

Monday 1st May - a dull day, Wind W. -
 Muretrail arrives -

Tuesday 2nd - Weather cool for the season, Wind S. E. -
 Muretrail departs

Wednesday 3rd - Fair cold, Wind E. Admiralty Court.

Thursday 4th - Rain, Wind, Snow, cold & disagreeable.

Friday 5th - Snow, ground covered, Wind N.

Saturday 6th - Clear fair, Snow disappears & dust with feet.

Sunday 7th - Fair Wind S. Monday 8th - Rain - Wind N. & S. E.

Tuesday 9th - Clear Weather, Wind N. & S. E. - Still cool.

Wednesday 10th - every body day, Wind S. W. quite disagreeable
 threatens rain.

Thursday 11th - a dull morning, light rain, and very fine.
 first snow in forenoon

Friday 12th - continuing fair, Weather has improved
 planted, dispirited with severe frost, planting them
 planted, Chions, carrots, Parsnips & Beet

Saturday 13th - quite a change of Weather, Wind N. & S. E.
 and dry cool - Rain. P.M. 2 inches of Snow.
 A Harri Fawson

Sunday 14th - April Tacket arrives - Wind N. & S. E.
 (Snow disappears.)

Monday 15th - Wind S. S. W. fair again but cool - Rain in the night.

Tuesday 16th - Wind S. W. - fair - but appears unsettled.

Wednesday 17th - Baryul Gastalia from Plymouth, in Packet
 Weather very fine first arrival - 2 o'clock

Thursday 18th - dull misty, Wind N. - cool.

Friday 19th - Baryul Victor from Plymouth, in Packet
 fair Weather Wind S. E. 4 o'clock

Saturday 20th - Wind N. - very cool - Clear, flowers in garden re-budged
 [at 11 P.M. - a very heavy squall, Wind S. E.]

Sunday 21st - Wind S. E. - Rain cool - Tuesday 22nd - dull, Wind S. E.
 it very disagreeable

Monday 23rd - Rain, Wind S. E. - extremely cold for the season

Tuesday 24th - disagreeable dull, cold, Wind N. E. -

Wednesday 25th - still dull - Wind inclining to the Southward
 with N. E. breeze and almost unseasonable breeze & snow.

Thursday 26th - early with morning. Snow, ground white, Wind N. E.
 still cold dull weather.

Friday 27th - Fair at length appears, fair, Wind S. E.
 Detachment of 54th arrives

Saturday 28th - dull cold, Wind S. - F. & S. Rain. Fair

Sunday 29th - Wind N. E. - and cold

Monday 30th - still cold and unseasonable Wind N. E.
 - parafrost at night

Tuesday 31st - Wind South & at last fine
 has made the dismal gloomy month of May.

COMETS.

Notwithstanding the accumulation of knowledge respecting Comets, 'from the first dawn of science to the present hour, it can be regarded only as a department which still requires all the skill and vigilance of modern astronomers to complete; and in this state not only the remarks of the profound, but the conjectures of the ingenious, merit attention. Under this impression the subject is again resumed in the present Almanack, though in a more miscellaneous form than formerly.

During the past year a comet, the most interesting to astronomers, viz :—that known as Halley's, will have returned to its perihelion, or to that point in its orbit least distant from the sun, and also to its perigee or to the point nearest the earth. On its return from its perihelion about the last of January and first of February, it may perhaps be visible early in the morning in the south east, but it will soon after be so far from the earth that it will cease to be visible to the sight, and will not again be seen until the year 1912.

