The copy filmed here has been reproduced thanks
to the generosity of:

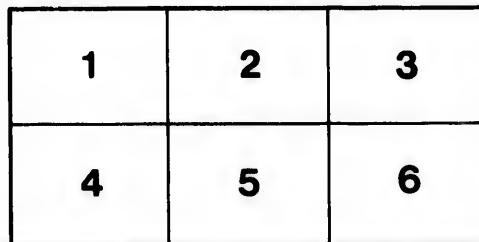

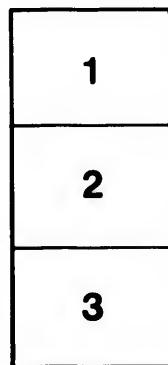

Library of the Public
Archives of Canada

The images appearing here are the best quality
possible considering the condition and legibility
of the original copy and in keeping with the
filming contract specifications.

Original copies in printed paper covers are filmed
beginning with the front cover and ending on
the last page with a printed or illustrated impres-
sion, or the back cover when appropriate. All
other original copies are filmed beginning on the
first page with a printed or illustrated impres-
sion, and ending on the last page with a printed
or illustrated impression.

The last recorded frame on each microfiche
shall contain the symbol → (meaning "CON-
TINUED"), or the symbol ▽ (meaning "END"),
whichever applies.

Maps, plates, charts, etc., may be filmed at
different reduction ratios. Those too large to be
entirely included in one exposure are filmed
beginning in the upper left hand corner, left to
right and top to bottom, as many frames as
required. The following diagrams illustrate the
method:

L'exemplaire filmé fut reproduit grâce à la
générosité de:

La bibliothèque des Archives
publiques du Canada

Les images suivantes ont été reproduites avec le
plus grand soin, compte tenu de la condition et
de la netteté de l'exemplaire filmé, et en
conformité avec les conditions du contrat de
filmage.

Les exemplaires originaux dont la couverture en
papier est imprimée sont filmés en commençant
par le premier plat et en terminant soit par la
dernière page qui comporte une empreinte
d'impression ou d'illustration, soit par le second
plat, selon le cas. Tous les autres exemplaires
originaux sont filmés en commençant par la
première page qui comporte une empreinte
d'impression ou d'illustration et en terminant par
la dernière page qui comporte une telle
empreinte.

Un des symboles suivants apparaîtra sur la
dernière image de chaque microfiche, selon le
cas: le symbole → signifie "A SUIVRE", le
symbole ▽ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être
filmés à des taux de réduction différents.
Lorsque le document est trop grand pour être
reproduit en un seul cliché, il est filmé à partir
de l'angle supérieur gauche, de gauche à droite,
et de haut en bas, en prenant le nombre
d'images nécessaire. Les diagrammes suivants
illustrent la méthode.

REGISTER,

FOR

THE YEAR OF OUR LORD

1849;

PREPARED UNDER THE SUPERINTENDENCE OF THE

FREDERICTON ATHENÆUM.

OFFICERS:

Venerable Archdeacon COSTER, *President*;

Hon. Judge STREET, *Vice-President*; | Hon. THOS. BAILLIE, *Vice-President*;

J. B. TOLDERVY, M. D. " Professor JACK, "

J. ROBB, M. D., *Secretary and Treasurer*.

SAINT JOHN:

PRINTED AND PUBLISHED BY HENRY CHUBB & CO.
PRINCE WILLIAM-STREET.

1848.

PREFACE.

The following Work has been undertaken by the Members of the Fredericton Atheneum, with a view to improve the character of the Almanacs of this Province.

Within the last few years, the Almanacs of most other countries have assumed a form more in accordance with the advanced state of knowledge. Astrology has been erased from the list of Sciences, and nobody now presumes to predict the state of the weather *for the ensuing year*, without running the risk of being laughed at by every person of ordinary intelligence. The elements of Weather are too numerous and too delicately balanced, and have been too recently submitted to exact observation and measurement, to afford the data necessary for foretelling any future series of such phenomena. In fact, we have not yet attained to a philosophical theory of Weather, and must wait patiently until Meteorology has acquired a Newton to reduce her complicated phenomena to law, and an Adams or Leverrier to unfold the remote consequences of the discovery.

In a Colony like this, where, as yet, food for the mind is but scantily supplied, care ought to be taken that the quality of it is good, and that the poor settler, who often has "no other library than his Bible and his Almanac," should find in the latter something more nourishing than the chaff of Astrology, Alchemy and Divination.

The Works chiefly consulted as models, were the British Almanac and Companion, and the American Almanac; and it is hoped the present publication will be found what it professes to be—a cheap compendium of information, useful for the time and the place. In order to secure cheapness most of the matter has been condensed and put into a tabular form; but, notwithstanding every effort, a good deal of what has been prepared has been necessarily omitted;—in the department of Agriculture, especially, the information conveyed falls far short of what was intended;—such defects, however, will be remedied in future years. The Astronomical calculations are entirely new, and carefully adapted to this Province, and it is believed they will be found more correct than is generally expected in works of this nature. In their preparation several members of the Society have laboured with much zeal, and some subsidiary tables for facilitating the computations, have been constructed by the scholars of the Collegiate School.

The object of the compilers has been a Public one:—they seek for neither profit nor remuneration, but only for the general dissemination of the materials they have collected.

The difficulties of a first attempt have not been inconsiderable, but now that the forms have been organized, and public attention drawn to the subject, it is presumed that the next volume will be more perfect and more generally appreciated throughout the Province.

The greatest good-will and sympathy have been shown in every quarter where co-operation was desired:—a continuance of the same is earnestly requested, and communications (more particularly upon the Tides, Climate, Agriculture and History of the Province,) from parties favorable to the undertaking will be thankfully received by the Publishers on behalf of the Society which has assumed the direction of the work.

ECLIPSES OF THE SUN AND MOON.

In the year 1849 there will be two Eclipses of the Sun and two of the Moon.

I. An Annular Eclipse of the Sun, February 22, 1849, invisible in New-Brunswick ; being confined to Asia, the extreme North-West of America, and the North Pacific Ocean.

II. A partial Eclipse of the Moon, March 8, 1849, visible in New-Brunswick.

	H. M.

Last contact with the Shadow,	- 9 59.0	at
" " " Penumbra,	11 11.7	Fredericton.

Magnitude of the Eclipse (Moon's diameter = 1) 0.738 on the Southern Limb. The first contact with the Shadow occurs at 144° from the Northernmost point of the Moon's limb towards the East. The last contact at 109°, towards the West. The Moon rises on the 8th at 5 hours 44 minutes.

III. A total Eclipse of the Sun, August 17th, 1849, invisible in New-Brunswick ; being confined to the Indian Ocean, between Australia and the Cape of Good Hope.

IV. A partial Eclipse of the Moon, September 2d, 1849, invisible in New-Brunswick ; the Moon not rising till after the Eclipse is over.

MERIDIAN PASSAGE OF THE POLE STAR ON THE FIRST DAY OF EACH MONTH.

The Pole Star does not occupy the true place of the Pole of the Heavens, but revolves round it at a distance of about $1\frac{1}{2}$ degrees, and consequently comes to the meridian only twice in twenty-four hours. On such occasions, but on no others, its bearing is exactly north ; and the following table, which gives the times of day when they occur, may be found useful to Surveyors in obtaining the direction of the true meridian. As 3m. 55.91s. is the daily average variation, the times of the meridian passage of the Star for any other day in each month can be easily calculated from those given in the Table.

THE UNIVERSE.

Space, so far as its depths have been fathomed by man, is occupied with Nebulae, or distinct clusters of stars; of these clusters nearly 4,000 lie within the range of telescopic observation.

All the stars in our firmament, amounting to "about one hundred millions of suns," form one single nebula. It is a lens-shaped, flattened, and everywhere detached stratum, whose thickness is small in comparison to its length and breadth. In these directions where the greater number of stars are placed behind each other, the remote ones necessarily seem closely crowded together, and present a zone or belt of stars, which, from its appearance, is familiarly known as the "Milky Way." Our whole Solar system is but one star of this great nebula, wherein it is deeply though eccentrically situated.

The solar system consists of a central self-luminous orb, the Sun, accompanied by a train of primary non-luminous planets and their satellites or attendant moons, and comets. The Zodiacal Light and Aerolithes are also supposed to belong to it. Of the vast number of comets that have from time to time visited our system, only five or six have been ascertained to return to it periodically. The satellites are irregularly but wisely distributed among the planets, and their number, so far as is yet known, amounts to twenty. There are seventeen primary planets, ten of which have been discovered within the present century. The following is

A TABULAR VIEW OF THE SOLAR SYSTEM.

The diameter of the Sun is 883,000 miles, and his mass is 355,000 times that of the earth.

The time of his rotation on his axis is a little more than 25 sidereal days.

The mean distance of the Moon from the Earth is 237,578 miles. Her diameter is 2160 miles, and her mass is about 1-80 part of that of the Earth. The period of her sidereal revolution is 27 days, 7 hours, 42 minutes.

The period of

Though the Astronomical portion of this work is chiefly designed for popular use, every care has been taken to ensure the accuracy of the information it contains, in order that, in the absence of the Nautical Almanac, it may be of some service to the Astronomer and Navigator.

All the calculations have been adapted to "Mean Time," or that which is shown by a well-regulated clock. This differs from "Apparent Time," or that indicated by a sun-dial, by what is called the "Equation of Time." The column marked "Sun Souths" gives the Clock time when the Sun's centre is on the Meridian, or when the Dial points exactly to 12 o'clock. It also shows the Equation of Time — the difference from 12 hours in *excess* or *defect* being the time the Sun is *behind* or *before* the clock.

The times of the Rising and Setting of the Sun, Moon and Planets have been computed for Saint John in latitude $45^{\circ} 16' N.$; but for ordinary purposes they may be considered applicable to the whole Province.

A good deal of labour has been bestowed upon calculating the times of High Water at St. John, and it is hoped the result will be found to be pretty nearly correct. The theory of the Tides, however, is so complicated, and so dependent upon local circumstances, that a long series of accurate observations is needed to give greater precision to our predictions. It was intended to insert the Height of the Tide at St. John for every day of the year, but as the extreme difference between the highest and lowest is only four feet, it was thought unnecessary. The time of High Water at some of the places contained in the Table of Latitudes and Longitudes, &c. inserted at pages 32 and 33, may be deduced approximately for every day from the time of High Water at Saint John, by taking the difference between the *establishment of the port*, or time of High Water at full and change, at each of these places, and the *establishment of the port* at Saint John, viz. 11h. 44m. and considering this as a constant quantity, representing the difference of the tides between Saint John and the place, to be *added to*, or *subtracted* from, Saint John tides, according as the establishment of the port at the place is *later* or *earlier* than that at Saint John.— Thus the establishment of the port at St. Andrews being 10h. 50m. the tides there are always 54m. earlier than the corresponding St. John tides.

In addition to the day of the month, the day of the year is also given in the Calendar, as furnishing an expeditious method of determining the interval between any two given dates.

The Semidiameter, Horizontal Parallax, Right Ascension, and Declination of the Sun and Moon, which are given for *mean noon* at Fredericton, but which, unless when great accuracy is required, are sufficiently correct for any longitude between 65° and 67° , supply data for making many useful and interesting Nautical and Astronomical calculations.

It is hoped that the Provincial Chronology will be favorably received, as gleanings from a more extended series of Notes on Colonial History, which may hereafter appear arranged in chronological order, and in a distinct form. The present scheme will tend to familiarize the public with the dates of many events which are of local importance, and might with advantage be much more generally adopted in Almanacs.

Declination, Rising, Meridian Passage, and Setting of the principal Planets.

28 Sun.	28	
29 Mon.	29 Lord Bathurst orders all American prisoners to Louisburg <i>for safety</i> .	1814
30 Tues.	30	
31 Wed.	31 Lord Durham's Report.	1839

≈ The Zodiacal Sign of this month is AQUARIUS, which the Sun enters on the 19th, at 10 P. M. January was added to the ancient Alban Calendar by Numm, 713 B. C., and derives its name from Janus, a divinity represented by the Romans with two faces, because he was acquainted with past and future events. On the night of the 1st, the Earth is at her Perihelion, being then distant from the Sun 93,410,000 miles, or 3,185,000 miles nearer than at her Aphelion, on the morning of the 1st of July. On the 19th, Saturn's Rings make their appearance, having been invisible from the 12th of September last.

Declination, Rising, Meridian Passage, and Setting of the principal Planets.

23 Frid. 54		
24 Sat. 55	House of Assembly address Sir C. Metcalfe on subject of respon. gov.	1844
25 Sun. 56	E. de La Tour appointed Governor of Acadia by Louis XIV.	1651
26 Mon. 57		
27 Tues. 58	Lord Gosford leaves Canada. Sir J. Colborne, Administrator.	1838
28 Wed. 59	Major Gen. G. S. Smyth, Lieut. Gov.	1817

* The Zodiacal sign of this month is **PISCES**, which the sun enters on the 18th, at 1 P. M. Its name is derived from Februa, a feast held therein by the Romans in behalf of the manes of deceased persons. This month, together with January, were added to the year, which had previously but 10 months, by Numa, the second king of Rome, 713 B. C. On the morning of the 6th, Jupiter is in opposition with the Sun; and on that of the 7th, he is in conjunction with the Moon, in the constellation Leo. On the morning of the 8th, Mercury is at his greatest elongation from the Sun, 18° 10' East, and is therefore an Evening Star. On the evening of the 22d, Venus and Uranus are in conjunction in the constellation Pisces.

30 Frid.	89	Treaty of Utrecht : Acadia confirmed to G. B.	1713
31 Sat.	90	Carleton Co. set off from York.	1831

The Zodiacal Sign of this month is **ARIES**, which the Sun enters on the 20th, at 1 P. M., when Spring commences. Its name is derived from Mars, the God of War among the Romans. On the evening of the 1st, Venus is at her greatest elongation from the Sun, being 46° 22' East, at the beginning of the constellation Aries, and on the 27th she is in conjunction with the Moon. On the forenoon of the 6th, Jupiter is in conjunction with the Moon, in the constellation Leo.

30 Mon.	120 Steamer Novelty at Woodstock.	1837

3 The Zodial Sign of this month is TAURUS, which the Sun enters on the 20th, at 2 hours, morning. It derives its name from the Latin verb *aperire*, to open, because then the earth first begins to open her pores, and the trees and shrubs to come into leaf. On the night of the 6th, Venus attains her greatest brilliancy ; on the 21st, she is stationary ; and on the 24th, she is in conjunction with the Moon in the constellation Taurus. On the 8th, Jupiter is stationary ; and on the night of the 29th, he is in conjunction with the Moon, near the star Regulus. On the 21st, Regulus souths at 6 hours 53 minutes, evening.

