The copy filmed here has been reproduced thanks to the generosity of:

National Library of Canada

The images appearing here ere the bast queity possible considering the condition end legibility of the original copy end in keeping with the filming contract specifications.

Originei copies in printed peper covers ere filmed beginning with the front cover end ending on the lest pege with e printed or illustreted impression, or the beck cover when eppropriete. All other originei copies era filmed beginning on the first pega with e printed or illustreted impression, end ending on the lest pege with a printed or illustreted impression.

The lest recorded frems on sech microfiche shell contain the symbol — (maening "CONTINUED"), or the symbol ∇ (meening "END"), whichever epplies.

Meps, pietes, charts, etc., mey be filmed et different reduction ratios. Those too lerge to be entirely included in one exposure ere filmed baginning in the upper left hend corner, left to right and top to bottom, es many fremes as required. The following diegrems illustrete the mathod:

L'axempleire filmé fut reproduit grâce à la générosité de:

Bibliothèque nationale du Canada

Les images suivantes ont été reproduites avec le pius grand soin, compte tenu de la condition et de le natteté de l'axempleire filmé, at an conformité evec les conditions du contrat de filmege.

Les exempleires originaux dont la couverture en pepier est impriméa sont filmés en commençant par le premier plat et en terminant soit par la darnière pege qui comporte una empreinte d'impression ou d'illustration, soit par le second piet, seion le ces. Tous les eutres exemplaires origineux sont filmés en commançant par la première page qui comporte una empreinte d'impression ou d'illustretion et an terminant par le dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image da chaque microfiche, seion le cas: le symbole → signifie "A SUIVRE", le symbole ▼ signifie "FIN".

Les certas, pianches, tabieaux, etc., peuvent être filmés à das teux de réduction différents. Lorsqua le document est trop grand pour être reproduit en un saul cliché, il est filmé à partir da l'engle supérieur gauche, de gauche à droite, et de haut an bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

LABORATORY

OF THE

DEPARTMENT OF TRADE AND COMMERCE

OTTAWA, CANADA

BULLETIN No. 416

COFFEE AND SUBSTITUTES

NOTES AND COMMENTS.

Under this heading, as occasion arises, the Bulletins issued by this Department will contain, as an appendix, such comment as may seem necessary or advisable upon matters relating to the work of the Department in connection with the administration of the Adulteration Act, the Fertilizers Act, the Feeding Stuffs Act or the Proprietary Medicines Act.

It frequently happens that correspondents ask information regarding the above Acts, of such nature that the matter in question possesses general interest, and comment upon it would prove acceptable and useful to others than the immediate questioner. In such cases the realy may find a place in these columns. For convenience of reference these notes are umbered in series.

A. McGILL, Chief Analyst.

FOODS AND DRUGS.

LABORATORY

OF THE

DEPARTMENT OF TRADE AND COMMERCE OTTAWA, CANADA

BULLETIN No. 416

COFFEE AND SUBSTITUTES

OTTAWA, December 14, 1918.

F. C. T. O'HARA, Esq.,

Deputy Minister of Trade and Commerce,

Sir.—I beg to hand you herewith a report upon Coffee and Substitutes for Coffee, as found on the Canadian market during the past year. This inspection was ordered in April last, but unusual pressure of other work in these Laboratories has made it impossible for me to report earlier.

The work of analysis was placed in charge of Mr. Westman in June, and has been continued, at intervals, with the assistance of other members of our staff, as their services were available. Ar. Westman resigned from our staff on the 30th of September.

Samples herein reported are as follows:--

Samples worked	at Ottawa	92	-
, ,,	Unlifer	50	
.,	Winnipeg	31	
	Vancouver	- 8	_
	Total	187	Samples.
Samples sold as	Coffee	105	
"	Compyunds	241	
	Substitutes	25	
	Extracts or Essences	20	
11	Prepared or Condensed		
	Total	187	Samples.

upon ation

above and diate conFive samples sold as Coffee are found to be adulterated under this Act, for the reasons given below:—

No. of Sample.	Vendor.	Manufacturer.	Nature of Adulteration.		
8126	Drouin frêres, Quebec	real.	Consists essentially of roasted peas and chicory.		
		Auguste Comte et Cie, Mont-	Consists essenti. ly of rossted peas as		
	Albert.				
		Montreal.	Contains 71% roasted grains.		
84512	Imbleau, Montreal Not stated Contains 8.7% roasted peas.				

Consequent upon notification sent to the above named parties, the following explanations have been received:—

8126 and 8127.—The vendors state that the samples named had been in stock for some time, and they could not remember whether purchased as pure or as compound. They claim not to have sold under a guarantee of purity. In a certain sense this may be correct; but the selling it as Coffee, without modification must be held as claiming it to be Coffee, and nothing else. Coffee, like tea, sugar, butter, etc., when sold under these names must be regarded as meaning pure Coffee, tea, sugar, butter, etc. Otherwise the Act has no meaning, and does not protect the purchaser.