By virtue of first causes, whose natures are unknown to us, and which have given rise to many theories of the creation more or less plausible, the planets of our system perform their revolutions round the sun in orbits almost circular. The comets, on the contrary, travel in paths of extremely elongated ellipses, and they move in all imaginable directions. In returning from their points of aphelion, they constantly traverse our solar system; they penetrate within the interior of the planetary orbits, often they even pass between Mercury and the Sun. *It is not then impossible that a comet may come in contact with the earth.*

After having acknowledged the possibility of a shock, we hasten to say that the probability of such an event is extremely small. This will appear evident at the first glance, if we compare the immense space in which our globe and the comets move with the small capacities of those bodies. A very general fear prevails that the near approach of a comet would break our planet in pieces, or at least produce a great accession of heat, sufficient perhaps to destroy animal and vegetable life, if not to burn the world altogether. The argument seems to have originated in a notion that because heat produces expansion, therefore very highly expanded bodies must needs be very hot. It would be as good an argument to say, that because expansion by any

other means except heat, produces cold, that therefore all comets must be very cold; and neither argument would, in the least degree, afford matter even for a rational conjecture. Let us suppose a comet, of which we only know that at its perihelion it is nearer the sun than we are, and that its diameter is *one-fourth* of that of the earth. The calculation of probabilities shows that, of 281,000,000 of chances, there is only one unfavourable,—there exists but one which can produce a collision between the two bodies.

Without endangering the tranquility of mind which the above number ought to give to the most timid persons, we can say that if in calculating the probability of the collision of the earth and nucleus of a comet, we have taken the supposed estimate of the comet's diameter at one fourth of that of the earth, we have much underrated it: that the chances of their meeting, according to the calculation, will be much too low, in the case where the question would be not of the nucleus properly so defined, but of the nebulosity which covers it on all parts. If then the number be taken at ten times the preceding, the result certainly will not be exaggerated. As for the nebulosity, in its most habitual dimensions, the unfavourable chances will be from 10 to 20 in the same number of, 281,000,000. Admitting then, for a moment, that the comets which may strike the earth with their nucleuses would annihilate the whole human race; then the danger of death to each individual, resulting from the appearance of an *unknown comet*, would be exactly equal to the risk he would run, if in an urn there was only *one single* white ball, of a total number of 281,000,000 balls, and that his condemnation to death would be the inevitable consequence of the white ball being produced at the first drawing.

Every man who is willing to make use of his reason, however he may be attached to life, will laugh at so small a danger. Well, then, the day on which a comet is announced, before observations have been made on it, before it has been possible to determine its path, then is there, for each inhabitant of our globe, the chance of the white ball from the urn of which I have just spoken.

Being quite ignorant both of the size of comets, and their quantities of matter, we can form no conclusions as to their effects, even upon the positions of the planets.—Hitherto, their influence, if any thing, has been very small; for, within the limits that must be allowed for error, even

in the best tabulation, the whole the hypothesis system appears no comets in it of some sort of appearance of the planets upon which comets has not been led to the conclusion density or magnitude of planets. When considerable part of the centre of the luminosity of this nucleus. On its first appearance luminous part of the comet far from the nucleus at perihelion, the comet's tail lengthens in length across a four

in the best tables that are calculated upon an approximation, the whole of the irregularities are explainable upon the hypothesis of planetary disturbance alone; and the system appears to have gone on just as if there had been no comets in it. That the comets are formed of matter of some sort or other we know, from the dense and opaque appearance of their nucleus, as well as from the action of the planets upon them; but, as their action upon the planets has not been great, or even almost perceptible, we are led to the conclusion that they are not bodies of the same density or magnitude as even the smallest and rarest of the planets. When a comet is viewed through a telescope of considerable power, there appears a dense nucleus in the centre of the luminous and apparently vaporous matter, of which the external parts are composed; and the opacity of this nucleus varies in different comets.

On its first appearance, and again when it recedes, the luminous part of the comet is faint, and does not extend far from the nucleus; but, as it moves on towards the perihelion, the brightness increases, and the luminous matter lengthens into a train, which in some cases, has extended across a fourth of the entire circumference of the heavens.

ECLIPSES IN THE YEAR 1836.