II This month has for its Zodiacal Sign **GEMINI**, which the Sun enters on the 21st, at 1 hour, morning. It is named after *Maia*, the mother of Mercury in the Roman mythology. The Moon is in conjunction with Uranus on the 19th, at 2 hours 27 minutes, afternoon; with Venus on the 21st, at 1 hour 56 minutes, morning; with Mercury on the 23d, at 0 hour 14 minutes, afternoon; and with Jupiter on the 27th, at 6 hours 11 minutes, morning. On the evening of the 25th, at 6 hours 52 minutes, Mars and Saturn are in conjunction in the constellation Pisces. Spica Virginis crosses the Meridian on the 15th, about 10 hours, afternoon; a line from Polaris through the middle star in the tail of the Great Bear passes at 70° distance through Spica.

Declination, Rising, Meridian Passage, and Setting of the Principal Planets.

APOGEE AND PERIGEE OF THE MOON.

Apogee, 5th d., at 11 h., m. At Apogee, semidiameter = 14° 41' .8 | Horizontal Parallax = 53° 56' .1
 Perigee, 20th d., at 1 h., m. At Perigee, " = 16° 42' .1 | " " = 61° 17' .1

DAY OF Mo. Week Year.	PROVINCIAL CHRONOLOGY.		A. D.
1 Fri. 1	152	Ship Lord Sheffield, built for Gen. Arnold, comes thro' Falls of St. J.	1786
2 Sat.	153	First Church in Canada built.	1629
3 Sun.	154	Steamer Unicorn at Boston, from Liverpool, in 18 days.	1840
4 Mon.	155	First Orders in Chancery published.	1839
5 Tues.	156		
6 Wed.	157	Battle of Stony Creek.	1813
7 Thur.	158	Cholera first appears in Quebec. Deaths, 2218.	1832
8 Frid.	159		
9 Sat.	160		
10 Sun.	161	Dalhousie declared a free port.	1843
11 Mon.	162	Patent to Sir H. Gilbert to colonize America.	1578
12 Tues.	163	St. Louis Theatre at Quebec burnt: 45 deaths.	1846
13 Wed.	164		
14 Thur.	165		
15 Frid.	166	Imp. Act, imposing additional duties on Baltic lumber.	1810
16 Sat.	167	St. John and Shediac Railway Co., incorporated by law.	1843
17 Sun.	168		
18 Mon.	169	Britannia Steamer at Boston, from Liverpool, in 14 days 8 hours.	1840
19 Tues.	170	First Colonial Assembly meets at Jamestown, Va.	1619
20 Wed.	171		
21 Thur.	172	First Newspaper published in Quebec.	1764
22 Frid.	173		
23 Sat.	174	Bill for union of Canadas.	1840
24 Sun.	175	De Morts discovers St. John R. and takes possession for France.	1604
25 Mon.	176	Lieut. Col. H. W. Hailes, President and Com. in Chief.	1816
26 Tues.	177		
27 Wed.	178		
28 Thur.	179	Lord Stanley's Despatch, prohib. imposition of Differential Duties.	1843
29 Frid.	180	Sir J. Harvey at Quebec, on a mission to Lord Durham.	1838
30 Sat.	181		

The Zodiacal Sign of this month is **CANCER**, which the Sun enters on the 21st, at 9 hours 41 minutes, morning, when he reaches his greatest declination north, and Summer commences. The point at which he turns to go south is called the **Tropic** of Cancer. June is probably named after Juno, in honor of whom the Romans celebrated a festival at the beginning of the month. On the 80th, at midnight, the Earth is at her Aphelion, or greatest distance from the Sun, (96,596,000). On the 1st, at 2 hours, afternoon, Venus is stationary; on the 17th, at 8 hours, afternoon, she is in conjunction with the Moon; and on the 18th, at 4 hours 17 minutes, morning, she attains her greatest brilliancy.

Declination, Rising, Meridian Passage, and Setting of the principal Planets.

30 Mon.	211	Wolfe defeated at Montmorency.	1759
31 Tues.	212	Treaty of Breda. Acadia ceded to France.	1667

Q This month has for its Zodiacal Sign LEO, which the Sun enters on the 22d, at 8 hours 32 minutes, afternoon. It is named in honor of Julius Caesar, to whom also we are indebted for the reformation of the Calendar by reckoning an additional day at the end of Feb. every fourth or leap year. The Julian Calendar thus reformed came into use Jan. 1st, B. C. 45. Previous to that time the month was called *Quintilis*, as having been the fifth of the Alban year. On the 16th, at 10 hours 35 minutes, morning, Venus is in conjunction with the Moon; and on the 21st, both she and Mercury attain their greatest elongation from the Sun—the former at 0 hours 22 minutes, morning, being 45° 58' W., and the latter at 6 hours 58 minutes, morning, being 19° 56' W.

27 Mon. 239 Restitution of Fort Jemseg to the French authorities.		1670
28 Tues. 240 Sir H. Douglas sworn in at Fredericton.		1824
29 Wed. 241 Govern't. of Col. of Mass. Bay trans. from London to N. England.		1629
30 Thur. 242 Messrs. Johnston and Minette app. to surv. line of Chignecto Canal.		1822
31 Frid. 243		

This month has for its Zodial Sign VIRGO, which the Sun enters on the 23d, at 3 hours, morning. It was named August by the Romans in compliment to the Emperor Augustus. On the 1st, at 7 hours 34 minutes, morning, Uranus is stationary at the beginning of the constellation Aries, and on the 8th, at 8 hours 32 minutes, morning, he is in conjunction with the Moon. On the 4th, at 5 hours 24 minutes, afternoon, Mercury is in Perihelion, and on the 29th, at 0 hour 40 minutes, he is in conjunction with Jupiter, near Regulus in the constellation Leo. On the 15th, Altair and a Lyra will cross the meridian about 10 hours, afternoon. The Milky Way is a beautiful object at this season of the year. The August shower of meteors makes its appearance on the 29th or 11th of the month.

Declination, Rising, Meridian Passage, and Setting of the principal Planets.

The Zodiacal Sign of this month is **SAGITTARIUS**, which the Sun enters on the 22d, at 4 hours 46 minutes, morning. The Moon is in conjunction with Mars on the 4th, at 10 hours 44 minutes, morning; with Jupiter on the 9th, at 2 hours 41 minutes, afternoon; with Venus on the 12th, at 7 hours 33 minutes, morning; with Mercury on the 13th, at 0 hours 3 minutes, morning; with Saturn on the 25th, at 7 hours 17 minutes, morning; and with Uranus on the 26th, at 7 hours 7 minutes, afternoon. On the 2d, at 2 hours 46 minutes, morning, Mercury is stationary; and on the 9th, at 0 hours 11 minutes, afternoon, he attains his greatest elongation from the Sun, being 19° 1' W. On the 8th, at 11 hours 40 minutes, afternoon, Mars is stationary in the constellation Gemini; he is at the north angle of a trapezium, at the south of which is the bright star Sirius, and at the east and west, on opposite sides of the Milky Way, are Procyon and Betelgeuse.

Declination, Rising, Meridian Passage, and Setting of the principal Planets.

27 Thur.	361		
28 Fri.	362	43d Reg't arrives at Quebec, overland from Fredericton, in 12 days.	1837
29 Sat.	363	Steamer Caroline burnt at Schlosser, U. C.	1837
30 Sun.	364	Died, at Fredericton, Hon. Col. W. H. Hailes, at. 68.	1821
31 Mon.	365		

The Zodiacal Sign of this month is CAPRICORNUS, which the Sun enters on the 21st, at 5 hours 26 minutes, afternoon, when winter commences. It was called December, having been the 10th month of the old Alban calendar. The Moon is in conjunction with Mars on the 1st, at 1 hour 55 minutes, afternoon; with Jupiter on the 7th, at 2 hours 13 minutes, morning; with Venus on the 12th, at 3 hours 18 minutes, afternoon; with Saturn on the 22d, at 3 hours 47 minutes, afternoon; and with Uranus, on the 24th, at 3 hours 41 minutes, morning. On the 31st, the Earth is in Perihelion, at 8 hours, morning. On the 15th, at 10 hours, afternoon, the Pleiades are near the meridian, and the splendid constellation Orion is high up in the east. The bright star above the Sword-belt is called Betelgeuse, and that below is Rigel, while to the southeast is Sirius,

LIGHT HOUSES.

Board of Commissioners for the several Light Houses in the Bay of Fundy.—
 Robert W. Crookshank, John Ward, L. Woodward, Esquires; Hon. Thomas Wyer
 John Wilson, Esquire, Hon. W. F. W. Owen, Lieutenant Charles Hare, R. N., and
 John James Robinson, Esquire, R. N.

Isaac Woodward, Esq. Surveyor of those Light Houses in the Bay of Fundy belonging to New-Brunswick, and also of those belonging to Nova-Scotia, which are partly supported by this Province.

Cape Sable Seal Island Light.—The first Light on approaching the Bay of Fundy is on the South Point of Seal Island. This is a plain White Light, elevated about eighty feet above high water mark, and may be seen in approaching the Island from any point of the Compass. A very dangerous Rock, under water, but upon which the sea always breaks, called BLONDE ROCK, lies $3\frac{1}{2}$ miles S. by W. by compass, from the Light House. Between this Rock and the Island there are some dangers; the ground is rocky throughout, and large vessels, therefore, ought not to attempt passing between them.

Brier Island Light.—In advancing up the Bay, the next Light is situated on Brier Island, about half a mile N.E. from the N. W. point thereof.—A plain White Light.

Digby Gut Light.—The next Light on the coast of Nova-Scotia is placed on the West side of Digby Gut, from Brier Island North-Eastward. The coast is very bold and not indented; the Light is therefore chiefly intended as a guide into Digby Basin.—A White Light.

Gannet Rock Light.—This Light is intended to warn vessels of their approach to a very dangerous range of shoals and ledges, which extend from the Old Proprietor to the Seal Islands off Machias, a distance of about twenty miles. It is a flash light—WHITE—twenty seconds dark and forty light in each minute. The Light House is painted in stripes, vertical, black and white.

BEARINGS AND DISTANCES BY COMPASS FROM THE GANNET ROCK LIGHT HOUSE:

This Light bears from the Light House on Brier Island N.N.W. $\frac{2}{3}$ W. 22 miles.
 From the Gannet Rock to the Old Proprietor, E. $\frac{1}{2}$ S. distance 7 miles.
 From the Gannet Rock to the Black Rock off White Head Island, N.E. $\frac{1}{2}$ E. 7 miles.
 From the Gannet Rock to the South West Head of Grand Manan, N.N.W. $6\frac{1}{2}$ miles.
 From the Gannet Rock to the Northernmost of the Murr Ledges, N.W. $\frac{1}{2}$ N. $2\frac{1}{2}$ miles.
 To the Southernmost of ditto, called St. Mary's Ledge, W.S.W. 2 miles.
 From the Gannet Rock to Machias Seal Island, W. and by N. $\frac{1}{2}$ N. $12\frac{1}{2}$ miles.

Between the Northernmost and Sonthernmost of the Murr Ledges, there is a range of dangerous rocks and shoals, many of them always above water, and which extend Westward from the Light-House about four miles; from this range, farther Westerly about six miles from the Gannet Light, lies a dangerous breaker, called the Bull. This may be avoided by keeping three remarkable headlands near the S.W. end of Grand Manan open.

From Brier Island Light to the Old Proprietor N. and by W. $\frac{1}{2}$ W. $18\frac{1}{2}$ miles.

The Blonde Rock from the Southermost point of Cape Sable Seal Islands S. and by W. $3\frac{1}{2}$ miles distant.

Machias Seal Island Lights.—There are two fixed white lights upon the Machias Seal Islands, elevated about forty-five feet above high water, bearing from each other E. S. E. and W. N. W. distant about 200 feet, by which circumstance of two Light Houses at the same station they will be immediately distinguished from

of other lights upon the coast, British or American. Both the buildings are painted white. The following are the bearings by Compass from them, viz:—

- To the Southernmost Marr Ledge (St. Mary's) E. S. E. easterly.
- " Gannet Rock Light, E. by S. & S. 13 miles.
- " Southern Head of Grand Manan, E. by N. & N.
- " Northern Head of Grand Manan, N.E. & E.
- " North-East Rock, distant 2 miles, N. E. by N.
- " Little River Head, N. by W.
- " Libby Island Light House (American), N. W. by W.

Vessels standing to the Northward, between these Lights and the Gannet Rock, should tack or haul off the moment they bring these Lights into one, as they will be less not more than three-fourths of a mile from the Marr Ledges, if more than five miles to the East of the Lights.

[It is recommended that the Ship's Compasses should be well compared and adjusted, (particularly in new ships,) before they leave Partridge Island, as serious errors have frequently occurred from want of attention on this point: and, as the variation in the Bay of Fundy is seventeen degrees Westerly, or ($1\frac{1}{2}$ points) it will be found by the latest published Admiralty Charts, * that the course from Partridge Island down the Bay, South Channel, between the Old Proprietor and N. W. Ledge, is S.W. & S., but the course to be steered must depend on the direction of the wind on leaving Partridge Island.]

Head Harbour Light.—Next in order, after passing Grand Manan, and the plain white Light (American) on West Quoddy Point, is Head Harbour Light. This is placed on the North-east extremity of Campo Bello, and is a guide to vessels entering the main channel to West Isles, Moose Island, and the Inner Bay of Passamaquoddy; it enables vessels also at all times to enter Head Harbour. It is a fixed white Light. The building is painted white, with a red cross on it.

Point Le Pecq Lights.—Upon this projecting head-land two Lights are placed, one above the other in the same House, and distant twenty-eight feet. Both Lights can be seen from every point of the compass where they may be useful—both are fixed and white. The Light-house is painted red and white, in stripes five feet broad each, horizontally.

Partridge Island Light.—This Light, at the entrance of the River and Harbour of Saint John, having been established above fifty years, requires no particular notice, farther than that it is a fixed white Light, and the Light-House is painted red and white in vertical stripes. The Light was enlarged in November, 1846.

Beacon Light.—Within Partridge Island, and upon a spit or bar, which extends about half a mile S.S.E. off Sand Point, and which dries at two-thirds ebb, stands the Beacon Tower. Upon this Tower a Light is established which is eminently useful to the coasting trade of St. John, and to all other vessels having pilots on board, as it enables them to enter the Harbour at all hours of the night. A fixed white Light. The House is painted white and black, in stripes vertically.

Quaco Light.—A revolving white Light is placed on a small rock off Quaco Head, shewing twice full and twice dark in a minute. The Light can be seen from any quarter where a vessel can approach. The Light-House is painted white and red in horizontal stripes.

Cape Enrage Light.—On the Point of that name in Westmorland, nearly opposite Apple River Harbour, N. S. The House is about 120 feet above the tide mark, and is painted white.—A plain white Light.

* The Charts can be procured at the COURIER OFFICE Book-store, Saint John, N. B.

