This item is filmed at the reduction ratio checked below/
Ce document eat filmé au taux de réduction indiqué ci-dessous.

The copy filmed here has been reproduced thanks to the generosity of:

The last recorded frame on each microfiche shall contain the symbol $\rightarrow$ (meaning "CONTINUED"), or the symbol $\nabla$ (meaning "END"). whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed entirely included in one exposure are filmed
heginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:
The images appearing here are the beat quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

## National Library of Canada

 mentL'exemplaire filme fut reproduit grâce al la
générosité de:

Bibliothéque nationale du Canada

Les images suivantes ont été reproduites avec le pius grand soin, compte tenu de la condition et de la netteté de l'exemplaire filme, et en conformité avec les conditions du contrat de filmage.

Les exempiaires originaux dont le couverture en papier est imprimbe sont filmés on commençant par le promier plat ot en terminant soit par la dernidre page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat. selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la premiére page qui comporte une empreinte d'impressioir ou d'illustration et en terminant par la dernidre page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole $\rightarrow$ signifie "A SUIVRE", le symbole $\nabla$ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés è des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite. et de haut en bas, on prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

REALITY VERSUS ROMANCE IN SOUTH CENTRAL AFRICA.

## PREFACE.

THE autlor of this narrative of Afriean exploration has been governed by two considerations only in his work: first, the obtaining of absolutely correct iuformation concerning that portion of the "Dark Continent" which was the field of his investigation; second, the presentation of that knowledge in these pages with rigid adherence to the truth. In every instance wherdisputed questions, whether commercial, political, or religions, are toucbed upon, he has endeavored to verify his statements by quoting from the writings or styings of men well known to the reading world. Entirely independent of all denominational, politieal, or party influences, with no interests to conciliate or ends to serve beyond the acquisition of indubitable facts that would be of value to the world, he has naturally reached results in some regards conflicting with representations made by certain preceding travelers, who have either been less painstaking in the attainment of precise knowledge or-for various reasons-more unable or disinclined to make known, with aecuraey, what they
had learned. It is not his province or desire to criticise either the methods or motives of others, but he is morally convinced that where the results of his observations differ from the conclusions at which they have arrived, he is right.

Fitting out his expedition himself, indebted to no govermment, commercial company, or society for its equipment, and responsible to no one but himself for its course or control, he was altogether untrammeled in his work, free from time limitations, and at full liberty to tell the truth, as he saw it. Those advantages but few Afriean explorers have, it must be admitted, hitherto enjoyed.

During a period of twenty months he crossed South C'entral Africa, traveling four thonsand five humbred miles mostly on foot, and alone so far as a white companion is concerned-passing through numerous hostile and savage tribes, traversing areas hitherto reported too pestilential for exploration, surmounting natural obstacles which have been represented as insurmonntable, and penetrating regions where no white man han ever gone before. In all that long journey he never once found himself prompted to fire a shot in anger, or compelled to do so in self-defense against a human enemy; while he can say what perhaps no other man who has crossed Africa can-that of the many native earriel's who traveled with him he did not lose one by death. He went among the fiercest tribes, not as a conqueror
and master, but as a friend, and seeking to leave a trail behind him not of blood and hate, but of pence and good-will.

Inspired in the inception of his undertaking by a belief that black men from Jamaica, by reason of their more ready adaptability to climatic conditions and supposable racial sympathy, could be advantageonsly employed for the Christianization and civilization of the African savage tribes, he took the only practical means for conclusively determining the probable practicability of the design, by thoroughly informing himself upon the conditions under which they would have to live and labor. This he conld only do by personal experience, for the assumedly anthoritative reports of precedent travelers were much too contradictory of one another upon important matters, too meager in essential details, and too restricted in their field of exploration, to be aceapted as information.

In pursumee of his purpose he not only made a careful study of the native tribes in the vast belt selected by him for exploration, but eritically investigated the resources of the country, its availability for development, and the obstacles-where any existed-in the way of its reclamation from savagery.

He saw with the eyes of the agriculturist, the geologist, the naturalist, the hunter, the trader, and the physician, as well as those of the missionary, subordinating all personal bias and preconceptions to an impartial
effort at collecting correct data about everything, and under all ciremmstances. Hence, while we know there is' an age of fable in the history of all enrly explorations in remote and maknown lands, it must recede before increasing light and the growing desire on the part of every honest man to know the bnsiness-like truth. The result of the author's investigations cannot but be of value to all who for anj reason desire to know South Central Afrien as it is.

# REALITY VERSUS ROMANCE IN SOUTH CENTRAL AFRICA. 

## CHAPTER I.

## FROM LONDON TO CATAMBELLA.

Carly promptings.-Jamaica.-White men in the tropies.-Purposes of the expedition.-- Hearty supprt.-Departme for Arrien.-lisubon lar-hor.-"Stuck fasc."-The detective cumera.-The Portugurse.-Dn board the "Cazengo."-Rebels.-St. Thyogo.-Barren rock.-St. Thome. -Kilnimdn.-St. Yaul de Lomudn.—Bishop Taylor's Mission.-Gelf-anpporting missions, -Ciremmstances alter enses.-The Liberim Mission. Pigeon Euglish.-A quid pro qua.-Stowing coal.-Arrival nt Bomplabla. -An evil climute.-Adobe.-C'ntambelh.-Delays.-The railway.-Nittive trade.-Slave camvans.-Bad sanitation.

IN early hoyhood a deep interest was created in my mind regarding Africa and its people ly realing the life and tiavels of Robert Moffat. Later on the writings of Dr. Livingstone, the story of his lonely and tragic death, and witnessing his funeral in 1874 , adment fresh stimulus to my purpose of visiting some day the "Dark Continent." I wished to see for myself the artual coultion of the Afrisan, that I might be the better qualified to plead his cause among Englishspeaking people, who have, particularly during this antury, proven themselves above all other nations
the pioneers of civilization, Christianity, and humane govermment.

Ill-health debarred me from the immediate renlization of my hopes, and symptoms of pulmonary trouble compelled me, toward the end of 1874 , to seek a more grenial climate. This I found in Jamaicn, West Indies, where the bulk of the population, though not African, arr at least of African deseent, and there I lived and lahored at my profession until 1890.

My physical strength being then completely restored, the wort under my charge firmly established and condurterl by a competent staif of assistants, and the longcherished desire to travel in no way abated, I felt that the time hat come when I could leave my work for a year or two.

Meantime, aceounts were frequently being receivel from Central Africa of the privations, hardships, and sufferings of those who were endeavoring to lead the van of light and knowledge into the dark interiorobtaining little or no aid or sympathy from the natives, for whose henefit they had risked so much. Treading the elay, cutting the sticks and grass, and with their own hands building the humble abodes that are to be their homes-white men cannot, in the tropies, do this with impunity and live. The painful fact is all too ronclusive from the fearful death-rate among those who have attempted it on the Congo, the West Coast, and alsewhere.

On looking aromd among the young men of Jamaica connected with our mission, I was strongly impressed with the idea that, having been brought up and trained amid surroundings the most favorable to fitting them
ly restored, d and cond the longI felt that work for a
${ }^{\text {g }}$ received ships, and , lead the interiorre matives, Trearling vith their are to be s, do this $s$ all too hose who past, and
for usefulness in their fatherland, as meehanies, builders, and planters, by such services (could their matural lack of "stiek-nt-it-iveness" and batekbone be overcome) they might relieve the white mun of manual toil, permitting him to devote his time to the translation and teaching of the antive languages.

To p. ${ }^{\prime \prime}$ this seheme to the test was now my intention, and although a dark enough program was presented of the probnble dangers to be encountered, in the form of malarial climates, deadly fevers, wild beasts, fatigne, longer, and thirst, volunteers to accompany me were not lacking, of whom I aceepted six likely young fellows. On the 11th of February, 1891, I sailed for England, whence, as also from Seotland, the United States, and Canada, I received the heartiest support and finanrial aid toward the outfits and passages of the colored men; but I preferred to defray my own axpenses.

The next few weeks were spent mostly in London, selecting and purchasing the varied paraphernalia and equipment required for camp lifo in " "foodless and shopless land." Furthr a I will rmmerate, for the information of those whe nay intend to travel throngh similar regions, not so mueh of what articles my ont fit consisted, but rather a list of those things artual experience proved to be the most usaful. Very many aceessories are recommended by outfitters beraluse other travelers have included them in their kits, which on the march are found to be not only uscless, but burdensome, and at last must be left behimd. Nor are the counsels of those in the field always infallible, as many of them settle down within easy aecess of the coast and know hut little of the requirements for long
journeys through the interior. A good rule to follow is to take nothing that one can possibly do without, as the carrier difficulty increnses yen by yemr, and the progress of a caravan is often in inverse matio to the amount of its buggage. "Pienie baskets," "jimernck motions," and "multum in pureo" must give place to the more important well-ehosen stores of fool, medicines, and medical eomforts, on which the henth and even the hife of the European will in a great measure depend.

Preparations completed, the 17 th of $A$ pril found the Jamaica men and myself at Waterloo Station, surrounded by a host of kind friends who had come to bid us Godspeed and a fimal farewell. $A$ few hours more brought us alongside the stemonship "Trojan," as she lay in Sonthampton doeks. Amid the bustle and eonatusion of embarking the ship's bell rings-the signal that the time for departure has arrived. The gangway is drawn up, the hawsers slipped, and the vessel stands out to sem.

Bragurla, on the west coast of $A$ frica, is our destination by water. And why Bengmela? Chicfly becanse it has the reputation of affording facilities for ohtaining carriors, slave routes for the interior starting from that point.

The short run to Lisbon gave no experience worthy of note. A grool ship, pleasant company, and a smooth sea-this told, the rest of our life on board a mail stommer can asily be imagined hy any one who has erossed the Atlantic; and in these days, who has not?

On the eOth we enter the mouth of the TagnsLisbon Harbor. A charming view of the city presents
(9) to follow without, as r, und the atio to the "jimerack e place to ood, mediwalth :and t measure
foum the tion, stircome to sw hous rojm," as nstle and he signal samg way el stands iefly leitios for starting
itself as we steam up the river. The wather is all that conld be dosided, fresh but balmy; air, a delightful rhange from the boak winds nod drizaling mins we laft in Southmpton. Mibe after mile the rity matols bofoge us-a grand pathormmat of shomid buiblings, rovering the long range of hills on which it is built, rising rumk upon rank, tire upon tier, from the waters "loge to the highest smmmits, with a sky owerheal beamtifully elem and blue. Anything more attruetive or more pieturestue I have never surn, in may romitry. Here we must land mad trmaship to a Porturume steamer, us the "I'rojun" Noes not call at W'est Const ports; and wo are trmsfinmed to the maky-looking ralt of a temer that is, to take us ashomes. 'Ihrow hours are spent in this tul, for the tide is low and she grots sturek fast in the mud. Some of the pmssengers suggest rhartering a couphe of the fishomen's punts that are pulling past us; but this idea is voted down as mudignified, and we meekly wait for the thon of the tide.

At last we reach the landing-stage-a flight of stome steps leading up to the mannifiont spuare of 'Termiro do paro, with its grand Arooda Rua $\Lambda$ ginsta, an "duestrian statue of King Joseph I. in the renter.

Stepping ashore, detertive ramera in hand, hoping to got some smap shots on objerts of introrest, a diminutive enstoms officer demands to know what the box contains; but my limited knowledge of Portugnese fails to ronvince him that I have nothing in it to prollla, when it oceurs to me to show him the reflecetion of King Joseph on the "finder." This is comelusive, and I pass on to the renter of the rity. The serme changes. Fowrer adjortives will satisfy us now than
when deseribing Listom from the steamer's deck. Surely distance lont anchantment to the view: the otherwise fine alifioes ure ill-kיpt unl dirty, with a pemernl out-at-0lhows look, matching the majority of the inhabitants.

Bat what a lot of little propin! A stay of several days in this the Portugnese rapital did not remow oll first impressiom, that, if for mothing aise, it is at latast romarkabla for its mandixim ritizans. But wr must mot remark on this, as ahromly wo soe their ceres flash and fists rlemelned memaringly when the word " binglish" is whisprom in their presemer.
'Tlue mamor of dress is distindly Smanish, and of a typu-spureially among the working rlasses-mande familiar to as hy 'lark's rottom-ren pietures of the hall fight. (iay and lomit rolors prodominate every Where, and on worything.

Our strimur, the "d'izallaso" in which we hope to sail for longorlat, is now in the river, and we mbark, only to barn, howerer, that the govermment has ordered her detrotion for threr days beyond the alvertised date of sailinge, as a mombre of pulitioal prisomers who
 Oporto are to be sent down to the West Coast. Murh achanst our will, we mast yidel to the dolay. 'Jhe time passes, and on the fompth day wro ohserve harges buing therend toward us arowded with soldiens, who with fixed bayonds smromed the prisomers-a motley erew. 'The former look like a mixture of the variost riff-raff of half a dozern different rompanies of militiaa perforet medley of shapes and sizes: romud shomblars. bow lars, imd mwashed; searoely a man standing five

feet eight among them, The majority were smoking cigarettes as they came alongside.

The prisoners seemed jolly enough, hob-nobbing with the "Soldados," shaking hands and embracing all romid as they parted; while several had brought their mandolins and guitars, with which to wile away the tedium of the years they anticipoted spending in exile. After a great deal of fuss and no little hilarity, they are grot on board, about a hundred in all; and now that they feel themselves free, some brass and reed instrments are produced, and we are regaled with selections of republican musie.

The next port of eall, St. Thyago, we reach in six days. Still no extraordinary incidents to relate; the usual monotonous round of cating, reading, talking, and sleeping goes on, with an occasional grame of quoits. It may be of interest to epiemes if we mention of what the cuisine a la Portugnese consists. The dinner menu permits of no variation, but may be summed up thes: Seven courses of meat or fowl; sweets, dessert, and coffee, with almost total alstinence from vegetables of any kind. The light table wine "Vinho tinto" is supplied ad lib., but, to the eredit of the Portugnese, it must be acknowledged that they are certainly a temperate people as compared with those of more northern elimes, for not once during the royage did we see spirits used, nor any one the least inebriated.

The small island of St. Thyago belongs to Portugal, and, judging from its appearance, we would say it is not likely to be coveted by any other nation. The town is built on an eminence some two hundred feet
ahove sea-level; it has a square and three atreets running parallel with one another, and a pupulation of about three thousand. How they live is a mystery. for hoth hill amb plain present a dreary expanse of barren rock and samd, destitute of even a trace of vegetation, with the exception of here and there a hollow where a few parched-looking cocoant patms struggle for existence.

We visit the marketplace, expecting that samples of whatever the island produces will be seen there. And it is so: a few baskets of beans, some tobaceo, and seores of begrars, all extending their dirty hams at once as soon as we appear within the gates. The prople are mostly African, of the ordinary type; a few are Portuguese; and there are three Englishmen, emiployees of the Cable Company.

On the Sth of May we arrive at St. Thome, a beantiful island, also a Portugueso possession. The town resembles somewhat parts on the north side of Jamaica. Here, molike St. Thyago, the scenery is very rish; the hills are clad to the top with luxuriment verdure, cocoant and date palms, hread-fruit and avocada pears, puapuas and banamas. This is accounted for probahly by the fact that the island is situated within the rain belt-its southern ent being on the equator.

We called at Kabinda on the 11th, where we took on forty-two natives to work cargo. This was our first glimpse of the African mainland, which is here very flat and uninteresting, with nothing tropical in its appearance.

Next day we reached St. Paul de Loanda, the chief of the Portugnese settlements on the West Const. We
had a tedious delay here of several days, on account of the many packages to be slowly transiemed to lighters, and as slowly towed ashore. No one is in a homy. Time seems to be of no value to these people. They reverse the old adage and "never do to day what am be put off till to-morrow." The eity is saill to have a population of six thousimd, made up of about tour hundred Portugnese, the rest negroes.

Livingstone arrived here with his six Makalolo in May, 18i5t, and spent long weeks on a sick-bed at the house of his friend, the British commissioner for the Suppression of the Slave Trade. He traveled from Kurmuan, throngh the Kalahari Desert with its shadeless glare, the deep gloom of forests, and drenching rains, contracting an intermittent ferer that almost ended his earthly career ere he reached Loanda-as he said, a "batg of bones."

The huildings look as if they were intended to resist hombardment, so heavy and bare are they, with but few piazzas or porticos to relieve the prison-like walls. The stores have little or no display of goods aromul the doors, and are destitute of windows. On groing ashore we fomm all the shops shat, and for explanation were informed that it was breakfast-time. It seems to be the rule in Portuguese towns (in Africa, at least) that all places of business be closed once a day, for a couple of hom's, to permit the lusy traders and their assistants to partake of their meals in prame, and at leisure.
Recollecting that Bishop Taylor told me, when I met him in Indianapolis during the previons winter, that he had an important station at Loanda, after a little
inquiry I was directed to the mission house, situated on the top of a hill overlooking the town. It stands alone on a sanly mound, built after the bungalow style, about a handred and fifty yards from the main road. I found the wife of the missionary in charge, with her children, at home; but her hushand, who works on the railway during the week, was absent.

Whatever may be said on missionary platforms concerning the feasibility of self-supporting missions in Africa, so far as I have seen or learned it is a grand mistake. The theory may be all right, lout practieally it is an absolute failure. Actual facts laid bare, and the experience of scores of earnest men now in the field prove, that it is infinitely more difficult for a white man to earn his living in Afriea than in any European country-unless, of course, he abandons mission work and confines himself solely to trading. Then he is not likely to have much influence for the furtherance of the gospel among the natives, for his calling would preclude the possibility of this. Certain it is, that a man who must toil the whole week through for the support of his wife and children can have but few opportunities for evangelistie work, which should surely form the primary object in sending missionaries to a land so shrouded in darkness and superstition as Africa.

Mr. P—_ does what he can in gathering a few men and hoys (women rarely come) on Sunday afternoons in the bascment of the house (they have no other meeting-place), and reads and speaks to them in Portugrese, but as yet without any apparent results.

The bishop seems to expect much from the training
of native children as future missionaries to their people. Good enough, if he could by a civilized upbringing change their hearts; but even Christian influences are not sufficient to turn the wayward into paths of rectitude, as many godly parents can testify. They may arcquire some knowledge of the three J 's, and how to dress in European fashion-the boys developing into idle rludes with unlimited conceit, and their natural antipathy for honest work immeasurably increased; and the girls will be much sought after for wives by the more aristocratic heathen (as has been the experiruce of missions on the Gaboon and in Sierra Leone, rete.). But is this gain to the kinglom of God? Or is this the work Christ has sent us to do?

Nor am I alone in my conclusions. In the issue for Fehruary of this year of The Regioms Beyom, one who takes a derp and practical interest in African mission work writes:
"Paul said to Timothy, 'Meditate on these things; give thyself wholly to them;' and when he himself, for special reasons, and for a brief time, gave himself to mamual labor and tent-making, it was not in uncivilized Africa! Ho had not to laarn a barbarons lamgnage, or to get acquainted with the thoughts and feelings of a savage people. He was preaching in his mother-tongue, to his fellow-Jews in the familiar synagogue, and living in luxurionsly rivilized Corinth, where his hosts attended to all his wants, and where he had neither linguistie studies nor translation work nor sickness nor dispensing nor sclool-taching nor long journeys to distract him. A very different state of things! Moreover-and this leads to a very impor-
tant point-there was a good mainker at hamd fore the tonts he madtr; and it was no dombthis hosis, not he. who attented to the rommereial part of the husimess.
"There is at present mo marketon the (ongo for anything the soil will grow, henee it is impossible to make monery hy any lorm of agrixulture, eren if a man does waste his time orar it. Ami as to rommerre, whether it be the loreign trale in ivory, or the mpulsive and time-wisting domestie trade in hippopotamms fleshwhich insolves the hunting, killing, and rutting up of hippos, the drying of their thesh, and the barteringe of it with the matives-or whether it be any other trale. all alike hase this grave disadvantane, that wom if ly their meams self-suppert could to somu extent be allained hy the missionary, it would immediately put him on a here with other traders, and the people would romelugle that self-interest was his motive for dwelling alloroge them. . . .
"Theomly" self-support' possible, theretore, in Afriea is the mere prowlurtion for domestide use of a supply of rewetahle and amimal foed on the station. All missionimides who emm sereme lamd romm their stations go in for this, haturally, as soon as they possibly cant, for ther sake of health, eomblort, and independente.
"But this is not self-support! Without rommitting the rery folly and sin bofore alluded to of wasting their meseakally precions time and talents, missionarins ramot raise arom this with their omen hambs, (iandening takes murl time, even at home. We should not think it wise יronomy for ministers to spemb their days in cultivating potatoes and cabbages, or in feoding pigs and goats, even in Englaml. How murl! more
itting asting sion-(i:llhomend I their eding mol'

absurd for missionaries to do it in Africa, where their time and knowledge are so precions, where lahor under a tropical stu is dangerous to the health and life of white men, where native labor is cheap and abmodant, where the people are naked and glad to earn 'rloth' to cover themselves by working for the white man, and where idleness is a vice which we want to cure in them.
"Common sense dictates the employment of the Afriean in the aetual work of the garden. They understand better than the missionary their own soil, productions, and climate, and can do the work quickly and easily. The white man must indeed superintend operations himself, or get his wife to do it, in addition to her already onerous domestic duties; but that need not take murh time.
"But this, again, is not self-support! 'No pay, no work,' in Africa as in England. The natives have no idea of serving the white man unless he gives them it quid pro quo. They will not work for love either of the missionary or of the ocempation. But they see and covet many of his European articles-cloth, cutlery, matehes, beads, needles, boxes, or what not; and they will work for these. How can the missionary better begin to civilize and elevate the poor savages whose spiritual and physical good he has come to seek, tham by giving them work which trains them to industry, and wages in the form of the primary necessaries of eivilization? But to do this he must receive barter goods from home. These cost money to buy, and still more to tramsport into Central Africa. . . .
"Missionaries must either be supperted by the na-
tives or from home; but in Central Africa self-support is simply impossible, if rapid and effective evangelization of the Dark Continent is to be attempted.
"The Liberian Mission of Bishop Taylor is an illus. tration of this. It is situated on the const, where stemmers call regularly, and among professedly Christian negroes-a very much easier sphere, consequently, than the wholly mevangelized interior, a thousand miles from the coast. Between fifty and sixty missionaries have, at very heavy expense, been sent ont since 1887 in connection with this mission, mostly from America. Six of the party died, twenty-seven (inchding fimilies) withdrew, and nineteen remained last year. These were distributed in sixteen stations, so that a 'station' was for the most part a solitary man, without any helpers or resources. What has been the missionary result of this effort? Some houses have been built by the missionaries' own hands, some vegetable gardens cleared and planted, and some coffee plantations in the same way; but no attempt has been made to learn the native language, to translate the gospel into it, or to evangelize the Kroo people. The missionaries were instructed to preach as they could in 'pigeon English' (which some of the Kroos understand), and to try and teach the children English. No heathen eongregations were gathered, no itinerating attempted, and no preaching to the heathen. One who worked three years in this 'mission,' and whose heart was burning to evangelize the Kroo people, found it impossible to get time for the study of the language. He had to build his house, clear and cultivate his garden, to light his fire and cook his food, and even to wash his clothes; for
of course he had no means of paying to a native servant even the sixpence a day demanded.
"Is it not, therefore, conspicuously unwise, and the very worst possible economy, to encourage, or even permit, the missionary to diminish his already scanty leisure for the real work for which he goes to Africa, by frittering it away in manual labor in order that he may have fool to eat?
"We trust that all who have been led to attempt, from right desires, this wrong plan, will do as we did ourselves-for we onee tried it-abandon it as a mischievous delusion. 'The laborer is worthy of his hire.' When our Lord began His ministry He laid aside His carpentering. Missionary work in Africa is hard enough in any case-why make it harder? Life there is all too apt to be brief-why waste it while it lasts? And why go the way to shorten it?"

The last five or six days on board the "Cazengo" were anything but agreeable. By some bungling arrangement five hundred tons of coal stowed in the after-hold had to be hoisted on deck and removed in wheelbarrows by the Kabindas to the bunkers for'ard, resulting in our being kept in an atmosphere of coaldust, which permeated and haekened everything. But on the morning of May 18 th Benguela was sighted, and here ended our ocean voyage.

The town stands only a few feet above sea-level, on an unbroken samly plain. It boasts a first-rate iron pier, with powerful derrick erane, and a tramway for the conveyance of goods to the custom-house and govermment warehonses adjoining-all spacious and commodious buildings, constructed of imported material,
and aromid which severnl police sentries are posted, comvicts from the East Const being employed for this purpose.

On landing, I began to realize how temible was the homat on seeming a fox-terrier belonging to one of the newly arived passengers being led along the street, when suddenly it wheeled romd two or three times, gave a yolp, and rolled over on its boek, dead. Fearing a like fatality befalling my bull-dog Gyp, I got her under shate and procured water for her as soon as possible.

The rlimate of Bengela has an evil reputation, and the ohlds are very molh against the probability of its improving, chiefly because of the low-lying situation of the town, preventing proper c!ranage and favoring malarial exhalations. Within the past few weeks seven Buropan traders have been cut off by hematuric fever. Fer white men ran live here for any length of time without frognont visits to their mothereomitry.

The streets are broad and well kept, with a row of trees on each side, mostly syramores The houses are built of alohe (smodried hricks) land with mud; the roots and floors are tiled. A large square forms the husiness renter, where around each door we see crowds of matives who have brought from the interior ivory, was, imbia-rubler, etc., receiving in exchange cotton stuff's, gums, gunpowiler, beads, aud "aguardente" (white rum).

By jurvious arrangement with my agent, Mr. Kammerman, manager of the Duteh House, I found several rarriors waiting to take our personal baggage on to Catambella, a town some sixteen miles nortla, where
our caravan was to be made up for the interior. We started in the evening along a fairly good rond but for the deep sand and dust, and arrived at the Dateh House about tell o'elock. But this lasty retreat from Benguela proved ill-udvised; for if we were in a hurry the shipping ofthials were not, and in a couple of days I haul to return again to see my goods through, and then fomm that the greater purt had gone on by the "Cazengo" to Mossamedes. Thas I had to wait several days until she returned; then two more were wasted in transferring them from the lighters to the wharfa bit of business that would have been completed on the Clyde, the Thames, or the Hudson in half an hom.

Mr: Greshoft (also of the Dutch House) kindly took charge of all my papers and had everything passed throngh the enstoms without any trouble. But I had still to draw on my ulmost exhausted stock of patience, for now the packages were in the hands of the dilatory railway company, and although a trata to Catambella was commenced six years ago, not more than half the distance is as yet completed. We were not surprised at this, after having had pointed out to us two brass grus lying in the sand near the wharf, for which carriages were ordered in 1790 and are still expected.

The navries employed for the heaviest work in the construetion of the railway are native women, many of them toiling along under the seorching sun with piek and shovel, or carrying rails, sleepers, spikes, etc., with babies strapped to their backs.

A large trade with the nativas is carried on in Catambella, and during our stay of ten days we had an opportmity of observing its general character. The
products of the far interior are bartered for the most common quality of cheap and trashy goods it is possible to manufacture-some of the calicoes resembling cheese-cloth, thongh not so strong; shoddy hlankets; long flint-lock gums, with gas-pipe barrels, white-pine storks painted red, and bound with mmerous rings of tinsel; white rim, ete. The headmen of caravans recoive much-appreciated presents in the shape of discarded military clothing, helmets, tmies, and overcoats, hy way of encouragement to come agran. It is no umusual sight to see those lucky individuals strutting behind their little company as they leave for the journey homeward-one trigged out in an old pair of ' $4:$ tartan trowsers and a helmet of the London polier; amother with a dismantled husby amd a footman's swallow-tailed coat; next a silk tile and the scarlet tmice of a Highland soldier. Of course, in each rase you must add Afriea's national garment-the loincloth!

Eyery morning, without exception, caravans varying in size up to hundreds of natives come trudging into the town in long straggling lines, each carrier bearing a load on his or her shonlder or head of from forty to eighty pounds weight. The most pitiablo sight it is possible to witness is the long procession, dhiefly women, boys, and girls, limping along, footsore, with swollen ankles and shoulders chafed by burdens all too heavy for their emaciated bodies. A large percentage of these are slaves, bought in the interior by half-hreed traders for a few yards of cloth, and return to their homes no more, being sold on putting down their loads at the trader's door. I saw a band of sixty

such, each with a tin tag round the neck, being marched off to be shipped at Benguela for one of the Portuguese islands. Were they slaves? Oh no, only contracted labor. Just so. Or suppose we call them apprentices for life? What's in a name-so long as the letter of the law is evaded? Only this I know: that they were sold to their present owners at from three pounds sterling to six pounds per caput.

Long open sheds are provided in the yards of the houses at which the matives have come to trade, and after a few days these become loathsome in the extreme, from their crowded and unsanitary condition. The death-rate at best on the coast is very high, but add the filthy state of the kintouls, as these inclosures are called, and the mortality is fearful. Not a day passed that we did not see dead bodies, each wrapped in a bit of dirty cloth, tied to a pole and borne on the shoulders of two men to the top of the adjacent hill, where they are thrown over the other side, to be devoured by jackals and hyenas during the uight, which is made dismal by their weird howls as they fight over their ghastly quarry. Deceased natives who have friends are carried out of town and buried by the wayside, so that for over a mile of the path to the interior there is scarcely a yard to right or left of the track that has not a grave.

## CHAPTER II.

## FROM CATAMBELLA TO KWANJULULU.

Toward the rising sun.-A waterless country.-A cold night--Native foot-tracks.-The Esupwa Pass.-Bad water.-In the Cisangi eountry.An outbrenk in eamp.-Foraging.-Extremes of temperature.-Lost in the forest.-In a game-pit.-Signals of distress.-Safe in eamp.-On the great plateau.-Shave shackles. -Native graves.-In dangers oft.The river Keve.-Utalama.-Indiseretion.-An mutimely end.-Bailun-du.-Cilumi.-The American mission.-Ekwikwi interviewed.-Trial for witeheraft.-Prepuring for war.-Social laws.-Domestic relation-ships.-Farewell to Cilumi.-Artificial beehives.-Carriers.-Arrival at Kwanjululu.

FOR several days before starting much has to be done in the way of repacking and making up loads to the required weight-sixty pounds per man.
Bat at last, on the 29th of May, we are ready, and at three o'elock in the afterncon turn our faces to the east and set out on the march toward the Indian Ocean. How very far away it seems to us now, and how many weary steps must be taken ere that goal is reached and the great continent crossed! But it will be done if health and life are granted us. I take the lead myself, with two of the Jamaicans, the ot'or four bringing up the rear; all of us feeling "very fit," and delighted to escape from the pestilential and fever-stricken coast.

Our path lies along the usual caravam route to Bihe. We have six extra men to carry water and other provisions throngh the waterless sountry between here and
the Esupwa Pass. By six o'clock we camp for the night, making a short mareh of cight miles; but it is a start.

By the time my tent is pitched the food-hoxes have arrived, and we set about preparing supper, gipsy fashion, but with a keen relish for our frugal repast. By 8 p.m. all is quiet, a score of camp-fires blazing, and around each the prostrate figures of several men with a little grass for a bed, and no covering but the canopy of heaven and their meager loin-cloths, there being neither sufficient wood nor grass to build huts. The dew is heavy and the night cold, so that the poor fellows have but a comfortless bivouac. By daybreak all are astir. There is time only for a hasty cup of coffee with a few biscuits, or the remains of last night's supper, wherewith to fortify the inner man for the road. The carriers eat nothing in the morning, but each man, seizing his load, cold and shivering, breaks into a half-trot, and follows the lead along the narrow track, that winds and twists, now up the rugged face of a hill, and anon through the long grass of the valleys. These tracks are mere footpaths, seldom over twelve or fourteen inches in width, but in many places worn into deep ruts by the rains and generations of native traffic ; and woe betide the ankles of the pedestrian if he wears low shoes with sharp heels. Their general direction is as straight as the configuration of the country will permit; but in detail they turn and bend in the most tortmous fashion, without any apparent reason. A stone or stump is sufficient to switeh the African out of his course, and on no account will he step over a fallen tree, be it ever so small, if by making a detour he ean get round it; in a slort time the white ants eat
the tree, but the new path has been made, grass grows on the old, and so it remains for all time.

The country between Catambella and the Esupwa Pass-two days' march-is the most mninteresting and dreary waste imaginable. Not a diop of water is to be had, and the land yields nothing but a few isolated bobs of rough, reedy grass; and although we get an extensive view of hills and piains, there is nothing to relieve the eye, only the vast stretch of stmited serul, with here and there a puny tree with gnarled trunk and shadeless foliage. But on the 30th we camped by the Esupwa River, and had a delightful swim in its beantiful clear waters, the natives warning us to keep a sharp lookout for alligators, as they abound here. Numerous long-tailed black monkeys grimed at us from the trees as we performed our ablutions. This is a charming spot. I wonder if we shall come across many more like it?

Next day we commenced the ascent of the Esupwa Mountain-a stiff pull over immense boulders of rocks. The pass reminds me very forcibly of a bit of Scottish Highland scenery. We are now getting up to the great Central African plateau, and in a day or two expect to reach an altitude of five thousand feet above sea-level.

Reached the camping-gromud abont noon. We have not seen a village, and only one human habitation, since leaving the coast. We had to wait until four o'elock for dimer, as the only means of obtaining water was ly digging a deep hole in a dry river-bed, and waiting for a muddy pool to form, to be dipped up in cupfuls. What a change from yesterday! But by boiling and allowing it to settle, we eolleet sufficient

for our immediate use. These long fasts become very trying, especially when, after a long mareh, we get into camp weary and hungry about 2 r.m., having had nothing lut a few ounces of food at daybreak, and now to wait until water is found and food cooked! 'Io eat bisenits by the way would cause thirst, and often without the means of allaying it. This brings us down to one meal a day, as, by the time dimer is over, it is getting dark, and after a chat round the camp-fire, rehearsing the experiences of the day and the prospects for to-morrow, we are glad to roll ourselves in our blankets and go to sleep.

Another day and we arrive in the Cisangi country, where, near a small village, we camp. We purehased some sweet potatoes, the poorest I have ever seen; also corn on the cob, the longest about four inches; but when we look at the poor sandy soil, we wonder how it yields anything at all.

The last of the loads had only just come in, when I heard loud shrieks proceeding from some distance behind my tent. Hastening to the spot, I found a band of my carriers, who, presming on the fact of their being with a white min, were attacking and doing their best to phomder a small native caravan hound for the coast. At first I could not comprehend what all the row was about, until the excited strangers directed my attention to several men retreating toward the camp, each carrying some article he had seized. Then I took in the situation. Right before my eyes two burly fellows were helping themselves to small bags of meal, carried by some little girls, who were screaming pitanisly and begging to have their food spared. I
made signs-not knowing the language-for the rol, bers to desist, but in vain; they pretended not to notier, and my only alternative was to make them feel. Laying lood of a stick that was hanly, I applied it with some vigor across the shoulders of the rowardly villans, when they speedily dropped the meal and mate off. In a very short time, by mems of the same stiek, I sueceeded in restoring all the spoil, and walked with the seared little company until they were a saffe distance from my men. None ean regret more than I do the necessity for surl drastic measures being resorted to ; yet it is imperative that a clear molerstambing be arrived at between the leader of an expedition and his men on the question of phurler; mequecting to define it emphatically at the start would probahly mean the ruin of the mulartaking, as has been the exprimence of some we could name, besides being the tanse of great loss of life.

The small defenseless party come from the far interior and belong to a powerfnl tribe lying right in our route. In a few weeks they return from the coast, pass on ahead of us, and report the assatult of the Biheans to their people. The former have nothing to fear in this case, as they do not travel beyond their own comntiy; but the injured natives somed their slogan as the white man approaches their territory, and they lay wait for him. If he refused to defend the wak and wronged, or winked at the depredations of his men, he must now fight or die-and perhaps both. I am persuaded that many of the disasters that have befallen large expeditions through various parts of Central Africa might have been averted had the ex-
plorer in charge rigorously punished the motural predisposition of the African to steal from the tribe through whose eonntry he is passing. Of course it is called foraging, but it mems in many instances that humadreds of men are set free to take what they want by foree from the villagers, who in thrn inparal to the white men for redress. Inese, not knowing the extent of the pillage, hand over a bit of cloth, a few beals or handkerehiefs-rompensation altoge ther imalequate: result, a passage at arms and probably losses on both sides.

June ${ }^{2} d$. I find it diffienlt to start the carriers in the morning before the smin is up, the rold is so severe. They huddle together romm the fires, mul when at last they are roused to make a move, with one ham they steady their loal, and with the other grath a firebrand, and trot off blowing upon it to keep up the glow and so supply a little warmoth to their fingers. The extremes of temperature between night and day are now very trying to those of us who have wam clothes. What mmst it be to their maken bodies! At 6 a.m. to-tay the thermometrir in my tent registered $38^{\circ} \mathrm{F}$., and yesterday, at noon, in the shade, over $90^{\circ} \mathrm{F}$.

Water still very scarce-not a drop to be had except by digging; and so impure, that boiling, precipitating with alum, and fittering were not enough to prevent it bringing on a sharp attack of dysentery when about a mile from camp. All the afternoon and night of the 4th I was eompletely prostrated-the most acute twelve hours of suffering I ever endured.

June 5th. Freling very weak, but thankful to be sufficiently recovered to take the road, four men car-
rying mo a good purt of the way in a hammock. Our path led thromgh thick hush; there were no villages itl sight, and we were impressed with the "pparent sparsaly populated condition of the country.

Wo were guite ont of tresh ment, and after a firugal meal of desiced ted soup and manioe I took my gron and went ont-unwisely, alone-in search of something for the pot. I shot a fow pigeons, and, seoing a grool many at some distance, bat very wild, kept following hither mad thither, until I got turned round and lost my bearimes, foretting the direction of the cmmp. The sim haviug sot, it grot dark very ruickly, amd in a shom time I hat to fice the awkward position of finding mysalf lost in the forest. I wandered up and down for lomrs, culeavoring to strike some track that might lould me out; hut in vain. It was now pitch dark. I sit down, tired of hopelessly strugeling among the bushes; but, having on meither coat mor vest, and without matchess to light a fire, I folt rhilly, and determiner to make one more effort to obtain sight or sombl of camp. I elimbed several trees, hoping to get a erlimpse of the camp-fires; but no, there was mothing to be seen but the black ontline of the trees against the sky. The welame stars began to appear, and soon the sonthern cross was in view; amd, having all idea that I ought to thron north, I set out omeo more, but had not erome far when I entered a deep ravine and (ancomatored a swamp with long reedy grass towering high abowe my hoal. I pushed on, holding my gron horizontally, to kerp the spear-grass from rutting my fince. Suddenly my feet went from umber me, and I was precipitated into a deep game-pit. The branches
of trees with which its mouth hum been covered broke the full considerably; but an angry sharl from below annommed that I was met none in the trap. If fell for my sheath-knife in prospect of un encomiter, but a conse fur brushing past my face intimated that the animal, whatever it was, hul wo such pugnacions intent, hat, being "runlly seared, took alvantage of my shoulder to effeet its escape. The hole was murow and I manared to sormable out by butting my frot agninst the opposite side. The strugge in the pit, however, trok away the last vestige of stremerth I jussessed, und to go farther was impossible.

I diseharged the remaining cartrideres in the forlom hope that the shots might be heard by some of my people. Breathlass with anxiety and fatigur, I listromed, when, to my umsueakablo relief, aftor a low minutes I heard, thongh at a great distanee, the answor of a mative ghan; mul soon the shonts of my men, getting mere and more distimet, foll me that I wonld shep, in my tent that night and not in the wools, as a shont time before seemed inevitable.

Next day bromght us thromgh a more thickly populated and better abltivated distriat than wo have sedn since starting. I was murll interested in several perent-iar-looking momatains, seemingly selid blocks of granite without a vestige of grass or herbage, and mo eracs, fissures, or jagred rocks. One in particular was romal and smooth, like a gigantic: inverted basis. We camperl at the base of the Olombingo range, so called becanse of its rocky parks, resembling, when viewed at a certain angle, the horms of an animal.

For several days mow our path leals over a series
of mountains, including the Elonga (or plate, from the hollowed-out shape of its summit), an the top of which both boiling-point thermometer and aneroid indicated an altitude of seventy-two hundred feet. From this point the view of hills and valleys is really very finethe atmosphere so clear, and no forests intervening. The immense landscape of rolling country is limited only by the extent of our vision.
I noticed by the pathway a great many blocks of wood, from a foot to eighteen inches long and abous five inches wide, with an oblong hole eut in each. These, I was informed by the natives, were the articles used by slave-traders with which to fetter their captive carriers during the night. The feet are passed through the hole and a wooden peg driven between the aukles.

We passed by the wayside the grave of a pombiero, or headman of one of these caravans, where the natives had with grim satire erected a monmment to his memory, by stringing some twenty of these shackles on a pole and sticking it up at the head of the mound where the tyrant was buried, that the passer-by might read the suggestive epitaph. Numerous bleaching skulls a little way from the track tell how the slaves whom death has set free are disposed or. But the headman of an ordinary caravan is generally buried in a very respectful manner, his hat, umbrella, cooking-pot, and powder-barrel being invariahly placed on the grave. Over all a rude hut is luilt, open at the sides, while near by a rough seat is erected, lest the spirit of the departed should get tired wandering up and down-as they suppose it does-and, returning to the spot, it
m the which licated n this finetening. limited cks of abous 1 each. 10 artiir their passed een the mbiero, natives s memes oll a d where ht read skulls s whom readman a very pot, and e grave. es, while it of the lown-as spot, it

might be gratified by this mark of consideration for its comfort on the part of the relatives or friends, and so refrain from haunting or troubling them.

On the 8th, sool after starting, we were accosted by four blacks, whom we recognized as Portnguese soldiers. They were armed with Snider difles, bayonets, and cartridge-belts, and announced to us that an officer and his wife were on their way to Bihe; but most of their carriers having deserted, leaving their loads in the bush, these worthies had orders to get men where and how they could, to fill the vacant situations. While making these explanations they kept casting furtive and admiring glances on some of my carcadores (porters), ultimately expressing their opinion that some of them woun serve their purpose. But, pointing to my Winchester and Webley, I emphatically assured them that to toueh a single individual in my caravan wonld bring about the funeral of more than one Portuguese soldier before the sun set. At this the cowardly quartet sneaked off, allowing our carriers to pass withont further molestation; but later in the day we learned that no sooner were we out of sight than they intercepted a party of natives, seized and bound twelve men, marching them off at the point of the bayonet. The whole district seems terror-stricken beeause of these marauders. We passed several villages where we had hoped to obtain food, but the inhaibitants had fled.

I'wo days more bring us to the Bailundu country. The ground being white with hoar-frost in the early morning, it is very diffieult for the first hour or two to urge the men along; they want to stop every few
minutes to make a fire, while some sit down to cry over and hug their cold feet.

On the 10th we reached the Keve Fiver. Some of us were ferried across in a native bark canoe, others waded over. It is said by some travelers that this stream is likely in the future to prove a great waterway into the interior from Novo Rodondo. The wisdom or otherwise of the suggestion may be judged from the fact that the body of water is comparatively small, navigable for most of the year only by canoes, and its elevation five thousand feet above the sea-a pretty steep climb for steamers in that short distance. But what would they eome here for, anyhow?

Another few miles and we reach Utalama, the village where poor Morris and Gall died and lie buried a stone'sthrow from the path, the graves inclosed by a palisade of sticks. Thoughts of deepest gratitude to God rose in my heart for the good health of our party thus far; but as I gazed on those lonely mounds I found myself in a melancholy reverie, having learned, since coming to Africa, the painful cireumstances connected with their death-cireumstances reflecting anything but credit on those who had charge of the party, and proving the indiscretion of permitting a man like Mr. Morris, just out of a London counting-house, to tramp all day in the glaring heat of Africa, living on the coarsest fare and sleeping sometimes in the open at night, as we gather from his own diary:
"It was late before we reached camp. Only one tent was pitehed, into which the three sisters retired, and we brethren just lay round about, wrapped up in our rugs on the bare ground, some of us-I among them
-putting up our umbrellas over our heads to keep off the night dew, which falls very heavily."

The privations suffered were from no lack of means, but from sheer misnamagement on the part of those who were responsible for the conveyance of this new party to the interior. For Mr. Morris was a gentleman of high standing and repute, an eminently successful Christian worker at Walthamstow, and comnerted with a lucrative mercantile business. Selling out his share, he with Mrs. Morris started for Africa at their own expense. But they never reached their destination. Mr. Morris was stricken by the fever, and Mr. Gall abont the same time, their deaths oceuring within four hours of each other.

For some days previous to his death Mr. Morris lay in a semi-conscious condition. Night and day his heroie wife was by his side; but who shall tell of the anguish of mind she must have endured as she watched her hasband shortly before he died? "Wringing his face at the memory of his poor children left behind, 'I cannot, no, I camot leave them!' he burst fortl. 'My precious girls-my boy, my boy!'"*

Some may seek to moralize, and quote Scripture for their comfort, on the premature end of two valuable lives; but the harrowing details as related by eyewitnesses of the tragie seene hame us like a horrible dream, and satisfy us that this mournful event might have been averted had the leader been possessed of as much common sense as sentiment.

June 11th, A number of our carriers belong to this district, and refuse to lift their loads this morning,

[^1]wishing, as they say, to spend the day with their friends. I was successful, however, by dint of coaxing and threats, in inducing half a dozen men to start with me for Cilmmi, a station of the American mission some eighteen miles distant, and to the left of our route.

Leaving the Jamaica men in charge of the camp, with instructions to advance next morning, we set out and arrived at the mission compound by noon. The missionaries, the Revs. Stover, Woodside, and Cotton, extended to me it hearty weleome. Nothing could have exceeded the kindness of these good friends, and I was easily persuaded to prolong my stay for a couple of days.

This mission-an oasis in the desert-was founded about twelve years ago, and there are now twenty-four converts in church-membership; but the influence of these men, their wives, and Miss Clark, a young Canadian lady who assists in sehool-teaching, cannot be calculated by figures.

The marked improvement in the social condition of the natives in the neighborhood, as compared with those we have met hitherto, testify that, if slowly, yet surely, the power for good of a mission such as this, conturted on practical commron sense as well as Christian principles, must in due course become manifest both in the lives and homes of the people among whom it is estalblished.

It may be said that the results seem small cousidering the large staff of laborers, and the many years that have passed since the work was organized. Yes, if it were true, as is asserted again and again, that the African carnestly reiterates the Macedonian ery, "Come
over and help us;" and that already "Ethiopia stretches out her hamls unto God." If he calls for missionaries at all, it is becanse he expeets them to bring him cloth, beads, guns, and gunpowder; but he is not partienlarly amxions for the gospel, for he is ignomant of its import and meaning, and in his heathen condition wants nothing that does not add to his sensual gratification. Anything clse he must be taught; and this means slow, mhill, and often discomaging work. Only in the field is it possible to know a tithe of the lindrances and harriers to the progress of missions in Central Afrira, requiring, as they do, unlimited patience, strong faith, and stearly plodding toil on the part of those who would suceeed.

I arcompanied Mr. Woorlside on a visit to Ekwikwi, king of Bathmelu, at his "ombala" or capital. The royal village is situated on the top of a hill, commanding a gool view of the surromming comitry. A hole in the palisanles about twenty inches wide and five feet high forms the grand entrance to the courtyard, which at night is used as a cattle-pen. Here we fomad his majesty, seated on a stone placed agranst the fence. At a distanco of some thirty feet, and in a semicirele, squatted a large number of minor chiefs, counselors, and headmen. In the renter sat a man who was being tried for his lifo umder an indictment for witcheraft; and hy his side an aged chief, who had esponsed the culpuit's canse, was, at the time we entered, eloquently pleading the imocence of his client. The speaker stopped short as we appeared, and waited mutil the ceremony of being "presented at court" had ended. The king greeted us cheerfully, graciously aceepting a
present of eloth, a bit of somp, and a box of matches; and we took seats, by his request and favor, on stomes . lese to "the benelh." The advoeate then proceeded with the (ase, while Ekwikwi kept up a rmming fir" of intrrrogations at Mr. Woodside, concerning the stranger. "Who is he?" "Where from?" "Whither lwomd!" otre, ete.

The king has a shewd and not minterligent fare ha, is probably about sisty years of age, and rejoiees in a harem of ora fifty wives, most of them being matives from distant tribes, bronght home as booty during his periorlical ralds on distrids which he thinks onght to pay him tribite and don't! Only a short time ago, he rearned from one of these eampaigus bringing hark somur sisty slates amd large herels of cattle.

While siting in the court we olsereved the young men busy making cartrideres, forming a mase ley doftly rolling pater round a stick, filling it with gunpowder, and inserting iron shges at the end-sungestive of coming tromble to some masuspecting eommunity.
'There was nothing very royal in the king's attire, howerer, his only habiliments ronsisting of a ragered bin-rloth and a dirty red night-rap on his head; hut he possesses a real cont dress of which he is very proud, and dons it only on state orcasions. It was made for him hy one of the ladies at Cilmu, of gay fumber chintz, fixed up with flounces and a train.

Sureral hoys and girls from the ombala attend the mission school, and on incuiring if the fathers of the rhildren sought in any way to hinder them from being educated, I was surprised to learn that they have, as a

rule, little or no voice in the matter. We are acenstomed in England and America to picture the mative Afriam as sitting under his own "vine and fig tree" with his happy fimily circle around him; and the milliant perorations on antislavery photforms referring to the "ruthless rending asmuler," and so on, are familiar to us all. So far as I can leam, neither our preronreived ideas nor the allusion apply, to this part of Africa at least.

The terrible record of " man's inhmmatity to man" in the slave-trade is much decper and more far-reathing in its eruelties than the "severing of family ties"ties, in most cases, less than nominal. For that matter, they think nothing of selling one another when it suits them; and when, ly the vigilanee ot British grumbats, the slave traffic on the East and West Coasts, as carrien on by Arabs and half-breed Portuguese, is put down, by far the worst form of slavery will still remain untourhed, as it exists to-day among the tribes of the distant interior.

In reference to the social laws that obtain in Bihe, it may be said that a father is sancely acknowledged as a relative of his own child, and cin exereise no control over it. Nor can the child, on the other hand, make any claim on its father, exeept it be the child of a slave wife; then it is the property of the father, just as the mother is.

When a man wishes to marry a free woman, he applies to her eldest brother, and, if accepted, seals the congagement by paying four yards of calico. On the day of the marriage some sixteen yards more have to
bee laid down. At the close of the wedring-feast he takes homes the bride to his own village, and lor man metain his wife only by paying tribute to the brother, of a fowl or hantkerehiof avery wew moon; failine this, she most be reflumel, and the rloth paid is forfoited. The offspring of this mion belong not to the father but to the under, who alone has the right to dispose of them or their serviees. Should he get into deht, her "an pass them orom to his creditors as surety, or they may las sold to liguidator his liabilitios. If it hmprens that the wife fails to work in the field or rook the "Imash" to har sirres sutisfaction, he may dismiss here; "and if he ran make groel his romplaint beforw a court of the heidmern of the villare he gets bark the eloth he paid for her and lows aromal for a belter mate.
 ('ilmmi, and strike out hriskly, knowing that my carnvan is ly this time a lome way ahem, amel it mast be overtaken, if pessible, by mom, so as to soldet the ":anping-gromut for to-night.

Here, as all through the forests of Angola, are to be fonmd many artifiefial beehives, made from the stout hark of a tree fom on five feet long and from fwere to filtren inches in dianctor. 'To remove this bark, the natives make two incisions aromal the trunk and a Himel lomsituelinally, when the chasticeity of the burk permits of its being perefol off and assmming its origimal form. The wiges are then drawn together bey means of peres and withes, and the ends rlosed in by weaviner grass over them, laving a small hole for the contrane and exit of the beres. These hives are then phared in a lorrizontal pesition high up amomer the branches of the

Hews; and from them is ohtained most of the wax ex-

I shang five homse mard hrings us to a strom, Whore we find the lomes are all laid down, while the

 abll a severe tiax on pationee; lont the tramern is contirely at their merey, and mast simply wail their
 by ally means imply a start horthwith. No; hay have to ero for their villages, taking the loads with thrm, and for a rouple of works they will think ant talk ahemt the roan; mother ton lays for the women to pomind their meal; yot anothor work for a hig farewell berodrink; then we mowe off fon ar twere miles along the intembed rontrand form "anm, as a prediminary notice
that we can wait no longer. During the next week or two they will come in twos and threes until the most have turned up; then another move is made.

But perhaps in the meantime rumors of inter-tribal wars from combtries through which we have to pass "righten the whole erowd, and they lay down the loads and desert to a man.

CHAPTER III.

KWANJULULU AND KOMONDONGO.

An English mission,-The illusion dispelled.-Garanganze.-Five years' work.-Their own superstition best. - Echoes of Nerrice.-Vegetuble prod-nets.-Visit to Komsulongo.-The late whr.—C'anse of the ruptme. -The peacemaker.-Bmining villages.-('aptare of Chindumdman,-The mission station.-Alversities.-Chronic bummers.-Mush and beans.Courting privations.

TWANJULULU is the headquarters of the English Brethren Mission, and is situated in the torritory of Bihe, within a day's mareln of the American mission stations, Komondongo and Cisamba.

This entering a district already occupied by the American Mission has been unfortmate, amt the cause of no little friction. Surely there is room enongh in Afriar for different societies to organize mission centers withont trearling on one another's toes! (iod forbid that Afriea shonld erer know the jangling and rivalry of the sects so prevalent in more enlightemed lames.

The Kwamjululu Mission is superintended by a Mr. F. S. Arnot. My proonceived ideas in favor of this mission have received such a shock, as week hy week its artual condition has been laid bare, that I would prefer to draw a veil of silenee over all I have seen and heard here; but I am impelled, from n: other motive than my interest in missions generally, to pleat for a
reformation in such quarters, lest the day come when tha enthusiasin aronsed at home by the flaming and high-oolored reports of grand ronquests of the gosper will suffer reartion. The supporters of this miterpise have bere led to rontrabte larer smas of money toward What may le truthtuly designated a hage farre, and, when the mamer in whirh they have leen hoodwinked is brought to light, disastions reflertions will he cast
 the present day-foren missions.