There will be Four Eclipses this year—*Two* of the SUN, and *Two* of the MOON, in the following order:--

I. The *first* will be of the MOON, on *Sunday*, May 1st, in the morning, partial and visible.

	H.	M.	
First contact of the ☽ with ☉'s penumbra,	1	38	} Apparent time
Eclipse begins,	2	53	
Middle, or greatest obscurity,	3	55	
Eclipse ends,	4	58	
Last contact of the ☽ with ☉'s penumbra,	6	12	
Quantity eclipsed, 4½ digits on the Moon's south limb.			

II. The *second* will be of the SUN, on *Sunday*, May 15th, visible.

	H.	M.	
Beginning of the Eclipse,	8	40	} Apparent or solar time in the morning.
Greatest obscurity,	9	32	
Eclipse ends,	10	58	
Quantity eclipsed 8½ digits on the Sun's south limb.			

The first contact of the Moon's penumbra, or imperfect

shadow with the earth in this eclipse, will be at a little distance south of the city of Quito, on the Andes mountains, South America, between the peaks Chimborazo and Coto-paxi, at the rising of the Sun; and the last contact at sunset, will be near the island of Rhodes in the Mediterranean Sea, a little northeast of the island of Candia. The centre of the penumbra, and path of the annular eclipse, will strike the earth at sunrise in the Pacific Ocean, in Long. about 98° W. of London, and Lat. 8° N.; and taking an easterly and northerly direction withal, will pass over Guatimala, the Caribbean Sea, Jamaica, the southeastern part of Cuba, and the northwestern part of St. Domingo into the Atlantic Ocean, where it will bend its course a little more to the north: traversing the Atlantic to the east coast of Ireland, it will again gradually change its direction to near a due east course, and will cross the northern part of Ireland, the North Channel, the north of England, and south part of Scotland, the North Sea, Denmark, the southern part of Sweden, the Baltic Sea, and the northern parts of Prussia and Poland into Russia, and inclining a little to the south, will pass off to the Caspian Sea, where it will leave the earth at the going down of the Sun. At all the above places, at the time of the greatest obscuration, there will appear round the dark body of the Moon, a golden glittering ring or wire of the Sun, of variable duration, from 20 to 90 seconds.

III. The *third* will be of the Moon, at the time of the full in October, invisible; but it will be so small that it would hardly be perceptible were it to happen when the Moon is above the horizon.

IV. The *fourth* and last will be of the Sun, on *Tuesday* November 8th, at 9h. 38m. in the evening, of course invisible; but it would also be invisible on account of the Moon's south latitude, were it to happen before sunset. In the Indian and South Pacific Oceans it will be visible and very great. Central and total on the meridian in the Southern Ocean about 550 miles south of Van Dieman's land. The course of the moon's shadow over the earth will be from northwest to southeast. The penumbra and partial eclipse will strike the earth at the rising of the sun in the Island of Java, and leave the earth at the going down of the Sun in the South Pacific Ocean, in Long. $139^{\circ} 59'$ W. of London, and Lat. $40^{\circ} 18'$ S.: but the umbra and total eclipse will

first strike the earth at sunrise in Long. $83^{\circ} 26'$ E. and Lat. $9^{\circ} 33'$ S. and leave the earth at the setting of the Sun, in Long. $116^{\circ} 45'$ W. and Lat. $51^{\circ} 12'$ S. That is, the Sun will rise totally eclipsed at the former place, and set totally eclipsed at the latter.

ORIENTAL AND OCCIDENTAL STARS.

The planet VENUS (ζ) will be Evening Star till July 25th, when she will be in inferior conjunction with the Sun; after that, she will be Morning Star through the year. She will be invisible, a few days before, and after her conjunction, on account of nearness to the sun.

JUPITER (γ) will be in opposition γ to the sun on the 2d of January; after that he will be Evening Star till July 19th, then Morning Star to the end of the year.

MARS (δ) will be Morning Star the whole of this year.