Four samples sold as Compounds, contain no Coffee or only very small amount and should have been sold only as substitutes for Coffee. These are:—

No. of Sample.	Vendor	Manufacturer.	Nature of Admixture.		
80642	A. J. Miller, Renfrew	L. & H. Coffee and Cereal	Contains 90% roasted cereal. Contains 95% chicory and peas.		
84566	H. Pariseau, Browns- burgh, Que.	Not stated	Contains 95% chicory and peas.		
79450 79455	O. Schacter, North Bay Rava & Pianetti, Cobalt.	Imperial Coffee Co Phoenix Mfg. Co., Toronto	Contains 72% chicory and grain. Contains 95% chicory and roasted cereals.		

Section 24 (11) of the Act defines Compounds or mixtures without regard to the percentage composition of these articles; and rules that, "No food or drug shall be deemed to be adulterated, when articles of food, not injurious to health are mixed together as a Compound, and sold or offered for sale as such, with each package, roll, parcel or vessel containing such articles distinctly labelled as a mixture, in conspicuous characters forming an inseparable part of the general label, bearing the name and address of the manufacturer."

It is highly desirable that such mixtures should be named in a way which would inform the buyer truthfully regarding their composition; and if the name of any single ingredient appears upon the label, such ingredient should be present to at least fifty per cent of the weight of the whole. Thus an article sold as a Compound Coffee or Coffee Mixture, should contain at least 50 per cent of actual Coffee. The four samples above referred to contain less than 25 per cent of Coffee, and two samples, less than 10 per cent.

I regret that owing to the non-existence of a ruling to this effect, I am unable to declare the above samples adulterated under this Act. They are really substitutes for Coffee, and should be sold as such.

Owing to the fact that the last three reports include a considerable number of samples sold not as Coffee, but as Coffee Compounds or as Substitutes for Coffee, the results given are not directly comparable; but a very marked improvement in the character of the articles offered as Coffee on the Canadian market since 1888 is manifest.

Substitutes for Coffee, and preparations of Coffee variously known as Coffee extracts; Condensed Coffee, etc., are more in evidence within recent years. To many of these preparations no exception can be taken on the ground of wholesomeness or desirability, although usually they are offered at prices which justiny their being classed as luxuries rather than as staples.

NOTES ON METHODS OF ANALYSIS.

When chicory only is present in admixture with Coffee it has been shown that a close approximation (well within 5 per cent) of the percentage amount present can be determined from the density of an extract made under fixed conditions. 'W-Gill Trans. Roy. Soc. Canada. Sec. 111, 1887.) Chicary is a more or less variable intermediate and its extractive matters are naturally more or less affer a by the drying and roasting treatment which it receives. Duer (Analyst, 1898, 3) quotes eight samples of roasted chicory in which the soluble material varies from 77.2 per cent to 78.5 per cent and this may be taken to represent ordinary regated chicory as prepared for admixture with Coffee. He shows, however, that by over sting, to soluble matters pproaching the extractive may be reduced to less than 60 per cent, thus more clo matter of Coffee which averages about 22 per cent.

McCrae ar 1 Kloot (The Analyst, November, 1918 boom" is in the English market, as a substitute for chico: d is sold as such. This term includes the roots of Boscia transvaalensis and remain, Merua pedunculata and Capparis albitrunca, all products of South Africa. Species of the three genera varying from 43 per cent to 60 per cent. It is evident that ____considerable substitution of Witgatboom for chicory would decidedly reduce the ex tive, and thus lower the density of the ten per cent decoction. The interpretative les for Coffee and chicory mixtures published by McGill and above referred to wou. Course so longer apply. The microscope shows certain histological elements, part by a triangularly pitted cell, which may serve to differentiate :Witgatboom

that so-called "Witgat-

by no means certain that this article has not type i its way to Canada; but this has not yet been demonstrated. Mr. A. J. Landry finds "that a sample of so-called American chicory appears to be similar to the chicory found in Coffee mixtures on the Eastern market." It gives results quite different from those given by ordinary chicory, and may indicate the substitution of different material. Mr. Westman suggests, as the result of work done by Mr. Dawson, that the most reliable way of estimating chicory is by hand separation under a lens. He finds that duplicates to within one per cent may thus be obtained.

As regards corroboration of the percentage of Coffee present by determination of nitrogen, Mr. Westman concludes that "results are only of value in a very general way." While determination of cassonic is also of little positive value owing to the fact that the amount of cassenic in Cosses is itself a variable,

The alkalinity and solubility of the ash may be of value especially in cases where the fineness of the grinding is such as to make difficult separation under lens.

Reducing sugars are generally an indication of the presence of chicory, and their amount is roughly proportioned to the chicory present. Reasted peas do not materially increase the sugar content.

The petrolic ether extract (fat) may vary from about 14 per cent in pure Coffee to much lower numbers where chicary or reasted cereal, are present.

The phosphate and manganese contents of the ash, also refractometer reading on ten per cent extracts, were investigated but led to no specially helpful results.

I would respectfully recommend publication of this report as Bullotin No. 416.

I have the honour to be, Sir,
Your obedient servant.

A. McGILL, Chief Analyst.
