**COMPARATIVE WORTH OF BAKING POWDERS** 

REPORTS OF GOVERNMENT CHEMISTS

As to Purity and Wholesomeness of the Royal Baking Powder.

"I have tested a package of Royal Baking Powder, which I purchased in the open market, and find it composed of pure and wholesome ingredients. It is a cream of tartar powder of a high degree of merit, and does not contain either alum of phosphates, or other injurious substances. E. G. Lovz, Ph.D.".

"It is a scientific fact that the Royal Baking Powder is absolutely pure. "H. A. Morr, Ph.D.".

"I have examined a package of Royal Baking Powder, purchased by myself in the market. I find it entirely free from alum, terrs alba, or any other injurious sub stance. HENEY MORTON, Ph.D., President of Stavens Institute of Technology."

"I have analyzed a package of Royal Baking Powder. The materials of which it is composed are pure and wholesome. S. Dara Hayas, State Asaaver, Mass."

The Royal Baking Powder received the highest award over all competitors at the Vienna World's Exposition, 1878; at the Contennial, Fhiladelphia, 1876; at the American Institute, New York, and at State Fairs throughout the country. No other article of human food has over received such high, emphatic, and uni-versal endorsement from eminent chemists, physicians, scientists, and Boards of Health all over the world.

Norm-The above DIAGRAM filmstrates the comparative worth of various Baking Powders, as shown by Chemical Analysis and experiments made by Prof. Schedler. A pound can of each powder was taken, the total leavening power or volume in each can calculated, the result being as indicated. This practical test for worth by Prof. Schedler only proves what every observant consumer of the Royal Baking Powder knows by practical experience, that, while it costs a few cents per pound more than ordinary kinds, it is far more economical, and, besides, affords the advant-age of heiter work. A sincic trial of the Royal Baking Powder will contain a second age of better work. A single trial of the Royal Baking Powder will con fair minded person of these facts.

\* While the diagram shows some of the alum powders to be of a higher degree of strength than other powders ranked below them, it is not to be taken as indicate ing that they have any value. All alum powders, no matter how high their strength are to be avoided as dangerous.