SATURN (ϵ) will be Morning Star till April 21st. when he will be in opposition to the Sun; thence Evening Star till October 30th; then again Morning Star.

EXPLANATION OF THE CALENDAR PAGES.

First column contains the days of the month—*second*, days of the week—*third*, Holy-days, Weather, &c.—*fourth*, Rising of the Sun—*fifth*, Setting of the Sun—*sixth*, Sun's declination in hours and minutes, taken from the Nautical Almanack—*seventh*, Rising and Setting of the Moon—*eighth*, Moon's Southing—*ninth*, Moon's place in the signs—*tenth*, high water.

The top of the columns of each month, shows the Moon's phases, or the times of new and full Moon, and of the first and last quarter, or two quadratures with the Sun.

To find the length of the day, add 12 hours to the time of the Sun's setting, and from the sum subtract the time of rising.

When the moon comes to the meridian of any place, or twelve o'clock hour-line, she is then due south with respect to that place, and this is termed the moon's southing. The time of New Moon's southing is 12 at noon; and from the new to the full moon, the southing is after noon, or sometime between noon and midnight, but every day about 49 minutes later than the former.—The time of the full moon's southing is 12 at midnight; and from the full to the new moon, the southing is in the morning, or some time between midnight and the noon next following; but every day about 49m. later than before.

Apogee means that a planet is at its greatest distance from the Earth, and tides low. *Perigee*, that it is at the nearest point, and the tides high.

Tuesday 1st - Partly clear day. Wind W.

Wednesday 2nd - Very fine day. Indian Summer.

Thursday 3rd - Fine in the morning. Wind changing to N.E. Shows fresh. 4 p.m. 2.1. M. Rain. Clearing.

Friday 4th - A very wet day. Wind N.E. - not cold for the season.

Saturday 5th - Showery - unsettled weather.

Sunday 6th - dull weather. Next day invariable Wind N.E. - clouds fast travelling.

Monday 7th - The 70th. for S. Thomas. Weather still dull, but dry overhead.

Tuesday 8th - mild for the season. fine, but dull. Calm.

Wednesday 9th - open weather, occasionally showers of snow - still soft & muddy underneath. Wind N.E.

Thursday 10th - a mild day - 3 P.M. The 70th returns.

Friday 11th - fine, but some dull. Mild.

Saturday 12th - very fine, quite fresh in the morning. Wind S. - like last year's fresh. Rain in evening.

Sunday 13th - Wet in the morning, becoming fine, very mild. Long on the River sailed yesterday.

Tuesday 15th - A very wet day. Wind S.W. - moderate.

Wednesday 16th - dull weather, but delightfully soft & occasional showers. - rich in the season. Both fine. Wind S.W.

Thursday 17th - Continuing fine to p.m. dull. Still showing signs of frost.

Friday 18th - Snow on the ground. Showers of snow. Wind W.

Saturday 19th - Hard underfoot though, with a little snow on the ground. Cool. Wind W. Frost at night. Frost returns.

Sunday 20th - very fine, clear weather. - frost at night.

Monday 21st - Delightful weather after a frost. Moderate in the evening. - clear in the day.

Tuesday 22nd - Breeze, blow fresh, Wind S.E. - still mild & pleasant.

Wednesday 23rd - dull weather but fine in the afternoon. Thursday 24th - snow falling. Wind moderate. Friday 25th - frosty. Wind W. - some sprinkling of snow in the morning. Saturday 26th - same. - some snow in the morning. - dull, but clear in the afternoon. Sunday 27th - frosty. Wind W. - frost on the ground. Monday 28th - frosty. Wind W. - frost on the ground. Tuesday 29th - thunders now. Wednesday 30th - showers of rain.