Whaterer Kwampulutu may be a transport depot. as influcome as a ('hristian mission is ahmost mil. But faw matios attend the meetings, amblext to mo eranmelistir work is being done. Not a single gospel mertine was held for three suceressive Sumblys in hast month, nor came there a solitary heror from outside the rompound. On Sumblas, at tha mismal time for morning swre the missionarios more for mutual alifiration and "hreaking of hread": but as this is the most suitalble lome of the day for gotting the matives tweether, the opportmity is lost. While at the othere station, (ianamganer, Mr. F——, one of the mission staff, who has just rome out from that distriet, trills mo that hat little spiritnal work has heen areomplished there, the time bring orempiod ehiofly in makinse gardens, homing for food, wating on King Msidi, and personally ronducting the transit of supplias from Kwan, luln. 'Thus Mr. Th—, one of their hest men, has spent twenty-one months on the road, ont of the two years he has leen in the mission.

Mr. S——, in charge of the Garanganze branch, writes:

"It is now nearly three years since we came here, and how very little seems to have been done! If we add the two years that Brother Arnot was here, it makes fice years. What a length of time to have been living in the country and yet many of the matives scareely know our ohjeet in living among them! lt is true, and we thank Gol for it, that those who are in the habit of eoming to our mertings are hegiming to umberstand more sleaty what we are here for; but the great majority seem to think we have some personal interest in living imong them.
"A few days ago a man who had heard something about the white min's comntry sail, 'You must have committed remes at home, or you would not live heres' Some might think that all that is meressary is to tell them you have come 'to tearh people the Word of Gol' and they would moderstand at onee. But is it so! Fiar from it. You must first tell them who (iond is, where llis Whal romes from, how it is that were are so interested in them that we come to live with them. When you remember that hefore any of these things call be told them it is necessary to learn a languige altogether different from your own, withont the aid of vorabulary or grammar, you begin to understand to some extent how so much time passes away without any or with very few results to show. Even after yon failly master the language and tell them distinctly that you are here to teach them ahout God and His prerious Worl, you arr sometimess greeted with 'buvedla' or 'buramba,' the Yoke and Laba words meaning 'nonsense, untruthfuhness,' ete.
"Again, you sit down with a man and try to teach
him something about right and wrong, and after you have finished he goes away without feeling his responsibility to do what you tell him is right and leave off doing that which you have songht to show him is wrong. Perhaps the conclusion he comes to is that their superstitions are far better than ours. He looks around, and he sees Va-yeke, Va-lamba, Va-luba, Valunda, Vil-sanga, and a host of others, with their peculian beliefs of right and wrong, and when he hears us he looks upon us as one more among the rest, and camot at all see that he is responsible to take heed to what we say. Ot course we tell him that the Word of God is for all people, but to tell him is not to convince him."

Would that all the reports from the Brathren Mission were as honest as this! Then there would be nothing to gainsay, for results are not in the power of man to control ; but he may, if he will, control his pen and refrain from inlle embellishments, exaggerated aurl firtitions stories of suceess, that are without foumdation.

From the head of the Kwanjululn depot we received sevemal letters extolling the agrioultural capabilities of the distriet; also in the Echoes of Sercice we read that evary kind of vegetable product is grown in abondance, including wheat, yans, potatoes, cabbages, strawberries, ate. 'The fact is that the erop of wheat referred to was raised on a spot of land previonsly used as a cattle-pen, and mand up by large quantities of earth carried from a nejghboring marsh. Scaredy a fair criterion by which to julge the productiveness of the soil! At this season of the year it would be hard to find a handful of vege-
tation in any of the mission gardens; only during the bride period of the wet season can any vegetables be grown, and then only by the free use of fertilizers. But the extravagant accounts of the land as a souree of food-supply for white men were as disappointing as the Christian work we expected to find, and as misleading as many other statements we had to deplore.

On the oed of June we set out to visit the Ameriean mission at Komondongo. About halif-way stands the Portuguese fort, Silva Porto. I ealled on the "rapitan" in command to present my compliments and show my passort, and found him very polito and agreeahle. He conducted me romud the premuses, where everything was neat, trim, and ship-shape. The fort is garrisoned liy a force of some two hmurbed slave soldiers armed with Suider rifles. In the armory stand four fieddpirees, including a "Krupp" and a "Nordenfedt."
Soon after leaving the fort we struek the wagon road made hy the Boers during their visit to suppress the late native rebellion. And now we travel mile after mile through a country desolate enough at best; but since every village and human habitation on the road to within a short distanee of Komondongo has been burned to the gromm, leaving nothing but charred palisardes and the ruined huts, the prospect is anything but inviting.

The caluse of the rupture was, briefly, as follows: Portugal has long (daimed sovereignty over Bihe, and until lately was content that her authority remained nominal. Early hast year a few of her soldiers, under Captain Condeiro, were ordered inland, but were refused permission ly the king of Bihe to pass throngh
his country. The king protested that an agreement bad been made between him and the Portughese govamment that back soldiers should nerer be quartered in Bihe- that only white people were weloom to his - new $\%$ The natives, who had never telt the fore of Cionown ams, refused to be included among the vassatio of the Portuguese, and assembled in large numbers to resist what they deemed an invasion of their territory, promptly moving against the aptain, who, having lint a small eompany of black soldiers with him, wisely retired, to wait for reinforements.

In the meantime, Stion Silva Porto, the remesentative of the Portuguese, who had lived at what is now the fort (and from whom it obtains its name) for noward of forty years on amicable terms with the matives, dial his best to allay the fears of the chicf, but failed. This peudo-insurrection having been taken up by the imprial govermment, and his previons sucess in controlling the Biheans ignored, so distressed Porto that he condented hife was for him no longer worth living. Going to his magazine and arranging a dozen kegs of ghinowder, he wrapped himself in the flag of his comtry, iay down on the explosives, applied a lighted fuse, and in a few seronds was blown through the roof, expiring shortly after.

Portugal, still determined to punish the relels, sent Captain Piva with a company of black soldiers and a fored of Boers from Caconda with fifty wagons to the srene of artion. Why engage Boers for this purpose? it may be asked. The Portuguese know, and do not hesitate to say, that while their demoralized blacks under strict supervision answer very well as police, eir terrivho, havsith him, presentait is now 4) for $\mathrm{n}_{3}$,e matives, nut failed. up by the ss in collorto that th living. a kegs of his comuhted fuse, the roof,
ebels, sent iers and a ons to the ; purpose? nd do not sed blacks as police,

the Boers took as a signal for attnek, and rushed up, tiring on them, dropping eleven of the maked wariors deme on the bonk, the remainder beating a hasty retrent. A few days after, the Biheans attacked a small party who were engaged in elearing a road for the wagons; lut the Boors respomed with such dradly efferet that a panic seized the assailants and they flend east to the Ganguellas. The burning of villages now begm, and every human abode over a groat track of comitry, including the "ombala," was sacrificed to tho flames; the latter is said to have had a population of tem thonsand inhathitants.

A truce for nine days was now declared, and within this preriod it was required that the chiof be fommed and given up; failing this on the expiry of the few days grace, the whole of Bihe would be destroyed by fire.

Mr. Samulers lost no time in dispatching messengers to all the minor chiefs holding the roads of exit from the country, that they might be guarded and so prevent the escape of Chindundmma. Then, calling a comeil of the healmen, he placed the serions state of affairs before them, thas obtaining their help. For eight days the country round was seoured by the missionary and hmodreds of matives, but in vain. On the ninth day, however, when hope was about giving place to despair, the man so much wanted was discovered cringed up in an isolated lout armed with a Martini rifle. Mr. Sannders entered and explained his business, whereupon the old man offered no resistance, but, surrendering, was handed over to the anthorities that same night, and is now a state prisoner on one of the little islands on the West Coast.

Missionaries sometmes meddle mwisely in politiend distubanese; but in this case it was well, for thereby much bloodshed was averted and an immense toritory saved from entire devastation.

By sumset I radhed Komomdongro, tired and weme; but the hemrty greating of the Res. Mr. Sammers and the kindly weleome of his grom wife disperlond all thought of fatigne. Onee insile the mission homse, I rombla casily have imagined myself in a gemuine Now England farmhonse, but for the canm-mat floons and the hadek fates of the servant-bose pereming romme cormers to get a glimpser of the stragerer.
'This station was formed some olevole years ago, hat the mission here and the ome at Bailmoln have prassed throngh seatsons of bitter trial and perserention, primipally throush the prejudier and jealousy of half-hered traters, who poisomed the minds of the king and nattives, until the terible arisis in May, 18st, when Ekwikwi, bribud by gilts and alamed hy false roports, oremed the expulsion of the missionaries. Tlae whele party were comperlerl, with surlo frew offerets as they could carrs, to seek the coast, sutfering harkhips and exposed to dangers by the way, ill provided as they were for surh a journey, that can seareely be described. But throngh the negotiations of Mr. Walters (a member of the mission) with the Porthgese governor, general letters of rommendation in behalf of the Amerinans were abhressed to the native rhiofs, resulting in the two kings expressing their regret for what had taken place, and, promising to listen no more to stories against the white tathers, begged them aromm.

What I have written concerning the Bailmand sta-
iem applies with equal truth here as regards the sheress of the work. There is not only sowing, but raplin!, thengh long deferved, has at last beginn to chaer the workers. Twide on Sumblay the large weetinghonse was well fillod with attentive hearers, both ment and womell, besides a well-attrmaded sumbay-sehoel, hald betwen the services.
 am industrial school, for he ratizes the damera of mate rating the mative lanls withont teterhing them also the disnity of lathor; but the extreme povaty of the soil in all these distriots is the great drawhere of farming. I wherere that the matives gemerally selare for the ir
 gens bear brooks, but awid the higher levers. Still, it womble be areat arhiowemme if the young mon anil boys aonli bee inturee! to work in the firlfs, for
 work-falls to the lot of the women alone, whila the men try to amme themselves and kill time hmatine, visiting their frimuls, making a mat, a basket, or domer a liftle sewing ; but as a rule they are faronie bum-
 thr hahies. Thases peen montumates, when only a fere werks old, are ranion by their mothers to the fiell. strapered on theip hateks with a bit of romgh hark Woth; and there they memain the livelong tay, with She exemption of intervals for refreshment, expesel to He fiery rays of the sum ; and whether they shay or banch of ary, their little heats oro bmmp, bump, hmmp, with every streke of the toiler's short fouble-hamelled lise.

A story I hearl at Cisamba serves to illustrate the position of mative African women. A native caravan bomel for the coast rearhed a river, and, the water being perty derp, some diffienty was experimered in arossime, when one of the men called to his wife and commanden her to cary him over on her shouldirs. 'I'o this she ohedientiy romplisel, and areomplishod her task suceessfully: The hustand, on being remonstmand with by a white man, asker, in astonishment, "Then whose wife should earry me over if my own don't?"
'The ohd men teach the young that to plant a shrub w a tree would only insume their death before it rane 10 matmrity; thus it will be seen that agrieulture is hamlioapped from varions causes, and white mem, if they wish to live here, must drpend rhidfly on impreter foesel-stuffs for mamy a long day to eome.

Furopums may rasis on mative fare for a short time, hat thongh some porn white mortals whom whe have met lately i, oast that they thriere unon "monsh amb bums," their carlarerons "omatemanes, sealy skin, pimpres, and sores that refase to laral, testify to the ambfrary, indiating that their hoorl is imporersheal, them monstitutions being rumed, and in a shoptor time than they thimk the peralty of their folly will have to bee paid.

I have tried this mative "mush," lat will be harel pressed by hamger before I met menomiten to it. It is only meressary to explain how mush is mathe to romvime an ordinary intellent that it mast be an indigest d, mess. An "anthen pot is pareal on the fire thre.. 'flatiors fall of watar, into whirh, whell lot, meal is
thrown in handfuls, until it becomes thick, when it is at onee taken from the fire, vigoronsly stirred, and the scalded meal compound doled ont. The native takes it down by the pound into his east-iron stomach, but the white man retires after eating a few ounces, to be kept a wake half the night by pyrosis, particularly if prepared from manioe meal.
"But it is expensive to import English food, and we must remember we are using the Lord's money:" Do you thereby imply that the Lord sets more value on money thin on the lives of his servants? It ramot be! Is it not written, "No good thing will He withhold from them that walk uprighty"? And surely that should inelade the missionary, if he deserve the name. 'Those who leave the romforts of home to spend their lives in a lam like this, were they even supplied with evory haxury that money could buy, will fim plenty of moavoidable opportunities for self-denial and selt-sacrifice without courting privation and suffering.

## CHAPTER IV.

## FROM CISAMBA TO KUTUNDA.

A
UGUST 1st. Six weeks since the last entry in my journal, and yet the prospects of a start eastward seem darker than ever; the fair promises of obtaining carriers remain unfulfilled hopes and expeetations raised one day, only to b blighted the next. Seeing the scarcity of men, I have sent back to the coast a number of my packages for shipment to England, along with several boxes leit at Catambella for the same reason. Still, bearer have to be found for fifty loads, all of which I deem necessary to the safety and progress of the expedition.

For some months past Mr. A- has been collecting natives to take on a party of Brethren as far as Nana Kundundu, and is still booking every man he can pick up. I being a stranger, and not knowing the Umbundu language, the odds are against me; the only alternative
now is to look elsewhere for the means of conveying my trade cloth, beads, provisions, ete., so as to enable me to proceed on my journey; but move on I must, or die of c'muri.

The $3 d$ of August found me at Cisamba, thirty miles northeast of Kwanjululu, my camp pitched in the forest near one of the mission stations of the American Board of Commissioners for Foreign Missions, in charge of the Rev. W. T. Currie of Camada, where a variety of circumstances which need not be detailed here determined a change in my route inkand.

I had intended going thirough the Katanga country and striking east to the Lakes, purposing to visit, so far as my limited time would allow, those parts of South Central Africa of most interest to the friends of missions. But as there is only one station on this ronte, viz, the Brethren Mission at Garangaize, ard having met two of their party just returned from that conntry, who had been five months on the road, seeing lut little worthy of note by the way, traversing for weeks together vast phains of burning white sand, I felt that to me it would mean five months wasted. So I decided to steer a course farther sonth, in the direction of the Barotse Valley, visit the French Evangelical Mission on the Zambesi, from thence pushing on to Nyasa as the way might open up. In the meantime, I set to work in amenest to acquire what I could of the Umbundu langrage, as an interpreter to aceompany me was not to loe had. Thas a further delay of several weeks was mavoidable.

Within a few days, through the aid of Mr. Currie, a number of hearmen from the surrounding villages were
brought together and commissioned to collect earriers as speedily as possible.

I did not think it advisable to leave my of the Jamaicams at the Kwaujululu mission, there being a phethora of missionaries on that station, and the ery is, "Still they come; " besides, several of them are sperially adapted to to the work for which the colored men were intender.

At Cisamba, however, it was far otherwise. We foum Mr. Currie toiling bravely, though almost singlefanded, having only the help of a fow mative lark in erecting a dwelling for himself and his rolleague, the Rev. IV. Lee, who was 'ben on his way up from the coast with his young wite, while the buidings were get fir from ready.

My men were heartily weloomen, and they set to work with a vigor and a will that left Mr. Curric free to attend to the many duties whirl had otherwise to be suspended--surh as visiting among the villages amd aiding with medicine the many sick poople who eame every day for relief. In this department I was glat to be of service, and had thereby an opportunity of observing the class of diseases to which the natives of the district are sulbject.
Many interesting cases appeared, among them an old mann with a large uleer on the leg, that had resisted erery remedy-seemingly a hopeless case. On examination, I found extensive necrosis of the tibia, and proposed to remove the dead portion of bone; hut as chloroform has never heen administered in this part of the comntry, and the patient being far advanced in life, we realized that there was no small risk. We placed
him, however, on a table in the open yard, and in a few minutes had him under the influence of the sensestealing vapor, while a wondering crowd of natives stood arouml, marveling at the strange proceding, and conjecturing among themselves what kind of fetirh this could be that made a man submit to having his lege cut and gouged withont a murmur or remonstrance. In a short time the wound was dressed, amb, the offents of the anmesthetic passing off, the astonisherl Sekulo sat up, amid the shouts of surprise and greetings of his friends.

The month spent at Cisamba has been in every way pleasant and profitable. Daily contact with the people has given me to moderstand a good deal of their mamnor's and constoms. I visited several villages in the surromding districts, and while crussing a plain on one of these exemsions observed humdreds of women and children wambering about among the young grass and werds that were just springing up after the ammal fires. They were most of the time in a stooping posture, as if looking for something, and were gathering the object of their search into calabashes and baskets.

Leaving the path and approaching a group, I heard them making a peculiar noise by protruding the tongue and moving it rapidly between the lips from side to side, meanwhile keeping up a high-pitched monotone in a minor key, like " lu-ra-lu-ra-lu." My curiosity was ex.ited. What was it all about? They were harvesting the Angust crop of eaterpillars, which they dry in the sum, stew, and eat as a relishl with their commeai mush, considering them a great delicacy. But why keep up that peculiar ery? Well, the insects being
of the same color as the grass, it was difficult to see them; but no sooner did the harvesters bend to their work and commence the "lu-ra-lu" than: there was an instant commotion among the green bledes, the areering things standing up on their hind legs and swaying their bodies to and fro, when they were easily captured.

The tastes of the Ovimbundu are not confined to caterpillars as a relish, but grasshoppers, rats, mire, and every kind of hawk or buzaard may be inchuded among their luxuries-anything in the form of flesh, mo matter what. Whether dead from disease or killed by themselves, it makes no difference-horse, mule, or dog, if even buried and the phace of interment dishovered, it may be a few days late-all the same, it is meat. The idea expressed by the word "nasty" has no equivalent in their vocabulary.

1 was interested in watching the movements of a funcral procession passing within a short distance of my tent. The horly was cartied in a hammork decoraterl with gayly rolored choth and suspended from a pole carried hetween two men, and followed hy a rrowd of natives yelling and shouting at the top of their voides, while gru-firing and beating of droms alded to the mearthly uproar. The bearers of the corpse ran hither and thither among the people, while the witch-doctor danced around it, gesticulating in the most frenzied manner, every few steps calling a halt, pretemting to interrogate the dead as to the probalifer canse of death, or as to who had put this fetich upon him that he died. Should the men controlling the hammock with its burden stop suddenly opposite any individual in particular, it is taken as a sure indication
that this is the gruilty barty, who will have to pay cloth, sharp, or pigs as an atomomont. Bat in this case, after promming for abont an hom, oft they went with a rimsin the burving-gromd; so it was probally de.. riden that the deremsed had swallowed his own fotird, and he was huried forthwith.

The disposal of deat hodies by phareng them in trees Nignifes that the dewemser was a stramger from amother triln: : mod this mothod is resorted to in arent of relations aminte to inguite for the departed. Shouk amy dombt arise as to his demise, they are directed to his Nowated resting-pare, where they may identity the bouly for themselves. lo the evening, the village Whre the death took plare will be filled with people, ant ox killed and a hige feast spreal, a portion of the mat being laid aside for a peareoffering to the spirit, ame the homs of the amimal stuck on a pole be the grave, together with the earthly helonginge of the departed. Then for several days there will he a great herpr-drinking, when yomge and ohl get drunk, amd the nights are spent in dancing, singing, and dromthumping.

These beer or "orimhombo" "alrousals are not ronfined to fimerals, for at this season of the yan they form the chief ocropation of the antives; someln so, that it is esperially diftionalt to indure carrims to takn the road while these revelings are in progress. The liguor is mate from corn soaked in water until it hegins to spront, then dried ame pomed into meal, hoiled to the romsistency of thin gruel, amb allowed to stand motil it foments, when it has a sourish taste with a permbian flaror, from the presence of a juice ohtained from the

umbundi root and added at the time of boiling. The greater part of the year's erop is consumed in this way.

While passing the village of Kolombambi a short time ago, I had an opportunity of seeing one of these orgies in full blast. Over five hundred natives of all ages and both sexes were assembled within the stockade; calabashes of the intoxioating beverage were circulating freely; the drummers were pounding on the goatskins as if for their lives, about forty women arcompanying their wild chants by rhythmically shaking gourds contaming small hatrl seeds, the arowd joining in the choruses between times, giving vent to the most hideous and demoniamal yels. Humdreds of men amt women all but muld presented every phase of intoxieation from mere talkativeness to mandin and pugnarious drunkemess, shuffling and swaying their bodies in gestures too indecent to deseribe. I tumed away from the sickrumg sight, convinced that whether rum is introduced as an article of trade into Afriaa or not, the savage already knows too well how to manafacture drink for his own dehatucheries.

In the course of our perambulations about bihe we were led to remark on the many forms that superstition assumes among the Biheans. One in particular we met at eross-paths near villages and in the vicinity of uative dwellings, in the shape of a miniature conioal hat of grass about two feet high, with a door proportionately small, and built hy the publie soreerer. Sometimes it contains a little roughly carved wooden image, but more often only a few hits of broken pottery, equshells, or hair. Its special function is not very clearly defined, but it is supposed to scare hostile neighbors,
insure the safe return of the warriors who go forth on fighting and plundering expeditions, and also to protect their families during their absence.

September 8th. At last we make a move, although the loads we not all lifted; but even the carriers who are engaged don't seem to believe the traveler is realy to sart until they see his flag move on to the first camp. Seeing this is expected, we have gratified them, for here we are at Kopoko, eight miles from Cisamba, with our headmen, thirty earriers, and two Jamaicans, Frater and Jonathan (the others remaining to assist Mr. Currie), expecting that the remaining loads will be forwarded in a few days, although how long we are destined to sit in this the first camp on the road, I camnot tell.

My tent is pitched by the side of a forest, in sight of a number of villages; consequently the last peg had scarcely been driven when we were besieged by throngs of natives, one and all taking a critical interest in everything they see about the white man's belongings, amused and frightened by turns, and expressing their amazement by cjaculations of "Eh! Eh!" when shown the mechanism of a rifle or revolver; but the marvel of marvels was my little American magic lamp. The next best show was dinner, laid on the camp-table in the tent; when I proceeded to eat, with a rush they (rowded round the door, mothers lifting up their childron to have a look at the, to them, strange performance of eating with a knife and fork. Every movement during the meal was watehed with unabated interest to the end. This over, and desiring still further to please the citizens of Kopoko (as I am in want of more por-
ters, aud among my audience are many relatives and friends of the men now in camp, en route with me), I got out my cornet. Its glitter eaught every cye, and the crowd pressed closer than was agreeable, to examine it; lut at the first shrill blast I was alone, with only a few of the older men. Sueh a stampede! They tumbled over one another in the desperate effort to escape from a sound that resembled nothing they had ever heard before. When at a safe distance, they pereed from behind trees, and, seeing the Sekulos still sitting near muhurt, and even langhing, they took "ourage and ventured back again, resuming the squatting position. To quiet their nerves they passed the smuffboxes, for they all take smuff, men and women; and as the sun went down children were sent off to the huts to bring several baskets of yams and meal, manifesting in this way their desire to reciprocate our frimenliucss. This experience is quite bearable and even amusing at first, but when it comes to be repeated day after day, with scareely a variation, one gets heartsick and faint at the very sight of approaching visitors.
I went ou a visit to the chief of Kopoko by the express wish of my headmen; they were anxious that I should make a good impression on the great man (more for their own glorification than mine), and directed the order of mareh. I must not walk, but be carried in a tipoia, although the distance was not over a mile. My trumpeter or spokesman takes the lead, and behind, a native carrying my camp-chair, followed by another with the cloth to be presented to his majesty; in the rear, a retinue of the favored individuals who have been invited to attend the interview. On reaching the
palace (a round mud hut) we found the chief busy with a neolle and thread mending his loin-cloth; but on seeing us approach, he dropped it and hurried half across the yarl to greet us. Kananene, for that is his name, appears to be about fifty years of age, quiet and unassuming in his manner as compared to most African chiefs; but there is something foxy and sueaking in his face that I mistrust, although I am told he fills his place at the ombala with credit, and seeks the peace and welfare of the eountry, avoiding raids, war, and strife, and expresses a desire that missionaries should come and teach his people, although these petty chiefs have in reality very little control over their sulbjects and comitry.

We were seated amid the clapping of hands and "lielumgas" of the guests and courticrs, who filed in and squatted in a circle around us. My speaker, Sanambello, proceeded with the palaver (it is not considered dignified in these formal or homsiness interviews that two chieis should address each other except through a second party) hy a long harangue about how far I had come to see the country; that I had shown kindness to the people by paying them well for any service they had rendered me, giving them medicine, ete.; that now I was about to travel farther into the interior and required carriers to take on my trade eloth and other roors; closing with a grand peroration of flattering eulogisms to Kananene. Now the prime-minister takes his turn. His face, like several others we have met during our journey, is terribly disfigured by the bursting of one of those wretehed trade guns supplied to the natives by the traders at the coast. He replies at

## COURT SPEECHES.

 great length, stating that I had been long enough at Cisamba for them to hear of me, and that they had no doubt I would deal fairly with and protect any men who might venture into the countries beyond with me; also, that the chief would visit my camp in a few days and talk over matters. Oh, if only he knew how sick and tired I am of sitting in the forest day after day, he would have ordered his men to get ready at once, instead of saying, "In a few days we will talk about it;" but the innate greed of the African suggests this further delay in the hope of more pelf. Some of his wives appeared, carrying large gourds of beer for my men, who have an enormous capacity in this direction. A few minutes suffice to see the vessels empty. The word "Twendi" ("we go") is passed, aud without more ceremony we take our leave and return to camp, where from dawn until dark there is no room to stir for the giggling, jabbering crowd of the "unemployed" occupying every available space round the tent.Time hangs heavy on the hands of the native Afriean. Now and again a mau of some importance in the community honors me with a call and presents himself with many eeremonious salutations. I try to attend when he speaks, and can just make out sufficient from his harangue to know who he is, where he comes from, and that he wants medicine, a knife, a needle and thread, or some such triffe. But the setting of the sun generally brings relief, as all natives have a great horror of being out after derk. This is by far the most thickly populated district we have come across as yet, and offers a splendid center for mission work. September 13th. Sunday, or "Calimingo," as the
matives rall it. I explain as best I ran to the perphe as they arrive that this is the day of rest from palavers, antrotamments, buying and selling, when they motire, assuring me, at the same time, for my "omfort, that they will rome have to-momow-which promis. I douht not they will kerp, the thener, athoung they are bey no muans frowerbial for sticking to their word. At any rate, we have one quint, west ful day, althomgh when I whent on my position and the gropere of aremor plishing this multoraking, the futme looks so dark that an werwhoming sathess opmesses me. Ity thomghts wanker back to the litthe islame of the west Where by loved ones Iwell, and wher I hate spent so many haply years of toil among a people who have to own this as then fathertand. I think of the "rowds as they ascemble at the various stations of the mission, from momitain hamkets and luxuriant ghens, where in rich profusion grow the ormge trexs, the woramit pahns, coffore and bentanas, while the balny air is lacken with the perfinme of spieses-se elanly and comfortahly attiverl, baving behind for the time the in eottage homes of prace and plenty, to gather in the homse of payer, to sing as only they can sing, and pray with eamestnoss and simplicity of faith, and listen to the Word of fiol. It is to them, indeed, a messame of love and good tidings.

Such are the seenes which pass mpinly before my mental eye, until the first impulse is to give up this struggle and return. But the thought that what the Jamainan is to-day these poor benighted and derraded perphe aromel me might be had they the same opportumitios, confirms my determination to proced as fir

and to see as much of their condition as $J$ can; carnestly hoping that my experienee be of serviee to others who may follow, and that the joumey will in some way add its quota to the opening up of this dark, sim-blighted land.

September 1th. Early this morning one of my tin boxes alromily given ont was bronght back. The carricp on receiving it had taken it to his village, as is the castom, to haw his rarrying-stioks tiond ons. In the meantino he hand committed solle crime, for which he hat to memain and the tried. This ciremmstanese was far from amosing to me, particularly as I saw in tho faces of several of my ment evidenees of displomsure at the way in which the culprit was being dealt with by the hoadmen of the village; and I dreaded the probability of thoir wishing to stay to attond the trial, thons delaying me indefinitely. A dispute forthwith arose, and for a full hour the bablble of voices was enough to drive one to distraction. Sitting at my tent foor in anything but a calm or peatefinl state of mind, though hardly restriming the strong inclination to drive the Whole gang from the camp, I aspied a latge hawk soaring over our heads at about forty yards. My vifle was lying close by; instantly raising it to my shombere, I fired. Ere the crowd hawl time to rreower from the alarm eansed by the sudden shot, the bird dropped dead in their midst. The uproar was immense, ame the provious squabble was too insignificant to be thought of now. Here was a bird every feather of which is prized by the men as a talisman of strength and rourage, and by the women as possessing certain undofined charms which enter into their fetiches. For the rest
of the day all other topics were forgotten; again and aguin they minieked the picking up of the rifle, and how the bird fell with a thud; to every new arrival the whole story was related, and they were satisfied threre would be plenty of meat on the rond if they traveled with me. Let us hope they will not be disappointed.

At noon Kananene appeared according to promise, (anried in a tipoin, in full dress, having donned, besides his loin-eloth, a long back cont with military epanlets. He was no sooner seated than he asked for something to drink. Having no spirits, I mixed a little chlorodyme in water and gave it him, which he evidently approciatord. I tried to interest him in the usual way, and presented him with a box of mutches on his departure. In the evening his serretary came to the ('amp with several men offering their serviees as carriers. I closed the varions duties of the day loy presuribing for eighteen sick people; several of them were cases of fever, but the majority skin disease very difficult to diagnose, as the problem is to decide whether the incrustations are from within or without.

I was smprised at the extmordinary prevalene of goiter, some of enormous size, affecting chiefly women and children. I should say it is quite within the mark to put the percentage at forty-five. They have to thank Dr. Lowe, Professor Simpson, and the directors of the Edinburgh Medieal Missionary Society for the lonefit they received from the medicines; for had it not been for the liberal supply of drugs presented me by that noble institution, I might have had to refuse aid to many poor sufferers I have helped since leaving the
eoast, besides replenishing the stock of severul missionaries short of quinine, rousers, ete.

September ted. We have been here now fourteen days, and during this time have tasted to the full the bitterness of colldeting earriers among these wrotehed people-one day rationing and booking a number of men, the next canceling as many. I had been toll that when a mative takes rations and ties his stick on a lomd, he rarely, if ever, retracts; this is sheer nonsense, as the Bibean (and subsequent experience of months with a hundred of them gave me no reason to alter my opinion) is influenced by neither conseience nor prinriple. His actions are controlled by the basest of motives, selfishness and superstition coming out ahend every time. We were to have started on the 17 th, bat the child of one of the hemdmen fell siek, and the canse hat to be inquired into by the tedions process of consulting the fetich-doctor. Another headman came to say that his men rofused to go becanse news had reached them of war in the Gamguella country, through which we have to pass, about four or five days' march from here.
'This may be true, as I mulerstand the Portugnese are fighting among the tribes east of the Kukema River; but as I do not intend to side with either party, and my carriers know it, this is a paltry excuse. They are arrant rowards, every man Jack of them. Around the camp-fire they vie with each other in boasting of their bravery and prowess, but, like big overgrown children, rum at the first appearance of dimger. I promise to go on ahead each day to see that the coast is clear for them; and after a long palave:
they consent to start to-morrow. The vexing repetition of this sort of thing day after day is enough to drive one mad, seeing that several of my loads are still to be lifted, and the rainy season approaching, when the lowlands en route will be flooded.

But I resent the idea of my plans being defeated by a people exhibiting the most despicable traits of "haracter ever heard of. Oh, how they enjoy treading on the white man when they think he is cornered, or in any way under obligation to them! Some will come, have their names put down, and just by the way suggest that they have a little debt that hinders their starting right away, but that a piece of cloth would square matters. We are not canght, however, and they return no more. The result would have been the same had they got the eloth, but my chagrin would have been greater. Yesterday, my chief "pombiero," Samambello, whom I trust most-which is not saying much-arrived with his men and their loads, telling me the others would come on to-day. For several days we have had two women pounding eorn for our own use, so that we have now a good supply. I decided to go on to Ciyuka to-morrow-eight miles-and sent a notice to that effeet to those in the rear.

September 23d. Hiring a dozen women to carry the mulifted loads, we started for Ciyuka, arriving there at 11 a.m. I pitched my tent near a small stream, and stacked the loads with an awning over them, as there is every indication of rain. I lost no time in paying a visit to the chief, Ohosi, and found him in a small hut within a skerm of brush, but outside the ombala, as he is siek, and the spirits of departed ehiefs gave

## AGRICULTURE.

him no chance to get better while in his own house; hence the isolation by order of the doctors. He is the youngest petty ruler I have seen-probably about thirty-five; of slim build, rather delicate-looking, and geuial in his mamer. He received us most cordially, with of course the usmal ceremony. He was told the purpose of our visit, viz, to get young men to join our cararam as far as the Barotse. He replied that he would do whatever lay in his power to get men, as several of his people had received medicines from me at Kopoko, that had done them grood. He was glad I had come so near his village, for no doubt I would be able to take away his sickness, thongh his own mondical advisers had failed. I gave him a present of eloth and cheparted. In the eroning he called for his medicine, when I was glad to find his malatly one, as a rule, quite amenable to treatment. His sickness may yot prove fortunate for us, as, if relieved, gratitude may induce him to render the aid we need. Next moming he sent us a fine black goat and a basket of meal; abundance of yams and sweet potatoes have been brought from the villages for sale.
The elevation of Ciynka is four thonsand feet, and the country generally is a great improvement on Bihe. sugar-cane, mealies, cassavia, pmopkins, yams, and sweet potatoes seem to thrive well; but neither here nor anywhere else since leaving Catambella have we seen banamas or plantains. Attempts have been made by the American missionaries to introduce them; but though planted, some of them for five or six years, they have as yet yiehled no fruit. (In the islands of the West Indies each sucker yields a bunch of fruit within
twelve months from the time of planting.) Every care has been taken during the winter months to keep out the frost by wrapping each plant in grass; still, the leaves and center shoots are exposed and get blighted by the black frosts of July and August, and are thus prevented from ever reaching maturity in these regions.

We are not annoyed by crowds of natives here, the chief having forbidden their entering our camp, exeept on business-a happy contrast to the miserable time we had at Kopoko. Here we are not in such a hurry to advance; I should almost enjoy a couple of weeks' stay, but there is something wanting. Week in and week out I see no white face, and the longing becomes intense to have some one with whom to talk and consult over matters. Prison-life could searcely be worse than this monotony, for there, at least, we would have something to do; here, the chief employment is hunting up carriers, and this must be equivalent to the treadmill. Even the companionship of books is denied me, having had to send most of them back, to lessen the weight or number of my loads.

The white ants are a constant souree of troulbe; they are everywhere; there is nothing they will not destroy if within their reach. Last night they succeeded in cutting the bottom out of my camera case, and made a hole eight inches square in the tarpaulin that serves as a ground-sheet for my tent. Only by moving every article at least once a day, or placing the goods high above the floor, can anything be preserved from these pests. Fortunately, there are no grass lice or ticks, as in the West Indies.

Two carriers came in for loads, and there is prospect
kUNDUNDL:
of more to-morrow. But this "to-morrow" is a most tantalizing word from the lips of a native, as it simply implies some future time; so I won't "throw up my hat "yet awhile. I am feeling thoroughly broken up, to-might from worry and anxiety.
Sumblay, 97 th. Most of the men have gone to neighboring villages. There seems to be a big beer-drink on, for the drums have been going at a great rate ever since daylight. No missionary influence here; but there is a big population, and it is certainly a promis. ing field for mission work. The chiet is in warm sympathy with the mission at Cisamba, and spatss of Mr. Currie as his friend; althongh nowhere have we as yet sech a native man or woman griving evidence of having amything like a true conception of the Christian's God -not even among those who have been in the habit of visiting the mission station for years. With them Tehorah takes a secoud place to their god Kundundu. The former name they will nse in addressing man as a sort of complimentary term, but the latter never; amal Sukn (Gol) they often apply as a pet name to their hoys. Until a thorongh system of evingelistic there is little to be hoped for from the casual visits of the matives to the mission stations on Sumalays toward breaking down the prejnitices of centuries.
September 28th. Three new men took loads this morning. The chicf, who, by the way, has almost recovered from his siekness, takes a kindly interest in all that concerns us, spenting the most of each day in camp, and, strange to say, seems to be each dity sing. He turned up with say, seems to be above begsing. He turned up with six more carriers and a pom-
birro, so that I begin to feel almost happy at this :ift in the dank cloud and brightening of my prospeets. But by noon the finture became blacker than ere. I was intormed by Samambello that righteren loals had beron brought back, and that the rarriops ham desurted, inMading nime engaged at ('isamba and the five from Kopmo.

Kamame is at the root of this; his men wouk :hot hasra abandoned their lomls withont permission. It is wident that my suspicjons of his being a comming and two-fired rogne were not moharitable; and moses we ger the others away from the vidinity of their villages, this will not be the and of the desations. But I will not linger ore the recital of the termble heart-bmings that have fallen to our lot in this the eommencement of our jommery as it has been the experiener of amost every traveler who has sought to penetrate the minefoluted regions of Central $A$ friara. On expmessing to Ohosi, who was stamding by when the loals cimm in, my bupose of striking camp and matheng on another stage athove, he promptly turned romed to a band of his yomg men who were near, and ordered eath one to take a load and follow me to Kutunda-nine miles. In a conple of hours we were on the road, essorted for swaral miles by the ehief, whom I shall ever remember with feelings of respect and gratitude; he has truly been a frimul in need.

We reathed the camping-gromed late in the afternoon. Leaving Fuater in charge, I went off with two of the headmen; when sent alone I find that they get into a village, beer is on the tapis, and business has to yidd to plansure. We were fortunate enough to

happen upon a village where I found several fellows who carried for me from the coast to Bihe; they readily engaged, and now, to my unbounded satisfaction, every load has a carrier. I have promised to stay a day or two to give then time to pound their eorn.
It is no easy matter to keep the women at work who we employed to pound corn for as. I have been reman patting in an appearance early in the morning with two of his wives and asking me to hire them a few days on the pestles at half a yard of calico each. At the same tine he promised to stay by and do the driving himself gratis. The bargain was struck, and so far he has not deserted his post, and we have quite a

## CHAP'TER V.

## AMONG JHF: GANGUELLANS.

O"TOBER Ist. Thank (ionl, my caravan is com-plete-ninety-sevell persons all told, inderling fifty carrimes, cight pombincros, and thirty-six yombs carrying meal and salt and driad fish for the mon. By daybreak this moming, and with a heart lighter than it has brem at any time during the last theree monthr, I gladly took the leat, and marelhed out of Kutumbla; the: ment, tow, sermed in goorl spirits, for all along the line they sumg in moisy chorns, as they trotted on with their sixty- to cighty-pound loads on their shonders. I had walked for ahout an hour at a hrisk pace a stomesthrow ahead of the flag, through a forsos, my mind full of the pleasure of at last cffeeting a fair start, whan my reflewtions were rudely interrupted, and I was involuntarily lorought to a halt by the sudelen apparition, right in the path, about fifty yalrls ahom, of a full-grown
male lion, leisurely watehing onr flymoach. Having Hothing in my hand hat a stiak, I had no desine to sore the distamer betwren us shortemed. My gum-harare. Was some distanoe behind, but hre had takinn in lher situation, and in $n$ fow secombls flar "Expmess" Was in my hamls. Still, too late, as the shagry lirntre skillied off into tha lomer grass with al strly sionel lefore I romla

 of right miles, comsinlaring it juliojens mot to allow the rinriars to feel the weight of thair lomels too ranly in the jombley.
'lhar flag stoplued at Komdolr, where wo fommd allum-
 nisht before ly a paty of matives brinering ivory and

 fialling all the time. Thar hats of the mon were fore fiail to resist the wind, most of th. "inss thatrh beiner sweyt off, lavinge the bate polses amil the oecolpants expeneal to the full fury of the blast. Haplily, it was mot eold. October -2l. Fwery ome feeling vory comfortless, their bits of eloth bering soaken by the rain. Tharr, Wis no delay in getting starterl, for all wanterl exerreise. Onf torthous path lay mostly throngh formst, now and arian rosssing a savamat, where the youmg grass was springing. Nothing ramarkable abont tho topoeraiphy of the comintry, except that the great ant-hills, for which the Cisamba distriet is notable, abound here; some of them are eighteen feet high and have a dianneter at the
base of thirty feet. We reached the Kukema River at 9.30 s.m., and several hours being ocoupied in ferrying (rir feople across, wo decided to go no farther to-day, "spurially as the ombala of Ongandu was close be, surrommed and shated by beantiful trees, called by the matives "ulembi."

The chicf, Cipopa, invited us to stay in his village, promising to provide luts for the men. Notwithstandmy very strong objections, for many reasons, anainst (amping in a strange village, I was so favorably impressoll with this man's appearame and manner, that I aceepted his hospitality, mul forthwith had my goofs stacked and tent pitched inside the storkatle. All was smor, ant I was just having un audience with the king, when Vratar whispered in my ear the commonplace remark that there was mothing for dimer but desiceated somp. 'This stuff tastes to me now very much like desiceated glow, and I decided to go and look for something more palatable.

Two young matives volunteered to take me where grame was to be found. Following my guides, after walking about five miles we came to a valley opening out to a vast plain; and sure enough, right before us, about six hundred yards, were four oryx and two Lechwe antelopes peacefully hrowsing on the young grass. Althongh we lay flat on the gromet, the grass was too short to cover us, and in an instant they sighted us and were off. For two hours we tried every stratagem to get within three hundred yards of them, hut in vain; wery attempt to eireumvent them failed. It was of no use; there was nothing to hide us from their keen sight. At last I thought of attempting a long shot, for

I was hungry, having eaten nothing since $\mathrm{B}^{3} 30$ a.m., and it was now 4 rim. But alas for my dimer! 'Though I mijusted the sight carefully, took steady aim, and firmi several times, the bullets dropped find short of the game. This was mysterious until I exmmined one of the remaning cartridges, mad fomm that the firm from whom I oltained the ammunition hal armelly mate up abont half the order with stake stoek, practionlly worthless, the firing-pin braking throngh the rotten mps at every shot. The powder was decomposed and rlogged in the shell, and the brass green with cormosion. Disappointed, we turned buck, and got to the ombuln just as it was getting dark. I fomm a large pig tied up by my tent, und the chief with his suite simatterl romud, waiting my return, to proced with the palaver and presentation, which was duly performed with all the honorsrlapping of hands and speerhes.

The pig dith not live long; a portion of the pork was reserverl, and the balane given to the hemban for distribution. The pig business over, and while dimmer was preparing, I entertained the villagers by exhibiting my eurios. I produced the rornet and began to play "Way down upon the Swanee River"; lut there was such a rush for the "boxes "and "front seats," that a free fight was imminent. I fared the tent might come to grieff, for already several had been sent sprawling by tripping on the ropes, so I was obliged to play the mational anthem and bring the roncert to a close. But more hearty shouts of aphause, ringing langhter, and expressions of simple delight I have never heard; and I foel happy that in spite of my weariness I may have been able to inspire these people with a measure of
ronfidence toward white men, for their experionce of binoperans, being rentined to half-hreed Portuguese hitherto, has hat the very opposite affect.

Ahout right welock one of the ofd men of the village ranne ont to where the lomis were piled up, and in a loul voice prochaimed that the "ocindele" (white man) was the gewst and friemel of the chidef; mut should my one dare to distur) the stranger, his lomels or pereple, the transeressor would leed the finll foree of Cipopes wratlo.

Noxt morning, iby laylight, the chide came to sere ms off, and begered me to intereede in behalf of his som, wha had berel riptured be the king of a comatry that lins ill olle rontr. I promised to hear the casis amil do What 1 roond to hate his bey set at libuety. With many andion we parterl, fimly "omvinued that, sular as wr aill judge from what we see daring the bind
 more inviting or morr merely firlds exist anywhere. The degranlinge efferets of romtart with the half-caste tralons have not been folt here as in Bihe; nor do they travel as the Biheans do, hemer are still remparatively free firom the vires of the coast. The prospert is all tha more promising in that (iangutha is composed of detacherl cenferlerations whder the juristiction of petty rulders, allowing more indepentenere to the people; also, prhaps, beeanse of the weakness of these small rommmitios, war ard boodshed is less frequent tham muder the government of antocratio chiofs, who maintain thain elaims over immense torritory by sheer fore of arms, and gratify their pride of savage power liy a reign of terror and 'ruelty.

In no rombtry on the continent where such potentathes widd their bandela sway has mission work male the slightest headway-not evorn, in same instaners, where $n$ duater of a century has bern spent in maro. mitting effort by missiomurias pesident momig thom: while in rommmitios where liberty of ronserienere allowerl, gemine romversions hate taken plane within: few years of commenerment of the mission. Wholsale conversions in totally mew firds have bern roportend within a fow months, but investigntion has generally revaded the fact that a rhief or some individmal in authority has taken thr initiatior in ontwarlly arquiescing with the white man's tearhings, when their people necessarily follow suit. Bat a profession of Christianity maler sur h airemmstamers by mo means warrants their being ealled converts.

Not every one, howerer, who may rhoose to molmtor for such a work need expect to suceed. If his hators have been unsucerssful at home they will be momes so here, where the himdranes to be owreome are infinitely greater. A special fitness or maptability is required of the man who would be a pioneer of missions in Afrian; he must possess indomitable zeal, strong, unwavering faith, good chacation, somml julgment, partical common sense, ready wit, and tact in dealing with the natives-in a worl, every inch "a man." We have alrealy met to many mamberamby, useless whomteers posing as missionarias in this combtry ; wasting time and money, aceomplishing nothing, mentally and physieally incapacitated for grappling with the immmerable diffieulties which present themselves at erory turn, in ther shape of superstition, profome ignotanre,
and yet unlimited conceit in the superiority of their religious beliefs over that of their teacher.

We camot see eye to eye with those who advoeate the sending out of young mmaricel ladies to Central Atrica, except to well-established stations, their position being so misunderstood by the natives. India and China offer ready spheres for lady missionaries, married or otherwise, where the women alreaty civilized ram and do appreciate their coming. Mrs. Searle, who has hard experience at Benguela, gives it as her opinion that the white women can renter most efficient aid in the kitelen, and says: "If a girl ean't or won't cook, she won't do for Afriea, however good a linguist or thrologian she may be." In no arse have we seen native women as house-servants in Central African missionary homes; not even where these have been estahlished twelve or fourteen years. The work of the culinary department is deputed to boys, as no native woman will submit to a domestic training. They consider themselves wronged and robbed of their rights as women if taken from field work.

The digestion is so often disordered, the system weakened, and the appetite rendered mecrtain by fever, that we might almost say the life-certainly the health and consequent usefulness-of the missionary depends in a great measure on the quality and preparation of his meals; and surely this is a department that em most properly be superintended by the missionary's wife. Then, it may be asked, Is there not a wide field of usefuhess open to single ladies as trained nurses? To this we would reply that many trained murses mo out, to find that all the ideas they had formed on the
subject of nursing were based on the supposition that the home-life of the native African bore some resemblance to that of the poorer classes at home. They soon diseover, however, that the domestic arrangements of the native hat offer no facilities for the services of a trained murse. Thus years spent in a hospital, mechanically obeying and earrying out the doctor's directions concerning the patients, is so much time wasted when Central Africal is to be the goal for future service; for, although skill in dressing, bandaging, etc., is acquired, a far more effectual preparation for usefulness would be olstaned by attending tor a few months the out-patient consulting-room of a city physician. There, practical, if elementary, information would be gained on the diagnosis of ordinary diseases and their treatment, so as to intelligently apply the simple remedies the medicine-chest contains to the relief of suffering natives, who, as a rule, either come or are carried to the mission station. Nor would this simple course be beyond the reach of the missionary's fime é Opportunities for dressing a womm or putting a few stitches in a cut will occur, such as may be better done by the deft and gentle fingers of a woman; but is there anything in such emergencies that the missionary's wite, if she be worthy of the name, would not be alle to meet?

By 11 A.m. we arrived at Okambokoakwengi, A number of headmen from the ombala came around our camp, but squatted at some distance; evidently a recounoitering party, and, as I afterward learned, sent by the king to see if I looked dangerons, before he should venture on a visit. Their report must have
been favorable, for in the afternoon Cipi himself put in an appearance, his face and body streaked all overwith the fetich white clay, as a protection against the evil spells he feared might possess him in our camp. My pombieros could not coax him to come nearer thau twenty yards of where I was seated; and having oceasion to rise from my chair, he jumped up, dropped his blanket, and would have escaped, but that the crowd around him was too dense. He kept looking about in the most uneasy and suspicious manner, as if dreading some impending danger. Meanwhile, his spokesman was reciting an address, at the close of which a fine goat and a basket of meal were produced for my acceptance. Sanambello replied for me, saying that I was pleased with the gift and would visit the chief in the evening at his village. At this Cipi joined his people in a great hand-clapping, with shouts of "ewa, ewi" ("yes, yes"); and forthwith about a hundred and fifty of his soldiers executed a war-dance for my special benefit, and betore we parted Cipi and I were the best of friends.

We are now in the Ganguella country, and have been ever since erossing the Kukema. Here we have an entirely new language and different class of natives, far finer specimens of humanity than the Biheans, so far as physique is concerned; particularly the men, who are, as a rule, fine stalwart fellows, and in point of physiognomy would compare favorably with the negroes of either the United States or the West Indies. As they are too independent a people to engage as carriers, and seldom cross the Kukema on the west or the Kwanza on the east, their supply of cloth is very,
very seanty, their clothing being confined to a bit of leopard or antelope skin. Few amulets, anklets, or other adornments are worn, but their heads display the prevailing fashion; and there the skill of the native tonsorial artist is exhibited.
So intricate and fanciful are some of the patterns that they must be seen to really understand what they are like. In some cases the decorations are all on one side of the head, where the hair is allowed to grow long for the barber's manipulations; the other side is shaved. Others have the hair cat off both sides of the head, leaving it ridge of long hair on the top, rumning from the forehead to the nape of the neek, the effeet produced suggesting a fireman's helmet. But there are dudes who spend an hour or two every day in the hands of the hairdresser, and affect something more elaborate still: he may have isolated tufts of long hair, like the headgear of the clown in a pantomime; lut the main part of the scalp is shorn elose, and then with a sharp knife geometrical figures, squares, erescents, and diamonds are seraped out, like the plan of a flower-garden. The head-arrungements of the women are not a whit behind the men in grotesqueness of style or design; but they spend less time over it, one great dressing sufficing for months, and even years: plaits with three or four white or red beads strung on the end of each; rolls, horns, serews large and small, according to taste, with cowry shells woven in, as fancy may suggest. For example, see the woman sitting in the center of the "Group of Ganguelians" (from a smap shot at ( my tentdoor).
The Ganguellians seem to have less faith in charms
than the natives farther west, for I have noticed very few of them worn, as is customary among the Umbundu. Almost every one of my carriers and headmen have their favorite charm suspended by a string around the neek or waist, in the form of sundry bits of wood, points of horns, shells, or an assortment of such knick-knacks as have passed through the hands of the fetich-doctor, with the assurance that they will ward off every ill that might otherwise hefall them. Others pin their faith to a collection of rubbish tied up in a dirty little bag. All come under the name of "Ombanda"-patent medicine, a panacea for every ill; so that in this respect they quite equal some of their more eivilized, though little less gullible, white brethren.

Sanambello carries an eland horn filled with a variety of trash, each article supposed to have its own special virtue. This he carefully sticks in the gromed near his hat on reaching camp; and it is not removed, nor is any one allowel to touch it, motil the flag moves on again. Only on such a journey as this with the Bihean can one fully know how almost their every action is governed by their belief in Kundundu. When twitted ahout it they only langh and say, "Ah no, we don't expect you to believe in this; it is something beyond the intelleet of a white man."

Another mareh of thirteen miles brought us to the Kwanza River. Nothing remarkable by the way; in fact, so far as each day's journey is eoncerned, it is only the monotonous tramp, tramp, over a rolling country, with an occasional lift in the tipoia when tired or feverish, and when there are men to spare. Now an open plain; then a small forest; anon a riv-
ticed very the Umand heary a string madry hits tment of the hamls they will all them. lish tied nime of wery ill; of their methren. ha variown spemid near ved, nor woves on Bihe:m ction is twitted e don't beyond to the ay; in 1, it is rolling when spare. a riv-
ulet; rarely a river; no plants or trees that by their appearance would suggest our being in the tropies; no fruit of any kind except a nanseons sort of wild berry. Noar the villages small plots of corn and manioe are cultivated; but the soil in Ganguella, between the Kukema and Kwanza, is by a long way the richest soil we have come aeross. With proper attention good crops of cercals and vegetables as yet unknown to the natives could be raised.
This district is noted for the excellence of its iron. During the coldest months of the year the miners and harksmiths turn out and camp near the pits, working night and day mutil they have manufactured a suphly of hoes, spear and arrow heads, axes, hatchets, knives, suufi-spoons, ete., sufficient to meet the demand. I examined several holes from which ore had been dug. They were about ten feet in diameter and cight feet deep. Close by were the small sheds, with broken clay finmaces and erucibles seattered around among the coke and slag, where the ore had been smelted and the metal transformed into implements of labor or weapons of war. The bellows or blast employed is a simple contrivance, but it serves the purpose. Those I have seen consist of two hollowed-out disks of wood, ten inches in diameter, resembling a large wooden ladle, with a tubular cylindrical handle a foot long; round the edge of the disks goatskins are bound with rawhide, forming a sack about fifteen inches long; this is gathered at the top and tied tightly round sticks, that serve as handles. The two wooden tubes are made to converge into a clay muzzle, which is comnected with the fire; and by the alternate and rapid movement of the sticks
a strong current of air is produced. The metal is said to bo tempered by means of ox grease and salt.

We camped on the bank of the river, near Kongovia, the capital. In two hours the thirty hats required for the accommodation of my people for the night were hailt, there being an albundance of long grass. In the afternoon we had a similar experience to that of yesterlay, the chief Liwika coming up with a large retimue of men, all marmed, however, but appoaching very warily, as if in doubt as to what the nature of their reception wond be. $\Lambda$ pig, three large calabashes of bear, that made the eyes of my men twinkle, and a basket of meal were the gifts he brought. The palaver and speedh-making lasted an hour and a half, and by this time we had made such an impression on the old man that he ordered the pig to be taken away, considering that I deserved nothing smallir than an ox, Which would bo sent to-morrow, the herd being away in the forest. I demurred about acepting so lange a present, and expressed doubt as to whether I should be able to mako him an adequate return; but he gave mo a receipt in full, in the presence of all, native fashion. 'Taking a piece of stick the length of an ordinary penholder, he broke it in two pieces, throwing one over earh shoulder.

