The interest evined by the public in the feel below the programment of the programment

full discussion, aided by the light of science, should take place before the fund determination is reached. There are several very important facts not ducidated, and their solution, when pronounced by men of science, a yet to be heard. A correspondent in the Montreal Herald, signed "Another Citizen," merits commendation for having called for inquiry and explanations, where so much is swallowed unreflectingly, and upon the flying opinions of men not competent, forms education or their pursuits, to calm double and appears objections. As citizens of Montreal, we hold it to be our creed to advocate every enterprise which festers the growth of the city in swalth and population, and extends the circles of commercial dealings. As a general principle, we object to the construct on of the great depote of the railways or causis at such a distance from Montreal as would asself the charges upon our commerce, and divert our traffic. If it be practicable to opes a communication with the South side of the St. Lawrence by meas of a bridge, the value of the Caughnswags traverse declines to zero; but the public are without data as to whether a Railway bridge can be constructed, and, if so, at what cost. The in satisfies spirit of progress with force through Railway Lines from eity to city, wherever the mitual way Lines from eity to city, wherever the mitual way Lines from eity to city, wherever the mitual way Lines from eity to city, wherever the mitual way Lines from eity to city, wherever the mitual way Lines from eity to city, wherever the mitual way Lines from eity to city, wherever the mitual way Lines from eity to city, wherever the mitual way Lines from eity to city, wherever the mitual way Lines from eity to city, wherever the mitual way Lines from eity to city, wherever the mitual way Lines for either a carrier amount of accounts. exempt from seizure for debt a certain amount

entiable spirit of progress with force through Railway Lines from city to city, wherever the intention obstucles which intervene can be overcome by engineering skill, Lacked by capital. As yet, we know nothing of the amount of travel which will follow the Railway track, when the Line has been completed. We have only had, as yet, the tourists, with leisure to pause and await whatever conveyances offered; but when the American masses to whom time is of the blocks. can masses, to whom time is of the highest importance, begin to move—when Trains come from New York, in twelve hours, with a thousand and fitness hundred passengers—we may accept it in alwance, as a settled fact, that the preference will be given to the direct Line—if a preference will be given to the direct Line—if a nect Line can be constructed. A Railway Ter-mus opposite Montreal, and a five minuse ferry, iy be predicted without the gilt of prophecy. The public will pay for the convenience, and that will settle the question; but it is mere groping in the dark to argue the respective merits of the Caughnawaga traverse as Spring and Autumn, and of a Railway bridge; because, as we have already observed, it is essential that full information should be extracted from competent. Engineers as to the expediency of building such a bridge. The word impossible has long since been expunged from the Engineers' Dictionary, where cup tal can be commanded.

The dog-days are the only excuse which can be

offered for the unseemly sauables in which seve-ral city journals have lately injulged. We regret such exhibitions of temper, as they tend to damage

details are not known; and we think that where serious offence is given, that there are other and more effective modes of bringing the offenders to reason, than by troubling the public with discus-

California gold has proved itself a reality, if the Philadelphia Mint be accepted as a guide—the report of that establishment, setting forth that about twenty-one millions of dollars have already passed through in the shape of new coin. If the returns for the next few years be in the same mito, the influx of so much gold must, we should suppose, disturb the standard value.

ons in which they can have no interest.

We understand that the Government have bessed the handsome buildings erected in 1848 by M. J. Hayes, Esq.; known as the Masonic Hall, for the use of the Courts, pending the period which will be occupied in pulling down and rebuilding the proposed Law Courts. The New York journals devote a large share of their columns to the proceedings of various branches of industry now passing through a pro-cess of organization. There is a tons of exment-ness and determination in the language of some of the trades, which implies the co-operation of able and educated leaders.

We perceive nests of young beggars about this town, training up to vice. They saunter about picking up a substatence at the cost of honest industry. This is all wrong. The harvest is in progress—the farmers are paying high for labor, and cannot supply themselves with hands enough? It were well that those who have the strength were taught the duty they over society of sharing in the common toil.
