## PHENOMENA AND CURIOSITIES OF NATURE.

1. *Aspects of Nature*.—In different lands and different climates, with scientific elucidations. By ALEXANDER VON HUMBOLDT. Translated by Mrs. SABINE. 8vo, cloth, pp. 475. (American Edition.) Price \$1.

This work consists of a series of papers, which took their origin, as the learned author says, "in the presence of the natural scenes of grandeur and beauty—on the Ocean, in the forests of Orinoco, in the steppes of Venezuela, and in the mountain wildernesses of Peru and Mexico. The view of Nature on an enlarged scale, the display of the concurrent action of various forces and powers, and the renewal of the enjoyment which the immediate prospect of tropical scenery affords to sensitive minds, are the objects which I have proposed to myself." A book on such subjects, from such an author, cannot fail to be instructive and interesting.

2. *The Six Days' Wonder*.—Or the world as it was and is. 16mo, boards, pp. 229. (American Sunday School Union.) Price 30 cts.

This little work treats in a pleasing and instructive manner of the six days of the Creation, and the special object of it, is to present "the perfectness of God's works from the beginning." The two concluding sentences of the Preface deserves general attention. "We think it important to preserve and impress, especially on the minds of the young, the association of God's CREATIVE WORK with the period of six DAYS. It is a suggestive idea; for it leaves the SEVENTH for the holy purposes to which it has ever been consecrated, and teaches us that a reverence for it is no less requisite to the physical health and happiness of the world, than to the immortal nature and spiritual necessities of man."

3. *The World of Waters*.—Or Recreations in Hydrology. By ROSINA M. ZORNLI. Illustrated, 12mo, cloth, pp. 346. (English Edition.) Price 75 cts.

This is the third of a series of amusing and instructive books similar in kind, the former two being entitled "*Recreations in physical Geography, and recreations in Geology*." The phenomena and mechanical powers of waters are the subjects of this volume. The author says, "in this undertaking our attention has not been limited to the consideration of the laws of Hydrostatics and Hydraulics, nor yet to the more

remarkable hydrographical features displayed in the natural world, but it has been our endeavour so to combine the two subjects, that their connexion may be clearly exhibited, and that they may thus tend to illustrate each other."

4. *The Ocean*.—By P. H. GOSSE. (London Christian Knowledge Society.) Illustrated, 8vo, cloth, pp. 360. Price \$1.00.

This is quite a different work from the one just noticed. It is limited to describe a few of the many objects of interest more or less directly connected with the Sea, and to lead youthful readers to associate with the phenomena of nature habitual thoughts of God. The writer has explored all the great seas for materials, and has wrought them with much skill. The illustrations are beautiful.

13. *On the Connection of the Physical Sciences*.—By MARY SOMMERVILLE. 12mo., half sheep, pp. 460. (American Edition.) Price \$1.00.

It was said a few years since, that Mrs. Mary Somerville was among the few persons, and the only woman, that thoroughly understood Laplace's *Mécanique Céleste*. She is a woman of extraordinary talents, and profoundly skilled in science. The object of her noble work on the *Connection of the Physical Sciences*, is to show that certain great principles govern them all, acting and reacting upon each other, and that they will, in all probability, be ultimately reduced to a few simple elements. The London *Quarterly Review* remarks—"The style of this astonishing production is so clear and unaffected, and conveys with so much simplicity, so great a mass of profound knowledge, that it should

be placed in the hands of every youth the moment he has mastered the general rudiments of education."

14. *Physical Geography*.—By MARY SOMERVILLE. With Notes and a Glossary by W. S. W. RUSCHENBERGER, M.D. 8vo., cloth, pp. 570. (American Edition.) Price \$1.10.

This work does not describe what is usually understood by the term *Geography*; it treats of Geography in connexion with the other branches of Physical Science, and in connexion with the history of living beings. It shows with what charms, and value, and dignity the study and teaching of that important branch of education may be invested. *Blackwood's Magazine* remarks—"We are anxious to recommend to our youth the enlarged method of studying geography which Mrs. Somerville's present work demonstrates to be as captivating as it is instructive. Nowhere, except in her own previous work, *The Connexion of the Physical Sciences*, is there to be found such a store of well-selected information so lucidly set forth. In surveying and grouping together whatever has been seen in the eyes of others, or detected by their laborious investigations, she is not surpassed by any one. With great perspicuity, she seizes at once whatever is most interesting and most captivating in her subject. We hold such presents as Mrs. Somerville has bestowed on the public, to be of incalculable value."