Next morning Liwika called romud to say that he was off with his men to fetel the animal; but as big thunder-clonds had gathered, would I be so good as to keep off the rain mitil he returned? Not comprehending his meaning, I turned to Samambello, who assured him the matter should have my immediate attention;
and away they went. When the request of the chief was explained to me I wished it woulh mans so that Liwika might learn that it was mot in the power of even white men to eontrol the rements; but the stom whid threatemed all day dia not brak mutil aftor the ox was bromght home and the whim saffly honsed in the omhala; so 1 smposer her foll himself muter extra obligat tion to me for having kept off the ratn, as, in addition to the ox, he semt a large foat.

October ith. Liwika's kinchess has mafortmately heren the meams of delaying us three whole days, for what with lihations of lex. and abmodame of meat for my men, threats and coaxing wore alike mavailing in getting them to move; but ly six orelock this morning we were all at the river-side mally to be fermerd arross. The Kwanza is abont ninnty yards widn laere, amid lourteren feet deep in the rentre. It flows at the rate of three miles an hour in a northwest dirertion toward its destination, noar Loanda. There were five dug-out camoes phaced at our serviee by the rhiaf, and manned by his own men. They seem to have no idea of a padde with a broad end, hat laboriously propel their raft with a long round pole, using each cond alternately to the right and left. I went over first, and was ammsed watching the carriers with their loads being bronght across. Many of them venturing on a big river for the first time, they did not dare to look up, but lay down flat in the bottom of the canor, hiding their faces in their hands. The older men sat up and gravely looked aromd, for they knew a trick which was a certain preventive, in their opinion, against any calamity
befalling them while on the river. This was to take a bunch of grass between their teeth and keep their mouths firmly closed until they reached the land. . I observed fishermen busy at work with nets amd lines catching some good-sized fish, which they killed by hiting them on the back at the jumetion of the borly purpose, as they have both the uper and lower incisors filed to a V shape and fitting between each otherlike the teeth of a rat-trap. The hooks they use are not barbed, but are merely bits of strong wirr bent and pointed; so they have to depend for success in landing the fish on the dexterity with which they ean tighten the line when they feel a nibble at the bait.
In two hours and a half we reached Mowanda, the chief of which is mamed Likalnha. I went to see his highness, but on entering the village learned that he had been told some days ago that a caravan with a white man was approaching, ame he had fled. It is hard to divine the canse of the mortal dread these Gangucllians entertain of white men; their ideas can only be formed from stories they have heard, or their intercourse with half-breed Portuguese, for I an not aware of any European having gone into the interior through this route-eertainly no Britisher or American.
Suspecting that he might not be far away, I told the natives who were sitting round that I wished the chief no harm, but had called in passing to salute him and make his arquaintance, and intended waiting there until he turned up.
This appears to be the private inclosure of the chief, and the dozen particularly neat and tidy huts are for

the nceommodation of his harem, the occupments of which me conspicuons by their absence, having one and all eseaped with their lom. A great deal of time and labor has bern spent in rutting and carving in a babiety of designs each separate pole composing the high stockade, until they look like three humdred yards of old-finshioned turned bedposts. But a formore chicri, I understumb, must get the aredit of these pleasing fontures of the ombah, as this man is a feebleminded, cowartly, and superstitions fellow, who never misses an opportmaty of empiching himself by plundaring those who ure too wak to resist him.

In about an hour Likalula's men prodnced him, literally eovered from head to foot with white rlay. Our interview was short, as he was trembling with foals. I made him a present of eloth and invited him to visit the eamp. We mast remain in this distriat for two or three days to pomal rom, as for the next pight or tom marehes there will be mo moal to be had. Sext day the chief came to us with a great deal of pomp, but we did not take to him, nor did his people serem to show him the usual respert. A vest-porket wouk hold all the habiliments he wore. With an air of gemerosity he told me that for one of my repeating rifles he would give a big goat. Little did he know that not for filty of his big goats would we have parted with a rifle in the vicinity of such men as Likatula; at the mere suggrestion we langhed so hantily that he quitted our company.

Whout noon a strange phenomenon appeared. The meremy stood at $100^{\circ} \mathrm{F}$. in the shade, a strong wind arose, and darkness came on as from an eclipse of the
sun; when suddenly a shower of hail-stones, each as large as a marble, began to fall, and continned for fifteen minutes, mutil the gromud was well covered. Some of the carriers happened to be returning from the villages, and fairly yolled as the hail peppered their maked bodies; but they did not seem much surprised, so $I$ conchuded that it was no rare oceurrence here.

The road before us must be a very liungry one, judging from the quantity of meal and small dried fish being tied up. By the evening of the 18th the men had finished their preparations, and seemed so satisfied with themselves that speech-making, song-singing (if the drealful braying and mmelodions reeitations could be called such), and genemal hilarity continued rommd the ramp-fire far into the night.

October 11th. We got a good start this morning by dayhreak. Our path lay mostly throngh forest. We "rossed on an improvised bridge the river Varia, about forty feet wide, flowing to the northwest to join the Kwanza; and twenty-three homs later mother stream, the Hondo, not quite so large, but flowing' in the same direction. We passed only one village on the way-a distante of fifteen miles. My heels are badly blistered; this is unfortunate, as there will be no more delays prohably for a week or two, so that they will have no rest, and several of the carriers having fever, there arr none to spare for the tipoia. I must make the best of it ly bandaging, and cutting ont pieces of my shoes, being only too glad to be going forward. We halted for the night at Kawangn. At present there is no ehief, the last having died about a month ago. We saw his hat, ealabashes, and pots piled on the grave, with all

the remains of his lint foming a heap near by, every care being taken to see that none of his belongings were left inside the ombala, thas removing, as far as possible, the necessity for nocturnal visits of his spirit to claim them.

October 16th. For the last five days we have not seen a single village or native hut, every day toiling through deep white samb, across plains with searcely a weed, far less grass, to shate the fiory path, the hot sand blistering our feet until we could searely limp into camp. For two days we had the Hondo in sight on our right. Traveling east-southeast, we crossed a small stream called the Quitn on the 1 thth. We have sem none of the large ant-hills since arossing the Kwanza.
iWe got on the path to-day liy 6 a.m. The moming was clondy and cool; but oh, the sand! It seems to get deeper and stiffer every day. Not a sign of life; the country throngh which we are passing is the most desert-like we have seen yet, and that means desolation indeed. Simd, sand, sand everywhere, with a few patches of shmbs here and there, but rarely a root of grass. We crossed a small brook, the Mongovie, which flows south to join the Quitu, and emmped at Kimbbimbia. We were surprised in the evening by the appearance in eamp of a man accompanied by two boys bringing baskets of a manioe meal, which is the only product of the soil in $\dagger^{\text {lo }}$ ese parts, and a large gourd of beer or mead made from wild honey. He tmrned ont to be the chief of this wilderness, and his is the only village for many miles around. He was made happy with fomr yards of calico.

October 17th. Rain detained us in eamp until 7 a.m. Soon after starting we entered a forest, and began the assent of a hill called the Coia. At the summit the boiling-point thermometer and aneroid registered an altitude of five thousand feet, or about eight hundred feet above the surrounding country. For about ten miles we followed the ridge of the hill, which stretches northward in a great platean, and southward sloping abruptly down to an immense and deusely wooded valley, forming an unbroken expanse of foliage as far as the eye can reach. The trees are tall, but few of them exceed eighteen inches in diameter. Rubber and wild honey are found plentifully all through this district.
The gathering of heney is not the work of bees only, ats every camp is infested with a small fly, about half the size of the ordinary house-fly; these are most assidnons in collecting and storing a honey whiter and sweeter than that of the bee. They find their way into the hollow trunks of timber where bees camot enter, having aceess throngh holes made by the boring-worm. Our daily meeting with the honey-bird served to remove any skepticism I may have had in reference to this cunning little creature. It is not much larger than a cal nary, and as soon as man makes his appearance hops from branch to branch, making repeated flights toward the traveler, and then flying off in the direction in which it appears to wish attention attracted, with a sustained chic-en, chic-en, chic-chnrr, ehnur, returning again and again, until its importunity is rewarded by some one accepting its invitation to follow to the spot, where is stored the-to it-inaccessible treasure. It makes a great fuss, flying round and round, leaving a doubt

ubt
as to the whereabouts of its find. Sometimes there is no opening to be seen, when the native proceeds to tap upon the trunk with the head of his hatchet, until he locates the hive. He then obtains the honey by making a fire at the root of the tree (in the ease of flyhoney this is, of course, unnecessary), and under cover of the smoke with his hatchet secures the prize. Then is revealed the reason for the excitement of our tiny guide, who now comes in for its share of the pickings. To the taste, bee honey is harsh in flavor, and looks like molasses.

Rubber has to be dug for with lioes, only a small plant showing above gromad, the roots, from which alone it is oltained, rumning along for may yards, ahont six inches below the surface, varying in size from a quarter-inch to an inch and a half. These roots are beatem with wooden mallets and boiled in water; when the rubber dissolves out it is collected and formed into balls, mixed a good deal with the wooly fiber.

We were happy in finding a suitable camping-ground (the small village of Vowelutwi-Onjamba) and a stream of water just as we emerged from the forest; and we were down to the level of this morning:; camp, fortytwo hundred feet. The sand is so loose and deep, and the plain, steetehing castward, so void of vegetation, that I am continually imagining myself by some seabeach. The huts of the village near by are built in an entirely different style to any we have seen in other parts of Gauguella. They eamot, of course, use mud, for there is none to be had, and stone is out of the question-we have not seen a pebble since leaving

Bihe; but they tie up small bundles of grass tightly, and weave them together in a perpendicular position, like a basket, to form the walls. The roofs are also of wriss, resembling in outline the shape of a Chinamin's hat, the eaves coming down to within four feet of the gromad. The mode of carrying loads, too, is not seen among the tribes west. Take water, for example: instead of the gourd being poised on the head, it is placed in a large basket or net slung on the back, and the weight borne by a band of plaited bark-cloth across the forehead, in the same way as New Haven fishwives carry their creels. The practice of filing the teeth to a sharp point prevails here, as all through Ganguella,

We purpose resting to-morrow, to give the lads of the caravan a chance to pick up a bit, the feet of a good many being played out from the burning sand. Several of them are very young, and are the slaves of the men whose meal they carry.

October 18th, Sunday. In camp all day; but it is a question with me whether the day is not better spent on the road than in camp. From daylight to dark there has been nothing but noise and carousal, drinking fermented honey beer to excess. When we travel on Sunday one's mind has at least the rest and quiet of the path, and at the end of the march the men are too tired for revelry.

## CHAPTER VI.

## FROM VOWELUTWI-ONJAMBA TO THE HUNTER'S PARADISE.

Five hundred natives in our camp.-Daily menn.-Seareity of food.- Lerds of buffuto.-The ombandu-horn.-Sohlier ants.- Hostile matives.-Peare by stratagem.-A magnanimous promise,-In puris nuturalibus.-CGaterfilliu stew.-Daking nu impression.-A wholesone awe.-Down with fever.-Extemporized mortars.-A dark ontlook.-Ciuriers on strike.A complimentury dunce.- Rognes all of them. - Nurse and eook ly turns. -Swamp vilhges. - Fail to control the elements.-Exorcising the mirits. -Struggles in the marshes.-Sparsity of villages.- bame in abmulaner. -Charged by a buffalo.-Itas the Bihean a god:-Our mam-maker.-Diviners.-Medicine-men.-Meat and to spare.-A hunter's paradise.

O
CTOBER 19th. We had started about half all hour, when we came upon three native caravans, bound inland for rubber. The headmen stated that they had been waiting our arrival for two days, amd wished to travel with us, as there were moro rumors of war three days ahead; and they thought it would be disereet to follow in the white man's train, which now, including these natives, mmbers five hundred persons. The route is very hilly; so many steep ascents to elimh compelled us to make the march short. The only village we have seen to-day is a small one opposite the camp, Kambata. The chief, with a dozen of his men, gave us a call in the evening, bringing the usual gourl of beer, and a goat; the latter very acceptable, as it is now over a week since we have tasted meat. Meal
and tea alone, day after day, with hard marches, was beriming to tell upon me. My diet these days is, as a rule, exceedingly simple. On getting into camp at noon I have some water boiled and poured over a teaspoouful of cocoa, which, with a couple of arackers, constitutes my lmoch. At smodown or dimer-time a dish of porvidge is made, part of which I eat with some wild honey, followed by a cup of tea; and the batanes, with a "up of coffee, serves for breakfast next morning, before getting on the track. Scareity of men combpelled me to leave a good deal of my provisions behind, and we miss many things, such as condensed milk, and flowr for bread.

This is still the Gangmella comutry, but I notice something peenliar to-day in the appearance of the matives. They differ from any we have seen hithorto. The language is the same, with its oft-repeated $z$; but the men are smaller, and most of them have beards three to six inches long, high foreheads, thin lips, and wear the hair long all round the head in fine plaits, profisely greased, but not cut or earved, as is the gemeral custom among the Ganguelians. In finct, they resemble very closely some types of Hindoos. I was sory they came when the light was gone, so that I conld not get a photograph of them.

Another stiff march of six hours brought us to the Kwandu district, where there is a small town. Food is getting very scarce; the carriers could get very little meal where we stopped two days ago. These long marches don't pay, as we have to rest a day, several of the men being siek and footsore.

In the forenoon we crossed a stream called the
as, was ; is, as mp at aterlckers, ine a some illice, ningr, (•O)IIhind, alld otice the rto.
lnut
trids

## and

its,

Kwangu, flowing swiftly to the south, only four yards wide but nearly nine feet deep. At the foot of the liill where we are camped to-night flows the Kwandu, hawing its rise in a swamp about a mile to the west of us, and deriving its mame from the distriat. It travels Mist-sontheast to join the Chobe. In the areming I woll down to the marsh and shot a hram of fine fat duck-a great treat. Probably we are getting mar He game country. Althongh there are ouly there or four villages in the whole distriert, it hoists of two Whirfs, both of whom came to visit nis, anh carlh hought agoat and "ovasangi" (eanary seed) meal, the only fureins of grain the soil will produce. It is of a dark wolor, and tastes a little likn rye. One mhiof was the haply possessor of four coats, presents from passing thanders; and he evidently thought it the proper thing th don them all on this special occasion, while six of liis men were rigged out with one coat among the lot, two of them considering one sleeve each, if properly aljusterd, quite sufficient.
October vttll. For two days we have followed the morth bank of the Kwandu. We sighted several herds of buffalo, high, slaggy-maned brites; but as they also sighted us, it was easy for them to keep at a safe distance, for there was not a single shrui) to hide us. They seampered away, stopping now and again to have a look at us, the bull always keeping a bit in the rear, between the cows and danger. Yesterlay the meroury reached $100^{\circ} \mathrm{F}$. at $1 \mathrm{f} . \mathrm{m}$. in my tent; but torlay we have been chiefly in forest, which, though hilly, hats afforded us a welcome shade. About 8 a.m. the Kwandu took a turn to the south-southeast, while we kept on
east-southeast and came upon the sponge where the Kwandu River has its rise. We had a tough struggle getting through. Some of the men, being heavily laden, sank into the black, fonl-smelling mud up, to the waist. One of the earriers knocked off a toe-nail, and rame for some medicine to dress it. I gave him a bandage with some carbolic ointment, directing him how to apply it; but before he proceeded to follow my instructions, he produced his ombunda-horn, stuck the small end in the ground near him, put a live coal inside, which from some stuff the horn contained sent up a dense smoke, and while it was aseending he made haste to fix up the injured toe. When it gets well my treatment will come in for a very small share of the credit, but faith in his fetich-horn will be confirmed.

Octoher ?6th. We were unceremoniously driven out of (:innp this morning, long before daybreak, by an army of soldier or driver ants. They swarmed into every hat in millions-no mean foe to the naked carriers, and from which there is no eseape but in flight. The enormons mandibles of these ferocions warriors are very strong, and shaped like reaping-hooks; when once they get a hold there is no let go, but, doulbing their bodies muder them so as to obtain a purchase, they pull with all their might, and muless killed fetch the , it of flesh every time. We see them frequently in the path hurrying along in close phalanx, flanked ly their generals and officers on either side, attacking vicionsly everything animate or inanimate that comes in their way. They are dreaded and given a wide berth by both man and beast.

Monsieur Coillard, who has had special facilities for
where the h struggle gr heavily up to the -hail, and re him a ting him ollow my tuck the coal insent up 10 matde well my - of the med.
ven out by an ll into ed earflight. ariors when lbling chase, fetch ently nked king mes wide
stulying their habits in the Barotse Valley, writes: "One sees them busy in innumerable battulions, ranked and liseciplined, winding along like a broad black ribbon of watered silk. Whence come they? Where are they going? Nothing can stop them, nor ean any object change their route. If it is inmimnte, they tirn it aside and pass on; it it is living, they assuil it vencmously, crowding one on cop of the otller to the attark, while the main army passes on, business-like and silent. Is the obstnele a trench or a stream of water? Then they form themselves' at its edge into a compact mass. Is this a delibernting assembly? Probably, for soon the mass stirs and moves on, crosses the trench or stream, and continues in its incessment mond mysrions march. A multitude of these soldiers are surrificed for the common good, and these legions, which know not what it is to be beaten, pass over the corpses of these, victims to their determination. Woe to him who puts his foot on that black ribbon! He has not yet seen what he has done, when thonsands of these choleric fighters cover him from head to foot and force their tenailles into the flesh. It is enough to drive one mad.
"The most redoubtable carnivora can do nothing against these tiny enemies. They bellow, low, and roar when attacked by them, and then run away. Even the 'lord of creation,' who destroys and ammihilates on sea and land the most. savage cetaceans and mammifers, is quite powerless before this insect. So much the worse for his dignity; he has to take off in the field all his elothes, and rub himself down as well as he ean. But at night the martyrdom is complete. I do not like
to think of a person down with fever in a room that these ants have invaded. 'lo roat a man with grease, tio him hand and foot, and thow him as a prey to these implacable carnivom, is a farorite form of exerntion resorted to by the Marotsi when they desire to specially torture their victim."

Weare now traveling southeast lys sonth, the K wang on our left, with its marshy hamks stretehing out on dither side for over a handred yards. Rain fell hemvily yosterdey, making the road a little cooker aind the samd firmer'; and a small leafy hash eovering the gromm gives the face of the combtry a slightly improved appearance. We met a party of natives, sevoral of whom had reereved spear and arrow womms while defending their ivory from an attack made by the tribe among whom we intend to camp to-night, at C'injinji. They warmed us to go no farther, as the savages wore gathred in great fore and were getting realy for us; that our little band would only be a monthina for them; amd so on. The Biheans were temihly seared, hut we pressed on, and by noon got into the dreaded amp, so lately vamated by the unfortmate mative traders.

We had just got the londs stacked when a crowd of men came along to look at us. They are the first we have seen in five days. The villages are not in sight, hut camot be a great way off. These men are of the rogular Ganguellian type, but evidently in a very bad humor, and, being elated by success in their last fight, seem eager for mother. Taking precaution to repair the temporary stockade around the eamp, I served out cartridges, gmpowder, and lead, and ordered every man who earried a gmo to have it by him in case of an attack.

Meantime, the natives were disappearing in twos and threes until we were alone. Now we feared the worst. "They have gone for their weapons," said Sanambello. His surmise was correct, for in less than an hour over two hundred men, armed with bows and arrows, spears and hatchets, camo dancing inside the stockade and halted at my tent door, where I was sitting mending my shoes. Their gesticulations and bawling beggar deseription; but I went on with my work, until several spears came so uncomfortably near my face that I jumped up, drew my revolver (a regulation 450), while Sanambello remarked, "Now see how the white man's gums shoot!" I fired several shots at a tree a few yards off, and as the bullets makle the bark fly they were silent and drew bark a little. Then, taking a Winchester, I fired half a dozen rounds as quickly as I could over their heads, and punsed, telling Sanambello to let them know that I was not half through yet, and that they should have the remaining shots muless they cleared out of my camp forthwith. The words were searcely uttered before they mate off, tumbling over one another in their haste to get at a safe distance from such infermal machines. My men fairly yelled and roared with laughter when the bloodless battle was ented and the warriors had fled.

But we were now in danger of a night attack; and to try and avert this I gave Sanambello a handsome piece of figured calico and a jackknife for the chief, with the message that I wond spare their lives and do them no injury provided they leit their weapons behind and came in a respectful and proper manner to my camp for palaver. These conditions of peace were
accepted. Quite a number came back, and with them several women earrying presents of rubber, meal, and fowls from the chief, who thus indicated that he wished to make peace. I treated them to a liek of coarse salt cach, which they seemed greatly to relish.

We arrived at Kangamba (altitude, 3750 feet), rain falling heavily as we halted. As it did not begin to fall until we had reached the eamping-ground, some of the carriers, as they came in wet, were grmmbling because I had kept off the rain until under sheiter myself, and allowed it to come while most of the caravan was still on the track. I disputed the point with Sanambello, but he simply remarked that he had seen me with his own eyes take out my ombanda (it compass) on the road. This was conclusive, and I had to take the blame. Here, also, we found the natives in a very sulky mood; but as they had eome off second best in their skimish with the native caravan already referred to, they did not seem so keen for a fight as the Cinjinjis. We added fresh thorn-bush to the skerm and put sentries on for the night to guard against a surprise.

There seems to be a large population here; crowds have been coming and going all the afternoon. Most of them were all but nude, particularly the women; an ordinary trade handkerehief would provide all the garb they seem to require for half a dozen. As a rule, both sexes have good figures, and are quite up to the average height, although the lazy life of the men is not condueive to muscular development. They are expert bas-ket-makers, and we saw some really beautiful specimens of this handicraft, perfectly water-tight, the smaller sizes being used as drinking-vessels. The trade or barter
goods in demand here are iron and copper wire for amklets and armets, the limbs of some of the women being loaded with them; red white-rye beads, gnnpowder, salt, and tobacco, the latter being in miversal use as snuff by both men and women, every one wearing round their neck a flat iron spatula, with which they shovel it into their capacious nostrils.

The carriers are short of meal again. I cannot mbderstand how they have stowed away such sadekfuls as they were provided with a few diys ago. Wr must stop here for two or three days to emable them to refill. For the last ten days the employment of the boys of the cararan on getting into camp has been to go offe into the woorls to gather a species of large black-and-ydlow-colored hairy eaterpilhar, genemally bringing in a dozen or more basketfuls, which are stewed in elay pots, and served round to be eaten with their mush. The insects are aboat tirree inches long, and, as may be imagined, make a repulsive-looking disl; ; hut this is the tasty bit of the mative repast, and is to them what pate de foie gras is to a modern epicure. The carriers at mealtime sit round in groups, their dish in the center heaped with a sodden stiff paste of sealded meal. Each man helps himself with his fingers, kneads ach hump into the form of a cone, and dips it into the samory stew before passing it to his mouth. They seldom have more than one meal a day, but I could not venture to state how many pounds of this mush they will pht out of sight at their evening sitting; after which the fires are stirred, fresh fuel added, pipes and smuff-boxes are in requisition, and they settle down to entertain one another by relating tales of "love and war:"

Smoking assumes many forms in Africa. A few carry their own individual pipe, but usually there is but one among a dozen or more men, each tribe having its own pecnliar style of family hookah. Some, like the bushmen, make a new pipe every time they want a smoke, by twisting up a leaf into a cone and filling it with crushed tobneco, which they light with a fire coal, and apply the mouth to the small end, passing it to their neighbor after two or three whiffs. Others mix a little earth with saliva and mold it into a bowl, making an opening at one side with a straw; then, drying it by the fire and passing a long hollow reed through the orifice, they load up and proced with their inhalations. All the natives I have seen at this operation take the smoke right into their lungs, and seem to enjoy the fit of coughing that follows. But the form of pipe in most general use has a receptacle for water, through which the smoke is drawn. An eland or koodoo horn has a hole ent in the side halfway between the base and the point; into this a reed is inserted, on the end of which a clay bowl is fixed and filled with tobaceo or bang (camabis matica), and oceasionally both; vater is poured in until it rises above the node, when it is ready for business, placing the mouth over the open base of the horn am? inspiring the fumes.

But the most objectionalle form of smoking is that of bang, or clagga. It is more used than tobaceo among the Batokas, Mashonas, Inhambanes, and those toward the East Const and Lake regions. Its intoxicating and injurious effects compare very closely with the sensations produced by the use of opimm. After filling the
lungs, the head is thrown baek, and the surplus smoke emitted in a dense cloud; the mouth is filled with Water, and this squirted right and left with the fumes from the lungs. They are now in a hysterical cou(lition, giving themselves up to coughing, langhing, shouting, and incoherent mutterings. Natives arlrlicted to the use of this weed become in a short time imbecile, emariated, and helpless. The Portugnese are so strongly convinced of the evils resulting to the votaries of bang that slaves discovered indulging in it are pmished as for any other crime.

On the morning of the 29 th the chied appeared, gorgeonsly armyed in leopard-skins, with a large band of nen at his heek armed with assegais. Quickly buekling on my revolver, I ordered them to quit the camp and leave their weppons outside if they wished to talk with me. They obeyed, and returned, when I gave the chief' a seat, and, by headmen having gathered round, proceded to make myselt agreable, taking care to show them my repeaters and Express rifles, drawing special attention to the size of the bullets, and to the fact that some of them were expiosive. The great man beeame very rivil, and after passing a few rompliments took his departure, returning, however, in the afternoon with a fat goat, meal, and beer. In return I gave him a blanket and some cloth, which pleased him, and we parted triends.

Our route now lies sonth-soutleast instead of castsontheast (as it has been ever since erossing the Kwanza), following the Kwangu on its east lank. The surrommling comtry gradually improves in appearance as we advance, grass being more abundant,
although still trudging through sand; but there seems but little of any other soil on the great central African plateau. Game is more plentiful, scarcely a day passing without our seeing herds of buffalo and autelope, Thit always in the open, where the absence of cover denies us the opportunity of a shot, much as we want meat.

Arriving at Metua, we have now to build a skerm around eaeh camp, not only as a protection against wild animals, but to break the rush of a charge fromi hostile tribes. There are two entrances, which are built up at night, and at each, durmg the day, the men stick their fetich-horns in the path to awe the natives; but an exhibition of the quick-firing rifles has a greater effect upon the Ganguellians than any number of horns, for thus far I have not seen a tithe of the outward signs of superstition with them that exists among my own men. They have a wholesome dread of the guns, which they say go "bam, bam, bam!"

November ©d. I have to record my first real attack of African fever. For some days back I have been dreading the results of camping so often and traveling so long among these marshes. The heat of yesterday was intense. I got into camp very exhausted, and sat by the fire for some time, feeling chilly, then sought warmoth in my tent, wrapping myself in several blankets; but the agne took hoid of me in earnest, and continned mutil near midright, while my mind was harassed by the saddest thonghts and most melancholy forebodings. This was followed by the hot stage, finding relief only in the next stage, when perspiration begran to flow copiously and continued until daybreak,

when I got up, drank a rup of coffee, but could not look at my cold poridge. I sounded the bugle and aroused the camp, and in half an hour more got on the path, feeling very weak and shaky. My poor dog Gyp refuses her food, and looks as if she would not follow us much farther. I am grieved for this; she has been good company, rumning along at our heels all the day, and keeping faithful wateh over the loats at night. The burning sand and have swans have lately proved very trying to her, and sometimes she will not arrive in camp until homs after the last man is in .

We met a large caravan in charge of half-caste Portuguese roming from the Barotse, laden with rubber and over one hundred tusks of ivory, varying in size from three to six feet in length; they had also about two humbed and forty head of cattle. They have bern twenty-four days since erossing the Zambesi, having had to follow the marshes and windings of the stream, so as to find grass for the stock. At 7 a.m. we entered a dense jungle, with scarcely any visible path. Rain had fallen during the night, so that the bush was heavy with water; and, having to lead the way, in a few minutes I was drenched to the skin, and remained so until we got into camp at noon, by the swamp where the river Knsivi has its origin.

On the th we reached Kalumbwi, and here again we have to delay a couple of days to prepare meal, as mother minhabited romitry of forest and jungle lies before us. The men succeeded in horrowing only one wooden mortar in which to pound their corn ; and as I have promised but two days for this purpose, several
of them have gone into the forest to extemporize a few, so as to expedite the work. These are produced more speedily than one would imagine, as they are neither hewn nor dug out, like those in ordinary use. A tree with a thick, soft, yielding bark, eight or ten inches in diameter, is selected and telled. From it a log about three feet six inches is ent, when they proceed at one end to dexteronsly fold back the bark, as in rolling up a coat-sleeve, for fourteen inches, when the demuded wood is curefully chopped square off, leaving a smooth surface; the bark is then returned to its original position. Next a stick four or five feet in length and two and a halt inches thick is peeled, the ends romided, and a very serviceable, if not durable, mortar and pestle is rady for use.

Villages have been more frequent than west of Kangambir; but though we are thereby better supplied with food, the denser population is far from being an unalloyed blessing to us, for, if there is beer to be had, my men are constantly framing exeuses to stop over a day or two, until I begin to realize that my own small stock of groceries is all but exhansted, though we are yet many marches from our destination. The men are making fresh demands for rations, although they have already reeeived more than was agreed upon at starting. I offered to divide among them, as a gift, twentyfour pounds of beads; but they coolly told me it was not enough, they must have two yards of eloth each besides. On deelining to accede to their unjust demauds, I was told to make myself comfortable-which meant that they intended to pit their patience against mine. This is easy enough for them, as anywhere is
home to the Africm while there is something to eat; so very likely they will get the best of it in the emd, but not to-day. I observed several of the women wearing picees of wood about three inches long and half all inch thick through the lobe of the right ear, while many of both sexes have their hearls closely thatched all romed with red bemes. Cloth is in little demand anong them, but an empty jam or sardine tin, or, better still, a hrass cartridge shell, which they use as smifiboxes, will buy a basket of manioe meal.
In the afternoon the chief of Knhmbwi paid the nsual visit, followed by a tremendons arow of matives. He went first to the headmen and asked them to walk with him to my tent. Like his people, he was all hut maked, and made no attempt to act the gramber, like most chiefs. He is a handsome, well-hailt savage, amb fiar less repulsive in his nakedness than the hallidraped, halt-civilized natives of the west, with their greasy shirts and dirty loin-cloths. I entertained hin as hest I could, while he expressed no end of pleasure at everything I had to show him. On leaving, he hinted that as I was the first white man he had ever seen, he would send his people that night to do me honor. What form this "honor" was to take remained a mystery until nearly eleven o'clock, when I was roused by a terrifir noise close to my tent. Jumping up, I rushed ont, to find a high fire blazing, spears, battle-axes, hows and arrows, ete., stuck in the ground at one side, while some two houdred young men and women danced in a circle round the fire, as if their very lives depended on the vigor with which they eapered and wriggled their bodies. For music, they had five big drums beaten
with the open hund, producing a noise that was positively deafening. I eurnestly hoped they would not prolong the demonstration past midnight; but as the hours went by the unearthly din only grew more wild and more unbearable. The monotonons and diseordant choruses on the same high-pitehed key over mal over again, interspersed with howls and yells, made up a pandemonimm which to cndmer was to put one's sanity to a severe test. At 8 a.m., when I suppose they considered I had been homored sufficiently for one night, they censed, and eame to know how I had enjoyed it; at the same time promising that if I wonld give them bach some salt they would repeat the little treat the following night. Neelless to say, there was no salt distributed, and my reply is not recorded here; hut they did not return.

The carriers sent their spokesman to-day with the message that they had decided to accept my gift of beads, provided I added the two yards of cloth; otherwise they intended to stay here until their demands were complied with. Hoping to get square with them when pay-day comes, I let them have the staff. Their threat to remain here indefinitely only shows the unreasonableness of their character, as, if they have means to hay food while in eamp, they ran find it to provide for the road; but they are rognes, without a single exeeption. On the jommey I have tried to put confidence in five or six men, who appeared to be honest, intrusting them with cloth to buy food for my Jamaicans; but in each case I found they were thieves. If any one of them offered to do anything for us on the road, it was only that they might have an excuse for extort-
re wild -ordant ill over c up a simity y connight, red it; : them at the 10 salt - ; but

ing three times the value of the service rendered. I heartily indorse every word that Professor Drammond has written concerning the average Ariom carrier.

On the morning of the !th we started onfer more, skirting the marsh of the Kasivi River for some hours. Both Jmanion men are suffering from fever, and strmgling along with great diftionlty; for some there werks Frater has seareely been a day without it, althongh the heary doses of quinine he is taking make the intervals longer now. When the two are down I have to be nurse and cook by tums. I think it is pretty clearly proven that the West Indian is quite as liable to malarial tiver as the Enropenn, if not more so. We made a short march mud bronght up at Kalomo (altitude, :350) freet).

November 10th. We mate an enrly start to-day, but had only gone seven miles when min began to fail heavily, and we had to stop and stack the londs near the village of Kusivi. As there was no sign of the weather clearing, I gave orders to build hats for the night. I was surprised to see a number of men come romed the eamp with hoes on their shoulders, and was told that all through the eastern part of Ganguella the men work in the fields along with the women, during the plinting season. The land here is of a reddish color, and the swamps by the river-in many places stretching out for half a mile on either side-yieh a tair crop of Kaffir-eorn. Most of the villages are built right in the center of the marsh, partly for the purpose of watehing their patches of grain, but ehiefly to be less accessible to their enemies. Being surrounded by water, the huts are built on piles some six or eight feet
above the ground. A rough ladder, which they draw up at night, is used to reach the platform at the entranee of eaeh hut.

Monday, November 14th. For the last four days we have been traveling mostly in the forest, with heavy rains every day. Yesterday morning dawned with thick fog and drizzling rain, and two of the headmen came to suy that unless I would promise to keep off the rain the men refused to leave camp. A few minutes later it began to clear up, when they picked up their loads, shouting vociferously, and telling me I had done well; but in less than an hour down came the rain in torrents. Alas for my reputation as rain-doctor! This was too bad! I had just kept it off long enough to get them exposed to it, and then let it come; and for the balance of tue day I was in the bad books of the whole caravan.

A path through the forest is very good in hot, dry weather, affording grateful shade; but in the wet season for hours after the rain has ceased there is a perpetual shower-bath from the trees and bushes. For eight miles we trudged along, until every stiteh of clothing was drenched through. Frater and Jonathan managed to get into dry elothes on reaching eamp, but the man canying the bag with my extria suit had let it fall into the water while crossing a stream, and the contents were soaked. There was no aiternative but to wrap myself in my blankei and wait for the sun to appear and dry them. We have seen no villages or natives for the last three days. Oh, how I long to see a white face! Little did I think, in starting out on this journey, that I would be so depressed with feelings of intense loneliness.

This moruing broke very gloomy, threatening early rain. I had everything ready by 5.30 A.m., but the carriers would not stir until after six, when, just as we were leaving camp, a boy was seized with an epileptic fit. Then a kind of circus commenced, by the old men performing around the lad with the fatieh-horns, exoreising the spirits that were supposed to be troubling him.

At seven o'clock, however, we got off, pushing onr way throngh dense jungle for thirteen miles, until we emerged at the head of the river Cikulwi, which, being about thirty-five feet wide and eight feet deep, we could not ford, and were obliged to halt and improvise a bridge. Pitching camp within a few yarts of the river, and entting down small trees, hy night we had fixed up a rough trestle bridge, which, though rather shaky, served our purpose. It was made by placing two trumks of trees, with forked ends, upon each bank; these met and fixed into earh other over the bed of the river, and a man crawling along one of the trees lashed the forks together with bark. A few poles were forced into the mud, and acted as supports and braces to the bridge; the fastening of tramsverse bars ladder-fashion was an easy matter, and the work was completed. It will remain, I suppose, mutil swept away by the next rains.

November 15th. The caravan crossed on the wooden structure safely; but spanning the stream was by no means the end of our difficulties, for all these rivers on the plains are bounded by far-reaching marshes, and in this case the swamp extended, green but treacherous, and reeking with malaria, for half a mile. Over an
hour passed before the last man had reached dry land, though there was no standing still; that only meant to sink deeper. Those with loads every now and again went down to the waist, while only the heads and loads of others were to be seen above the mud, holding on with their hands to clumps of grass until resened by their companions. This was but one of the many similar struggles we have experienced in the marshes. We entered the thicket again, erossing the Kambuli, a strean about twenty yards wide bu: 'nly knee-deep, and by noon reached Kalongo, having made a good mareh of sixteen miles.

On the morning of the 16 th we staggered out into the path again, feeling very stiff and tired. We were still in the jungle, and had twelve miles of thick underbrush to contend with, our first opening being at the rise of the Ninda. We passed the glave of a Frenchman, inclosed by a palisade. He had been killed by an "onyani" (wild ox). He had fired on the animal, but only wounded it, and before he could reload, it charged and gored him.

We are now ont of the Ganguella country, and on the southern border of Lovale. The landscape is beautiful, rich green grass covering the plams. Still no sign of matives or villages, for which I am rather thankful, as the men make longer mareher and travel better when there are no attractions by the way and they know there is no chance of replenishing their meal-bags. Some have run short of food already, and have been digging for edible roots this evening, to eke out their neailly exhausted store. I have kept a sharp lookont all day for a shot at an antelope or a buffalo, as it is

now nearly two weeks since my daily allowance of oatmoal has known any variation; even the wild honey is finished; and this fare does not tend to strengthen me for the long, heary marches. Still, I am thankful to be in very fair health, with the exception of a peculiar vertigo that troubles me every morning, but which passes a way after walking a few miles. It may be asked, Why was not better provision made for the journey? Well, I was informed ly those who were supposed to know, that five weeks at most would see us at the Barotse. Had we made the journey in that time, there would have been no lack of food; but nine weeks have passed since we left Cisamba, and we are still, I believe, two weeks from the Zambesi. One camot calculate upon time while having to depend for the conveyance ot loads on such fellows as the Biheans.

November 19th. This is the first bright day we have hat for a weck. We started at six o'clock. The course of the Nind.a to-day had many winding's, to avoid which we mate short cuts through the forest, steering due east. This is the widdest country we have seen. There is plenty of game; we saw several herds of antelope, eland, hartebeest, and onyani. We struck the fresh spoor of elephants at four different places, and at one spot they had, either in a fight or in play, torn up a number of young trees, plowed up the gromnd, and - strewn it with broken branches. There is no chance of getting near game, with a noisy crowd of men whose tongues never seem to weary. A buffalo that was gamboling about on the pain as we passed charged the rear of the straggling caravan, and although most of the men were armed they threw down their grons and

## 130

loats and hid in the bush. We saw eight large smakes within a mile; three of them were the venomous and deadly green mamba. None of them attempted to show fight, but got out of the way as quickly as they could. While threading my way throngh the thicket I almost stepped on a huge igmana that was lying right across the path; it mode off and serambled up a tree, when I hrought it down with my rifle. It measured four feet three inches from tip to tip. I preserved the skin, and the carriers begged the flesh, eonsidering it a great delicacy.

We reached Kahungalunga early in the day. I bought several good-sized fish for a few beads, so we have a splendid dimer for once. There are several villages in the vieinity, but no meal can be obtained without semeling eight miles to the north, cansing another delay of several days.

November 23d. After spending three days in last camp, we had only gone six miles when we came upon a village where the natives said they had plenty of dried fish. There is no use trying to get the men past; I am sick of contending with them, yet unwilling to take the law into my own hands and force them, which could easily be done, they are such arrant cowards. It I can only bear with them the few remaining days and get rid of them in peace, I shall be thankful. So here we must camp at Wamambuka for to-night. Were I asked if the Bihean has a god that he worships, I should muhesitatingly reply, "Yes; his goot is his belly; "for three parts of his waking hours are taken up with cooking, eating, and talking about food.

November etth. Rain fell the most of last night,
and did not hoold up until half-past eight this morning. The men have given up asking me to control the weather since the day I allowed the rain to come down just after starting. We have a carrier in our company named Cirula, who the Ovimbund beliere pessesses wonderful power over the elements, and by 6 a.m. he was out shouting to the clouds and whistling to the rain, whie he burned a fetich-powder which he calried with him. After a great effort and mueh hard work he stacceeded in stopping the rain at the hour named; so we struck camp.
The name "fetich-doctor" may be applied to all sulperstitions pretenders fomed in Central Africa; but in reality the supposed power over and knowletge of the unseen is appropriated to widely different ends. As all cases of siekness are attributed to some evil spel!, or the visitation of some departed relative, friend, or enemy, when a case of illness oreurs the "diviner" is applied to first, in order to diseover the caluse. This is arrived at with much ceremony, and generally in the presence of a mumber of people, by a wearying program of inceutations, accompanied ly the sacrifice of a white rock. He feigns to discover a foreign body, in the shape of a claw, or stick, or a pince of iron, generally in the arm, leg, or head of the sufferer. Resort is now made to the "medicine-man," who professes ability to cure all mamer of sickness, from whatever cause. He makes no attempt to diagnose a case, but with mysterious words and genuflections he preseribes and administers to the patient pungent deroctions from his stork of dried abominations; and in order that the medicine shall prove efficacions, the patient has often to be re-
moved to an isolated hut. Should the treatment fail to have the desired effect, the skill of the "physician" would not be questioned. The diviner and medicineman play into each other's hands; and there is yot another iniquitons impostor who must also be ensirlered a mone: in this nefarions firm-the soreerer, or
 to contme whin actions, or make void their designs by counter-witcher; ; he affects the erops and increase; and to his car are intrusted the secret desires of wouldbe avengers, and by his infernal work persons not wanted are removed.

November 25 th. Seeing game so abundant, I detrimined this morning to start out half an hour ahead, so as to gret away from my noisy followers. Accompanied by two headmen, I set out by daybreak, traversing during the first two hours seven miles of phan, and sighting herds of buffaloes and antelopes, which from the absence of eover were umapproarhable. Wo had just entered the forest when I saw three splendid hartebeests, two cows and a bull, grazing quietly at ahout five humdred yards. Getting down on all-fous, I repe along until I had shortened the distance three humbed yads; the bull, always on the alert, got wind of me, aml, facing romal, began snorting and stamping with his foretset. Raising my "Express," I fired and hit him in the chest, when he stagered a few yards and fell. By the time we had skimed and ont up the (arcass the carriers arived, and we were soon muder way again. The meat was tender and delicions-a great windfall for us. I reserved a small portion for our own use, and hatd the rest distributed among the sician" dicineis yet - nusirlarer, or spirits gus by crease; wouldns not deterahead, lecoms, travplain, which 2. We lendid etly at -fours, a three t wind mping ed and yards up the under ons-i ion for ng the
men; but in no instance was there an expression of thankfulness, only a growl that I had not shot two instead of one.

Any one coming to this comitry to lahor in Christian work must be eontent to look for his chcouragement or reward from some other sourer than from the people he comes to benefit; for the white man, to them, is only a present-giving amimal, or an ohject to be phundered. Respect boing ganged by the amoment of stuff he distributes, if he has nome to wix he is despered, and beromes the subjere of theix sures and contempt.

All along now we ohserve ah telight the remarkable change in the appearande of the country compared with the sterilo plains whic lin behind us-immense stretehes of luxmriant grass, shaded here and there with patehes of palms. Wo are camped to-night in the forest primeval; very little undergrowth, and magnifieent large trees. Any one fond of sport would find hẹre a hunter's paradise, with ahmost avery kind of African grame, from duikers to elephants. In the evening three wild oxen came trotting past my tent. I always pitch it in these minhabited regions some distance from the huts, so as to be away from the noise at night. I picked up my rifle just as a dozen men with guns came rushingr, ont of camp, howhing and shouting in full cry after the game. This is their idea of hunting, and the reason why they so seldom bring (lown anything; so I put up my gun, knowing it was useless to join in such a chase. I heard eighteen shots fired before they returned; result, animals scared a bit.

## CHAI'TWR VII.

## ALBLVAL IN 'THE BADOTSE VALLEY

 Luwanika.

N
 ing, the earriers, lod loy two maseals, Bwote aml Kesongo (who have been at the root of almost every tronble we have hate on the road), consedous that they ham exiluted from mor mon more than was dhe for rations, and fearing I should take it of their pay on getting to the Barotse, refused to take up their loarls muless I pait every man, in full, here amd now. They strutted about all day, thinking, no doubt, I shonk be obliged to romply. Calling the heatmen together, l fold them they rould do as they pleased, but that I intembed starting for the apital of Barotse to-morrow, alone, if neressilly, where men would be foum to come bark for my loads, and the matineers would lose all their pay: This had the desired efferet, and they promised to start. within three or four days of Lialui, and there accounts will be squared.

On the morrow I sent two men with, as is enstomary, a letter and presents of eloth to King Lewanika, requesting permission to enter his country. I also sent a letter to Monsieur Coillarl, the Frenth missionary.

The matives have their own way of carying a letter. Having no pocket, and a comer of their loin-rloth not being the best receptacle, they devise a plan to keep the envelope clear of their greasy skins hy slipping it into a cleft stick, secming the opren end by tring it with bark. When they rest, the fiee end is stuck in the ground; and they hole it prominently as they travel, the sight of an omakanda (paper that speaks) generally securing for them a measure of potertion when passing among strangers, as they recognize the finct that there must be a white man not far off.

Three more marches brought us on the 30th to the thiekly populated district of Kimete. None too soon, for my fool-smpply is at the lowest eblb, my rations for the last two days having been reduced to a few crackers with two cars of roasted mealies. I hope we shall be able to procure a fresh supply of meal here, even if we have to stay a day or two. This is part of the Barotse Valley. The natives are sulnjects of Lewanika, but most of them are slaves belonging to the headmen of the villages. These people are a mixture of several tribes captured in raids and war; they are of a lower caste and are coarser featured than the (inmollians. The women make no attempt at hairiressing, plaitic $g$, or ornamenting; a few have beads moud their modes, and most of them rings of iron and hrass on their
arms ain? ankles. There are no flint-locks among the men, but bows and arrows and assegais. This morning I saw cow's milk for the first time since coming to Africa, bronght in large gourds by a native for sale; but as the mative does not consider milk fit to use until it has been kept for a week or so and beeomes sour and thick, this was the condition of all that was brought to-day; but they promised to bring a gourd of frestumilk to-morrow.

We arr ronsinerl, by the apparent abomdance of milk, that the lireed of cattle as well as the land must he vastly superior to anything of the kind in Eihe or the West Coast ; for althongh there are eattle at all the mission stations, and the time we passed through was the ealving season, in no instance did we see other than condensed milk on the table. The elucation of the Bihean row has thas far been neglected.

Deember $2 d$. For ten miles we followed the western border of the plain, and camped again at the edge of a woon. Several villages are in sight, but the matives are very shy. About 3 p.m. the two men I sent off on the 30 th with letters to the king and Monsieur Coillard returned, and, to my dismay and chagrin, said they found no white people, and that the king had forliddrn, on pain of death, any white man to enter his comutry. They conld give no reason for having failed to deliver the letter to the king. I will, howner, start in the morning and seek the white men, of whom I have heard, ant risk the king's interdi•t. So, leaving Frater in charge, I procured a guide, ant, taking Jonathan, set out at daybreak to walk to Lialui, the capital of Barotse. After tramping for an hour and a half we
ng the morning to - sale; until s sour was urd of
reached the Zambesi. Prorwing a canoe, we crossed the fimous river, which at this point is abont one handred and fifty yards wide, and called the Mongole drift. Hippopotami were bathing in the coo. waters just above the place where we erossed, but I was too preocenpied to ake much notice of them. Another hom brought us to the river Kimbo, wide but not deep, so that the guide was able to carry me orer on his shoulders. The grassy plains on either side of as abounded with cattle of small size, but in cplendid condition, while flocks of widd geese and durks were everywhere, within easy gimsliot. Fom hom:s more and we were at Liahi. To the right, I olserved a few huts, where I was tokl white men lived. Thither I bent my steps, found an English tradar and a hunter of donbtful nationality, and was heartily walromed. I sent back the guide to camp with orders for the caravan to come on in the moruing.

Later in the day I went to see Lewanka, whom I foum sitting in his "lekiothla," or courtyard, in the center of the town, with a crowd of people kneeling in semicireles before him, near or far aceording to their rank. The deep, yelding samd is a merciful provision for those who have to remain in this position for hours together. I was graciously reeeived, and conld not but feel that at last I was face to face with a real Afrioum king, compared with whom the many I had seen were but insignifirant. Lewanika was phanly dressed in Englis! clothes, and sat on ant ordinary dane-bottom chair; his mamer was affiable and free. In front of him were his band of drommers and marimba players. Earlo company of men, as they assembled at the even-
ing council, while still at some distance began clapping their hands in unison; and before taking their places raised their hands above their heads and shouted the royal salutation, "Yo sho, yo sho, yo sho!" Atter kneeling, they continne clapping, and low their faces to the earth three times. 'To all this pomp and eeremony, with which the Marotsi have for anes smromeded their sovereign, Lewanika paid no attention (althongh I muderstand he is not indifferent to it), but kept up a long conversation with me throngh an interpreter. He could not quite understand why J hat come so far simply to see the country and the people, for he said, "All the white men who come here either want ivory and skins, or liberty to hunt in my teritory."

The mode of salutation among the Marotsi is peculiar. They approach a superior clapping the hamels and repeating the word "lumela"; but to equals they observe three different grades (see illustration), according to the degree of friendship or relationship, existing between them. Those having a slight acquaintance with each other will on meeting lay down their sears or whatever load they may be carrying, and, seizing each other by both hands, elevate them to about the level of their eyes, lowering and raising then three times, silently gazing into eath other's face, and conclude the ceremony by squatting down and passing the smuff-box. The second mode of greeting applies to individuals between whom a closer triendship exists; the same dumb show is performed, but in this case the parties kneel. The third form is ohserved only by near relations, and differs from the second in that each with his right hand seizes the left hand of the other, pahm upward, on which ditees at the Alter faces cereminded ough up it He o far said, ivory uliar. dreserve o the ween each

he impresses a prolonged kiss, or kisses, according to the warmth of their attachment.

December 4th. Early in the morning a messenger came from the king with his greeting, and to know if I had slopt well; at the same time expressing his desire that I should live in his village during my stay in the valley, and stating that a honse was already prepared for me. Ho also sent an invitation to huch with him at noon. Such kindness and eivility from a chief in the interior of Africa I was totally unpreparred for, as past experidence had led me to look upon them merely as grachly beggars, who never offered the white man a paltry hasket of meal without expereting ten times its value in return. There have certainly been exceptions, such as the rhicf's at Ciyuka, Kukema, aud Kwanza.

Noon fomm the English trader and myself at the entrance of the reed-mat inclosure within which is the king's residener, surrommed by some twenty large hats, the domiciles of his numpous wives. The entire ahsence of dirt and rubbish is a pleasing feature of Lialui ; but still more praiseworthy is the well-kept and orderly condition of the royal inclosure, reminding one of a military fort in time of peace. Lewamika was sitting at the door of his house conversing with his seretary; but on seeing us he arose and bid us welome in a very genial mamer. The buiding is after the bungalow style, and is the work of matives tramed by Mr. Winfdell, a Seotch carpenter at Scfula, Monsieur Coillard's mission station. A namow veramat runs along the front of the dwelling, ant, crossing the threshold, we entere the sitting-romm, where only white people besides the king aro admitted. The walls of this room are com-
posed of reed mats, beautifully woven, in various designs, with the beaten bark of trees, dyed in several colors-the work of his wives.

December 5th. No sign of my earavan yet; they seem determined to follow their own sweet wills to the very last. I went to the king and laid the matter before him, when he immediately dispatehed a messenger with the order that they put in an appearance at once, with the result that before night they were all here, and very murh frightened. I never salw such a change in the demman of any company of men. Just like the cowardly knaves! Now they know that they have inrurred tha king's displeasure, for he had toh his messenger to say they were to tail not, at their peril. They hane had a lige scare. "It's a long lane that has no turning."

All day there has been held in the "lekhotha" the grat mative festival of the month-the dance of the new moon. From early morning the druns have heen going harrl, and as I passed through the council-yard at noon the dance was at its height, performed by some three handred men, hraped almost miformly in kilts of leopards' tails, and ostrich feathers in their hair. It lasted until sumdown. But every night there is a dance for a couple of hours, commeming at ten o'dock, ind the drumming contimes with heriof intervals mutil daylight; this is for the pmorpose of driving of the evil spirits that are inclined to disturl) the king's shmbers. I now oceupy the premises provided hy the king, consisting of two large luts, one of which was assigned to Fatme and Jonathan. The construction of these hats is permliar, and deserves more than a passing notice.
ous deseveral

They consist of two circular walls, one within the other, made of reeds, and both surfaces phastered over by hamd with a mixtmre of cow-rlung and samb, or preferally ant-hills, when obtainable. 'The fleors are mate with the same kind of cement, well trohlen with the feed, and subsequently smoothed in the same fashion as the walls, a finishing coat being added of hullork's blowl, which serves to harten ame give a polish to the smeftare. The roof, made of reeds elosely wowen together amd thatehed with grass, and extemding beyomed the outer wall several fere forms a shambe all romed the hat, amb, as it rests on hoth walls, forms an immer and outer combpartment, perfectly light-tight, having no windows, and I might say "air-tight" too 'The inside or sherpingroom is stiflingly hot and oise, se that I profer to sloep in the onter section. In the largest dwellings the doer is only about four fent high by two am a half wind. The privary of earh fanily is sermerl ly inelosing their
 consequently the smell is very strong; hat we are getting used to it.

December 6th, Smmay. The chinf's sempetary, Sibiika, who has been mbuated in Basutoham, ham a sarviee in the sillage, rading aportion of Soripture and singing some hymme with the boys who are muthe the tuition of Monsiem ('oillard an Sofnta; lant in the evening the drums heat and the dane goes on as on other mights, lomdly amb furerely, until two ordock in the morning. Thare is a manifust strugere going on hore between light and darkness; so lar, the latter is in the ascendeney.

I spent three hours of the afternoon with the kinus,
our conversation being interpreted ly a black boy, who knows a little English, having been brought ul at Cape Colony. Lewanika says he longs for light and knowledge, and wonders why more missionaries do not come to teach him and his people. It must not he imagined by this, however, that he yams for a knowledge of the gospel. By no means; he wants toachers to instruat his people how to read and write, hut asereially to train them as carpenters, (abinet-makers, backsmiths, and for other trades, that they may make fumiture amd build houses for him. None of his prople dare own is chair, or build a square house, or put a wooden door or a window in their hut; the right to possess such laxuries he reserves to himself. But he has a great inlea of the ability of the Marotsi to learn the varions arts and become wise like Europeans. He is by no means an idler himself, med of his time being spent in wood-enving, with very primitive tools, turning out bowls and other dishes of womderful symmetry, and exhibiting exeeptional skill and taste. At present he is lonsy with his mon building the ammal Nalikwamda.

