## Technical and Bibliographic Notes / Notes techniques et bibliographiques

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming are checked below.

- Coloured covers / Couverture de couleur
- Covers damaged / Couverture endommagée
- Covers restored and/or laminated / Couverture restaurée et/ou pelliculée
- Cover title missing / Le titre de couverture manque
- Coloured maps / Cartes géographiques en couleur
- Coloured ink (i.e. other than blue or black) / Encre de couleur (i.e. autre que bleue ou noire)
- Coloured plates and/or illustrations / Planches et/ou illustrations en couleur
- Bound with other material / Relié avec d'autres documents
- Only edition available / Seule édition disponible
- Tight binding may cause shadows or distortion along interior margin / La reliure serrée peut causer de l'ombre ou de la distorsion le long de la marge intérieure.
- Blank leaves added during restorations may appear within the text. Whenever possible, these have been omitted from filming / Il se peut que certaines pages blanches ajoutées lors d'une restauration apparaissent dans le texte, mais, lorsque cela était possible, ces pages n'ont pas été filmées.
- Additional comments / Commentaires supplémentaires:

L'institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

- Coloured pages / Pages de couleur
- Pages damaged / Pages endommagées
- Pages restored and/or laminated / Pages restaurées et/ou pelliculées
- Pages discoloured, stained or foxed / Pages décolorées, tachetées ou piquées
- Pages detached / Pages détachées
- Showthrough / Transparence
- Quality of print varies / Qualité inégale de l'impression
- Includes supplementary material / Comprend du matériel supplémentaire
- Pages wholly or partially obscured by errata slips, tissues, etc., have been refilmed to ensure the best possible image / Les pages totalement ou partiellement obscurcies par un feuillet d'errata, une pelure, etc., ont été filmées à nouveau de façon à obtenir la meilleure image possible.
- Opposing pages with varying colouration or discolourations are filmed twice to ensure the best possible image / Les pages s'opposant ayant des colorations variables ou des décolorations sont filmées deux fois afin d'obtenir la meilleure image possible.

This item is filmed at the reduction ratio checked below /  
Ce document est filmé au taux de réduction indiqué ci-dessous.

	10x		14x		18x		22x		26x		30x	
	12x		16x		20x		24x		28x		32x	

The copy filmed here has been reproduced thanks to the generosity of:

National Library of Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol  $\rightarrow$  (meaning "CONTINUED"), or the symbol  $\nabla$  (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Bibliothèque nationale du Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole  $\rightarrow$  signifie "A SUIVRE", le symbole  $\nabla$  signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

BULLETIN No. 143

DRUGS

CHLORAL HYDRATE, AMMONIUM BROMIDE, PURIFIED CREAM  
OF TARTAR

OTTAWA, December 3, 1907.

W. J. GERALD, Esq.,  
Deputy Minister of Inland Revenue.

SIR,—I beg to hand you a report dealing with 389 samples collected as above, and more particularly described as follows:—

	Samples.
Chloral hydrate .....	129
Ammonium bromide .....	129
Boracic acid (sold as ammonium bromide).....	1
Potassii tartras acidus. ....	92
Rochelle salt (sold as pot. tart. ac.).....	1
Cream of tartar.....	36
Bi. carbonate of soda (sold as cream of tartar).....	1
Total.....	389

The collections were made in July and August last, and particular instructions were issued to guide the inspectors in their work. Unfortunately these instructions were ignored by four of the inspectors, and, in consequence of this fact, thirty-seven samples of cream of tartar were purchased under that name, a name which is not recognized by the British Pharmacopœia. Cream of tartar is not a drug, although *purified cream of tartar* is an official synonym for potassii tartras acidus. These samples must, therefore, in justice to the vendors, be judged as commercial cream of tartar, and not in terms of the pharmacopœal definition for the purified article.