15. *The Earth and Man*.—Lectures on Comparative Physical Geography, in its relation to the History of Mankind. By ARNOLD GUYOT. Translated from the French by C. C. FALTON. 8vo., cloth, pp. 334. (American Edition.) Price \$1.10.

The title of this book expresses its object, but its value can only be appreciated by perusal of the book itself. The *North American Review* observes—"Those who have been accustomed to regard Geography as a merely descriptive branch of learning, dryer than the remainder biscuit after a voyage, will be delighted to find this hitherto unattractive pursuit converted into a science, the principles of which are definite, and the results conclusive; a science that embraces the investigation of natural laws, and interprets their mode of operation; which professes to discover in the rudest forms and apparently confused arrangement of the materials composing the planet's crust, a new manifestation of the wisdom which has filled the earth with its riches." *Silliman's Journal of American Science* remarks—"The work is one of high merit, exhibiting a wide range of knowledge, great research, and a philosophical spirit of investigation. Its perusal will repay the most learned in such subjects, and give new views to all of man's relation to the globe he inhabits."

16. *The Poetry of Science*.—Or Studies of the Physical Phenomena of Nature. By ROBERT HUNT. 8vo., cloth, pp. 388. (American Edition.) Price \$1.10.

The object of this work is "to link together those scientific facts which bear directly and visibly upon Natural Phenomena, and to show that they have a value superior to their more economic applications, in their power of exalting the mind to the contemplation of the universe." It is a work of great merit, and pre-eminently adapted to lift the mind from the admiration of the wonderful works of creation to the adoration and worship of the great Creator. The *London Morning Herald* speaks of it as "one of the most readable epitomes of the present state and progress of science we have yet perused."

17. *Cosmos*.—A Sketch of a Physical Description of the Universe. By ALEXANDER VON HUMBOLDT. Translated from the German. By E. OTT. In three volumes. 8vo., cloth, pp. 375+367+219=961. (American Edition.) Price \$2.00.

That great scholar and philosopher, Chevalier Bunsen, Prussian Minister at the English Court, has termed the *Cosmos*, "The great work of our age." The object of the learned author of this work was, "to embrace a summary of physical knowledge, as connected with a delineation of the material universe." The author remarks, in his preface, "In the late evening of an active life, I offer to the German public a work, whose undefined image has floated before my mind for almost half a century." The *first* volume comprises a sketch of all that is at present known of the physical phenomena of the universe. The *second* volume consists of two parts, the first of which treats of the incitements to the study of nature, afforded in descriptive poetry, landscape painting, and the cultivation of exotic plants; while the second and larger part enters into the consideration of the different epochs in the progress of discovery and of the corresponding stages of advance in human civilization. The *third* volume presents general and special results—"the special and scientific development of the great Picture

of Nature." The *London Spectator* observes—"Here is a work which unites the grandeur and extent of early speculations with the fullness and precision of modern science, written in the evening of a long life, it has the mellowed light of the setting sun."

N.B. In all cases where the parties concerned wish to provide their library with copies of any of the authorised text books used in the schools, or any of the maps, and comprehensive and valuable atlases, mentioned in the Descriptive Catalogue of Books, Charts, Maps, Atlases, Apparatus, &c. of the Depository at the Education Office, Toronto, they can procure them upon the terms stated in that catalogue, and to which they are referred for an account of all such publications.