This is a monster canoe, constructed from a number of smaller ones lroken up, to ridel planks for the mgainly araft. It measures a hmolred and twenty feet in length ly fifteen fee beam, is flat-bottomerl, has no keed and no libs, and will only be used in taking the king in state with his wives to his mountain village, some thirtren miles off, where he spends a couple of months each year during the time when the plain is immolated with water by the overflow of the Zambesi. Ere the waters dry up he raturns again, and the boat, that reguired months of libor from hamberts of men,
is used no more; :mother one is built for the following year. It is mamed only by ehiefs, aml none but the aristocmey are allowed on boarl. But it the back of this one does not break aml slip the whole of them inte the water I shall be surprisel. hast ram they sowed the planks together with bark; mow they have got a step forther, and are joining the planks by orertayiner the seams with boards and mailing them down with four-ind matior spikes, and have, like the hatders of the ark, "pitchorl it within and without with pitelh."

Derember thl. I paid off my caravan this morning. Not a single spowl was heard from a man; they wore like a floek of frightenod sheep, lest I shomld tell the king of their comber an the road. I same to each the full amomet agred upon at Biho; hard they behaved better, they would have rederised something more. I han only to remember that they hat robbed me of at loast six weeks of my life, to prevont a fit of gemerosity scrizing me.

To-day the king prespated me with a fine fat on. I had it slamghtered, and sent all but a fow pounds of the moat to 'the sub-chiofs, as we cammot kemp it longer tham two dars. Whan we have mant for dimmer, it is meat alone, for there is not a solitary vegetable to be hand exoppt cereals. Yesterday we got a few sweet potatoes, hat so small that we could mot attempt to peel them; and even these are only to be hand onee a fortught, as they are not grow in the valley, and have to be brought a distame of fifteen miles. I hope to get some moul to-morrow, when we shall have the substantial S.otrli fare of "porridge and milk." Wo ant abmandere of the latter, as the king has had three
cows set apurt to be milked avery day for our special use. linewood for the "kitchen" is very scarce, every head-load being carried not less than fonteen miles; there is not a bush nearer.

December 9th. Three or four hours adh day me spent with Lewamiki, disenssing every ronceivable question relating to bark people. He is much interested in Jamaira, and in all I have told him of that romutry. Nothing conld exced his kindness to us so far. I dined with him yosterday and to-day, in a very good attempt at English style, hut for the slave waiters, who in bringing in or removing each dish did so rronching on their linees (no mative is allowed to stand it Lewanika's presencer), (rapping their hands every time they were empty; ind when the repast was finished the five slaves knelt in a row at the door and elapped again, thanking him for being pleased to cat the foord they had served.

1 tohl him to-thy that I wished to visit Monsiome Coilland at his station, righteen miles off, when he otfered me the use of a horse, and men to earry my buggage.

I may mention here that the burden of the conversations I have had with Lewamika, and the reason for his having issmed an interdict against white men coming into his comutry except at his discretion, is what he considers the bar treatment he has received at the hamks of the British South Africim Company. For some years past Lewanika has beon writing and somding messages to the English govermment, asking to be inchuded under "British protertorate", as the chief of Khama amd others farther south. 'To none of his re-
special , every miles;

his re-
quests did he rearive un mswer until last year (1890), when an agent of the company was sent up to interview him, and to negotinte for the monopoly of working the mineral resources of his country, giving him to mulerstamd that this meant being moder "British protectorate," as he had so long desired, and secming his sigmature to the concession. The agent bromght presents whieh Lewanika acepted, becanse he was told they were sent to him ly the Queen of England. Wherempon, as he himself expresses it, to prove that he was grad that at last his wish was gratified in being muder Her Majosty's protection, and that his heart was white toward her, he selected a pair of the finest tusks of ivory in his possession and handed them over to the representative of the company, as a return present to the Quecn.

But he looked in vain for an acknowledgment from Her Majesty, mutil he begran to suspect that all was not as he had muldrstood it. 'This feeling was encomaged by traders and others coming to the country, who told him that the English government was in no way rosponsible for the actions of this company, and that he was not yet muler "British protectorate." And his suspicions were confirmed when a book entitled "Zambesia" was published in the interests of the company (June, 1891), which contained the following statement (and was translated for him), page 435:
" Mr. Lochner and the king parted in the most amicable mamer, his majesty rotming the traveler"s present by the gift of two fine tusks of ivory, each eonsiderably over one humdred pounds in weight and over six feet long. These now ornament the board-room of the

Corporation

British South African Company in their palatial offiee in St. Swithens' Lane."

Now Lewaniki's rage was at white-heat, and he had no name for Englishmen lut "thieves and robbers." Unhappily, Monsieur Coillard and his colleague Monsieur Jalla were seriously compromised in the matter, they having acted as interpreters for the agent, fomblly hoping that they were doing a service to the king and comutry, but now juiged by the king as abettors in the attempt to sell his comntry. The following letter, written by Monsieur Coillard to the secretary of the British South African Company, will better explain his unenviable position at that time, and the effects of which remain until now.

Sefula, Barotse Valley, Upper Zambesi, June 5, 1891.

## Dr. R. Harris, <br> Secretary to the B. S. A. Co., Kimberly :

Sin: This mail will bring yon a message from King Lewanika, and Mr. Middleton will remit to yon from him through me the $\dot{2} 200$ paid to the king by Mr. Lochner "as the first ammal payment of the Ware Coneession."

You are aware that three years ago the king applied for the protectorate of the British government. He was assured of the friendliness of the government, of his request being serionsly considered, and that the reply should be conveyed to him at once. That longexpected reply has never come.

Meantime, Mr. F. E. Lochner was last year sent to this comitry by the B. S. A. Company. That powerful company, with royal eharter, introduced to us and recommended to us by persons on whose jutigment I could rely, strongly recommended also to King Lewanika by the chief Khama, who escorted it by a special messenger, won at once our confidence. On the strength of the terms of the treaty that "any angreement with the company was to be considered in the light of a teaty or alliance made between the nation (the Barotse) and the
he had obbers." te Monmatter, , fondly ing and is in the er, writBritish unenvihich re-

Zambesi, ј, 1891.
ewanika, the $\pm 200$ ment of
the proe friendnsidered, at longuntry by charter, se judgmika by a at once rat "any ght of a and the

Government of Her Brilannic Majesty Queen Victoria," the envoy of the company overcame all difficulties, the concession was granted, and the treaty signed.

The Rev. Adolph Jalla and myself were fully satisfied that the transaction was on both parts made in perfect good faith; it is why we gave our support to it. I was anxious to see this unhappy country, a hot-bed of constunt intrigues and revolutions, where is so little seeurity for property or life, pass under the protection of a strong but wise and humane government; and in the firm conviction that this great end had been attained, King Lewanika's power strengthened, and tho welfare of the people secure, I sincerely rejoieed in the siguing of the treaty.

Since then, King Lewanika has not failed to take advice of other men-men who profess to know more of these matters than we doand the transaction was represented in a very different light. We are accused of having been bribed by the company, of having sold the whole of the country, of having purposely withheld from the king the true nature and full import of the treaty, and, in complicity with the company's representative, of luving willfully deceived the king and his poople.

This the king, in spite of his personal regard for us, resents bitterly, and the words in which his message is framed give but a faint idea of the state of his mind. All these rumors have spread liks fire, and have thrown the natives into the wildest state of excitement.

To this partly may be attributed the shameful treatment which one of the Primitive Methodist missionaries has lately suffered at the hands of the people, under the most trifling pretext.

Now, if the aim of the B. S. A. Company is what it is represented to the king, a mere gigantic mining and land-securing scheme, and if the British Protectorate has been used simply as a blind, I emphatically protest against it, and regret if I have unwittingly been a dupe and an accomplice in such transactions.

The fact that during all the time of his long-protracted sojourn in this country Mr. Lochner was my guest, and that of necessity I served as the only medium in all his intereourse with the king, has greatly compromised me in the eyes of the natives, and caused me to appear to them as being identified with the company. They, of course, give me credit for far more than my share in the business.

Matters having assumed such a threatening aspect, and being, as far as our safety and our mission are concerned, in so grave a position, I must deeline having in the future any more to do in these matters. Believe me, sir,

The eompany of course deny that their agent treated with Lewanika under the guise of the Queen's representative; but letters written by him at the French mission station to the king, inelosed in envelopes marked O. H. M. S. (On Her Majesty's Service), and from which we quote, place the matter beyond doubt.
"I am sending to you to ask whether it is possible for you to let me know approximately what date the meeting regarding the establishment of British protection, ete., may be held.
"When I startod to come up here it was never thought that there would be any delay or difficulty abont the protectorate, as you had written to the government about it, and the government and the company thought everything would be settled on my arrival here.
"Please also to remember always that I should never" have come up here if you had not written to the English govermment for protection.
"If you and your counselors aceept the protection of the Queen of England, ete., the company will send traders into your country who will deal fairly with you and your people, the same as is being done now at Khama's town."

Lewanika forwarded an emphatic protest to Her Majesty's Secretary of State in August, 1891, against the eoneession, and is now looking anxiously for a re-
ad being, as rave a posido in these

Corllard.
ent treated represenench misas marked om which
ply. My excuse for referring to this matter, apart from the personal entreaties of Lewanika himself during my stay at Lialui that I might give publicity to his grievances on returning to Europe, is the following letter, dispatched to me by special rumers, overtaking us while on my journey down the Zambesi:

Lialei, Jin. 16, 1892.

## To Mr. Johnston:

King Lewanika hopes you will not forget him and his wishes, but trusts yon will uso all the comphints and all the desires he hus expressed to you verbally to his advantuge and that of his people and country. And further, the king commands and nuthorizes you hereby to make known and to publish all that he has made known to you nimself; and further, to publish his determination, and that of his people, that no force must bo used by any person or persons to enforco his submission to terms he abhors, and which he did not understand, and which ho was led into through ignorance and deceit ; and if any force (as is threatened illegally) is so used pending any answer he may recenve direct from Her Majesty the Queen and her government, it will bo resisted by force, as he will treat it purely as robbery, and the conserquences will be upon such attacking forees.

And the king wishes it to be elenrly understood that he truly did not know that it was a company to work all the resomrees of his country; but, on the contrary, ho was repeatedly told that it was an embassy from the Queen Victoria of England. But in this they deceived him, and when they asked where were the boundaries of his rule, he did not know it was to mean the comntry in which they were to have the sole rights of working, but they told him it was to define the extent of his country to be under the protection of the Queen. But as to rights to work resources as written, it was not so; he never gave away the rights to work solely the resources of his country, and in proof of this, all who know his feelings on the subject and are at all acquainted wit' the king know well that his chief ambition is to be instructed in all such practical knowledge so that he ean work the resources of his country by himself and his people; and he intends to do so, as he will not recognize any bond obtained from him by
ignorance and deceit. Moreover, he gave his word on the matter, simply as he gave it to Harry Ware, i.e., to seek gold, und, on finding it, to acquaint the king with the fact, when areas of land would be defined where they could work solely; and when he and his people had learned the methods employed, he with his people would work for thomselves outside of those areas that had been allotted to tho company. He never intended, he did not consent, and he will not consent, to part with the resources of his country. Euglishmen ho likes, and his political preferences are all in favor of England; but the using of their Queen's name to hide their evil designs he cannot understand. If the Queen really wished his land, his rights, and resources, would she not send direct9 A treaty of frieudship with the Queen direct does not surely mean that he is to be weakened at all; and if all these industrial rights of his are parted with forever, then what inducement remains to induco them to learn anything of industrinl arts? The king says he feels sure that if all these things can be known in England as the words of the king himself, then the English Queen and her people will not permit such deceit, mean advantage of ignoranee, to be done in their name and with their approval.

The king says deceit like this is robbery, not friendship, and it must be treated as robbery, and so has fully determined, and his pcople support him in this. Moreover, those who wish to come to his comntry must come with sincere feelings toward him and his people, and of supporting the king in maintaining his rights to the resources of his land. He wishes them to come, but on terms of submission to his law, and of agreement to do nothing disadvantageous to hinn, his people, or his land, or the rights appertaining thereto, either by word or letter, or by deed-such bond or agreement to be in writing, any refusal to be taken as opposing the interests of the king. Apart from this, King Lewaaika does not wish it to be understood or thought that by this he closes his land against white people; by no means; but this insures and secures to him people who will help him and teach him, rather than those who only seek to deceive him and try to despoil him of all he possesses of value. The king wishes to cordially welcome all who come willing to teach and to help him and his people to know and understand the works and industries and the knowledge of civilization; he wants secular as well as religious instruction, und, on findf land would ad his people would woik lotted to tho the will not glishmen ho ugland; but as he cannot rights, and ndship with weakened at vith forever, anything of these things elf, then the eceit, mean 1 with their
, and it must his people to his counpeople, and resources of bmission to ous to hm, $o$, either by in writing, ng. Apart or thought no means; p him and 1 and try to to cordially nd his peothe knowlnstruction,

i.e., works, trade, religion, and education ; and if they are not disinterested tenchers, but wish also to beneflt themselves whilst benefiting others, the king suys it is well, as might be agreed upon; but they must submit to the king, his uuthority, his rights, and his powers: this is the one bond he will demand of them.
Further, the king says it may be said, on behalf of the compnay, that ho proved his full eonsent to them about the concession, by giving them two of the finest tusks of ivory seen here for a long time, each weighing one hundred and five pounds. Now he wishes it to be thoroughly understood, anil to be published as his own statement, that theso tusks wero not given with any intention or knowledge of clinching an agreement of which ho knew nothing ahout; but, as they insisted that they were an embassy sent by the Queen, and that the presents they brought lim were also sent by the Queen, so he accepted their presents and gave them the two aforesaid tusks as a present to the Queen, as a proof of his friendly feeling toward Her Majesty, and the Queen was to aecept his oxchango product as proof thereof. Now, these tusks, beenuse of their extroordinary sizo and benuty, were worth the exceptional price of one pound sterling per pound weight, therefore valuo $\mathbf{£ 2 1 0}$, or more than the value of the presents thoy brought to him. All this he wishes to be well known.

Now, in conclusion, the king says he trusts you implicitly ; he sees your heart is well toward him, even though you did not care to say much here; the king says a man's heart alwnys speaks true, and you have always shown great sympathy toward him and his affairs. And he says that if he really receives any prnctical help from you on these matters, you will receive from him and his nation their eternal thanks and gratitude. And the king further says that if God should eall him away, nevertheless his son and others may remain and remember all they shall owe to you. He prays you a safe journey and safe and joyful return to your family.

Written at the dictation and by command of
The King Lewanika.
To Dr. J. Johnston.

## CHAPTER VIII.

LIFE IN THE BABOTSE VALLEY.

The heroic Frenchman.-A model mission station.-Blighted plans.-A touching story.-Thrilling tules.-Truth first.-Missionury tidings.-Korems.-Ammaing statements.-Futile hopes.-Primitivo Mothodist purty.-Home eommittees.-Virtually a prisomer.-Marotsi hamiderufts. -In the lekinothlu.-" $A$ sound of revelry by night."- $\lambda$ perpetiun vinor. bath.-A bloodthirsty queen.-Display of fireworks. - New Year's Buy. First mutive wedding on the Zambesi.-Amused sknptieinm.-Ladies tuke a buck seat.-Magie-hutern exhibition.-Silence reigus.-The Mashuku-lumbwe.-Taking their mensure.

DECEMBER 10th. Mounted on a fine black horse and escorted by a guide, also riling, I set out for Sefula. The path lay sonthward aeross the plain. We passed numerous marshes swarming with flocks of wild geese and ducks, at times so near that we could have knoeked them over with a stone; but here stones are as rare as the " roc-egg." In two hours and a half we reached the mission station. It may be imagined with what delight I grasped the hand of the noble and heroie Frenchman of whom I had heard so much. The warm greeting was mutual. I was introduced to Miss Kiener, a Swiss lady teaeher, also to Mr. Wadidell, the Scotch carpenter. The station is situated on a beautiful plateau at the extreme end of the low range of hills running along the east side of the great valley. It might well lay elaim to the title of a model mission station, it
is so fully equipped with every applinnce for instructing the mutives, not only in divine things, but also how to improve their social condition. So far, however, these privileges have been but poorly appreciated, as the people know it would be little short of a crime to attempt my improvement in their dwellings.

The station contains a fine 'saw-mill with six spen of oxen for the motor power, brick-making machines, smithy with patent forge, minel's workshop, fitted with
$k$ horse out for in. We of wild ld have mes are half we ed with l heroic e warm Kiener, Scoteh ful plalls runmight ation, it every tool the mechanic requires, from a brad-awl to a turning-lathe-every building on the station, including the trim little chureh, displaying skilled workmanship. I was grieved to find Monsieur Coillard in a very low state of health and depressed in spirits. More than ordinary trials and sorrows have fallen to the lot of this faithful servant of God, not only in the dark outlook of the mission's future and the difficulties that beset the cause, dearer than life to him, but in the sore berenvement he sustained, but a few weeks ago, in the denth of Madame Coillard, the devoted companion and helpmeet of his thirty years' labors in Afrien.

On Sunday I spoke through Monsieur Coillard to a good congregation of the rawest-looking lot of natives I have ever met inside a place of worship. It was no easy matter to speak to such people, for, with the exeeption of the boys employed or at school on the station, but few, if any, have as yet (after yeurs of uremitting toil) manifested even interest in, far less ability to grasp, the most elementary truths of the gospel. They listen quietly and respectfully, but there it seems to end.

Monsieur Coillard, in describing the present condition of the work, says: "It is now seven years since our expe-
dition crossed the Zambesi and the mission was started -a long time in one's short life; and yet we are still passing through that arduons and minteresting period of breaking the fallow ground and sowing the seed. We amxiously watch for the appearance of the little clond and the showers of blessings which it shall bring. Sometimes a little mist in the atmosphere has filled our hearts with hope; then the mist vanished away, and the sun shone in a brazen sky, fiereer and more scorehing than ever. 'He that ohserveth the wind shall not sow, amd he that regardeth the douds shail not reap!' We remmented it. The lood has given us grace to toil on, plow and sow, and expert against all appearances. We know that the seed is not lost. Silmatly, seeretly, molar the clocks it germinates, and the first shower shall adorn with verdure our parderd gromul. The time shall come; therefore we faint not.
"These last three years have been to us more by far than all our missionary life years of toil, trials, and suffering. The social and political state of the country has been greatly disturbed by intermal causes, and the advent of the British South Africa Company. Sickness and death have thimed our ranks as quickly as wo had the joy of receiving helpers from Europe, at great expense, and we have sen our brightest hopes and our dearest plaus blighted and dashed to the groumd."

Such is the aspert of the most faithful mission work in reality. Of romance we have already had far too much from visionaries, who deem it essential to write such accounts for the purpose of keeping up the interest, particularly if they are not guanateed support, are still g period he seel. the little 11 lring . illed our , and the corching not sow, p! We e to toil atrances. secretly, shower mil. The re by far ials, and comery and the $\therefore$ Sickiickly as arope, at st hopes to the
but have to depend upon casual voluntary contributions. In a published letter of one who was stranded in Barotse a few years ago, hut ultimately got out to the West Coast by attaching himself to the caravan of a Portuguse traler, we read:
"At one place, among the Bakuti, it was remarkable how the prople seemed to onen their cars and hearts and gave their time. I spent ten days among them. The first five I went anneng the villages, having large meetings, at which I told them of Jesus and His love. As I coold speak a dialtert which many of them monderstood, I could explain myself quite freely to them. They berame very much intorested in what thery heard me sily, and they said among themselves, 'We are caly tiring the white man out ley coming day after day to our villages; we will go to him.' So, for the last five days, we had all-day meetings-a most extraordinary time, I might saly, for Africa. They kept up the diselussions among themselves, and before I left at keast two of the men stoorl up, in the midst of their tribe, and deelated for Jesus before all their frimods, in their own simple language. They admowledged that the things wr said to them were true, and they renounced their superstitions and fetich worship. Since then I have heard that they are still longing for a return risit from me, or that some other white temeher should go to their comutry:"

A very touching story, if it were true! But every lahorer of experience will bear me out when I state that there is not an anthentiented instane on reeord of a savage geminely turning to God or remoncing "their superstitions and fetich worship" mutil he has been many
months, and too often years, muder instruction. Many ramest men who have toiled long in breaking up the fallow gromm have been ralled away from the sphere of their labor withont being permitteri to see evert the Hanle, fiar less the car, that foretells a probable harvest ; alm satisfied not to mason why, but to ohery.
 onn (floted abow is incalaulable, giving a totally false "onerption of the nature of the work, ame filling the minels of enthasiastio missionary volunteres with the idea that the ('mitral Atrica matioes "are rady and wating to reerive the gospel." The artand farts being the very antijerles of sullo statements, the offere is olten to driw the most samgine to the opposite axtrme. Nor arr tha writers of sud artides alome to blame; "onstant demands ar madr mon them by their home rommitares and smportars to provide something sperially thrilling for their "quartirly" or "ammal" menting. But as the routine of a welt-establisher mission station soldom furnishes material for "thrilling" tales, some mast be mate to order. Nor is this merehandise in surh missionary reperts likely to rase while the fompling exists that was expressed hy a wealthy ('hristian philanthropist, whose name is often to the front with large donations, and who spoke not only for himself, but as representing the monied subsuribers to missions, when he said to a friend of mine, "I give only to sueress." The following extract is from The Thuth, edited by Dr. James Brooks, of St. Louis, Missomi, hearing upon this subjeret, though refming to another field:
"It is never pleasant to write of those who have gone to the heathen with the gospel, unless they can be men-

Many up the sphere wen the harrest;
as as the olly false ling the with the ady and ts hering is oltem extreme. , blame; iir home ing spe1 " meetmission gr" tilles, -handise hile the 'hristian bint with himself, tissions, to sue1, edited braring ield:
ve gone be men-

tioned in terms of affectionate commendation. But there is danger that the church at home may be misled by false reports of marvelous success; and even if the facts are discouraging, it must not be forgotten that the truth is expedient. It is so delightful to believe that all the missionaries are thoronghly loyal to the Word of God, and wholly devoted to the work of saving the lost, and that pagans and Mohammedans are standing with outstretched hands, eager to receive our Lord Jesus Christ the moment He is presented to them; but sueh, it is sad enongh to say, is not the case. . . . Now comes a letter from Mr. M. C. Fenwick, missionary in Wonsau, Korea, with a request that public use shall be made of it to undeceive Christians in America. He also sends a copy of The Chinese Recorder and Missiouary Journal, published in Shanghai, and edited by Rev. L. N. Wheeler, D.D. It contains a commmication from Mr. Fenwick in reply to the following statement that went the romnds of the religions press in this country : 'Korea presents a striking illustration of the irresistible advance of the kingdom of Christ. Ono of the most remarkable works of grace known in modern missions is that among the Koreans. Without having heard or seen a missionary, thousands of people have heard of Christ and turned to the service of God. These converts are the fruit of the circulation of copies of the New Testament by the Rev. John Ross, late missionary of the Presbyterian Church of Scotland in Manchuria.'
"Of this marvelous story Mr. Fenwick says: 'It is a grave dould in the minds of a majority of Protestant missionaries in Korea whether there are fifty Koreans in the whole comntry who have been "boru again." Some
are persmaded that there are not even a dozen. Coneerning the New 'lestament that is said to be the translation of the Rev. John Ross, but which is really the production of Koreans, under the direction of a Mr. Melatyre and Mr. Ross, no Korean has yet bem found who has any ronception of its meaning. There are many words in this proluction foreign to the Korem langunges, and that which is Korean is by no means is tramslation of the Word of God-not even in the "eon"ept." Some thought perhips it might be used on the border between China and Korea, but it has been aecorded a fair trial there, and failed to tind a man who could understand its fumy sommds.'
"In the letter just received he more completely exposes the deecption too often practieed on the Chureh in so-called Christian lands, perhaps in the exereise of the Jesuitical primeiple that the and justifies the means.
"The missionary literature of the day, taken as a whole, is the most deeptive writing I see. . . . $\Lambda$ rase in point: A missionary in Korea, representing a small committee in $\qquad$ romposed of husinoss men united to send the gospel to Korea, made his ammal report, truthfully setting forth the actual stato of affairs on the field as he found them. The report was promptly rejeeted, and one of striking cases of interest, conversions, ete., dem:unded. Ho complied with the request under protest, bat the report was declared to be the proper thing, and given it wide eirenlation.
"Two years ago a man named - [perhaps it is well to omit the name] returned from this field to America, and has sinco been sprealinir his exagrerated stories throughout the churehes in the United States. . . . Let

Cone transally the f a Mr. II fombl
 Korean neems in e" "ollOnt the redl ieall who toly ex('humeh reise of means. 11 as is A rilse is smiall mited report, iirs on pmptly onverequest le the
. Let
me give you an aceonnt of his eonverting work in a village where I afterward lived for six months, as given me hy one whom he haptized on the occasion now mentionel. A native who rearival mission money was direeted by Mr. —— to enet together at last forty or fifty, ant he would be along at suld a time. Rather prephexed at the mumber demamded, the mative set to work to grather his frimols, lat rould muster only ninte.
"'The missionary arrivel, and after exherting at ronsiderable length, asked the natives to remove their hats. 'What for?' sait one. 'Oh, newor mind, roaxingly pleadent the mative friend; 'take off your hats;' and with the politemess so characteristic of the Basterner, they removed their hats, and then the Rev. Mr. D.I., administared haptism to these nine men, nome of whom, with the possible exerption of one, he han ever sieril.
"The letter contains statements equally amazing and hmmiliating, but enongh has lerem said to put Christians on their gravel against believing ererything that eomes to them from the loreign fied. No dombt this hathit of sory-telling arises from the error, hed by mearly all, that it is the mission of the 'hareh to romvert the worlh. Hence it seems to be nererssary, in order to aronse and sustain entlmsiasm and to procure fimds, to tell hig tales of wholesali ronversions amd to represent the heathen as rager to abept the gospel. But 'no lie is of the truth' ( 1 John ii. $\because 1$ ), ant no lie is harmless. It is sure to inflict its own penalty in due time; and the Chureh cimmot continue to act under the delnsion that its business is to couvert the world, withont
experiencing some day a dreadful reaction from its futile hopes."

We claim for the lonely and sorely tried workers in the Matebele comntry, for Monsieur Coillard and his coworkers in the Barotse Valley, and for others we could mention, that, while they have no visible successes to report, but, on the contrary, mourn over the years as they roll by without realizing their desire among the heathen, they are fommation workers, toiling deep down in superstition and gross darkness, and spending their lives almost unknown, amid dangers and discouragement, without a soul to cheer by respouding to the message they bring, receiving no sympathy from their surroundings, and hundreds of miles, perhaps, from the nearest fellow-laborel.

There were many weary months of jeopardy and labor to the divers as they toiled fathoms deep beneath the Forth, blasting rocks and building the massive masoury that was to be the fom dation of one of the greatest engineering achievements of the age-the Forth Bridge. Had these toilers in mud and stone and flood, whose uninteresting and, to the upper world, invisible work, which was accomplished slowly but surely -in many instances at the sacrifice, and in every case at the peril, of their lives-no honor or recognition on the day when the structure was completed?

It is in snch cireumstances that these servants of God grapple with untold obstacles, determined that, as fir as it is in their power, the groundwork of the future building, which they may not see, shall be well and truly laid. But sueh are not the men whose services receive full recognition at the hands of their fel-
lows; these workers are often followed by mere surface men, who by their reports elicit the practical sympathy of those who "give only to sucress."

What we contend for is that the truest and most genmine missions of the present day are those which must be sousht out, for rarely are their clams pultlished to the work, except among the fow; while, on the other hand, many a man whose mission is superficial resorts to sensational and questionablo advertisements of his work.

Let the truth be told, howerer mpalatable, for no real advantage is gained, in the long rum, hy false reports, and societies and friemls who sustain these missionaries are placed in a wrong position, leading eventually to great disappointment.

Let the truth be told, also, for the sake of those who offer themselves for mission work, that there may he a wholesome sifting of the numerous hands of young men on both sides of the Athantic who are eager to give up lusiness, etc., to go" the "regions beyond" and preach the gospel; while 1. solid men would only be strengthened in their purpose to devote their lives to a canse worthy of their best talents and highest attaimments.

Camped near Sefula is Mr. B-, representing the English Primitive Methodists, with Mrs. B—— and rhild, having just arrived here for the second time, expecting to get permission trom Lewanika to settla in some part of his comntry, or he allowed to go throngh to the Mashukulumbe for the purpose of organizing a mission center for his society. The king is anything but favorable to the proposition, and fir from friemlly
toward the party; nor is he likely to grant the rerquest ; on the contrary, her cmphationlly derdared omly to-day

 his wifr and doliate little girl, whom he takes about with him in the wagon, trmking these many montlas axposed to all the privations indidontal 60 sumb a lifo in sum a romble suroly, judging from a hamall stamlpoint. a black ground, and north of the Zambesi, in the center of the Mashukulumbe country, we find "•3:3" On reference to the list of societies we find this to be the number representing the Primitive Methodist nission. But there is not, mud never has been, a mission of any kind in that comntry; the "os" in this instance only points to where the party rofermed to above aromt to go.

December 21 st. We returned to Lialni on the 1 thl, and I have been busy every day visiting and preseribing for the sick of the village, including nine of the king's wives. 'There is a drawback to this doctoring of his people, wishing, as I lo, to get away and proceed on my journey; hemathetain me longer than is agreeable. However kimdly the white traveler may be received and treated by a powerful heathen potentate like Lewanika, he is soon made to ralize that his position as a guest is virthally that of a prisoner, for he camot leave the comntry, nor dare a porter lift one of his loads, except by the king's permission.

The romance of life among the Marotsi, or any other savage tribe, is of short churation to the European, passing off after the first few days. He is interested in observing their manners and costoms-the native smithy, for instance, where cluring the early hours of the morning blacksmiths are at work smelting iron from the crude ore by means of charcoal and clay crucibles; forging spears, arrow-heads, battle-axes, knives, and smuft-spoons, with the most original and rude appliances, the anvil being a flat stone and the hammer a conical block of iron without a handle. Under a shed is a group of men busy making "karosses" (blankets), by sewing together, with threads prepared from the
sinews of antelopes, skins of leopards, jackals, tiger-eats, and other wild animals. I may add that the sewing is not done with an ordinary needle, but by means of a plain spike of iron brought to a fine point at one end by rubbing on a stone, and using it as a shoemoker does his awl, piereing the holes through which the thread is passed, each stiteh being made fast by a tum in the loop, as in working a buttonhole. The kaross-maker carries his needle in a wooden sheath, highly ornamented with carving and plaited brass wire, and suspended from his neek. As some karosses have over a hundred yards of seams, contaning twelve to fifteen stitehes to the inch, the length of time requived to complete a blanket may be imagined.

In another corner wood-carvers are hewing, from blocks of wood, bowls, milk-jugs, mush dishes, etr., with various-sized native hatchets, on hent knife-blade serving as a scoop, chipping away morning after morning, for weeks and months, before a single household utensii is completed; but had these vessels been turned in a lathe, the symmetry could scarely be more perfect.

Here also the basket-maker's art may be seen in perfection, and excelling anything produced by basketfictories of eivilized comntries, for scarcely would our workers in basketry undertake to weave an impervious vessel from reedy gruss, to carry five or six gallons of water.

In the evening, with much pomp and eeremony, preceded by his band of drums and marimbas, his majesty comes out to the lekhothla, where hundreds and sometimes thousands of his subjects are gathered, and kneeling in their usual semicircles romnd the spot where the

## cer-cats,

 wing is us of a end by er tloes meat is in the ;-maker mented ed from d yards to the blanket, from
c., with erving ng, for ensii is lathe,
royal mat is spread. A second chair is phaced by that of the king's, and the white guest is invited to sit with him while con't is being held. The business on hand is perhaps a case of witcheraft, poisoning, or cattle-stealmag; or it may lo to redede some of the many bands of matives belonging to distant tribes as far north as Bangwoola and south to Lake Ngami, but who ocempy bamd supposed to be within Lewamika's dominions, and by these delegates send the ammal tribute he elaims. In this way the opportmity was afforled me of seeming representatives of seraral tribes that are hat little known to the rivilized wordt. This over, the king returns to his wattle-and-danh palare in state, and I to my hut. Would that it wore to spemel a quict night But not while ancestral worship is the religion, if religion it may be called, of the Marotsi nation, ran be experter other than "a somel of revery ly night," their theory being that, althongh their amerestors have departed this life, their spirits still hame the seemes of their carthly career, potent to wreak vengeance on those who may have incurved their displeasure. Although Lewanika reqularly visits the tombs of his prederessors to prety to them, and is libomal in his gitts of oxem as peromoferings, his conseipned reminds him that some of them did not, to saly the least, reedive fair play at his hamls on the oreatsion of their exit from the horly, and he dreads their nocturnal visits; henee the neeressity for the drmes and moise to kecp them at hay.

For several days a party of Mambundas-a hill tribe and the recognized sorerers of the valley-have been busy tinkling their bells, rattling their gourds, throwing down the divining-tahles, and shaking the witch-baskets
(which contain a collection of trifles such as birds' claws and beaks, splinters of haman bones, leopards' claws, lits of iron and strange shells, and from the position of which they pretend to read the will of the gords), in order to diseover whether or no the Marotsi are to go to war against the Matebele. In this case it was divined that the gools were sulky, angry with the tribe, and refused to answer. This was a convenient decision, as they were well aware that the Marotsi soldiers were too weak to take the field against the armies of Lobengula, king of the Matebele; and in the event of defeat in battle authorized by the witch-doctors, the latter, of course, wonld have to bear the brunt.

But their conclnsions are rarely so indefinite; generally some poor wreteh has to be sacrificed to their whims and conjectures. Nor do they always spare the headmen in giving judgment; even the king is oceasionally indicted. An instance of this has in fact taken place since my visit to the Barotse, when Lewanika, after a great astrological inquiry, was pronounced guilty of having been the canse of a violent outbreak of smallpox at the close of last year. Monsieur Coillard relates the circumstance in a letter received recently, as follows :
"' Do you know', said he (Lewanika), 'that for three days the Mambundas, masters of the back art, have consulted the knuckle-bones. This morning the first chiefs, Gambellia at the head, have come to commmicate the oracle to me. Ah well! it is I myself that the bones have seized on and pointed out. They aceuse me of having brought on the nation the plagne of smatlpox, aud of stopping the rain from falling. If I am cruel, be not astonished.' . . .

"Accompanied by Paulus and Jacob, I returned next day to the king, and found him in the lekhothla, and sat down near him. He named new chiefs in phace of those the small-pox had mown down-and they are many! On ordinary occasions the ceremony does not lack interest, lut Lewaniki is anxious and worried. He is absent-minded and throws furtive side-glances. As soon as he was able, he got up and asked me to follow him. But in the great square shed of the lakhothat there was an unaceustomed hubbub. "They are still here!' the king said to me in parting. I wished to see what went on there, so I made a way in the dense crowd which surromilet the lat. Inside, six or seven ohd Mambundas squatting on mats were shaking convulsively baskets filled with all kinds of imaginable things. These sages were absorbed in the profound study of each combination, amd muttered cabalistic formula, while all tromel them, ranged in a cirele, their confrères mate a fearbul canophany with rattles made of gourds and babobly fruits, wooten harmonicas, their little bells and tom-toms. The public, packed like sardines, stand with stretched necks, wide-open months, and fixed eyes. And all this by the orders of the head chiefs in a full lekhotha, moler the very eyes of the king, whom they have charged thus publicly with the misfortumes of the nation! I was looking on this scene and absorbed in dark reflections, when a new message came to call me.
"Lewanika, a prey to great agitation, gave some orders to one of his confilants. Soon after, a loud tumult of voices arose in that public place. The king's man had gathered the crowd, given the message, and
wound up by erying, 'Seize them!' Hundreds of voices responded, each one stronger than the other, shouting, 'Seize them! seize them!' They all rushed on the unfortunate Mambundas and fought for the pleasure of strangling them, some pulling their arms, other's dragging them by the legs, while still others held on to their necks. It was a frightiful confusion, when a second order came commanding the liberation of the eulprits, and the king, holding up his hand, said, 'It is enough, they shall be pardoned; but let them know not to take such liberties with royalty again!' The effervescence of the spirits calmed down, and the Mambundas, profiting by a moment of contusion, had already taken advantage of the opportunity to steal away. At another time they would have been ummercifully put to death. Lewanika has used his anthority -it is good; but I ask myselt, with disquietude, if he has truly realized the peril that menaced him, and if he has not male a mistake over it."

The Barotse Valley is not likely ever to be a place where white men can live. It is a vast expanse of decaying vegetation reeking with malaria; nor could it be otherwise, stagnant water being on every side, to drink of which wond be certain fever. The whole valley is annually covered with water to the depth of five to eight feet by the rise of the Zambesi, in the same way as Lower Egypt is flooded by the Nile; when only the villages can be seen, built on mounds (the work of a former chief, Santurn), the only means of transit for several months of the year being canoes. The grass rots when under water, and when the floods cease new grass springs up everywhere immediately,
preventing the rotting vegetable matter from dryingresulting in the most offensive exhalations during the wet season, the heat and moistmre keeping one in a perpetual vapor-bath. To-day my hands and arms are puckered from perspiration, as if I had spent hours at the wash-tub.

Yesterday Monsieur Coillard came over to comburt service in the lekhothla. About three humdred men were present; women do not attend. He kindly presses me to return to Sefula with him to-day, and I gladly aceept his invitation, for I am searcely a day free from fever here, and begin to feel very much broken down.

Sefula, December 30th. Lewanika arrived here today with a great retime of people, who are buikling a camp near by, to make preparations for the marriage of his eldest son, which is to take place on New Yea's Day. The queen has also arrived, attended by about one hundred and fifty women, with a similar flourish of trumpets. She is the sister of Lewanika, and with him rules the kingdom, having her headquarters at Nalolo, about a day's journey down the river; but she is a much more determined character than her vaeillating and pusillanimous brother. Her reign is stained with many a cruel act of murder and bloodshed, avenging herself particularly on those who are in any way the objects of her jealonsy. But a short time ago, an aged headman in her village had won for himself, by his kindness and gentle demeanor, far more of the respect and esteem of the people than was agreeable to his sovereign, whose great ambition is that none receive honor but herself. Some one had spoken in her presence of the old man in terms of praise, aml forthwith
her heart was filled with hate toward him. He was doomed! Next morning she invited him to come to her hut to drink beer, at the same time appointing two young men, armed with spears, to be ready at her signal to kill him. The sign was given, but the vencrable fate and gray hair so touched even their hearts that they hesitated, when she, uttering a curse on their cowardice, seized a rusty Portuguese saber and thrust him through. Summoning her crier, she ordered him to amomere to the town that " the queen had a thorn removed from her foot this morning."

On New Year's Eve the immense crowd of peoplo was treated by Monsieur Coillard to an exhibition of fireworks, whieh seemed to amaze them greatly. Monsieur Coillard puts himself to no end of tronble to create an iuterest in the station and draw the people together. To a magie-lantern exhibition or such-like they will come in flocks; but let the church-bell ring and expeet to see the same anxiety to fill the building? Alas, no! After waiting until long after the appointed hour for service, we enter, to find but a very, very few, except when there is some other attraction than preaching.

January 1, 1892. Yes, another year is gone, and one that to me has been fraught with the strangest and most varied experiences that have fallen to my lot during my somewhat checkered life. This time last year I was surrounded by all that makes life sweet, in a land where there is light, joy, peace, and love; here, darkness, wretchedness, strife, and hate abound. While writing, I hear the ghonlish yells and wild revel of the natives as they celobrate the opening year. Knowing no joy but in that which panders to their basest pas-
sions, love is to them a myth, and peace they have never known, for war and bloodshed is their special delight.

With all my heart I thank God for His mereies to me during the year that is gone, and for His preserving care both by sea and land; and did I know that my loved ones-wife and children-were at this moment well and hiply, I rould eron now be hopeful and joyful; but this is hidden from me, and I fear will be for many months yet to come.

This has been a great day in the Barotse Valley, inasmuch as at Sofula the first mariage, Christian or heathen, has been performed by Monsieur Coillard, in the mion of Letia, son of Lewanika, and Makahi, danghter of Katusi, a minor chief. The girl has been for some time in the sehool at Sefula, and murh care has been bestowed and many monthes spent in the endeavor to wean her from her heathenism; hut withont success. Still, Letia has made a protession of Christianity, and wished to be married by the missionary. The bridegroom and eroomsmen were neatly dressed in suits of tweed; the bride decked ont in a dress of yellow luster trimmed with fumiture chinta, the material having been bronght from Mangwato by Letia and made up with his own hands, Miss Keiner cutting it out and adding the finishing tonches.

By 11 a.m. thousands had assembled at the little church, which was tastefnlly decorated for the occiasion with fronds of the fan palm and leaves of the wild phantain. Flowers are searee in these parts. The most important among the people obtained admission mutil the buikling was crammed, while the mass had to be contented with standing room at a distance, or
a prop in at the windows. The mpmony proceded withont all intermpution matil the bidenvoom promised to deave muto this wibe only so long as they "hoth shonld live," when an amilibr tittor ol amsen skeptidism passed romad among the dhefs, hegimning with his father, who rejorees in the possession of ovor a seoter And he would be a small chiat imbeed who combl mot hoast of at last hall a rlozen women in his harem. (Sial to sily, the sergmel has proven that then unhelief in Latia's vows had mome fommation than one hopes for his stealtiasthess, for within a fow monthe he took to himself a seromil wifre, amd has openly returmed to the pasaluism of his tribe.)

Monsiour coillard propesed to have a hamela in the opern air for the gomin pophe, in Laropem fashion,

and make themselves comfortahle on the sand. Much more of a like mature took place, grieving the missionary to his very som, and cansing him to regret having shown them this kimbuess; but it proved to me how totully impossible it must aver be to influene for groot, civilize, or elevate a people who are tyamized over lay such an arrogat, ignomat antorrat as Lawamika. In the afternoon the matives were treated to a liberal feast, consisting of four fiat oxem, mealies, and manior, at Monsiem Coillards expense. They formed a proression previons to the fonst, hearing the cooked food in baskets, bowls, and gomels; phacing all in rows bofore the king, saluting him in the usual way, clapping thoir hands, getting down and touching the ground with their foreheads, taking up hambinks of samd and rubbing it on their ehests and arms in self-abasement, then miting in the ery of "Yo sho! Than Tuma!" ("great lion").

In the evening a magic-lantern exhibition was given in front of the mission honse. The andience did not seem to understand photographs of seenery or buikdings, however beantiful; lut when the picture of a zebra, lion, elephant, or buffalo was thrown upon the sereen, they sereamed with delight, imitating the eries of the animals represented. At a late hour they dispersed, evidently greatly pleased.

On Saturday measles broke out in the king's camp. I was most of the day walking aromd with him attending to his tiworites. Great crowds gathered for the Simday services, both morning and exening, becanse the king and queen were there. A lot of Lewanikn's wives marched in and took their places-on the opposite side
of the building from him, of cousse-daped in a profusion of gay-colored eloth, toga fashion, with from six to twelve large ivory rings on each arm, and the indispensable snutf-box hanging by their sides, with which they amused themselves during the service.

January 4tll. A blissful stillness pervades the district to-day. Royalty has taken its departure-the queen and her suite to Nabolo in canoes, the king on horseback to Lialui, followed by his satellites, in cach case preceded by their respective bants of music (save the mark!). I am not very sorry to see the last of them, for now we shall get a little quiet rest at night. If the " uneasy head that wears a crown" in Africa, purchased as it is in almost every ease by deeds of violence and bloodshed, requires this perpetual tum-tumming from dusk to dawn, with impromptu appeals to his good genius that he may sleep, it is at the sacrifice of rest to every eivilized being within a mile; for a din more hideous can seareely be conceived. But such is savage life in the far interior, even among kings.

A band of Mashukulumbwes arrived at Sefula this morning en route homeward. They have been on an embassy to the court of Lewanika, carrying tribute, and declaring their desire to live at peace with him, having lost heavily by a raiding party of Marotsi who entered their country last year and eaptured a great number of slaves and eattle. These are representatives of a wild but little-known tribe--little known beyond the fact that every expedition led by whites who have attempted to visit them came to grief, including Dr. Holub and Mr. Selous, who in each case were obliged to flee for their lives, helpless to resist the midnight
attack of hundreds of naked demons in human form, hurling their spears through the tents and hats of the unsuspecting travelers.

I gave cach of these interesting embassadors a yard of bright-colored cloth-the first eertainly they ever ownel, eacis hanging it from his belt behind like a tail, pranding about and looking over his shoulders to see it fluttering in the wind. Then they all joined in a wardance. Stopping every now and again and droudhing together on the ground, one of their number, areeping steahinly forward, spear in hand, for a short distance, wou!d then make a rish, at a great speed, for fifty yards, rapidey thrusting with his weapon, fencing and fending himself as he retives from the inaginary ememy. We got them calmed down a bit with some food, and gronped them for a photograph, in which it is noticcable that the character of the features is entirely distinct from the usual type of negro. The dressing of the hatir, too, is remarkable, particularly in the case of the two chicfs in charge, who have it worked up to a point about four feet long. It is necessary to exercise much patience and tact while endeavoring to get photographis of natives. They are so suspicious, it is hard to persuade them that posing in front of the machine will not in some way bewitch them. But I fomm the most successful argument was to politely request permission to "take their measure."

One European, who has traveled extensively in Africa, writes: "Photography . . . presents in itself almost insuperible difficulties. In the first place, it is no easy matter to employ photography on a journey of exploration. Fancy, for instanee, the ronveyance of an appa-
ratus with its applances in ghass bottles, upon the head of a carrier who stumbles and falls at least a dozon times a lay! . . . And, aven supposing that that diff"ulty were got over, amd that photography could be effectively amployed, where is the native of the interior who would allow an apparatus to bo set up aml stand before it as a subjert for the camera?" So far, my exberience in this direction moves that in transporting a photographic ontfit there is no diffirnlty whaterer, ant far less risk of breakages than if traveling in Earope, for damage from rough troatment is the last thing that happens to a load in the hamds of an Afrioan carrier; they are not "haggage-smashers."

The following instanm of their carefmhess camme muder my own notice. A box of window glass, containing a humdred sheets, was intrusted to a mative to be catriod from Bengruda to Cisambal, a distance of ahout three humbred and thirty miles. While in store at the coast, white ants hall got at the straw in which thr glass was packed, making a "lean sweep of it, amd leaving the tragile contents murotected; hut althoush the journey is onn of some twenty-two days, inemring the lifting and laying down of this load perhans a humdred times, it arrived at its destination without injury to a single panc.
is to the other statement in the extract, my success in photographing this with tribe, as well as the Gianguchlians, Matokas, and others, proves that it is within the hounds of possibility to procure a photograph of even the willest of Central Africa's natives.

FALIS OF GONYA

## CHAPTER IX.

## FROM SEFULA TO SESHEKE.

The Sefula Canal.-Haste peeuliar to white men.-To be thrown to the crocoliles.-Preparing for the river journey.-Parting injunctions.- - . clond of voracions mosquitoes. - Waist-deep in the swamp.-Afloat on the Zambesi.-Aneestrul worship.-An interview with Makwai.-The omande shell.-The great fish-eagle.-Cumped at Senanga.-More portentons game. -Memories of the Georgian Bay.-Charming surround-ings.-A pleasme trip.-In flanger of an ulset.-Dragging eanoes over-land.-Lion stories.-The Falls of Gonya.-Beautiful easeades.-Veldt sehoons.-In the rapids.-The aromatic mopmi.-A fruitless chase.A gorgeous sunset.-The gracefnl zebra.

MY most pleasant sojourn at Sefula comes to a close. It has been a delightful rest, and I would gladly prolong it were I not still far from my destination, and must now see to getting boatmen for the river journey. The king having sent a canoe for me, I started early in the morning for Lialni. Instead of having to walk some ten miles to the river, as was necessary a short time ago, it is now but a step to the canal, some six miles in length, and connecting a series of small lakes, thas opening a good water-way to the Zambesi. It was ent at the expense of a friend in Scotland, and is a great boon to the mission-a saving of trouble and time that all who visit Sefula cannot fail to appreciate. This route is a long day's journey, owing to the strong current which the paddlers have
to contend with, but by no means a tiresome one, as the traveler can, by the active use of his grm, find plenty of sport and lay in a grood stock of ducks and geese, as they rise in great flocks at every bend of the river. I hagged seventeen birds to-day, the combined weight of five geese being fifty-seven and a half pounds.

The digging of this canal had another good efferet, in this way: Lialui is sitnated abont five miles from the river; and no sooner was the work at Sefnla accomplished than Lewanika was ronsed to see the benefit of it, and at once set thousinds of his slaves to work to cut a similar water-way-fifteen feet wide and six deep —not only to the capital, but extemding northward a distance of over twenty miles, navigable for large canoes, and tapping one of the most thickly populated districts of the Zambesi Valley.

On the 7th I had a long interview with the king about men and hoats. He seems quite willing to do his best, if he could only be impressed with the fact that I am in a hurry. This to him, as to most of his race, is only one of the foolish peculiarities of white men, and he does not hesitate to say so, and seems to think that the responsibility of teaching me that what is not accomplished this month may be the next, rests with him. I presented him with a Winchester rifle, belt, suit of tweed, and one of Jaeger wear, requesting, at the same time, that if he wished our friendship to be maintained he would have the men gathered at once. He promised, and promptly dispatched messengers to the outlying villages to colleet them; so now I must simply "wait and murmur not."

tention was callod to a young woman whom a headman had recently added to his harem. The new wife had already become an object of jealonsy to his oldest spouse, who thought it best to have her put out of the way; so she ordered a slave to make some broal, and, putting the juice of a poisonous plant into the dongh, gave the victim a liberal share for breakfast. The dose was evidently too large, as tho stomach rejected most of it; sufficient remained, however, to bring the poor creature near to death. I foumd her in a comatose rondition, administered such antidotes as I thought best, and left. I observed, as I passed out, the would-be murderess and her slave with both hands and feet tied up so tightly that the limbs were fearfully swollen. It my request the thongs were slackened; hut I understand they are to be excented by throwing them into the river, where the crocodiles will make short work of them.

A strange superstition which prevails among the Marotsi was brought to my notice to-day by Amba, the king's chief steward, who has been very kind to me in many ways. He came to say gool-by, as he was about to leave the eapital for a time, giving as his reason, that, having heard of the death in a distant village of one of his children, according to custom he could not come into the king's presence until the next new moon. But it would fill a volume to detail the numerous superstitions, beliefs, and fancies which obtain among these people.

January 14th. I am glad to hear we are likely to get off to-morrow. I have been busy all day making final arrangements-booking canoe-men and unpack-
ing bales of cloth, etc., to adjust them to the new mode of earrying, as some of the goods go by land and the balance in the canoes. We have sixty loads altogether. The men of Barotse do not like porter work, but slaves have no choice. The natives of Bihe carry their loads on the head or shoulder ; but these must have it divided into two bundles and suspended from the extreme ends of a stick, six feet long and laid across the shoulder, Chinese fashion. But it would be endless trouble for me to divide up bales of calico in this way, and in the case of the trunks impossible; so they will have to settle the mode of conveyance among themselves. I find no trouble in bringing matters to a focus among these people; the amount of pay for each man has already been fixed, and there is no haggling or bateking out at the last. They are under orders, and book without at word.

By ten o'clock next morning all my stuff was lifted and taken down to the canal, where the canoes were drawn up in readiness. Lewanika and a number of his headmen walked with us to say good-by and see us off; also to grive final instructions to the men concerning their behtivior on the river, winding up with "Remember, if you give any trouble, or cause naka's [doctor's] heart to be sore on the way, you will have to settle with me when you return; so beware!"

It took some time to choose canoes strong enough to shoot the rapids we have to encounter, and to so arrange the men that there should be at least one experienced paddler at the prow of each. But by noon preliminaries were completed-seven canoes, each mamed by five paddlers. After much hand-shaking and mutual

intronaing of grool wishes, the rowers seized their bindllos, shonted three times, and away wo sped down the strean toward the river, my canoe taking the lead, followed by Jack, a Batotse boy, whom I engaged at Lialui as interpreter. Having beren some years at the Cape, he eonld speak a little English. Then came the two Jamaia men, and also the hanter already referred to as of "lonbtful mationality" who, having insulted Letia, the king's son, was umber orders to leave the comutry at onec, while the matives were forbiden to render hinn any assistance whatever. Seeing a fellowcreature in surh a strait, I was induced to ask permission of Lewanika to give him a lift down the river in one of my eanoes, but had afterward canse to regret having done so.

It was almost dark by the time we reached the mouth of the Sefula Canal, or rather marsing lakes which ronneet it with the river. This was mfortmate, as in the darkness my headman, who acts as pilot, lost bis way several times among the long reeds, ruming agromad, having to back out and search again; until at last we fomm a narrow opening which we followed, making our way slowly through a perfect clond of the langest and most voracions mosquitoes I ever encountrred. But worse tromble was aheall of as, for the water in the camal was low, and our canoes, being heavily laden, stuck fast in the sand, while still between two and three miles from the mission station, where we intemded to camp over Sumlay and pick up the supplies left there. The night was now pitrl-dark, the longlegrged boodsuckers attarked us mmerrifully, and the men were tired. What was to be done? Surrounded
on every side by fonl-smelling swamps, we knew not how deep, with tall realy grass stretehing far above our heads, the prospect of remaning there all night was dolefal in the extreme. Most of the crews had already mate off to seek a shelter in the memest vilhage; and lemving only fome men to ghard the stuff, I derider to try warling throngh the marsh, taking dnck with re. I slipped out of the cmoe into the water, phanging along for several hundred yards waist-deep, until we felt the ground firm mater our feet. By ten o'dock we reathed the mission honse. Monsieur Coilland had food sent to the men in the boats, and after a refreshing elup of coffee I got off my wet clothes and retired to a comfortable cot, quatefal to escape the horrot's of a night in the dismal swamp.
damany loth. By daylight all hamels went to work and got the canoes over the samblank and up to the camping-ground, the men taking possession of the huts built by the king's people during his visit for Letia's wediling. I occupied myself all day forming bales of the blankets purchased from Monsicur Coillard for the purpose of paying earriers. In this part of Ahrica, and for the next eight hmolred miles, a porter does not think he is paid, however mach calico he receives, unless there is a blanket with it.