Descriptive notes precede the tables, and the only other point which deserves mention here is the occurrence of serious blunders in dispensing. When one is served with

boracic acid for bromide of ammonium, Rochelle salt for purified cream of tartar, and bicarbonate of soda for cream of tartar, it is apparent that grave consequences are liable to follow in the filling of medical prescriptions. It will be further noted that one of the samples of bromide of ammonium contains nearly 18 per cent. of ammonio-chloride of mercury.

I think that everything further of importance in regard to these articles will be found in the notes appended to the tables. I have considered it unnecessary to give details of collection in regard to samples of chloral hydrate, since all of these samples were officially pure.

I beg to recommend that this report be published as Bulletin 143.

I have the honour to be, Sir,

Your obedient servant,

A. MCGILL,  
*Chief Analyst.*

### CHLORAL HYDRATE.

In July and August a collection of ten samples of this drug in each Inspectoral district was ordered. One hundred and twenty nine (129) samples were collected.

These were examined by Mr. Lemoine, of this office, and were found in every instance, to come up the requirements of the British Pharmacopœia. As regards the Soda test, a remarkable homogeneity was found, the volume of normal soda corresponding to 4 grammes of the drug, varying between 29.5cc and 29.9cc. In no case was any trace of chloral alcoholate found; and eighty samples were quite free from chlorides, while the traces obtained in the remaining 49 samples were so small as to be negligible.

The examination shows that this important drug, as supplied in Canada, is of a uniformly high grade.

### AMMONIUM BROMIDE—(SEE TABLE I).

One hundred and thirty samples were collected in August of this year; being ten in each inspectoral district.

Of these samples, two, namely Nos. 33424 and 29569 are not ammonium bromide. The former contains about 18 per cent of ammoniated chloride of mercury. No. 29569 is boracic acid.

The remaining samples (128 in number) are true to name; but of very different degrees of purity.

The distinctive pharmacopœal test for the purity of this drug is, titration with volumetric solution of nitrate of silver. The reaction is as follows:—

Hence *one gramme* of chemically pure ammonium bromide should require 102.2 cubic centimetres of the deci-normal solution of silver nitrate for complete decomposition. The closely allied chloride and iodide of ammonium (or other base) react similarly with silver solution. Owing to the lower molecular weight of the chloride, it would require  $\frac{102.2 \times 98}{170} = 186.9$  cubic centimetres of deci-normal solution to react with 1 gramme; while, the greater molecular weight of iodide would cause only  $\frac{102.2 \times 170}{234} = 69.0$  cubic centimetres to be used, in the case of the ammonium salts.

It is unlikely that the iodide should be present, as an impurity, on account of its higher value, and for other reasons. As a matter of fact, none of the samples now reported shows a lower titre than 102, except No. 33424, which contains ammonio-chloride of mercury, insoluble in water, and consequently not entering into reaction with the silver test.

The pharmacopoeia provides for traces of chloride as an impurity, and permits samples requiring as high as 103.6 cubic centimetres of the test solution to pass as satisfactory.

Assuming excess of test solution (above 102.2 cc) as due to admixture of ammonium chloride, the percentage of this substance present may be calculated from the following:—

$$\begin{aligned} \text{If } x &= \text{percentage ammonium chloride} \\ 100 - x &= \text{ " " " bromide} \\ \text{Let } a &= \text{cc. volumetric solution used per gramme sample} \\ \frac{x}{.535} + \frac{100-x}{.98} &= a \end{aligned}$$

$$\text{Whence, } x = 1.1782a - 120.23$$

Taking  $a = 103.6$ , it thus appears that the British Pharmacopoeia permits as much as 1.83 per cent of ammonium chloride.

It will be seen, by consulting the appended table, that while a large number of the samples examined come very near to the B. P. Standard, not one sample quite reaches it, and a considerable number depart from it by notable amounts.

Chloride of ammonium is not a dangerous impurity, except in so far as it materially reduces the medicinal efficiency of the drug. The bromide is recognized as essentially a nerve sedative and depressant; while the chloride is a nerve stimulant. It is therefore evident that these substances tend to counteract each other. Moreover, the effective dose of chloride is smaller than that of the bromide; hence, the presence of relatively small percentages of the chloride is highly objectionable.