SIGNALS

Made at Partridge Island on the approach of Vessels to the Harbour of St. John

- One Ball, close, for one square-rigged vessel.
- One Ball, half-hoisted, for two square-rigged vessels.
- Two Balls, close, for three square-rigged vessels.
- Two Balls, separated, for four square-rigged vessels.
- A Pendant of any colour, for five square-rigged vessels.
- A Pendant under a Ball, for six square-rigged vessels.
- A Pendant over a Ball half-hoisted, for seven square-rigged vessels.
- A Pendant under two Balls close, for eight square-rigged vessels.
- A Pendant between two Balls separate, for nine square-rigged vessels.
- A Flag of any colour, for ten or more vessels.

[The above are hoisted at the East or West yard-arm, according to the quarter the vessels first appear in, and when their rig can be made out, the following descriptive colours will be hoisted at the mast-head :]

- A Union Jack for a Flag Ship, with or without a squadron.
- “ with a Red Pendant over, for a two-decker.
- “ with a Blue Pendant over, for a Frigate.
- “ with a White ditto, for a small armed vessel.
- A Blue Pendant, for a merchant ship or barque.
- A Red ditto, for a merchant brig or brigantine.
- A White and Blue ditto, for a foreign square-rigged vessel.
- A White ditto, without a Ball, for a topsail schooner or sloop.
- A Flag, blue and white horizontally, a neutral fleet.
- A Pendant, white and blue, a neutral man-of-war.
- A Blue Flag, a neutral merchant-ship.
- A Red, White and Blue Flag, an enemy's fleet.
- A Red, White and Blue Pendant, an enemy's man-of-war.
- A Union Jack over neutral or enemy's signals, the vessel is detained or a prize.
- A White Flag over any signal, the vessel bears a flag of truce.
- A Red Flag pierced white, for a Steamboat from Digby.
- A Blue Flag pierced white, for a Steamboat from St. Andrews or Eastport.
- A Red Flag with a white square, for a Steamboat from Boston.

A Ball at the mast-head, the vessel is on shore or in distress : should immediate aid be necessary, guns to be fired.

In thick weather a gun will be fired at Partridge Island in answer to each gun heard at sea. There is a Fog-bell on the Island, which is rung in foggy weather to warn vessels of their approach to the shore.

When the vessel requires a pilot, her descriptive pendant will be shewn at the yard-arm instead of a ball.

TIME FOR GOING THROUGH THE FALLS

NEAR THE CITY OF SAINT JOHN.

The Falls are level, or it is still water at about three and a half hours on the *flood*, and about two and a half on the *ebb*, so that they are passable four times in twenty-four hours, about ten or fifteen minutes at each time. No other rule can be given, as much depends on the floods in the River Saint John, and the time of high water or full sea, which is often hastened by high southerly winds. For a few days in the spring of the year, the height of water in the River Saint John renders the passage of the Falls extremely difficult.

NEW-BRUNSWICK REGISTER.

r of St. John

EXECUTIVE DEPARTMENT.

HIS EXCELLENCY SIR EDMUND WALKER HEAD, BARONET,
Lieutenant Governor and Commander-in-Chief of the Province of New-Brunswick,

The Collegiate, or Grammar School of York receives an annual allowance of £375 (besides the services of a French Teacher) from King's College, and is placed under the control of a Committee appointed by the College Council.

The supervision of the other Grammar Schools is vested in Boards of Directors and Trustees, appointed by the Lieutenant Governor in Council.—The Government allowances are, £150 to the Saint John School, £50 to the School in charge of Mr. Sievwright, in Northumberland, and £100 to each of the others, on condition that the inhabitants pay the further sum of £50 to the Teacher.

The general management of the Parish Schools is by Act of Assembly 10 Vic. ch. 56, vested in the Lieutenant Governor and Executive Council as a Board of Education.—The average number of Schools in the Counties has heretofore been limited to nine for each Parish; but the number may be increased to thirteen in any Parish, provided the whole number in the County does not exceed the established average. The Government allowance to the Teachers is £30 per annum for Teachers of the First Class; £22, Second Class; and £18, Third Class. The emoluments, exclusive of the Government allowance, range between £20 and £100, the general average being about £30.

FREDERICTON ATHENÆUM.

REGULATIONS AND RATES.

1.—All Letters sent by Post in New-Brunswick and other Provinces of British North America, are charged by weight.—Prepayment optional, except on those for Bermuda, Newfoundland, and the United States.

2.—The scale of weight for charging postage is the same as that by which letters to and from the United Kingdom are charged, viz.:—

For a Letter not exceeding $\frac{1}{2}$ ounce,	...	1 Rate.
Ditto ditto, 1 "	...	2 "
Ditto ditto, 2 "	...	4 "
Ditto ditto, 3 "	...	6 "

and so on, adding two rates for every additional ounce. After the first ounce fractional parts are not noticed; thus, if a Letter exceeds one ounce it becomes liable to four rates, and if it exceeds two ounces, six rates.

3.—The Rates of Postage on Letters are:—For a Letter not exceeding half an oz. (without regard to the number of pieces of which it is composed),

Conveyed 60 miles or under,	-	-	0s. 4½d.
Ditto 61 " to 100 miles,	-	-	0 7
Ditto 101 " to 200 "	-	-	0 9
Ditto 201 " to 300 "	-	-	0 11½
Ditto 301 " to 400 "	-	-	1 1½
Ditto 401 " to 500 "	-	-	1 4

and so on, adding two pence, sterling, for every additional 100 miles.

4.—Letters to and from the United Kingdom are subject to a uniform charge of 1s. 4d. currency per single letter.

Letters to and from the United States are subject to a Provincial rate according to the scales of weight and distance above laid down, which must in all cases be collected in the Province.

Newspapers.—Colonial Newspapers, not exceeding two ounces, to or from any part of the British North American Provinces, pay one halfpenny, prepaid or not, at the option of the sender.

If sent to any British Colony beyond sea (not intended to pass through the United Kingdom), or to any foreign country, except the United States, one half-penny, to be prepaid.

If sent to any part of the United States, one penny, to be prepaid.

Newspapers from the United States pay on delivery one penny, Provincial postage.

Colonial newspapers sent to the United Kingdom, or to any British Colony by way of England, and British newspapers from the United Kingdom to any part of New-Brunswick, will not be liable to postage. With exception of these last (which are not limited as to weight) a newspaper to pass under the foregoing regulations must not exceed two ounces, otherwise it will be liable to pamphlet postage, i.e. one penny per ounce.

British newspapers can be re-posted in New-Brunswick, subject to one halfpenny

postage ; but United States newspapers, if re-posted in this Province, become liable to full Letter-postage.

Supplements charged as distinct newspapers.

Votes and Proceedings in Parliament.—If sent to the United Kingdom by packet, or to any part of British North America, or British West Indies, one penny for every four ounces. If intended to be sent to the United Kingdom by private ship, double the above rates. No packet or cover containing votes or Legislative proceedings, permitted to be sent through the Post, if exceeding six pounds in weight.

Pamphlets and other Publications—If printed in the United Kingdom, British North America, or British West Indies, may be sent to any place in British North America, the United States, or British West Indies, at the inland rate of one penny per ounce, in addition to sea postage, provided they do not exceed 16 ounces. If printed and mailed in the United States they are liable on delivery in this Province to the same rate of one penny per ounce ; but if re-posted in New-Brunswick, they are charged with full letter-postage.

Newspapers, Pamphlets, Publications and Parliamentary proceedings must be sent without covers, or with covers open at the ends. If this is not done, or if there be any marks or writing on them besides the address, full letter-postage will be charged.

Franking.—Postmasters, and other Officers of the Post-Office Department, not to receive or send Letters, &c. “ free.”

HARBOUR MASTER'S FEES.—On vessels of 30 tons, and under 50, 2s. 6d.; of 50, and under 75, 3s. 9d.; of 75, and under 100, 5s.; of 100, and under 150, 6s. 3d. of 150, and under 200, 7s. 6d.; of 200, and under 300, 10s.; of 300, and under 400, 12s. 6d.; vessels of 400 tons and upwards, 15s.—Decked vessels under 100 tons, owned and registered at St. John, and all British vessels under that tonnage, trading within the Bay of Fundy, arriving from ports to the Northward of Cape Cod, or the Westward of Cape Canso, or from any port in Nova Scotia, to pay annually as follows:—under 30 tons, 3s. 9d.; over 30, and under 50 tons, 5s.; over 50, and under 75 tons, 7s. 6d.; over 75, and under 100 tons, 10s.

RATES OF ANCHORAGE.—For every decked vessel exceeding 50 tons, 3s. 9d.; vessels from 50 to 100 tons, inclusive, 5s.; 100 to 150, 6s. 3d.; 150 to 200, 7s. 6d. 200 to 250, 8s. 9d.; 250 to 300, 10s. And all vessels of greater burthen in like proportion; and for all decked vessels trading within the Bay of Fundy, there shall be paid, yearly, on the first arrival after the first of April, according to the tonnage and amounts settled by the aforesaid scale.

RATES OF PILOTAGE.—For bringing any ship or vessel into the Harbour of St. John, and mooring her in a safe place or berth, or securing her alongside a wharf, the rates annexed to the several distances:—

First distance—from Partridge Island to Musquash Head, bearing North West, 5s. per foot; 2d distance—from Musquash Head to Point Lepreaux, bearing North West, 6s. 3d. per foot; 3d distance—from Point Lepreaux to North Head of Grand Manan, bearing North West, or North Channel bearing South-East, 7s. 6d. per foot; 4th distance—from the North Head of Grand Manan or North Channel, to Machias Seal Island, bearing South, or Brier Island, South South-East, 8s. 9d. per foot, anywhere outside the aforesaid distances, 10s per foot.

For removing and taking any ship or vessel out of the harbour, 5s. per foot,—In cases where pilots shall be detained on board of vessels under and by virtue of Quarantine or Health Laws of the Province, they shall be entitled to demand from the Masters of such vessels 10s. per day, for every day of such detention, in addition to the allowance aforesaid.—Coasting vessels going from one part of the Bay of Fundy to another, (except square-rigged,) British steam-boats, or British vessels drawing under six feet of water, are not compelled to take pilots; when employed, they are to be paid according to the above rates.—For removing any ship or vessel from one place to another, within the harbour, and properly securing her,—for vessels not exceeding 100 tons, 7s. 6d.; over 100, and not exceeding 200, 10s.; over 200, and not exceeding 300, 15s.; over 300, 20s.

RATES OF WHARFAGE, established by Act 54, Geo. III. cap. 9.—For every decked vessel, or vessel of the description called woodboats, not exceeding 50 tons, 1s. 6d. per day; above 50 tons, and not exceeding 100, 2s. 6d.; above 100, and not exceeding 150, 3s. 6d.; above 150, and not exceeding 200, 5s.; above 200, and not exceeding 300, 7s. 6d.; above 300, and not exceeding 400, 10s.; 400 and upwards, 12s. 6d.

By an Act passed on the 4th April, 1842, the following rates of Wharfage are established in the City of St. John and Parish of Portland;—For every decked vessel, or wood-boat, of the burthen of 40 tons and under, 1s. 6d. per day; above 40 tons, and under 50, 1s. 9d.; above 50 and under 60, 2s.; above 60, and under 70, 2s. 3d.; above 70, and under 80, 2s. 6d.; above 80, and under 90, 2s. 9d.; above 90, and under 100, 3s.; above 100, and under 120, 3s. 6d.; above 120, and under 150, 4s.; above 150, and under 180, 4s. 6d.; above 180, and under 200, 5s.; above 200, and under 220, 5s. 6d.; above 220, and under 240, 6s.; above 240, and under 260, 6s. 6d.; above 260, and under 280, 7s.; above 280, and under 300, 7s. 6d.; above 300, and under 320, 8s.; above 320, and under 340, 8s. 6d.; above 340, and under 360, 9s.; above 360, and under 380, 9s. 6d.; above 380, and under 400 10s.; above 400, and under 450, 11s. 3d.; above 450, and under 500, 12s. 6d.; and 1s. 3d. for every additional 50 tons.

RATES OF SLIPPAGE AT THE CORPORATION SLIPS.—All decked vessels, same rates as for wharfage; wood-boats, three half-pence for every ton burthen,

and allowed to remain six days each trip, for the purpose of discharging; if they remain longer, to pay one penny per ton, additional, each day; no boat to remain longer than twenty days.

HISTORICAL NOTICE OF THE UNITED STATES,

AND LIST OF PRESIDENTS.

I. MAINE.—The first permanent settlement in Maine was formed about the year 1630 ; and for several years the government of the colony was administered in the name of Sir Ferdinando Gorges, as proprietor of the country.

In 1652, the inhabitants of Maine were placed under the jurisdiction of Massachusetts. The country was, however, afterwards claimed by the heirs of Gorges, but was, in 1677, purchased by the colony of Massachusetts. From that time the territory formed a part of the colony, and afterwards of the State of Massachusetts, and was styled the District of Maine, till the year 1820, when it was erected into an independent state. The constitution of this state was formed in 1819, and went into operation in 1820.

II. NEW HAMPSHIRE.—The earliest grant of the territory of New Hampshire was made, in 1622, to John Mason and Ferdinando Gorges ; and the first settlements were begun, in 1623, at Dover and Portsmouth. In 1641, the settlements in New Hampshire voluntarily put themselves under the government of the colony of Massachusetts, and were allowed to send representatives to the General Court at Boston, till 1679, when a new government was formed, and New Hampshire was made a separate province.

In 1686, New Hampshire was placed, together with the rest of New England, under the government of Sir Edmund Andros ; in 1689, the union with Massachusetts was revived, and continued till 1692. From 1699 to 1702, it was united with Massachusetts and New York ; in 1702, it was again united with Massachusetts, and so continued till 1741, when a final separation took place.

III. VERMONT.—Fort Dummer, in the south-east part of Vermont, was built in 1721 ; and Bennington, the oldest town in the state, was chartered in 1749, by Benning Wentworth, governor of New Hampshire.

The territory of Vermont was originally claimed both by New Hampshire and New York; and its political condition was, for a considerable time, unsettled; but the people, preferring to have a separate government, formed a constitution in 1777, under which a government was organized in March, 1788; and in 1791, Vermont was admitted into the Union. The first constitution of this state was formed in 1777; the one now in operation was adopted on the 8th of July, 1793.

IV. MASSACHUSETTS.—The territory of Massachusetts comprised, for many years after its first settlement, two separate colonies, styled the *Plymouth Colony* and the *Colony of the Massachusetts Bay*.

The first English settlement that was made in New England was formed by one hundred and one persons who fled from religious persecution in England; landed at Plymouth on the 22d of December, 1620; and laid the foundation of Plymouth Colony.

The settlement of the colony of Massachusetts Bay was commenced at Salem in 1623. Boston was settled in 1630.

The two colonies continued separate, and elected their own governors annually till 1685-6, when they were deprived of their charters, and were placed under the government of Joseph Dudley, and afterwards of Sir Edmund Andros. In 1692, they were united into one colony under a new charter, and the governors were afterwards appointed by the King.