Thursday 1st delightful moderate weather in Hudson
 soft small snow from Sunday frosty heat at night: -
 Friday 2nd cold, but fine, snow is now required
 ground very rough, with a more sprinkling of snow -
 Saturday 3rd calm, a little snow falling in a.m. fine
 beautiful weather. - a very cold night -
 Sunday 4th a bitter cold day. Wind W. S.P. M. moderate
 Monday 5th weather soft (wind) Wind S.
 Tuesday 6th - a most splendid fine day
 Wednesday 7th cold, clear, and extremely fine.
 Thursday 8th weather continues very fine, with
 a considerable breeze. - cold but pleasant. - very calm.
 Friday 9th another splendid fine day, calm & clear
 bright and serene. Wind about S.W. -
 Saturday 10th continues remarkably fine
 Sunday 11th still fine - S. P. M. Rain
 Monday 12th a dull day, very soft & mazy.
 Tuesday 13th a very fine day again. Most
 extraordinary fine season. - soft -
 Wednesday 14th shows very fresh from S. E. -
 Rain. - high winds - very soft & muddy.
 Thursday 15th some snow, Wind W. frozen a little
 Friday 16th cold, disagreeable, Wind W. N. W. dull.
 Saturday 17th Wind S. rain - Snow - P. M. S. 2. High, high winds
 at night. - Sunday 18th Frost, Wind W.
 Monday 19th cold, blow fresh from W. N. W. clear
 Tuesday 20th a very fine clear day. Ice nearly made
 Wednesday 21st Wind S. Snow. Rain open again.
 Rain at night. high winds, very mild
 Thursday 22nd very cold frosty, Wind W. N. W.
 Snow much wanted.
 Friday 23rd very cold. River appears frozen in
 at least 6 or 7 places. Persons cross on foot up
 to the bridge. -
 Saturday 24th Wind S. blow fresh, less cold. Snow
 fair again. Wind W. W. N. W.
 Sunday 25th Xmas day - very fine, calm, mild & serene
 Monday 26th S. Stephen a heavy Wind S.
 Tuesday 27th Snow for 4 or 5 days, soft & muddy
 Wednesday 28th moderate weather, snow falling.

THE SHORT COURTSHIP.

As a gentleman was passing along one of the most retired streets of London, late in the evening, he stumbled over the body of an old man, whom on examination, he found in a state of excessive inebriation, and who had in consequence tumbled down and rolled into the kennel. He had not gone many yards farther when he found an old woman very nearly in the same circumstances. It immediately struck Mr. L. that this was some poor old couple, who, overcome with the fatigues of the day, had indulged too freely in some restorative beverage, whether brandy or gin, the historian does not say. Full of this idea, and animated by his own charitable disposition, Mr. L. soon made arrangements for the reception of the poor couple into a neighboring public house, where the landlord promised that the senseless pair should be undressed and placed in a warm bed. To bed they were put.—

FARMER'S CALENDAR.

FOR JANUARY.

FOR FEBRUARY.

Winter is peculiarly the season of social enjoyment. Man has ever within his heart a fund of kindness; but in Summer he finds a companion in nature, and can measurably dispense with the intercourse of his species. He may spend hours—nay days, in the seclusion of the forest, and whilst every thing around him is teeming with life, he feels neither weary nor solitary. Not so in winter. He walks abroad, it is true—is struck with awe by the majesty of the scenery, and his soul glows with a high wrought enthusiasm. But soon his feelings lose their wonted tone, and a vacuum is left that can only be supplied by communication with society. He then feels the full force of the tie that binds him to his fellow-men—Hence the festivities of the New Year—a period when cordial congratulations are offered, and a profusion of kind wishes called forth. Though the earth is no longer spread

with a carpet of verdure; and the perfume of summer has passed with its gentle breezes—though we rise not up “at the voice of the bird,” nor sit in twilight beneath a bower of roses, sublimity repays us for the loss of beauty. The naked rock—the mountain clothed in a robe of snow—the dark tempestuous waves, and the calm grandeur of the nightly heavens, awaken a moral sympathy in our souls, and we feel fitted to achieve deeds worthy of the world we inhabit.—Industry will make a man a purse, and frugality will find him strings for it. Neither the purse nor strings will cost him any thing. He who has it should draw the strings as frugality directs, and he will be sure always to find a useful penny at the bottom of it. The servants of industry are always known by their livery; it is whole and wholesome. Idleness travels very leisurely, and poverty soon overtakes him.