Since this is the first occasion upon which this drug has been subjected to inspection, it may be well to summarize the results of its examination, as below:—

PERCENTAGE OF PURITY.

District.	97 p.c.	96 p.c.	95 p.c.	94 p.c.	93 p.c.	92 p.c.	91 p.c.	90 p.c.	Total.
									Samples
Nova Scotia.....	5	2	1			1			9
Prince Edward Island.....	3	7							10
New Brunswick.....	2	1	1	1		2	1	1	9
Quebec.....	1	3	1	2		2	1		10
St. Hyacinthe.....	4	3	2				1		10
Montreal.....	3	6	1						10
Ottawa.....	3	7							10
Kingston.....	2	7				1			10
Toronto.....	2	5	1			1		1	10
London.....	2	6	1			1			10
Manitoba.....	3	3				2	2		10
Calgary.....	7	2	1						10
British Columbia.....	-	3	1			3	2	1	10
	37	55	10	3	0	13	7	3	128

This tabulation omits the two cases referred to above, where decided mistakes in dispensing occurred; in one case boracic acid being furnished; and in the other a bromide of ammonium highly contaminated with ammonio-chloride of mercury.

Expressed as percentages, we have the following:—

## BROMIDE OF AMMONIUM.

	Per cent.
Of 97 to 98 per cent purity .....	28.0
96 " 97 " " .....	43.0
95 " 96 " " " .....	7.8
94 " 95 " " " .....	2.3
93 " 94 " " " .....	10.1
92 " 93 " " " .....	5.6
91 " 92 " " " .....	2.3
90 " 91 " " " .....	2.3
	100.0 per cent.

of the collection.

Even if we allow a margin of 1 to 2 per cent. to cover possible errors in sampling, weighing, measuring and titration (a margin which is fully large even when work is not done in duplicate, and which entirely disappears under the conditions fulfilled in this laboratory), we find more than 20 per cent. of these samples below such standard, i. e., below 95 per cent. of purity.

This being a first inspection of the drug, it might be advisable to permit all samples reaching a purity of 95 per cent. to pass unquestioned. This suggestion is offered without prejudice to future inspection.

## PURIFIED CREAM OF TARTAR.

*Potassii Tartras Acidus*: Acid potassium tartrate; Bitartrate of potassium, or purified cream of tartar, is to be carefully distinguished from commercial cream of tartar. For this last substance no legalized standard of purity exists, while for the first-named substance the British Pharmacopoeia furnishes a perfectly definite standard "Each gramme of the dry salt should require for neutralization at least 5.2 cubic centimetres of the volumetric solution of sodium hydroxide. It should yield no characteristic reaction with the tests for lead, copper or iron, and only the slightest reaction with tests for calcium, magnesium, sodium, chlorides or sulphates. The total amount of impurities should not exceed  $2\frac{1}{2}$  per cent. of the dried salt."

*Commercial cream of tartar*, for which no standard of purity has been, thus far made legal, is very largely used as a component of baking powders, of effervescent drinks, etc. It is found on the market in varying degrees of purity, and has been made the subject of inspection in 1887, 1889, 1896, 1900 and 1905. The following synopsis may be of interest:—

## COMMERCIAL CREAM OF TARTAR.

Date of collection.	Number of samples examined.	Found genuine.	Same expressed as percentage.
1887 .....	36	23	61
1889 .....	86	52	60
1896 .....	99	65	66
1900 .....	65	57	88
1905 .....	180	132	73

It is likewise of interest to note the *degrees of purity* reached by the Cream of Tartar of commerce. For the inspection of 1887, 73 per cent of the genuine cream of tartars examined were below 90 per cent purity; for 1889, 60 per cent; for 1896, 30 per cent; for 1900, 63 per cent. As regards the inspection of 1905, 12.8 per cent of the genuine samples reached a purity of 97 per cent, i.e. were practically up to the pharmacopoeal standard of purity; while 38.3 per cent were above 90 per cent of purity.