V. RHODE ISLAND.—The settlement of this state was commenced at Providence, in 1636, by the celebrated Roger Williams, a minister who was banished from Massachusetts on account of his religious opinions; and in 1639, the settlement of the island of Rhode Island was begun by William Coddington, John Clarke and others. In 1643, Mr. Williams went to England, and obtained, in 1644, a charter, by which the settlement of Rhode Island and Providence Plantations were united under one government, and which continued in force till 1663, when a new charter was granted by Charles II., which, until 1842, formed the basis of the government.

VI. CONNECTICUT.—The territory of Connecticut originally comprised two colonies, the *Colony of Connecticut*, and the *Colony of New Haven*.

The settlement of Hartford, in the colony of Connecticut, was commenced by emigrants from Massachusetts, in 1635; and that of New Haven, in 1638, by emigrants from England.

In 1662, a charter was granted by Charles II., with ample privileges, uniting the colonies of Connecticut and New Haven, under one government; but the colony of New Haven refused, for some time, to accept the charter, and the union did not take place till 1665.

The charter was suspended, in 1687, by Sir Edmund Andros; but it was restored again after the Revolution of 1688 in England; and it formed the basis of the government till 1818.

VII. NEW YORK.—The settlement of this state was commenced by the Dutch, in 1614, who named the country *New Netherland*, and established a colonial government in 1629. In 1661, Charles II., of England granted to his brother, the Duke of York, a patent for a large tract of country, forming the present states of New York and New Jersey; and, during the same year, Colonel Nicolls with a considerable force, in the service of the Duke, made a conquest of the country; and the name of New Netherland was afterwards changed to *New York*. In 1736, the colony was recaptured by the Dutch, and held by them a few months; but, with the exception of this short period, it was in the possession of the English from 1664 till the American Revolution, in 1775.

VIII. NEW JERSEY.—The territory comprised in this state was included in the patent for large tracts in America, which was granted by Charles II. to his brother, the Duke of York, in 1664; and in the same year the duke conveyed this territory to Lord Berkeley and Sir George Carteret; and it then received the name of New Jersey. In 1665, Philip Carteret was appointed the first governor of the province, which then contained only a few families.

In 1676, New Jersey was divided into two provinces, *East Jersey* and *West Jersey*; the former continuing under the government of Carteret, and the latter being held, for a time, as a dependency of New York.

In 1682, East Jersey was transferred to William Penn and eleven associates, and *Robert Barclay*, the celebrated author of the "Apology for the Principles of the Quakers," was appointed governor.

In 1702, East and West Jersey were again united into one province, by the name of New Jersey, under the government of *Lord Cornbury*, who was also governor of New York; and this connection with New York continued till 1738, when a separate government was instituted, which lasted till the American Revolution. *Lewis Morris* was the first royal governor; and *William Temple Franklin*, a son of the celebrated Dr. Franklin, the last.

X. PENNSYLVANIA.—Pennsylvania was granted by Charles II., by a charter signed on the 4th of March, 1681, to the illustrious William Penn, who was constituted the proprietor of the province. In 1682, William Penn, together with about two thousand settlers, most of whom, like himself, belonged to the society of Friends or Quakers, arrived in the country; and in the following year he laid out the plan of the city of Philadelphia. He established a friendly intercourse with the Indians, which was not interrupted for more than seventy years.

From the beginning of the 18th century till the commencement of the American Revolution, the government was generally administered by deputies appointed by the proprietaries, who mostly resided in England.

XI. DELAWARE.—The first European settlement in this state was formed by Swedes and Finns, in 1627; in 1655, the colony was taken from the Swedes by the Dutch, under Governor Stuyvesant; and after the conquest of New-York by the English, in 1664, it was placed under the jurisdiction of the government of New-York.

In 1682, the country was granted to William Penn, and placed under the same executive and legislative government with Pennsylvania. It was then, as it is now, divided into three counties, Newcastle, Kent, and Sussex, generally styled, till the American Revolution, "The Three Lower Counties upon the Delaware."

In 1701, the representatives of Delaware withdrew from those of Pennsylvania. The first separate legislative assembly met at Newcastle, in 1704; and it ever afterwards continued distinct from that of Pennsylvania; though the same governor presided over both provinces till the 4th of July, 1776.

XII. MARYLAND.—In 1632, Maryland was granted by Charles I. of England, to Sir George Calvert, Lord Baltimore, a Roman Catholic, and an eminent statesman, who had been secretary to James I.; but before the patent was completed, Lord Baltimore died, and the patent, dated June 20, 1632, was given to his eldest son Cecilius, who succeeded to his titles, and who, for upwards of forty years, directed as proprietor, the affairs of the colony.

Leonard Calvert, brother to Cecilius, Lord Baltimore, was appointed the first governor; and he, together with about 200 persons, commenced the settlement of the town of St. Mary's, in 1634. A free toleration of religion was established, and a system of equity and humanity was practised with regard to the Indian tribes.

XIII. VIRGINIA.—The first permanent English settlement formed in America was made in 1607, by one hundred and five adventurers, on James river, in this state, at a place named *Jamestown*, in honor of James I. of England.

Several unsuccessful attempts had been made in the latter part of the preceding century, during the reign of Queen Elizabeth, in honor of whom the country was named *Virginia*; which name, though now limited to a single state, at the time of the settlement, was applied to all the country in America lying between latitude 34° and 45° N. The early history of the colony is full of interesting and affecting incidents, occasioned by dangers and calamities; by sickness, want, and contests with the Indians. The government of the colony was at first administered by a council of seven persons, with a president chosen from among their number; but afterwards it was administered by a governor, appointed, except during the Commonwealth in England, by the crown.

XIV. NORTH CAROLINA.—In the latter part of the fifteenth century, three different attempts were made, under the direction of the celebrated Sir Walter Raleigh, to establish settlements in North Carolina, which was then included within the limits of the country, that had been recently named Virginia. first attempts made by the English to form colonies in North America : they all proved unsuccessful ; and many years passed away before the attempt to settle the country was renewed.

The first permanent settlements were formed about the middle of the seventeenth century. North Carolina was long united under the same government with South Carolina : it was for many years called the *County of Albemarle*, or the *County of Albemarle in Carolina*, and about the beginning of the 18th century, the *Colony of North Carolina*. As early as 1715, it had a separate legislative assembly, at which time Charles Eden was governor ; and in the year 1727, it was formed into an entirely distinct province. The constitution was formed in 1786, and the present amended one in 1835.

XIV. SOUTH CAROLINA.—In 1663, the territory which now comprises the states of North and South Carolina and the greater part of Georgia, was granted by Charles II. to the Earl of Clarendon and seven others, who were constituted proprietors. The colony was named *Carolina*, and the government was vested in the hands of the proprietors. The proprietary government lasted about fifty years, when it was abolished by the people ; and the government was afterwards directed by governors appointed by the king.

XV. GEORGIA.—The first English settlement of Georgia was formed at Savannah, in 1733, by General James Edward Oglethorpe, together with 160 persons. Of the thirteen states which belonged to the Union at the time of the Declaration of Independence, this was the last settled. The first constitution of Georgia was formed in 1777 ; a second, in 1785 ; and the present one in 1798. Many amendments have been made.

XVI. FLORIDA.—Florida was conquered by the Spaniards as early as 1396. In 1763, it was ceded to Great Britain, and divided into East and West Florida ; but, in 1781, it was again recovered by Spain.

In 1821, it was ceded by Spain to the United States ; and, in 1822, both parts, East and West Florida, were formed into one government or province, under the name of "The Territory of Florida." It was admitted into the Union as an independent state, March 3d, 1845.

XVII. ALABAMA.—Mobile, in the southern part of Alabama, was settled long since by the Spanish ; yet the territory which now forms this state contained but very few civilized inhabitants before 1810. Since that time, its increase in population has been exceedingly rapid. Alabama was erected into a territorial government in 1817, and in 1820 it was admitted into the Union.

XVIII. MISSISSIPPI.—This state was included within the country which was discovered and possessed by the French, who formed a settlement at Natchez about the year 1716 ; but, in 1763, it was ceded to the English, with the rest of the French possessions to the east of the Mississippi.

There were but few inhabitants within the present limits of this state before the end of the last century. In 1798, the country was erected into a territorial government ; and, in 1817, into an independent state.

XIX. LOUISIANA.—The state of Louisiana comprises the southern part of an extensive country, which was purchased by the United States, of France, in 1803, for the sum of \$15,000,000.

The river Mississippi was discovered in 1673, by Marquette and Joliette, two French missionaries ; in 1682, the country was explored by La Salle, and named *Louisiana*, in honour of Louis XIV. ; in 1699, a French settlement was begun at Iberville ; and in 1717, New Orleans was founded.

The country now forming the state of Louisiana was separated from the rest in 1804, and called the Territory of Orleans ; and in 1812, it was admitted into the Union as an independent state, by the name of Louisiana.

XX. TEXAS.—Texas, formerly a province of Mexico, declared its independence in March, 1836, and achieved it by the battle of San Jacinto on the 21st of the following April. In September of the same year, the first election was held under the constitution. In 1845 it was admitted into the Union as an independent state, by a joint resolution of both houses of Congress, which was signed by the president, March 1, 1845, and ratified by the Texans in convention, July 4, 1845.

XXI. ARKANSAS.—Arkansas was separated from the territory (now state) of Missouri in 1819, and erected into a separate government. In 1836, it was admitted into the Union as an independent state.

XXII. TENNESSEE.—The earliest settlements in this state were made between the years 1765 and 1770, by emigrants from North Carolina and Virginia.

The country was included within the limits of North Carolina till 1790, when it was placed under a separate territorial government, under the name of the "Territory South of the Ohio;" and, in 1796, the inhabitants formed a constitution, and Tennessee was admitted into the Union as an independent state.

XXIII. KENTUCKY.—The first permanent settlement of this state was begun on Kentucky River, in 1775, by Colonel Daniel Boone. The county formed a part of the state of Virginia till 1790; and in 1792, it was admitted into the Union, as an independent state.

XXIV. OHIO.—The first permanent settlement of Ohio was commenced at Marietta in 1788; in 1790, the country was put under a territorial government, and called the "Western Territory," which name was afterwards altered to the "Territory North-west of the Ohio;" and in 1802, it was erected into an independent state.

XXV. MICHIGAN.—Detroit, the capital of Michigan, was settled by the French about the year 1670. In 1803, the country was erected by the Congress of the United States into a separate territorial government; in 1812, it was taken by the British under General Brock; in 1813, it was recovered by the army of the United States under General Harrison; and in 1836, it was admitted into the Union as an independent state.

XXVI. INDIANA.—Vincennes, in Indiana, was settled by French emigrants from Canada, near the beginning of the last century, and long remained a small village. But few settlements were made in the country till the commencement of the present century; since which time its increase in population has been very rapid.

In 1809, Indiana was erected into a territorial government; in 1816, it was admitted into the Union as an independent state.

XXVII. ILLINOIS.—This country was explored by La Salle, an enterprising French traveller, in the latter part of the 17th century; and French settlements were formed at Kaskaskia, Cahokia, and some other places. Though these settlements flourished, in some degree for a time, yet they never became very important, and at the peace of Paris, in 1763, the country to the east of the Mississippi was ceded by France to Great Britain.

Almost all the settlements which have been formed by the citizens of the United States have been begun since 1800. In 1809, Illinois was erected into a territorial government. In 1818, it was admitted into the Union as an independent state.

XXVIII. MISSOURI.—Missouri formed a part of the extensive country of Louisiana, which was purchased of France by the United States in 1803. Though French settlements were commenced at St. Louis and St. Genevieve as early as 1764, yet, at the time when the country was purchased, this portion of it contained but few inhabitants. In 1804, this country was separated from the rest of Louisiana, and erected into a territorial government, by the name of the Territory of Louisiana, afterwards altered to the territory of Missouri; and, in 1821, it was admitted into the Union as an independent state.

XXIX. IOWA.—Iowa was erected into a territorial government by act of Congress, in June, 1838, and admitted into the Union in December, 1846.

XXX. WISCONSIN TERRITORY.—Wisconsin, before 1836, formed for civil purposes part of the Territory of Michigan. In 1836, it was erected into a territorial government.

XXXI. OREGON TERRITORY.—Under provisional government, George Abernathy being governor and superintendent of Indian affairs, at a salary of \$500.

XXII. DISTRICT OF COLUMBIA.—The District of Columbia is under the immediate government of Congress. The city of Washington became the seat of the government of the United States, in 1800; and it is the residence of the President, and the other chief executive officers of the national government. By an act of Congress, in 1803, which was subsequently accepted by the people of Alexandria,

9. William H. Harrison,*	Ohio,	March 4, 1841,	April 4, 1841.
10. John Tyler,	Virginia,	April 4, 1841,	March 3, 1845.
11. James Knox Polk,	Tennessee,	March 4, 1845,	March 3, 1849.

* Died in office.

(From the *American Almanac*, for 1818.)

HISTORICAL NOTICE OF CANADA.

Canada has been claimed by the English by virtue of Cabot's discovery of the coast, but it is certain that St. Lawrence was first visited by J. Cartier in 1535, and in that year he built a fort at Quebec or Stadacona. The commerce of the country remained entirely in the hands of individuals or of small companies, who did not for its permanent settlement, until 1608, when S. Champlain, who had been sent out by DeMonts, founded Quebec and explored the interior of the country. In 1627 the general management of New France (as the country was called) was vested in a powerful corporation called the Company of the Hundred Partners. Quebec was captured by D. Kirk in 1629, but restored and ceded to France by the Treaty of St. Germain in 1632. In 1663 the King of France broke up the old company, transferred its powers to the French West India Company, and again resumed his original rights in 1674. The country was subdivided into Siguicies, with a sort of feudal or military organization. The French had, from time to time, frequent contests with the Indians, and with the English Colonists; the great object in the latter case being to determine to whom the right bank of the St. Lawrence was to belong. By the treaty of 1763 the dominion of New France passed into the hands of England.

By Royal Proclamation in 1763, the Province of Quebec was constituted a distinct government; and in 1774 a Legislative Council was instituted. In 1791, the Province of Quebec was divided into the two Provinces of Upper and Lower Canada, and a civil government provided for. In 1838, in consequence of the Rebellion, the civil government was suspended and a Special Council established; this lasted till 1849, when the constitution was restored, and a re-union of the Canadas effected under the government of Lord Sydenham.

Note.—There is now sufficient evidence to show that Amerigo was discovered by the Norwegians sailing from Greenland, long before the times of Columbus, though there is no reason to suppose that he was aware of the fact. In the year 986, the coast line from Newfoundland to Nantucket was observed, and four years afterwards was partially settled by these Northmen. The coast of Labrador and Newfoundland was called Helluland or Skaluland; Nova-Scotia was called Markland or Woodland, and New England was called Vinland or Vineland. In 1121 the Bishop of Greenland sent a mission to Vinland, and we read of timber being brought from Markland as late as 1347; after this the whole country was lost sight of until the period of Columbus and Cabot.