1836.

Mr. L. left them side by side, snoring in concert, and likely to pass together a more harmonious night than would have been the case had they possessed the full enjoyment of their senses. L. journeyed homewards filled with the satisfaction arising from the performance of a kind deed, and never reflected that there was a possibility of his having joined a pair whom the laws of God had not made one. The fact was, that the old man and the old woman were perfect strangers to each other, and their being found in a similar situation was purely accidental. In London, however extraordinary it may appear, many poor folks get drunk at night, especially Saturday night, and what is not less wonderful, they are in this state often unable to preserve their balance, the laws of gravity exert their influence, and the patient rolls into the gutter. Soundly, soundly did this late united pair sleep and snore till morning, when the light broke in upon them and disclosed the secret.

FARMER'S CALENDAR. -

FOR MARCH.

FOR APRIL.

Attend to the business of spring. Look to your tools and repair them if necessary. Why, this you may think, is but a trifle ; but you must remember that the good husbandman attends to all the minutiae of his affairs. If a man intends to thrive by farming, he must attend to it personally, and not trust to others. He must engage in the business through thick and thin, and must never be afraid of getting dirty hands or a smutty face. Now if your buildings have been neglected, and are all out of repair ; if you have chosen rather to sit by the fire and count your fingers, than to take the hammer and drive a few nails ; or if you have been in the habit of hanging about the tavern to the disregard of your home affairs, then you are indeed a sufferer. Great attention is necessary in feeding cattle, we generally give them them too much rather than too little.

System is every thing in farm-

ing. Suppose you make it a point to be up as early as the sun is every morning ; have a plan and arrangement prepared the night beforehand for a morning job, and then go immediately upon the business, while your wife is getting breakfast ? you would then have no lost time. It is now a capital time to keep the boys at work, and use them to the yoke.—Boys are like calves, they need management and much practice to make them handy ; and can there be a better time to do this than when spring work comes on ? Show them the benefit of every operation ; let them understand that he who would reap must sow, and he that would enjoy life must use rational means for it. Show them the advantages of industry, virtue, integrity, and honest principle. Look to your water courses, and change their direction, to receive the benefit of the spring rains.

Weeds are our common en-

Imagine the consternation of the old lady when the fumes of intoxication were dissipated, and she opened her eyes upon her snoring partner! Where she was, or how she had been put there, she knew not. It was clear she was in bed with a man, and that was an event which had never happened to her before, so she set up a scream, and roused the old man, whose astonishment was not a jot less than the lady's. She sat upon end in bed staring at him, he moved himself into a similar situation and rivetted his eyes upon her, and so they remained for a few instants, both full of perfect wonderment; at last it struck the poor lady that this was some monster of a man who had succeeded in some horrible design upon her honour; the idea in a moment gave her the look and manner of a fury, she flung out of bed and roared aloud, to the admiration of all the inmates of the house, who attracted by her first scream were already peeping into the door of the room,

FARMER'S CALENDAR.

FOR MAY.

emy, and nature has arrayed a host against us, consisting of more than fifty different nations of weeds, as mauraunders to destroy our labours, and rob us of our crops. They enter our gardens and cornfields unobserved, by night and by day; they pillage, waste, and destroy more of our property than all the rest of our enemies, except rum and tobacco. Let us then set our faces against them, watch them close, and extirpate them radically from our fields and gardens. Hoeing is a business by no means to be neglected; and unless attended to, no one must expect a crop. Some, however, after taking much pains to deposit their seed, like the tortoise, leave the rest to Providence. Weeds and brambles of course come up and choke the tender plants; and the field once so fair and promising, becomes a stigma and a disgrace to the idle possessor. Hoe deep and hoe often, and your land will retain more moisture for it.