It must be remembered that these statements refer to Commercial Cream of Tartar. The inspection now reported has regard to the pharmacopoeal *Bitartrate of Potassium*, for which a standard of 97½ per cent purity is required. Our inspectors were instructed to ask for the article by one or other of the names recognized by the British Pharmacopoeia. These names are (1) *Potassii Tartras Acidus*; (2) *Bi-tartrate of Potassium*; (3) *Acid potassium tartrate*; (4) *Purified Cream of Tartar*.

These instructions were disregarded by the inspectors for the Districts of London, St. Hyacinthe, Manitoba and Calgary, whose invoices show that *Cream of Tartar* has been asked for. This failure to observe my instructions has the important consequence that thirty seven (37) samples, of the present collection, must be judged as *Cream of Tartar* and not as *Purified Cream of Tartar*.

Of the 37 samples referred to, No. 28837 contains a small amount of bi-carbonate of soda. It is probable that this is unintentionally present (perhaps from the container having formerly contained bi-carbonate) and I have marked it as "doubtful." No. 25621 consists entirely of Bi-carbonate of soda, and is evidently an error in dispensing. No. 27878 consists of acid phosphate of lime and starch; and No. 30428, contains burnt alum and starch. These two samples are therefore adulterated, under the Act. The remaining 33 samples must be passed as legal cream of tartar although their values, to the consumer, vary greatly. This is shown in the following table:—

95 to 100 per cent purity .....	Samples. 11
90 to 95 " " .....	14
85 to 90 " " .....	7
Below 85 " " .....	1
	<hr/> 33
Doubtful .....	1
Adulterated .....	2
Error in dispensing .....	1
	<hr/> Total..... 37

The samples just referred to are reported in detail in the accompanying Table No. III. Table No. II. contains details of the examination of ninety three (93) samples purchased as *Potassii Tartras Acidus*, or *Purified Cream of Tartar*.

Of these samples Nos. 33415, 26309 and 33314 consist of burnt alum and starch, and are clearly adulterated. In the case of No. 26309 the word "Commercial" is pencilled on the label. Even as a commercial *Cream of Tartar* it would be pronounced adulterated. No. 32554 is a sample of Rochelle salt, and is clearly an error in dispensing.

Of the remaining 89 samples, only 21 samples fulfil the requirements of the British Pharmacopoeia. The 68 samples which, although genuine, in the sense of being essentially *Bi-tartrate of potassium*, are below the standard of purity fixed by the pharmacopoeia, differ so widely among themselves, that it seems scarcely just to place them in a single category. The variations referred to are clearly brought out, thus:—

From 97.5 to 95 per cent purity .....	Samples. 4
" 95 to 92.5 " .....	6
" 92.5 to 90 " .....	24
Below 90 per cent .....	34
	<hr/> Total..... 68

The results of this examination of *Purified Cream of Tartar*, may therefore be summarized as follows:—

	Samples.
Genuine .....	21
Doubtful (Error in dispensing).....	1
Adulterated (Burnt alum, &c.) .....	3
" (Commercial Cream of Tartar, below 90 p.c. purity).....	34
" (Commercial Cream of Tartar, below B.P. standard, but from 90 to 95 p.c. purity).....	30
" (Commercial Cream of Tartar, below B.P. standard, but above 95 p.c. of purity) .....	4
Total .....	<u>93</u>

While I have no power to change this classification or to characterize as other than adulterated, any sample falling below 97.5 per cent purity, I would recommend a lenient treatment of such offenders, whose samples show a reasonably close approximation to the standard fixed by the British Pharmacopoeia; particularly, as the failure to meet the high degree of purity required by the Pharmacopoeia, involves no serious reduction of value in the drug, so far as the cases in question are concerned.

A. MCGILL.