HISTORICAL NOTICE OF PRINCE EDWARD ISLAND.

This island was discovered by Cabot on the 24th of June, 1497, and called St. John's Island. The French, however, claimed it by right of settlement, and in 1663 it was granted to Captain Doublet and others, who carried on a lucrative commerce of fish and sea-horse teeth. After 1713 it began to be much settled by the French, and came to be regarded as the granary of L'Isle Royale or Cape Breton. In 1745 it fell for a short time under the power of England, and again in 1758, after the fall of Louisburg, it reverted to England, and peaceful possession of it was guaranteed by the Treaty of 1762. In the following year it was annexed to the Government of Nova-Scotia. In 1769 the Island was granted away by lottery in one day under the term of sixty-three townships of 20,000 acres each. In 1769 it was created a distinct government under W. Patterson, Esq. who convened the first Assembly in 1778. In 1784, however, it was resummed to Nova-Scotia by Letters Patent, its separate Government and Legislature still continued, and in 1786, along with all the other North American Provinces, was united into one Government, of which the Governor-in-Chief resides at Quebec or Montreal. In 1799 the name was changed from St. John's Island to Prince Edward Island, in honor of H. R. H. the Duke of Kent, Our Most Gracious Majesty's father.

HISTORICAL NOTICE OF NEWFOUNDLAND.

Newfoundland was discovered by Cabot in 1497. The shores of this *Terra Novae* or *Terra de Bacalao* or Cod-land were much frequented by French fishermen as early as 1604. Formal possession was taken for England by Sir H. Gilbert at the Harbour of St. John's, and a code of laws was framed for the fisheries, in the year 1583. Other attempts at a permanent colony were made by Lord Northampton, Lord Baltimore, Marquis of Hamilton, Sir D. Kirk, and others, who had obtained Letters Patent for that purpose, but without much success. In 1690 the trade of the Island was thrown open to British subjects in general. The French at various times established themselves thereon, and fixed their head-quarters at Placentia, but by the Treaty of Utrecht in 1713 the whole Island was formally ceded to England. In 1719 R. Phillips was appointed "Governor of Placentia in Newfoundland, and Nova-Scotia," but in 1729 Newfoundland was made a distinct government, and in 1763 Labrador, Anticosti and the Magdalen Islands were annexed to it, while the islands of St. Pierre and Miquelon were detached from it, and together with the right of fishery were ceded to the King of France by England. In 1825 Courts of Justice, and in 1832 a Legislative Assembly were established. The latter continued till 1842, when the Constitution was limited by an Act of the Imperial Parliament.

CAPE-BRETON.

This Island seems to have been discovered by Cabot for King Henry VII. of England, and to have been formally taken possession of by Sir H. Gilbert in 1583. It was first actually planted by the French in 1598, but not long after, they were driven away. In 1632 it was ceded to France by the Treaty of St. Germain, and continued to that power by the Treaty of Utrecht in 1713. Louisburgh, the capital, *L'Isle-Royale*, as it was styled, was fortified and maintained at great expense, the key to the Canadas and West Indies. In 1745 it was taken by Admiral Wolfe and restored again by the Treaty of Aix-la-Chapelle in 1748. Ten years afterward, it was retaken by Gen. Amherst and Admiral Boscawen, by whom the fortifications of Louisburgh were razed to the ground; and in 1762 it was formally ceded to England by the Treaty of Paris. Next year, Cape Breton was, by Royal Proclamation, annexed to the Government of Nova-Scotia. In 1765 it was made a distinct county of that Province, but afterward (in 1770) annexed to the county of Halifax. In 1782 many loyalist refugees settled in the Island, and a Lieutenant-Governor (J. J. W. DesBarres, Esq.) was commissioned for it in 1784. The same year a separate Legislature and Courts of Justice were established; but in 1820 it was again made a County of Nova-Scotia. In 1831 it was subdivided into three Counties, and, notwithstanding an appeal by many of the inhabitants in 1843 to the Privy Council against annexation, still remains an appendage to Nova-Scotia.

NEW-BRUNSWICK AND NOVA-SCOTIA.

The greater part of North America from Labrador to Florida was claimed by the French under right of Cabot's discovery in 1497. The Gulf Shore, seems, however, to have been first taken possession of by J. Cartier for France in 1534, and the shores of the Bay of Fundy by DeMorts in 1604, under a commission from Henri IV., of Nova-Scotia, New-Brunswick and part of Maine being together styled the *Country Acadia in New-France*. In 1622 the greater part of the above territory was granted by James I. to Sir William Alexander, under the name of Nova-Scotia. In 1629 this patent was renewed and extended by Charles I., and in order to carry out the settlement of the country an order of Baronets was created, each of whom was to receive a grant of 16,000 acres, on condition of settling six men in the colony. In 1632, however, it was by the treaty of St. Germain ceded and restored to the French, who at that period carried on a lucrative trade in the fish and furs of the country. The English re-conquered it again in 1651, but leased it over again to France by the Treaty of Breda, in 1667. In 1691, during the war, it was granted under certain restrictions, to the Province of Massachusetts Bay, and claimed thereby, but by the Treaty of Ryswick, all the country north of the St. Croix River was again restored to France. By the Treaty of Utrecht, in 1713, "Nova-Scotia with its ancient boundaries" was ceded and restored to England, and in 1719 it was made a separate Province, with head-quarters at Annapolis. In 1749, the capital was transferred to Halifax; and ten years after, the first Legislature was convened. The French tried to maintain jurisdiction over New-Brunswick under the plea that, in the Treaty of 1713, the word Nova-Scotia applied only to the peninsular portion of the country, and the Acadians, who were known to favour their old friends, were in 1755 removed and dispersed among the other Colonies. The wide question of the French claim was ultimately set at rest by the conquest of Canada effected by the Treaty of Paris in 1763, the whole of New-France was formally surrendered to the British Crown.

In 1765 the country bordering upon the St. John River was set off as the County of Sunbury in Nova-Scotia; and after the peace of 1763 many loyalist refugees landed at Parrtown, which had been built at the mouth of the river. Next year, all that part of Nova-Scotia north of the Bay of Fundy, was constituted a distinct Province, named New-Brunswick, and Governor Carleton appointed to preside over it. In 1785 the first Assembly of the new Province met at Saint-John, but two years after the seat of Government was transferred to Fredericton. The question of the boundary between New-Brunswick and the United States was not settled till the Treaty of Washington in 1842, nor has that with Canada or Nova-Scotia yet been finally adjudicated.

• 1808 Nov. 21, Ward Chipman, Junior.	1848 April 20, Daniel L. Robinson.
1824 Jan. 6, John Thomas Murray.	1848 June 1, John Simcoe Saunders.

THE COURTS OF JUSTICE IN NEW-BRUNSWICK.

THE CITY COURT OF SAINT JOHN—which derives its original jurisdiction from the Charter of the City—and is held on the Thursday of every alternate week before one of the Aldermen associated with the Common Clerk of the City. The practice, fees, process forms, and modes of proceeding in this Court are still regulated by the Charter; but the extent of its jurisdiction as regards the cases over which it has cognizance is by the 4th Wm. IV., ch. 45, made the same as

THE COURTS OF JUSTICES OF THE PEACE:

These Courts are created by the Act of Assembly above mentioned, viz. 4th Wm. IV., ch. 45, which gives to every Justice of the Peace jurisdiction in civil actions—for the recovery of any debt not exceeding five pounds—and in actions of trespass and trespass on the case, including trover for injuries to personal property—and trespass to real property when the damages claimed do not exceed forty shillings. This jurisdiction is included in all cases where the Crown is a party, or where the title to land is involved, or where the original debt exceeds five pounds and has not been reduced to that amount by actual payments,—also in actions for debts, by specialty (or bond) which is not for the payment of a certain sum, and in all actions against Executors, Administrators, Trustees of Absconding Debtors, and Corporations.—Causes in these Courts are determined by the Justice alone, unless either party demand a jury, in which case three qualified jurors are summoned. Either party who may think himself aggrieved by the judgment may within thirty days after the rendering of the judgment, on an affidavit of the circumstances, apply for a renewal of the case to a Judge of the Supreme Court whose decision is final.

THE INFERIOR COURTS OF THE COMMON PLEAS.

These Courts derive their jurisdiction from the original County Charters and from the Acts of Assembly 35th Geo. II., ch. 2, and 42d Geo. III., c. 7. One of these Courts is established in every County, and is held four times in every year. The Judges are appointed by the Crown. These Courts have jurisdiction in all transitory actions—i. e., for the recovery of all debts and damages for breach of contract, and for injuries to the person or personal property in which the title to lands does not come in question. In all actions where the sum or matter in demand does not exceed twenty pounds the costs of proceedings are on a reduced scale. Any person sued in these Courts may, pending the cause—if the matter in dispute exceed twenty pounds—remove the cause into the Supreme Court, by Habeas Corpus, and either party after judgment may bring a writ of error to remove such judgment into the Supreme Court.

THE SUPREME COURT OF JUDICATURE.

This Court consists of the Chief Justice and three Puisne Judges, appointed by the Crown during pleasure, and has within the Province the combined jurisdiction possessed as Courts of Law by the Courts of Queen's Bench, Common Pleas and Exchequer in England.

The full Court is held four times in every year at Fredericton, and Courts for the trial of causes, both civil and criminal, are held by one of the Judges at Fredericton twice a year, by virtue of the Act of Assembly 5th Wm. IV., c. 37. In the Counties of St. John and Charlotte, Courts are held twice, and in all other Counties once in every year for the trial of all criminals, under commissions giving authority for such purpose to the Judges of the Supreme Court and certain other persons therein named, (the presence of one of the Judges being necessary to constitute the Court). These Commissions are ordinarily executed at the times fixed by law for holding the Circuit Courts in the different Counties, at which Courts the Judges of the Supreme or any one of them are by the 26th Geo. III., ch. 8, authorised to try all causes in the Supreme Court—which are to be determined by a Jury—in the particular County in which the cause of action is stated to have arisen.

By the 4th Wm. IV., ch. 41, in all actions of debt, covenant, assumpsit, trover and trespass to personal property, the sum total whereof does not exceed twenty

isdiction from a week before. The practice, regulated by the which it has pounds, the proceedings are summary—i. e., the pleadings are simplified and the costs about one half the amount of ordinary proceedings. There is an appeal from the decisions of this Court by writ of error to the Governor in Council, where the amount exceeds £300 sterling; and from that Court to the Queen in Council, where the amount in dispute is over £500 sterling; and in all cases where the matter in question relates to the taking or demanding any duty payable to the Queen, or to any fee of office, or annual rent, or other such like matter or thing where the rights of the Crown in future may be bound. The allowance of this appeal must be claimed from the Governor within fourteen days after the determination of the Court below, and is derived from, and limited by the Royal Instructions under which the Governor executes the Commission by which he administers the Government: but it is apprehended that in all cases without limit as to time or amount, any party who thought himself aggrieved by the judgment of a Colonial Court, from which there was no appeal within the Colony, would have a right to petition the Sovereign for redress, and the Sovereign might refer the case to the Judicial Committee of her Council for hearing.

THE COURTS OF CHANCERY.

The office of Chancellor is held by the Lieutenant Governor, by virtue of his Commission which makes him the Keeper of the Great Seal of the Province, but the general business is transacted by the Master of the Rolls, who is appointed by the Crown during good behaviour. All proceedings relative to Lunatics and Idiots must be had before the Chancellor himself, who, generally in all cases which come before him, claims the assistance of one or more of the Judges of the Supreme Court as advisers. The Equity system of the English Court of Chancery is adopted generally—varied however in some respects by particular rules of practice established by order of the Court, and by the provisions of several Acts of the Provincial Legislature. An appeal may be had, from the decisions of the Master of the Rolls, to the Chancellor, and from the latter tribunal to the Queen in Council, by petition.

THE COURT OF GOVERNOR AND COUNCIL.

This Court derives its jurisdiction from the Acts of Assembly 31st Geo. III., ch. 5, and 4th Wm. IV., ch. 30. It consists of the Lieutenant Governor or Commander-in-Chief, as President; the Members of the Executive Council for the time being; together with one of the Judges of the Supreme Court or the Master of the Rolls, for that purpose appointed by commission under the hand and seal of the Governor, as Vice President.

The Vice President and any two Members of the Executive Council, form a Court for the transaction of business.

The jurisdiction of this Court is confined to suits, matters and questions concerning marriage, and contracts of marriage—and divorce, as well from the bond of matrimony, as divorce and separation from bed and board, and alimony.

THE COURT OF VICE ADMIRALTY.

The Governor is Vice Admiral of the Colony, either by his Commission from the Crown as Governor—if such power is specially contained therein—or by a separate Commission from the High Court of Admiralty in England. In this Colony it is by the latter authority.

The Judge of this Court is appointed by the Crown. There are two branches of this Court, viz. a Prize and an Instance Court, held by separate Commissions. The former has never hitherto existed in this Colony, and would, if it did exist, be only applicable in time of war. The Instance Court has jurisdiction in suits for seamen's wages, pilotage, bottomry, damage to a ship by collision, contempt in breach of the regulations and instructions relating to Her Majesty's service at sea, and salvage and rights of Admiralty, notwithstanding the cause of action may have arisen out of the local limits of such Court. This Court has also jurisdiction in cases of seizures made for the contravention of the laws in force within the Province, for the collection of the duties on Timber. An appeal lies to the Queen in Council, by the Imperial Act 3d & 4th Wm. IV., ch. 51. By Statutes of the Imperial Parliament this Court also possessed jurisdiction over all cases of offences against the Laws of Trade and Navigation.

THE COURT FOR THE TRIAL AND PUNISHMENT OF PIRACY AND
OTHER OFFENCES COMMITTED ON THE HIGH SEAS.

This Court is constituted by Commission, and consists of the Governor, the Chief Justice, and the other Judges of the Supreme Court, the Members of the Executive Council, the Judge of the Vice Admiralty, the Provincial Secretary, the Provincial Treasurer, the Commander-in-Chief, Flag Officers, and Captains and Commanders of Ships of War on the station for the time being. This Court has no fixed times for sitting, but sitteth at any time when cases arise calling for the exercise of its jurisdiction. It is then held at any place within the Province, to be appointed by any three of the Members—the Governor, Chief Justice, or one of the Judges of the Supreme Court, or Judge of the Vice Admiralty, being one.

The jurisdiction of this Court is confined to Crimes committed on the High Seas, and the proceedings are conducted according to the same forms as are used in the ordinary Criminal Courts within the Province.

THE COURT OF ORDINARY AND SURROGATES' COURTS.