I shall never forget the time spent on this station with the veteran missionary, Francis Coillard. If I have seen one mission in Africa that deserves the full sympathy and hearty support of Christians at home more thim another, it is this.

farewell to the kind friands, who acempanied us to the water-side, and a last lingering look at Sefula, we atro of full sued down the cambl. By 11 a.m. we remehed the river. 'The motion of the rough amb mansherely dugouts is anything but plensant, and an miset sooner or later serems inevitable, partienlarly as all the men stand to puddlic. He steersman at the bow and fome astern of the rargo, bemding their bodies to each long but stemdy strok" in lwifeet rlyythm. Sitting on a mat exposent to the sererching stin would be very trying to ones's patience but for the interest created by watching the rrocodiles as they slide lazily from the banks into the water at our appouch, or looking at the mumerons hippus that infest the river, bobbing in exery fow humbenl pards, extmong their enormons jaws, shorting ime blowing, often in dimgerous proximity to our fragile lark, sometimes as many as forty to fifty in a herid; but we shoot past, giving them as wide a berth as possible.

Thur is nothing remarkable in the seenery, as we are still in the Barotse Valley, and the banks are only from four to six feet high; while the vast grassy plains stretel out on either side with scareely a bush to be seenl, although now and again we notice a large tree standing solitury aud alone, marking the grave of some anmestral chief. On getting opmosite any of these, the boatmen ship their paddles, drop on their knees, elap their hands (Kandele), and, raising their hamds above their heans, shout, "Yo sho!" (Shwilela) to these defunct chiefs-the gols of the Marotsi.
At one place, where a very powerful ruler is said to have been buried, they stopped and went ashore, when
the headman Limamba requested me to contribute a yard of eloth as a peace-oftering. I of course declined, so one of the liirds shot in the morning was taken and laid out very solemnly on the ground. Limamba, atting as priest, gathered the erews round him, all kneeling, when he proceeded to implore their genius to be so good as not to be angry with them, as they were starting on a long voyage with a white man; and pleaded that they might go safely and be preserved from the hippos, erocodiles, and rapids. Prostrations and salutations followed, as if in the presence of a living ling. They were very wroth with me for withholding the cloth, and threatened to stop; but a little firmness, with counter-threats and some storming, brought them on, and we reached Nalolo, the village of the queen, Makwai, about 3 p.m. We pitehed our camp in sight of her town, but by the time my tent was up fever had me down; yet i had to struggle against my sickness, and with an effort walked over to pay a formal eall to and salute her majesty, otherwise we should have no firewood. Excusing myself for my brief visit, I returned to camp and turned in as soon as I could.

Next morning we made an early start, but lost a good deal of headway erossing and reerossing the river to aroid the hippos. I find sitting in one place exposed to the scorching rays of the sum and glare from the water for eight or nine hours very trying. The day we left Lialui my underlip got badly blistered; now the blisters are broken and very sore, causing much pain when I touch them. Added to this, the upper lid of my right eye is decorated with the seventh sty I have
ntribute a declined, taken and amba, actall kneelinus to be they were man; and preserved ostrations e of a livfor withbut a litstorming, he village tched our my tent struggle ked over ty, otherg myself urned in

 river to exposed rom the The day now the ch pain or lid ofI have
had since coming to the valley. Still, these are minor sufferings, if the fever would only give us a respite for a while.

Limamba, my hoatswain, tries hard every evening to so time our progress that we shall halt at an old camp; but they are gemerally so very dirty amd so infested witil vermin that I invariably avoid them. He dislikes being thwarted, and would like to pose as aptain, as at home he is a minor chiof, and wears round his neck the insignia of his rank-an omande shefl. None hut chiefs or those of royal blood are permitted to wear this distinguishing barge.

Livingstone refers in his first hook (page 300) to the veneration in which the omande shell was hela in his day among the Makalolo. He gives a good illastration of the original shell, from the end of which these are obtained, and writes:
"As the last proof of friendship, Shinte came into my tent, thongh it could seareely contain more than one person, looked at all the curiosities-the quirksilver, the looking-glass, books, hair-brushes, comb, watell, ete.-with the greatest interest; then, closing the tent so that none of his own people might see the extravagance of which he was about to be guilty, he drew out from his clothing a string of beads and the end of a conical shell, which is considered in regions far from the sea of as great value as the lord-mayor's batge in London. He hung it round iny neck, and said, 'There, now, you have a proof of my frimdship.' My mom informed me that these shells are so highly valued in this quarter as evidences of distinction that for two of them a slave might be bought, and five would be considered

I may say that these sbolls are becoming rare, and are more than double the value now than forty years ago. At the present day one will purchase a slave, and two a gool tooth of ivory; while it is a recognized law in the Barotse, that, if a condemmed man is bronght out to be executed, for whatever crime, if any one will hand over their "omande" to the king the culprit is at onee set free and becomes, the property of whoever pays this ransom. I am pleased at having procured five specimenss of these interesting shells, not, however, without a deal of troubie, as the owners were very loath to part with them; but the temptation offered of possessing a red blanket was inresistible.
I shot several ducks, two spur-winged geese, and a beatififl specimen of the great fish-eagle, the outstretched wings of which measured six feet seven inches from tip to tip. This bird resembles the pietures we aro familiar with summounting the "stars and stripes" of the United States-the proud emblem of liberty: black leak, white neck and breast, dark chocolate body, black wings, yellow legs, and enormous black claws. They live entirely on fish, and from the overhanging branches they watch for their prey to come to the surface of the water, when like lightning they swoop down and seize it in their powerful talons, retiring into the bush to enjoy their meal. This bird sometimes secures fish up to eighteen inches in length. When the capture is witnessed by the boatmen they make a bee-line in its direction and rob it of the prize.

In the evening we reached Senanga, the extreme

southeast end of the Barotse Valley, and we camp at the edge of a forest. It is quite a relief to see trees again after the monotony of seven weeks on the mbroken expanse of grass and reeds. Here we must stop for a few days, as part of my loads, which have come so fine by water, must now be taken by carriers overland to Sesheke, which we hope to reach three weeks hence. We were not long in camp when natives brought some sweet milk for sale. Its abmindance at Lialui and Sefula has been a great luxury to us, and it will probabliy be some time ere we meet with such good fortume again, as after leaving Senangat we shall find no more villages until we reach Sesheke. The prominent features of this cump are crorociles and mosquitors: the latter fill the air with a buzz like a hive of bees, and their sting is little less severe; while out on the water, at about fifty yards from where I sit, three huge crocodiles are floating like logs on the surface.
January 응. It has heen raining heavily for most of the day. The headman of the overland detachment has arived with his carriers. This is cncouraging, and certamly surprises me not a little-a happy contrast to my troubles with the West Coast natives. Serving out a little gumpowder, caps, leat, and a few pieces of calico completes the arrargements, and they are off ; to-morrow, all being well, we do likewise. In the evening I went up the river a mile, and shot thirtern ducks and two geese-the last we shail see of them for some time, as they are seldom seen except in the viemity of marshes. But we are getting out our belts and rifle cartridges for more portentous same, that we hope to stalk during the next three weeks, as 1 am told antelopes of almost
every variety abound on both banks of the river; but that means, too, that we must keep a sharp lookont for lions and leopards, for where game is plentiful these are gellerally not far away.

On the $23 d$ we struck camp and pushed off again, the men pulling with plenty of vim after their few days' rest. I noticed the high-water mank of the Zambesi liy the debris deposited among the lranches of some trees twelve feet above the present level, and indicating the height it will possibly reach in another two months. The scenery is now completely changed; instead of the bald and uninteresting banks on either side, we have a variety of splendid trees with very few breaks. This does not present a tropical appearance, by any means; on the contrary, so far as the vegetation is concerned one might easily imagine one's self on any of our beantiful English or Canalian rivers in midsummer. The many islands brought back to us happy memories of eamping days on the Georgian Bay. Nor are the trees so close as to hide the sward, with its crop of rich deep green grass between, at times remineling one of a park in the vicinity of some old English mansion. But the illusion does not last long, for right near us pops up the liead of a hippopotamus, with a grunt that startles the hoatmen and makes them redouble their energies to get as far and as quiekly away from him as possib!e. While rommling a bend we see the armor-clad croeodiles glide noiselessly out into deep water, casting hungry glances at the naked figures whose approach has disturbed their repose; and in the trees various species of monkeys and baboons are sporting among the branches.
river; but ookout for al these are off again, their tew it the Zimbanches of el, and inn another changed; on either 1 very few рреar:mee, he vegetae's self on rs in midus happy Bay. Nor , with its s remind1 Euglish for right s , with a them rekly away d we see into deep figures nd in the re sport-

The placid water looks like a lake, and the numerous islands, varying in size from a few feet square to many ateres, are all richly clad with vegetation, the larger ones abounding in game. On one of these, called Beta, to our right aud on the west bank, we camp, for the night. I :un simply charmed with my surroundings; and who would not be? Gipsying uader the shade of lordly trees like great oaks, which shelter us from the sum by their far-spreading branches; no therns, jungle, ereepers, or underbrush of any kind, but soft, fresh grass, about a foot higll. The chief interest, however, is centered in three pots that are steaming over the fire, one containing rice, another cormmeal dumplings, and the third ribs of a pallah buck shot abont an hour ago, within three hundred yards of camp. At a little distance the canoc-men are rigging up, their lean-to sheds of twigs and grass, while others are cooking their share of the antelope. There are plenty of mosquitors, and, what is perhaps worse, swarms of the tsetse-fly-the dreaded scourge of domestic animals in Central Africa. The men are not giving me the slightest trouble so far, aud, if I may judge from appearances, everything bids fitir for the water jomrney to Kizaingulu being little short of a pleasure trip. I would willingly have remained at this lovely spot for another day, but this must not be; so we load up in the morning and lamech away.
The river spreading out to uearly a mile in width gave us a great deal of shallow water; twice my camoe was stuck fist on the top of stones--the first we have come across of any size, large or small, in the last six hundred miles. Now we would rather be without
them, for, being large boudders hidden moder the water, which is clark at this season of the year, we are in comstant danger of an upset. We reached Sioma in thir afternoon, within a mile and a hall of the Falls of Gonya. 'To avoid the hatter we have to gret all the canoes taken from the water and dragged overland for a distance of some fom miles; but I find that Lewanika las thonghtfully sent on a man to collect natives, so as to have no delay.

The moving of 'moes overland at Sioma is made the subject of a pieture and deseription extraordinary in the book "How I Ciossed Africa," representing hundreds of men, abont forty at each camoe, carrying them on sticks laid underneath, and dimbing up a steep hill throngh dense forest and tropical folitge. This is gross exageration from first to last, but only on a par with the rest of this two-volmmed hook. The same may he said of the writings of several other African travelers who might be named, amb whose literature can only rank in the cstimation of those who have visited these paces, written as it is by these exeedingly imaminative scribblers, among "dime novels" and "penny dreadfuls." I don't believe there is a comontry under heaven that has been the suljeet of more romancing and misrepresentation than Africa.

The transferring of the eanoes past the falls is, after all, a very commonplace affair. They are not carried, but dragged nong the ground ly means of bark ropes, and always have been since traveling by the river began, with not more than twelve men to each; and as to the hill, there is nothing imposing about it, being only five or six leet high. Nor is there any forest,
the water, are in conoma in thio he Falls of get all the verland for that Lew:ect matives, is marle the ordinary in enting lomrrying them a stece hill l'his is gross a par with tune may be an travelers a cill only risited these imagimative may dreadader heaven 18 and mis-
thls is, after not carried, bark ropes, the river each; and ut it, being any iorest,
muless a solitary tree in every other acre can be made to do duty for the dense jungle so elaborately portrated by pen and pencil. In the same book we have a sketrl of lion-shooting at night, by the light of a bulls-eve lantern in the hand of a boy, reflereting on a pair of monster males, who are representeal as stamding within twenty yarls of the camp, patiently receiving their comp de grate It also contains the tragie amd boon-emraling acomut of an attack on the anthors (amp ley the Matots, when he, with hat a hamelfy of ment, defomed the honor of the Portmenese flag against hamireds of nativos, killing sevanteen of the assabiants. This thrilling story is also mitrue, and without the slightest fommation. I feel it due to the Marotsi to give it a flat contridiction, for the wonld-be hero arrived at Lialui in a destitute condition, was the reeipiont of Lewanikis's hospitality and protection, and was umder ohligation to him for men and boats to prowed on his journey. But far too much of this sort of thing has heen foisted on the public, giving the general realer a vaghe and totally erroneons idea of the combtry and its peoples. There is quite sufficiont to tell abont Afriea that is truly wonderful, and of intense interest to all who desire to aecquire a knowledge of the "Dark Continent," without turning it into fiction and fable.

As the day cleared up, I got a few boys, and with my photo apparatus trudged off to the Falls of Gonya. After walking a mile and a half we eame to a branch of the river about a hundred yards wide, that cut us off completely from the only point where the cataract cam be seen to advantage. There being no canoe near
by, and as the water did not appear to be more than waist-deep, our only altermative was to strip and wade it. Our progress was slow, the current being strong and the stones slippery; patience and perseverance, however, triumphed, and we reached the other side in safety with my camera. It proved to be a rocky island, which I crossed, and sut down on a boulder, to gaze on a seene so grand that few men would regret traveling a thousand miles to see. The volume of water constituting the falls, thongh great, does not represent the entire wilth of the Zambesi here-perhaps not more than half, as, besides the portion we waded through, a large part is cut off by an island on the west side, that rejoins the main stream about two hundred yards below, in beautiful cascades, a third part coming in still lower down in roaring rapids. The day was unfavorable for photography, as I had to unlimber my apparatus every few minutes and protect it with my waterproof cloak from the torrents of rain, which gave me bat few intervals. After four hours on the rocks, alternately scorched by the sun and drenched by the rain, we retraced our steps, gratified beyond measure for the privilege of having been permitted to view the falls, cascades, and rapids of Gonya.

The following day we proceeded with the loads to where the canoes were awaiting us below the falls. Here the river is narrow, compressed on either side by rocky bluffs, giving a rise of fifty feet at the end of the ammual wet seasons. It would be a very easy matter to escape the cataract by eutting a canal to this point, the route being almost in a straight line, with very few and slight undulations. The day was far gone before
to be more than strip and wade int being strong d perseverance, he other side in o a rocky island, alder, to graze on regret traveling of water consti$t$ represent the :haps not more uled through, a west side, that dred yards becoming in still $y$ was unfavornber my appavith my waterrhich gave me he rocks, alter$d$ by the rain, measure for view the falls, the loads to low the falls. either side by he end of the easy matter to this point, vith very few gone before

we got on the water again, so that an hour after starting I ordered a halt and formed camp on a samdbank, about a hundred yards below the contlance of the Lumbi. This river is over halt' a mile wide a little higher up its course, but here comes thumdering down a marrow, rocky gorge of not more that fifty yards, as it enters the Zambesi.

Jamary 97 th. As the Barotse men are not partienlarly well acquainted with the rapids below Sioma, I have thought it best to engage a native pilot. I put him in my canoe mind let the others follow his lead, as he professes to know every chamel among the shallows. A run of three hours brought us to the Kari Rapids, where the waters were so turbulent and forbidding that we had to unload and carry the stuff past the most dangerons places. I have to reserve a portion of each day now for the purpose of hunting, so as to provide meat for our thirty-eight hungry men, the corn ingy aurried with them being finished. But it would be an easy matter to feed five times as many here, as both banks of the river are simply teeming with game.

During the next few days we made but short runs, being frequently delayed in getting our dug-outs safely through the numerous rapids; but the seenery seems more beantiful than ever, the many elusters of wikl date palms along the banks adding peculiar charm to the grandeur of the landscape. While eamped at the mouth of the river Injoka, I found myself in a forest of mopani. This tree is a favorite in Afriea, although it is useless for building purposes. Its leaves when crushed give off an agnecable aromatic odor almost as strong as pimento; no underwood or scrub grows be-
neath its shade, hut a carpet of short clomingrass. What a gemme pleasure it is to samen along mader those dark-green trees, withont a bush to impede the careless treal, with the exception of an occasional chmp of aloes. One ean sarcely conceive that there is not a human habitation within firty miles of a spot so lovely. I struck fresh antelope spoor, and knew they wonld not the vory lar away. $A$ shanle short drew my attention to a pallah buck stamding at short mage, and I fired and dropped lim; but before the erho hat died away. a whole herd came rushing past, skirting the alge of a mansh, and stoppinge at alout a humbed amd fifty yarls from me. I singled ont amother and got him, amd as they started off, fired again and brought down a thim. The shots having been heard by my Katfirs, a batch of them som apmeatred and bore the meat in trimmph to (:imp).

Hunting in Afriat is attembed with an amome of excitement and interest mknown to the same spert in Enrope. The knowledge that the forests throngh which we noiselessly glide are hamed hy so many wild and dangerons amimals keeps one constantly on the alert for the slightest somel that might indicate the ir
 lion or a leopard be larking in its dark reereses, reaty to spring on the mwary; while a conseionsmess of perfere freedom lends boyamey to ones spirits.

On the 30 th, while guicoly gliding along in smooth water near the bank, I was aronsed by a moise at first like distant thander, but every seeond roming nearer and inereasing to a terrifie roar, like the somm of an approaching express train. I stopped and jumped
grass. What mulder those e the careloss nal clump of here is not a pot so towely. w they romild ew my attcu$g r$, alud I firwi ub dien away: x the alge of tred and firty and got him, rought down y my Kattirs, a the meat in

ig in smooth noise at first ming nearer soimd of an :and jumped
ashore. It proved to be an inmense herd of buffaloes tearing through the thidket, within a dozen yards of where I stood, leaving a tract: lechind them as thomen a regiment of heavy artillery hat just gone ly. Wio got our rifles and gave chasis; but they had wimbed us and swervel round to lewwart, and although wer foltrwed the tremendons trail for two hours as hard as we combl, failed to get within fiw humbed yards of them, aul at last were relluctantly compellen to give up. We grot a duiker antelone on the way lack. Such abourlane of game as swarm in this part of the Zambesi Yalley I never even dramed of. A number of zelnas reossed our track, and we ohserved the spoor of at least six diffirent species of antelope. On manhing the tiver
 lohimel in the mad rush, and which supplied us with delicious veal steaks for dimer.

We got muler way again, but in a few minutes arrived at the Ngambwe Falls. These folls are insignificant in themselves, being only five or six feet high. Both almeve and betow them the river-herl is full of huge boulders, which with the rapidity of the current made the waters so tumultuous that we were obliged to get out of the canoes and drag them ly lame for a good half-mile, which orenpied most of the afternoon. The day was gone, and we camped. I shall ever remember the gorgeous sumset of that evening: the islames so green, and the reflection in the water so pronomuen, witis a golden-hued shade over all as old sol retires, making a pieture to which no panter's lonsh could do justice.

Next morning we camm upon the finest game seme
it has ever been my lot to witness, or ever expect to see again. In the foreground, close to the water, stood a group of nine zebras, including three young colts. Nothing could have been prettier than the startled mien, the pricked ears, and poise of the heads of these graceful animals, with their beautifully striped coats of cream and rich dark brown glistening in the morning sun. Beyond them a few yards a herd of hartebeest was grazing, and at a short distance a small valley, like a dip in the veldt, was red with hundreds of roy bucks. One of the men jumped ashore and shot a zebra, when we had an opportunity to examine it closely. Surely this is the most beautiful animal in the African forests! But here sentiment must give place to our mundane wants. Zebra meat is rather sweet to the taste, very tender, though not particularly savory; but to this the men make no objection, for to them any meat is toothsome. Later in the day, when we had camped, the hunter went out and brought in two roy bucks; but we are getting surfeited with venison. I would gladly give the finest antelope for a dish of cabbage or a few potatocs; it is now sixteen days since we have tasted vegetables of any kind. At Lialui I prepared a very good substitute for spinach from pumpkin leaves, or a succulent shrub gathered for us by the natives, that served in sone measure to appease our craving for green food and aid the digestion, which becones seriously impaired by an exclusive meat diet.

I have been wearing for the past few weeks a pair of "veldt schoons," native made-uppers of koodoo hide, soles of buffalo, and sewn with strips of antelope skin. They are very comfortable to the feet, and are excel-
lent for hunting in dry weather, but get like a piece of wash-leather when wet. I was obliged to put on a pair of heary boots this morning, and, having walked a good deal, find my heels badly blistered. I have suffered intensely in the past from the strong boots I brought with me from England, and have eome to the conclusion that they are no gool for these tracks. With the exepption of two or three pairs of temis-shoes, I have hat no romfort in my footgear until I came across "veldt schoons," and I mean to stiek to these as long as they will last-then make another pair.

## CHAPTER X.

## FROM SESHEKE TO BA:TANGWATO.

FEBRUARY 1st. Now all is changed; the Elysian somes in which we have reveled these many days, to us are no more. The country on both sidas is again low, flat, and swampy; few trees, and consequently no large gime, lut acuatic birds abumdant, as in the Bat rotse. We mande a long run to-day, from 7 and mutil 5.30 1.M., when we reched Sesheke, where Dr. Livingstone had his headquarters while exploring in these regions. There is now here a station of the Paris Evangelical Mission, in charge of Monsieur and Madame Goy, who were expecting my arrival, and tendered me a welcome so hearty that I folt very moll at home right away. I mot Monsieur V-, a yomg French missionary, who arrived here a few weeks ago; but he has suffered so severely from fever that he is mable to remain, and is now making preparations to return.

ed; the Elysian hese many days, tha sides is again consequently no it, as in the Bal'om 7 A.M. mutil we Dr. Living--ing in these rethe Paris Evan1 and Madame id tendered mo muth at home young Fromelh ks ago; lut he t he is mable mis to retmon.

Next morning the chiof', Nambamal, and headmen assmbled, and much time was oceupied in palaver, talking over the prospects of my joumey beyond Kaqungula, as they have to find more carriers for me by order of Lewanika, for we are still in his territory. We will be delayed here a few days, as the overland caravan has not yet turned up. I sent on the two Jamaicans in charge of the boats and goods to Kazmgrua, as I find the spot where the camp is pitched very unhealthy, and they are having ronstant fever. I would have left one or even both these young men at either of the Fremeh mission st:tions; hat from the fact of their suffering so murh from the fewer, I realized that to do so meant the sarerifice of their lives at no distant date.

February 9th. The whole of the past week has been spent at Sesheke, waiting for the loads by land. They arrived yesterday afternoon with all the goods safe; and to-day I have made arragements to start for Kazungula to-morrow morning. The work on this station, like most new missions in the interior, is diseouraging in the extreme. For many months Monsienr Goy, althongh often prostrated with fover, bronght on by exposme and fatigne, has been bravely toiling at the huilding of a meeting-house, and has at last compheted it. He had to go to the forest and with his own . hamels rut the lumber, load it on his wagon, and drive it home; then to prepare the wool for the frame, put on the ralders, and thateh the roof with grass, almost without aid, for he could not persuade the matives to risk their precion. lives by climbing up even half-way to hamd him a rafter or hundle of thatch. The few
who were employed to cut grass, ete, gave non no end of worry, every pay-day demanding cloth and beads tar in excess of the duantity agreed upon, or the nominal amount of work perfortited.

Last Saturday week, after infinite labor and trouble, the building was redily for hokling services, and Moniem Goy rejoiced at the thought that now, surely, the people would come and hear the gospel in a place so amfortable, yot having cost them nothing. Monsiem Log proposed to have a formal opeuing, and went aromm the villages inviting the people to come. Abont a homded and fifty responded to the call, as there was to be a roasted ox distributed. But yesterday, there being nothing promised to eat, the service commenced with an andience eonsisting of the chief, five lads, and four women. Ahont a dozen more samered in before the close of the service, but the manifest total indifference of the natives is even more disheartening than open hostility. There is no difficulty in getting people whe come round the station during the week to tisten, even with apparent interest, for hours together, to spiritual comsel; lut it would be a mistake to conclude that their assents and nods of approval are sincere. One yomg missionary, in his imocence and zeal, was so delighted with the long conversations he was having daily with three men posing as inguirers, that it tormed the subject, meamwhile, of a very interesting letter he was writing to friends at home. But nour the ent of the week, the trio, lingering round the door to a later homr than usual, were asked why they waited. The answer was prompt, "We are waiting for five days' nav." "Pay for what?" queried the aston-
ished missionary. "Well, now! Did you think we were coming here every day to listen to you for nothing?"

Thus the illusion was rudely dispelled, and, like an honest man, he tore up the interesting letter.

Monsienr Coillard and others have had similar experiences in attempting to get lads to attend school. They expect the same pay for "working book" as for any other form of labor, and the young mader instruetion at the various schools of minssion are mostly those sent by the chicf's, who te che willing to have the children tanght to read, mided the missionary takes the entire eharge of tues anplying them with fool and clothing at his on' expense. The Christian workers see fresh proofs are $y$ day of how little, after all, "the line upon line and preerpt upon precept" has afferted the natives. They steal from him at every opportmity, and very rarely can he obtain any redress from the chiefs; consequently Monsieur Goy and his brother missionaries are obliged to provide themselves with large dogs to protect their property.

But for the sure promise of a day of raping, if even long delayed, he would often be tempted to abmion the task as hopeless, and retire from the field in despair.

It has been said that slavery has left its stamp on the negroes of the West Indies, so that it is diffienlt now to eradicate the evil propensities acquired by their forefathers in the days of foreed labor. Be this as it may, one thing is certain: great good would accrue to these natives by compelling them to perform some honest work, and keeping them at it, for at least eight hours a day, until they learned the value of manual labor. Their natural conceit, pride, and lazi-
ness are traits of chameter that are almost prohibitive of their aceepting the tenchings or following the example of the white man, whom the matives, of these parts nt least, look upon as-to put it mildly-not quite their equal.

Never, until the present absolute power of the big chicfs over the body and soul of their vassals is broken (which, however, mast eome at no distant period), will there be any real suceess in spreading the gospel among them. The missionary is ever conseious that while he is spaking, the prople before him, if they think at all, are debating in their own minds, "Were I to beeome a Christian, what would my ehief say?" for well they know that the ethics of Christimity are conlemmatory of the life, conduct, and waracter of their rulers.

Bufore leaving Sesheke, let me answer the question, "What are the prospects for agriculture in the Zambesi Valley"" by quoting a litter received from Monsiew Goy, who is an anthority on the sulheect, not only by reason of his practical experience of several years in the comntry, but also beeause his knowlorge as a scientitic agriculturist gives sperial importance to his testimony. Monsieur Goy, I may mention, is a native of Switzerland. He writes:
"I would like to assist incognito at the lectures you will give on your peregrinations throngh the Dark Continent. Fet I am sure you will not imitate so many travelers, who in their own interest have always overpraised Africa, in estimating too highly its mineral wealth and the fertility of the soil in eertain regions. You will render a great service to the general public in describing the comtry along the Zambesi River, which
is smposed to la one of the gambens of Africa, but in reality is most desolate. Bring in the tropies, one would expeet to meet with all the froits ame products of those regions; but you tind mothitug else tham mealies, Kattid-eorn, and millet, and very inferior froits imderd. The harrest is gemerally very small, and, notwithstamding the game and fish, which are ahmolant, foople sulfin from seareity of food every yar. We are the only strangers, and yet have to make provision in andvanm against the time of famime. Ous would, then, wonder it ly atetive am intelligent work the Enropean cultures comblat be intrombed here. I call only say that that plan wombl have littlo chance of surerss.
"For five pears I have lived in this romutry, am! tranoled much, hat have not heen able to find two spmare miles of rlay soil. I have stmdied the question mome than amything ase, as it was my voration by choier. I had prepared mysidf for it hy a long and sperial apprentiereship. In coming to the Zambesi I proposed to do agricultural work, hut with a purely missionary am. I left Framee with monch comage and hoge for the snecess of this simerial mission, which hat bern intrusted to me by our committee, and began working at Sefula by opening a canal of two miles to drain a matrsly ground, and disposing that camal in a way that made easy the watering of my plantations. A great deception was in store for me: the ground, once exposed to the smin, turned out to be pure white samd, and I don't believe that a better result wonld have been fomirl in any other place. With a great deal of trouble one might succeed in growing a few vegetables for his own use, but nothing to speak of.

My own experience shows that everything imported animals of every kind as well as seeds, drgenerate, ma have to be renewed after a couple of years.
"This country, judged with impartiality, is not country with a bright finture, and offers no induer ments to civilization. The Emropeans who labor here as missiomuries do so from a sense of duty, and not from choice."

February 10th. Having bude farewell to the kind friends at Sesheko with whon I have put in a week so lappily, we startel this morning in a swift canoe, thirty-two feet long, twenty-four inches beam, and twelve indhes deep, with five strong pardlers, intending, if possible, to reach Kithngula to-night, a distanoe of seventy miles. By noon we were in the rapids of Mombova, where I learned that two of my canoes sent on aheal last week got eapsized, and the loads, not being properly seemred to the canoes, went to the bottom. They were all recovered, however, and, as they consisted chiefly of trade cloth, ete., will be easily drien. We werr more fortmate, and reached our destination without any mishaps at 3.30 r.m., making the journey in eight hours' actual traveling. The quicker one makes this run, the better, for it is most minteresting, being shat in nearly all the way by tall reeds and papyrus on either side, the neighboring swamps exhaling, in the early morning particularly, a vile malarious odor.

On arriving I was warmly greeted by Monsieur and Madame Jalla, of still another French mission station, sitnated close to the drift, where all who visit Lewaniki's country from the south must cross the Zambesi. It ivas expected that many natives would come and settle here;

## omance.

ted ly Monsieur and mel mission station, who visit Lewanika's the Zambesi. It was ome and settle here;

but, although several years have passed sinee the station was established, these hopes have not bern matized. There is not a village or a mative lat within a mile on this side, and the site is very mheallhy, for when the river is in flood the water rises to within a fow yarls of the dwelling-house, leaving heaps of dibris and mod as it recedes. I found Frater and Jonatham romfortally ensconced in an old wagon, while all the groots wore safely stored in a lout. Here I diseharge the Barotse hoatmen and wait for the carries's to turn up who are to take my loads on the next stage of the jomruey. They are assembling every day in response to the call of the sulbechiefs sent out by the king to collere them from the various villages; over a humbed are ahready in camp.

To-day Jack told me that his fathor (who lives on the other side of the river) objects to his acompanying mo farther as interpreter unless I promise bigger monry. At present I am paying him twioe as murh as he conld carn thy other way, so I quistly told him, much to his chagrin, that I will endeavor to get along withont hime A few minutes after, Monsien Jalla told me that he ham often thought of the prosperts there might be for mission work in the Batoka combtry, through which I intomed to travel, and expressed his desire to areompany me as far as the Kafnkwe River. Ito knows the hesutu language well, and several of the mon know both it and Sotoka, so that the interporem differulty is solved.

All bring well, wr start on Thesslay morning.
Madame Jalla is a bave little woman, and rembly consonts to being loft all alone motil her hashands return, probably three or four monthe hemere. The iso-
lation and lonctiness of missionary life here can searcely be realized by workers in more favored spheres. 'Ihe home life and its pleasures must be held with a light hamd, for malarial fever ceases not in its readly work, sparing no one. No loving care or frequent preamtion can do more than lessen the attacks of the invisible foe The merry voides of the chihlren and the patter of little feet must be heard by the parents ass music that is passing. Aladame Jalla in a reeent letter writes:
"Our little darling Vialdo is still very well in health; he is not yet eight months ohd. You know that the greatest trial of the missionaries on the Zambesi is that up till now they have ahways lost their children quite young. We have two dear little girls buried here, and that makes us appreciate all the more this thind child, who seems so strong and well; lut the fever is here, threatening us continnally, and our joy in having him is always mixed with fear."

There is as yet no church formed or meeting-honse erected on this station. The trials incidental to missionary life are at Kazungula of a similar nature to those experienced at the other stations of this mission. The work to which these heroie men and women have devoted their lives can only be described, at present, as resembling the dead of winter. Now they sulfer the chilling blasts of a dreary, lifeless, and frozen apathy on the part of those whose good they seek; but as springtime and the singing of birds mast follow winter amd the trees put forth the tember leaf, then after a season of shower and sminshine bring forth fruit, until the husbandman is made to rejoice over garnered crops, so to these tried and faithful toilers shall come a day
life here can searcely vored spheres. The be held with a light in its deadly work, frequent preatution of the invisible foe. ad the patter of little \& music that is passer writes:
very well in health; You know that the the Zambesi is that their children quito rils buried here, and ore this third child, it the fever is here, : joy in having him
d or meeting-house cidental to missionlar nature to those this mission. The d women have deiberl, at present, as ow they suffer the fint frozen thathy they seek; but as must follow winter leaf, then after a r forth fruit, until re gamered crops, shall come a day
when "both he that soweth and he that reapeth shall rejoire together:"

Monday, 16 th. We have now a hundred and fifty men in emmp, one third loing porters, the rest a compmy of wamions sent by Lewanka to escort us as far as the Katukw River. I have bean busy all day allotting boals, hat somehow with many misgivings. There is a aprat dabl of talk among the hemhen ronerming the danmes we are to encounter, ete., and, to cap all, a rumer has reached them that an impi of Matelele, the tribu of all others they most dread, has erossed the riad into Batokaland and are lying in wait for us. Now these men, who but a short time ago in a wardinere vowed they would immililate any opposing host, howerer strong, are paralyzed with foar, and I shonhd not he surprised if, after all, I am prevented from proareling by the north bank of the Zambesi. Most of these hraves have followed us over four humbed and fifty miles, surely not to show the white feather now! Sis, and at the only time when their company is actmally reguired.
All is ready for the march on the moming of the 1 Sth, when a servant reports that my (amp is deserted. The rowarlly fellows have fled during the night, donbtless to relate to the king a story of the appalling dangers they have escaped. Well, better that they go here than hater on, when I might have been in at worse fix; thas I am left alone again with my two Tamaicans. This is al crusher, hat, like the Afriean ferer, re get used to it. The finture is now dark, but in a fre days, no doubt, it will $\mathrm{l}_{\text {dighten. I I must look aromel for some other means }}$ for continuing my journey eastward. In the memime,
accompanied by Monsieur Jalla and a few boys to carry some blankets, we set out on a week's tramp through Batoka, so as to see something of the natives and visit Afriea's greatest wonder, the Vietoria Falls.

We went by canoe as far as the Nanpwi Rapids, where we hid the boat and took to a footpath along the river-bank leading to a small village, which we reached at 6 p.m. We turned aside among the long grass and bivouacked under a large tree, thinking it would serve the purpose of a tent; but its shelter, together with the long grass, harbored such hordes of mosquitoes that when supper was ready our hands were so busy keeping off the wretched tormentors that we could searcely get a chance to carry the food to our mouths. We ate but little, and, being tired, wrapped ourselves in our thick blamkets and tried to rest; but it was a weary night. Not ten minutes' slecp could we catch, and our arms ached with the perpetual whaeking right and left, which we had to keep up in vain efforts to defend ourselves from the "pesky varmint."

At daylight we had a cup of coffee, and set out on the march. There was searcely any perceptible pathnow through a rocky ravine, then aeross a broad stretch of grass eight to ten feet high. We had soon more than enough of it while trusting to the proverbial native who knows all about the forest and has a natural instinct for finding his way anywhere in the wools. A'ter following him for two hours, we found by his twisting and turning that he had los'; his bearings; so, deposing him from the position of guide, we took our own way, making a bee-line at a right angle to our previr as course, and to a point ahead where the hills

on either side seemed to conserge, and between which wr knew the river must pass. Whe were not mistaken, and with a feeling of relief we found ourselves on the rient roat.

Whut noon we sat down in a cool shate for breakhast, rested for a couphe of hours, and started again. Solarge game sighted, but I got a few winea-fowls and partridges. We halted at 5.30 p.an under some moneman trens, and in the stillness of the eroming ron!di hear the distant boom of the famous catamet.
baybreak saw us again on the thack, which in most phases was; only imaginary and very rongh. But the. whof amoyance wats from a dertain kind of grass that sherls imimerable small, sharp, chaw-shaped prickles, which sturk to our clothes, penetrating to the skin like humberts of needles, searifying we all ower. By noom we deached the village of the chief at the dritt, whe tries to hold the monopoly of ferrying perple ore the rive. aheut a mile above the falls; hat he did not seem ineline to oblige us right away, in spite of the profered pay and present, only remarking that he would think ahout it and see us to-morrow. bment thereloy 10 show how little he cared for wh a men, ant desiring alose all that we might eat a little" hamble pie" liy being under the neeessity of cot une and begring him to faror us. Resenting this inde, Monsian lalla wront to interview another ahicf-an oht Makalolo named Mosatame, one of the very few mmaming of that ahmost exterminated tribe-who reater us with much more: respect, presenting us with a shap amb phenty of meal, and promising to see us over in the morning.

We spent the night in a lovely grove near the riveri-
side. The seemery here is particularly fine. The river, thonghat ant amile wite, is hoken mu hare inlamls of from a handrod and fifty to fwo hamdral yands; these istands are dial with the most tropirall-lowking

 columbe of sperg, white as show, rixing sowly high above the falls, allul lingorines in romes that existen bamtifully in the smbight Finly in the moming No-

Lat the aftemonn we wout to virw the attraction that ham imbued us to walk fifty rough and weary miles. The hanks are ilemsely wooded with hage trees and thick mudermons. When within a stonesthrow of the water we mitured an atmosphere of perpetaal drizale, kept up by the sumy that rises mueasingly in great volmmes and carried in the direction of the wind, to fall in tine ralin. The gromul is soppling wet every now and then We sink to the amkles in monl, and in a few minntes are dremehed throngh. Yet for hours we stamb gating in annament and awe, contemphating this the greatest natural phemomenon we have ever sern. Now we are on the edge of the chasm; but it is impossible, with either pen or peucil or camera, to give anything like all aderquate idea of the majestic splendor of this rival of Niagata.

The river is about a mile broad as it dashes over a preeipice fone hmudred feet in depth, in a straight line across its entire width. The chasm into which the river phuges is a narow rent not more than a handred and fifty feet wife, and runs at right angles to its comse, gatting narrower towarl the casteru bamk. The opposite side of the fissure is very prempitons, of hard basaltic rock, and ahmost on a level with the river above; but on account of the dense fog one camnot see more than a comple of hundred yams at a time, and that only when a gust of wind blows it to one side,
which, thongh momentary, bears mpating many times over, and well repays the exoreise of patience, for throngh thes rifts we get a magnifirent view of the lovely haw water above, ilowing calmly and trampilly onwad until it crashes into the soething abys below. Tha palm-hearing iskads in the distance form a pietmesque barkgromm to the sublimely beantiful serme. White viewed in smashine, the double zones of prismatice colors formed in the spay have a buillancy compared with which an ordinary minlow is hut a faint semblaner. Livingstome, Batines, and Mohe have emelo in turn given their impressions of the Victoria Falls. The latter, a shrewd and keen observer, writes:
"I will how endeavor to give a fedle desiription of the great catamet itself. 'The majestie river, a mile wide, domes down from the north-northwest, and things its waters down fom humbred feet into a rorky ravine, varying in width from two lomdred and forty to there humbed focet, which rums arross its hed. From the biver above the falls rise many islames, all adomed with the richest tropical regetation. The hanks are covered with vast but not dense forests, in which orremr whole gromps of tall-stemmed palms, giving a thoronghly southern chameter to the semery. Near the falls the water hurves along with flying speed, and the long rilhons of fom everywhere to be sem make it look as if it were boiling. Near the western bank lies a little island, ahont a limdred and twenty feet from the brink, and here the bed of the stream seems to dip suddenly, for the water leaps down with a roar amd a lush, like a huge sea-wave. At this point, quite at the eastern corner, a ridge of rock juts ont, on to

Which ant one not sulbjert to giddiness cam step, when her will have, on the left, the fall gust deseribed, and in frout the long line of the great cataract, which can of
 drann down with the flood and filled with drops of water aspapes continnally and rises in mhties, prombemer the spreveromes, which oldam like speretors fior atove dhis ereat 'altar' of the wathers. After looking down for some time into this raging, leaping, foaning, hasinge chatos, deatemed by the termith noise of the maddened waters, amd shaks, by the momedng howl rising ug contimensily from the theths, which serms to pibere through hone and marow, ome wombers how tho rocks, those hard ribs of the earth, cam withstame the shork of surh a mighty onset.
"After I hand gatered at this glorions sceme for some time I began to foel stmmed, and I wout a humbed pares to the semth in the direetion of our ramp. Here I was on rocky ground, within the sphere of the spray rail, and one moment was wrapped in it as in a thick fog, whild the next it was suddenly rent asumber by a gnst of wind, the most brilliant smbeams pouring throngh tho galp, suceceded, however, almost immediately ly a fresh shower of spmy.
"Tuming round on this spot with the face to the north, a singular impression is prodnced, for the ahyss am the long line of clouds rising from the earth are visible, hat the waterfall is hidden by the intervening trees and hoshes.
"Ansious to get a front view of the falls, I now made my way throngh the forest - whirh may not inaptly be called the 'rain torest,' its luxuriance being

the result of continual showers of spray-and found the grommd marked by the comntass footprints of elephamis and buffaloes, attracted, dombtless, by the rool mund-baths to be had here.
"The upper side of the chasm, rimning arrose the bed of the stream, ends in a projeretinge slat of rook, and before us on the east lies the channel-here two handred and seventy feet widn-which is the only onthet for the whole volume of water. Stepping on to the slath of rork, and looking to the north-northwest, we have a view of the whole long line of falls. As the river, owing to the late rains, was still very much swollen, I saw them under very favorable ciremmstamere, for the back rock-masses were almost antirely hidden be the indescribably beatutiful water draperies, the abrupt naked rock-edasms only yawning here and there through the white reil of spray. When I saw the catanact, the first fall consisted of one long, unbroken, shining, greenish-blue wave, which, as it sped on its farther course, resolved itself into awer fincr, whiter, and more deliately rounded elond-forms.
"This is the point from which the visitor cam obtain the grandest view of the incompamble Viatoria Falls of the Zambesi. Before us we have the full ghory of the falling mass of water, ever moving, ever changing, blustering, forming, glowing, shining, with small green islands pereping over the very edge of the alyss, and on the laft and right, above amd below, water, water arevehere, hurrying onward with a continnous roar like thmaler. In front of the falls, where the waters from the west and east meet and embrace, hang suspended two double eircular rainbows, unbroken by
any horizon, the magic hues ghowing in the brilliant tropical sumbenms, blue, yellow, and red sumeceding each other in the outer, and red, yellow, and blue in the inner ring. . . .
"Livingstone, who made his olservations with a pocket dhronometer, which showed the mean (ireonwich time, gives the lomgitude as 2.00 4. E. I place my observation forty-four mimutes of longitude farther east.
"The height of the veil of spray which hovers ahove the falls I measured witt a sextant amd a hass-line equal to 500 feet; the angla a was fomm at $50^{2}$, which gives for the opposite angle a the length = (inje. feet; add to this 400 feet depth of alyses, and we have 10.5 fert asconsion, a result differing only ly 40 foen from that given by Baines. Of course the height varies every day, areording to the volume of water in the river, the temperature, and the strengeth of the wind....
"After the Zambesi has mand its way through the pass, two hmodred and seventy feet wite, it rolls on in sinuous fashion, deserihing there or four wide aurves. The bed is so marrow that its depth must be dormons to aceommodate such a vast vohme of water. The banks consist of perpendicular rorks five humbred or six humdred feet high, absolutely inaceessible to men, though many baboons, which have taken up their abote here, climb, up and down them with ease."

I have to apologize for the accompanying photographic views of the falls, as they by means eomey the inipression of gramdenr produred on an eye-witness. They are only "bits," showing the water as it takes the leap clear of the rock into what-the reader must be
left to imakime, as the most rugred and imposing portions ane so shromded in spray that the mantives taken "中n"ar as if " light struck," or "fogere", while it is not in the pewer of the camera to "shoot aromed comers," therefore camot look owe the brink into the fom hamdred fert of chasm below, whore the fomming waters arr tossed into billows of smow whitmess, dashing on to the out lat at the eastam bamk. Fom many miles the romrse of the Zambesi below the falls zigatags in acute angles arery fer lomilred yards.

On the $\because$ thh I walked down ans fiar as the first bemt, atout a mile and a hall' distant. 'This turn is most abronf, the genge marow, and the water very derle, the surface streaked with foam. The left of the "Profile (liff" photo remesents the eastern extremity of the falls, where the waters have the marrow rhasm and rontinme their ramse toward the Intian (owam. Whild retmoning to rampl 1 ame arross a lot of baboons the size of right-year-old bors, but, being alone, gato theme a wirle herth.

On the egth, thomgh leath to leare this emehanting
 Im not while my pulse beats shall I forget the experiener of these three days. Nosatance was on hame to firre us over, amd invitud us to his village to see his
 vicinity of his rompomal set alont preparing lmakfast. Wir wore homored be a visit from four of his wives, who bronght us meal and Katfir here we partioularly apmeciated the latter, for we were very thirsty. The day passed rather wearily, beng besjuged hy matives from morning till night. I was mortitied to diseover

that the chief ohjert of Mosatane's inviting us to his village was that he might bug from us whatever he set eves on. He did not get anything, all the same, exeept what he gave us an equivalent for. One soon gets sick of these people when finding that it is an atter impossibility for them to show a single disinterested act of kimhess: be their present great or small, they without exeeption get angry if they do not receive a deal more than its valme in retmon. Seldom, if ever, have I seen an exception to this.

We observer that the tribal mark of the Matoka is the absence of the two upere contral incisors, these being removed in early life. The anstom, though a personal disfigurement, is misersal. Mosatane reveres the name of Livingstone, with whom he had made many long jomrness, and tells mumerous storins concerning him, but all in the highest praise of the great explorer. It Sesheke we met two old men, Makmuba and Ratan, who also elamed to have been in the serrice of Livingstone; they vied with aikh other in extolling his character, and apparently reathed the memory of the years spent in his service with great pleasure.

In the early morning, after a rip of coffee, we were once more afoot; lat in an homr or two fever began to assert itself on me, and I struggled along with an atching and throbbing head, while my month became so parehed and dry that I felt as thongh the mueons membrane would strip off if I closed my lips. We rested for three hours at noon, and marched again until evening, covering about twenty-five miles. We lay fown for the night near a peol of water, but mos-
quitoes were there in millions, and slerp was impossible. At daybmeak, for which wo han longed, I struggled to my freet again, still very feverish, but managed to to amother twenty miles, which brought us to the phace where we had left our eanoe. In two and a hall hours we were at Kazmoguta again.

For the past two days I have eatem nothing and done a good bit of tramping, and now feed much inclined to go to bed for a werk. The journey to the falls and back has been a trying onc, hat we were more thani repaid for the trouble, and with the aid of Madame Jalla's unremitting kindness I hope to be soon all right again.

February $28 t h$. I feel very much better, only that the twenty-five to thirty-grain doses of quinine make my ears ring unpleasantly, and I can hear nothing else. But what is to be the next move? I camot delay long liree. No other way seems open but to cross the Kalahari Desert, visit Khama's town and see what an Afri(an township) is like umder a Christian native king (for I have seen enough of the other sort); then from Bamangwato to strike north throngh Mashomalamed and reach my goal, the Lakes, in some way, not yet very clear to me. But, believing it to be possible, I will make the attempt.

I crossed the river to the west bank to interview two English honters who are waiting for an answer from Lewanika to the request for permission to hunt elephants in his romitry. I found them very short of trade stuff, of which I have a good supply. They having a bullock-ant and oxen with two Colony drivers, whom I han the option of engaging, business was speed-
ily arranged to omr mutnal satisfaction; mud thas, most unexpertedly, ways and means for thasport are one more provided. The oxen are kipt some tell miles distant from here, beyond the "fly" belt that skirts the west bank of the Zambesi, and they can only come in here at night, when the tsetse is supposed not to lite. They are sent for and will be here by ten ordock, when I hoal up and start withont delay.

My goots are alrealy anross the drilt, amd in the evoning I say grool-he to Monsionu and Madame dalla, who hate been the essence of kimbers to me. The time spent with them and my experinue at hazungula have beed on a par with the fellowship and hospitality I "njoverl at the other stations of the Freneh Zambesi mission, whirl is salying a good deal. At 11 p.s. the baggage is all aboard the eart, drawn by a span of two oxem. It is off at foll sperel, which is about the rate of a "Trames Procession" or a "Lort-Mayor" show"; hut they will get heyoml "the fly " before daylight.

I spent the night in the Englishmmes ramp, and mext morning, after a shatp walk, reathed Lashmma, where the oxen were ontepaned awaiting my arrival. At this phate Monsiemr and Matame (oillard had to (:amp) for over a year, wating for the derision of Lewanika as to whether they were to be allowal an cutranee into the Barotse Valley or not. At length their request was granted; hut it must have been a weary time for them, the distriet is so lonely, widd, and dreary. Nemely is a solitary grave of a Swede named Oswald Bagger, who died here of fever in 1878.

After having lumelh we trekked until 9 p.an., when we ontspamed for the night. On akain to Dambimatenka,
where we take on and extra span of oxem. 'This phare is of some interest, asperially to Romath 'atholies, trom
 "ammold" Fathers" and "Brothre" to organize a mission station here. 'Thery hand intembed sottling in the bamotse Vallery, hat ratroing the romatre without tirst obtaining the king's promission so innernsed him against them that he orderod them hark forthwith. Pambante tomka being a sort of nelttal gromul betwom Khama, Lobengula, and Lerwaika, they derided to build muter the pattromage of (G. Westheath, a thather, whose station it wis. 'Thuir dwelling-house allul dhureh still stallul, the latter (sed formpentud of illustration) mow atilized as a stable. The dools and window-frames that pamain bear abidnee of the skilled workmen they must have ham with them; hut their mission was at failure, the party lowing too large and their rpuipment altogether tow claborato and extensiso rompured with their very limited knowledger of the eomntry and people. By litter axperionee they leamed that in sum work "the rane is not to the swift, nor the hattle to the strone." Soon alter their alvent, amd ere they hat well begm their mission, one of the Brothers died, a Father was hrowned on his way to the valley, the others got dishairtomed, amd the mission was broken up. Even those who eseapert from Pamdamatenka fell virtims to farer elsewhere. Westbeard, too, is dead, and his trad-ing-store stands rmpty. The present ocempants of the place are two half-hreed humters with a few bushmen. Here we found five beaps of stomes, maming the last resting-places of Jolly, Cowley, Bain, Baldwin, and Lown-Enropeans who succumbed to malarial fever.

I.INin.| ソ..1 ! ! Nh.

We had been toll that at this place corn and vegetaboses were cultivated in abmolaner, and that we shond be able to put in a supply for the jomerne but we wore contented with a limiten purelase, as they chamen ms at the rate of three pomme per hag for corn ame tan shillings rarli for ver poor pumpkins.

 jommey was through rough comitry-aither rorky bults. of woolland, with stones and stmmps that ahmost shook the cart to pireres, or arem miles of swamp with batck
 feeling very "bluc, and comserions of an apponhing attark of fover, I was sitting in the cart holding my arhing hend betweon my hands, when the "desselboom" gave way with a erash, and we wore thrown forwath on the road, putting a probed to om journey for that night, so we camper where we were But be the time I ronld get out mey banket and lio down at the foot of a tree the fever had me in full forer ; the live-long night my heal felt as if it would horst-skin hot and parehed, temperatme $106{ }^{\circ} \mathrm{F}$. Sevoral times during the weary homs of darkness slight showers of rain fell, and althongh I hat no sheiter I wished it would come heavily and rool me a hit. Sear morning perspiration broke out profusely and I was relievol. I took a elp of coffee, and thought I was hetter and got $n_{1}$, anxious to see to the repairing of the rart. The drivers brouglit in a small tree they had rut down, and were just commencing to hew it into shape, wien I folt a sudden chill, accompmied by faintness, romperling me to lie down again. Such a fit of ague amel fever fol-
lowed as I have seen in others but newr until now experienced, vomiting mutil my eyes were bloodshot, shaking mutil 1 han to hold be the root of a bush to steady myself, cold and hoodless, althongh now the smo was high and the themometer registered $100^{\circ} \mathrm{F}$. in the shade. By evening the new dessel-hoom was firished alld wis trekked again. I was just able to emal moto the eart, hut for the mext two days could mot rat a mouthful, only drink water-and such water! brackish amd mathy.
'lodity, the 1こth, however, I am, thank fion, forling very much botter. This is fortunater for wo are mever sum that there are no lions lurking in the nemghorhood when we lie down for the night. Here, and alongr our route for the mext cight days, they aboumd. hast night they roared and growled within fifty paces of our camp, treing to stamperde the oxem. . There was, of comse, no rest for either the drivers ormende, as we had to kerpl guard, rifle in hamd, expecting an attarek erey minnte. We mot the ammal transport wagons, three in mumber, home for the Zambersi with supplias for the missionaries. Ther romberer told me that this morning, the lions, in spitu of lige fires, dogs, amel grms, attacked his oxen, and lacerated one so badly that it had to he killed, while two bore hely daw womms. Fome dogs went after them, hint one, the biggest amd hawast, never roturned, so we shall have to keep a shanj lookout now.

1 am making no attempt at writing a daily jomrnal during this trip. One day is so like amother that there is sellom an event worthy of record. The program of an ordinary day is very murh thas: At the first red-
dening of the sky, abont an hour bafore smmise, the fine is stirred up and the kettle put on; meanwhile mats and blankets are stowed awiay, the "voige" (waterkese filled, if we are fortmatre phough to be near a "rhey" (pool), cooking utemsils colleetad amd parkimb. The oxen are being inspanned, and by this time coftere is realy, which we swallow with a bit of heral baked in the athes or a hollowed-out ant-hill. Tha long whips are "makem, the word "trek" is shomemb, and the oxem move on; and now for fier or six hours we lomber along, throngh the derp samb, rongh rock, or swampy gromad, through belts of mopani forest, and on through vast stretrhes of thorng bush armed with spikes like grapling hooks. By 10 ans. wo polathy ram water, where we ontspan and rest during the heat of the dis,
 on till nime, when we hivouat for the night. The oxern are mate last hy remes to the trok-rhain; and alture subper we cath seek the ke side of a busk of a dompor mias, spread our mat umlor the stary sky, and wap up for a few hours repose.