FOR JUNE.

What a most interesting month this is! Verdure crowns all the face of nature, and life and animation is seen and heard everywhere. Journeying at this season is delightful, with one exception:—viz. in many places it is the time for road-mending, which makes the travelling often rough and rocky. This is a business which needs to be seen to with more than ordinary attention, and faithfully done; but many seem to think that to cheat the public is a virtue and altogether right. Most of those who pretend to be working at the highway, do little more than lean upon their shovel-handle all day, and gape about as if staring at a print shop. But at night, when the surveyor makes up the reckoning, he should give credit for no more time than they have actually worked,—this would soon put a stop to their idleness; they would at first kick against it, but the same justice he gave the public, that same justice should be given him.

"make me an honest woman, thou wretch," she cried—"villain that you are, make an honest woman of me, or I'll be the death of thee;" down she sat upon the bed-stocks, and as she attempted to dress herself she interlarded her occupation with calling for vengeance upon her horrible seducer, who sat trembling at the other side of the bed, vainly attempting in his fright to insinuate his legs into the old tattered breeches. The landlord at last interfered with the authority of his station, and on inquiry found that no breach had been made which could not easily be repaired. The old gentleman was asked if he had any objection to take his fair bed-fellow for a helpmate during the remainder of his life; he stammered out his acquiescence as well as he could, and the enraged virgin consented to smooth down her anger on satisfaction being made to her injured honour. The bargain was soon struck, the happy pair were bundled off to church amidst the

FARMER'S CALENDAR.

FOR JULY.

FOR AUGUST.

See how the hay-makers sweep over the meadow! It is not sunrise yet, and they have been at it more than an hour. This is the true way to work it. Awake all hands at peep of day! Tools all ready and sharpened the night before, and spring to it in the cool of the sweet morning. Cut your grass while the dew is on, if you would have your scythe move slick and smoothly. In this way there will be no chopping, but a regular, gentle sweep from right to left: by doing this you will have half the day's work over before nine, and then you may rest in the heat and burning of the day, for mowing is laborious work, and performed in the hottest season of the year.—Keep among your men, Mr. Longacre, if you do not think they will take advantage of your absence. No doubt they are good and true men; but nevertheless, it is always best for the owner to stick by, and shew an interest, at least, for his own.

How is it about the fences? It is generally pretty true, that he who neglects his fences, will be negligent in other matters. When feed begins to dry up and become short, breachy cattle begin to show their prowess and agility. As soon as you have finished getting in your grain and hay, improve every opportunity of collecting into your cow-yards and hog-pen, materials for making manure. Spare neither time nor expense for this. It will pay you better than any thing else you can attend to. Put your ground in readiness for sowing winter grain. Suffer no weeds to seed in your gardens. Stake and tie up the seeding stems of such plants as need support, to prevent their being borne down by the winds and heavy rains. A morning walk at this season is replete with gratification to the admirer of nature's beauties. What a magnificent phenomenon is every day exhibited in the rising of the Sun! yet how common is the obser-

laughing shouts of the mob, where a parson waited to make good the match, so precipitately formed by our charitable friend.

BE SHORT.

Some people have a roundabout way of getting at things, which is as wasteful of time as it is trying to the patience. I wish the printers would notice it in the papers, and advise every body, on all manner of subjects to be short.

What can be more vexatious, when you are just going about your ordinary business, and perhaps in a hurry too, than for some idle fellow to take you by the button and say, "only a word," and detain you half an hour in durance vile, listening to a story without beginning, middle, point or end, in which every little particular is intermingled with interminable digression, silly comment, and tiresome insanity? Take such a one by the ears, and tell him to be short, under pain of losing them.