The Governor by the Royal Commission is the Ordinary of the Province, and as such has the power of collating to any Churches, Chapels, or other Ecclesiastical Benefices, within the Province, as often as any of them may happen to be void. By the same authority he issues all marriage licences. The other powers of the office are delegated to the Surrogates, one of whom is appointed by the Governor for each County, and has jurisdiction to grant probates of wills and letters of administration. From the Surrogates' Courts there is by the Act of Assembly 31 Vict., c. 61, an appeal to the Court of Chancery, in this Province, in all matters cognizable by the Surrogates' Courts. Such appeal must be filed in the registry of the Surrogate Court within thirty days after the decision of the Court, with a bond to the Surrogate with two sureties in the sum of £30, to secure the payment of the costs of such appeal.

OPENING AND CLOSING OF THE HUDSON RIVER AT ALBANY.

Observations, extending over the 31 years previous to 1848, make the mean time of closing of the Hudson River, the 13th of December, and the mean time of opening, the 16th of March; so that on an average it is closed 93 days, or a little more than a quarter of a year. The times of opening and closing, especially the former, are much more variable than the same periods for the River St. John, at Fredericton, N.B.

OPENING AND CLOSING OF SAINT JOHN RIVER AT FREDERICTON

TABLE C
TI

Opened.	Closed.	Days open	REMARKS.
1825	Apr. 15	Nov. 20	219
1826	17	11	211
1827	6	Dec. 3	211
1828	20	Nov. 19	213
1829	17	15	212
1830	18	29	226
1831	10	Dec. 1	235
1832	May 3	Nov. 15	199
1833	Apr. 10	5	219
1834	11	17	220
1835	May 1	23	206
1836	Apr. 28	19	205
1837	17	9	205
1838	May 1	25	208
1839	Apr. 25	23	236
1840	16	23	221
1841	27	27	214
1842	24	22	212
1843	26	13	202
1844	14	27	227
1845	23	Dec. 4	225
1846	6	Nov. 2	236
1847	2	20	254
1848	19	13	208

N. B.—The average period during which the River remains open is 218 days; it will, therefore, be shut 147 days, or two-fifths of the whole year. In 1832, the River was open for the shortest, and in 1847, for the longest period of which we have any notice.

FLOWERING OF FRUIT TREES IN 1847.

Zinc, - - - - -	7.03	439.4	

The above Table may be used for finding the *ultimate transverse strength* of any rectangular beam of Timber.

Rule.—When the beam is *fixed* at one end, and loaded at the other, the weight in pounds which it will support before breaking, will be obtained by multiplying the number opposite the kind of Timber in the third column of the above Table, by the breadth and square of the depth of the beam, both in inches, and dividing the product by the length, also in inches.

Note 1.—When the beam is *fixed* at one end and loaded uniformly throughout, the result obtained by the Rule must be doubled.

Note 2.—When the beam is *fixed* at both ends and loaded in the middle, the result obtained by the Rule must be multiplied by 6.

Note 3.—When the beam is *fixed* at both ends and loaded uniformly throughout, the result obtained by the Rule must be multiplied by 12.

Note 4.—When the beam is *supported* at both ends and loaded in the middle, the result obtained by the Rule must be quadrupled.

Note 5.—When the beam is *supported* at both ends and loaded uniformly throughout, the result obtained by the Rule must be multiplied by 8.

N.B.—Two-thirds of the foregoing results are reckoned fully sufficient for a permanent load.

MENTAL ARITHMETIC.

RULES FOR CALCULATING INTEREST.

At 5 per cent per annum.

At 6 per cent.

FOR MONTHS.

Rule.—Multiply the Principal by the number of months, and the pounds in the product considered as pence will be the answer; thus

Rule.—Multiply the Principal by the number of months; cut off the right hand figure of the product and considering each unit in it as $1\frac{1}{5}d$, and the remaining figures as shillings, you will have the answer.

Required the interest of £947 15s. for eight months, at each rate.

£	s.	£	s.
947	15	947	15
	8		8
12) <u>7582</u>	0	2,0,0) <u>75,82</u>	0
2,0) <u>63,1</u>	10	Ans. <u>37 18</u>	$2\frac{2}{5}$ at 6 per cent.
<i>Ans. 31 11 10 at 5 per cent.</i>			

FOR YEARS.

Rule.—Multiply the Principal by the number of years, and consider the pounds in the product as shillings.

Rule.—Reduce the given years to months, and proceed as above;—thus:

Required the interest of £265 10s. for 7 years, at each rate.

£	s.	£	s.
265	10	265	10
	7		7
2,0) <u>185,8</u>	10	1858	10
<i>Ans. 18 10 at 5 per cent.</i>		2,0,0) <u>223,0,2</u>	0
		<u>£111 10</u>	$2\frac{2}{5}$ at 6 per cent.

FOR YEARS AND MONTHS.

Rule.—Consider the years as shillings and the months as pence, then take such part or parts of the Principal as those shillings and pence are of a £; thus

Required the interest of £847 8s. 3d. for 4 years and 6 months,

	£ s. d.	£ s. d.
Y. s.	£ 847 8 3	847 8 3
4 as 1 = $\frac{1}{5}$	<hr/>	<hr/>
M. d.	6 as 6 = $\frac{1}{6}$	6 ≠ 9 = 54 months
	<hr/>	<hr/>
	169 9 7 $\frac{1}{2}$	5084 9 6
	21 3 8 $\frac{1}{2}$	9
	<hr/>	<hr/>
£190 13 3 $\frac{1}{2}$ at 5 per cent.	2,0,0) 157,6,0 5 6	<hr/>
	<hr/>	<hr/>
	£228 16 0 $\frac{1}{2}$ at 6 per cent.	<hr/>

FOR DAYS.

Rule.—From one-third the product of the principal, and number of days, cut off the right hand figure, and consider those remaining as pence.

Rule.—From one-third the product of the principal, and number of days, cut off the two right hand figures, and consider the remaining as shillings.

From the result in each case deduct $\frac{1}{12}$ for every 6 shillings.

Required the interest of £547 for 96 days, at each rate,

£	£
547	547
32 = $\frac{1}{3}$ the number of days.	32
<hr/>	<hr/>
1094	1094
1641	1641
<hr/>	<hr/>
$1750,4 = 1750\frac{4}{10} = 7\frac{4}{5} 10\frac{4}{10}$	$175,0,4 = 175\frac{4}{100} = 8\frac{4}{100} 0\frac{4}{100}$

As each of these results is calculated at the rate of 360 days in the year, we deduct $\frac{1}{12}$ for every 6s. or $\frac{1}{72}$ of the whole, which rectifies for the real year.

£ s. d.	£ s. d.
Thus : from 7 5 10 $\frac{4}{5}$	From 8 15 0 $\frac{4}{100}$
deduct 0 2 0 $\frac{2}{5}$	deduct 0 2 5
<hr/>	<hr/>
leaving £7 3 10 $\frac{2}{5}$	leaving £8 12 7 $\frac{1}{2}$ the correct ans.

leaving £7 3 10 the correct ans.

From these two rates may be derived many others, as follow :

For 5 $\frac{1}{2}$ per cent. find at 5 per cent. and add $\frac{1}{10}$ part.
" 4 $\frac{1}{2}$ " " 6 " and subtract $\frac{1}{4}$ "
" 4 " " 6 " and " $\frac{1}{3}$ "
" 3 " " 6 " and take $\frac{1}{2}$ "
" 3 $\frac{1}{2}$ " " 3 " and add $\frac{1}{6}$ "
" 2 $\frac{1}{2}$ " " 5 " and take $\frac{1}{2}$ "
" 2 " " 6 " and take $\frac{1}{3}$ "
" 1 $\frac{1}{2}$ " " 6 " and take $\frac{1}{4}$ "

Commission or Discount at 1 per cent. may be found by doubling the right hand figure of the pounds in the principal as pence and fifths, and the next figure to the left as shillings; the remaining figures will be pounds. Thus :

Required the commission on £582*4* at one per cent.

£58*2*,*4*

Here doubling the 4 for pence and fifths we have $8\frac{2}{5}d$, or $9\frac{3}{5}d$.

and doubling the 2 for shillings, we have 1*s*. $9\frac{3}{5}d$.

Thus the whole reads, £58*1*,*9* $\frac{3}{5}$, which is the correct answer.

Commission at $\frac{1}{2}$ per cent. may be found by simply cutting off the right hand figure as pence and fifths, and considering the remaining figures as shillings,---thus:

Required the Commission on £32*7*,*1* at $\frac{1}{2}$ per cent.

For £32*7*,*1* read $627s. 1\frac{1}{2}$ = £31*7*,*1* $\frac{1}{2}d$. Answer.

To Convert Sterling into Currency.

Sterling money may be changed into New-Brunswick Currency by adding $\frac{1}{5}s$, and Currency into Sterling by deducting $\frac{1}{6}s$. This is the mode of reckoning adopted in the Commissariat Department.

Required the value of £7*15* Sterling, in New-Brunswick Currency.

To £7*15* From £8*1* Cur.

Add $\frac{1}{5}s$, 1*9* Deduct $\frac{1}{6}s$, 1*9*

Answer, £8*0*,*4* Currency. Answer, £7*45* Sterling.

To Convert Sterling into Dollars (at 4*s*. 2*d*) and Cent.

Reduce the former to pence, double the amount and call it cents.

PRICE OF LAND.

The following simple method of calculating the price of Land by the acre, may be found useful in this country.

Rule.—Consider the acres as pounds, multiply the rods by 5 for shillings, and the perchs by $1\frac{1}{2}$ for pence; this will give the price at £1 per acre. Multiply by the price per acre and it is done. Thus—

Required the price of 27*t*. 3*r*. 2*p*. of land, at £1*6s. 8d.* per acre.

<i>o.</i>	<i>r.</i>	<i>p.</i>
27	3	24
<hr/>		
5 12		

6*s. 8d.* = $\frac{1}{5}$ £ $\left\{ \begin{array}{l} 27.18 \quad 0 \text{ at } £1 \text{ per acre.} \\ 9.6 \quad 0 \text{ at } 6s. 8d. \text{ per acre.} \end{array} \right.$

£37.4.0 at the given price.

Boards of various lengths, breadths and thicknesses may be readily brought into feet by considering the feet in length as inches, and multiplying by the number of inches in the other dimensions.

Thus:—How many feet are there in a plank 36 feet long, 10 inches wide and 2 inches thick?

For 36 feet read 36 inches, or 3 feet,

then 10 inches in width

give $\frac{30}{2}$ feet at 1 inch thick.

Answer, 60 feet.

	400	0	15.78	0	9.21	0	13	0	18	0	5.42	0	19	0	0.0
	500	0	19.73	0	6.08	0	16	0	5.26	0	9	0	7.75	0	0.0
	600	0	23.67	0	9.70	0	19	0	8.71	0	19	0	4.27	0	0.0
	700	0	3.62	0	13.32	0	3	0	16	0	9	0	14.42	0	0.0
	800	0	7.56	0	18.493	0	6	0	3.62	0	18	0	10.85	0	0.0
	900	0	11.51	0	0	0	8.55	0	9	0	7.07	0	17	0	0.0
	1000	0	3.45	0	3	0	0.16	0	12	0	10.52	0	18	0	6.71

By means of the foregoing Table the interest of any sum from one shilling to £2000, for the times therein mentioned, may be readily obtained. Thus, to find the interest of £1742 8s. for 90 days at six per cent. per annum, we have :-

$$\begin{aligned}
 \text{Interest of } & \text{£}1000 \ 0 \ 0 \text{ for } 90 \text{ days} = \text{£}11 \ 15 \ 10.68 \\
 & \quad " \quad 700 \ 0 \ 0 \quad " \quad = 10 \ 7 \ 1.48 \\
 & \quad " \quad 400 \ 0 \ 0 \quad " \quad = 0 \ 11 \ 10.03 \\
 & \quad " \quad 200 \ 0 \ 0 \quad " \quad = 0 \ 0 \ 7.10 \\
 & \quad " \quad 0 \ 8 \ 0 \quad " \quad = 0 \ 0 \ 1.42
 \end{aligned}$$

Therefore the Interest of £1742 8 0 for 90 days = £25 15 6.71

It will also be obvious that the table may be used for computing the interest of any sum for any specified number of years and days.

APPENDIX.

ANNUAL REPORT OF THE SAINT JOHN AGRICULTURAL SOCIETY.

We, the Directors of the Saint John Agricultural Society, beg to submit the following REPORT of our proceedings during the past year:—

IMPORTATION OF SEED.

A large quantity of seed Oats and Barley, and parcels of Turnip, Carrot, and Beet seed, were imported by us from Scotland last Spring, and were distributed through the County. The beneficial effect of the introduction of good seed, has been instanced in the improved quality of the Oats which of late have been brought to market. The congeniality of this climate to the Oat crop, is also proved by the fact, that samples of Polish and Potch Oats, from seed imported by this society four years ago, were exhibited at the Fair, considerably heavier than the original seed.

OAT MILLS.

Feeling the necessity that exists for Oat Mills in this County, in convenient situations, (there being none at present in the County,) we offered three Premiums, of £25 each, in addition to the Provincial Bounty, for the erection of good Mills and Kilns, at Golden Grove, Back River, and Musquash; and we are happy to state, that Oat Mills are now in course of erection at these places.

THE CROPS OF HAY, POTATOES, AND GRAIN.

The wet weather which has prevailed this season, has been very unfavourable to the crops. Hay was generally abundant, and well saved; but Potatoes were early affected with the disease in this County, long before their arrival at maturity, and probably half of them rotted in the ground. The cause of the disease still remains a mystery, and none of the proposed remedies have had the slightest effect.

Oats were generally an excellent crop. From the cold wet weather early in June, Barley received a check from which it did not recover, and the crop was light. Samples weighing 54 lbs. to the bushel were, however, shown at the Fair. Wheat was generally much injured by the rust; but the weevil has been scarcely heard of in this County the present season.

GREEN CROPS, AND FEEDING CATTLE.

Impressed with a conviction of the vital importance, to the Agricultural interest, of a large increase in the cultivation of green crops, such as Carrots, Turnips, Beets, and Parsnips, we have tried every means we could devise to induce farmers to turn their attention to this branch of husbandry; and we are happy to report, that patches are now appearing on almost every farm. It must be borne in mind, that these crops require a much greater share of attention during their growth than potatoes. If Turnips and Carrots are sown in drills, on a light, dry, rich soil, thinned to the extent of ten inches for Turnips, and six inches for Carrots, and the earth kept loose with the Cultivator until the leaves meet between the rows, there is nothing in this climate to prevent the diligent farmer from calculating on the ordinary return of Britain—say from 800 to 1500 bushels per acre.