While this routine may be taken as the rule, it is ley no means without many exaptions. At times, for two whole days we will find no watere, cither for omselses or the cattle, necussitating long treks. Whan about half-waty across the desert the oxen were inspamed for twelve hours, pushing on to a spot where wre ax perted to find a vhey, hat which, when we reached it, was almost dry. We had to colleret a little from the holes mate hy the feet of game, hat it was so thick and of such a vile odor that we ponld mot swallow it. One of the drivers took a mouthitul, and sumemed all day in
consequence. The poor beasts surked the murd, refused to erana, foitering aromme the waron, and daring tho night licked the broad iron tires of the wheeds to eool their tongues. Llayed ont, we rould go no finther withont a rest ; but about two ordock in the morning (bow the third day of onr thisst) we inspanned again, and dragged wemily on, almost at the fainting point for homes, when, just as the first rays of the sum shot arross the ard phain, we deseriod in the distance what apheared to be a small lake, erlistoming like burnished silver. The oxen sermed to seent water in the air, and,
 amel in an home wo reareme the lake, rattle and men phuging into it with a mand rush. But onf joy was short lived; the pore amimals moaned their disapmointment, the drivers fienes were piotures of despair. Ilow I looked I don't know, lut how I folt may be inagimed. It wats a salt "pan" (lakr), and the water a bitter brine. Slowly and sadly wo dumed aromm, uttery dishantened, and went on for two homrs more, when we came
 hat ols, so precions-swert vater. Jow fondly wo sipperl it! And with buckets we drew anongh for the oxen, having to use tho whips vigomonsly to kere oft the hord while earh one had its turn.

Wre rested for twenty-four lomes so as to give them a rhance to piak up. Two oxen suftring from hang siokness hand been loft on the roan to follow as best they ronld with the spare span. One must have lingered behind and fallen a prey to lions, as we never saw him again; tho othor wo shot, and used such portions ir, innl, - Mral, id 1110 ay was puintHow agined. of the flesh as we thought safe. We were not over nice about it, as for two weeks we had been without fresh meat, having seen no game exeept an oecasional guinea-fowl, althongh we saw a great many fresh spoor of almost "以ory kiud of antelon", alphant, zehnat, giraffe, hant wheest, ete., hat mostly crossing our track, goinge north and sonth. I sighted seremel therks of ostrichers, and snceeded in knocking owr two at long range. They were very widd, and without a horse it is difticult to hant them. In cach aase they got up and disappeared in the bush, but were fomd dead mext day by the bushmen, who bronght me several hamhome feathers -the only trophies I possess of ostrich-hunting.

Every few days we meet with small hamds of these bushmen (Masarwa) in the most malikely and maxpected plates. They are wild ehildeen of the desert, homeless wamlerers, and pigmies in stature; during the rainy seasom of a dirty yellow color, at other times hard to tell. They are spimilo-shanked, amd posserss abdomens entirely disproportioned to their dimime. vo size. These quere little peoplo ropeak a limgunge so barbarous, with its perpetual riack, click, click, that mo white mam has been ablo to acquire it. Many of them are veritable caricatures of the creature man. An armful of reeds on a cave provides all the shelter they ere know; they own no herds, cultivate no fields, hut subsist upon the gime, edible roots or bulbs, the larvie of white ants, grasshoppers, and woms that they find in their fimiliar domams. But this "reature, insignifirant thongh he looks, is more than a mateh for the most formidable wild animal that roams the forest or plain.

These curiosities-the primitive bow of supple wood, and the small bark quiver of cane-arrows, with their detachable ivory, poisoned points-are now in my collection.

## CHAP'TER XI.

## FROM PALACHWE TO FORT VICTORLA.

Palaehwe.-A terrible epidemic.-Maharia.-Semi-eivilization.-Physically losing ground,-Khuma and his eomery:-Total pohinition. -The Magrwato as a race.-Maknlakas.-Darker phases of Afrienn life.Mrkengie and Hephorn.-The Matebele, On the trek mgain.-My West Intians return.-A monotonous landsrape.-Fort Maclousice,-Ityemas und jurknls,-Mutum in puro.-Tuli township.-"Show sour passport." - A licensed prospector.-Memies and pumpkins.-Labenguh's impis.Matipi's krmal.-Whiskey shops. -Syudientes "dend moke."-White
 macient shroughold.-Fort Victoria.-A hundred miles of sand.

TIIE journey across the Kalahari Desert puts the strength and endurance of both man and beast to the severest test ; but on the 30th of Mareh we reached Palachwe, the principal town of the Mangwato, having been just four weeks on the road. We feel very thankful, too, when we remember the many broken wagons, shattered wheds and dessel-hooms we passed on the way, telling of long delays and great trouble to others who had attempted the journey muder less fiavorable riremonstances. It is nothing rare for travelers to be delayed for months in the midlle of the desert by flooded swamps, oxen dying, or wagons hopelessly broken down, and ohliged to send back for assistance. Yet we are here, with a measure of fair health and strength (with the exeeption of a troublesome cough
which amoys me much, and seems come to stay), in a semi-civilized comntry under the good chief Khama. We outspamed in front of Messiss, Blackbeard Bros.' trading station, where we are inviterl to stay for a couple of weeks, until arrangements are made for our next mow which mast be northwarel.

Mareh 31st. I was called this morning to see Khama, his wife, amd chill (the child died the following day), who were all three down with fever. Not ouly they, but, as the chief tells me, fully half the matives are stricken with a bad type of malarial fever, which has assumed the form of an epidemic, an average of fifteren suremmbing to the disease daily; while I am informed that since the year began, close upon three thonsand of Khama's subjeets have been eut off. He serms greatly distressed about it, imploring me to remain for a few weeks and render what modical ain 1 can to the sufferers, for this tide of death threatens to deeimate the tribe. The night is made hideons hy the gruesome cries of the l!yons as they join in the carmage among the many a i l bodies but partially interred in the sand of the plain.

A very cursory glance at the situation of the town is sufficient to reveal the cause of its being so unhealthy, althongh it is the new town of the Mangwato, and only laid out in the latter part of 1889 (Shoshong, their old settlement, sixty or seventy miles south, having become untenable from lack of water). Palardawe orenpies a valley at the base and west of the Chupong Hills, and covers an aria of some sixten square miles, with a population of say filteren thonsam prople, composed of a number of viltages in charge of sub-rhiefs. The
hats in these "stmats" (villages) are built in airelos, with a small lakhothla in the erolure. 'Thes soil is roarse, deap samd, whemed rohiolds simking to a depth oí from six imelase to a foot ont the roats in the town, und for milas aromul. Fiardmime is impossiban withont ronstath artifictial irvisation, which the matioss do mot
 the land in and aromul the "statis" promains as it has
 of even cutting down the superflums bush or trees; consergently the fetid, fonl air from the exemement and refinse of the chaster of hats hange aromed the dwellings, the undrocrowth prevonting the freve aroses of fresh air. Sanitaly rernlations there are nome, ant but fow eomfortable Wwallings that might in some wiy be madre to comform to the observallere of laws whing wre ronsinler ecombuive to health. Now white man ran own a foot of land in Khame's rombtry, mo were a sghare homse, exorpt hy his eperial permissiom, and "roll then the chiof chams it as his property; so hait tomperary pesidents have to content themselves, as a

 are not to be rompared in any way with hose of the Marotsi. The result is, at the close of the rainy shatom Thre grass thatell has berome sorking wot and rots,
 Which the night at least must be spent, inhaling the noxions: vapors, that en far to prothere the ammat attielks of frewr, whidh avery white man seems to experet as al matter of comse.  station; the line beine mes onveright herourh to Salisbury pares Mashomaland in trexraphir emmmmiration with the ontro worla.

I was ralleal on the goth to sede a yomer man whe hat fallen in fromt of and was foll ore be his wigon, sus-

 will be meressary for him to remain rainet on his bank
for seremal wreks. I will atterd hime closely, und hope that union may take phace betome I leave. Nuch to my annoyanse, on visiting hin the following day I found the bundages amd splints had all been umdono by a nut tive doetor, who derehmed it un utter impossibility that the firature should heal without the: orthorlox fotich priformanoe being sulmitted to-burning of rertain herbs, pheing the limb in the smokr, rote. I fixed him
 inlorproter rould moster, that if his wizarrl was permittod to interfore ngial I should soo him no more.

April 2bith. It is now nourly a month simer I remeherl l'alareliwe a and although the ehief and tho white resi-- lonts aro unxions for me to stay a lithe longerg, I find mesolf physiocally losimen gromme and grotting weakor
 darime my sojoum here have I mot folt the rforets of this trying elimatr, rither in utter prostration from tho malarial poison, or in repeaterl imel homs-antimmal sperls of high tompenature. I have decided to get out of this to-morrow ly wagom, and stere northward throngh Mashomalame rian Salishmy Joring tho month, bessides Khama (who has suffored two menses, but is now sumbingly all right) ame humberls of his people, I have had seventern out of tho twonty Furopeans in the fown malor tratmont, also sevoral Dutehmon passing throngh. Mappily, there have berm no fatal rases among them to reoord; althongh the fever assumed a vory matlignant typr in five instamers, all atre now eomvalesernt. 'The death-late among the mativas, who have had no merlical aide except from Kaffir doctors, has continumed rary high; but now that the winter approaremes the
probabilities are that the worst of the equidemice is overe for the present.

Among many amios I bronght home from Airica, there are none I prize so highly as the munilioront kaross, "omposed of six humeral and twonty-six tigercat tails, which was pressenten! to me by the white ment of Palachwe, with the following lefter:

## Dr. Johnstom, Pralachire:

Deate Sik: We, the undersigned, of the eve of your depirtite from Inlachwe, beg to hatid you this little note, and the arempane ing kiross as a shght return for the very great kinduess we haw ull
 would mention that if it sometmes reminds fou of the friconds yon have mate and helped hore, il will inderd have answored its purpose.

Wishing you a very pleasant trip nul a long life, we are, dear mr, Yours wry sinerrely,
 Pbrey (i. Wybd, I'. Ilowabi Whadags, C. II. M. Buos, II. Gheis.

Much has already been witten donderming Khama, his comotry, and people, buth hy missiomaries and travelers. The former, as a rule, champion the ramse of the native, extolling his vilums and romboning his failings, while the latter are only tow whtell maner the nemessity of depembing on projulired partios for therir information. What we have to saly will he simply comparative, and romfined, as murla as possible, to parsonal ohservation, avoiding sentiment-so indispensable an alljunet to writings on Atriat nowathys. We are told the publie likes romamer; perhase it does; but there are some who prefer plain facts, and for such we write.

aspire no higher; henee we fomd whole families with grown-up sous and daughters herded together promisemonsly in their small romud grass and mud hovels. In no instance have we seen the semblance of a partition, not "ven a bit of calico hang up to divide the sleepingpares, while immorality is more brazen-faced than among the most murivilizen we have met hitherto. The mmorons rases of syphilis and venereal comphants that have rome muder my notiee here for the first time since leaving the West Coast prove all too romelnsively that something more is wamted besides the exclusion of alcoholie liguors before the majority of Khama's people can be truthtully numbered among the trophies won to Christianity in Afrian.

The Mangwato as a tribe are of small stature, amd coarsereatured. The tribal mank is fomed by making fom perpenticular incisions the puators of an inch long in from of the cars over the eygomatic arrh. They make no attempt at dressing the hair; the mon rat it short, and the women have their heads shaved with the regularity of a Chiuman. Female decorations consist of an assortment of iron and brass ambets and anklets, amd in aldition tiers of rings compesed of small bhe beads remehing almost to the knees. The hadmen wear Earopean chothing, and the aspiration of all the Mangwato proper is to dress like white men.

They are arose to manual lathor, work of any kind being comsidred modignified. Thain chicf ocenpation is the making of karosses. But this hambirratt has seen its best days, as since Khamat came muter British protertorate the salde of gminowder, artridges, or firearms has been so mostristed that there is very little
lunting of wild animals now. As usual among such people, the bulk of the hard work falls upou the women. They till the gromnd, stamp the mealies, and act as maids-of-all-work to their lumsbants and brothers. What we have written concerning slavery in the Barotse applies also to Bamangwato, althongh perhaps in a mikler form. Yet over fifty per cent. of Khama's people are slaves (Makalakas), suhject to his orders, his suh-ehiefs, or such of the Mangwato as may have permission to appropriate their labor. These Makalakas are the ropresentatives of many tribes conguered and captured in by-gone days, when the Mangwato was a strong and warlike nation. Still, many frients of freedom would be glad to see Khama add to his many virtues and humane laws that of equal rights to all his subjects, and place those victims of "the aecidents of wail" on a footing with the Mangwato, and not the albject slaves they are at present.

But why, it may be suggested, refer to these darker phases of African life? Well, for one reason, becanse there are many who desire to know both sides. It would certainly be more agreeable, and perhaps more popular, to write only that which is pleasing; but for the sake of those especially who may be anticipating coming to this comntry, I am endeavoring in calm deliberation to acquire a knowledge of the regions and prople along my route, judging impartially ant without prejudice, seeking to record only that which I believe to be indisputably true. Untold harm has artually been done by the publieation of one-sided reports, purporting to be faithful deseriptions of certain por-
tions of the Dark Continent, but written (when the truth is known) by men who are simply the took of parties having selfish motives for booming this or that territory where their interests lie, and by writers who cater to that elass of readers to whom books of thand are palatable only as they smack of hair-breadth eseapes, thrilling adventures, ete.

In many instances young men orenpying good situations at home have been induced to resign their positions and come out here with the hope of bettering themselves, only to find that they have been grossly dreceived; and if they do not sucemmb to fever, dysentery, or drink, they embrace the first opportunity presenting. itself of returning home, with a very much increased appreciation of the mother comntry. Even missionary reports often fail to tell the truth concerning the fieh in which they seek to create an interest, fearing that a full aceoment might discounge rontributors. The avil effect of this poliey is not far to seek: half of the missionaries we have met during om jomrney state in so many words that their coming to Africa has been tranght with sore disappointment, both as regards the comntry and the work.

But to return to the Mangwato. While what we have written in reference to them apphies to the tribe as a whole, there are may hapy exceptions. The labors of MeKenzie and Hepburn during these many years have not been in vain, for besides the chief there are a large number of natives whose consistent and exemplary lives prove that their profession of Christianity is something more than the mere observance of
ontwat formalities; and there eam be no question that great and lastinge good has resulted from the hong and earnest toil of the missionaries.

It was with deep regret that we learmen, on arriving at lialadhwe, that on accoment of a dispute between Khama and Mr. Incpburn the hatter hat retired from the fied and returned to Eagland. This muformate ciremmstance has been a great how to the mission. The splendid brick chard in conse of arection and near completion is now at a standstill, and I fear will remain so mutil the London Missionary Society can send out another man.

The contrast between the Mangwato and the Matobele in the aljoining eonutry on the north is very marked, illustrating the power and influener of the dhats own the people. The Matebele are Zulus who, owing to inter-tribal wars, were obliged to lave the sonth and trek northward. They are ruled by the savage chief Lobengula, who, while he in no way molests or opposes the four missionaries who live in his comtry and cary on a work that has existed for over thinty yeats (being originally established by Dr. Moffatt), like Lewanika, assumes an attitude towarl them quite as antagonistic to snecess as if he were openly hostile. Shaking his clinched fist at his people, he tells them, "You may become Christians if you like, but-_" and there he stops, for his people know him well enough to muderstand what the menace implies. Hence the results, thas far, of these long years of self-sacrificing labor are almost wil. This I learned from Rev. Mr. Elliott, one of their oldest and most experienced missionaries, whom I had the pleasure of meeting lere with his sick wife, on
their way to Cape Town. Ihe akso informed me that not half a dozen matives vam be fomm in the whole comatry who would boldy assedt their allegianee to Christianity; one or two dared to do so, and were promptly knorked on the heald, he order of the whef.

But our bagage is on board the wagom, our cightern oxen are really to be inspamm, and we trek to-night north toward the Kambesi. I hate thenght it best to semat my two Jamaicams, Frator amd Jonatham, on to Cape 'Town, Mr. Elliott kintly momising to take charge of them '"n route homeward. I ann sorry to part with them, as I an still a thousamed mites from the peint in Africal wish to readh. They have beren of great sorviere to me, and the idea of employing 'hristim matives of the West Indies as assistants to pioneers in Central Africa I have proved hy this jomme to be quite pato-
 luggage sem to get more expensive and difficult to procure the finther cast we travel, I do not feel justifire in taking them beyond bechmaname. But why not leave them with the missionaries, as propened? It Bamangwato there is mo missionary, as I have alreaty stated, and in any case I fo mot see that the fit time has come yet. Even those left at Bihn I wouh reommend to return as soon as bilding oprations are rompleted on the Cisamba station, as it is only in the opming up of new spheres that their services an be profitahly utilized. At present little or no affort is being put forth to reach tha momerous tribes ocempring the vast regions five humbed miles north and five hander miles sonth of the road we have traseled from Bihas, wave that noble little band composing the French mission on the

Zambesi. They are not ronstituten to wh as organizers of work, and mitil white men are fortheoming to lead the ram, cather than put friends at home to the expense of supporting them, withont the prospect of accomplishing anything, we deem it expedient that they remain in their own comery, for the present.

Mr. Ellard, a young Englishman in the employ of Messrs. Blackheard Bros., being threatened with pulmonary trouble, has voluntered to arompany me part of the way at least, in the expectation that the higher phatem may bencfit him. So I have laid in a sumply of provisions for the rom, sufficient, I hope, for two of us, until wr reach Salishory. The prohilition priaes charged here for food-stuffs forbid extravigature; but "necessity knows no law," and past experienee has tanght me not to depent on what may be obtained from the matives on the way. The nsual monotony attents traveling through this purt of the cometry. There is but little variety in the serenery ; an odd kopjie (hill), soruhby thom-lush, or small mopani tree, with a great expanse of dry, wiry, salplese, strageling grass, constitutes the lamelseale. The roal, howerer, is failly sood, and we lumber along, the drivers bawling ont the names of the oxen with threats and wxhortations, and cmaking their long whips. We cover alont fifteen miles a might, one trek from sumset until 9 or 10 p.an., and another from 1 a.m. mutil dialight, when the oxem are set free to graze for the day. This seems a slow mote of traveling, and so it is; but it must lee remembered that we have ovar five handred miles of a romgh rom before us, and a howily laten wagon to be drawn he the same oxen the whole way. On the morning of the ed
allizers to lead expense mphishmain in ploy of ith pulme part - higher suply r two of

a driver went out and shot a splendid eland antelon", the thesh of which we fomm delieions, and mate a good addition to our larder, as with care a hindquarter keeps for a week.

We reached Maelontsio on the : id, where we find a fort, and hemdquarters camp of the Berhmmaland Border Police. They are here to entore British anthority and protect its interests in Bechuanalam, although what these interests are seems at prosent prohlematical. The troops, two lomdred and fifty in mumber, are poeruited from Cape Colony and the mother eomntry, and commanded by officers from British regiments. Arcording to Sir Sydney Shempard, "the rexpmene of the fores is abont $x^{9} 90,000$, and the whole expenditure on the Protectorate is just over $£ 100,000$; the reveme at present is very small." (See The Cape Argus, weekly edition, July $28,1892$. )

The elevation of the district is mueh higher than Palachwe, and healthier, there being hat three or fomr patients in the well-appointed hospital at the time of our visit.

Two days beyond Macloutsie the drivers welt hunting again, and shot a wart-hog-a hormible-looking animal, with tusks six inches long, and a catilaginons protuberance two and a half inches in length. A little behind and three inches above each oye the flesh is too rank to cat. Along this part of the road wolves and jackals cone howling around the camp at night; but the fires kerp them at bay. The track is rongh in the extreme, not only from the mimerons stones and holes in the way, but, what is even worse, stumps of trees varying in height from a few inches to a foot. The
broal whents persist in mometing them, to come down with a dull, sirkiming thal that threatms not only "ondussion of the bain, hat of every intemal organ of the weary travere, who trias to smatele a comple of hom's, sley on the top of the catro, comperling him at last to sit up and improvise a primg seat of his pollentuh banknts, so as to lessen the risk of surions injury from cmintio comp.

On the sth we ont pammel within there miles of 'Tuli, and walker on in the merning to sion this "mushrom" stat that has sprums; up siner Rhoms © Co. begm to boom Mashonaland as Linglamis Edemato. A small lut at the outskirts smprised us not a little; for the fropridor, besidns ammenming, on a boand of many whlors fixal to a pold in front of his establishment, that he was a haidrosser athe harber, also intimated that in his twedro-fer-sinalle domiefle he was prepared tw arommodate, for a ronsideration, hangre and sommolnt wiyfiners with refleshment amb bods. I entered
 If fomd the artist-in ex-polieeman-lusy with a very refractory subject, a prospector, mandin dromk. Talk he woult, while being shaved, in spite of the hathers expostulations. As a second party in a like romdition sat awaiting his turn, we proposed taking a stroll. Intoxinated white men semed the order of the day; we met them at arery tum, althongh they have to pay twenty-five shillings per bottle for bramly and five shillings per bottle for alle.
'Tuli is sitnated on the sonth bank of the river Sharshi, and hoasts of a small hotelam half a dozen tradingstores, built mostly of wood and corrugated iron. There

wagons having come up early in the afternoon, so as to get across the five hondred yards of sandy river-bed of the Sharshi during daylight, I walked on after them.

I may remark that not more than ten per cent. of South African rivers cam be called permanent. They flow only during the three or fom months of the wet season. For another month water will be found in isolated pools, but for the balanee of the year they will be perfeetly dry. Since leaving the Zambesi we have crossed seores of water-comses, but in not more than two did we find a romning stream.

When about to get on the wagon for the purpose of reaching the other side, a polieemam rode up demanding to see om passport or license to cuter Mashonaland. We mate some observations in refereme to our possessing a Portuguese passport through their comentry as a foreiguer, but thought it rather extraordinary that a British sulject should require a permit to pass through (so-called) British tervitory. "Can't help that, sir; my orders are to stop every white man from passing through Thali muless he can show a prospector's license." Vain were our protests that we were not "prospectors"; nor would we know the difference between reff quart\% and allurial gohl, it we saw it. A policeman on thaty is utt open to reason, and, thongh feeling very ill, we had no altermative but to march back to a small mud hat, where a minion of the law duly registered us as prospertors, and on payment of a small tee hamded us strips of paper to that effect. It was now getting late, and we hurricd back to join our wagon. To cross the river-bed wats no light work, the wheels sinking to the hubs in the wet sand and requiring double spans of

oxen to pull it througli ; hat it was anomphished without any mishap, and, having trekked seven miles more, we tied up. Being mablo to cat ansthing, Elland went out to a Boer ramp for the purpose of purchasing some milk. They allowed him to hatere a fuart, and let him down easy ly chargitig only two shillings and sixpenee.

We are now out of Khama's commtry, Nharshi being the northern bomdary: From the time we intered it at Leshmma, ten miles south of the Kambesi, we have trateresed in a sort of semicirehe orer six hmmed miles of his territory, amb have come to the comblasion that it may suit Katfirs well enough, whose daily wants arre limited to a few moalies or pmopkins (I have sedo mo other products of the soil in any guantity during the ten weeks of my wambrings in British Berhmanalaml), hat it ran never le of any use to Enompans for purpeses of colonization. There are parime farms in the Chitem States and Canallat any single one of which yidds ammally mom argicultumal porluer than dows the whoh of Khama's kingelom. "Hrrigath, brigath," says the farmur. With what, pray? For eight months in the gear there is seanery a rmming stream in the romatry; during that time the only water to lo fomm is in the pits and stagrant pools called "vheys," suattered few and firr betwem over the veld, beeming reduced in number as the season advances.

We "rossed the Tha, agi on the 10th, and are now in the Banyai rombry. Tha roals ane still very rongh,

 quent applation of the hakes to prevent the wagon from crushing the oxen as it plunges into the ravine.

The Banyai natives are refugees from various tribes, and have their kraals among the fastnesses of the hills, where they have been driven throngh fear of the Matebele. Like the Mashonas, they are very por, hatving heen similarly pimadered of almost eversthing they jossessed by the raiding warriors of Lobengula, who not only seize their cattle, but take captive and emshaw their women ant dhildren, assegaing their men. The dress of the women consists chiefly of large coils of beads romul the waist and ankles. They shave their heads with the exerption of a round spot on the crown athout three inches in diameter, and over all, of course, grease. The men, as usual, are more simple in their attire, contented with the regulation small tab of wildeat skin fore and alt.

Four days more saw us ontspanmed by the Booly River, surrounded by mumerous grand kopjies rising ahruptly from the phain, some of them to the height of cight humdred to a thousand feet, bare and bald, seemingly one solid block of granite, closely resembling those we first saw in the Cisange country west of Bilic. While out hunting, the drivers encomered a lion, but there is no exciting story to tell ori the allvesture, for with conmendable discretion they songht refuge in the camp. Two days ago four lions attacked the oxen of a tramsport rider, killing several; but thens fir we have eseaped them.

Next day we halted at Matipis kraal, and bartered for some vegetahles with salt, gun-eaps, and matches. I climbed an adjoining kopjie for the purpose of taking photos, and fomm quite a village near the top, composed of poo: little huts built m the nooks and crevieres the hills, he Mate, having ing they whis, who 1 'hslam ell. The coils of we their he erown ti course, in their , of wild1e Booly es rising te height and bath, y resematry west countered if the ath$y$ songht attacked but thus bartered matches. of taking top, com1 crevices

of the rocks; having no soil in which to fix the upright sticks, the fomblations were strengthened by layers of mud.

The following day we crossed the Gomlogne. There is a small whiskey slop here, rum by whe men, nominally for the comentience of travelers, amd one of many that have been opened between That, Salishury, amd Cuntali since the British took peossession, amblemerally situated as nem as possible to ther regular ontspaming plares. The Salishmry cormepoment of The ('upre' Alyus Warki!, April (i, 1892, writes:
"The following list will he interesting to many, and also useful to those intoming to trek Mashomatantward. Wayside patces on main roal, Thuli-Salisbury. From Tuli:
M. Pigre's, 15 miles. ('amplell and Drummond.

Unzingwim, :3: miles. Dinds and Ferman.
M. Gobu's, 80 miles. Withers.
M. Tibi'r, ! : miles. Drmmond.
$—$ — 106 miles. Dillon and Perkins.
Nuenetsi Rivrr, 1シ2 miles. Sanderson.
Lundi River, 155 miles. Grant.
Toqui River, 180 miles. Simmbers and Prinslotz.
Farn Suriit, $19+$ miles. Bowlen.
Fort Victoria, 904 miles. Virious hotels and stores. M. Kari's, $\mathfrak{y} \boldsymbol{3}+\boldsymbol{t}$ miles.

Imytsitsi. Werrit and Young. Fort Charter. Dumm.
Unfuli.
Hanyami.
Six-mile Spruit. Mashonaland Auctioneering Co. Salishbury.
"The phares loft blank have been filled, but so far I have not rewived the names. Erom Salisbury to Umtali the following is the list:

16 miles from Salishary. Duncar and Kerr.
32 miles from Salislomy. Graham and White.
Marandella's, Bottomley. Head and Moore.
M. Chiki's, 78 miles. Lewis.

Lanrencedale.
Kesapi Drift, 10 s miles. Reid Bros.
———, 1:30 milas. Bates and Watson.
Odsi, 100 miles. Holherg."
Alboit they are of bat little benefit to a hungry man, as wo have inguired in vain for bread at every one we passed. Thes, with the fact that out of a humbed Wagons now on the road to Salisbury seventy amry an abrage of two thonsand bottles of intoxi"ating liqnor earlh, is not murla to the eredit of Euroneans, nor to the company under whose patronage it is admitted. It is the mamimous opinion of those we have met that Whiskey dealers will get their fingers burmed this time, for there is neither money to buy nor poople to drink a tithe of the stuff that is poming into Salishmy. This rush is owing to the seareity of lignor and provisions last year. The rivers being fill, wagons were detaned on the road until whiskey hronght e:30 per case;
 and one-pomed tins of provisions, 10 s . wath. The times have chamged materially sines then. Many of the minfing clams have not turned out to be such honamas as was expected; four syndicates have smashed up, dismissed their men, and abandoned in disgnst the fields that refuse to yield sufficient of the precions metal to

## so far I

 to Um-ite.
qry man, very one hundred rarry in nig liguor for to the itter. It mot that this time, (0) drink a ry. This rovisions - detained per rase; - . The times f the minphanzas as d up, disthe fields s metal to
pay working expenses; while almost every day we meet bands of disappointed prospectors returning down country, pooter men than when they passed up, full of hope, a year or so ago. One graphically deseribed things in general by remarking, "It ain't no romutry for the white man anyow, even if gold is threre, where to live he has to be a-eatin' of guinine all day long."

We could not but sympathize with one young fellow, whose health seomed completely shattered, and who but eighteen months bofore had gons up in company with two brothers, but now returns alome, both the brothers having died of fever after sinking their all, some fiftren hudred pounds, in fruitless searel for "the wealth of Mashonalaml."

Wo crossed the Landi River on the morning of the 190th—it tongh bit of work, taking two spans of thirty-six oxen, pulling their hardest, to get the wagon through. The river, thongh low, hanl a good stram ruming. Daring the raing samon the Lamli rises wey high, and, owing to the rapidity of the cument, beomes impassable for transport wagons, many being delayad on the bank for montlis at a time. Then fever, aided by the canteen close by, gets in its deally work. Thare were no fower than fifty-swem white men's grawe, mostly on the sonth side, made during the last wet season.

We are now in Mashonaland. The landseape grows more hilly and rigged as we move northwatd, while the same smooth-faced, rooky kopjies predeminate here as we noticed farther sonth. The vegration on the plains is richor, the trees larger, and the seenery in
general murh more interesting; but there are no signs of eultivation anywhere, and the few natives who come out to trade seem to set great store by their menger stock of garden products. One lorings half a pound of maties in a basket little larger than a coffec-emp, while another swings in his hamd one small sweet potato suspended by a string, and for which they earh ask a shitling or a yard of limbo, but go away satisfied, toward evening, with a tablationful of salt.

We have now traveled twenty-three days without scein's a mative village, with the "xerption of the kratal at Matipi's. Throngh the Naglai Piass the high, rocky hhufte on earh side present quite an Alpine apmearance. Emerging into the open comntry, we outspanmed, and were entertained the whole day by a concert of moneartly whongs and yells issuing from a glen where a Mashona krand lay hid. A hig beer-drink was evidently on ham. We continmed our journey the same night through " Providrntial Pass," where the Pioneer Colunm was so agreeahly disimpointed in not being attacked by Lobengula's wartiors; hence the name.

On the god we reached the Toquani, another hard "river to cross." Last year at this place three prospectors on their way to Salishmry had a melancholy experience. The eldest of the party having been gored by an ox, one of his companions boldly ventured to cross the swollen river on horsehack to call medical aid from Vidtoria. He had reached the center of the stream, when a crocodile seized him ly the leg, mangling it fearfully, and dragged him down to some reeds, where he lay in a helpless condition all night, doing his best to
keep the monster at bay with his revolver. At daybreak his moms brought friends to his assistance, who earried him to Victoria. But it was too late; gangrene had alrealy set in. Ho sueemmbed next disy, and was laid to rest by the side of a young Englishman whom fever and humger had rot off a few days previonsly (kind-hearted romitrymen hand phaten a fow towers on the graves, and ereeted a palisade of stidks to protect them from the hymas), while the commate for whose sake he had attempted to ford the river died hy the wayside.

We rambed Vietoria on the morning of the 2tth and outspamed at the new township. I walked batek to the fort, abont four miles, for the purpose of pieking up Kaffirs to carry my photo apparatus, bankets, and somm provisions, and started ahont noon to visit the Zimbabwe ruins, fifteen miles sontheast by aist. By sumdown we were busy cooking our supper in inn open spare near these marveloms memorials of a groat but long dofunct people. The night was hitterly cold for a bed on the bare earth, and we han only enongh firewood to last a couple of hours; so we hailed with relief the first streak of day, and got astir stiff and cramperl. With diy grass we made up sufficient fire to prepare a eup of hot tea, which had a wonderful effect in reviving our spirits. I then set about seeking points of vantare for the tripod, but found it impossible, even with a wideangle lens, to get the curions tower within the rotmuda. Its position is much confined by high trees and broken walls, white the long grass and weeds would require half a dozen men clearing up for days before the cam-
era could be brought to bear suceesstully on much that is most interesting among these gramd relies of a people whose identity so far is a matter of speculation.

After taking a view of the rotunda from the northcast, we gathered our traps and elimbed to the top of the kopjie, where the remains of the ancient fort are to be found. Here agnin we were foiled in the attempt to get pietures; everywhere the summit of the southeast portion has been built upon, and so closely that one can only walk in and out mong the narrow passages and small rooms, but nowhere could we find sufficient distance to focus upon more than a few feet of wall at a time. Why these Phœ⿱icicians, Arabians, or whoever they may have been, should have crowded themselves and their stronghold into such a limited space is explained when in walking aromed to the north side we find the only entranee is throngh a crevice between two huge rocks, so small as to admit of but one person at a time; while the bonlders present a perpendienlar front about forty feet high, uniting with others of the same character to form a wall across the kopjie almost as inpregnable to the weapons of modern as it must have been to those of ancient warfare. Access from any other direction is impossible on account of the high, smooth-faced, roeky cliff of ninety feet on the opposite side, which in several places has been supplemented by the addition of walls from fifteen to twenty feet in height, and built so as to form a continuation of the precipice.

To those archæologically inelined we would recommend the book entitled "The Runined Cities of Mashonaland," by J. T.. Bent, Esq., an expert and scientist who
the norththe top of fort are to attempt to southeast $y$ that one w passages l sufficient of wall at or whoever themselves aree is exth side we tween two eerson at a cular frout f the same nost as immust have from any the high, le opposite plemented nty feet in ion of the
ald recom-Mashonaentist who

visited these ruins a short time ago, and from whose deseription we take the following extrade:
"The prominent features of the (ireat Zimbabwe ruins, whid cover a harge area of eromul, are, tirstly, the large circular ruin with its rombl town on themer of 14 gentle shope on the phain below ; seromilly, the mass of roins in the valley immerliathly bemmath this; amd thirelly, the intricate fortress on the quater hill atowe, arting as the arropolis of the menent rity. 'These wo will now diseluss in thair orter.
"When we readed the (ireat Zimblawe the direnlar ruin was on the inside a dense mass of tropidal begetat tation; rempers and monkry ropes hang in matted conlasion to the tall trees, forming a jungle which it was almost impossible to penctrate, and aldent to the mazy habyrinth of walls a peculiar and almost awe-inspiring mystery.
"It was the work of some days to char this off with the aid of ative workmen, while at the samme time we prodeded with our exeavations in the neightorhood of the tower and other prominent pertions of the hilling.
"As for the walls themsmes, they were nemby free from vegetation, for, owing to the absence of mortar, no lichen, moss, or ereeper rould thrive on them, and those few things which had penetraten into crevices were of a suceulent character, which formed their branches to the shape of the interstices. To this fact is due the wonderinl state of preservation in which these ruins are found.
"What appeared at first sight to be a true circle eventually proved elliptical-a form of temple fomd at Marib, the ameiont Salsa and capital of the Sabsem

walls at home in preserving the buikding from falling. In this marow passage, at peint is is the rematkable hole, executed with perfere meatmes through the thickest part of the wall, about the admal nse of which I am ahle to give no detinite theory. It romblat not hate been used for dramage or defenser : and in the fort ress ahove there are two similar tumels equally inexptiable . . .
"1 will now proced to deseribe the hill fortrese approarling it from the valley lestow. . . 'The kopjia itself is of great matural strenghth, bume proteded on one side le erigmtice sramite homblers, and on the sombly
 and on the only aceressible sulde the andent inhalhitats
 the ruins helow. This wall is thirtwom ford therk on the summit, with a hattar of ond form in six : it is thires bent high in parts, alld the flat rallserway oll the top was decorated on the ouside mige her a sheression of small romm! towers altomating with tall monoliths. Sam romad towers in all we mand oith, alome there for in diameter, and sempal others hand lum destroved he the lall of a portion of the wall. This spetelle of romel

 rowed in one place to tom iadnes. Wialls af hage size shat oft sebarate chambers. In all diredions worything is tortuous; every iuch of groumd is protected
with buttresses and traverses. Fere, too, as in the large circular building below, ali the entranees are rounded off, and I imagine that here we have quite the oldest portion of the ruins, built at a time when defense was the main object. When they were able to do so with sufety, they next constructed the direular temple below, and as time went on they erected the more carelessly put together bitildings around, which I have deseribed."

A momber of Mashonas have taken refuge on the hilltop, forming quite a large kraal, and so far eseaping the raiding ind plundering impis of Lobengula; for no sooner are the Matebele known to be on the war-path than the matives betake themselves with their small cattle throngh the erevice, where, once inside, three or fous amed men are more than a mateh for a regiment.

By 11 a.m. I had finished my work, and, delighted with our visit to Zimbabwe, we set out for the wagons; but on coming to a brook we remembered that we had omitted breakfiast. We stopped and boiled water in our "linlly," threw in some tea, and this served to wash down the bit of bread we had saved for this repast. This done, we were oft once more.

The extremes of temperature are so great at this season of the year that it is hard to tell whether we suffer most from the cold during the night or the sweltering heat of the day. We have no time to delay thinking of it, however, as we do not wish to keep the wagons waiting; we generally like to trek about sundown.

By four oclock we had covered the fifteen miles to Victoria, of which place there is little to say, except that there are several temporarily built stores, and a
few police of the British South African Company. But why so few are there, no one knows. A foolhardy confidence is $p^{\text {laced }}$ by the company in the professed friendship and pacific attitude of Lobengula toward the English; but those who best know the crafty old chief of the Matebele dechare that an attack on the Europeans is inevitable, and that at no distant date. For, even now, althor:gh Lo-ben is receiving a pension of one hundred pounds a month in gold, his younger braves are fretting like sleuth-hounds in the leash for liberty to-as they say-wipe out the white invarders. of their comntry. A fort has been constrmeted with a broken-backed provision-shed in the center, and a trench and breastrivis that wonld be no formidable barrier to the advance of a company of sehoolboys, not to speak of a charge of Zulus. Mr. Bent, the archeeologist already referred to, comments on this $1^{\text {natee }}$ as follows:
"In point of fact, the scenery of Mashonaland is nothing if not quaint. . . . Fort Victoria has no redeeming point of beanty about it whatsoever, being placed on a bare, flat platean, surrounded in the rainy season by swamps. Nearly everybody was down with fever when we got there; provisions were at famine prices-for example, seven shillings for a pound of bacon and the same price for a tin of jam; and the melancholy aspect of atfairs was enhanced by the hundred and fifty saddles placed in rows within the fort, which had onere belonged to the hundred and fifty horses bronght up by the pioneers, all of which had died of horse-sickness.
"The diseases to which quadrupenk are smberet in theis combtry are appalling. One man of our arpaint-

$\mathbf{W}^{\text {E passed Fort Charter on the night of June ath. }}$ This is the place where the company's Pionecer Column endured the greatest hardships, through the mismanagement of the commissariat department, the men suffering with hunger, with only an oreasional pannikin of mealies to appease it; while seventy per cent. were without boots and clothel in rags, at the same time working their hardest, building the fort, and getting the numerous wagons, machines, and guns through the mud. And all for what?

The fort is sitnated on a slight rise on the dreary plain, the only outlook heing is vast expanse of white sand. I found two solitary white men in charge. One was running a "gin-mill" in the magazine, but intending to close up in a week or two, as travelers are too
fow to make it pay, the main rond being lately diverted through another distriat. The other is the telegraph opreator, whe is in damser of forgetting the Dome alphaloct for want of practio.
 Mike Spmit." The large native kratal m the vicinity fared ond to be complady deserted, the matives having fled $m$ terror from the outrages rommitan upon them by white policenmen. The cooking-pots, calahashes, and baskets of the Mashoms seattered arombl the huts were suggestive of hasty tight. [^3]less honomale and even mereiful than the sword of Istarl, have given them in return nothing hat a grave They have perished before our viees and diseases; our presence has been their extermination. Nor is it possiha for a man with a heart to mad many pages of our colonial history withont feelings of deppost pity and burning indigmation. 'They remind us of the sald but true worls of Fowell Buxton. 'The darkest day;', satid that Christian philanthropist, 'for many it hathern tribe was that which first saw the white man step npon its shores.'"

By 8.30 p.an. we are on the outskirts of Salishmry. I walked on ahead of the wagons so as to choose a suitable place where wo might pitel onr tent. The night was bitterly cold, and the bleak open veldt anything but inviting. Fearing that we might inadvartontly squat on private property, we intmpogated two gemthemen on the question who were passing at the tine One of them, a Gemm, happened to be the owner of the lamb, and most cordially suggested our taking possession of an mocempied hat close bey, kindly plading it at our service so long as we remained in the district. This was a most mexpected but areeptahbe wimblall, as a hut is warmer in the night amb cooler in the day than a tent-no small consideration when wo remember that the thermometer reqisters up to $90^{\circ} \mathrm{F}$. midalay, and frequently 320 F . at wight. The warons coming up, our haggage was monlod and safely stowed in our new abode.

Salishury at last-healquarters of the British Sonth Afric:m Compamy, and the most northerly pint rearhed by the Pionner Colum in 189 . The lowiness shanties
are built along the base of an isolated kopjio, forming one long street, while on the opposite side of the valley, and about a mile distant, are sitnated the ofliorial hats belonging to varions departments of the govermment, the militaly camp, and the pullir hospital. At present there semms to be stannation in every line of business in Salishmy. Miners are diseomaged over the filty per cent. of their "finds" being chamed by thr company, and are leaving for pastures new, whild there are but few eoming in to take their plares. Large consiguments of liquor and provisions are being piled up at the doors of the traders, matil they have now more tham sufficient to supply the needs of the small commmity for several years to come Bamkruptey is the order of the day. Sales by andion are held twide a week, where grods are sarrificed at hess than therir original cost in the colony, so as to realize sufficiont to moret present demands. All this hats cansed a dephorable readtion, and those who have extolled "the inconcorivalde wealth of Mashomand "as "impossible to exaggemate" are in worse than hat orlor with the unfortumate inhal)itants. Every other night indignation meetings are heh. At one of them the following cablegram was formulated and dispatehed to the diroutors in Enghand: "In consequence of the stagnation in this comntry throngh the company's fifty-per-rent. charge, a full representative meeting was hell on the 11th inst., strongly protesting against the claim, which is to the detriment of the conntrys progress and of the wellare of all inhabitants, and respectfully but firmly requesting an immediate rednction to ton per cent."

The crmelest dereption of all seems to be the encour-
orming vallis, al huts dumint, present nsiluess 11 fifty (1) Hw are ge coniled up w more ill com$y$ is the twire a ir origto meret alble recivalille misute" inhlal)gs are m wils glame: guntry a full inst., to the relfine quest-hrour-
aging of farmers with their families to trek from the sonth to these highlamels, with the promise of thonsiands of acres of fine faming combtry fres. No one looking ont on the dreary wastes we have traversend during the last forty-five days sould hone to cam arm a bare living from the arid soil. Good "rops of whent or mrain it certanly will not yiehd, exerpt in the fow low-lying spots on the hanks of the spmite, amd these only Kaffir-eorn or moalies. We hawe talken with several white men who have put the matter to the test churing the past two years with results almost ail. Potatoes have been planted, hat they no sooner begin to form than the white ants cat them oft ; and this termite occupies moly the best limd.

We were invited by one of the anthorities (who, having, as he said, large stakes in the comutry, tries to look hopefully on its future) to risit the vegrable market. We did so. $A$ jackass could have camion away all the garden produce displayed without being orerloaded. I bate the realer to draw his own eondusions as to the prolurtiveness of the soil from the fiact that a small basket of potatoes not much higgor than walnuts was offered and found purehasers at two shillings per pentud.

To obtain anything like farming lands we must leave the high veldt and try subl districts as lie east amb northeast of Vietoria or the Mazoe Valley. Far from Mashonaland being even a fair average comitry for faming, none hat those who have "an ax to grime" in booming it will speak of it other than as a falure for sublh purposes. That there is gold in the country there can be no question, ime for those who are willing to risk their lives in an insilnhrions clime to find it
there is no donbt a fiuture of some promise; but as for mught else, it is but another" "South Sea bubble"

Importerl domestic mimals are short-lived, and those intigenons to the comitry are eorreetly deseribed by Mr. Bant thas: "The eharmeteristie of all domestic mimals in Mashonalamy is their small size. The cows are less than our Gueprsey breed, and give very little milk; the whep and goats are diminutive and mhealthy looking; the hens are ridiculens little things, and their egegs not mon'l higger than pigeons' eggs at home; as for the fogs, they are the most contemptible specimens of the amine race I have ever seen in any of my waterings. This does not look well for the prospects of the agri"ulturists."

The great argument " that the country is new, that munh will yet be aceomplishen, lont we must await derelopments," and laying special emphasis on the beneficial results aceruing to every comntry that has the good fortune to be under British influened, sanves but to remind me of a circumstane that is reported to have wecurred here a short time ago. Two miners on coming into Salish,ury had treated themselves to a few botthes of " (ilenlivet," retiring to their hut to consume them; amd when no longer able to maintain their equilibrim, one askerl the other, "How do yon feel!" "Feel!" was the reply-"I feel-that I am under the sphere-of British influence."

On the 1 thi, aceompanied by Dr. Rand (to meet with whom so mexpectedly here was a mutual joy, having known ach other years ago in Jamaiaal, I retmmed to Six-Mile Spruit, for the purpose of taking some photos of the village, to find nothing lut a mass of lodackened
ruins. We draw our own conclusions from this, and regret having prematurny spoken of diseovering the hooly of a woman in one of the hats, as interested parrties had doubtless got wind of this; heme the evident inerembiary. Special rame had been taken to ser that the burning of the hut with the body was dome thoronghly. That it was not the result of a bush fire was manifest from the fact that the grass for severall yards romed the int was maseathed. On removing the dibnis and exposing the remains of the woman, howerer, b . Rand fomed the bones in sufficient form to emable him to "orrolorate my statements.

While rambling in the bush a short distance from this phace, Dr. Ramd drew my attention to an owarhanging rock under which was a large stome, its flat surface literally covered with hoshmen's drawings, very ancient and interesting. The artists, as a people, have long since disappeared from Mashonaland, althowern sperimens of their work are to be fomd in many districts, particularly in the Mazoe Valley. They represent, generally, wild amimals and all sorts of game, battle scenes, etc., and aro done in colored pigmonts, red, black, and yellow predominating. On close inspection the pigments appar to have eaten into the rock; hence their preservation.
'Lhe week spent at Satishury passed very rapidly and pleasantly. Making the aequantance of the leating people of the district was a material help, to my gathering information on points of importance to intending emigrants.

I met "Major" and Mrs. P——of the Salvation Amny, who rame up about a year ago with the intention of
establishing a rearuiting eenter, but so far without success; the class of men found in mining camps resent being sought after by the Army. The "Majom" seems to be am intelligent man, hut has only a faint hope that some diy in the distant future they may be able to do something, should the projects in hame for the eomutry suceed; otherwise the fied will have to be abamboned. The Churel of Englamd has also a representative here, though there is mo chureh or meeting-honse yet; but a few people on Sunday mornings attend a service heh in a simall hut.

The most sucerssful and enterprising mission is the Wesseran Methotist, under the superintendenee of the Rev. Isatae Shimmin, an earnest amd energetio missionary, who, althongh in Salishmy loss than two years, has suroerded in buibling a vory meat little ehaner, seating abont two humberl, and opened a fortnight ago, free of aht, most of the money having been sub)suriber in the district. It would be hard to find is more suitable man for such a sphere. His manly, framk, and homest bearing has won the ronfindenee of the whole commmity; hat it drans the line at going to church; very, very few turn ont to the services on sumdiy.

On Wednesday evening, liy request, I lectmed in the chapel to a full house on the suldeet of my joundey from the West Coast ; and probably never again shall I have the opportmity of addressing an andirncere so entirely composed of those who eonld hest appreciate an areome of the trials, privations, and dangers ine ident to Afrian travol, every individual man being in a position to sympathize more or lass from actual
axperiance. A libeal collection was made at the close towatd the seating of the new himing.

The missions in Mashonaland, howerer, so far, are for the evangelization of the Europeans; no effort is being put forth to rearl the matives.

A few werks ago Mr. Shimmin seored heavily against fone or five loading spertsmen in the town, who, in response to the request of some matives of a distant village that the white mon might come and kill a lion whirh was taking off their meager flocks of goats, artanged for a hant. Mr. Shimmin formod one of the party, in spite of an ill-disguised protest on the part of
 anticipating, of eomese, that a man of the "cloth" wonld be in their way. The bush where the lion was said to be lurking being reachod, a very showt time clapsed before a low growl revalded his wherabouts. Immediately sevaral shots were fired at ramem, which served only to mage the brute, and with a homud he elanged his assailants, who took to their herls, with the exerp)tion of the "parson," who stood his gromm with his rithe at the "reals:" The monster spange on the hime most of the fleeing sportsmen, hinging him to the groume with fearful forer, and intlicting a whatly wound in his leg. For an instant the lion. with his forepalws on the prostrate man, raised his head to look aromb, when Mr. Shimmin, takingestraly aim, phanted a bullet in a vital spot, rolling the bast over-a leate. The man was sabed. But where were his commates? There rame hark on hearing t'o shot. shouting with great agitation, "Wher" is it! Whore is it?" The "parson" printer for amswe to the inmamate "aneass.

It has been a treat to meet so many friends in this far-distant land, but we must be on the move homewarl. Two ways are open to us, viz., by Tete to Blantyre and Nyasa, or ria Untali to Sena and up the Shire River. We have tried our best, backed ly the influence of Mr. boyle, the interpreter, and others, to get carriers for the first route; but no money will tempt them to go. $\Lambda$ few Shanghans came and booked, giving me a little hope of getting through by what wouk have been the shortest way; lut at the last moment they backed out. The fact is, the company have been sending down policemen in that direction of late, to punish recreant chiefs for infringement of its laws by burning their villages, and to which Mr. Bent refers:
" A fine of cattle had been imposed on the chief, accompanied by a threat that if the fine was not paid by a certain day the kraal would be burned down. The fine was not paid, and Major -_, with a band of men, rode out to execute the orders, borrowing two of our horses for the oecasion. As we passed through the village the ashes of huts and granaries were still smoldering, broken pots and household goods lay around in wild confusion, and all the inhabitants had taken refuge at one of the neighboring villages. As we passed by this, it is needless to say we did not meet with an altogether cordial reception. We dismoliited and went among them, asking in vain for beer, eggs, and fowls. The Mormko (white men) had taken them all, they said, and they received our overtnres of friendship with silent and, as we thought, ominous contempt."

As a result of this, carriers from this side unprotected naturally fear retaliation.

Is in this ve hometo Blanthe Shire he influrs, to get ill tempt ker, givat would moment we been
late, to laws by refers: he chicf, not paid d down. band of $g$ two of ough the ill smolaround d taken e passed with an nd went d fowls. all, they hip with
unpro-

Failing the Tete road, I take the next best, ria Umtali, which has one advantage : transport for the first hundred and ninety miles can be done by bullockwagon.

On June 19th we left Salishury. I am mot altogether disappointed at being obliged to take this dire etion, a:s I shall have an opportmity of seeing Untali and barning something of Manicaland. The road gets moner diversified the nearer we approath Manica. Some of the gorges and eanons are very fine, and the rocky kopjies present most fimtastic and peenliar features. It a distanee the rugged peaks apear like ruins of ancient eastles or monasteries so fimplian to tourists in Italy; otherwise they have the same characteristics as those ohserved south of Salishmry, consisting of masses of solid granite, and almost void of vegetation.

It is remarkable that with the granite kopjies appear also the lage ant-hills such as we last saw heyont the Kwamza. Theie have been many doubts and a great deal of speculation expressed by travelers as to whether these mounds, so momerons, and varying in size up to eightem feet in height, and even a greater dimmeter at the base, are the work of ants at all. This is exeusalble, in a measure, on the West coast, where the activity of the termites has ceased constructing such memorials of their existence, probably for centuries; but here there ran be no donlt on the suliject, as during the dry seat son we observe a momber of chimney-like structures, from a few inches to two or three feet in height, ami werawing eight inches in diametor, on the mombls. On - loser inspertion were the ants, all alive, working their harlest, bringing from below the particles of earth of
which the buidling is composed. They go on minterruptedly until the wet season, when the rains break down their edifices of minempered mortar, and so ad infinitum increase, year by year, the proportions of the great ant-hills, that in some districts appear at a distance like the conical root's of so many native hats.

The journey to Umiali oremped only eleven diys, and there were but few incidents worthy of note, exeept, perhaps, that I had mather a marow asempe from what in many ins anees has terminated fatally to dither man or beast, sometimes to both. As game is only fomm some distance from the road, the transport rider in charge of the wagon having with him two good horses, one or other of us was accustomed to go out every day for a hunt while outspamed. On the S8th, near the Odzi River, in company with a young gentleman holding the official position of the company's forester (like us, he was boumd for Umiali), I started as usual for the bush. After riding some miles we raised an antelope and gave chase, clearing the narrow shits and spruits at a good gallop; but, unfortunately, in attempting to head off the amimal I took a course that led along by the side of a brook to leeward of a steep bank and near to some reeds, among which the buck disappeared, when my horse plunged headfirst into a game-pit. These wretched trips in this part of Africa are exactly like an ordinary grave, abont seven feet long and five feet deep, and a little over two feet wide, but narrowing down to a few inches at the bottom, which generally bristles with sharp spikes, although, luckily, not so this time. It was so well hidden with long grass that I could not see whether we had got
in hroadside or lengthways of the hole. I was not kept long in doubt, for the horse made a second phange to free himself, and down we went together, jamming my legs against the sides of the pit. Happily for both of us, the ground was solt and loose, aml I manitged to extricate myself in a short time by knorking in the bank at the and with the butt of my rifle. The planky animal with a struggle sucreeded in wetting clear of the hole, hat was too frightened for more galloping over the veldt that evening, so we had to return to the wagons.

When ahont three treks from Salishmry, a circomstamer came under my notice that confirmed in a geat measure reports I had heard of the doings of some of the British Sonth African Companys poliee. A errtain captain with three ment, who had been sent to arbitrata some matters with the matives in the Mutassi district, were returning to hearldarters, when they overtook on the road fom Mashomas driving two small oxen. On seefing policemen approath, of whom they hand heard enongh to make them dread a closer aequaintance, the ${ }^{\text {g }}$, of course, ran off into the hush; wherempon, according to the captain, who was my informant, the polier put spurs to their horses, rod down one man, whom they tied up on the spot, and brgan firang on the others with their Martinis. Walking some distance in adramere of the wagon, I fomm at a wayside hut this noble hand of Englishmen, who seemed to think they were doing valiant sorviow for their Queen and comitry hy attacking fou harmbess and defonseless Kalfirs on the publie roan. The night was very cold, but there, outside, sat the Mashona, secured by an ox
rein tied round his waist; while inside was the captain, swearing romully at his men for their bad shooting, who in than exensed themselves on the ground that it was clank.

