful home. Every Wednesday afternoon the children met in her sitting afternoon she was waiting for the children. She hacl selected the pieces they were to sing, and had laid the book and her glasses on the window-sill. Then she dozed of to sleep in her easy-chair, with her back to
the window. Dutsido, a street organ was playing 'Grandfather's Clock,' so you sce It was an old organ.. If it had been a new one it would have becn playing 'Annie Rooney,' which would have awnkened Aunt Jane, and she would have closed the window quickly. As it was, the old tune made her dream she was a girl again in her father's orchard, listening to arobin that was singing 'Grandfather's, Clock:
Then she a avakened with a start, gave one wild lonk at the window, and with a shrick bounded to the other side of the room. And no wonder, for there on the
shrivelled up little old man, with hair, all over his face, and little twinkling eyes
He had put on Aunt Jane's glasses, and was looking into the song-book, as if about to give out a hyrnn. The children rushed in, and they and Aunt Jane began to laugh, for they siw it was only a monkey belonging to the organ man. They were soon on friendly terms, and when a little boy gave it a piece of apple, the monkey ook off his cap and bowed, which made hich time the monkey was given a piece of money, the man at the organ would jerk the cord until the monkey brought it to ${ }^{\text {him. }}$ I

I wouldn't like to be a monkey, and have to take everything I gos to a man at the organ, and not keep anything for myself,' said a little buy
'We will take tho little fellow for, our but first let me tell you that the alderme have prohibited the organ-grinders of New York City. Now, you think this poor little animal has a hard life of it and needs sympathy : perhaps it does, but it is cared or and fed by the man who owns it, and has protection, food, and bed in return for wht it earns.
'But what would you say of a man or boy who would fisten a cord about himself and let another mian hold the other end, who would take from him all the money he could beg or earn whenever the cord was pulled, and getting nothing worth having in return; but when ho had given up everything, his money, clothing, furniture, happiness, - henlth, then to be kicked out into cold by the other n
'Oh, Aunt Jine, you don't mean real nen,' said a little girl. 'No man would be so silly as that.

Course not,' said a boy. 'Why even ittle boys couldn't be fooled like that.
' I'd cut the rope with my knife, and run like bixty,' said nnother.

Yes,' snid Aunt Jnne, 'I mean renl men ; some of the bright young men I have known have acted just this way. The cord is the appetite for stron'r drink At first it is only like a thread, and could bo ensily broken. When you spark:'of danger, young men are apt to laugh, and say they can break it whenever they please; but if they go when tho thread is pulled, it soon becomes like twine, then a rope, and at-last a chan which drags the ictim to the saloon whenever he has nickle. There are a hindred men and woinen begging for money to take to the
men at the other end of the lime in the saloon, where there is one monkey beggin pennies to take to the organ-grinder. And yet if you were to ask the aldermen to prohibit the saloons they would laugh at you, and call you a crank. Now, all this

> ms very scrange, aves it not I should think it did. said on

But why is it ? asked sathene.
I do not know,' replied Aunt Jane.
' I think I do,' said a big boy, whose father was a politician. 'Women, orgnn grinders and monkeys can't vote, and saloon-keepers con, and they can get lots
of other votes by jerking the same cord.' other votes by jerking the same cord.
'Well,' said Aunt Jane, 'let us see that none of us are caught. Remember the cider is thread, lager-beer and wine are the twine, whiskey the rope, and brandy rum, and all other drinks are tho lonks that form the chan. All you who are de termined to keep clear of even the thrend as long as you live, hold up your hands. And up went every hind.-Nat. Temp Society Leaflet.