Some idle controversy has arisen as to the disposal of green crops when grown. Now, it is well known that horses will thrive well on Carrots, and that cattle, sheep, and pigs will fatten on Turnips. It is also certain, that if cows are kept in good condition through the winter, by getting a suitable allowance of Turnips, they make a very different show at the milk pail in spring, than if life is merely kept in them with hay and water. The feeding of Stock, with the quantity required for family consumption, will probably absorb all the Turnips and Carrots likely to be raised for some years to come; and no good farmer would think of carrying his green crop to

market while his cattle were starving at home. We do not look forward to any great improvement in farming, until a larger surplus of green food is obtained. Without roots, cattle cannot be fed profitably; without cattle, no manure; without manure, no grain.

It is sometimes argued, that owing to the low price of beef in our market, it will not pay to raise green crop for the food of cattle. As this is a subject of much importance, we will, at some length, state our views upon it.

In the St. John Market, Beef seldom exceeds twopence per pound in the autumn. It is a fair question to ask, why we do not export it to the British Market, which is open to us, and where Beef is worth on the average, fivepence sterling per pound. The answer is, that our Beef is never more than half fed—only grass-fat—and will not stand curing. When used fresh, it is tough and unpalatable, and if salted, it hardens into mere junk. All the Beef required for the use of ships, has therefore to be imported, not because it is cheaper in other markets, but because our farmers will not furnish a suitable article. Having no green crops, the cattle cannot be kept through the winter. When the grass fails, anything at all fit for killing is hurried to market, and being only fit for immediate use, the price is kept far below the real worth of the article. In spring, the price advances, but only for the benefit of our more provident neighbours, for our farmers cannot then supply the demand, and we have to import Fresh Beef.

In considering this matter, we have also to observe, that there is a great waste in killing cattle half fed. It costs far more to raise an animal to the weight it will be at maturity, with ordinary feeding, than for the additional weight and value which may be given by higher feeding—or, in other words, than for the layers of fat, the rounding of the ham, and the accumulation of tallow which distinguish a fat animal from a lean one.

To remedy the existing evil,—to equalise the price in our own market, and not only stop all importation, but also furnish a valuable and profitable export, it is only necessary, supposing the happy time to have arrived when turnips are overflowing, that our farmers should make up their minds never to allow an animal to leave the farm until he is fed up to the highest point; until he has attained the greatest value. If the butcher will not then buy at a fair price, the exporter will.

To make our meaning more plain,—we will suppose it takes £12 worth of food and labour to raise an Ox to the condition in which he is usually brought to market—his beef will then sell at twopence per pound, and for eating it is perhaps dear at that. By the expenditure of perhaps six pounds' worth of Turnips, Oats, and Straw, on this animal, not only would his weight be considerably increased, but the value of the Beef would be doubled. It is scarcely necessary to notice the foolish argument, that good Beef will bring no more than ordinary in our market. Let good Beef be made the rule instead of the exception, and it will bring its value, as surely as water finds its level. It is a commercial truism, that “a good article will always command a market, and bring its value.”

In Britain, the breeder of cattle rarely deals directly with the butcher. There, cattle dealers traverse the whole country, and purchase cattle and sheep, in herds or droves, to be delivered at stated times. These are re-sold, generally at fairs, to farmers in the vicinity of the larger markets, who stall-feed them until wanted. The demand and supply being thus made dependent on each other, prices are kept steady. With us, when the farmer brings his cattle to market, he has little or nothing to say in fixing the price. He *must* sell, there being no market for lean cattle, as farmers rarely buy from farmers. When cattle arrive at market, generally at a distance of 50 to 150 miles, there is only one way in which they can be disposed of—the butcher is the only buyer. There are no graziers, or feeders, to be tempted by a low price, and the cattle cannot go back to their owner—he is too far off, and has no food for them—therefore they must be killed, and the beef which cost the poor farmer three-pence per pound, is too often sold at one penny.

A better system of farming is the only remedy for this state of things, as thereby, a division of labour would be introduced. Those farmers at a distance from the market, where hay is cheap, would be breeders; those nearer, stall-feeders. The

supply being furnished, packers and exporters would soon make their appearance. By this system, farmers would not be compelled to make sacrifices. If their cattle did not sell to-day, they would to-morrow, and in the meantime be increasing in weight and value.

We know of but one farmer in this vicinity who has attempted farming on this principle; and he, although paying a high rent, has been successful, as he deserved to be.

We have noticed in recent returns from Ireland, where the potato is extensively cultivated, that the number of acres in turnips is more than double the number in potatoes. In this country, farmers are yet debating as to the propriety of raising *any*; but now that the potato-crop is so uncertain, it must cease to be a question.

BREED OF CATTLE.

We have not thought proper to do more for improving the breed of cattle, than to offer liberal premiums at the annual show. Several private individuals have, however, imported Ayrshire stock, and thorough-bred Bulls are being scattered through the Country in that way, the effect of which will soon be visible.

A great hindrance to the increase of good stock, arises from the farmer not being aware of the difference in value between one breed and another. Many argue that cows are but cows ; and that if those we have, were well kept and carefully bred, they would be as good as any others. But the difference is this—in older counties great care has been taken in breeding from the best specimens for many generations, and the result has been, that in all thorough-bred classes, comprising the Durham, Alderney, and Ayrshire breeds, a degree of perfection has been attained, in milk-giving and easily-fattening qualities, which give to these varieties a value, requiring only to be known to be appreciated. It is true, that by following a similar course, we might arrive at the same results ; but how much cheaper and easier is it, to step in and take the benefit of the labours and experience of others ? It is true also, as many argue, that these improved breeds will not stand the hard usage that our breeds get ; but if we mean to farm profitably, cattle must get *no* hard usage. No cows will do their duty in summer unless warmly housed and well fed in winter. The superiority of the improved breeds over the common, consists in the head, horns, necks, and legs, or parts of least value, and which may be called offal, being reduced to the least possible dimensions ; while the large ham, and deep chest, for fattening, and the square, well-set udder, large milk-veins, mellow skin, and kind temper, for milk-giving, being the most valuable properties, are all developed to the greatest possible extent. In consequence of possessing these properties, the improved cattle far exceed the common breed in intrinsic value, and if our farmers could be induced to breed from them, the wealth of the Country would be materially increased. As an instance of the value of good cattle, and the profit to be derived from breeding them, we may mention, that agents of the Swedish Government, during the last summer, purchased in Ayrshire, three hundred two-year-old heifers, at a cost of £10 sterling each.

To show that these remarks are not uncailed for, we may state, that although we have kept an imported Ayrshire Bull in the County for the last three years, but few farmers availed themselves of the opportunity ; and when the animal was offered for sale at the late Fair, surrounded by a number of his descendants far surpassing anything ever before exhibited in the County, no one appeared to want him, and he was sold at £6 15s. for the purpose of being converted into beef, although a similar animal could not be imported for fifty pounds.

BUTTER AND CHEESE.

This County is remarkably deficient in Butter and Cheese. No Cheese has yet been produced for competition, and we are not aware that any has been made for market in the County.

We would urge upon farmers the propriety of turning their attention more to their dairies. If the fogs of the Bay of Fundy cause grain crops to be backward and uncertain, they operate in favour of hay, pasture, and green crop. The City of Saint John affords an excellent market for Butter ; all that comes sells readily for cash, by wholesale, at an average of ninepence per pound, and at that price will make a safe export to Great Britain. Small lots have been sent as a trial even into

the best butter districts in Scotland, and sold at one shilling sterling per pound. There is as yet, however, no surplus for export, our own market absorbing the whole produce of the neighbouring Counties, and of the Northern portion of Nova-Scotia, besides occasional imports, of considerable extent, from the United States and Canada.

The quality of our Butter cannot be surpassed, and is not equalled by any that can be imported.

Of Cheese, we are compelled to import largely from Britain and the United States, at the cost of sixpence to one shilling per pound. The Cheese made in New-Brunswick sells from two-pence to fivepence per pound, and is generally very inferior. The cheapness and inferiority arise from two causes—first, from the smallness of the dairies, it being necessary that fifteen or twenty cows should be kept to make good Cheese; and secondly, from great carelessness in making. In some cases, no attention is paid to the temperature; and in others, the whey is not properly extracted; in consequence, the Cheese will not keep to ripeness, but sours, beats, or becomes putrid. There is no reason why Cheese, as good as that made in England, should not be made here—that it can be done, is proved by the fact, that occasionally one Cheese in a lot is found equal to the best Cheshire, and it would only require that all should be of equally good quality, not only to stop the importation, but to turn the stream the other way.

ROTATION OF CROPS.

Much complaint is made that the white weed, or bull's eye (ox-eyed daisy) is overspreading the County, displacing the grass, and requiring acres to be mowed over to get a ton of hay. Many also grumble against the climate, on account of moss springing up, and destroying the grass in a few years after the land is laid down.

We would enquire of those who complain, whether these evils do not arise from their exacting more from the land, than any land, in any climate, is capable of giving. In what country but this, do farmers sow down land, and expect it to yield hay forever after? A proper rotation or change of crops is the first step in good husbandry, and that step has yet to be taken in this Province. Without it, profitable crops need not be anticipated. The reason of the thing would be evident to the farmers, if they would only observe the process followed by nature, in the forests which surround us. It will be seen, that a growth of hard-wood (birch, beech or maple) invariably follows the cutting or burning a forest of soft-wood (spruce or pine), and in like manner, that hard-wood trees always follow after the destruction of those of the fir tribe. Nature is inexorable; we cannot contravene her laws. If we will not alternate our crops, she will do it for us, by introducing a course of weeds and moss.

DRAINING.

As draining is now of great importance in agriculture, and but little understood in this Province, we will offer a few remarks on the subject, with the view of directing attention to its uses and value.

DRAINING, as understood thirty years ago in England (and to this day with us), merely meant the making of channels to carry off surface water, and underground drains to dry bogs or cut off springs. It has now an entirely different meaning in the agricultural world. Mr. Smith, of Deanston, near Edinburgh, was among the first to practice and explain THOROUGH DRAINING, as it is called. His system (and we may say that it is now recognized as the only true system) is, that *all* land requires to be drained—that the depth of loam, or soil containing the food of plants, seldom exceeds a few inches, resting on a subsoil or pan of clay, or hard gravel, saturated with water. By making drains from two and a half to five feet in depth, at every twenty or thirty feet, the land becomes dry; air takes the place of water; every shower furnished with a stock of ammonia, permeates the soil, and the result is, that instead of a few inches there are as many feet of fertile loam, the action of the atmosphere being sufficient of itself to produce the change, although to hasten the process, subsoil ploughing is made part of the system.

The change produced by the introduction of thorough draining in Britain, is said to be truly astonishing. Not only has the produce been greatly increased, but wheat and turnips have been grown at elevations, and in districts, where their cultivation was not before thought possible. By it, crops have been rendered less liable to disease,

and harvest has been forwarded nearly a month. This will be better understood, if we reflect, that when water is allowed to remain in the soil until removed by evaporation, the heat of the sun, and air, instead of being imparted to the land, will actually, thro' this process, produce an intense degree of cold. On the other hand, were the soil so dry as to allow the rain to pass through, it would imbibe heat from every ray that fell upon it.

The British Government has considered this improvement of so great importance, that during the last three years large sums have been loaned to all applicants, to be expended in drainage, under the superintendence of inspectors. These loans are repaid by annual instalments of $6\frac{1}{2}$ per cent., for about twenty years; and as the money is borrowed by Government at 3 per cent., these payments cancel the loan and interest.

Tiles are chiefly used for draining, and are supposed to be cheapest, even when there are stones on the land. In New-Brunswick tiles have not yet been tried; they cost about £1 per thousand in Britain, and might be made as cheaply here if there were a sufficient demand. It has been objected in this Province that drainage by tiles would not answer, in consequence of the depth to which frost penetrates; but to this we reply, that frost will not penetrate so deeply in dry land as in wet—dry earth, the interstices filled with air, being nearly equal as a non-conductor to a covering of snow.

We are very sure it would pay the farmer better to spend a few spare days in draining, than in hanging about the market with a wagon-load of oats or potatoes, to be exchanged for Genesee flour; and his spare capital might be invested much more safely and profitably in draining, than in logging, or horse-racing.

THE RUST IN WHEAT.

The following remarks as to one of the causes of rust in wheat, are thrown out rather as a supposition than an opinion, with the view of exciting enquiry.

The oat draws nutrient from the earth by side roots, which spread over the ground. The wheat-plant has similar rootlets; but in addition thereto, when about to head, sends down a tap-root into the earth, for the purpose, it may be presumed, of procuring that additional nutrient which its large rich ear requires; and this tap-root has been known to go down to the depth of four feet. We may observe, that up to the time of sending down the tap-root, the wheat is the hardiest and thriftiest of all the cereals, but afterwards, the most liable to disease. This delicacy is readily accounted for, when we consider that land is generally undrained—at not more than a few inches of soil get the benefit of sun, air, and manure, and that, therefore, the root must encounter in its downward travel, nothing but disappointment. It comes in contact with the cold clay, or a sour, wet subsoil, turns back in despair and dies. In accordance with the laws of nature, insects, or rust, which is itself a fungus, or vegetable insect, come to finish the work of devastation on the dying plant. The forlorn farmer rails at the climate, and cries out that his wheat is killed by rust, while, in fact, it has died from starvation—from the want of that food which, as a provident husbandman, it was his duty to have provided for it.

THE FAIR AND CATTLE SHOW OF 1848.

The Annual Fair took place on the 5th October instant, and a list of the premiums awarded has already been published. The show was the best we have yet had; the improvement in the young stock, caused by the introduction of the Ayrshire and Alderney breeds into the County, was evident and gratifying. There was also considerable competition, and a respectable show of grain, butter, and vegetables.—Three samples of oats which were exhibited, weighed respectively 47 lbs., $46\frac{1}{2}$ lbs. and 44 lbs. the bushel.

We have adjudged the first premium, for the largest quantity of Turnips grown, to Mr. James Ingledew; and the second premium to William Hawkes, Esq. We have awarded the first premium for carrots to Mr. Ingledew; and the prize for the best report on the saving of manure, to Mr. Hawkes. The report of Mr. Ingledew on the culture of carrots, and the reports of Mr. Hawkes on turnips, and the saving of manure, are appended hereto, and will be found well worthy of attention. We hail these reports as the dawn of better things, and of more prosperous times.

A PROVINCIAL BOARD OF AGRICULTURE.

In our report of 1847, we called the attention of this community, and of other Societies throughout the Province, to the propriety of urging upon the Legislature, the adoption of energetic measures by means of which the agriculture of the Province might be raised from its present disgraceful and ruinous position.

The only results of our appeal were, a grant of £500 to import race-horses, and the enactment of a law to prevent the growth of thistles!

The time seems now to have arrived, however, when a continuance of apathy and neglect, on the part of the government and the people, in relation to agriculture as a subject of the most vital importance to the Province, will certainly and speedily bring about universal bankruptcy, and the depopulation of the country. As we do not content ourselves with the creaking cry of "something should be done," we proceed to state what we conceive *can and ought* to be done.