I could not make out why he wanted to marder the mathern askelfor ant explation. "Why," he repian. "uly were about no grood, or they wond not have man ary when they saw us coming. Bring in the follow, interireter, and ask him what the -_ made him rim."
" Great dhief, I was frightened."
"Where were yon going?"
"Going to my kraal."
"Where did yon get the two oxen?"
"I don't know where they came from. I only overtook the boys who were driving them a short time befors we saw you coming. But I believe the cattle had strayed and were being bronght back to their owner, the diaef of - stalat."
"Tuke the fellow outside, and tie him up till morning, when we'll see abont it ; meantime, let me have a glass of whiskey."

Such scenes are of too frequent occurrence, and could English pople but know the treatment received by natives at the hands of some of their filibustering representatives in Africa, a more humane system of extending. British rule would speedily be inaugurated, while some who aspire to be classed among the heroes of the Dark Continent would he tried at the Old Bailey for their lives. The Magoma case has yet to be brought to light, but "murder will out."

We reached Unitali on the morning of June 30th, and
learned that a few weeks ago a wagon road had been cleared as far as Massikassi. I decided to defer the carror question until we get there, and proceed thither with my stuff by wagon. We stayed only one night in this village, which differs but little from surl places as Macloutside or Fort Victoria. It is sitmated at the hase of a large kopjic, and consists of some iwo dozen wattle-amd-daub hats, every third one deverny to tho sale of drink.

When within some six miles on Untali, and after erossing the Odzi, we notieed a : ig" maked change in the nature of the soil: no more samby wastes, ha ridh real auth or bank lome The ... litary kopjias game phae to long ratuges of momitans forming the great Manica gold-belt, and, judging from the general configuration of the conntry, it bids fair for farming, althongh the uncertainty of the seasons must always remain a great drawback to large investments in that direation.

The evening of July 1st saw us trekking toward Massikassi. For the first two treks the roand was fairly good, as we were mostly on the grassy plains; but the balanee of the way was simply exerrable, the trees having been very carelessly cat down, leaving stmuns two feet high. Every five hundred rads there are havines from thirty to fifty feet deep, with sides so ahrupt that though the brakes were serewed home matil the wheels stood still, the wagon would plunge forward with a rush, shrouded in a cloud of dust, at a speed that threatened to (rush the oxen and end in a general smash-mp, and giving rise to the fear that we should som have nothing but the pieces to collect of both oxen and wagon.

The next four miles was over rough veldt, among great rocks and shits, where no attenpt had been mate to prepare the way for wagons. We succeeded in reaching Massikassi safely on the moming of the 4th. This phace commands a view approathing the nearest to Scottish Highland scenery we have struck in Afriea. To the west, long ranges of hills well clad with vagetation, while eastwarl widens out before us the beantiful valley of the Rovne, bounded on the north and south be momatains rising to the height of six thonsand feet. We find here, besides the Portugnese village, whero Captain Andrada and Commandant Battencourt with several sul)-officers are quartered, the camp of the English Boundary Commission, consisting of eight officers belonging to engineer regiments. Most of them are alsent smrveying, and not likely to return before Saturday. This handicaps me, as they, with the Portuguese Commission, have taken all the available carriers that cam be depended upon for long journeys, such as Inhambanes and Sofalas; matives of Manica are cowardly, and would be almost certain to desert on the roand.

I passed the interim in submitting to a conple of shanp attarks of feror, ant when well enough aceepted an invitation to the with the commandant, whom I found very genial and hospitable. I spent one evening at the old Portuguese fort, about a mile down the valley, now in charge of the Companha Mozambique, who retain an Englishman, a Fronchman, and a Portuguese as their representatives. It is some seventy years since the Portuguse built this fort, and their right or claim to this part of Manicaland was never disputed mutil a fuw months ago, when the British Sonth African Com-
t, among men mate in reachth. This earest to in Africa. h vergetabeautiful nil south sand feet. gr, where ourt with the Engit officers them are pre Siaturortuguese fiers that ll as Inowardly, oarl.
ouple of alceppted whom I evening the valfue, who rtuguese urs since or claim 1 until a m Com-
pany took it into their heads to bing down a lot of
 posted themselves on a meighbering knpije and menaced the fort. The result was a most mijustifiathu fight, in which the Portugusis were dafented with heary lose, their fort captured by the empung's men, and by them looted. This high-hambed prorectling, howerry, was severely censumed ly the Eagish lome govemment, and the company withlrew. 'The fort was repared, and is now the very pieture of peare and trampuillity. A fine garden ocenpies the opron spare in the intorior, and banams are flomishing all aromod the stores and dwellings.

On Saturday the commission returned, and the Porthguese captan most readily expressed his willinghess to assist me with men, all he 'Tueshay moming hand rollerted seventeen carriers, lembing me at the samo time several of his own servants to at ats ghindes. 'This is th small car:avan, but quite sufferient for my fow belongings now. The diffienlty of obtaining camiots seemed so serious at Salisbury, that I, having berome inured to exposure and hardship, deceided to minimize my outfit. Finding that portars can mow be paid in gold or rupees, I disposed of a quantity of my cloth and bulky trade goods, also my tent, so that I have agrain to sleep in the open, as on the jommey from Zambesi to lat lachwe, where the halts at night were too brief to allow of pitching the tent.

As eight of the porters are natives of Gorongoza, a combtry through which we have to pass, it was thought advisable to pay their eapitao (headmam), hut to retain him at Massikassi as a hostage to insure their abiding

 own frow will from the roast and distant latis of the

 jonmoy to heme they and wot thirty shillings in woll, and l find them in loon lresides.

On the l:Ah of July wo set out from Massikassi, tak-
 womlal have been thromeh the Hambi rombtry to the
 the nexessity of giving that rombtry a wide lueph, on accombt of its distmbed rondition, aising from the reront war hetween (Govial and Makombe, in which the former was killed, with a errat momber of his followers. 'The matives lecins so rated orer their virtory wo wror alvised not to attompt going throngh, hat to wross the P'mgwe River at Makaka, a lammerd and cight milos castward.

The path wis mamow amd led thromgh tall giass for most of the day. Wrame but sixtem miles amb camped for the night. Gur order of matel here diffors sommohat from that on the West Coast. The Biham makes an ealy start and trame motil about noon, when lar halts for the day amd procoeds to prepare his hat. with as moll ware as if he intembed to take ul his abord there for a year instean of a night. There it is

小又 others Thime 11:am!ly, inary $\therefore$ : $10 \times$ tha of their tso of the

seven o'elock before they get on the track, and they go on for tem miles and stop for breakfinst; two hours, rest, and another ten miles mareh before smmown. There is no lut-buitling, nor arom a skem, hat good fires are kept mp all night. This is asential to omr mitety, for all this region abomeds in lions. No soober do we compose omselves for the night, wrapued in our bamkets, three or four of us streteher? out aromid rarh fire, than from exey point of the compass we hear the hangry roar of these surly brutes as they serm to invite eath other to combine in an attack upon ns, every minute coming nearer, antil within two or three hambed yarts, when they lie down and wait their chamer should our fires burn low, kindly reminding us of their prosimity ly a contimmer repetition of low grmats. But in spite of this we abe too tired to keep awake all might watehing; a certain momber of men are therefore told off for sentry duty amd to kerp up the fires, each man taking a spell of two hours during the night.

On the serond day we made a long mareh of twentyfive milos, as water was searee, lont were rewarded for this extra exertion when we happened at hast mon a clear rmming brook.

By noon on the lith we arrived at Chimoia, where we had to lose a conple of hours buying meal and riee for the men. In the west rations are sarred by an allowance of calieo for a certain mumber of days; but here we have all the hether oif tratume with the mation. as atoth is not in so murh demmel, amd they want a variety of gools for therir food-stuffe-red whitwere
 rioe is grown in these distriats, but very little else
except Kaffir-corn. It is not that the soil is poor, as in most parts of Africa where we have been, but the native seems to have no ambition in the vietualing line beyond mush, and a bit of game, when he call get it. Manicaland is a rich comntry, not only in goh, hat in the (apmhilities of the soil; any tropical produets would thrive well if given ehance.

There is no very distinctive tribal mark among the Manicas and coast matives, exerpt that the men have the lohe of both cars slit and in the hole carry their smuff-hox-genemally the empty shell of a Martini cartridge. The women have the upper lip piereed, and insert a lead or silver plug with a flat round top on the ontside, like a reversed collar-stud.

We are now in the tsetse-fly belt. We passed seventeen wagms to-day that have been left to their fate on the velat for several months-the result of a rash ventwre on the part of a company to tramsport goods from Beira up into the interior. The "fly" killed off the oxen, numbering some four humbed and valued at seven pounds each, and so the wagons, of an arerage value of one hundred and thinty pounds, hand to bee ahamdoned. Most of them are now so dilapidated and seorelned by bush fires that it would not pay to remove them.

Mr. Bent, in describing his jomeney to the coast cast of the point where we throd northward, writes:
 seet (the tretse) are visible on the roatside. Dorans of wagons lie rotting in the veldt, bearing melancholy testimony to the failure of Messis. Heaney and Johmson's pionere seheme. Erepwher lin the hathing hones
s poor, as 1, hut the aling line all get it. In, hut in rts would mong the nell have wy their rini callreed, and of on the ed sevenir fate on ash ventorls from 1 off the altued at arerage (l) to he :upidated pay to

Holis intarolis of oly teslh1son's
linhes
of the oxen which dragred them; and at Mandigo is an abandoned hut filled to overflowing with the skins of these animals, awaiting the further development of the Punge traftic to he converted into roprs, or reims, as they are usually termed in south iffiras. Fully two thousam pomils' worth of wagons, we calculated, as we passed by on ome day's mareh, lies in the velat, ghost-like, as after a battle.
"Then there are Seoteh rarts of more or hess value, aud a hamdsome Cinge cart, which Mr. Rhodes hand to abandon on his way up to Mashonaland, contaning in the box-seat a bottle labeled 'Anti-fly Mixture'-a parorly on the situation.
"But the greatest paroly of all is at Sarmento itsolf, a Portuguese settlement on the banks of the Pmowe. Here two handsome coaches, made expressly in New Hampshire, in Americal, for the oreasion, lie deserted near the Portaguese hats. They are richly pianted with arabesques and pirtures on the pancls. 'Punewo Route to Mashonalame ' is written thereon in letters of gold. The comfortable enshons insite are being motheaten, and the apprombing mins will romplete the ruin of these handsome but ill-fater rehicles. Dealuwhile the Portnguese stand by and langh at the discomfiture of their British rivals in the thirst for gold. Even the signhoard, with 'To Mashonalam,' is m its plare. Aml all this elaborate preparation for the pioneer ronte has been rendered abortive bey that venomons little inseret, the tsentse-fly. In his zeal to carry out his contract, Major dohnson rommitted a great error and antailed an bromons amount of misery when he telegraphed that the Pungwe ronte was open, and dironlated alvertise-
ments to that effect, giving dates and hours which were never carried ont.
"Heaps of people, for the most part poor and imperunions, flocked to this entramee to their Eldorado, and, alfter waiting without anything, and in abject misery at Chimoia, had to return to Mapanda, where the condition of affairs was desperate-people dying of fever, the doctor himself ill, amd no food, for the Portnguese governor of News Firreira, Colonel Madera, boycotted the English and forbate the natives to loring them prorisions. Assistance was bronght to them by Dr. Todd, of the Marficieme; but many died, and the rest, disappointed and pemiless, had to retmrn to Cape Town."

We reached Makaka early on the 18th, having averaged twenty miles a day from Massikassi. We give the hoys a rest, and cross the Pungwe to-morrow. While waiting at this village, the fiat is demonstrated to us that "woman" is by no means to be considered the "weaker vessel" here. On expressing smrprise at the alsence of the usual lomging men aromd the kraal, while a whole crowd of women were husy stamping corn and singing their liveliest songs, the reason was given that this being the harvest time, the women had their hands full of work; and that as the men persisted in idling all the morning, and ronstantly getting in the way of their wives, the latter seized sticks and quickly mate a clearane of the male sex, who had semse mongh to offer no resistamee, seeing they were very much in the minority, but wore impressed with the parting order, that they were not to retmen without permission.

The river Pungwe here is about a hmolred yards brom, and presents a beantiful view from this point

## Fhich were

 and impemado, and, ect misery 'e the con; of fever, ortuguese boycotted them proDr. Todd, est, disapTown." ring avelWe give -morrow. onstrated onsidered rimise at oned the y stimpason was men had persisted ig in the (quickly - enough fin the gr order, sion. d yards is pointlooking down the strean, its many windings being seen to a great distanee shimmering in the smeshine, and the overhanging trees refleeted on the bosom of its dear, cool waters. We crossed early in the moming in a very primitive dug-out with the outlines of a boon(rang, the original shape of the trer, and proceded on our journey toward Sma, talking a comrse a little east of north.

We stopped at Mabute for breakfaci, ame I ham a long palaver with the hatives, who were exeredingly polite and respectful, the healman bringing mo al pres ent of meal and a fowl-a plain proof that white nemare rare in these parts. Gur fiaces and arms get pretty woll seratehed by the grass, which beromes still more rank and tall, in some places rearhing a height of fourteren feet. The hamionsmess of vegetation here is mankable. The immense fields of rorn now being reiled speak volmes, not only for the laml, lat for the diligence and industry of the women, who are, with few exerptions, of good physique, and possess ly mo means mpleasant features but for th disfigurment of the uper lip. They contrast an widely with the poor Mashonas as do their resped of comatries.

A sort of light hamboo grows in great abmante all along our route, valued hight by wagon-drivers in the Colony as whip-sticks. I vac sumprised to see, while passing through a kimal, a small hoy spiming a rough top, whipping it up with gereat vim be moanis of a barkwhip. I wondered if the indea was original with him. I find the matives we meet on the path or in the villages verycivil. The wombl make on awkwal attempt at a curtsey as we pass, while the men salute by performing
a kind of donhle-shumfe with their feet, readily answering any question, and frequently accompanying us long distances to guide us throngh the intriacies of the numerons tracks.
They preare a wey superior bark-doth hy entting from a sort of fig tree large felt-like masses of the bark. After soaking it in water for a short time it is hammered with wooden mallets on a smooth $\log$. When it is beaten out quite thin and all the holes neatly memded, by the aid of a very primitive native neede and fine fiber, it is again beaten with a mallet on which lines are eut, giving the finished cloth a ribhed apmeanace. If the portion of the tree from which this layer of bark has been taken is bound up tightly with phantainfiber, a new bark forms in process of time.

Since crossing the Pungre three lays ago we have bern gradnally ascending; but now, following the base of the Gorongoza Momtain, our highest altit ule has beell rearded, and we now begin to deseemb, kepping to the ridge of the tablelamb. Water is plentiful, and we come arross villages every few miles. On the plains to the east, buffalo, clamd, and zelna are to be fomm in great numbers; hut they keep clear of the hills.

On the evening of the 21 st we drossed the Kulmandzi, flowing sontheast. The stream was low romgh to permit of our wading it, its width being ahont forty yarls. But the serenery arery way we looked was bewtebmer -the water coming noidily dowi from the hills, rushing and dashing among the mmerons ligh boulders that oeruly the river-berl. We linger to mest for a while on the hank, so refreshing and cool it seems alter the long day's exhansting mardh. Wr have jnst emerged from
answerg us long s of the rutting the bark. is hambWhen it memded, and fille i•h lines aramee. layer of lanlatain-
we have the hase whe has ping to and we lains to hand in 1s. manlzi, to per yards. t(t) $111!$ , rushis that rile on (r) long from
the gloomy somberness of the primeval forest, throngh which we have been tramping for over five homs, and where the rays of the sme could scareely piepee through the dense and tangled herbage-the gigantic cable-like creepers festomed among the branches, parasites of enomons growth clinging to the ancirnt timbers, where stillness reigned mbroken by even the twitter of a bird or the sough of the wind.

Next day our path lay through a more open comutry, and the soil is no longer hand loan, hut rhanged to rongh marl, the small pebbles eansing the carrieps to complain much of sore feet. The grass and mulergrowth are shorter, and the general aspert of the comntry is not so pleasing as it mans been for the past fow days. Gorongoza Momitan is now behind us, and we have on our left the hills of Masama.

We crossed the river Nymildima about 9 ...м., and halted for breakfins by the beatitul Mumedeze. Fome hours more bronght us to Goveia, a Portuguese village muth the worse for wear. The resifint representatives of Portugal are thre men of middle age, the tallewt not exeecding five feet fom inches in height, and all of a very despairing appearamee, with a sort of tathe and resigned expression on their fine es, the result, I sulppose, of eight or nine years floing nothing. Ther kindly profteren we the use of one of the five liarge mat honses, once official residences, but for years bumerupiod, and crumbling back to mothere earth. Ss some of our "atrrieps belong to this district we gave all a day oft, comtiming our journey on the etth.

Wra have hand wo water for tell mites, and then only a small stagnant pool ; nime miles merre, aml wo ohtainal

a littlo by digrang in a dry river-bed. We saw at a long distaner large herds of antolones. Everywher there is evidenoe of penty of game, induling whmant hat as the season for grises fires has hegun, the larger amimals have bern driven rast. Anothor month the yomg grass will be sumging, and they will roturn; so that here we have onn of the finmet hamting-grommls in Africa, within tell dilys of tha seal.

Wir passed reveral small villages duming the day, hat all deserted, owing, pobaldy, to the satreity of water, or prinhes the late warr. Sion after starting on the
 altur which we fomme wo water for twelve miles, amb then only by diggong. On ramping the samm opmation hand to be repated before we conld get chomgh of the predons thid to prepire sidear. It this place I obsorved some women lyeing white alieo bark, by mems of a jot-blatek juice extuled from the pork of a trea; and, julding from the eloth wom the peope, that had been submitted to the process, the dye seems to be permement.

July 2bth. Having shpt last night in a hollow, we
 ing, amd by now fever "ame on. I stopered at a village to buy meal for the carriers. Again a hembman brought out a fine latge basketina of meal as a present to the white man. I gave him a jackkife in retmm. The attermoon marela was very hamp what with the hot fover amd not a drop of water for fourteen miles, it was 1! phay. The men were arying out for meat, hat exhamstion compelling me to lie down bey the waysule avery mile or two, l was quite mable to go into the

SilW at a Ewrywher

hollow, we this mornat at village lam hrought sent to the flum. The ith the hot niles, it was rat, hut exhe waysirle go into the

bush after game. Fortmately, howeror, I sighted a fine buck grazing about a handred and fifty yards from the path. On masing my ritle my land shook so murn that I had to lem against a tree to stmaly meself. I fired one shot and dropped him, hat hat to late the carcass in change of my gun-einrion unt the men should come up, for my month and throat folt as thengh it would be a case of spontancons combustion if 1 did not reach water soon. At last we arrived at a village where a mative took me to a hole, five feet deep, dug in the samd, with about half a gallon of water in it-not very nice, but never more apprediated.

The 27 th was mother thirsty day, thirteen dry miles, but the scenery magnifierent. With the exerption of the first twenty-five miles after leaving Gomia-of rough, stony, rather sterile eountry-the rest of the way has been a perfert pamoman of latuty, with mumerous fine palms and gigantic baohabs. The latter peraliar tree, to which nature has heen so liberal in the matter of trunk and so stingy in allowance of bramches on foliage, yieds large pords rontaining a substance tasting like cream of tartar, ant is often called the tartar tree. But the tree that apmarel most striking was a kint of large acacia, called by the matives "njeremjere." Its bark is wery smooth, bright sea-green in color, looking for all the work as if it hat beren treated to a roat of "Aspinall's enamel" from the roots to the tips of the smallest hranthes. It is nsed hy the river men for making paddes, and low all natives for producing fire. Almost every man carries a pinee of this woot about with him, and when he wants a blaze he bores a hole in the chmok, in which he phaces a little tinder or

specially prepared bark, and then, inserting a straight stick, which he hohls against his hean, by an ingenious arrangement of string he twirls the stick and in a short time smoke is sem to rise.

About sumbow we reached the village of Inyamacambe, a damghter of the late ( foveria. The chiof bronght us some homons and a basket of lovely swert oranges, the first we have seen in our joumey. I noticel with great pleasure a clump of lordiy mango trees, all in full bloom, making me think of Jamaica, as these were the first I had seen since leaving home.

Ir a straight ningenions if in at short of Inyamahiaff brought cort oranges, notiered with es, all in full ese were the

## CIIAPTER XIII.

## FROM SENA TO BLANTYHE.

T) my intense satisfaction we rathen sema hy fom ordoek on the afternoon of July 巳Sth. Five monthes ago I left the Zamberi at Kamongla, amt now see its broad waters again, hat a goonl deal mearer home, thank Gorl! It has taken fiftern days' artual mardhing to come from Massikassi, a distame of fally there hamdred miles, griving us an average of twenty miles a day: I am not math the worse, exapht that my feret amd largs are batly swollen; hut my next stare, I trust, will be aceomplished by boat, and they will get a rest.

Sema has evidently been a very important Portugnese settlement in days gone by. It las a large, strongly built stone fort, impreanathe to hostile natives ; the fine old arched gateway, the stones of which are time-wom, is an interesting sperimen of ameient matsonry. The town itself is wery scattered, and emsists of the sul)stantial dwellings of some sisty Portuguese inhabitants, and several trading stores combucted by banyams,

T'o wait twelve days for this promit was ont of the question; yet I was not very kern :homt vontming on the next stage of my journey mammen, thond a romutry abomuting in leopards and lions-won within half a mile of where we were stamding. A hat to prohibit the sale of gums or gmupowder to matives I "all quite understand; but to take from a hom travelar his only meams of defense in Africa, without the option of ohtaining a license, is a proweding that wom the lome guese would be ashamed of. I profestul, hat the ofticial was immovable, and there wats nothing for it bint to sulmit.

Chiromo is an important govermment stan, having
 the north and the Porturemes the south hank of the Ruo. The two British gmboats are hre, II. M. sis. "Herall" and "Mostuito." I spunt a phasint wroning on board the "Hherah" ley invitation of Commander Robertson, meeting the ofiniors and dertors of both vessels.

I songht out Mr. Simpsom, a S.ootch trader, who has a large store and has done an extomsin hasiness bere anong the matives for many yatrs. Ha gave me a hearty welcome, and pressent me to stay with him a couple of clays, promising to get me carrices for the owerland jomey to Blantyre. Mr. Simpeon complains bitterly-and I fear not withont reason-of the athinin-
istration of British Central Africa (now ineorporated with the British South African (ompany) by Her Majesty's commissioner, who exerecises his anthority in such a peremptory and bullying manner, through his Zanzibari and Sikhs, that a great deal of diseontent is rapidly springing $u p$ among the rlicefs, who derlate that they have never given owe their eometry to the English. A tax of six shillings ber ammm is leviol by the British upon every male mative over fomeren pars of agre, white the Porthguese demand only one runere, resulting in some of the natives going over to the latter, while others are threateming resistance to the umrasonable and minust demands made upon them, from which they derive no return or benefit whatever.

It strurk me as being mather perentian that I should have been required to take ont a license in order to pass through Mashonalamp; and now on coming again into British possessions, so callen, to be deprived of my rifle, in a combtry where it is alosolutely indispensable, not only in procming meat, but as a means of defonse against widd amimals, strikes me as being more peruliar still. Only gesterday Mr. Simpson came adorss a lion and lioness with two cubs, within a mile of (amp.

Satmeday, August 6th. There has been a great deal of disputing on the station as to the day of the week, some maintaining that it is Friday, others Saturday. I settled the matter in this way: having purchased at Sena a small basket of egres for use on the journey, and knowing how many I had at starting and the number used each day, the arithmetical problem resulted in fivor of Saturday.

On Tuesday I got earriers together and started at
neorporated ly Her Mamithority in through his liseontent is who derlate intry to the is leviod ly wrems yons y y one run", to the latter, the umreasonfrom which

1at I should order to pass gr again into 1 of my rifle, pensalhle, not of defense hore peculiar uross a lion camp. a sreat deal of the week, Saturday. I urchased at the journey, nd the numi resulted in
started at

11 A.m. overhmel for Kathega. Murh of the journey was vory rough, on arromit of the long grims and thormhash. We passerl Nona ahout $\because$ b.m., and arrived at Masanjeras a little before fise in the arming, making eighteen miles. I fommat a white man in a good-sizend honse, which he had huilt for the purpose of ordasional trading. In kindly oftored mo a sheltor for the night. Next morning we contimed oll jonboley through the farful grass. 'the ruggel loophath was very matow, winding along the base of the 'lyolo Momatain all the way. We sighterl large herds of hutfialo amel waterburk. Patm trees are ahmulant on the plain, and somo arre very hamdsome. This valley is thiokly pepulated. We passed mane villages during the day, the langest, Mhewe, close to the Shire. 'The chicf, Manuire, quite a young man, came out to greet us, with some two handreal natives at his heels; he hade me geon-eroning very cheorfully in English. I aftoward learnod that he hat been for some time at the Blantyre mission, and bears a good reputation among the white poople of the country.

The sun was setting, and wo pressed on to serk a canping-place for the night; we pitched on a spot clear of erpass, right on the river-hamk. Mosquitons attankend us in hordes, which, with the frequent harking of leopards, the low growl of a lion in our near ricinity, the constant snorting of hippos, ant the ceric comseionsness of our defenseless position, premitted no sleep (for which I have to thamk the unfair exaldions of official(lom). At break of day we continued to follow the river-bank, passing a village abont every twenty minutes, and reachar $K:$ tunga abont 9 a.m. I turned into
the premises of the Afriman Lakis Company, where Mr. Baird is manager, who sent out to get earriers for Blantyre; and, as by the time they were all collerted it was late in the aftemoon, I decided to stay matil next morning. Wo started embly, crossing the phan toward the hills, commencing the aseont about eight ordock. We han stiff elimbing for a couphe of hours, then the road, dug out of the momatain-side, was tolmahly lovel and in gool order. We got some fine glimpses of the Shiré Valley from our high altitule. By is r.m. we passed the fortress-like store of the African Lakes Company at Mandala, and in fifteen minutes more were in Blantyre.

I met Dr. Scott, who took me to the Manse, where I was introluced to the missionary in charge (foro tem.), Res. A. Heatherwick. The magnifierent rhareh, the substantial and home-like residener, the arowis of hoys and girls being trained by the mission, have all bern so well and frequently deseribed that a detailed sketeh of them bye is umeerssary. I lemond that the rompany's stemer, "Domiza," would not be down to the south end of Nyasia for some ten days. This is disalppointing, but camot be helped, as I must go and see the stations on the famous lake before retmrning home; besides, doubtless letters are awating me at Bambawe, which I must get somehow. Were it not that I longed with an intense geaming to get bald home, I could put in a few weoks at Blantyre very happily; and I mach require the rest this beantiful spot and pleasant surrommtings afford.

I visited Mandala, headquarters of the African Lakes Compmy, where a large trade is carried on with the
uy, where carriers for rolleated it mutil maxt laill towarl sht ordork. ss, then the rably level peses of the : : p.an. we Lakes ('omore were in ise, where I - ( (pro tem.), rhimerl, the ards of boys ve all ham iiled skitel at the comown to the (is: is disin)go ind see hing home; t Bamlawe, nat I louged I could put :mind I murh easiant sur-
matives, and through whom supplies are forwarded to brand stations, and to the varions missionaries on the hake. Bat areounts of the disturbed combition of the
 of a fresh outhrak was daily expertand, the hostility of
 ressful in wiming ower the momerons rhiofs to thair side. To this mer be adderl, as a masom for diseontront, the mahalministration of Her Majowstys commissionere, who sames to possess mo primiple and no poliny in dirertine the atfiniss of the combtry, execpt the very questionalike one of "might is right."

On Sumbay I attembed the varions sorvires in the "hareh, the rongregration "onsisting whelly of the two humbed mative hoys and wirls umber instrindion and boarded on the mission premises. 'The form of sirpviere, though nominally that of the Estahlishme Chumen of Scotlam, contrasted strangery with the simplicity to whicla I had been aceustomed in my hoyhood in the LIighlames of Siotlamb. It elowere resembled the more ceremonions rithal of the Chure of Ehghandthe surplied clergyman, the proescional whitr-rohed dooir, intoned pravers, tuming to the mas during the repertion of the Creat, tapers on the altar, rambingdesk on one side of the chaneel amd pulpit on the othere, ete. But perhaps this is the form countenamerd ley the Church of Scotland in modern times. Dr. Seott ronducted service in the morning, Mr. Heatherwirk in the evening; both of them arr evidently zealons and drvoted men. The former is indefatigable in his attembance on the sick of the district, incluting all classes, whether belonging to the mission or not. No jommey
is too long, no hour umreasonable for him, provided the call comes trom a sufferer.

The gromels around the mission are very fine; much has heen done in planting trees of cuealyptus, cypress, fir, ete., by a Scotch gardener who has been here for many years. I visited the little eometery near hy, the last resting-plaee of some twenty-three white people who have died here, in almost every instamer from fever. One grave, that of a man mamed lemehman, surgested a temible lesson to those famaties, now so numerous, who have either come or intend eoming to Africa as missionaries on the "faith alone" plam. 'This man came up the river last yoar with his wife and two children. Although warned again amed again mot to nttompt traveling in Africa without some tangible means of providing for his family, his only answer was the stock phrase, "The Lond will provide" Arriving at Blantyre, he left his fimily in charge of the missionaries and proceeded to Angoniland, where he proposed to establish a station. Alfor a short time he returned to Blantyre, amd, taking his wife and children with him, set off again, provided with but a menger suphly of provisions and a very small quantity of harter goods. A few weeks sufficed to open his eyes to the blunder he had committed. The natives, diseovering that he was mable to pay his way, coolly boyrotted him, refusing even to supply them with food, until they were brought to the last extremes of distress. He persisted in his sufferings; hut his wife, having common sonse as well as filith, dispatched a letter to the Afriam Lakes Company begring for men to briag them back. Ihis was promptly done, the Blantyre mission taking ns, cypress, en lieato for lear by, the liste people tance from Henchman, ics, how so 1 coming to plan. 'This ife and two sain mot to ne tangible mly answer ovile." Arnarge of the l, where he short time fe and chilnut a meager tity of ballhis eyes to s, diswovery hoyonted 1, until they ss. He perug common the Africum them baick. sion tilking
them in and providing for them again. The babble of Henchnan's dream ragarding a mission supported by "faith alone" laving burst, it was now either work or want. Ite sought and obtained employment at roadmaking, muler the administration. But a fow months of tent life and exposire to the sim were too mumh for him; repenated attarks of frever so disableed him that he hand to seek blantyre omer more, this time too late. In three days the died, leaving his wife and children atome in Centrial Afriva, among strangers.
One might imagine that surh ane example would deter others from hazarding their livers in foothardy attempts to prove that the present eystem of missions in Africat -reeciving their support from home-is all a : :stake. But no! Such men are too obstinate to lee lod hy any remsel other than their own comerit. Only this morning, August eoth, I have been to see a delicate litthe shalow of a girl, ten yars of age apmently dying of ferer, in a hut mar Mandiala. She was bromght here by her father, a Mr. Booth, who, with a amplamion namen Mangin, arrivel a week ago, with the intention, as they say, of commeneing a phan of opreations in mission work, which, with the atid of humberd, of the same mime as themselves, who are to follow som, is to result in the exangelization of all Africa during the present embluy. They are provisionel for only a few monthes, and almost pemilhes. I have idwised Booth, for the sake of his poor litthe motherless chill, if for nothing olse, to albudm his mad theory and wo hemer but he laughed at the bare idea, and pitied my lack of faitli, assuring me of his comitionner that he hais a grait work here to perform. To all anparame he is quite
prepared to sacrifice his only child to the hallucination that possesses him.

August 26th. I have just returned from the mission cemetery, where we have laid the horly of the young man Mangin, already referred to, hy the sithe of poor Homehmam. The door to his berembiar mission did not opro up before him as readily as he had antiripated, and meressity compelled him to aroplt employment in a brick-field. But three days' fever, and his earer is closed. By this sam event Booth's faith has received a rude shock; but will it bring him to his sonses? Oh no! like the Zulu savige, who courts death in the hattlefield, or the Hindoo fanatic, who throws himself bencath the wheels of the Juggermant car, he believes that surh a sacrifiee will merit a great reward in the world to come.

In missionary specehes we have heard such expressions as, "The survivors will pass over the slain in the tremelnes and take the Afrioan fortress for the Lord."* This somuls very brave, but it is questionable if the canse of missions might not be better served by the arloption of a course less tragic; ant if, instean of courting a martyrs death by following the impulses of ill-balanced mimis, these enthusiasts would hut submit to be guided by the comsel ant practical experience of gorly men, who for years have adopted measumes suggested by the knowledge they have alequired of the country and its people, for the effective promulgation of the gospel of Christ. The time has arrived when this sul,jecet demands of all who are seriously interested in Africa's missions a full, tree, and dispassionate discussion.

The Rev. Dr. Ellinwood, in The Missionary Revicu of the W'orld for December, 1s00, speaks out so faithfully and to the point that re camot refiain from giving here a portion, at least, of his able artiche:
"It seems desirable that the foreign missionary enterprise shall be so administered as to quicken the faith and aronse the zeal of the whole churel, mather than to encourage the iflea that it is to be carriod on by the conspichous self-tenial and self-immolation of a few.
"There is needed a faith which, instead of dispensing with the use of means, shall lead to a great increase of means; which shall, on all hands, call forth more praying and more generons giving; which shall inspire selfdenial not merely in some sickly swamp in Africa, but in the wealthy and comfortable Christian homes of' Americal.
"The world camot be comberted by a fow startling object-lessons in toil and suffering. Wre are not ancamped before Philistines, whom it is Gonl's purpose to eonquer by the faith and valor of a faw Davids while the hosts of Israel simply stand still and see the salvation of the Lord. Instead of a bendit there may ber positive injury in such examples. Thery involve a false theory of Christian duty; they exense the arariadens and ease-loving; they seem to remose the burden o! responsibility from the chureh as a whold. Not only do the missionaries need fixed and reliahle salamies, to free them from anxioty and kerp, them in health and secure their suceess, but the ehureh meress to pu!! these salaries. Its own spiritual life demands at last that smath share of the common hurden, and any theory which mantains that a fixed support is not moerssary
for foreign missionaries, and which so far removes responsilitity from those who stay at home, is a downright injury to the whole spiritual life of Christian lants, and in the end will retard the conversion of the world instead of hastening it.
"Such theories do harm upon the mission fields as well as at home. I am aware that the phat has been made that Orientals are aceustomed to assoriate habits of self-mortifieation with religion, and that they will he more readily influenced by men who are in a sense asceties; but there is amother side to this matter. Aseetieism has for ages proved useless and abortive, and what is now needed is the plain, mostentations, and vigorous devotion of an alert amt healthy (hristian life. The gospel of common sense is inwoven with the grospel of redemption, and where this is wanting positive harm is done.
"What are the recent facts in this comection, and what has been their inflnence? Nine missionaries sent out in comnection with what is known as the 'Kimsas Movement' were landed, some months sinee, at Sierra Leone. None can doult the sincerity of their derotion.
"They hat doubtless been pained by the critieisms of a worldy churcla upon the 'luxuries of fordign missionaries, and they resolved to cast themselves on the Lord, and without salary, and withont even medieal rare, derote themselves to the estaldishment of a mission in western Soudan.
"For the sequel we refer the reader to the statements recently published by the authorities at Sierra Leone. The British minister at Washington has lately transmitted to the Department of State a letter from the e, is a lownof Cluristian ersion of the sion fields as da has been sor iate halits t they will be in a semse asatter. Ascetabortive, and matations, and thy Christian inwoven with is is wanting minection, and ssionaries sent : the 'Kansas inre, at Sierra heir devotion. ecriticisms of reign missionson the Lord, dieal care, dea mission in the statements Sierra Leone. S lately transtter from the
governor of Sierra Leone, including a report from the colonial surgeon at Freetorin relative to the case of the nine American missionaries at that pare. The report states that upon their arrival they hergan to liva in mative fashion, eating natire foorl, cooking and washing for themselves, and even collowting their own fore in the rainy season, hoping thus to gain the confidener of the matives. On the 9 th of July two of the party dient, both of whom had been such stanch believers in taith cure that they had taken no merlicine. Two days atter, a third died of exhenstion, from negleded in ere, having been ill for nine days. As the fouth pationt in the list refused the services of the physiciam, the latter reported to the govergor that the missiomariss, hy the course pursued, had originated a malignant typ of fever, which embangered the whol commmuity. He therefore quarantined the house, and advised that the survivors of the party be sent hack to Ameria. Vpon this the patient consented to be treatend.
"Nothing could possibly produce a more unfavorable impression upon a commmity of foreign residents, in regarl to the whole work of missions, than an event of this kind:
"And pullic sentiment throughont Christmilom will condemm not so much the misguided young missionaries as that self-excusing sentiment in the chureh which sems to call for such sacrifices. So long as a missionary camot receive a molest salary without being exposed to criticeism by those who ought to be his cheerful supporters; so long as there are thonsands of moneygetting Christians who are realy to say of the faith missionary, 'There is the man that I believe in; he is
not after the loaves and fishes; la is not going to live in luxury, ate.-so long will sensitive yomen mon be found who would mather buve danger, and even death itself, than to depend on such grouging smporters. At Siemat Leone starvation led to ferer and death, and by all aroomists rame near to breeding a pestilence; yet peope will soon forget it, and the plea of 'cheap missionaries' will be remewed.
" Is it cuite somud, either as theology or as fact, to assume that fool intemis a different masure of fiath and a less regard to means on the forming fielles than in the work at home? ls there any mone reason to suppose that a fortuitons support an be relied upon for missionaries that for our own pastors? The whole theory of 'laith missions' proves too murh; for, mess it be assmmed that Gor has two different reomomies for the work of the chureh, then every department and every interest onght to be commueted uren trost, and all salatries, all pledges, atl contracts, should be dispensed with.
"The intervention of broad oceans does not change the gemeral laws of Christian service nor invalidate anywhere the divinely anthorized principle that 'the bahorer is worthy of his hire.'
"Nay, a glamanted support is even more indispensahe on the foreign fied than at home. If one is to carry economy to the verge of starvation anywhere in Christ's service, a salage commmity in a malarions comntry is the very last place for the experiment. If the ministry wannot be self-supported in this comitry, where they are surounded by friends and abundant resources of every kind and a great variety of occupations which open before them, how murh less in an African com-
eving to live ming men be 1 even demoth porter's. $\quad \Lambda t$ math, and ly stilence; yot 'cheap, missis fact, to ansof faith antul ; than in the tos sumpe pon for miswhole theory muless it be mies for the it and exיy :mel all salapensed with. not change pr invalidate le that 'the
sindispensalle is to canry re in Christ's is comutry is the ministry where they resources of tions which frie:an com-
manity, where labor of exary kimd ram be semmed for a pittaner, where few comforts of life can be fomm at the best, where no business momprise presents itself as a possibility, and where any missionary, umbertaking to live as the matives live, must be almost motain of sickness amd death.
"Ther vorst of all in these rash experiments is the semling out of married ment, with the increased hazards that must rome to a family. If singre men were disposed to take such risks alone, as an explomer womb renture into an mbnown region, the akse wonld be somewhat less serious; though no exporer wom pros eents without a thorongh ontfit of supplies and the means of preserving health.
"It may be safe to assmme that mo man has a risht to expose a young wife to the perils of surl a sithation, subjere as she must be to the incidents of manien libe, and with all the aditional burdens and trials whirh a womall must ancomiter. . . .
" . Whout a year ago a letter was received froan a young missionary who felt that must yield to pophlar eritirism and live on a much a...aller salary than that which was assignod to him, whith was about seron hombed dollars. The proposed to dissolve his combertion with the boart and throw himself for support unon the students of one of our colleges. I urged him to "omsider carefully the subjeet, since, irrespective of the quastion of amome in salary, it would tend to disserer tha stu. dents' movement from the regnlar organzed hoards of the different demominations, which would be a calamity. Many months passed before a reply came, at the mind of which time he informed me that he had tried the experi-
ment thoroughly of living on half salury, mative food mul in mative honses, mul had given it up.
"Ilo had tried honestly and earnestly to commend himself to the people, who, as he supposed, would be influmord ly on who came nearer to their idens of what a religions man should be. But he found he was only despised, and that he really made no impression for grood. He lived too well to pass for a fakir, and not well buongh to claim respect as a missionary. He was neither one thing nor the other. By the Hindoo community he was looked upon as a foreign tramp. He had made a conseientious and heroie effort, and his experience should inspire the young men of our comtry with zeal, coupled with just views of the missionary work."
native food
commend 1, would be sir ideas of und he was impression kir, and not y. He was Iindoo comtramp. He ort, and his of our collue missionary

## CHAPTER XIV.

## Flom Nyasa to chinde.

Bush fires.-A atrong current mud hemil wind.-Myrinds of rod mits.-

$\mathrm{O}^{\mathrm{s}}$the 28th news arrived that the stemmship" Domira" is mable, on accome of shallows, to come farther down the river than Mponda, the southern extremity of the lake, where she is now at anchor. 'This neeessitates a tedions jommey of several lays pulling hard against the stream; lont in rompany with the raptain, in whose boat I will make the trip, we started early this morning for Matope, a distance of thirty-five miles. There is nothing very interesting on the roan; once away from the vicinity of such places as Blantyre, Zomba, or the Melangi Hills, it requires a party of it very sanguine temperament to see the beantios of the Shire Highlands. The ordinary traveler sees only the drooping and sapless foliage of the smostricken and stunted trees, surrounded by tall wiry grass; whild at this season the atmosphere is thick with smoke from the bush fires that amually sweep over the whole comntry, leaving it for a time a blackened waste.

Every few miles we come uon these bush fires hazing furionsly on both sides of the path; but we mako a rom for it, and get through with only a sniff of the flames. The mative systrm of rultivation is responsible, in a great measure, for the wintry asperet murh of the lamescape presents, particularly where there is a large population. They shift to a fresh spet of land arey secom or thire yend demmeng the larger trees of their bramehes and felling the smaller ones three freet from the ground, laving the hrush to dry amd wither, when it is gathered into hemps before the bainy seasom and bmed. The next process is simply making a hole hy a stroke or two of the hoe, dropping in'a frey grains of maize, covering them up with another stroke, and so on, until the fied is sown ont. Thery see no good in planting bamamas, coffee, cotton or fruit treas, as they are seldom long emongh in one plate to map arops that require years to matme.

The present almost prohihitive freights eharged hy river stemmers from the coast to Katmga, and rice cersit, must serionsly militate against the rapid andioultural development of the Shire Highlands, as the high rates must leave but a small margin to the growers who wish to export cotton, coffee, ete. In the case of some products, such as sugar, it would cost more to tramsport to Chinde than it would realize in the Lon.don manket. The construction of a milway, as far as Ruo at least, is the only remedy; for, even if the charges were less by water, navigation on the Shire gets more difficult every year. The river has never been known as low as it is now, while the sandbanks are constantly but we make 1 suiff of the in is responaspeect much here there is fresh spot of ug the larger smialler comes lurush to dry ips before the wess is simply hoo, dropping a 1 , with inis sown out. ffee, cotton or wh in one phace
ts charged by mga, and rice rapil agrimends, as the high o the growers In the case of cost more to ze in the lonlway, as fin as nif the charges fhiré gets more er been known are constantly
changing, and pilots find the chamels of one week the shallows of the mext.

Next morning we had our boat loadden, and started up the Shirg against a strong current and a head wind. Having two sets of loatmon, we emtimued to move along slowly but surely mutil late, when we stopped for the night. I spread my bed moler the caves of a mat tive hut, preferring the ontside to the inside, as being less likely to encomer the disagrecable kind of company fomm in these domiciles gemerally. I was just becoming oblivions to earthly things, when 1 stalted $u_{1}$, with a sensation of being tiekled in the fitee by a number of red-hot need es. Striking a light, I fomm myself besieged hy myrials of forocions reat ants. The only reliable weapon of defense against sum an attark is fire, and this l wiolded so rffertively for hatf an homr, that I hat, at last, the satisfaction of seming the enemy ronted with great slanghter, and was able to rest for the balane of the night in peace.

One speries of vermin that infests the native huts, in addition to the trio usually acempamying sumator and dirt, is the horrible tampan, resombling a tidk in size and shape, but of a dingy bark color. Its bitu is very painful, and produres a swolling that remains for some time after the biming semsation from the poison has passed away, often induring forer. In some hats they can be gathered up in dozens from the barthen floms, and on aceount of this the traveler cam seddom aroept the shelter of a mative dwelling. A hivonate eren in the rain is preferable to the torture of being bitten by tampans.

Next morning we shoved off again, keeping a sharp lookout for the hippos, which keep bobbing up umpleasantly near our heavily laden boat. They seem more ready to go for intruders on their domain at this season, as many of them are accompanied by their young, some not larger than an ordinary pig, and often seen standing on the back of their dam.

We reached Milouries village after midnight. I avoided the luts this time by placing my mat in the open yard, to the lee of a reed fence; but a strong wind with frequent showers of rain made it anything but comfortable. Early in the morning we moved out into the stream onee more, determined, if possible, to reach Mponda without further stophages. The boys, being promised a fathom of cloth extra pay, consented to row all night. This proved rather risky, as toward the small hours of the morning, when the eaptain and myself were enjoying "forty winks," yells from the boatmen and the sudden upheaval of the boat brought us to our feet. We felt sure that the next minnte would find us struggling in the river; but, happily, our two tons of eargo were not so easily tipped over, and wo escaped a ducking. It was only a drowsy hippo trying to balance us on its back, in rather shallow water.

About nine o'elock on Friday morning we entered Lake Pomalombe, the oars stirring up the yellow mud at every stroke. We crossed the lake in six hours, and before dark got alongside the "Domira" as she lay at anchor in the stream opposite Mponda. I am sorry to learn that slo will not sail for some three days yet; for although she has been lying here for ten days already, there is not a single package of her cargo on
ping a sharp r up unpleasy seem more 1 at this seatheir young, d often seen vidnight. I $y$ mat in the strong wind nything but ved out into ble, to reach boys, being ented to row toward the ain and mym the boatbrought us inute would ily, our two ver, and wo ippo trying water. we entered yellow mud chours, and she lay at I am sorry e days yet; en days al1 cargo oul
board. I find I have four fellow-passengers, who came up the river a few days ago; three of them are yomer missionaries-two, Gemans, for the north em of the lake, and one, an Englishman, for the Lniversities Mission at Lokomo; the fourth is one of the "ompanyss agents. As the passenger acommodation is limitad to two small bunks, some of us have to shift on deek as best we can.

On the west bank of the Shire the native rity of Mponda stretches ont for a great distame-the largenst collertion of native huts we haw sem in Africa. The population consists mostly of Yaos and Nyanges. The only attempt at mission work among them was made some years ago by four Jesuit priests; hat they fomm the place too mhealthy to remain more than a fow months, when they retired from the field and went to work at Tanganyika.

There is but little confidener placed in the professed frieudship of the chief, and he is guiet only from fear of the big gums that look over on him from the opposite bank at Fort Johnson. This fort has been ronstructed as the headquarters of the Britisl: administ altion, and is garrisoned ly abont twenty Imlian Sikhs and a few Zanzibari. There is nothing very imposing about the fort proper, it being little better than a low bank of sand thrown up in the form of a square, amb surrounded by a ditch.

We got up steam at 10.30 A.m. on Theselay, making "Monkey Bay" hy smset, where we dropped amblhor for the night. This is a smug and pretty little harthor, with plenty of watrer, and hemmed in hy hills on all sides, execpt the narow entranere. A vessel would be
safe here from almost any storm. Next moming we wore delayed for several hous taking on a smply of firewoot. This rompleted, we starten again, and reathed (ape Mr Lear !y nom. I went ashore to sere the Livingstonia mission station, where a mative teareher is in - hatres, and, lan informed, doing a good work among the childrem of the distrixt. IIr is a quiet, smaible, massuming young man, and speaks a little English; lant for him, this would be truly a deserted and dreary spot.

There are several large haidings composing the mission premises. 'These are the results of the carly labors of white missionaries, who were ond after another ant off herer, fom or five during as many yours, ind lathing the lamentel br. William Black, the position of whose grave is indieated in the photograph hy the Inonze medallion amd tablet rivered to the rock, at the losid-a loving tribute to his memory from friends in Sootlam. This was sulficiont waming not to persist in werupring the station hy Europeans; for though phanted in a lowely spot arionnd hy granite momntains cland to the summit with small trees, it is hat a frew feet ahove the law of the lake, hemee a very hotbed of malarial watatations. The survions deceided to move northward and tramster the mission renter to Bamdiawe.
Wr left Cape Mredear the same evening and rrossed the lake to Maganga, where we left some letters and parkages for the Mrera missionaries. The moon rose might amb dear on the plarid watars as the shipes pow turned out to the deep. Far into the night we sat no anjoying the delights of a moonlight trip on Nyasa;
molning we 11 a sulply of 11, and reachered , see tha Livtrachere is in work amonge nict. samsible, tthe English; a and dreary $\operatorname{sing}$ the miscurly labors another cout rars, inuludposition of "aph by the rock, at the n frients in to persist for thonght ite momentit is lint a a wry hotus dereitend 12 (winter to Ind (rossed ctters: and hoon rose hip's prow we sat 11 Nyasa;

but as the morning broke there was every ovidence that we were soon to get a taste of the opposite extreme. The sky became of a dull leaben color, overcast by dark, lowering ciouds, sharp gasts of wind increasing in fremuency and forer, until Nyasa could scarcely be recognized as the same lake that only a few hours ago lay around us a very pirture of tramquillity. Now lashed into a fury, its great waves swept the deeks and threatened to swamp our sturdy little craft as she bravely healded to the wind shipping tons of water at each dip of her prow. We were rompelied to pass Kotakota without calling, lest we might be driven ashore. Most of the day the storm continmed, but toward evening the wind abated, subsiding as suddenly as it had arisen.

In the afternoon a number of $\Lambda$ tonga laborers were being paid off previous to landing them at one of the ports on the lake shore. One of them was husy tying up his buadle of cloth, and w!ile spreating out and admiring half a yard of Turkey-red, the wind whipped it out of his fingers and blew it overhoart. In an instant the owner dropped his loin-cloth, and over the rails he went with a jump, feet first into the water. As he rose to the surface he spied his precions twopenceworth on the crest of a wave, and struck out boldy until he reached it. Fortmately for him, there were some repairs going on in the engine-room, and we were at only half speed; even then, by the time he turned round to come back he was half a mile astern. The captain good-naturedly put about the ship and proked him up.

By 9 p.an. Thursday we were anchored off Bandawe,
and, late as the hour was, went ashore in the ship's hoat to get my letters; having been fourteen months without a single word from home, I could not wait matil morning, now that I was so near. On landing, we made for the mission honse, hat on reaching it I was almost breathless. The congl, which during the last few days' rest on the water had eased off a little, became aggravated by the short walk through the deep, stiff black sand, and a severe paroxysm came on, so that it was some time before I could speak. All the inmates had retired except Dr. Elmslic, who handed me the longed-for package. But the latest from Jamaica is dated December 13,1891 , so that there is still a hlank of nine months; surely some of my letters must have gone astray. I trudged back to my shakedown on the ship's deck. A high breeze was blowing, but the night was not cold.

Next morning I returned to Bandawe Station, so as to visit it by daylight. Dr. Elmslie gave me a cordial invitation to stay there until the return of the steamer from Karonga, when I purposed proceeding to Lokomo. Bandawe is situated on a sandy promontory, bounded on the west by the Angoni Mountains, about a humdred and seventy miles north of Mponda. The mission premises, which are built of brick, with grass roofs, form a straight line, running north and south, consisting of dwellings, school or meeting-honse, curpenter's shop, and printing-room. Lake all other stations on the flat lake shore, it is far from healthy. The heat is intense, and although the soil is deep sand, within a few inches of the surface it is quite moist, giving off an unwholesome vapor from the accumulation of
the ship's en months not wait n landing, whing it I during the off a little, h the deep, tme onl, so 8. All the handod me m Jamaica till a blank must have own on the it the night ation, so as e a cordial he stemmer to Lokomo. y, bounted put a humthe mission rass roofs, th, consistcarpenter's tations on The heat is 1, within a ist, giving ulation of
organic matter swept down from the adjoining hills every year. Here, as we have noted elsewhere, the missionaries have tried to grow ahost every kind of English vegetables, but without sureess. They are obliged to depend mainly on imported food-stuftis, with occasional supplies of sweet potators from the hills.

The chief feature of the Bandawe mission is its harge day-school. A number of the boys are boarters, hat a good many come from the neighboring villages as day-scholars. The natives are now beximing to appreciate education, but it has been a long, hard struggle to attain even this; for here, as on the Zambesi, many abandon the pursuit of knowledg after the first week or two, when wages for "working book" is demink them. But one and all fully realize the benefits acerning from the presence of the missionaries among them, not only for the medical aid they receive, but also protection, as attacks from hostile tribes or the slavetraders are now rare.

In reference to the latter, it mast be said that, while there can be no question that a very extensive traffe in "black ivory" still exists around Nyasa, and while it will ever be the eamest purpose of every tron frimel of the African to do all that (am be done to stamp ont this fearful scourge, we must take eare that mere sentiment is not permitter to control the pen that reports the doings of the Arabs and their native allies. That this is no imaginary damger is comelnsive from facts gathered during our sojoum in these regions. For example: a leaflet aldressed to the chidhen of the Free Chureh of Scotland, in the form of a letter from a missionary at the worth end of the lake, headed
"___s Three Hundred Slave Children," reads as follows:
"All my little scholars at the school are from the Wankomet villages-the very children that the Arabs fought for und longed to enslave. They are, every one of them, maked und helpless. Gowl liss reseued them from the slaver's ermel hand, and they look to ms. Could not the children of the Sabhath-schools at home do a little for the three hundred naked, helpless Wimkoule children whom we have graciously saved from the cruel goree-stick and slavery?"

What these statements are worth may be gathered from the following facts. In the first place, the children referred to never were slaves, and therefore not oljgects for rescue (even to use his own words, the Arabs only "longed to chsluce them"), but attend a seliool organized some years ago by Mr. Fotheringham. Moreover, they are provided with both food aml lodgings by their parents, who in almost every ease live in the villages of the neighborhood. Nor are they or their parents in any way soliciting commiseration, seeing that their lot is east in one of the richest and most productive parts of Nyasaland, and that they are exposed perhaps less than most tribes to Arab raids, protected, as they are, by the guns on the fort of the African Lakes Company.