## GEOLOGY AND MINERALOGY.

- (1.) *Principles of Geology, &c.*  
 (2.) *A Manual of Elementary Geology*.—Or the ancient changes of the earth and its inhabitants, as illustrated by geological monuments. With Engravings. By SIR CHARLES LYELL, Knt. A.M. 8vo., cloth, pp. 512. (English Edition.) Price \$2.50.  
 Sir Charles Lyell stands, confessedly, at the head of the Geologists of the present age, and his writings occupy the first place among works on geology. He has himself thus described the peculiar scope and objects of the two works mentioned at the head of this notice: "The 'Principles' contain a view of the *modern* changes of the earth and its inhabitants; while the 'Manual' relates to the monuments of *ancient* changes. In separating the one from the other, I have endeavoured to render each complete in itself, and independent; but if asked by a student which he should read first, I would recommend him to begin with the 'Principles,' as he may then proceed from the known to the unknown, and be provided beforehand with a key for interpreting the ancient phenomena whether of the organic or inorganic world, by reference to changes now in progress."
- Elements of Geology*.—By DAVID PAGE. 12mo, pp. 332. (Chambers' Educational Course.) (English Edition.) Price 45 cts.  
 A plain, comprehensive, useful elementary work, to which is added an interesting sketch of the geography of geology.
- The Elements of Geology*.—For popular use; containing a description of the geological formations and mineral resources of the United States. By CHARLES A. LEE, M.D. 12mo, half sheep, pp. 375. (American Edition.) Price 40 cts.  
 A well compiled elementary work, containing (as stated in the Preface) "perhaps the fullest description of the geological formations and mineral resources of the United States hitherto published in any systematic treatise."
- Elements of Geology, &c.*.—By W. S. W. RUSCHENBERGER, M.D. 12mo, boards, pp. 235. (American Edition.) Price 50 cts.  
 A scientific, profusely illustrated, and admirable treatise; all the technical terms are accentuated, and a copious glossary of definitions of them is appended.
- The Geological Observer*.—By SIR HENRY T. de la BECHE, Knt. C.B. Royal 8vo, cloth, pp. 695. (American Edition.) Price \$3.60.  
 The author of this work is an English gentleman of rank and fortune, who has devoted his life to geological studies. This work, occupying nearly 700 pages, is an American reprint from the English edition, and contains the result of extensive research and observation. The author states, that "the work was undertaken in the hope that the experience of many years might assist, and, perhaps, abridge the labours of those who may be desirous of entering upon the study of Geology, and especially in the field. Its object is, to afford a general view of the chief points of that science, such as existing observations would lead us to infer were established; and to show how the correctness of such observations may be tested; and to sketch the directions in which they may apparently be extended."
- The Ancient World*.—Or Picturesque Sketches of Creation. By D. T. ANSTED, M.A. 8vo, cloth, pp. 382. (American Edition.) Price 60 cts.  
 This work may be regarded as an Essay on the Geology of the Creation. It exhibits considerable acuteness and learning, and contains many things curious and interesting to the geological reader. The author's object is, "to communicate definite ideas of the Ancient History of the Earth and its Inhabitants," as the results of geological investigation.

7. *The Foot-Prints of the Creator*,—Or the Asterolopis of Stromness. By HUGH MILLER. 8vo, cloth, pp. 357. (American Edition.) Price 38 cts.

The author of this work is a self-taught Scotch geologist. The style of the work is simple, graphic, vivid, and pungent; the thoughts elevated and noble; the facts and reasoning irresistible. It contains a triumphant refutation of a semi-infidel work, entitled the "Vestiges of Creation." It has passed through several editions in both Europe and America. This volume is preceded by an interesting memoir of the author. The "Foot-Prints of the Creator," is regarded as one of the best defences of Truth that science can produce. The late Dr. Buckland, remarked, at a meeting of the British Association, that he "had never been so much astonished in his life, by the powers of any man, as he had by the geological descriptions of Mr. Miller. That wonderful man had described these objects with a facility which made him (Dr. B.) ashamed of the comparative meagreness and poverty of his own descriptions in the Bridgewater Treatise, which had cost him hours and days of labour. He would give his left hand to possess such powers of description as this man; and if it please Providence to spare his useful life, he if any one, would render science attractive and popular, and do equal service to theology and geology."

8. *The Old Red Sandstone*,—Or New Walks in an Old Field. Illustrated. By HUGH MILLER. 8vo, cloth, pp. 238. (American Edition.) Price 88 cts.

This is another of the remarkable and charming works of Hugh Miller. The late Dr. J. Pye Smith terms this work "a geological work, small in size, unpretending in spirit and manner; its contents, the conscientious narration of fact; its style, the beautiful simplicity of truth; and altogether possessing, for a rational reader, an interest superior to that of a novel." *Silliman's American Journal of Science* remarks—"this admirable work evinces talent of the highest order, a deep and healthful moral feeling, a perfect command of the finest language, and a beautiful union of philosophy and poetry. No geologist can peruse this volume without instruction and delight." And the *Edinburgh Review* observes—"The excellent and lively work of our meritorious, self-taught countryman, Mr. Miller, is as admirable for the clearness of its descriptions, and the sweetness of its composition, as for the purity and gracefulness which pervade it."

9. *The Religion of Geology*—And its Connected Sciences. By EDWARD HITCHCOCK, D.D. LL.D. 8vo, cloth, pp. 511. [American Edition.] Price \$1.

This admirable volume consists of a series of 14 lectures, which, the author has delivered, from time to time, in the course of his professional duties. The object of these lectures, "is to develop the relations between geology and religion;" and this object the author pursues, in a clear and eloquent style, with much learning and research, and with great force of argument.

This little book, so profusely illustrated, and written in so clear and perspicuous a style, is an appropriate introduction to the study of physical and natural science. The author states that its design "is to furnish a short yet connected and comprehensive view of these departments of knowledge, which may serve as an introduction to a more extended study, either of the whole or of particular portions."