In the first place, we propose that a Provincial Board of Agriculture should be formed, to be composed of those who, from their position, energy, business habits, and acquaintance with the state of agriculture in this and other countries, would be most likely to bring forward, and *carry out*, measures of improvement. Sufficient funds should be placed at the disposal of this Board to enable it to carry on its operations with vigour and effect.

Next, as to the work to be done. It is not so much the want of industry, as the want of knowledge, which renders farming unsuccessful in this Colony. Our native farmers, as might be expected, follow in the footsteps of their fathers; they neither see, nor hear of, any better methods than those of their ancestors. Those emigrants who undertake agricultural pursuits, do as they see others doing; and as few, or none, of these new settlers have been bred to farming, they introduce, if possible, a worse system than the old one—an exclusive reliance on the potato.

The mode of culture adapted to the virgin soil—to the rich leaf mould newly rescued from the forest—will impoverish and render valueless the cleared fields which now compose so much of our farms. Yet the cultivation by which these worn-out fields could be made to produce far more than ever the *burnt land* did, is unknown and unpractised. There is no rotation of crops—no draining—no proper ploughing—and but imperfect manuring, as hay, and most of the other produce are sold off the farm; consequently the land is almost barren. Only uncertain and short crops are produced, and the universal cry is—"No use trying! Farming in this country will not pay." And no wonder—such farming would not pay in any country.

To introduce, and encourage, a better system of farming, would be the chief business of the Board.

There are various ways by which agriculture is encouraged in other countries. The Agricultural Boards of the United Kingdom employ lecturers on agriculture, who visit every part of the country. The Boards also establish model farms, and agricultural schools, in which the best modes of agriculture are carried on, within the view of all, and at the same time means are adopted, by a system of accurate accounts, of furnishing ample knowledge as to the profit and loss of farming upon sound principles. The Boards have frequent Shows in different parts of the country, where large premiums are distributed for improvements in stock, or in modes of cultivation. It is notorious, that Great Britain owes her present elevated position in agriculture chiefly to these means. In Holland, Germany and Sweden, agricultural colleges with model farms attached, are considered as necessary as courts of law or churches. The agriculture of a great part of Scotland, was rescued by the Highland Society from much such a state as that of New-Brunswick is now in, but little more than half a century since.

There are peculiarities, in our position, however, which must affect the mode of procedure. From the protection heretofore enjoyed by our timber in the British market, and the exclusive encouragement given to that branch of trade by our own Legislature, timber-getting, and the branches of business intimately connected with, and depending upon it, have absorbed all the energy, industry and capital of the Province. Agriculture, the only source of permanent prosperity to any country, has not only

been in other parts of the country farms) would be that farm has been those owing to that which Australian, with country they originally fore set of embankment of the p

To re who are favourable that few farms, in similar, and this otherwise in this in ample e

St.

been neglected, but absolutely sacrificed. In this country, capital accumulated in other pursuits, instead of being invested in the improvement of land, as in most other countries, has been taken (with the addition of all that could be scoured from the farms) to supply lumbering-parties, and to build saw-mills. Farming, thus neglected, would of course prove unprofitable; and farmers themselves being loudest in crying out that farming would not pay, the character of the Province, as an agricultural country, has been sunk to the lowest possible ebb, not only among ourselves, but in those quarters from whence we might expect assistance and encouragement. It is owing to this erroneous opinion of the agricultural capabilities of New-Brunswick, that while foreign capital and skill are pouring into the United States, Canada and Australia, the emigrants to our shores have been generally poor and ignorant. Farmers, with capital, pass us by,—the people of New-Brunswick say it is not a farming country; and the wealthy emigrant takes their word for it, naturally supposing that they ought to know best.—That New-Brunswick is not the land for farmers is therefore set down as an established fact,—it is so stated to emigrants at the various ports of embarkation throughout the United Kingdom, and it is urged upon them in many of the publications for their information and guidance.

To remove this false impression, and make known to farmers in other countries, who are inclined to emigrate, those facts,—that our climate and seasons are quite favourable to the growth of wheat, maize, barley, oats, hemp, and all vegetables—that few countries possess a greater proportion of soil fit for cultivation—that freehold farms, ready for the plough, can be obtained for less than the annual rent paid for similar farms in older countries—will be the duty of a Provincial Board of Agriculture; and this, with the task of introducing into the country, by means of model farms and otherwise, a system of farming which *will* pay, and the labour of providing instruction in this new system, to farmers' sons and others, throughout the Province, will furnish ample employment to the Board for many years to come.

The whole success of the Board will of course depend upon the appointments being made of those who will fit the offices, and not from among those whom the offices will fit.

We trust that the other Agricultural Societies, and the friends of Agriculture throughout the Province, will give serious attention to these suggestions, and co-operate with us in bringing this subject under the notice of the Government and the Legislature. As our sole motive is an earnest desire to promote the welfare of the country, we shall hope to be excused for thus earnestly pressing our views and opinions upon the people generally, and seeking their co-operation in a matter of such vital importance. The occasion is so pressing, that it behoves every man to be “up and doing.” Our *one* article of export is now a drug in every market; and as our farmers do not even produce sufficient food for themselves, we *must* change our course or the Province will be deserted.

ADDRESS TO FARMERS.

To the Farmers of New-Brunswick we would say:—The prosperity of the country depends upon you. It is only by well-directed energy and economy on your part that a surplus of food can be produced; and until we have that surplus, no manufactures can be carried on profitably. Will you allow it to be said, that while farmers in other countries, pressed down by heavy rents and taxes, and without any right of property in their improvements, are causing their fields to yield double, that **you**—the owners of the soil—with a climate abundantly favourable for almost every crop—with miles on miles of fertile alluvial vallies, and hills that may be cultivated to their very tops—with a government of your own choosing, and lighter taxes than any country in the world—that **you** are not only not improving, but are actually going backward!

Farmers of New-Brunswick! You stop the way—you must move onward!

Signed by order of the Board.

ROBERT JARDINE, President,

M. H. PERLEY, Corresponding Secretary.

St. John, October 20th, 1848.

MR. INGLEDEW'S REPORT ON THE CULTIVATION OF CARROTS.

MARCH, OCTOBER 21, 1848.

To the President of the Saint John Agricultural Society.

SIR—I enclose a certificate, from Messrs. Bowes and Ayers, of the quantities of turnips and carrots raised by me this year, as measured by them, amounting to 840 bushels of turnips, and 500 bushels of carrots.

As carrots are a root I would highly recommend to the notice of farmers, I will state my mode of cultivation.

I take a piece of light, loamy land, which I have had in green crop, and I plough it in the fall as deep as I can. In the spring, I put on thirty loads of well rotted manure to the acre, and spread it. I then cross-plough, and harrow, repeating the operation if the soil is not well pulverised. I then strike out drills two feet apart, and strike off the top of the drills with an iron rake—then sow the seed, after which, I rake as light as possible. Carrot seed should be in the ground not later than 20th May. As soon as weeds appear, I pass the cultivator between the drills, and also apply the hoe, and fingers. The large Belgian carrot ought to be thinned to six inches apart; the early horn carrot to three inches.

I mix the seed with fine earth ten days before sowing, dash a little water on top, and set it away in a moderately warm place, until next day. Then, I break the crust, mix the whole, and dash water as before. I repeat this operation daily, for the time above mentioned, taking care not to make the seed too wet, but keeping it so, that it can at any time be separated with the fingers.

The following is a statement of the cost and value of my carrot crop:—

COST.	£	s	d
Ploughing and labour for one acre,	-	-	-
Manure 30 loads, at 5s per load,	-	-	-
	<hr/>	<hr/>	<hr/>
	£4	10	0
	7	10	0
	<hr/>	<hr/>	<hr/>
	£12	0	0
VALUE.			
Five hundred bushels of carrots, which I estimate,	-	-	-
as worth 2s. 6d. per bushel,	£62	10	0
	<hr/>	<hr/>	<hr/>
Profit on the acre	£50	10	0

Last year, I furnished an account of my way of cultivating turnips, which I cannot better, further than to say, that this season I sold 22 perches of yellow turnips as they stood in the ground, for the sum of £4 10s., being at the rate of £33 per acre.

I wish to explain why my crop was not so heavy this year as it was the last. My land was a cold, wet, clay loam, and the season being very wet, the crop is not half what it might have been in a drier season. When farming in England, I was extensively engaged in raising turnips, and commonly could count upon 800 to 1200 bushels the acre. I should say, that the climate here suits turnips very well, the summer being warm, and the autumn long and mild; but turnips must have a very mellow soil, and that we cannot have without thorough draining, which my limited means have not as yet allowed me to have done. I believe that the want of draining is the only reason why I do not raise the same weight of crop here, as I used to do in England.

JAMES INGLEDEW.

REPORT OF WILLIAM HAWKES, ESQUIRE, ON TURNIPS.

BLACK RIVER, OCTOBER 9th, 1848.

To the President of the Saint John Agricultural Society.

Sir,—I was induced, the year before last, by the reports and recommendation of your Society, to try the cultivation of turnips. The land was well prepared and manured, but still, the crop did not come up to my expectation, and I had almost

made up to turnip unless the well cleared Mr. Ing for any

made up my mind, that you were too sanguine as to what might be done in the way to turnip-raising. In your last year's report, I noticed Mr. Ingledew's directions, that unless the young plants were thinned out to the extent of six inches, and the earth well cleared away from the remaining plants, there would not be half a crop; and seeing this, I thought I would try again. I am happy to tell you, that I have followed Mr. Ingledew's directions, and would not exchange the acre of turnips I now have, for any three acres of any other crop I have on my farm.

The produce of this acre is 600 bushels, of which I will send you a certificate,	
600 Bushels of Turnips, worth to me for family use, and feeding my Stock, 1s. per bushel,	£30 0 0

As I am satisfied that when we become better acquainted with the cultivation of the turnip, we will be able to obtain a much greater yield, I intend to follow it up, in a great measure, instead of the potato, which has become so very uncertain, and I would like to see all farmers do the same. Your obedient Servant,

WILLIAM HAWKES.

REPORT OF WILLIAM HAWKES, ESQUIRE, ON MAKING AND SAVING MANURE.

BLACK RIVER, OCTOBER 11th, 1848.

To the President of the Saint John Agricultural Society.

Sir.—As your Society has offered a premium for the best report on the making and saving manure, I will tell you my own experience in the matter, not to get the premium, but for the purpose of assisting you in your efforts for the improvement of farming among us, of which, I must say, there is great need. I have often been filled with pain at seeing the poor cattle shivering in their stalls, in barns where they were exposed to every wind that blew, and the manure thrown out of a hole in the wall, there to lie, and have all the good washed out of it, not only by the rain, but by the dripping from the roof; and this, I am sorry to say, is a true picture of nine out of ten of all the barns in the country which I have seen.

Now, I will venture to say, that no farmer, however humble his circumstances, but might keep his cattle on far less feed, and double the value of his manure, by merely placing the cattle, with their heads inwards, on the south side of his barn, with close boarding before and over them, and then, throwing over the manure a shed, ten feet wide, covered with slabs, or spruce bark, if shingles cannot be afforded.

I followed the fashion of the country when I first began farming, but found that my cattle took the horn distemper, and would not thrive as I thought they should. My manure was also mixed in winter with layers of snow, and all the substance was washed out of it in Spring, so I did not perceive the land to be much the better for it. I tired of this, and saw that I must either change my plan, or give up farming.

I therefore built a barn on the following plan. It measures 36 by 26 feet, and fronts to the South, with large doors at both ends, and a passage running along the south side. On that side the land falls away, so I brought the roof close down to the ground. By doing this I got breadth enough for a cow-house, and a manure-house behind. The cows stand with their heads to the barn, and I feed them from the thrashing floor. I sank the floor of the manure-house considerably, and left it open at each end, so that I can drive a team right through. My manure never freezes now, and my cattle being made comfortable, thrive in a way they never did before.

As I have found that turnips and carrots can be raised to advantage in this country, I intend to make a root-cellars in the middle of my barn, about five feet deep. I think the turnips will keep there, if well covered with straw, and they will be at hand for feeding the cattle.

I have this year a compost heap of the following dimensions:—fifty-six feet long, thirty-three feet broad, and five feet high. It is composed of 136 loads of green sea-weed, with about the same quantity of black bog-earth, and as much good vegetable mould; the two last mentioned I mixed together. I placed this and the seaweed, in alternate layers, of eighteen inches, and find that it heated, until the whole became one mass of very beneficial manure.

Wishing the Society the success it so well deserves; I am, your obedient servant,
WILLIAM HAWKES.

MR. INGLEDEW'S REPORT ON TURNIP CULTIVATION

The mode which I adopt in the cultivation of turnips is as follows:—I take land from which I had previously taken a crop of oats, without manure, from sward; this I plough over in the Fall. In Spring, I plough across, and harrow thoroughly. I then run out drills two feet apart, into which I put thirty double horse-loads of barn manure to the acre; this I cover about two inches by opening new drills. On the top of these drills, after being a little flattened, I sow about 1½ lbs of seed per acre, with a seed sower,—if by hand, a small opening must be made for the seed with a hoe. The seed should be sown when the land is dry, and shortly before rain, if possible. I have found the best time of sowing to be from 5th to 20th June. The best remedy I have found for the fly is thick sowing, although I understand that if bran be sown on the young turnips when wet with dew, they will suffer less. So soon as weeds appear, I pass a cultivator between each drill. When the plants put forth the rough leaf, which is generally about the tenth day after sowing, I pass along the drills with a hoe, striking out all but about two plants in each six inches. About ten days after, I thin out to six inches, filling up vacancies with the plants thus drawn. *On the last thinning depends much of the future growth.* It is done with both hoe and hand, the tops of the drills being nearly levelled, and the soil being well cleared away from the plant, leaving the tap-root only in the ground. If the earth was not well cleared away from the turnip, it would not attain half its size, besides being more liable to be injured by grubs and worms. After this operation, the young plants will fall down and appear to wilt, but the inexperienced need not be discouraged, as in a few days they will start again with fresh vigour.

They may now be left to themselves for some weeks, until they begin to crowd, when they should be thinned to twelve inches apart—the drawn turnips affording an excellent food for cows, hogs, &c., as well as for market purposes. The hoe should then be drawn through between every plant and the cultivator passed up the drills. A light furrow might also be opened with a plough to carry off the water. They will seldom require more.

The expense of cultivating an acre of turnips after this mode, may be summed up thus:

Ploughing, Harrowing and Drilling—4 days, at 15s.	£3 0 0
Manure, carting and spreading,	9 0 0
Cultivator, one day in all,	0 10 0
Hoeing and weeding,	0 15 0
	£13 5 0

I estimate the turnips as worth, on the ground, 1s. per bushel, which is, 640 bushels, £32 0 0

—leaving nett profits, £18 15 0

—besides having two months' valuable feeding from the drawn turnips and tops.

Carrots are cultivated much after the same manner, with the exception that the land ought to have another ploughing, and about ten loads more of manure. The hand is also to be used instead of the hoe in weeding and thinning.