What has been the result of this pathetic account of slave rescue? Why, the people of Scotland could not be deaf to such an appeal, and in a brief space twelve hundred pounds were contributed. What has been done with it? Nothing! because the object for which it was given existed only on paper.
from the the Arabs every one cued them ok to us. s at home less Wanived from gathered , the chilrefore not vords, the attend a eringham. and lodgse live in $y$ or their m , seeing and most $y$ are exal, raids, n't of the ccount of could not ce twelve has been or which

Such poliey on the part of mer man is smicidal to the canse he seeks to advaluee 'There are phente of gemine and just clams on the sympathins of the hrmeokent, withoit romjuring up surh garns as this. Philanthoppists do not like being suld any more than shases, mul the mext mall, thongh prohally desserving, will suther in conssumen

Dr. Elmslie hat his ardor sommenthen dampen on the question of liherating slaves last werk. Hraring that
 of miles from the station, three temethers with a fow lanks took thoir gums and starten off to interview the half-hmeds in elarge. On the appentane of the mission beys in the ramp, the supposed shares, suspereting that white men were not fine off and faring tronbla, took to thair heres. Many of the ramain followem suit, leaving diftern of their momber, mostly women, behind. These the trachers broturlt ont to bandawe, where comfortalh hats were assighed them allil phents of food, althongh, on the whote, they hid not appeire to have sutfered mund on the manell. The doedor sat down forthwith to report the eiremmstame to the home: committee; but what was his surprise mext moming, on visiting their hats, for the purpose of whathinger fuller information conrerning them, to finl that, with the exeeption of one woman and her ertikl, the whole gathe of diptomed shaves hatd rom away during the night, and returued to the pory people from whon they hat heom mesened the dey before Rather all me romantie termination to the alfair. But it teaches the important lesson that we must diseriminate between slave-trading and domestice slandy.

The whole life of Central Atriea is permented with a system of shavery, which the matives themselves have no desire to ser abolished, althongh it must come in time. But high-hamded measures will areomplish little in this direction; rather lat forer be comenentrated to arrest the cruel and bloody work of the Arabs, who mid and capture slaves for aimen only.

I sumededed in taking several photos of groups of native women who were empleyed on the premises as latherers in the construction of a dwelling-honse. I here give one of these groups. Those in the foreground are mostly oll women, showing the deformity of the features produced lis wearing the prefere in the upner lip. This repulsive anstom is mot combined to the ohd; but no soomer was the ramera placed in position ami my head hidden beneath the formsing-reloth, than up went the hands of the younger women to their monthe, and the rings, cte., wore whipped ont quide as a wink. 'The ohl women, howerer, are less semsitive, and in then this lip "improver" rearhes the maximm of size, in somm cases to menly the diameter of a mat kin ring; and when sum attempt a smile, the eontraction of the risorial museles throws the lip up with a jerk, and forms a circle roumd the tip of their that pugnoses that peep through the operning, while a row of V-shapert, cat-like terth is displayed, giving the wemer a most ludicrous appearame.
'The girls have their lips piemed when very yomge A straw or thered is inserted to keep the hold opern; then a small piece of hamboo or houre, gradmally indreasing in size, matil the orthodox ring eam be worn. But the pelele assmmes many forms-a hit of ivory, or wood
shaped like a cotton :ar, or, what is greatly admired, a pieee of white quart\% from an inch to two inches in length, looking very much as if they hand stark in the end of at wax camille.

The partice of tattooing the bocly is usual, hat without any anment tridal pattern or design, as wo motioed among the (ianguellians, in which distride it is guite
 Gamgella tribal math among the men serms to be an arramgement of four latge dimmome, thongh othere forms are nsed to adorn the main pattern. The women tattoo fremy, hat prefier lines across the lexly to more compliated figures. Therer are different methods embphoyed to produre these deromations. In man the knitiopoint is inserted mulder the atide to almit the ehatrcoal, pigment, or eren, in some instamers, gmpewter ; in others the skin is merrly seraternerl with the knife; while in a thiad the nsmal plan of fattooing is followerd, when some sharp-pointen instrmont is used to priek in the desimed-astigurement.

Along the shomes of Nyasia, as among all the tribes north of the Zambex, trial her orleal, or the "mmavi" test, is practioed extemsively, amd is resorted to, not only for the purpose of "smelling ont "witelactaft, of to romvirt persons suspereded of erime, hat in the most trivial quarrels is often the arbitrator for seftlement of the dispute. Only $t$,-day a man wame pushing into the mission fard appealing to Dr. Elmstio for holp, as lar hadl taken a long and astronge pull from the poisongemed. Onc of his wives and himself having had a disugremment, it was mutnally deroded that they inth take the test, which they did. The wife infused the
poisonous deroction of bath and took the first drink, and immediately commenced to vomit-a sure indiciotion that she was in the right. But the hasband was not so fortmate, for, having finishod the potion, it did not reant as he hand hoped, and, fearing death, repenterl of what he hand done, and made for the mission house, when a prompt rmetic put him ont of hanger.

As a ruld, matives who are ronsedons of their inmo"ene take the test rearlily, as they have the fullest conficlence that the "muavi" will comvict only the guilty.

When at chief susperets a revolutionary spirit, or any lank of fidelity on the piat of his subjerts, the witelodoentor is dispatehed to assemble the reereant villagers and orgatize a hig mavi-thinking, so as to sift out the traitors. All rlasses and both sexes are put on their trial, withont respert of persoms.

Three monihs ago a case of this kind oceurred a short distance from here, hy order of the rhidf, Chikusi. One of the Livingstonia mission staff refers to it in the Fire ('hurch off S'rotlewid Month!!!:
"The rhief sent his singinga (witch-doctor) and the royal 'many' as a trial of their subjection. That in part wemonted for its importance. It seems that everyberly in the villages, mon, women, amd chidren above nime or ten yens old-many of our sehool-children annong them-had drunk it, and that a feew from a distance only remained for Saturday's drinking. Seven in all were fomd dead-cast out to the vultures-incloding an old white-haired man and wife, and the headman of the villages, but no children. Dr. Henry insisted on the hurial of the corpses. Some seemed only too willing to do so, now that the singinga dare
first drink, sure indicalhusband was rotion, it did ath, repented ssion honse, er. their inno. fullest conthe guilty. irit, or any , the witchant villagers sift out the ut on their ired is short ikusi. One in the Free ir) and the That in that everyren above ol-children rom it disg. Sevoll tures-in, and the Dr. Henry 10 seemed ingil dare
not interfere. The possessions of those who died were taken off to 'Tshipolopelo (the sul-erhinf who bronght the rharen against the viotims and appabled to Chiknsi for the trial).
"Another manvi-drinking took place last Fridag, at which tew of our sehoolgirls-little thinge of tan of eleven yours old-and a woman died. Tha exemse was the drath of a man in their village."

Athongh this "ustom exists in the Barotse Yallere, the Marotsi profer to pour the poisomons deroction down the throat of a dog or a fowl, and jouge of the innoernee or grielt of the indiated party hy the rffert the peison produres on the animal-romiting hoing sulpposed to be proot positive of imorerner, while purging indicates gailt.

The favorite ordeal of this chass in the Barotse is that of the "louiling-pot." The last that took plare at Liahio was brought about by a slave calrying a piexe of raw meat through Lewanikn's reeption-room, a few drops of blood falling on his mat. The romstrimation amd atarm of the great man at his, to him, an omen portrmang every ill, may be imagined, amd not a moment Was lost in smmmoning all the soreerers and wise mell of the cappital, when it was derided to try the offeret of the "boiling-pot" in shedding light on the subjere.t.

The natives are assembled as for the "monave" trial. Those suspected of having aril desighs against the king are singled ont at the instigation of the witelodoctor, the names of whom he professes to ram in his bask of tricks. Of such there may be many-twenty, thirty, forty, or more-who arr arch in turn required to dip their hand three times into the boiling watere.

If imocent, it is supposed that this should have no eifert on their skin, which, strange to say, is very often the rase, experially on the thick and shriveled skin of the old; but with the majority large blisters are produced, and they are pronounced guilty, and sentenced either to be knob-kerried, spared, or thrown to the erorodiles.

Roturning to the subject of mission stations, I think it has heen demonstrated beyond the shadow of a doubt that only high altitudes-as far as possible from the low-lying swamps, or valleys hemmed in by hillsshoild be selected as sites. If stations must be planted on the flats, let them be ocempied only oreasionally by white men, and then only during seasons of the year when the exhalation of malaria is least active. The Angoni Hills, for instance, have proved comparatively healthy; the land is fertile, cattle thrive, and much in the way of regretables, so essential to the health of Enropeans, can le grown in abondance.

The Livingstonia Mission has two stations in Angonilame since 1880: Njuyu, where a chareh has been formed with nine members, and Ekwendeni. There are not the same limitances in East Central Africa to Christian work as exist farther south and west; the intense darkness and gross ignorance are all over alike, but the power of the chiefs is not so great. They exert little or no influence or : the home-life of the people; nor is attembance on religious instruction, efforts to iniprove their eondition or rise in the seale of civilization, votoed by autoratic rulers, as in the Barotse or Matebekeland. In a word, there is liberty of conseience. This is a point of great importance, and a very encour-
ld have no very often led skin of rs are pro1 sentenced wn to the

aging augury for the fature of missions in the vast regions bounding the beautiful Nyasa.

On Thursday, September 1tth, the "Domira" returned from the north end, when I leamed, to my dismay, that she would have to put up at Lokoma for repairs and go back to Karonga for passemgers. This is a sore disappointment to me, as I shall miss the October steamer from Quilimane, and shall probahly have to wait a whole month at the coast for the November mail. But I am helpless in the matter, for a land jour-

- ney is not to be thought of, owing to the distmbed condition of the matives on both sides of the lake. I got on board, and crossed over to Lokoma early on Friday morning.

This is an island ten miles from the mainland. It is about five miles long and three wide, with a population of over two thousand matives, speaking the Chinan, ii language. There is but little vegetation on the island except biobabs; these are mumerous, and some of them very large. The soil is poor, as may be said of most of the lake shore; the only products are samd and stomes, and a stunted species of manioc. Half a mile from the beach we find the headquaters of the Universitios Mission, surrounded by several small hills, that look as if they were formed of debris thrown up from some lige excavation.

The mission premises consist of a mumber of detached reed huts, the domiciles of the several members of the staff; the church, also of reeds; and a schoolroom, store, and boys' dormitory, built of stome and mud. Archdeacon Maples, well known for his matiring entry. and devotion to mission work, and, withal, gemial, hos-
pitable, and kind, is in charge of the station. He is assisted hy some seven or eight white workers, men and women, and also by several native teachers from Zanzibar. The mission has two small stemers, the "Charles Jansen" and the "Beta." The former is used chicfly for visiting the numerous villages along the coast, and is unter the command of the Rev. W. Johnson.

The modus operamdi of the service on Sunday morning should satisfy the most exacting ritualist. The chareh is floored with mats, on which the natives squat, prostrating themselves one by one as they come in. A few benches are placed near the altar for the white portion of the audience and for the native choir, who are surpliced in white and cassocked in purple. These entur at the commencement of the service in procession, hoaded by a large brass cross; the priests bring up the rear, crossing and bowing themselves in front of the altar before taking their places. The service is principally choral, and the archdeacon, being a splendid musician, adds great effect to the chanted liturgy by his brilliant execution on the organ. The choir-boys give evidence of careful vocal training, their intoning and chanting being performed with antomatic precision.

The congregation embrices a large membership, the majority being women, who wear the distinguishing badge-a small cross round their neeks; in many instances, however, their fetich charms are not displaced by this latter addition to their adormments.

I believe this mission is considered a great success by the ritualistic party. And if advanced High-Chureh lines indicate success, surely we have it here. To say nothing of the full choral service, with its priestly

Thumsiay, 21st. Another weary werk of waiting for the return of the "Domira"; hat she is here at last, and by sunset we are healing for Cape Masar, and in thirty-six hours more anchored again at Mombla. Here I left the stemmer, aml in an onem hoat proweded down the Shire. Going with the current, wr made good progress, and andy on the moming of Thesslay, the ebth, landed at Matope. Camiors luming in readiness, after a hurved breakfast we started for Bantere. The hills were stiff to (limb, aml the day exeressively hot, so that it was far into the night before we reanded the mission station. Next day I mgageal ramidrs to take my luggage to Katmula, pmrehased some provisions for the roal, and started on Thmsilay morning, with many adicur to my Sooteh friemls at Blantyre, whose open-hearted and mpretentions kindness has done so much to restore, strengthen, ind cheer me, arriving among them, as I did, worn out, weary, and sick from my long jomrney, with its variel and trying experiences of privation and diffienlties.

Leaving Blantyre, we set out for the river. Coming upon some water at noon, I stopped aml mande a cup of cocoa; but as there was no shadr from the relentless heat of the scorching smm, we delayed hat a short time, and reached Katunga at 7 p.an. I jut up at thre Afriom Lake Company's station again for the night, and next morning found tise boat and pardlers 1 had previously
engaged all ready; and by nine o'clock we were afloat, bound for Chinde. The run of eleven days down this river was meventful, though we called at the "castoms" Chiromo, when I got back my firearms, and had some good shooting on the flats. Rain fell heavily for several days in suceession, from which I had no protection but a slight awning of grass at the stern of the boat, so that everything got badly drenched, giving me wet lhankets to sleep under for four nights, and indnoing a sharp turn of fever. But we reached Chinde safely on the 10th of October, where, with what joy no tongue can tell, I view at last the Imtian Oceam, toward which I have been traveling these many months.

Having missed the German mail for this month, I have seerured, throngh the courtesy of Commander Finnis, R. N. of H. M. S. "Swallow," a passage on board a transport steamer, now in the river discharging eargo for the lakes, and leaving in a few days for Port Said via Zanzibar.
e were afloat, ys down this at the "cusrms, and had 11 heavily for had no prostern of the l, giving mo $s$, and inducthed Chinde what joy no cean, toward onths. ais month, I mander Fine on board a arging eargo or Port Said

## CHAPTER XV.

A hetrosirect.

 gant waste of ability. - Nutive doclors.-('onclusion.

T looking back ower the past rightern months since landing at Benguela, and over the thonsands of miles I have traversed, the duestion arises, How far has the purpose of my journey bean ralized?

So far as my desire to see amt learn the comblition and need of these regions is conerment, I have been gratified beyond my most samginn anticipations; for at most I had only expereted to be able to make straight for Nyasa through the Katanga romentr-after all, a road no longer manown, sine the remarkable jommey of Mr. Sharp and the ill-fated expedition of Captain Stairs, both of whom started almost simultameonsly with myself, although from opposite direntions. But I have been p mitted to travel throngh the interesting and but little known Ganguella romitry and the famous Zambesi Valley; to see one of the worlds greatiost wonders, the Victoria Falls; to taste the hitters of the Kalahari Desert; to visit Berhmanaland and render medical aid to the good (hofi Khama and his people during the fever eprdemic; to trek over the desolate and dreary 205

Wastes of Mashomaland ; to wateh the minors perging out thair claims in Manicalinul; mal to roann through the lomutiful and fertila-bint to the gengrapher almost hank-ambley of (iomongoza; besides being privilequed to wimblor mong those phans low which tha sympathies of the ('hristian world were fiest mblisted hey the holown Livingstom-Lakn Nyinsa and the Bhantyro Highliands.

Apart from this, I had midipated testing the ghas tion how far the servires of the Christimn matives of the Wrest hadies might herequisitioned as mids in mission work in this vast continent. My homes in this dirertion werr fomman patly on reports from those in the firli, mande publire through missionaly papers and publishod hathers, and partly from the finct that every few monthes there seromed to low fresh detarhments going
 aties, alme some mot ; mith, in common with many others, I telt that if ewor the . Famainam is to be hrought hack to bemefit his fiatlerlamd, it should be now.

It is mmeressary here to repeat what has alrealy been explained in the first chapter in refinduen to the six young men who areompanied me for this purpose. As to how they journeyed with me to Cisambal, where fome of them remained, the other two going as far an Mangwato, the realer already knows. But when I state that, from the time Bihn on the west was left herhind and wo arrived at Blantyre on the east, with the exreption of the Fromeh mission on the Zambesi $I$ did not come arross a single missionary laboring among natives, it will be loetter moderstood why I failed to find phares for the ippointment of colored men, is all the way I

is ahrady י"re to ther s promes. abin, where as fall ils len I state ft lowhind the exrepp$I$ did not g natives, ind places le way I

Was looking for pioneres rognged in the work of founting mew stations, with whom there might he possible openings for "olomed assistants, lat fonm them mot.
'This, of romser, has bero in some disapperintment to me, but has in the why wakemed my formar conviation that, provided white mon with sympathe for, nud tart in dealing with, the colowed race are fortheoming to anter the mandeken and lillow fieks of the interion, the
 phators, ate., would be fomm invaluables. In a short time their aptithle for arguiring the langinge wond fit them for itheremt arangelists, whild thair wober wonld exise emphasis to thaid word beyomd aren those of the white tearhor, for whom, as the mumber of eon-ressiom-hantorsand spermatoms increase, a marken projwedre in the mation Afrivan mind grows stroner sam by yans.

But why not indmar the mission in Mangwato and those of Mashomalam with the Fremeh mission? Boranse, althongh there is a rhatron mony complated in Khama's town, there was mo white missiomary at the time we passed throngh, amd the stations at Salishory and Untali ares far intomded only to ment therempire monts of the influx of gehlesorking amd mining bino-
 being mande to reard tha matives in Mashomaland ; therefore, miswions to white man are not indmed in the ghestion mular consideration. The fart remains that the Fremeh mission stamts alone ans boing actually angaged in the wangelization of the heathen in the great bolt of truitory refermed to.

It is mot trom mere persomal partiality toward colored
men that I am led to think highly of the prospects for their future usetuhess in the mission fields of Central Africa, but now from actual experienere, and the testimony of those to whom they have remdered service, as expressed verbally and by letter. The first of the latter was from the Rev. W. T. Currie of Cisamba, referring to those left with him, and which I received while in the Ganguella country :

## Canadian Station, Cisamba, West Africa, September 15, 1891.

Dear Dr. Johnston: Let me briefly wish yon farewell, with a sincere "(God be with yon till we meet again." Your visit to this station has been for us most pleasant. After a long season of loneliness and henvy work, which had greatly tried my strength, you came with a strong arm and a warm heart to eheer and help in time of need. If, in retmrn, I have been able to assist yon in any way, rest assured that I have done so with the ntmost pleasure.

The men you have left with me at this station supply a long-felt need of our work here.

The bearing of the men has thins far increased our respoct for and confidence in them. They hase already won the afferetion of my boys, even thongh they can speak to them but few words. They have begun the study of the language, and can sing most of our hymns; have several times helped my boys when holding evangelistie services in the native vilhages. Their speciall value to us at present is perhaps in the line of building, and I am sure, from what they have ilready done, that they will be able and willing so to relieve us from mueh work that we may devote much more timo than we otherwise eould to the instruction of the romen, and to the preaching of the gospel to the people at large in this comntry. . . .

Yours sincerely,
W. 'T. Currie.

Mr. Currie is one of the very few having the tact and firmness, coupled with miform kinduess, so racessury
rospects for Is of Central nd the testi1 selvice, as of the latter n, referring ed while in

West Africa, ber 15, 1891.
rewell, with a Ir visit to this cason of lourstrength, you d help in time a in any way,
ue.
my a long-felt
espert for atel cetion of my worls. They most or our ling evangellue to us at e, from what willing so to h more time r , and to the mitry. . . .
ely,
. Currie.
e tact and 1:20essary
in a missionary who has the manigement of colored workers; so that when he left the station on aceome of ill-health for a prolonged furlongh, the men I left with him lost heart, got dis.omraged, and conchaded to follow, overtaking Mr. C'mrie at the coast, evontually returuing with him to England, and afterward finding their way back to Jamaica.

In one partienlar, the retmon of these men io the coast proved a most fortunato ineident, as they fomm Mr. Curve down with a severe attack of faver, and rendered very opportme selvior, as the following extract from a subsequent letter from Mr. Currie states:
"Please remember me very kimdly to the native brethren. Often do I soem to har thoir voioes singing so sweetly, as they did at our priber-meetings. God bless them! They kindly carred for me when I had no power to raise my head, and sumely 1 ramot soon forget them."

The Rev. W. Elliott, with whom I intrusted Frater and Jomathan (who had traveled with me as fire as Berhuanaland) and who left with him for the ('ape, writing to the healduarters of the damaira Missiom, notifying their deparme for home, says:
"We shall he very somy to lose them imberd. Their bright hearts and fares have dheored our depressed spirits, and their hearty willinguess to holp in all the work of the journey has mande them finerites with us all. I carnestly hope to get the ielp of one or more of them, or their triomds, in omr Matelneld mission in a year or two, or prohaps carlines.
"Jonathan carries away a sall heart from Africa beeanse he has been ahle to do so litale for the Siviour.

He and Frater have both done much for us, and you know what value Christ puts an a 'cup of cold water' given to His children.
"I hope to have a talk with them both about getting help for our Matebele, and I shall write to Dr. Johnston too on the same subject when I know more of our own movements than I do at present.
"We part from them as from friends long tried. May God give then bon royage and a happy return to their homes."

As to the prospect for future mission work, several plares along hay route impressed me as being very hopeful as well as needy "fields," such as, commenting at the west, Ciynka in Bihe, Ongandu by the Kukema River, Kongovia by the Kwanza-both the last-mamed in the Ganguella country; while farther east Kangamba, and, passing over the Barotse Valley and Beehuamaland, we come to the little-known but thickly inhahited region of Gorongoza. In none of these places has mission work been attempted in any form whatever; and why I would especially emphasize the importance of these places as inviting spheres is: first, so fir as the clinate is concemed they were the healthiest districts we ame across; second, they were among the very few places where we were able to obtain vegetables, proving that the soil was sufficiently fertile to yidd something more than the ordinary Kaffir-corn; third, owing to the matives being governed by petty chicts there is more freedom and liberty of conscience allowed, and the work, therefore, not open to the oljections that present themselves muder a big antoratic chief; while the interviews we held on the subject with
us, and you 'cold water'
bout getting Dr. Johuston of our own
; long tried. py return to vork, several being very commenting the Kukema last-mimed
east Kinn$y$ and Becht thickly inthese places form whate the impor: first, so fiar healthiest eamong the obtain vegetly fertile to Kaffir-corn; ed by petty t conscience to the orjeeg intocratic subject with
the various headmen of these conntries confirmed our opinion that missionaries wonld be well received and kindly treated.

At Ongandu, Kongovia, and Kamgamba in particular the populations are large and very areessible, their villages being grouper in each case within it short distance of their respective ombalas. We camot indorse the reports so often made of the demsely popalated condition of Central Africa, but quite the contray. Once in three or four hundred miles one strikes a moderatesized town; about every hmolren miles a group of villages; a shall village. perhass, arery other day's march. This eertainly was my experimen alter arossing the Kwanza motit we reached Mamicaland, and this fact gives all the more prominence to the phaces we have mentioned.

I earnestly hope to see the day when a mission on a sound practical hasis shatl be established at eath of them.

Gorongoza is hat a short joumey from the kast Coast; handing at Beira hy either German stemmers from the north or ley the Union Line aromed the Care, proceeding up the Punge River to Sammento, and then, after three or four days marehing, (forongoza Mountain woukd be reacherd.

Those places west of the Zambesi must be approached trom the West Coast, either from Lomila, Novo Rndondo, or Benguela. At present the latter mast be preferred, as cimriers ate diffientt to ohtain at the first two. The cost of comveying a load of sixty pounds would be abont thirte shillings.

But on no aceome wonld it he alvisalbe in the begin-
ning to take out ladies or children. The work should be conmenced by young men, several at each station; and as the langnage or anything like a vocabolary has not yet been reduced to writing, it would be essential that the young missionaries should have the ability and educational qualifications necessary to mutertake the drudgery of this task. Interproters might be obtained from among the half-caste Portuguese, hence a previons knowledge of the Portugnese language would be foumd almost intispensable.

Much of the first year would be oecupied in clearing a place for the settlement, preparing and getting into the soil seods amd phants for the kitchen-garden, making furniture, and providing, as far as possible, for their futme comfort. On aceount of the expense in hiring lathor for this work-for we suppose, of comse, that the white men will not attempt ont olor toil themselves (urhich momis the shontest roed to a promatwe grare -a phentiful supply of trade choth, beads, knives, gunpowder, lead, ete., should be provided, sufficient to meet the probable emergency that six or eight months might elapse before their next caravan arives from the coast.

After two years, and when everything is in order and the home mate comparatively sung, it will be time dnongh to talk about bringing out wives. But even then, should there be children, it were kinder to leave them at home, as this is no comntry for them. Some are of the opinion that the example of a missionary family home-life as am oljeet-lesson to the matives must stir their aimless minds to emmation. Some time, perhaps, this may come; but for years the ron- each station; cabulary has l be essential te ability and ndertake the the ohtained ce a previons uld be found
d in clearing getting into garden, makible, for their ise in hiring course, that r toil thema premature eads, knives, sufficient to ight mouths res from the
is in order will be time

But even der to lave hem. Some missionaly the matives tion. Some uss the eon-
trast will be too great for them to see anything to imitate. In reality, the domestic life, hahits, and customs of the white man excite in the African only a curiosity similar to that of a comutry bumpkin's first introduction to a memageric. And to say the heast, even were some good aromplished therely, the exposing of children to the base and degrading sermes that must surround them evory day among a barbarons and savage people camot be justified muder any protense whatever.

One qualifiod medical man rould easily look after the health of the Europems on racl of the first three stations, as there is at most hut a couple of days' jommey between them; but Kangambi, heing more isolatem and farther interior, would require a larger staff of workers and its own physician.

Too much stress camot be laid on the importaner of medieal missions in the foreign field as well as at heme. Ravely a day passed during my whole jommey that I did not prove the value of heing ahle to preseribe for the sidk; and I might say that, muler (iond, I owe my life in more than one instanere to the pareifie efferets of medical aid remdered to suspicions and hostile natives. Right at Catambella, our first stage on the West Coast, I opened my "Buroughs \& Wreleome" merlirine-rinest to physic ferer-stricken carriers, many of whom were to take my own loads. Quinine, antipyin, and ronsers soon established a reputation for me as a forer-dortor; while ou the marel those suffering from gastrointestinal catarrl, galled shoulders, and ulows were mustered daily and treated promptly and sueressfully. All along the route I had numerons opportmities of
alleviating the sufferings of not only many hundreds of natives, but several missionaries, hunters, and traders, and, in Mashonaland and Manica, miners and Portugrese officials.

It is with the greatest satisfinetion that I look herek orer my personal experimens throughont the long journey, to the benefits aceruing to sufferers from my profession as a medical man. Not the least of these was my timely arrival ai Mangwato and sojourn there during the month of April, 184), when the devastating ferer epidemie was at its leight. The many expressions of gratitude from hoth backs and whites in Khama's country and elsewhere convince me that in this, if for nothing else, my joumey was not in vain. The monetary expense of the expedition, the hardships and trials endured, pale to insignificance when compared with what we were permitted to see aceomplished among those who were otherwise hundreds of miles from medical assistance. And the fact that through the whole of our traveling not a single death occurred among my men must be attributed to the well-stocked and at all times available medirine-chest.

The question has bee: put to me repeatedly by medical students, Would you reeommend Central Africa as a fichl for men holding', University degrees in medicine who wish to derote themselves to mission work? Is there a sphere for such there? i can only say that the answer depends very much upon eiremmstances. It there is a party of white missionaries going out, a fully qualified physidian shoukd eartanly acompany them. Nothing can justify the appointing of white men and their families to posts in the far interior without plac-
$y^{\prime}$ humdieds of , ancl traters, is and Portunt I look herk the long jourfrom my proof these was an there dur-- deviastating mally expreshites in Khilhat in this, if u viain. The 1ardships and en contpared aceomplished eds of miles that through ath oceurved well-stocked

ing a doctor within easy areoss of their station, and in this purticular lies the chirfe meressity fiar ther quelificel medicel mant.

We will of course find abumbant opportunity for practiee among the matives; but fom all I have serm of the gencral elass of disenses prevalent in dipica and bronght muler the notior of the morlioul missionary, it cextamly seems an extravagant wastrof ability, as har will fiml that a very small prowntage of the kowherdge and skill atequired during yeats of stme is cror repuired or brought into exareise. It is a recognized faret that the Central Afrian will ramp submit to have even a tooth extracterl, fin less consint to a smerinal oproration, even if death rould be arerted theroby, :s amputation confliets with the antioipation of his disemberian spirit returning in a form superior to his present existemere. In the matter of accourhement it is rontrary to native kaw that a man, physician or otherwise, shomble ber mitted to be present, far loss to aid women in rhildbirth. A doctor who has been for the last serven yours resident in the combtry informed me that only once in his whole experience had he been present in such at ease, so that his knowlerge of minwifery, so far as the native is concernod, is quito dispensalme. And there is no room for orthopedie or plastice smery for all drformed infants are destroyed at hirth, as hringember the hant and displeasure of the gools.

Again ant again I have watehed the daily rontine at the dispensary of medieal mission stations, and the work of the physician consisterl rhiofly in dressing ulorrs, preparing lotions for ophthalmia, atministermer emetios as an antidote to the effects of "mumvi," strapluing "up a
spear wound, preseribing for indigestion incidental to their coarse fare, or a simple cough mixture for the bronchitis to which they are liable during the cold season; but seldom did we see a case so complicated that a missionary with a very ordinary knowledge of the properties of drugs in common use could not have treated successfully.

Although we are inclined to sneer at the native dortors, it must be owned that, with all their cabalistice pactices and the superstitions and orgies that pervade their exorrising of disease, some of them effert "ures by mams of herbs to us mknown, mind the seeret of which we might well covet. Dr. E—— of Bandawe tells me that more than onere for weeks he has rontimed to treat ukers with every means and appliance known to our profession, without avail; owning himself baffled, the patient resorteal to a mative doctor, and returned in a short time, to Dr. E——'s astonishment, with the wound completely healed.

A case in point may be rited that occurred, April, 1892, in Bechnamanal, in the presence of a momber of Europems. A Boer while trekking northward with his tanily was delayed for some weeks in camp from the greate: number of his cattle having died of lang sickuess. His wite was in a low state of health, suforing from momerous boils and festering sores. While dressing them one day, she tailed to keep off the hordes of flies that had gathered round the putrid meat in the vicinity; blond-poisoning and pyemia quickly supervened, and death seemed imminent. An English surgeon who chaned to be on the road was summoned, but after careful examination he pronomed the rase hoprless, when one of the Boen's native drivers begged
cidental to we for the se cold senlicated that dge of the not have native dorl cabalistie: nat pervade affert rures 1e secret of f Bandawe 1e has rond apliance ming himdoctor, and onishment, reel, $\Lambda_{p}$ ril, number of ward with camp from ed of lung elth, surfores. While the hordes neat in the kly supicrnglish surfummoned, af the ease ers begged
permission to call a bushman dortor. Consent was given, and in a short time the hoshman appeared. He sat silently watching the patient for a little time, and then went off at a trot over the whit for some distance, gathered a variety of herbs, and on refurning put a large pot with water on the fire, into which he threw his collection of medicines. When the infusion was ready he urged the patient to drink, which she dirl, bowl after bowl; while with the same decortion he bathed the sores, and within twenty-four homes ab danger was over, and the woman ultimately made a good recovery.

It is with no thomght of vamting the gmalities of the native doctor that we give such an example, hat that it may be maderstood that the native Afrima is mot totally withont medical aid of a kind, even in the alsenee of white men.

In the face of these farets we are fored to the emelnsion that the appointment of qualified medical men to mission centers chiefly for the benefit of the native population is superfluons, and that the work assigued to them might be quite satisfactorily aroomplished by mere tyros in the art of healing.

Mr. Currie of Cisamba has not heen able to take a full course in mediedine, hut, having a great interest in the study of mative diseases and their treatment, hard, during the time of my visit there, a larger momber of patients coming daily to his dispensary than I have seen at any station in Afrin-aren where the missionary was an M.D.

Much the same may be said of Monsien Coillart, and I am fairly comvine that the expenses of mealial mis- , as in C'entral Ifrica may be very murh lasement.
without their value being materially diminished, were a short course in the practire of medicine included in the curriculum of our missionary colleges-the studies to be directed by an ex-Africom medical missionary thoroughly conversmint with the prevalent ailments endemie to the regions for which the varions students are destined. Yet this suggestion retracts in no way from my first statement, that wherever Earopems are stationed the presence of the best and most skilffal physician obtainable is absolutely essential; for where the lives of valued workers are at stake the thought of expense should not be considered.

My weary joumey across Africa is ended. I long with intense yearning to gret back to that smag little island, the gem of the Caribbean Sea-Jamaica, wherein I am prond to have a home; for in all my travels I have seen no spot so lovely, or that can half compure with the "Isle of Springs." Yet I thank Gorl that I have been permitted to travel throngh the great continent, notwithstanding the many trials, hardships, mul dangers I have had to face, without losing a single nat tive follower by death, and without firing an angry shot.

And now that it is over, I hmmbly and gratefully anknowledge the protecting care of Him whom I trust, and who has never failed me even in the darkest hour. And if the knowledge acquired of comntries through which I have passed, or of people and tribes I have met, ran be of service to those who are seeking to spread the light and truth of the gospel, or advance the canse of rivilization on this dank and benighted land, I shall rejuice in all I have enthred for its sake.

## APPENILX.

 Commissarint.-Merlicinc.-Tublonily. - Fever. - Insombin.- Whter.-Coolers.-laght.-1'holography.

THE intending traveler must be grided in the soledtion of his outfit and "quipment by a knowherge of the nature and chanaber of the regions throngh which he proposes to jomrmey, as it makes a material difference whe the his route liss through distrints where oceasional supplies may be obtained, or prombates the interior beyond the boundary of suply stores.

Again, the facilities for eonveramere of gooms must bo considered, as, if wagons ran lwe user, provision for the journey may only be limitm by the travelen's mans; while if camiers must lu promed, the less he cinn do with, the better. 'To the latter alass I would offir a fow suggestions from my own experience, having sperial reference to Contral $A$ fria a

Equipmext.-Personal ontfit shouhd indule: tent, made of Willestem canvas, about seven fore hy cight, with double roof, and tirpanlin gromd-sheret for the floor; small folding-table and chair; iron frame fohl-ing-rot weighing twinty pomis; a thin cork mattress; two or three blankets, large amd of good quality, with a rug or plaid, and a small horsm-hair pillow. Don't for:33!
get a piece of gool mosquito-netting, und werer pass the night, whether in a tent or in the open, withont its protection, for it is modoubtedly a great preservation to health, the meshess shatting out the miasmu, which is always worst at night. There mer may whe of rigging up, the motting, but the simpenst of all is to tuke " piece of strong malieo, suy bhe "pentado," seren foent long and three fect wide; aromed the edges of this sew a length of netting five feret wide; to earlo comer stitch a piece of strong tupe, and the armagement is completa. After the gromml-sheet, mattress, and hankets are spread for the night, get four of your carriots' spears, and stick one into the gromed at ench comer, from which, by memes of the tapes, suspemd the net at a convenient height. After getting, into bert, thek the edge of the metting in maler the mattress all aromid. But whatever shape you may adopt for your moscuito netting, remember that it is positively indispensable.

A rubber grommbesheet is assential in aise you require to sleep in the open; but this is the only article of rubher goods one need take, as air-pillows and suchlike give way in a few months.

Texps.-I'ents are very aseful in wet weather, but they get intolerably hot during the day, maless they cam be opened at both ends to permit a free current of air to pass through; and this lans the drawhack that the contents are exposed too much to the prying eyes of the natives, amd so exating their "upidity. West of the Zambesi they may withont serions inconvenience be dispensed with altogether, as the carriers prepare quite commodions romm hats in an hour or two of sticks and grass, cool on the hottest day and warm at without its mescrvation isma, which ways of rinis to take a "seren fert Iges of this each rolmer mgemont is , and blankour ('ilriters' nell corner, d the net at al, turek the all aromul. if mosifuito pensable. -ise yoll reonly article is illud surehreathrer, but muless they e cument of awhack that prying oyes y. West of convenienne iers prepare $r$ or two of and warm at
night, while if the thermometre goes down very low, a fire con be bailt in the renter. 'lhis rammot with comfort be done in a tomt, as there is no ontlet for the smoko, and in may anse would destroy the emmias.
 supplied by Lamgilon of Lompon, contains all the merossury utensils for the camp kitelnem, aml may loe hat in various sizes, to suit one or half 11 lozen preporns. I wombladve that the kit be exmmined beforo purehasing, to see that lids, hamolles, etre, are thoromghly rivetorl, as, from the ramonesmess of matives and the opern camp-fire, solder holis hat a very short time. Sere also that the lind of the pot he male of shent-iron and not of tim, so that it will serve the purpose of a Dutnh oven.

Cdormina, - Two or there smits of grool twered might rome in hamly when aphrombing or visiting rivilizer conters; but for the velit, good light-rolored "chephant cord" will be found much more durable mul satistantory. It is most snitable for marehing in the form at knickerbockers, and one jacket of this material will last a year, as it is only wom in the cool of the morning and after getting into (amp) aml it mast bo vory rough usage that would require more than two or three pairs of breeches. With these, thick, heary worsted storkings must be worn; hut when traveling throngh long grass they need to be protected by leugings, say of camvas, as, if the grass is dry, it shodes small soeds and sometimes sharp nerdle-like burrs, that are retained hy the rough, woolly surfare, penetrating to the skin ant cansing great irritation. The worstal stockinge are at the same time a sure dofense against ants of every desaription, as, mo mattrr how firmor, thein mandibles
get entangled in the meshes of the knitting, and thus are rendered harmless.

Footwear should be of two kinds. Light temisshoes of eamvas, but not rubber-soled, are best suited for marehing over sandy plains, but soon weary the feet if the path becomes rough or stony; here we must have thick-soled leather boots, a size larger than usuall. I do not mean by this "top-boots," such as are sometimes worn by sporting-men at home; they are fomd much too hot and heary; but the shoe par excellencer in dry weather is the native-made " reldt schoon." For more than half my jommey I used them in preferenee to every other, finding them noiseless in hunting and very easy to the feet. They are generally made with soles of buffalo hide and tops of "koodoo" or other antelcre.

Uinderclothing should be ehiefly of wool, so as to avert the evil effects arising from chill; and loose-fitting, to allow for shrinkage, as new travelers are not generally experts in the art of washing. The shirts shond be made of a light, soft tweed, with a breast-pocket on each side; if some of them are only half-sleeved it would be no harm, as one generally prefers during the day to have the arms bare from the elbow at least.

Headgear is purely a matter of cheice. Some vote for the helmet of pith, cork, straw, or felt; others, like myself, prefer an ordinary broad-brimmed light-colored Terai or wide-awake. The helmet I find a misamee. It gets knocked off in the jungle ly the overhanging. bramehes of the trees; it is always in the way; if yon wish to rest at noon you must either sit up so as not
g , and thus rint temuisbest suiterl weary the re we must than usual. are someare fomul rexcellence ioon." For preference unting and made with " or other as to avert e-fitting, to t generally sloould be -porket on -sleeved it rluring the leist.
Some vote thers, like hit-colored , nuistance. erhanging ay; if you o so as not
to erush it, or lie down without its protection, while the soft felt is obviously more accommorating.

Finemms.-In reference to weapons, if firearms are carried for the sole purpose of prombing meat, a twelvebore shot-ginn choked in one harrel and a . 577 " Express" rifle D. B. will be found sufficient for ordinary game. But if danger from hostile matives is anticipated, in addition to these a few Winchester repeaters, 45.90 caliber, will be fomud invalnable. If a revolver is carried at all, it shonld be a big one, for the sake of the moral effect its appearance prodnees on the natives -a regulation Webley, and well plated, as this saves a lot of trouble in looking after rust-ipots. As to calltridges, it will be seen, after my experiene related on page 91, that it is of first importane that the intemding traveler should get his goods from a trustworthy agent, or direct from the manufiatures, and then to personally inspect his ammmition, to make sure he is not taking old stock.

Bahter Goods.-No specifir adviee cin be given in reference to trade goors, as arery separate district has its own peculiar fashion in heads, color or quality of cloth, size of brass, copler, or iroll wire; and informattion on this head wan hest be obtained from meremutile houses who supply the traders nearest to the point of entrance. But let it be mulerstood that the grools above named are standard enmerer in some form or other in every print of the comitry; but this camot be satid of other articles often inchuled among harter grods, such as "lothes, hats, old military miforms, fancy things, ete; these will be recoived, hut only as pres-
ents. Sometimes by hard experience one finds out how necessary it is to be sure what the market demands before purchasing, so as not to be laden with unsalable stuffs. A quantity of beads (fitty pounds' weight) was sold to me by one in the country as the very thing required for barter in the distant distriets of the interior ; but after currying them for three months, I had to deliberately throw most of them away in utter disgust, and feeling very sore at being swindled, for no native would aceept them; and but for having procured a fair supply of the right kind from an houest man who had no wish to paln off his bad stock on an unsuspecting stranger, I should have been in a bad fix.

Trade eloth is generally done up by the wholesate houses in water-tight bales of from fitty to sixty pomeds cach, suitable in size, shape, and weight for a man's load. For personal baggage and sundries, tin cases are most suitable; wooden boxes, leather portmanteaus, ete., are quickly destroyed by the white auts. The most convenicnt size for tin eases is $26 \times 15 \times 9$ inches; and I certainly would not be inclined again to spend forty to fifty shillings each on what are called watertight tin boxes. Six of mine were of this description, made by one of the best mamatacturers in London. I never doubted their ability to keep their contents dry under all eiremmstances until two of them were thrown into the Zambesi by the capsizing of a canoe. On boing recovered they felt very much heavier than before, and yet there was no water dripping from them; the fact was, they were water-tight on the wrong side. The water got in easy enough, soaking the leather buffing round the rim, which swelled and
s out how nauds beunsalable dight) was thing reinterior; had to der disgust, no native ured a fail 1 who haud suspecting wholesale ty pounds r a man's 1 cases are manteaus, ints. The 69 inches; 1 to spend led watereseription, London. nitents dry re thrown mioe. On wier than ping from it on the h, soaking velloed and
effectually imprisoned it. They were full of water, and many of my most valuable artieles, put there for sperial satety, were rompletely destroyed.

Provisioss.-Lay in a good stock of flour, rolled wheat, oatmeal, rice, harley, and phin bisenits; roffere, tea, cocon; dried fruit ; desiematel potatoes, compressed vegetables; salt; canned goods-corned berfi, sardines, ete. Sugar is bulky and heary, but will never be missed if to the ahore sterk is added a few parkages of satechame tablets. Combiments, etc., will of course be included according to diseretion. These foods named are the substantial stamd-hyes.

Bat a few medical comforts and luxuries must not be forgotten, in case of sickness, such as extrate of beef, arrow-root, condensed milk, preserves; and a hotthe or two of Cognate must not be onitted, as there are times of extreme prostration in attacks of dysultery, or as the result of ferer, when a tablespoonful of this stimulant maty turn the tide in the patient's favor. But aleohol in any form, exapt for medieinal purposes, particulary if taken during the dily, is the shomenst way to fevers, and rembers the traveler less able to resist them when they come.

Medicines.-These are next in importane to food, and should be earefully selected, and not all put up in one medieine-ehest. Several small hoxes, each containing a few special drogs, should be packed away in different eases, so that in the event of one or two loarls getting lost, stolen, or struyed there will he lass danger of being left without a remerly when attacked ly illness, as has been the muname experienee of some.

Tabloms.-I would strongly reommem that the
drugs be in the form of tabloids, as prepared by Burronghs \& Welcome. As I have stated elsewhere, the Edinburgh Medical Missionary Society presented me, on leaving Scotland, with a Stanley medicine-rhest, containing a bountiful supply; and althongh it was under water twice and traveled thonsand of miles in all kinds of weather, temperature, and atmosphere, for cighteen months, alternately carried by matives, conveyed in ramoss, or bomped in bullock-wagons $\cdots$ the end of the journey the drugs that remained were in as good condition as when I started out.

The following will be found among the most valuable for Central Africa: Livingstone's rousers; comp. cathartic; quinine; arsenic ( $\frac{1}{50}$ of a gruin each) ; antipyrin; phenatetin; calomel and potophyllin; lead and opium; aloin, stryehnine, and belladome; suphonal.

Messis. Burroughs \& Welcome supply a small book with each medicine-chest, containing plain and concise directions as to the properties, uses, and doses of the various medicines.

Ferer.-The principal disease, and from which none who penetrate the interior esenpe, is fever in some form or other, generally bilious intermittent, yet all too frequently, particularly near the coast, the malignant and dangerous remittent hematurie, or black-water ferer.
$O_{1}$ inions differ as to the treatment of the vallions ferers, but most are agreed that quinine is our "sheet anchor"; but I have much more fath in its effects as a prophylactic tham in its antipretic property, not only from personal experience, but also from the evidence of many I have met and on whose testimony I
ed by Bur－ where，the sented me， －chest，con－ was under in all kiuds or eighteen miveyel in end of the ；good coll－ ost valuable comp．ca－ rach）；anti－ a；lead and sulphomal． small book and concise loses of the Which none er in some ，yet all too malignant black－water
the various our＂sheet ts effects as operty，not on the evi－ testimony I
can rely．Five－grain doses of quinine daily while ap－ proaching or passing through districts known to be malarions mitigated the severity of an attack，and often warded it off altogether，while others in the same cara－ van who neglected this precaution were completely prostrated every week or two；but they also，en atopt－ ing the habit of a dose every morning，experieneed almost complete inmminty for months together．
Apart from the ever－xhading malaria in swampy regions，long delays in camp，with their attembent wor－ ries，etce，sitting in damp clothes，whether from per－ spiration or rain，and omitting to change them on getting into camp，mutil one is chilled，are the most prolific canses of fever．
A practical and handy little brochure on＂Health Hints for Central Afriea，＂ly Horave Willer（than whom there are few men better qualified to give com－ sel on this suljecet），is pullisheel ly John Murray， London．It is convenient for the porket，and contains valuable ativice and information that shonld he in the possession of every one who would travel in matarions comutries．
The premonitory symptoms of an approaching attack are，first，languor，depression，inritalility of temper，and， in some，excitement and talkativeness；the renal secre－ tion becomes frequent and almost colorless，indieating the neressity for something like＂Livingstone＂s rousers＂ to stir up the liver，a timely dose of two or three some－ times averting an attack．
But when once the natusea and romiting sets in， further resistance is useless；one must simply lie down to it，when all the bankets ：and rugs within reach will
be requisitioned to give some warmth to the cold and shivering frame, while the acute frontal headache, pain in the back, and gencral feeling of "haven't-got-a-friend-in-the-world" completes the misery of one's condition at this stage. A few hours of this, and the chilliness gives place to heat, the skin becoming dry and buming, and the tongue parched; then happy and fortmate is the patient who ean get his hands on a bottle of sodawater.

If this stage is prolonged, it may sometimes be cut short hy a drink of hot gruel or tea with a drachmof spits. reth. nit., when the attack enters on the third part of the program of its course, by profuse perspiration, giving almost instant relief. The temperature runs, down rapidly. Now for a ligg dose of quinine.

It is of little use taking quinine during a paroxysm, as ten to one it will be rejected by the stomach; and small doses in repeated exacerbations of high temperature is equally futile. Thirty grains have often to be administered, taking advantage of a remission when the temperature is at its lowest, before beneficial results are olstained.

To relieve the persistent headaches, antipyrin in fivegrain doses will be found very helpful; but better still, and satier, I wonld mention phenacetin. One (or at most two) five-grain tabloid acts like a charm, soothing and quicting the nerves, and producing a feeling of restfuhess that is delightful. In the sleephess nights acrompanying fever I have found sulphonal give great relief, lint would cantion against its reekless nse. Messrs. Burroughs \& Weleome give the maximum dose at forty grains, but this I found too high. I would limit to half
he cold and dache, pain ot-i-friends condition 1e chilliness nd burning, ortumate is tle of sodaimes be cut drachm of e third part erspiration, rature runs. inine.
aroxysm, as ; and small iperature is be adminen the temresults are yrin in fivebetter still, One (or at arm, sootha feeling of s uights acve great rese. Messis. ose at forty imit to half

the quantity, or even less, as giving equal benefit without the umpleasant effects of forty grains, which produces a nervous condition, with vertigo and a swaying, staggering gat when attempting to walk.

For fever recurring every day aill contiming for weeks, quinine has but little antidotal power; hut it
 grain) every four homs. Stryehme may be alvantageonsly added to this, and can be obtained in the combined form.

Witen, gencrally so impure, is responsible for much of the ferer and dysentery incidental to traseling in Africa. It should be the ambition of every one to train himself to accomplish the day's mareh without trinkjug, for it becomes very murl of a habit, dipping from evary pool or stream that one comes arross, and only increases the craving for more. By a little exoreise of self-denial, one will in a fow werks find he can rows stream after stream withont any desire to drink, and on getting into camp a colp of tea or cocoa will refresh him, and thas avoid the rivk of drinking mboilen water.

Coolens.-If there should be no vertainty of water being obtainable at the noonday rest, a sumply hand better be carricul. But in what? is the question. All sorts of water-bottles amd cantenens have brem invented. Many give the prefereme to the emameled-ware flask covered with folt, the latter to be kept moist se as to keep the contrints cool; but if there is water to be foum wherewith to kerp emtimally wotting the folt (for it dries in a very fow minntes), why any any? While, if there is no water for the felt, a drink from the flask is far from mefreshing.

To those who can appreciate a dranght of real cold water, even when the sum is hottest, I would say: Construct from a piece of sail canvas a hag, say eight inches square, sewed all around, excepting an inch and a half at the upper comer, into which the nock of a boltle mat he tied, and you have a water-vessel that as get is 10 mapasted. This is the home-mate form, hut it mar the chled to in not only being made more elogamtly, but a fai piece of volcamitr may be fastemed to the under side, to protect the elothes when it is to be slung over one's own shoulder. But similar bags may be made of a larger sizo and handed to emriors who have light loads. If they are kept dean and filled with boiled and filtered water every morning, there will le no lark of cold and non-injurions water at every halt.

Litint.-A word or two on the sulbject of lights. Oillamps are madvisable, as it is inconvenient to camy bulky cans of oil; the same may be said of candles. But a good ball of wick ame two or three molds will "fill the bill," and provide the means of preparing light en route as required; for anywhere and everywhere in Africa bee's-wax may be hat, and from which enongh candles may be made in a couple of hous to supply the traveler for a month. These cambles, too, are not open to the same objections as the sperm and composite, as tisey do not get soft and melt with the intense heat.

I would recommend a small bull's-eye lantern with a quart or two of paraffine to supply it, as there are orcasions when traveling at night is necessary, and when compass readings are to be taken, ete; then such a protected light will be a great convenience.

Photography.-It may not be amiss to wive a brief sketch of my experience with photographin applianes, for the benefit of those who may wish to provide apparatus, material, plates, atre, for a similar "ampaign.

My outfit in this lime consisterl of a phain Waterbury $8 \times 10$ ramern, with single batck, rising front, foltinger tailboarl, and hinged gromm glass; obr Ross $8 \times 10$ rapid symmetrial lens, and one $8 \times 10$ wide-ingle portable symmetriat. I haw hadf a dow ?. Moders for phates and half a dozen ditto for films, wi h akmite sidedes specially male tor me by the trot a Alams Co of New York, who suppliod all my epamatus.

Five gross C'armet $8 \times 10$ epmial phates, simsitomoter Q5, and three gross Cablutt that of same size and rapidity. These were parked in hermetioally sealed zine parkages contaning two dozen radl, and altur deseloping were repacked face to face, mothing brtween, in their original form-a mothod which I ram cortainly recommend, as, though put to the sevorest tost possible, all my negatives antived in damaia without a single hreakige or clamage.

Developing material I carried dry: soda sulphite, sorla calbonate, potash cablonate, abin pyogallic, acial sutphuric; and for fixing, sorla hyposulphite and allum.

One ordinary folding-triped with serm-ind top, three rubber tarss, a folling ruby-lantern (procoreal
 patent time shatter, complated my photngraphier paraphermalia.

I developed on the mareh only when there was no moon, when we dianed to ramb ley at and rmang stream, my tent sorving the purpose of a " lark room,"
and with such a provision fom no necessity for anything more elabome. Tho avoid the eonveymee of heary dishes for the "hypo" and washing, I construeted bags of rubber choth for the purpose, tacked upon frames, and carried a box to receive exposed phates, holding two dozen, rephenishing my holders always at night.

Now as to results, I kave the reader to junge how far I haw been sureessfal in obtaining truthful representations of the tribes, atre, with whom I came in contact, from those I have selected for the illastration of this book from orar five humbed negatives now in my possession.

The hollers provided by the Seovill \& Alams Co. never failed me, and their camera, thongh neither brassbound nor leather-bellowed, did not suffer even the smashing of the gromd glass; while the boxes containing my photo apparatus experienced the same rongh usage as my medicine-rhest-carried on the head or shonlders of matives, by river in canoes, and throngh Bechamaland amd northward by wagon, and, like the chast, having been several times umber water. Yet they are still as servireohle as when I first set ont. Neither plates nor films showed the slightest sign of deteriomation while they lasted. The only difficulty I experienced was with the films, which contracted three cightlis of an inch, and thas conld no longer be contained in the groove of the holder, but required to be keph in phace by pins; this, however, conld be easily obviated.

In addition to the aforenamed equipment, I had a $5 \times 7$ detertive hand camera, fitted with an Eastman's
y for nny reyance of g , I conose, tackerd - exposed y holders julge how hful repreme in conestration of now in my Adims Co. ither buass1 even the res containtame rough he heal or nd through nil, like the water: Yot rist set out. est sign of diffieulty I moted three ger be conrequired to ld be easily
nit, I had it Eastman's
roll-holdar, with in good supply of rolls; but they turnel ont very unsatislimery, for, although I ohtnimed a large

 They are the most ohstreprons insention I hase exere hamend; mothing shot of "hattoming down" will kny thom flat. Of these thin roll films I wonk sily, Amatrats, bewime!

A parting worl: Contal Afriea, being eompanatioly all mphotographed roontry, offers an mimituited fied for the protessional ame amatems. The traveler will
 means of dispelling ther cemmi that will so often ovartake him in that strange lamb, whike the fasemation is
 will be surrommen; but if suressfin, he carres band with him phensing mementos of his jommey that will arer remind him of tha seenes and experiences though which he has passed.