FARMER'S CALENDAR.

FOR SEPTEMBER.

FOR OCTOBER.

vation that indolence and the love of sleep prevent a great part of mankind from contemplating this beauteous wonder of the Creation.

Let us for a moment visit the dwelling of a good husbandman. We find him in possession of a competency. Every thing about him is marked with neatness and order. His family is distinguished for industry, frugality and correct deportment. His mind, though not bred a scholar, is replenished with useful knowledge. He knows enough of law to avoid litigation; enough of the human system to keep it healthy by diligent exercise, and by temperate habits; enough of morality and religion to practice them. In the morning he rises with the dawn; calls his household round the family altar; pays his devotions to the fountain of light; and like the great luminary of heaven, he performs the duties of the day. Joyful harvest makes the

heart glad. He that has attended minutely to the management of his farm will now see the benefit of it. But if ploughing, hoeing, weeding, trimming, pruning and care-keeping have been neglected, then no great harvest must be expected. That beautiful farm, that used to attract the attention of all the passers-by, owned and cultivated by busy Charles, alas, it is now in a most wretched, dilapidated state! It is mortgaged for a shop debt. Charles, (O, what a falling off is there!) poor Charles has lost his activity, his ambition, his spirit, his brightness. Beshrew this cursed poison, shame on all its votaries!

Old father *Frost* begins to run his nose through the cracks. Some try to keep off his intrusions by stuffing in old rags. When such things are done, matters and things do not go altogether right neither *in* nor *out* of the house. Look a lit-

to make good friend.

Short speeches, short stories, short courtships—a wise man will always be *short* in these things. I never knew a short sermon that was not liked the better for it—a short story that had not more pith in it—a short courtship that was not more fortunate than a long one.

A tipsy preacher, in Dumfries, Scotland, was saying from the pulpit, 'What was it, think ye, gude people, that swallowed Jonas? It was nae horse, it was nae cow? "Suppose, said an old woman, it was a whale, your reverence." I suppose (replied he) you are a fool; you might as well tak the brede out of my mouth, as the word of God?'

Well Sam, shall we have rain or snow about these times? 'Oh, I don't know,' replied Sam, looking wondrous wise, but I am inclined to think we shall have rain, or it may be snow, but that will depend very much on the weather.

FARMER'S CALENDAR.

FOR NOVEMBER.

FOR DECEMBER.

tle a head, if you would go ahead, otherwise you may chance to run your head against a post. Old cross-grained Winter is on the road, and you may meet him before you are aware of his approach, and if the boards and shingles of your buildings happen to be loose, the wind will claim a right to them, and bear them off in a jerk, therefore look to these matters in time. Cold winter is coming, long evenings are coming; in other words, the period of social enjoyment and social improvement is coming;—therefore see well to provide for a comfortable fire-side, then provide instructive books, plain useful studies, useful labours, attend to the education of your children, inquire after the poor, contrive the means of preventing idleness and poverty.

Life, like the budding spring, opens with beauty. The summer of life succeeds the spring. Autumn approaches, and its arrival is discovered by its forests, and winds, and 'sober

livery.' The leaves are decaying, and fall from the trees; all things bear the hectic flush of consumption. Man's faculties, even so begin to fail. He prepares to meet his dissolution.

Winter comes—the last and aged season of the year. So, also, man finds his winter. He sinks and falls beneath the bleak and cheerless winds of time—his fall speaking only of departed grandeur. The energies of man's spring-time have ushered him into the summer, which has failed him, almost at its entrance; and Time has opened in the autumn of his life the pathway to the grave, while the prostrating Winter shuts him in the tomb. But the dull days of Winter are succeeded by the dawning of a perennial and glorious spring. Man only sleeps in the tomb, like the decayed flowers, to be awakened into a glorious and immortal life—to enjoy a new Spring unchanging, yet never tiring, and perpetual.
